There is inherent risk in the financial estimates because the calculations are highly dependent on forecasts of the total consumption and bills of customers eligible for the RPP, the cost of borrowing, electricity demand and electricity market conditions and accounting assumptions. In addition, under the proposal, electricity prices would increase around 10% above forecast residential monthly bills from 2028 to 2047.The public may expect that the government is committed to reducing or holding constant the absolute cost of electricity for consumers in the longer term. Under the proposal, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future. (See page 17- Fiscal Pressure)

What are the key steps to deliver this proposal?

- May 11, 2017 - introduce legislation.
- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of the Fair Hydro Plan.
- Information postings of proposed regulations.
- June ?? 2017- Energy to bring regulations to TB/MBC.
- June ??, 2017- Energy to bring regulations to LRC/Cabinet.
- July 1st, 2017- the remaining Fair Hydro Plan reductions and programs would take effect. Programs that are not established on this day for technical implementation issues will have benefits that are retroactively applied to customers once program is operational in individual LDCs.

Commented [HT15]: Energy: Pelase refine

How will the changes be communicated?

Commented [HT16]: CO and Energy Comms to review.

On March 2, 2017, the Premier made a high profile announcement of additional relief to reduce electricity costs for Ontarians. Coinciding with this event, there was news releases with backgrounders, a technical briefing of the media, a public education campaign to raise awareness of the rebates and initiatives in place to reduce electricity bills, and an Ontario website that includes all the programs and initiatives that the government is undertaking to reduce electricity costs.

Building on the previous announcements, on May 11, 2017, the Premier is to make a high profile announcement of the plans to introduce the necessary legislation to implement Ontario's Fair Hydro Plan to provide additional relief to reduce electricity costs for Ontarians.

Given the risk identified that the GA financing may have a fiscal impact, communication will need to be clear that the proposed draft legislation meets the legal, accounting and financial requirements to not have a fiscal impact.

Notes and Recommendation from LRC

LRC item direct to Cabinet.

Cabinet Office Analysis

The proposed legislation allows for the implementation of the main elements of Ontario's Fair Hydro Plan (FHP) announced March 2 to provide further rate relief to Ontario electricity ratepayers. The FHP, including the Global Adjustment (GA) smoothing proposal, will provide residential consumers 25% in rate relief on their bills on average in aggregate (including the 8% announced in 2016) ~~for eligible consumers of the Regulated Price Plan (RPP)~~ between July 1, 2017 and April 31, 2018 ("The Fair Adjustment"). Other eligible farm and small business consumers under the Regulated Price Plan (RPP) would also receive a benefit. Electricity rates would then change by amounts prescribed in the regulations under the bill, with the intention to keep rate increases in line with Consumer Price Index (CPI) between May 1, 2018 and April 30, 2022.

Commented [AP17]: The 25% is an average or for every customer?

Commented [BA18]: Should sentence read "…25% in rate relief on average…"?

Commented [HT19]: Need to add estimate of benefits from the other programs, particularly RRRP as I think the impact, along with GA, is going to be closer to 40 or 50% for some customers

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the summer of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement, and conservation. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the Ministry has identified key priorities, and, Ontario's Fair Hydro Plan combined with new policy or program announcements in the LTEP, will provide the comprehensive future planning perspective for Ontario's energy sector.

Commented [HT20]: Confirm with PO and Energy

1. Refinancing the Global Adjustment

The proposed legislation establishes the framework to defer some of the current GA costs to future ratepayers by recognizing the longer term benefit of these assets to the electricity system ~~(similar to extending and re-financing a mortgage)~~. The methodology is based on the assumption that some generation assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts, and that future ratepayers are expected to continue to be able to utilize and benefit from these assets, and that they will also reduce the need to finance the development of new generation assets in the future.

Many of the contracted generation assets are expected to have useful lives that extend beyond the term of their current financial contracts (typically 20 years). Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives can provide benefits to the electricity system over many years.

According to a legal opinion by former Supreme Court Justice Binnie, the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations leaves the process more susceptible to constitutional challenge and could jeopardize the nature of the clean energy adjustment being a regulatory charge, and risk it being deemed an unlawful tax. The bill has been drafted to mitigate this risk and clearly articulates the desire to fairly attribute intergenerational costs and benefits. In addition the bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. (See page 16- Legal Risk)

Key elements of this component of the bill include:

Fair Adjustment

- July 1, 2017- April 30, 2018- the bill outlines an immediate 25% reduction (on average) in rates for eligible residential consumers in recognition of the investment in clean energy initiatives since 2005. Other RPP eligible consumers would also receive a benefit.
- May 1, 2018- April 30, 2022- the bill allows for rates to be set by regulation, with the intention that rates will increase in line with CPI over this time, consistent with government commitments. (See page 17- Fiscal Pressure)
- Ontario Energy Board (OEB) would calculate appropriate adjustments for "specified consumers".

Clean Energy Adjustment

- Determined by Ontario Power Generation (OPG) as the Financial Services Manager, the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principlale, interest, transaction costs and administrative costs associated with the fair adjustment (regulatory/investment asset).
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- May 1, 2022- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing Independent Electricity System Operator (IESO) and Local Distribution Companies (LDC) processes.
- In accordance with the regulations, the OEB to set the rate at which "specified consumers" are invoiced to recover the clean energy adjustment.

Fair Allocation Amount

Commented [AP21]: OPG intends to recover interest costs every year through the Trust in order to pay the interest payments from debt sourced from the capital markets. Thus, the clean energy adjustment charge would start in 2017, not 2022.

Commented [SQ222]: I had this comment initially too but the opposite side to this is that they will simply capitalize those costs and will result in increased financing requirements over the first 4 years.

- The fair allocation amount is calculated by the Financial Services Manager consistent with the principles of the bill.
- Established for the purposes of allocating the costs of the clean energy initiative to provide inter-generational fairness to rate payers; and aligning funding obligations that may be incurred during each reference period (typically every 6 months).
- Provided to the Minister of Energy who will ensure that the information is made public in an appropriate way.
- Principles established in the bill require proper match over time between the costs of providing facilities for clean electricity generation and conservation and the consumers who benefit from these investments in the system. (Page 16- Legal Risk; See page 17- Fiscal Pressure)

Financing Plan

- Prepared by the Financial Services Manager to determine if potential funding obligations should be incurred to acquire an investment interest in accordance with the bill.
- Provided to the Minister Energy who may remove the Financial Services Manager if the Financing Plan is not consistent with the principles of the bill and the Financial Services Manager has been given the opportunity to address the Minister's concerns.
- May be amended as determined by the Financial Services Manager.
- In practical terms, the Financing Plan is intended to show how debt (with varying degrees of incurrence dates, maturities, interest rates) will be used over time.
- The OEB would review the administrative costs of the Financial Services Manager.

Regulatory Asset and Investment Asset

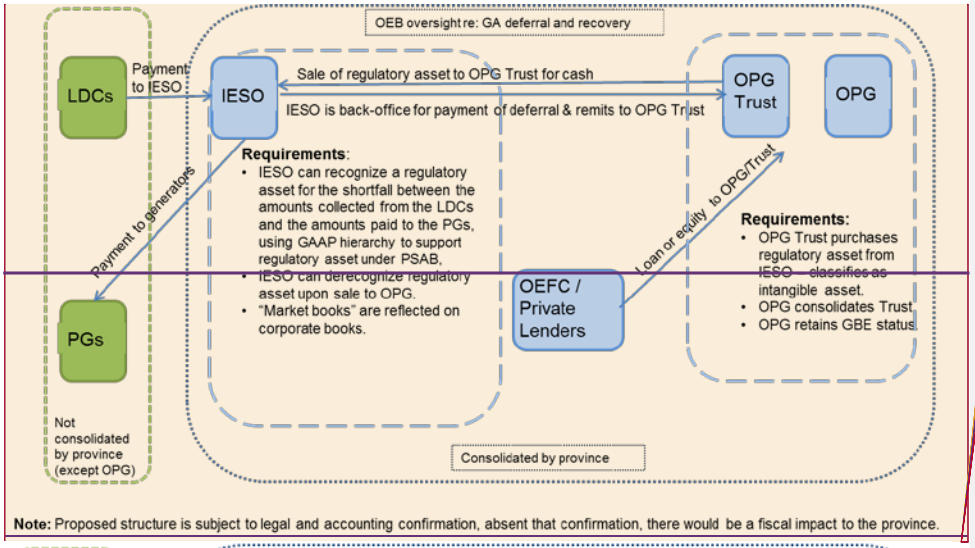
- Regulatory Asset created as IESO incurs a funding shortfall equal to the difference between the rates it receives after the implementation of the Fair Adjustment and the amounts owed under generation and conservation contracts (i.e. the comparison rate minus rates after fair adjustment).
- Subject to OEB approval, IESO would record the funding shortfall as a regulatory asset, as~~.~~ IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until May 1, 2022.
- The Financing Plan contemplates the Financial Services Manager establishing financing entities (OPG Trust/Special Purpose Vehicle (SPV)) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.

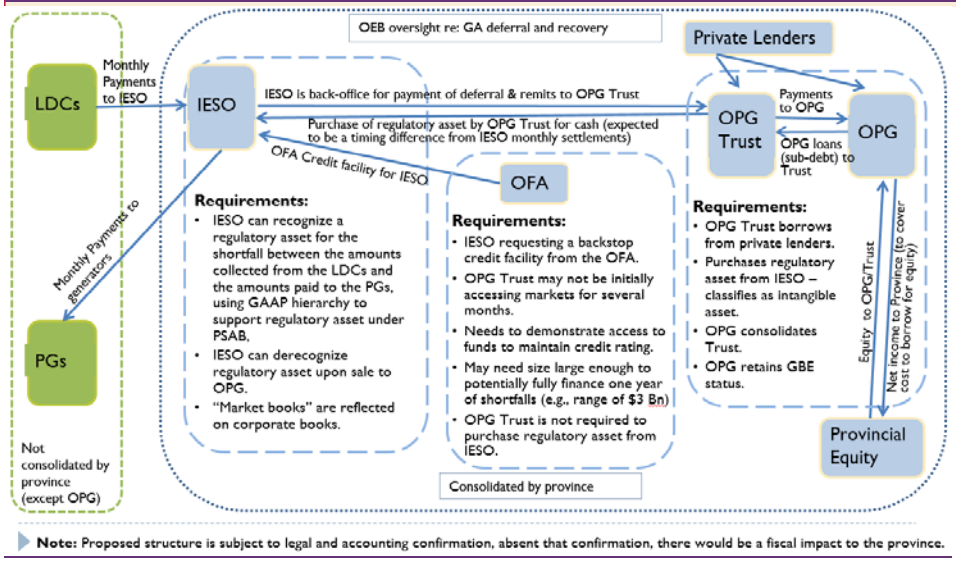
Commented [AP23]: Is this a different point from Ernst & Young advice OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.

- This purchase and sale turns the regulatory asset into an investment asset for the investment interest owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests including by dividend or undivided interest, consistent with the Financing Plan. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 5 years (May 1, 2022) the IESO has the rights to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority. (See page 17- Fiscal Pressure)
- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

Crown Undertaking (Guarantee or Backstop)

- The Crown would undertake not to do anything to adversely affect an investment asset or funding obligation, including hinder, impair, prejudice the charging, collection or remittance of the clean energy adjustment.
- The Minister of Energy, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill.
- The Minister of Finance, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.





Commented [HT24]: Energy: Please provide updated chart with terminology from the legislation embedded.

Commented [JK25]: CEFD/OFA will have an updated version for this provided to Energy.

Commented [RK26R25]: To show potential OFA financing to IESO.

Also, need to show Provincial equity into OPG (not from OEFC).

The bill establishes a structure in which the IESO records the GA cost recovery deferral ~~is recorded~~ as a regulatory asset (regulated by the OEB), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time ("The Fair Adjustment"). Eligible residential consumers would receive an average 25% reduction in electricity rates from July 1, 2017 to April 30, 2018. Eligible farms and small businesses would also receive a benefit. The IESO may then

Commented [HT27]: Section to be compared against the legislation's compendium when available.

sell the regulatory asset, at which time it becomes an investment asset. The investment asset owner (OPG Trust/SPV or trust "financing entities") may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

Under the proposed framework, OPG, acting in its role as the "Financial Services Manager", and following the principles in the bill, would regularly calculate the "Fair Allocation Amount" to ensure a proper match of the allocation of the intergenerational costs and benefits. To recoup the costs associated with the fair adjustment, consumers, starting in May 2022 would be invoiced the "Clean Energy Adjustment" on their electricity bills through existing IESO and LDC processes. The OEB would set the rates at which the clean energy adjustment could be collected.

OPG is planning to create a SPV or Trust to finance the GA. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. The variability will likely largely result from the financing of the SPV/Trust, and therefore OPG will have the ability to direct the financing of the Trust and both benefit from its financing strategy and be at risk as a result of it.

OPG Trust/SPV will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province (See Table 1 on page 4) and external financing through a securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG (to offset the interest on debt). ~~The proposed structure is expected to result in: (1) increase in provincial gross debt offset by an equivalent in regulatory assets resulting in no change in net debt, and (2) an increase in interest on debt paid by the province offset by higher earnings from OPG resulting in no impact on annual deficit of the province.~~

The legislation commits the government to backstop the financing if the government were to ever hinder the collection of the clean energy adjustment including revoking or changing the legislation or regulations. In other words, the OPG and its debt holders would have their capital guaranteed and paid for directly by the Province if such a situation were to occur. The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time, but could be as high as $1-1.5B annually [TBC]. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future.

The proposed structure has been extensively reviewed by KPMG (Energy advisor and IESO auditor), and the firm has provided an accounting opinion confirming the validity of the structure under PSAB [TBC]. This opinion can be made public [TBC] to support the governments rational for the plan. In addition, MAG and Blakes are confident that the structure is constitutionally sound, but that this will depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism. Based on the

Commented [SQ228]: Has this been a plan to define? Annually? Semi-annually? Monthly?

Commented [SQ229]: This should be prefaced with the fact that this risk only arises after OPG would have decided to purchase the Regulatory Asset from IESO, which it is not obligated to do so.

Commented [JK30]: In the latest legislative drafting we have seen.

Commented [SQ231]: This is focussed on accounting fiscal impact but cash flow impact is still present. Province would require cash to pay for IOD and unless those higher earnings (re: cash) is divdended back to Province to cover IOD payments, my guess would be that there is a fiscal impact in terms of IOD.

Commented [JK32]: Albeit relatively small compared to the deferred GA amounts.

Commented [HT33]: Based on commentary from implementation meetings. Don't believe this includes estimates of private lender borrowing costs. Please advise

Commented [SQ234]: Furthermore, this would likely be the "additional" impact. The Province's equity injection, which is currently offset by expected higher earnings, would cease to exists resulting in fiscal impact as well. Could result in $2-3B annually. Please confirm.

Commented [HT35]: Energy to confirm

current analysis there is a moderately high risk that the GA financing will have a fiscal impact on the Province before 2022.

For clarity: the following structural requirements have been met: [TBC]

Commented [HT36]: TBC based on receipt of professional opinions etc.

- IESO requirements :
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB;
  - IESO can derecognize regulatory asset upon sale to OPG;
  - "Market books" are reflected on corporate books; and,
  - OEB to act as regulator.

Commented [SQ237]: Currently, I don't believe this is the case for IESO. Will this be the case going forward?

- OPG requirements:
  - OPG Trust/SPV purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust/SPV; and
  - OPG retains GBE status.

However, despite the fact that the structure has satisfied the legal, fiscal, and accounting requirements outlined in the policy submission, there remain some fundamental risks that the province would need to accept:

- The structure is unique in Canada and possibly the world, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the Unites States, but officials are currently unaware of any example that would compare to the size, complexity, or fluidity of what is proposed;
- Complexity of the structure and length of deferral/recovery increases risk and decrease transparency;
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG's direct operations as the Financial Services Manager. While removal of the Financial Services Manager is provided for in the bill, in practice this may prove problematic once the system is operational; and
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and therefore its saleability. Could decrease amount of rate reduction achievable under this mechanism.

2. Enhancing electricity supports for vulnerable Ontarians and shifting costs from rate payer funded to government funded:

<u>Moving the Ontario Electricity Support Program (OESP) to the tax base:</u>

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The program was launched in January 2016 and has had roughly 30% enrolment. Consistent with Cabinet direction, the program was recently expanded to increase the existing benefit scales by 50% and provide additional credits to more households.

Under the expanded program the basic OESP benefit scale increased from $30-$50 to $45-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $68-$113 a month for eligible consumers.

The proposed bill amends the *Ontario Energy Board Act, 1998* to allow for the program to transition from the rate base to the tax base, and become administered by a Ministry or other entity as may be prescribed. The cost to the fiscal plan would be $186M in 2017/18. The bill provides further amendments designed to allow information sharing between the Ontario Disability Support Program (ODSP) and the entity responsible for OESP. The intention is that this information sharing will allow for the automat enrolment of individuals that are already enrolled under the ODSP, but it is currently unknown to what extent this will significantly impact the enrolment under the program.

Commented [HT38]: ENERGY: do you have any numbers on this point? Were other programs considered other than ODSP? Can we put something in about continuing efforts to improve the enrolment?

RRRP Enhancement (Delivery Charge Relief):

Currently, RRRP is a $241.9M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial. RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province, including Hydro One R2 customers. The delivery charge includes a distribution cost, which can vary across LDCs, and distribution costs are highest for Hydro One R2 and R1 (medium density) customers.

There are also some LDCs with relatively high distribution costs that, when coupled with high consumption patterns, can result in very high bills for consumers (Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma).

In 2016 the OEB made a ruling that all LDCs need to move to fixed distribution charges. The OEB found that fixed distribution charges would establish a fairer way to recover the costs of providing distribution service, and provides greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a distribution rate protection program and the ability to cap the distribution charges of prescribed distributors. The amendments also establish that this program will be funded by the tax base.

The intention is to draft regulations permitted under this section of the bill to Harmonize the fixed distribution rates to the lowest distribution cost of the LDCs mentioned above

at $38/month (which is the forecast rate for Northern Ontario Wires). If the costs of another LDC moved above these in the future, a regulation change would be required to for that LDC to receive RRRP. These enhancements are expected to benefit approximately 800,000 customers in Ontario.

Targeted RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level and cost to fiscal plan would be $344M in 2017/18, $243M of which is a transfer of existing programs to the tax base. If the legislation and required regulations are passed, the program would become active as of July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Commented [HT39]: Need new estimate of transferred program cost starting from July 1.

On-reserve First Nations Delivery Credit

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances. In this instance, historic grievances relate to lands affected by energy developments.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a tax base funded delivery credit program for on-reserve customers with the details as prescribed in the regulations. The intention is to enact regulations that would eliminate the delivery charge for all on-reserve First Nation household customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.

Eligible recipients would be automatically enrolled in the program (~21,500 customers) and receive an average monthly benefit of $85. The program will cost approximately $20M annually and, provided the legislation and regulations are passed, would become effective July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Expected Impacts of the Proposal on Electricity bills:

The impact of proposed legislation to an eligible customer's bill in July 2017 is an average 25% decrease (combined with the equivalent amount to the 8% provincial portion of the HST from ORECA effective Jan. 1, 2017) for residential consumers, followed by an increase in price over time. This includes the ~~8%~~ rebate for an equivalent amount to the 8% provincial portion of the HST that came into effect on January 1, 2017. Between May 2018 and April 2022 electricity rates will be set by regulation with the intention that rate increases would be kept in line with CPI.

Commented [HT40]: ENERGY: Can you provide analysis on the impact for customers that will receive the RRRP etc?

Customers that are eligible for the RRRP enhancements and the OESP will see further reductions in their electricity rates beyond the 25%

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021

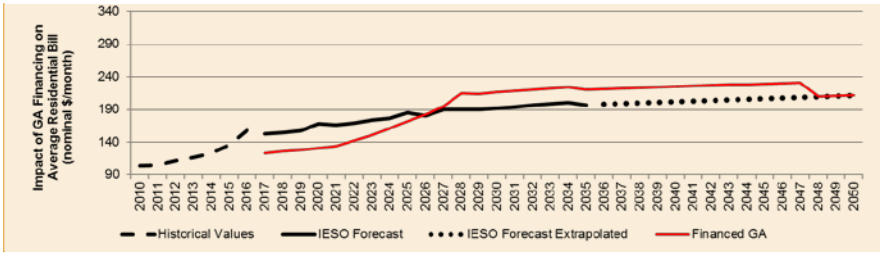
Notes: *Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.*

Commented [HT41]: Energy to provide updated chart

Risks and Considerations:

Future Impacts to Electricity Rates

Borrowing money to defer GA costs for ratepayers would lower costs in the short term but result in substantial debt and higher electricity prices in the future. Based on the GA deferral portion of the plan, electricity prices would increase to about 10% above the actual cost of electricity over the recovery period (peaking at 13%). The proposal may create the expectation that the government is committed to reducing or holding constant the absolute cost of electricity for consumers. Under the proposal, the government would not have the ability to control this portion of electricity rates in the future outside of recourse to the fiscal plan.



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at a maximum of 13% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Commented [HT42]: ENERGY to confirm if this needs to be updated.

The government may be criticized for creating a new debt structure which could be compared to the previous debt retirement charge (DRC). The previous debt retirement charge was removed from residential bills in January 2016 and is scheduled to be removed for remaining customers in April 2018.

Future repayment cost estimates are based on a static assumed interest rate of 5% (actual interest rate may differ), and forecast electricity market conditions and demand levels. Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA financing. This would increase the risk that the province would have to absorb some of the debt in the future. To mitigate against the risk that increased self-generation poses, the bill provides that the Clean Energy Adjustment may not be "set-off". In other words, it would exist as a separate and distinct component of the bill that could not be reduced by methods such as net-metering.

Not all generating assets will continue operations at the end of their contract. If the Fair Allocation Amount is not properly designed, future rate payers will be paying the cost for assets that are no longer in use, which would be unconstitutional-, unless legislatively authorised as a tax (See page 1~~6~~7- Legal Risk). High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators will shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the deferred GA and accumulated interest costs.

Accounting and Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. The structure of the GA deferral was designed to result in an (1) increase in provincial borrowing (2) no

increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on funding to OPG/ OPG Trust from the Province, an increase in interest on debt and an increase on income from OPG will result. The structure is also contingent on the size of the GA deferral that is seen as possible, which, as previously mentioned, increases the likelihood of pressures on the fiscal plan in the near future. (See page 17- Fiscal Pressure)

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust) as an obligation of the Province. Depending on the magnitude of the debt incurred, the Province's borrowing cost may be impacted.

The Ontario Auditor General (OAG) has been briefed on the proposal and has had access to the March 1, 2017 policy submission for the Fair Hydro Plan. While the auditors of OPG and IESO have provided their assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief [TBC] can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount is dependent on increased borrowing. All of the deferral is dependent on increased borrowing. The 18% referenced here is the limit based on review of the contracts and a Eurig assessment and also includes the rebate for an amount equivalent to the 8% provincial portion of the HST~~reduction~~ that was already provided.

Commented [HT43]: To be updated when Navigant prelim report and OPG analysis complete

Legal Risk – constitutionality of financing the GA

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing a portion of the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Former Supreme Court Justice Binnie has provided legal analysis of this proposal, stating that the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations could jeopardize the nature of this being a regulatory charge.

A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. If the government fails to establish that the relevant electricity generating assets will continue to

perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

The bill has been drafted to mitigate the constitutional risk of the proposal and clearly articulates the desire to balance the costs and benefits of assets across generations. The bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. In addition, external consultant Navigant has provided an interim report on the costs and benefits of the long lived assets which supports the previous conclusions regarding the size of the GA deferral that would be supportable. This is further supported by the conclusions of OPG's independent analysis of the question.

Commented [HT44]: TBC

Commented [HT45]: ENERGY please confirm. Need to clearly articulate any differences that may exist between these analyses

MAG and Blakes are confident that the structure is constitutionally sound, but, as identified above, that this will highly depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism.

In addition, the structure of the GA refinancing means that the infrastructure included as part of the clean energy adjustment (i.e. amortized over 30 instead of 20 years) will need to be in service over the entire 30 year amortization period or provide benefits to the system in some way over the whole period. In practice this may mean that the government will have limited ability to alter the generation mixture included under the clean energy adjustment, including natural gas generation facilities, which may at some point be seen as inconsistent with the province's commitments to reduce greenhouse gasses. This risk has been mitigated in the bill, by allowing for prescribed natural gas generation contracts to be excluded from the clean energy benefit calculation.

Commented [HT46]: Needs ground truthing

Fiscal Pressure

Commented [HT47]: TBS please review closely

This proposal aligns with the 2017 Budget fiscal plan, but involves significant ongoing risks. The proposal does not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections in this proposal are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant.
- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government has commissioned external opinions on the legal, fiscal, and accounting requirements. Energy's advisor and IESO auditor, KPMG, has provided an accounting opinion that the principles of the structure are sound, and this opinion can be released publicly when desired. This opinion may not change the likelihood of a contrary opinion by the OAG, but does provide a tool for government to point to in justifying its decisions.

Commented [HT48]: TBC

There is also a risk that credit rating agencies and the market may take an alternate view as to the size of the GA deferral that is possible before becoming unconstitutional. If the Fair Adjustment exceeds this analysis, it may increase the perceived risk of the investment asset and therefore its financeability / saleability, which would result in reduced market uptake and reduce the amount of near term rate reduction that would be achievable under the plan. This is why the increases in electricity rates between May 2018 and April 2022 are to be set by regulation as opposed to legislating that they increase by CPI. It may not be possible to legally hold the rate reductions to increase by CPI, and if the government wanted to hold to this commitment, the difference would need to come out of the fiscal plan, which has not been forecasted. Each percentage point of reduction that the structure cannot provide would result in an approximate $150M [TBC] cost to the tax base. This has not been provided for in the bill, but it is likely that the government will receive questioning along these lines and why the previously committed CPI increases are not explicitly stated in the bill.

Commented [HT49]: Needs ground truthing

Note that if the IESO is not able to sell the regulatory asset (i.e., the OPG SPV is unable to get financing to purchase it), then the IESO would require financing from an alternative source. The IESO has requested a backstop credit facility from the Ontario Financing Authority. This would be associated with a fiscal impact risk.

There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Legislative Officers

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the announcement of this suite of initiatives. The

Commented [HT50]: Energy to update.

OAG was provided copies of the Cabinet Submission seeking policy approval for Ontario's Fair Hydro Plan and has been briefed by officials from the Ministry of Energy. The OAG will have opportunities to publicly state her views through the Public Accounts committee in the summer of 2018 and in her pre-election report.

The Financial Accountability Officer (FAO) has not been consulted on this proposal and is expected to have an opinion on how this proposal may impact the state of the province's finances.

Commented [HT51]: Energy to update from discussion with FAO

OPG Mechanism

- Accountability
  - Bill attempts to balance the independence of the OPG trust with regulatory oversight and the market's need for certainty in recovering the GA financing that it provides.
  - Accountability to the government or the public, amount of government control of the entity, including future rate increases.

Commented [HT52]: Needs to be recast given limitation on control after initiated

- New structure
  - Structure is complex, involving:
    - IESO as originator of the regulated asset and responsible for flow of funds;
    - OEB as regulator of the new mechanism;
    - OPG responsible for financing and managing the mechanism; and
    - The Province providing ongoing equity capital infusions to OPG and backstop.
  - Addition of financial agency to current operational obligations of OPG – not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, could possibly dilute OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).
  - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise would be required.
  - Connection to BPS compensation framework/lack of national comparator.
  - Unknown transaction, admin, consultant costs. OEB would review OPG's cost as the Financial Services Manager
- Debt
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.

  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates

- Public perception/reaction (could be seen as similar to the process preparing Hydro One for IPO).

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake)
- The OESP matrix no longer follows the Low Income Measure (LIM) which creates inconsistencies between how programs are applied and may put pressure other provincial programs to increase funding amounts.

Benefits for all Consumer Classes

The Fair Hydro Plan includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need. It is likely that the government will be criticized for providing benefits to those who may not be in need (e.g., wealthy cottage communities, etc.).

Stakeholder Considerations:

General public (including residential and small businesses) – Likely support a proposal that is projected to provide up to 25% in rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but likely to question the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications.

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral the remainder of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an

expectation government is going to take specific action to mitigate their increases due to Cap & Trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. **Note:** Funding electricity support programs through the tax-base rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Commented [HT53]: Confirm work still ongoing on this piece

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generation as part of the "Clean Energy Adjustment."

Solar PV sector – May react negatively to price relief as it can be seen to undercut the affordability of distributed renewable generation assets such as solar PV, and undermines the economic arguments behind net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Delivery:

If passed, the legislation will enable the price mitigation measures to begin to take effect on July 1, 2017. The 2017 LTEP will be released to the public in the summer2017 and would reinforce/integrate with Ontario's Fair Hydro Plan. Regulations are required under the major components of the legislation in order to fully implement the initiative and clarify program details.

Commented [HT54]: TBC

1. Refinancing Global Adjustment assets in order to defer ratepayer costs / Mechanism to defer GA costs

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

Commented [HT55]: This needs more elaboration and confirmation. Last discussion I was part of on this point hadn't landed exactly how long it is expected that the IESO retains the Reg Asset for before sale to OPG.

2. Enhancing Social and Conservation Programs

OESP Enhancements

New OESP program details would require TB/MBC approval.

Changes to regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modelled after processes used for the OREC (8% rebate). The amendments made in this bill allow for a transition period where the program continues to draw on the existing IESO variance account until the account can no longer maintain the program. IESO is required to notify the Ministry of Energy when it expects the variance account to be depleted (likely sometime in the fall). At this time

The proposed changes will take time to implement as they would require changes to the central system and the LDCs' billing systems. The OEB and their central service provider will need to work with LDCs, MOF, and the CRA on the changes to this program (delivery mechanism, funding source, application system, eligibility).

Commented [HT56]: Requires update

RRRP Enhancement

Regulations would be required to establish the details of the program. OEB estimates that the implementation would take at least six months after finalizing regulations. For this reason it is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st which will put an immediate pressure on the OEB and LDCs as implementation is required no later than October 1, 2017. A mechanism will need to be created to ensure that all parties are aligned in the yearly forecasting and costing of the program.

On-Reserve First Nations Delivery Credit

The OEB would need to work with the LDCs to identify the eligible on-reserve consumers. A communications plan could include public release of the OEB report and a commitment to working with the LDCs on implementation details.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Once available, the rebate would appear on customer's electricity bills as a reduction in, or credit for, their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Linkages:

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer-fall 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The Ontario Rebate for Electricity for Electricity Consumers Act, 2016, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) was a five-year legislated program put in place as a broad-based (RPP-eligible), transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB expired on December 31, 2015.

Commented [RK57]: TBC

Debt Retirement Charge – On January 1, 2016 the government ended the electricity Debt Retirement Charge (DRC) on residential users, earlier than planned, and put in place the low-income targeted OESP, effective 2016. For all other consumers, the Electricity Act was amended so that the DRC is ~~schedul~~legislated to be removed ~~by~~ April 1, 2018.

Industrial Conservation Initiative – Ministry of Energy program implemented in January 2011 to help large industrial consumers reduce their electricity costs by ~~shirftin~~reducing electricity consumption ~~away from~~ in peak periods. As part of the Fair Hydro Plan, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all electricity consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – approved as part of Ontario's Fair Hydro Plan, and under development, the Affordability Fund is intended to expand access to conservation funding to targeted consumers that do not currently qualify as low-income for the purposes of the Home Assistance Program (HAP).

Commented [HT58]: insert

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded~~met~~ by the January 2017 ~~8%~~ rebate amount equal to the 8% provincial portion of the HST.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. **Note:** Funding electricity support programs through the tax-base rather than the rate base will also provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON)- is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed to "consider options for legislation/regulation change that lessen the impact on residential tenants of increased energy costs from cap and trade". As part of the review of the Residential Tenancies Act, the Ministry of Housing is working on a proposal that will address that commitment. The proposal is expected to come to Cabinet in spring 2017.

Commented [HT59]: To get updated language on the RTA amendments

Proposed Cabinet Minute

Approval of draft bill for introduction

Cabinet approved version XX-XX of this draft legislation for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

Hi Felix and Chris:

As mentioned earlier in the week, please find attached the draft CBN re the rate mitigation legislation for the TBS' review (password same as previous materials). This has been prepared with no materials and should be reviewed closely. I have left comments in the margin where I am looking for specific review or confirmation of particular details. I am interested in ensuring alignment in how we are characterizing the proposal and its risks.

The note is a bit on the longer side at the moment, so suggestions to economize without losing key pieces would also be helpful.

The note is undergoing concurrent review with Energy and my management now. My ADM will likely pass this along to Cindy and Karen for concurrent review given the time crunch, but please feel to pass along

as well.

Please try to have any comments to me by EOD on Monday so I can get it to my DM and the Secretary on Tuesday.

Have a great weekend,

One more point James along this line. It's fairly important in my view….

In the Minute, could we have something like:

"Note that the IESO has requested a credit facility from the OFA to manage liquidity issues between the time IESO requires financing for monthly settlements to meet the requirements of the FHP, and the time when OPG's SPV purchases the IESO regulatory asset, or as a backstop in the case of the regulatory asset not being purchased for a period of time. Note that the Minister of Finance will provide a directive to the OFA to provide a new or expanded credit facility for this purpose."

We are open to better wording from the experts on the Minute item and also as tied to the legislation terminology.

Subject: Re: DRAFT CBN For Review- Rate Mitigation- Due EOD May 1st

Hi John,

I think it might be nice to have in the Minute something like "Note that the IESO has requested a credit facility from the OFA to manage liquidity issues between the time IESO requires financing for monthly settlements to meet the requirements of the FHP, and the time when OPG's SPV purchases the IESO regulatory asset, or as a backstop in the case of the regulatory asset not being purchased for a period of time. Note that the Minister of Finance will provide a directive to the OFA to provide a new or expanded credit facility for this purpose."

Very open to better wording, or jargon tied to the draft legislation terminology.

Yes, we did.

We don't have a revised version yet but James shared the same FPC deck we have checking in.

Pls. see attached.

Hi John,

Do you have the final markup version we sent on the CBN? And a revised version?

Also, did we get it through TBS?

I'd like to keep the DMO in the loop on this.

Thanks,
Ron

Hi Felix and Chris:

As mentioned earlier in the week, please find attached the draft CBN re the rate mitigation legislation for the TBS' review (password same as previous materials). This has been prepared with no materials and should be reviewed closely. I have left comments in the margin where I am looking for specific review or confirmation of particular details. I am interested in ensuring alignment in how we are characterizing the proposal and its risks.

The note is a bit on the longer side at the moment, so suggestions to economize without losing key pieces would also be helpful.

The note is undergoing concurrent review with Energy and my management now. My ADM will likely pass this along to Cindy and Karen for concurrent review given the time crunch, but please feel to pass along as well.

Please try to have any comments to me by EOD on Monday so I can get it to my DM and the Secretary on Tuesday.

Have a great weekend,

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy

DRAFT Financing Global Adjustment

Commented [HT1]: Name as in EVista- Will update as item is updated.

Cabinet (info)	TB/MBC	Cabinet	Announcement	TB/MBC	Cabinet	Introduction
Feb 15, 2017	March 1, 2017	March 1, 2017	March 2, 2017	May 9, 2017	May 10, 2017	May 11, 2017

Summary of Proposal

The proposed legislation contains a variance from Cabinet direction, which is detailed in the ministry's variance memo and within this note.

Context for Decision:

This proposal follows Cabinet direction to the Ministry of Energy to take the necessary steps to implement electricity price mitigation initiatives that would provide additional rate relief to Ontario electricity ratepayers.

The proposed legislation enables approaches to fairly allocate the costs of the Global Adjustment (GA) amongst current and future electricity rate payers, and help the most vulnerable Ontarians through enhancements to electricity support programs through ~~tax base~~government funding. To fully implement the initiative, the Ministry of Energy will be seeking future approvals for regulations identified in the proposed bill, while working to maintain existing public policy objectives such as~~:~~ maintaining a reliable electricity system, Ontario's commitment to reducing the impacts of climate change and commitment to achieve greenhouse gas (GHG) reduction targets.

The proposed legislation:

1. Establishes a framework to finance a portion of the GA costs in order to reduce costs for ratepayers in the near term and spread the costs of the GA more fairly across ratepayers between July 1, 2017 and April 30, 2047:
   - July 1, 2017 to April 20, 2018, reduces after-tax electricity costs for specified consumers by 25%.
   - May, 1 2018 to April 31, 2022, electricity rates will be set by Order in Council (OIC) with the intention to keep increases in line with the Consumer Price Index (CPI) (See page 17- Fiscal Pressure)
   - May 1, 2022 to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and

Commented [RK2]: 30?

administrative costs, around 10% of total electricity costs. (See page 14- Future Impacts to Electricity Rates)

Commented [HT3]: TBC by Energy

- Through the bill and subsequent amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998, e*xpanding the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO), to provide for appropriate oversight, putting in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the deferred GA costs. (See page 19- OPG Mechanism)

2. Expands electricity support programs for the most vulnerable consumers and moves program costs from the rate base to the tax base. The bill amends the *Ontario Energy Board Act, 1998* to:
   - ~~M~~move the recently expanded Ontario Electricity Support Program (OESP) to ~~the tax base~~be government funded, transition the program to be administered by the Crown, and to enable information exchange between the Ontario Disability Support Program to potentially allow for automatic enrolment procedures to be established;
   - ~~Amends the Ontario Energy Board Act, 1998 to e~~enable a broadening of the Rural or Remote Electricity Rate Protection (RRRP), including harmonizing distribution costs for customers with the highest distribution rates and moving the program to be government funded~~the tax base~~; and,
   - ~~Amends the *Ontario Energy Board Act, 1998* to~~ require the establishment of a government funded program to provide a delivery credit to prescribed on reserve customers.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price, helping to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, fixed generation costs, such as renewables, gas and nuclear contracts, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:

  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable, per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable, per unit charge and a fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - Line Loss: The costs to recover electricity that is lost as heat when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service types are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. The more customers there are in the area, the lower the cost to serve. R1 customers are considered 'medium density' customers and R2 are considered 'low density customers.'
- **Ontario Power Generation (OPG) –** A business corporation owned by the ~~p~~Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to comment on various items.
- **Independent Electricity System Operator (IESO) –** An independent corporation and agency of the Ministry of Energy that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Class A Consumer –** Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A eligibility was lowered to 1MW for all consumer types. In April 2017, the threshold for Class A eligibility for manufacturing and certain industries, including greenhouses, was lowered to 500 kilowatts.
- **Non-RPP Class B Consumer –** Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a

volumetric rate applied to all electricity consumption. Class B consumers include those Class A eligible that choose not to become Class A.

- **Special Purpose Vehicle (SPV) –**
- **Security Interest –**

Commented [HT4]: TBS: Do you have standard language that you would recommend using?

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. There has been increased media attention and public pressure for the government to provide ratepayer relief. On March 2, 2017, the Ontario government announced its electricity rate mitigation package, Ontario's Fair Hydro Plan, which included the initiatives contained in the proposed legislation. The government has committed to implement further rate relief measures by the summer 2017.

What is the expected cost to government?

The total cost of the proposal is $4.1B [TBC] in 2017/18, $1,599M funded through the fiscal plan and $2.5B to be funded through the electricity rate base.

Commented [HT5]: TBC as this includes the equity injection.

Commented [BA6]: Is it clear here what is mean by "cost"? Fiscal cost plus higher debt.

Commented [JK7]: TBS, pls. check this figure. I believe there is an updated figure ($1,438?).

TABLE 1: Cost Impact ($M)	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	499	753	829	892
GA Financing	2,534	2,668	2,942	3,420
OPG Loan / Province's Capital Injection to OPG Share Purchase (i.e. equity injection or debt)	1,100	?	?	?
Cumulative Total	4,133	3,421	3,771	4,312

Commented [BA8]: Maybe should avoid calling this a loan

Commented [RK9]: Should this be just assumed att 44% of the GA deferral amount?

Commented [BA10]: May be confusing to total these amounts. 1st row is a fiscal impact while equity injection represents increase in debt but no fiscal impact.

Commented [JK11]: Also, 2.5bn in 2017-18 includes the Province's capital injection

Commented [HT12]: TBC

The proposed bill identifies OPG as the Financial Services Manager and would therefore take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from the IESO through OPG Trust. ~~The~~ OPG would finance these purchases through a combination of an equity investment by the Province ($1.1 B in 2017-18; See Table 1) and external private sector financing. The structure ~~has been designed to~~would increase gross debt of the Province (to finance the equity injection in OPG), ~~increase interest on debt related to that external debt,~~ increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. ~~The equity investment has been structured so that the underlying regulatory asset will offset the additional debt to not impact the province's net debt.~~

Commented [BA13]: Do we need to distinguish between OPG as financial service manager and OPG Trust which would purchase regulatory assets?

The estimate for the combined impact of the non-Global Adjustment initiatives that would begin in 2017/18 is expected to be $499M in 2017/18, growing to $753M in 2018/19 and rising. This represent~~s~~ed an additional pressure ~~on~~ that has been incorporated into the 2017 Budget's fiscal~~the~~ plan. These estimates are based on variable inputs such as program uptake and future energy consumption of various consumer groups, and are therefore subject to change.

Commented [BA14]: Additional to? As proposed this is the only pressure on the fiscal plan. The GA financing as proposed has no impact on the fiscal plan but does impact debt.

TABLE 2: Fiscal Impact ($M)	17-18	18-19	19-20	20-21
RRRP Enhancements*	344	472	484	497
OESP Enhancements	140	261	325	375
First Nations On-Reserve Delivery Credit	15	20	20	20
Total	499**	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate base.
****Note**: Value adjusted from $665 million to reflect July 2017 implementation.

There is inherent risk in the financial estimates because the calculations are highly dependent on forecasts of the total consumption and bills of customers eligible for the RPP, the cost of borrowing, electricity demand and electricity market conditions and accounting assumptions. In addition, under the proposal, electricity prices would increase around 10% above forecast residential monthly bills from 2028 to 2047.The public may expect that the government is committed to reducing or holding constant the absolute cost of electricity for consumers in the longer term. Under the proposal, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future. (See page 17- Fiscal Pressure)

What are the key steps to deliver this proposal?

- May 11, 2017 - introduce legislation.
- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of the Fair Hydro Plan.
- Information postings of proposed regulations.
- June ?? 2017- Energy to bring regulations to TB/MBC.
- June ??, 2017- Energy to bring regulations to LRC/Cabinet.
- July 1st, 2017- the remaining Fair Hydro Plan reductions and programs would take effect. Programs that are not established on this day for technical implementation issues will have benefits that are retroactively applied to customers once program is operational in individual LDCs.

Commented [HT15]: Energy: Pelase refine

How will the changes be communicated?

Commented [HT16]: CO and Energy Comms to review.

On March 2, 2017, the Premier made a high profile announcement of additional relief to reduce electricity costs for Ontarians. Coinciding with this event, there was news releases with backgrounders, a technical briefing of the media, a public education campaign to raise awareness of the rebates and initiatives in place to reduce electricity bills, and an Ontario website that includes all the programs and initiatives that the government is undertaking to reduce electricity costs.

Building on the previous announcements, on May 11, 2017, the Premier is to make a high profile announcement of the plans to introduce the necessary legislation to implement Ontario's Fair Hydro Plan to provide additional relief to reduce electricity costs for Ontarians.

Given the risk identified that the GA financing may have a fiscal impact, communication will need to be clear that the proposed draft legislation meets the legal, accounting and financial requirements to not have a fiscal impact.

Notes and Recommendation from LRC

LRC item direct to Cabinet.

Cabinet Office Analysis

The proposed legislation allows for the implementation of the main elements of Ontario's Fair Hydro Plan (FHP) announced March 2 to provide further rate relief to Ontario electricity ratepayers. The FHP, including the Global Adjustment (GA) smoothing proposal, will provide residential consumers 25% in rate relief on their bills on average in aggregate (including the 8% announced in 2016) ~~for eligible consumers of the Regulated Price Plan (RPP)~~ between July 1, 2017 and April 31, 2018 ("The Fair Adjustment"). Other eligible farm and small business consumers under the Regulated Price Plan (RPP) would also receive a benefit. Electricity rates would then change by amounts prescribed in the regulations under the bill, with the intention to keep rate increases in line with Consumer Price Index (CPI) between May 1, 2018 and April 30, 2022.

Commented [AP17]: The 25% is an average or for every customer?

Commented [BA18]: Should sentence read "…25% in rate relief on average…"?

Commented [HT19]: Need to add estimate of benefits from the other programs, particularly RRRP as I think the impact, along with GA, is going to be closer to 40 or 50% for some customers

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the summer of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement, and conservation. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the Ministry has identified key priorities, and, Ontario's Fair Hydro Plan combined with new policy or program announcements in the LTEP, will provide the comprehensive future planning perspective for Ontario's energy sector.

Commented [HT20]: Confirm with PO and Energy

1. Refinancing the Global Adjustment

The proposed legislation establishes the framework to defer some of the current GA costs to future ratepayers by recognizing the longer term benefit of these assets to the electricity system ~~(similar to extending and re-financing a mortgage)~~. The methodology is based on the assumption that some generation assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts, and that future ratepayers are expected to continue to be able to utilize and benefit from these assets, and that they will also reduce the need to finance the development of new generation assets in the future.

Many of the contracted generation assets are expected to have useful lives that extend beyond the term of their current financial contracts (typically 20 years). Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives can provide benefits to the electricity system over many years.

According to a legal opinion by former Supreme Court Justice Binnie, the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations leaves the process more susceptible to constitutional challenge and could jeopardize the nature of the clean energy adjustment being a regulatory charge, and risk it being deemed an unlawful tax. The bill has been drafted to mitigate this risk and clearly articulates the desire to fairly attribute intergenerational costs and benefits. In addition the bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. (See page 16- Legal Risk)

Key elements of this component of the bill include:

Fair Adjustment

- July 1, 2017- April 30, 2018- the bill outlines an immediate 25% reduction (on average) in rates for eligible residential consumers in recognition of the investment in clean energy initiatives since 2005. Other RPP eligible consumers would also receive a benefit.
- May 1, 2018- April 30, 2022- the bill allows for rates to be set by regulation, with the intention that rates will increase in line with CPI over this time, consistent with government commitments. (See page 17- Fiscal Pressure)
- Ontario Energy Board (OEB) would calculate appropriate adjustments for "specified consumers".

Clean Energy Adjustment

- Determined by Ontario Power Generation (OPG) as the Financial Services Manager, the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principlale, interest, transaction costs and administrative costs associated with the fair adjustment (regulatory/investment asset).
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- May 1, 2022- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing Independent Electricity System Operator (IESO) and Local Distribution Companies (LDC) processes.
- In accordance with the regulations, the OEB to set the rate at which "specified consumers" are invoiced to recover the clean energy adjustment.

Fair Allocation Amount

Commented [AP21]: OPG intends to recover interest costs every year through the Trust in order to pay the interest payments from debt sourced from the capital markets. Thus, the clean energy adjustment charge would start in 2017, not 2022.

Commented [SQ222]: I had this comment initially too but the opposite side to this is that they will simply capitalize those costs and will result in increased financing requirements over the first 4 years.

- The fair allocation amount is calculated by the Financial Services Manager consistent with the principles of the bill.
- Established for the purposes of allocating the costs of the clean energy initiative to provide inter-generational fairness to rate payers; and aligning funding obligations that may be incurred during each reference period (typically every 6 months).
- Provided to the Minister of Energy who will ensure that the information is made public in an appropriate way.
- Principles established in the bill require proper match over time between the costs of providing facilities for clean electricity generation and conservation and the consumers who benefit from these investments in the system. (Page 16- Legal Risk; See page 17- Fiscal Pressure)

Financing Plan

- Prepared by the Financial Services Manager to determine if potential funding obligations should be incurred to acquire an investment interest in accordance with the bill.
- Provided to the Minister Energy who may remove the Financial Services Manager if the Financing Plan is not consistent with the principles of the bill and the Financial Services Manager has been given the opportunity to address the Minister's concerns.
- May be amended as determined by the Financial Services Manager.
- In practical terms, the Financing Plan is intended to show how debt (with varying degrees of incurrence dates, maturities, interest rates) will be used over time.
- The OEB would review the administrative costs of the Financial Services Manager.

Regulatory Asset and Investment Asset

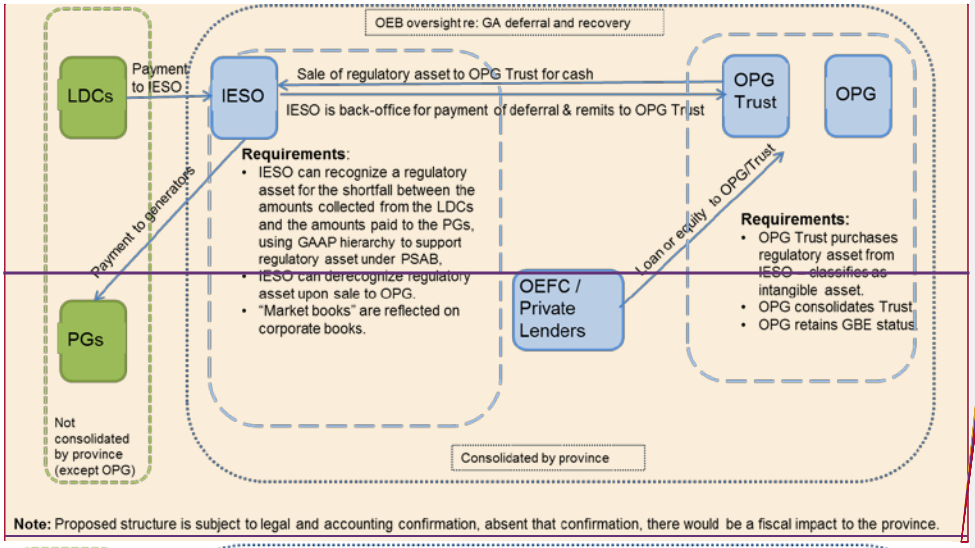
- Regulatory Asset created as IESO incurs a funding shortfall equal to the difference between the rates it receives after the implementation of the Fair Adjustment and the amounts owed under generation and conservation contracts (i.e. the comparison rate minus rates after fair adjustment).
- Subject to OEB approval, IESO would record the funding shortfall as a regulatory asset, as~~.~~ IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until May 1, 2022.
- The Financing Plan contemplates the Financial Services Manager establishing financing entities (OPG Trust/Special Purpose Vehicle (SPV)) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.

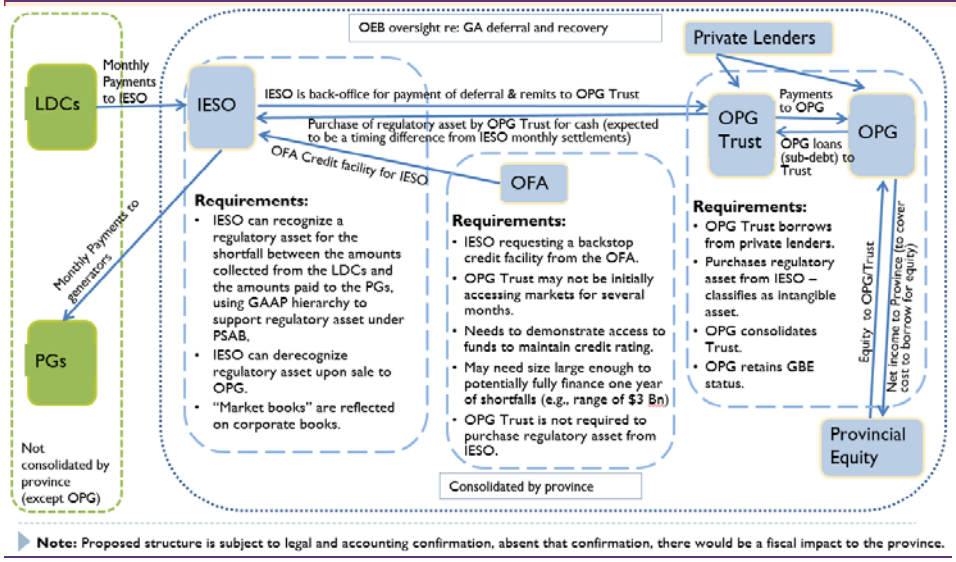
Commented [AP23]: Is this a different point from Ernst & Young advice OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.

- This purchase and sale turns the regulatory asset into an investment asset for the investment interest owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests including by dividend or undivided interest, consistent with the Financing Plan. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 5 years (May 1, 2022) the IESO has the rights to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority. (See page 17- Fiscal Pressure)
- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

Crown Undertaking (Guarantee or Backstop)

- The Crown would undertake not to do anything to adversely affect an investment asset or funding obligation, including hinder, impair, prejudice the charging, collection or remittance of the clean energy adjustment.
- The Minister of Energy, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill.
- The Minister of Finance, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.





Commented [HT24]: Energy: Please provide updated chart with terminology from the legislation embedded.

Commented [JK25]: CEFD/OFA will have an updated version for this provided to Energy.

Commented [RK26R25]: To show potential OFA financing to IESO.

Also, need to show Provincial equity into OPG (not from OEFC).

The bill establishes a structure in which the IESO records the GA cost recovery deferral ~~is recorded~~ as a regulatory asset (regulated by the OEB), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time ("The Fair Adjustment"). Eligible residential consumers would receive an average 25% reduction in electricity rates from July 1, 2017 to April 30, 2018. Eligible farms and small businesses would also receive a benefit. The IESO may then

Commented [HT27]: Section to be compared against the legislation's compendium when available.

sell the regulatory asset, at which time it becomes an investment asset. The investment asset owner (OPG Trust/SPV or trust "financing entities") may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

Under the proposed framework, OPG, acting in its role as the "Financial Services Manager", and following the principles in the bill, would regularly calculate the "Fair Allocation Amount" to ensure a proper match of the allocation of the intergenerational costs and benefits. To recoup the costs associated with the fair adjustment, consumers, starting in May 2022 would be invoiced the "Clean Energy Adjustment" on their electricity bills through existing IESO and LDC processes. The OEB would set the rates at which the clean energy adjustment could be collected.

OPG is planning to create a SPV or Trust to finance the GA. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. The variability will likely largely result from the financing of the SPV/Trust, and therefore OPG will have the ability to direct the financing of the Trust and both benefit from its financing strategy and be at risk as a result of it.

OPG Trust/SPV will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province (See Table 1 on page 4) and external financing through a securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG (to offset the interest on debt). ~~The proposed structure is expected to result in: (1) increase in provincial gross debt offset by an equivalent in regulatory assets resulting in no change in net debt, and (2) an increase in interest on debt paid by the province offset by higher earnings from OPG resulting in no impact on annual deficit of the province.~~

The legislation commits the government to backstop the financing if the government were to ever hinder the collection of the clean energy adjustment including revoking or changing the legislation or regulations. In other words, the OPG and its debt holders would have their capital guaranteed and paid for directly by the Province if such a situation were to occur. The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time, but could be as high as $1-1.5B annually [TBC]. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future.

The proposed structure has been extensively reviewed by KPMG (Energy advisor and IESO auditor), and the firm has provided an accounting opinion confirming the validity of the structure under PSAB [TBC]. This opinion can be made public [TBC] to support the governments rational for the plan. In addition, MAG and Blakes are confident that the structure is constitutionally sound, but that this will depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism. Based on the

Commented [SQ228]: Has this been a plan to define? Annually? Semi-annually? Monthly?

Commented [SQ229]: This should be prefaced with the fact that this risk only arises after OPG would have decided to purchase the Regulatory Asset from IESO, which it is not obligated to do so.

Commented [JK30]: In the latest legislative drafting we have seen.

Commented [SQ231]: This is focussed on accounting fiscal impact but cash flow impact is still present. Province would require cash to pay for IOD and unless those higher earnings (re: cash) is divdended back to Province to cover IOD payments, my guess would be that there is a fiscal impact in terms of IOD.

Commented [JK32]: Albeit relatively small compared to the deferred GA amounts.

Commented [HT33]: Based on commentary from implementation meetings. Don't believe this includes estimates of private lender borrowing costs. Please advise

Commented [SQ234]: Furthermore, this would likely be the "additional" impact. The Province's equity injection, which is currently offset by expected higher earnings, would cease to exists resulting in fiscal impact as well. Could result in $2-3B annually. Please confirm.

Commented [HT35]: Energy to confirm

current analysis there is a moderately high risk that the GA financing will have a fiscal impact on the Province before 2022.

For clarity: the following structural requirements have been met: [TBC]

Commented [HT36]: TBC based on receipt of professional opinions etc.

- IESO requirements :
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB;
  - IESO can derecognize regulatory asset upon sale to OPG;
  - "Market books" are reflected on corporate books; and,
  - OEB to act as regulator.

Commented [SQ237]: Currently, I don't believe this is the case for IESO. Will this be the case going forward?

- OPG requirements:
  - OPG Trust/SPV purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust/SPV; and
  - OPG retains GBE status.

However, despite the fact that the structure has satisfied the legal, fiscal, and accounting requirements outlined in the policy submission, there remain some fundamental risks that the province would need to accept:

- The structure is unique in Canada and possibly the world, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the Unites States, but officials are currently unaware of any example that would compare to the size, complexity, or fluidity of what is proposed;
- Complexity of the structure and length of deferral/recovery increases risk and decrease transparency;
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG's direct operations as the Financial Services Manager. While removal of the Financial Services Manager is provided for in the bill, in practice this may prove problematic once the system is operational; and
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and therefore its saleability. Could decrease amount of rate reduction achievable under this mechanism.

2. Enhancing electricity supports for vulnerable Ontarians and shifting costs from rate payer funded to government funded:

<u>Moving the Ontario Electricity Support Program (OESP) to the tax base:</u>

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The program was launched in January 2016 and has had roughly 30% enrolment. Consistent with Cabinet direction, the program was recently expanded to increase the existing benefit scales by 50% and provide additional credits to more households.

Under the expanded program the basic OESP benefit scale increased from $30-$50 to $45-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $68-$113 a month for eligible consumers.

The proposed bill amends the *Ontario Energy Board Act, 1998* to allow for the program to transition from the rate base to the tax base, and become administered by a Ministry or other entity as may be prescribed. The cost to the fiscal plan would be $186M in 2017/18. The bill provides further amendments designed to allow information sharing between the Ontario Disability Support Program (ODSP) and the entity responsible for OESP. The intention is that this information sharing will allow for the automat enrolment of individuals that are already enrolled under the ODSP, but it is currently unknown to what extent this will significantly impact the enrolment under the program.

Commented [HT38]: ENERGY: do you have any numbers on this point? Were other programs considered other than ODSP? Can we put something in about continuing efforts to improve the enrolment?

RRRP Enhancement (Delivery Charge Relief):

Currently, RRRP is a $241.9M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial. RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province, including Hydro One R2 customers. The delivery charge includes a distribution cost, which can vary across LDCs, and distribution costs are highest for Hydro One R2 and R1 (medium density) customers.

There are also some LDCs with relatively high distribution costs that, when coupled with high consumption patterns, can result in very high bills for consumers (Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma).

In 2016 the OEB made a ruling that all LDCs need to move to fixed distribution charges. The OEB found that fixed distribution charges would establish a fairer way to recover the costs of providing distribution service, and provides greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a distribution rate protection program and the ability to cap the distribution charges of prescribed distributors. The amendments also establish that this program will be funded by the tax base.

The intention is to draft regulations permitted under this section of the bill to Harmonize the fixed distribution rates to the lowest distribution cost of the LDCs mentioned above

at $38/month (which is the forecast rate for Northern Ontario Wires). If the costs of another LDC moved above these in the future, a regulation change would be required to for that LDC to receive RRRP. These enhancements are expected to benefit approximately 800,000 customers in Ontario.

Targeted RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level and cost to fiscal plan would be $344M in 2017/18, $243M of which is a transfer of existing programs to the tax base. If the legislation and required regulations are passed, the program would become active as of July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Commented [HT39]: Need new estimate of transferred program cost starting from July 1.

On-reserve First Nations Delivery Credit

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances. In this instance, historic grievances relate to lands affected by energy developments.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a tax base funded delivery credit program for on-reserve customers with the details as prescribed in the regulations. The intention is to enact regulations that would eliminate the delivery charge for all on-reserve First Nation household customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.

Eligible recipients would be automatically enrolled in the program (~21,500 customers) and receive an average monthly benefit of $85. The program will cost approximately $20M annually and, provided the legislation and regulations are passed, would become effective July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Expected Impacts of the Proposal on Electricity bills:

The impact of proposed legislation to an eligible customer's bill in July 2017 is an average 25% decrease (combined with the equivalent amount to the 8% provincial portion of the HST from ORECA effective Jan. 1, 2017) for residential consumers, followed by an increase in price over time. This includes the ~~8%~~ rebate for an equivalent amount to the 8% provincial portion of the HST that came into effect on January 1, 2017. Between May 2018 and April 2022 electricity rates will be set by regulation with the intention that rate increases would be kept in line with CPI.

Commented [HT40]: ENERGY: Can you provide analysis on the impact for customers that will receive the RRRP etc?

Customers that are eligible for the RRRP enhancements and the OESP will see further reductions in their electricity rates beyond the 25%

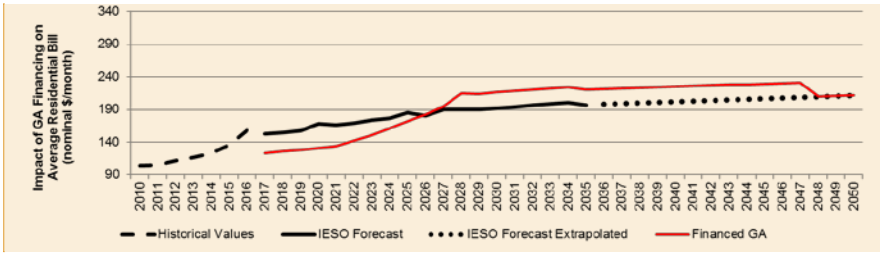
Notes: *Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.*

Commented [HT41]: Energy to provide updated chart

Risks and Considerations:

Future Impacts to Electricity Rates

Borrowing money to defer GA costs for ratepayers would lower costs in the short term but result in substantial debt and higher electricity prices in the future. Based on the GA deferral portion of the plan, electricity prices would increase to about 10% above the actual cost of electricity over the recovery period (peaking at 13%). The proposal may create the expectation that the government is committed to reducing or holding constant the absolute cost of electricity for consumers. Under the proposal, the government would not have the ability to control this portion of electricity rates in the future outside of recourse to the fiscal plan.



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at a maximum of 13% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Commented [HT42]: ENERGY to confirm if this needs to be updated.

The government may be criticized for creating a new debt structure which could be compared to the previous debt retirement charge (DRC). The previous debt retirement charge was removed from residential bills in January 2016 and is scheduled to be removed for remaining customers in April 2018.

Future repayment cost estimates are based on a static assumed interest rate of 5% (actual interest rate may differ), and forecast electricity market conditions and demand levels. Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA financing. This would increase the risk that the province would have to absorb some of the debt in the future. To mitigate against the risk that increased self-generation poses, the bill provides that the Clean Energy Adjustment may not be "set-off". In other words, it would exist as a separate and distinct component of the bill that could not be reduced by methods such as net-metering.

Not all generating assets will continue operations at the end of their contract. If the Fair Allocation Amount is not properly designed, future rate payers will be paying the cost for assets that are no longer in use, which would be unconstitutional-, unless legislatively authorised as a tax (See page 1~~6~~7- Legal Risk). High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators will shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the deferred GA and accumulated interest costs.

Accounting and Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. The structure of the GA deferral was designed to result in an (1) increase in provincial borrowing (2) no

increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on funding to OPG/ OPG Trust from the Province, an increase in interest on debt and an increase on income from OPG will result. The structure is also contingent on the size of the GA deferral that is seen as possible, which, as previously mentioned, increases the likelihood of pressures on the fiscal plan in the near future. (See page 17- Fiscal Pressure)

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust) as an obligation of the Province. Depending on the magnitude of the debt incurred, the Province's borrowing cost may be impacted.

The Ontario Auditor General (OAG) has been briefed on the proposal and has had access to the March 1, 2017 policy submission for the Fair Hydro Plan. While the auditors of OPG and IESO have provided their assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief [TBC] can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount is dependent on increased borrowing. All of the deferral is dependent on increased borrowing. The 18% referenced here is the limit based on review of the contracts and a Eurig assessment and also includes the rebate for an amount equivalent to the 8% provincial portion of the HST~~reduction~~ that was already provided.

Commented [HT43]: To be updated when Navigant prelim report and OPG analysis complete

Legal Risk – constitutionality of financing the GA

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing a portion of the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Former Supreme Court Justice Binnie has provided legal analysis of this proposal, stating that the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations could jeopardize the nature of this being a regulatory charge.

A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. If the government fails to establish that the relevant electricity generating assets will continue to

perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

The bill has been drafted to mitigate the constitutional risk of the proposal and clearly articulates the desire to balance the costs and benefits of assets across generations. The bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. In addition, external consultant Navigant has provided an interim report on the costs and benefits of the long lived assets which supports the previous conclusions regarding the size of the GA deferral that would be supportable. This is further supported by the conclusions of OPG's independent analysis of the question.

Commented [HT44]: TBC

Commented [HT45]: ENERGY please confirm. Need to clearly articulate any differences that may exist between these analyses

MAG and Blakes are confident that the structure is constitutionally sound, but, as identified above, that this will highly depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism.

In addition, the structure of the GA refinancing means that the infrastructure included as part of the clean energy adjustment (i.e. amortized over 30 instead of 20 years) will need to be in service over the entire 30 year amortization period or provide benefits to the system in some way over the whole period. In practice this may mean that the government will have limited ability to alter the generation mixture included under the clean energy adjustment, including natural gas generation facilities, which may at some point be seen as inconsistent with the province's commitments to reduce greenhouse gasses. This risk has been mitigated in the bill, by allowing for prescribed natural gas generation contracts to be excluded from the clean energy benefit calculation.

Commented [HT46]: Needs ground truthing

Fiscal Pressure

Commented [HT47]: TBS please review closely

This proposal aligns with the 2017 Budget fiscal plan, but involves significant ongoing risks. The proposal does not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections in this proposal are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant.
- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government has commissioned external opinions on the legal, fiscal, and accounting requirements. Energy's advisor and IESO auditor, KPMG, has provided an accounting opinion that the principles of the structure are sound, and this opinion can be released publicly when desired. This opinion may not change the likelihood of a contrary opinion by the OAG, but does provide a tool for government to point to in justifying its decisions.

Commented [HT48]: TBC

There is also a risk that credit rating agencies and the market may take an alternate view as to the size of the GA deferral that is possible before becoming unconstitutional. If the Fair Adjustment exceeds this analysis, it may increase the perceived risk of the investment asset and therefore its financeability / saleability, which would result in reduced market uptake and reduce the amount of near term rate reduction that would be achievable under the plan. This is why the increases in electricity rates between May 2018 and April 2022 are to be set by regulation as opposed to legislating that they increase by CPI. It may not be possible to legally hold the rate reductions to increase by CPI, and if the government wanted to hold to this commitment, the difference would need to come out of the fiscal plan, which has not been forecasted. Each percentage point of reduction that the structure cannot provide would result in an approximate $150M [TBC] cost to the tax base. This has not been provided for in the bill, but it is likely that the government will receive questioning along these lines and why the previously committed CPI increases are not explicitly stated in the bill.

Commented [HT49]: Needs ground truthing

Note that if the IESO is not able to sell the regulatory asset (i.e., the OPG SPV is unable to get financing to purchase it), then the IESO would require financing from an alternative source. The IESO has requested a backstop credit facility from the Ontario Financing Authority. This would be associated with a fiscal impact risk.

There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Legislative Officers

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the announcement of this suite of initiatives. The

Commented [HT50]: Energy to update.

OAG was provided copies of the Cabinet Submission seeking policy approval for Ontario's Fair Hydro Plan and has been briefed by officials from the Ministry of Energy. The OAG will have opportunities to publicly state her views through the Public Accounts committee in the summer of 2018 and in her pre-election report.

The Financial Accountability Officer (FAO) has not been consulted on this proposal and is expected to have an opinion on how this proposal may impact the state of the province's finances.

Commented [HT51]: Energy to update from discussion with FAO

OPG Mechanism

- Accountability
  - Bill attempts to balance the independence of the OPG trust with regulatory oversight and the market's need for certainty in recovering the GA financing that it provides.
  - Accountability to the government or the public, amount of government control of the entity, including future rate increases.

Commented [HT52]: Needs to be recast given limitation on control after initiated

- New structure
  - Structure is complex, involving:
    - IESO as originator of the regulated asset and responsible for flow of funds;
    - OEB as regulator of the new mechanism;
    - OPG responsible for financing and managing the mechanism; and
    - The Province providing ongoing equity capital infusions to OPG and backstop.
  - Addition of financial agency to current operational obligations of OPG – not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, could possibly dilute OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).
  - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise would be required.
  - Connection to BPS compensation framework/lack of national comparator.
  - Unknown transaction, admin, consultant costs. OEB would review OPG's cost as the Financial Services Manager
- Debt
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.

  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates

- Public perception/reaction (could be seen as similar to the process preparing Hydro One for IPO).

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake)
- The OESP matrix no longer follows the Low Income Measure (LIM) which creates inconsistencies between how programs are applied and may put pressure other provincial programs to increase funding amounts.

Benefits for all Consumer Classes

The Fair Hydro Plan includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need. It is likely that the government will be criticized for providing benefits to those who may not be in need (e.g., wealthy cottage communities, etc.).

Stakeholder Considerations:

General public (including residential and small businesses) – Likely support a proposal that is projected to provide up to 25% in rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but likely to question the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications.

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral the remainder of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an

expectation government is going to take specific action to mitigate their increases due to Cap & Trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. **Note:** Funding electricity support programs through the tax-base rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Commented [HT53]: Confirm work still ongoing on this piece

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generation as part of the "Clean Energy Adjustment."

Solar PV sector – May react negatively to price relief as it can be seen to undercut the affordability of distributed renewable generation assets such as solar PV, and undermines the economic arguments behind net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Delivery:

If passed, the legislation will enable the price mitigation measures to begin to take effect on July 1, 2017. The 2017 LTEP will be released to the public in the summer2017 and would reinforce/integrate with Ontario's Fair Hydro Plan. Regulations are required under the major components of the legislation in order to fully implement the initiative and clarify program details.

Commented [HT54]: TBC

1. Refinancing Global Adjustment assets in order to defer ratepayer costs / Mechanism to defer GA costs

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

Commented [HT55]: This needs more elaboration and confirmation. Last discussion I was part of on this point hadn't landed exactly how long it is expected that the IESO retains the Reg Asset for before sale to OPG.

2. Enhancing Social and Conservation Programs

OESP Enhancements

New OESP program details would require TB/MBC approval.

Changes to regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modelled after processes used for the OREC (8% rebate). The amendments made in this bill allow for a transition period where the program continues to draw on the existing IESO variance account until the account can no longer maintain the program. IESO is required to notify the Ministry of Energy when it expects the variance account to be depleted (likely sometime in the fall). At this time

The proposed changes will take time to implement as they would require changes to the central system and the LDCs' billing systems. The OEB and their central service provider will need to work with LDCs, MOF, and the CRA on the changes to this program (delivery mechanism, funding source, application system, eligibility).

Commented [HT56]: Requires update

RRRP Enhancement

Regulations would be required to establish the details of the program. OEB estimates that the implementation would take at least six months after finalizing regulations. For this reason it is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st which will put an immediate pressure on the OEB and LDCs as implementation is required no later than October 1, 2017. A mechanism will need to be created to ensure that all parties are aligned in the yearly forecasting and costing of the program.

On-Reserve First Nations Delivery Credit

The OEB would need to work with the LDCs to identify the eligible on-reserve consumers. A communications plan could include public release of the OEB report and a commitment to working with the LDCs on implementation details.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Once available, the rebate would appear on customer's electricity bills as a reduction in, or credit for, their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Linkages:

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer-fall 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The Ontario Rebate for Electricity for Electricity Consumers Act, 2016, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) was a five-year legislated program put in place as a broad-based (RPP-eligible), transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB expired on December 31, 2015.

Commented [RK57]: TBC

Debt Retirement Charge – On January 1, 2016 the government ended the electricity Debt Retirement Charge (DRC) on residential users, earlier than planned, and put in place the low-income targeted OESP, effective 2016. For all other consumers, the Electricity Act was amended so that the DRC is ~~schedul~~legislated to be removed ~~by~~ April 1, 2018.

Industrial Conservation Initiative – Ministry of Energy program implemented in January 2011 to help large industrial consumers reduce their electricity costs by ~~shirftin~~reducing electricity consumption ~~away from~~ in peak periods. As part of the Fair Hydro Plan, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all electricity consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – approved as part of Ontario's Fair Hydro Plan, and under development, the Affordability Fund is intended to expand access to conservation funding to targeted consumers that do not currently qualify as low-income for the purposes of the Home Assistance Program (HAP).

Commented [HT58]: insert

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded~~met~~ by the January 2017 ~~8%~~ rebate amount equal to the 8% provincial portion of the HST.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. **Note:** Funding electricity support programs through the tax-base rather than the rate base will also provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON)- is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed to "consider options for legislation/regulation change that lessen the impact on residential tenants of increased energy costs from cap and trade". As part of the review of the Residential Tenancies Act, the Ministry of Housing is working on a proposal that will address that commitment. The proposal is expected to come to Cabinet in spring 2017.

Commented [HT59]: To get updated language on the RTA amendments

Proposed Cabinet Minute

Approval of draft bill for introduction

Cabinet approved version XX-XX of this draft legislation for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

Prepared based on draft submission

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan,

how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its 2017-2019 Business Plan (Board-approved?) to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO.~~,~~ It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets. ~~financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending~~ (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged (Check is OFA)

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments~~changes~~ ~~for~~ from the Ontario Financing Authority and~~,~~ MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards.~~.~~ The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

Commented [RK1]: "from"?

Commented [BA2]: Also added MoF changes for IFRS risk

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 201~~7~~8.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan~~, along with OFA forecast updates for OFHP (TBC),~~ show a decrease in earnings before tax of $~~84M~~ 29~~49~~M in 201~~6~~-17~~-18~~ and $~~89M~~ 556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase~~s~~ of $~~59M~~ 112M in 2018-19 and a decrease of $14~~120M~~ 62M in 2019-20 versus ~~over~~ the estimates in the 2016 Budget. The 2019-20 decrease largely reflects an IFRS-

Commented [JK3]: Added to address Ron's comment.

Commented [BA4R3]: Check figures

related consolidation risk of $200M) as described above.~~,~~

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4~~63~~6M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, (before OFA and MoF adjustments) is projected~~lanned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering

Commented [RK5]: I'd say separate out the differences related to the business plan from the Provincial consolidation adjustment for IFRS.

Commented [BA6]: Edit 463

(e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: A~~ny~~ change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected~~could~~ to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

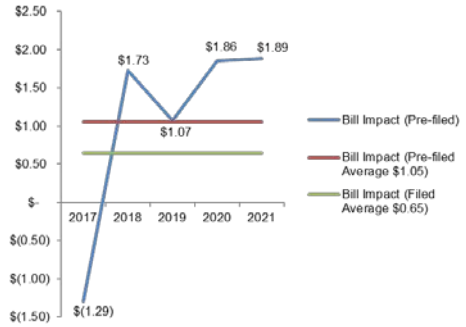
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

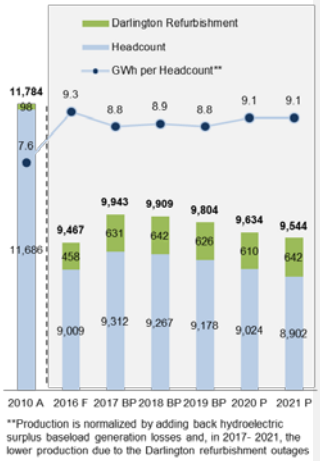
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



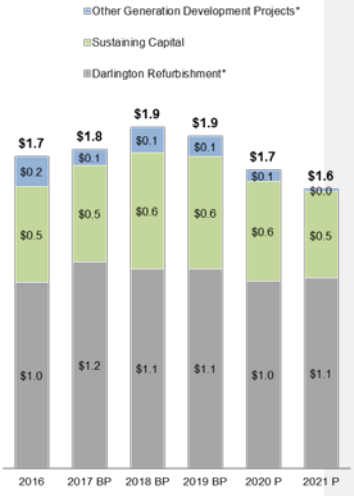
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**
2016 Ontario Budget

Date:	Tuesday, May 02, 2017 2:38:09 PM

While I don't see why we wouldn't facilitate the request, we would require Minister's authorization of some sort and staff level, we view that TB/MBC should be made aware of the request/requirement.

Thanks James.

At a few points in the OFA comments they say "The IESO has requested a backstop credit facility from the OFA." Do you know if the plan is to grant this request?

Thanks!

Importance: High

Hi Felix and Chris:

As mentioned earlier in the week, please find attached the draft CBN re the rate mitigation legislation for the TBS' review (password same as previous materials). This has been prepared with no materials and should be reviewed closely. I have left comments in the margin where I am looking for specific review or confirmation of particular details. I am interested in ensuring alignment in how we are characterizing the proposal and its risks.

The note is a bit on the longer side at the moment, so suggestions to economize without losing key pieces would also be helpful.

The note is undergoing concurrent review with Energy and my management now. My ADM will likely pass this along to Cindy and Karen for concurrent review given the time crunch, but please feel to pass along as well.

Please try to have any comments to me by EOD on Monday so I can get it to my DM and the Secretary on Tuesday.

Have a great weekend,

The Proposed Fair Hydro Act

May 3, 2017

Purpose

- Purpose is to walkthrough the main elements of the legislation.

- The Act consists of two components:
  - Part 1: Legislation to provide for the fair allocation of costs of electricity over time \
  - Part 2: Legislative amendments for social programs

- The proposed *Fair Hydro Act, 2017* would be an omnibus bill with 2 schedules: the *Ontario Fair Hydro Plan Act, 2017* and amendments to the *Ontario Energy Board Act, 1998*

Part 1 – Overview of Legislation to Provide for the Fair Allocation of Costs of Electricity Over Time

1. Ontario Fair Hydro Plan Act – Fundamental Principles
2. Brief Overview of the Legislation
3. Stakeholder Consultation and the Process to Prepare the Legislation
4. Building Blocks of the Legislation
   - What costs are part of the program?
   - How are the costs allocated fairly amount ratepayers now and in the future?
   - What consumers does the program apply to?
   - How is the program financed?
4. How the Legislation Works
   - Clean Energy Initiative
   - Clean Energy Costs and Benefits
   - Clean Energy Adjustments
   - Fair Adjustment
   - Fair Allocation Amount
   - Regulatory Asset and the Investment Asset
   - Issuance and Payment of Debt
   - Financing Plan
5. Who Does What
   - Minister of Energy
   - Role of OPG
   - Role of IESO
   - Role of LDCs
   - Role of OEB

Ontario Fair Hydro Plan Act – Fundamental Principles

- The actions taken by the Government of Ontario to achieve a clean, modern, and reliable electricity system have resulted in significant costs. The burden of financing the electricity system improvements and funding key programs has unfairly fallen on the shoulders of today's consumers.

- The proposed Ontario Fair Hydro Plan Act (OFPA) is founded on the principle that costs related to the development of a clean, modern and reliable electricity system (with a diverse supply mix) ought to be charged to those consumers, today and in the future, who will be the beneficiaries of those costs.

- The Government of Ontario is committed to ensuring that the costs of financing these investments are allocated fairly among present and future generations of consumers.

- The challenge inherent in the development of the legislation was the need to balance several key factors: the fundamental principles of the program, the program's desired accounting treatment, ratepayer interests, expectations of the financial markets, financeability, and legal considerations.

Stakeholder Consultation and the Process to Prepare the Legislation

- The development of the Ontario Fair Hydro Plan Act was preceded by extensive consultation, on an ongoing basis, with representatives from the Ontario Energy Board (OEB), IESO, Ontario Power Generation (OPG), the Ontario Provincial Controller's Office Division (OPCD), the Ministry of Energy, the Ministry of Finance, dealers, investment advisors and Canadian (and in some cases U.S.) counsel for each of the involved parties.

- As appropriate, other Ministries were circulated with drafts of the legislation and consulted on particular issues.

- Several drafts of the legislation were circulated among stakeholders and several mark-ups of draft legislation were received in response.

- Lengthy face to face meetings also took place with stakeholders and their counsel both as a group and individually.

- Legislative counsel were involved on a daily basis and produced multiple versions of the legislation.

- A steering committee chaired by the Deputy Minister met and were briefed weekly on the status of the legislation (i.e., the "Rate Mitigation Implementation Group" consisting of senior executives of the Ministry of Energy, Cabinet Office, Ministry of Finance, Treasury Board Secretariat, OFA, OPCD, OPG, OEB and IESO.

Brief Overview of the Legislation – Fair Allocation

- Legislation is based on the principle that the costs incurred to move to a clean, modern and reliable electricity system creates benefits that will be experienced by multiple generations of Ontario ratepayers and, therefore, in the interest of fairness, those costs should be shared by those multiple generations.

- The legislation does two things: (i) it establishes the fundamental elements of the fair allocation program, and, (ii) it puts the mechanisms in place to permit the financing of periodic shortfalls in revenue that are created by the fair allocation of electricity costs over multiple generations.

- With respect to the “fair allocation”, the legislation identifies:
  - What costs ought to be more fairly allocated (“clean energy costs”);
  - Mechanisms to allocate costs fairly among generations of consumers (“fair adjustment” and “fair allocation”);
  - The consumers to whom the program applies (“specified consumers”);
  - How the program is funded (borrowing on the strength of the revenue stream from consumers); and
  - The roles of various provincial entities in the program (i.e., Minister of Energy, Ontario Energy Board, IESO and OPG).

Brief Overview of the Legislation – Financeability

- In order to ensure the financeability of the program, considerable portions of the legislation are devoted to dealing with the “nuts and bolts” of what is required for successful financing including,
  - The quantification of the value of the regulatory asset;
  - The transfer of the regulatory asset to the (OPG) financing entity (which creates the “investment asset”);
  - The establishment of the “invoicing” process that ensures the investor’s “line of sight” to the investment asset;
  - The establishment of an OPG financing plan to ensure, among other things, an appropriate program of financing the shortfalls that are created by the deferred collection of revenues; and
  - Provisions setting out the way in which the financings are backed by amounts payable by specified consumers.

Building Blocks of the Legislation – What Costs are Part of the Program?

- In order to achieve its purpose, the legislation establishes the following “building blocks”:
  - Clean Energy Initiative – This is the term used to describe the Government of Ontario’s policies to foster growth and investment in and remove barriers and promote opportunities for clean and renewable energy sources and technologies and promoting conservation and demand management. The “clean energy costs” under the legislation arise from the “clean energy initiative”.
  - Clean Energy Costs – These are costs (attributable to the “clean energy initiative”) that are to be more fairly distributed among generations of consumers.
  - Clean Energy Benefits – These are the value of the benefits derived by the “specified consumers” (including the clean energy costs).
  - Clean Energy Adjustments – This is adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing.

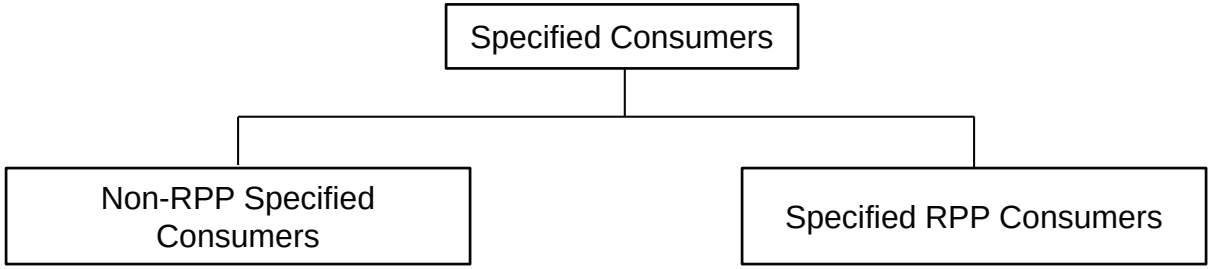
Building Blocks of the Legislation – How are the Costs to be Allocated?

- Fair Adjustment – This is the adjustment that gives the “relief” to certain specified consumers during the period from July 1, 2017 to June 30, 2021 (including this program’s portion of the 25 per cent reduction).

- Fair Allocation Amount – This is the concept/mechanism by which the fair distribution of “clean energy costs” (including, for example, financing costs, the cost of the power contracts, and the costs of the fair adjustment) is calculated and implemented.

Building Blocks of the Legislation – What Groups of Consumers Does the Program Apply To?

- Specified Consumers – This is the defined group of consumers to whom the legislative program applies. These consumers are persons who have an account with an electricity vendor for the supply of electricity in Ontario and,
  - Have a demand for electricity of 50 kilowatts or less (or as otherwise prescribed);
  - Annually use not more than 250,000 kilowatt hours of electricity (or as otherwise prescribed);
  - Carry on a farming business (basically pursuant to the *Farm Registration and Farm Organizations Funding Act*);
  - Have an account with an electricity vendor that is for a “dwelling”, condominium property, residential complex or co-operative housing; or
  - Are otherwise prescribed.



Building Blocks of the Legislation – How is the Program Financed?

- The ability to engage in the fair distribution of clean energy costs among the specified consumers requires financing during periods where the collection of the clean energy costs is, as part of the fair allocation, deferred to later years (thereby creating a revenue shortfall). A series of complex provisions are required to:
  - (i) Enable the financing, and
  - (ii) Meet requirements known to be important to rating agencies and investors.

- Regulatory Asset – This is fundamentally IESO's right to recover the revenues that it has deferred collecting because the clean electricity costs are being allocated across generations of ratepayers.

- Investment Asset – This is the asset that results when the regulatory asset is transferred to the (OPG) financing entities.

- The (OPG) financing entities will fund the acquisition (transfer) of the investment asset in the capital markets.

How the Legislation Works – Clean Energy Initiative

- The “clean energy initiative” concept is set out by definition. Its purpose is to establish the fundamental basis for the legislation.

- The definition is self-explanatory and is as follows:

“clean energy initiative” means the policies of the Government of Ontario related to,

a) eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,,

b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,

c) promoting conservation, demand management and energy efficiency; and

d) investing in energy infrastructure to ensure a clean, modern and reliable system;

How the Legislation Works – Clean Energy Costs and Benefits

- "Clean energy costs" are those costs that arise from the "clean energy initiative" and are allocated to the specified consumers for past, present and expected costs.

- The costs included in the "clean energy costs" include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act* (basically, the Global Adjustment provisions) which relate to contracts for,
  - Renewable energy generation or capacity;
  - Conservation and demand management, including shortage;
  - Energy efficiency; and
  - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act* or as prescribed); and
  - Payments made under section 78.5 of the *Ontario Energy Board Act.*

- Other such costs to be included in "clean energy costs" may be prescribed

- These are the costs to be distributed fairly among the specified consumers through the "fair allocation amount".

How the Legislation Works – Fair Allocation Adjustment

- The fair adjustment provisions are set out in Part II of the legislation.

- Part II establishes that the rate that will be payable by "specified RPP consumers" from May 1, 2017 to April 30, 2018 for the first fair adjustment is the rate that would be required from this program to contribute to that consumer to receiving a total a monthly invoice amount that is 25 per cent lower than the monthly invoice amount for that consumer under the "comparison rate". The comparison rate is a rate to be determined by the OEB using the method prescribed by regulation under s 79.16(1)(b) of the OEB Act.

- Part II includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program (i.e., adaptation of invoices must be implemented by August 1, 2017 followed by a subsequent lump sum credit to the consumer once the invoice is adapted).

- The Lieutenant General in Council is given the authority after April 30, 2018 to make regulations prescribing the rate for electricity (and therefore prescribing the "fair adjustment" until June 30, 2021). After June 30, 2021, regulations will have regard to the fair allocation amount and clean energy adjustments.

How the Legislation Works – Fair Allocation Amount

- The Minister sets the fair allocation amount.

- The establishment of the “fair allocation amount” is required to,
  - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the “specified consumers” for applicable “reference periods”; and
  - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers).

- The “fair allocation amount” is to have regard to:
  - Clean energy costs and allocating the appropriate proportionate amount of the clean energy benefits to the “specified consumers” (in the applicable “reference periods”);
  - Reasonable assumptions regarding the time value of money, the number of consumers in the “reference period”; and
  - Expected electricity consumption for the reference period.

How the Legislation Works – Regulatory Asset and Investment Asset

- IESO will have a funding deferral resulting from the reduction in amounts collected from specified consumers during the first 4 years because of the fair adjustment. The IESO's funding deferral will be financed indirectly through the debt capital markets.

- The Act enables the financing of this IESO funding deferral, on an ongoing basis, by establishing the funding deferral as a "regulatory asset". In simple terms, the regulatory asset is IESO's right to recover the revenues that it has deferred collecting.

- IESO will then legally transfer portions of this right to recover revenues to the (OPG) financing entities.

- The (OPG) financing entity that receives the transfer of the right to recover revenues acquires a right to impose, invoice and collect those regulatory charges (called the "clean energy adjustments"). This is generally described in the legislation as the "investment asset".

- The (OPG) financing entity will need to finance its acquisition (from IESO) of the investment asset, and it will do so in the capital markets.

How the Legislation Works – Issuance and Payment of Debt

- Debt securities and related funding obligations will be incurred by one or more (OPG) financing entities. These entities will be managed by OPG, as the financial services manager.

- The financings will be backed primarily by the “clean energy adjustments” payable by specified consumers. The “clean energy adjustments” will track the actual payment obligations incurred by the financing entities when they become due and payable. To ensure intergenerational fairness, these amounts will be managed by OPG to align with the “fair allocation amounts” ascribed to each of the next 60 six month periods ending in 2047 (or such later period as prescribed).

- IESO and each electricity distributor will act as agent for the financing entities to impose, invoice and collect the clean energy adjustments, which will be channeled through to pay each financing entity’s related funding obligations.

- To support the program, the Government of Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be achieve highest rated securities, although that will largely depend on issues such as the strength of the Government of Ontario’s undertakings not to adversely affect the program through subsequent legislation.

How the Legislation Works – Financing Plan

- The Financing Plan is prepared by the Financial Services Manager (OPG).

- The Financing Plan is the plan which is intended to set out when a “funding obligation” (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the “investment interest” from IESO.

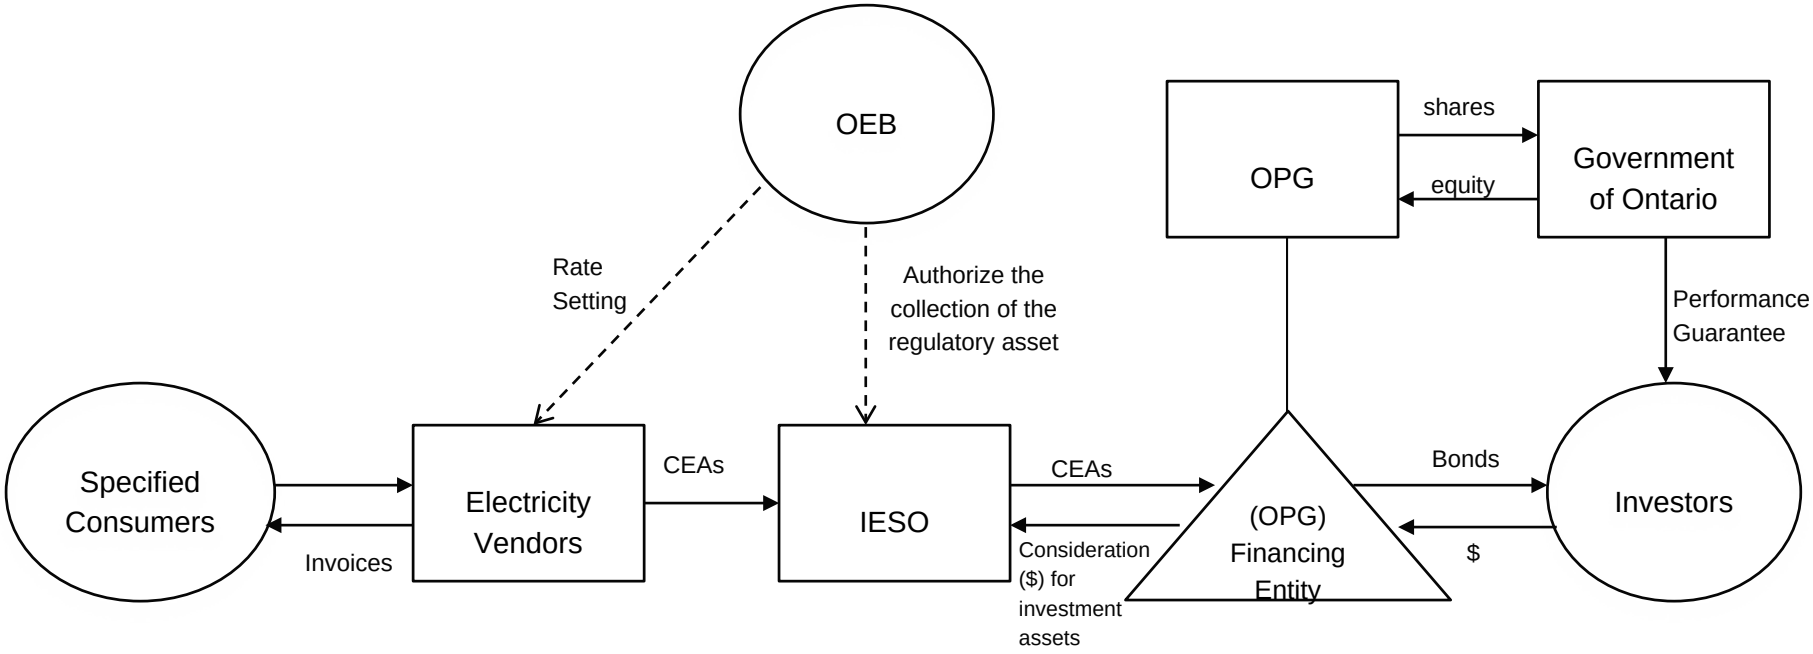
- There are rules that apply to the Financing Plan:
  - It must align with the “estimated finance amount” that will become due and payable during a “reference period”;
  - It must take into account the “fair allocation” and any “fair adjustment”;
  - It must plan to implement the financing in a reasonable and cost effective manner that reflects prevailing market terms and conditions; and
  - It must be based on certain reasonable assumptions set out in regulations (for example, related to anticipated IESO shortfalls, maturity of funding obligations, availability of refinancings, redemption opportunities and liquidity, and similar assumptions).

How the Legislation Works – Financing Plan (Continued)

- The (OPG) Financial Services Manager must incur funding obligations in conformity with the applicable Financing Plan.

- The Financing Plan will guide OPG's decisions regarding the repayment terms of the debt securities to be issued by financing entities. The Financing Plan will also deal with fundamental issues, such as the alignment (using derivatives) of any foreign currency obligations incurred by financing entities with the Canadian dollar cash flows arising through the clean energy adjustments.

How the Financing Structure Works



Note: CEAs are “clean energy adjustments”

Who Does What – Role of the Minister of Energy

- Determine the “fair allocation amount” applicable for each reference period. The fair allocation amounts will be set for all reference periods at the beginning of the program, based on reasonable expectations and forecasts at that time.

Who Does What – Role of the OPG

- As financial services manager, OPG will be responsible for the following under the Act:
  - Prepare and implement Financing Plan.
  - Establish and administer the financing entities.
  - Capitalize the financing entities by acquiring subordinated debt and equity, as required to achieve OPG's accounting and capital markets objectives.
  - Estimate and "true up" periodic finance amounts, to be passed through as regulatory charges in the form of Clean Energy Adjustments.

Who Does What – Role of IESO

- Calculate and record IESO funding shortfalls from time to time in a variance account, giving rise to a right of recovery from specified consumers to the extent not funded through the financings.

- Transfer the IESO's rights of recovery to (OPG) financing entities, in consideration for cash payments made by the financing entities from the proceeds of their financings.

- Coordinates the collection of "clean energy adjustments" from Electricity Distributors.

- Remit "clean energy adjustments" to (OPG) financing entity, for payment of financing entity funding obligations.

- Fund initial interest costs and expenses during the first 4 years.

Who Does What – Role of LDCs

- Obligation to invoice specified consumers.
- Collect, as agent of the investment interest owners, “clean energy adjustments” from specified consumers.
- Hold money received for clean energy adjustments in trust until remittance to the IESO.

Who Does What – Role of the OEB

- Determine and set rates to account for fair adjustments, fair allocations and clean energy adjustments (monthly adjustments).

- Determine and set rates and process to allow IESO to recover funding shortfalls (to the extent such amounts are not transferred to an (OPG) financing entity and financed in the capital markets).

- Review the administrative costs of OPG in connection with the administration of the program.

Part 2 – Overview of Legislative Amendments for Social Programs

- As part of the proposed Ontario Fair Hydro Plan, the Ministry of Energy is proposing amendments the *Ontario Energy Board Act, 1998* (OEBA) to enable the following measures:
  - Enhancing and providing tax-based funding for Rural or Remote Electricity Rate Protection (RRRP) through new enhanced rate protection for residential customers with high distribution rates;
  - Enhancing and providing tax-based funding for the Ontario Electricity Support Program (OESP); and
  - Creating a new First Nation On-Reserve Delivery Credit and providing for tax-based funding.

Overview of RRRP and Broadened Distribution Rate Protection

- Section 79 of the *Ontario Energy Board Act* would be amended to provide the Ministry the authority to prescribe, through regulation, classes of consumers whose cost would be transferred from the rate-base to the tax-base.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would prescribe Hydro One's R2 customers as receiving RRRP from appropriated funds effective July 1, 2017. This would fulfill the government's intention to transfer the majority of the costs of administering the RRRP program to the tax-base.
- In addition, Energy is proposing legislative amendments that would broaden rate protection by creating a new distribution rate protection program to complement RRRP. This new program would be funded through tax payers.
- Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs.
  - Proposed legislative amendments would enable a maximum monthly base distribution charge to established through regulations.
- If the proposed legislative amendments are approved, the government intends to prescribe by regulation both program details and the residential customers eligible for broadened distribution rate protection served by the following LDCs:
  - Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

Ontario Electricity Support Program

- Proposed legislation related to the Ontario Electricity Support Program (OESP) would shift program funding from the rate base to the tax base.
  - Tax-based funding would only kick in once the existing OESP variance account is depleted, which is expected to happen in the fall of 2017.

- To allow for the existing program structure to stay in place until tax-based funding kicks in, proposed new legislation would only come into force via a proclamation Order in Council, on a date to be determined.
  - This would ensure that existing OEB authorities remain in place while ratepayer funding is being used.

- In addition, a new authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers to support increased participation in the OESP program among Ontario Works and Ontario Disability and Support Program clients would be put in place.
  - Information Privacy Commissioner (IPC) staff were consulted, and customer consent is reflected.
  - This information sharing component will come into force at Royal Assent, allowing OEB and MCSS to begin this process quickly, and support increasing OESP participation levels.

First Nations Delivery Credit

- Energy is proposing legislative amendments that would establish a first Nation Delivery Credit for On-Reserve Consumers. This new program would be funded through tax payers.

- The proposed First Nation Delivery Credit would provide:
  - All prescribed on-reserve consumers with a credit for the entirety of their delivery line or with a credit for the monthly service charge.
  - The costs that are covered by the delivery credit are also described in legislation.

- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would:
  - Establish the class of customers eligible;
  - Determine what is considered on-reserve; and
  - Determine the method of calculating the delivery credit.

Subject: DRAFT CBN For Review- Rate Mitigation- Due EOD May 1st
Importance: High

Hi Felix and Chris:

As mentioned earlier in the week, please find attached the draft CBN re the rate mitigation legislation for the TBS' review (password same as previous materials). This has been prepared with no materials and should be reviewed closely. I have left comments in the margin where I am looking for specific review or confirmation of particular details. I am interested in ensuring alignment in how we are characterizing the proposal and its risks.

The note is a bit on the longer side at the moment, so suggestions to economize without losing key pieces would also be helpful.

The note is undergoing concurrent review with Energy and my management now. My ADM will likely pass

this along to Cindy and Karen for concurrent review given the time crunch, but please feel to pass along as well.

Please try to have any comments to me by EOD on Monday so I can get it to my DM and the Secretary on Tuesday.

Have a great weekend,

Tim Hindmarch-Watson

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy

DRAFT Financing Global Adjustment

Commented [HT1]: Name as in EVista- Will update as item is updated.

Cabinet (info)	TB/MBC	Cabinet	Announcement	TB/MBC	Cabinet	Introduction
Feb 15, 2017	March 1, 2017	March 1, 2017	March 2, 2017	May 9, 2017	May 10, 2017	May 11, 2017

Summary of Proposal

The proposed legislation contains a variance from Cabinet direction, which is detailed in the ministry's variance memo and within this note.

Context for Decision:

This proposal follows Cabinet direction to the Ministry of Energy to take the necessary steps to implement electricity price mitigation initiatives that would provide additional rate relief to Ontario electricity ratepayers.

The proposed legislation enables approaches to fairly allocate the costs of the Global Adjustment (GA) amongst current and future electricity rate payers, and help the most vulnerable Ontarians through enhancements to electricity support programs through ~~tax base~~government funding. To fully implement the initiative, the Ministry of Energy will be seeking future approvals for regulations identified in the proposed bill, while working to maintain existing public policy objectives such as~~:~~ maintaining a reliable electricity system, Ontario's commitment to reducing the impacts of climate change and commitment to achieve greenhouse gas (GHG) reduction targets.

The proposed legislation:

1. Establishes a framework to finance a portion of the GA costs in order to reduce costs for ratepayers in the near term and spread the costs of the GA more fairly across ratepayers between July 1, 2017 and April 30, 2047:
   - July 1, 2017 to April 20, 2018, reduces after-tax electricity costs for specified consumers by 25%.
   - May, 1 2018 to April 31, 2022, electricity rates will be set by Order in Council (OIC) with the intention to keep increases in line with the Consumer Price Index (CPI) (See page 17- Fiscal Pressure)
   - May 1, 2022 to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and

Commented [RK2]: 30?

administrative costs, around 10% of total electricity costs. (See page 14- Future Impacts to Electricity Rates)

Commented [HT3]: TBC by Energy

- Through the bill and subsequent amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998, e*xpanding the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO), to provide for appropriate oversight, putting in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the deferred GA costs. (See page 19- OPG Mechanism)

2. Expands electricity support programs for the most vulnerable consumers and moves program costs from the rate base to the tax base. The bill amends the *Ontario Energy Board Act, 1998* to:
   - ~~M~~move the recently expanded Ontario Electricity Support Program (OESP) to ~~the tax base~~be government funded, transition the program to be administered by the Crown, and to enable information exchange between the Ontario Disability Support Program to potentially allow for automatic enrolment procedures to be established;
   - ~~Amends the Ontario Energy Board Act, 1998 to e~~enable a broadening of the Rural or Remote Electricity Rate Protection (RRRP), including harmonizing distribution costs for customers with the highest distribution rates and moving the program to be government funded~~the tax base~~; and,
   - ~~Amends the *Ontario Energy Board Act, 1998* to~~ require the establishment of a government funded program to provide a delivery credit to prescribed on reserve customers.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price, helping to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, fixed generation costs, such as renewables, gas and nuclear contracts, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:

  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable, per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable, per unit charge and a fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - Line Loss: The costs to recover electricity that is lost as heat when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service types are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. The more customers there are in the area, the lower the cost to serve. R1 customers are considered 'medium density' customers and R2 are considered 'low density customers.'
- **Ontario Power Generation (OPG) –** A business corporation owned by the ~~p~~Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to comment on various items.
- **Independent Electricity System Operator (IESO) –** An independent corporation and agency of the Ministry of Energy that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Class A Consumer –** Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A eligibility was lowered to 1MW for all consumer types. In April 2017, the threshold for Class A eligibility for manufacturing and certain industries, including greenhouses, was lowered to 500 kilowatts.
- **Non-RPP Class B Consumer –** Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a

volumetric rate applied to all electricity consumption. Class B consumers include those Class A eligible that choose not to become Class A.

- **Special Purpose Vehicle (SPV) –**
- **Security Interest –**

Commented [HT4]: TBS: Do you have standard language that you would recommend using?

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. There has been increased media attention and public pressure for the government to provide ratepayer relief. On March 2, 2017, the Ontario government announced its electricity rate mitigation package, Ontario's Fair Hydro Plan, which included the initiatives contained in the proposed legislation. The government has committed to implement further rate relief measures by the summer 2017.

What is the expected cost to government?

The total cost of the proposal is $4.1B [TBC] in 2017/18, $1,599M funded through the fiscal plan and $2.5B to be funded through the electricity rate base.

Commented [HT5]: TBC as this includes the equity injection.

Commented [BA6]: Is it clear here what is mean by "cost"? Fiscal cost plus higher debt.

Commented [JK7]: TBS, pls. check this figure. I believe there is an updated figure ($1,438?).

TABLE 1: Cost Impact ($M)	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	499	753	829	892
GA Financing	2,534	2,668	2,942	3,420
OPG Loan / Province's Capital Injection to OPG Share Purchase (i.e. equity injection or debt)	1,100	?	?	?
Cumulative Total	4,133	3,421	3,771	4,312

Commented [BA8]: Maybe should avoid calling this a loan

Commented [RK9]: Should this be just assumed att 44% of the GA deferral amount?

Commented [BA10]: May be confusing to total these amounts. 1st row is a fiscal impact while equity injection represents increase in debt but no fiscal impact.

Commented [JK11]: Also, 2.5bn in 2017-18 includes the Province's capital injection

Commented [HT12]: TBC

The proposed bill identifies OPG as the Financial Services Manager and would therefore take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from the IESO through OPG Trust. ~~The~~ OPG would finance these purchases through a combination of an equity investment by the Province ($1.1 B in 2017-18; See Table 1) and external private sector financing. The structure ~~has been designed to~~would increase gross debt of the Province (to finance the equity injection in OPG), ~~increase interest on debt related to that external debt,~~ increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. ~~The equity investment has been structured so that the underlying regulatory asset will offset the additional debt to not impact the province's net debt.~~

Commented [BA13]: Do we need to distinguish between OPG as financial service manager and OPG Trust which would purchase regulatory assets?

The estimate for the combined impact of the non-Global Adjustment initiatives that would begin in 2017/18 is expected to be $499M in 2017/18, growing to $753M in 2018/19 and rising. This represent~~s~~ed an additional pressure ~~on~~ that has been incorporated into the 2017 Budget's fiscal~~the~~ plan. These estimates are based on variable inputs such as program uptake and future energy consumption of various consumer groups, and are therefore subject to change.

Commented [BA14]: Additional to? As proposed this is the only pressure on the fiscal plan. The GA financing as proposed has no impact on the fiscal plan but does impact debt.

TABLE 2: Fiscal Impact ($M)	17-18	18-19	19-20	20-21
RRRP Enhancements*	344	472	484	497
OESP Enhancements	140	261	325	375
First Nations On-Reserve Delivery Credit	15	20	20	20
Total	499**	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate base.
****Note**: Value adjusted from $665 million to reflect July 2017 implementation.

There is inherent risk in the financial estimates because the calculations are highly dependent on forecasts of the total consumption and bills of customers eligible for the RPP, the cost of borrowing, electricity demand and electricity market conditions and accounting assumptions. In addition, under the proposal, electricity prices would increase around 10% above forecast residential monthly bills from 2028 to 2047.The public may expect that the government is committed to reducing or holding constant the absolute cost of electricity for consumers in the longer term. Under the proposal, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future. (See page 17- Fiscal Pressure)

What are the key steps to deliver this proposal?

- May 11, 2017 - introduce legislation.
- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of the Fair Hydro Plan.
- Information postings of proposed regulations.
- June ?? 2017- Energy to bring regulations to TB/MBC.
- June ??, 2017- Energy to bring regulations to LRC/Cabinet.
- July 1st, 2017- the remaining Fair Hydro Plan reductions and programs would take effect. Programs that are not established on this day for technical implementation issues will have benefits that are retroactively applied to customers once program is operational in individual LDCs.

Commented [HT15]: Energy: Pelase refine

How will the changes be communicated?

Commented [HT16]: CO and Energy Comms to review.

On March 2, 2017, the Premier made a high profile announcement of additional relief to reduce electricity costs for Ontarians. Coinciding with this event, there was news releases with backgrounders, a technical briefing of the media, a public education campaign to raise awareness of the rebates and initiatives in place to reduce electricity bills, and an Ontario website that includes all the programs and initiatives that the government is undertaking to reduce electricity costs.

Building on the previous announcements, on May 11, 2017, the Premier is to make a high profile announcement of the plans to introduce the necessary legislation to implement Ontario's Fair Hydro Plan to provide additional relief to reduce electricity costs for Ontarians.

Given the risk identified that the GA financing may have a fiscal impact, communication will need to be clear that the proposed draft legislation meets the legal, accounting and financial requirements to not have a fiscal impact.

Notes and Recommendation from LRC

LRC item direct to Cabinet.

Cabinet Office Analysis

The proposed legislation allows for the implementation of the main elements of Ontario's Fair Hydro Plan (FHP) announced March 2 to provide further rate relief to Ontario electricity ratepayers. The FHP, including the Global Adjustment (GA) smoothing proposal, will provide residential consumers 25% in rate relief on their bills on average in aggregate (including the 8% announced in 2016) ~~for eligible consumers of the Regulated Price Plan (RPP)~~ between July 1, 2017 and April 31, 2018 ("The Fair Adjustment"). Other eligible farm and small business consumers under the Regulated Price Plan (RPP) would also receive a benefit. Electricity rates would then change by amounts prescribed in the regulations under the bill, with the intention to keep rate increases in line with Consumer Price Index (CPI) between May 1, 2018 and April 30, 2022.

Commented [AP17]: The 25% is an average or for every customer?

Commented [BA18]: Should sentence read "…25% in rate relief on average…"?

Commented [HT19]: Need to add estimate of benefits from the other programs, particularly RRRP as I think the impact, along with GA, is going to be closer to 40 or 50% for some customers

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the summer of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement, and conservation. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the Ministry has identified key priorities, and, Ontario's Fair Hydro Plan combined with new policy or program announcements in the LTEP, will provide the comprehensive future planning perspective for Ontario's energy sector.

Commented [HT20]: Confirm with PO and Energy

1. Refinancing the Global Adjustment

The proposed legislation establishes the framework to defer some of the current GA costs to future ratepayers by recognizing the longer term benefit of these assets to the electricity system ~~(similar to extending and re-financing a mortgage)~~. The methodology is based on the assumption that some generation assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts, and that future ratepayers are expected to continue to be able to utilize and benefit from these assets, and that they will also reduce the need to finance the development of new generation assets in the future.

Many of the contracted generation assets are expected to have useful lives that extend beyond the term of their current financial contracts (typically 20 years). Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives can provide benefits to the electricity system over many years.

According to a legal opinion by former Supreme Court Justice Binnie, the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations leaves the process more susceptible to constitutional challenge and could jeopardize the nature of the clean energy adjustment being a regulatory charge, and risk it being deemed an unlawful tax. The bill has been drafted to mitigate this risk and clearly articulates the desire to fairly attribute intergenerational costs and benefits. In addition the bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. (See page 16- Legal Risk)

Key elements of this component of the bill include:

Fair Adjustment

- July 1, 2017- April 30, 2018- the bill outlines an immediate 25% reduction (on average) in rates for eligible residential consumers in recognition of the investment in clean energy initiatives since 2005. Other RPP eligible consumers would also receive a benefit.
- May 1, 2018- April 30, 2022- the bill allows for rates to be set by regulation, with the intention that rates will increase in line with CPI over this time, consistent with government commitments. (See page 17- Fiscal Pressure)
- Ontario Energy Board (OEB) would calculate appropriate adjustments for "specified consumers".

Clean Energy Adjustment

- Determined by Ontario Power Generation (OPG) as the Financial Services Manager, the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principlale, interest, transaction costs and administrative costs associated with the fair adjustment (regulatory/investment asset).
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- May 1, 2022- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing Independent Electricity System Operator (IESO) and Local Distribution Companies (LDC) processes.
- In accordance with the regulations, the OEB to set the rate at which "specified consumers" are invoiced to recover the clean energy adjustment.

Fair Allocation Amount

Commented [AP21]: OPG intends to recover interest costs every year through the Trust in order to pay the interest payments from debt sourced from the capital markets. Thus, the clean energy adjustment charge would start in 2017, not 2022.

Commented [SQ222]: I had this comment initially too but the opposite side to this is that they will simply capitalize those costs and will result in increased financing requirements over the first 4 years.

- The fair allocation amount is calculated by the Financial Services Manager consistent with the principles of the bill.
- Established for the purposes of allocating the costs of the clean energy initiative to provide inter-generational fairness to rate payers; and aligning funding obligations that may be incurred during each reference period (typically every 6 months).
- Provided to the Minister of Energy who will ensure that the information is made public in an appropriate way.
- Principles established in the bill require proper match over time between the costs of providing facilities for clean electricity generation and conservation and the consumers who benefit from these investments in the system. (Page 16- Legal Risk; See page 17- Fiscal Pressure)

Financing Plan

- Prepared by the Financial Services Manager to determine if potential funding obligations should be incurred to acquire an investment interest in accordance with the bill.
- Provided to the Minister Energy who may remove the Financial Services Manager if the Financing Plan is not consistent with the principles of the bill and the Financial Services Manager has been given the opportunity to address the Minister's concerns.
- May be amended as determined by the Financial Services Manager.
- In practical terms, the Financing Plan is intended to show how debt (with varying degrees of incurrence dates, maturities, interest rates) will be used over time.
- The OEB would review the administrative costs of the Financial Services Manager.

Regulatory Asset and Investment Asset

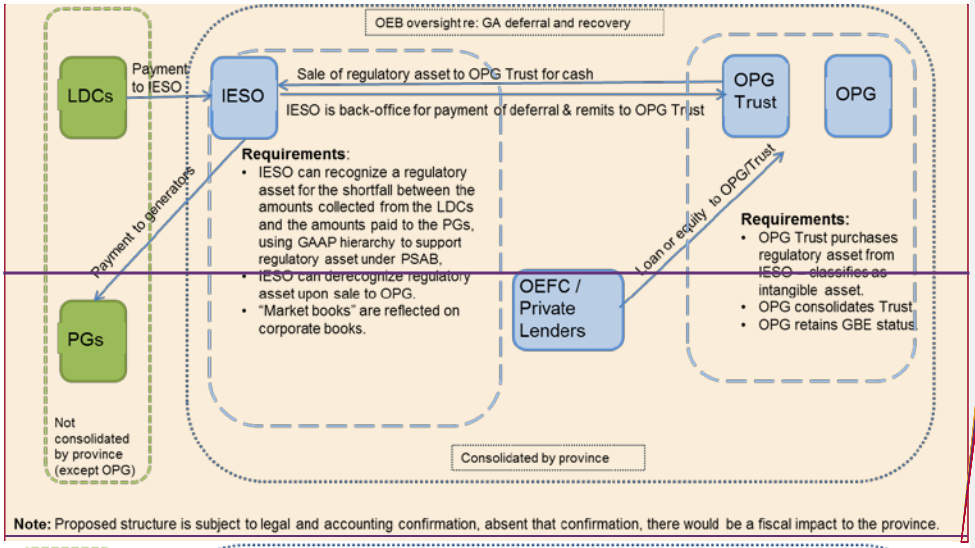
- Regulatory Asset created as IESO incurs a funding shortfall equal to the difference between the rates it receives after the implementation of the Fair Adjustment and the amounts owed under generation and conservation contracts (i.e. the comparison rate minus rates after fair adjustment).
- Subject to OEB approval, IESO would record the funding shortfall as a regulatory asset, as~~.~~ IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until May 1, 2022.
- The Financing Plan contemplates the Financial Services Manager establishing financing entities (OPG Trust/Special Purpose Vehicle (SPV)) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.

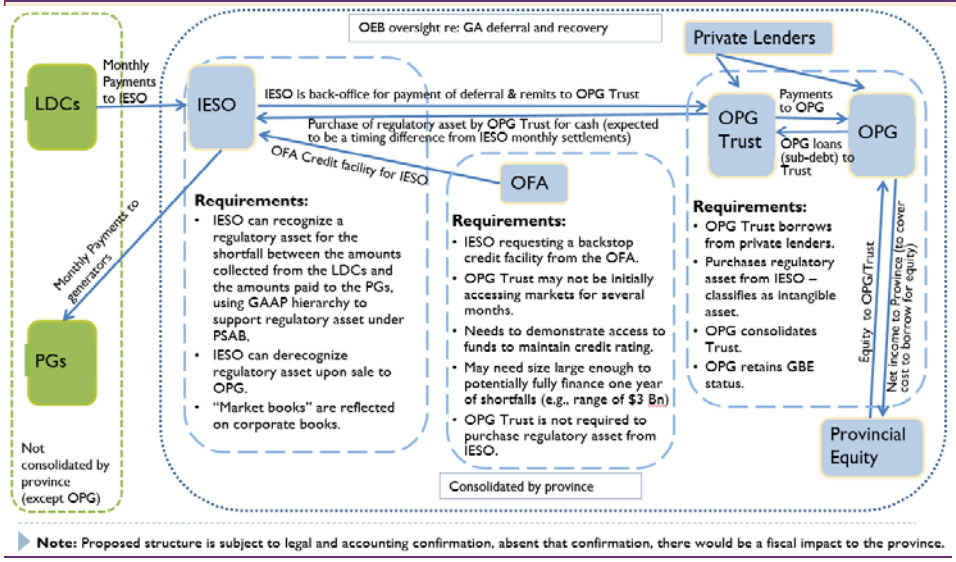
Commented [AP23]: Is this a different point from Ernst & Young advice OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.

- This purchase and sale turns the regulatory asset into an investment asset for the investment interest owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests including by dividend or undivided interest, consistent with the Financing Plan. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 5 years (May 1, 2022) the IESO has the rights to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority. (See page 17- Fiscal Pressure)
- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

Crown Undertaking (Guarantee or Backstop)

- The Crown would undertake not to do anything to adversely affect an investment asset or funding obligation, including hinder, impair, prejudice the charging, collection or remittance of the clean energy adjustment.
- The Minister of Energy, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill.
- The Minister of Finance, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.





Commented [HT24]: Energy: Please provide updated chart with terminology from the legislation embedded.

Commented [JK25]: CEFD/OFA will have an updated version for this provided to Energy.

Commented [RK26R25]: To show potential OFA financing to IESO.

Also, need to show Provincial equity into OPG (not from OEFC).

The bill establishes a structure in which the IESO records the GA cost recovery deferral ~~is recorded~~ as a regulatory asset (regulated by the OEB), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time ("The Fair Adjustment"). Eligible residential consumers would receive an average 25% reduction in electricity rates from July 1, 2017 to April 30, 2018. Eligible farms and small businesses would also receive a benefit. The IESO may then

Commented [HT27]: Section to be compared against the legislation's compendium when available.

sell the regulatory asset, at which time it becomes an investment asset. The investment asset owner (OPG Trust/SPV or trust "financing entities") may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

Under the proposed framework, OPG, acting in its role as the "Financial Services Manager", and following the principles in the bill, would regularly calculate the "Fair Allocation Amount" to ensure a proper match of the allocation of the intergenerational costs and benefits. To recoup the costs associated with the fair adjustment, consumers, starting in May 2022 would be invoiced the "Clean Energy Adjustment" on their electricity bills through existing IESO and LDC processes. The OEB would set the rates at which the clean energy adjustment could be collected.

OPG is planning to create a SPV or Trust to finance the GA. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. The variability will likely largely result from the financing of the SPV/Trust, and therefore OPG will have the ability to direct the financing of the Trust and both benefit from its financing strategy and be at risk as a result of it.

OPG Trust/SPV will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province (See Table 1 on page 4) and external financing through a securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG (to offset the interest on debt). ~~The proposed structure is expected to result in: (1) increase in provincial gross debt offset by an equivalent in regulatory assets resulting in no change in net debt, and (2) an increase in interest on debt paid by the province offset by higher earnings from OPG resulting in no impact on annual deficit of the province.~~

The legislation commits the government to backstop the financing if the government were to ever hinder the collection of the clean energy adjustment including revoking or changing the legislation or regulations. In other words, the OPG and its debt holders would have their capital guaranteed and paid for directly by the Province if such a situation were to occur. The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time, but could be as high as $1-1.5B annually [TBC]. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future.

The proposed structure has been extensively reviewed by KPMG (Energy advisor and IESO auditor), and the firm has provided an accounting opinion confirming the validity of the structure under PSAB [TBC]. This opinion can be made public [TBC] to support the governments rational for the plan. In addition, MAG and Blakes are confident that the structure is constitutionally sound, but that this will depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism. Based on the

Commented [SQ228]: Has this been a plan to define? Annually? Semi-annually? Monthly?

Commented [SQ229]: This should be prefaced with the fact that this risk only arises after OPG would have decided to purchase the Regulatory Asset from IESO, which it is not obligated to do so.

Commented [JK30]: In the latest legislative drafting we have seen.

Commented [SQ231]: This is focussed on accounting fiscal impact but cash flow impact is still present. Province would require cash to pay for IOD and unless those higher earnings (re: cash) is divdended back to Province to cover IOD payments, my guess would be that there is a fiscal impact in terms of IOD.

Commented [JK32]: Albeit relatively small compared to the deferred GA amounts.

Commented [HT33]: Based on commentary from implementation meetings. Don't believe this includes estimates of private lender borrowing costs. Please advise

Commented [SQ234]: Furthermore, this would likely be the "additional" impact. The Province's equity injection, which is currently offset by expected higher earnings, would cease to exists resulting in fiscal impact as well. Could result in $2-3B annually. Please confirm.

Commented [HT35]: Energy to confirm

current analysis there is a moderately high risk that the GA financing will have a fiscal impact on the Province before 2022.

For clarity: the following structural requirements have been met: [TBC]

Commented [HT36]: TBC based on receipt of professional opinions etc.

- IESO requirements :
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB;
  - IESO can derecognize regulatory asset upon sale to OPG;
  - "Market books" are reflected on corporate books; and,
  - OEB to act as regulator.

Commented [SQ237]: Currently, I don't believe this is the case for IESO. Will this be the case going forward?

- OPG requirements:
  - OPG Trust/SPV purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust/SPV; and
  - OPG retains GBE status.

However, despite the fact that the structure has satisfied the legal, fiscal, and accounting requirements outlined in the policy submission, there remain some fundamental risks that the province would need to accept:

- The structure is unique in Canada and possibly the world, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the Unites States, but officials are currently unaware of any example that would compare to the size, complexity, or fluidity of what is proposed;
- Complexity of the structure and length of deferral/recovery increases risk and decrease transparency;
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG's direct operations as the Financial Services Manager. While removal of the Financial Services Manager is provided for in the bill, in practice this may prove problematic once the system is operational; and
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and therefore its saleability. Could decrease amount of rate reduction achievable under this mechanism.

2. Enhancing electricity supports for vulnerable Ontarians and shifting costs from rate payer funded to government funded:

<u>Moving the Ontario Electricity Support Program (OESP) to the tax base:</u>

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The program was launched in January 2016 and has had roughly 30% enrolment. Consistent with Cabinet direction, the program was recently expanded to increase the existing benefit scales by 50% and provide additional credits to more households.

Under the expanded program the basic OESP benefit scale increased from $30-$50 to $45-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $68-$113 a month for eligible consumers.

The proposed bill amends the *Ontario Energy Board Act, 1998* to allow for the program to transition from the rate base to the tax base, and become administered by a Ministry or other entity as may be prescribed. The cost to the fiscal plan would be $186M in 2017/18. The bill provides further amendments designed to allow information sharing between the Ontario Disability Support Program (ODSP) and the entity responsible for OESP. The intention is that this information sharing will allow for the automat enrolment of individuals that are already enrolled under the ODSP, but it is currently unknown to what extent this will significantly impact the enrolment under the program.

Commented [HT38]: ENERGY: do you have any numbers on this point? Were other programs considered other than ODSP? Can we put something in about continuing efforts to improve the enrolment?

RRRP Enhancement (Delivery Charge Relief):

Currently, RRRP is a $241.9M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial. RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province, including Hydro One R2 customers. The delivery charge includes a distribution cost, which can vary across LDCs, and distribution costs are highest for Hydro One R2 and R1 (medium density) customers.

There are also some LDCs with relatively high distribution costs that, when coupled with high consumption patterns, can result in very high bills for consumers (Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma).

In 2016 the OEB made a ruling that all LDCs need to move to fixed distribution charges. The OEB found that fixed distribution charges would establish a fairer way to recover the costs of providing distribution service, and provides greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a distribution rate protection program and the ability to cap the distribution charges of prescribed distributors. The amendments also establish that this program will be funded by the tax base.

The intention is to draft regulations permitted under this section of the bill to Harmonize the fixed distribution rates to the lowest distribution cost of the LDCs mentioned above

at $38/month (which is the forecast rate for Northern Ontario Wires). If the costs of another LDC moved above these in the future, a regulation change would be required to for that LDC to receive RRRP. These enhancements are expected to benefit approximately 800,000 customers in Ontario.

Targeted RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level and cost to fiscal plan would be $344M in 2017/18, $243M of which is a transfer of existing programs to the tax base. If the legislation and required regulations are passed, the program would become active as of July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Commented [HT39]: Need new estimate of transferred program cost starting from July 1.

On-reserve First Nations Delivery Credit

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances. In this instance, historic grievances relate to lands affected by energy developments.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a tax base funded delivery credit program for on-reserve customers with the details as prescribed in the regulations. The intention is to enact regulations that would eliminate the delivery charge for all on-reserve First Nation household customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.

Eligible recipients would be automatically enrolled in the program (~21,500 customers) and receive an average monthly benefit of $85. The program will cost approximately $20M annually and, provided the legislation and regulations are passed, would become effective July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Expected Impacts of the Proposal on Electricity bills:

The impact of proposed legislation to an eligible customer's bill in July 2017 is an average 25% decrease (combined with the equivalent amount to the 8% provincial portion of the HST from ORECA effective Jan. 1, 2017) for residential consumers, followed by an increase in price over time. This includes the ~~8%~~ rebate for an equivalent amount to the 8% provincial portion of the HST that came into effect on January 1, 2017. Between May 2018 and April 2022 electricity rates will be set by regulation with the intention that rate increases would be kept in line with CPI.

Commented [HT40]: ENERGY: Can you provide analysis on the impact for customers that will receive the RRRP etc?

Customers that are eligible for the RRRP enhancements and the OESP will see further reductions in their electricity rates beyond the 25%

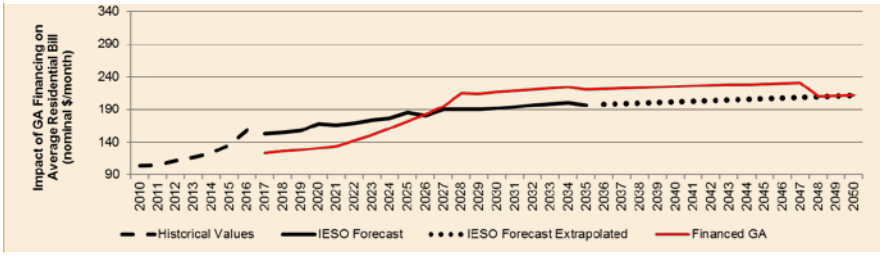
Notes: *Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.*

Commented [HT41]: Energy to provide updated chart

Risks and Considerations:

Future Impacts to Electricity Rates

Borrowing money to defer GA costs for ratepayers would lower costs in the short term but result in substantial debt and higher electricity prices in the future. Based on the GA deferral portion of the plan, electricity prices would increase to about 10% above the actual cost of electricity over the recovery period (peaking at 13%). The proposal may create the expectation that the government is committed to reducing or holding constant the absolute cost of electricity for consumers. Under the proposal, the government would not have the ability to control this portion of electricity rates in the future outside of recourse to the fiscal plan.



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at a maximum of 13% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Commented [HT42]: ENERGY to confirm if this needs to be updated.

The government may be criticized for creating a new debt structure which could be compared to the previous debt retirement charge (DRC). The previous debt retirement charge was removed from residential bills in January 2016 and is scheduled to be removed for remaining customers in April 2018.

Future repayment cost estimates are based on a static assumed interest rate of 5% (actual interest rate may differ), and forecast electricity market conditions and demand levels. Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA financing. This would increase the risk that the province would have to absorb some of the debt in the future. To mitigate against the risk that increased self-generation poses, the bill provides that the Clean Energy Adjustment may not be "set-off". In other words, it would exist as a separate and distinct component of the bill that could not be reduced by methods such as net-metering.

Not all generating assets will continue operations at the end of their contract. If the Fair Allocation Amount is not properly designed, future rate payers will be paying the cost for assets that are no longer in use, which would be unconstitutional-, unless legislatively authorised as a tax (See page 1~~6~~7- Legal Risk). High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators will shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the deferred GA and accumulated interest costs.

Accounting and Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. The structure of the GA deferral was designed to result in an (1) increase in provincial borrowing (2) no

increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on funding to OPG/ OPG Trust from the Province, an increase in interest on debt and an increase on income from OPG will result. The structure is also contingent on the size of the GA deferral that is seen as possible, which, as previously mentioned, increases the likelihood of pressures on the fiscal plan in the near future. (See page 17- Fiscal Pressure)

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust) as an obligation of the Province. Depending on the magnitude of the debt incurred, the Province's borrowing cost may be impacted.

The Ontario Auditor General (OAG) has been briefed on the proposal and has had access to the March 1, 2017 policy submission for the Fair Hydro Plan. While the auditors of OPG and IESO have provided their assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief [TBC] can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount is dependent on increased borrowing. All of the deferral is dependent on increased borrowing. The 18% referenced here is the limit based on review of the contracts and a Eurig assessment and also includes the rebate for an amount equivalent to the 8% provincial portion of the HST~~reduction~~ that was already provided.

Commented [HT43]: To be updated when Navigant prelim report and OPG analysis complete

Legal Risk – constitutionality of financing the GA

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing a portion of the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Former Supreme Court Justice Binnie has provided legal analysis of this proposal, stating that the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations could jeopardize the nature of this being a regulatory charge.

A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. If the government fails to establish that the relevant electricity generating assets will continue to

perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

The bill has been drafted to mitigate the constitutional risk of the proposal and clearly articulates the desire to balance the costs and benefits of assets across generations. The bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. In addition, external consultant Navigant has provided an interim report on the costs and benefits of the long lived assets which supports the previous conclusions regarding the size of the GA deferral that would be supportable. This is further supported by the conclusions of OPG's independent analysis of the question.

Commented [HT44]: TBC

Commented [HT45]: ENERGY please confirm. Need to clearly articulate any differences that may exist between these analyses

MAG and Blakes are confident that the structure is constitutionally sound, but, as identified above, that this will highly depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism.

In addition, the structure of the GA refinancing means that the infrastructure included as part of the clean energy adjustment (i.e. amortized over 30 instead of 20 years) will need to be in service over the entire 30 year amortization period or provide benefits to the system in some way over the whole period. In practice this may mean that the government will have limited ability to alter the generation mixture included under the clean energy adjustment, including natural gas generation facilities, which may at some point be seen as inconsistent with the province's commitments to reduce greenhouse gasses. This risk has been mitigated in the bill, by allowing for prescribed natural gas generation contracts to be excluded from the clean energy benefit calculation.

Commented [HT46]: Needs ground truthing

Fiscal Pressure

Commented [HT47]: TBS please review closely

This proposal aligns with the 2017 Budget fiscal plan, but involves significant ongoing risks. The proposal does not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections in this proposal are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant.
- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government has commissioned external opinions on the legal, fiscal, and accounting requirements. Energy's advisor and IESO auditor, KPMG, has provided an accounting opinion that the principles of the structure are sound, and this opinion can be released publicly when desired. This opinion may not change the likelihood of a contrary opinion by the OAG, but does provide a tool for government to point to in justifying its decisions.

Commented [HT48]: TBC

There is also a risk that credit rating agencies and the market may take an alternate view as to the size of the GA deferral that is possible before becoming unconstitutional. If the Fair Adjustment exceeds this analysis, it may increase the perceived risk of the investment asset and therefore its financeability / saleability, which would result in reduced market uptake and reduce the amount of near term rate reduction that would be achievable under the plan. This is why the increases in electricity rates between May 2018 and April 2022 are to be set by regulation as opposed to legislating that they increase by CPI. It may not be possible to legally hold the rate reductions to increase by CPI, and if the government wanted to hold to this commitment, the difference would need to come out of the fiscal plan, which has not been forecasted. Each percentage point of reduction that the structure cannot provide would result in an approximate $150M [TBC] cost to the tax base. This has not been provided for in the bill, but it is likely that the government will receive questioning along these lines and why the previously committed CPI increases are not explicitly stated in the bill.

Commented [HT49]: Needs ground truthing

Note that if the IESO is not able to sell the regulatory asset (i.e., the OPG SPV is unable to get financing to purchase it), then the IESO would require financing from an alternative source. The IESO has requested a backstop credit facility from the Ontario Financing Authority. This would be associated with a fiscal impact risk.

There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Legislative Officers

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the announcement of this suite of initiatives. The

Commented [HT50]: Energy to update.

OAG was provided copies of the Cabinet Submission seeking policy approval for Ontario's Fair Hydro Plan and has been briefed by officials from the Ministry of Energy. The OAG will have opportunities to publicly state her views through the Public Accounts committee in the summer of 2018 and in her pre-election report.

The Financial Accountability Officer (FAO) has not been consulted on this proposal and is expected to have an opinion on how this proposal may impact the state of the province's finances.

Commented [HT51]: Energy to update from discussion with FAO

OPG Mechanism

- Accountability
  - Bill attempts to balance the independence of the OPG trust with regulatory oversight and the market's need for certainty in recovering the GA financing that it provides.
  - Accountability to the government or the public, amount of government control of the entity, including future rate increases.

Commented [HT52]: Needs to be recast given limitation on control after initiated

- New structure
  - Structure is complex, involving:
    - IESO as originator of the regulated asset and responsible for flow of funds;
    - OEB as regulator of the new mechanism;
    - OPG responsible for financing and managing the mechanism; and
    - The Province providing ongoing equity capital infusions to OPG and backstop.
  - Addition of financial agency to current operational obligations of OPG – not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, could possibly dilute OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).
  - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise would be required.
  - Connection to BPS compensation framework/lack of national comparator.
  - Unknown transaction, admin, consultant costs. OEB would review OPG's cost as the Financial Services Manager
- Debt
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.

  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates

- Public perception/reaction (could be seen as similar to the process preparing Hydro One for IPO).

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake)
- The OESP matrix no longer follows the Low Income Measure (LIM) which creates inconsistencies between how programs are applied and may put pressure other provincial programs to increase funding amounts.

Benefits for all Consumer Classes

The Fair Hydro Plan includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need. It is likely that the government will be criticized for providing benefits to those who may not be in need (e.g., wealthy cottage communities, etc.).

Stakeholder Considerations:

General public (including residential and small businesses) – Likely support a proposal that is projected to provide up to 25% in rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but likely to question the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications.

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral the remainder of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an

expectation government is going to take specific action to mitigate their increases due to Cap & Trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. **Note:** Funding electricity support programs through the tax-base rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Commented [HT53]: Confirm work still ongoing on this piece

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generation as part of the "Clean Energy Adjustment."

Solar PV sector – May react negatively to price relief as it can be seen to undercut the affordability of distributed renewable generation assets such as solar PV, and undermines the economic arguments behind net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Delivery:

If passed, the legislation will enable the price mitigation measures to begin to take effect on July 1, 2017. The 2017 LTEP will be released to the public in the summer2017 and would reinforce/integrate with Ontario's Fair Hydro Plan. Regulations are required under the major components of the legislation in order to fully implement the initiative and clarify program details.

Commented [HT54]: TBC

1. Refinancing Global Adjustment assets in order to defer ratepayer costs / Mechanism to defer GA costs

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

Commented [HT55]: This needs more elaboration and confirmation. Last discussion I was part of on this point hadn't landed exactly how long it is expected that the IESO retains the Reg Asset for before sale to OPG.

2. Enhancing Social and Conservation Programs

OESP Enhancements

New OESP program details would require TB/MBC approval.

Changes to regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modelled after processes used for the OREC (8% rebate). The amendments made in this bill allow for a transition period where the program continues to draw on the existing IESO variance account until the account can no longer maintain the program. IESO is required to notify the Ministry of Energy when it expects the variance account to be depleted (likely sometime in the fall). At this time

The proposed changes will take time to implement as they would require changes to the central system and the LDCs' billing systems. The OEB and their central service provider will need to work with LDCs, MOF, and the CRA on the changes to this program (delivery mechanism, funding source, application system, eligibility).

Commented [HT56]: Requires update

RRRP Enhancement

Regulations would be required to establish the details of the program. OEB estimates that the implementation would take at least six months after finalizing regulations. For this reason it is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st which will put an immediate pressure on the OEB and LDCs as implementation is required no later than October 1, 2017. A mechanism will need to be created to ensure that all parties are aligned in the yearly forecasting and costing of the program.

On-Reserve First Nations Delivery Credit

The OEB would need to work with the LDCs to identify the eligible on-reserve consumers. A communications plan could include public release of the OEB report and a commitment to working with the LDCs on implementation details.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Once available, the rebate would appear on customer's electricity bills as a reduction in, or credit for, their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Linkages:

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer-fall 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The Ontario Rebate for Electricity for Electricity Consumers Act, 2016, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) was a five-year legislated program put in place as a broad-based (RPP-eligible), transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB expired on December 31, 2015.

Commented [RK57]: TBC

Debt Retirement Charge – On January 1, 2016 the government ended the electricity Debt Retirement Charge (DRC) on residential users, earlier than planned, and put in place the low-income targeted OESP, effective 2016. For all other consumers, the Electricity Act was amended so that the DRC is ~~schedul~~legislated to be removed ~~by~~ April 1, 2018.

Industrial Conservation Initiative – Ministry of Energy program implemented in January 2011 to help large industrial consumers reduce their electricity costs by ~~shirftin~~reducing electricity consumption ~~away from~~ in peak periods. As part of the Fair Hydro Plan, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all electricity consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – approved as part of Ontario's Fair Hydro Plan, and under development, the Affordability Fund is intended to expand access to conservation funding to targeted consumers that do not currently qualify as low-income for the purposes of the Home Assistance Program (HAP).

Commented [HT58]: insert

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded~~met~~ by the January 2017 ~~8%~~ rebate amount equal to the 8% provincial portion of the HST.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. **Note:** Funding electricity support programs through the tax-base rather than the rate base will also provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON)- is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed to "consider options for legislation/regulation change that lessen the impact on residential tenants of increased energy costs from cap and trade". As part of the review of the Residential Tenancies Act, the Ministry of Housing is working on a proposal that will address that commitment. The proposal is expected to come to Cabinet in spring 2017.

Commented [HT59]: To get updated language on the RTA amendments

Proposed Cabinet Minute

Approval of draft bill for introduction

Cabinet approved version XX-XX of this draft legislation for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

Subject: DRAFT CBN For Review- Rate Mitigation- Due EOD May 1st
Importance: High

Hi Felix and Chris:

As mentioned earlier in the week, please find attached the draft CBN re the rate mitigation legislation for the TBS' review (password same as previous materials). This has been prepared with no materials and should be reviewed closely. I have left comments in the margin where I am looking for specific review or confirmation of particular details. I am interested in ensuring alignment in how we are characterizing the proposal and its risks.

The note is a bit on the longer side at the moment, so suggestions to economize without losing key pieces would also be helpful.

The note is undergoing concurrent review with Energy and my management now. My ADM will likely pass this along to Cindy and Karen for concurrent review given the time crunch, but please feel to pass along as well.

Please try to have any comments to me by EOD on Monday so I can get it to my DM and the Secretary on Tuesday.

Have a great weekend,

Subject: RE: Draft GA Sub debt term sheet - Performance Fee Recommendations

Carlos, Mike and Jim

Since I will not be available for the meeting this afternoon here is my single comment.

I have concerns with the weighted average calculation of both the benchmark and actual issuance including the debt issued to the Trust by OPG funded by the 44% equity injection given that there are no market forces in play with regard both issuance and funding of this tranche, at least from an OPG perspective.

The only way in which this tranche is acceptable for performance inclusion is by OPG linking the yield on this debt to what was issued to the markets by the Trust. For example the debt from the equity injection is X bps above or below what was issued in the markets for equal tenors. Even so a linked component in the benchmark, in my opinion, adds limited value.

Thanks

Ken k

Subject: Draft GA Sub debt term sheet

Carlos,

Further to our discussions re establishing GA financing benchmark. Attached please find the draft term sheet of the subordinated debt (from Province equity injection). Could you please review and circulate it to the appropriate contacts/group on your side. We'd also like to set up a meeting with OFA, at your earliest convenience, to go over the document and get your feedback. Please let us know your availability.

Thanks

Sheen

Date:	Friday, June 02, 2017 1:29:01 PM

Carlos, Mike and Jim

Since I will not be available for the meeting this afternoon here is my single comment.

I have concerns with the weighted average calculation of both the benchmark and actual issuance including the debt issued to the Trust by OPG funded by the 44% equity injection given that there are no market forces in play with regard both issuance and funding of this tranche, at least from an OPG perspective.

The only way in which this tranche is acceptable for performance inclusion is by OPG linking the yield on this debt to what was issued to the markets by the Trust. For example the debt from the equity injection is X bps above or below what was issued in the markets for equal tenors. Even so a linked component in the benchmark, in my opinion, adds limited value.

Thanks

Ken k

Hi John, I'm wondering if we should raise these and other issues and let Chris decide how to deal with them. My concerns are as follows:

1. report back seems to be mainly about regs, so maybe desire to keep the focus on regs.
2. indemnities is one of a number of outstanding issues, e.g. performance guarantee, PiLs exemption etc. Should they all be noted or is tyere another venue for this?
3. not sure how far indemnity discussion has gone and whether this is place to raise it
4. less concerned about IESO credit facility. It has been mentioned and is relatively non-controversial

What do you think?

Hi,

This was Emily's question more so than ours. Would it be fair to ask Chris to provide coverage on IESO's request for a credit facility and IESO's and OPG's requests for indemnities in their RAN note?

Any thoughts on that?

Yeah, Gavin had explained the distinction between the two to me last week. Bill 132 includes the OFHPA and other changes, I think.

I am wondering if there's an opportunity for us to add something that we need to see Energy acknowledge. And not sure if there is a window to do that either…..so I'm taking a look to see what we could add in for that purpose.

Subject: RE: Draft TB Sub - Electrictiy Regs

I don't think anything immediate is needed. This is a report back to report on status/plan for the regs.

But I did note something that I didn't get before. There is a distinction between Bill 132 Fair Hydro Plan Act, 2017 and Ontario Fair Hydro Plan Act, 2017.

The former was an Act to enact the Ontario Fair Hydro Plan Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998. I don't think that has any implications for any of our notes. I assume all those acts/amendments were passed on March 31, 2017.

But I'll pass the document around. Sounds like we get a RAN note this afternoon from TBS.

Hi Ron,

A comfort letter would be a significant step in my view. While not a certainty, a TPD letter providing comfort [establishing that no activity would result in tax liability ranking ahead of security holders] would be material to ratings agencies. Just not sure how that is done but if TPD can assure them that without putting those changes in place or motion.

Subject: RE: EXTERNAL - Conference Call MOF, OPG and Torys | Fair Hydro Plan

During today's call there was a general reference to potential credit rating agency concerns. That concern may not have come across clearly enough and here is some perspective on the specific concern. Given that this structure is very unique in the Canadian environment the credit rating agency will likely request a legal opinion – tax neutrality or run flat for tax – establishing that any activity of the financing entity will not result in a tax liability that would rank ahead of security holders.

Hi Ann,

I'm in a meeting right now. Not sure about a comfort letter's impact. I'd need to consult. And the view and experience of our IR folks may not reflect the particularities of this planned financing entity.

Ron

Dear Bruno, John, Salman and Adam – Hi!

We look forward to our meeting this afternoon and have the opportunity to discuss the models we received from Energy and OPG re: the GA smoothing, and the broader social programs. Our goal is to develop a robust understanding of the assumptions/models and the financial risks that may materialize under different scenarios. Happy to share with you what we know and we look forward to benefitting from your insights.

Here is a little deck we put together to reflect our understanding. We would greatly appreciate hearing about your thoughts about the models and financial risks that may be inherent. We also hope to talk about how we can best work together, with each other as central agencies, as well as the Ministry of Energy and the sector partners to allow for proactive management of issues/risks as they come up.

Looking forward to talking to you in person.

Cheers,
Didem

Office of the Treasury Board

Ontario Fair Hydro Plan
Analysis of Financial Models and Risks

April 2017

Purpose

- In March 2017, the government approved and announced the Ontario Fair Hydro Plan (OFHP), which committed to lowering electricity bills by 25% for the typical residential customer and holding rate increases to the rate of inflation for four years.
  - In addition to residential customers, small businesses and farms would also benefit from the initiative (approximately 90% of all customers).

- On April 12, 2017, Treasury Board Secretariat received two models:
  - The model the Ministry of Energy developed and used to support the March submission; and
  - The financial model that was developed by the Ontario Power Generation (OPG) that provides details regarding the financing of the proposed structure.

- The models received are based on high level aggregates and do not allow for running different scenarios that would allow TBS to determine the financial impact of potential changes in variables. In discussions with the Ministry of Energy and OPG, it has been agreed that these scenarios must be developed – both to help creation of a risk-based outlook for the province, as well as to respond to questions that will inevitably arise from the credit rating agencies.
  - Given the current focus on the legislative pieces, the scenarios will be done in the coming weeks.

- Hence this deck focusses on risks without providing $ impacts, and is intended to support ongoing discussions by highlighting factors as the legislation and regulations are drafted, and the initiative is implemented.

Overview

1 **Ontario Fair Hydro Plan: How does it work?**

- Overview of the model
- The Model: Phases
- The Model: Key assumptions

2 **What are the risks and implications?**

- Risks/sensitivities
- Next Steps: Scenario Testing

3 **Key Considerations and Risk Mitigation Strategies**

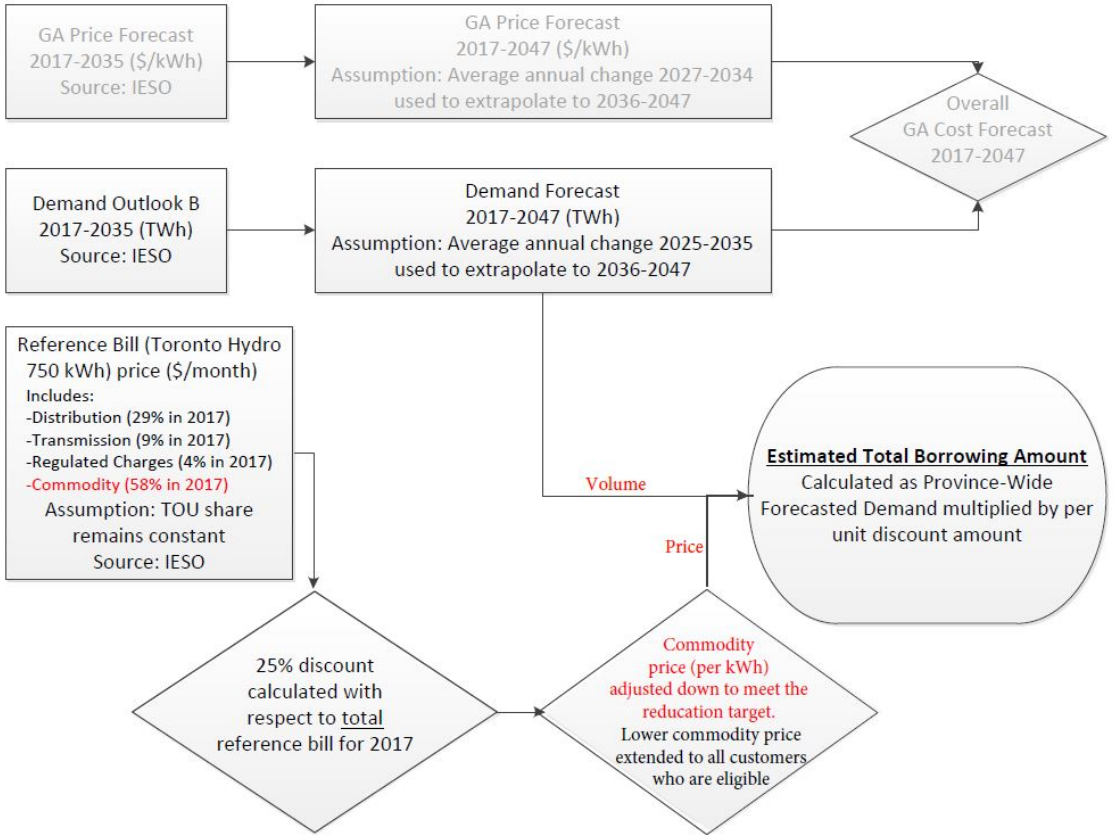
- **Options through Phases**
- **Monitoring & Early Warning Indicators**

1 Ontario Fair Hydro Plan

- Overview of the model
- The Model: Phases
- The Model: Key assumptions

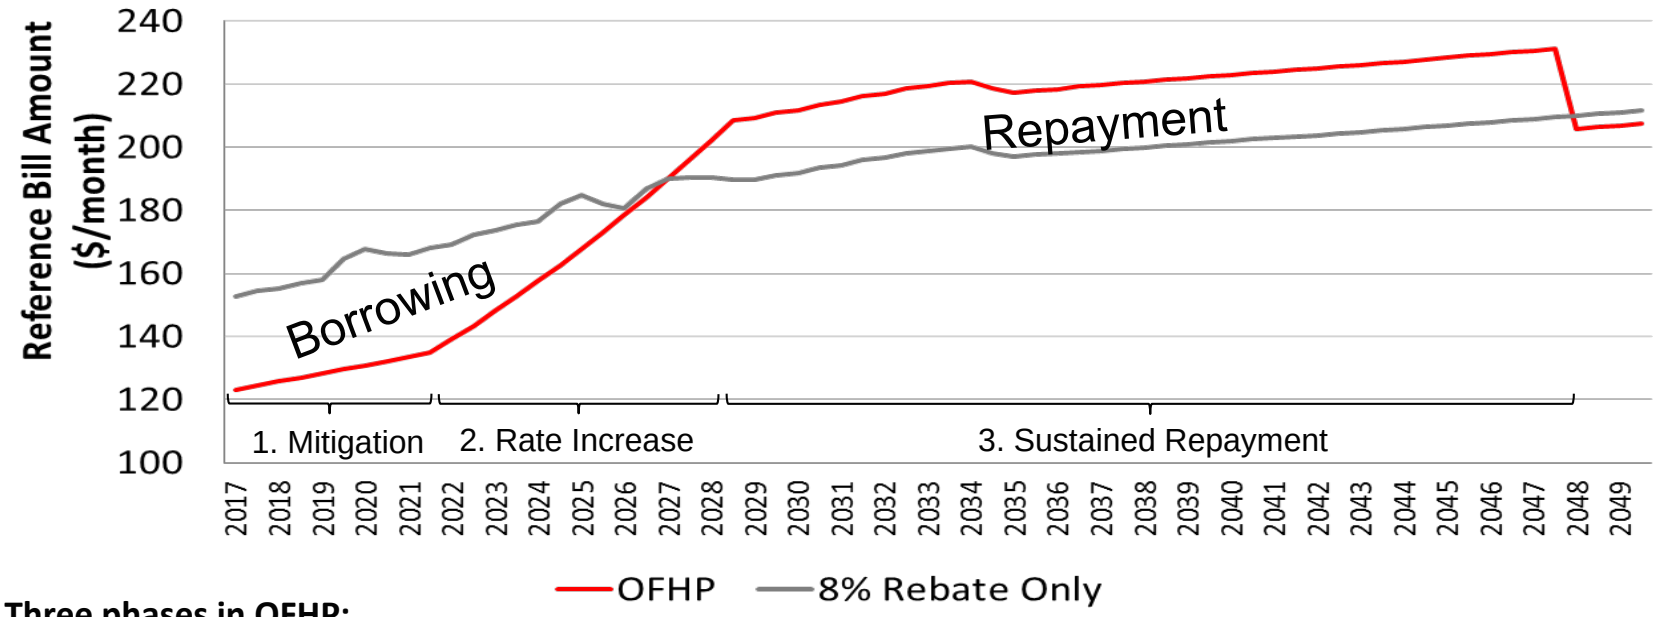
Ontario Fair Hydro Plan: Construct

- Through refinancing of the Global Adjustment (GA), which provides immediate rate relief by spreading the cost of electricity investments over a longer period of time, the OFHP reduces electricity bills by 25% for the typical residential customer in 2017, and holds rate increases to 2% (the expected rate of inflation).



Ontario Fair Hydro Plan: Phases

- OFHP can be thought of as having three phases:



Three phases in OFHP:

Phase 1: Mitigation

- 2017 bill set 25% lower than original projection (that did not include 8% HST rebate)
- Increase in bill capped to 2% per year until 2021

Phase 2: Rate Increase

- Bill **increases 6.3% each year** to avoid exceeding borrowing limit of $28B
- Planned increases end in 2028 when sustained repayment starts

Phase 3: Sustained Repayment

- Bill remains **10.4% higher** than projected with 8% rebate until 2047
- Difference represents financing repayment
- Total interest paid: **$26.2B**

Ontario Fair Hydro Plan: Key Assumptions

- The model is a high level and aggregate model, which is build on other independent forecasts (e.g. IESO demand forecast). There are a large number of assumptions built into the model explicitly and implicitly (as a large number of assumptions are embedded into the other forecasts that are used as inputs into this model).

- These variables can be bucketed into three groups (variables in red have significant impact):

Exogenous Variables

- Interest Rates
- USD/CAD Exchange Rate
- Debt ceiling of $28B (borrowing limit 10% of bill)
- Natural Gas Prices

Policy Parameters

- Use of Toronto Hydro Customer @ 750 kWh as the reference bill
- 25% bill reduction in 2017
- Bill increase capped at CPI annually until 2021
- Rate increase accelerate starting in 2022 in order to never exceed the $28B cap
- Payments set to fully repay by 2047
- Implementation approach

Other Model Inputs

- **IESO Demand Forecast (Outlook B)***
- **IESO Global Adjustment Forecast***

*** includes a large number of variables ranging from: generation costs, federal CO2 price, regulatory charges, energy conservation, technological disruption, exchange rates, load forecasting and seasonal adjustments, etc.)**

2

What are the risks and implications?

- Risks/sensitivities
- Next Steps: Scenario Testing

Assumptions and Risks: Eurig Compliance

- As outlined on slide 6, the base model has three phases:
  - Phase 1: Bill lowered by 25%, **increases kept to CPI growth (2%) from 2018-2022;**
  - Phase 2: Bill **increases 6.3% each year** from 2022 to 2028; and
  - Phase 3: While year-over-year increases slow down, **bills remain 10.4% higher** than what it would have been without the GA smoothing/OFHP.

- Analysis is currently underway to better understand intergenerational costs and benefits and the impact of GA smoothing on recovery charges that would be allowed under the current Eurig compliance rules.

- Depending on the legal determination, if the annual increases in bills or the commodity prices will be subject to caps, additional borrowing/provincial funding may be required.

- The next couple of slides explore various assumptions built into the model, and what any variation in these assumptions may mean. As such it is important to keep in mind that impacts referenced below will be incremental to the increases allowed under the current model and each would continue to be subject to similar Eurig limits.

Assumptions and Risks: Demand

- Demand is a key assumption built into the model. Both the Ministry of Energy and the OPG's models use IESO Demand Forecast (Outlook B – "Flat Demand Outlook"), which explores a level of long-term demand that roughly matches the level of demand that exists today.
  - Both MOE and OPG have confirmed that they believe this is the most appropriate outlook to use from the four that have been developed by IESO for the Ontario Planning Outlook.
  - TBS does NOT have access to the IESO model to run sensitivity analysis.

- While TBS does NOT have access to the IESO model to run sensitivity analysis, we have analyzed how prior IESO forecasts performed against actual electricity demand. Variance analysis suggests that, IESOs forecasts have been reasonably accurate in predicting short term (18-2 yrs), but tended to overestimate medium to long term demand vis-à-vis actuals. 2-4% overestimation was noted in 2005 of the near-term forecast (2006-2008); long-term forecasts are expected to be even less accurate due to increased uncertainties.

- If the current outlook has a similar bias (overestimation of demand) built in, there would be pressures built into the medium to long term outlook.
  - If actual demand is below projections, the fixed costs in the system (generation contracts, transmission and distribution) as well as the repayment requirements will have to recovered over a smaller amount of consumption, which would necessitate additional borrowing (assuming the $28B ceiling has not been reached), higher recovery rates, and if higher recovery rates (beyond the 10.3% built into the base outlook can't be exceeded for Eurig or other "absorbability" reasons) are not an option, then provincial financing.

- It is also important to note that the IESO forecast is the aggregate demand for all consumers across the province, whereas the program will cover approximately 90% of the users. If there are marked differences between the projected electricity demand for various classes, there may be an added margin for variance.

Assumptions and Risks: Interest Rates

- OPG has developed a detailed financial model where the borrowing is carried out in tranches, interest is paid for Yrs 1-10, with interest + principal payments starting in Yr 11.

- The model and current projects assume an interest rate of 5% per year.
  - It is important to note that the model is very sensitive to the interest rate.
  - The assumption of 5% is in line with the outlook reflected in the 2017 Budget and the current consensus of private sector economists for the 2017-2020 period.
  - **If interest rates rise steadily from 5% to 7% (historical average) between 2020 and 2024**
    - Phase 2: Bill **increases 7.3% each year** (compared to 6.3% without interest rate increase)
    - Phase 3: Bill remains **12.5% higher** (compared to 10.4% without interest rate increase) and the total interest paid increases to $37.5B (compared to the $26.2B that would be paid @ 5%)

- Consideration should be given to building permissive language in the proposed legislation and regulations to allow for timely course correction mechanisms. For instance, if interest rates are going up (or other variables are changing that is increasing pressure on the model), consideration could be given to allowing higher bill increases sooner (possibly moving up when Phase 2 starts, or allowing for transitional adjustments between 2% increases under Phase 1 and 2).
  - Section 7xx in the current draft legislation enables course corrections during the first phase (i.e. until April 30, 2022) through regulations made by the Lieutenant Governor in Council
  - Section 10xx in the current draft legislation enables course corrections after April 30, 2022 through determinations made by the Financial Services Manager (i.e. OPG)

Assumptions and Risks: System Costs

- The current framework is focused on providing relief on the overall electricity bill, by providing a sufficient reduction in the commodity price of electricity.

- For the Reference Bill that is being used as the analysis, 42% of the bill is currently covering electricity system costs (generation contracts, Transmission, Distribution, existing regulatory charges, etc.) and only 58% of the bill pertains to the commodity cost of electricity.

- In order to main the proposed bill reductions in total bills, it will be important to account for and actively manage the potential increases in the system costs.
  - If the system costs (generation, transmission, distribution, etc.) for the Toronto Hydro reference customer goes up, it would require a greater reduction in commodity prices (and hence significantly greater borrowing) to meet the commitment of 25% reduction and the subsequent 2% cap.
  - OPG's noted that additional system costs are deferred using financing up to 2030 after which they are amortized to 2047. TBS will be following up with the Ministry of Energy and OPG to get a better understanding of what may be built as assumptions into the base case with respect to this risk.

Other Risks That May Impact the Fiscal Plan

- The proposed structured will be reviewed by credit rating agencies to allow OPG to borrow in the open market. Depending on the perceived risks and credit assessment, there may be an impact on:
  - The interest at which OPG can borrow the funds;
  - The amount of equity/funding the province may have to inject into the Trust at the outset;
  - The nature and timing of guarantees that may be required.
- If the Trust can't raise the full funding requirements in the market as various tranches come due, additional cash injections would be required. Similarly, if the borrowing cap of $28B is reached sooner than forecast, the province may have to provide the incremental funding needed to float the program to 2047.
- Beyond 2022, when steep increases are required (from 6.3% per year under the base case (compound increase of 55%) to over 8% if there are changes in interest rates, demand, and/or other variables, such as natural gas), there will likely be additional pressure on the government to offset a part of the scheduled increases.

3 Key Considerations and Risk Mitigation Strategies

- Options through Phases
- Monitoring & Early Warning Indicators

Risk Response Actions by Phase

Available actions to respond to an emerging risk depends on the phase in which it is identified. Consideration should be given to building permissive language in the proposed legislation and regulations to allow for timely course correction mechanisms.

	Phase in which risk is identified		
Actions to respond to Risk	**Phase 1 - Mitigation**	**Phase 2: Rate Increase**	**Phase 3: Sustained Repayment**
Allowing greater rate increases during the remainder of the rate mitigation phase (change to policy direction)	✓		
Higher year-over-year increases throughout the rate increase phase	✓	✓	
Higher payment amounts throughout sustained payment phase	✓	✓	✓
Use public funds to ease pressure	✓	✓	✓

Risks – Fair Adjustment Phase – 2017-2022

- From 2017 to 2022, the Ontario Energy Board determines electricity rates
  - Lieutenant Governor in Council may make regulations prescribing the methodology to be applied by the OEB to determine electricity rates
- The table below summarizes impacts, potential actions, and indicators should any identified risk cause deviation from the MOE/IESO forecasted financing plans

Risk	Impact	Potential Action	Indicator
Electricity rates increases deviate from 2% annually	• Increases <2% will require more borrowing and result in reaching the $28B debt limit sooner (increasing the total repayment) • Increases >2% increases consumer bills, especially as the difference accumulates over time	• Section 6.1xx and 6.2xx could make reference to 2% and/or CPI to better align with the model forecasts	• Bi-annual electricity rates
Interest rates are > 5%	• Would result in reaching the $28B debt limit sooner than planned, increasing the total repayment amount • Increases consumer bills beyond the current forecast	• Section 6.1xx and 6.2xx could require that the methodology to determine rates be reviewed/updated should interest rates significantly increase over 5%	• Bi-annual interest rate
Electricity Demand Forecast is overestimated (approx. 2-4% historically)	• Would result in reaching the $28B debt limit sooner than planned, increasing the total repayment amount • Increases consumer bills beyond the current forecast	Section 6.1xx and 6.2xx could require that the methodology to determine rates be reviewed/updated should demand be significantly lower than projected	• Actual electricity consumption

Hi Bruno,

I had been thinking, to make it easier for Energy, to simply work with their version of the flow chart from the March CabSub.

That said, their version may have been updated since then anyways, but they could take out suggestions in.

I also added reworked some parts of the text slide, and dropped some detail, as it was rather dense – may still be!

Thanks,
Ron

DRAFT

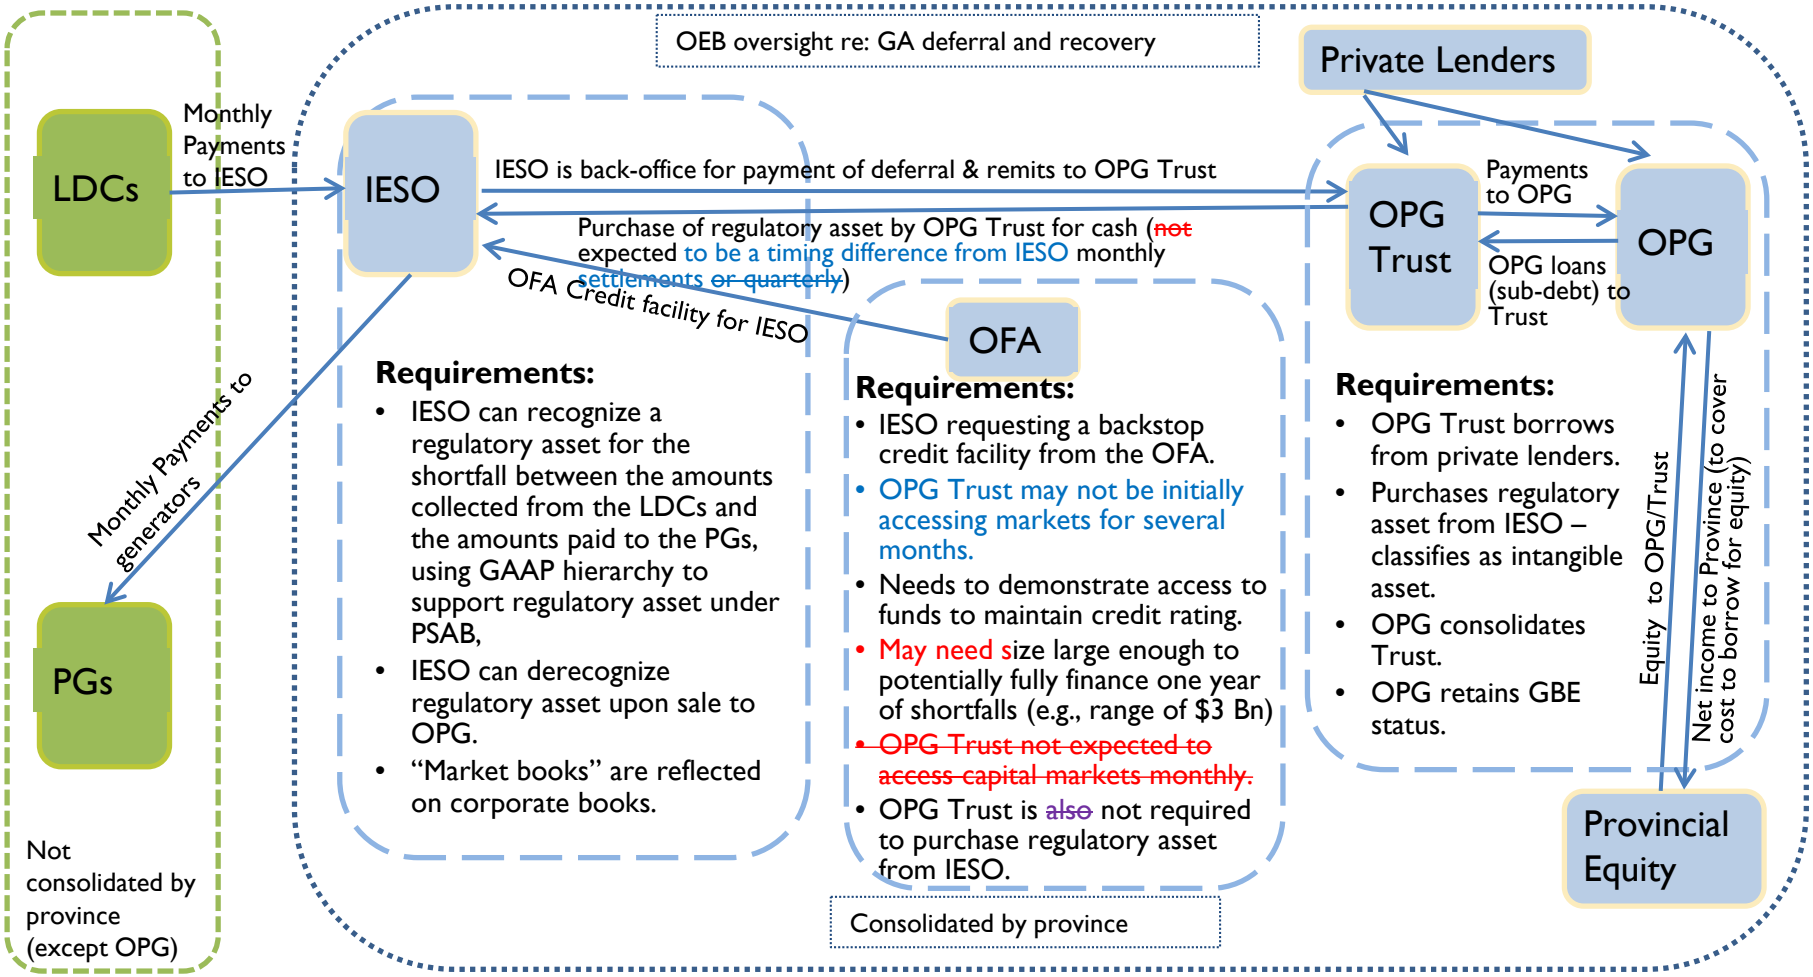
GA Financing Plan: Role of IESO

Corporate and Electricity Finance Division
April 28, 2017

DRAFT

GA Smoothing – Proposed Structure

- The following diagram provides an overview of the proposed GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

IESO Financing Requirements

- IESO will need to ensure that it continues to have the funds available to provide payments to generators on a monthly basis as part of the IESO settlements process, while recoveries from LDCs for Regulated Price Plan (RPP) / Fair Hydro Plan eligible customers will be lower.
- IESO has an existing credit facility from the OFA; however, a new or expanded facility is being requested.
- IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period.
  - OPG Trust is not expected to access public capital markets for several months after the start of the FHP, and may be purchasing the asset with a lag vs monthly settlements. Also, OPG Trust is not ~~nor is it~~ required to purchase the regulatory asset.
  - IESO will need a credit facility for interim financing.
  - IESO may require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.
- Based on Ministry of Energy's GA deferral plan, it is estimated that approximately $2.5-3.0 billion need to be deferred per year for over first 10 years, equal to approximately $200-250 million per month, on average.[1]
  - The size of the credit facility required to backstop IESO could be $2.5 to $3.0 billion ~~per year~~. [TBC]
- The monthly and annual amount being deferred and the resulting monthly amounts can be substantially different than forecast based on various factors, such as seasonality or electricity usage, as well as potential changes to electricity costs from OEB rate decisions, with IESO estimating deferral amounts as high as $400 million per month.
- Other factors that may increase IESO's financing requirements:
  - IESO will also incur financing charges that will need to be refinanced.
  - The financing and administration costs that OPG Trust incurs will need to be paid.
- There is an accounting risk on how OFA financing of the IESO requirements would be treated.
  - Even if IESO is allowed to recognized the Regulatory Asset, there is a risk as to whether this recognition will be permitted under the accounting standards (PSAS) upon consolidation with the Province.

[1] Based on Ministry of Energy's annual GA deferral amounts, assuming the monthly deferral is equally-weighted.

Subject: RE: GA - IESO Role and Financing v4 - extract v6.pptx

Hi Ron,

Some edits. As discussed, I am not sure if we can say definitively what OPG Trust is expected to do.

John

Hi Bruno,

I had been thinking, to make it easier for Energy, to simply work with their version of the flow chart from the March CabSub.

That said, their version may have been updated since then anyways, but they could take out suggestions in.

I also added reworked some parts of the text slide, and dropped some detail, as it was rather dense – may still be!

Thanks,
Ron

Hi Ron

Attached are the updated slides per you request.

Thanks
Bruno

DRAFT

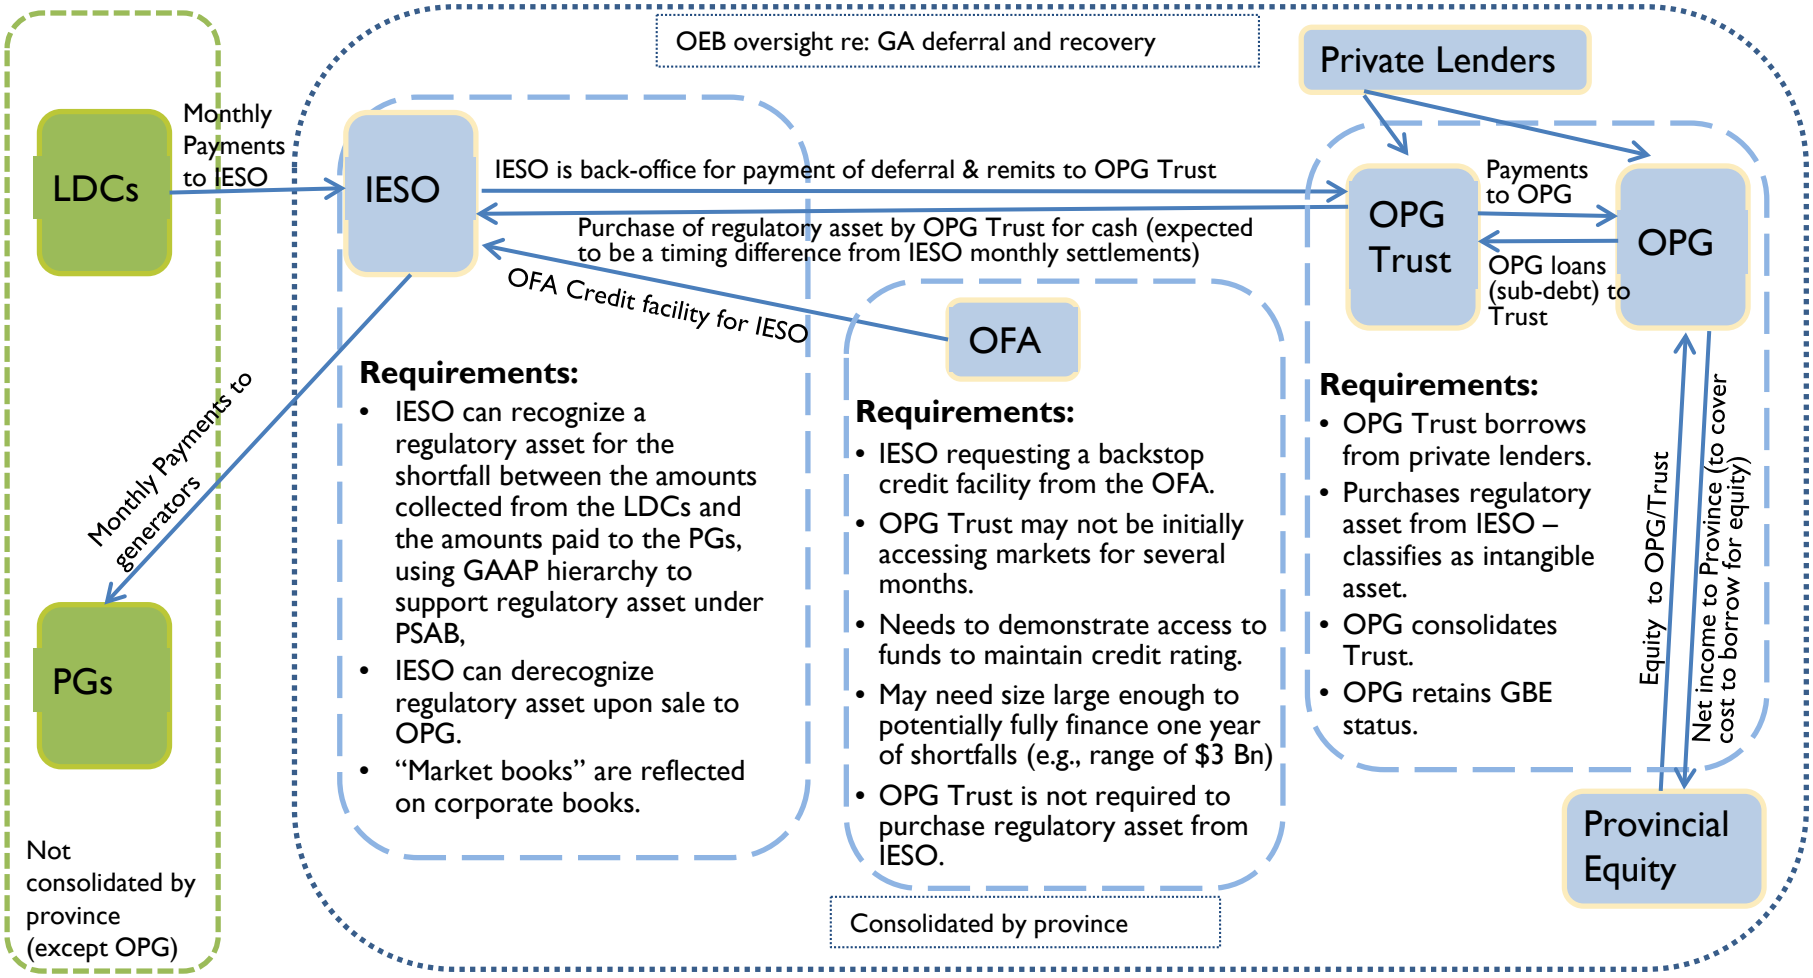
GA Financing Plan: Role of IESO

Corporate and Electricity Finance Division
May 1, 2017

DRAFT

GA Smoothing – Proposed Structure

- The following diagram provides an overview of the proposed GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

IESO Financing Requirements

- IESO will need to ensure that it continues to have the funds available to provide payments to generators on a monthly basis as part of the IESO settlements process, while recoveries from LDCs for Regulated Price Plan (RPP) / Fair Hydro Plan eligible customers will be lower.
- IESO has an existing credit facility from the OFA; however, a new or expanded facility is being requested.
- IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period.
  - OPG Trust is not expected to access public capital markets for several months after the start of the FHP, and may be purchasing the asset with a lag vs monthly settlements. Also, OPG Trust is not required to purchase the regulatory asset.
  - IESO will need a credit facility for interim financing.
  - IESO may require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.
- Based on Ministry of Energy's GA deferral plan, it is estimated that approximately $2.5-3.0 billion need to be deferred per year for over first 10 years, equal to approximately $200-250 million per month, on average.[1]
  - The size of the credit facility required to backstop IESO could be $2.5 to $3.0 billion. [TBC]
- The monthly and annual amount being deferred and the resulting monthly amounts can be substantially different than forecast based on various factors, such as seasonality or electricity usage, as well as potential changes to electricity costs from OEB rate decisions, with IESO estimating deferral amounts as high as $400 million per month.
- Other factors that may increase IESO's financing requirements:
  - IESO will also incur financing charges that will need to be refinanced.
  - The financing and administration costs that OPG Trust incurs will need to be paid.
- There is an accounting risk on how OFA financing of the IESO requirements would be treated.
  - Even if IESO is allowed to recognized the Regulatory Asset, there is a risk as to whether this recognition will be permitted under the accounting standards (PSAS) upon consolidation with the Province.

[1] Based on Ministry of Energy's annual GA deferral amounts, assuming the monthly deferral is equally-weighted.

I'm not sure. We would have to coordinate through CO no? I know a few years back I received a schedule of upcoming LRC dates - might be published yearly - just don't recall where that came from.

Patrick (MOF legal) had mentioned that this OIC would likely not go to TB since it does not require their approval (it's a statutory approval, not voted appropriation).

Hi James,

Would "finance" be more accurate than "cover" -- at least at this time as per the intent? Cover might suggest funding, vs financing.

Also, the OIC we think would go to LRC. And the authority would be under CIPA.

I'd need to check with staff, and your advice, if such an OIC would need to go to TB.

Ron

Hi James,

How about this?

iii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time or for a period of time, does not purchase any portion of the deferred Global Adjustment amounts payments. Note that an OIC to allow the OFA to provide an expanded credit facility will be requested.

Subject: Latest version of the ENE - OFHP note

Hi everyone,

Please find attached the latest version of the OFHP assessment note - incorporating feedback from folks today.

Patrick - two things to point out:

- the Ministry requested a new TP line to support "future rate mitigation initiatives". We struck out the minutes related to this request, given a TP can be created in the future once we have a specific future rate mitigation initiative (rather than just creating a placeholder now). However, we thought we would include it on page 12 in case folks do want that minute included.
- We also included the Minute for media buy / ARB request. Let us know if there

are any concerns with the language.

Thanks - let us know if there are any concerns. Patrick - we will wait for your ok before we share the note with Energy.

And many thanks to OCPD and COE for all your help and support on this.

Felix

Hi Ron

The only thing that I noted is the table on page 4 in the Section "What is the expected cost to government?" The table includes annual costs for moving social programs to the tax base but also includes the GA deferral amounts and sums the two. I think it's a bit apples and oranges and may be confusing as paragraph above also notes no fiscal impact to government from GA financing structure.

I think there is a small summing issue in 2017-18 column as well.

Bruno

Hi James,

Would "finance" be more accurate than "cover" -- at least at this time as per the intent? Cover might suggest funding, vs financing.

Also, the OIC we think would go to LRC. And the authority would be under CIPA.

I'd need to check with staff, and your advice, if such an OIC would need to go to TB.

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy

Implementation of Ontario's Fair Hydro Plan

Cabinet (info)	TB/MBC	Cabinet	Announcement	TB/MBC	Cabinet	Introduction
Feb 15, 2017	March 1, 2017	March 1, 2017	March 2, 2017	May 9, 2017	May 10, 2017	May 11, 2017

Summary of Proposal

The proposed legislation contains a variance from Cabinet direction, which is detailed in the ministry's variance memo and within this note.

Context for Decision:

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit. These measures include the 8% rebate introduced in January 2017 and builds on previously announced initiatives to deliver broad-based rate relief on electricity bills. OFHP includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need, and includes the following major components:

- Refinancing the Global Adjustment (GA);
- Helping vulnerable electricity consumers;
- Extending the Industrial Conservation Initiative (ICI);
- Improving sector efficiency; and
- Modernizing Ontario's electricity market.

Since March 2, 2017, the Affordability Fund and ICI expansion have been implemented.

This proposal follows Cabinet direction to the Ministry of Energy to take the necessary steps to implement electricity price mitigation initiatives that support OFHP to provide additional rate relief to Ontario electricity ratepayers.

The proposed legislation, the *Fair Hydro Act, 2017*, if enacted, enables approaches to fairly allocate a portion of GA amongst specified current and future electricity rate payers ("Schedule 1- *Ontario Fair Hydro Plan Act, 2017*"), and help the most vulnerable Ontarians through enhancements to electricity support programs through government funding ("Schedule 2- Amendments to the *Ontario Energy Board Act, 1998*"). To fully implement the initiative, the ministry will be seeking future approvals for regulations identified in the proposed bill.

The proposed legislation:

1. Establishes a framework to refinance a portion of the GA costs in order to reduce costs for eligible electricity ratepayers ("specified consumers") in the near term while recovering these costs over the mid- to long-term:
   - July 1, 2017, to April 30, 2018, reduces, on average, after-tax electricity costs for prescribed typical consumers by 25% (inclusive of the 8% rebate and shifting of support program to be government funded).
   - May 1, 2018, to June 30, 2021, electricity rates will be prescribed by regulation. This regulation making authority would enable the government keep increases in line with the Consumer Price Index (CPI) (see page 17- Fiscal Pressure)
   - July 1, 2021, to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and administrative costs (see page 14- Future Impacts to Electricity Rates). Time period may be extended by regulation.
   - Provides for amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998*, to enable Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO) to address payment, settlement and cost-recovery obligations and to manage the refinanced GA costs. (see page 19- OPG Mechanism).
2. Expands electricity support programs for the most vulnerable consumers and moves program costs from the rate base to the tax base. The bill amends the *Ontario Energy Board Act, 1998* to:
   - Move the recently expanded Ontario Electricity Support Program (OESP) to government funding, allow for the potential transition of the program administration to the Crown or other entity, and to enable information exchange between the Ontario Disability Support Program (ODSP) and Ontario Works (OW) to potentially allow for automatic enrolment procedures to be established;
   - Enable the funding of existing Rural or Remote Rate Protection (RRRP) for prescribed customers to be provided for through provincial revenues, rather than from electricity customers.
   - Enable a broader government funded Distribution Rate Protection (DRP) program (broadened RRRP) which provides additional distribution rate protection to residential customers of prescribed higher cost LDCs by enabling the regulations to prescribe a maximum distribution charge.
   - Enable the provision of a government funded on-reserve First Nations Delivery Credit (FNDC), which would cover 100% of the delivery charge for on-reserve First Nation residential customers.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price

in order to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.

- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.) LDCs recover their costs through distribution rates. LDCs are licensed to serve a specific geographic area by the Ontario Energy Board (OEB). An LDC must receive Ontario Energy Board approval to charge a distribution rate.
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates for residential customers are moving to a fully-fixed charge by 2019 for most LDCs. Some LDCs, such as Hydro One and Algoma Power are transitioning over a longer period.
  - Line Loss: The costs to recover electricity that is lost when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service classes are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. Lower customer density increases the cost to serve. Residential class R1 customers are considered 'medium density' customers and residential class R2 are considered 'low density customers.' Hydro One also served urban residential customers, considered "high density" through its UR class. Hydro One also has urban and non-urban general service classes.
- **Ontario Power Generation (OPG) –** A business corporation owned by the Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an

open and transparent process to allow for stakeholders to participate in quasi-judicial proceedings and formal stakeholder consultations.

- **Independent Electricity System Operator (IESO) –** An independent corporation established under the *Electricity Act, 1998* that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Special Purpose Vehicle (SPV)** – **Special Purpose Vehicle (SPV) –** A Special Purpose Vehicle (SPV) sometimes referred to as a Special Purpose Entity (SPE) is an off-balance sheet legal entity created by the sponsor or originator. SPVs can be viewed as a method of isolating the risks of an underlying pool of exposures held by the sponsor and reallocating them to the SPV and often investors. This allows investors access to investment opportunities which would not otherwise exist, and provides a new source of revenue generation for the sponsor.
- **Security Interest –** A security interest is a type of property interest created by agreement or by operation of law over assets to secure the performance of an obligation, usually the payment of a debt. It gives the beneficiary of the security interest certain preferential rights in the disposition of secured assets.

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. On March 2, 2017, the Ontario government announced OFHP, and since then, there has been increased media attention and public pressure for the government to bring forward the legislation which would enact the commitments made in the Plan. The government has committed to implement further rate relief measures by the summer 2017. On April 20, 2017, the OEB announced that, starting in May, electricity rates would be 17% lower than would have otherwise been without the 8% rebate (OREC), the anticipated move of OESP costs to government funding, and a portion of the reductions estimated under OFHP based on a comfort letter sent from the Minister of Energy.

What is the expected cost to government?

While the GA refinancing structure is intended to result in no fiscal impact to the province, the total projected cost to the electricity rate base is $24.7B amortized until 2047, or longer as may be prescribed. In 2017-18, the GA refinancing cost is forecast to be $2.5B which would eventually be recovered through the rate base. Enhancing electricity support programs and moving to government funding will cost government $499M in 2017-18.

TABLE 1: Cost Impact ($M)	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	499	753	829	892
GA Financing (Assumes funded from the electricity rate base)*	2,500	2,600	3,000	3,500
Cumulative Total	2,933	3,353	3,829	4,392

***Note:** GA Financing includes equity injection from the province to OPG. $1.1B investment operating asset in 2017-18 (Ministry has received appropriations)

The GA refinancing portion of the bill establishes a structure in which the IESO records the GA cost recovery deferral as a regulatory asset (regulated by the OEB). The IESO may then sell the regulatory asset, at which time it becomes an investment asset. The investment asset owner (OPG Trust/Special Purpose Vehicle (SPV) or "financing entities") may then further sell or securitize all or part of the investment asset to other parties in exchange for a funding obligation. Under this structure, OPG, acting as the "Financial Services Manager," would therefore take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from IESO. OPG would finance these purchases through a combination of an equity investment by the Province flowed through the OFA ($1.1 B in 2017-18; see Table 1) and external private sector financing. The structure would increase gross debt of the Province (to finance the equity injection in OPG), increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. The Province's net debt will remain unchanged as the equity investment in OPG will offset the additional Provincial borrowing. This is expected to be fiscally neutral to the Province.

The estimate for the combined impact of the support programs for the most vulnerable consumers would begin in 2017-18 and is expected to be $499M in 2017-18, growing to $753M in 2018-19 and rising. This investment has been factored into the 2017 Ontario Budget's fiscal plan. These estimates are based on variable inputs such as program uptake, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

TABLE 2: Fiscal Impact ($M) of Social Programs	2017-18 Budget
Rural or Remote Rate Protection	344
Ontario Electricity Support Program	140
On-Reserve First Nations Delivery Credit	15

Note: As approved in the TB/MBC submission of Mach 1, 2017, and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31, 2018. ENERGY will return updated out-year figures following program implementation

There is inherent risk in the financial estimates given the number of variables that are included in the calculations (e.g. cost of borrowing (projections assume 5%), electricity demand and electricity market conditions and accounting assumptions). Under the mechanism, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future (see page 17- Fiscal Pressure).

What are the key steps to deliver this proposal?

- May 11, 2017 - Introduce legislation.

- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of OFHP.
- Energy will post a proposal to the regulatory registry in early May outlining proposed new regulations and amendments needed to support implementation.
- Early June 2017 [TBD]- Energy to bring regulations to TB/MBC.
- Early June 2017 [TBD]- Energy to bring regulations to Cabinet/LRC.
- July 1, 2017- the remaining reductions and initiatives associated with the OFHP would take effect. Programs that are not established on this day for technical implementation issues will have benefits that are retroactively applied to customers once program is operational in individual LDCs.

How will the changes be communicated?

On March 2, 2017, the Premier announced OFHP, which would lower electricity bills by 25% for all residential customers including many small businesses and farms. Communications was sustained through minister announcements, local MPP echoes, a radio campaign, and a webpage that features all the programs and initiatives the government is taking to reduce electricity costs.

On May 11, 2017, there will be a news release to announce the introduction of legislation to implement OFHP. Phase two of the marketing campaign will start this summer and will include radio and television.

A robust issues management plan will be developed to mitigate the GA financing risks.

Notes and Recommendation from LRC

LRC item direct to Cabinet.

Cabinet Office Analysis

The proposed legislation allows for the implementation of the key elements of Ontario's Fair Hydro Plan (OFHP) announced on March 2, 2017, to provide further rate relief to Ontario electricity ratepayers. The Global Adjustment (GA) partial refinancing proposal will provide, on average, 25% in electricity rate relief (including the 8% announced in 2016 and shifting of support program costs to the tax base) to "specified consumers" (i.e., residential, farms, small businesses, condominiums, long-term care homes and co-operative housing as prescribed) between July 1, 2017, and April 31, 2018 ("The Fair Adjustment"). Electricity rates would then change by amounts prescribed in the regulations. Regulation making authority would enable the government to keep rate increases in line with Consumer Price Index (CPI) between May 1, 2018, and June 30, 2021 (see page 17- Legal Risks). Additional relief will be provided to Ontarians most in need through enhancements to electricity support programs through government funding.

1. Partial Refinancing of the Global Adjustment:

The proposed legislation establishes the framework to refinance a portion of the current GA costs to future ratepayers by recognizing the longer term benefit many of these generating assets to the electricity system. The methodology is based on the assumption that some assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets in the future. Similarly, conservation costs are currently recovered through the GA in the year they occurred while conservation initiatives can provide benefits to the system over many years.

The proposed *Fair Hydro Act, 2017* attempts to balance several key factors including financeability, accounting treatment and legal considerations by:

- Supporting financeability through a number of features, including a provincial undertaking not to interfere with clean energy adjustments once determined, which will be backstopped by a guarantee, and provisions intended to reduce borrowing costs and attract a wide investor base;
- Addressing the necessary accounting requirements through mechanisms to record funding, interest and the transfer of regulatory assets to avoid a fiscal impact to the province; and
- Mitigating legal risk by developing a methodology that attempts to ensure an alignment of costs with benefits to future rate payers.

In order for the clean energy adjustment to be characterized as a regulatory charge, the amount that could be refinanced would need to reflect the true value of the underlying assets being amortized over a longer period of time. According to a legal opinion by former Supreme Court Justice Binnie, there is a moderately high risk that the proposed change would be characterized as an unconstitutional tax rather than a valid regulatory charge because future consumers are being required to subsidize current consumers (see page 16- Legal Risk).

The bill establishes a structure in which the Independent Electricity System Operator (IESO) records the GA cost recovery deferral as a “regulatory asset” (regulated by the Ontario Energy Board (OEB)), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time from “specified consumers” (“the Fair Adjustment” and “IESO deferral”). Specified consumers would receive a reduction in electricity rates from July 1, 2017 to June 30, 2018 as based on a 25% reduction for a prescribed typical residential consumer. IESO may then sell the regulatory asset, at which time it becomes an “investment asset.” The investment asset owner (OPG Trust/Special Purpose Vehicle (SPV) or “financing entities”) may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

The Minister, following the principles in the bill, would regularly calculate the “Fair Allocation Amount” to ensure a proper match of the allocation of the intergenerational costs and benefits in relation to each on the next 60 six month “reference periods.” The financings will be backed primarily by the clean energy adjustments payable by specified consumers. The clean energy adjustments will track the actual payment obligations incurred by the financing entities when they become due and payable.

OPG, in its role as the Financial Services Manager, will calculate the aggregate clean energy adjustment payable in each month of the reference period, and, to ensure intergenerational fairness, these amounts will be managed to align with the fair allocation amounts determined by the Minister. OEB would calculate the rates at which the clean energy adjustment could be collected from specified consumers. To recoup the costs associated with the fair adjustment, consumers would be invoiced the clean energy adjustment on their electricity bills through existing IESO and Local Distribution Companies' (LDC) processes, which will be channeled through to pay each financing entity's related funding obligations. However, electricity rates are projected to remain lower than would have otherwise been until about 2026-27 (pending the development of the fair allocation amount), and the clean energy benefit will appear on customer's bills once repayment of the accumulated debt begins.

OPG is planning to create a SPV or Trust to finance the partial GA refinancing. To maintain the integrity of the structure, OPG must have the ability to appoint and remove the Trustee (or Board of Trustees) of the SPV/Trust, with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV/Trust. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. OPG will have the ability to direct the financing of the SPV/Trust and both benefit from its financing strategy and be at risk as a result of it.

Once the OPG Trust/SPV has purchased the regulatory asset, which it is under no obligation to do, it will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province through the OFA (see page 4: Table 1) and external financing through sale or securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG (to offset the interest on debt).

The legislation also provides that no action or omission by the OEB, the Minister, or the Crown is effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay the clean energy adjustment. Additionally, to support the program, the government will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The legislation enables these agreements. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be to achieve the highest rated securities, although that will depend on issues such as the strength of the undertaking not to adversely affect the program through subsequent legislation.

The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future (see page 14- Risks and Considerations).

Key elements of this schedule of the bill include:

Specified Consumers

- The defined group of consumers to whom the “Fair Adjustment” applies. Prescribed consumers include residential consumers, farms, small businesses, condominiums, long-term care homes and co-operative housing. These are primarily consumers eligible for the RPP, and aligns with the eligibility under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA).

Clean Energy Costs

- Clean energy costs are those costs that arise from the “clean energy initiative” and are allocated to the specified consumers for past, present and expected costs.
- The clean energy costs include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act*, *1998* (basically, the GA) which relate to contracts for:
    - Renewable energy generation or capacity, conservation and demand management, energy storage, and energy efficiency;
    - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act, 1998* or as prescribed);
    - Payments made under section 78.5 of the *Ontario Energy Board Act, 1998*; and,
    - Other costs as may be prescribed.

Fair Adjustment

- The adjustment to rates to ensure intergenerational fairness.
- July 1, 2017- April 30, 2018- reduction in rates for “specified consumers” based on a 25% reduction for a prescribed typical consumer.
- May 1, 2018- June 30, 2021- the bill allows for rates to be set by regulation (see page 17- Fiscal Pressure).

Fair Allocation Amount

- Principles established in the bill require proper alignment over time between the costs of providing facilities for clean electricity generation and conservation (“clean energy costs”) and the consumers who benefit from these investments.
- The Minister of Energy sets the fair allocation amount, and is required to:
    - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the “specified consumers” for applicable “reference periods” (typically every 6 months); and,
    - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (see page 16- Legal Risk; page 17- Fiscal Pressure);

  - Align these costs with clean energy benefits expected to be received by rate payers in the future.

- Subsequent calculations may be undertaken by other agents as prescribed.

Clean Energy Adjustment

- Determined by Financial Services Manager (OPG), the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principal, interest, transaction costs and administrative costs associated with the fair adjustment and consistent with the fair allocation amount.
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- July 1, 2017- June 30, 2021- OPG to internally capitalize the costs related to the fair adjustment, which will result in increased financing costs during this time.
- July 1, 2021- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing IESO and LDC processes. Note: it is not certain when the clean energy adjustment will ultimately appear on electricity bills as this will be tied to when repayment of the accumulated debt begins.
- In accordance with the regulations, the OEB to calculate the rate at which specified consumers are invoiced to recover the clean energy adjustment.

Regulatory Asset and Investment Asset

- A regulatory asset is created as IESO defers its right collect a portion of the rates that it would have otherwise received from customers/LDCs if not for the implementation of the Fair Adjustment.
- Subject to OEB approval, IESO records the funding shortfall as a regulatory asset, as IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until July 1, 2021.
- The Financing Plan contemplates the Financial Services Manager (OPG) establishing financing entities (OPG Trust/SPV) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.
- This purchase and sale turns the regulatory asset into an investment asset for the investment asset owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 4 years (July 1, 2021) the IESO has the right to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority (OFA) (see page 17- Fiscal Pressure).

- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

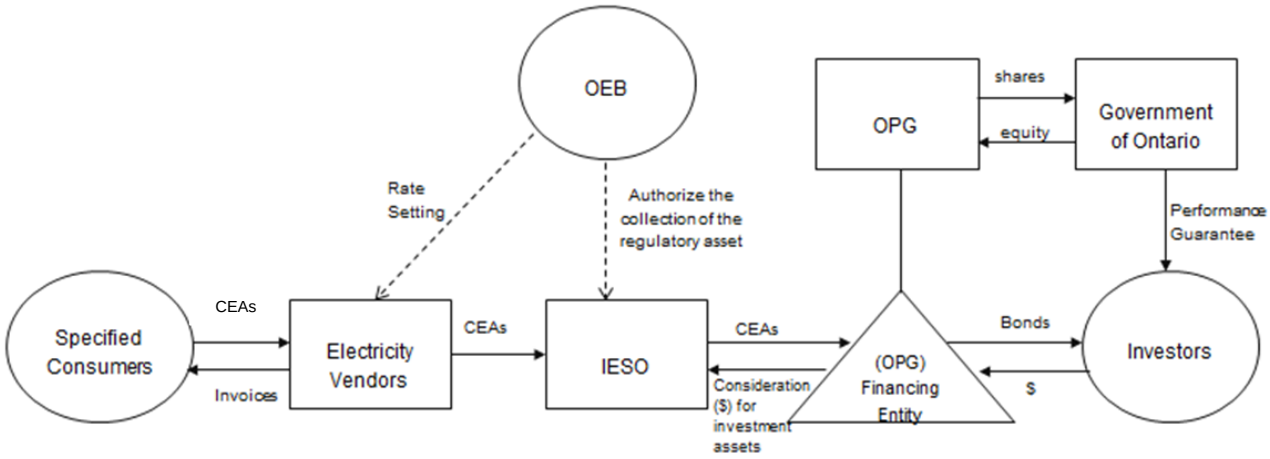
Financing Plan

- In practical terms, the Financing Plan is intended to show how debt (with varying incurrence dates, maturities and interest rates) will be used over time.
- Prepared by the Financial Services Manager (OPG), the Financing Plan is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO. Plan to be provided to the Minister of Energy.

Crown Undertaking (Guarantee or Backstop)

- The bill provides that no action or omission of the Crown, OEB, or the Minister would be effective to reduce, impair, or postpone or terminate the obligations of specified consumers to pay the clean energy adjustment.
- The Ministers of Energy and Finance together, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill, including regarding the performance of the IESO or electricity vendors under the bill.
- The Ministers of Energy and Finance together, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.

Figure 1: Financing Structure



Note: CEAs are "clean energy adjustments".

External Opinions

The proposed structure's impacts on IESO has been extensively reviewed by KPMG (IESO auditor), and the firm has provided a final draft accounting opinion confirming the validity of the structure under Public Sector Accounting Board (PSAB) standards, which will be updated after the legislation, regulations, and commercial arrangements are complete. KPMG advises that the variance account created by the proposed legislation meets the accounting criteria for the recognition of a "regulatory asset". The KPMG

opinion is highly technical and contains information pertaining to the proposed legislation. While it would be possible to make the opinion public, the ministry is not recommending this approach and is considering alternative options to propose.

If the government intends to keep rate increases to the pace of CPI from May 2018 to July 2021, this may require recourse to the fiscal plan to maintain the constitutionality of the GA refinancing structure.

For clarity, the below requirements were to be met to ensure the structure was defensible, and, based on the opinions received, the ministry is confident that the bill achieves these objectives:

- IESO requirements:
    - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB; IESO can derecognize regulatory asset upon sale to OPG; “Market books” are reflected on corporate books; and, OEB to act as regulator.
- OPG requirements:
    - OPG Trust/SPV purchases regulatory asset from IESO – classifies as intangible asset; OPG consolidates Trust/SPV; and, OPG retains GBE status.

The ministry retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

However, despite the fact that the structure has satisfied the fiscal, and accounting requirements and mitigated to the extent possible the legal risks outlined in the policy submission, there remain some fundamental risks:

- The structure is unique in Canada and possibly the world, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the Unites States, but officials are currently unaware of any example that would compare to the size, complexity or fluidity of the proposal;
- Complexity of the structure and length of deferral/recovery increases risk and decreases transparency;
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG’s direct operations as the Financial Services Manager; and,
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and

therefore its saleability. This could in turn, decrease the amount of rate reduction achievable under this mechanism.

2. Enhancing Electricity Supports and Shifting Costs to Government Funding:

Moving the Ontario Electricity Support Program (OESP) to Government Funding

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The program was launched in January 2016 and has had roughly 30% enrolment. Under OFHP the program was recently expanded to increase the existing benefit credit amounts by 50% and provide additional credits to more households. Under the expanded program the basic OESP benefit scale increased from $30-$50 to $35-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $52-$113 a month for eligible consumers.

The proposed bill amends the *Ontario Energy Board Act, 1998* to allow for the program to transition from the rate base to the government funding, and allow for the potential transition of the program administration to the Crown or other entity. The cost to the fiscal plan would be $186 million in 2017-18. The bill provides further amendments designed to allow information sharing between the Ontario Works (OW) and the Ontario Disability Support Program (ODSP) and the entity responsible for OESP. The intention is that this information sharing will allow for the automatic enrolment of individuals that are already enrolled under the ODSP or OW, but it is currently unknown to what extent this will significantly impact new enrolment under the program. The ministry is continuing to work with MCSS to increase the uptake of the program and automate enrolment of current social assistance clients. The ministry and OEB are also working with the Canada Revenue Agency (CRA) to eliminate the CRA requirement for “wet signatures” on OESP application forms to streamline the application process.

Enhancing RRRP (Delivery Charge Relief) and Moving to Government Funding

Rural or Remote Rate Protection (RRRP) helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. Currently, RRRP is a $290M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial.

The proposed bill amends the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The intention is to draft regulations permitted under this section to move the portion of RRRP costs used to support Hydro One R2 customers from rate payers to government funding. This is the majority of the cost associated with RRRP.

The bill would further amend the *Ontario Energy Board Act, 1998* to enable the creation of a government funded distribution rate protection program and the ability to prescribe a maximum distribution charge for prescribed classes of residential customers for certain prescribed high cost distributors. The intention is to draft regulations permitted under this section of the bill to prescribe residential customers of the following LDCs to receive distribution rate protection: Hydro One R1 and R2 rate classes, Algoma Power (excluding reclassified residential customers), Atikokan Hydro, Sioux Lookout Hydro, Lakeland Power – Parry Sound, InnPower, Chapleau PUC, and Northern Ontario Wires.

The OEB would continue its usual rate setting activities for prescribed LDCs, as authorized under the *Ontario Energy Board Act, 1998*, and prescribed LDCs would continue to collect the revenue they are entitled. However, prescribed customers (~800,000 customers) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up of out provincial funds.

Targeted broadened RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level. Cost to fiscal plan would be $344 million in 2017/18. If the legislation and required regulations are passed, the program would become active as of a prescribed effective date (planned: July 1, 2017).

On-Reserve First Nations Delivery Credit

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances related to lands affected by energy developments.

The proposed bill amends the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers with the details to be prescribed in the regulations. The intention is to enact regulations that would eliminate the delivery charge for all on-reserve First Nation residential customers served by licenced electricity distributors, and eliminate the monthly service charge for customers of licensed distributors that charge a bundled rate.

Eligible recipients would be automatically enrolled in the program. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed effective date (planned: July 1, 2017).

RISKS AND CONSIDERATIONS

Future Impacts to Electricity Rates

The impact of proposed legislation to a typical eligible customer’s bill in July 2017 is a 25% decrease (combined with the 8% rebate effective January 1, 2017, and shifting of the funding of OESP and RRRP to provincial revenues), followed by an increase in

price over time. Between May 2018 and June 2021 electricity rates will be set in accordance with a methodology established by regulation which would enable rate increases to be kept in line with CPI (see page 17 – Legal Risk). Customers that are eligible for the RRRP enhancement, OESP, and the On-reserve First Nations Delivery Credit will see further reductions in their electricity rates by as much as 40-50%.

Original policy direction was to keep electricity rate increases in line with CPI until the end of 2021. While the government will have regulatory authority under the bill to establish rates after April 30, 2018, bills are expecting to begin to increase above the rate of inflation as of July 1, 2021 under current forecasts. This constitutes a variance from Cabinet direction. However, the government has publicly committed to 4 years of increases tied to the rate of inflation, which this plan addresses.

Borrowing money to refinance a portion of the GA costs for ratepayers lowers costs in the short term but results in substantial debt and higher electricity prices in the future. Under the plan, electricity prices have been projected to exceed forecast residential monthly bills by about 10% each year from what otherwise would have been from 2028 to 2047 (Note: Values are subject to change). Cabinet policy direction provided that electricity rates increases due to repayments should be capped at around 10% of the total electricity bill during the repayment phase of the plan. To maintain the integrity of the structure, the legislation does not provide a mechanism by which this level of bill increase can be ensured and therefore constitutes a variance from Cabinet direction. However, the debt rating will be impaired if the modelling suggests that rates could increase more than 10%, providing a cap in practical terms. The public may expect that the government is committed to reducing or holding constant the absolute cost of in the longer term and the government would not have the ability to control this portion of rates in the future.

Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA refinancing. IESO forecasted demand has historically been over-projected which also increases the risk of the static demand assumption. However, the reverse is also true, that if higher levels of electrification are achieved and demand increases, the cost of paying off the debt will be spread over a greater number of consumers. To partly mitigate against the risk that increased self-generation poses, the bill also provides that the clean energy adjustments may not be “set-off.” In other words, it would exist as a separate and distinct component of the bill that could not be reduced by methods such as net-metering.

The current model is based on a static interest rate of 5%. While this assumption is accurate within the current historically low interest rate environment, should interest rates increase above 5%, residential bills would also significantly increase during the repayment phase of the plan. All of these factors increase the risk that the province would have to absorb some of the debt in the future.

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2020 such that the average monthly residential electricity bill increases by 6.3% per year to a maximum of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Data shown above is by RPP period. Assumes RPP prices are adjusted in July 2021 instead of May 2021 to coincide with the end of the inflation cap. Fair allocation amounts subject to third party review.

Not all generating assets will continue operations at the end of their contract. If the fair allocation amount is not properly designed, future rate payers will be paying the cost for assets that are no longer in use, which would be unconstitutional, unless legislatively authorised as a tax (see page 16- Legal Risk). High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators may shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the refinanced GA and accumulated interest costs, and it would need to be justified that these assets are still providing some kind of benefit to the system after they cease operation.

Bill Presentment

Over the fall/winter of 2017, the Ministry will be working with LDCs to undertake a comprehensive review of electricity bill presentment regulations.

The ministry expects to prescribe LDCs:

- To include certain basic messaging on electricity bills;
- Starting July 1, 2017, for those eligible, include the On-reserve First Nations Delivery Credit as a line item; and
- Prescribe LDCs to include bill inserts over the next year with OFHP messaging.

With respect to the OFHP, while the 8% rebate is expected to continue to appear on eligible consumer's bills, the further reductions as part of the GA refinancing and moving social programs to government funding will not appear as a specific line item. It is uncertain when customers will begin to be invoiced the clean energy adjustment as a distinct item on their electricity bill. This will commence once repayment of the accumulated debt begins.

Accounting, Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. The structure of the GA refinancing was designed to result in an (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on funding to OPG from the Province, an increase in interest on debt and an increase on income from OPG will result. The structure is also contingent on the size of the partial GA refinancing that is seen as possible, which, as mentioned, increases the likelihood of pressures on the fiscal plan in the near future (see page 17- Fiscal Pressure).

In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt.

- The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line.
- The ministry has received an appropriation for $1.1 billion operating asset to support these injections for the fiscal year 2017/18, and will report back through PRRT for future funding. Based on the final fair allocation amount calculation, the equity injections would be required until the period of recovery begins.
- The injections will be fiscally neutral for the province as they will be offset with the value of shares purchased from OPG.
- To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements /documents. E&Y concurs with OPG's assessment that accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust/SPV) as an obligation of the Province. Depending on the magnitude of the debt, the Province's borrowing cost may be impacted. The structure of the guarantees from the Province that will be required by the market at the transaction stage may also impact the accounting analysis. These will be negotiated at a later stage.

OPG will seek to achieve the highest possible credit rating (AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV/Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide.

The Ontario Auditor General (OAG) has been briefed on the proposal and has had access to the March 1, 2017, policy submission for Ontario's Fair Hydro Plan. While the auditors of OPG and IESO have provided assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount by this method could undermine the nature of the regulatory charge and could only be achieved by relying on increased borrowing.

Legal Risk

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional

tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Former Supreme Court Justice Binnie has provided legal analysis of this proposal, stating that the amount that could be constitutionally financed as a regulatory charge as opposed to a tax would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations would jeopardize the nature of this being a regulatory charge.

A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. If the government fails to establish that the relevant electricity generating assets and conservation investments will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge and would be characterized as a tax. If characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and conservation and the group of consumers who benefit year to year from those facilities and investments. By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

Mr. Binnie concluded that the proposed charge faces a moderately high risk of being characterized as an unauthorized tax rather than as valid regulatory charge because (1) there is a disproportionate back-end loading of the charge on 2021-2047 consumers for the benefit of 2017-2021 consumers and (2) because an unknown number of generating assets whose financing costs will be partly recovered from 2021-2047 consumers will not benefit them as they will no longer be in operation.

In addition, the structure of the GA refinancing means that the infrastructure included as part of the clean energy adjustment (i.e. amortized over 30 instead of 20 years) will need to be in service over the entire 30 year amortization period or provide benefits to the system in some way over the whole period. In practice this may mean that the government will have limited ability to alter the generation mixture included under the clean energy adjustments, including natural gas generation facilities, which may at some point be seen as inconsistent with the province’s commitments to reduce greenhouse gasses.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs

with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill also provides for provincial assurances, guarantees and a statutory cause of action. The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction. The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- the Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
- the Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted.

A statutory cause of action may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

Fiscal Pressure

This proposal aligns with the 2017 Budget's fiscal plan, but involves significant ongoing risks. Parts of the proposal do not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant ($2.5B in 2017-18, escalating annually).
- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government has commissioned external opinions on the fiscal and accounting requirements, and external legal advice. IESO auditor, KPMG, has provided a final draft accounting opinion that the principles of the structure are sound, which will be updated after the legislation, regulations and commercial agreements are complete. KPMG advises that the variance account created by the proposed legislation meets the accounting criteria for the recognition of a "regulatory asset." This opinion can be released publicly if desired; however, given that the KPMG opinion is highly technical and contains information pertaining to the proposed legislation, the ministry is not recommending its immediate release and is considering alternative options to propose. In addition, the opinion may not change the likelihood of a contrary opinion by the OAG, but does provide a tool for government to point to in justifying its decisions.

There is also a risk that credit rating agencies and the market may take a view as to the size of the GA refinancing that is possible before becoming unconstitutional. If the fair adjustment and fair allocation amounts exceeds this outlook, it may increase the perceived risk of the investment asset and therefore its financeability/saleability, which would result in reduced market uptake and reduce the amount of near term rate reduction that would be achievable under this mechanism. This may require rate increases greater than the rate of CPI to maintain the integrity of the structure. This is why the increases in electricity rates between May 2018 and June 2021 are to be set by regulation as opposed to legislating that they increase by CPI.

It may not be possible to legally hold the rate reductions to increase by CPI, and if the government wanted to hold to this commitment, the difference would need to come out of the tax base, which has not been forecasted nor included in the fiscal plan. Each percentage point of reduction that the structure cannot provide would need to be addressed by an appropriate alternative mechanism and would result in an approximate $125-150M cost to the government annually.

Further, if IESO is not able to sell the regulatory asset (i.e., the OPG SPV/Trust is unable to get financing to purchase it), then IESO would require financing from an alternative source. IESO has requested a backstop credit facility from the OFA. This would be associated with a fiscal impact risk.

<u>Legislative Officers</u>

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the implementation of this suite of initiatives. The OAG was provided copies of the Cabinet Submission seeking policy approval for

Ontario's Fair Hydro Plan and has been briefed by officials from the Ministry of Energy. The OAG will have opportunities to publicly state her views through the 2017 Public Accounts based on the IESO adoption of regulated accounting in its 2016 financial statements, as well as in the Public Accounts committee in the summer of 2018 and in her pre-election report.

Data and assumptions that underpin the GA refinancing proposal have been submitted to the Financial Accountability Officer (FAO). The FAO is expected to have an opinion on how this proposal may impact the state of the province's finances.

OPG Mechanism

There are several risks associated with the proposed OPG mechanism:

- Accountability:
    - Bill attempts to balance the independence of the OPG Trust/SPV with regulatory oversight and the market's need for certainty in recovering the GA financing;
    - As mentioned, no party will have the ability to remove OPG in its role as the investment asset owner. The mechanism could be criticised for not providing for an appropriate level of accountability to the government or the public, due to the limited amount of government control of the entity, and future rate increases. However, this is seen by the markets as an essential component for the structure to operate.
- New structure:
    - The structure is complex and involves: IESO as originator of the regulated asset and responsible for flow of funds; OEB as regulator of the new mechanism; OPG responsible for financing and managing the mechanism; and Ontario providing ongoing equity capital infusions to OPG and backstop.
    - The addition of financial agency to the current operational obligations of OPG is not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, this new role could possibly dilute OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).
    - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise required.
    - There is a risk that at the next opportunity to review the OPG compensation framework, they make the case that there is no national comparator for this aspect of their work and they should therefore receive further exemptions from the rules (OPG nuclear executives do not need to find national comparators for compensation determination).
    - It is unknown what the magnitude of transaction, administrative, and consultant costs that OPG would incur would be. OEB would review OPG's cost as the Financial Services Manager to ensure appropriateness.

- Debt:
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.
  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates
- The public could claim that the government is simply putting off a problem and making it worse for future generations. The complexity of the structure may be seen as government attempting to cover up its actions.

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake)
- The OESP matrix no longer follows the Low Income Measure (LIM) which creates inconsistencies between how programs are applied and may put pressure other provincial programs to increase funding amounts.

Connection to the Province's Next Long-Term Energy Plan

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the summer of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement, and conservation. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the ministry has identified key priorities, and, OFHP combined with new policy or program announcements in the LTEP, will provide the comprehensive future planning perspective for Ontario's energy sector. Note: The legislation associated with GA refinancing establishes a framework for the period after the ratepayer relief is set. By design, to achieve financing requirements there is limited control once the plan is set.

STAKEHOLDER AND PARTNER CONSIDERATIONS

General public (including residential and small businesses) – Likely support a proposal that is projected to provide 25% in average rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but likely to question the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and

recent changes will heavily depend on government communications. There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral on the rest of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to cap and trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. Funding electricity support programs through government funding rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generators as part of the clean energy costs.

Solar PV sector – May react negatively to price relief as it can be seen to undercut the economics of net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

DELIVERY

If passed, the legislation will enable the price mitigation measures to begin to take effect on July 1, 2017. The 2017 LTEP will be released to the public in the summer 2017 and would reinforce/integrate with Ontario's Fair Hydro Plan. Regulations are required under the major components of the legislation in order to fully implement the initiative and clarify program details.

1. Partial Refinancing of the Global Adjustment:

The ratepayer benefit of the OFHP will be in place as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the coming into force of the enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

The bill includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

2. Enhancing Electricity Supports and Shifting Costs to Government Funding:

OESP Enhancements

Changes to regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modeled after processes used for the ORECA (8% rebate). The amendments made in this bill allow for a transition period where the program continues to draw on the existing IESO variance account. IESO is required to notify the Ministry of Energy when it expects the variance account to be depleted (likely sometime in the fall).

The OEB and utilities implemented the 50% credit increase and added the additional eligibility so that more households could qualify for the program as of May 1, 2017.

RRRP Enhancement

Regulations would be required to establish the details of the program. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed effective date. In this case, the regulation will dictate the eligibility of July 1st and give until October 1, 2017 for LDCs to get their systems in place. The LDCs would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting.

On-Reserve First Nations Delivery Credit

The ministry is consulting with affected LDCs, the OEB, the IESO and Chiefs of Ontario (COO) to help develop a plan to identify eligible on-reserve consumers, as well as identify any potential implementation issues.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed effective date (planned: July 1, 2017). The bill includes transitional provisions that would ensure customers remain eligible for the delivery credit from the prescribed date. Once available, the rebate would appear on the eligible customer's electricity bills as a credit for their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based

program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

LINKAGES

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The *Ontario Rebate for Electricity for Electricity Consumers Act, 2016*, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) – Was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB program ended on December 31, 2015.

Debt Retirement Charge – On January 1, 2016, the government ended the electricity DRC on residential users earlier than planned. For all other consumers the DRC will be removed by April 2018.

Industrial Conservation Initiative (ICI) – Implemented in January 2011 to help large industrial consumers reduce electricity costs by reducing consumption in peak periods. As part of OFHP, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – Approved as part of OFHP, and under development, the Affordability Fund is intended to provide energy efficiency measures to Ontarians who are not eligible for low income conservation programs, and who are otherwise unable to make energy efficiency improvements without financial assistance.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the

two recent expansions to the ICI provides for significant potential savings. Funding electricity support programs through government funds rather than the rate base will also provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON) - is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and,
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed that the government consult on and develop options to mitigate the impact of carbon pricing and resulting increased utility costs on residential tenants. The mitigation is proposed because tenants do not usually have the opportunity to make changes to their building envelope (e.g. windows, insulation) or major appliances that would allow them to address utility costs themselves. On April 24, 2017, the government introduced the *Rental Fairness Act, 2017* which, if passed, would remove above-guideline rent increases for utilities, to protect tenants from carbon costs and encourage landlords to make their buildings more energy efficient.

Proposed Cabinet Minute

Approval of draft bill for introduction

Cabinet approved version 1-TP of this draft legislation for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

2. ENERGY report back, pending Royal Assent, with regulation and associated regulatory amendments for approval.

3. ENERGY work with Cabinet Office and Premier's office to develop a communications plan.

Subject: MO Bi-weekly Agenda

Hi all,

The next MO bi-weekly meeting will be on Monday, June 12th, 2017. To prepare for the meeting, could you please provide me with your annotated agenda by **EOD Thursday, June 8th, 2017** for Ron to review?

I have attached the previous agenda for your reference.

Please let me know if you have any questions.

Thanks,
Gavin He

ANNOTATED AGENDA
MO UPDATE: June 12, 2017

1. IESO Credit Facility – FHP Requirements

- IESO raised the ~~potential~~ requirements for financing the Fair Hydro forecast variances.
  - A letter requesting incremental credit facility room of $1.5 Bn in potential borrowing requirements is requested, composed of a new FHP-purpose facility of $2 bn~~,~~ and a reduction of the existing $975 million facility to $475 million.
- Staff are preparing a draft Minister's Directive to the OFA to provide the new and revised facilities to the IESO.
- To allow for this, an Order-in-Council (OIC) will be required for the OFA to borrow money from the Province. ~~CEFD staff is currently working on the OIC~~The approval package has been provided to the Minister for signature and it's tracking towards the June 27th LRC date, together with Energy's LRC submission.

2. Section 28 Approval for Indemnities

- The Minist~~e~~ry of Energy staff are~~is~~ putting together an ~~requesting~~ approvals ~~from~~package for the Minister of Finance, pursuant to Section 28 of the Financial Administration Act, to enter into Indemnity Agreements in favour of OPG, including ~~and~~ its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.
  - The indemnities are expected to provide coverage for both organizations and their respective Board members and employees involved in implementing the plan.
  - IESO and OPG have stated that these indemnities are required for their participation in the implementation of the OFHP Act.
  - In order for the OFHP Act to be successful, the draft materials, under review by MOF Legal and CEFD staff, indicate that it is recommended by the Minister of Energy that the Minister of Finance approve this request.
- As currently proposed, t~~T~~he Minister ~~is~~will be~~ing~~ ~~asked~~requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault.
  - Draft materials from ~~Ministry of~~ Energy state~~s~~ that the likelihood of this indemnity being called upon is low and that the fiscal exposure is unquantifiable at this time.
  - Energy has confirmed in its draft request letter that it bears responsibility for funding, within its approved allocation, for payments associated with the indemnities provided under the Agreements.
- CEFD staff is working on a note and analysis on the request with MOF Legal and ~~EIGS~~TBS staff, including OPCD members.
  - A set of questions on the draft materials have been provided to Energy Legal and relevant policy sections of the ministry.

Formatted

~~2.~~3. MNO Solar Inc. ALGP Application

- The Ministry of Finance is continuing negotiations with MNO related to broadening the ownership of Hydro One to MNO. While the current position is to offer $15M in seed capital for an MNO investment vehicle, that offer was declined by MNO. MNO has asked for assistance related to its ALGP application.
- The MNO Solar Inc. project is a portfolio of 50 small solar projects with an aggregate name-plate capacity of about 13 MW. All sites have reached commercial operation.
- In July 2016, MNO Solar Inc. received a conditional offer of a loan guarantee under the ALGP for approximately $6.5 million. MNO accepted the conditional offer in August 2016.
- At this point, there is no reason to believe that the guarantee agreement will not be successfully concluded within usual ALGP parameters.
- OFA comments on some key documentation, including the limited partnership agreement, and intercompany loan agreements, remain unaddressed. The process of documentation negotiation between parties usually takes several months, though timing could be shorter or longer.
- Due to the passage of time, staff have considered basing the loan size on a 15 year term which is 75 per cent of the term of the FIT contract, as opposed to 75 per cent of the remaining FIT contract so as to keep the amount of the guarantee at approximately $6.5 million rather than having to reduce it to approximately $6 million given the sensitivities to the file. The concept is to leave a 25% buffer (5 years in this case) to deal with any workout period if the loan repayment is in any difficulty, however given that the projects are operational and operating at projected levels, any project construction risk that is applicable to preoperational projects is not applicable and a three year buffer can be comfortably supported when seeking final guarantee approval which is anticipated to be sought in the coming weeks.

~~3.~~4. Cochrane Solar Project Update

- The Applicant and its project partner continue to consider whether they wish to pursue a guarantee well below the amount of the application (approximately 50%) with a provision for a subsequent follow on amount until a proven snow clearing plan can be demonstrated.
- While the partner is interested in moving ahead on this basis, the advisor to the Applicant has advised that they believe this project may not be viable and are reconsidering the application altogether.
- Staff are waiting for confirmation whether they wish to drop the application.

~~4.~~5. Other Applicants to the ALGP

- Staff are continuing to work on ALGP applications for three wind electricity generating projects (the 300 MW Henvey Inlet Wind project which is requesting a

late September close of the guarantee, the 100 MW Belle River Wind project where due diligence is under way, and the 100 MW North Kent Wind project which is understood to mirror the Belle River project in most respects – the latter two were awarded power purchase agreements under the Green Energy Investment Agreement as), and the Wataynikaneyap transmission project.

~~5.~~6. NUG Curtailment

- In order to facilitate a curtailment agreement between the Independent Electricity System Operator (IESO) and Northland Power for its Iroquois Falls NUG facility, Northland has requested that OEFC agree to suspend rather than terminate its Power Purchase Agreement (PPA) with Iroquois Falls for the remainder of the PPA term. The Iroquois Falls PPA expires at the end of 2021.
- Northland does not want to terminate the PPA as they believe a termination could make it difficult for Iroquois Falls to make a claim against OEFC if it disagrees with OEFC's calculation of the escalation and indexation used in the Iroquois Falls PPA, which is also proposed to be used in a curtailment agreement with IESO.
- In late May, staff sent a proposed termination agreement to Northland that provides assurance to Northland of OEFC's continued calculations of the indices on the basis of the original PPA. As Northland was unwilling to accept that termination agreement, staff sent a further draft which also provides further assurance that OEFC will calculate the indices on the basis of the judge's decision in the Global Adjustment lawsuit.
- Staff are awaiting a response from Northland.

~~6.~~7. Recovery of Standstill NUG payments

- On April 19, 2017 the Minister of Energy sent a letter to the Minister of Finance requesting that the Minister direct OEFC to recover retroactive payments to standstill NUGs through the Independent Electricity System Operator's (IESO) settlement process over a six month period to ensure greater consistency with the smoothed cost recovery for Regulated Price Plan electricity consumers.
- A response letter has been drafted for the Minister of Finance's signature that will serve as both a response to Minister of Energy and as an authorization for OEFC to recover payments over 6 months.
- The OEFC has begun recovery of the first of these six payments from the IESO settlement process, based on agreement from Minister's staff, and are awaiting the Minister's signed response letter.

~~7.~~8. Fair Hydro Plan – NUG Impact

- The Fair Hydro Plan (FHP) will reduce the amounts charged to electricity consumers. Rates under some NUG contracts escalate on the basis of indices which reflect amounts charged to electricity consumers.

- As such, under current legal advice, OEFC will have to exclude deferred GA costs under the calculations and would require direction from the Minister, supported by a request from the Minister of Energy in order to change the way the indices are calculated and include deferred GA costs as these costs are incurred rather than when they are ultimately recovered from ratepayers.

- While deferred costs will eventually be recovered from ratepayers and reflected in the indices, some NUG have PPAs that will expire before the repayment phase of the FHP and would be negatively impacted by the cost deferral under the plan.
- Staff are currently initiating discussions with Energy on this matter to request whether the Minister of Energy would provide policy support for revising the calculation of the PPA price indices and also to ensure that the information necessary to calculate the affected indices will be made available.

~~8.~~9. Constance Lake Meeting Request

- ENERGY has recently reached an agreement with Constance Lake First Nation (CLFN) that will provide the First Nation with a Hydrology Adjustment Adder in respect of generation from the Nagagami facility (holder of a NUG contract).
  - In order to facilitate further economic benefit to CLFN, ENERGY has requested to the Minister of Finance that discussions take place between CLFN, Brookfield and OEFC regarding refinancing of Generator Debt that Nagagami owes to OEFC. CLFN has also sent a request to the Minister of Finance to initiate these discussions and to enter into a similar framework agreement the way it did with MIRR and ENERGY.
- OEFC cannot enter into a framework agreement without a direction from the Minister of Finance. Independently taking such an action would be outside of OEFC's mandate.
  - OEFC is mandated with managing NUG contracts until their conclusion. OEFC cannot enter into new agreements outside the PPAs.
- Based on the request in the letter, staff can set up a meeting with CLFN, Brookfield and staff for OEFC to provide Brookfield and CLFN an opportunity to provide any relevant information and for staff for OEFC to request further information required to understand and assess Brookfield and CLFN's position.
  - OEFC does have a policy under which it can provide assistance to NUGs if they are able to make a claim of financial duress.
- In response to the letter from CLFN to the Minister, staff for OEFC will propose a response, copying the Minister of Energy.

OTHER ISSUES

~~9.~~10. Stelco Transaction

- Treasury Board approval of Stelco transaction will be sought by OGBESI on June 13, 2017. Transaction is expected to close on June 30, 2017.

- Minister of Finance approval will be required for three MoF loans, contingent liabilities contained in pension-related administrative contracts that will be assumed by FSCO, contractual release to Stelco and the land vehicle for certain legacy environmental liabilities, indemnification of directors and officers of US Steel and Stelco, and Indemnification of U.S. Steel and United States Steel and Carnegie Pension Fund in respect of third party claims, for all liabilities and claims related to Stelco's operations, including historical environmental and pension liabilities.

    - Formal request for s. 28 approvals will be forthcoming from OGBESI and MOECC.

~~10.~~11. College Class Exemption Regulation

- MAESD Minister will be sending shortly a request to Minister of Finance for limited college class exemption regulation under based on materiality thresholds.
- For the time being it is assumed that colleges are not going to be exempted entirely at this time (pending a review of regulations under the revised legislation – including business cases on potential sectors to prescribe or not), and MAESD will be proceeding with the request for a more limited class exemption under the existing FAA s.28 provisions.

~~11.~~12. Immigrant Investor Program – Notice of Termination

- The Ministry of Citizenship and Immigration is seeking the Minister of Finance's immediate approval to suspend the receipt of funds from the Federal Immigrant Investor Program (IIP) to the Ontario Immigrant Investor Corporation (OIIC), for the purposes of enabling the OIIC to meet its planned wind down date, which is expected to be in fiscal 2021-22.
- The Province can trigger a suspension if the Minister of Finance were to send a termination notice to the federal Minister of Immigration, Refugees and Citizenship advising that the Province would no longer guarantee the repayment of any future provincial allocations transferred to the OIIC after a specific date.
    - The termination notice should be delivered before the next allocation of federal monies. Otherwise the wind down of the OIIC could be pushed back to 2022-23.
- OIIC will continue to manage prudently the existing funds under its administration to ensure that the outstanding obligations to immigrant investors will be met in their entirety.

- Metrolinx Fuel Hedging – with DMO, they may/may not require a briefing
  - Metrolinx is keen to begin hedging between 20 and 30% of their annual fuel costs. Given the fall of fuel prices over the past two years they have benefited from waiting, but now their advisors are telling them they need to begin hedging to achieve budgetary price certainty.
  - Minister's approval required for the by-laws and the contingent liabilities in the ISDA agreements.

Subject: MO Bi-weekly Agenda

Hi all,

The next MO bi-weekly meeting will be on Monday, June 12th, 2017. To prepare for the meeting,

could you please provide me with your annotated agenda by **EOD Thursday, June 8th, 2017** for Ron to review?

I have attached the previous agenda for your reference.

Please let me know if you have any questions.

Thanks,
Gavin He

ANNOTATED AGENDA
MO UPDATE: June 12, 2017

1. IESO Credit Facility – FHP Requirements

- IESO raised the potential requirements for financing the Fair Hydro forecast variances.
  - o A letter requesting incremental credit facility room of $1.5 Bn in potential borrowing requirements is requested, composed of a new FHP-purpose facility of $2 bn, and a reduction of the existing $975 million facility to $475 million.
- Staff are preparing a draft Minister's Directive to the OFA to provide the new and revised facilities to the IESO.
- To allow for this, an Order-in-Council (OIC) will be required to borrow money from the Province. ~~CEFD staff is currently working on the OIC~~The approval package has been provided to the Minister for signature and it's tracking towards the June 27th LRC date, together with Energy's LRC submission.

2. Section 28 Approval for Indemnities

- The Minister of Energy is requesting approval from the Minister of Finance, pursuant to Section 28 of the Financial Administration Act to enter into Indemnity Agreements in favour of OPG, and its subsidiaries and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.
  - o IESO and OPG have stated that these indemnities are required for their participation in the implementation of the OFHP Act.
  - o In order for the OFHP Act to be successful, it is recommended by the Minister of Energy that the Minister of Finance approve this request.
- The Minister is being asked to sign the section 28 approval forms and the transmittal letter to Minister Thibeault.
  - o Ministry of Energy states that the likelihood of this indemnity being called upon is low and that the fiscal exposure is unquantifiable at this time.
  - o Energy has confirmed in its draft request letter that it bears responsibility for funding, within its approved allocation, for payments associated with the indemnities provided under the Agreements.
- CEFD staff is working on a note and analysis on the request with MOF Legal and EIGS.

~~2.~~3. MNO Solar Inc. ALGP Application

- The Ministry of Finance is continuing negotiations with MNO related to broadening the ownership of Hydro One to MNO. While the current position is to offer $15M in seed capital for an MNO investment vehicle, that offer was declined by MNO. MNO has asked for assistance related to its ALGP application.

- The MNO Solar Inc. project is a portfolio of 50 small solar projects with an aggregate name-plate capacity of about 13 MW. All sites have reached commercial operation.
- In July 2016, MNO Solar Inc. received a conditional offer of a loan guarantee under the ALGP for approximately $6.5 million. MNO accepted the conditional offer in August 2016.
- At this point, there is no reason to believe that the guarantee agreement will not be successfully concluded within usual ALGP parameters.
- OFA comments on some key documentation, including the limited partnership agreement, and intercompany loan agreements, remain unaddressed. The process of documentation negotiation between parties usually takes several months, though timing could be shorter or longer.
- Due to the passage of time, staff have considered basing the loan size on a 15 year term which is 75 per cent of the term of the FIT contract, as opposed to 75 per cent of the remaining FIT contract so as to keep the amount of the guarantee at approximately $6.5 million rather than having to reduce it to approximately $6 million given the sensitivities to the file. The concept is to leave a 25% buffer (5 years in this case) to deal with any workout period if the loan repayment is in any difficulty, however given that the projects are operational and operating at projected levels, any project construction risk that is applicable to preoperational projects is not applicable and a three year buffer can be comfortably supported when seeking final guarantee approval which is anticipated to be sought in the coming weeks.

~~3.~~4. Cochrane Solar Project Update

- The Applicant and its project partner continue to consider whether they wish to pursue a guarantee well below the amount of the application (approximately 50%) with a provision for a subsequent follow on amount until a proven snow clearing plan can be demonstrated.
- While the partner is interested in moving ahead on this basis, the advisor to the Applicant has advised that they believe this project may not be viable and are reconsidering the application altogether.
- Staff are waiting for confirmation whether they wish to drop the application.

~~4.~~5. Other Applicants to the ALGP

- Staff are continuing to work on ALGP applications for three wind electricity generating projects (the 300 MW Henvey Inlet Wind project which is requesting a late September close of the guarantee, the 100 MW Belle River Wind project where due diligence is under way, and the 100 MW North Kent Wind project which is understood to mirror the Belle River project in most respects – the latter two were awarded power purchase agreements under the Green Energy Investment Agreement as), and the Wataynikaneyap transmission project.

~~5.~~6. NUG Curtailment

- In order to facilitate a curtailment agreement between the Independent Electricity System Operator (IESO) and Northland Power for its Iroquois Falls NUG facility, Northland has requested that OEFC agree to suspend rather than terminate its Power Purchase Agreement (PPA) with Iroquois Falls for the remainder of the PPA term. The Iroquois Falls PPA expires at the end of 2021.
- Northland does not want to terminate the PPA as they believe a termination could make it difficult for Iroquois Falls to make a claim against OEFC if it disagrees with OEFC's calculation of the escalation and indexation used in the Iroquois Falls PPA, which is also proposed to be used in a curtailment agreement with IESO.
- In late May, staff sent a proposed termination agreement to Northland that provides assurance to Northland of OEFC's continued calculations of the indices on the basis of the original PPA. As Northland was unwilling to accept that termination agreement, staff sent a further draft which also provides further assurance that OEFC will calculate the indices on the basis of the judge's decision in the Global Adjustment lawsuit.
- Staff are awaiting a response from Northland.

~~6.~~7. Recovery of Standstill NUG payments

- On April 19, 2017 the Minister of Energy sent a letter to the Minister of Finance requesting that the Minister direct OEFC to recover retroactive payments to standstill NUGs through the Independent Electricity System Operator's (IESO) settlement process over a six month period to ensure greater consistency with the smoothed cost recovery for Regulated Price Plan electricity consumers.
- A response letter has been drafted for the Minister of Finance's signature that will serve as both a response to Minister of Energy and as an authorization for OEFC to recover payments over 6 months.
- The OEFC has begun recovery of the first of these six payments from the IESO settlement process, based on agreement from Minister's staff, and are awaiting the Minister's signed response letter.

~~7.~~8. Fair Hydro Plan – NUG Impact

- The Fair Hydro Plan (FHP) will reduce the amounts charged to electricity consumers. Rates under some NUG contracts escalate on the basis of indices which reflect amounts charged to electricity consumers.
    - As such, under current legal advice, OEFC will have to exclude deferred GA costs under the calculations and would require direction from the Minister, supported by a request from the Minister of Energy in order to change the way the indices are calculated and include deferred GA costs as these costs are incurred rather than when they are ultimately recovered from ratepayers.
- While deferred costs will eventually be recovered from ratepayers and reflected in the indices, some NUG have PPAs that will expire before the repayment phase of the FHP and would be negatively impacted by the cost deferral under the plan.

- Staff are currently initiating discussions with Energy on this matter to request whether the Minister of Energy would provide policy support for revising the calculation of the PPA price indices and also to ensure that the information necessary to calculate the affected indices will be made available.

~~8.~~9. Constance Lake Meeting Request

- ENERGY has recently reached an agreement with Constance Lake First Nation (CLFN) that will provide the First Nation with a Hydrology Adjustment Adder in respect of generation from the Nagagami facility (holder of a NUG contract).
    - In order to facilitate further economic benefit to CLFN, ENERGY has requested to the Minister of Finance that discussions take place between CLFN, Brookfield and OEFC regarding refinancing of Generator Debt that Nagagami owes to OEFC. CLFN has also sent a request to the Minister of Finance to initiate these discussions and to enter into a similar framework agreement the way it did with MIRR and ENERGY.
- OEFC cannot enter into a framework agreement without a direction from the Minister of Finance. Independently taking such an action would be outside of OEFC's mandate.
    - OEFC is mandated with managing NUG contracts until their conclusion. OEFC cannot enter into new agreements outside the PPAs.
- Based on the request in the letter, staff can set up a meeting with CLFN, Brookfield and staff for OEFC to provide Brookfield and CLFN an opportunity to provide any relevant information and for staff for OEFC to request further information required to understand and assess Brookfield and CLFN's position.
    - OEFC does have a policy under which it can provide assistance to NUGs if they are able to make a claim of financial duress.
- In response to the letter from CLFN to the Minister, staff for OEFC will propose a response, copying the Minister of Energy.

OTHER ISSUES

~~9.~~10. Stelco Transaction

- Treasury Board approval of Stelco transaction will be sought by OGBESI on June 13, 2017. Transaction is expected to close on June 30, 2017.

- Minister of Finance approval will be required for three MoF loans, contingent liabilities contained in pension-related administrative contracts that will be assumed by FSCO, contractual release to Stelco and the land vehicle for certain legacy environmental liabilities, indemnification of directors and officers of US Steel and Stelco, and Indemnification of U.S. Steel and United States Steel and Carnegie Pension Fund in respect of third party claims, for all liabilities and claims related to Stelco's operations, including historical environmental and pension liabilities.

    - Formal request for s. 28 approvals will be forthcoming from OGBESI and MOECC.

~~10.~~11. College Class Exemption Regulation

- MAESD Minister will be sending shortly a request to Minister of Finance for limited college class exemption regulation under based on materiality thresholds.
- For the time being it is assumed that colleges are not going to be exempted entirely at this time (pending a review of regulations under the revised legislation – including business cases on potential sectors to prescribe or not), and MAESD will be proceeding with the request for a more limited class exemption under the existing FAA s.28 provisions.

~~11.~~12. Immigrant Investor Program – Notice of Termination

- The Ministry of Citizenship and Immigration is seeking the Minister of Finance's immediate approval to suspend the receipt of funds from the Federal Immigrant Investor Program (IIP) to the Ontario Immigrant Investor Corporation (OIIC), for the purposes of enabling the OIIC to meet its planned wind down date, which is expected to be in fiscal 2021-22.
- The Province can trigger a suspension if the Minister of Finance were to send a termination notice to the federal Minister of Immigration, Refugees and Citizenship advising that the Province would no longer guarantee the repayment of any future provincial allocations transferred to the OIIC after a specific date.
    - The termination notice should be delivered before the next allocation of federal monies. Otherwise the wind down of the OIIC could be pushed back to 2022-23.
- OIIC will continue to manage prudently the existing funds under its administration to ensure that the outstanding obligations to immigrant investors will be met in their entirety.

- Metrolinx Fuel Hedging – with DMO, they may/may not require a briefing
  - Metrolinx is keen to begin hedging between 20 and 30% of their annual fuel costs. Given the fall of fuel prices over the past two years they have benefited from waiting, but now their advisors are telling them they need to begin hedging to achieve budgetary price certainty.
  - Minister's approval required for the by-laws and the contingent liabilities in the ISDA agreements.

Hello all,

The next MO bi-weekly meeting will be on Monday, May 15th, 2017. To prepare for the meeting, could you please provide me with your annotated agenda by **EOD Thursday, May 12th, 2017** for Ron to review?

I have attached the previous agenda for your reference.

Please let me know if you have any questions.

Thank you,
Deena

ANNOTATED AGENDA
MO UPDATE: May 15~~2~~, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Ontario Fair Hydro Plan – Equity Injection

Staff from CEFD, OFA capital markets, Ministry of Finance, and OPG continue to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The CEFD and EIGS staff are working to establish clarity and steps required on the Provincial approvals for the equity injection, with common equity structure [with a new class of shares] looking to be the mechanism.

2. IESO Credit Facility – ~~$975M for Market~~FHP Requirements

- IESO raised the potential requirements for financing the Fair Hydro forecast variances.
  - Draft letter requesting the incremental or a new facility indicates a requirement for $1.5 Bn in potential borrowing requirements. OFA is of the view that a new, separate facility to better track the amounts related to the FHP is ideal and have communicated back to the IESO.
  - As indicated in the previous meeting, t~~T~~he possibility was raised of the IESO relying on the existing $975M credit facility provided by the OFA to provide short term financing until the OPG SPV purchases the IESO regulatory asset.
  - ~~It was also discussed to have a new, separate facility to better track the amounts related to the FHP.~~
  - One of the main uses of the current $975M credit facility is to provide liquidity into the electricity market to support various initiatives including the Regulated Price Plan (RPP), the Rural or Remote Electricity Rate Protection (RRRP), the new Ontario Electricity Support Program (OESP), the various conservation programs and overall market liquidity.
  - The $975M facility was not intended to provide long-term financing.
  - IESO indicates that it would require a term of 7 to 95 days in its draft memo.
- In the Minister's Directive signed November 28, 2016, facilitates the lending agreement between the OFA and IESO until the end of 2019 and has the term restriction of 28 to 95 days, essentially providing short-term liquidity for the IESO.

3. Cochrane Solar Project Issue

- The Cochrane Solar Project (CSP) submitted its application to the Aboriginal Loan Guarantee Program (ALGP) early in 2015.

- The Applicant purchased its equity interest in October 2015.
- The Applicant is owned by two First Nations, one was the recent beneficiary of an ALGP guarantee for its ownership interest in the Peter Sutherland Sr. Generating Station.
- The other First Nation has shown frustration at the lack of progress on the ALGP application for the CSP.

- In early 2017 ALGP staff became aware that the CSP is only performing at 75% of forecast for the nineteen months ended January 2017. The underperformance is attributable to snow accumulation on the panels. Winters to date actually witnessed higher temperatures and lower accumulation of snowfall compared to averages for the area.
  - The CSP has also experienced significant cost overruns due to foundation issues. The increased capital costs (~25%) were borne by Northland Power Inc. (the Applicant's Partner "NPI").
- For this application staff have considered an outright decline to the application or alternatively propose to size the guarantee based upon, e.g., accepting actual output to date as reflective of the longer term average.
  - Generally, the ALGP would size the loan based upon a statistically conservative analysis compared to forecast as opposed to having actual output data.
  - Even based on actual data to date, the loan supportable would be an estimated about half the amount applied for to be guaranteed – TBD, subject to further due diligence.
- If the partner can develop an effective and successfully evidenced snow clearing plan, a guarantee may be increased at a later date. It should be noted that snow clearing is not well developed in the solar industry and that a guarantee at this time would reflect a more aggressive view to output than the ALGP would normally employ and as such the risk of a call under the guarantee would increase.
- Also noteworthy is that the partnership between the Applicant and NPI is not unwound in the event that a guarantee is not awarded. NPI would then be in a realization position of monies advanced to the Applicant with the possible outcome that the ownership interests of the Applicant are extinguished by NPI.

4. Recovery of Standstill NUG payments

- On April 19, 2017 the Minister of Energy sent a letter to the Minister of Finance requesting that the Minister direct OEFC to recover retroactive payments to standstill NUGs through the Independent Electricity System Operator's (IESO) settlement process over a six month period to ensure greater consistency with the smoothed cost recovery for Regulated Price Plan electricity consumers.
  - OEFC Legal has advised that aside from a direction an indication (via email or letter) from the Minister that it concurs with the Minister of Energy's request that

the recovery be done over six months would be sufficient for OEFC to initiate recovery over six months.

- In the past, for the recovery of retroactive payments to applicant NUGs (who were party to the lawsuit), the Deputy Minister of Energy sent a letter to the CEO of OEFC requesting that recovery of the retroactive payments occur over three months. While the Minister of Energy did not write the Minister of Finance, staff for OEFC did consult with the Minister's Office on this request.

~~**5. OPG 2017-19 Business Plan**~~

- ~~OPG submitted its 2017-19 Business Plan to the Ministry of Energy for concurrence, and the Plan will be submitted to Treasury Board for review in May.~~
- ~~The OPG BP submission pre-dates the proposed plan for OPG's role in the Fair Hydro Plan.~~
- ~~CEFD is currently reviewing the draft TB submission materials and will work with TBS on the assessment note.~~

ANNOTATED AGENDA
MO UPDATE: June 12, 2017

Commented [RK1]: Should there also be a brief update on the Provincial Guarantee status for the FHP?

And maybe an ONFA-related heads up on the upcoming OPG submission to the CNSC for its Financial Guarantee requirement.

And a very short, general reminder on upcoming Trillium Trust related items and estimated timelines (e.g., for Brampton, OPG head office properties, H1 secondary offering.

1. IESO Credit Facility – FHP Requirements

- IESO raised the requirements for financing the Fair Hydro forecast variances.
  - A letter requesting incremental credit facility room of $1.5 Bn in potential borrowing requirements is requested, composed of a new FHP-purpose facility of $2 bn and a reduction of the existing $975 million facility to $475 million.
- Staff are preparing a draft Minister's Directive to the OFA to provide the new and revised facilities to the IESO.
- To allow for this, an Order-in-Council (OIC) will be required for the OFA to borrow money from the Province. The approval package has been provided to the Minister for signature and it's tracking towards the June 27th LRC date, together with Energy's LRC submission.

2. Section 28 Approval for Indemnities

- ~~The~~ Ministry of Energy staff are putting together a~~n~~ s.28 approvals package for submission to the Minister of Finance~~, pursuant to Section 28 of the Financial Administration Act,~~ for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.
  - The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan.
  - IESO and OPG have stated that these indemnities are required for their participation in the implementation of the OFHP Act.
  - In order for the OFHP Act to be successful, the draft materials, under review by MOF Legal and CEFD staff, indicate that it is recommended by the Minister of Energy that the Minister of Finance approve this request.
- As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault.
  - Draft materials from Energy state that the likelihood of this indemnity being called upon is low and that the fiscal exposure is unquantifiable at this time.
  - Energy has confirmed in its draft request letter that it bears responsibility for funding, within its approved allocation, for payments associated with the indemnities provided under the Agreements.
- CEFD staff is working on a note and analysis on the request with MOF Legal and TBS staff, including OPCD members.
  - A set of questions on the draft materials have been provided to Energy Legal and relevant policy sections of the ministry.

3. Provincial Support Agreement or Provincial Guarantee Agreement

- As part of the OFHP and in order to provide support to those with claims against the Financing Entity (i.e. currently the OPG Trust) and with the ultimate objective of providing the highest possible credit ratings (and corresponding low interest costs to the ratepayers), the Province has been asked to provide both a Service Guarantee and a Performance Guarantee to support obligations of the IESO and the debt instruments issued by the Financing Entity.
- There are potential overlaps in the support provided through the Provincial Support Agreement being drafted and the Section 28 support being contemplated with involvement from MOF Legal, Energy Legal (and their clients) and TBS staff, including OPCD staff.
- As mentioned above, CEFD staff working with MOF Legal are conducting due diligence on the Section 28 request and looking at potential duplication of support which may be redundant.
- While led by OFA's CMD staff, CEFD staff are continuing to provide support and input.

4. NUG Curtailment

- In order to facilitate a curtailment agreement between the Independent Electricity System Operator (IESO) and Northland Power for its Iroquois Falls NUG facility, Northland has requested that OEFC agree to suspend rather than terminate its Power Purchase Agreement (PPA) with Iroquois Falls for the remainder of the PPA term. The Iroquois Falls PPA expires at the end of 2021.
- Northland does not want to terminate the PPA as ~~they~~it believes a termination could make it difficult for Iroquois Falls to make a claim against OEFC if it disagrees with OEFC's calculation of the escalation and indexation used in the Iroquois Falls PPA, which is also proposed to be used in a curtailment agreement with IESO.
- ~~In late May, s~~Staff sent a proposed termination agreement to Northland that ~~provides assurance to Northland of OEFC's continued calculations of the indices on the basis of the original PPA. As Northland was unwilling to accept that termination agreement, staff sent a further draft which also~~ provides further assurance that OEFC will calculate the indices on the basis of the judge's decision in the Global Adjustment lawsuit.

Staff are awaiting a response from Northland.

~~3. NUG Curtailment~~

~~• In order to facilitate a curtailment agreement between the Independent Electricity System Operator (IESO) and Northland Power for its Iroquois Falls NUG facility, Northland has requested that OEFC agree to suspend rather than terminate its Power Purchase Agreement~~

~~4.~~5. Fair Hydro Plan – NUG Impact

- The Fair Hydro Plan (FHP) will reduce the amounts charged to electricity consumers. Rates under some NUG contracts escalate on the basis of indices which reflect amounts charged to electricity consumers.
  - As such, under current legal advice, OEFC will have to exclude deferred GA costs under the calculations and would require direction from the Minister, supported by a request from the Minister of Energy in order to change the way the indices are currently calculated ~~and~~ to include the deferred GA costs ~~as~~when these costs are incurred (and exclude financing costs), rather than when they are ultimately recovered from ratepayers.
- While deferred costs will eventually be recovered from ratepayers and reflected in the indices, some NUG have PPAs that will expire before the repayment phase of the FHP and would be negatively impacted by the cost deferral under the plan.
  - For one PPA, indexation begins later, and would benefit from the deferred cost recovery, with financing cost included in the escalation.
  - For PPAs extending across most or all of the OFHP period, on a present value basis, they would likely prefer the indices calculation continue to include the portion of GA costs that is deferred.

Formatted

Formatted: Font: (Default) Arial, 12 pt

- Staff are currently initiating discussions with Energy on this matter to request whether the Minister of Energy would provide policy support for revising the calculation of the PPA price indices and also to ensure that the information necessary to calculate the affected indices will be made available.

~~5.~~6. Constance Lake Meeting Request

- ENERGY has recently reached an agreement with Constance Lake First Nation (CLFN) that will provide the First Nation with a Hydrology Adjustment Adder in respect of generation from the Nagagami facility (holder of a NUG contract).

- o In order to facilitate further economic benefit to CLFN, ENERGY has requested to the Minister of Finance that discussions take place between CLFN, Brookfield and OEFC regarding refinancing of Generator Debt that Nagagami owes to OEFC. Note that refinancing the generator debt would likely primarily benefit Brookfield, as CLFN is a minority partner in the Nagagami NUG, unless there were a side agreement between the partners.
- o CLFN has also sent a request to the Minister of Finance, which may suggest broader discussions than the generator debt, to initiate ~~these~~ discussions and to enter into a similar framework agreement the way it did with MIRR and ENERGY. [Could add a point on what was in the Framework Agreement.]

- OEFC cannot enter into a framework agreement without a direction from the Minister of Finance. Independently taking such an action would be outside of OEFC's mandate.
  - o OEFC is mandated with managing NUG contracts until their conclusion. OEFC cannot enter into new agreements outside the PPAs.
- Based on the request in the letter, staff can set up a meeting with CLFN, Brookfield and staff for OEFC to provide Brookfield and CLFN an opportunity to provide any relevant information and for staff for OEFC to request further information required to understand and assess Brookfield and CLFN's position.
  - o OEFC does have a longstanding policy under which it may~~can~~ provide assistance to NUGs if they are able to support~~make~~ a claim of financial duress.
- In response to the letter from CLFN to the Minister, staff for OEFC will propose a response, copying the Minister of Energy.

Formatted: Space Before: 12 pt

~~6.~~7. MNO Solar Inc. ALGP Application

- ~~The Ministry of Finance is continuing negotiations with MNO related to broadening the ownership of Hydro One to MNO. While the current position is to offer $15M in seed capital for an MNO investment vehicle, that offer was declined by MNO. MNO has asked for assistance related to its ALGP application.~~
- The MNO Solar Inc. project is a portfolio of 50 small solar projects with an aggregate name-plate capacity of about 13 MW. All sites have reached commercial operation.
- In July 2016, MNO Solar Inc. received a conditional offer of a loan guarantee under the ALGP for approximately $6.5 million. MNO accepted the conditional offer in August 2016.
- At this point, there is no reason to believe that the guarantee agreement will not be successfully concluded within usual ALGP parameters.
- OFA comments on some key documentation, including the limited partnership agreement, and intercompany loan agreements, remain unaddressed. The process

of documentation negotiation between parties usually takes several months, though timing could be shorter or longer.

- Due to the passage of time, staff have considered basing the loan size on a 15 year term which is 75 per cent of the term of the FIT contract, as opposed to 75 per cent of the remaining FIT contract, so as to keep the amount of the guarantee at approximately $6.5 million rather than having to reduce it to approximately $6 million ~~given the sensitivities to the file~~.
    - The concept of using a shorter term for ALGP purposes than the FIT contract term is to leave a ~~25%~~ buffer (typically 5 years in th~~is~~e case of a full 20 year contract) to deal with any workout period if the loan repayment is in any difficulty. Using the original contract length and a 15 year ALGP term would result in a buffer of about 3 years instead; ~~,~~ however given that the MNO Solar Inc. projects are operational and operating at projected levels, any project construction risk that is applicable to preoperational projects is not applicable and a three year buffer could~~an~~ be ~~comfortably~~ supported when seeking final guarantee approval, which is anticipated to be sought in the coming weeks.

Formatted

~~7.~~8. Cochrane Solar Project Update

- The Applicant and its project partner continue to consider whether they wish to pursue a guarantee well below the amount of the application (approximately 50%) with a provision for a subsequent follow on amount until a proven snow clearing plan can be demonstrated.
- While the partner is interested in moving ahead on this basis, the advisor to the Applicant has advised that they believe this project may not be viable and are reconsidering the application altogether.
- Staff are waiting for confirmation whether they wish to drop the application.

~~8.~~9. Other Applicants to the ALGP

- Staff are continuing to work on ALGP applications for three wind electricity generating projects (the 300 MW Henvey Inlet Wind project which is requesting a late September close of the guarantee, the 100 MW Belle River Wind project where due diligence is under way, and the 100 MW North Kent Wind project which is understood to mirror the Belle River project in most respects – the latter two were awarded power purchase agreements under the Green Energy Investment Agreement as), and the Wataynikaneyap transmission project.

OTHER ISSUES

~~9.~~10. Stelco Transaction

- Treasury Board approval of Stelco transaction will be sought by OGBESI on June 13, 2017. Transaction is expected to close on June 30, 2017.

- Minister of Finance approval will be required for three MoF loans, contingent liabilities contained in pension-related administrative contracts that will be assumed by FSCO, contractual release to Stelco and the land vehicle for certain legacy environmental liabilities, indemnification of directors and officers of US Steel and Stelco, and Indemnification of U.S. Steel and United States Steel and Carnegie Pension Fund in respect of third party claims, for all liabilities and claims related to Stelco's operations, including historical environmental and pension liabilities.

    - Formal request for s. 28 approvals will be forthcoming from OGBESI and MOECC.

~~10.~~11. College Class Exemption Regulation

- MAESD Minister will be sending shortly a request to Minister of Finance for limited college class exemption regulation under based on materiality thresholds.
- For the time being it is assumed that colleges are not going to be exempted entirely at this time (pending a review of regulations under the revised legislation – including business cases on potential sectors to prescribe or not), and MAESD will be proceeding with the request for a more limited class exemption under the existing FAA s.28 provisions.

~~11.~~12. Immigrant Investor Program – Notice of Termination

- The Ministry of Citizenship and Immigration is seeking the Minister of Finance's immediate approval to suspend the receipt of funds from the Federal Immigrant Investor Program (IIP) to the Ontario Immigrant Investor Corporation (OIIC), for the purposes of enabling the OIIC to meet its planned wind down date, which is expected to be in fiscal 2021-22.
- The Province can trigger a suspension if the Minister of Finance were to send a termination notice to the federal Minister of Immigration, Refugees and Citizenship advising that the Province would no longer guarantee the repayment of any future provincial allocations transferred to the OIIC after a specific date.
    - The termination notice should be delivered before the next allocation of federal monies. Otherwise the wind down of the OIIC could be pushed back to 2022-23.
- OIIC will continue to manage prudently the existing funds under its administration to ensure that the outstanding obligations to immigrant investors will be met in their entirety.

Thanks.

It's interesting that peak debt on Slide 1 is 24B, not 28B.

Also minor typo on slide 2. 'Broadening of the Rural or Remote ***Rate*** Protection Program'.

Hi John

Did you notice the wording change on the timing of the OIC regarding OPG indemnity. It now says June 27. Our wording was not committal to the June 27 date, but to . I don't think there is that urgency for this OIC. Per our teleconference earlier this week, there are still internal discussions to be had regarding the Province's position.

This was our wording

- Upcoming Cabinet date is June 27, 2017, for which documents are past due. Next possible LRC/Cabinet date is scheduled for July 26, 2017.

Outstanding Business Issues – Ontario Fair Hydro Plan
Briefing Note

PURPOSE
Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Provincial Support Agreement Term Sheet (~~Service and~~ Performance and Payment Guarantees)**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA ~~and~~are working towards the development of a term sheet
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July.

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - The Province would like to minimize, to the extent possible~~,~~, the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers.
   - The Province is considering regulation changes to exempt from PILs the income arising [to the OPG financing vehicle(?)] as a consequence of the Fair Hydro Plan. ~~from PILs~~
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.
   - **Next Steps:**
     - The Ministr~~ies~~ of Finance, OFA and OPG are working together to determine required regulation changes.
     - Timing: [Next steps for a decision / when is a decision required / when would these regulation changes occur]

3. **Fair Hydro Plan - Master Subscription Agreement Term Sheet (Equity Injection Process)**

Commented [RK1]: Have TPD staff also been consulted on this section?

Commented [RK2]: Is this an "approved" position? Potential alternative wording: "Provincial staff, with OPG's concurrence, recommend minimizing, to the extent possible,....

- OPG will require equity injections on a monthly basis, to match the timing of the purchase of the IESO regulatory asset, as applicable, in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province.
- The Ministry of Energy received appropriation for a fiscally-neutral operating asset expenditure of $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT.
- **Next Steps:**
    - The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process, which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.
    - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June.

4. **Management Fees**
    - OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
    - The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations, which are currently in development.
    - OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements.
    - **Next Steps:**
        - OPG and OEB will bring forward a recommended framework for developing management fees.
        - Timing: For incorporation into regulations being brought forward in June

5. **Subordinated Debt Loan Agreement**
    - OPG will lend the equity injection from the Province to the Fair Hydro Trust by way of subordinated debt
    - Based on monthly funding requirements of the GA asset, the Trust will use short term financing and take out bonds once short term funding reaches certain levels
    - OPG and OFA are working on a Debt Loan Arrangement ~~which~~that would establish the interest rates on the subordinated debt
    - **Next Steps:**
        - OPG and OFA will bring forward a recommended framework for determining interest rates
        - Timing: TBD

6. IESO – Increased OFA Credit Facilities

- THE OPG financing entity is not expected to be immediately operational, so the IESO will need to have transitional financing in place to manage the difference in the payments to generators and other service providers vs payments from loads / LDCs.
- There may also be on-going monthly cash flow timing differences that the IESO will need a credit facility for.
- In addition, ~~T~~the OPG financing entity has the right to purchase the regulatory asset from IESO but ~~does~~is not ~~have~~required~~mandated~~ to purchase it.
- IESO is working with the OFA to increase the credit facilities in the event that the OPG financing entity does not purchase the regulatory asset
- **Next Steps:**
    - OFA is drafting a new agreement for a $2 billion credit facility for the OFA to lend funds to IESO for FHP purposes. Concurrently, the OFA is seeking the Minister's approval for an LRC submission to approv~~al~~e an OIC for an ~~new~~additional $2 billion ~~OIC~~in borrowing capacity, as well as a Directive from the Minister of Finance, which are both necessary for the OFA to lend funds to IESO under the requested new Credit Facility. ~~.....~~
    - Timing: The OIC is scheduled ~~as item~~ for the June 27, 2017 LRC meeting. The Directive and Credit Facility Agreement are currently being drafted, to be in place by July 1st, 2017~~.....~~

7. OPG Indemnity

- OPG (and IESO) are asking for the Province to indemnify the IESO, OPG (the entities) and their respective directors, officers and employee in order to allow them to carry out their roles in implementing the Ontario Fair Hydro Plan and primarily the Global Adjustment refinancing.
- Depending on the structure of the indemnity requested, indemnity would be provided either under section 22 or under section 28 of the *Financial Administration Act.* [CEFD staff are assessing the request.]
- Consideration will need to be given as to how providing an indemnity will be perceived given that the GA refinancing structure is meant to be independent of the Province.
- **Next Steps:**
    - Staff in Ministry of Finance and Treasury Board Secretariat have received initial documents and are currently reviewing.
    - If the Province is to provide the indemnity, section 22(1) of the FAA specifies that an OIC will be required to authorize the Minister of Finance.
    - Upcoming Cabinet date is June 27, 2017, for which documents are past due. Next possible LRC/Cabinet date is scheduled for July 26, 2017.

Hi all – just checking in on comments. ENE DMO is looking for this by noon so if you're able to share any comments shortly I would greatly appreciate it.

This version just includes one more item based on the term sheet OPG shared yesterday but I was unsure about timing on that one.

Please let me know if you have any questions.
Kaitlin

Subject: OFHP - Outstanding business issues

Hi all,

ENE MO asked for a quick note on 4 of the outstanding business issues that are being worked through and are hoping to see something tomorrow morning.

I've pulled together a high level explanation of each of the items and next steps/timing (to the extent I know).

Would greatly appreciate if you guys could take a look and provide any edits/comments today/early tomorrow if possible. I'm also not too involved in a few of these discussions so if there's others within OFA you think should review feel free to pass along.

Thanks in advance,
Kaitlin

Outstanding Business Issues – Ontario Fair Hydro Plan
Briefing Note

PURPOSE
Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Service and Performance Guarantees**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA and working towards the development of a term sheet
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - The Province would like to minimize to the extent possible , the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers
   - The Province is considering regulation changes to exempt the income arising as a consequence of the Fair Hydro Plan from PILs
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity
   - **Next Steps:**
     - The Ministries of Finance, OFA and OPG are working together to determine required regulation changes
     - Timing: [TBD]

3. **Equity Injection Process**
   - OPG will require equity injections on a monthly basis in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province

- The Ministry of Energy received appropriation for $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT
- **Next Steps:**
    - The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.
    - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June

4. Management Fees

- OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
- The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations which are currently in development
- OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements
- There are two components to the model proposed by OPG:
    - Cost recovery: the structure will also allow for recovery of costs, subject to OEB's prudence review. OEB and OPG are in discussions in order to develop a model that is consistent with OEB's processes.
    - Performance management fee: OPG has the ability to over-earn or lose depending on its cost of funds for sr. debt relative to a benchmark. Any savings / costs would be shared equally between ratepayers and OPG to +/-$1M. Above or below $1M, all savings / costs flow to ratepayers.
- **Next Steps:**
    - OPG and OEB will bring forward a recommended framework for developing management fees
    - Timing: For incorporation into regulations being brought forward in June

5. Subordinated Debt Loan Agreement

- OPG will lend the equity injection from the Province to the Fair Hydro Trust by way of subordinated debt
- Based on monthly funding requirements of the GA asset, the Trust will use short term financing and take out bonds once short term funding reaches certain levels
- OPG and OFA are working on a Debt Loan Arrangement which would establish the interest rates on the subordinated debt
- **Next Steps:**
    - OPG and OFA will bring forward a recommended framework for determining interest rates
    - Timing: TBD

Hi John

Did you notice the wording change on the timing of the OIC regarding OPG indemnity. It now says June 27. Our wording was not committal to the June 27 date, but to . I don't think there is that urgency for this OIC. Per our teleconference earlier this week, there are still internal discussions to be had regarding the Province's position.

This was our wording

- Upcoming Cabinet date is June 27, 2017, for which documents are past due. Next possible LRC/Cabinet date is scheduled for July 26, 2017.

Outstanding Business Issues – Ontario Fair Hydro Plan

Briefing Note

PURPOSE

Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Provincial Support Agreement Term Sheet (Performance and Payment Guarantees)**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA have discussed a draft term sheet and the OFA, MOF and Blakes will work together to provide comments
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July.

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - Provincial staff, with OPG's concurrence, recommends minimizing, to the extent possible, the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers.
   - The Province is considering regulation changes to exempt from PILs the income arising to the OPG financing vehicle / OPG as a consequence of the Fair Hydro Plan.
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.
   - **Next Steps:**
     - The MOF, OFA and OPG are working together to determine required regulation changes.
     - Torys prepared a memo on the item
     - Timing: MOF will be setting up a call with tax policy, OPG and Torys to discuss a memo Torys prepared on the item in the next few days

3. **Fair Hydro Plan - Master Subscription Agreement Term Sheet (Equity Injection Process)**
    - OPG will require equity injections on a monthly basis, to match the timing of the purchase of the IESO regulatory asset, as applicable, in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province.
    - The Ministry of Energy received appropriation for a fiscally-neutral operating asset expenditure of $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT.
    - **Next Steps:**
        - The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process, which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.
        - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June.

4. **Management Fees**
    - OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
    - The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations, which are currently in development.
    - OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements.
    - There are two components to the model proposed by OPG:
        - Base fee: the structure will allow OPG to earn a commercial fee, an accounting consolidation requirement, with periodic OEB review of the commercial basis of that fee. OEB and OPG are in discussions in order to develop a model that satisfies the accounting requirements and is consistent with OEB's processes.
        - Performance management fee: OPG has the ability to gain or lose depending on the actual financing cost relative to a benchmark, which would be shared equally between ratepayers and OPG. Gain/loss is capped at 1% of annual incremental issuance amount.
    - **Next Steps:**
        - OPG and OEB will bring forward a recommended framework for developing management fees.
        - Timing: TBD

5. **Subordinated Debt Loan Agreement**
    - OPG will lend the equity injection from the Province to the Fair Hydro Trust by way of subordinated debt

- Based on monthly funding requirements of the GA asset, the Trust will use short term financing and take out bonds once short term funding reaches certain levels
- OPG and OFA are working on a Debt Loan Arrangement that would establish the interest rates on the subordinated debt
- **Next Steps:**
    - OPG and OFA will bring forward a recommended framework for determining interest rates
    - Timing: TBD

6. IESO – Increased OFA Credit Facilities

- THE OPG financing entity is not expected to be immediately operational, so the IESO will need to have transitional financing in place to manage the difference in the payments to generators and other service providers vs payments from loads / LDCs.
- There may also be on-going monthly cash flow timing differences that the IESO will need a credit facility for.
- In addition, the OPG financing entity has the right to purchase the regulatory asset from IESO but is not required to purchase it.
- IESO is working with the OFA to increase the credit facilities in the event that the OPG financing entity does not purchase the regulatory asset
- **Next Steps:**
    - OFA is drafting a new agreement for a $2 billion credit facility for the OFA to lend funds to IESO for FHP purposes. Concurrently, the OFA is seeking the Minister's approval for an LRC submission to approve an OIC for an additional $2 billion in borrowing capacity, as well as a Directive from the Minister of Finance, which are both necessary for the OFA to lend funds to IESO under the requested new Credit Facility.
    - Timing: The OIC is scheduled for the June 27, 2017 LRC meeting. The Directive and Credit Facility Agreement are currently being drafted, to be in place by July 1st, 2017

7. OPG Indemnity

- OPG (and IESO) are asking for the Province to indemnify the IESO, OPG (the entities) and their respective directors, officers and employee in order to allow them to carry out their roles in implementing the Ontario Fair Hydro Plan and primarily the Global Adjustment refinancing.
- Indemnification will need to ensure separation between the Province and OPG is maintained
- **Next Steps:**

- Staff in Ministry of Finance and Treasury Board Secretariat have received initial documents and are currently reviewing.
- Depending on the structure of the indemnity requested, an OIC may be required to provide authority to the Minister of Finance
- Timing: If an OIC is required this would be included in the June 27th, 2017 submission

Hi all – just checking in on comments. ENE DMO is looking for this by noon so if you're able to share any comments shortly I would greatly appreciate it.

This version just includes one more item based on the term sheet OPG shared yesterday but I was unsure about timing on that one.

Please let me know if you have any questions.

Hi all,

ENE MO asked for a quick note on 4 of the outstanding business issues that are being worked through and are hoping to see something tomorrow morning.

I've pulled together a high level explanation of each of the items and next steps/timing (to the extent I know).

Would greatly appreciate if you guys could take a look and provide any edits/comments today/early tomorrow if possible. I'm also not too involved in a few of these discussions so if there's others within OFA you think should review feel free to pass along.

Thanks in advance,
Kaitlin

Outstanding Business Issues – Ontario Fair Hydro Plan
Briefing Note

PURPOSE
Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Provincial Support Agreement Term Sheet (~~Service and~~ Performance and Payment Guarantees)**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA ~~and~~are working towards the development of a term sheet
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July.

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - The Province would like to minimize, to the extent possible~~,~~, the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers.
   - The Province is considering regulation changes to exempt from PILs the income arising [to the OPG financing vehicle / OPG] as a consequence of the Fair Hydro Plan. ~~from PILs~~
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.
   - **Next Steps:**
     - The Ministr~~ies~~y of Finance, OFA and OPG are working together to determine required regulation changes.
     - Timing: [Next steps for a decision / when is a decision required / when would these regulation changes occur]

3. **Fair Hydro Plan - Master Subscription Agreement Term Sheet (Equity Injection Process)**

Commented [RK1]: Is this an "approved" position? Potential alternative wording: "Provincial staff, with OPG's concurrence, recommend minimizing, to the extent possible,....

- OPG will require equity injections on a monthly basis, to match the timing of the purchase of the IESO regulatory asset, as applicable, in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province.
- The Ministry of Energy received appropriation for a fiscally-neutral operating asset expenditure of $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT.
- **Next Steps:**
    - The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process, which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.
    - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June.

4. **Management Fees**
    - OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
    - The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations, which are currently in development.
    - OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements.
    - **Next Steps:**
        - OPG and OEB will bring forward a recommended framework for developing management fees.
        - Timing: For incorporation into regulations being brought forward in June

5. **Subordinated Debt Loan Agreement**
    - OPG will lend the equity injection from the Province to the Fair Hydro Trust by way of subordinated debt
    - Based on monthly funding requirements of the GA asset, the Trust will use short term financing and take out bonds once short term funding reaches certain levels
    - OPG and OFA are working on a Debt Loan Arrangement ~~which~~that would establish the interest rates on the subordinated debt
    - **Next Steps:**
        - OPG and OFA will bring forward a recommended framework for determining interest rates
        - Timing: TBD

6. IESO – Increased OFA Credit Facilities

- THE OPG financing entity is not expected to be immediately operational, so the IESO will need to have transitional financing in place to manage the difference in the payments to generators and other service providers vs payments from loads / LDCs.
- There may also be on-going monthly cash flow timing differences that the IESO will need a credit facility for.
- In addition, ~~T~~the OPG financing entity has the right to purchase the regulatory asset from IESO but ~~does~~is not ~~have~~required~~mandated~~ to purchase it.
- IESO is working with the OFA to increase the credit facilities in the event that the OPG financing entity does not purchase the regulatory asset
- **Next Steps:**
    - OFA is drafting a new agreement for a $2 billion credit facility for the OFA to lend funds to IESO for FHP purposes. Concurrently, the OFA is seeking the Minister's approval for an LRC submission to approv~~al~~e an OIC for an ~~new~~additional $2 billion ~~OIC~~in borrowing capacity, as well as a Directive from the Minister of Finance, which are both necessary for the OFA to lend funds to IESO under the requested new Credit Facility. ~~.....~~
    - Timing: The OIC is scheduled ~~as item~~ for the June 27, 2017 LRC meeting. The Directive and Credit Facility Agreement are currently being drafted, to be in place by July 1st, 2017~~.....~~

7. OPG Indemnity

- OPG (and IESO) are asking for the Province to indemnify the IESO, OPG (the entities) and their respective directors, officers and employee in order to allow them to carry out their roles in implementing the Ontario Fair Hydro Plan and primarily the Global Adjustment refinancing.
- Depending on the structure of the indemnity requested, indemnity would be provided either under section 22 or under section 28 of the *Financial Administration Act.* [CEFD staff are assessing the request.]
- Consideration will need to be given as to how providing an indemnity will be perceived given that the GA refinancing structure is meant to be independent of the Province.
- **Next Steps:**
    - Staff in Ministry of Finance and Treasury Board Secretariat have received initial documents and are currently reviewing.
    - If the Province is to provide the indemnity, section 22(1) of the FAA specifies that an OIC will be required to authorize the Minister of Finance.
    - Upcoming Cabinet date is June 27, 2017, for which documents are past due. Next possible LRC/Cabinet date is scheduled for July 26, 2017.

    - Staff in Ministry of Finance and Treasury Board Secretariat have received initial documents and are currently reviewing.
    - If the Province is to provide the indemnity, section 22(1) of the FAA specifies that an OIC will be required to authorize the Minister of Finance.
    - Upcoming Cabinet date is June 27, 2017, for which documents are past due. Next possible LRC/Cabinet date is scheduled for July 26, 2017.

Yeah, I'm fine with it as they took ownership of the wording. And I am of the view that various areas would try to squeeze in everything for the June 27.

Hi John

Did you notice the wording change on the timing of the OIC regarding OPG indemnity. It now says June 27. Our wording was not committal to the June 27 date, but to . I don't think there is that urgency for this OIC. Per our teleconference earlier this week, there are still internal discussions to be had regarding the Province's position.

This was our wording

- Upcoming Cabinet date is June 27, 2017, for which documents are past due. Next possible LRC/Cabinet date is scheduled for July 26, 2017.

Hi all – just checking in on comments. ENE DMO is looking for this by noon so if you're able to share any comments shortly I would greatly appreciate it.

This version just includes one more item based on the term sheet OPG shared yesterday but I was unsure about timing on that one.

Please let me know if you have any questions.

Hi all,

ENE MO asked for a quick note on 4 of the outstanding business issues that are being worked through and are hoping to see something tomorrow morning.

I've pulled together a high level explanation of each of the items and next steps/timing (to the extent I know).

Would greatly appreciate if you guys could take a look and provide any edits/comments today/early tomorrow if possible. I'm also not too involved in a few of these discussions so if there's others within OFA you think should review feel free to pass along.

Thanks in advance,
Kaitlin

Hi Scott,

On the numbers for the second slide, they do not appear to reflect the numbers from the March 1, 2017, Energy CabSub in each year (see attached). Also, the 17-18 numbers in the fiscal plan were adjusted to reflect ¾ of a year, per a July 1, 2017 implementation date (see attached Q&A file). With regard to the latter file, it might be useful to add to the second slide the revised OREC estimated cost numbers too.

On slide 1, I'd suggest separating out the Province and OFA bubble, to show the credit facility and equity injection separately.

Ron

Subject: OFHP Placemat/definitions

Hi Nancy, Ron, Gadi,

Attached is an early cut at products we thought may be helpful as guides for the Fair Hydro plan. We have developed a two page overview placemat that follows Brandon's format. We also have a 1-pager with definitions that help to decode language in the OFHP legislation.

These products still require some refinement particularly on next steps for the tax based social programs (2nd slide). I need to check back with Energy to get some dates and to ensure what we have is correct. Ron, it would also be very helpful if your group could take a look at the numbers to ensure they align with the Budget forecasts. If anyone has additional key issues they would suggest flagging, please let us know and I we will drop them in. Also happy to take suggestions on format as we crashed this together fairly quickly (note that some of the numbers show up small on the screen, but hopefully look better on 11x17 sheets). We will treat this as an iterative product over the next few days / week.

While not perfect, I realize fiscal prep and MMP meetings are occurring tomorrow. I wanted to get this into the system in case it is helpful to have a reasonably accurate summary of a very complex initiative.

Thanks,

Scott

Ontario's Fair Hydro Plan

Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit.
- Any rate increases for typical residential consumers over the next four years would be held to inflation
- To implement the OFHP, ENERGY has prepared legislation (Ontario Fair Hydro Plan Act) in close collaboration with the OEB, Independent Electricity System Operator (IESO), Ontario Power Generation (OPG), partner ministries (TBS, MOF and MAG), external advisors.

OFHP Act Overview

- The Legislation balances ratepayer interests, accounting objectives, market expectations and legal considerations
- Built around core principle that costs incurred to move to a clean, reliable system creates benefits across generations, and costs that should be spread more fairly. Pre-defined terms (see definitions) form the building blocks for this structure
- Roles and responsibilities are established in legislation:
  - Minister of Energy: sets Fair Allocation Amounts for all periods, at the beginning of the plan
  - OPG: Financial Services Manager, sets the Financing Plan, establishes financing entities, purchases assets from IESO, and will drive invoice amounts to customers
  - IESO: creates funding shortfall / regulatory asset, sells to OPG, acts as agent to collect from ratepayers and fund initial interest costs
  - OEB: sets customer rates, establishes regulatory asset for IESO, reviews OPG's admin. costs
- Large part of legislation designed to ensure the financeability of the program
- Key considerations
  - Legislation sets the first Fair Allocation Adjustment and end date of 2047; amounts for intervening years set in regulation
  - Several Provincial guarantees to be negotiated to enable financing without imposing undue cost / risk on Province
  - Province's role constrained once the program underway (e.g. cannot remove OPG as financial services manager)
  - Modelling underway to ensure principle of cost / benefit alignment underlying the program is justifiable
  - Energy has received approval to provide monthly equity injections to OPG to fund sub-debt (see diagram)
  - OFA working with IESO to provide an additional credit facility (see diagram)

GA Financing Overview

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average monthly residential bill w GA financing impact and tax *($/month)*	104	105	112	116	124	136	158	123	126	128	131	133	142	151	161	172	183	195	215	214	216	219	221	223	224	221	222	222	223	224	225	226	227	228	229	230	230	231	210

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Ontario's Fair Hydro Plan (cont'd)

Electricity Support to Help the Most Vulnerable

Rural / Remote Electricity Rate Protection	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	344	472	484	497
Overview	Expand the existing program and harmonize distribution rates for customers in the top 1/8 of distribution rate classes, and shifting costs to the tax base				
Updates	Amend S. 79 of OEBA to provide through regulation classes of customer costs to be shifted to tax base, and create distribution rate protection program to complement RRRP				
Next Steps	Amend regulation to prescribe H1's R2 customers as receiving RRRP & prescribe by regulation program details/customers eligible for broadened distribution rate protection				

Ontario Electricity Support Program	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	140	261	325	375
Overview	Improve the existing program to enhance benefits and increase uptake through streamlined applications and expanded eligibility to include additional households				
Updates	Shift program funding to tax base and authority to allow data sharing between OEB/MCSS to support participation of Ontario Works/Ontario Disability and Support Program clients				
Next Steps	Move to tax base once variance account depleted (exp. fall 2017), with legislation to be proclaimed via OIC at that time to ensure OEB authorities while ratepayer funding is used				

On-Reserve First Nations Delivery Credit	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	15	20	20	20
Overview	Establish a credit to remove delivery charges for 21,500 on-reserve First Nations residential customers				
Updates	Establish authority to create delivery credit and provide for tax-based funding				
Next Steps	Regulatory amendments with details - class of customers eligible, determine what is considered on-reserve and determine the method of calculating the delivery credit				

Affordability Fund	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	100		Up to 100 additional		
Overview	Fund has been established through local distribution companies to help consumers in need to make energy efficiency improvements				
Updates	Advisory committee established and has recommended reps. from Hydro One, Alectra and Thunder Bay Hydro to act as trustees; 2 social services trustees to be selected soon				
Next Steps	Report back to TB/MBC in June 2017 with final program details and a performance management framework; LDCs begin to apply to the Trust for funds in summer 2017				

Other Elements / Considerations

- *Revised cost forecast for 8% rebate:* Key measures announced in OFHP are expected to reduce the cost of the 8% rebate for the Province as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced. The revisions are as follows compared with estimates in August 26, 2016*:

	2017-2018	2018-2019	2019-2020	2020-2021
ENERGY Estimate (August 26, 2016) ($ million)	1,006	1,004	944	n/a
ENERGY Revised Estimate (March 15, 2017) ($ million)	939	882	882	895
Change: March 15, 2017 vs August 26, 2016	*-7%*	*-12%*	*-7%*	*n/a*

***NOTE:** The estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

- *Industrial Conservation Initiative:* Program expanded to include greenhouses. Energy working with CME and OCC on outreach campaigns on benefits of ICI and other conservation initiatives
- *Bill Presentment:* Targeting a re-design of the bill for Fall 2017. For the interim period the Ministry plans to include bill inserts describing the program
- *Auditor General (AG) / Financial Accountability Officer (FAO):* The Ministry has met with both offices and is circulating information in response to follow up requests. The AG also engaged with IESO through its IT value-for-money audit

Subject: RE: OFHP Placemat/definitions

Along the line of your second comment, we're still looking into it but Salman had pointed out that the $975M facility to IESO is done in the name of OFA with OIC, etc. So your comment on separating the OFA and the Province bubble is a good one. I don't fully know the details but my understanding is that the OIC loans have limits. In a spreadsheet I saw, it has approved amounts and drawn or used portions to each. The key distinction, I understand, being that sometimes lending is done by the OFA and sometimes by the Province.

Bruno also had comments and minor edits earlier this morning.

Subject: RE: OFHP Placemat/definitions

Hi Scott,

On the numbers for the second slide, they do not appear to reflect the numbers from the March 1, 2017, Energy CabSub in each year (see attached). Also, the 17-18 numbers in the fiscal plan were adjusted to reflect ¾ of a year, per a July 1, 2017 implementation date (see attached Q&A file). With regard to the latter file, it might be useful to add to the second slide the revised OREC estimated cost numbers too.

On slide 1, I'd suggest separating out the Province and OFA bubble, to show the credit facility and equity injection separately.

Ron

Subject: OFHP Placemat/definitions

Hi Nancy, Ron, Gadi,

Attached is an early cut at products we thought may be helpful as guides for the Fair Hydro plan. We have developed a two page overview placemat that follows Brandon's format. We also have a 1-pager with definitions that help to decode language in the OFHP legislation.

These products still require some refinement particularly on next steps for the tax based social programs (2nd slide). I need to check back with Energy to get some dates and to ensure what we have is correct. Ron, it would also be very helpful if your group could take a look at the numbers to ensure they align with the Budget forecasts. If anyone has additional key issues they would suggest flagging, please let us know and I we will drop them in. Also happy to take suggestions on format as we crashed this together fairly quickly (note that some of the numbers show up small on the screen, but hopefully look better on 11x17 sheets). We will treat this as an iterative product over the next few days / week.

While not perfect, I realize fiscal prep and MMP meetings are occurring tomorrow. I wanted to get this into the system in case it is helpful to have a reasonably accurate summary of a very complex initiative.

Thanks,
Scott

Along the line of your second comment, we're still looking into it but Salman had pointed out that the $975M facility to IESO is done in the name of OFA with OIC, etc. So your comment on separating the OFA and the Province bubble is a good one. I don't fully know the details but my understanding is that the OIC loans have limits. In a spreadsheet I saw, it has approved amounts and drawn or used portions to each. The key distinction, I understand, being that sometimes lending is done by the OFA and sometimes by the Province.

Bruno also had comments and minor edits earlier this morning.

Minor suggested edits in attached

And w.r.t. to the chart and label for arrows going to and from Trust and IESO. Wondering if it's simplifying too much if these were just labelled "cash" (top arrow) and "regulatory asset" (bottom arrow)

Or

top arrow one could change wording around to match the arrow

"OPG SPV/Trust cash purchase of regulatory asset from IESO" rather than "Sale of regulatory asset to OPG SPV/Trust for cash"

bottom arrow

Is wording on arrow below explaining too much?. I.e., is it also explaining the payment from IESO to PGs.

Or

Just leave as is

Ontario's Fair Hydro Plan

Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit.
- Any rate increases for typical residential consumers over the next four years would be held to inflation
- To implement the OFHP, ENERGY has prepared legislation (Ontario Fair Hydro Plan Act) in close collaboration with the OEB, Independent Electricity System Operator (IESO), Ontario Power Generation (OPG), partner ministries (TBS, MOF and MAG), external advisors.

OFHP Act Overview

- The Legislation balances ratepayer interests, accounting objectives, market expectations and legal considerations
- Built around core principle that costs incurred to move to a clean, reliable system creates benefits across generations, and that costs ~~that~~ should be spread more fairly. Pre-defined terms (see definitions) form the building blocks for this structure
- Roles and responsibilities are established in legislation:
  - Minister of Energy: sets Fair Allocation Amounts for all periods, at the beginning of the plan
  - OPG: Financial Services Manager, sets the Financing Plan, establishes financing entities, purchases assets from IESO, and will drive invoice amounts to customers
  - IESO: creates funding shortfall / regulatory asset, sells to OPG SPV/Trust, acts as agent to collect from ratepayers and fund initial interest costs
  - OEB: sets customer rates, establishes regulatory asset for IESO, reviews OPG's admin. costs
- Large part of legislation designed to ensure the financeability of the program
- Key considerations
  - Legislation sets the first Fair Allocation Adjustment and end date of 2047; amounts for intervening years set in regulation
  - Several Provincial guarantees to be negotiated to enable financing without imposing undue cost / risk on Province
  - Province's role constrained once the program underway (e.g. cannot remove OPG as financial services manager)
  - Modelling underway to ensure principle of cost / benefit alignment underlying the program is justifiable
  - Energy has received approval to provide monthly equity injections to OPG to fund sub-debt (see diagram)
  - OFA working with IESO to provide an additional credit facility (see diagram)

GA Financing Overview

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Ontario's Fair Hydro Plan (cont'd)

Electricity Support to Help the Most Vulnerable

Rural / Remote Electricity Rate Protection	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	454	450	446
Overview	Expand the existing program and harmonize distribution rates for customers in the top 1/8 of distribution rate classes, and shifting costs to the tax base			
Updates	Amend S. 79 of OEBA to provide through regulation classes of customer costs to be shifted to tax base, and create distribution rate protection program to complement RRRP			
Next Steps	Amend regulation to prescribe H1's R2 customers as receiving RRRP & prescribe by regulation program details/customers eligible for broadened distribution rate protection			

Ontario Electricity Support Program	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	178	239	290
Overview	Improve the existing program to enhance benefits and increase uptake through streamlined applications and expanded eligibility to include additional households			
Updates	Shift program funding to tax base and authority to allow data sharing between OEB/MCSS to support participation of Ontario Works/Ontario Disability and Support Program clients			
Next Steps	Move to tax base once variance account depleted (exp. fall 2017), with legislation to be proclaimed via OIC at that time to ensure OEB authorities while ratepayer funding is used			

On-Reserve First Nations Delivery Credit	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	20	20	20
Overview	Establish a credit to remove delivery charges for 21,500 on-reserve First Nations residential customers			
Updates	Establish authority to create delivery credit and provide for tax-based funding			
Next Steps	Regulatory amendments with details - class of customers eligible, determine what is considered on-reserve and determine the method of calculating the delivery credit			

Affordability Fund	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	100	Up to 100 additional		
Overview	Fund has been established through local distribution companies to help consumers in need to make energy efficiency improvements			
Updates	Advisory committee established and has recommended reps. from Hydro One, Alectra and Thunder Bay Hydro to act as trustees; 2 social services trustees to be selected soon			
Next Steps	Report back to TB/MBC in June 2017 with final program details and a performance management framework; LDCs begin to apply to the Trust for funds in summer 2017			

Other Elements / Considerations

- Industrial Conservation Initiative: Program expanded to include greenhouses. Energy working with CME and OCC on outreach campaigns on benefits of ICI and other conservation initiatives
- Bill Presentment: Targeting a re-design of the bill for Fall 2017. For the interim period the Ministry plans to include bill inserts describing the program
- Auditor General (AG) / Financial Accountability Officer (FAO): The Ministry has met with both offices and is circulating information in response to follow up requests. The AG also engaged with IESO through its IT value-for-money audit

Ontario's Fair Hydro Plan

Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit.
- Any rate increases for typical residential consumers over the next four years would be held to inflation
- To implement the OFHP, ENERGY has prepared proposed legislation (Bill xx: Ontario Fair Hydro Plan Act) in close collaboration with the OEB, Independent Electricity System Operator (IESO), Ontario Power Generation (OPG), partner ministries (TBS, MOF and MAG), external advisors.

Bill xx: OFHP Act Overview

- The proposed Legislation balances ratepayer interests, accounting objectives, market expectations and legal considerations
- Built around core principle that costs incurred to move to a clean, reliable system creates benefits across generations, and costs that should be spread more fairly. Pre-defined terms (see definitions) form the building blocks for this structure
- Roles and responsibilities are established in legislation:
  - Minister of Energy: sets Fair Allocation Amounts for all periods, at the beginning of the plan
  - OPG: Financial Services Manager, sets the Financing Plan, establishes financing entities, purchases assets from IESO, and will drive invoice amounts to customers
  - IESO: creates funding shortfall / regulatory asset, sells to OPG, acts as agent to collect from ratepayers and fund initial interest costs
  - OEB: sets customer rates, establishes regulatory asset for IESO, reviews OPG's admin. costs
- Large part of legislation designed to ensure the financeability of the program
- Key considerations
  - Legislation sets the first Fair Allocation Adjustment and end date of 2047; amounts for intervening years set in regulation
  - Several Provincial guarantees to be negotiated to enable financing without imposing undue cost / risk on Province
  - Province's role constrained once the program underway (e.g. cannot remove OPG as financial services manager)
  - Modelling underway to ensure principle of cost / benefit alignment underlying the program is justifiable
  - Energy has received approval to provide monthly equity injections to OPG to fund sub-debt (see diagram)
  - OFA working with IESO to provide an additional credit facility -- requires approvals / Directive from Minister of Finance to OFA (see diagram)

Fiscal Impact ($ Millions)	0	344	472	484	497
Overview	Expand the existing program and harmonize distribution rates for customers in the top 1/8 of distribution rate classes, and shifting costs to the tax base				
Updates	Amend S. 79 of OEBA to provide through regulation classes of customer costs to be shifted to tax base, and create distribution rate protection program to complement RRRP				
Next Steps	Amend regulation to prescribe H1's R2 customers as receiving RRRP & prescribe by regulation program details/customers eligible for broadened distribution rate protection				

Ontario Electricity Support Program	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	140	261	325	375
Overview	Improve the existing program to enhance benefits and increase uptake through streamlined applications and expanded eligibility to include additional households				
Updates	Shift program funding to tax base and authority to allow data sharing between OEB/MCSS to support participation of Ontario Works/Ontario Disability and Support Program clients				
Next Steps	Move to tax base once variance account depleted (exp. fall 2017), with legislation to be proclaimed via OIC at that time to ensure OEB authorities while ratepayer funding is used				

On-Reserve First Nations Delivery Credit	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	15	20	20	20
Overview	Establish a credit to remove delivery charges for 21,500 on-reserve First Nations residential customers				
Updates	Establish authority to create delivery credit and provide for tax-based funding				
Next Steps	Regulatory amendments with details - class of customers eligible, determine what is considered on-reserve and determine the method of calculating the delivery credit				

Affordability Fund	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	100		Up to 100 additional		
Overview	Fund has been established through local distribution companies to help consumers in need to make energy efficiency improvements				
Updates	Advisory committee established and has recommended reps. from Hydro One, Alectra and Thunder Bay Hydro to act as trustees; 2 social services trustees to be selected soon				
Next Steps	Report back to TB/MBC in June 2017 with final program details and a performance management framework; LDCs begin to apply to the Trust for funds in summer 2017				

Other Elements / Considerations

- *Revised cost forecast for "Ontario Rebate for Electricity Consumers" for amount equivalent to 8% provincial portion of HST:* Key measures announced in OFHP are expected to reduce the cost of the rebate for the Province as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced. The revisions are as follows compared with estimates in September 8, 2016*:

	2017-2018	2018-2019	2019-2020	2020-2021
ENERGY Estimate (Sept 8, 2016) ($ million)	1,119	1,086	1,171	n/a
ENERGY Revised Estimate (March 15, 2017) ($ million)	939	882	882	895
Change: March 15, 2017 vs Sept 8, 2016	*-16%*	*-19%*	*-25%*	*n/a*

***NOTE:** The estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

- *Industrial Conservation Initiative:* Under the FHP, the program was expanded for manufacturing sectors, plus greenhouses, to a lower threshold, down to 500 kilowatts (vs 1 MW for other consumers). Energy working with CME and OCC on outreach campaigns on benefits of ICI and other conservation initiatives
- *Bill Presentment:* Targeting a re-design of the bill for Fall 2017. For the interim period the Ministry plans to include bill inserts describing the program
- *Auditor General (AG) / Financial Accountability Officer (FAO):* The Ministry has met with both offices and is circulating information in response to follow up requests. The AG also engaged with IESO through its IT value-for-money audit

Subject: OIC s22 CIPA - OFA-IESO - LRC package

Hi Ron,

Please find attached the LRC package for an OIC authorizing the Minister of Finance to lend to the OFA. In order for the OFA to lend to the IESO as part of the proposed Fair Hydro Plan Act, the OFA borrows from the Province (Minister of Finance). The OIC is being obtained under section 22 of the Capital Investment Plan Act.

The package is getting sign-off from MOF legal at the moment, and it's aiming to get yours and Gadi's sign off today in order to get this to DMO to make sure this will be on June 27th LRC date. MOF legal has already reviewed the package, so I do not expect any further changes from them. I will provide you the hard copy of the package once Legal signed off on that.

The documents are also saved here:
Z:\Users\CEF\Hydro 2017\IESO\Financing\IESO-OFA - FHP Line of Credit\LRC Draft Package

Thanks,
Gavin He

Proposed Items for Review

1. Approval of Order in Council ("OIC") under section 22 of the *Capital Investment Plan Act, 1993 ("CIPA"),* authorizing the Minister of Finance to make a loan to the Ontario Financing Authority ("OFA").

Approvals required prior to LRC

	Committee and date	Cabinet Date
Policy		
TB/MBC	LRC, June 27, 2017	June 27, 2017

Deputy Minister _____ Date _____

Minister _____ Date _____

s. 1 Proposal and Context

- Approval is being sought for an OIC under section 22 of *Capital Investment Plan Act, 1993* ("CIPA"), which will authorize the Minister of Finance to provide loan(s) to the Ontario Financing Authority ("OFA") in an amount of up to $3.5 billion. Under the proposed OIC, loan(s) could be advanced during the period between the effective date of the OIC and June 30, 2053.

- Subsection 22(1) of CIPA authorizes the Minister of Finance to make loans to the OFA in the amounts, times and on the terms and conditions authorized by Lieutenant Governor in Council ("LGIC"). Subsection 22(2) provides a statutory appropriation for loans made by the Minister to the OFA under subsection 22(1).

- Existing OICs authorize the Minister of Finance to provide loans to the OFA of up to $x, under which the OFA has provided loans and credit facilities to …

- This proposed OIC is required to expand the overall Minister of Finance lending authority to the OFA to allow the OFA to provide loans ["including"?] under credit facilities requested by the Independent Electricity System Operator (~~to the~~ ("IESO"). This ~~and~~ will help the IESO to fulfil the commitments under the proposed Fair Hydro Act, 2017, under anticipated and potential timing differences in the implementation of the proposed Fair Hydro Plan. The timing of this OIC is critical to ensure borrowing authority for the OFA is available ~~as it will be required~~ to provide the IESO its requested financing arrangements upon the enactment of the proposed *Ontario Fair Hydro Plan Act, 2017.*

Commented [RK1]: Why this amount? Unless we can provide a reason beyond the FHP, I'd rather not go so high.

Commented [RK2]: Why this date? Tied to what?

Formatted: Indent: Left: 0.25", No bullets or numbering

Commented [RK3]: Include IESO in the list.

s. 2 Approach and Intended Outcomes

- Under CIPA, the OFA provides financing to public bodies as directed by the Minister of Finance. The OFA obtains the funds it needs for its lending program by borrowing from the Province. This OIC would authorize the Minister of Finance under section 22 of CIPA to provide additional loans to the OFA.

- As per subsection 3(1) of CIPA, the Minister of Finance is responsible for the administration of CIPA with respect to the OFA.

- This proposed OIC is required to assist in fulfilling the commitments under the proposed *Ontario Fair Hydro Plan Act, 2017.*

- It is expected that as part of the implementation of the proposed arrangements, the Minister of Finance will direct the OFA to provide a revolving credit facility for short term financing related to the on-going *Ontario Fair Hydro Plan Act, 2017*. In particular, the OFA would be directed to provide a credit facility~~will be lending~~ to the Independent Electricity System Operator ("IESO"). The IESO is a public body for the purposes of CIPA.

- Under the proposed *Ontario Fair Hydro Plan Act, 2017,* the IESO would incur a monthly funding shortfall in the early years of the plan, as a portion of the Global Adjustment charge to ratepayers will be deferred to the future. Global Adjustment amounts initially collected will, therefore, be insufficient to fund the IESO's contractual obligations to electricity producers and service providers.
- The proposed *Ontario Fair Hydro Plan Act, 2017* allows the IESO ~~to sell~~ the right to recover those deferred amounts from specified consumers in the future (the "regulatory asset") and the ability~~.~~ to sell that asset.
    - It is anticipated that the regulatory asset would be purchased by the financing entity to be established by OPG ("OPG SPV", an OPG special purpose vehicle or trust).
    - The cash received would be used by the IESO to fund the current Global Adjustment shortfall.
- However, there is expected to be initial and potential timing differences. The OPG SPV is not anticipated to be established and able to borrow to finance the purchase of the regulatory asset from the IESO until later in 2017. Even once the SPV is set up to borrow, there may be timing differences between the IESO's monthly settlement process when it has to pay generators and when the SPV purchases the asset from IESO. Also, under ~~T~~the proposed legislation, ~~however, does not require the~~ OPG's SPV is not required to purchase any portion of the regulatory asset.
- As a result, IESO requires short-term financing to be in place for initial and potential monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. ~~This short-term financing may also be required before the OPG SPV is operating and before it has its own financing in place to purchase the regulatory asset.~~

- IESO has requested that the OFA provide a revolving credit facility of up to $2 billion to support its role in the implementation of the *Ontario Fair Hydro Plan Act, 2017*. The $2 billion request from IESO is based on current data and assumptions which could change.

Formatted: Indent: Left: 0.5", Tab stops: 0.75", List tab + Not at 1"

Formatted: Font: 11 pt, Font color: Auto, English (United States)

- ~~, therefore, i~~It is proposed that the OIC authorization be $3.5 billion [to ensure that there is sufficient ~~contingency~~borrowing authority in place for the OFA to meet the IESO and other requirements ~~once the implementation begins~~].

- For the OFA to accommodate this request, the OFA requires additional borrowing authority from the Minister of Finance to ensure that it has sufficient funds to lend, hence the current request for an OIC.

- If approved, t~~T~~he Minister of Finance will subsequently ~~be required to~~ provide a Directive to the OFA to direct it to provide credit facilities ~~make loans~~ to the IESO in an amount not to exceed $~~3~~2.5 billion.
  - The OFA currently provides a credit facility to the IESO of $975 million.
  - The IESO has requested that the existing credit facility be reduced to $475 million, and a new credit facility be provided of $2 billion, for a total amount of $2.475 million.

Commented [RK4]: $2bn, unless there is an identifiable other reason OFA needs more borrowing authority.

Commented [RK5]: Add in only if this is justifiable.

Formatted: Font: 11 pt, Font color: Auto, English (United States)

s. 3 Direction and Urgency

- As announced on March 2, 2017, and highlighted as a commitment in Budget 2017, the Province intends to implement the *Ontario Fair Hydro Plan Act, 2017*, which would reduce electricity bills by 25 per cent on average for eligible households.
- The ability for the OFA to have the requisite borrowing and lending capacity is instrumental in supporting implementation~~ing~~ of the proposed *Ontario Fair Hydro Plan Act, 2017*.
- Ministry of Energy proposed ~~R~~regulations under the proposed *Ontario Fair Hydro Plan Act, 2017* are expected to track for Cabinet approval by end of June 2017. It is expected that this OIC also be submitted for approval~~ed~~ concurrently as it ~~is~~supports a crucial component of the successfully implementation~~ing~~ of the Fair Hydro Plan.
- A related Cabinet Minute from the Ministry of Energy is tracking for June 27, 2017 date.

s. 4 Impact Assessment and Costs

- With this OIC, the Minister of Finance will be authorized to lend an additional amount of $x billion to the OFA. Subject to the terms and conditions of a

Directive from the Minister of Finance, loans from the Minister of Finance to the OFA are expected to be at the Province's cost of funds.

- Loans advanced will result in increased borrowing in the debt markets by the Province.
- Loans are expected to be repaid and, therefore, no fiscal impact is expected.

s. 5 Implementation

- If the OIC is approved and signed, the Minister of Finance will have authorization to provide a loan to the OFA. A Directive from the Minister will be required that will provide direction to the OFA on how ~~the OFA~~it can use the proceeds of the loan.

s. 6 Delivery and Results Tracking

- As described in section 2 above, the requirement for this OIC is a result of the Province's proposed *Ontario Fair Hydro Plan Act, 2017* and is required to ensure the timely implementation and support for the success of the Fair Hydro Plan.

s.7 Stakeholder Consultations

- As described in section 2 above, the requirement for this OIC is a result of the Province's proposed Fair Hydro Plan. The related Cabinet note for the initiative should be referred to.

Ontario

Order in Council
Décret

On the recommendation of the undersigned, the Lieutenant Governor of Ontario, by and with the advice and concurrence of the Executive Council of Ontario, orders that:

Sur la recommandation de la personne soussignée, la lieutenante-gouverneure de l'Ontario, sur l'avis et avec le consentement du Conseil exécutif de l'Ontario, décrète ce qui suit :

WHEREAS pursuant to subsection 22(1) of the *Capital Investment Plan Act, 1993* (the "Act"), the Minister of Finance may purchase securities of or make loans to corporations established under subsection 2(1) of the Act in such amounts, at such times and on such terms and conditions as the Lieutenant Governor in Council considers expedient;

AND WHEREAS the Ontario Financing Authority (the "OFA") is a corporation established under subsection 2(1) of the Act;

AND WHEREAS pursuant to subsection 6(3) of the Act, the power of a corporation established under subsection 2(1) of the Act to borrow and issue securities, among other things, may only be exercised under the authority of a by-law that has been approved by the Minister of Finance;

AND WHEREAS the OFA wishes to borrow up to Three Billion Five Hundred Million Dollars in lawful money of Canada from the Minister of Finance and has been authorized to do so by a borrowing by-law approved in accordance with the Act;

Commented [RK1]: Why this amount? Unless we can provide a reason beyond the FHP, I'd rather not go so high.

THEREFORE:

Pursuant to subsection 22 (1) of the Act, the Minister of Finance is authorized to lend a maximum of Three Billion Five Hundred Million Dollars in lawful money of Canada to the OFA on the following terms and conditions:

(a) the loan may be advanced in such amounts and at such time or times as required by the OFA;

(b) repayment of advances made under the loan plus accrued interest may be made in whole or in part at any time provided that the loan plus any accrued interest shall be fully repaid by June 30, 2053;

(c) each advance (an “Advance”) made under the loan hereby authorized shall bear interest at a rate which is determined as follows:

(i) from the date of the Advance to (but excluding) the date of repayment the Advance shall bear interest at a per annum rate equivalent to the yield earned on ninety day Province of Ontario treasury bills on the date before the Advance Date as determined by the Province, provided that if an Advance is outstanding for longer than ninety days, the interest rate shall be reset on the last day of each ninety day period (the “Reset Date”) to the yield earned on ninety day Province of Ontario treasury bills immediately preceding the Reset Date for such ninety day period as determined by the Province;

(ii) in the event that moneys included in an Advance are used by the OFA for the purpose of funding loans to third parties (a “Third Party Loan”), the rate of interest payable by the OFA to the Province on the portion of the Advance so used shall be adjusted effective as of the date that the portion of the Advance is used to fund the Third Party Loan so that the per annum rate of interest payable by the OFA on such moneys is equivalent to the per annum rate of interest payable to the OFA under the Third Party Loan less an amount as may be determined by the Minister of Finance in respect of such Third Party Loan or a class of such Third Party Loans, until but excluding the date on which the Third Party Loan is repaid, at which time the interest rate set out in subparagraph (i) shall again be applicable to that portion of the Advance; and

(iii) in the event that moneys described in subparagraph (ii), once repaid, are subsequently used to fund loans to third parties, subparagraph (ii) shall again be applicable in determining the interest rate payable to the Province on that portion of the Advance used to fund such loan, and so on, until the Advance shall be repaid to the Province in full;

(iv) despite subparagraphs (ii) and (iii), in the event that no interest is payable to the OFA under a Third Party Loan, no interest shall be payable by the OFA on the portion of the Advance so used and to the extent that the terms of a Third Party Loan provide for the deferral of the payment of accrued interest for a period, the interest payment terms of an Advance or portion thereof shall also be deferred for a similar period.

(d) interest for any period of less than one year shall be payable for the actual number of days included in such period, computed on the basis of a 365-day year;

(e) despite paragraph (b) of this Order, interest on any portion of an Advance made to the OFA under the loan that is used by the OFA to fund a Third Party Loan shall accrue on the basis stated above but shall become payable only to the extent the OFA receives payment of interest under the relevant Third Party Loan;

(f) despite paragraph (b) of this Order, any portion of the principal of an Advance made to the OFA under the loan that is used by the OFA to fund a Third Party Loan shall become payable only to the extent the OFA receives repayment of principal under the relevant Third Party Loan; and

(g) the loan hereby authorized shall be evidenced by a promissory note.

ATTENDU QUE le ministre des Finances peut, en vertu du paragraphe 22 (1) de la *Loi de 1993 sur le plan d'investissement* (la « Loi »), acheter des valeurs mobilières des personnes morales créées en vertu du paragraphe 2 (1) de la Loi ou leur consentir des prêts selon les montants, aux moments et aux conditions que le lieutenant-gouverneur en conseil estime opportuns;

ATTENDU QUE l'Office ontarien de financement (l'« OOF ») est une personne morale créée en vertu du paragraphe 2 (1) de la Loi;

ATTENDU QUE, conformément au paragraphe 6 (3) de la Loi, le pouvoir qu'ont les personnes morales créées en vertu du paragraphe 2 (1) de la Loi de contracter des emprunts et d'émettre des valeurs mobilières, entre autres, ne peut être exercé qu'aux termes d'un règlement administratif approuvé par le ministre des Finances;

ATTENDU QUE l'OOF souhaite emprunter jusqu'à concurrence de trois milliards cinq cent millions de dollars en monnaie légale du Canada du ministre des Finances et qu'il a été autorisé à le faire par un règlement administratif d'emprunt approuvé conformément à la Loi;

PAR CONSÉQUENT :

en vertu du paragraphe 22 (1) de la Loi, le ministre des Finances est autorisé à prêter un montant maximal de trois milliards cinq cent millions de dollars en monnaie légale du Canada à l'OOF, aux conditions suivantes :

a) le prêt peut être consenti selon les montants et aux moments qui conviennent à l'OOF;

b) le remboursement des avances consenties au titre du prêt, plus les intérêts courus, peut à tout moment être effectué en totalité ou en partie, pourvu que le prêt et les intérêts courus soient entièrement remboursés au plus tard le 30 juin 2053;

c) chaque avance (« avance ») faite au titre du prêt autorisé par les présentes portera intérêt au taux est fixé comme suit :

(i) de la date où elle a été faite jusqu'à la date (non comprise) de son remboursement, l'avance portera intérêt à un taux annuel équivalant au rendement gagné sur des bons du Trésor de la province de l'Ontario de quatre-vingt-dix jours à la date précédant la date de l'avance fixée par la province, pourvu que ce taux d'intérêt soit rajusté le dernier jour de chaque période de quatre-vingt-dix jours (« date de rajustement ») selon le rendement gagné sur de tels bons du Trésor immédiatement avant la date de rajustement pour une période de quatre-vingt-dix jours décidée par la province, si l'avance est impayée pendant plus de quatre-vingt-dix jours;

(ii) dans l'éventualité où l'OOF se servirait de sommes comprises dans une avance pour financer des prêts à des tiers, le taux d'intérêt à payer par l'OOF à la province sur la partie de l'avance ainsi utilisée sera rajusté à la date à laquelle la partie de l'avance sera utilisée pour le financement du prêt à un tiers de façon que le taux d'intérêt annuel à payer par l'OOF sur de telles sommes soit équivalent à ce

dernier taux moins un montant que pourra fixer le ministre des Finances à l'égard d'un tel prêt ou d'une telle catégorie de prêt, jusqu'à la date (non comprise) à laquelle le prêt à un tiers sera remboursé, date à laquelle le taux d'intérêt établi au sous-alinéa (i) s'appliquera de nouveau à cette partie de l'avance;

(iii) dans l'éventualité où les sommes décrites au sous-alinéa (ii), une fois remboursées, seraient ultérieurement utilisées pour le financement de prêts à des tiers, le sous-alinéa (ii) s'appliquera de nouveau dans l'établissement du taux d'intérêt à payer à la province sur la partie de l'avance utilisée à cette fin, et ainsi de suite, jusqu'à ce que l'avance ait été remboursée intégralement à la province;

(iv) malgré les sous-alinéas (ii) et (iii), dans l'éventualité où aucun intérêt ne serait payable à l'OOF au titre d'un prêt à un tiers, aucun intérêt ne sera à payer par l'OOF sur la partie de l'avance ainsi utilisée et dans la mesure où les conditions du prêt à un tiers prévoient le report du paiement d'intérêts courus pour une période, le paiement d'intérêts au titre d'une avance ou d'une partie d'une avance sera également reporté pour une période d'égale durée;

d) l'intérêt payable relativement à toute période de moins d'un an sera calculé en fonction du nombre de jours réellement compris dans cette période, par rapport à une année comptant 365 jours;

e) par dérogation à l'alinéa a) ci-dessus, l'intérêt sur toute partie d'une avance consentie à l'OOF dans le cadre du prêt que cette dernière utilise pour financer un prêt à un tiers est calculé comme il est indiqué ci-dessus, mais cet intérêt devient payable uniquement dans la mesure où l'OOF reçoit un paiement d'intérêts au titre du prêt à un tiers;

f) par dérogation à l'alinéa b) ci-dessus, toute partie du capital d'une avance consentie à l'OOF dans le cadre du prêt que cette dernière utilise pour financer un prêt à un tiers devient payable uniquement dans la mesure où l'OOF reçoit un remboursement du capital au titre du prêt à un tiers

g) le prêt autorisé en vertu des présentes sera attesté par un billet à ordre.

Subject: OPG Business Plan BN - Review and Input Needed

John,

Attached is the note for the OPG Business Plan item going to TB/MBC same time as OFHP May 9, 2017. Please review and provide comments, and clarification regarding what's in the OPG #s in the 2017 Budget numbers (There are references in the note and the tables on the last two pages need updating to be complete).

Sec Briefing is tomorrow afternoon, would it be possible to get the updated tables in the morning tomorrow? Fair Hydro Plan is also scheduled, but not sure if it or both will be bumped to a separate briefing cycle in advance of May 9, 2017.

Laurie (for Judy) – I've included a description of the international travel aspect (around slide 11, deck in the attached email) and a placeholder for a minute (Judy was aware of the item).

James

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

Prepared based on draft submission

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan,

how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its 2017-2019 Business Plan (Board-approved?) to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO.~~,~~ It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets. ~~financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending~~ (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged (Check is OFA)

Financial figures from the OPG Business Plan are included and supplemented with forecast changes ~~for~~ from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

Commented [RK1]: "from"?

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 201~~7~~8.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan~~, along with OFA forecast updates for OFHP (TBC),~~ show a decrease in earnings before tax of $~~84M~~ 299M in 201~~6~~-1~~7~~ ~~-18~~ and $~~89M~~ 556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by increases of $~~59M~~ 12M in 2018-19 and $~~120M~~ 182M in 2019-20 over the estimates in the 2016 Budget.~~-~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington

Commented [JK2]: Added to address Ron's comment.

Commented [RK3]: I'd say separate out the differences related to the business plan from the Provincial consolidation adjustment for IFRS.

Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019 is planned to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB

for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.

- OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.

- On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
- On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: A~~ny~~ change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected~~could~~ to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

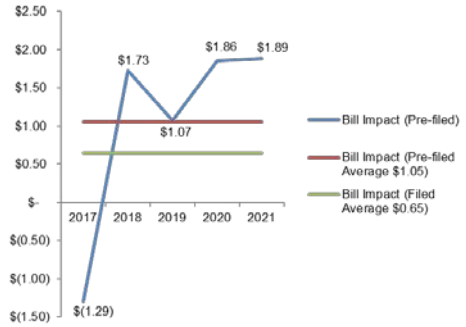
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

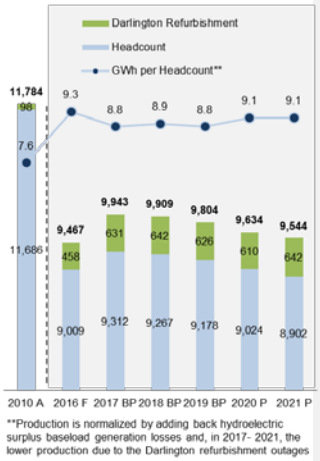
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



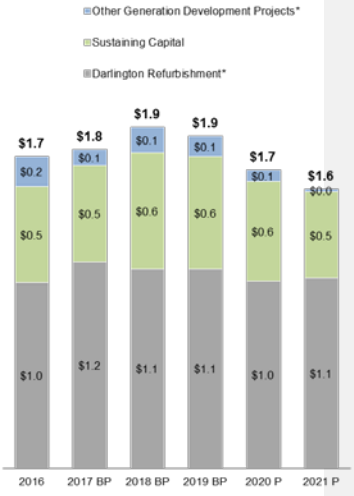
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Subject: OPG Business Plan BN - Review and Input Needed

John,

Attached is the note for the OPG Business Plan item going to TB/MBC same time as OFHP May 9, 2017. Please review and provide comments, and clarification regarding what's in the OPG #s in the 2017 Budget numbers (There are references in the note and the tables on the last two pages need updating to be complete).

Sec Briefing is tomorrow afternoon, would it be possible to get the updated tables in the morning tomorrow? Fair Hydro Plan is also scheduled, but not sure if it or both will be bumped to a separate briefing cycle in advance of May 9, 2017.

Laurie (for Judy) – I’ve included a description of the international travel aspect (around slide 11, deck in the attached email) and a placeholder for a minute (Judy was aware of the item).

James

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

Prepared based on draft submission

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**

Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan,

how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its 2017-2019 Business Plan (Board-approved?) to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO.~~,~~ It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets. ~~financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending~~ (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged (Check is OFA)

Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

Commented [RK1]: "from"?

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 201~~7~~8.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan~~, along with OFA forecast updates for OFHP (TBC),~~ show a decrease in earnings before tax of $~~84M~~ 299M in 201~~6~~-1~~7~~ ~~-18~~ and $~~89M~~ 556M in 2017-18, primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by increases of $~~59M~~ 12M in 2018-19 and $~~120M~~ 182M in 2019-20 over the estimates in the 2016 Budget.~~.~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Commented [RK2]: I'd say separate out the differences related to the business plan from the Provincial consolidation adjustment for IFRS.

Net income in 2018 and 2019 is planned to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.

        - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
    - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
    - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
    - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
        - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
        - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
        - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
        - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: A~~ny~~ change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected~~could~~ to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1

Total Fiscal Impact (draw from c-funds)		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

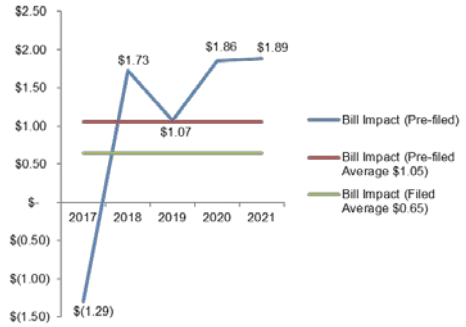
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

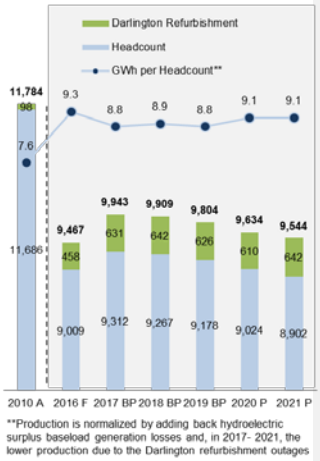
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



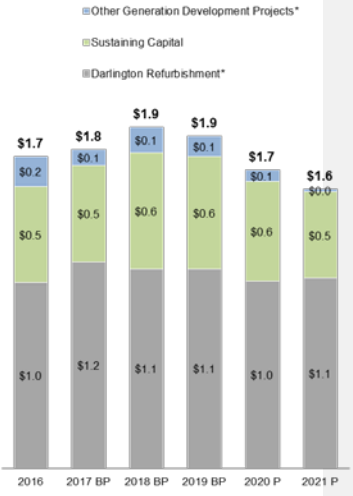
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Subject: OPG Business Plan BN - Review and Input Needed

John,

Attached is the note for the OPG Business Plan item going to TB/MBC same time as OFHP May 9, 2017. Please review and provide comments, and clarification regarding what's in the OPG #s in the 2017 Budget numbers (There are references in the note and the tables on the last two pages need updating to be complete).

Sec Briefing is tomorrow afternoon, would it be possible to get the updated tables in the morning tomorrow? Fair Hydro Plan is also scheduled, but not sure if it or both will be bumped to a separate briefing cycle in advance of May 9, 2017.

Laurie (for Judy) – I've included a description of the international travel aspect (around slide 11, deck in the attached email) and a placeholder for a minute (Judy was aware of the item).

James

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

Prepared based on draft submission

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan,

how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its 2017-2019 Business Plan (Board-approved?) to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO.~~,~~ It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets. ~~financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending~~ (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged (Check is OFA)

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments~~changes~~ ~~for~~ from the Ontario Financing Authority and~~,~~ MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards.~~.~~ The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

Commented [RK1]: "from"?

Commented [BA2]: Also added MoF changes for IFRS risk

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 201~~7~~8.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan~~, along with OFA forecast updates for OFHP (TBC),~~ show a decrease in earnings before tax of $~~84M~~ 29~~49~~M in 201~~6~~-17~~-18~~ and $~~89M~~ 556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase~~s~~ of $~~59M~~ 112M in 2018-19 and a decrease of $14~~120M~~ 62M in 2019-20 versus ~~over~~ the estimates in the 2016 Budget. The 2019-20 decrease largely reflects an IFRS-

Commented [JK3]: Added to address Ron's comment.

Commented [BA4R3]: Check figures

related consolidation risk of $200M) as described above.~~,~~

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4~~63~~6M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, (before OFA and MoF adjustments) is projected~~lanned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering

Commented [RK5]: I'd say separate out the differences related to the business plan from the Provincial consolidation adjustment for IFRS.

Commented [BA6]: Edit 463

(e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: A~~ny~~ change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected~~could~~ to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

Total Fiscal Impact (draw from c-funds)		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

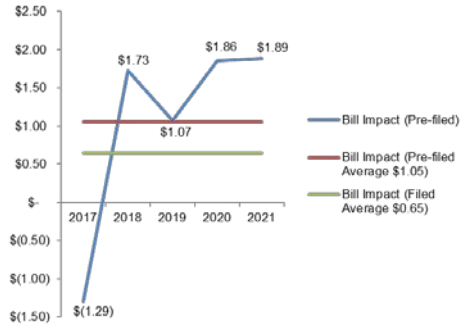
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

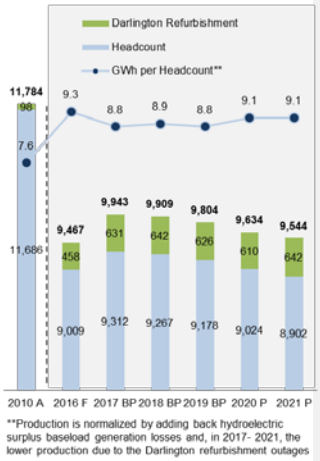
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



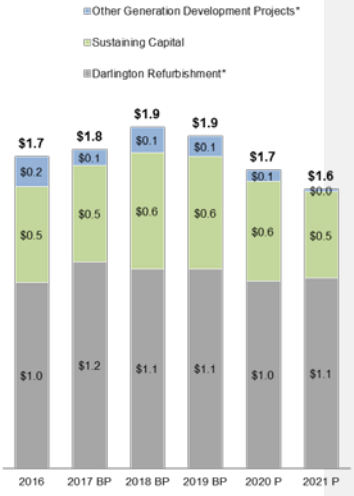
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**

Subject: RE: OPG Performance fees
Date: Monday, May 15, 2017 10:22:55 AM

Hi Ron,

Some early comments. OPG has been coming up with these ideas, we had one earlier that seems to have changed to the 1M one. If the idea is to meet accounting requirements and the impact is fairly small, it looks OK to me.

Might be a good idea to not get all fussed over some of these ideas as could end up looking like over-reacting and I'm not even sure at what level of OPG these ideas are being originated.

I take power and profit to mean OPG having the ability to make commercial decisions and profit to mean for conducting business for commercial/profit-making reasons.

John

Subject: RE: OPG Performance fees

I talked to OPG on this. Here are some other considerations:

- Risk / reward goes both ways. Unlike most management fee structures where the performance fee provides an at risk upside to the manager, but no downside, the distribution of potential benefits and losses is symmetric between ratepayers and OPG.
- OPG's current thinking is that it would work with OFA to set a benchmark for borrowing costs at the start of the year based on GOC yields + a premium. If OPG over-performs (under-performs) the benefit (downside) would be shared between the company and

ratepayers 50/50 up to +/- $1M. Above or below $1M, all of the benefit (downside) would flow to ratepayers.

- OPG does not particularly like this symmetry but this is apparently required to meet accounting requirements.
- From my perspective, $1M is a small number, so I am not too concerned about overall impacts on ratepayers.

Thanks,
Scott

Subject: RE: OPG Performance fees

Hi Scott

Yes the MOF does like OPG to make money since on a PSAB basis it benefits the Province's fiscal position. In this instance however, the marginal increase to the fiscal bottom line comes at the expense of the ratepayers in terms of additional debt, hence our push back.

Pls see below my responses on the two issues that you have raised. I am cc'ing Cindy as well since she may have her own thoughts and a discussion maybe value added in terms of arriving at a common understanding.

Thanks

Subject: RE: OPG Performance fees

MoF asking OPG to make less money! This feels so backward!

I will chat with OPG to dig in to the rationale. I take your point that OPG will benefit from the loans to the trust. However, I see two weaknesses with the argument:

1) Lenders don't typically consolidate borrowers, so it takes more than interest revenues to meet this test. Not sure if you are referring to the "Power" or "profit" principle. If the former the Province lends to IO for all its needs and yet exercises power since IO is

consolidated with the Province in much the same way the Trust and OPG will be consolidated. Note that OPG benefits from the interest income on the 44% relating to the equity injection even if the Trust is not consolidated.

2) Earning interest income on equity is going to take down the company's ROE (one of the key metrics that we are tracking on overall company performance). Therefore I wouldn't see this as a particularly compelling allocation of funds from a commercial perspective. This is a good point however, OPG considers the 44% it lends to the Trust as sub-debt most likely priced higher than the debt borrowed by the Trust from the markets. In the event the interest on the 44% is less than OPG's current ROE of the company, your point holds however, if the interest is higher it actually adds to OPG's ROE.

Subject: OPG Performance fees

Hi Scott

This issue has come up a couple of times and after discussing with Gadi we felt that you may be able to raise it either directly with OPG or via Energy. As the Financial Services Manager, OPG is proposing a performance fee for itself based beating a benchmark for borrowing costs the Trust incurs in presumably the 51% it seeks to borrow from the capital markets.

OPG argues that the latter of the two fundamental principles, "Power" and "Profit" allowing the Trust to be consolidated with OPG requires the implementation of a performance fee structure. The counter argument is that OPG already has access to profit, by virtue of its position as the funding entity for 44% of the debt incurred by the Trust. OPG uses the funds it receives from the Province's equity injection, for which it pays no interest, for this purpose.

Upon consolidation with the Trust, OPG's interest income will therefore increase by the amount of the interest the Trust receives on 44% of its overall debt, a relatively risk free profit source, at least over the duration of the Fair Hydro Plan. While the use of a benchmark is appropriate and contributes to an efficient borrowing program, any performance fees arising from beating the benchmark will effectively be funded by the ratepayers, by increasing the investment asset and the associated debt to be repaid by ratepayers.

Mike and I will be happy to provide any further technical assistance that you may require as you raise this issue.

Thanks

Ken k

Subject: RE: OPG Performance fees
Date: Monday, May 15, 2017 10:55:03 AM

Hi John/all,

Some initial thoughts:

1. This refers to the profit OPG is able to make, unrelated to its own contribution (including Province) to the Trust.
    - Since the Trust is financing its requirements from capital markets and OPG, what rate is OPG going to be lending to the Trust at (which it has financed through 5% capital markets and 44% province equity)? Because OPG's contribution is financed through Provincial equity with (at the moment) no preset rate of return, can't OPG simply price its own debt to the Trust lower? What rules/mechanism are in place for it to determine the rate it offers the Trust for its debt?
    - Notwithstanding point #2 below, what exactly is OPG being rewarded or penalized on? How is the "+premium" going to be determined?

2. Can the argument be made that any reward OPG earns is going to effectively reduce OPG future costs and result in better rates through their rate applications etc? Can we say the loss would result in similar consequences?
    - Its pretty much the same as not having any sharing mechanism in place, except it may be required for OPG to have some "profit" to keep the Trust separate.

Regards,
Salman

Above or below $1M, all of the benefit (downside) would flow to ratepayers.
- OPG does not particularly like this symmetry but this is apparently required to meet accounting requirements.
- From my perspective, $1M is a small number, so I am not too concerned about overall impacts on ratepayers.

Thanks,
Scott

Subject: RE: OPG Performance fees

Hi Scott

Yes the MOF does like OPG to make money since on a PSAB basis it benefits the Province's fiscal position. In this instance however, the marginal increase to the fiscal bottom line comes at the expense of the ratepayers in terms of additional debt, hence our push back.

Pls see below my responses on the two issues that you have raised. I am cc'ing Cindy as well since she may have her own thoughts and a discussion maybe value added in terms of arriving at a common understanding.

Thanks

Ken K

Subject: RE: OPG Performance fees

MoF asking OPG to make less money! This feels so backward!

I will chat with OPG to dig in to the rationale. I take your point that OPG will benefit from the loans to the trust. However, I see two weaknesses with the argument:

1) Lenders don't typically consolidate borrowers, so it takes more than interest revenues to meet this test. Not sure if you are referring to the "Power" or "profit" principle. If the former the Province lends to IO for all its needs and yet exercises power since IO is consolidated with the Province in much the same way the Trust and OPG will be consolidated. Note that OPG benefits from the interest income on the 44% relating to the equity injection even if the Trust is not consolidated.
2) Earning interest income on equity is going to take down the company's ROE (one of the key metrics that we are tracking on overall company performance). Therefore I wouldn't see this as a particularly compelling allocation of funds from a commercial perspective. This is a good point however, OPG considers the 44% it lends to the Trust as sub-debt most likely priced higher than the debt borrowed by the Trust from the markets. In the event the interest on the 44% is less than OPG's current ROE of the company, your point holds however, if the interest is higher it actually adds to OPG's ROE.

Subject: OPG Performance fees

Hi Scott

This issue has come up a couple of times and after discussing with Gadi we felt that you may be able

to raise it either directly with OPG or via Energy. As the Financial Services Manager, OPG is proposing a performance fee for itself based beating a benchmark for borrowing costs the Trust incurs in presumably the 51% it seeks to borrow from the capital markets.

OPG argues that the latter of the two fundamental principles, "Power" and "Profit" allowing the Trust to be consolidated with OPG requires the implementation of a performance fee structure. The counter argument is that OPG already has access to profit, by virtue of its position as the funding entity for 44% of the debt incurred by the Trust. OPG uses the funds it receives from the Province's equity injection, for which it pays no interest, for this purpose.

Upon consolidation with the Trust, OPG's interest income will therefore increase by the amount of the interest the Trust receives on 44% of its overall debt, a relatively risk free profit source, at least over the duration of the Fair Hydro Plan. While the use of a benchmark is appropriate and contributes to an efficient borrowing program, any performance fees arising from beating the benchmark will effectively be funded by the ratepayers, by increasing the investment asset and the associated debt to be repaid by ratepayers.

Mike and I will be happy to provide any further technical assistance that you may require as you raise this issue.

Thanks

Hi Sriram,

A Provincial support agreement (or agreements) is being worked on, and there are services or performance guarantee portions discussed but a tax or PILs component does not sound familiar to me. I'll enquire.

It's more about a Provincial payment guarantee to bondholders of the financing entity under certain circumstances.

Ron

Hi Sriram,

Perhaps I missed the reference on the call, as I was drawn away for part.

I think the potential impact on the proposed provincial support agreement is arguably tenuous.

The payment guarantee (drafting is on-going) could be potentially triggered under certain circumstances (basically if there is an impact on bondholder) such as the Act is repealed; or if it is amended, or a regulation is amended, in a way that adversely impacts the ability of a Financing Entity to fully pay all funding obligations.

Given that the financing entity can recover, under the Act, taxes or PILs, if payable, from ratepayers (as I understand it), should mean that there should be no such impact on the financing entity's ability to pay bondholders -- there would just be a ratepayer impact if PILs or taxes are paid, which is why the PILs exemption is being asked for.

That said, if OPG is making such an argument, I'd want to hear the strength of their case too, of course, but it seems a stretch.

Perhaps Scott or John would have more to add on this.

Ron

Subject: FW: Outstanding Business Issues Ontario Fair Hydro Plan vCEFD.docx

Hi John

Salman added a bullet with respect to the indemnity request. S.22. We can discuss the S.22 vs. S.28. I note that James Strang's BN on this changed it to s.22 although his Qs and As still refer to S.28.

We can pose this question to MOF legal but hopefully this helps:

S22 of the FAA:

The Lieutenant Governor in Council may by order authorize the Minister of Finance, on behalf of Ontario, to agree to guarantee or indemnify the debts, obligations, securities or undertakings of any person.

s28 of the FAA:

Despite any other Act, a ministry or public entity shall not enter into any financial arrangement, financial commitment, guarantee, indemnity or similar transaction that would increase, directly or indirectly, the indebtedness or contingent liabilities of Ontario, or seek the approval of the Lieutenant Governor in Council to do so, unless the arrangement, commitment, guarantee, indemnity or transaction

Section 28 is specifically for any public entity, acting on behalf of the province, who will be indemnifying ANOTHER entity. What IESO and OPG have asked is that the Province indemnify them, which is where s22 comes into play.

I just read through s.22 and s.28 and that didn't help me. I'll see if we can get some definitive explanation, otherwise per your suggestion.

Thanks….looks good. One thing though, could we leave both s22 and s28 as options? I'm of the bias that s28 is the way to go. Happy to be persuaded otherwise though. It has to do with my understanding that s28 won't require OIC? And wouldn't it be cleaner for the government to provide indemnities to the organizations (OPG and IESO) and have them extend the indemnities to relevant parties? I understood Bruce Lease indemnity was done this way?

Yes. I think they are separate. In outstanding items that Salman referred to, the PILs exemption and PG are separate follow-up items.

This was also mentioned in the "Outstanding Business Issues" prepared by Kaitlin I believe:

- Provincial staff, with OPG's concurrence, recommends minimizing, to the extent possible, the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers.
- The Province is considering regulation changes to exempt from PILs the income arising to the OPG financing vehicle / OPG as a consequence of the Fair Hydro Plan.

Hi John,

Is this related to the PILs exemption? Last week Gavin sent the attached.

OPG's issues was paying PILs on earnings from the GA financing. The attached document implies there are significant PILs which I'm rather surprised by since their returns may be small (based on the 5% share and benchmarks).

So that's a good point but let me go through my logic, the way I understand so far.

The benchmark will likely be a way to put that income/loss mechanism that we saw last week. The actual cost would be passed onto the ratepayers. So the impact of the benchmark is capped at + or - $1mn.

Just speculating here,

Would the provincial guarantee reduce the risk premium. This would decrease the borrowing costs, and in turn increase the ability to meet the benchmark for the Trust. Thereby enabling it to turn a profit and pay taxes/PILs?

Subject: Preferred equity treatment

There is an exception to preferred share 20% rule:

"There are cases where a parent may invest in a subsidiary through deeply subordinated debt for tax or other reasons with the intention that the security mirrors the attributes of equity. DBRS would typically assess a range of factors to establish if the latter has been achieved, such as cross-default trigger covenants, term and ability to defer interest. Regardless of these factors, the parent-subsidiary relationship is key and represents the only reason that DBRS would consider these debt instruments for high equity treatment. In these cases, the 20% cap rule does not apply."

Here is S&P's handbook – although there have been various amendments issued since 2008 that would need to be checked. It states the following but need to review in more detail:

Pg 33.

We include any hybrid capital issuance in excess of 15% in the numerator of our leverage calculations. We do not generally recognize hybrid issuance of operating companies (reflected also as hybrid capital in the relevant parent's consolidated financial statements) as such in our consolidated capital adequacy analysis (see table 4)

Hybrid Capital Handbook: September 2008 Edition

*(**Editor's Note:** This criteria article was originally published on May 12, 2008. We are republishing this article following our periodic review completed on March 30, 2015.*

This article supersedes the articles "Issuing Equity Hybrids Via A Corporate Issuer's Operating Subsidiaries," published on July 26, 2007, and "Flexible Gapping Of Ratings Reflects Regional Variations In Structural Subordination As Well As Differing Debt-Servicing Capacities," published on May 25, 2005. This article also partially supersedes "Holding Company Analysis," published June 11, 2009.

This article has been partially superseded. Table 4a has been superseded by table 3 of "Refined Methodology And Assumptions For Analyzing Insurer Capital Adequacy Using The Risk-Based Insurance Capital Model," published June 7, 2010. The section titled "Issue Features: Dividend Stoppers, Look-Backs, And Pushers" has been superseded by the article titled, "Methodology: Hybrid Capital Issue Features: Update On Dividend Stoppers, Look-Backs, And Pushers," published on Feb. 10, 2010. The article titled, "Bank Hybrid Capital Methodology And Assumptions," published on Nov. 1, 2011, has partially superseded references to financial institutions; it has itself been fully superseded by the article with the same title, published Jan. 29, 2015. The article titled "Methodology And Assumptions: Assigning Equity Content To Corporate Entity And North American Insurance Holding Company Hybrid Capital Instruments," published on April 1, 2013, supersedes references to "high" equity content for corporate issuers and certain North American insurance holding company issuers, and also amends references to the role of management intent. The section below, titled "Rating The Issue: Default And Distress," has been superseded by "Use Of 'C' And 'D' Issue Credit Ratings For Hybrid Capital And Payment-In-Kind Instruments," published Oct. 24, 2013. The section titled "Corporate methodology: Leveraged buy-out equity hybrids: Too good to be true" has been superseded by "The Treatment Of Non-Common Equity Financing In Nonfinancial Corporate Entities," published April 29, 2014.)

Financing with common stock (i.e., common shares) is the best alternative from the perspective of an issuer's credit quality. Common stock has no maturity. If dividends are paid at all, they are discretionary--at least for most types of entities, in most countries. Moreover, common stock is subordinated to all the company's debt obligations and other liabilities. Yet, common stock is expensive in the eyes of issuers, since dividends are generally not tax deductible. Also, stockholders, as owners, have full participation in the company's upside, and issuing common stock dilutes existing shareholders' ownership interest.

Hybrid capital instruments have been developed with the goal of gaining recognition as being equity-like—that is, being granted "equity content" by Standard & Poor's Ratings Services and by other rating agencies--and, in some cases, being treated as capital by regulators. At the same time, these instruments are generally more cost-effective (e.g., by being tax deductible) than common stock, and typically do not affect the earnings-per-share denominator.

In assessing equity content, we pay close attention to the instrument's individual features. Ultimately, though, we take a holistic approach, considering the overall effect of the issue on the issuer's credit profile. In some cases, the issue's strengths can offset its weaknesses.

In assessing equity content, we use a common analytical framework across all sectors and geographic regions, categorizing equity content as "high," "intermediate," or "minimal" based on guidelines we have developed. We have a somewhat different perspective on issues of investment-grade issuers as compared to speculative-grade issuers, given

differences in the relevant time frame and other pertinent rating considerations. Importantly, we always take account of the issuer's particular circumstances, including management's financial policies. In assessing the credit implications of any actual transaction, issuer-specific considerations can always trump any generalized conclusions we might reach about an instrument.

Inevitably, across different sectors, there are varying approaches to incorporating conclusions reached about the instrument into the quantitative analysis, given differences in financial characteristics and measures. In any case, ratios tell only part of the story.

In assessing an instrument's equity content, we try to look past form, and focus on the economic substance. The past few years have seen a proliferation of instrument types and features. Some issues, in seeking to meet the varying preferences of different constituents, have become exceedingly complex. From our perspective, complexity often detracts from equity content: As it becomes more and more difficult to fathom how matters could play out under different scenarios, the potential for unintended consequences increases. Once there is a longer track record with such structures, our comfort level could grow.

In determining an issuer credit rating (ICR), the utilization of hybrid capital is just one of many factors that need to be considered. In fact, it is rare for this one factor in and of itself to be critically significant to the ICR outcome.

In their most common forms, hybrid capital instruments afford equity benefit to issuers, in part, by having ongoing payment requirements that are more flexible than interest payments associated with nondeferrable senior debt, and by being contractually subordinated to such debt. Obviously, these characteristics make the instruments more risky for investors than nondeferrable debt. In assigning issue ratings to equity hybrids, we seek to reflect the incremental risks associated with the issue in terms of payment timeliness and principal recovery compared to nondeferrable debt. We typically reflect these risks in our issue ratings on equity hybrids by assigning them ratings that are lower than those on nondeferrable debt.

We continually reassess our hybrid capital criteria as instrument structuring innovations and other market developments warrant. Please check RatingsDirect for subsequent criteria updates.

Working With Standard & Poor's On Hybrid Capital Matters

We formed our New Instruments Committee (NIC) in early 2006, primarily to centralize our criteria-setting with respect to hybrid capital-related matters. The NIC is comprised of senior analysts across all relevant sectors and regions. Analysts closely involved in our hybrid capital criteria development activities are listed in table 1.

*New Instruments Committee member. **New Instruments Committee adjunct member.

Anyone with questions about our hybrid capital criteria should feel free to contact any of the individuals listed. In addition, the NIC offers feedback to investment bankers and issuers who are developing new instrument structures. We provide a preliminary and generic assessment of the equity content, and the notching that would be applied in rating the issue, on a confidential basis. Such feedback is subject to our review of the final terms and conditions of the issue, if there is an actual transaction, as well as to consideration of issuer-specific factors.

To have a new structure assessed, investment bankers and issuers should contact any of the individuals listed. It facilitates the discussion if the instrument is described in the form of an indicative term sheet. The NIC seeks to provide feedback expeditiously. The NIC routinely meets twice per month, but additional meetings can generally be convened to address pending priority matters, as necessary. In the overwhelming majority of cases, we communicate our conclusions informally; however, we provide formal, written feedback in certain circumstances, as appropriate. If an issuer is proposing an issue of a structure for which close precedents already exist, it is most efficient to contact the primary analyst responsible for the issuer, or others on the coverage team. Members of the NIC will be involved, as necessary, in assisting with the review of the instrument terms and to ensure the consistent application of criteria.

If the issuer is contemplating financing strategies involving issuance of different hybrid capital instruments, and wants to have definitive formal feedback regarding the potential rating ramifications, this exercise lends itself to our Rating Evaluation Service. The issuer can obtain information about this service by contacting their respective Client Business Manager or the following regional contacts:

- North America: Terrence Streicher, VP-Rating Evaluation Service Product Manager; New York; (1) 212-438-7196; terrence_streicher@standardandpoors.com
- Europe, Middle East, Africa: Ian Byrne, Director, Commercial & Product Management; London; (44) 0-207-176-3633; ian_byrne@standardandpoors.com
- Asia-Pacific: Denis O'Sullivan, Vice President, Client Relationship Group Asia Pacific; Hong Kong; (852) 2533-3522;

Equity Content: Guiding Principles

What constitutes equity in the first place? Traditional common stock--the paradigm equity instrument--sets the standard. But equity is not a monolithic concept; rather, it has several positive characteristics:

- Equity requires no ongoing payments that could lead to default;
- It has no maturity or repayment requirement, and is expected to remain as a permanent feature of the enterprise's capital structure; and
- It provides a cushion for creditors in case of bankruptcy.

Equity hybrids possess some--or all--of these characteristics to some degree. Yet, because equity has these several defining attributes, a specific security can have a mixed impact. Hybrid securities, by their very nature, can be equity-like in some respects and debt-like in others. Moreover, the specific features may provide the positive characteristic only to a limited extent.

In any event, the security's economic impact is most relevant; its nomenclature is a secondary consideration. A transaction labeled debt for accounting or tax purposes may still be viewed as equity for rating purposes, and vice versa.

In the case of regulated banks and insurance companies, aside from our own analytical views about the characteristics of a given hybrid capital instrument, we must also take account of the regulators' views. Indeed, this can be a key consideration. In many jurisdictions regulators have the authority and power to intervene in the operations of a bank or insurance company, and they determine whether to do so based, in part, on their own assessment of capital adequacy. Regulators' capital policies strongly influence bank hybrid capital issues' terms--and this is increasingly the case in insurers' issues. Not only will the structure of a hybrid instrument be influenced by regulatory treatment, but the redemption of hybrid capital instruments typically is also subject to regulatory review. Regulators can intervene to enforce the suspension or nonpayment of hybrid coupon payments, restrict the amount of hybrids that an entity can issue, and require any redeemed hybrid to be replaced with an instrument of equivalent equity content. Thus, as explained below, our analytical assessment of regulated issuers' hybrid capital instruments is typically anchored in the regulator treatment.

Equity Content: Ongoing Payments

A company generally pays dividends on its common stock only at its discretion: There is no fixed requirement to do so that could lead to default and bankruptcy if the common dividend were cut or eliminated.

In practice, though, once a company has established a record of paying a common dividend, it will be loath to reduce the payment, given management's likely concerns about capital markets perceptions. Common dividend reductions are seen as a signal that the company's prospects are clouded, and market perception can be a powerful consideration in management's decision making. As a consequence, some distressed companies continue paying their common

dividends, even though they arguably have more pressing uses for the cash. In this way, the common dividend can act like a fixed charge, draining the company, over time, of funds needed to bolster operations. Yet, whatever the pressure to pay common dividends, the company always retains some discretion, whatever the pressure to pay common dividends.

Most types of hybrid capital instruments have a stated dividend or coupon rate, but the payment either may be deferred or forgone at the discretion of management or a regulator, or must be deferred or forgone with the breach of a predefined trigger, or both. We assume that management or a regulator would always have greater reluctance to pass on the hybrid payment than to reduce or eliminate the common dividend. This is the hybrid capital market's clear expectation, as reflected in issue pricing, and borne out by historical experience. Accordingly, this distinguishes hybrid capital issues from common equity, in terms of the benefit to the issuer.

The longer a company can defer or skip payments, the better. An open-ended ability to defer or skip payments until financial health is restored is optimal. As a practical matter, the ability to forgo payments for up to five years or so is most critical in helping to prevent a general default. If the company cannot restore financial health in five years, it probably never will.

In addition, the fewer restrictions imposed on the company's ability to defer or forgo payments, the better. For example, some issues include a "look-back" provision under which the company can only defer or forgo payments after some minimum period of time has elapsed since the last common dividend was paid. In other instances, there is a requirement—for example, under the corporate charter or the national corporate legal framework-–that any dividend changes be approved at the annual shareholders' meeting. Or there may be other preconditions that must be satisfied, such as the breach of certain financial tests. With any such restrictions, the company's ability to react to worsening circumstances by deferring or forgoing payments can be considerably hampered, and so such features undermine equity content. (See section "Issue Features: Dividend Stoppers, Look-Backs, And Pushers.") (Note: It is typical for a hybrid capital issue to include a so-called "common dividend stopper"--a provision under which the company is prohibited from paying common dividends while it is deferring or forgoing hybrid issue payments. We generally view such a stipulation as a neutral factor from a credit perspective. On the one hand, eliminating both the common dividend and the hybrid payment together maximizes the overall cash conserved. On the other hand, the link between the two may increase the reluctance of the issuer to forgo paying on the hybrid. Thus, a common dividend stopper is not essential to our assessment of the equity content afforded the hybrid issue.)

In the case of hybrid capital issues with optional deferral provisions, we are generally indifferent to the choice between instruments with cumulative payments (which, when deferred, still accrue, and ultimately must be made up) and noncumulative payments (where there is no obligation to address missed payments). With noncumulative instruments, it may be easier for the issuer to recover after deferring, since there is no arrearage to be repaid. However, given the more severe consequences for investors, the company may be somewhat more reluctant to forgo payments on noncumulative instruments in the first place.

Naturally, any instrument feature that discourages the issuer from exercising the right to defer optionally is detrimental to equity content. This is one of the key aspects that we analyze when we assess hybrid capital securities' equity content. Such features include:

- Penalty rates. In the case of cumulative issues, if deferred payments accrue at a rate that is higher than the normal payment rate, we view this as clearly intended to discourage deferral.
- Alternative payment mechanisms (a.k.a., alternative coupon settlement mechanisms; see section "Issue Features: Alternative Payment Mechanisms/Alternative Coupon Settlement Mechanisms (APM/ACSM)"). In the case of some cumulative issues, the company must issue stock--common or preferred--once it has deferred for a certain period of time. If this requirement only becomes effective after five years of deferring, we don't view this as a significant negative. When management (or a regulator) is first weighing the decision to defer, this limitation is unlikely to be a significant consideration. However, if the requirement becomes effective earlier—especially if it is only after one or two years--companies might well want to avoid such a requirement, and so be even more reluctant than usual to defer in the first place.
- Nomenclature. In some cases, instruments with virtually identical credit features can be variously defined as debt or preferred stock. Although the distinction may be only one of nomenclature, we believe the identification of a security as debt constrains the company's practical discretion to defer payments, given the greater "headline risk" that may be associated with deferring payments on the debt form of the security. However, this does not necessarily preclude the instrument being viewed as having significant equity content if there are other mitigating features.

Finally, various case-specific considerations can enter into the assessment of payment flexibility. Other things being equal, a company with heavy ongoing funding requirements-–and hence a need to access the capital markets regularly—might be more reluctant than others to pass on making payments for fear of the capital markets' reaction. Such a company's regulator could well have the same reservations. Also, if the amount of cash that would be conserved is small relative to the company's near-term cash requirements, the company might rationally chose not to defer or forgo payments, since little would be gained from doing so.

By removing the discretionary element, mandatory trigger mechanisms can increase confidence that payments will be deferred or forgone when the issuer's circumstances make this desirable from the creditors' perspective. (Historically, income bonds--i.e., where interest payment is contingent on achieving a certain level of earnings--were designed with this in mind. However, to the extent that cash flow diverges from earnings measures, income bonds tend to be imperfect instruments.) The equity content of such instruments is significantly influenced by the trigger levels used to determine when payments are eliminated. For example, if the level of cash flow that triggers payment curtailment is relatively low, reducing the likelihood of deferral, that instrument does not support high ratings. Credit quality might already have deteriorated drastically before the trigger would be breached. Conversely, though, if the trigger level is set close to the expected performance level, and at a level where the company is still very strong, we would have to consider the headline risk that forced deferral might pose.

A different mandatory approach entails linking interest payments to the company's common dividend, creating a common equity-mimicking bond. (A number of international financial institutions issued such bonds in the late 1980s.) Of course, a company having an inordinate amount of dividend-linked issues outstanding could ultimately be reluctant to curtail its common dividend.

Equity Content: Permanence

Capital should be sufficiently permanent that it is available to preserve cash and absorb losses when needed. Obviously, retaining funds in perpetuity offers the company the greatest flexibility. Extremely long maturities are next

best. Accordingly, 100-year bonds possess an equity feature in this respect (and only in this respect) until they get much nearer their maturity. (To illustrate the point, consider how much, or how little, the company would have to set aside today to defease or handle the eventual maturity.) However, in 100-year bonds, interest payments are not deferrable and cross-default provisions could lead to these bonds being accelerated.

Hybrid capital issues usually come with a maturity. Having a limited life is a clear shortcoming in terms of equity permanence. If the maturity happened to coincide with a period of stress for the issuer, the need to refinance could add to financial pressures. Even if we expect the issue to be refinanced successfully at maturity, the potential for using debt in the refinancing would concern us.

As a practical matter, we view an issue with a remaining time to maturity of 20 years (15 years for 'BB' rated issuers and 10 years for 'B' rated issuers) as sufficient to support credit quality. However, even 20 years is a very long time for many issuers and investors. Different features have been introduced that further limit the likely life of the issue--and thereby constrain the extent of the equity content the issue affords.

Thus, the ability to call always gives reason for pause (see section "Issue Features: Call Provisions"). Will the issue remain outstanding beyond the call date? It is common for hybrid capital issues to be callable, either starting on a certain date and continuing for a defined period (often referred to as an "American-style" call) or on certain specified, discrete dates (i.e., "European-style" call). Calls exercisable after five years are the most common in certain markets, and we would question the rationale for an issuer including a call date sooner than five years after issuance. We have not placed much emphasis on call features as limiting equity content—that is, if we believe the issuer has good reasons for maintaining hybrid capital in its capital structure (e.g., to meet regulatory capital requirements, or because the issue is tax deductible and therefore is a cost-effective form of funding). Indeed, call provisions can even be beneficial from a credit perspective, because they afford the issuer the opportunity to refinance the issue at more favorable rates, market conditions permitting. Moreover, in many instances, the issuer could repurchase the issue on the open market or through a tender offer, even in the absence of a call provision.

Where an issue contains a call provision, the issuer has the option to redeem the issue, but no obligation to do so. Thus, in our assessment of equity content, we don't generally penalize instruments with call provisions, unless, in the case of unregulated issuers, the initial call date is less than five years after issuance—which heightens our skepticism about the issuer's intentions with respect to the issue. We may also be concerned when the issue is only callable on discrete dates followed by a long noncall period. Where an issuer is regulated and we believe the regulator will ensure that any refinancing would not be credit-harming, we do not penalize issues with call dates earlier than five years. (See section "Issue Features: Call Provisions.")

In recent years, more hybrid capital securities have included terms whereby the issuer has the right to call the instrument at par on the same future date that the coupon rate increases, or steps up, by a preset amount. Step-ups (and similar penalty-rate provisions) question the permanence of issues that incorporate them, and so undermine the equity content of a hybrid capital security (see section "Issue Features: Step-Ups, Resets, Remarketing"). The call and step-up are expressly designed to prompt issuers to retire the issue. Moreover, in certain circumstances, the issuer could incur significant reputational fallout if it did not call. Indeed, investors strongly rely on step-up provisions to incentivize a call. We view these types of hybrid capital instruments as a form of long-term capital if:

- The amount of the step-up is limited, such that if the issuer chose, for whatever reason, not to refinance the issue, it would not be burdened by onerous financing costs; and
- There is a high degree of assurance that if the issue were called, it would be replaced with another issue warranting an equal or higher degree of equity content.

We see no need for any replacement provision (legally enforceable or otherwise) if the issue does not have a step-up, even if the issuer has call rights. The issuer's option to retire hybrid capital issues is similar to its option to repurchase common equity. But, if a hybrid issue has a significant step-up or a discrete call followed by five or more years during which it is not callable, we presume the issue will be called--either at the time of the step-up/discrete call or before it. The presumed temporary nature of the issue begs the question of how it will be replaced. Legally binding replacement language reinforces the permanency of the capital raised by rendering replacement highly likely, particularly when the issuer would need the capital to maintain its creditworthiness. In our view, mere expression of intent regarding replacement is insufficient when there is a workable alternative that more strongly enforces the permanence of the equity. To be sure, legally enforceable replacement capital covenants (RCCs) can pose their own problems--especially those that are complex or unduly restrict a company's future choices (see section "Issue Features: Replacement Capital Covenants"). But we view RCCs as the lesser of two evils. RCCs offset the clear motivation to call and retire the hybrid security created by the step-up, and reestablish sufficient permanence to allow the security "intermediate" or "high" equity content under Standard & Poor's methodology. We believe that legally binding RCCs can be crafted to introduce flexibility and thus render them more acceptable to issuers.

At any time, a company can choose either to repurchase equity or to issue additional shares. However, some securities are more prone to being temporary than others. Our analysis tries to be pragmatic, looking for insights as to what may ultimately occur. For example, auction-rate or remarketed preferred stock is designed for easy redemption. Even though the terms of this type of preferred provide for its being perpetual, failed auctions or lowered ratings typically prompt the issuer to repurchase the shares. (They are sold as commercial paper equivalents, which heightens the potential for failed auctions if credit quality ever falls to 'A-3'--or even 'A-2'--levels, or if market conditions deteriorate. Although the company has no legal obligation to repurchase the paper--i.e., the last holder could be left with this "perpetual" security--the issuer sometimes bows to market pressures and chooses to repurchase the preferred. Accordingly, such frequently remarketed preferreds are treated as debt.)

Another important consideration is the issuer's tax-paying posture. It may be difficult for an issuer that is currently not paying taxes to assert that it will continue to finance with nontax-deductible preferred stock once it becomes a taxpayer, and that it can lower its capital cost by replacing the preferred with debt.

Other clues can come from who invests in the issue (e.g., money market, as opposed to long-term fixed-income investors) and the mode of financing that is typical of the company's peer group. For example, U.S. utilities traditionally finance with preferred stock, and industry regulators are comfortable with it; therefore, the usual concern that limited-life preferred stock will be refinanced with debt is less of an issue for utilities.

There is always the risk that tax-deductible instruments' favorable tax status could be overturned by tax authorities, or through legislative changes. If we had particular concerns about the continuation of favorable tax treatment, and loss of tax deductibility would make the economics unfavorable for the issuer, we would have significant reservations about

viewing the instrument as permanent, unless we had reason to believe that the issue would be refinanced in another equity-like form.

In assessing any issuance's degree of permanence, management intent is always an important consideration. Through discussion of financial policy with senior management, we seek insight into potential future retirement and replacement of hybrids. We also take into account a company's track record in this regard. We always must be aware that management intent can become diluted over time—for example, as there are changes in management.

Equity Credit: Subordination/Cushion For Creditors In The Event Of Default

What happens in bankruptcy also pertains to the avoidance of bankruptcy and default, albeit indirectly. That is, companies' access to debt capital depends on providers feeling secure about the ultimate recovery of their loans in the event of a default. Debt-holders' claims have priority in bankruptcy, while equity holders are relegated to a residual claim on the assets. The protective cushion created by such equity subordination can facilitate the company's access to capital, helping enable it to stave off a default in the first place. (In the case of some European bank, insurance, and corporate issues, mechanisms exist that can result in loss absorption outside of bankruptcy or reorganization by reducing the principal owed to investors—for example, following the recording of a net loss, when directed by the regulator.)

Regulators virtually always insist that instruments be subordinated to qualify for capital treatment. Apart from this consideration, in our framework subordination typically is a secondary factor compared with other beneficial aspects of equity, although lack of subordination would always weigh somewhat on equity content. Thus, if an instrument is senior, but ongoing payments are deferrable and it has a long-dated maturity, we could well view it as having meaningful equity content. On the other hand, if an instrument is subordinated, but lacks the other equity-like traits, it would be viewed as predominantly debt-like.

The distinction between subordination and deep subordination generally is not significant in our analysis, although deep subordination incrementally is somewhat more supportive of credit quality. However, many U.S. securities--to meet IRS guidelines for tax deductibility--may be termed subordinated while providing pari passu status to trade creditors. This is a shortcoming--albeit not one that we view as significant.

Equity Content Categories

To facilitate our analysis, we classify qualifying hybrid capital issues into three categories, based on our assessment of their equity content: "high," "intermediate," and "minimal." In our financial institutions practice (excluding insurance), where matters pertaining to quality of capital assume particular importance, we further distinguish between "intermediate-strong" and "intermediate-adequate." As discussed more fully in the section "Applying Hybrid Capital Equity Content Assessment In Credit Analysis: Financial Institutions Methodology (Excluding Insurance)," for regulated U.S. financial institutions, we only give equity credit to issues that qualify for Tier 1 regulatory capital treatment.

"High" equity content

"High" equity content hybrids have very strong equity-like characteristics. They include features that help protect credit quality near the current level, and if they substitute for plain vanilla debt, they improve the overall quality of the issuer's capitalization. Investors in "high" issues typically bear equity-like risk, and we would expect the value of such instruments to have a high correlation with the value of equity.

We have identified three potential types of "high" equity content instruments:

- The issue converts mandatorily to common equity within a fairly short time horizon;
- The issue has a coupon or dividend that varies directly with changes in the common stock dividend or with earnings or cash flow; or
- The issue is mandatorily deferrable upon the breach of financial triggers or rating triggers that are set close to the expected performance level/existing rating level.

"High" equity content due to mandatory convertibility. "High" mandatorily convertible issues provide for the deferred, but mandatory, issuance of common stock, while raising proceeds immediately. (See section "Issue Features: Conversion Into Common Stock.") There are several varieties of this structure, including instruments that convert directly into common stock and units comprised of a contract providing for the forward sale of common stock, coupled with an initial security with a maturity or call date that may or may not match the common stock issuance date under the forward contract. In either case, the instrument initially takes the form either of preferred stock, with optional deferability of payments, or debt, with fixed payments. (Naturally, we view the former form somewhat more favorably from a credit perspective. In the bank sector, regulators require that the initial instrument qualify as Tier 1 capital.)

To meet our standard for "high" equity content (indeed, to be viewed as having any equity content), investment-grade issuers must issue common stock within no more than approximately three years (issuers with issuer credit ratings in the 'BB' category must issue within two years; issuers with issuer credit ratings in the 'B' category must issue within one year).

Also, the security must include a conversion price floor, and this floor must be no less than the common share price at the time of initial issuance. For example, if the stock price is $50 per share when the convert is issued (a $1,000 note is equivalent to 20 shares), at conversion the note may not be convertible into more than 20 shares, regardless of the then-current stock price. Importantly, for us to believe that such an issue warrants "high" equity content, we must be convinced that the company will be sufficiently satisfied with the outcome of common stock issuance that it will not reverse the result with share repurchases. While necessarily arbitrary, the maximum three-year time frame and presence of a floor price are essential, in our view, to warrant equity content. We believe management's assurances today about their willingness to issue common stock in the future inevitably have little credibility beyond the three-year time period. Moreover, while it's reasonable that a company would want to retain some upside in ultimately being able to issue fewer common shares if the share price appreciates, if the conversion ratio were fully variable or required the issuance of shares at a price significantly discounted compared to the Day 1 share price (like the RHINOs issued a number of years ago), the dilution would increase as the company's share price declined, testing management's resolve at the very time when enhancement of the capital base might be most needed. (Although we generally view longer dated mandatorily convertible issues as debt-like due to the long time to conversion, these may be reclassified as "high" when the remaining period to mandatory conversion falls to within three years or less, depending on our then-understanding of management's intentions.)

In the case of mandatorily convertible instruments, where the interim issue converts directly into common stock, or where, in the unit version, the initial issue matures at the same time as the receipt of the common stock proceeds, no other security remains outstanding once the common stock issuance has occurred. In contrast, in the mismatched version of the unit structure, the initial security survives the common stock issuance, and the common stock issuance results in the company raising a second set of proceeds. Although the company will then possess cash that could be used to repay debt, we would not automatically net such cash against debt; rather, we would account for the debt and equity components separately at the outset. However, the issuer can often make the case that it will actually use the second set of proceeds (that is, the equity proceeds) to pay down debt immediately and permanently. Such debt reduction could apply to a debt maturity that coincides with the equity issuance--or to short-term debt (such as commercial paper), assuming the company carries a sufficient permanent layer of such debt. In these instances, we adopt a "net" approach, which leaves the company with only the common equity proceeds. (Note: In corporates [as opposed to financial institutions] where equity content leads to an adjustment of interest expense in coverage ratios, the treatment of ongoing payments in the initial preconversion period are treated as if they were common dividends.) In any event, the company can receive recognition for the deferred equity issuance in leverage ratios, even if we view the interim issue as debt-like.

"High" equity content through linkage to common shares. In theory, an instrument could also achieve the "high" designation by mimicking some of the characteristics of common stock–-by being perpetual (or at least with a remaining life of 20 years or more) and subordinated (albeit senior to common stock), and having interest or dividend payments that are tied directly to the common stock dividend. It is acceptable for "high" equity content if the distribution is tied to the common dividend only within a certain range, with some small portion of the payment being fixed. (We would not be concerned about a ceiling on the payout.) Of course, if such an issue were sufficiently material, it could become a significant disincentive for the company to cut its common dividend. In practice, though, there seems to have been very little issuer interest in such an approach, or in issues where the payment is tied to some other indicator of financial health, such as earnings or cash flow.

"High" equity content due to mandatory deferrability. Finally, the equity content we attribute to hybrid capital issues that rely on optional deferral is constrained by our assumption that managements (and regulators, where relevant) will always be loathe to utilize the option to defer or forgo payments--perhaps until it is too late for the deferral to make any difference to the company. By removing the discretionary aspect, issues with mandatory deferral triggers can potentially achieve "high" equity content (see section "Issue Features: Mandatory Deferral"). Mandatorily deferrable securities that would warrant "high" equity content recognition would entail the following features.

High thresholds. The mere existence of a mandatory deferral provision is meaningless. Everything depends on the thresholds that define the deferral trigger. To illustrate: If the trigger for nonpayment is 10 years of losing money, that provision is virtually worthless. The company would probably have defaulted prior to the deferral provision going into effect. To be included in the "high" equity category, an instrument's trigger must go into effect at a level relatively close to the current credit profile of the issuer. One approach is to use a rating trigger. To qualify for "high" equity content, the trigger must be set at a level within three notches of the initial rating level. A threshold defined in terms of crossing over to noninvestment grade does not suffice--unless, of course, the issuer credit rating happens to be within three notches of that level. A variety of financial benchmarks can also serve as a proxy for the appropriate threshold level. These always need to be crafted to fit the specific issuer's context. In any event, we need to be mindful that a single ratio cannot entirely be relied upon to capture all of the business and financial changes the credit may have undergone

by the time the trigger activates. As noted below, we do not view this type of issue as warranting "high" equity content if the issuer is confidence-sensitive, or if the trigger could be breached when the issuer is still investment grade because risks outweigh the intended benefits.

No loopholes. For example, some deals stipulate that the mandatory deferral must be simultaneous with or only occur following the cessation of common dividends (a look-back period). As long as the company chooses to pay even a paltry dividend, the security continues to pay. Obviously, such an instrument is "mandatory" in name only.

No back-door payment mechanisms. Many proposed high-equity structures provide for requiring payment or allowing payment in common stock while mandatory deferral is in effect, under the terms of so-called alternative payment mechanisms (APM; see section "Issue Features: Alternative Payment Mechanisms/Alternative Coupon-Settlement Mechanisms (APM/ACSM)"). While appealing on the surface, we believe such provisions could defeat the purpose of mandatory deferral. The likelihood is that the company will feel pressured--if not actually obliged--to make the payment, and then turn around and repurchase the stock it issued (unless it were otherwise inclined to issue common stock for whatever reason). Ironically, the higher the threshold of the instrument, the greater the likelihood the company would pay and repurchase. To meet our requirements for "high" equity content, APMs are acceptable only if they take effect five years or more after the initial breach of the trigger.

Permanence. Excluding mandatorily convertible issues, to qualify for "high" or "intermediate" equity content, there must be assurance that the issue—or a successor issue warranting a similar or higher degree of equity content-—will be a component of the issuer's capital base for a long time. We apply a common standard regarding remaining time to maturity to all investment-grade financial institutions (including insurance companies) and corporates, in all regions. Under this standard, we require a hybrid capital issue to have a remaining term of at least 20 years to receive our "intermediate" or "high" equity content designation. (See section "Issue Features: Maturities/Scheduled Maturities.") The ability to call can give reason for pause, since it puts into question whether the issue will remain outstanding beyond the initial call date. However, where an issue contains a call provision, the issuer has the option to redeem the issue, but no obligation to do so.

As long as we believe the issuer intends either to keep the issue outstanding or refinance it with the proceeds of another issue warranting comparable equity content, we do not view the call date as an effective maturity (see section "Issue Features: Call Provisions"). In recent years, many hybrid capital issues have coupled calls with mechanisms clearly designed to penalize the issuer if the call is not exercised, such as step-ups. While such provisions can enable the issuer to benefit from lower funding costs, since investors assume the issue will be called, they can fly in the face of any notion of permanence, absent mitigants, such as legally binding replacement capital covenants. We have developed guidelines for assessing such provisions (see sections "Issue Features: Call Provisions," "Issue Features: Step-Ups, Resets, Remarketing," and "Issue Features: Replacement Capital Covenants").

Subordination. Subordination (i.e., subordination to all conventional debt) is necessary to meet the criteria for the "high" or "intermediate" equity content category, when based on tight mandatory deferral. The original premise of modern, tax-deductible preferreds was that they would provide deep subordination. However, in reaction to some tax authorities' apparent sensitivity to full subordination, this feature was watered down. Virtually all U.S. trust-preferred securities, for example, are subordinated to indebtedness--but pari passu with trade creditors. While the lack of full

subordination weakens the equity content for all such securities, we have not automatically excluded those securities from the "high" or "intermediate" equity content category.

With mandatorily deferrable issues, investors are taking substantial risk--well beyond the corporate default risk--and this risk is reflected in relatively low ratings on the securities themselves (as discussed in "Rating The Issue (Notching)" below).

The benefits of mandatorily deferrable issues could be offset by exposing the company to negative market responses, in the event of a looming or actual deferral. This is more pronounced in times of market turbulence, when "headlines" can dramatically affect financial institutions' funding flexibility, whatever the state of credit fundamentals otherwise. We believe that for companies that are confidence-sensitive--notably, financial institutions, including insurance companies--deferrals driven by mandatory triggers could result in more harm than the benefit realized by reduction in debt service obligations. Accordingly, we do not consider hybrids with tight mandatory triggers as eligible for "high" equity content for confidence-sensitive issuers.

More broadly, even for issuers in less confidence-sensitive sectors, if the triggers halt payment while the company is still far from being incapable of making the payments, the benefits of reduced debt service could turn out to be small relative to the potential headline risk and investor reaction--especially in cases where the trigger threshold is at a level where the company is investment grade. The company could pay a price in terms of its financial flexibility. (Alternatively, the company would be motivated to avoid the deferral by retiring the issue.) These risks associated with mandatory deferrals are recognized in qualitative aspects of our analysis, no matter how the security is treated for ratio-calculation purposes.

Specific features of the security could mitigate or heighten the risk--and recent proposals for securities structured to achieve high equity content have included features that are pertinent to the issues we have raised in this section. In this regard, the trigger must not be opaque or overly complex. It can be defined by a ratings downgrade or breach of various financial benchmarks that serve as a proxy for credit quality. Any metrics used in defining the triggers need to be straightforward and highly transparent. But they also must be customized for the specific context of the issuer. Complexity may be hard to avoid, especially given the interplay of business risk with financial indicators of credit quality. (This can be especially challenging in sectors such as regulated utilities, where the business risk profile plays an outsize role.)

Some structures shift deferral risk from the investors by introducing a financial counterparty to stand in for the company at the point of deferral. By effectively dealing with the direct risk to investors, market reaction might arguably be muted. Still, the need for third-party intervention could produce similar negative responses. Moreover, the relationship of such a counterparty vis-à-vis the issuer could give it special clout to avoid or undo the cash savings of any deferral.

"Intermediate" equity content

This category encompasses a wide range of instrument types and accounts for the overwhelming majority of hybrid issues. "Intermediate" equity content hybrids have substantial equity-like characteristics. These include features that help protect credit quality in the event of financial distress. If such hybrids substitute for plain vanilla debt, they improve the overall quality of the issuer's capitalization. Nevertheless, an "intermediate" equity content hybrid is also

debt-like in some respects, typically due to the relatively fixed nature of the dividend/interest on an ongoing basis, given investor expectations. Noncumulative perpetual preferred stock (noncumulative in the sense that where the company passes on a dividend, there is no obligation to eventually make this up) is the most equity-like of the instruments we view as warranting "intermediate" equity content. As the name suggests, such an issue has no maturity date or repayment obligation, so the equity benefit does not diminish over time. It is subordinated to all debt and other liabilities of the company. And the company can choose not to declare dividends at its discretion, with no limitation on the length of time it can do so-—except that it cannot pay common dividends while it is deferring on the preferred dividend--and no obligation to make up missed payments. (In some cases, after a certain period of time, such as six quarters, during which dividends are not declared, preferred shareholders have the right to appoint a small number of directors to the company's board of directors. However, while this board representation is enough to pose a nuisance to the company, the preferred stockholders still have only limited ability to pressure the company for compensation.)

Yet, we don't generally view noncumulative preferred stock as warranting more equity content, given our assumption that managements are loath to exercise the right to defer payments (except in the case of regulated companies where this affects the regulatory capital treatment). Investors expect to be paid, and, short of severe financial distress, companies will be reluctant to disappoint investors, for fear of the capital markets' reaction. (In the case of regulated issuers, the regulator, in theory, could be more proactive about insisting that payments be forgone. Historical evidence is lacking, however, that this has been the case.) While, on balance, we believe noncumulative distributions are more supportive of credit quality than are cumulative payments, we recognize that the greater potential harm to investors-–since missed payments are never made up—could make companies even more reluctant than otherwise to exercise the right not to pay. Moreover, in cases where dividends on noncumulative perpetual preferred are not tax deductible (as in the U.S., but not in the U.K.), the relatively high after-tax cost of the issue could motivate the company to refinance it under certain circumstances-–belying the nominal perpetual life.

(Note: We also don't make a distinction in our analytical treatment of cumulative issues between those where deferred payments accrue interest and those where it doesn't. The latter are more equity like in that the payments the issuer ultimately must make up are smaller. However, the difference is unlikely to affect the issuer's financial profile meaningfully.)

Since 1993, U.S. companies have been issuing what we term "conventional" trust-preferred stock. This term is used to refer to a class of instruments that take different legal forms--being issued via a trust, via a partnership, or directly by the company. Trust-preferred structures can differ in other regions, but in the U.S., the common features from a credit perspective are as follows:

- A term of 30 to 40 years;
- Deep subordination, although senior to noncumulative perpetual preferred stock in certain cases; and
- Optional deferral of dividends for up to five years, at which point any arrearage has to be paid, or a legal default results.

Conventional trust-preferred stock, as defined above, is somewhat less equity-like than is noncumulative preferred stock, but nonetheless still warrants "intermediate" equity content under our criteria. Although a term of 30-40 years is less supportive of credit quality than a perpetual term, 30-40 years is nonetheless a long time in the life of any issuer,

generally being longer term than the overwhelming majority of its debt obligations. We don't believe different degrees of deep subordination are significant from creditors' perspective. And while the longer the company can defer or forgo payments the better, five years should be long enough for most companies that fall on hard times to effect a turnaround—if the company is going to survive at all.

Since 2005, U.S. companies have been issuing what we term "enhanced" trust-preferred stock, typically having the following features:

- A term of 40 to 60 years;
- Deep subordination—in some cases with the issue being junior to conventional trust-preferred issues; and
- Optional deferral of dividends for up to 10 years, and, in some cases, no legal default even if there is continuing nonpayment after 10 years.

The longer the ability to defer or forgo payments, the better, from the perspective of equity content. To highlight this point, as we apply our framework to financial institutions (excluding insurance companies), we distinguish between instruments where deferral is limited to five years, which instruments potentially receive our "intermediate-adequate" equity content designation; and instruments where deferral or nonpayment can exceed five years, which potentially receive our "intermediate-strong" equity content designation (as is the case with most trust-preferred instruments issued in Europe). We don't make such a distinction in other sectors.

Just as in the case of "high" equity content instruments, as discussed above, an instrument must have a remaining life of 20 years or more to continue receiving the "intermediate-strong" or "intermediate-adequate" equity content designation. Myriad "bells and whistles" are found in conjunction with the basic structures described here. Some of these can qualify the extent to which the instrument can be viewed as permanent or semipermanent.

Many issues completed in recent years have included call provisions that are combined with step-ups or other repricing mechanisms that are clearly designed to motivate the issuer to call the issue—even if it is not optimal for the issuer to do so at that point, from a credit perspective. Where the call date is at least five years from the initial issuance date, the increase in cost is moderate, and there are adequate offsetting provisions (e.g., a legally binding replacement capital covenant), the instrument can nonetheless qualify for "intermediate" equity content under the guidelines we have developed (see sections, "Issue Features: Step-Ups, Resets, Remarketing," and "Issue Features: Replacement Capital Covenants).

In addition, many recently completed issues have included provisions designed to limit the extent to which investors bear the risk of deferral. Conventional U.S. trust preferred has "unfettered deferrability," by which we mean that the company can optionally defer for the full five-year period without being required to undertake any issuance of common stock or additional hybrid capital. In some other cases, APMs are included that require the issuer, under certain circumstances, to undertake the issuance of common stock or additional hybrid capital, and utilize the proceeds to make the dividend/interest payment that it would otherwise defer.

We believe such a requirement--becoming effective at a point when the issuer's common stock price quite possibly would be depressed and its ability to issue new preferred stock on acceptable terms dubious--undermines the value of optional deferrability, since it could lead the issuer to be even more reluctant to exercise the deferral option than

would otherwise be the case. We have developed guidelines for determining when such provisions are still consistent with "intermediate" equity content (see section "Issue Features: Alternative Payment Mechanisms/Alternative Coupon Settlement Mechanisms (APM/ACSM)").

Some issues seek to strengthen equity content through the use of mandatory triggers by decreasing reliance on management's discretion (see section "Issue Features: Mandatory Deferral"). However, if the triggers are set at a level so remote that the company, at the point the triggers were breached, would likely be contemplating optional deferral anyway, they may add little to the optional deferral provision alone. In some cases, mandatory triggers are coupled with APMs, as discussed above. Unlike with "high" equity content instruments, we believe it is acceptable in the case of "intermediate" issues if the APM becomes effective immediately upon the breach of the trigger or after some fixed time short of five years. However, where this is the case, we believe that it is necessary for there to be restrictions on the company's ability to repurchase any securities issued under the APM, or the objective of cash conservation could be thwarted.

"Minimal" equity content

The "minimal" category includes some instruments with significant equity attribute(s), but which, as a whole, fall short of our standards for "intermediate." This category includes, for the most part, either subordinated issues with deferrable payments, but where there are fewer than 20 years remaining until the maturity, or long-lived subordinated issues with deferrable payments, but where the ability to defer is limited to fewer than five years or otherwise restricted. One example of the latter is certain Tier 2 or Tier 3 subordinated issues of banks on which the interest payments are not subject to optional deferral, but where the payments can be restricted by a relatively loose earnings test. Another example would be corporate issues that have all the main features of conventional trust preferred, except that they carry debt nomenclature-–which we believe could cause management to be even more reluctant than usual to exercise the right to defer payments, given the added headline risk of not paying on a debt instrument. (Such instruments can achieve "intermediate" equity content when in the form of enhanced trust preferred, given the offsets of the extended deferral feature and longer term.)

While, as discussed below, instruments with "minimal" equity content are treated as debt for ratio calculation purposes, that isn't to say that we disregard their equity-like characteristics in our analysis. Rather, we take account of them qualitatively. Given the varied attributes of any hybrid capital instrument--however categorized--financial ratios, at best, tell only part of the story.

Instruments structured as hybrid capital issues that fail to meet our standards for "high" or "intermediate" equity content do not necessarily warrant even the "minimal" equity content designation, in our view. Some are predominantly debt-like, and so are viewed as such. Examples include:

- Subordinated debt, where there is no deferability of payments. Here, we believe the inflexibility of the ongoing payments far outweighs the equity-like aspects.
- Very long-dated or perpetual senior debt, where there is no deferability of payments. Again, we believe the inflexibility of the payments more than offsets the equity-like aspects.
- Auction-rate preferred stock. Although nominally perpetual and subordinated, and having dividends that are deferrable, this instrument has a dividend rate that is reset through an auction process at very short-term intervals. Given a failed auction, the issuer is likely to come under intense pressure from investors to retire the issue.

- Mandatorily convertible issues where conversion into common occurs more than three years from the current time, or where there could be greater share dilution than permitted under our guidelines. In such cases, we would be concerned that a repurchase of the shares would follow the share issuance, and that the risk of this occurring could be greater the more depressed the issuer's share price.
- Instruments-–where adequate equity-like features are otherwise lacking--that can convert into common stock at the option of the holder, and where the conversion option becomes attractive to investors only when there is share price appreciation (see section "Issue Features: Conversion Into Common Stock And Share Settlement").
- Certain instruments that could convert into common stock-–mandatorily or at the option of investors-–but where the issuer then has the alternative of redeeming the issue for cash.

Applying Hybrid Capital Equity Content Assessment In Credit Analysis

Different attributes of equity hybrids are relevant to different dimensions of our analytical methodology. The aspect of ongoing payments is considered in fixed-charge coverage and cash-flow adequacy; equity cushion is considered in leverage, capital adequacy, and asset protection; the need to refinance upon maturity is considered in liquidity; and the potential for conversion is considered in financial policy. The before- and after-tax cost of paying for the funds also is a component of both earnings and cash flow analysis.

In our analytical methodology, we take account qualitatively of a hybrid capital issue's varied effects on the issuer's credit profile. We have also developed techniques for factoring in hybrid capital in our calculation of certain financial ratios-–knowing, though, that any such adjusted ratios represent a simplified view, and certainly do not tell the whole story.

In assessing hybrid capital issues' equity content, we use a common framework across our Corporate and Financial Services practices and across regions. In applying our conclusions, though, there are significant differences, reflecting the different nature of the companies and in our rating methodologies among sectors.

In our analysis of corporates, we have found that among all the possible ways to represent "intermediate" issues in financial ratios, the most effective is to split hybrid-related amounts 50%-50% between debt and equity.

Compared to the norm for corporates, most types of financial institutions (aside from insurance companies) are highly leveraged and have heavy funding appetites. In our analysis, the quality of capital is an important consideration. In considering regulated financial institutions (including insurance companies), we must pay particular attention to the matter of capital adequacy relative to regulatory capital requirements. In turn, the hybrid methodology does not follow the "partial credit" approach used for corporates; rather, for capitalization ratio calculation purposes, it grants full equity content within certain threshold limits, which are set depending on the degree of equity content.

Applying Hybrid Capital Equity Content Assessment In Credit Analysis: Corporate Methodology

Under our corporate methodology:

- Hybrids with "minimal" equity content are treated entirely as debt for ratio purposes;

- Amounts relating to "intermediate" category hybrids are split into 50% debt and 50% equity; and
- Hybrids with "high" equity content are treated entirely as equity for calculating ratios.

This approach is followed in our analysis of capital structure, as well as of cash flows and fixed-charge coverage. That is, for "minimal" equity content instruments, all related dividend or interest payments (however defined legally) are treated as a fixed charge; for "intermediate" equity content instruments, 50% of the related payment is treated as a fixed charge and 50% as the equivalent of a common dividend; and for "high" equity content instruments, all related payments are treated as if they were the equivalent of a common dividend—i.e., they are not included in fixed charges. (See also "Standard & Poor's Encyclopedia of Analytical Adjustments for Corporate Entities," published July 9, 2007, on RatingsDirect.)

As discussed above, in assessing a hybrid capital instrument's equity content, we consider the financial reporting treatment of the issue, since this can influence management's actions and the market's perception. However, in performing our ratio calculations, we reallocate as necessary between debt and equity, and between interest expense and dividends, in accordance with our analytical methodology, and our treatment is not driven by the accounting treatment.

We know our approach to calculating ratios is a simplified one, inevitably leading to some distortions. So, for example, as discussed above, we don't view "minimal" equity content issues as fully debt-like, nor do we view "high" equity content issues as the exact equivalent of common stock. And, for intermediate issues, there are cases where the 50%/50% allocation will skew ratios in a positive or negative direction (depending on the initial financial profile of the issuer and the use of proceeds), where our overall analytical interpretation of the hybrid issuance would be the opposite. Moreover, in the case of "intermediate" issues, the company will generally either pay the stipulated amount or defer it; it is rare for there to be a partial payment.

These drawbacks speak to the limited value of financial ratios where hybrid capital issues are concerned. These instruments represent a bundling together of different features, which have a varied effect on the issuer's credit profile. We haven't devised a means of calculating financial ratios that better captures such subtleties.

Prior to mid-2006, for hybrids with intermediate equity content, we computed financial ratios both ways-—viewing them alternatively as debt and as equity, i.e., we calculated two sets of coverage ratios--to display deferrable ongoing payments entirely as ordinary interest and alternatively as an equity dividend. Similarly, two sets of balance-sheet ratios were calculated for the principal amount of the hybrid instruments, displaying those amounts entirely as debt and entirely as equity. For hybrids in the middle category, analytical truth lies somewhere between the two, and we sought to interpolate between the two sets of ratios to arrive at the most meaningful depiction of an issuer's financial profile. However, this methodology also had drawbacks, including the challenges for issuers in appreciating the potential impact on our view of their financial profile. Therefore--notwithstanding the issues mentioned above--we decided to calculate ratios with the amounts relating to intermediate category hybrids split 50%-50%. This is the set of ratios we now emphasize as the basic adjusted measures, and these are the ratios we publish in our reports. We believe this approach has greater transparency and ease of comparability-—thereby outweighing the negatives. We continue to encourage analysts to view hybrids from all perspectives.

Under our corporate methodology, there is no hard-and-fast limit to the amount of hybrid capital for which we

recognize equity content. Nonetheless, without drawing any bright lines, we would, indeed, be sensitive at a certain point. That is not because the character of the security changes when a lot of it is issued. Rather, beyond a certain point, a company's nonstandard, complex, or over-engineered balance sheet begins to put its financial policies in a negative light. In turn, this could lead to market pressures to restructure or normalize company finances. This concern would be compounded to the extent that a company also uses various off-balance-sheet financing vehicles, derivatives, and long-term contracts, and/or other techniques that contribute to an overall opaque financing structure. The perception of financial aggressiveness--by us or by the investment community--would certainly overshadow any theoretical benefit from the equity content that might be afforded to hybrid securities. It helps to focus on measures that would indicate little or no concern. In simple terms, there should be no problem with issuing conventional hybrids in an aggregate amount up to 15% of capitalization. (Capitalization is defined as debt + hybrids + book equity, adjusted for goodwill and also making all our other standard adjustments.)

For corporates and financial institutions (excluding insurance companies), ratio calculations incorporate capital only after it is issued—or its issuance is mandatory within a relatively short period. Even though a company has contracted for the right to sell equity at its discretion and even has fixed a price, we do not include such contingent capital in advance. This treatment applies whether the contingent capital is provided by a financial counterparty or structured vehicle, whether prefunded or not.

That said, contracting for contingent capital can be very valuable as a credit support in specific situations. For example, a company might find its credit rating under pressure because of a potential acquisition or expansion; and management's stated intention to issue equity to finance such activity may not be entirely convincing. Arranging contingent equity capital in advance could be just what is needed to allay any concerns regarding a credit-harming outcome. The company would not want to issue equity prior to the transaction materializing. But locking in the availability and cost on a contingent basis makes sense as an "insurance policy." In the insurance sector, given the "lumpiness" of potential losses, we give formal recognition in capital ratios to certain contingent capital structures (see section "Applying Hybrid Capital Equity Content Assessment In Credit Analysis: Insurance Methodology").

Corporate methodology: Corporates' operating subsidiaries issuing equity hybrids

Many corporates structure their operating units as distinct legal entities, owned, controlled, and consolidated by the parent company. (This is especially the case in the utility business, where the operating subsidiaries are regulated entities. It is also the case for financial institutions [including insurance companies], but this note relates only to corporate issuers.) If such operating subsidiaries issue equity hybrids, the rating benefit extends to the parent company and the larger consolidated entity--inasmuch as our analysis focuses on the consolidated economic entity.

Issuance at the subsidiary level raises some questions regarding how the equity aspects help parent company creditors. In particular, the lack of subordination from the perspective of the parent's creditors and the potential for trapping funds at the subsidiary are two concerns that differentiate subsidiary issuance from parent issuance. However, we believe the equity content for the parent is generally deserved, as explained below.

A critical element of equity is subordination--and equity hybrids feature deep subordination (with the occasional exception of trade payables). The significance of subordination is twofold. It creates a cushion to absorb losses prior to bankruptcy, which leads to higher recovery (loss given default) on senior issues. In turn, the better recovery prospects

for senior issues allow the company greater access to (senior) capital, enabling it to stave off a default in the first place. It is precisely this latter consideration that is important for the corporate credit rating.

In the case of subsidiary issuance, the subordination pertains to other claims against that subsidiary--but the hybrid's claim actually is senior to claims of parent company creditors. This priority of claims is referred to as structural subordination (of parent company creditor claims, even senior debt claims).

Nonetheless, equity issued by a subsidiary enhances capital access by reassuring potential debt providers to the subsidiary itself. As long as the subsidiary is positioned to raise additional funds--and it can direct those funds to its parent or affiliates--the default risk for the entire consolidated entity, including the parent, is lower. (As far as recovery prospects, parent company debt issues are indeed disadvantaged by adding to operating company claims. Our recovery ratings and notching of parent issue ratings reflect such priority claims.)

As noted, we normally assume that parents and subsidiaries are free to direct cash at will throughout the consolidated group. (Indeed, in cases where this is effectively restricted--for example, by regulators or covenants--we do not apply the consolidated rating methodology.) Thus, the ability to defer payments on the equity hybrid is beneficial, not just for the immediate subsidiary that issued the hybrid, but also for the group as a whole, since the cash conserved can be directed to affiliates as needed.

There is a concern, however, that cash conserved by the subsidiary from dividend deferral may not be available to its affiliates by virtue of the typical dividend-stopper provisions in the hybrid security. These provisions force the cessation of common dividends as long as the hybrid periodic payments are being deferred. If the dividend stopper pertains to dividend payments by the subsidiary to its parent, the cash conserved may be trapped at the subsidiary, limiting the equity benefit associated with the hybrid.

There are, however, mitigating considerations regarding the dividend stopper.

- There is no requirement that a dividend stopper should apply to intercompany dividends. Some utilities have issued subsidiary securities that restrict payment of dividends by the parent on parent common stock; the subsidiary is free to pay dividends to the parent. (The linkage to parent company dividends adds a disincentive to defer. However, this consideration applies broadly to equity hybrids issued by the parent company. Accordingly, the issuance via a subsidiary is no more problematic than if the parent were the issuer.)
- There usually are ways other than common dividends to transfer cash intercompany, including, for example, loans and advances. Moreover, the dividend-stopper clauses of some utility hybrids have actually spelled out and permitted the upstreaming of cash payments to the parent for specific operating needs. (Of course, if there are constraints in individual situations--such as tax-related issues--our analysis will take the specific fact pattern into account.)
- The scenarios under which hybrid payments are deferred could well involve stress at the issuing subsidiary itself. (Indeed, the more significant the role of a particular operating subsidiary relative to its group, the more likely that the group's distress emanates from that operating subsidiary.) In that case, the cash conserved directly assists the subsidiary in meeting its various obligations. Indirectly, the parent benefits by avoiding the need to downstream cash to help its subsidiary.

Note: We analyze hybrid capital issues of corporates' finance subsidiaries utilizing our financial institutions framework.

Corporate methodology: Leveraged buy-out equity hybrids: Too good to be true

For the past few years, leveraged acquisition activity has employed ever-greater financial leverage. To stretch still more, equity hybrids have been introduced for such buyouts.

A recently popular hybrid security for this purpose provides leveraged buy-outs (LBOs) with a modicum of equity--or, at least the appearance of equity. The security is a preferred stock held by owners of common stock, and has the following terms:

- Perpetual;
- High dividend yield;
- Option of payment-in-kind (PIK), at the discretion of the company, for life of security;
- Some versions provide for PIK only, with no cash payments of dividends for life of security;
- Deeply subordinated; and
- Needs to be redeemed only upon change of control.

At first blush, the security is extremely equity-like. However, we are skeptical about this security's benefit for the company's long-term credit quality. We do not assign it any equity content, and treat it as debt in calculating credit ratios.

We specifically are concerned about the incentives created by this structure to pay the dividend in cash where possible--even when not required--and/or orchestrate a change of control. The LBO context (i.e., very aggressive financial policies of owner/sponsors) heightens our concerns. In the case of aggressive LBO owners, common equity itself is ephemeral: Indeed, for most LBOs, the overarching rating consideration is the risk associated with future owner actions, rather than the specifics of the current balance sheet. (Please see "Credit FAQ: Knowing The Investors In A Company's Debt And Equity," published April 4, 2006, on RatingsDirect.)

Roadmap for redemptions

The current genre of equity sponsors, to generalize, has a track record of taking out its investment in owned entities very quickly, via cash dividends and fees of all types. We should not expect these controlling shareholders to defer cash payment of dividends on preferred securities they hold. Rather, the preferred should be seen as a vehicle--apart from other ways to extract cash--for owners to cash out. The yield on these securities is usually quite robust. Thus, the preferred is a roadmap for one avenue owners can use to take out significant amounts of cash.

If there is no cash payment option, there will be no cash payments, of course. But the owners will still want to see a return on the investment represented by the preferred stake--especially as the value of the preferred investment accretes quite rapidly, given the high dividend accrual rate. The change-of-control redemption provision can provide the mechanism for doing just that.

Change-of-control redemption

Even though the common share owners can cash out in various ways, there is often a growing incentive to realize the value of their preferred stake. Indeed, their investment will shift to the preferred stock--as taking out common dividends reduces the common equity, while paying the preferred dividends in kind leads to an ever-larger preferred investment. Ultimately, the preferred value may exceed the common value many times over.

This sets the stage for recapitalizing. The owners can orchestrate a change of control to trigger payment of the preferred. The change can be bona fide or contrived. Either way, the preferred likely will be replaced with debt.

Because the entity will be saddled with the takeout debt upon the expected change of control, we view this security as eventual debt, rather than equity, and include that debt immediately in metrics such as debt/cash flow.

In other instances where there are incentives to replace hybrid equity securities, we similarly are concerned that they will be replaced with debt, and we grant no equity content. For example, we presume hybrids with a substantial step-up will be called and replaced with debt in the absence of any specific replacement commitment.

Note that we ordinarily treat potential change-of-control as event risk. Change of control instigated not from within the company, but from without, is unpredictable and deemed to be beyond the pale of ratings analysis. However, regarding the context addressed here, change-of-control is foretold by the terms of the security and the structure of the capital base.

Corporate methodology

Real estate investment trusts REITs have become increasingly popular in a growing number of countries. A defining characteristic of a REIT is that it does not pay income taxes, but holders of REIT equity, including both common and preferred stock, pay taxes on the dividends received. Tax rules typically require REITs to pay dividends equal to a very high percentage of their earnings.

Similar to the way we view other unregulated corporates, we are concerned about the permanence of REIT hybrid capital. U.S. equity REITs have often refinanced "perpetual" preferred stock with debt. We attribute "minimal" equity credit to most REIT preferred securities, fully burdening the fixed-charge coverage metrics with the preferred dividend.

We have concluded that although REITs may be less likely to defer payment of preferred dividends because of their special dividend payout characteristics, the difference in deferral risk generally does not warrant a different rating outcome for the instrument. (See "Issue Features: Dividend Stoppers, Look-Backs, and Pushers," below.)

Applying Hybrid Capital Equity Content Assessment In Credit Analysis: Financial Institutions Methodology (Excluding Insurance)

In assessing financial institutions' hybrid capital securities, we employ the same broad equity content categories as with corporates-–"high," "intermediate," and "minimal." To reflect certain finer distinctions linked to regulatory capital, within the "intermediate" category we differentiate between "strong" and "adequate" issues.

Two sector-specific considerations significantly influence our approach to assessing equity content in the case of financial institutions.

First, in the case of regulated financial institutions, regulators have the power to intervene in companies' operations, and they typically determine whether to do so based, at least in part, on their own definitions of capital adequacy. Consequently, and due to the importance of regulatory capital, when assessing individual instruments and their specific features, we take account of the regulators' view. We don't follow the regulators exactly. Rather, we have developed generalized guidelines that vary somewhat from regulators' to facilitate cross-border comparisons.

Qualification as regulatory capital (Tier 1 or Tier 2) is a mandatory requirement for us to include a hybrid security in our total capital measures for regulated companies. If the regulator excludes an instrument from regulatory capital, the instrument provides no cushion between minimum capital and regulatory action, which could include closure. Whereas we are sometimes more conservative than regulators as to where we place a hybrid security in our hierarchy of equity content (compared to regulators' own classification hierarchy), we are rarely more liberal.

The home country financial regulators' capital policy is inscribed in the terms of most bank hybrid capital issues. Not only will the regulatory treatment influence the chosen structure of a hybrid instrument, but the redemption and refinancing of hybrid capital instruments typically is subject to regulatory review. Regulators typically can intervene to enforce the suspension of hybrid coupon payments, restrict the amount of hybrids that an entity can issue, and require any redeemed hybrid to be replaced with an instrument of equivalent strength. Regulators define and accept hybrid capital instruments to allow financial groups to build and manage regulatory capital. They seek instruments that rank below debt in liquidation and that absorb losses while permitting the financial institution to continue to operate. Bank regulators in mature and emerging countries around the world have adopted the Tier 1 and Tier 2 categories of hybrid instruments developed and defined by the Basel Committee on Banking Supervision to rank the instruments by relative capital strength and to regulate capital and leverage in the industry. Bank regulators distinguish between "plain vanilla" subordinated debt, which provides protection to depositors and senior creditors in liquidation, and stronger types of regulatory capital, which defer or eliminate coupon payment under defined circumstances. In many countries, and notably in the EU, regulators further define Tier 2, setting specific standards for eligibility as upper and lower Tier 2 capital. Consequently, when we review a financial institution's hybrid capital instrument, the regulatory intent with respect to the instrument is a dominant factor in our analysis of equity content and payment deferral risk.

The second sector-specific consideration that influences our approach to this sector is that financial institutions are typically characterized by a high degree of financial leverage and heavy ongoing funding requirements. The quality of capital and its ability to provide a cushion against insolvency and liquidity risks are of paramount importance.

Consequently, we apply varying limits to the inclusion of hybrid securities in our capital measures for financial institutions. This parallels the regulatory approach and best fits the highly leveraged nature of financial services companies. These limits vary by degree of equity content: high equity content hybrid securities are subject to higher limits than are intermediate-strong hybrid securities, which are subject to higher limits than are intermediate-adequate hybrid securities (see table 2).

Table 2a

Equity Content Categories - Financial Institutions

Equity content desgnation	Maximum included in adjusted total equity (ATE)*	Examples
High	Up to 50% of adjusted common equity (ACE)	Short-dated mandatory convertible securities (less than three years)
		Issues with participating coupons
Intermediate-strong	Up to 33% of ACE	Noncumulative, perpetual preferred stock
	Up to 18% or 33%** of ACE	Enhanced trust preferred
Intermediate-adequate	Up to 12% of ACE	Conventional trust preferred
Minimal	Not included in ATE	Issues that otherwise qualify for "intermediate" or "high" but have remaining lives of less than 20 years.

Table 2a

Equity Content Categories - Financial Institutions (cont.)

*Maximum amounts are cumulative of lower-designated securities. For example, an issuer that had already issued "intermediate-adequate" hybrids in an amount equal to 12% of ACE could get equity credit for additional "high" issuance up to 38% of ACE (thereby totaling 50%) or up to 21% of ACE in the form of noncumulative perpetual preferred stock (an intermediate-strong instrument, which, by itself, would receive equity credit up to 33% of ACE), thereby aggregating 33% of ACE. **Enhanced trust preferred of regulated N.A. financial institutions is limited to 18%.

Table 2b

Definitions Of ACE And ATE

Common shareholders' equity (as reported by company)	
	(+) Minority interest-equity
	(-) Dividends (not yet accrued or distributed)
	(-) Revaluation reserves
	(-) Goodwill and nonservicing intangibles
	(-) Interest-only strips
	(-) Tax loss carryforwards
	(+/-) Postretirement benefit adjustments
	(+/-) Other adjustments
= Adjusted common equity	
	(+) Preferred stock and hybrid capital instruments (subject to limits)
	(+) General reserves
	(+) Unrealized gains
	(-) Equity in unconsolidated subsidiaries (financial companies)
	(-) Capital for insurance subsidiaries
	(-) Adjustment for securitized assets
= Adjusted total equity	

Like the regulators, we limit the proportion of hybrid securities in our capital ratios because excessive reliance on hybrid securities increases financial leverage due to the fixed cost of servicing the hybrids and potential concentrations in the redemption dates of dated or callable instruments. The servicing cost of hybrids is less flexible than that of common equity, and many hybrids are less permanent than common equity. Investors expect hybrid securities to pay a fixed coupon. Hybrids often contain features that create incentives for management to retire the instrument, or to repurchase common shares that might be issued as a result of a conversion clause. Moreover, many hybrid securities include highly complex combinations of different features and are still relatively novel and untested, making it difficult to foresee how the securities would perform for issuers in different scenarios--and may cast doubt over how they would absorb losses on a going-concern basis. Thus, a prudent financial policy dictates a degree of caution about reliance on capital in this form.

In the same vein, banking regulators impose restrictions on call and step-up features to limit the incentives to retire regulatory capital that is intended to be permanent. In 1998, the Basel Committee on Banking Supervision issued a notification for regulators to limit acceptance of "innovative capital instruments" with calls and step-ups to a maximum of 15% of Tier 1 capital and to subject innovative hybrids to stringent conditions:

- The call option with step-up should be a minimum of 10 years after the issue date;
- The step-up should be less than or equal to 100 basis points (bps), less the swap spread between the initial index

basis and the stepped-up index basis; or the step-up should be less than 50% of the initial credit spread, less the swap spread between the initial index basis and the stepped-up index basis;
- There should be no more than one rate step-up during the life of the instrument; and
- The swap spread should be fixed as of the pricing date and reflect the differential in pricing on that date between the initial reference security or rate and the stepped-up reference security or rate.

Regulators in mature banking markets around the world generally have implemented the 15% Tier 1 limit on innovative hybrids broadly in line with the conditions suggested by the Basel Committee (although there are some exceptions based on the "grandfathering" of previous regulatory agreements).

The following are noteworthy points about our financial institutions methodology:

- As shown in Table 2, we express our caps in terms of percentages of "adjusted common equity" (ACE), as defined. In our capital measures, hybrid capital is included in "adjusted total equity" (ATE), which is a broader form of capital than ACE. Defining our caps in terms of ACE avoids the circularity that otherwise would result if the cap definitions were based directly on ATE.
- We differentiate the equity content of hybrid securities with deferrable payments limited to five years or less (such as conventional trust preferred) and instruments with longer deferral (such as enhanced trust preferred and noncumulative perpetual preferred). The former are typically "intermediate-strong" and the latter "intermediate-adequate."
- Given regulators' role in overseeing and authorizing any refinancing, we are not as concerned about call provisions as with unregulated issuers. Where an issuer is regulated and we believe the regulator will ensure that any refinancing would not be credit-harming, we do not penalize issues with call dates earlier than five years. And even where a call is coupled with a moderate step-up, we do not require a legally binding replacement capital covenant, unless the call date is less than 10 years from the date of the initial issuance. (See sections "Issue Features: Call Provisions" and "Issue Features: Step-Ups, Resets, Remarketings.")
- Hybrid securities with mandatory deferral triggers are never viewed as warranting "high" equity content in the case of confidence-sensitive entities (i.e., financial institutions, including insurance companies). Given financial institutions' heavy funding requirements and need to preserve access to capital markets, hybrid securities with mandatory deferral triggers could result in more harm--stemming from negative market responses--than the benefit derived from reducing debt service obligations. (See section "Issue Features: Mandatory Deferral.")

The following are noteworthy points regarding our approach to U.S. financial institutions in particular:

- The Federal Reserve is considered the leading regulatory authority with respect to hybrid securities by the other bank and securities regulators, who lack detailed frameworks of their own. Thus, we generally assume that the Federal Reserve framework is applicable to all regulated U.S. banks and securities firms.
- Unlike bank regulators in most other countries, the Federal Reserve does not allow issues with step-ups less than 30 years from the initial date of issuance as regulatory capital. This is the approach we take, then, to issues of regulated U.S. financial institutions.
- Our perception is that the Federal Reserve draws a sharp distinction between Tier 1 and Tier 2 capital, placing much greater emphasis on the former in its assessment of capital adequacy (see Table 3). As a consequence, for regulated U.S. financial institutions, we give equity credit only to issues that qualify for Tier 1 regulatory treatment, whatever their characteristics otherwise.
- Generally, in the case of instruments in the intermediate–strong category, we allow for inclusion of the amount outstanding up to 33% of ACE. In the case of U.S. regulated financial institutions, we have a limit of 18% for enhanced trust preferred. (Conventional trust preferred, which we classify as intermediate–adequate, is limited to

12%. Noncumulative perpetual preferred can still qualify for intermediate-strong, up to 33% of ACE.) This special treatment is driven by U.S. regulatory considerations. Specifically, under new rules for determining Tier 1 capital that the Federal Reserve adopted in 2005 and that take effect in first-quarter 2009, so-called "restricted core capital elements," which include trust preferred and other cumulative preferred, are to be limited to 15% of the sum of "core capital components," net of goodwill, for bank holding companies deemed to be "internationally active" (see Table 3). While the Federal Reserve's restriction is limited to internationally active banks (i.e., those with $250 billion or more of consolidated assets or having $10 billion or more of on-balance-sheet foreign exposure), given the caution of the Federal Reserve with respect to including trust preferred in Tier 1 capital, even in its enhanced form, we think it is prudent to depart from our normal numeric guidelines. We also believe that for our analytic purposes it is more prudent to hold all U.S. regulated financial institutions to the same standard. Indeed, it is at the smaller, less-diversified banks where matters of capital adequacy assume greater importance. Thus, in our framework, we limit enhanced trust preferred to 18% of ACE for all regulated U.S. financial institutions.

Table 3

U.S. Federal Reserve Board Framework: Components Of Risk-Based Capital For Bank Holding Companies

Qualifying total capital consist of the following two types of capital components:
- Core capital elements (Tier I)—which must represent at least 50% of qualifying total capital
- Supplementary capital elements (Tier II)

Tier of Capital Elements	Limits	
TIER I*		
Core Capital • Common stock • Perpetual noncumulative preferred stock • Perpetual noncumulative preferred stock convertible into common	Unlimited, but a majority of TIER I must be voting common stock	
Restricted Core Capital • Trust preferred plus three-year forward on common • Trust preferred plus three-to-five-year forward on preferred • Cumulative preferred stock mandatory convertible into common in three years	25% of TIER I	25% of TIER I
Restricted Core Capital (limited for internationally active BHCs) • Cumulative perpetual preferred stock • REIT preferreds (including partnership issued) • Eenhanced trust preferred • Traditional trust preferred securities	25% of TIER I (15% for Internationally active BHCs)	
TIER II		
Supplementary Capital • Non-Tier I portion of securities above** • Long-term dated cumulative preferred stock (20 year min. term) • Perpetual subordinated deferrable debt • Subordinated deferrable debt with automatic conversion features • Subordinated debt mandatorily convertible within 12 years	Up to amount equal to 100% of TIER I (50% of total capital max.)	Up to amount equal to 100% of TIER I (50% of total capital max.)
Supplementary Capital • Intermediate-term preferred stock (five-year min. maturity) • Dated subordinated debt (five-year min. maturity)	Up to amount equal to 50% of TIER I	

*Tier 1 capital is the sum of core capital elements, including permitted restructured core capital elements, less goodwill, other intangible assets, interest-only strips receivables, deferred tax assets, and nonfinancial equity investments.

**Non-Tier I portion of REIT Preferreds, and enhanced and traditional trust preferreds become subject to Lower Tier II limit beginning March 31, 2009.

For all financial institutions, the analysis of hybrid capital must be placed in the context of the broader analysis of capital, and of a bank or insurer's creditworthiness. Formulaic ratio-driven analysis represents only part of the overall quantitative and qualitative assessment of capital, which in turn can only be analyzed within the broader commercial and financial profile of the rated company. Capital ratios are visible shorthand signals of balance-sheet strength, but are not closely correlated with credit rating levels. Qualitative analysis of capital policy is fundamental to the global assessment of banks' and insurers' creditworthiness. No single measure fully captures the breadth of information

needed to evaluate an entity's capital adequacy. Industry participants--investors, securities analysts, and the company management itself--at times focus excessively on the management of bank and insurance capital with respect to a specific ratio, to the detriment of analysis of broader issues such as risk profile and management. Capital ratios based on historical data are also less meaningful than expectations of future capitalization under various scenarios. Components in the qualitative analysis of capital include: unrealized capital gains or losses and hidden reserves or losses, access to capital and liquidity from third parties, the nature and extent of minority interests, dividend policy, potential for earnings generation and retention, and management strategy with respect to acquisitions, disposals, and investments.

Applying Hybrid Capital Equity Content Assessment In Credit Analysis: Nonbank Financial Institutions Methodology

U.S. broker-dealers

We apply the same analytical framework for U.S. securities brokers that we have developed for banks. We believe the guidelines we utilize for banks capture our notion of what is prudent for securities brokers, despite the differences in business characteristics and fundamentals. Moreover, in the U.S., there has been a convergence of the regulatory standards applied to banks and those applied to brokers. In June 2004, the SEC established a framework for supervising the parent holding company of a SEC-registered broker-dealer. Four firms--Goldman Sachs, Lehman Brothers, Merrill Lynch, and Morgan Stanley--have opted into this supervisory regime, and have thereby become "consolidated supervised entities" (CSEs). The CSE status includes SEC oversight of capital adequacy. In this regard, the SEC has indicated it will abide by the Federal Reserve's standards for inclusion of hybrid capital issues in regulatory capital. Likewise, then, as with U.S. banks, we cap inclusion of enhanced trust preferred in ATE at 18% of ACE.

Finance companies

In assessing the equity content of finance companies' hybrid capital issues and calculating their capital ratios, we apply the same framework as for banks. Finance companies' asset composition and leverage characteristics are broadly similar to those of banks. While bank regulators' tolerances for hybrid capital issuance are not directly applicable to finance companies, we believe the guidelines we utilize for banks nonetheless capture our notion of what is prudent for finance companies. However, finance companies' enhanced trust-preferred are included in ATE up to 33% of ACE. We do not impose the 18% cap we apply to U.S. banks, since this tighter limitation is based strictly on regulatory considerations. On the other hand, without the external oversight of a regulator to help ensure that prudent capital levels will be maintained, we believe it is appropriate to apply stricter standards for replacement in cases where issues are callable and there is a step-up in the interest or dividend rate if the issue is not called. Here, we utilize the same guidelines as we do in considering corporates. Thus, if the step-up is material, we require an RCC for "intermediate" or "high" equity content, in jurisdictions where RCCs are legally valid and practical (see section "Issue Features: Replacement Capital Covenants").

Asset managers

In assessing equity content and calculating financial ratios of independent asset managers' hybrid capital issues, we essentially use the corporate model rather than the framework applied to banks, finance companies, and broker

dealers. There are three reasons for this. First, commercial banks are highly leveraged, asset-intensive financial institutions; traditional asset managers are not. At most banks, loans and deposits are the largest items on the balance sheet. In contrast, asset managers have relatively small balance sheets. Second, as a result of the nature of their balance sheets, credit metrics differ between banks and traditional asset managers. Third, as banks, brokers, and insurance companies are heavily regulated financial institutions, our approach toward hybrid securities for these entities parallels that of the relevant regulators, whereas, where matters of capital are concerned, asset managers are largely unregulated.

Stock and commodity exchanges

Similar to asset managers, in the case of stock and commodity exchanges, we also employ the corporate model rather than that applied to banks, finance companies, and broker dealers. Our approach toward rating stock and commodity exchanges focuses on the cash flow generated from operations to service their financial obligations. Monoline exchanges that only provide trade execution and ancillary services (e.g., price dissemination) are less capital-intensive than other financial institutions such as banks and brokers. However, more diversified exchanges that also provide clearing and settlement, securities custody, and even banking, require some additional capital to support these more risky businesses.

Applying Hybrid Capital Equity Content Assessment In Credit Analysis: Insurance Methodology

We apply compatible methodologies when assessing the capital strength of banks and insurers, while recognizing the different nature of business risk and regulation in the two industries. We also reflect different national regulators' varied regulatory practices.

Regulatory policy in the insurance sector is generally less developed than in the bank sector; thus, many insurance regulators look to banking regulators for guidance in establishing policy on inclusion of hybrid instruments, including securities with calls and step-ups, in regulatory capital. In some countries, from the U.K. to The Netherlands and to the regulators in some countries of the Gulf Cooperation Council, the combination of bank and insurance regulation under one roof (e.g., the Financial Services Authority in the U.K.) has facilitated a convergence of bank and insurance regulatory policy with respect to hybrid capital. Furthermore, outside the U.S., there is a trend toward more consolidated group supervision—-e.g., by 2012, we expect this to apply to the whole EU under the Solvency II Directive. Still, in other parts of the world, insurance holding companies are rarely formally regulated, unlike bank holding companies. Most hybrid issuance is now from holding companies to give the consolidated groups optimal financial flexibility.

When we rate a regulated insurance or reinsurance company, we take account of the risk of full, formal regulatory intervention and presumed wind-up of the institution. Consequently, the amount of hybrid capital allowable in our capital analysis of insurers and reinsurers can vary according to local regulatory practice as regards eligible solvency capital, though we are rarely more generous than the local regulators. (In jurisdictions where the insurance regulators have expressed no view on a specific hybrid capital instrument issued by an insurance group, Standard & Poor's establishes its own stance on likely regulatory policy with respect to the instrument.)

To better reflect the often significant regional variations in the nature of insurance regulation as well as the many local differences in the regulatory eligibility of diverse forms of capital, we have differentiated criteria in respect of our hybrid capital and double-leverage tolerances. We focus on two analytic variables that are used to establish appropriate tolerances for hybrid capital and for the proceeds of ordinary debt-funded double leverage–-that is, the extent to which regulators are likely to enforce structural subordination on a company-by-company basis, and also the local regulatory tolerance of debt capital in eligible solvency.

For this reason, in line with local regulatory practice and given the extraordinary force of structural subordination that prevails, capital credit may be given in the U.S., for example, for ordinary debt-funded double leverage whereby an insurance holding company raises conventional senior or subordinated debt and downstreams the proceeds of that debt as equity at the regulated subsidiary operating level. In such circumstances, the additional tolerance for "intermediate" hybrid leverage is normally constrained at a maximum of 15% of operating group total adjusted capital (TAC; plus 10% for "high" equity content issues) given the capital credit already allowed for debt-funded double leverage.

Meanwhile, in much of the rest of the world, regulators calculate insurance and reinsurance solvency on a fully consolidated group basis, and generally exclude all leverage and double leverage except that which is funded by eligible hybrid equity. Standard & Poor's analysts in most parts of the world outside the U.S. do not recognize equity content in their group capital analyses for ordinary or subordinated debt, and instead only allow capital credit for explicitly hybrid equity leverage, normally up to 25% of TAC for "intermediate" hybrid issues, or up to 35% of TAC for "high" issues. This difference in regulatory policy is also reflected in holding company notching where, for example, U.S. holding companies are normally rated three notches lower than the counterparty credit rating of the core operating companies in the group. A two-notch differential normally applies to European groups.

For capital models that are based on operating company statutory balance sheets, we deduct the excess over the double-leverage tolerances from TAC. For capital models that are based on consolidated GAAP balance sheets, we add qualifying hybrid capital to TAC, subject to the tolerances referred to in table 4. However, we include any hybrid capital issuance in excess of 15% in the numerator of our leverage calculations. We do not generally recognize hybrid issuance of operating companies (reflected also as hybrid capital in the relevant parent's consolidated financial statements) as such in our consolidated capital adequacy analysis (see table 4).

Table 4a

Maximum Tolerances For Double Leverage And/Or Hybrid Equity Usage

--Cases where enforcement of structural subordination is high and regulators allow holding-company debt to fund operating-company capital (e.g., U.S. and Bermuda)--		--Cases where enforcement of structural subordination is low and regulators exclude holding-company senior debt from group solvency capital (e.g., Europe and Canada)--	
Category	**Maximum tolerance**	**Category**	**Maximum tolerance**
Total double-leverage tolerance	Up to 45% of capital*	Total double-leverage tolerance	Up to 35% of capital*
Debt-funded double leverage	Up to 20% of capital*	Debt-funded double leverage	0%
'High equity content" hybrid tolerance (three-year mandatorily convertible)	Up to 25% of capital*	'High equity content" hybrid tolerance (three-year mandatorily convertible)	Up to 35% of capital*
Sublimit "intermediate equity content" hybrid tolerance	Up to 15% of capital*	Sublimit "intermediate equity content" hybrid tolerance	Up to 25% of capital*

Table 4a

Maximum Tolerances For Double Leverage And/Or Hybrid Equity Usage (cont.)			
'Minimal equity content" hybrid tolerance	0% credit	'Minimal equity content" hybrid tolerance	0% credit
Hybrid Ratios			
U.S.	Standard & Poor's qualifying hybrid/[U.S. GAAP (consolidated) capital + total hybrid + total senior debt]	Europe	Standard & Poor's qualifying hybrid/[group consolidated TAC (excluding hybrid) + regulatory qualifying hybrid capital]
Double Leverage			
U.S.	[Standard & Poor's qualifying hybrid + total senior debt + nonqualifying hybrid] / [U.S. GAAP (consolidated) capital + total hybrid + total senior debt]	Europe	Standard & Poor's qualifying hybrid / [group consolidated TAC (excluding hybrid) + regulatory qualifying hybrid capital]

*The definition of "capital" in regard to the maximum tolerance varies by region. In the U.S. and Bermuda, capital is defined as [U.S. GAAP consolidated equity + total hybrids + debt] with no adjustments to the reported numbers. In Europe and Canada, capital is defined as [total adjusted capital (TAC) + regulatory qualifying hybrids]. Note that TAC is a measure of adjusted equity capital and excludes debt. In Europe and Canada, the hybrid tolerance is higher (e.g. 35% versus 25% for high equity content) to normalize for the smaller denominator, which excludes holding-company debt.

Table 4b

Components Of TAC	
Reported shareholders equity/policyholder surplus	
Plus	Equity minority interests*
Plus	Equalization/catastrophe reserves*
Plus	Prudential margins included in reserves
Minus	Proposed shareholder dividends not accrued
Minus	Standard & Poor's impairment of goodwill
Minus	Other intangible assets
Minus	On-balance-sheet unrealized gains/(losses) on life bonds* ** (post tax***)
Plus	Off-balance-sheet unrealized gains/(losses) on investments other than life bonds* (post tax***)
Minus	Off-balance-sheet pension deficits (post tax***)
Minus	On-balance-sheet pension surpluses (post tax***)
Plus	Up to 100% of off-balance-sheet life value of in-force (post tax***)
Plus	Property/casualty loss reserve surpluses/(deficits) (post tax***)
Plus	Property/casualty loss reserve discount
Plus/Minus	Analyst adjustments
= ECA (economic capital available)	
Minus	Remaining goodwill after Standard & Poor's impairment
Minus	Investment in unconsolidated subsidiaries, associates, and other affiliates
Minus	Investments in own shares/treasury shares
Minus	50% deducted of off-balance-sheet value of in-force (post tax)
Minus	50% deducted of life deferred acquisition costs (post tax)
Minus	100% deducted of property/casualty deferred acquisition costs
Minus	50% deducted of property/casualty loss reserve surpluses
Minus	33% deducted of property/casualty loss reserve discount
Plus	Policyholder capital available to absorb losses

Plus	Hybrid capital (subject to tolerance limits)
Minus	Excess over hybrid tolerance
= Total Adjusted Capital	

*Where not already included in shareholders' equity. **Subject to fair value exception. ***Where tax effect not disclosed, use effective tax rate.

In the insurance sector, we continue to review a variety of prefunded contingent capital arrangements and, assuming acceptable security features, have viewed these as eligible hybrid equity up to 5% of the capital structure for investment-grade issuers. This 5% is a subset of the traditional 15% capital bucket. For example, a trust issues perpetual or long-dated pass-through securities, with the proceeds ultimately used to purchase eligible assets that reside in a Regulation 144 Trust. For these securities, the insurer has a put option giving it the right to put the insurer's preference shares having a liquidation value equivalent to the assets owned by the trust to a special-purpose entity. We would expect a trigger to be included in the securities, requiring mandatory exercise of the put if the insurer's credit strength falls below investment grade for these securities to be viewed as equity currently.

We would accept the instrument, when drawn, as equity subject to the guidelines of any hybrid security. As with other hybrid instruments viewed as equity, they must have an appropriate long-term maturity, cannot be funded with an auction-preferred mechanism, and cannot have any feature that would cause management to make them a short-term security.

Bond insurers

Our approach to the so-called monoline bond insurers differs somewhat from our approach to multiline insurance companies.

What is the equity treatment for hybrid securities issued by a bond insurance holding company, and is there a limit on the amount of hybrid securities that can be part of its capital structure?

In the case of bond insurers, securities with "high" or "intermediate" equity content receive 100% equity treatment subject to limitations, while "minimal" equity content issues receive zero equity treatment and are treated as debt.

There are two ratios in our bond insurance rating criteria that limit the amount of hybrid securities that can be part of an insurers' capital structure:

- Holding company hybrid security tolerance ratio: Hybrid securities are limited to a maximum of 15% of the holding company capital structure. For this ratio, hybrid securities exclude contingent capital facilities. The formulaic expression of the hybrid security tolerance ratio for a bond insurance holding company is: hybrid securities/(capital + hybrid securities); in this ratio, capital is defined as shareholder equity plus long-term debt.
- Holding company total hybrid tolerance security ratio: Hybrid securities plus contingent capital facilities cannot exceed 20% of a holding company's capital structure. Contingent capital facilities are included in this calculation even though they may be "issued" by a subsidiary. The formulaic expression of the total hybrid security tolerance ratio for a bond insurance holding company is: (hybrid securities + contingent capital)/(capital + hybrid securities +

contingent capital).

If a bond insurance holding company exceeds its tolerance ratios, how would the amount that exceeds the tolerance ratios be treated?

Analytical treatment will differ in situations where a holding company exceeds tolerance ratios:

- If the level of consolidated hybrid securities exceeds the tolerance ratios due solely to contingent capital facilities, the overage of the contingent capital facility would be treated as neither debt (for holding company capitalization analysis) nor equity (for operating company capital modeling exercise).
- If the level of consolidated hybrid securities exceeds the hybrid equity tolerance ratio but not the total hybrid equity ratio, the overage of the hybrid equity tolerance ratio would be treated as debt (for holding company capitalization analysis) and the operating insurance company would receive full credit for any contingent capital facility, subject to limitations imposed on the insurance operating company. For example, if a holding company had $3.2 billion of capital, the hybrid security tolerance limit would be $565 million and the total hybrid security tolerance limit would be $800 million. If there were $650 million of "high" or "intermediate" equity content hybrid securities outstanding, only $565 million would receive appropriate equity treatment and the remaining $85 million would be viewed as debt. The presence of a $200 million contingent capital facility would not exceed the total hybrid security tolerance limit.
- If the level of consolidated hybrid securities exceeds the limit due to the combination of contingent capital facilities and other hybrid securities, the amount of hybrid security tolerance consumed by the contingent capital facility would first be evaluated. The remaining hybrid security tolerance cushion would be measured against any remaining hybrid securities to determine the amount of equity treatment for the hybrid securities. For example, if a holding company had $2.8 billion of capital, the total hybrid security tolerance limit would be $700 million. The presence of a $600 million contingent capital facility would leave a cushion of $100 million. If there were $400 million of "high" or "intermediate" equity content hybrid securities outstanding, only $100 million would receive appropriate equity treatment, and the remaining $300 million would be viewed as debt.

What effect does the use of debt and hybrid securities issued by a holding company have on the funding of an operating bond insurance company's capital?

Bond insurance holding companies typically issue debt or equity securities to fund the capital needs of their bond insurance subsidiaries. Once the proceeds from these securities are downstreamed to the operating insurance company, they are viewed as equity for capital adequacy purposes. However, we have criteria that limit the amount of financial leverage a holding company can employ. In determining a holding company's financial leverage, we consider the amount of long-term debt (including hybrid securities over the tolerance ratio) and equity (including hybrid securities under the tolerance ratio). The capitalization ratio is defined as: long-term debt/(long-term debt + equity). For bond insurance holding companies, a capitalization ratio of 20% or less is thought to be appropriate.

What effect does the establishment of a contingent capital facility have on the various insurance operating company capitalization ratios?

When looking at a bond insurance operating company's capital structure, the overall tolerance for contingent capital is 20% of total adjusted capital across all rating categories. Total adjusted capital is defined as statutory surplus plus contingent capital. The formulaic expression of the contingent capital tolerance ratio for an operating insurance

company is: contingent capital/(statutory capital + contingent capital).

If a bond insurer had statutory capital of $3.6 billion, contingent capital would be limited to $900 million. Even if a contingent capital facility totaled $1.0 billion, there would only be recognition of equity content for the $900 million in capital adequacy testing.

Any contingent capital in excess of 20% of total adjusted capital will not be considered in capital adequacy modeling. In addition, these types of capital markets instruments are a component of the reliance-on-soft-capital ratio, which should not be greater than 33%. Fees paid on the entire amount of the contingent capital facility are included as interest expense in the evaluation of the holding company's GAAP interest coverage ratio. The GAAP interest coverage is defined as: (GAAP pretax operating income + interest expense)/interest expense.

In terms of the equity treatment a bond insurer receives in Standard & Poor's capital adequacy model for contingent capital structures, does it matter what type of security would be issued once the bond insurer exercises its put?

First and foremost, the security issued by the bond insurer once it exercises its put must be viewed as equity by the insurance regulator for us to consider recognizing any equity content. Any security viewed as debt does not add to statutory capital, and therefore will receive no recognition of equity content in the capital adequacy model. To date, preferred stock and surplus notes have been the only put securities for which the bond insurers have received any recognition of equity content in the capital model, as regulators view these securities as equity. A contingent capital structure in which the insurer has the option to issue either surplus notes or senior notes once it exercises its put option will receive no recognition of equity content in the capital adequacy model. However, choosing to issue surplus notes would add to statutory capital, while opting to issue senior notes creates a liability and does not add to statutory capital.

Issue Features

In this section we focus on some selected instrument features that tend to play an important role in our determination of equity content. It bears repeating, though, that while detailed assessment of a specific hybrid capital security is obligatory to classify the security by its relative equity value, we ultimately take a holistic approach. Also, it is rare that the detailed features of a hybrid instrument have a material impact on an issuer's overall creditworthiness.

Issue Features: Optional Deferral

We believe issuers' option to defer dividend or interest payments under the terms of most hybrid capital instruments affords significant equity benefit. Such a feature provides issuers with the ability to conserve cash at a time of financial stress, without triggering a legal default.

The longer a company can defer payments, the better. An open-ended ability to defer until financial health is restored is best. As a practical matter, we believe the ability to defer dividend payments for up to five years is most critical in helping to prevent a general default. If the company cannot restore financial health within that period, it probably never will. The ability to defer payments for shorter periods may be valuable, but equity content diminishes quickly as

constraints on the company's discretion increase. We give no more than "minimal" equity content for instruments where the maximum deferral period is less than five years.

Issue Features: Mandatory Deferral

Certain securities have mandatory triggers that force deferral of distributions, conserving cash for a company that is experiencing reverses in its business or funding capabilities. With the use of mandatory triggers, concerns about management's reluctance to exercise the right to defer are avoided. When triggers are set at a level we would equate with the company possibly exercising its right to optionally defer payments, instruments typically warrant "intermediate" equity content, providing they are adequately equity-like in other respects.

When triggers are set at a level close to the company's current rating level (i.e., within two or three rating notches of the current rating), these securities can support the current level of credit quality, and thereby potentially qualify for our "high" equity content designation, providing they are adequately equity-like in other respects. Obviously, though, investors are taking substantial risk--well beyond the issuer default risk--and this risk is reflected in relatively low ratings on the securities themselves (see section "Rating The Issue: Deferral").

On the other hand, we have been concerned that these benefits could be offset by exposing the company to negative market responses. Such "high" equity content instruments may not work as intended--especially if investor reaction to payment deferral is very negative. That concern has become more pronounced in light of recent mortgage-related capital market turbulence, which has underscored the extent to which "headline" factors can dramatically affect financial institutions' (including insurance companies') funding flexibility, whatever the state of credit fundamentals otherwise.

We believe that for companies that are confidence sensitive--such as financial institutions (including insurance companies) --deferrals driven by mandatory triggers could result in more harm than the benefit realized by reduction in debt service obligations. Accordingly, we do not consider hybrids with tight mandatory triggers as eligible for "high" equity content for confidence-sensitive issuers.

More broadly, even for issuers in less confidence-sensitive sectors, if the triggers halt payment while the company is still far from being incapable of making the payments, the benefits of reduced debt service would generally be small relative to the potential headline risk and investor reaction, such as where the trigger threshold is at a level where the company is investment grade. The company could pay a price in terms of its financial flexibility. (Alternatively, the company could be motivated to avoid the deferral by retiring the issue.) We recognize these risks associated with mandatory deferrals in qualitative aspects of our analysis, no matter how the security is treated for ratio calculation purposes.

Specific features of the security could mitigate or heighten the risk--and recent proposals for securities structured to achieve high equity content have included features that are pertinent.

In this regard, the trigger must not be opaque or overly complex. It can be defined by a downgrade or breach of various financial benchmarks that serve as a proxy for credit quality. Any metrics used in defining the triggers need to

be straightforward and highly transparent. But they also must be customized for the specific context of the issuer. Complexity may be hard to avoid, especially given the interplay of business risk with financial indicators of credit quality. (This can be especially challenging in sectors such as regulated utilities, where the business risk profile plays an outsized role.)

Some structures shift deferral risk from the investors by introducing a financial counterparty to stand in for the company at the point of deferral. By effectively dealing with the direct risk to investors, market reaction might arguably be muted. Still, the need for third-party intervention could produce similar negative responses. Moreover, the relationship of such a counterparty vis-à-vis the issuer could give it special clout to avoid or undo the cash savings of any deferral.

Issue Features: Maturities/Scheduled Maturities

We apply a common standard regarding remaining time to maturity to all investment-grade financial institutions (including insurance companies) and corporates, in all regions. Under this standard, we require a hybrid capital issue to have a remaining term of at least 20 years to receive our "intermediate" or "high" equity content designation--unless the issue mandatorily converts into another type of equity-like issue in a shorter time frame. Other things being equal, we view undated (i.e., perpetual) and very long-dated securities as superior instruments from the perspective of equity content. But, as a practical matter, we believe an issue having a remaining life of 20 years or more is sufficiently permanent to warrant our "intermediate" equity content classification when other issue features are consistent with this designation. In the case of financial institutions, we do not use the remaining term of the issue-–beyond 20 years--to differentiate between "intermediate-strong" and "intermediate-adequate" issues. (These subcategories are not used with insurance companies.) Rather, such differentiation would reflect other issue features, such as the flexibility of payments.

"Intermediate" or "high" issues with initial maturities of greater than 20 years that subsequently fall to less than 20 years of remaining maturity are reduced to "minimal" equity content at that point, and as such do not receive any formal equity treatment in our calculation of financial ratios. There is no amortization period. Nevertheless, as a qualitative matter, we are still sensitive to the benefits afforded by such issues–-for example, the deferability of ongoing payments-–even where the "intermediate" or "high" equity content determination is not warranted because the condition of a long remaining term is no longer met.

For speculative-grade issuers, where debt maturities are typically far shorter than with investment-grade credits--and where, more broadly, the scope of our analysis necessarily extends fewer years--we do not apply the same standard. Here hybrid capital issues with maturities shorter than 20 years can still achieve the "intermediate" or "high" equity content designation, assuming other features make this appropriate. Generally, 15 years of remaining life suffices for issuers rated in the 'BB' category, and 10 years for issuers in the 'B' category.

Some issues have so-called "scheduled maturities," where the issuer is required to undertake all "commercially reasonable efforts" to refinance the issue. If the issuer is unsuccessful at refinancing the issue, it must repeat the attempt periodically. We treat scheduled maturities as effective maturities, even where accompanied by legally binding

replacement provisions. The latter do not mitigate scheduled maturities, which still expose the issuer to a sharp increase in financing costs if its credit spreads have widened. (We lower the issue rating to 'C' when it is not redeemed at the scheduled maturity as a result of the issuer's financial distress.)

(Note: We announced the current standards for minimum remaining terms and scheduled maturities on Feb. 20, 2007. Previously, we had different remaining-term standards in different sectors, and did not view scheduled maturities as effective maturities where there was a legally binding replacement provision in place. We stated that our new approach would not be applied to then-outstanding issues or to any then-pending issue where we had already reviewed the terms. Such preexisting issues of banks will continue to receive unchanged recognition of equity content until five years are remaining until maturity, and the equity content will then be amortized down at 20% per year. Such preexisting issues of insurance companies will continue to receive unchanged recognition of equity content until 10 years are remaining, and equity content will then be amortized down at 20% per year. We attribute no equity content when there are five years or less to maturity. Permanence of the instrument remains an essential and enduring criterion for equity content.)

Issue Features: Call Provisions

The ability to call can give reason for pause, since it puts into question whether the issue will remain outstanding beyond the initial call date. However, where an issue contains a call provision, the issuer has the option to redeem the issue, but no obligation to do so. Importantly, there hasn't been any significant market stigma associated with an issuer not calling an issue when there is no step-up. From a credit perspective, it might even be advantageous for the company to retain the flexibility to exercise a call provision—-to take advantage of issuing a similar equity-content hybrid at lower cost if the opportunity presents itself. Thus, typically we have not placed much emphasis on the inclusion of a call provision, especially if the instrument is truly low-cost-—such as with tax-deductible instruments-—and, therefore, shouldn't make the company feel pressed to refinance. However, we consider a hybrid with a longer period to the call date to be more equity-like than one with a shorter period to the call, all else being equal. This reflects the longer period that the former will remain in the capital structure on an obligatory basis.

As long as we believe the issuer intends either to keep the issue outstanding or refinance it with the proceeds of another issue warranting comparable equity content, we do not view the call date as an effective maturity. Still, in the case of unregulated issuers, we are highly skeptical of issuers' intentions in cases where the initial call date is less than five years after issuance: We generally do not give more than "minimal" equity consideration for issues in such cases. When a discrete call date is followed by more than five years during which the issue may not be called, an RCC can mitigate the unregulated issuer's incentive to call. If an issuer is regulated and we believe the regulator will ensure that any refinancing would not be credit-harming, we generally do not penalize issues that may be called earlier than the fifth anniversary or with discrete call dates.

Issue Features: Step-Ups, Resets, Remarketing

We view call provisions that are coupled with step-ups in the dividend/interest rate-—or with other mechanisms that

can likewise increase the cost to the issuer--very differently from simple calls. Where call provisions are combined with material step-ups, they are specifically designed to motivate calling of the issue to avoid the step-up. The idea, obviously, is to convince the market to price the issue as if the term were no longer than the period to the initial call—rather than until the final maturity. Because of investor expectations, the issuer could face reputational risks if it were ultimately to choose not to call the issue (which investors, for their part, have referred to as "extension risk"). This could pressure the issuer to call, even when it were not economically or otherwise optimal for it to do so. Clearly, this is incongruent with the notion of permanence that underlies equity content.

Currently, we view a step-up in the dividend/interest rate of 25 bps or less as not material, and thus not requiring any particular offsetting feature to preserve equity content.

In typical interest rate environments, we view step-ups in the range of 26 bps-100 bps in the case of issues of investment-grade issuers as material, but still moderate. At present, 100 bps is the de facto regulatory limit for banks, in most cases, as well as the norm for investment-grade issuers in most markets. (Under our criteria, we allow up to 200 bps for noninvestment-grade issuers, given that the initial financing cost is relatively higher.) Here, notwithstanding the disincentives, we view it as at least possible that the issuer would choose not to refinance if circumstances were unfavorable: in that event, the resulting higher rate would not be onerous. Still, to preserve the notion of permanence and thus qualify for "intermediate" or "high" equity content, we generally require issues of unregulated issuers with moderate step-ups to have legally binding RCCs. The RCC can restore sufficient assurance of permanence by stipulating that any refinancing be with proceeds of a similarly equity-like issue.

In some cases, bank and insurance regulators accept step-ups set at 50% of the initial credit spread of the issue, as defined. Where regulators have explicitly approved such an approach, we would generally view the step-up as moderate. Although if the step-up appears to us to be onerous (e.g., seemingly reflective of a temporary spike in market pricing), we could still conclude it is not consistent with equity content. Outside of regulated sectors, we would be open to flexible approaches to determining the step-up, but would need to be convinced that the results would not be punitive for the issuer.

Some instruments provide for a step-up in the coupon if the company issues similar capital within a specified time period with a higher coupon. This type of "make-whole" reset burdens the issuer with higher payments when it is likely to be under stress and increases the aversion to issue more capital when it might otherwise be prudent.

We are less concerned about explicit replacement provisions for callable issues of regulated entities, which include banks and bank holding companies in most countries, European insurance groups, North American insurance operating companies, and U.S. broker dealers. In this context, we treat such issuers as U.S. insurance holding companies, regulated utilities, asset managers, securities exchanges and clearinghouses, and unregulated finance companies as effectively unregulated. (Note that while unregulated finance companies require an RCC to offset a moderate step-up, the application of equity content treatment generally follows the methodology applied to regulated financial institutions. See section "Applying Hybrid Capital Equity Credit Assessment In Credit Analysis: Nonbank Financial Institutions.")

In regulated sectors, issues with moderate step-ups but lacking legally binding RCCs qualify for "intermediate" equity

content (but not "high" equity content), provided that the issues meet the standards for "intermediate" equity content in other respects. The spirit of financial institution regulation is to maintain a sound level of capital. Consequently, the oversight powers of the regulators generally include the authority to prevent a call and/or force the issuance of other equally strong capital as a replacement. This, combined with our understanding of the incentives that generally drive financial institutions' (including insurance companies') financial policies, ensures permanence. (Although regulators may in some cases focus only on whether minimum solvency requirements are met, the regulatory authority remains more important analytically, and the presence of a replacement provision would only provide incremental comfort). Under our criteria, when an RCC is not required, we do not look at the RCC expiration date or the other terms as defining the effective maturity or as otherwise being detrimental to equity content. Although we generally look to the regulator to ensure replacement where appropriate, where regulators allow short-dated calls combined with step-ups (we define short-dated as less than 10 years), we would require a legally binding RCC to cure the overwhelming lack of permanence even if the national regulator classifies the issue in question as regulatory capital. On the flipside, where the regulator objects to a step-up or other feature, such as a step-up before year 30 for U.S. bank holding companies, we generally follow that more stringent regulatory approach.

For regulated and unregulated issuers alike, where issues have step-ups of more than 100 bps (or 200 bps in the case of speculative-grade issuers), we view the call/step-up date as the effective maturity of the issue. Also, we do not generally classify securities with call and step-ups of less than five years from the date of issuance as "intermediate" or "high" equity content even if the securities have an RCC. We believe such a short noncall period puts in question the issuer's intentions.

Other repricing mechanisms

We increasingly are skeptical about features that seemingly try to obscure their purpose of provoking the issuer to call the issue. Thus, many long-dated equity hybrids have a fixed rate for the first 10 years, then convert to a variable rate. That variable rate may incorporate a penalty feature, other than a step-up, that is designed to motivate the issuer to call the issue: We then likewise question the permanence of the issue.

One example of such a penalty involves the payment of the highest of various rates that could fluctuate relative to each other. We have accepted as consistent with equity content some approaches that employ two or three rates tied to points on the yield curve, the highest of which determines the instrument's yield for each dividend period. Because the yield curve is normally upward-sloping, we presume the rates will not fluctuate--rather, that the long-term benchmark will pertain.

However, using a long-term benchmark for a security that resets at short intervals would itself be a penalty if not appropriately adjusted. Any long-term benchmark rate must be modified to make it economically comparable with a more appropriate short-term benchmark rate, to eliminate the penalty aspect. For example, the applicable rate could be a percentage of the long-term benchmark rate or "x" bps below the benchmark rate.

We presume that use of a long-term benchmark, on its own or in combinations, is an inherent penalty rate--unless there is an adequate pricing modification that equates it with the short-term benchmark rates ordinarily used for variable-rate debt. We will evaluate securities that incorporate such pricing modifications to a long-term benchmark rate individually. Our acceptance of the specific modified rate will require a rigorous statistical analysis of whether the

modification is adequate. Such analyses should be provided by the structuring bank.

RCCs can remedy a penalty-rate situation, to a point. We are sensitive to the size of the penalty involved, as noted above. If the penalty is greater than moderate (typically, if it exceeds 100 bps in investment grade), we do not recognize equity content even where an RCC is in place. Because of the difficulty in calculating the penalty associated with use of long-term benchmarks, given the constantly fluctuating variables involved, we cannot presume the penalty is 100 bps or less. Therefore, RCCs are insufficient to remedy this feature, without the aforementioned modifications and accompanying statistical analysis.

Other repricing mechanisms that we view as greater than a moderate penalty, and thus inconsistent with equity content, even with the presence of an RCC and/or regulatory oversight, include the following:

- Where there is a reset based on the then-relevant credit spread of the issuer—rather than on the issuer's initial credit spread—such that any deterioration in perceived credit quality would be reflected in a higher cost to the issuer;
- A reset to a floating rate from a fixed rate, but with a pre-established floor, is generally deemed inconsistent with equity content because calling and refinancing the issue may be less expensive than leaving the issue outstanding. However, an exception is sometimes made for instruments that are treated as Tier 1 capital of a regulated financial institution, if we are convinced that the reset mechanism does not represent more than a moderate penalty;
- Discrete calls that are followed by extended periods when the issue is not callable. For unregulated issuers, where that period is longer than five years, an RCC is required. The lengthy period during which the issuer must live with the current terms creates an incentive to redeem on the call date. This mechanism is especially onerous when combined with a coupon step-up because the issue is then subject to the penalty rate for an extended period; and
- Incentives to call that are qualitative, fluctuate, or are otherwise difficult to value will be assessed case by case. Our policy is to view almost every incentive or penalty, when combined with a 100-bps coupon step-up, as problematic, since the coupon step-up is already at the ceiling of the acceptable range for a moderate penalty. Examples could include a loss of favorable accounting treatment, higher cash flows, higher after-tax cost, or loss of peripheral tax benefits.

We do not, however, view the reduction of equity content to "minimal" as increasing the incentive to call, given the qualitative benefits we continue to attribute to issues with minimal equity content, and the paradoxical circularity of that logic.

Under the terms of some initially convertible issues, at some point the issue becomes nonconvertible and the rate increases—supposedly to the rate that would have been in place if the issue initially had not been convertible. We must assess each such case to determine if the increase is indeed consistent with the loss of the option value, and whether the increase in interest expense should be viewed in the same light as a step-up.

Issue Features: Replacement Capital Covenants

An RCC is a legally enforceable commitment by the issuer to replace a hybrid capital issue upon its call, redemption, or repurchase with an instrument having specified characteristics. To be effective in helping to preserve credit quality, the RCC must commit the issuer to replace a hybrid security, if it is called, redeemed, or repurchased, with an instrument having similar equity-like characteristics in terms of payment flexibility, degree of subordination, and permanence. In July 2005, First Tennessee Bank N.A. first demonstrated the feasibility of providing a legally binding

replacement clause when it made a "declaration of covenant" in connection with its preferred stock issuance. The covenant favors holders of the bank's covered debt. Where appropriately structured, an RCC can alleviate our concerns regarding the permanence of an issue having a call provision that is coupled with a moderate step-up: This is the only situation where we have any specific requirement for an RCC under our hybrid capital framework.

With respect to limitations on refinancing, covenants contained in the issue itself have dubious efficacy. After all, investors in the hybrid issue are likely to be indifferent to what the credit quality of the issuer is once their issue has been retired. The RCC addresses this by being structured for the benefit of holders of certain designated "covered" long-term debt of the issuer, giving these debt holders the right to pursue remedies against the issuer if terms of the covenant are not satisfied. Thus, in the legal sense, the replacement covenant is a separate agreement, not part of the hybrid issue indenture.

Beneficiaries of the covenant should be comprised of debtholders with significant amounts outstanding (excluding, of course, any amounts held by the company or its affiliates). If the RCC runs to a specific covered debt issue, the RCC should provide for transfer to another issue upon maturity or repayment of the original covered debt issue. Covered debt is preferably unsecured (senior or subordinated), since unsecured debt holders would ordinarily have the greatest incentive to enforce the covenant. However, even secured debt holders can be expected to act to enforce the RCC on their own behalf-—and we would rely on that in the absence of appropriate unsecured issues to serve as the covered debt.

In addition, the replacement issue should equal at least the amount redeemed. There is one exception: As a practical matter, we take a mix of 50% common equity and 50% debt to be an acceptable alternative to refinancing with 100% hybrid capital, for issues receiving "intermediate" equity content. (Common stock here refers to equity issuance with cash proceeds that can be used to partially refinance the hybrid, not retained earnings or equity issued as payment for acquired assets.) This is based on the rough generalization that the positive impact of common on the company's credit profile is double that of intermediate instruments. We do not generally consider less than full replacement by another hybrid capital issue to be adequate.

Replacement instruments need to warrant at least the original equity content designation ("intermediate" or "high"), in terms of payment flexibility and subordination. It suffices, though, for the term to extend only through the issue's initial effective maturity. In this regard, we recognize the full measure of equity content only so long as an issue has at least a 20-year remaining life. So, in this respect, a 20-year replacement issue would not achieve recognition of equity content received upon the original issuance. While issuing a new security that has limited equity content from day one may not be intuitive at first glance, the effect is identical to all cases where the original is not called. And, the alternative--that no such replacement was to occur—-would imply that no equity content should be granted in the first place. To illustrate: A 30-year security gets equity treatment for only 10 years. (The reasons for this are the company will enjoy a substantial period during which it can defer payments, and the payment of principal is still far enough in the future that it hardly factors into the current rating.) In effect, all nonperpetual hybrids that remain outstanding until maturity will exist for 20 years during which they no longer receive recognition of equity content (the 20 years prior to maturity). If a 30-year security were replaced in year 10 with a new 20-year instrument, that would replicate the initial instrument and be consistent with recognition of equity content for the initial 10 years, and no equity content thereafter.

Finally, the new replacement capital should be raised well in advance of the planned call to avoid incentives to redeem early and bypass the refinancing requirements.

Although RCCs can alleviate concerns regarding the permanence of the issue, they can give rise to new concerns if they are overly rigid and detailed—given the potential for unintended, unforeseeable consequences. For our criteria, issuers can incorporate flexibility in the choice of replacement securities. It is satisfactory for the covenant to commit in general terms that the issue be replaced with a security having similar equity-like characteristics. Moreover, we view as acceptable "carve-outs" that would excuse the issuer from the replacement obligation under certain circumstances, as follows:

- There is no material debt outstanding to serve as covered debt.
- Change of control. The issuer's undergoing a potentially radical transformation of this type is a form of "event risk" that we typically don't factor into either our issuer credit ratings or issue ratings.
- Tax law changes. Without tax deductibility, the cost/benefit of certain equity hybrids changes significantly, and the issuers should be able to call them (or not replace them with hybrids when they have the right to call for other reasons). While this possibility raises a cloud over the permanence of the hybrid, the risk can be assessed through understanding the potential for tax-law changes. Indeed, we would not initially recognize equity content in hybrid issues that faced significant tax risk, given both the potential cost penalty and/or the incentive for the issuer to somehow get out of the security.
- Market disruption. See below.
- Credit quality improvement subsequent to the time of issuance that obviates the need for the hybrid to support rating. The potential measures of credit quality improvement are varied. Any rating upgrade above the rating level at the time of issuance would provide prima facie evidence that the security is no longer needed. Alternatively, we would be willing to consider approaches that relied on indicative financial ratios instead of ratings. Another acceptable indication, albeit indirect, would be the consent to terminate the covenant by holders of the majority amount of covered debt outstanding--excluding amounts held by the issuer or its affiliates.
- Rating-agency criteria change leading to a reduction in the equity content for the security originally issued. Some covenants call for replacement with whatever security would qualify at that time. But since it is impossible to predict in advance what, if anything, would qualify, it is unreasonable to expect replacement on such an open-ended basis. (This carve-out would have to exclude criteria refinements of an incremental or technical nature, since such changes would not justify the issuer's jettison of the hybrid.)

While we accept the aforementioned termination events in the RCC, if one of the termination events were to occur, such that the provisions of the RCC were no longer binding, we would then cease to view the issue as warranting recognition of equity content, given the then lack of permanence. Where the provision is structured to allow the issuer to reelect the obligations of the RCC, and if it were to opt to do so, recognition of equity content could continue to be appropriate.

In countries where RCCs have no legal basis or are otherwise not practicable, such as under Japan's current legal framework, we would consider accepting a statement of intent in its place, providing such statement of intent was straightforward, visibly communicated to the market, was broadly consistent with the issuer's financial policy, and if the step-up was moderate and at least 10 years from the time of issuance. In Japan, the law requires that, for an agreement made for the benefit of a third party to be enforceable, the beneficiary must "express intent to enjoy such right." We believe requiring issuers to solicit such consent from bondholders would be cumbersome. Moreover, such

consent would likely become ineffective once the bonds are traded or transferred to a new investor. Similarly we would consider accepting a nonbinding statement for any issuer with no eligible covered debt.

Issue Features: Market Disruption Events (MDEs)

The MDE concept initially arose in the context of mandatory alternative-payment mechanisms (APMs/ACSMs; see below). The MDE addressed the risk that a company faced legal obligations to pay with proceeds of common equity issuance, but was unable to execute its obligations due to market disruption. Scenarios such as the closure of financial markets after Sept. 11, 2001, were the focus of this concern. The MDE allowed the company to defer its obligations until the disruption passed.

In the context of RCCs, MDEs also provide flexibility in the event of such "force majeure" scenarios. If an issuer has redeemed an outstanding hybrid issue (or legally committed itself to redeem) in a way that requires replacement, it must be allowed to defer that replacement as long as there is no practicable possibility of doing so. It should go without saying that it is unacceptable for such provisions to effectively create an opportunity for an issuer, upon an MDE, to redeem the hybrid and completely negate the replacement obligation.

The definition of such disruption needs to be very clear and objective, and limited to scenarios that are remote. Poor economic conditions, depressed financial markets, distressed pricing for the company's securities, and so on do not fit the definition of an acceptable MDE as we conceive it.

Most issues with RCCs provide for the replacement securities to be issued before the call and before serving redemption notice to bondholders. The proceeds of the new securities are meant to be used to fund the call. Accordingly, in such cases, the MDE provisions are irrelevant.

Issue Features: Dividend Stoppers, Look-Backs, And Pushers

Many types of hybrid capital instruments include so-called dividend stoppers, whereby if there is an optional or mandatory deferral of dividends/interest on the hybrid issue, the company is prohibited from making payments on any pari passu or more junior issues--including making dividend payments on common stock--until the arrearage, if any, has been cured. We generally view such a stipulation as a neutral factor from a credit perspective. On the one hand, eliminating both the common dividend and the hybrid payment maximizes the overall cash conserved. On the other hand, the link between the two may increase the reluctance of the issuer to forgo paying on the hybrid. Indeed, in cases where shareholder expectations or tax considerations (for REITs) increase the reluctance to suspend common dividends, omitting the dividend stopper could significantly increase the issuer's willingness to defer payments on the hybrid issue. This could enable a REIT's hybrid instrument to merit intermediate equity content, assuming other terms meet Standard & Poor's criteria. In general, the presence or absence of a common dividend stopper is not essential to our recognition of equity content.

Some instruments incorporate so-called look-backs, which we view as detrimental from a credit perspective. In these instruments, the right to optionally defer applies only after a period of no share repurchases or payment of common

dividends. The main point of deferrable payment securities is to accommodate a company that has a crisis and needs to save cash. Look-backs constrain this flexibility, as a practical matter, if the company had recently paid a dividend or repurchased any stock.

The details of the look-back provision dictate the extent of the potential problem. For example, does even the repurchase of a trivial amount of stock in conjunction with an employee option plan violate the look-back? Is the look-back period a quarter? Six months? One year? How do the frequency and juxtaposition of common and preferred dividend payment dates affect the possible delay?

The existence of a look-back that could impose a delay of one or more years would disqualify a security for our "intermediate" equity content category. (In the case of hybrid issuers that are speculative grade, even a potential delay of six months would rule out "intermediate" equity treatment.) Importantly, even where a look-back period is shorter and does not in itself disqualify the security, the potential for delay is still problematic--and, in combination with other features of the security, can affect its equity content categorization.

With respect to mandatory-deferral instruments, look-backs (sometimes termed "pushers") undermine the nondiscretionary aspect of the deferral. The company can choose to short-circuit the deferral by paying a paltry common dividend, for example. Such issues would, therefore, never qualify for our "high" equity content category.

Issue Features: Alternative Payment Mechanisms/Alternative Coupon-Settlement Mechanisms (APM/ACSM)

Optional deferral

Certain hybrid capital instruments combine optional deferral with a requirement that the company, at some point following the initial deferral, issue common stock, more of the same hybrid issue, or some other hybrid security, and utilize the proceeds to make up the arrearage and resume payments. Such mechanisms are variously referred to as APMs or ACSMs. We believe such a requirement significantly undermines the value of the optional deferral provision. The prospect of having to sell even a small amount of additional securities at a point when their pricing would likely be depressed could well serve as a disincentive for the company to defer in the first place.

Therefore, when such a requirement becomes effective within five years of the initial deferral, we would generally view such an instrument as warranting "minimal" equity content under our framework. (The base five-year requirement has long been our standard for an interval when the company can reasonably be expected to effect a turnaround, if it is to do so. We would not be as concerned about a requirement to issue shares that only becomes effective beyond five years: Such a requirement is unlikely to be a significant consideration for management when first weighing the possibility of deferring.)

Nevertheless, we would make an exception--and view the issue as compatible with "intermediate" treatment, depending on our holistic view of the instrument--if doubts about the company's willingness to defer were addressed by appropriately structured mandatory deferral triggers, thereby removing discretion from management (see below).

We would also make an exception where all three of the following conditions were met:

- Prior to five years, there is no requirement to issue additional securities unless hybrid payments are resumed. In this way, management retains some control of the timing of the capital raising.
- Before five years of deferral have elapsed, the additional common shares that are required to be issued to meet the dividend or interest requirement are limited to a relatively modest amount: for corporate and other unregulated issuers, no more than an aggregate of 2% of the total number of shares outstanding during the period the deferral continues. This mitigates concerns about dilution avoidance as a motive weighing on management. (Note: out-of-the money warrants to purchase common shares could be used as an alternative to directly issuing shares. This may be marginally more acceptable to management because the share price would have to appreciate before the warrants were exercised. Nevertheless, the same tight limit on the number of shares covered by the warrants would still be appropriate. In the case of certain regulated financial institutions, we have accepted what is sometimes a looser standard--warrants capped at 2% of market value, rather than 2% of shares outstanding.)
- The company has the option of issuing more of the hybrid or of another hybrid, and if it does so, the company is required to issue no more than 25% of the initial principal amount. This provides further assurance about dilution concerns, since the company will have an alternative that could well be seen as more attractive than common stock issuance. Moreover, there will be protection against the company's being burdened by a substantial amount of new obligations with uneconomic terms.

Direct allocation of additional hybrid securities, commonly referred to as "PIK payment," to the initial hybrid investors (requiring no new market issuance) would be even less problematic, at least when the basis of valuation is the nominal value as opposed to the market value.

Mandatory deferral

In certain instruments, an APM/ACSM-type mechanism is coupled with a mandatory deferral provision. For example, some issues define mandatory deferral triggers in terms of financial tests, such as the following:

- Cumulative consolidated net income for the two half-year periods ending six months prior to the coupon date must be less than zero; and
- Adjusted consolidated shareholders' funds must decline by 10% or more during the four half-year periods ending six months prior to the coupon date; and
- Six months after the prior two triggers have been activated, total adjusted capital (including mandatory convertibles and/or hybrid securities) must have declined by more than 10% during the preceding five half-year periods.

However, with the breach of these conditions, the issuer has the option to issue common stock or other specified securities before the payment date-–in sufficient amount to fund the payment owed, or, in other cases, in sufficient amount to offset the decline in capital–—and thereby avoid the payment deferral. We believe such an optional capital-raising feature undermines some of the equity benefit of the mandatory deferral provision. We see a risk that in cases short of financial distress, companies might succumb to investor pressure to utilize the capital-raising option—even if, from a credit perspective, the company's capital markets access would best be utilized for other purposes, or conserved. Lest there be any doubt, some companies have actually made explicit "best endeavors undertakings," in which they state in the issue offering materials that they would always undertake to raise fresh capital as needed to avoid a deferral. In other instruments, there is not an option, but rather a contractual requirement to undertake the sale of common stock or other equity-like issues immediately upon the breach of defined financial tests.

We have accepted such provisions as consistent with "intermediate" equity content, but not with "high" equity content. To warrant the "high" equity content designation, no forced or "best efforts"–based (or even optional) settlement of

mandatorily deferred amounts must be allowed to take place until the earlier of five years from the initially scheduled payment date or the point at which the breach is cured. For both "intermediate" equity content issues, there must be a prohibition against repurchasing the settlement currency (other than payment-in-kind at face value) extending at least 12 months from the cure date. Otherwise, through share repurchases, the issuer could well thwart the cash conservation on which our determination of equity content relies. (See section "Equity Content Categories.")

Issue Features: Conversion Into Common Stock And Share Settlement

We do not recognize equity content, per se, for a provision whereby an issue can convert into common stock at some premium, at the option of the investor. While, historically, many such issues have ultimately converted, we view this feature as a positive contingency. That is, if the company fares well and this is reflected in significant share price appreciation, then conversion would likely occur. (In theory, if the share price had appreciated well above the conversion price, there was only a short time remaining before the issuer could call the issue and thereby force conversion, and we were confident the issuer intended to do just that, we could then view the situation as warranting recognition of some amount of equity content. However, we have been reluctant to formalize this approach, given the rapidity with which share price volatility can erase even seemingly unassailable stock price gains.) On the other hand, if the issuer is struggling, this is highly likely to be reflected in a depressed share price, making the conversion uneconomic for investors. Of course, investors value the conversion option, and this should translate into lower interest cost for the issuer—something beneficial for the issuer, regardless of whether the issue ultimately converts. And if the conversion feature is combined with other features that qualify the instrument for "intermediate" or "high" equity content, the conversion feature certainly does not detract from equity content, in our view.

Likewise, we don't recognize equity content for a provision whereby the company has the option to repay an issue upon redemption or maturity by issuing common shares to the holders at the then-share price, instead of using cash. Although such a provision may save the company an underwriting fee, our assumption is that it could always choose to finance the maturity with a separate common stock offering, if inclined to issue common stock. Of course, if the local equity market were relatively underdeveloped or dormant, then such a provision would perhaps deserve more recognition.

Although leaving it up to the company to determine how to settle a convertible instrument does not necessarily detract from credit quality, if investors' exercise of an optional conversion provision means the issuer is required to repay the principal amount in cash—with only the appreciation settled in shares—we view that as the equivalent of a put. The instrument is more debt-like than equity-like. Share appreciation ordinarily being correlated with good performance by the company does not mean that maintaining capital adequacy is irrelevant to the company's credit profile.

As discussed above, we view mandatory conversion into common stock in a very different light. If the issuer's share price at the outset is used as a floor to limit the extent of shareholder dilution, if the ultimate conversion is no more than three years from the time of issuance in the case of investment-grade issuers (two years for issuers with issuer credit ratings in the 'BB' category; one year for issuers with issuer credit ratings in the 'B' category), and if various other conditions are met, an issue with such a feature can achieve "high" equity content. Otherwise, such issues are generally viewed as debt-like, given the concern that the shares issued would be repurchased.

Some instruments provide for a change in the conversion or exchange ratio if the company issues common shares within a specified time period at a lower price. (In lieu of changing the conversion ratio, some issues call for a cash payment to the hybrid holders.) This type of "make-whole" feature increases the aversion to issue more capital when it might otherwise be prudent and may burden the issuer with more dilution.

We do not consider an issue that converts or exchanges into common stock of a company other than the issuer as having equity content. Rather, we treat such an issue as an asset monetization, in that the issuer exchanges one asset (its equity stake in the third party) for another--the proceeds of the issue--albeit with a significant time delay between the latter and the former. The overall impact of the transaction can be positive, neutral, or negative, depending on such factors as the value realized for the equity stake relative to our expectations, our perception of the risks related to the equity stake, the cost of the financing (taking account of tax considerations), and the use of proceeds.

Rating The Issue

In the corporate and financial institutions sectors, we assign two types of credit ratings--one to issuers and the other to individual issues. The first type is called variously an issuer credit rating (ICR), counterparty credit rating, or corporate credit rating. It is our current opinion of an issuer's ability and willingness to meet its financial commitments on a timely basis. In contrast, while issue ratings address timeliness, they also address the potential for recovery of principal in the event of a bankruptcy or liquidation of the issuer--that is, the ranking of the issue.

Most types of hybrid capital instruments afford equity benefit to issuers by having ongoing payment requirements that are more flexible than interest payments associated with conventional debt, and by being contractually subordinated to such debt. Obviously, these characteristics make the instruments riskier for investors than debt. In assigning issue ratings to hybrid capital issues, we seek to assess the incremental risks associated with the issue in terms of payment timeliness and principal recovery compared to the ICR and to nondeferrable debt. We reflect these risks in the ratings of hybrid capital issues by assigning them ratings that are "notched down" from the ICR. Owing to the unpredictable nature of some of the risks to which hybrid capital issue ratings are subject, the ratings are potentially more volatile than the ratings on conventional debt issues.

We utilize a common framework across our corporate and financial institutions practices and across regions. However, the rating dynamics can work differently. For example, in the banking sector, most instances of companies deferring payments on trust preferred have reflected the intervention of regulators. In theory, given banks' high funding needs and the importance of maintaining confidence in the specific bank and the entire financial sector, the regulatory order to defer may occur when the company's credit quality is still stronger than the point where most corporates would consider such an action. So, in certain circumstances, where a bank is experiencing deteriorating credit quality, we may decide to widen the gap between the ICR and hybrid capital issue rating at an earlier point than for a corporate on a similar trajectory.

We also utilize this framework across the rating spectrum. In the case of highly rated issuers, the prospect of financial distress is, by definition, extremely distant. Still, issue ratings reflect our relative assessment of how different instruments in the issuer's capital structure might fare, should the downside case materialize. Some highly rated issuers

have argued that in their particular cases, the risk of deferral is so remote that it should not be reflected in a lower issue rating than for subordinated debt. If we accepted this argument, we would not notch down for deferral risk, but we would also see little basis for recognizing equity content in the issue.

Rating The Issue: Subordination

Subordination adversely affects the ultimate recovery prospects of subordinated obligation holders in a bankruptcy, since claims of priority creditors must be satisfied first. For issuers with investment-grade ICRs, we assign a rating one notch below the ICR for issues that are subordinated (but not deferrable). We typically rate subordinated instruments with deferrable coupons two notches below the ICR when it is investment grade (see details in next section). We do not distinguish in the notching between gradations of subordination: Junior subordinated issues and senior subordinated issues are rated the same. Experience has shown that, in bankruptcy, ultimate recoveries for different classes of subordinated instruments tend to be similar--and poor. (Likewise, other things being equal, we don't distinguish between hybrid capital issues that are cumulative and those that are noncumulative, since there is little reason to suppose recovery prospects of the two are materially different.)

Historically, in the case of issuers with speculative-grade ICRs, we automatically rated the issue two notches below the ICR just to reflect subordination (apart from the incremental notching for deferral risk). Under the updated Issue Rating and Recovery Analytics framework published on May 30, 2007 ("Recovery Analytics Update: Enhanced Recovery Scale And Issue Ratings Framework"), hybrid capital issues of speculative-grade issuers (except banks) can be notched down based on issuer-specific and instrument-specific recovery prospects in countries where we have adopted this issue rating approach and extended it for hybrid capital instruments. (Elsewhere, the two-notch differential for subordination remains automatic.) However, as a practical matter, this makes little difference to our rating conclusions: We expect the vast majority of nondeferrable subordinated instruments of speculative-grade issuers to receive a recovery rating of '6' on the revised scale (0%-10% recovery of principal post default), which would imply the same two-notch differential from the ICR that these instruments would otherwise be assigned just for subordination.

When a holding company issues the hybrid capital instrument, as is common for U.S. financial institutions, the notching is relative to our ICR on the holding company, which is typically lower than the ICR on the main operating unit.

Rating The Issue: Deferral

Payment risk can be heightened in the case of hybrid capital issues due to:

- The right of optional deferral, where management has the option under the terms of the instrument to suspend or cancel distributions without triggering a default (see section "Issue Features: Optional Deferral");
- Mandatory deferral, where, with the breaching of one or more predetermined triggers, the issuer is required to suspend payments (see section "Issue Features: Mandatory Deferral"); and
- Regulators' ability, in certain cases, to order companies to defer or cancel payments.

Our objective is to fully reflect payment deferral risk in hybrid capital issue ratings, whatever the potential driver of the

deferral. As deferral becomes an increasingly likely prospect, the gap between the ICR and the hybrid capital instrument would widen to reflect the heightened risk of deferral.

Optional deferral

We assume that issuers will be loath to exercise their right of optional deferral, given the negative reaction this evokes among investors and hence the ramifications it can have for the issuer's future access to capital markets. Deferral risk is heightened when the issuer faces increased prospects of financial distress, such that management's reluctance to defer may ultimately be overcome in favor of the need to conserve cash. As referred to above, the "pressure points" may differ for different types of issuers, meaning the consideration of deferral may come at earlier or later stages in the course of credit deterioration. One danger sign is when a company curtails or eliminates its dividend on common stock: This is sometimes a precursor to a deferral on equity hybrids. (Most equity hybrids have a "dividend stopper" that prevents the company from making any distributions to its common stockholders while it is deferring distributions on the hybrid; see section "Issue Features: Dividend Stoppers, Look-Backs, And Pushers.")

If a corporate has an unusually large proportion of equity hybrids in its capitalization, it may have an added incentive to defer, due to the significance of the cash flow savings that would result and perhaps pressure from senior lenders. However, in the case of large, regulated financial institutions, we believe this could cut both ways: the greater the amount of outstanding hybrids, the greater the potential for a systemic disruption or a backlash in the capital markets. This could give the issuer more of an incentive to continue payments under all circumstances.

Mandatory deferral

Triggers for mandatory deferral vary. Some consist of earnings-, cash flow-, or capitalization-based financial ratio tests; others refer to the issuer's incurrence of a loss during a defined period or the failure to meet specified minimum regulatory capital requirements. Still others tie the payment of the distribution on the equity hybrid directly to the company's payment of the common stock dividend.

Obviously, the payment deferral risk for the hybrid capital issue investor is higher when it would take only a minor and temporary shortfall in profitability to cause the deferral, for example. On the other hand, if it would take circumstances so dire for the trigger to be breached that the issuer would likely be on the brink of bankruptcy, then the payment risks for the hybrid capital issue investor would not be materially different than they would be for debt holders.

Triggers for mandatory deferral may be included in the terms of the hybrid capital issue. Alternatively, they may be included in the terms of other financing agreements or indentures of the issuer—for example, in the form of a financial covenant under a committed credit facility prohibiting the payment of dividends on all common and preferred stock if certain tests are breached. In our surveillance of hybrid capital issue ratings, we are alert to any changes in the issuer's financing agreements or indentures that could bear on its ability to make payments on a hybrid issue.

Regulatory deferral

In some regulated financial services sectors, regulators have the authority to direct companies to defer payments on equity hybrids based on the regulators' own assessment of what is prudent. In certain cases, banks have been ordered to defer even when they met all regulatory capital requirements (for example, Riggs National Corp., a bank holding company that was required to defer payments on trust-preferred securities in December 2004). Assessing the risk of deferral in the case of a regulated company requires careful consideration of sector- and country-specific factors,

including precedents of deferral ordered by the regulatory body in question. Especially important is the identification of financial measures to which the regulator is particularly sensitive.

The authority and intent of financial regulators to order deferral of payments in certain circumstances--whether or not clearly defined--means that most hybrid capital securities of regulated financial institutions can be viewed as having de facto mandatory deferral. Regulated financial institutions structure hybrids according to rules established by national regulators for regulatory capital measures. This includes the definitions of the capital ratios or performance measures that would trigger payment deferral if breached. The triggers for deferral--typically the regulatory minimum capital ratio for banks and insurers--are usually made explicit in the covenants of the hybrid security. Less often, the trigger is not explicit in the document but is understood by both issuer and regulator.

Rating The Issue: Factoring Payment Risk Into Issue Ratings

In reflecting payment/deferral risk in hybrid capital issue ratings, we evaluate the different sources of deferral risk that are present and seek to assess their combined significance. Where deferral is possible but we believe the prospect of a deferral is relatively remote for the foreseeable future, we take one notch from the ICR in setting the issue rating, whether the ICR is investment grade or speculative grade (subordination will increase the notching, as explained in the prior section). A one-notch differential is the typical treatment for issues that have optional deferral alone. For example, the subordinated and optionally deferrable issue of an issuer rated 'BBB+' would generally be rated 'BBB-'--one notch for subordination and one notch for payment deferral risk. If the issue were senior and deferrable (a rare but not unheard of combination), the issue would be rated 'BBB'. We take the same approach even at the highest rating levels. (Note that a subordinated and deferrable issue of a 'AAA' rated issuer is typically rated 'AA'. Because there is no 'AAA-' rating in our rating scale, 'AA' is two notches below 'AAA'.)

When we have heightened concerns that the issuer may defer--whether due to the exercise of its right to defer optionally, the breaching of a mandatory deferral trigger, or the exercise of a regulator's prerogatives--we increase the gap between the ICR and the issue rating. We do not impose any arbitrary limit on the size of the gap. So, in an extreme example, if the ICR of an issuer were investment grade, but we believed that there was a substantial risk that the payment on the issuer's trust-preferred securities could be deferred within a few quarters, the issue would have a low speculative-grade rating. On the other hand, if the issuer faced the immediate prospect of financial distress, yet we believed management remained determined-–for whatever reason-–not to exercise the right to optionally defer, we could, at least in theory, narrow the notching for deferral risk.

Combinations of different forms of deferral may or may not increase deferral risk. For example, if an issue has mandatory and optional deferability, and the mandatory triggers are defined so that they could be breached without there necessarily having been fundamental erosion in the issuer's credit quality, then the risks to investors would be greater than if there were optional deferability alone. The same would be true if the triggers were more reflective of fundamental credit quality, but could be breached before the point where the issuer would contemplate optional deferral. In either of these cases, a lower issue rating would be warranted than if there were optional deferability alone. In these circumstances we generally add to the gap between the issue rating and the issuer credit rating. On the other hand, if the mandatory trigger were sufficiently remote that we believed it would be unlikely to be breached before the

company would otherwise have optionally deferred, then we would not take away additional notches for the mandatory deferability compared to what would be appropriate for the optional deferability alone.

For example, MetLife Inc. issued $2.1 billion of noncumulative perpetual preferred in 2005 that was rated 'BBB', three notches below the ICR. The issue has both optional and mandatory deferral. The mandatory deferral is breached by the triggering of either of the following:

- Consolidated net income during any consecutive four quarters is zero or less AND shareholders' equity declines 10% or more during the most recent eight quarters AND MetLife cannot reduce the decline in shareholders' equity within the subsequent two quarters to less than the 10% threshold through equity issuance; or
- The risk-based capital ratio of Metlife's largest U.S. life insurance subsidiaries falls below 175% of the company action level.

Analytically, it was deemed reasonably possible, while not expected, that MetLife could have an atypical earnings event or a decline in its GAAP equity that would cause the first trigger to be breached, even while the company remained financially strong. More importantly, the second trigger relates only to measures of solvency for a portion of Metlife's U.S. life insurance operations, while the ICR reflects the diversity afforded by the company's U.S. property and casualty operations and its growing presence outside the U.S.

We have rated a number of mandatory deferrable issues where, as in the first trigger in the MetLife transaction, triggers are defined to give the issuer the chance to make up for a decline in shareholders' equity by issuing new equity. Some issuers of these instruments have argued that this completely mitigates mandatory deferral risk, since it would always be their company's intention to take whatever actions were necessary to forestall the breach of the trigger, barring cases where they would want to exercise the right to optionally defer. Some issuers have even put such assertions in the form of "best endeavors" undertakings included in offering documents or other filings. We must be skeptical about such assertions, just given the remoteness of the prospect of deferral, and the adverse changes the issuers might have undergone by the time that point was reached. However, if we were convinced that the company, apart from situations where it would optionally defer, would always avail itself of whatever capital markets access it had to avoid a breach of the mandatory trigger, then we would not notch down incrementally for the mandatory deferral risk; rather, we would only notch once, for the risk of optional deferral. However, there would then be little basis for ascribing any extra value in terms of equity content (beyond that warranted due to the optional deferral feature alone) to the mandatory deferral feature.

If a mandatory deferral trigger is defined in such a manner that we believed the trigger would always be breached before the company would otherwise consider deferring optionally, and if the company is legally required to issue common shares immediately upon the breach of the trigger, then we could conclude that deferral risk had been effectively eliminated, and not notch down for deferral risk.

In the case of regulated financial institutions, explicit mandatory deferral triggers do not add to deferral risk stemming from regulation if--as is generally the case--the triggers just replicate the capital standards that a regulator applies in determining whether to order a deferral. Also, in the case of banks, we consider it particularly unlikely that a company would exercise unilaterally its right to defer optionally. Moreover, we would generally presume that bank regulators would act preemptively to force banks to raise capital (or divest some activities) to prevent regulatory capital

guidelines from being breached. Thus, in most instances we take away only one notch for deferral risk in rating hybrid capital issues of investment-grade banks, even where there is a combination of optional deferral and regulatory deferral risk.

For example, certain Spanish and Australian banks' hybrid capital issues contain relatively narrow earnings tests, which link the payment of a coupon to the existence of profits in the previous fiscal year. However, we do not believe that the local regulators will apply these tests mechanistically. Rather, we expect there to be situations where the issuer reports a loss, but where the regulator still allows the issuer to pay a coupon. (The terms and conditions allow this flexibility.) We believe that the likelihood of regulatory intervention will depend on the circumstances that have given rise to the reported loss and that the probability of regulatory intervention on these hybrids is not materially affected by the existence of the tests. Yet, as indicated above, we would notch to a greater extent in cases we view as exceptional. Examples would be where we perceive that the likelihood of a reported loss has increased materially, or if we come to believe that the regulatory approach to the narrow earnings test would be more mechanistic.

Rating The Issue: Default And Distress

On July 23, 2008, we expanded the definition of our 'C' long-term issue credit rating to include issues on which cash coupon payments have been deferred, eliminated, or in some cases, paid in-kind, as permitted under the terms of the issue. The definition expansion only affects the rating that we assign to a hybrid capital issue when the cash coupon on the instrument is no longer being paid, but the issuer is not bankrupt or insolvent and our credit rating [ICR] on the company is not 'D', 'SD', or 'R'. We will generally continue to assign a 'D' rating to issues that are in payment default, to issues that have been subject to a distressed exchange, or when the issuer has filed for bankruptcy or taken similar action.

Some issues with mandatory deferability have clauses that require the issuer to undertake the sale of common or preferred stock and utilize the proceeds to make the distribution. If the payment can be made on a timely basis, we would not view this as a default. In such circumstances, we believe a grace period of up to 30 calendar days is appropriate—equivalent to the grace period commonly found in conventional debt issues. However, there is the risk that the company would be unable to complete the required share issuance, depending on the company's circumstances and conditions in the capital markets. So far, we have not notched down a second notch for mandatory deferability in cases where "best efforts" share issuance (or issuance of other securities) would then be immediately required. However, we could reassess this approach as we gain more insight into the practicability of this requirement. In any event, we will notch down when we believe that under the most likely scenario where a deferral could occur, the issuer's financial strength and share price would have declined so precipitously that the issuer's ability to complete even a modest-size common stock issuance (or issuance of other securities) could be dubious.

In theory, if we were convinced that the deferral of payments was highly unlikely to occur absent a default by the company on all of its obligations and/or a bankruptcy filing, then we would not notch at all for deferral risk, only for subordination.

Rating The Issue : Government Support

The policy for rating the hybrid equity securities of government-supported entities deserves particular mention. When Standard & Poor's expects the government to support a government-supported entity's debt obligations but has less confidence that the support would be extended to the government-supported entity's equity hybrids, then the base for the notching of the equity hybrid issue rating is not just the ICR (which factors in the imputed government support). The issuer's stand-alone profile (absent government support factors, including extraordinary intervention and rescue) is also a relevant rating factor in these situations.

This indeed was the case in Japan in the late 1990s and early in the current decade, when Japan's government provided massive support to the private banking sector to maintain confidence and prevent the failures of many institutions. The government support did not extend to all hybrid capital securities of Japanese banking groups during that period, however, and some of the bank hybrids, notably the operating company (opco) preferred securities, deferred payments. Two prominent cases of deferral were those of Resona Bank and UFJ Bank (through opco Tokai Preferred Capital Co.). During this period, we widened the notching of hybrid equity securities, including opco preferred securities, up to six notches below the ICR of the issuing groups. In the cases cited, the banks avoided liquidity problems after the payment deferrals: UFJ was merged with higher-rated Mitsubishi Tokyo Financial Group, and Resona Bank was under the direct control of the government.

A more recent example is the U.K. bank Northern Rock PLC, which has received significant liquidity support from the U.K. government since September 2007 and was nationalized in February 2008. The liquidity support includes a government guarantee arrangement that covers Northern Rock's deposits and senior unsecured wholesale funding, but explicitly excludes its subordinated capital issues. Northern Rock's preference shares (a Tier 1 capital instrument) were included within the nationalization, and ownership of them has consequently transferred to the government, with compensation to be determined by an independent valuer. These preference shares are now rated 'D' to reflect the impact on the prenationalization investors, who have not, to date, received any compensation for the change in ownership. Northern Rock's two other Tier 1 issues remain with their existing owners and are up-to-date with coupon payments.

Our approach would be similar in the case of an entity whose ICR benefited from support of a strong parent, but where we doubted whether parental support would be extended to the subsidiary's hybrid capital.

Rating The Issue: The Rating Approach To PIK Debt

PIK debt can pay interest in cash or in-kind in certain circumstances. These obligations are typically issued by speculative-grade corporates. PIK means that the investor, in lieu of cash, receives more of the same note, or that the note's principal is increased. There are several forms of PIK debt. In their simplest form, PIK notes pay interest in kind from the outset and for the life of the instrument. These are similar to zero-coupon bonds. Although such issues can help highly leveraged companies conserve cash, the generally steep interest rate and rapid accretion give the issuer a strong incentive to refinance the issue. Our ratings for such issues are not notched down to reflect default risk to a

greater extent than for ordinary debt issues of the company-—only to reflect subordination (if applicable).

Some PIK debt initially requires cash interest payments, but gives the issuer the option of paying in-kind later. Such an issue is analogous to deferrable payment equity hybrid securities. Although the PIK option is contractually permitted, the expectation is that the company will pay cash unless it faces severe financial distress. Accordingly, we reflect that risk with additional notching (for deferral risk) at the time of issuance.

Toggle notes are somewhat different from the two types described above, in that they are designed to facilitate switching back and forth between cash payment and PIK distributions, according to the preferences of the issuer. (In some cases mixed cash/PIK payments are also permitted.) When the PIK option is utilized, there is a bump-up in the interest rate, intended to make the investor relatively indifferent. With appropriate disclosure at the time of issuance, the investor knows to expect a toggling cash/PIK payment pattern. The fact that the issuer is noninvestment grade also helps to support this expectation. Where we are satisfied that disclosures are sufficient to give investors the expectation of receiving PIK at various stages of the security's life, and where the issuer is noninvestment grade at the time of issuance, we will not treat utilization of the PIK option as warranting the 'C' rating. In other words, we do not treat it as a payment deferral and we do not notch down for this PIK feature. For other forms of PIK debt, we believe that a shift from paying cash to paying in-kind indicates severe financial distress and warrants a 'C' rating. Previously, we assigned a 'D' to the issue in these situations.

Toggle notes may be senior, and even secured. We take account of this in assessing recovery prospects. In analyzing recovery prospects, however, we expect the PIK option would likely be utilized prior to a bankruptcy, and that this would thus translate into higher debt at time of default-—and so must be added when calculating recoveries.

All types of PIK notes provide a measure of flexibility that is a positive consideration with respect to issuer liquidity. We do not formally recognize equity content in toggle notes, though, given the incentive to pay in cash, and the relatively short maturities and senior ranking of the instruments-–at least as seen in the issues done to date.

Rating The Issue: Equity Unit Ratings

Companies continue to issue mandatorily convertible debt, structured as a unit that bundles two pieces:

- A corporate debt (or preferred stock) security; and
- A forward contract that requires the investor to purchase--and the company to sell--the company's common shares at a predetermined price (or formula).

Standard & Poor's may be asked to rate the underlying debt (or preferred) piece--or the unit. Such debt and/or a unit incorporates substantial equity risk.

The investor winds up with common stock--if not via conversion, strictly speaking--by fulfilling the contract obligation. Sometimes the debt is remarketed, but the company gets the new money, while unit holders still receive the stock to satisfy the terms of the equity contract.

The ratings we assign do not opine on the totality of the equity risk, but neither do we ignore the equity nature of these instruments, as explained below.

Under the current policy, the rating of the debt and/or unit is normally two notches below our corporate rating on investment-grade companies, or three notches in the case of speculative-grade companies. This level equates to the ordinary rating of a company's preferred stock, which is also an equity security of the company (although the risks incorporated in preferred ratings are, of course, somewhat different). Given the market risk that the investor takes, the assigned rating could arguably be lower; however, sizing the risk of share price changes is beyond the scope of rating analysis.

Thus, the rating on the unit applies to the company's obligation to service the debt component, as well as its obligation to issue common shares under the forward contract. The rating does not pertain to the safety of principal or the units' value. The units' ultimate value is a function of the market value of the company's common shares, and is not addressed by our rating.

Note that we apply a different approach where the purchase contract relates to shares of another company that are owned by the issuer, rather than the issuer's own common shares. In line with our market-linked bond policies, the rating on such exchangeable debt or preferred will be that of the issuer--even if the issuer is disposing of shares of a company with a very different credit profile. And, if the obligation is senior, it will carry the same senior debt rating as the issuer.

How Have Hybrid Capital Issues Performed?

Apart from the need to do so for our normal rating surveillance purposes, we monitor closely the deferral experience of rated hybrid capital issues with a view to validating our analytical perspective on hybrid capital issues. Among the characteristics of such issues, the flexibility of payments (i.e., the contractually permitted ability to defer interest or dividend payments) is generally the key to our recognition of equity content. Thus, it is important to look at the extent to which companies under stress actually avail themselves of the option to defer payments. We also seek validation of our notching policy, since, in setting the rating on hybrid issues, we notch down more than with conventional subordinated debt, under the assumption that there is incrementally greater payment risk. Under our rating definitions, if a payment is deferred or omitted, the issue rating would be lowered to 'C' (assuming the issuer is not bankrupt or insolvent).

Our findings have been mixed. Here, we consider the experience from 1995 to the present, taking account of all rated hybrid capital issues, in all regions and sectors, and including most types of conventional preferred stock, since they have deferral features similar to those in the newer forms of hybrid capital.

Corporates have accounted for the dominant share of all cases where the hybrid capital issue rating was lowered to 'C' (or the then-equivalent). We have identified 101 corporate groups that deferred or defaulted on 179 separate rated issues. The vast majority of the issuers–-95-—have been U.S. companies, and the majority of these issuers were speculative grade when the hybrid issue rating was first assigned. Only nine issuers deferred when their issuer credit ratings were higher than the 'B' category (this excludes Fannie Mae and Freddie Mac, which did not have ICRs). In 49 cases, the issuers never deferred in advance of a bankruptcy filing or default on conventional debt. In nine cases where issuers went bankrupt or defaulted on conventional debt, they deferred hybrid payments one year or more before this

occurred. In 21 of the 101 cases, the issuers deferred but did not subsequently file for bankruptcy or default on conventional debt—at least as of yet.

We have noted 14 instances of insurance companies that deferred or defaulted on issues--all but one U.S.-based. In eight of the cases—including, most notably, Conseco Inc.--the default occurred effectively concurrent with either a bankruptcy filing by the issuer or with the main operating units being placed under regulatory supervision. In five of the other six cases (Lumbermens Mutual Casualty Co., Southwestern Life Holdings Inc., Lasalle Re Holdings Ltd., Gerling Global Finance Alpha B.V., and Scottish Re Group Ltd., which is currently deferring), deferral commenced before the issuer ceased ongoing operations or filed for bankruptcy. In some of these cases, the holding companies' hybrids defaulted, whereas the operating companies did not. This shows that the hybrids provided a degree of protection to the operating companies. In another current example, Syncora Holdings Ltd., formerly Security Capital Assurance Ltd., deferred on its series A perpetual noncumulative preference shares: it remains current on its debt obligations. Many Japanese insurers maintained payments on their hybrids through periods of stress. One insurer, Asahi Mutual Life, deferred payment on its unrated "kikin" hybrids in 2003, while remaining current on its senior financial obligations.

In financial institutions (excluding insurance), we have observed 13 examples of deferral or default on rated hybrid capital issuers. Four were U.S. finance companies: Dynex Capital Corp. deferred for an extended period and never defaulted on conventional debt, FINOVA Capital Corp. and New Century Financial Corp. filed for bankruptcy, not having previously deferred, and Thornburg Mortgage, despite modifying the terms of its hybrid, continues to remain current on its conventional debt. Fannie Mae and Freddie Mac, government-related entities that the U.S. Treasury recently took into conservatorship, accounted for two notable instances. Payments were halted on a combined 38 hybrid issues ($36 billion). We also identified seven instances of deferral at banking groups—two Japanese (Resona Bank Ltd. and UFJ Bank Ltd.), one Thai (TMB Bank Public Co. Ltd.), three U.S. (Bay View Capital Corp., Riggs National Corp., and IndyMac Bank) and one European (Northern Rock plc). Interestingly, in only one of those seven--IndyMac--was there a default on other obligations following deferral on hybrid securities. The case of Riggs is noteworthy in that the company was not in immediate danger of violating regulatory capital standards. Rather, the company was mired in scandal, and the Federal Reserve exercised its broad authority to intervene in an institution it viewed as troubled.

Also noteworthy is Northern Rock plc. Its preference shares were included in the February 2008 nationalization of the bank, which meant that ownership mandatorily passed to the U.K. government from the investors. To date, the investors have not received any compensation. Our rating on this issue is 'D', not the 'C' rating we typically apply where interest is deferred as permitted in the terms of the agreement. This is because of the forced transfer of the preference shares to the U.K. government. We believe that any compensation to the original investors will be limited because it will be based on the estimated worth of the preference shares if Northern Rock had not been supported by the U.K. authorities. On July 4, 2008, Northern Rock announced that it will not declare or pay a dividend on the noncumulative preference shares until further notice, and the annual coupon was not paid on that date. Payments on debt have continued without interruption.

Among unrated U.S. bank holding companies, City Holding Co. deferred payments on its preferred shares in July 2001

and resumed in July 2002. Smaller unrated institutions are exhibiting an uptick in hybrid deferrals. We are aware of cases of unrated hybrids of German banks that deferred payments--e.g., certain hybrid securities of Allgemeine Hypothekenbank Rheinboden AG (now named Correal), Westdeutsche Landesbank, and Sachsen LB.

In interpreting financial institutions' results during the past decade, it is important to keep in mind that senior debt performed very well during 1995-2006 (and in 2007, too, excluding unregulated U.S. finance companies). Indeed, in mature markets, no regulated banks' rated senior debt defaulted during this time.

We have pondered why companies under pressure haven't been more proactive in utilizing the deferral option under outstanding hybrid capital issues. We believe it is most likely due to some combination of the following factors:

- The decline in the company's fortunes was too rapid for deferral to be possible. Examples of this include PG&E, Enron, Parmalat, and more recently, New Century.
- Management might have been too concerned about the "headline risk" associated with deferring, particularly as it could affect its ability to maintain capital markets access.
- The company might not have had enough hybrid capital outstanding for the potential cash-flow savings resulting from a deferral to be meaningful.
- Management was unrealistic in its assessment of its financial condition.

We believe it is unwise to read too much into our historical observations, given limitations of the data and the uptick of deferrals we are seeing in the current environment. While past utilization of the deferral option is less frequent than we might have expected, companies are loath to curtail or eliminate even their common dividends for many of the same reasons cited above—and the equity-like features of common stock set the standard against which we assess hybrid capital instruments. Perhaps future experiences will be different, given the representations that have been made about the equity benefits of the new generation of hybrids. In the sizable area of hybrid capital of regulated financial institutions, the widespread tendency for bank regulators to favor market discipline may lead to a higher incidence of payment deferral during the next decade compared to the 1995-2006 period. One conclusion we draw is that the deferral feature's value is more tangible in the regulated context and/or where there are mandatory triggers. We expect a higher incidence of coupon deferrals and suspensions on hybrid securities of regulated financial services companies in the future, as the amount of issuance grows. We will continue to track the performance of hybrid capital issues in all sectors to help us gauge the appropriateness of our conclusions regarding equity content and payment risk.

Appendix

Table 5

Essential Features Required For Equity Content

	Intermediate-Adequate	Intermediate-Strong	High	High
Interest deferral	Optional – Five years unfettered with default no earlier than five years	Optional – Five years unfettered with default at no earlier than 10 years Or - Mandatory deferral with moderately tight triggers	Mandatory deferral with tight triggers	
Term - capital permanence	20 years or more remaining to the "effective maturity"*			
Term - refinance risk	Where an incentive to redeem early exists, there must be both (1) a replacement provision or equivalent regulatory oversight, and (2) any incentive (or penalty if not redemed) must not be excessive.			
Subordination	Subordinated			
Mandatory conversion				Mandatory conversion to common stock within three years, with the conversion price not lower than initial share price.

*Refer to table below for more detailed criteria relating to "effective maturities".

© Standard & Poor's 2008.

Table 6

Provisions In Hybrid Instruments Viewed As The Equivalent Of Maturity

Hybrid equity content treatment in our ratios ends when less than 20 years remain until the "effective maturity." At that point it is treated as debt for ratio purposes, with the benefits incorporated qualitatively in our analysis. This table summarizes which maturity-like provisions are viewed as an "effective maturity."

	Call (with no step-up)	**Call with moderate step up or equivalent* (For investment-grade issuers 26 bps-100 bps is viewed as moderate. "Moderate" can vary depending on local interest rates.)**		**Scheduled maturity (co. is required to make best efforts to redeem)**	**Final maturity (nonpayment upon maturity is a default)**
Standard & Poor's approach	Not viewed as an effective maturity, unless the call is within five years of the issuance date.	For unregulated issuers**: This is viewed as an effective maturity unless there is a replacement capital covenant (RCC). (The expiration date of the RCC would be viewed as an effective maturity).	For regulated issuers:***: This is not viewed as an effective maturity (and no RCC is needed) because the regulator ensures replacement where appropriate. For a step-up with a call before year 10 (even where the regulator accepts that), we require a legally binding replacement covenant.	Always viewed as an effective maturity	Always viewed as an effective maturity

Table 6

Provisions In Hybrid Instruments Viewed As The Equivalent Of Maturity (cont.)

Rationale	Issuer calls are standard in almost all long-term instruments and there is no obligation to redeem that inflicts costs (the market does not assume it will be called, so there is limited headline risk if it is not called). A call before five years is unusual and we take it to be an indication of a lack of permanence, even with a RCC.	The step-up presents an incentive to call and a penalty rate if not called, which undermines permanence. Given that the potential increase in cost is limited to a moderate step-up, the RCC is adequate to offset concerns about permanence. (In contrast, an RCC does not offset the lack of permanence in a short-dated issue.)	For regulated issuers, the regulatory oversight is viewed as adequate to ensure it will be replaced when its benefits are needed. However, where the call is before year 10, we require the even stronger RCC, as regulatory oversight doesn't ensure permanence to the extent an RCC does.	Unless there is a market disruption event, the company is obligated to redeem, which can impose onerous costs on the issuer. This is therefore viewed as an effective maturity.	The instrument must be repaid at this time or else an event of default is triggered.
How the company is likely to react under varying circumstances					
Doing well	Might or might not call, depending on its view of future interest rates	Will redeem	Will redeem	Will redeem	Will redeem
Under moderate stress	Won't retire the instrument (it's equity-like when needed)	Will redeem	Will redeem	Will redeem	Will redeem
Under heavy stress	Won't retire the instrument (it's equity-like when needed)	Won't retire the instrument (it's equity-like when needed)	Won't retire the instrument (it's equity-like when needed)	Will redeem	Will redeem

*"Step-up equivalents" are features that, similar to an increase in the coupon, motivate the issuer to call the issue. For example, a discrete call followed by a non-call period longer than five years would moderately motivate a call and an RCC would be required to achieve equity content, otherwise we would view that as an effective maturity. Features deemed to present a greater-than-moderate motivation to redeem cannot be remedied by an RCC. For example, a rate composed of the "higher of" a specified short-term, mid-term, and long-term interest rate after the first call (e.g. at year 10) is not curable by an RCC unless the rate is haircut to compeltely eliminate the penalty rate. Similarly, we would view a rate comprised of the "highest of" various uncorrelated interest rates such as Treasury (U.S.), Libor (U.K.), and the like as an effective maturity, even with an RCC. We also view a floating interest rate combined with a floor following the call date as an effective maturity even with an RCC (with an exception made in certain instances in regulated sectors).

** Unregulated issuers include North American insurance holding companies, most corporates, utilities, asset managers, security exchanges and clearinghouses. We also view finance companies as unregulated in this respect. (However, for tolerance limits and treatment in ratios, finance companies follow the regulated approach. See table below.)

***Regulated issuers include banks, U.S.-based securities brokers, most insurance issuers outside North America, and insurance operating companies in North America.

Table 7

Equity Unit Structures (Mismatched Mandatory Convertibles)

				Treatment in year #								
Maturity of front end (security issued at outset)	Forward contract is exercised at:	Mismatch	Treated as dual financing of debt and equity	1	2	3	4	5	6	7	8	9
five years	three years	yes	yes	($100 debt) + ($100 debt w/ equity content)			$100 debt + $100 equity		$100 equity			
eight years	five years	yes	yes	$100 debt		($100 debt) + ($100 debt w/ equity content)			$100 debt + $100 equity			$100 equity
five years	five years	no	no	$100 debt		$100 debt with equity content			$100 equity			
three years	three years	no	no	$100 debt with equity content			$100 equity					

© Standard & Poor's 2008.

The mechanics of a typical unit structure: A unit is made up of two components: (a) a debt issue and (b) a forward contract obligating the investor to purchase common shares in three years. At year three, the debt owned by the initial investors is replaced with common stock and the debt is separately remarketed to new investors (for new proceeds). To achieve tax deductibility the structure typically separates (mismatches) the date of the debt maturity and the date of the exercise of the stock purchase/issue contract by at least two years.

The equity unit involves two sets of proceeds. It starts as $100 in debt and in three years becomes a total issuance of $200, made up of $100 in debt plus $100 in equity. In respect to capital ratios, we roll the clock forward three years and apply both the resulting debt and equity issuances to the ratios today. Where our understanding is that the second set of proceeds will be used for debt repayment, we ignore the second set of proceeds and apply "high" equity content, without the dual financing treatment, similar to our approach for the basic mandatory convertibles.

Table 8

How Equity Content Is Applied In Capital Ratio Analysis, Across Sectors

		Corporates (Includes regulated utilities, asset managers, security exchanges and clearinghouses)***		Insurance (Excludes bond insurers that have similar, but slightly different tolerance limits)	Financial institutions (Includes securities brokers and unregulated finance companies)
		Debt/equity	Maximum allowed	Treated as 100% equity, up to allowable limits	Treated as 100% equity, up to allowable limits
High		**Equity = 100%** Debt =0%	General guideline is 15%	Up to 25% of TAC (35% in Europe & Canada*)	Up to 50% of ACE
Intermediate	Strong	**Equity = 50%** Debt = 50%	General guideline is 15%	Up to 15% of TAC in US & Bermuda (25% for European and Canadian insurers*)	Up to 33% of ACE (preferred with unlimited deferral)
					Up to 18% -or- 33%** of ACE (enhanced trust preferred i.e., more than five years deferral)
	Adequate				Up to 12% of ACE (upper tier 2, trust preferred, five years deferral)
Minimal		**Equity = 0%** Debt = 100%	NA	NA	NA

© Standard & Poor's 2008.

ACE = Adjusted common equity (common equity + minority interests - unaccrued dividends - revaluation reserves - goodwill - interest only strips - tax loss carry forwards +/- pension benefits +/- other adjustments).

TAC = Total capitalization (total shareholders' equity + preferred shares + minority interest + debt -appreciation on fixed-income securities).

Note: The higher caps (maximum allowed) are cumulative of amounts in the lower caps. E.g. in applying the caps for financial institutions, we would first look at intermediate adequate instruments up to 12% (ignoring adequate instruments that were over the 12% cap), then apply enhanced trust preferred from that amount up to 18%, etc.

*In the U.S. & Bermuda where structural subordination is high, regulators allow holding company debt to fund operating company capital. So our tolerances are 25% and 15% of TAC for high and intermediate instruments, respectively. In Europe and Canada where structural subordination is low, regulators exclude holding company debt from groups' solvency, so tolerance limits are higher at 35% and 25% of TAC for high and intermediate instruments, respectively.

**The 18% basket for financial institutions only applies to North American banks and security brokers, due to regulation. For non-N.A. banks, and for all unregulated finance companies (even in N.A.) enhanced trust preferred is

treated like preferred stock, i.e. up to 33%.

***In the corporate/industrial sector only, the interest payments are treated (partially) as common dividends. For "intermediate" issues, they would be treated as 50% interest and 50% common dividends (which are excluded from coverage ratios). In the financial and insurance sector all distributions are treated as interest, and only capital ratios are modified to reflect equity credit.

N.A.--Not applicable.

Table 9

Assigning Issue Ratings: Number of Notches Below the Issuer Credit Rating (ICR)

	Investment-grade rating		Speculative-grade rating	
	Optional deferral	**Mandatory deferral**	**Optional deferral**	**Mandatory deferral**
Subordination	1	1	2	2
Deferral	1	Typically 2**	1	Typically 2**
Total notches	2 *	3	3	4

* The overwhleming majority of hybrid issues are investment grade with optional deferral and are rated two notches below the ICR.

**Where there is a mandatory trigger the notching for DEFERRAL would typically be 2 (or more if there is a greater-than-usual likelihood of the trigger being breached). Where there is a mandatory trigger and (a) the company credibly says it will make its best efforts to settle with common shares and (b) the risk of the trigger being breached is relatively remote, the notching for DEFERRAL would typically be 1.

Notching of mandatory convertibles and equity units: Notching of the issue rating mirrors our approach to notching of preferred stock (even if the coupons are not deferrable and the debt host is senior). Our rating on the issue does not opine on the totality of the equity risk to investors.

Subject: RE: Privileged and Confidential - Fair Hydro Plan - PILs Exemptions

Hi Sriram,

I received the following responses to your question on structure and types of potential income:

1) OPG is planning for the initial financing entity to be a trust. However, the Fair Hydro Plan Act allows for flexibility on the types of structures that can be used (trusts, corporations, partnerships, limited partnerships, other special purpose entities). Because the Fair Hydro Plan envisions a 30 year program, it is important that the PILs exemptions be broad enough to cover all of the various types of entities in the event that a different form is used for one or more future financing entities.

2) The memo we sent addressed types of income that might arise in a trust. As you'll have seen from the memo, it is strongly recommended that a PILs exemption be promulgated which would exempt from PILs any income distributed by a trust financing entity to OPG as beneficiary. This would allow the trust to flush its income to OPG as beneficiary. If a corporation is used as a financing entity, it is important that any income earned in that corporation be exempt from PILs. If a partnership or limited partnership is used as a financing entity, it is important that any income distributed to OPG (or any of its subsidiaries) as a partner or limited partner be exempt from PILs.

OPG is keen to move forward on these regulations. Without the regulations and the PILs exemptions, any taxes payable by a financing entity (whether it's a trust, corporation or otherwise), will be collected from ratepayers which will eat up part of the fair allocation amounts. In addition, the costs of the Fair Hydro Plan will increase as the rating may be affected and the capacity available from the debt markets will decrease as the lenders add a contingency for future taxes that may be collectible at some point in the future from ratepayers.

I would suggest we set up a call to further discuss, perhaps next week.

Please let me know if that makes sense,
Scott

Scott,

Thank you for sharing the Torys Memorandum, dated May 17, 2017, with us.

The structure was not finalized at the time we first reviewed the proposal. Based on the Memorandum, it appears that the type of structure is still being determined. If there has been progress in this regard, we would be happy to conference with Torys and OPG to discuss the appropriate next steps.

As the PILs relief sought appears to be appropriate given the policy objective, we would probably recommend amendments to ensure the structure is not subject to PILs. However, we would suggest that a ruling from the tax administration division may be appropriate in this case, provided the final structure is not subject to regular federal tax and if authority can be found in the existing legislation and regulations.

Our recommendation would depend on the type of structure that is ultimately selected and on other particulars such as the types of income that would be earned in the special purpose vehicle.

Regards,

Sriram

Hi Sriram, Ron,

Further to our conversations from earlier this spring, we received the following from OPG on its request for PILs exemptions relating to Ontario's Fair Hydro Plan. Please let me know if you have questions or comments. Torys and OPG have also asked whether we would like to set up a call in the next few days to discuss.

Thanks,
Scott

TORYS LLP

MEMORANDUM

PRIVILEGED AND CONFIDENTIAL

To	Ontario Power Generation Inc.	**Date**	May 17, 2017
From	Torys LLP, Toronto Tax		
Re	Fair Hydro Plan – PILs Exemption		

As part of the Fair Hydro Plan (the "Plan"), it is expected that Ontario Power Generation Inc. will act as the financial services manager and that Ontario Power Generation Inc., or a wholly-owned corporate subsidiary of Ontario Power Generation Inc. (in either case, "OPG"), will establish one or more new financing entities that will raise debt to acquire "investment assets" from the IESO. A Bill to implement the Plan has been introduced to the Provincial Legislature [1] and there is flexibility under the Bill for the new financing entity to be a corporation, a trust, a limited partnership or a partnership.

We understand that the Province would like to minimize, to the extent possible, Federal and Provincial taxes and "payments in lieu of taxes" ("PILs") under the *Electricity Act, 1998* (Ontario) (the "OEA") payable by a financing entity as the costs of any of those taxes payable by a financing entity will be passed on to ratepayers through the collection of the clean energy adjustment under the Bill and the associated regulations. Accordingly, we understand that the Province is considering the possibility of making regulation changes to exempt the income arising as a consequence of the Plan from PILs. In order to assist the Province in their consideration of this regulation change, including the scope of any such amendment, we have set out below a summary of: (i) the tax treatment of the income of the financing entity under the *Income Tax Act* (Canada) (the "ITA"), the *Taxation Act, 2007* (Ontario) (the "OTA"), and the OEA, (ii) certain matters relating to the computation of the financing entity's income for tax purposes, and (iii) our recommendations with respect to how the Province can ensure that PILs arising from the Plan are minimized.

It is also important to note that Ontario Power Generation Inc. will not bear any of the tax costs arising as a consequence of participating in the Plan. If there are any tax costs, they will be borne by ratepayers through the clean energy adjustment.

[1] Bill 132, *An Act to enact the Ontario Fair Hydro Plan Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998*, 2nd Sess, 41st Leg, Ontario, 2017 (first reading May 11, 2017).

Tax Treatment of Income of Financing Entity

As noted above, there is flexibility in the draft legislation to implement the Plan relating to the form of a financing entity. What follows is a summary of the tax treatment of the income of the financing entity if it is a corporation, a trust or a limited partnership/partnership, as well as the tax treatment of amounts paid or allocated to OPG as a shareholder, beneficiary or a partner, respectively, of the financing entity:

Form of Financing Entity / OPG	Treatment of Income under ITA/OTA	Income Subject to PILs
Corporation	-Income of the corporation should be exempt from tax	Yes
OPG as shareholder of corporation[2]	-Dividends paid to OPG should be exempt from tax	Yes
Trust	-Income should be subject to tax, although the trust can reduce its income by the amount of its income which is paid or made payable to its beneficiaries	No
OPG as beneficiary of trust	-Trust income paid or made payable to OPG as a beneficiary should be exempt from tax	Yes
Limited Partnership/Partnership	-Limited Partnership/Partnership is not generally a "taxpayer" although income is computed at the partnership level and allocated to partners for tax purposes	No
OPG as partner of limited partnership/partnership	-Partnership income allocated to OPG as a partner should be exempt from tax	Yes

As summarized, if the financing entity is a corporation, the income of this corporation would be subject to PILs, and further, any amounts paid or allocated by the financing entity to OPG, as a shareholder, beneficiary or limited partner/partner of the financing entity, would similarly be subject to PILs. Consequently, any regulation change to exempt the income of the financing entity from PILs under the OEA should be broad enough to accommodate the three possible forms of financing entity and address PILs at both the financing entity level (in the case of a corporation) and the shareholder, beneficiary and limited partner/partner level.

[2] We note that corporations are generally entitled to claim a deduction under section 112 of the ITA (and any OTA equivalent) equal to the amount of taxable dividends received from another Canadian corporation, with the result that taxable dividends are generally not subject to tax under Part I of the ITA (and any OTA equivalent). To illustrate the scope of the PILs exemption under consideration by the Province, we have ignored this deduction in preparing this chart.

Income Computation Matters

As part of the Plan, it is expected that the financing entity will raise debt and acquire "investment assets" from the IESO. The investment assets do not appear to be debt instruments from a commercial perspective on the date they are acquired, but rather seem to be intangible assets. Given the unique nature of the investment assets, the tax analysis that is generally relied on by a financing entity in a typical securitization transaction (which involves interest-bearing debt obligations) is not applicable. There are no specific rules in the ITA or OTA which govern the manner which the investments assets should be treated for tax purposes, such that further analysis will need to be conducted in order to determine whether the investment assets are on income or capital account to the financing entity, and that the "cost" of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.

In addition to the tax implications relating to the investments assets, the following additional matters, among others, are relevant in computing the income of the financing entity:

- In order to be deductible, an expense must satisfy the requisite income earning purpose test;
- Expenses which are owing to a non-arm's length person must be paid in a timely fashion so that the expense does not give rise to an income inclusion;
- Capital losses may generally only be offset against capital gains, such that consideration must be given to the character of the assets and liabilities of the financing entity to ensure there are no mismatches;
- If the financing entity incurs foreign-currency denominated debt, any related foreign currency hedging instrument will need to be sufficiently "linked" to the underlying debt to ensure capital treatment of the hedge; for example, if the period of the hedge does l not match the period of the related debt, the financing entity will realize gains or losses on the hedge that will not be offset with realized losses or gains on the debt; and
- If the financing entity is a trust, it will be necessary for interests in the trust to "vest indefeasibly" or be structured as units where at least 95% of the units, by fair market value, are redeemable on demand by the holder to ensure that the trust is not deemed to dispose of any capital property under the "21 year" rule.

Recommendations

In order to ensure that the taxes arising under the Plan are minimized so that the overall cost of the Plan (over its 30 or more years of existence) to ratepayers is minimized and to ensure that Ontario Power Generation Inc. is kept whole from tax costs arising as a consequence of participating in the Plan, the following exemptions from PILs are required:

1) If the financing entity is a trust: Any income paid or made payable to OPG by the trust should be exempt from PILs. If this PILs exemption is not promulgated, the income will

Commented [GH1]: Historically, one of the purposes of the PILs regime was to ensure publicly-owner (aka government-owned) electricity entities would be forced to operate on equal footing with privately held companies by paying the equivalent of corporate income taxes (albeit to the OEFC rather than to the Federal and Provincial governments).

As OPG enacts new businesses (eg. bioenergy, solar, isotope sales and new markets etc), these taxes would similarly be 'PILs' and remitted to OEFC.

Providing this tax exemption for OPG would be seen as an unfair advantage for a publicly-owned corporation, particularly in the event there are any future desires to privatize. In addition as OPG is not mandated to be the financial manager, it is unclear if another financing entity would be eligible for these PILs exemption.

Commented [SK82]: Are there limitations in the role of the financing entity, and would it (by utilizing this PILs exemption) be able to expand its breadth into other operating businesses?

not be distributed out of the trust, tax will be payable by the trust on the income and the costs of that tax payable will be passed on to ratepayers through the clean energy adjustment. This will be a significant cost.

2) If the financing entity is a corporation: The corporate financing entity should be exempt from PILs and any dividends paid to OPG should be exempt from PILs. Again, if these PILs exemptions are not promulgated, no dividends will be paid to OPG and the costs of all PILs paid by the financing entity will be passed on to ratepayers through the clean energy adjustment. This will be a significant cost.

3) If the financing entity is a partnership or limited partnership, any income allocated to OPG should be exempt from PILs.

4) If the financing entity is any other form of special purpose vehicle, the income of such entity should be exempt from PILs and any income from such special purpose vehicle allocated, paid or taxable in the hands of OPG should be exempt from PILs.

Commented [SK83]: Unclear why 'the income will not be distributed out of the trust' if the PILs exemption is not promulgated. What exactly is stopping the income from being distributed to OPG?

Why can't OPG (in its capacity as a larger organization) manage its tax obligations (PILs) appropriately upon receiving income paid (or payable) by the trust?
(ie. If the financing entity/trust has less maneuverability, why can't OPG as a larger organization engage in better tax planning).

Commented [SK84]: What is meant by significant?

From my understanding no taxes will be paid on the 95% of the borrowings of the fund.

Furthermore there will be a benchmark on the weighted average borrowing and the trust will receive a gain/benefit/income on the 5% if it beats the benchmark.

Hi Ron,

I'm okay with the outstanding issues piece. If you're attending this morning, it would be helpful to gauge the level of support and the timing of the requested indemnities.

Likely, we will received merged set of questions and comments from MOF Legal and be in a position to send over to Energy policy shops (EIGS included?), Energy Legal, etc. We will run it by you beforehand.

Thanks,

John

Subject: FW: Revised Electricity Assessment Note

Hi Everyone – Please see the attached draft assessment note for the electricity reg's tracking to TB/MBC tomorrow. I'd appreciate any input or feedback by first thing tomorrow. As you can see in the below chain, we've also simultaneously shared the latest version with senior management so the note is subject to change.

OPCD/TBS Legal – We've left placeholders in the risk section for accounting and legal risks. I am hoping that risks from previous assessment notes can be re-purposed and used for this note (assuming they haven't been mitigated). Frankly, I just didn't know which ones were the most important to flag. Please let me know if you have any concerns.

Thanks and happy to discuss.

Chris

Subject: Revised Electricity Assessment Note

Hi Everyone – Please see the attached revised electricity note taking into consideration the conversation at today's re-group.

For the financial risks, we were unable to locate any material that spoke about the source of data or assumptions that supports the voted appropriation estimates for the social programs. As such, we haven't been able to address Karen's concern on documenting the assumptions behind the financials. We'll continue to look.

Please let me know if Maria, Cindy or Karen have any further comments on the material. Also, sharing the latest draft of the submission with tracked changes from the version shared this morning.

Thanks,
Chris Skubel

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions	**2017-18**	**2018-19**	**2019-20**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base: Global Adjustment Refinancing*	0.0	0.0	0.0
Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended	0.0	0.0	0.0
Total Potential Fiscal Impact	0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.
^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Commented [npp1]: For an interim period and/or as required? The role of the OPGTrust may not be fully presented otherwise.

Commented [npp2]: •Consider whether additional details are necessary to more clearly present the transaction overview:
•The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a Regulatory Asset.
–OEB would determine rates to allow IESO to recover under-collection recorded in its variance account in the event the under-collection is not sold.
IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust

Investment Asset
•The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an "Investment Asset".
–The legislation establishes property rights for the Investment Asset such as the right to collect principal and interest and financing costs in the form of the clean energy adjustment from eligible consumers.
•The Investment Asset may in turn be sold to other investors or group of investors.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	359	492	504	517

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

Commented [npp3]: For purposes of…have been provided?

Commented [npp4]: Details in the regulations will impact the final accounting analysis (IESO ability to recognize a rate regulated asset, control of OPG Trust by OPG, etc.)

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

The fiscal impact associated with the Fair Hydro Plan will be determined by how the series of complex transactions are accounted for on the Province's Consolidated Financial Statements which are prepared in accordance with public sector accounting standards established by CPA Canada. A number of details yet to be finalized through the regulations and various commercial agreements will impact the final accounting analysis.

It is anticipated that both the IESO's and OPG's external auditors will provide independent accounting opinions on the appropriate accounting for elements of the FHP structure related to each entity, respectively. Based on the audited financial results for these organizations, supported by the anticipated accounting opinions, the Office of the Provincial Controller will prepare the Province's consolidated financial statements.

At this time, the Auditor General has voiced several concerns regarding the planned accounting treatment for the Fair Hydro Plan as related specifically to the Global Adjustment component which is expected to impact the Province's financial results for the first time in 2017/18. The Auditor General has also publicly communicated her opposition to a change in the IESO's accounting policy to reflect rate regulated balances on its books. The Province supports the IESO's accounting treatment as more fairly presenting the economic substance of the entity's market-related activities.

The Auditor is currently reviewing the Province's accounting analysis related to the Affordability Fund which reflects a $100M transfer payment to be reflected in the Province's 2016/17 Public Accounts.

If the Auditor General does not concur with the Province's accounting treatment, including the change in accounting treatment by the IESO, she may qualify her audit opinion on the Provinces' financial statements in the Public Accounts.

- ~~*Placeholder for accounting issues… [OPCD]*~~

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Name of analyst:	Chris Skubel/ Afshin Malekzadeh	**Phone number:**	416-327-2151
Date:	June 13, 2017	**Log number:**	
Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **Update:** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **<u>Update:</u>** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **<u>Update:</u>** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **<u>Update:</u>** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be ~~created~~ increated in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

Subject: FW: Revised Electricity Assessment Note

Hi Everyone – Please see the attached draft assessment note for the electricity reg's tracking to TB/MBC tomorrow. I'd appreciate any input or feedback by first thing tomorrow. As you can see in the below chain, we've also simultaneously shared the latest version with senior management so the note is subject to change.

OPCD/TBS Legal – We've left placeholders in the risk section for accounting and legal risks. I am hoping that risks from previous assessment notes can be re-purposed and used for this note (assuming they haven't been mitigated). Frankly, I just didn't know which ones were the most important to flag. Please let me know if you have any concerns.

Thanks and happy to discuss.

Chris

Subject: Revised Electricity Assessment Note

Hi Everyone – Please see the attached revised electricity note taking into consideration the conversation at today's re-group.

For the financial risks, we were unable to locate any material that spoke about the source of data or assumptions that supports the voted appropriation estimates for the social programs. As such, we haven't been able to address Karen's concern on documenting the assumptions behind the financials. We'll continue to look.

Please let me know if Maria, Cindy or Karen have any further comments on the material. Also, sharing the latest draft of the submission with tracked changes from the version shared this morning.

Thanks,
Chris Skubel

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.
^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Commented [npp1]: For an interim period and/or as required? The role of the OPGTrust may not be fully presented otherwise.

Commented [npp2]: •Consider whether additional details are necessary to more clearly present the transaction overview:
•The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a Regulatory Asset.
–OEB would determine rates to allow IESO to recover under-collection recorded in its variance account in the event the under-collection is not sold.
IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust

Investment Asset
•The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an "Investment Asset".
–The legislation establishes property rights for the Investment Asset such as the right to collect principal and interest and financing costs in the form of the clean energy adjustment from eligible consumers.
•The Investment Asset may in turn be sold to other investors or group of investors.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	359	492	504	517

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

Commented [npp3]: For purposes of…have been provided?

Commented [npp4]: Details in the regulations will impact the final accounting analysis (IESO ability to recognize a rate regulated asset, control of OPG Trust by OPG, etc.)

- ~~Lastly, t~~There are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.
- Lastly, TB/MBC has requested detailed consumer impacts with assumptions and methodologies specified and documented to support better decision making and achieving the intended program goals.

Accounting

The fiscal impact associated with the Fair Hydro Plan will be determined by how the series of complex transactions are accounted for on the Province's Consolidated Financial Statements which are prepared in accordance with public sector accounting standards established by CPA Canada. A number of details yet to be finalized through the regulations and various commercial agreements will impact the final accounting analysis.

It is anticipated that both the IESO's and OPG's external auditors will provide independent accounting opinions on the appropriate accounting for elements of the FHP structure related to each entity, respectively. Based on the audited financial results for these organizations, supported by the anticipated accounting opinions, the Office of the Provincial Controller will prepare the Province's consolidated financial statements.

At this time, the Auditor General has voiced several concerns regarding the planned accounting treatment for the Fair Hydro Plan as related specifically to the Global Adjustment component which is expected to impact the Province's financial results for the first time in 2017/18. The Auditor General has also publicly communicated her opposition to a change in the IESO's accounting policy to reflect rate regulated balances on its books. The Province supports the IESO's accounting treatment as more fairly presenting the economic substance of the entity's market-related activities.

The Auditor is currently reviewing the Province's accounting analysis related to the Affordability Fund which reflects a $100M transfer payment to be reflected in the Province's 2016/17 Public Accounts.

If the Auditor General does not concur with the Province's accounting treatment, including the change in accounting treatment by the IESO, she may qualify her audit opinion on the Provinces' financial statements in the Public Accounts.

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Branch / Division:	GGPR / PEMD / Treasury Board Secretariat

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**

Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **Update:** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **<u>Update:</u>** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **<u>Update:</u>** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **<u>Update:</u>** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be ~~created in~~created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

Hi Gavin, et al,

Thanks.

My comment on "Would this suggest a potential Energy request to the OFA for an MOU like the ORECA one?" is more an internal one to reach out to Energy staff to ask. It doesn't need to go back to CO.

Ron

Hi Anna and Gavin,

Attached is the latest CBN for Energy's OESP reg. It is tracking to June 27th as part of the first of two bundles of regulations required for the implementation of the Ontario Fair Hydro Plan.

CO has a hard deadline of 2:00 today, so I'm wondering if you guys can please have your teams review and provide comments (if any) to me by 1:30?

Thanks,
Dave

Hi,

Can we get copies of the proposed draft regs too.

Do we need to check with MOF Legal on any components? And see if TBS staff are reviewing and commenting too.

Thanks,
Ron

Hi Gavin, et al,

Thanks.

My comment on "Would this suggest a potential Energy request to the OFA for an MOU like the ORECA one?" is more an internal one to reach out to Energy staff to ask. It doesn't need to go back to CO.

Ron

Hi all,

Please find attached the CO note on the first part of the implementation of the Ontario Fair Hydro Plan. Could you please review ASAP and provide your edits to Ron by noon today?

Comments are due back to DMO by 1:30 p.m. today. Sorry for the short turnaround time.

Thanks,
Gavin He

Hi Anna and Gavin,

Attached is the latest CBN for Energy's OESP reg. It is tracking to June 27th as part of the first of two bundles of regulations required for the implementation of the Ontario Fair Hydro Plan.

CO has a hard deadline of 2:00 today, so I'm wondering if you guys can please have your teams review and provide comments (if any) to me by 1:30?

Thanks,
Dave

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy
Fair Hydro Plan Regulations

Cabinet (info) Feb 15, 2017	TB/MBC and Cabinet March 1, 2017	Announcement March 2, 2017	TB/MBC May 9, 2017	Cabinet May 10, 2017	Introduction May 11, 2017
Royal Assent June 1, 2017	TB/MBC June 13, 2017	Cabinet June 14, 2017	Program Effective Date July 1, 2017		

Summary of Proposal

The proposed regulations are consistent with Cabinet direction. [TBC]

Context for Decision:

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. OFHP includes some benefits for all consumer classes as well as targeted benefits to those identified as having the greatest need, and includes the following major components:

- Refinancing a portion of the Global Adjustment (GA);
- Helping vulnerable electricity consumers ("social programs");
- Expanding the Industrial Conservation Initiative (ICI);
- Improving sector efficiency; and
- Modernizing Ontario's electricity market.

The *Fair Hydro Act, 2017,* was introduced on May 11, 2017, passed on May 31, 2017 and received Royal Assent June 1, 2017.

Proposal

This proposal is the next step in the implementation of the OFHP and would establish most of the necessary regulations under the *Ontario Energy Board Act, 1998* (OEBA), *Ontario Rebate for Electricity Consumers Act, 2016,* (ORECA) and the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) related to:

1. Partial Refinancing of the Global Adjustment (GA):

The ministry is proposing a new regulation under Part II of the OFHPA that would support the required calculations related to the refinancing of GA. More specifically, the proposed regulation would implement the reduction in rates for the typical residential consumer effective July 1, 2017.

2. Social Programs and Bill Presentment:

The ministry is proposing new regulations under the OFHPA and the OEBA and amendments to existing regulations under the OEBA and ORECA to support implementation and clarify program details of the social programs, as well as support transparency and communication of the changes made under the OFHP.

To fully implement the required regulations for the OFHP, the ministry will be seeking approvals of three additional regulations in late June 2017.

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. Since the OFH was announced there has been increased media attention and public pressure for the government to take the necessary steps to enact the commitments made in the plan. The *Fair Hydro Act, 2017,* identifies a July 1 implementation date for the various price mitigation initiatives contained within. Pending approval of the regulations, the OEB will recalculate rates to be implemented for July 1, 2017.

Effective May 1, 2017, the OEB reduced electricity prices for eligible households and small businesses. At the time, the OEB also announced, upon passage of the Act, that it would further adjust Regulated Price Plan (RPP) prices as needed so that RPP customers receive the full rate relief as legislated.

What is the expected cost to government?

The estimate for the combined impact of the social programs in this proposal is expected to be $359M in 2017-18, growing in 2018-19 once annualized. The ministry will return to TB/MBC with updated out-year figures following program implementation. This investment has been factored into the fiscal plan in the 2017 Ontario Budget. These estimates are based on variable inputs such as program uptake, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

TABLE 1: Fiscal Impact ($M) of Social Programs	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344
On-Reserve First Nations Delivery Credit	15

Note: As approved in the TB/MBC submission of Mach 1, 2017, and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31, 2018.

What are the key steps to deliver this proposal?

- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, MOF, OFA and LDCs on the implementation of OFHP.
- July 1, 2017- the remaining reductions and initiatives associated with the OFHP would take effect. Programs that are not established on this day for technical implementation issues will allow benefits to be retroactively applied to customers once programs are reflected in bills by individual LDCs.

How will the changes be communicated?

The proposed changes will be communicated via a news release or backgrounder in late June.

Cabinet Office Analysis

The proposed new regulations under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and the regulatory amendments under the *Ontario Energy Board Act, 1998* (OEBA) allow for the implementation of the key elements of Ontario's Fair Hydro Plan (OFHP) announced on March 2, 2017 and are consistent with Cabinet direction [TBC].

1. Partial Refinancing of the Global Adjustment:

The ministry is proposing a new regulation under Part II of the OFHPA that would support the implementation of the refinancing of GA, including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board (OEB) to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the OFHPA. If approved, the OEB is targeting June 22 to announce changes to rates for the July 1 effective date.

Critics of the OFHP may see the implementation of this component of the plan as compromising the independence of the OEB. This is mitigated by the fact that the government has always, through legislation and regulation, established the parameters

within which the OEB operates, and has no control over the day to day operations of the Board.

2. Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

Rural or Remote Rate Protection (RRRP) helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The Fair Hydro Act, 2017 amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments to O. Reg. 442/01 moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, under O. Reg. 442/01, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits beyond RRRP, making the escalating factor unnecessary.

The ministry is proposing a new regulation under the OEBA to create a government funded distribution rate protection (DRP) program. The regulation establishes a mechanism for the OEB to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs, as authorized under the OEBA, and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up ~~of~~by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same

reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

Commented [RK1]: Would this suggest a potential Energy request to the OFA for an MOU like the ORECA one?

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances related to lands affected by energy infrastructure.

The OFHPA amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program. The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate. The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. There is a risk that some eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements. The following LDCs would be prescribed as responsible for delivering the program: [LDCs list?]

The proposed regulation relies upon definitions of key terms such as “member of a band” and “reserve” from the *Indian Act* (Canada). This approach is defensible and relatively straightforward, but may be criticised as not taking into account lands that are considered as roughly analogous to reserve land, but that do not meet the strict

definitions of the *Indian Act.* For example, many communities have lands within the federal Additions to Reserve (ATR) process that would be excluded from this program until the lands are officially recognized as reserve. This risk is mitigated by the fact that many of these parcels of land will have few if any residences on them, so the impact is expected to be minor. The legislation provides sufficient flexibility to expand application to these kinds of lands if appropriate in the future.

The ministry is also proposing amendments to O. Reg. 363/16 under the ORECA to provide clarity that FNDC should be included in the base amount used to calculate the 8% rebate. This is consistent with how other support programs have been treated for the purposes of applying the 8% rebate to customer's bills.

3. Bill Presentment

The ministry is proposing to create new regulations under the OFHPA that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments to O. Reg. 275/04 that would remove invoicing requirements related to the Debt Retirement Charge (DRC) exemption message, per s. 8.2. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017.

In anticipation of these new OFHP invoicing requirements, the ministry has amended O. Reg. 364/16 (Minister's order) to revoke the "8% provincial rebate" messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an "8% Provincial Rebate" line item remains.

Risks

Fiscal

The social programs do not have a scheduled end date and represent an ongoing fiscal pressure, which will likely increase over time. These estimates are based on variable inputs such as program uptake, electricity market conditions, future energy consumption

Commented [GH2]: From OFA: Suggest a mention of accounting risks in the Fiscal subsection, particularly given the AG's stated position at Committee on this. May want to seek input from OPCD/TBS.

Suggest including on page 6, as part of the objectives of the proposed regulations:
- Details on how the interest on the Trust debt will be managed; and
- The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

of various consumer groups and future distribution rates, and are therefore subject to change.

Perception

It is expected that there will be some criticism of the OFHP messaging and bill presentment changes as being political in nature and not strictly necessary for transparency or program implementation.

Legal

In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets present only a low risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period.

Under the FNDC program “non-status” Indigenous communities without reserves (e.g. certain members of the Algonquins of Ontario (AOO), Mocreebec etc.) and Métis will not be eligible as they do hold reserve lands. There is a risk that these communities could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter (equality rights). This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change. This risk is mitigated by phase in implementation provisions in the enabling legislation that allows for LDCs to provide retroactive payments to July 1, 2017 if they are, for technical reasons, unable to have the required program changes implemented by this date.

Linkages

Commented [EK3]: The Fair Hydro Plan also included changes to the Ontario Electricity Support Program (OESP). Should those changes be included in this note?

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer 2017. The LTEP identifies needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The *Ontario Rebate ~~for Electricity~~ for Electricity Consumers Act, 2016*, (ORECA) put in place a~~n 8%~~ rebate for an amount equivalent to the 8% provincial portion of the HST for eligible residential, small business customers and farms, beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) – Was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB program ended on December 31, 2015.

Debt Retirement Charge – On January 1, 2016, the government ended the electricity DRC on residential users, which was earlier than previously estimated~~planned~~. For all other consumers the DRC will be removed by April 2018, also earlier than previously estimated.

Industrial Conservation Initiative (ICI) – Implemented in January 2011 to help large industrial consumers reduce electricity costs by reducing consumption in peak periods. As part of OFHP, ICI eligibility has been expanded several times, and was most recently expanded to allow for the participation of the manufacturing and, e.g., greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI provides a benefit~~s~~ to all consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – Approved as part of OFHP, and under development, the Affordability Fund is intended to provide energy efficiency measures to Ontarians who are not eligible for low income conservation programs, and who are otherwise unable to make energy efficiency improvements without financial assistance.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (~~i.e.,~~ Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings for those eligible. Funding electricity social programs through government funds rather than the rate base will also provide saving to all electricity consumers (i.e., Class A and B).

Commented [RK4]: Is this what is meant – for industrial and commercial regardless of whether they are in Class A or Class B?

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON) - is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods,; and,
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed that the government consult on and develop options to mitigate the impact of carbon pricing and resulting increased utility costs on residential tenants. The mitigation is proposed because tenants do not usually have the opportunity to make changes to their building envelope (e.g., windows, insulation) or major appliances that would allow them to address utility costs themselves. On April 24, 2017, the government introduced the *Rental Fairness Act, 2017* which, if passed, would remove above-guideline rent increases for utilities, to protect tenants from carbon costs and encourage landlords to make their buildings more energy efficient.

Delivery

The proposed regulations are required under the major components of the *Fair Hydro Act, 2017* in order to fully implement the initiative and clarify program details.

1. Partial Refinancing of the Global Adjustment:

The ratepayer benefit of the OFHP will be in place as of July 1, 2017. The establishment of the regulatory asset and purchase by the OPG trust is expected to take three to six months to implement following the June 1, 2017 Royal Assent of the *Fair Hydro Act, 2017*.

The act includes transition provisions in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Using the methodology outlined in the OFHPA and the Part II regulations, the OEB will calculate the electricity rates that consumers will pay as of July 1, 2017.

2. Social Programs:

DRP and RRRP

The programs will take advantage of existing LDC and IESO processes. The regulatory amendments also enable payment flows to prescribed LDC to allow recovery of RRRP and DRP payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the DRP in time for the prescribed effective date. In this case, the regulation dictates the eligibility of July 1st and gives until October 1, 2017 for LDCs

to get their systems in place. The LDCs would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program.

On-Reserve First Nations Delivery Credit (FNDC)

The ministry is consulting with affected LDCs, the OEB, the IESO and Chiefs of Ontario (COO) on implementation. FNDC will take advantage of existing LDC, IESO, and community-LDC relationships to implement the program. The regulatory amendments also enable payment flows to prescribed LDCs to allow recovery of FNDC payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed July 1, 2017 effective date. OFHPA includes transitional provisions that would ensure customers remain eligible for the delivery credit from the prescribed date. Once available, the rebate would appear on the eligible customer's electricity bills as a credit for their delivery line. FNDC line item, demonstrating the savings by eliminating the delivery line costs on the bill.

STAKEHOLDER AND PARTNER CONSIDERATIONS

General Public (including residential and small businesses) – Likely support a proposal that is projected to provide 25% in average rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but there has been public discussion of the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications. There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Commented [RK5]: "e.g.,"?

~~Large~~ Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral on the rest of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to cap and trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. Funding electricity support programs through government funding rather than the rate base will provide some saving to both Class A and B consumers.

Commented [RK6]: Are the concerns from the subset of Class B customers not eligible for the OFHP?

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being ineligible for the delivery charge relief.

NGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generators as part of the clean energy costs.

Solar PV sector – May react negatively to price relief as it can be seen to undercut the economics of net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price in order to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.) LDCs recover their costs through distribution rates. LDCs are licensed to serve a specific geographic area by the Ontario Energy Board (OEB). An LDC must receive Ontario Energy Board approval to charge a distribution rate.
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates for residential customers are moving to a fully-fixed charge by 2019 for most LDCs. Some LDCs, such as Hydro One and Algoma Power are transitioning over a longer period.

  - Line Loss: The costs to recover electricity that is lost when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service classes are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. Lower customer density increases the cost to serve. Residential class R1 customers are considered 'medium density' customers and residential class R2 are considered 'low density customers.' Hydro One also served urban residential customers, considered "high density" through its UR class. Hydro One also has urban and non-urban general service classes.
- **Ontario Power Generation (OPG) –** A business corporation owned by the Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to participate in quasi-judicial proceedings and formal stakeholder consultations.
- **Independent Electricity System Operator (IESO) –** An independent corporation established under the *Electricity Act, 1998* that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Affordable Housing- *Residential Tenancies Act, 2006* amendments –** To mitigate the costs of carbon pricing on tenants, who are not able to control major building features that impact energy use (like insulation and windows) or major appliances, the government has amended regulations under the Residential Tenancies Act, 2006 to remove the ability for landlords to increase rents above the guideline based on extraordinary increases in utility costs.

Hi Ron,

Please find attached the comments from CEFD for your review. In addition, I added the comment from OFA in the attached version as well.

The document is also saved under below folder:
\\ofina.on.ca\ofadfs\Users\CEF\Hydro 2017\Electricity Prices\OFHP\CBN

Please note that comments are due back to DMO by 1:30 p.m. today.

Thanks,
Gavin He

Subject: URGENT: CBN Fact Check

Hi all,

Please find attached the CO note on the first part of the implementation of the Ontario Fair Hydro Plan. Could you please review ASAP and provide your edits to Ron by noon today?

Comments are due back to DMO by 1:30 p.m. today. Sorry for the short turnaround time.

Thanks,
Gavin He

Subject: CBN Fact Check

Hi Anna and Gavin,

Attached is the latest CBN for Energy's OESP reg. It is tracking to June 27th as part of the first of two bundles of regulations required for the implementation of the Ontario Fair Hydro Plan.

CO has a hard deadline of 2:00 today, so I'm wondering if you guys can please have your teams review and provide comments (if any) to me by 1:30?

Thanks,
Dave

Ontario

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy
Fair Hydro Plan Regulations

Cabinet (info) Feb 15, 2017	TB/MBC and Cabinet March 1, 2017	Announcement March 2, 2017	TB/MBC May 9, 2017	Cabinet May 10, 2017	Introduction May 11, 2017
Royal Assent June 1, 2017	TB/MBC June 13, 2017	Cabinet June 14, 2017	Program Effective Date July 1, 2017		

Summary of Proposal

The proposed regulations are consistent with Cabinet direction. [TBC]

Context for Decision:

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. OFHP includes some benefits for all consumer classes as well as targeted benefits to those identified as having the greatest need, and includes the following major components:

- Refinancing a portion of the Global Adjustment (GA);
- Helping vulnerable electricity consumers ("social programs");
- Expanding the Industrial Conservation Initiative (ICI);
- Improving sector efficiency; and
- Modernizing Ontario's electricity market.

The *Fair Hydro Act, 2017,* was introduced on May 11, 2017, passed on May 31, 2017 and received Royal Assent June 1, 2017.

Proposal

This proposal is the next step in the implementation of the OFHP and would establish most of the necessary regulations under the *Ontario Energy Board Act, 1998* (OEBA), *Ontario Rebate for Electricity Consumers Act, 2016,* (ORECA) and the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) related to:

1. Partial Refinancing of the Global Adjustment (GA):

The ministry is proposing a new regulation under Part II of the OFHPA that would support the required calculations related to the refinancing of GA. More specifically, the proposed regulation would implement the reduction in rates for the typical residential consumer effective July 1, 2017.

2. Social Programs and Bill Presentment:

The ministry is proposing three new regulations under the OFHPA and the OEBA and amendments to existing regulations under the OEBA and ORECA to support implementation and clarify program details of the social programs, as well as support transparency and communication of the changes made under the OFHP.

To fully implement the required regulations for the OFHP, the ministry will be seeking approvals of three additional regulations in late June 2017.

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. Since the OFHP was announced there has been increased media attention and public pressure for the government to take the necessary steps to enact the commitments made in the plan. The *Fair Hydro Act, 2017,* identifies a July 1 implementation date for the various price mitigation initiatives contained within. Pending approval of the regulations, the OEB will recalculate rates to be implemented for July 1, 2017.

Effective May 1, 2017, the OEB reduced electricity prices for eligible households and small businesses. At the time, the OEB also announced, upon passage of the Act, that it would further adjust Regulated Price Plan (RPP) prices as needed so that RPP customers receive the full rate relief as legislated.

What is the expected cost to government?

The estimate for the combined impact of the social programs in this proposal is expected to be $359M in 2017-18, growing in 2018-19 once annualized. The ministry will return to TB/MBC with updated out-year figures following program implementation. This investment has been factored into the fiscal plan in the 2017 Ontario Budget. These estimates are based on variable inputs such as program uptake, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

TABLE 1: Fiscal Impact ($M) of Social Programs	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344
On-Reserve First Nations Delivery Credit	15

Note: As approved in the TB/MBC submission of Mach 1, 2017, and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31, 2018.

What are the key steps to deliver this proposal?

- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of OFHP.
- July 1, 2017- the remaining reductions and initiatives associated with the OFHP would take effect. Programs that are not established on this day for technical implementation issues will allow benefits to be retroactively applied to customers once programs are reflected in bills by individual LDCs.

How will the changes be communicated?

The proposed changes will be communicated via a news release or backgrounder in late June.

Cabinet Office Analysis

The proposed new regulations under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and the regulatory amendments under the *Ontario Energy Board Act, 1998* (OEBA) allow for the implementation of the key elements of Ontario's Fair Hydro Plan (OFHP) announced on March 2, 2017 and are consistent with Cabinet direction [TBC].

1. Partial Refinancing of the Global Adjustment:

The ministry is proposing a new regulation under Part II of the OFHPA that would support the implementation of the refinancing of GA, including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board (OEB) to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the OFHPA. If approved, the OEB is targeting June 22 to announce changes to rates for the July 1 effective date.

Critics of the OFHP may see the implementation of this component of the plan as compromising the independence of the OEB. This is mitigated by the fact that the government has always, through legislation and regulation, established the parameters

within which the OEB operates, and has no control over the day to day operations of the Board.

2. Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

Rural or Remote Rate Protection (RRRP) helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The Fair Hydro Act, 2017 amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments to O. Reg. 442/01 moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, under O. Reg. 442/01, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits beyond RRRP, making the escalating factor unnecessary.

The ministry is proposing a new regulation under the OEBA to create a government funded distribution rate protection (DRP) program. The regulation establishes a mechanism for the OEB to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs, as authorized under the OEBA, and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up of provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same

reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances related to lands affected by energy infrastructure.

The OFHPA amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program. The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate. The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. There is a risk that some eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements. The following LDCs would be prescribed as responsible for delivering the program:

Commented [EK1]: Should the LDCs be listed after this?

The proposed regulation relies upon definitions of key terms such as “member of a band” and “reserve” from the *Indian Act* (Canada). This approach is defensible and relatively straightforward, but may be criticised as not taking into account lands that are considered as roughly analogous to reserve land, but that do not meet the strict

definitions of the *Indian Act.* For example, many communities have lands within the federal Additions to Reserve (ATR) process that would be excluded from this program until the lands are officially recognized as reserve. This risk is mitigated by the fact that many of these parcels of land will have few if any residences on them, so the impact is expected to be minor. The legislation provides sufficient flexibility to expand application to these kinds of lands if appropriate in the future.

The ministry is also proposing amendments to O. Reg. 363/16 under the ORECA to provide clarity that FNDC should be included in the base amount used to calculate the 8% rebate. This is consistent with how other support programs have been treated for the purposes of applying the 8% rebate to customer's bills.

3. Bill Presentment

The ministry is proposing to create new regulations under the OFHPA that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments to O. Reg. 275/04 that would remove invoicing requirements related to the Debt Retirement Charge (DRC) exemption message, per s. 8.2. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017.

In anticipation of these new OFHP invoicing requirements, the ministry has amended O. Reg. 364/16 (Minister's order) to revoke the "8% provincial rebate" messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an "8% Provincial Rebate" line item remains.

Risks

Fiscal

The social programs do not have a scheduled end date and represent an ongoing fiscal pressure, which will likely increase over time. These estimates are based on variable inputs such as program uptake, electricity market conditions, future energy consumption

Commented [GH2]: From OFA: Suggest a mention of accounting risks in the Fiscal subsection, particularly given the AG's stated position at Committee on this. May want to seek input from OPCD/TBS.

Suggest including on page 6, as part of the objectives of the proposed regulations:
- Details on how the interest on the Trust debt will be managed; and
- The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

of various consumer groups and future distribution rates, and are therefore subject to change.

Perception

It is expected that there will be some criticism of the OFHP messaging and bill presentment changes as being political in nature and not strictly necessary for transparency or program implementation.

Legal

In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets present only a low risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period.

Under the FNDC program “non-status” Indigenous communities without reserves (e.g. certain members of the Algonquins of Ontario (AOO), Mocreebec etc.) and Métis will not be eligible as they do hold reserve lands. There is a risk that these communities could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter (equality rights). This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change. This risk is mitigated by phase in implementation provisions in the enabling legislation that allows for LDCs to provide retroactive payments to July 1, 2017 if they are, for technical reasons, unable to have the required program changes implemented by this date.

Linkages

Commented [EK3]: The Fair Hydro Plan also included changes to the Ontario Electricity Support Program (OESP). Should those changes be included in this note?

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer 2017. The LTEP identifies needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The *Ontario Rebate for Electricity for Electricity Consumers Act, 2016*, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) – Was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB program ended on December 31, 2015.

Debt Retirement Charge – On January 1, 2016, the government ended the electricity DRC on residential users earlier than planned. For all other consumers the DRC will be removed by April 2018.

Industrial Conservation Initiative (ICI) – Implemented in January 2011 to help large industrial consumers reduce electricity costs by reducing consumption in peak periods. As part of OFHP, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – Approved as part of OFHP, and under development, the Affordability Fund is intended to provide energy efficiency measures to Ontarians who are not eligible for low income conservation programs, and who are otherwise unable to make energy efficiency improvements without financial assistance.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. Funding electricity social programs through government funds rather than the rate base will also provide saving to all electricity consumers (i.e. Class A and B).

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON) - is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and,
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed that the government consult on and develop options to mitigate the impact of carbon pricing and resulting increased utility costs on residential tenants. The mitigation is proposed because tenants do not usually have the opportunity to make changes to their building envelope (e.g. windows, insulation) or major appliances that would allow them to address utility costs themselves. On April 24, 2017, the government introduced the *Rental Fairness Act, 2017* which, if passed, would remove above-guideline rent increases for utilities, to protect tenants from carbon costs and encourage landlords to make their buildings more energy efficient.

Delivery

The proposed regulations are required under the major components of the *Fair Hydro Act, 2017* in order to fully implement the initiative and clarify program details.

1. Partial Refinancing of the Global Adjustment:

The ratepayer benefit of the OFHP will be in place as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the June 1, 2017 Royal Assent of the *Fair Hydro Act, 2017*.

The act includes transition provisions in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Using the methodology outlined in the OFHPA and the Part II regulations, the OEB will calculate the electricity rates that consumers will pay as of July 1, 2017.

2. Social Programs:

<u>DRP and RRRP</u>

The programs will take advantage of existing LDC and IESO processes. The regulatory amendments also enable payment flows to prescribed LDC to allow recovery of RRRP and DRP payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the DRP in time for the prescribed effective date. In this case, the regulation dictates the eligibility of July 1st and gives until October 1, 2017 for LDCs to get their systems in place. The LDCs would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program.

<u>On-Reserve First Nations Delivery Credit (FNDC)</u>

The ministry is consulting with affected LDCs, the OEB, the IESO and Chiefs of Ontario (COO) on implementation. FNDC will take advantage of existing LDC, IESO, and community-LDC relationships to implement the program. The regulatory amendments also enable payment flows to prescribed LDCs to allow recovery of FNDC payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed July 1, 2017 effective date. OFHPA includes transitional provisions that would ensure customers remain eligible for the delivery credit from the prescribed date. Once available, the rebate would appear on the eligible customer's electricity bills as a credit for their delivery line. FNDC line item, demonstrating the savings by eliminating the delivery line costs on the bill.

STAKEHOLDER AND PARTNER CONSIDERATIONS

General Public (including residential and small businesses) – Likely support a proposal that is projected to provide 25% in average rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but there has been public discussion of the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications. There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral on the rest of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to cap and trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. Funding electricity support programs through government funding rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being ineligible for the delivery charge relief.

NGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generators as part of the clean energy costs.

Solar PV sector – May react negatively to price relief as it can be seen to undercut the economics of net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price in order to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.) LDCs recover their costs through distribution rates. LDCs are licensed to serve a specific geographic area by the Ontario Energy Board (OEB). An LDC must receive Ontario Energy Board approval to charge a distribution rate.
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates for residential customers are moving to a fully-fixed charge by 2019 for most LDCs. Some LDCs, such as Hydro One and Algoma Power are transitioning over a longer period.
  - Line Loss: The costs to recover electricity that is lost when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay

for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.

- **Customer classification for Hydro One –** Customer service classes are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. Lower customer density increases the cost to serve. Residential class R1 customers are considered 'medium density' customers and residential class R2 are considered 'low density customers.' Hydro One also served urban residential customers, considered "high density" through its UR class. Hydro One also has urban and non-urban general service classes.
- **Ontario Power Generation (OPG) –** A business corporation owned by the Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to participate in quasi-judicial proceedings and formal stakeholder consultations.
- **Independent Electricity System Operator (IESO) –** An independent corporation established under the *Electricity Act, 1998* that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Affordable Housing- *Residential Tenancies Act, 2006* amendments –** To mitigate the costs of carbon pricing on tenants, who are not able to control major building features that impact energy use (like insulation and windows) or major appliances, the government has amended regulations under the Residential Tenancies Act, 2006 to remove the ability for landlords to increase rents above the guideline based on extraordinary increases in utility costs.

Hi Ron,

DMO doesn't have a copy of the draft regs but will see if they can get a copy. In addition, they will share this with Legal and TBS as well.

Regards,
Gavin He

Hi Ron,

Sure, I will ask DMO to see if they have the draft regs. And I will check if MOF Legal and TBS staff are reviewing this as well.

Regards,
Gavin He

Hi,

Can we get copies of the proposed draft regs too.

Do we need to check with MOF Legal on any components? And see if TBS staff are reviewing and commenting too.

Thanks,

Ron

Hi all,

Please find attached the CO note on the first part of the implementation of the Ontario Fair Hydro Plan. Could you please review ASAP and provide your edits to Ron by noon today?

Comments are due back to DMO by 1:30 p.m. today. Sorry for the short turnaround time.

Thanks,
Gavin He

Hi Anna and Gavin,

Attached is the latest CBN for Energy's OESP reg. It is tracking to June 27th as part of the first of two bundles of regulations required for the implementation of the Ontario Fair Hydro Plan.

CO has a hard deadline of 2:00 today, so I'm wondering if you guys can please have your teams review and provide comments (if any) to me by 1:30?

Thanks,
Dave

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy
Fair Hydro Plan Regulations

Cabinet (info) Feb 15, 2017	TB/MBC and Cabinet March 1, 2017	Announcement March 2, 2017	TB/MBC May 9, 2017	Cabinet May 10, 2017	Introduction May 11, 2017
Royal Assent June 1, 2017	TB/MBC June 13, 2017	Cabinet June 14, 2017	Program Effective Date July 1, 2017		

Summary of Proposal

The proposed regulations are consistent with Cabinet direction. [TBC]

Context for Decision:

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. OFHP includes some benefits for all consumer classes as well as targeted benefits to those identified as having the greatest need, and includes the following major components:

- Refinancing a portion of the Global Adjustment (GA);
- Helping vulnerable electricity consumers ("social programs");
- Expanding the Industrial Conservation Initiative (ICI);
- Improving sector efficiency; and
- Modernizing Ontario's electricity market.

The *Fair Hydro Act, 2017,* ~~was~~ introduced on May 11, 2017, was passed on May 31, 2017 and received Royal Assent June 1, 2017.

Proposal

This proposal is the next step in the implementation of the OFHP and would establish most of the necessary regulations under the *Ontario Energy Board Act, 1998* (OEBA), *Ontario Rebate for Electricity Consumers Act, 2016,* (ORECA) and the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) related to:

1. Partial Refinancing of the Global Adjustment (GA):

The ministry is proposing a new regulation under Part II of the OFHPA that would support the required calculations related to the refinancing of GA. More specifically, the proposed regulation would implement the reduction in rates for the typical residential consumer effective July 1, 2017.

2. Social Programs and Bill Presentment:

The ministry is proposing three new regulations under the OFHPA and the OEBA and amendments to existing regulations under the OEBA and ORECA to support implementation and clarify program details of the social programs, as well as support transparency and communication of the changes made under the OFHP.

To fully implement the required regulations for the OFHP, the ministry will be seeking approvals of three additional regulations in late June 2017.

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. Since the OFHP was announced there has been increased media attention and public pressure for the government to take the necessary steps to enact the commitments made in the plan. The *Fair Hydro Act, 2017,* identifies a July 1 implementation date for the various price mitigation initiatives contained within. Pending approval of the regulations, the OEB will recalculate rates to be implemented for July 1, 2017.

In addition, the OEB has announced that electricity prices dropping for households and small businesses effective May 1, 2017. Upon the approval of the OFHP, the OEB also announced that it would further adjust Regulated Price Plan (RPP) prices as needed so that RPP customers receive the full rate relief as legislated.

What is the expected cost to government?

The estimate for the combined impact of the social programs in this proposal is expected to be $359M in 2017-18, growing in 2018-19 once annualized. The ministry will return to TB/MBC with updated out-year figures following program implementation. This investment has been factored into the fiscal plan in the 2017 Ontario Budget. These estimates are based on variable inputs such as program uptake, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

TABLE 1: Fiscal Impact ($M) of Social Programs	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344
On-Reserve First Nations Delivery Credit	15

Note: As approved in the TB/MBC submission of Mach 1, 2017, and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31, 2018.

What are the key steps to deliver this proposal?

- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of OFHP.
- July 1, 2017- the remaining reductions and initiatives associated with the OFHP would take effect. Programs that are not established on this day for technical implementation issues will allow benefits to be retroactively applied to customers once programs are reflected in bills by individual LDCs.

How will the changes be communicated?

The proposed changes will be communicated via a news release or backgrounder in late June.

Cabinet Office Analysis

The proposed new regulations under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and the regulatory amendments under the *Ontario Energy Board Act, 1998* (OEBA) allow for the implementation of the key elements of Ontario's Fair Hydro Plan (OFHP) announced on March 2, 2017 and are consistent with Cabinet direction [TBC].

1. Partial Refinancing of the Global Adjustment:

The ministry is proposing a new regulation under Part II of the OFHPA that would support the implementation of the refinancing of GA, including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board (OEB) to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the OFHPA. If approved, the OEB is targeting June 22 to announce changes to rates for the July 1 effective date.

Critics of the OFHP may see the implementation of this component of the plan as compromising the independence of the OEB. This is mitigated by the fact that the government has always, through legislation and regulation, established the parameters

within which the OEB operates, and has no control over the day to day operations of the Board.

2. Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

Rural or Remote Rate Protection (RRRP) helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The Fair Hydro Act, 2017 amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments to O. Reg. 442/01 moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, under O. Reg. 442/01, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits beyond RRRP, making the escalating factor unnecessary.

The ministry is proposing a new regulation under the OEBA to create a government funded distribution rate protection (DRP) program. The regulation establishes a mechanism for the OEB to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs, as authorized under the OEBA, and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up of provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same

reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances related to lands affected by energy infrastructure.

The OFHPA amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program. The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate. The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. There is a risk that some eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements. The following LDCs would be prescribed as responsible for delivering the program:

Commented [EK1]: Should the LDCs be listed after this?

The proposed regulation relies upon definitions of key terms such as “member of a band” and “reserve” from the *Indian Act* (Canada). This approach is defensible and relatively straightforward, but may be criticised as not taking into account lands that are considered as roughly analogous to reserve land, but that do not meet the strict

definitions of the *Indian Act.* For example, many communities have lands within the federal Additions to Reserve (ATR) process that would be excluded from this program until the lands are officially recognized as reserve. This risk is mitigated by the fact that many of these parcels of land will have few if any residences on them, so the impact is expected to be minor. The legislation provides sufficient flexibility to expand application to these kinds of lands if appropriate in the future.

The ministry is also proposing amendments to O. Reg. 363/16 under the ORECA to provide clarity that FNDC should be included in the base amount used to calculate the 8% rebate. This is consistent with how other support programs have been treated for the purposes of applying the 8% rebate to customer's bills.

3. Bill Presentment

The ministry is proposing to create new regulations under the OFHPA that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments to O. Reg. 275/04 that would remove invoicing requirements related to the Debt Retirement Charge (DRC) exemption message, per s. 8.2. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017.

In anticipation of these new OFHP invoicing requirements, the ministry has amended O. Reg. 364/16 (Minister's order) to revoke the "8% provincial rebate" messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an "8% Provincial Rebate" line item remains.

Risks

Fiscal

The social programs do not have a scheduled end date and represent an ongoing fiscal pressure, which will likely increase over time. These estimates are based on variable inputs such as program uptake, electricity market conditions, future energy consumption

of various consumer groups and future distribution rates, and are therefore subject to change.

Perception

It is expected that there will be some criticism of the OFHP messaging and bill presentment changes as being political in nature and not strictly necessary for transparency or program implementation.

Legal

In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets present only a low risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period.

Under the FNDC program “non-status” Indigenous communities without reserves (e.g. certain members of the Algonquins of Ontario (AOO), Mocreebec etc.) and Métis will not be eligible as they do hold reserve lands. There is a risk that these communities could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter (equality rights). This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change. This risk is mitigated by phase in implementation provisions in the enabling legislation that allows for LDCs to provide retroactive payments to July 1, 2017 if they are, for technical reasons, unable to have the required program changes implemented by this date.

Linkages

Commented [EK2]: The Fair Hydro Plan also included changes to the Ontario Electricity Support Program (OESP). Should those changes be included in this note?

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer 2017. The LTEP identifies needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The *Ontario Rebate for Electricity for Electricity Consumers Act, 2016*, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) – Was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB program ended on December 31, 2015.

Debt Retirement Charge – On January 1, 2016, the government ended the electricity DRC on residential users earlier than planned. For all other consumers the DRC will be removed by April 2018.

Industrial Conservation Initiative (ICI) – Implemented in January 2011 to help large industrial consumers reduce electricity costs by reducing consumption in peak periods. As part of OFHP, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – Approved as part of OFHP, and under development, the Affordability Fund is intended to provide energy efficiency measures to Ontarians who are not eligible for low income conservation programs, and who are otherwise unable to make energy efficiency improvements without financial assistance.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. Funding electricity social programs through government funds rather than the rate base will also provide saving to all electricity consumers (i.e. Class A and B).

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON) - is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and,
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed that the government consult on and develop options to mitigate the impact of carbon pricing and resulting increased utility costs on residential tenants. The mitigation is proposed because tenants do not usually have the opportunity to make changes to their building envelope (e.g. windows, insulation) or major appliances that would allow them to address utility costs themselves. On April 24, 2017, the government introduced the *Rental Fairness Act, 2017* which, if passed, would remove above-guideline rent increases for utilities, to protect tenants from carbon costs and encourage landlords to make their buildings more energy efficient.

Delivery

The proposed regulations are required under the major components of the *Fair Hydro Act, 2017* in order to fully implement the initiative and clarify program details.

1. Partial Refinancing of the Global Adjustment:

The ratepayer benefit of the OFHP will be in place as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the June 1, 2017 Royal Assent of the *Fair Hydro Act, 2017*.

The act includes transition provisions in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Using the methodology outlined in the OFHPA and the Part II regulations, the OEB will calculate the electricity rates that consumers will pay as of July 1, 2017.

2. Social Programs:

<u>DRP and RRRP</u>

The programs will take advantage of existing LDC and IESO processes. The regulatory amendments also enable payment flows to prescribed LDC to allow recovery of RRRP and DRP payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the DRP in time for the prescribed effective date. In this case, the regulation dictates the eligibility of July 1st and gives until October 1, 2017 for LDCs to get their systems in place. The LDCs would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program.

<u>On-Reserve First Nations Delivery Credit (FNDC)</u>

The ministry is consulting with affected LDCs, the OEB, the IESO and Chiefs of Ontario (COO) on implementation. FNDC will take advantage of existing LDC, IESO, and community-LDC relationships to implement the program. The regulatory amendments also enable payment flows to prescribed LDCs to allow recovery of FNDC payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed July 1, 2017 effective date. OFHPA includes transitional provisions that would ensure customers remain eligible for the delivery credit from the prescribed date. Once available, the rebate would appear on the eligible customer's electricity bills as a credit for their delivery line. FNDC line item, demonstrating the savings by eliminating the delivery line costs on the bill.

STAKEHOLDER AND PARTNER CONSIDERATIONS

General Public (including residential and small businesses) – Likely support a proposal that is projected to provide 25% in average rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but there has been public discussion of the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications. There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral on the rest of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to cap and trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. Funding electricity support programs through government funding rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being ineligible for the delivery charge relief.

NGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generators as part of the clean energy costs.

Solar PV sector – May react negatively to price relief as it can be seen to undercut the economics of net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price in order to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.) LDCs recover their costs through distribution rates. LDCs are licensed to serve a specific geographic area by the Ontario Energy Board (OEB). An LDC must receive Ontario Energy Board approval to charge a distribution rate.
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates for residential customers are moving to a fully-fixed charge by 2019 for most LDCs. Some LDCs, such as Hydro One and Algoma Power are transitioning over a longer period.
  - Line Loss: The costs to recover electricity that is lost when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay

for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.

- **Customer classification for Hydro One –** Customer service classes are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. Lower customer density increases the cost to serve. Residential class R1 customers are considered 'medium density' customers and residential class R2 are considered 'low density customers.' Hydro One also served urban residential customers, considered "high density" through its UR class. Hydro One also has urban and non-urban general service classes.
- **Ontario Power Generation (OPG) –** A business corporation owned by the Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to participate in quasi-judicial proceedings and formal stakeholder consultations.
- **Independent Electricity System Operator (IESO) –** An independent corporation established under the *Electricity Act, 1998* that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Affordable Housing- *Residential Tenancies Act, 2006* amendments –** To mitigate the costs of carbon pricing on tenants, who are not able to control major building features that impact energy use (like insulation and windows) or major appliances, the government has amended regulations under the Residential Tenancies Act, 2006 to remove the ability for landlords to increase rents above the guideline based on extraordinary increases in utility costs.

Hi Ron,

Sure, I will ask DMO to see if they have the draft regs. And I will check if MOF Legal and TBS staff are reviewing this as well.

Regards,
Gavin He

Hi,

Can we get copies of the proposed draft regs too.

Do we need to check with MOF Legal on any components? And see if TBS staff are reviewing and commenting too.

Thanks,
Ron

Subject: Rate Mitigation - OPG and Province Financing Consideration v8.pptx
Date: Friday, May 05, 2017 3:46:54 PM
Attachments: Rate Mitigation - OPG and Province Financing Consideration v8.pptx

---

Another…

DRAFT

GA Financing Considerations

- Under Energy's proposed structure, the financing of the deferred GA costs would be effectively done in part by each of the OPG Trust, the Province, and OPG: the OPG Trust would borrow 51%, the Province 44%, and OPG 5% of the required GA amounts needed to be financed.
- In the alternative, the Province (through the OFA/OEFC) could borrow the required amounts each year, likely at a lower cost. However, the target for an arms-length trust and potential risk transfer would not be achieved.

	OPG Structured Financing	OFA/OEFC/Provincial Financing

Financing Considerations	• As the OPG Trust would be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing.
	• This would increase the cost of GA smoothing and the ultimate rate impact on future consumers.
	• Availability of debt financing may also be limited, depending on the overall amount of deferral, and the subsequent rate impact during the recovery period. OPG has cited examples of a 10% threshold on overall rate impacts of the deferral recovery amounts.
	• The Trust would be exposed to interest rate changes.
	• With a potential guarantee from the Province for the borrowings of the OPG Trust, OPG could see borrowing costs closer to the Province. However, this would redirect the risk back to the Province, removing the intended benefits of using this particular structure, and could add risk to the targeted accounting treatment.
	• With, or potentially even without a provincial guarantee, OPG Trust's borrowings could be seen as debt effectively supported by the Province by credit rating agencies and included in their analysis and determination of the Province's ratings.
	• If a Provincial guarantee ~~endangers the targeted accounting treatment~~ [~~and a guarantee~~ is not provided, it may be hard to justify the higher cost borrowing by the Trust to be passed through to ratepayers.
		• Province's borrowing from the public markets would add to the borrowing program and the Province's gross debt.
		• The Province would expect to be able to finance the GA deferral at a lower financing cost than an OPG Trust, but would likely not achieve the targeted accounting treatment based on OPG's analysis.
		• Net debt would not increase, to the extent supported by increased equity in OPG under that model, or if the accounting treatment is achieved as backed by a GA-related asset.
		• The Province's IOD cost would need to be effectively recovered through the GA.
		  • E.g., an OPG equity return to cover the cost of borrowing for the equity injection.
		  • Or more directly if the Province is providing financing directly to the GA entity.
		• The cost of borrowing for the Province could change:
		  1. The Province's credit rating could be at risk of being re-evaluated by Rating Agencies, which may negatively impact the cost at which the Province borrows and
		  2. An increase in the Province`s borrowing rates, as a result of increased borrowing. The market may not have adequate demand for the Province to carry-out these borrowings without increasing the interest rate on the debt issues for GA financing and for all of the Province's borrowings.
		• The interest cost of GA deferral would be exposed to changes in the interest rate environment generally.

Hi John,

And did you fix the table in the appendix as per the slide?

I just tried to use terms they used for consistency.

We could put springing in quotes. We could actually just call it guarantee agreement.

Subject: RE: CBN Fact Check

Anna/Gadi

Agree with Gadi's point re accounting risks. No need for regulations for both the guarantee and the new credit facility to IESO(confirmed with Malle). I would also suggest that the objectives of the proposed regulations spelled out on page 6 include:

- <!--[if !supportLists]-->• <!--[endif]-->Details on how the interest on the Trust debt will be managed and
- <!--[if !supportLists]-->• <!--[endif]-->The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

Thanks

Ken k

Subject: Re: CBN Fact Check

I find it interesting that in the Risks section there is a lengthy description of the constitutional risk in the Legal subsection, but there is no mention of the accounting risks in the Fiscal subsection, in spite of the AG's stated position at Committee on this. I think that it's a gap that needs to be at least mentioned in the CBN, doesn't it?

I'm assuming, because it isn't mentioned anywhere in the CBN, that there are no regs required for the guarantees that Mike has been working on with Blakes and OPG? Also, our direction on the $2 billion line of credit for the IESO can be done independently of these regs?

Thanks,

Gadi

Hi David,

A few comments from us:

- Suggest a mention of accounting risks in the Fiscal subsection, particularly given the AG's stated position at Committee on this. May want to seek input from OPCD/TBS.
- Suggest including on page 6, as part of the objectives of the proposed regulations:
  - Details on how the interest on the Trust debt will be managed; and
  - The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

Comments from CEFD will be relayed separately by Gavin.

Thanks, Anna

Thanks, James. I have a call into MoF Legal to see if they know what the OFA is referring to. I'll let you know if I hear anything back, but for my part I'm not entirely clear on why the OFA thinks they might need an OIC approval. I agree with what you say below re: the OFA needing to engage MOF legal on this to get their input.

Paul Kaufman

Paul, below OFA indicates potentially needing an OIC.

I also indicated the ask needs to come through the TB submission with a requested minute…versus added the minute further down into the TB note directly.

James

To: Kim, John (OFA)
Cc: Bruno Amara; Fung, Felix (TBS); Salman Qadir
Subject: RE: DRAFT CBN For Review- Rate Mitigation- Due EOD May 1st

I would suggest engaging Legal. I know for the OIC's I've dealt with involve getting a recommendation from TB/MBC before LGIC approves. Not sure what applies for finance related OICs.

James

From: John Kim [mailto:John.Kim@ofina.on.ca]
Sent: May 3, 2017 11:58 AM
To: Strang, James (TBS)
Cc: Bruno Amara; Fung, Felix (TBS); Salman Qadir

So along this line, we were doing more digging and we will try to arrive at what approvals are needed….

If an OIC is required, what would be the process? For one of the current facilities, it is put in place under the authority of an OIC as we currently understand it. Just looking for your guidance on the OIC process.

From: Strang, James (TBS) [mailto:James.Strang@ontario.ca]

Subject: Re: DRAFT CBN For Review- Rate Mitigation- Due EOD May 1st
Date: Tuesday, May 02, 2017 3:08:22 PM

Hi John,

I think it might be nice to have in the Minute something like "Note that the IESO has requested a credit facility from the OFA to manage liquidity issues between the time IESO requires financing for monthly settlements to meet the requirements of the FHP, and the time when OPG's SPV purchases the IESO regulatory asset, or as a backstop in the case of the regulatory asset not being purchased for a period of time. Note that the Minister of Finance will provide a directive to the OFA to provide a new or expanded credit facility for this purpose."

Very open to better wording, or jargon tied to the draft legislation terminology.

Hi John,

Do you have the final markup version we sent on the CBN? And a revised version?

Also, did we get it through TBS?

I'd like to keep the DMO in the loop on this.

Thanks,

Ron

I will go and speak with Sarah Harris.

This would have nothing to do with IESO, so not sure why Paul before is speaking of them. This is really about OFA needing to lend to IESO and the OIC is needed to ensure the OFA can.

Will reconfirm with both Sarah's today.

I heard back from MoF Legal on this – they aren't clear on what potential OIC the IESO is referring to either, and they haven't been engaged by anyone in connection with this. Sorry that's not helpful.

Thanks, James. I have a call into MoF Legal to see if they know what the OFA is referring to. I'll let you know if I hear anything back, but for my part I'm not entirely clear on why the OFA thinks they might need an OIC approval. I agree with what you say below re: the OFA needing to engage MOF legal on this to get their input.

Paul, below OFA indicates potentially needing an OIC.

I also indicated the ask needs to come through the TB submission with a requested minute…versus added the minute further down into the TB note directly.

I would suggest engaging Legal. I know for the OIC's I've dealt with involve getting a recommendation from TB/MBC before LGIC approves. Not sure what applies for finance related OICs.

So along this line, we were doing more digging and we will try to arrive at what approvals are needed….

If an OIC is required, what would be the process? For one of the current facilities, it is put in place under the authority of an OIC as we currently understand it. Just looking for your guidance on the OIC process.

Hi John:
We didn't get a chance to meet today, but would be happy to meet to discuss Monday or Tuesday. We are having a meeting on Monday from 11:00 to 12:30 at OPG to discuss some of these issues and would be happy to have you & any colleagues you see fit attending. I think in the hurry to set up a meeting you were accidentally not invited. Anyway, let's talk on Monday morning.
Regards, Mike

> I have concerns with the weighted average calculation of both the benchmark and actual issuance including the debt issued to the Trust by OPG funded by the 44% equity injection given that there are no market forces in play with regard both issuance and

funding of this tranche, at least from an OPG perspective.

The only way in which this tranche is acceptable for performance inclusion is by OPG linking the yield on this debt to what was issued to the markets by the Trust. For example the debt from the equity injection is X bps above or below what was issued in the markets for equal tenors. Even so a linked component in the benchmark, in my opinion, adds limited value.

Thanks

Further to our discussions re establishing GA financing benchmark. Attached please find the draft term sheet of the subordinated debt (from Province equity injection). Could you please review and circulate it to the appropriate contacts/group on your side. We'd also like to set up a meeting with OFA, at your earliest convenience, to go over the document and get your feedback. Please let us know your availability.

Thanks

Sheen

Hi Ann,

I'm in a meeting right now. Not sure about a comfort letter's impact. I'd need to consult. And the view and experience of our IR folks may not reflect the particularities of this planned financing entity.

Ron

> During today's call there was a general reference to potential credit rating agency concerns. That concern may not have come across clearly enough and here is some perspective on the specific concern. Given that this structure is very unique in the Canadian environment the credit rating agency will likely request a legal opinion – tax neutrality or run flat for tax – establishing that any activity of the financing entity will not result in a tax liability that would rank ahead of security holders.

Hi Bruno,

I had been thinking, to make it easier for Energy, to simply work with their version of the flow chart from the March CabSub.

That said, their version may have been updated since then anyways, but they could take out suggestions in.

I also added reworked some parts of the text slide, and dropped some detail, as it was rather dense – may still be!

Thanks,
Ron

DRAFT

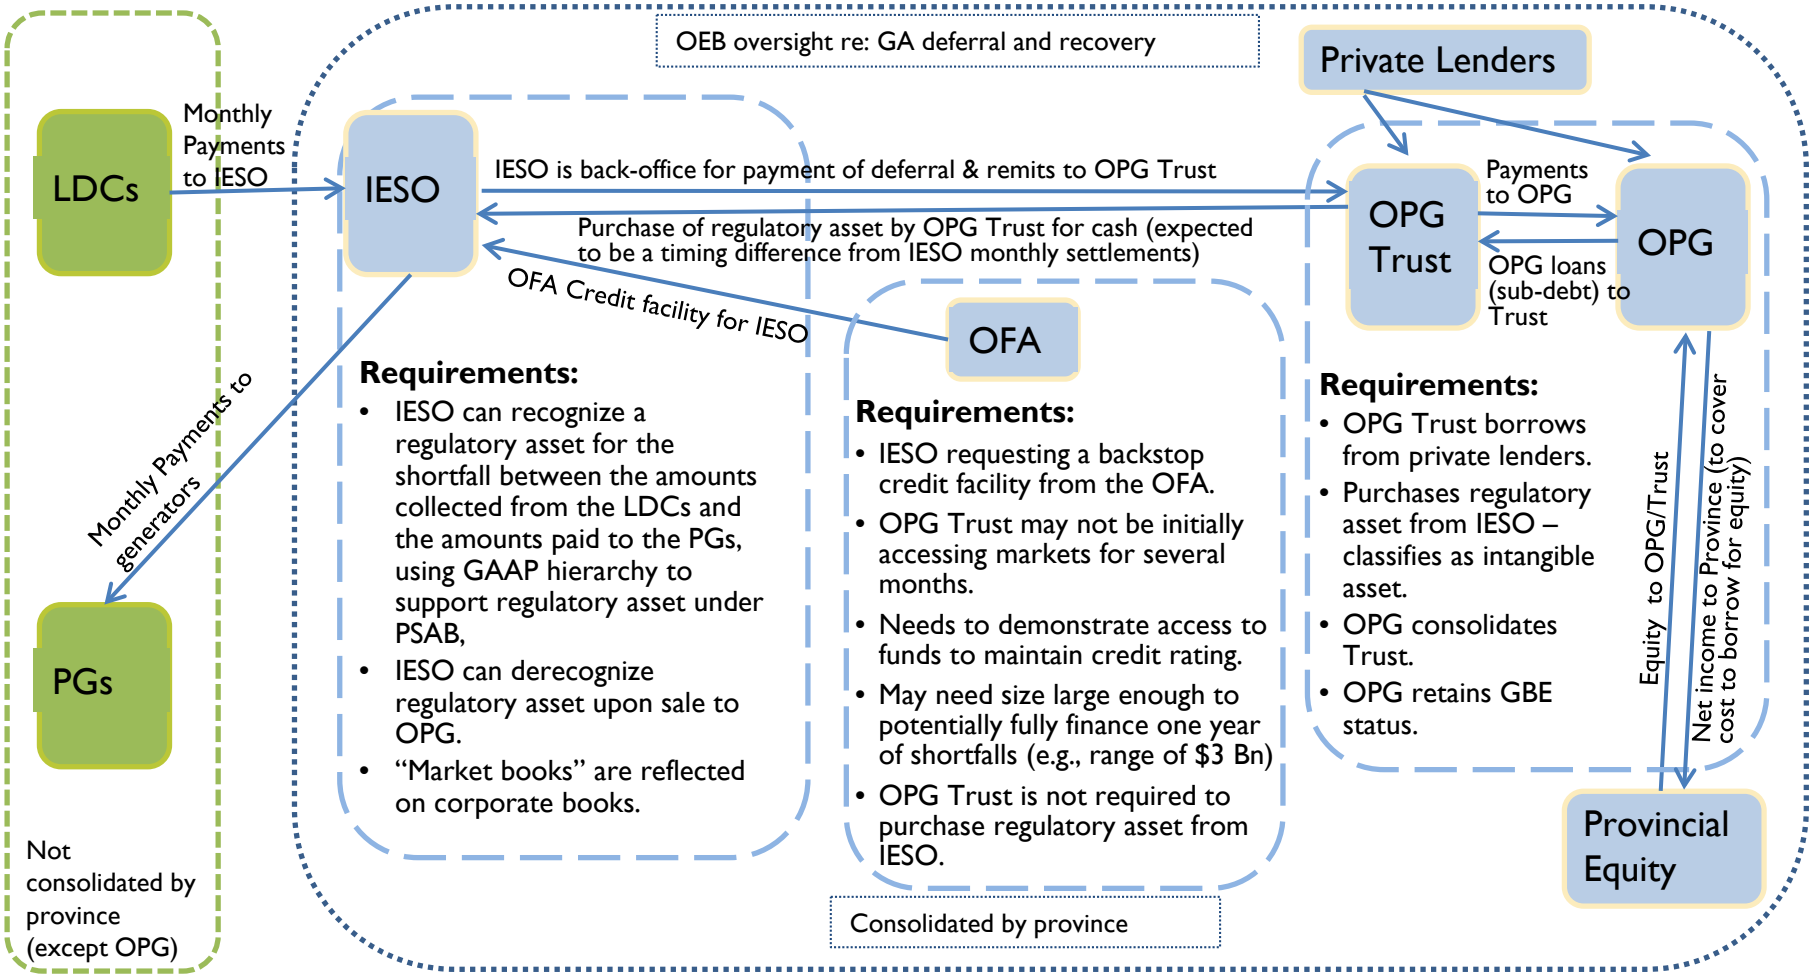
GA Financing Plan: Role of IESO

Corporate and Electricity Finance Division
May 1, 2017

DRAFT

GA Smoothing – Proposed Structure

- The following diagram provides an overview of the proposed GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

IESO Financing Requirements

- IESO will need to ensure that it continues to have the funds available to provide payments to generators on a monthly basis as part of the IESO settlements process, while recoveries from LDCs for Regulated Price Plan (RPP) / Fair Hydro Plan eligible customers will be lower.
- IESO has an existing credit facility from the OFA; however, a new or expanded facility is being requested.
- IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period.
  - OPG Trust is not expected to access public capital markets for several months after the start of the FHP, and may be purchasing the asset with a lag vs monthly settlements. Also, OPG Trust is not required to purchase the regulatory asset.
  - IESO will need a credit facility for interim financing.
  - IESO may require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.
- Based on Ministry of Energy's GA deferral plan, it is estimated that approximately $2.5-3.0 billion need to be deferred per year for over first 10 years, equal to approximately $200-250 million per month, on average.[1]
  - The size of the credit facility required to backstop IESO could be $2.5 to $3.0 billion. [TBC]
- There is a fiscal impact and accounting risk on OFA financing of the IESO requirements if it were to be more than temporary borrowing to cover timing differences on when the OPG SPV buys the regulatory asset vs the timing of IESO monthly settlements.
  - Even if IESO is allowed to recognized the Regulatory Asset, on consolidation into Public Accounts, the regulatory asset would not be expected to be recognised, so that the deferral amount and associated financing costs would be expected to have a fiscal impact..
- The monthly and annual amount being deferred and the resulting monthly amounts can be substantially different than forecast based on various factors, such as seasonality or electricity usage, as well as potential changes to electricity costs from OEB rate decisions, with IESO estimating deferral amounts as high as $400 million per month.
- Other factors that may increase IESO's financing requirements:
  - IESO will also incur financing charges that will need to be refinanced.
  - The financing and administration costs that OPG Trust incurs will need to be paid.

[1] Based on Ministry of Energy's annual GA deferral amounts, assuming the monthly deferral is equally-weighted.

Thanks John, the issue is more capital markets and borrowing costs as opposed to the electricity program so the response should come from either Mike or me.

Cc: Strathy, Anna (OFA); John Psinas
Subject: RE: BN - FAO Fair Hydro Plan Report_Summary - v9.docx

Ken – thanks for this. Re the bullet below - I noticed that you didn't make any edits to the borrowing costs of 6.2% for the OPG but the report has a borrowing cost of 5.4% for the OPG which is a 90bps spread. Think we need to reflect? and would the unrealistically high wording still hold true? Sorry for just catching this. Thanks.

<!--[if !supportLists]-->o <!--[endif]-->**Financing Costs and Interest Rate Spread Assumptions** – the FAO's estimates are based on an illustrative assumed 3 to 5 per cent interest rate, while actual financing costs may differ. The high end of this range of 5 per cent, is assumed by the FAO report to be a weighted average of Provincial (at 3.5 %) and OPG Trust borrowing costs (at 6.2%). The differential of assumed 270 basis points interest rate spread between the two borrowing rates, used to calculate the FAO's borrowing cost estimates is unrealistically high, overstating the high end of the range provided as the total cost of borrowing through the OPG Trust.

Karen mentioning Gadi providing financing assessment? I think in the new format, easier for OFA Staff Comments to appear alongside TBS Staff Comments.

Hi everyone,

Please find attached the latest version of the OFHP assessment note - incorporating feedback from folks today.

Patrick - two things to point out:

- the Ministry requested a new TP line to support “future rate mitigation initiatives”. We struck out the minutes related to this request, given a TP can be created in the future once we have a specific future rate mitigation initiative (rather than just creating a placeholder now). However, we thought we would include it on page 12 in case folks do want that minute included.
- We also included the Minute for media buy / ARB request. Let us know if there are any concerns with the language.

Thanks - let us know if there are any concerns. Patrick - we will wait for your ok before we share the note with Energy.

And many thanks to OCPD and COE for all your help and support on this.

Felix

Hi James,

Would "finance" be more accurate than "cover" -- at least at this time as per the intent? Cover might suggest funding, vs financing.

Also, the OIC we think would go to LRC. And the authority would be under CIPA.

I'd need to check with staff, and your advice, if such an OIC would need to go to TB.

Ron

Hi Sriram,

A Provincial support agreement (or agreements) is being worked on, and there are services or performance guarantee portions discussed but a tax or PILs component does not sound familiar to me. I'll enquire.

It's more about a Provincial payment guarantee to bondholders of the financing entity under certain circumstances.

Ron

Ron, no sure if you were on the call this morning. OPG mentioned a provincial guarantee to negate tax or (I think) other liabilities, and that they're working on the wording. Do you have a copy of this, or any detail?

thanks

Hi Ron,

We have inquired to TBS and they don't have any materials.....we are on them to follow up. In terms of the envelope, it is unquantifiable so we have inquired on that as well. Unfortunately, the key staff there are either not there or left.

John

Hi all,

Please find attached the CO note on the first part of the implementation of the Ontario Fair Hydro Plan. Could you please review ASAP and provide your edits to Ron by noon today?

Comments are due back to DMO by 1:30 p.m. today. Sorry for the short turnaround time.

Thanks,
Gavin He

Subject: CBN Fact Check

Hi Anna and Gavin,

Attached is the latest CBN for Energy's OESP reg. It is tracking to June 27th as part of the first of two bundles of regulations required for the implementation of the Ontario Fair Hydro Plan.

CO has a hard deadline of 2:00 today, so I'm wondering if you guys can please have your teams review and provide comments (if any) to me by 1:30?

Thanks,
Dave

Ontario

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy
Fair Hydro Plan Regulations

Cabinet (info) Feb 15, 2017	TB/MBC and Cabinet March 1, 2017	Announcement March 2, 2017	TB/MBC May 9, 2017	Cabinet May 10, 2017	Introduction May 11, 2017
Royal Assent June 1, 2017	TB/MBC June 13, 2017	Cabinet June 14, 2017	Program Effective Date July 1, 2017		

Summary of Proposal

The proposed regulations are consistent with Cabinet direction. [TBC]

Context for Decision:

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. OFHP includes some benefits for all consumer classes as well as targeted benefits to those identified as having the greatest need, and includes the following major components:

- Refinancing a portion of the Global Adjustment (GA);
- Helping vulnerable electricity consumers ("social programs");
- Expanding the Industrial Conservation Initiative (ICI);
- Improving sector efficiency; and
- Modernizing Ontario's electricity market.

The *Fair Hydro Act, 2017,* was introduced on May 11, 2017 and received Royal Assent June 1, 2017.

Proposal

This proposal is the next step in the implementation of the OFHP and would establish most of the necessary regulations under the *Ontario Energy Board Act, 1998* (OEBA), *Ontario Rebate for Electricity Consumers Act, 2016,* (ORECA) and the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) related to:

1. Partial Refinancing of the Global Adjustment (GA):

The ministry is proposing a new regulation under Part II of the OFHPA that would support the required calculations related to the refinancing of GA. More specifically, the proposed regulation would implement the reduction in rates for the typical residential consumer effective July 1, 2017.

2. Social Programs and Bill Presentment:

The ministry is proposing new regulations under the OFHPA and the OEBA and amendments to existing regulations under the OEBA and ORECA to support implementation and clarify program details of the social programs, as well as support transparency and communication of the changes made under the OFHP.

To fully implement the required regulations for the OFHP, the ministry will be seeking approvals of three additional regulations in late June 2017.

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. Since the OFH was announced there has been increased media attention and public pressure for the government to take the necessary steps to enact the commitments made in the plan. The *Fair Hydro Act, 2017,* identifies a July 1 implementation date for the various price mitigation initiatives contained within. Pending approval of the regulations, the OEB will recalculate rates to be implemented for July 1, 2017.

What is the expected cost to government?

The estimate for the combined impact of the social programs in this proposal is expected to be $359M in 2017-18, growing in 2018-19 once annualized. The ministry will return to TB/MBC with updated out-year figures following program implementation. This investment has been factored into the fiscal plan in the 2017 Ontario Budget. These estimates are based on variable inputs such as program uptake, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

TABLE 1: Fiscal Impact ($M) of Social Programs	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344
On-Reserve First Nations Delivery Credit	15

Note: As approved in the TB/MBC submission of Mach 1, 2017, and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31, 2018.

What are the key steps to deliver this proposal?

- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of OFHP.
- July 1, 2017- the remaining reductions and initiatives associated with the OFHP would take effect. Programs that are not established on this day for technical

implementation issues will allow benefits to be retroactively applied to customers once programs are reflected in bills by individual LDCs.

How will the changes be communicated?

The proposed changes will be communicated via a news release or backgrounder in late June.

Cabinet Office Analysis

The proposed new regulations under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and the regulatory amendments under the *Ontario Energy Board Act, 1998* (OEBA) allow for the implementation of the key elements of Ontario's Fair Hydro Plan (OFHP) announced on March 2, 2017 and are consistent with Cabinet direction [TBC].

1. Partial Refinancing of the Global Adjustment:

The ministry is proposing a new regulation under Part II of the OFHPA that would support the implementation of the refinancing of GA, including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board (OEB) to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the OFHPA. If approved, the OEB is targeting June 22 to announce changes to rates for the July 1 effective date.

Critics of the OFHP may see the implementation of this component of the plan as compromising the independence of the OEB. This is mitigated by the fact that the government has always, through legislation and regulation, established the parameters within which the OEB operates, and has no control over the day to day operations of the Board.

2. Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

Rural or Remote Rate Protection (RRRP) helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The Fair Hydro Act, 2017 amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments to O. Reg. 442/01 moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, under O. Reg. 442/01, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits beyond RRRP, making the escalating factor unnecessary.

The ministry is proposing a new regulation under the OEBA to create a government funded distribution rate protection (DRP) program. The regulation establishes a mechanism for the OEB to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs, as authorized under the OEBA, and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up of provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances related to lands affected by energy infrastructure.

The OFHPA amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program. The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate. The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. There is a risk that some eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements. The following LDCs would be prescribed as responsible for delivering the program:

The proposed regulation relies upon definitions of key terms such as “member of a band” and “reserve” from the *Indian Act* (Canada). This approach is defensible and relatively straightforward, but may be criticised as not taking into account lands that are considered as roughly analogous to reserve land, but that do not meet the strict definitions of the *Indian Act.* For example, many communities have lands within the federal Additions to Reserve (ATR) process that would be excluded from this program until the lands are officially recognized as reserve. This risk is mitigated by the fact that many of these parcels of land will have few if any residences on them, so the impact is

expected to be minor. The legislation provides sufficient flexibility to expand application to these kinds of lands if appropriate in the future.

The ministry is also proposing amendments to O. Reg. 363/16 under the ORECA to provide clarity that FNDC should be included in the base amount used to calculate the 8% rebate. This is consistent with how other support programs have been treated for the purposes of applying the 8% rebate to customer's bills.

3. Bill Presentment

The ministry is proposing to create new regulations under the OFHPA that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments to O. Reg. 275/04 that would remove invoicing requirements related to the Debt Retirement Charge (DRC) exemption message, per s. 8.2. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017.

In anticipation of these new OFHP invoicing requirements, the ministry has amended O. Reg. 364/16 (Minister's order) to revoke the "8% provincial rebate" messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an "8% Provincial Rebate" line item remains.

Risks

<u>Fiscal</u>

The social programs do not have a scheduled end date and represent an ongoing fiscal pressure, which will likely increase over time. These estimates are based on variable inputs such as program uptake, electricity market conditions, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

<u>Perception</u>

It is expected that there will be some criticism of the OFHP messaging and bill presentment changes as being political in nature and not strictly necessary for transparency or program implementation.

Legal

In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets present only a low risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period.

Under the FNDC program “non-status” Indigenous communities without reserves (e.g. certain members of the Algonquins of Ontario (AOO), Mocreebec etc.) and Métis will not be eligible as they do hold reserve lands. There is a risk that these communities could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter (equality rights). This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change. This risk is mitigated by phase in implementation provisions in the enabling legislation that allows for LDCs to provide retroactive payments to July 1, 2017 if they are, for technical reasons, unable to have the required program changes implemented by this date.

Linkages

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer 2017. The LTEP identifies needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance

the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The *Ontario Rebate for Electricity for Electricity Consumers Act, 2016*, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) – Was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB program ended on December 31, 2015.

Debt Retirement Charge – On January 1, 2016, the government ended the electricity DRC on residential users earlier than planned. For all other consumers the DRC will be removed by April 2018.

Industrial Conservation Initiative (ICI) – Implemented in January 2011 to help large industrial consumers reduce electricity costs by reducing consumption in peak periods. As part of OFHP, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – Approved as part of OFHP, and under development, the Affordability Fund is intended to provide energy efficiency measures to Ontarians who are not eligible for low income conservation programs, and who are otherwise unable to make energy efficiency improvements without financial assistance.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. Funding electricity social programs through government funds rather than the rate base will also provide saving to all electricity consumers (i.e. Class A and B).

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON) - is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and,

- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed that the government consult on and develop options to mitigate the impact of carbon pricing and resulting increased utility costs on residential tenants. The mitigation is proposed because tenants do not usually have the opportunity to make changes to their building envelope (e.g. windows, insulation) or major appliances that would allow them to address utility costs themselves. On April 24, 2017, the government introduced the *Rental Fairness Act, 2017* which, if passed, would remove above-guideline rent increases for utilities, to protect tenants from carbon costs and encourage landlords to make their buildings more energy efficient.

Delivery

The proposed regulations are required under the major components of the *Fair Hydro Act, 2017* in order to fully implement the initiative and clarify program details.

1. Partial Refinancing of the Global Adjustment:

The ratepayer benefit of the OFHP will be in place as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the June 1, 2017 Royal Assent of the *Fair Hydro Act, 2017*.

The act includes transition provisions in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Using the methodology outlined in the OFHPA and the Part II regulations, the OEB will calculate the electricity rates that consumers will pay as of July 1, 2017.

2. Social Programs:

<u>DRP and RRRP</u>

The programs will take advantage of existing LDC and IESO processes. The regulatory amendments also enable payment flows to prescribed LDC to allow recovery of RRRP and DRP payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the DRP in time for the prescribed effective date. In this case, the regulation dictates the eligibility of July 1st and gives until October 1, 2017 for LDCs to get their systems in place. The LDCs would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program.

<u>On-Reserve First Nations Delivery Credit (FNDC)</u>

The ministry is consulting with affected LDCs, the OEB, the IESO and Chiefs of Ontario (COO) on implementation. FNDC will take advantage of existing LDC, IESO, and community-LDC relationships to implement the program. The regulatory

amendments also enable payment flows to prescribed LDCs to allow recovery of FNDC payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed July 1, 2017 effective date. OFHPA includes transitional provisions that would ensure customers remain eligible for the delivery credit from the prescribed date. Once available, the rebate would appear on the eligible customer's electricity bills as a credit for their delivery line. FNDC line item, demonstrating the savings by eliminating the delivery line costs on the bill.

STAKEHOLDER AND PARTNER CONSIDERATIONS

General Public (including residential and small businesses) – Likely support a proposal that is projected to provide 25% in average rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but there has been public discussion of the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications. There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral on the rest of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to cap and trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. Funding electricity support programs through government funding rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being ineligible for the delivery charge relief.

NGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generators as part of the clean energy costs.

Solar PV sector – May react negatively to price relief as it can be seen to undercut the economics of net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price in order to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.) LDCs recover their costs through distribution rates. LDCs are licensed to serve a specific geographic area by the Ontario Energy Board (OEB). An LDC must receive Ontario Energy Board approval to charge a distribution rate.
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates for residential customers are moving to a fully-fixed charge by 2019 for most LDCs. Some LDCs, such as Hydro One and Algoma Power are transitioning over a longer period.
  - Line Loss: The costs to recover electricity that is lost when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service classes are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line.

Lower customer density increases the cost to serve. Residential class R1 customers are considered 'medium density' customers and residential class R2 are considered 'low density customers.' Hydro One also served urban residential customers, considered "high density" through its UR class. Hydro One also has urban and non-urban general service classes.

- **Ontario Power Generation (OPG) –** A business corporation owned by the Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to participate in quasi-judicial proceedings and formal stakeholder consultations.
- **Independent Electricity System Operator (IESO) –** An independent corporation established under the *Electricity Act, 1998* that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Affordable Housing- *Residential Tenancies Act, 2006* amendments –** To mitigate the costs of carbon pricing on tenants, who are not able to control major building features that impact energy use (like insulation and windows) or major appliances, the government has amended regulations under the Residential Tenancies Act, 2006 to remove the ability for landlords to increase rents above the guideline based on extraordinary increases in utility costs.

Fair Hydro Plan – Subordinated Debt Loan Arrangement
Term Sheet

- Parties: OPG, Fair Hydro Trust, OFA

- In accordance with the Master Subscription Agreement among OPG, OFA and Ministry of Energy, the Province agrees to inject 44% of total funding of GA asset by way of equity subscriptions in OPG, and OPG agrees to use the equity subscription amounts solely for funding the Fair Hydro Trust's subordinated debt (Equity Injection Plan) requirements as part of the Fair Hydro Plan

- OPG will lend the equity injection from the Province to Fair Hydro Trust by way of subordinated debt (one or more mezzanine level)

- Initial credit rating will be assigned to the subordinated debt of Fair Hydro Trust

- Based on monthly funding requirement of GA asset, the Trust will use short term financing, such as bank facilities, and take out bonds once accumulative short term funding reaches certain levels.

- The mechanism to implement Equity Injection Plan will be based on monthly equity injections reflecting funding requirements of GA asset

- Interest rates on the subordinated debt will be established as follows:

    - During the Trust short term financing period when bank facilities are used as funding vehicles, the interest rate on subordinated debt will be the sum of (1) funding rate on senior debt, and (2) additional spread margin of [xx], reflecting the credit rating difference between the senior and subordinated debt

    - At the time when senior bonds are being issued to take out (term out) the short term financing, OPG will seek indicative coupon rates on the subordinated debt from dealers, reflecting the sum of underlying Government of Government of Canada yield of equivalent term and the appropriate credit spread. The average indicative coupon rate from dealers will be calculated and set as the subordinated debt rate. The process will be similar to the one established for pricing of OPG debt drawn from OEFC facilities.

FINANCING TRUST – PERFORMANCE FEE TO OPG

BACKGROUND

Ontario Power Generation Inc. (OPG) has been appointed the Financial Services Manager under the Fair Hydro Plan Act, 2017 to, among other things evaluate whether funding obligations should be incurred by the Trust for the purpose of acquiring and financing an investment interest. A performance fee relating to the funding obligations will be meaningful and allow OPG to make decisions that will significantly impact its return. The Act as drafted enables OPG to achieve its accounting objective of consolidation of the Trust with OPG, and the ability to earn a return and take on risk, through its control of the Trust.. The objective therefore is to recommend a reasonable variable performance fee structure for OPG to earn a return from the Trust, and meet the accounting requirement.

ANALYSIS OF ACCOUNTING REQUIREMENT

To support the accounting consolidation, OPG's variable performance return will be accomplished through the followings:

a. The cash flow from the investment asset shall include interest determined based on a relevant benchmark that is appropriate relative to the investment asset, plus an appropriate margin consistent with the relevant market and other risks
b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the Trust to achieve a more favorable return compared to the benchmark for interest on the investment asset
c. The Trust shall establish different classes of debt (senior, subordinated and the most subordinated). The classes would allow the Trust to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity.
d. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the investment asset, or any residual risk of investment asset. The targeted return of the subordinated debt should be reflective of the underlying risks and compensate holders for active management that would be required.

PERFORMANCE FEE ANALYSIS

Based on the accounting requirements, the recommendation is for OPG to establish a variable performance fee structure as follows:

As the Trust may issue both long term bonds and medium term notes, benchmarks based on various terms, will be established on an annual basis, subject to the following methodology:

- Benchmarks will be established as the sum of (1) reference rate, and (2) spread
    - Both reference rate and spread will be term dependant

- For bond/note issuance, reference rate will be GOC rate of equivalent term
- Reference rate will be based on consensus forecast provided by various financial institutions

- Benchmarks will be established based on the weighted average rate of incremental debt issuance at the Trust level
- If the actual weighted average rate is lower than the corresponding benchmark, OPG will realize a gain, otherwise a loss
- Variable performance fee, i.e. gain/loss, is applicable only to OPG's investment in the Trust (5% of the funding requirement), and is capped at benchmark weighted average rate +/-1%

An example illustrating this structure is detailed in Appendix 1

APPENDIX 1

The illustration is based on the expected Trust debt structure as follows:

	Risk Profile	Source	% of Total Funding Requirement
Tranche A Senior Debt	the least risky	Capital Markets	51%
Tranche B Sub Debt	In between A&C	OPG via OEFC	39%
Tranche C Sub Debt	the most risky	OPG via OEFC	5%
		OPG via Capital Markets	5%

1. Benchmark is to be established at each year end for Trust issuance next year. In this example, assuming the following benchmark is established as of end of Yr 1

		Benchmark
Tranche A	51%	4.25%
Tranche B Sub Debt	39%	5.50%
Tranche C Sub Debt	10%	6.50%
Weighted Average Rate		**5.0%**

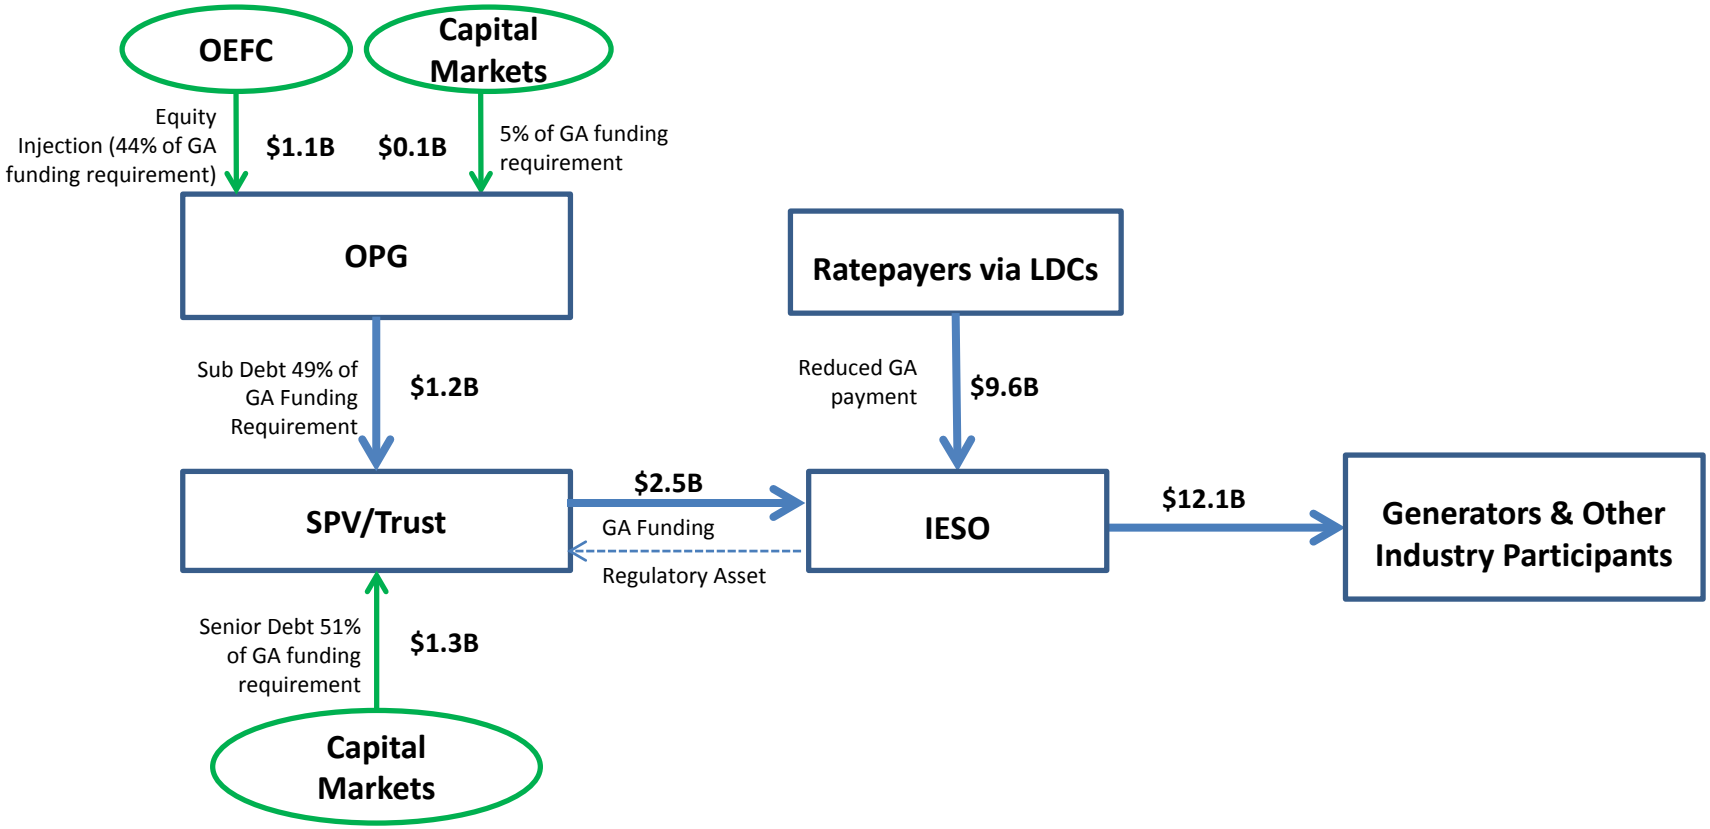
2. By the end of Yr 2, OPG will calculate the actual weighted average rate for all incremental issuance for the year. If the actual weighted average rate is lower than the corresponding benchmark, OPG will realize a gain, otherwise a loss.

	Allocation	Benchmark	Actual
Tranche A	51%	4.25%	5.0%
Tranche B Sub Debt	39%	5.50%	5.60%
Tranche C Sub Debt	10%	6.50%	6.60%
Weighted Average Rate		**5.0%**	5.4%
		Loss	0.4%

3. Variable management fee, i.e. gain/loss, is applicable only to OPG's investment (5% of the Trust funding requirement), and is capped at benchmark weighted average rate +/-1%.

   Based on the example above and assume incremental Trust issuance is $2B, OPG will realize loss of variable performance fee of 0.4M ($2B*5%*0.4%)

Illustration based on $2.5B GA Funding



Fair Hydro Plan –Master Subscription Agreement
Term Sheet

- Parties: OPG, OFA, Ministry of Energy

- The Province agrees to inject 44% of total funding of GA asset by way of equity subscription in OPG, which amount OPG in turn will invest in the Fair Hydro Trust as subordinated debt (**Equity Injection Plan**)

- Minister of Energy/Province approves Equity Injection Plan, and initial equity injection amount for 2017/18 fiscal year, and delegates to appropriate ministry staff authority to implement Equity Injection Plan (**Delegated Authority**)

- Long term, OPG equity requirements will form part of the business planning process in place between OPG and Ministry of Energy, ie, annually OPG to include forecasts of its equity requirements for the upcoming 3 years in its business plan submission -- NOTE: this portion of the business plan is not subject to concurrence by the shareholder

- Ministry of Energy will seek appropriation on an annual basis through PRRT for the amounts requested by OPG for its equity requirements-- NOTE: amount of annual appropriation to cover OPG multi year forecasts

- OPG agrees use the equity subscription amounts solely for funding the Fair Hydro Trust's subordinated debt requirements as part of the Fair Hydro Plan

- OPG will amend its Articles to create an additional class of shares – Class A Shares – which will be non-voting and redeemable at OPG's option

- OPG will issue Class A Shares to the Province monthly at a value per share equal to book value, as determined from OPG's last approved quarterly financial statements -- Value of first Class A shares issued to Province will be based on book value of OPG common shares – ie, existing shareholder's equity

- OPG will have the right to repay equity to the Province, through exercise of its right to redeem the Class A Shares, as principal repayment of the subordinated debt is made commencing in 2027

- Redemption value of the Class A Shares to be based on book value on the redemption date, ie, the equity value per Class A share at the end of the prior financial quarter as set out in OPG's approved financial statements

Monthly Process/Mechanics of Share Subscriptions:

a) OPG notifies OFA and Ministry of Energy of required equity injection and number of shares

   Timing: [same day as notice from Fair Hydro Trust]

   Documents/steps:

   (i) share subscription form,
   (ii) supporting documentation/invoice from Fair Hydro Trust, confirming amount of GA asset purchase for the month

b) OFA and OPG settle equity injection amounts

Timing: [five] business days from notice to OFA to payment/settlement with OPG [NOTE: timing to be confirmed based on IESO/Trust process requirements]

Documents/steps:
(i) completed/signed share subscription form from OFA/Province to OPG
(ii) funds transfer from OFA to OPG account)
(iii) OPG receipt, together with secretary's certificate confirming issue of shares/update of share register

Longer term Process/Approvals:

1. Equity Requirements Estimates:
    a. Business Plan Submissions
    b. OPG Board Approvals
        - [Bi-annual] Board of Directors' resolutions authorizing equity requirement for period
        - [Bi-annual Shareholder's resolutions authorizing equity requirement for period][NOTE: TBD if needed]

    c. Ministry of Energy appropriations
    [describe annual process]

Share Redemption Process

- TBD -- process to be determined at a later date and appended as Appendix to Master Subscription Agreement

Subject: re: higher cost
Date: Tuesday, May 16, 2017 3:20:41 PM

The higher costs was under assumption that "Province funds the cost of the FHP (i.e. the HST Rebate and the electricity relief programs) through debt. For example, if the Province funds the HST rebate and electricity relief programs by borrowing over the 29-year period, it could increase costs by $24 to $48 billion, assuming an effective cost of borrowing between 3.0% and 5.0%.

So they are essentially speculating on higher interest costs if 8% rebate and transfer to tax base is , above the balanced budget plan. Not the other case iof financing structure failing the sniff test and costs being on Province's books.

I'll see if I can verify the interest costs they assume
