Introduction – Schedule 1

In 2012, we launched www.wsibstatistics.ca, our *By the Numbers: 2011 WSIB Statistical Report*, which made our statistics more accessible and easier to use and interpret. Based on feedback we received via our online survey we have now further enhanced our report to include rate group level data and we've continued to increase the data available through our downloadable tables. This is part of our ongoing commitment to an open and transparent approach to the way we do business.

Although the Ministry of Labour is now the lead agency on prevention in Ontario, the WSIB still plays a key role in the work to make our workplaces safer and healthier. Our claims statistics provide a wealth of useful information for both the wider prevention system and individual workplaces.

A review of this report can help the reader to understand what's happening in Ontario workplaces. It provides a valuable resource for workers and employers as they continue the important work of making their workplaces safer and healthier.

Who We Are and What We Do

The WSIB administers the province's no-fault workplace insurance system for Ontario workplaces. We provide return to work, medical coverage, and wage loss benefits for workers injured on the job or contracting occupational diseases. For employers, we provide no-fault collective liability insurance and access to industry specific information about workplace fatalities, injuries and illnesses.

We are legislated by the Provincial Government of Ontario and are responsible for administering the *Workplace Safety and Insurance Act, 1997* (WSIA). We are funded by employer premiums, and to a lesser degree, income earned on our investments. The province does not provide us with any funding. We are a trust agency and are governed by an independent Board of Directors made up of representatives from employers, workers and others.

By the Numbers: 2012 WSIB Statistical Report

Employers who are registered with the WSIB are covered under either Schedule 1 or Schedule 2 of *the Act*. *By the Numbers* presents 10 years of statistics on Schedule 1 and 2 separately.

Schedule 1 employers are those for which the WSIB is liable to pay benefit compensation for workers' claims. Schedule 1 employers are required by legislation to pay premiums to the WSIB and are protected by a system of collective liability. Since the WSIB pays benefits to injured workers out of money pooled in the insurance fund, Schedule 1 employers are relieved of individual responsibility for actual accident costs.

Schedule 2 employers are employers that self-insure the provisions of benefits. Schedule 2 employers are liable to pay all benefit compensation and administration costs for the workers' claims. The WSIB administers the payment of the benefits for workers of Schedule 2 employers and recovers the cost of these benefits plus administration fees from the employers.

Discussion and Analysis – Schedule 1

The WSIB provides one of the most comprehensive workers' compensation benefit systems in North America. In 2012, we served over 4.2 million workers, 255,000 employers, registered over 195,000 claims and issued \$2,664 million in payments to or on behalf of Schedule 1 workers and families.

Summary of Performance

Overall, fewer claims are entering the system and more injured workers are getting back to work sooner. Since 2003, there has been a 37% reduction in registered claims and a 49% decline in the lost time injury rate. At the same time, the number of workers covered increased by 7%.

Industry, Worker and Claim Profile

Over the past 10 years, five sectors (Services, Manufacturing, Health Care, Construction, and Transportation) have accounted for over 75% of WSIB covered employment and allowed lost time injuries.

In 2012, some of the most common characteristics of lost time claims were:

- Gender: Male (62%)
- Age Group: 25 to 44
- Nature of Injury: Sprains and strains
- Event: Overexertion
- Part of Body: Low back
- Occupation: Motor vehicle and transit drivers

Our Commitment to Financial Stability and Improved Recovery and Return to Work Outcomes

Compared to the past 10 years, in 2012 we experienced:

- the lowest average days lost within one month post injury or illness

Locked-in claims are increasing as a percentage of all claims receiving an LOE benefit. However, with fewer claims entering the system and improved return to work outcomes, it is expected that over time fewer claims will require a locked-in loss of earnings award.

Over the past five years, the number of registered claims has consistently decreased, whereas benefit payments were on the rise until 2009, when a downward trend began. This trend is partially due to the continued reduction in registered claims, but more significantly reflects changes to the service delivery model, a newly implemented Health Care Strategy, and the creation of a new Work Reintegration Program. At the same time, after adjusting for inflation, the amount of Loss of Earnings paid for a single day off work for an injured worker remained relatively stable in recent years.

Our modernized claims management and our new Health Care Strategy are supporting successful recovery and return to work – and the results are clear. In 2012, approximately 85% of Schedule 1 and 2 injured workers were off full Loss of Earnings (LOE) benefits within a month of a Return to Work Specialist's involvement.

High Impact Claims

The WSIB has identified a group of allowed lost time claims that have been shown to have significant impacts on workers and employers. These "high impact" claims are those involving the low back, shoulder and fractures, and have represented on average more than 40% of all lost time benefit payments and more than 30% of all lost time claims over the past five years. In addition, the average days lost for high impact claims within six months post injury or illness is consistently higher than all other lost time claims combined.

Recognizing that appropriate and timely medical care is important to an injured worker's recovery and return to work, the WSIB continues to invest in health care. We have expanded the network of specialized assessment and treatment services across the province for low back and shoulder injuries, resulting in better health care outcomes for injured workers in Ontario.

Improved Outcomes for Workers and Employers in Ontario

In recent years, the WSIB has demonstrated progress in modernizing all key aspects of its business – delivering better claims management, better health care, and improved support for return to work.

The WSIB is working hard to find faster, easier and more efficient ways for people to do business with us. With an improved service delivery model, a proactive health care strategy, and enhanced WSIB-managed work reintegration, the WSIB has embraced sound, effective, and proven approaches to managing and modernizing its business.

We know we can meet the challenges ahead as we continue to introduce enhanced programs and new technology to deliver even better value to workers and employers. We have more work ahead of us, but we are on-track to creating a modern, financially sustainable system that's promoting economic growth and productivity.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Employer Profile – Schedule 1

Overview

Claims for workplace injuries have decreased steadily over the past decade, showing a 40% reduction, while claims for occupational diseases have remained relatively high. At the same time, the number of registered employers and the number of workers covered has increased since 2003.

Employer Profile – Schedule 1 (Continued)

Overview

The lost time injury rate takes into account the number of lost time claims and the number of workers employed in order to represent the number of lost time claims per 100 workers. Since 2003, the lost time and no lost time injury rates have declined by approximately 49% and 38% respectively, while the number of workers covered by WSIB has increased by approximately 7%. Recent employment increases, although modest, are an indication that employment levels are starting to recover from the economic downturn; a trend that is consistent with Statistics Canada's Labour Force Survey (LFS) employment for Ontario.

Industry Profile – Schedule 1

WSIB Covered Employment by Industry Sector

The distribution of workers among the industry sectors has remained fairly consistent over the past 10 years, with the Construction, Health Care, Manufacturing, Services and Transportation sectors accounting for more than 80% of the WSIB Schedule 1 covered employment in 2012. Despite an overall 7% increase in the number of Schedule 1 workers, the Automotive, Chemicals/Process, Forestry, Primary Metals, and Pulp & Paper industry sectors all experienced significant reductions in the number of workers since 2003. When compared to prior year, the majority of industry sectors (with the exception of Pulp & Paper, Forestry, and Education) did experience an increase in their covered workforce in 2012.

Industry Profile – Schedule 1 (Continued)

Allowed Lost Time Claims by Industry Sector

When comparing 2012 to 2003, all sectors experienced significant decreases in the number of allowed lost time claims. The distribution of lost time claims among the industry sectors remained fairly consistent over the past 10 years, with the Construction, Health Care, Manufacturing, Services, and Transportation sectors accounting for more than 80% of all Schedule 1 lost time claims in 2012. In 2012, of the four sectors with an increase in the number of lost time claims from prior year, the Agriculture and Health Care sectors had the most notable increases (12% and 7% respectively).

2012 Lost Time Claims
by Leading Industry Sector

For a breakdown of Lost Time claims by the Standard Industrial Classification (SIC) please go to AWCBC National Work Injury Statistics Program (NWISP) | AWCBC

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Industry Profile – Schedule 1 (Continued)

Lost Time Injury Rates by Industry Sector

The lost time injury (LTI) rate takes into account the number of lost time claims and the number of workers employed in order to represent the number of lost time claims per 100 workers. The 2012 Schedule 1 lost time injury rate was 1.01, a 4% reduction compared to prior year. Of the 16 industry sectors, seven had a 2012 lost time injury rate above Schedule 1 and nine were below, with the Agriculture sector having the highest lost time injury rate, and the Electrical sector having the lowest. In 2012, there were two industry sectors (Agriculture and Health Care) that experienced an increase in LTI rate from prior year, however when comparing 2012 to 2003, all 16 industry sectors experienced LTI rate reductions.

Lost Time Injury Rates Above Schedule 1 and Below Schedule 1

Schedule 1 Industry Sectors with Lost Time Injury Rates Above the Overall Schedule 1 Lost Time Injury Rate*

Industry Sector	Injury/Illness Year									
	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012
Agriculture	3.30	3.30	3.17	2.61	2.56	2.46	2.38	2.29	1.90	2.05
Automotive	2.64	2.78	2.64	2.58	2.36	2.25	1.78	1.75	1.49	1.38

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Claim Profile – Schedule 1

2012 Allowed Lost Time Claims by Accident Location

The map below highlights the number of 2012 Schedule 1 and 2 allowed lost time claims per 10,000 employed workers by accident location. The number of employed workers used in this calculation is sourced from the Statistics Canada 2006 Employed Worker Census Count. WSIB accident location has been mapped to Statistics Canada 2006 Census Districts for the province of Ontario. The 2012 Provincial Average for Ontario is 98.6 allowed lost time claims per 10,000 employed workers.

2012 Number of Allowed Lost Time Claims Per 10,000 Employed Workers by Statistics Canada Census District* for Ontario

See Appendix for additional data on the number of allowed lost time claims per 10,000 employed workers by accident location.

**2012 Number of Allowed Lost Time Claims Per 10,000 Employed Workers by Statistics Canada
Census District* for Southern Ontario**

Data Source:

Schedule 1 & 2 Allowed Lost Time Claims:
WSIB - Enterprise Information Warehouse.

The number of employed workers used in this calculation is sourced from the
Statistics Canada 2006 Employed Worker Census Count.

Employed Worker Census Count: Statistics Canada. 2008. Employed labour force
by place of work status, 2006 counts, for Canada, provinces and territories and
census subdivisions (municipalities) of work - 20% sample data (table). Place of
Work Highlight Tables, 2006 Census. Statistics Canada Catalogue no. 97-561-
XWE2006002. Ottawa. Released April 2, 2008.

Data Maturity:

Schedule 1 & 2 Allowed Lost Time Claims: As at March 31st of the following year
for 2012 injury year

Data Exclusions:

Schedule 1 & 2 Allowed Lost Time Claims: Allowed lost time claims where
accident location is Unknown, Ontario Navigational Waters and Outside of Ontario

Employed Worker Census Count: Employed workers identified as having 'No
Fixed Place of Work'

Formula for Number of Lost Time Claims per 10,000 Employed Workers:

(Number of Schedule 1 & 2 Allowed Lost Time Claims/Statistics Canada
Employed Worker Census Count) x 10,000

See Appendix for additional data on the number of allowed lost time claims per 10,000 employed workers by accident location.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Claim Profile – Schedule 1 (Continued)

Allowed Lost Time Claims Average Days Lost

The average days lost is the average number of days for which wage loss benefits were paid. Improved recovery and return to work outcomes will be reflected in both of these measures.

In 2012, the average days lost within one month and three months post injury or illness was the lowest it has been in 10 years, at 7.4 and 13.3 respectively.

**Average Days Lost within
One Month and Three Months by Injury/Illness Year**
Schedule 1

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Claim Profile – Schedule 1 (Continued)

Allowed Lost Time Claims Average Days Lost by Industry Sector

The bar graphs below illustrate the average days lost within one month and three months post injury or illness by industry sector for 2011 and 2012. Similar to 2011, in 2012, the industry sectors with the highest average days lost for both time periods were Forestry, Construction, Pulp & Paper and Mining, and those with the lowest average days lost were Health Care, Automotive, and Education.

2011 Average Days Lost within One Month by Industry Sector by Injury/Illness Year

2012 Average Days Lost within One Month by Industry Sector by Injury/Illness Year

2011 Average Days Lost within Three Months by Industry Sector by Injury/Illness Year

2012 Average Days Lost within Three Months by Industry Sector by Injury/Illness Year

AG	Agriculture	AU	Automotive	CH	Chemical/Process	CO	Construction	ED	Education	EL	Electrical	FO	Food	FR	Forestry
HC	Health Care	MF	Manufacturing	MI	Mining	MU	Municipal	PP	Pulp & Paper	SE	Services	PM	Primary Metals	TR	Transportation

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Worker Profile – Schedule 1

Allowed Lost Time Claims by Age and Gender

Between 2003 and 2012, the average percentage for all allowed lost time claims for males and females was 63% and 37% respectively. Compared to Statistics Canada’s Labour Force Survey (LFS) over the same period, the average gender distribution of the Ontario employed workforce was 52% male and 48% female. This indicates that the demographic of Schedule 1 lost time claims is significantly different than the overall profile of the employed workforce, as the majority of Schedule 1 lost time claims are affecting male workers.

See Appendix for historical and additional data on Age and Gender

(Continued)

Worker Profile – Schedule 1 (Continued)

Allowed Lost Time Claims by Age and Gender

In 2012, two age groups comprised the majority of lost time claims, those between 25 to 44 and 45 to 54. Over the past 10 years, the two older age groups (55 to 64 and 65+) increased as a percentage of all allowed lost time claims, whereas the younger age groups (< 25 and 25 to 44) decreased. This is a reflection of the continued aging of Ontario's workforce, and is consistent with Statistics Canada's employment trends.

See Appendix for historical and additional data on Age and Gender

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Worker Profile – Schedule 1 (Continued)

2012 Allowed Lost Time Claims by Leading Occupations

Ontario has a diverse workforce undertaking a wide variety of occupations. Over the past 10 years, lost time claims were spread across more than 150 occupations, with Labourers in Processing, Manufacturing and Utilities, and Motor Vehicle and Transit Drivers representing the two occupations with the highest number of lost time claims.

In 2012, of the seven leading occupations, workers between the ages of 20 to 24 represented the leading age group of lost time claims in four of these occupations. The leading occupation for female workers was Assisting Occupations in Support of Health Services, whereas Motor Vehicle and Transit Drivers represented the leading occupation for male workers. In all cases the leading nature of injury was sprains and strains and the part of body most frequently injured was the low back.

2012 Leading Occupations
Schedule 1

2012 Leading Occupation Characteristics

*Leading characteristics are independent from one another

Schedule 1	Leading Age Group	Leading Industry Sector	Leading Gender	Leading Event	Leading Source	Leading Part of Body	Leading Nature of Injury
Motor vehicle and transit drivers	45-49	Transportation	Male	Overexertion	Structures (including walkways, floors and buildings)	Low back (lumbar, sacral, coccygeal regions)	Sprains and strains
Labourers in processing, manufacturing and utilities	20-24	Manufacturing	Male	Struck by objects or equipment	Structures (including walkways, floors and buildings)	Low back (lumbar, sacral, coccygeal regions)	Sprains and strains
Assisting occupations in support of health services	50-54	Health Care	Female	Overexertion	Persons (bodily motion or condition)	Low back (lumbar, sacral, coccygeal regions)	Sprains and strains
Retail salespersons and sales clerks	20-24	Services	Female	Overexertion	Structures (including walkways, floors and buildings)	Low back (lumbar, sacral, coccygeal regions)	Sprains and strains
Cleaners	50-54	Manufacturing	Male	Overexertion	Structures (including walkways, floors and buildings)	Low back (lumbar, sacral, coccygeal regions)	Sprains and strains
Longshore workers and material handlers	20-24	Services	Male	Overexertion	Containers, boxes, barrels, packages (pressurized, non pressurized)	Low back (lumbar, sacral, coccygeal regions)	Sprains and strains
Trades helpers and labourers	20-24	Construction	Male	Struck by objects or equipment	Structures (including walkways, floors and buildings)	Low back (lumbar, sacral, coccygeal regions)	Sprains and strains

See Appendix for historical and additional data on Occupation.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Work Reintegration – Schedule 1

Referrals to Return to Work Specialists

Since 2009, when the role was introduced, initial referrals to Return to Work Specialists within 12 weeks of the date of injury or latest recurrence have increased steadily from 38.6% to 76.0%. This increase is due in part to improved referral processes and recognition of the value of early return to work in a worker’s recovery. In 2012, approximately 85% of Schedule 1 and 2 injured workers were off full Loss of Earnings (LOE) benefits within a month of a Return to Work Specialist’s involvement.

In 2012, our Return to Work Specialists and Work Transition Specialists made 23,000 Schedule 1 and 2 workplace visits to help workers and employers negotiate successful, safe return to work. In addition to the introduction of new roles to support return to work, we have also significantly increased program oversight of return to work since 2009 – meaning more quality management and accountability for ourselves and our providers.

Work Reintegration – Schedule 1 (Continued)

Allowed Lost Time Claims Receiving Loss of Earnings (LOE) Benefits

Loss of Earnings (LOE) benefits are the wage loss benefits for time lost from work due to a work related injury or illness occurring on or after January 1, 1998. Improved recovery and return to work outcomes will be reflected in this measure.

The bar graphs below illustrate the percentage of claims receiving LOE benefits at three and six months. Each bar is split by level of LOE benefits – full and partial. Over the past five years, there has been a shift in claims durations to levels lower than those in 2008. Upon further analysis of these graphs it can be seen that the overall improvement is due to the decrease in the percentage of claims receiving full LOE benefits.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Work Reintegration – Schedule 1 (Continued)

Work Transition (WT)/Labour Market Re-Entry (LMR)

The WSIB's Better at Work philosophy guides our Work Reintegration Strategy, comprising of our Return to Work and Work Transition programs. The new program is replacing the Labour Market Re-Entry (LMR) program and enhances services for workers and employers. Statistics show that, as we transition to the new strategy, we are already seeing improved outcomes for injured workers and reduced costs.

The new Work Reintegration Strategy recognizes that:

- Workers and employers know their workplaces best, but they may benefit from help to understand their roles and responsibilities in the creation of fair, mutually beneficial return to work plans
- We need to take a more active role in cases where return to work is not possible
- We need to provide injured workers with more choices in their Work Transition Plans, and we need to play an active role in making sure these plans give them the retraining they need

By integrating our Return to Work and previous LMR programs into a new Work Reintegration program, the WSIB has been able to improve return to work outcomes for workers through better case management, assessments, and work reintegration planning while still reducing program costs.

Work Transition/Labour Market Re-entry Program Costs (in thousands)

Schedule 1 & 2	2009 (000s)	2010 (000s)	2011 (000s)	2012 (000s)
WT/LMR Program Costs	\$167,913	\$155,546	\$88,951	\$66,544
Assessments/Evaluations	\$14,854	\$10,905	\$5,520	\$5,488
Education/Training	\$77,748	\$73,257	\$38,850	\$36,220
Placement & Retention	\$4,898	\$6,738	\$8,224	\$6,500
Provider Related	\$32,258	\$30,865	\$11,867	\$(75)
Supplies & Equipment	\$8,985	\$7,966	\$5,205	\$4,159
Travel Related	\$24,652	\$24,589	\$17,419	\$12,538
Other	\$4,518	\$1,225	\$1,866	\$1,714
WT Administrative Costs*	N/A	N/A	\$20,700	\$24,600
Total	\$167.9 (\$M)	\$155.5 (\$M)	\$109.7 (\$M)	\$91.1 (\$M)

* Unable to separate WT Administrative Costs between Schedule 1 and 2, therefore the costs represent both Schedule 1 and 2 combined.

Work Reintegration – Schedule 1 (Continued)

Completed Work Transition/Labour Market Re-Entry Plans

Since the implementation of the Work Transition (WT) program, the percentage of cases with completed plans resulting in return to work either with the injury employer or a new employer is showing a steady increase from employment outcomes achieved under the earlier Labour Market Re-entry (LMR) program.

As a number of cases were transitioned from the LMR program to the WT program, results in 2011 and 2012 demonstrate employment outcomes achieved by both programs. Cases exclusively serviced by the WT Program show significantly better results in the first two years of the program achieving an average return to work (RTW) rate of 67% (69% for Schedule 1 and 2 combined) compared to the combined results of the WT/LMR programs (45.5% in 2011 and 51.5% in 2012).

2011 was the first year of the WT program and as a result there is an overrepresentation of employed outcomes in the statistics for that year due to shorter term WT plans. The RTW rate achieved in 2012 will be more reflective of what can be expected in the coming years.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Injury Profile – Schedule 1

2012 Schedule 1 Leading Injury Characteristics

Most Workers' Compensation Boards and Commissions in Canada code the injury details of a claim using the National Work Injuries Statistics Program (NWISP) coding standard (NWIS). This standard is based on the Canadian Standards Association (CSA) Z795-96 codes which allow for more detailed coding injury details. The WSIB adheres to this standard and codes all lost time claims into four categories: Nature of Injury, Event, Source and Part of Body.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Injury Profile – Schedule 1 (Continued)

2012 Allowed Lost Time Claims by Leading Nature of Injury

Over the past 10 years, Sprains and Strains have consistently represented the leading nature of injury. In 2012, they represented 43% of all lost time claims, compared to 45% in 2011. Fractures were the nature of injury that accounted for the second greatest percentage of lost time claims in 2012, with approximately 9%.

In 2012, the workers who were most prone to experiencing one of the five leading natures of injury were male workers, and workers in the Services sector (the largest sector in terms of number of covered workers). These types of injuries were also most prevalent within two occupations: Motor Vehicle and Transit Drivers and Labourers in Processing, Manufacturing and Utilities.

2012 Leading Nature of Injury

Schedule 1

2012 Leading Nature of Injury Characteristics

*Leading characteristics are independent from one another

Schedule 1	Leading Age Group	Leading Industry Sector	Leading Gender	Leading Occupation	Leading Event	Leading Source	Leading Part of Body
Sprains and strains	45-49	Services	Male	Motor Vehicle and Transit Drivers	Overexertion	Persons (bodily motion or condition)	Low back (lumbar, sacral, coccygeal regions)
Fractures	50-54	Services	Male	Motor Vehicle and Transit Drivers	Fall on same level	Structures (including walkways, floors and buildings)	Finger(s), fingernail(s)
Cuts, lacerations, punctures	20-24	Services	Male	Labourers In Processing, Manufacturing and Utilities	Struck by objects or equipment	Hand tools, non-powered	Finger(s), fingernail(s)
Bruises, contusions	50-54	Services	Male	Labourers In Processing, Manufacturing and Utilities	Struck by objects or equipment	Structures (including walkways, floors and buildings)	Leg(s)
Traumatic injuries, disorders, complications, unspecified, NEC	25-29	Services	Male	Labourers In Processing, Manufacturing and Utilities	Struck by objects or equipment	Structures (including walkways, floors and buildings)	Multiple body parts

See Appendix for historical and additional data on Nature of Injury.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Injury Profile – Schedule 1 (Continued)

2012 Allowed Lost Time Claims by Leading Injury Event

Over the past 10 years, Overexertion has consistently represented the leading injury event. In 2012, Overexertion accounted for 19% of all lost time claims, down from 23% in 2003. Struck by Objects/Equipment and Fall on Same Level were the two other injury events that accounted for the next greatest percentages of lost time claims in 2012, with 16% and 12% respectively.

In 2012, workers in the Services sector (the largest sector in terms of number of covered workers) were most prone to experiencing one of the five leading injury events. While male workers represented the majority of lost time claims for these injury events, female workers represented the greatest percentage of Fall on Same Level lost time claims. These leading injury events also tended to be highest among the older age groups (45 to 54) and within three occupations: Labourers in Process/Manufacturing/Utilities, Motor Vehicle Transit Drivers and Assisting Occupations in Support of Health Services.

2012 Leading Injury Event

Schedule 1

2012 Leading Injury Event Characteristics

*Leading characteristics are independent from one another

Schedule 1	Leading Age Group	Leading Industry Sector	Leading Gender	Leading Occupation	Leading Nature of Injury	Leading Source	Leading Part of Body
Overexertion	45-49	Services	Male	Assisting occupations in support of health services	Sprains and strains	Containers, boxes, barrels, packages (pressurized, non pressurized)	Low back (lumbar, sacral, coccygeal regions)
Struck by objects or equipment	20-24	Services	Male	Labourers in processing, manufacturing and utilities	Cuts, lacerations, punctures	Hand tools, non-powered	Finger(s), fingernail(s)
Fall on same level	50-54	Services	Female	Motor vehicle and transit drivers	Sprains and strains	Structures (including walkways, floors and buildings)	Multiple body parts
Bodily reaction	45-49	Services	Male	Motor vehicle and transit drivers	Sprains and strains	Persons (bodily motion or condition)	Low back (lumbar, sacral, coccygeal regions)
Bodily reaction and exertion (combined), including unspecified, NEC	45-49	Services	Male	Assisting occupations in support of health services	Sprains and strains	Containers, boxes, barrels, packages (pressurized, non pressurized)	Low back (lumbar, sacral, coccygeal regions)

See Appendix for historical and additional data on Injury Event.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Injury Profile – Schedule 1 (Continued)

2012 Allowed Lost Time Claims by Leading Injury Source

Over the past 10 years, Persons (bodily motion or condition) and Structures (including walkways, floors and buildings) have consistently represented the leading sources for all lost time claims. In 2012, these two sources of injury accounted for 22% and 20% respectively, of all lost time claims.

Where Persons was the source of injury, female workers and workers in the Health Care sector represented the greatest percentage of these lost time claims in 2012. Most of the five leading injury sources were highest among the 45 to 54 age group, and each leading injury source was represented by a different leading occupation. The leading nature of injury for all five leading injury sources was Sprains and Strains and the part of body most often injured was the Low Back.

2012 Leading Injury Source
Schedule 1

2012 Leading Injury Source Characteristics
*Leading characteristics are independent from one another

Schedule 1	Leading Age Group	Leading Industry Sector	Leading Gender	Leading Occupation	Leading Event	Leading Nature of Injury	Leading Part of Body
Persons (bodily motion or condition)	45-49	Health Care	Female	Assisting occupations in support of health services	Bodily reaction	Sprains and strains	Low back (lumbar, sacral, coccygeal regions)
Structures (including walkways, floors and buildings)	50-54	Services	Male	Motor vehicle and transit drivers	Fall on same level	Sprains and strains	Multiple body parts
Containers, boxes, barrels, packages (pressurized, non pressurized)	45-49	Services	Male	Longshore workers and material handlers	Overexertion	Sprains and strains	Low back (lumbar, sacral, coccygeal regions)
Building materials	25-29	Construction	Male	Labourers in processing, manufacturing and utilities	Struck by objects or equipment	Sprains and strains	Low back (lumbar, sacral, coccygeal regions)
Furniture and fixtures	50-54	Services	Female	Retail salespersons and sales clerks	Overexertion	Sprains and strains	Low back (lumbar, sacral, coccygeal regions)

See Appendix for historical and additional data on Injury Source.

Injury Profile – Schedule 1 (Continued)

2012 Allowed Lost Time Claims by Part of Body

Over the past 10 years, the Low Back has consistently represented the leading part of body injured. In 2012, the Low Back accounted for approximately 20% of all lost time claims; a slight reduction compared to 2011 (19.6% from 20.1%).

In 2012, workers in the Services sector (the largest sector in terms of number of covered workers) were most prone to injuring one of the seven leading parts of body. Injuries to these parts of body tended to be the highest among male workers, those in older (45 to 54) and younger (20 to 24) age groups, and among Motor Vehicle and Transit Drivers. The leading nature of injury for most of these incidents was Sprains and Strains.

2012 Leading Part of Body
Schedule 1

2012 Leading Part of Body Characteristics

*Leading characteristics are independent from one another

Schedule 1	Leading Age Group	Leading Industry Sector	Leading Gender	Leading Occupation	Leading Event	Leading Nature of Injury	Leading Source
Low back (lumbar, sacral, coccygeal regions)	45-49	Services	Male	Motor vehicle and transit drivers	Overexertion	Sprains and strains	Persons (bodily motion or condition)
Leg(s)	45-49	Services	Male	Motor vehicle and transit drivers	Bodily reaction	Sprains and strains	Persons (bodily motion or condition)
Multiple body parts	50-54	Services	Male	Motor vehicle and transit drivers	Fall on same level	Sprains and strains	Structures (including walkways, floors and buildings)
Finger(s), fingernail(s)	20-24	Services	Male	Labourers in processing, manufacturing and utilities	Struck by objects or equipment	Cuts, lacerations, punctures	Hand tools, non-powered
Shoulder	50-54	Services	Male	Motor vehicle and transit drivers	Overexertion	Sprains and strains	Persons (bodily motion or condition)
Ankle(s)	20-24	Services	Male	Motor vehicle and transit drivers	Bodily reaction	Sprains and strains	Persons (bodily motion or condition)
Cranial region, including skull	20-24	Services	Male	Retail salespersons and sales clerks	Struck by objects or equipment	Concussion	Structures (including walkways, floors and buildings)

See Appendix for historical and additional data on Part of Body.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

High Impact Claims – Schedule 1

High Impact Claims

High impact claims is a term used to identify allowed lost time claims that have been shown to have significant impacts on workers and employers. The WSIB is focused on mitigating the risks for these claims to maximize return to work, recovery outcomes and to reduce costs. The WSIB has implemented many initiatives to improve outcomes in these claims, including specialized case management teams, new evidence-based health services and expedited access to expert medical intervention.

We have identified three types of high impact claims, those involving the Low Back, Shoulder and Fractures, as our focus. Over the past five years, these three types of claims represented more than 40% of all benefit payments and more than 30% of all lost time claims each year.

In 2012, these high impact claims represented approximately 42% of all benefit payments for allowed lost time claims.

**High Impact Claims by Benefit Payment Percentage
by Payment Year**

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

High Impact Claims – Schedule 1 (Continued)

Since 2008, the average days lost within three and six months post injury or illness was higher for high impact claims in comparison to all other lost time claims combined. In 2012, the average days lost within three months decreased for both high impact and all other lost time claims when compared to 2011.

The WSIB's continued focus on programs resulting in recovery and return to work outcomes has contributed to the steady decrease in average days lost for high impact claims.

High Impact Claims
Average Days Lost within Three Months
by Injury/Illness Year
Schedule 1

High Impact Claims
Average Days Lost within Six Months
by Injury/Illness Year
Schedule 1

(Continued)

High Impact Claims – Schedule 1 (Continued)

In 2012, these three types of high impact claims represented approximately 34% of all lost time claims, of which low back claims represented nearly 20%. Since 2009, the percentage of lost time claims that are low back has decreased slightly, while the percentage of fracture lost time claims had a small increase.

Each year, four industry sectors accounted for more than 70% of all high impact claims: Services, Health Care, Manufacturing and Transportation. In addition, over 60% of all high impact injuries are experienced by male workers. Since 2008, the percentage of high impact injuries experienced by the 50 to 54 age group has increased slightly each year.

Leading High Impact Claims Characteristics					
Schedule 1	Injury/Illness Year				
	2008	2009	2010	2011	2012
Leading Age Groups	35 to 39 - 11.9% 40 to 44 - 14.2% 45 to 49 - 15.3% 50 to 54 - 12.2%	35 to 39 - 11.2% 40 to 44 - 13.5% 45 to 49 - 15.4% 50 to 54 - 13.1%	35 to 39 - 11.1% 40 to 44 - 13.0% 45 to 49 - 16.1% 50 to 54 - 13.4%	35 to 39 - 11.3% 40 to 44 - 12.5% 45 to 49 - 15.0% 50 to 54 - 14.0%	35 to 39 - 11.0% 40 to 44 - 12.0% 45 to 49 - 14.7% 50 to 54 - 14.5%

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Fatalities – Schedule 1

Allowed Traumatic Fatalities by Year of Death

Traumatic fatalities are allowed claims for workers who died of a work-related traumatic incident. For Schedule 1 employers, in 2012, 64 workers lost their lives due to a workplace fatality. More than 55% of these deaths were caused by motor vehicle incidents, which has remained the leading cause of traumatic fatalities since 2003.

Over the past 10 years, more than 90% of all traumatic fatalities occurred among males, with the predominant age group being 45 to 49. During this period, three industry sectors: Construction, Transportation and Services, accounted for more than 60% of these tragic workplace incidents.

Over the 10 year period from 2003 to 2012, the following age groups, industry sectors, events and gender accounted for the highest traumatic fatality percentages.

- Age Groups: 45-49 (14.6%), 35-39 (11.1%), 40-44 (11.1%), 55-59 (11.1%), 50-54 (10.4%)
- Industry Sectors: Construction (26.5%), Transportation (26.0%), Services (11.7%)
- Events: Motor Vehicle Incidents (40.8%), Falls (16.8%), Struck By/Caught in Objects (11.7%)
- Gender: Males (92.1%)

See Appendix for historical and additional data on Traumatic Fatalities.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Fatalities – Schedule 1 (Continued)

Allowed Occupational Disease Fatalities by Year

Occupational disease fatalities are allowed claims for workers who died of a work-related disease or condition. In 2012, 190 fatality claims were allowed for workers from Schedule 1 employers, who lost their lives due to an occupational disease.

Over the past 10 years, occupational disease fatalities predominantly occurred among males, with a significant number in the Construction and Manufacturing sectors. During this period, approximately 60% of the 190 deaths in 2012 were caused by cancers, including mesothelioma and lung cancer.

Over the 10 year period from 2003 to 2012, the following industry sectors, disease types and gender accounted for the highest Occupational Disease fatality percentages.

- Industry Sectors: Construction (26.8%), Manufacturing (21.5%), Primary Metals (12.6%)
- Diseases: Mesothelioma (32.9%), Lung Cancer (28.3%)
- Gender: Males (96.5%)

See Appendix for historical and additional data on Occupational Disease Fatalities.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Benefit Payments – Schedule 1

Benefit Payments by Benefit Category

Benefit payments are payments made during a specific year to or on behalf of injured workers and are detailed by the eight benefit categories found in the table below. Over the last five years, the number of registered claims consistently decreased whereas benefit payments were on the rise until 2009 when a downward trend began. This trend is partially due to the continued reduction in registered claims, but more significantly reflects changes to the Service Delivery Model that included a newly implemented Health Care Strategy and the creation of a new Work Reintegration Program.

Over the past five years, Loss of Earnings (LOE), Workers' Pensions and Health Care represented the greatest percentage of benefits paid to injured workers. In 2012 these three benefit categories contributed to over 75% of all benefit payments made to or on behalf of injured workers (excluding Loss of Retirement Income Fund expense).

Benefit Payments by Benefit Category

Schedule 1	Benefit Payment Year									
	2008		2009		2010		2011		2012	
	Benefit Payments (millions)	% of Benefit Payments	Benefit Payments (millions)	% of Benefit Payments	Benefit Payments (millions)	% of Benefit Payments	Benefit Payments (millions)	% of Benefit Payments	Benefit Payments (millions)	% of Benefit Payments
Workers' Pension	\$735	24%	\$723	23%	\$701	23%	\$678	24%	\$652	24%
Loss of Earnings	\$1,049	34%	\$1,149	36%	\$1,117	36%	\$1,069	38%	\$968	36%
Health Care	\$483	16%	\$513	16%	\$497	16%	\$468	16%	\$457	17%
External Providers	\$155	5%	\$164	5%	\$151	5%	\$86	3%	\$65	3%
Non-Economic Loss	\$129	4%	\$129	4%	\$126	4%	\$88	3%	\$60	2%
Future Economic Loss	\$333	11%	\$315	10%	\$292	10%	\$278	10%	\$259	10%
Survivor Benefits	\$163	5%	\$167	5%	\$178	6%	\$172	6%	\$176	7%
Other	\$17	1%	\$18	1%	\$5	0%	\$11	0%	\$27	1%
Total Benefit Payments	\$3,064	100%	\$3,178	100%	\$3,067	100%	\$2,850	100%	\$2,664	100%

Prior to 2011, all publications referenced five benefit payment categories. As of 2011 these categories were reclassified into eight categories. As such, prior years have been reclassified in this report to reflect the new Benefit Categories.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Benefit Payments – Schedule 1 (Continued)

Loss of Earnings Benefit Payments

Over the past five years, Loss of Earnings (LOE) accounted for the greatest percentage of benefit payments made to injured workers. LOE benefits represent wage loss benefits for time lost from work due to a work-related injury or illness occurring on or after January 1, 1998. The number of allowed lost time claims receiving LOE benefits has been steadily decreasing since 2008. Factors that are contributing to this trend include improved claims management, fewer claims entering the system, and shorter claims durations; a reflection of more workers recovering, returning to work and mitigating their wage loss.

After adjusting for inflation, the amount of Loss of Earnings paid for a single day off work for an injured worker has remained relatively stable over the last 5 years.

Locked-in claims are increasing as a percentage of all claims receiving a LOE benefit; however, with fewer claims entering the system and improved return to work outcomes, it is expected that over time fewer claims will require a locked-in loss of earnings award.

Loss of Earnings Claims and Average Loss of Earnings per Full Paid Day by Payment Year

Schedule 1

A claim is considered locked-in if a lock-in payment occurred at any point within the Benefit Payment year. The claim population includes Bill 99 Legislation only.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Benefit Payments – Schedule 1 (Continued)

Non Economic Loss Benefit Payments

Non Economic Loss (NEL) benefits are based on the age of the worker and the severity of the permanent impairment (PI) sustained by the injured worker. They are awarded to recognize that, beyond a wage loss, an injured worker has also suffered a physical, functional or psychological loss and are calculated as a percentage of whole body impairment.

The yearly total of allowed claims receiving a NEL benefit has been decreasing since 2009 with a notable decrease of 26% from 2009 to 2012. This decrease is a reflection of improved health care outcomes for injured workers, and also due to fewer claims entering the system in recent years.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Payments – Schedule 1 (Continued)

Health Care Payments

Health Care payments are made to or on behalf of injured or ill workers and in 2012 represented 17% of total payments. 2012 marked the third consecutive year where Health Care payments decreased compared to the prior year, which can mainly be attributed to a decrease in the overall number of claims entering the system, and newly implemented Health Care and Narcotics Strategies. The Health Care Strategy includes initiatives such as the Low Back Injury Program and Shoulder programs, which promote early access to care and return to work. The Narcotics Strategy includes increased oversight of narcotics support treatment goals, including quality of function, quality of life, and safe and sustained return to work.

Schedule 1	Health Care Payments by Leading Service Categories			
	Payment Year			
Service Category	2011 (000s)	% of 2011 Total	2012 (000s)	% of 2012 Total
Drug Benefits	\$ 81,432	17.4%	\$71,129	15.5%
Specialized Clinical Services and Programs	\$ 71,008	15.2%	\$81,090	17.7%
Physiotherapy, Chiropractic and other Non-Physician Treatment	\$ 46,483	9.9%	\$36,446	8.0%
Allowances (Clothing, Independent Living, Personal Care)	\$ 55,034	11.7%	\$55,670	12.2%
Physician Services via Ministry of Health & Long Term Care	\$ 41,802	8.9%	\$39,716	8.7%
Hospital In/Out Patient	\$ 38,092	8.1%	\$36,572	8.0%
Hearing Aid Devices and Services	\$ 28,343	6.1%	\$28,859	6.3%
Travel and Accommodations	\$ 26,439	5.6%	\$24,175	5.3%
Reports and Information	\$ 22,739	4.9%	\$27,832	6.1%
Medical Devices	\$ 19,692	4.2%	\$19,786	4.3%
Other	\$ 37,411	8.0%	\$36,218	7.9%
Total	\$468.5 (\$M)	100.0%	\$457.5 (\$M)	100.0%

External Provider Expense Payments

Since the implementation of the new Work Reintegration Program in November 2010, there has been a significant decrease in the payments for external providers. This decrease is a reflection of improved return to work outcomes for injured workers, and also due to fewer claims entering the system in recent years. In 2012, Schedule 1 claims experienced a 25% decrease in external provider payments compared with 2011. Education/training continues to be the largest category, representing approximately 55% of external provider payments in 2012.

Schedule 1	External Provider Payments by Leading Service Categories			
	Payment Year			
Service Category	2011 (000s)	% of 2011 Total	2012 (000s)	% of 2012 Total
Assessments/Evaluations	\$5,191	6.0%	\$5,138	8.0%
Education/Training	\$37,802	43.9%	\$35,416	54.8%
Placement & Retention	\$7,990	9.3%	\$6,322	9.8%
Provider Related	\$11,497	13.4%	-\$64	-0.1%
Supplies & Equipment	\$5,008	5.8%	\$4,033	6.2%
Travel Related	\$16,808	19.5%	\$12,187	18.9%
Other	\$1,806	2.1%	\$1,585	2.5%
Total	\$86.1 (\$M)	100.0%	\$64.6 (\$M)	100.0%

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Focus – Schedule 1 & 2

Modernization

In recent years, the WSIB has demonstrated progress in modernizing all key aspects of its business – delivering better claims management, better health care, and improved support for return to work.

The WSIB is working hard to find faster, easier and more efficient ways for people to do business with us. With an improved service delivery model, a proactive health care strategy, and enhanced WSIB-managed work reintegration, the WSIB has embraced sound, effective, and proven approaches to managing and modernizing its business.

Claims management

For the last 10 years, we've allowed almost 80% of all claims for benefits. This allowance rate hasn't changed, but workers and employers have benefitted from faster decision-making in more recent years.

In 2011, approximately 87% of eligibility decisions on claims were made within two weeks after we received them. In 2012, that percentage had risen to 92% – and more than half of all decisions are now made within 24 hours.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Focus – Schedule 1 & 2 (Continued)

Customer Service

A new service model has been implemented to provide employers with faster and more accessible service. The focus is to provide employers with live-answer, no-need-for-voicemail service and to resolve the majority of calls on first contact.

Since the implementation of a new live-answer operating model in our Employer Service Centre, 98% of calls from employers received a live answer in an average of less than one minute of the call being received in 2012.

We're easier to do business with, and we're providing better business outcomes. Key transactions can now be done by phone or online. Injuries, illnesses and exposures can now be reported over the phone to WSIB representatives, and we have a growing range of eServices that can be accessed 24/7 on our website to do things like register accounts, report injuries, pay premiums, and get clearance certificates. We've enhanced our e-reporting capabilities, allowing physicians to report medical information online.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Focus – Schedule 1 & 2 (Continued)

Health care

Recognizing that appropriate and timely medical care is important to an injured worker's recovery and return to work, the WSIB continues to invest in health care. We have expanded the network of specialized assessment and treatment services across the province for low back and shoulder injuries, resulting in better health care outcomes for injured workers in Ontario.

Please refer to the High Impact Claims chapter for additional information

Our Health Care Strategy is getting injured workers the right treatment sooner – helping them to get back to work. As a result of our health care investments, Schedule 1 and 2 health care payments are down from \$528 million in 2011 to \$516 million in 2012. Our overall costs are down, even though the average spend per worker has actually increased.

Return to work

Our modernized claims management and our new Health Care Strategy are supporting successful recovery and return to work – and the results are clear. In 2012, approximately 85% of Schedule 1 and 2 injured workers were off full Loss of Earnings (LOE) benefits one month after a Return to Work Specialist's involvement.

In 2012, our Return to Work Specialists and Work Transition Specialists made 23,000 Schedule 1 and 2 workplace visits to help workers and employers negotiate successful, safe return to work. In addition to the introduction of new roles to support return to work, we have also significantly increased program oversight of return to work since 2009 – meaning more quality management and accountability for ourselves and our providers.

Please refer to the Work Reintegration chapter for additional information

We know we can meet the challenges ahead as we continue to introduce enhanced programs and new technology to deliver even better value to workers and employers. We have more work ahead of us, but we are on-track to creating a modern, financially sustainable system that's promoting economic growth and productivity.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Glossary

Term	Business Definition
Allowed Lost Time Claim	A lost time claim is created when a worker suffers a work-related injury/disease which results in: • being off work past the day of accident • loss of wages/earnings, or • a permanent disability/impairment.
Allowed No Lost Time Claim	A no lost time claim results from a work-related injury where no time is lost from work, other than on the day of accident, but where health care is required. The health care costs resulting from the injury are paid by the WSIB.
Allowed Occupational Disease Fatalities	Allowed claims for workers who died of a work-related disease or condition
Allowed Traumatic Fatalities	Allowed claims for workers who died of a work-related traumatic incident
Average Days Lost	The average number of days lost for which wage loss benefits were paid for claims within 1 month, 3 months or 6 months after the injury/illness occurred.
Average Loss of Earnings (LOE) per Full Paid Day	Average amount paid for an entire day off work, adjusted for inflation
Benefit Payment Year	The year benefit payments were made to or on behalf of injured workers.
Benefit Payments	Payments made to or on behalf of injured and ill workers. Includes Loss of Earnings (LOE), Workers' Pension, Health Care, Future Economic Loss (FEL), Survivor Benefits, External Providers and Non-Economic Loss (NEL). Excludes benefit liabilities and claims administration costs.
Data Maturity	Data continues to be revised after the year has concluded as additional claims are reported and decisions on complex claims are made. The revision of data after the year has concluded is called "maturing". All data contained in this report is matured 3 months, with the exception of benefit payments which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.
eClearance (%)	A clearance certificate tool used for the online issuance and management of clearance certificates.
ePremium (%)	A premium remittance tool used for the online submission/reporting of premium information.
eRegistration (%)	An employer account registration tool used for the online submission of account registration information.
eService Usage	Active subscribed users of our online services
Eligibility Decisions within 2 Weeks	The percentage of claims where eligibility decisions are made within the targeted timeframe of 10 business days after their registration date. Excludes occupational disease, serious injury, fatality, withdrawn, abandoned and re-opened claims.
Employer	An employer means every person having in his, her or its service under a contract of service or apprenticeship another person engaged in work in or about an industry and includes, 1. a trustee, receiver, liquidator, executor or administrator who carries on an industry, 2. a person who authorizes or permits a learner to be in or about an industry for the purpose of undergoing training or probationary work, or 3. a deemed employer. Coverage under the WSIA only applies to those employers: • whose operations are compulsorily covered by Schedules 1 or 2 of the Act, or • whose operations have been added to Schedule 1 of the Act by application, or • who have optional insurance only
Entitlement Year	The year in which a decision was made on a claim.
External Provider Payments	These are payments associated with the reintegration program and represent payments to external agencies providing rehabilitation services, such as training programs to assist an injured worker's return to work and the costs of work transition assessments and plans, in the case of injured workers not returning to work with their pre-injury employer.
First Return to Work Specialist Referrals Within 12 Weeks	Cases with a first referral received by the Return to Work Program within 12 weeks of either the case's date of injury or latest recurrence date.
Future Economic Loss Benefit Payment	Compensation to a worker, who was injured after January 1, 1990 and prior to January 1, 1998 and suffers a workplace injury resulting in a permanent impairment or temporary disability for 12 continuous months.
Health Care Payment	Payments made on behalf of an injured or ill worker for professional services provided by health care practitioners, hospitals and health facilities as well as the cost of drugs, attendant services, home or vehicle modifications, assistive devices and prostheses, extraordinary transportation costs to obtain health care and other measures to facilitate independent living and to improve the quality of an injured or ill worker's life.
High Impact Claims	WSIB has identified a group of allowed lost time claims that have been shown to have significant impacts on workers and employers. These claims are those involving the low back, shoulder and fractures.
Illnesses (occupational disease)	An occupational disease is a health problem caused by exposure to a workplace health hazard. For more details, please refer to the Occupational Disease fact sheet located under the 'Workers' tab on the WSIB website.
Industry Sector	The WSIB's operations are organized into 17 industry sectors (Schedule 2 is a separate industry sector).
Injury	A worker who sustains a personal injury by accident arising out of and in the course of his or her employment is entitled to benefits under the insurance plan.

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.

Injury/Illness Year	The year in which injury or illness occurred.
Injury Event	Describes the manner in which the injury/disease was produced/inflicted and is based on the National Work Injuries Statistics Program (NWISP) coding standard (NWIS). This standard is based on the Canadian Standards Association (CSA) Z795-96 codes which allow for more detailed coding injury details.
Injury Source	The object, substance, exposure or bodily motion that directly produced or inflicted the injury/disease identified under Nature of Injury and is based on the National Work Injuries Statistics Program (NWISP) coding standard (NWIS). This standard is based on the Canadian Standards Association (CSA) Z795-96 codes which allow for more detailed coding injury details.
Labour Market Re-entry (LMR) Program	The Labour Market Re-entry Program was introduced January 1, 1998 as part of Bill 99. LMR services were outsourced to primary service providers who provided assessments, LMR planning, and case management services. These primary service providers used a variety of secondary service providers (public, not for profit, and private) to deliver education and training programs. The WSIB established a new integrated RTW and LMR program in November 2010 called the Work Reintegration Program.
Locked-In Claim	Those claims, with an injury/illness date on or after January 1, 1998 (Bill 99), where a final review of the loss of earnings benefit at 72 months post injury/illness has been completed and the benefit will continue to be paid to age 65, with few exceptions.
Loss of Earnings Benefits (LOE)	Wage loss benefits for time lost from work due to a work-related injury or illness occurring on or after January 1, 1998.
Lost Time Injury Rate (LTI)	The number of allowed lost-time injury and illness claims per 100 Full-Time Equivalent (FTE) workers for the injury year specified.
Nature of Injury	The principal physical characteristics of an injury/disease and based on the National Work Injuries Statistics Program (NWISP) coding standard (NWIS). This standard is based on the Canadian Standards Association (CSA) Z795-96 codes which allow for more detailed coding injury details.
No Lost Time Injury Rate (NLTI)	The number of allowed no lost-time injury and illness claims per 100 Full-Time Equivalent (FTE) workers for the injury year specified.
Non Economic Loss Benefits (NEL)	Compensation paid to a worker, beyond wage loss who suffers a permanent impairment as a result of an injury based on the severity of the permanent impairment and the age of the worker.
Non Locked-In Claim	Those claims, with an injury/illness date on or after January 1, 1998 (Bill 99), receiving loss of earnings benefits that may not be reviewed at the 72 month post injury/illness date.
Occupation	A major grouping of occupations that are coded based on National Occupational Classification standards.
Other Benefit	Payments made to or on behalf of injured and ill workers. Includes situational payments such as Temporary Total and Temporary Partial for Bill 162 claims (accident dates between January 2, 1990 and December 31, 1997) and pre-1990 claims.
Part of Body	The injured/disease part of body affected by an injury/disease and is directly linked to the nature of injury/disease which is based on the National Work Injuries Statistics Program (NWISP) coding standard (NWIS). This standard is based on the Canadian Standards Association (CSA) Z795-96 codes which allow for more detailed coding injury details.
Percentage of Workforce Covered	Percentage of the employed labour force that is covered under the WSIA.
Percentage Receiving Loss of Earnings Benefits	The percentage of injured or ill workers that continue to receive full or partial Loss of Earnings (LOE) benefits on the specified anniversary.
Permanent Impairment	Any permanent physical or functional abnormality or loss (including disfigurement) which results from an injury, and any psychological damage arising from the abnormality or loss. A worker's degree of permanent impairment is expressed as a percentage of total permanent impairment of the whole person.
Registered Claims	Registered claims for injuries, illnesses or fatalities reported to the WSIB in the year (as some claims are registered with the WSIB after the year in which the injury, illness or fatality occurred) and includes all allowed, denied, abandoned and pending claims.
Registration Year	Total number of claims registered with the WSIB by year. Some claims are registered with the WSIB after the year in which the injury, illness or fatality occurred.
Return to Work Specialist (RTWS)	The Return to Work (RTW) Specialist is an objective facilitator who intervenes in a case at the request of a Case Manager or workplace parties. When a Case Manager is unable to resolve or remove RTW barriers, the RTW Specialist will lead the early and safe RTW process by meeting on-site with workplace parties.
Schedule 1	Schedule 1 employers are those for which the WSIB is liable to pay benefit compensation for workers' claims. Schedule 1 employers are required by legislation to pay premiums to the WSIB and are protected by a system of collective liability. Since the WSIB pays benefits to injured workers out of money pooled in the insurance fund, Schedule 1 employers are relieved of individual responsibility for actual accident costs.
Schedule 2	Schedule 2 employers are employers that self-insure the provisions of benefits under the WSIA. Schedule 2 employers are liable to pay all benefit compensation and administration costs for the workers' claims. The WSIB administers the payment of the benefits for workers of Schedule 2 employers and recovers the cost of these benefits plus administration fees from the employers.
Statistics Canada – Labour Force Employment	Statistics Canada. Table 282-0008 - Labour force survey estimates (LFS), by North American Industry Classification System (NAICS), sex and age group, annual (persons unless otherwise noted). (accessed: April 29, 2013)
Survivor Benefit Payment	Benefits payments provided to a spouse, dependent children and other dependants when an injured worker suffers a fatality in the workplace or as a result of an occupational disease. Benefits include lump sum payments, monthly payments, bereavement counselling and burial expenses.
Work Reintegration (WR) Program	The Work Reintegration Program is a comprehensive and integrated approach to returning injured workers to employment. Early and ongoing support is provided to the workplace parties to create work reintegration plans. The focus is on return to the injury employer, and where that isn't possible, to provide high quality training and placement services that enable the worker to find a job with a new employer. The Work Reintegration Program, launched in November 2010, integrates Return to Work and Work Transition Programs.

Work Transition (WT) Program	The Work Transition Program replaced the outsourced Labour Market Re-entry (LMR) Program. Unlike the LMR program, Work Transition focuses first on helping the injured workers and employers find suitable and available work with the injury employer. The Work Transition Program provides new options to help workers remain with their employer including re-training and the alternative of part time employment in appropriate cases. When it is not possible for a worker to return to work with the injury employer, the Work Transition Program offers a broad range of services including high quality assessment, training and placement services to support workers to find a job with a new employer.
Work Transition Administrative Costs	Total administrative costs of the Work Transition Program.
Work Transition Plans Completed Resulting in Return to Work	Work Transition plans where the injured worker is employed at the conclusion of the plan. This measure excludes cases with prior Labour Market Re-entry plan services.
Work Transition Specialist (WTS)	Provide expert advice, vocational rehabilitation planning, and support workers and employers to co-ordinate work reintegration which may include accommodation and transition to a different job if necessary.
Work Transition/Labour Market Re-entry Plans Completed	Work Transition/Labour Market Re-entry plans where the injured worker is employed or employable at the conclusion of the plan.
Work Transition/Labour Market Re-entry Plans Completed Resulting in Return to Work	Work Transition/Labour Market Re-entry plans where the injured worker is employed at the conclusion of the plan.
Work Transition/Labour Market Re-entry Program Costs	Totals costs by service category (Assessment Evaluations, Education/Training, Placement & Retention, Provider Related, Supplies & Equipment, Travel Related, and Other) for the Work Transition/Labour Market Re-entry Programs.
Worker's Pension Benefit Payment	Pensions for injured workers suffering a workplace injury prior to January 1, 1990 based on the degree of the injured worker's permanent disability.
WSIB Covered Employment Schedule 1	The number of full time equivalent workers is an estimate based on employer reported insurable earnings divided by the average hourly wage for the rate group divided by 2,000 hours, it is assumed a person works 2,000 hours per year.
WSIB Covered Employment Schedule 2	The number of full time equivalent workers is an estimate based on data from Statistics Canada's Survey of Employment, Payrolls and Hours (SEPH).

Data in By the Numbers: 2012 WSIB Statistical Report may not match previously published results. This is due to factors such as data maturity, updated definitions and methodologies, and rounding. Data in By the Numbers is matured three months, with the exception of benefit payments, which represents cash paid during the year to or on behalf of injured workers and are not matured three months following year end.
