Pickering Nuclear Performance Report - Q3 2024 Results

Performance update

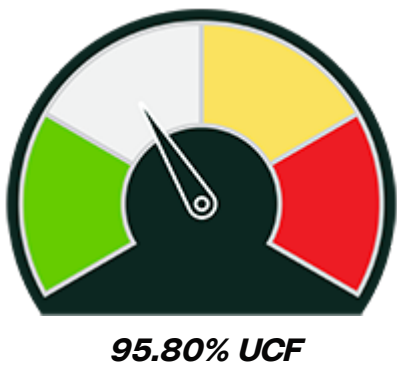

As part of our commitment to keep you informed, this report tracks performance for Ontario Power Generation’s (OPG’s) Pickering Nuclear in the areas of safety, operational and environmental performance, and significant accomplishments during the third quarter of 2024.

Electricity production

The electrical energy generated, minus station needs

OPG’s nuclear electricity generation for Q3 of 2024 totaled 9.5 terawatt hours (TWh) compared to 9.6 TWh in 2023 in the same quarter. In Q3, Pickering Nuclear produced 6.1 TWh of electricity, which was 14 per cent of the electricity produced in Ontario.

Reliability

Unit capability factor

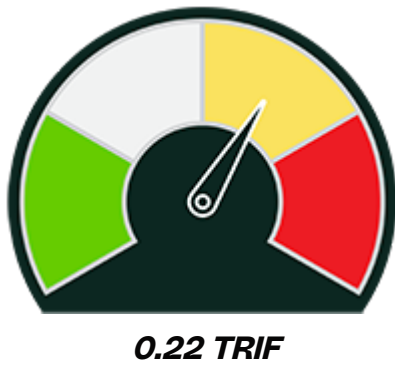

Compared to Q3 in 2023, Pickering’s Unit Capability Factor (UCF) for Q3 2024 is higher (95.80) primarily as a result of a decrease in the number of days the station has been shut down for maintenance outages.

Environment

Spills to the environment

During Q3 2024, there was one spill to the environment at Pickering Nuclear reportable to a regulatory authority.

Safety

Total Recordable Injury Frequency

Total Recordable Injury Frequency (TRIF) measures the number of injuries involving OPG employees that result in a fatality, lost time, requiring restricted work and requiring medical treatment per 200,000 hours. In Q3 2024, Pickering Nuclear recorded 0.22 injuries per 200,000 hours worked.

About OPG's Nuclear Generating Stations

Ontario Power Generation owns and operates the Pickering and Darlington Nuclear Generating Stations. The two stations have a combined generating capacity of about 5,200 megawatts with Darlington Unit 4 currently on refurbishment. Accounting for 22.1 per cent of the electricity produced in Ontario in Q3, OPG's nuclear units generated 9.5 terawatt hours.
