1. The licensee has failed to comply with O. Reg 79/10 s. 36 whereby staff did not use safe transferring techniques when assisting a resident.

On an identified date, Resident #1's family member requested the resident be transferred to bed. Resident #1's condition had deteriorated and according to staff, the resident was unable to transfer from the wheelchair to the bed with the usual assistance of staff due to a lack of strength in his/her arms and legs.

The staff determined the resident would require a mechanical lift to get into bed. S#105 was interviewed and stated the resident was slumped down in the wheelchair. Two staff members were unable to apply the transfer sling properly as a result of the resident's position. Resident #1 was transferred using a hoyer lift while one staff member supported the resident's upper body and the second staff member supported the resident's lower body and legs. As the resident was positioned over the mattress, S#105 stated the resident's bottom slipped out of the sling onto the bed.

The resident was assessed and sustained no injuries as a result of the incident. The resident was sent to hospital for reassessment of his/her deteriorating condition.

At the time of the inspection, the home was working with the lift provider to obtain a sling that would be safe during the transfer of a resident with limited ability to be properly positioned. [s. 36.]
