

## Measuring Up 2017 Technical Data Table

### General Description

These tables provide additional data (LHIN, interprovincial, international and other stratifications) for the indicators included in *Measuring Up 2017*, where available.

The table includes the indicator name, the unit of measurement, and the values for each stratification as well as some additional details on methodology. For detailed methodology notes please refer to the technical appendix for *Measuring up 2017*.

### Notes

Confidence intervals around each result were used to compare results. The values are highlighted when the confidence intervals of the results do not overlap with the confidence intervals of the Ontario value (or another reference point), depending on stratification.

For example:

LHIN values are highlighted as statistically significantly different from the Ontario average if the confidence intervals for those values did not overlap with the confidence intervals of the Ontario value. Teal shading shows the LHINs that are statistically different from the provincial average.

#### Here are the reference points for each stratification:

LHIN – Compared to Ontario average

Interprovincial – Compared to Ontario average

International – Compared to Ontario average

Income – Compared with Q5

Education – Compared to the highest education group

Sex – Male versus female

Age – Compared to Ontario average

Time trend – No comparison

Rural/Urban – Urban versus rural

Please note that in the Measuring Up 2017 report, variation is noted based on a comparison of the confidence intervals for the highest and lowest values. Therefore, in some cases the results may vary across the LHINs or other stratifications but there may be no statistical difference compared to the provincial average.

For more details on indicator technical specifications, please see the MU 2017 Technical Appendix ([Insert hyperlink](#)) and the Indicator Library ([insert](#)

#### Notes included in the table:

<sup>1</sup>Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.

<sup>2</sup>Due to population-level data and narrow confidence intervals all results look statistically different

"LV" (low volume) appears in cases where data were not available due to a small number of observations.

"ND" (No data) appears in cases where the data were not available.

#### Color

#### Note associated with color

Ontario value

Statistically significantly different than the Ontario value

Notes included in the table:

<sup>1</sup> Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.

<sup>2</sup> Due to population-level data and narrow confidence intervals all results look statistically different

"LV" (low volume) appears in cases where data were not available due to a small number of observations.

"ND" (No data) appears in cases where the data were not available.

"NA" appears where it is non-applicable

**Notes included in the table:**  
<sup>1</sup>Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.  
<sup>2</sup>Due to population-level data and narrow confidence intervals all results look statistically different  
"LV" (low volume) appears in cases where data were not available due to a small number of observations.  
"ND" (No data) appears in cases where the data were not available.  
**Colour** **Note associated with colour**

Notes included in the table:

<sup>1</sup>Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.

<sup>2</sup>Due to population-level data and narrow confidence intervals all results look statistically different

"LV" (low volume) appears in cases where data were not available due to a small number of observations.

"ND" (No data) appears in cases where the data were not available.

| 88 | Health Spending    | Percentage of survey respondents who have serious problems paying or were unable to pay their medical bills, 2016                                                                                                                                                                                           | Percent                     | ND    | ND    | ND    | ND    | ND    |                                                                                                                                                                                           |

**Notes included in the table:**

<sup>1</sup>Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.

<sup>2</sup>Due to population-level data and narrow confidence intervals all results look statistically different

"LV" (low volume) appears in cases where data were not available due to a small number of observations.

"ND" (No data) appears in cases where the data were not available.

**Colour**

**Note associated with color**

Statistically significantly different than the Ontario value

| 75 | Palliative care    | Percentage of people who died in hospital, 2015/16                                                                                                                                                                                                                                                          | Percent                     | 53.6   | 56.5   | 50.6   |  |
| 76 | Palliative care    | Average number of days people spent at home in the last 6 months of life, 2015/16 <sup>1</sup>                                                                                                                                                                                                              | Days                        | 160.9  | 160.0  | 161.8  |  |
| 77 | System Integration | Percentage of patients who saw a family doctor or specialist within seven days of discharge after hospitalization for chronic obstructive pulmonary disease, 2015/16                                                                                                                                        | Rate (per 100)              | 35.22  | 36.06  | 34.49  |  |
| 78 | System Integration | Percentage of patients who saw a family doctor or specialist within seven days of discharge after hospitalization for heart failure, 2015/16                                                                                                                                                                | Rate (per 100)              | 45.30  | 46.63  | 44.07  |  |
| 79 | System Integration | Percentage of patients aged 1 to 74 who had an unscheduled emergency department visit that could be treated in an alternative primary care setting, 2015/16                                                                                                                                                 | Percent                     | 1.85   | 1.33   | 2.37   |  |
| 80 | System Integration | Percentage of people aged 16 and older who reported their emergency department visit was for a condition that could have been managed by their primary care provider, if that provider had been available, 2016                                                                                             | Percent                     | 41.6   | 37.7   | 45.3   |  |
| 81 | System Integration | Unplanned hospital readmissions within 30 days of discharge after medical treatment, per 100 patient discharges, 2015/16                                                                                                                                                                                    | Rate (per 100)              | 13.9   | ND     | ND     |  |
| 82 | System Integration | Unplanned hospital readmissions within 30 days of discharge after surgical treatment, per 100 patient discharges, 2015/16                                                                                                                                                                                   | Rate (per 100)              | 7.2    | ND     | ND     |  |
| 83 | System Integration | Percentage of inpatient days that beds were occupied by patients who could have been receiving care elsewhere, 2015/16                                                                                                                                                                                      | Percent                     | 13.9   | ND     | ND     |  |
| 84 | System Integration | Rate of hospitalization, per 100,000 people under 75, for one of the following conditions that if effectively managed or treated earlier may not have resulted in admission to hospital: asthma, diabetes, chronic obstructive pulmonary disease, heart failure, hypertension, angina and epilepsy, 2015/16 | Rate (per 100,000)          | 288.81 | 315.16 | 262.97 |  |
| 85 | Health Spending    | Percentage of survey respondents, aged 12 to 64, who report having prescription medication insurance, 2015                                                                                                                                                                                                  | Percent                     | 71.1   | 70.8   | 71.4   |  |
| 86 | Health Spending    | Total health spending per person, 2014                                                                                                                                                                                                                                                                      | Current Canadian dollars    | 5,962  | ND     | ND     |  |
| 87 | Health Spending    | Health spending on drugs per person, 2014                                                                                                                                                                                                                                                                   | Current Canadian dollars    | 949    | ND     | ND     |  |
| 88 | Health Spending    | Percentage of survey respondents who had serious problems paying or were unable to pay their medical bills, 2016                                                                                                                                                                                            | Percent                     | 8      | 7      | 8      |  |

**Notes included in the table:**

<sup>1</sup>Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.

<sup>2</sup>Due to population-level data and narrow confidence intervals all results look statistically different

"LV" (low volume) appears in cases where data were not available due to a small number of observations.

"ND" (No data) appears in cases where the data were not available.

| 76 | Palliative care    | Average number of days people spent at home in the last 6 months of life, 2015/16 <sup>1</sup>                                                                                                                                                                                                              | Days                        | 160.9  | 160.4 | 163.3 |  |  |  |
| 77 | System Integration | Percentage of patients who saw a family doctor or specialist within seven days of discharge after hospitalization for chronic obstructive pulmonary disease, 2015/16                                                                                                                                        | Rate (per 100)              | 35.22  | 36.21 | 30.28 |  |  |  |
| 78 | System Integration | Percentage of patients who saw a family doctor or specialist within seven days of discharge after hospitalization for heart failure, 2015/16                                                                                                                                                                | Rate (per 100)              | 45.30  | 46.23 | 39.38 |  |  |  |
| 79 | System Integration | Percentage of patients aged 1 to 74 who had an unscheduled emergency department visit that could be treated in an alternative primary care setting, 2015/16                                                                                                                                                 | Percent                     | 1.85   | ND    | ND    |  |  |  |
| 80 | System Integration | Percentage of people aged 16 and older who reported their emergency department visit was for a condition that could have been managed by their primary care provider, if that provider had been available, 2016                                                                                             | Percent                     | 41.6   | 39.0  | 55.2  |  |  |  |
| 81 | System Integration | Unplanned hospital readmissions within 30 days of discharge after medical treatment, per 100 patient discharges, 2015/16                                                                                                                                                                                    | Rate (per 100)              | 13.9   | ND    | ND    |  |  |  |
| 82 | System Integration | Unplanned hospital readmissions within 30 days of discharge after surgical treatment, per 100 patient discharges, 2015/16                                                                                                                                                                                   | Rate (per 100)              | 7.2    | ND    | ND    |  |  |  |
| 83 | System Integration | Percentage of inpatient days that beds were occupied by patients who could have been receiving care elsewhere, 2015/16                                                                                                                                                                                      | Percent                     | 13.9   | ND    | ND    |  |  |  |
| 84 | System Integration | Rate of hospitalization, per 100,000 people under 75, for one of the following conditions that if effectively managed or treated earlier may not have resulted in admission to hospital: asthma, diabetes, chronic obstructive pulmonary disease, heart failure, hypertension, angina and epilepsy, 2015/16 | Rate (per 100,000)          | 288.81 | ND    | ND    |  |  |  |
| 85 | Health Spending    | Percentage of survey respondents, aged 12 to 64, who report having prescription medication insurance, 2015                                                                                                                                                                                                  | Percent                     | 71.1   | 71.2  | 69.9  |  |  |  |
| 86 | Health Spending    | Total health spending per person, 2014                                                                                                                                                                                                                                                                      | Current Canadian dollars    | 5,962  | ND    | ND    |  |  |  |
| 87 | Health Spending    | Health spending on drugs per person, 2014                                                                                                                                                                                                                                                                   | Current Canadian dollars    | 949    | ND    | ND    |  |  |  |
| 88 | Health Spending    | Percentage of survey respondents who had serious problems paying or were unable to pay their medical bills, 2016                                                                                                                                                                                            | Percent                     | 8      | ND    | ND    |  |  |  |

**Notes included in the table:**

<sup>1</sup>Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.

<sup>2</sup>Due to population-level data and narrow confidence intervals all results look statistically different

"LV" (low volume) appears in cases where data were not available due to a small number of observations.

"ND" (No data) appears in cases where the data were not available.

| The Health of Ontarians | Percentage of the people aged 12 and older who reported fair or poor health, 2015                                                                                                                                                                                                                              |                     | 11      | 3.5      | 5.5      | 6.9      | 9.4      | 13.9     | 15.9     | 24   |                                                       |
| Health Spending         | Percentage of survey respondents, aged 12 to 64, who report having prescription medication insurance, 2015                                                                                                                                                                                                     | Percent             | 71.1    | 74.5     | 61.5     | 69.3     | 74.0     | 77       | 75.5     | ND   |                                                       |
| Chapter                 | Indicator                                                                                                                                                                                                                                                                                                      | Unit of Measurement | Ontario | 20-64    | 65 +     |          |          |          |          |      | Additional notes (i.e. details of age group analysis) |
| Primary Care            | Percentage of people with diabetes who received an eye exam within a two-year period, 2014/15                                                                                                                                                                                                                  | Percent             | 67.5    | 57.7     | 79.2     |          |          |          |          |      |                                                       |

Notes included in the table:

<sup>1</sup>Statistical significance could not be determined for this indicator as no p-values or confidence intervals were available.

<sup>2</sup>Due to population-level data and narrow confidence intervals all results look statistically different

"LV" (low volume) appears in cases where data were not available due to a small number of observations.

"ND" (No data) appears in cases where the data were not available.
