

Ontario Electricity Pricing Comparison

Q: Seeking any messaging on Ontario's energy pricing – specifically – in our notes we have messaging that says that ON is about in the middle of the pack for electricity prices as against US states. Can we get some more info on that? How is that calculated and what is that based on? Is that an all-in calculation? Does that include the global adjustment or not?

External messaging: Are Ontario's industrial electricity rates higher than competing jurisdictions?

A. Ontario's average industrial electricity prices are close to the U.S. average, and in line with states like Ohio, Pennsylvania, and Michigan.
