Delivering Fairness and Choice: Ontario's Long-Term Energy Plan 2017

ontario.ca/energyplan

Back

Ontario's electricity system was more than 90% free of greenhouse gas emissions that cause climate change in 2016. Our success in building a clean and reliable energy system means we can renew our focus on helping Ontarians.

- Ontario's Fair Hydro Plan lowers electricity bills by 25% on average for residential consumers and will hold increases to the rate of inflation for four years.
- Ontario will help improve efficiency, reduce costs, and provide customers more choice by creating the right environment for utilities to modernize their businesses and electricity grids.
- Eligibility criteria for the Ontario Electricity Support Program has expanded and monthly credits have increased by 50%.
- Low-income customers can benefit from an enhanced electricity conservation program starting in 2018.
- Save on Energy for Home programs help households to become more energy efficient.
- Proposed enhancements to net metering will offer customers greater choice in producing their own clean, renewable energy as a way to reduce their electricity bills.
- Strengthened regulatory powers for the Ontario Energy Board will provide greater consumer protection for residents living in individually metered condos and apartment buildings.
- The First Nations Delivery Credit provides a 100 per cent credit for the delivery charge for eligible on-reserve First Nations households.
