

Labour Day weekend stats show up Wynne government power folly

To all, Because of the weather over the Labour Day weekend I had a look at the IESO reports to see how below normal temperatures and the wind on a couple of the days affected our consumption and the costs associated with that consumption. As is typical on the weekend and holidays we were paying the low end of the time of use (TOU) rates which became lower effective July 1st due to the Fair Hydro Act.

What shocked me is how many dollars we kicked down the road for future generations to pay for just those three days.

Find my take on the above here:
