

Electricity Price Outlook – Residential Consumers Option 1 (chosen)

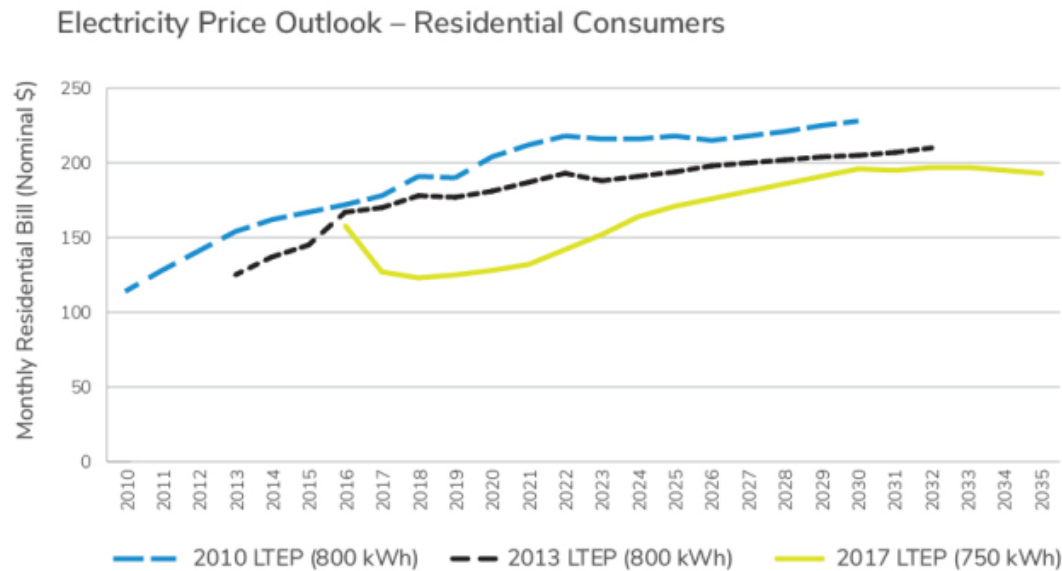

Source: IESO, Ministry of Energy

Note: Forecasts used in *Delivering Fairness and Choice* reflect prevailing patterns of consumption. Between late-2009 and mid-2016, the OEB defined the typical residential customer as a household that consumed 800 kWh of electricity per month. As of May 2016, the OEB changed their typical residential consumption to 750 kWh per month, due to declining household consumption.

(See Appendix for underlying data.)

Electricity Price Outlook – Residential Consumers Option 2
