

Ontario Influenza Bulletin

2006-2007 Season

SURVEILLANCE WEEK 18-19 (April 29-May 12) 2007

This issue of the Ontario Influenza Bulletin provides information on the surveillance period from April 29 – May 12, 2007, (Weeks 18 & 19). The analysis for this issue occurred on Thursday May 17, 2007, therefore all data is current to that date unless otherwise specified.

Overall, influenza activity in Ontario during Weeks 18 and 19, 2007 was similar to week 17. Ten sporadically occurring cases of influenza, eight influenza A and two influenza B, were reported through iPHIS from health units. There were no reports of institutional outbreaks of influenza. For Week 19, the highest level of influenza activity in Ontario was 'localized activity' reported from Central East region. All the other regions except Toronto reported 'sporadic' activity levels. Toronto reported 'no data' for the influenza activity level.

As of May 5, 2007, the Bulletin will be published on alternate weeks and the GIS map of influenza activity levels will be posted on 'non-Bulletin' weeks under 'Weekly Influenza Surveillance Maps' at the following link: http://www.health.gov.on.ca/english/providers/program/pubhealth/flu/flu_mn.html

Please continue to submit weekly activity reports weekly by 4 p.m. every Tuesday. Please refer to page 14 for report submission dates.

For a definition of influenza-like illness (ILI) activity levels and links to websites providing current influenza information from other sources, please refer to the attached Appendix- I. If you would like to provide feedback on the Bulletin, please contact Christine D'Souza (christine.dsouza@moh.gov.on.ca, 416-212-5323) or Anne-Luise Winter (anne-luise.winter@moh.gov.on.ca, 416-327-7301).

Table 1: Summary of confirmed influenza cases and institutional influenza outbreaks by health region (Weeks 18 & 19, 2007).

Confirmed Influenza cases*	HEALTH REGION							TOTAL
	North West	North East	Eastern	Central East	Toronto	South West	Central West	
Influenza A	0	1	1	1	3	1	1	8
Influenza B	0	0	0	0	2	0	0	2
Influenza A & B	0	0	0	0	0	0	0	0
Total new cases	0	1	1	1	5	1	1	10
Institutional influenza outbreaks‡	0	0	0	0	0	0	0	0

SOURCE: MOHLTC [iPHIS, Health Unit Reports to PHD]

* Includes reports of sporadically occurring influenza through iPHIS, as well as cases in institutional outbreaks, with dates of onset in the surveillance period.

‡ Confirmed outbreaks in institutions with onset date of symptoms during the surveillance period.

SOURCE: MOHLTC [iPHIS, Health Unit Reports have been extracted using CRN at PHD]

* Cumulative case counts include late reports and records that are otherwise reconciled. Therefore, cumulative counts may not equal new cases plus previous cumulative value.

† Episode Date for a case corresponds to the earliest date on record for the case according to the iPHIS hierarchy (Symptom Date > Clinical Diagnosis Date > Specimen Collection Date > Lab Test Date > Reported Date)

Influenza Subtype(s):

During Week 19, 1609 isolates were received by the Public Health Agency of Canada, with a total of 11 testing positive for influenza A and 45 for influenza B. The majority of influenza A isolates (7) were from Ontario (63.6%), while 2 (18.2%) were from Alberta and 1 (9.1%) each was from Newfoundland and New Brunswick. Of the 45 influenza B isolates, 37 were from Quebec (82.2%), while 3 each (6.7%) were from Alberta and New Brunswick.*

Antigenic Characterization:

The National Microbiology Laboratory (NML) has characterized 931 influenza viruses for the 2006-2007 influenza season: 251 (27%) A/New Caledonia/20/1999(H1N1)-like, 585 (63%) A/Wisconsin/67/05(H3N2)-like, 12 (1%) B/Malaysia/2506/2004-like, and 83 (9%) B/Shanghai/361/2002-like. All but the B/Shanghai/361/2002-like strain are included in the composition of the 2006-2007 Canadian influenza vaccine. Of the influenza A viruses characterized, 78% of the A(H1N1) viruses were from the West while the majority of the A(H3N2) viruses were from Ontario (54%) and British Columbia (25%). **

Antiviral Resistance:

Since the start of the season, the NML has tested 941 influenza A isolates (245 H1N1, 696 H3N2) for amantadine resistance. Two (0.8% or 2/245) of the H1N1 isolates tested were resistant to amantadine (the resistant isolates originated from Ontario). Of the H3N2 isolates tested, 35% (242/696) were resistant. Of the 919 isolates (846 influenza A, 73 influenza B) tested for oseltamivir resistance, none were found to be resistant. **

Note: Based on the World Health Organization recommendations, Canada's National Advisory Committee on Immunization (NACI) recommended the **2006-2007** influenza vaccine contain an **A/New Caledonia-like**, an **A/Wisconsin-like** & a **B/Malaysia-like** virus strain.

* These data have been obtained from the Respiratory Virus Detection tables of Public Health Agency of Canada for Week 19, 2007.

** These data have been obtained from the FluWatch report of the Public Health Agency of Canada for Week 18, 2007.

APPENDIX - I

Definitions for influenza activity levels:

No Data: No activity report corresponding to the surveillance week was received at the Ministry of Health and Long-Term Care Call Centre by the Tuesday (at 4 p.m.) following the end of the surveillance period.

No Activity: **No laboratory confirmed* influenza cases(s) or outbreak detected during the past four weeks** within the influenza surveillance region, however, sporadically occurring ILI may be reported†

Sporadic: Sporadically occurring **ILI and laboratory confirmed influenza* case(s) with NO outbreaks** detected within the influenza surveillance region†

Localized: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in less than 50% of the influenza surveillance region(s)†**

Widespread: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in greater than or equal to 50% of the influenza surveillance region(s)†**

* Confirmation of influenza within the surveillance region at any time within the prior week

† Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist

Influenza-Like Illness (ILI) Definitions:

A) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which could be due to influenza virus. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

B) ILI/Influenza outbreaks:

Schools and work sites: greater than 10% absenteeism on any day, most likely due to ILI.

Residential institutions: two or more cases of ILI within a seven-day period, **including at least one laboratory confirmed case.**
