

Ontario summer day means low power demand, high costs or consumers

To all, I got the suspicion that August 5th was one of those days when ratepayers got stuck with a big bill. This post confirms it wasn't pretty and we paid up for intermittent and unreliable power that wasn't needed. We were swamped by wind and solar generation completely out of sync with our demand.

The result of the day's cost won't be felt fully until the four year hiatus of the Fair Hydro Plan is over but it doesn't bode well as this is just one of many similar days that will come back to haunt us.

My friend, Scott Luft generated the data that allowed me to tell the story!
