Dear Liz Sandals (MPP), Guelph, Ontario Liberal Party, Glenn Thibeault (MPP), Sudbury, Ontario Liberal Party, Chris Ballard (Minister of the Environment and Climate Change), ON

Guelph Solar has 13 people on our payroll. Guelph citizens are investing in their homes, participating in the new energy economy and reducing our natural gas CO2 emissions.

Ontario has invested significantly over the last 10 years in renewable energy when the costs solar were significant. The Fair Hydro Plan will cost Ontario billions and is undermining the investment that Ontario has made to become a leader in the clean energy economy.

Please act quickly to ensure local jobs are not lost and the investment in developing a clean energy economy is not squandered. Ontario citizens want lower cost electricity. Help Ontario home owners to invest in solar energy through a solar rebate program. At the very least, remove the HST off of solar equipment as has been offered other sources of energy - that would be fair for clean energy workers and homeowners.
