Hi Andrew,
See below from the IESO.
Keley

T he removal of LRP II will result in a reduction in the Industrial rate (nominal $) of about $1.10/MWh on average over that period from that shown in LTEP 2013 (Fig 8, Pg 18) which ranges from $100/MWh in 2017 to $123/MWh in 2032.

W hile both residential and industrial customer classes are exposed, on average, to about the same HOEP increase, since the residential/Class B customers pay a much larger share of the GA they will see a corresponding larger share of the cost decreases in the GA. Hence the Class B customers will see a greater total share of the overall reduction from this action.
