REPURPOSING PICKERING

Thanks for sharing your vision for the future of the Pickering Nuclear site

OPG is planning for the end of commercial operations at the Pickering Nuclear station, including determining future uses of the site. The goal of the Repurposing Pickering project is to gather information and ideas from the community to develop a long-term strategy and action plan for redeveloping available site lands during and after the station is decommissioned.

After commercial operations cease, the station will first be placed in a "safe storage" state and eventually decommissioned. Although the full process will take decades, some existing structures and areas of the site will become available earlier for other uses.

Thanks to the many residents who visited our information booth and community open house as part of the Repurposing Pickering project. And thanks to the hundreds of people who have sent us your thoughts and ideas for the future of the Pickering Nuclear site.

We have heard from hundreds of members of the community and OPG employees. We will now carefully assess the ideas received to identify those that work in synergy with

OPG's Kris Probodiak (left) discusses the features of the Pickering Nuclear site with local residents Sandy Wander and Pam Herron at the open house for the Repurposing Pickering study.

the continuing presence of the nuclear facilities, while also considering how those options will influence future visions.

If you were unable to join us, visit our website for a copy of the materials from the information sessions.

Since 1971, the Pickering Nuclear station has proudly served the people of Durham Region and Ontario. We want the future of the Pickering site to build on our proud past.
