Findings/Faits saillants :

1. Inspector spoke with the Director of Care on December 14, 2011 related to a critical incident, in which a resident sustained an injury and was transferred to the hospital. The DOC reported that since the incident the home has initiated a new preventative maintenance check of all lifts and bath trolleys. The DOC reports that the checks are completed on evening and night shifts on a daily basis and are to be documented on check lists on every unit. Inspector reviewed the policy titled "Pre-Use Inspection For Mechanical Lifts & Equipment" which confirms that staff on evenings and night shift are assigned to inspect various lifting equipment. Inspector reviewed the check lists at all 12 different nursing stations within the building on December 16, 2011. None of the 12 units had completed the inspection every day in December. On three units, the inspector was unable to locate the checklists and after speaking with staff on the unit, no check lists were located. On five units the checklists were located by the inspector but inspections had not been completed at all in December. The remaining four units had completed the daily inspection between one and five times during December. The licensee failed to ensure that procedures are implemented to ensure that electrical and non-electrical equipment, including mechanical lifts are kept in good repair and maintained at a level that meets the manufacturer's instructions at a minimum.
