Statement of facts and assumptions

It should be noted that the following background and facts represent a high level summary of the situation and represent those facts that are considered important in assessing the appropriate accounting treatment for the OTPP pension assets reported on the Province's books.

"The (Ontario Teachers') pension plan is jointly sponsored by the Ontario government, through the Minister of Education, and the executive of the Ontario Teachers' Federation (OTF). The OTF represents teachers, while the government represents employers.

OTF and the government are equally responsible for ensuring the pension plan has enough money to meet its long-term pension obligations. In addition, they appoint experienced, professional experts to the pension plan's Board.

Through a six-member Partners' Committee, the sponsors jointly:

- Set benefit levels
- Establish the contribution rate paid by working teachers (which is matched by the Ontario government and other designated employers)
- Decide how to address funding shortfalls or use surplus funds when they arise"

(Source: https://www.otpp.com/corporate/plan-governance)

The governing and other documents that are relevant to the accounting analysis are as follows:

- Teachers' Pension Act (TPA), including Schedule 1
- Partners' Agreement
- Funding Management Policy (FMP)
- Osler's letter dated September 20, 2016; we have not summarized this letter as it should be read in its entirety.

The assets of the pension plan are held by Ontario Teachers' in trust for the beneficiaries of the plan – teachers. The Government does not have unilateral access to the assets of the trust (including changing contribution amounts, taking contribution holidays, or withdrawals). Actions of this nature require negotiation and agreement between the two sponsors.

The following facts and assumptions have been accepted without further analysis or verification:

- As a jointly sponsored plan, the Plan meets the definition of a joint benefit plan under S. 3250 of the Public Sector Handbook.
- The actuarial and other assumptions that factored into the valuation used for accounting purposes, before considering the appropriateness of the recognition of an asset or the need for a valuation allowance related to any asset, are appropriate and meet the requirements of PS 3250.
- The Plan's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015. These financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook, which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the funding surplus or deficit.
- As at March 31, 2016, there were no written agreements in place to access the Plan surplus to reduce future minimum contributions or withdraw any amounts from the Plan.

- The OTPP is regulated by the Financial Services Commission of Ontario. Valuation reports must be filed with this regulator to monitor that assets of the fund are reasonably sufficient to meet the liabilities of the pension plan on a continuing basis. Per 78(1) of the Pension Benefits Act: No money that is surplus may be paid out of a pension fund to the employer without the prior consent of the Superintendent.
- The government received legal commentary about the role of the Superintendent. From this advice, management has concluded that despite this regulation the Province could utilize a surplus through contribution reductions as "Neither the PBA nor the regulations to the PBA (the "Regulations") require the Superintendent's consent for surplus to be *utilized* for a contribution holiday or to amend the contribution formula under the OTPP." Further, although changes to the OTPP text would be required to be registered with the Superintendent, "The authority of the Superintendent to refuse to register an amendment under the PBA (in whole or in part) is limited to circumstances where the amendment is void or if the pension plan with the amendment would cease to comply with the PBA and the Regulations." (Source: Osler memo dated September 26, 2016).

Relevant Extracts from the TPA

Section 5 (1.1) of the TPA states that the total amount of contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year. There can be instances where contributions would not be equal between the sponsors, such as the government's payments in connection with forgone inflation adjustments.

Section 10 of the TPA provides that the Minister of Education and the executive of OTF may enter into an agreement that provides for, among other things, the joint management of the Plan and the sharing of entitlement to gains or surplus under the Plan and of liability for deficiencies in the pension fund.

Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Partners) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement.[1] The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.

Relevant extracts from the Partners' Agreement

The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the *Pension Benefits Act,* appointing the OTTP Board, and defining the role of the Board.

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Partners to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

[1] Partners' Agreement, section 110.

If the partners cannot agree on the changes required to the Plan, a mediator is appointed to assist the Partners in coming up with an agreement. The mediator is responsible for submitting a report to the partners on his or her views on the positions of the partners and provide a recommendation to the Partners. If the partners do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Partners' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Relevant extracts from the FMP

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.

The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).
ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).
iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Partners are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both partners, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the partners (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Application of accounting principles

1. Is it necessary for a government to have a legally enforceable right to reduce future contributions in order to recognize a Pension Asset under PS 3250?

2. What is the role of legal uncertainty in assessing the government's expectation of future benefit from a Pension Asset?

Authoritative literature

The objectives of funding and accounting

.8 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.

.9 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. Accordingly, it is necessary to develop accounting estimates of liabilities for retirement benefits and expenses using an actuarial cost method and actuarial assumptions that ensure essential information required for fair presentation of financial condition and results of operations can be reported in government financial statements

.10 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.

Actuarial assumptions

.042 Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts. [SEPT. 2001]

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans*. [SEPT. 2001]

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Disclosure

.83 The notes and schedules integral to the financial statements would disclose the methods and judgments applied in accounting for accrued benefit obligations and expenses. Full disclosure is particularly important for retirement obligations because the measurements depend heavily upon judgments rather than objective evidence.

Limit on the carrying amount of an accrued benefit asset

.50 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.* [SEPT. 2001]

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset . The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.54 The adjusted benefit asset is then compared to the expected future benefit . When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Also consider the following definitions as set out in the glossary of PS 3250:

- An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).
- The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:
  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and
  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:
  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;
  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;
  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and
  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally.
Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

CONSIDERATION OF QUESTION 1

Application of PS 3250 to Joint Defined Benefit Plans

A joint defined benefit plan is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. We would note that paragraph .081 of PS 3250 clearly states that a government should account for its portion of the plan in accordance with the standards for defined benefit plans. As a result, the Province of Ontario accounts for its proportionate share of OTPP and has historically recorded its share as 50% of the plan.

The Province of Ontario's Public Accounts have included a Pension Asset related to OTPP since fiscal 2001/2002. We have been informed that this situation has arisen because, to this point in time, the government's share of the total contributions to the Plan plus the actual investment returns on the Plan's assets have exceeded the government's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by S 3250. S 3250.51 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons."

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province of Ontario has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44. We express no view on the actual rates that were chosen.

Application of the limit on the carrying amount of an accrued benefit asset

PS 3250.50 requires that an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. This comparison between the adjusted benefit asset and the expected future benefit informs whether a valuation allowance is required and if so, how much of a valuation allowance should be recorded.

PS 3250.52 contemplates that there are two ways in which a government can benefit from an accrued benefit asset. A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. As such, an expected future benefit would include the ability to either withdraw plan assets from the plan or reduce future contributions.

PS3250.52 also goes on to consider that an accrued benefit asset may become impaired when there is a plan surplus that the government is not entitled to benefit from fully. The paragraphs in the standard that follow determine how a government would go about considering the extent of any impairment, which would give rise to a valuation allowance. In order to make this determination, the government is required to consider the "expected future benefit", which would effectively create a ceiling for the asset. Here the guidance diverges between benefit expected to be realized through future reductions in contributions and those to be realized through withdrawal of surplus.

Specifically with respect to withdrawal of surplus, PS 3250.59 is very clear that expected future benefit can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. With regards to the applicability of this guidance to cases where the expected future benefit related to the Pension Asset is expected to be realized through reduced contributions, one might conclude that the guidance does not apply in this situation; while PS 3250.59 does introduce the concept of a legally enforceable right, it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions.

Rather, if the standard setters had intended legal enforceability to be the test, one might expect that they would have included that notion throughout the guidance, instead of only raising it in the context of a withdrawal of surplus.

In the situation at hand, the Province is not asserting an expected future benefit based on surplus withdrawal. Instead the Province's position is that the future benefit is expected to be realized through future contribution reductions. Therefore, we do not believe that 3250.59 applies in this case.

There is specific guidance (PS 3250.81) that requires the Government to account for a portion of the Plan in accordance with the standards for defined benefit plans.

Legal enforceability of a government's right to access a pension plan surplus through future contribution reductions is not necessary to justify recognition of a Pension Asset. The guidance in PS 3250 is the primary source of GAAP on this topic and, since it is clear, there is no need to look at any other potential sources of GAAP.

CONSIDERATION OF QUESTION 2

Since legal enforceability is not a necessary requirement to support a government's right to access a pension plan surplus through future contribution reductions, it is necessary to consider what role legal considerations should play in the measurement of the Pension Asset. PS 3250.52 requires one to consider "uncertainties as to a government's legal right to use a plan's accounting surplus." One interpretation of this guidance might be that it presents a lower threshold than legal enforceability. Specifically, the amount of Pension Asset that gets recorded needs to be subject to considerations around any legal uncertainties. This consideration will involve significant professional judgment. However, uncertainty does not need to be reduced to zero in order to recognize a Pension Asset.

PS 3250.53 to .58 lay out a mathematical calculation that determines the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in PS3250.055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where realization includes a reduction in future contributions. A valuation allowance is recorded against the Pension Asset to limit the asset value, if necessary, based on this analysis.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. This calculation is further described in PS 3250.56(a), which sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the Pension Asset value to be recorded in the accounts. For example, if the Pension Asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the Pension Asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in the determination of future minimum contributions required to be made by the government regardless of any surplus. There is no further guidance in S 3250 as to how this calculation should be performed and what restrictions or parameters should be factored into this calculation.

Determining the number of years of contributions to include should involve consideration of legal uncertainty as set out in PS 3250.52. With respect to this uncertainty, there are a number of considerations that may be relevant, including Osler's legal letter of September 20, 2016. That letter makes a number of observations about the Plan agreements and governing documents and does note that legal enforceability does not exist. However, as noted above legal enforceability is not required in this case.

Future reductions in contributions will need to be negotiated and agreed between both sponsors, who are required under the Plan governing documents to bargain in good faith. There are a number of factors to consider and it is possible for reasonable professionals to arrive at different conclusions, even when confronted with the same set of facts and circumstances. These considerations will be judgmental.

With respect to these judgments:

- Plan documents and design contemplates the shared nature of the Plan.
- Section 10 of the Partners agreement requires that the partners meet every 3 years to discuss changes to the Plan.
- There was a long history of sharing surpluses through various mechanisms during the 1990's when funding surpluses were more common. The FMP also contemplates a sharing of surpluses.
- In addition to the history of surplus utilization noted in the facts and assumptions, it is worth noting that the actions taken around inflation indexation and subsequent restoration of those benefits are a recent example of the sharing philosophy governing operation of the OTPP. Starting in 2011 in response to a deficit situation, it was determined that indexation would be reduced for teachers retiring after 2009. Consistent with the 50/50 approach inherent in the Plan operation, the government agreed to make payments (often referred to as "share the pain" payments) into the Plan that would effectively match the value of benefits foregone by teachers. In 2014, 2015 and 2016, surpluses were used to restore some of the lost indexation. This decision results in a decrease in the Province's "share the pain" payments.
- The FMP explicitly considers the possibility of contribution reductions at different funding levels, although both sponsors need to agree. The OTPP's investment performance has consistently outperformed expectations. If this situation continues the funding surplus can be expected to continue to grow. Modelling could be performed to help estimate when the different funding zones will be reached and probability of contribution reductions may be increased.
- Canada Revenue Agency establishes limits for pension surpluses. When these limits are breached, steps need to be taken to reduce the surplus. In such a situation, contribution reductions would be one way to reduce the surplus that would need to be negotiated by the parties within their overall framework for negotiation. Modelling could be done to develop expectations as to when these CRA limits could be expected to be reached.
- Contributions are generally borne equally by the Province and the teachers. It may be reasonable to presume that teachers will also want to see contribution reductions at some point. Admittedly, increases in benefits could also use any surplus; however, it may be reasonable to expect that the interests of taxpayers and teachers will need to be weighed in the "good faith" bargaining process such that unequal weighting towards increases in benefits may be unlikely.

- In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130.03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in PS 2130.13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

However, application and weighting of these and other considerations is a highly judgmental exercise and it is possible that there is a range of reasonable conclusions that may result in a range of reasonable estimates for the valuation allowance to be taken against the Pension Asset.

Given the complexities and degree of judgment involved in these matters, appropriate disclosure is a matter of significance as is recognized in 3250.83 which states, in part, *"Full disclosure is particularly important for retirement obligations because the measurements depend heavily upon judgments rather than objective evidence"*. This importance is also highlighted in the context of joint benefit plans in 3250.93 which requires that the unique nature and terms of any joint plans be disclosed.
