Hi.

Just got this. So a few small edits coming. But, as discussed, Serge got told by Steve to toss the distribution options that we had discussed yesterday's FPC and make them ALL Delivery based.

So it changes the numbers on slides 15-20 from what you have seen before, but represent the same general concepts.

From a policy perspective, would represent the first time we are seeking to normalize / socialize the volumetric transmission charge and line loss that also make up the delivery line. We have not had any time to consider the implications or considerations of that request. Personally, I would have liked time to think up a rationale. Going to try to concoct one this morning.

Otherwise, I'm making a few edits on pages to add greater clarity, but tight deck with decisions specified.

Same password.
