1. (a) Previously identified as non-compliant with a VPC on August 24, 2011 and February 21, 2013.

(b) In 2013, Resident #001 sustained a fall with a minor injury. Following the fall, the clinical record showed the resident was resistive to care, exhibited ongoing responsive behaviours, refused to ambulate or participate in ROM exercises with physiotherapy staff. The resident was not formally assessed until a formal request was made on an identified date. The resident was transferred to the hospital the same day, where the resident was confirmed to have a fracture. The resident had an undiagnosed fracture for a period in excess of two weeks. A pain assessment was not completed for a significant number of days after the fall.

(c) According to the plan of care, Resident #005 had ongoing issues with pain management. Progress notes recorded by the physician during an identified time period in 2013, indicated the resident's pain was not being controlled, which prompted changes to medication orders. The resident did not have a formal pain assessment completed by nursing staff during that identified time period in 2013, despite numerous changes to medications and expressions of pain.

(d) Residents #001 and #005 were not cared for in a manner consistent with their needs. (130)

1. (a) Previously identified as non-compliant with a VPC on March 7, 2012.

(b) According to the clinical record, Resident #3 was assessed by the physician during an identified time period. A pain assessment completed by nursing staff around that time period, indicated a score of 1.0 which indicated "low" pain.

(c) Progress notes reviewed for Resident #004 indicated, on an identified date in 2013, the resident was exhibiting abnormal behaviour. An assessment by physiotherapy staff the same day, indicated the resident would not allow passive range of motion testing, indicating pain with movement of joints. Notes recorded on another identified date indicated the resident was expressing pain. On a third identified date the resident expressed pain. A pain assessment completed by nursing staff the same month, was coded "none" for expressions of pain. The resident's pain was scored at 1.0, which indicated "low".
