- Statistics Canada's population estimates, components of change and age groups are 2006 Census-based adjusted for net undercoverage.
- Except for Canada, all projections are produced by the Ontario Ministry of Finance (Spring 2010). Projections for Canada are from Statistics Canada (based on 2006 Census).
- Total dependency ratio is the ratio of the population aged 0-19 and 65+ to the population aged 20-64.
- Total Fertility Rates and life expectancy estimates are for calendar year, and projections are for census year. Life expectancy estimates for years after 2005 represent three-year averages (e.g., 2006 reported life expectancy corresponds to the average recorded over 2005-2007).
- Families and households are Census data.
- In the "Components of Change" table, flows are for the 12-month period July 1 to June 30. Net international migration is calculated as the net balance of immigrants, net emigrants and net non-permanent residents (NPRs).

Note: All population figures are for July 1st.
