

Delivery Charge Relief: Customer Variability - Appendix

- Hitting the Delivery line cap at \$55 would happen at different consumption levels for customers across the various LDC service territories due to the variability in distribution rates.

Consumption Threshold for \$55 Delivery Line Subsidy vs. Average monthly kwhs – Example LDCs

Customer more likely to receive benefit

Customer less likely to receive benefit

- LDCs whose average consumption level is greater than their \$55 cap consumption threshold would see a greater share of customers receive a benefit, compared to those with lower averages.
