Martha, this is the list of questions still with ENERGY.

- Looking at the entire proposal, are there any groups of consumers who would not be eligible for any electricity price mitigation? (e.g. commercial consumers over 1MW, but not a part of ICI, or any others)
- How would consumers who do not currently pay HST (First Nations, other BPS) on their invoices be impacted by this proposal?
- For ICI participants, is there an analysis of the economic benefit of the ICI program, vs the 8% rebate? (specifically, could this possibly incent ICI participants to opt out of the program?)
- For rental units, would savings be passed on to the individual units by the landlords? If yes, how?
