Minor suggested edits in attached

And w.r.t. to the chart and label for arrows going to and from Trust and IESO. Wondering if it's simplifying too much if these were just labelled "cash" (top arrow) and "regulatory asset" (bottom arrow)

Or

top arrow one could change wording around to match the arrow

"OPG SPV/Trust cash purchase of regulatory asset from IESO" rather than "Sale of regulatory asset to OPG SPV/Trust for cash"

bottom arrow

Is wording on arrow below explaining too much?. I.e., is it also explaining the payment from IESO to PGs.

Or

Just leave as is

Ontario's Fair Hydro Plan

Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit.
- Any rate increases for typical residential consumers over the next four years would be held to inflation
- To implement the OFHP, ENERGY has prepared legislation (Ontario Fair Hydro Plan Act) in close collaboration with the OEB, Independent Electricity System Operator (IESO), Ontario Power Generation (OPG), partner ministries (TBS, MOF and MAG), external advisors.

OFHP Act Overview

- The Legislation balances ratepayer interests, accounting objectives, market expectations and legal considerations
- Built around core principle that costs incurred to move to a clean, reliable system creates benefits across generations, and that costs ~~that~~ should be spread more fairly. Pre-defined terms (see definitions) form the building blocks for this structure
- Roles and responsibilities are established in legislation:
  - Minister of Energy: sets Fair Allocation Amounts for all periods, at the beginning of the plan
  - OPG: Financial Services Manager, sets the Financing Plan, establishes financing entities, purchases assets from IESO, and will drive invoice amounts to customers
  - IESO: creates funding shortfall / regulatory asset, sells to OPG SPV/Trust, acts as agent to collect from ratepayers and fund initial interest costs
  - OEB: sets customer rates, establishes regulatory asset for IESO, reviews OPG's admin. costs
- Large part of legislation designed to ensure the financeability of the program
- Key considerations
  - Legislation sets the first Fair Allocation Adjustment and end date of 2047; amounts for intervening years set in regulation
  - Several Provincial guarantees to be negotiated to enable financing without imposing undue cost / risk on Province
  - Province's role constrained once the program underway (e.g. cannot remove OPG as financial services manager)
  - Modelling underway to ensure principle of cost / benefit alignment underlying the program is justifiable
  - Energy has received approval to provide monthly equity injections to OPG to fund sub-debt (see diagram)
  - OFA working with IESO to provide an additional credit facility (see diagram)

GA Financing Overview

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048

Total Accumulated Debt *($ billion)*	0.0	0.0	0.0	0.0	0.0	0.0	0.0	2.5	5.1	7.9	11.4	14.6	17.8	20.8	23.2	25.6	26.7	27.7	26.8	26.0	25.1	24.1	23.1	22.0	20.9	19.7	18.5	17.2	15.9	14.4	12.9	11.3	9.7	7.9	6.1	4.2	2.1	0.0	0.0
Total Change in Accumulated Debt *($ billion)*	0.0	0.0	0.0	0.0	0.0	0.0	0.0	2.5	2.6	2.8	3.5	3.2	3.2	2.9	2.4	2.4	1.1	0.9	-0.8	-0.9	-0.9	-1.0	-1.0	-1.1	-1.1	-1.2	-1.2	-1.3	-1.4	-1.4	-1.5	-1.6	-1.7	-1.7	-1.8	-1.9	-2.0	-2.1	0.0

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Ontario's Fair Hydro Plan (cont'd)

Electricity Support to Help the Most Vulnerable

Rural / Remote Electricity Rate Protection	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	454	450	446
Overview	Expand the existing program and harmonize distribution rates for customers in the top 1/8 of distribution rate classes, and shifting costs to the tax base			
Updates	Amend S. 79 of OEBA to provide through regulation classes of customer costs to be shifted to tax base, and create distribution rate protection program to complement RRRP			
Next Steps	Amend regulation to prescribe H1's R2 customers as receiving RRRP & prescribe by regulation program details/customers eligible for broadened distribution rate protection			

Ontario Electricity Support Program	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	178	239	290
Overview	Improve the existing program to enhance benefits and increase uptake through streamlined applications and expanded eligibility to include additional households			
Updates	Shift program funding to tax base and authority to allow data sharing between OEB/MCSS to support participation of Ontario Works/Ontario Disability and Support Program clients			
Next Steps	Move to tax base once variance account depleted (exp. fall 2017), with legislation to be proclaimed via OIC at that time to ensure OEB authorities while ratepayer funding is used			

On-Reserve First Nations Delivery Credit	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	20	20	20
Overview	Establish a credit to remove delivery charges for 21,500 on-reserve First Nations residential customers			
Updates	Establish authority to create delivery credit and provide for tax-based funding			
Next Steps	Regulatory amendments with details - class of customers eligible, determine what is considered on-reserve and determine the method of calculating the delivery credit			

Affordability Fund	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	100	Up to 100 additional		
Overview	Fund has been established through local distribution companies to help consumers in need to make energy efficiency improvements			
Updates	Advisory committee established and has recommended reps. from Hydro One, Alectra and Thunder Bay Hydro to act as trustees; 2 social services trustees to be selected soon			
Next Steps	Report back to TB/MBC in June 2017 with final program details and a performance management framework; LDCs begin to apply to the Trust for funds in summer 2017			

Other Elements / Considerations

- Industrial Conservation Initiative: Program expanded to include greenhouses. Energy working with CME and OCC on outreach campaigns on benefits of ICI and other conservation initiatives
- Bill Presentment: Targeting a re-design of the bill for Fall 2017. For the interim period the Ministry plans to include bill inserts describing the program
- Auditor General (AG) / Financial Accountability Officer (FAO): The Ministry has met with both offices and is circulating information in response to follow up requests. The AG also engaged with IESO through its IT value-for-money audit

Outstanding Business Issues – Ontario Fair Hydro Plan

Briefing Note

PURPOSE

Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Provincial Support Agreement Term Sheet (Performance and Payment Guarantees)**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA have discussed a draft term sheet and the OFA, MOF and Blakes will work together to provide comments
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July.

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - Provincial staff, with OPG's concurrence, recommends minimizing, to the extent possible, the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers.
   - The Province is considering regulation changes to exempt from PILs the income arising to the OPG financing vehicle / OPG as a consequence of the Fair Hydro Plan.
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.
   - **Next Steps:**
     - The MOF, OFA and OPG are working together to determine required regulation changes.
     - Torys prepared a memo on the item
     - Timing: MOF will be setting up a call with tax policy, OPG and Torys to discuss a memo Torys prepared on the item in the next few days

3. **Fair Hydro Plan - Master Subscription Agreement Term Sheet (Equity Injection Process)**
    - OPG will require equity injections on a monthly basis, to match the timing of the purchase of the IESO regulatory asset, as applicable, in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province.
    - The Ministry of Energy received appropriation for a fiscally-neutral operating asset expenditure of $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT.
    - **Next Steps:**
        - ~~The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process, which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.~~Approval of the draft term sheet (see note).
        - Once term sheet is approved, this will serve as the basis for the Master Subscription Agreement between OPG/ENE and OFA
        - OFA and ENE to develop Service Level Agreement for monthly cash management services
        - Amendment to OPG articles required to facilitate issuance of new class of shares
        - Timing: OPG will require the ability to issue equity in ~~July~~August, so mechanics and agreements should be finalized in ~~June~~July.

4. **Management Fees**
    - OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
    - The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations, which are currently in development.
    - ~~OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements.~~
    - There are two components to the management fee model proposed by OPG:
        - Base fee: the structure will allow OPG to earn a commercial fee, an accounting consolidation requirement, with periodic OEB review of the commercial basis of that fee. OEB and OPG are in discussions in order to develop a model that satisfies the accounting requirements and is consistent with OEB's processes.
        - Performance ~~management~~ fee: OPG has the ability to gain or lose depending on the actual financing cost relative to a benchmark, which would be shared equally between ratepayers and OPG. Gain/loss ~~is~~ is applicable only to OPG's investment in the Trust from external borrowing

(5% of the funding requirement) and capped at 1% of the related annual incremental issuance amount.

- **Next Steps:**
  - Base fee: OEB to provide comments on OPG's proposed base fee framework.
  - Performance Fee: ~~OPG and OEB will bring forward a recommended framework for developing management fees.~~Approval of the draft framework (see note).
  - Timing: ~~TBD~~For incorporation into the June 27th regulations

5. **Subordinated Debt Loan Agreement**
   - OPG will lend the equity injection from the Province to the Fair Hydro Trust by way of subordinated debt
   - Based on monthly funding requirements of the GA asset, the Trust will use short term financing and take out bonds once short term funding reaches certain levels
   - OPG and OFA are working on a Debt Loan Arrangement that would establish the interest rates on the subordinated debt
   - **Next Steps:**
     - OPG and OFA will bring forward a recommended framework for determining interest rates
     - Timing: TBD

6. **IESO – Increased OFA Credit Facilities**
   - THE OPG financing entity is not expected to be immediately operational, so the IESO will need to have transitional financing in place to manage the difference in the payments to generators and other service providers vs payments from loads / LDCs.
   - There may also be on-going monthly cash flow timing differences that the IESO will need a credit facility for.
   - In addition, the OPG financing entity has the right to purchase the regulatory asset from IESO but is not required to purchase it.
   - IESO is working with the OFA to increase the credit facilities in the event that the OPG financing entity does not purchase the regulatory asset
   - **Next Steps:**
     - OFA is drafting a new agreement for a $2 billion credit facility for the OFA to lend funds to IESO for FHP purposes. Concurrently, the OFA is seeking the Minister's approval for an LRC submission to approve an OIC for an additional $2 billion in borrowing capacity, as well as a Directive from the Minister of Finance, which are both necessary for the OFA to lend funds to IESO under the requested new Credit Facility.

- Timing: The OIC is scheduled for the June 27, 2017 LRC meeting. The Directive and Credit Facility Agreement are currently being drafted, to be in place by July 1st, 2017

7. OPG Indemnity

- OPG (and IESO) are asking for the Province to indemnify the IESO, OPG (the entities) and their respective directors, officers and employee in order to allow them to carry out their roles in implementing the Ontario Fair Hydro Plan and primarily the Global Adjustment refinancing.
- Indemnification will need to ensure separation between the Province and OPG is maintained
- **Next Steps:**
  - Staff in Ministry of Finance and Treasury Board Secretariat have received initial documents and are currently reviewing.
  - Depending on the structure of the indemnity requested, an OIC may be required to provide authority to the Minister of Finance
  - Timing: If an OIC is required this would be included in the June 27th, 2017 submission

TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged
    - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. ~~Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Commented [BA1]: Also added MoF changes for IFRS risk

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on t~~T~~he figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $2994M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of ~~Ontario~~ n~~N~~uclear ~~Funds Agreement~~asset retirement obligations-related IFRS risks, followed by an increase of $121~~1~~M in 2018-19 ~~and a decrease of $14M in 2019-20~~ versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4633~~6~~M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA a~~n~~nd MOF adjustments, is p~~rojected~~lanned to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as

Commented [JK2]: Still being checked.

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK3]: There is a delta in the latest information used for the fiscal plan.

continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and

investment and due diligence processes for its pension fund and nuclear funds.

- OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

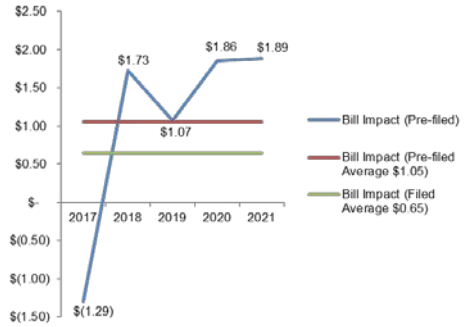
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

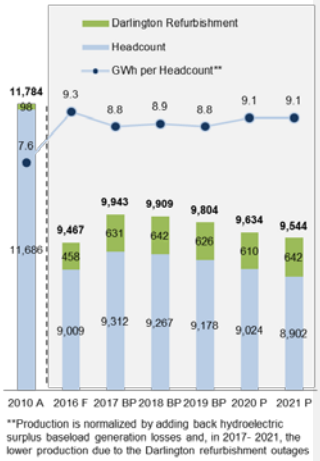
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



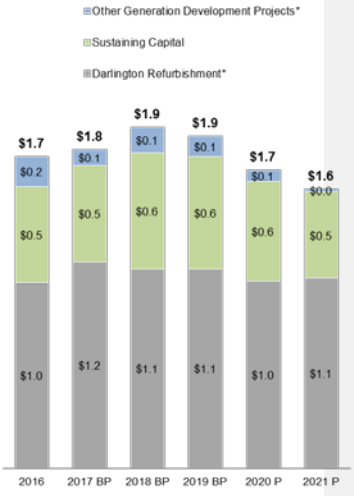
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged
    - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. ~~Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Commented [BA1]: Also added MoF changes for IFRS risk

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on t~~T~~he figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $2994M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of ~~Ontario~~ n~~N~~uclear ~~Funds Agreement~~asset retirement obligations-related IFRS risks, followed by an increase of $121~~1~~M in 2018-19 ~~and a decrease of $14M in 2019-20~~ versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4633~~6~~M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA a~~n~~nd MOF adjustments, is p~~rojected~~lanned to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.

  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.

  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK2]: There is a delta in the latest information used for the fiscal plan.

continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and

investment and due diligence processes for its pension fund and nuclear funds.

- OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

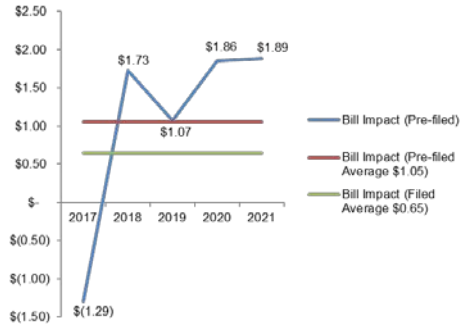
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

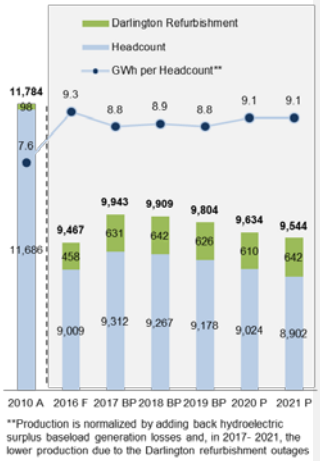
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



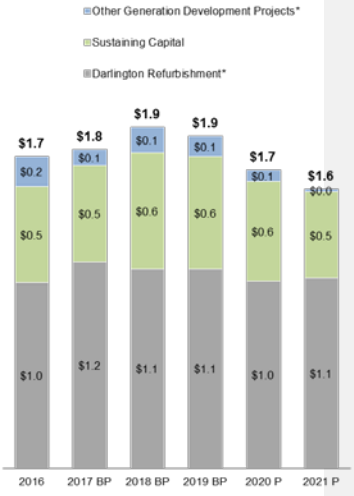
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged
    - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. ~~Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Commented [BA1]: Also added MoF changes for IFRS risk

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan show a decrease in earnings before tax of $294M in 2016-17 and $556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase of $11M in 2018-19 and a decrease of $14M in 2019-20 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4633~~6~~M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA a~~n~~nd MOF adjustments, is projected~~lanned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.

  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.

  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK2]: There is a delta in the latest information used for the fiscal plan.

than 2017 levels in 2021.

OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100

trips annually, while Darlington accounts for 45% and is expected see increases.

- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

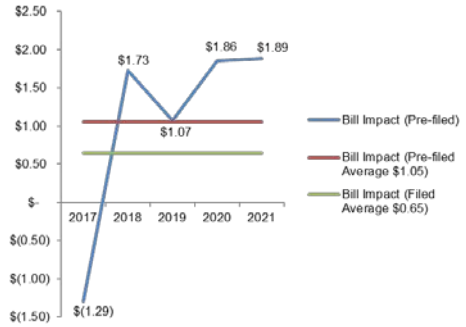
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

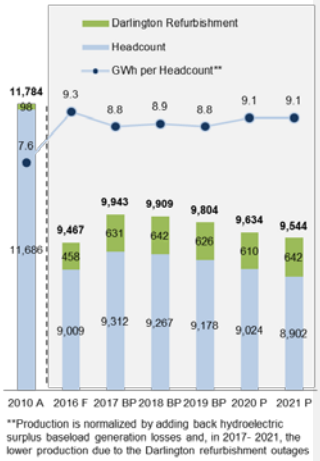
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



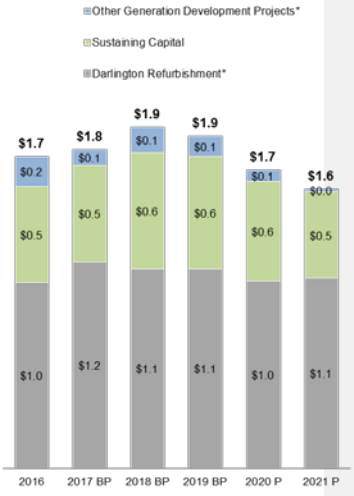
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged
    - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. ~~Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Commented [BA1]: Also added MoF changes for IFRS risk

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan show a decrease in earnings before tax of $294M in 2016-17 and $556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase of $11M in 2018-19 and a decrease of $14M in 2019-20 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4~~63~~6M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA a~~n~~nd MOF adjustments, is p~~l~~rojected~~anned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.

  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.

  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK2]: There is a delta in the latest information used for the fiscal plan.

than 2017 levels in 2021.

OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100

trips annually, while Darlington accounts for 45% and is expected see increases.

- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

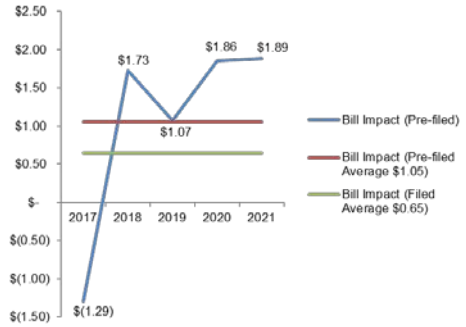
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

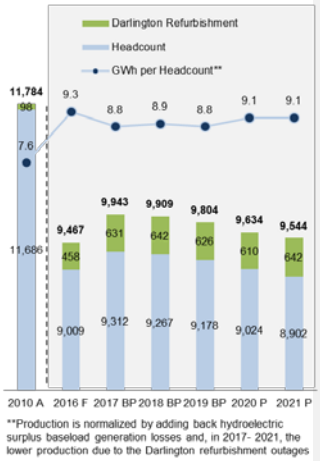
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



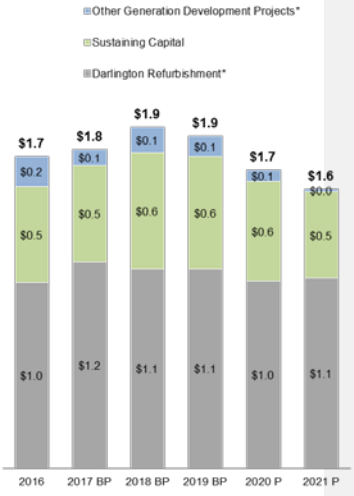
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE: 2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged
    - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged~~ ~~(Check is OFA)~~

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. ~~Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Commented [BA1]: Also added MoF changes for IFRS risk

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan show a decrease in earnings before tax of $294M in 2016-17 and $556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase of $11M in 2018-19 and a decrease of $14M in 2019-20 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4~~63~~6M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA a~~n~~nd MOF adjustments, is projected~~lanned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.

  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.

  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK2]: There is a delta in the latest information used for the fiscal plan.

than 2017 levels in 2021.

OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100

trips annually, while Darlington accounts for 45% and is expected see increases.

- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

Total Fiscal Impact (draw from c-funds)		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

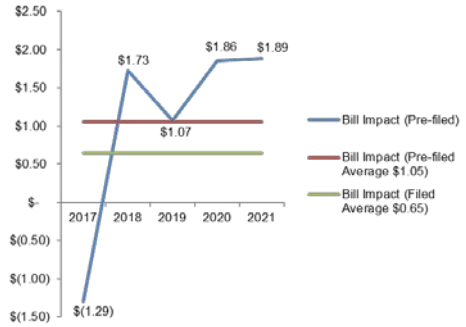
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

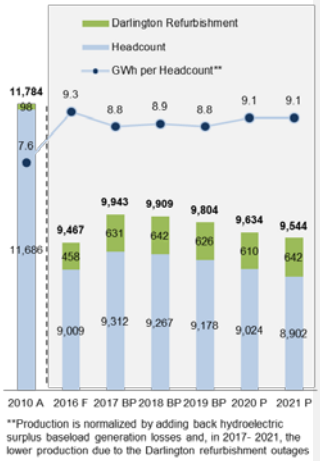
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



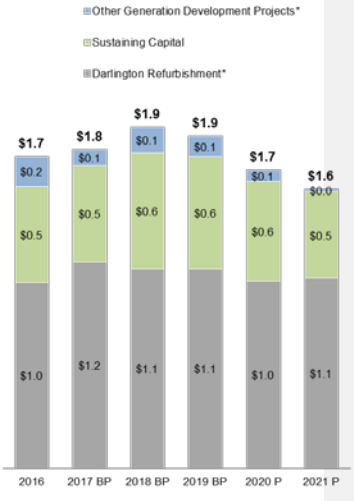
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE: 2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining~~include~~ 44-49% ~~debt or~~ equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) ~~with OPG raising the remaining 5% from capital markets~~.
  - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.
  - ~~In addition, the Province's net debt position should remain unchanged~~
  - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified, ~~and for~~ are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. ~~The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. Commented [BA1]: Also added MoF changes for IFRS risk

~~fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a~~n~~ one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on t~~T~~he figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291~~9~~4M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of ~~Ontario n~~Nuclear ~~Funds Agreement~~asset retirement obligations-related IFRS risks, followed by an increase of $12~~1~~M in 2018-19 ~~and a decrease of $14M in 2019-20~~ versus ~~-~~the estimates in the 2016 Budget. ~~The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.~~

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4633~~6~~M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA an~~m~~d MOF adjustments, is p~~rojected~~~~lanned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

    Also, ~~I~~in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    ~~These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.~~ The first table in Appendix ~~G~~E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget

Commented [JK2]: Still being checked.

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK3]: There is a delta in the latest information used for the fiscal plan.

2016 fiscal plan.

- Key Operational Metrics:
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

    OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016~~, Unit 2~~ and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., ~~U~~upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in [month] 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per

Formatted

year

- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: […]

Commented [RK4]: Could list nuclear performance, financial market risk on the performance of the nuclear funds.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

Commented [RK5]: Could contemplate removing this requirement going forward, say replacing it with a direction for the Ministry to continue to consult with the MOF and OFA on OPG's draft and approved business plans and in-year financial updates.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

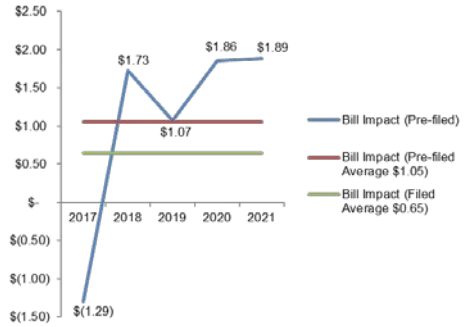
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

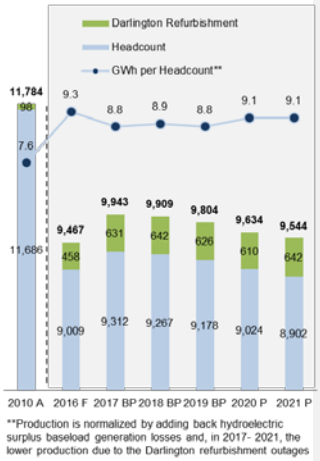
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



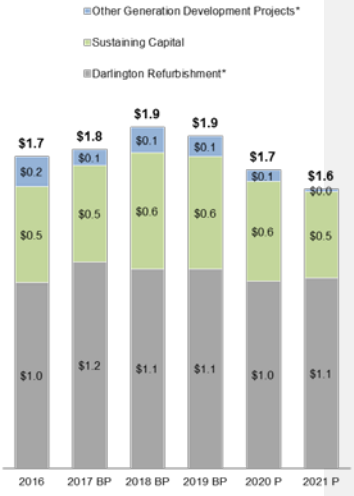
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

Prepared based on draft submission

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan,

how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its 2017-2019 Business Plan (Board-approved?) to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO.~~,~~ It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets. ~~financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending~~ (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged (Check is OFA)

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments~~changes~~ ~~for~~ from the Ontario Financing Authority and~~,~~ MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards.~~.~~ The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

Commented [RK1]: "from"?

Commented [BA2]: Also added MoF changes for IFRS risk

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 201~~7~~8.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan~~, along with OFA forecast updates for OFHP (TBC),~~ show a decrease in earnings before tax of $~~84M~~ 2~~9~~49M in 201~~6~~-17~~-18~~ and $~~89M~~-556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase~~s~~ of $~~59M~~-11~~2~~M in 2018-19 and a decrease of $14~~120M~~-18~~62~~M in 2019-20 versus ~~over~~ the estimates in the 2016 Budget. The 2019-20 decrease largely reflects an

Commented [JK3]: Added to address Ron's comment.

Commented [BA4R3]: Check figures

IFRS-related consolidation risk of $200M) as described above.~~,~~

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4~~63~~6M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, (before OFA and MoF adjustments) is p~~l~~rojected~~anned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering

Commented [RK5]: I'd say separate out the differences related to the business plan from the Provincial consolidation adjustment for IFRS.

Commented [BA6]: Edit 463

(e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: A~~ny~~ change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected~~could~~ to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

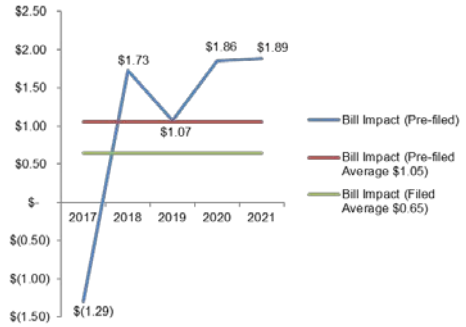
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

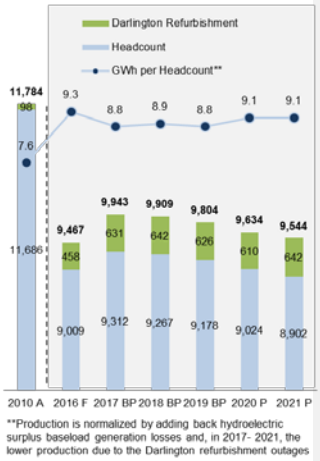
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



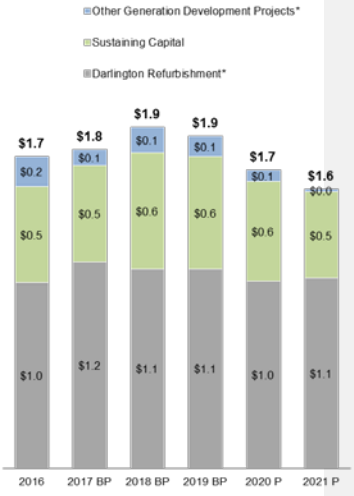
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**
2016 Ontario Budget

Total Revenue Items On Deck	471	(258)	(832)	(185)	(112)	380

Notes:

1. OPG's 2015-16 outlook reflected its reported earnings. Out-years reflect OPG's 2017-19 business plan, November monthly update, and long-term outlook to 2019-20 (as fiscalized by OPG). 2020-21 estimates are based on OPG's calendar year-based long-term projections from the November business plan and fiscalized by CEFD staff. OPG Business Plan projections are also adjusted to remove amounts related to asset optimisation amounts (for real estate sales, to avoid double-counting) that are reflected in the fiscal plan under sales and rentals.

1. OPG Net Income is also adjusted for assumed equity return on Provincial equity injection to partially finance the Global Adjustment deferral -- designed to match FTD estimated IOD to finance the equity injection. See OPG Worksheet for annual breakdown.

2. Reflects provincial adjustment as at December 31, 2016, for net unrealized earnings in the decommissioning and used fuel segregated funds net of Bruce variance account and change in Due to the Province on the decommissioning and used fuel segregated fund. Adjustment for 2014-15 also includes non-ONFA financial instruments.

3. Reflects CEFD forecasts based on latest available public information and modelling. Reflects an 70% Provincial share ownership, with impacts of future share sales incorporated into the asset optimisation projection in Other Non-Tax Revenues, Sales and Rentals

5. Reflects retroactive payment to applicant NUGs under the Global Adjustment lawsuit, based on payment in October 2016. Reflect updated forecast from 2016-17 to 2020-21, with the latest forecast from February 2017.

Notes: All the Hydro One ownership broadening impacts, other than the initial IPO in 2015, are in the asset optimisation line (Sales and Rental) and not in the current Outlook file.

Notes:

1.Reflects OPG October 2015 report for 2015-16. Out-years reflect OPG's 2015 business plan and long-term outlook to 2018-19 (as fiscalized by OPG, received February 11, 2015). 2019-20 and 2020-21 estimates are preliminary and based on OPG's long-term model provided in 2015 and fiscalized by CEFD staff, to be updated.

2. Provincial consolidation adjustments for unrealized earnings on the decommissioning and used fuel segregated funds net of Bruce variance account and change in Due to the Province on the decommissioning and used fuel segregated funds, as of the end of December 2015.

3. Hydro One 2015-16 to 2020-21 projections are based on its 2015 Business plan, adjusted for latest information, including its 2015-17 distribution rate decIsion, adjustments to forecast ROEs based on current interest rate outlook and estimated Hydro One IPO impacts.

4. Provision for electricity sector reflects OPG and Hydro One reported net income, excluding provincial consolidation adjustments, minus the interest costs to OEFC. The provision is currently assumed to end once the DRC ends on a legislated fixed end date of April 1, 2018.

5. Reflects April 23, 2014 announcement announcement that DRC will be eliminated for residential users, after December 31, 2015. The end date of DRC for remaining users is legislated to be on April 1, 2018. Estimates are subject to change based on actual consumption.

6. Offset by incremental Debt Retirement Charge revenues related to the Industrial Electricity Incentive program.

Notes: The Hydro One net income outlook above (2016-17 to 2020-21) reflects the Province's current 70% ownership share, after the initial IPO in 2015 [and the secondary offering in April 2016]. Net estimated fiscal impacts from future Hydro One offerings are reported along with other planned Asset Optimization proceeds under "Sales and Rentals" in the Provinces Revenue outlook.

Notes:

1.OPG's 2015-16 outlook reflected its reported earnings. 2016-17 outlook reflected OPG's November monthly update. Out-years reflect OPG's preliminary 2017-19 business plan and long-term outlook to 2019-20 (as fiscalized by OPG). 2020-21 estimates are based on OPG's calendar year-based business plan projections and as fiscalized by CEFD staff.

2. Provincial consolidation adjustments for unrealized earnings on the decommissioning and used fuel segregated funds net of Bruce variance account and change in Due to the Province on the decommissioning and used fuel segregated funds, as of the end of December 2016.

3. Hydro One 2015-16 income reflects its reported net income, adjusted for Hydro One IPO impacts. 2016-17 to 2020-21 projections are based on CEFD projections based on latest public information and modelling, including its 2015-17 distribution rate decision, adjustments to forecast ROEs based on current interest rate outlook and estimated Hydro One IPO and secondary share offering impacts.

4. Provision for electricity sector reflects OPG and Hydro One reported net income, excluding provincial ONFA consolidation adjustments, minus the interest on debt payable ~~costs~~ to OEFC. The provision is currently assumed to end once the DRC ends on a legislated fixed end date of April 1, 2018.

5. Reflects April 23, 2014 announcement that DRC will be eliminated for residential users, after December 31, 2015. The end date of DRC for remaining users is legislated to be on April 1, 2018. Estimates are subject to change based on actual consumption.

6. Offset by incremental Debt Retirement Charge revenues related to the Industrial Electricity Incentive program.

Electricity Sector Outlook (PSAB)

(294) (556) 11 (14)

($million)	Actual 2014-15	2015-16	Plan 2016-17	2017-18	2018-19	2019-20	2020-21	Explanation of Change
Changes from Budget 2016 as of March 2017								
Income from Investment in Government Business Enterprises								
OPG Income	-	34	(167)	(489)	59	(79)	332	The explanation for the drop of OPG's Income are related to a number of OEB regulatory risks related to the pe application for the 5-year period starting in 2017. Budget 2016 figures were primarily based on OPG's 2015-17 Plan as its board-approved multi-year business plan had not yet been approved and provided when the 2016 Bu plan was locked. OPG's revenues are projected to improve over time as the regulated rate increases on the ba custom incentive regulation approach, and the first refurbished Darlington unit will return to service in February
ONFA and other Fair Value Adjustments	-	(69)	8	-	-	-	-	
Hydro One - Unrealized Gains Adjustment	-	-	-	-	-	-	-	
HOI Income	-	424	(48)	(93)	(112)	(109)	(86)	The variance primarily reflects impacts of new Hydro One net income and corporate income tax projections pro CEFD. Hydro One's net income increased due to the stronger than anticipated results for Q3 2016. Corporate i are also lower to reflect the corporate minimum cash taxes Hydro One will pay due to the benefit from the defe reducing cash taxes. Hydro One Brampton's net income is removed from 2017-18 onwards due to the merger v Inc.
Total OPG and HOI Income	**-**	**389**	(207)	(582)	(53)	(189)	246	
Other Fees and Licences	**-**	**-**	(5)	(23)	(32)	(34)	(41)	
Electricity Expenses of the Province								
Provision for Electricity Sector	-	(3)	(205)	582	-	-	-	The variance is primarily due to the updated revenue figures from OPG and Hydro One. As well, at the time of the forecast was for a significant negative provision, which would have then be kept at zero to have the negative clawed back from the subsequent year (2016-17). As a result of larger than anticipated deferred tax benefit rep Hydro One and proportionate share attributed to the Province based on its ownership interest, the provision in 2 came out to be $3 million [and not the large negative provision previously anticipated]. The variance in 2016-17 explained by the reversal in the actual amount for 2015-16 versus the Budget 2016 forecast. The forecast for th after 2017-18 fiscal is zero since the ESDI payments are assumed to discontinue after DRC ends on April 1, 20 will consider policy options on the continuation of ESDI in 2017.]
Public Debt Interest - Electricity Sector	-	(12)	-	-	-	-	-	
Subtotal	-	(15)	(205)	582	-	-	-	
Public Debt Interest - Impact of ONFA	-	-	-	-	-		-	
Amortization of Deferred Revenue re profit on sale of H1 notes	-	-	-	-	-		-	
Total Electricity Expenses of the Province	**-**	**(15)**	(205)	582	-	-	-	
OEFC Income								
Taxation Revenue								
Electricity Payments-in-Lieu of Taxes (PILs)	-	(4)	(141)	(75)	(56)	57	114	The variance is primarily due to updated OPG revenue figures in OPG's 2017-19 Business Plan, including lowe 2016-17, which impact its PIL payments as well.
Other Revenue								
Electricity Debt Retirement Charge	-	(9)	-	-	-	-	-	Updated with December 2016 Ontario Planning Outlook forecast Scenario A
Power Supply Contract Recoveries	-	91	96	(171)	(71)	25	25	• The declines in volumes, payments and rates in 2017-18 and 2018-19 compared to the earlier forecast are du termination and suspension of several NUG PPAs for curtailments. - The NUG suspensions/terminations coincide with the assumptions used by the IESO for LTEP modelling. • The increase in volumes from 2019-2023 compared to the earlier forecast is from the correction of generation Nagagami and The Power Limited Partnership, which lowered the forecasted rates. • The latest model from Navigant includes more detailed modelling for Kirkland Lake, which resulted in lower o payments, however this decline was balanced by a higher payments due to an increase in forecasted TMC/DC - The decline in payments in 2022-2023 is due to Iroquois Falls and Nipigon expiring, leaving Kirkland Lake as remaining gas facility.

Electricity Sector Outlook (PSAB)

Negative Revenue Risks						
($ millions)	**Plan**					
	2015-16	**2016-17**	**2017-18**	**2018-19**	**2019-20**	**2020-21**
OPG Global Adjustment Trust			**TBD**	**TBD**	**TBD**	**TBD**
OPG Generation Risk: Nuclear Reliability (-1.6 TWh)[1]	-	(120)	(120)	(120)	(120)	(120)
ONFA Funds Return Risk[2]	-	(90)	(95)	(100)	(105)	(110)
Lower OPG's Equity weighting & Return on Equity (ROE)[3]		(2)	(12)	(20)	(25)	(43)
Ministry of Energy's price mitigation initiative - OPG operational efficiencies[9]		(60)	(240)	(240)	(240)	(180)
Lower Hydro One Return on Equity (ROE)[4]			(10)	(39)	(41)	(43)
Hydro One Tx rate application - OEB staff report[8]		(13)	(50)	(50)	(50)	(50)
OPG Switch from accrual based to cash based accounting for pension and OPEB[5]			(475)			
OPG IFRS Consolidation Risks - Scenario 1: 15 year historical, update discount rate each year.[6]	-	(75)	(425)	(525)	(675)	TBD
OPG IFRS Consolidation Risk - Scenario 2: 15 year historical + 5 forward, update every 5 year.[6]		(1,000)	(375)	(400)	(400)	TBD
Additional regulatory risk - Timing, Darlington Refurb Project & Others[7]	-		(660)			
Total - Scenario 1	-	(360)	(1,661)	(568)	(581)	(547)
Total - Scenario 2	-	(1,285)	(1,611)	(443)	(306)	(547)

Notes: The cumulative downside risk is presented as additive, which may overstate off-setting risks.

1. OPG's market and generation risks related to nuclear reliability similar to the scenarios OPG developed for its sales margins to capture major market risk factors (e.g., natural gas prices, coal prices, foreign exchange, nuclear reliability) in its 2012 business plan. Currently, only the nuclear reliability risk is captured at the current regulated rate for OPG's nuclear generation.

2. Under the Ontario Nuclear Funds Agreement (ONFA), OPG has established two segregated funds, the Decommissioning Segregated Fund (DSF) and for the Used Fuel Segregated Fund (UFSF). The risk shown is based on 1% decline on a realized basis in the DSF and UFSF, less the portion in the DSF assumed to be attributable to OPG's Bruce assets that is recoverable from consumers through the Bruce Variance Account.

3. Risk range for OPG reflects potential risk of lower ROE by 0.5% vs assumed ROEs in OPG's 2016 business plan and corresponding rate application. Also reflects how the proposed deemed equity of 49% might actually revert to the prior approved 45% weighting.

4. Risk range for Hydro One transmission and distribution reflects potential risk of lower ROE by 0.5% vs assumed ROEs in CEFD Hydro One Forecast based on the most recent rate applications and forecasted ROE rates.

5. The OEB directed a switch to cash-based accounting for years 2014 and 2015. However, the OEB also directed OPG to track the difference between cash based and accrual based accounting in a deferral account, while a generic proceeding is underway for all OEB-regulated electric and gas utilities.

6. The Ontario Auditor General recommended in the 2016 AG Report that the Province of Ontario include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards potentially as soon as the 2016-17 fiscal year. Estimated impacts to the Province by OPG being consolidated on an IFRS basis with respect to its nuclear liabilities under two methodologies are summarized in Scenarios 1 and 2. (Following work on the next Reference Plan, the potential impact to the 2021-22 fiscal year and going forward would be known.) **NOTE: The scenario 1 risk for 2017-18 to 2019-20 is reflected in the current fiscal plan.**

7. Additional regulatory risks related to the-rate application in spring 2016, including risks related to effective date timing, and a portion of refurb. costs-to-date of about $700-800M.

8. On January 25, 2017, the Ontario Energy Board (OEB) staff released their review of the Hydro One Transmission rate application (EB-2016-0160), and proposed a number of changes for the Board to rule on including a reduction in allowed capital expenditure, which would reduce the rate base and related return on capital, and OM&A related primarily to the compensation levels beyond the benchmark.

Electricity Sector Outlook (PSAB)

Positive Revenue Risks						
($ millions)	**Plan**					
	2015-16	**2016-17**	**2017-18**	**2018-19**	**2019-20**	**2020-21**
OPG Global Adjustment Trust						
OPG Generation Risk: Nuclear Reliability (+1.1 TWh)[1]	-	85	85	85	85	85
Positive OPG regulatory risk - Motion to Review[2]	-	-	-	-	-	-
1% increase in Hydro One actual load[3]	-	15	15	15	15	15
Higher Hydro One Return on Equity (ROE)[4]		-	15	60	65	65
Higher OPG Return on Equity (ROE)[5]		-	6	25	30	55
Revenue risk if Scenario 2 IFRS Consolidation risk.[6]			50	125	275	
	-	100	171	310	470	220

Notes: The cumulative upside risk is presented as additive, which may overstate off-setting risks.

1. OPG's market and generation risks related to nuclear reliability similar to the scenarios OPG developed for its sales margins to capture major market risk factors (e.g., natural gas prices, coal prices, foreign exchange, nuclear reliability) in its 2012 business plan. Currently, only the nuclear reliability risk is captured at the current regulated rate for OPG's nuclear generation.

2. Reflects OPG's Motion to Review application with the OEB for the Niagara Tunnel cost disallowance and the 2013 tax loss.

3. A 1% change in the forecast represents a change of approximately 206MW for Tx in peak demand based on 2015/2016revenue requirement.

4. Risk range for Hydro One transmission and distribution reflects potential risk of higher ROE by 1% vs assumed ROEs in the Hydro One CEFD Forecast. Rounded to the nearest $5M.

5. Risk range for OPG reflects potential risk of higher ROE by 1% (for nuclear base) vs assumed ROE in OPG's 2016 business plan and corresponding rate application. Rounded to the nearest $5M.

6. NOTE: The Scenario 1 risk for 2017-18 to 2019-20 is reflected in the current fiscal plan. This is the impact if Scenario 2 is realized.

Notes:

1. OEFC interest income includes $520 million, or less (after H1 ownership broadening), annual interest payment from Province related to the Province's investment in OPG and Hydro One.

2. OEFC receives Electricity Sector Dedicated Income from the Province for the combined net income of OPG and Hydro One in excess of the Province's annual interest cost for its investment in these companies.

3. OEFC pays a Debt Guarantee Fee to the Province that is eliminated upon consolidation.

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2017-2019 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*Direct OPG review of delegated financial authority in consultation with TBS*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**

Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to

annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment refinancing, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining 44-49% equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection).

    - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
    - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
    - 2017 Budget projections were based on the figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291M in 2016-17 and $556M in 2017-18 compared to the 2016

Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of nuclear asset retirement obligations-related IFRS risks, followed by an increase of $12M in 2018-19 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $463M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, before OFA and MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

Also, in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

The first table in Appendix E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget 2016 fiscal plan.

- Key Operational Metrics:
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

    OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.
- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent

with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016 and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.

  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

    TBS staff note that to obtain a special status, ministries are required to provide a comprehensive business case that would demonstrate how the special status would support the organization's business plan and mandate, and include details related to its annual forecast activity, internal audit controls, governance structure, and robust reporting processes that would be in place to support governance of the proposed

delegated authority.

As the Ministry is interested in streamlining the approval process related to approvals for international travel, it is recommended that the Ministry explores its current delegated financial authority framework and consult with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing) and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) Direct OPG to review its current delegated financial authority framework in consultation with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

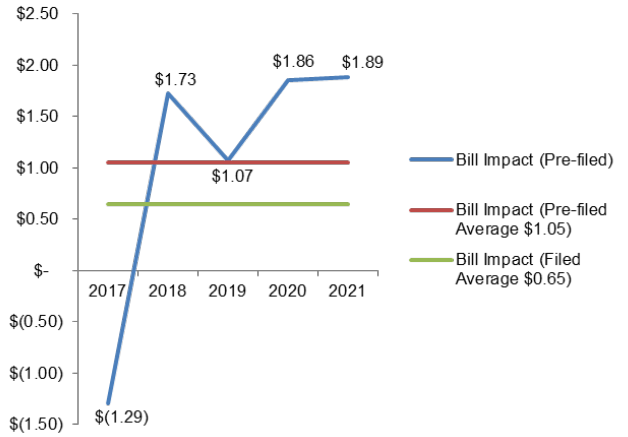
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

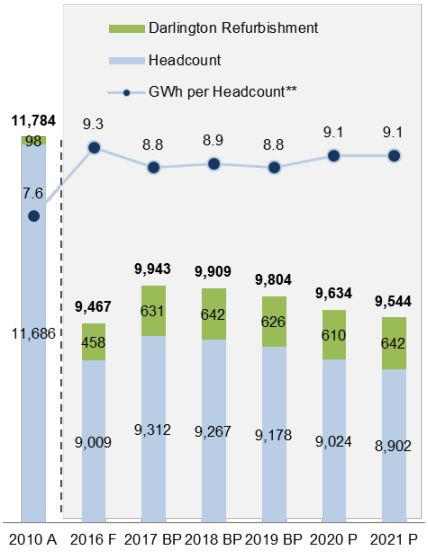
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



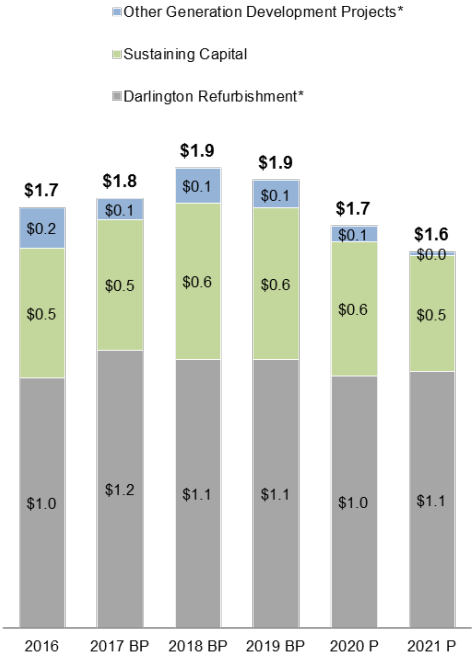
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF OPG BUSINESS PLAN PROCEEDING

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only). Net Income and PILs contributions from OPG Head Office are included in Sales and Rental under Other Non-Tax Revenue in the 2017 Budget.

OPG Net Income and Income Tax ($ Millions)				
	2016-17	2017-18	2018-19	2019-20
2016 Budget[1]				
Net Income	471	586	673	
Income Tax	224	159	182	
2017-2019 OPG Business Plan				
Net Income	349	702	678	726
Income Tax	96	166	135	170

Income tax 2017 Budget	92	92	135	170
2016 Budget vs. 2017 Budget (including IFRS and sales &rental adjustments)				
Net Income	(167)	(489)	59	
Income taxes	(132)	(67)	(47)	
2016 Budget vs. 2017 Budget (Before IFRS and sales &rental adjustments)				
Net Income	(84)	133	59	200
Income taxes	(132)	7	(47)	0

1. 2016 Budget fiscal plan was largely based on OPG's 2015 multi-year business plan, as the 2016 multi-year business plan was approved and submitted following the timeframe for locking the numbers for the early 2016 Budget.
2. OPG February 2017 Monthly Update

3. IFRS risk is related to Province's reporting of nuclear asset retirement obligations. The Ontario Auditor General recommended (2016 AG Report) that the Province include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards, versus the companies U.S. GAAP basis of reporting.
4. For public Budget reporting, projected net impacts of Province asset optimization strategy including, OPG Head Office sale, are reported under Sales and Rentals for commercial confidentiality. OPG proceeds estimate updated per 2017 Budget.
5. Provincial consolidation adjustments for unrealized earnings on decommissioning and used fuel segregated funds net of Bruce variance account and change in Due to the Province on the decommissioning and used fuel segregated funds.

OPG's fiscal results are also impacted by Other PILs to the Ontario Electricity Financial Corporation (OEFC) and the Province. The following table reflects these others impacts in addition to the latest net income and income tax PILs from OPG's August update.

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**
2016 Ontario Budget

---

Morning John, Bruno:

Attached is the note for Chair's briefing usual place.

Two Energy items, OFA should be in attendance (Items are at the front on the agenda, items 3 &4):

- Ontario Fair Hydro Plan 1:20pm (Draft note pending)
- Ontario Power Generation Business Plan 1:30pm (Note attached)

James

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2017~~6~~-2019~~8~~ business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*Direct OPG review of delegated financial authority in consultation with TBS*

III. FINANCIAL SUMMARY

Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to

annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment refinancing, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining 44-49% equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection).
    - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
    - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

- ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.~~
    - ~~Provincial borrowing would be offset by an increase in an investment asset in OPG.~~
    - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
    - ~~In addition, the Province's net debt position should remain unchanged~~

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.

~~Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

Commented [BA1]: Also added MoF changes for IFRS risk

~~The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.~~

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on the figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of nuclear asset retirement obligations-related IFRS risks, followed by an increase of $12M in 2018-19 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

    Commented [JK2]: Still being checked.

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $463M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA and MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

    Also, in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    The first table in Appendix E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget 2016 fiscal plan.

- Key Operational Metrics:

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016 and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides

more information):

- OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
  - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
  - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
  - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
  - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

TBS staff note that to obtain a special status, ministries are required to provide a comprehensive business case that would demonstrate how the special status would support the organization's business plan and mandate, and include details related to its annual forecast activity, internal audit controls, governance structure, and robust reporting processes that would be in place to support governance of the proposed delegated authority.

As the Ministry is interested in streamlining the approval process related to approvals for international travel, it is recommended that the Ministry explores its current delegated financial authority framework and consult with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing) and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

- Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact. ~~The figures in the OPG Board approved 2017-2019 Business Plan show a decrease in earnings before tax of $294M in 2016-17 and $556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase of $11M in 2018-19 and a decrease of $14M in 2019-20 versus the~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) Direct OPG to review its current delegated financial authority framework in consultation with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

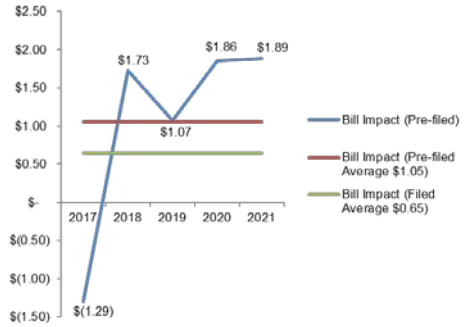
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

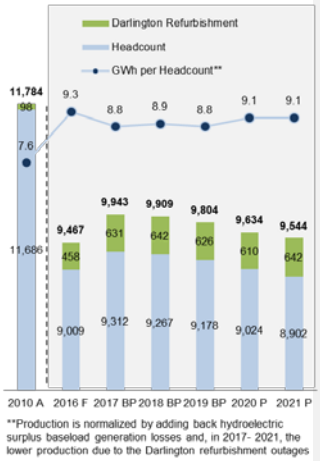
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



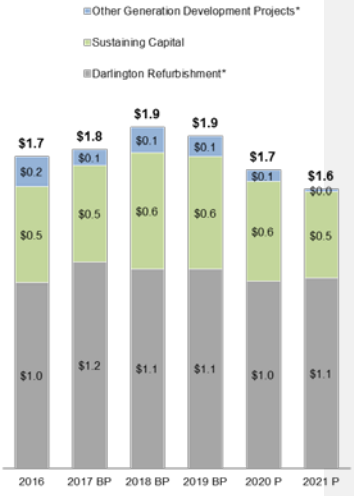
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2017-2019 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*Direct OPG review of delegated financial authority in consultation with TBS*

III. FINANCIAL SUMMARY

Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to

annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment refinancing, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining 44-49% equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection).

    - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
    - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
    - 2017 Budget projections were based on the figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291M in 2016-17 and $556M in 2017-18 compared to the 2016

Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of nuclear asset retirement obligations-related IFRS risks, followed by an increase of $12M in 2018-19 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $463M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, before OFA and MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

Also, in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

The first table in Appendix E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget 2016 fiscal plan.

- Key Operational Metrics:
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

    OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.
- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent

with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016 and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.

  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

    TBS staff note that to obtain a special status, ministries are required to provide a comprehensive business case that would demonstrate how the special status would support the organization's business plan and mandate, and include details related to its annual forecast activity, internal audit controls, governance structure, and robust reporting processes that would be in place to support governance of the proposed

delegated authority.

As the Ministry is interested in streamlining the approval process related to approvals for international travel, it is recommended that the Ministry explores its current delegated financial authority framework and consult with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing) and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) Direct OPG to review its current delegated financial authority framework in consultation with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

Total Fiscal Impact (draw from c-funds)		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

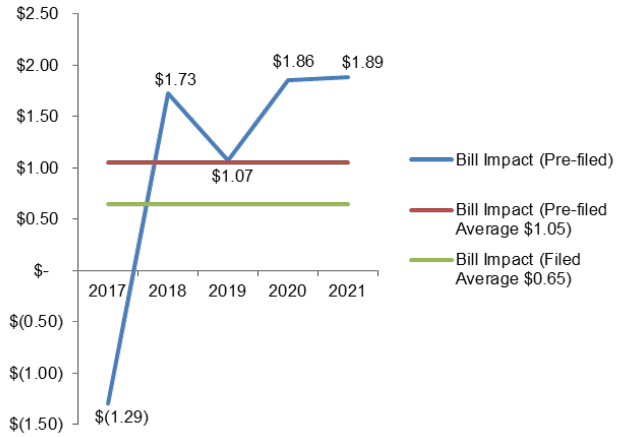
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

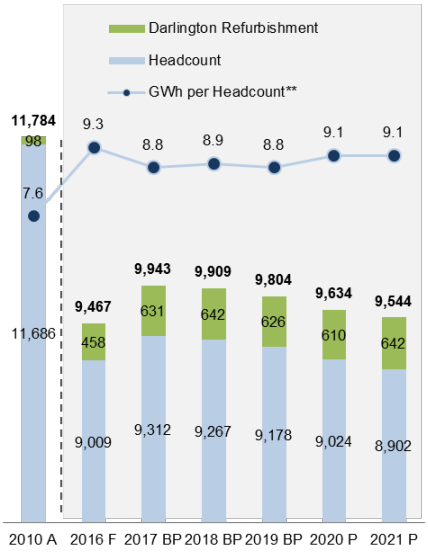
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



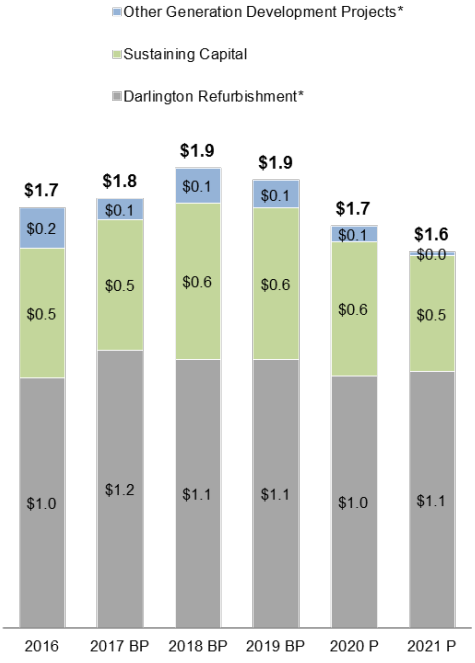
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF OPG BUSINESS PLAN PROCEEDING

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only). Net Income and PILs contributions from OPG Head Office are included in Sales and Rental under Other Non-Tax Revenue in the 2017 Budget.

OPG Net Income and Income Tax ($ Millions)				
	2016-17	2017-18	2018-19	2019-20
2016 Budget[1]				
Net Income	471	586	673	
Income Tax	224	159	182	
2017-2019 OPG Business Plan				
Net Income	349	702	678	726
Income Tax	96	166	135	170
2017 Budget				
Net Income				
OPG 2017-19 Business Plan	349	702	678	726
Adjustments:				
OPG Update[2]	30			
IFRS Risk adjustment[3]	(75)	(400)		(200)
related to OPG Head Office Sale[4] (reported under Sales & Rentals)		(222)		
GA – OPG Trust Net Inc. Impact (assumed to offset IOD)		17	54	99
Nuclear Funds fair value adjustment[5]	8			
Net Income 2017 Budget	312	97	732	625
Income Tax				
OPG 2017-19 Business Plan	96	166	135	170
Adjustments				
OPG Update[2]	(4)			
related to OPG Head Office Sale[4] (reported under Sales & Rentals)		(74)		
Income tax 2017 Budget	92	92	135	170
2016 Budget vs. 2017 Budget (including IFRS and sales &rental adjustments)				
Net Income	(167)	(489)	59	
Income taxes	(132)	(67)	(47)	
2016 Budget vs. 2017 Budget (Before IFRS and sales &rental adjustments)				
Net Income	(84)	133	59	200
Income taxes	(132)	7	(47)	0

1. 2016 Budget fiscal plan was largely based on OPG's 2015 multi-year business plan, as the 2016 multi-year business plan was approved and submitted following the timeframe for locking the numbers for the early 2016 Budget.
2. OPG February 2017 Monthly Update

3. IFRS risk is related to Province's reporting of nuclear asset retirement obligations. The Ontario Auditor General recommended (2016 AG Report) that the Province include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards, versus the companies U.S. GAAP basis of reporting.
4. For public Budget reporting, projected net impacts of Province asset optimization strategy including, OPG Head Office sale, are reported under Sales and Rentals for commercial confidentiality. OPG proceeds estimate updated per 2017 Budget.
5. Provincial consolidation adjustments for unrealized earnings on decommissioning and used fuel segregated funds net of Bruce variance account and change in Due to the Province on the decommissioning and used fuel segregated funds.

OPG's fiscal results are also impacted by Other PILs to the Ontario Electricity Financial Corporation (OEFC) and the Province. The following table reflects these others impacts in addition to the latest net income and income tax PILs from OPG's August update.

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**
2016 Ontario Budget				
Combined Other PILs & Other GRC	342	351	359	
Other PILs (GRC to OEFC, Proxy Property Tax)	213	223	232	
Other GRC (to MOF & Niagara Parks Commission)	129	128	137	
2017-19 OPG Business Plan				
Combined Other PILs & Other GRC	329	350	363	362
Other PILs (GRC to OEFC, Proxy Property Tax)[3]	218	232	243	241
Other PILs (GRC to MOF & Niagara Parks Commission)	110	118	120	121

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy

DRAFT Financing Global Adjustment

Commented [HT1]: Name as in EVista- Will update as item is updated.

Cabinet (info)	TB/MBC	Cabinet	Announcement	TB/MBC	Cabinet	Introduction
Feb 15, 2017	March 1, 2017	March 1, 2017	March 2, 2017	May 9, 2017	May 10, 2017	May 11, 2017

Summary of Proposal

The proposed legislation contains a variance from Cabinet direction, which is detailed in the ministry's variance memo and within this note.

Context for Decision:

This proposal follows Cabinet direction to the Ministry of Energy to take the necessary steps to implement electricity price mitigation initiatives that would provide additional rate relief to Ontario electricity ratepayers.

The proposed legislation enables approaches to fairly allocate the costs of the Global Adjustment (GA) amongst current and future electricity rate payers, and help the most vulnerable Ontarians through enhancements to electricity support programs through tax-base funding. To fully implement the initiative, the Ministry of Energy will be seeking future approvals for regulations identified in the proposed bill, while working to maintain existing public policy objectives such as: maintaining a reliable electricity system, Ontario's commitment to reducing the impacts of climate change and commitment to achieve greenhouse gas (GHG) reduction targets.

The proposed legislation:

1. Establishes a framework to finance a portion of the GA costs in order to reduce costs for ratepayers in the near term and spread the costs of the GA more fairly across ratepayers between July 1, 2017 and April 30, 2047:
   - July 1, 2017 to April 20, 2018, reduces after-tax electricity costs for specified consumers by 25%.
   - May, 1 2018 to April 31, 2022, electricity rates will be set by Order in Council (OIC) with the intention to keep increases in line with the Consumer Price Index (CPI) (See page 17- Fiscal Pressure)
   - May 1, 2022 to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and

administrative costs, around 10% of total electricity costs. (See page 14- Future Impacts to Electricity Rates)

Commented [HT2]: TBC by Energy

- Through the bill and subsequent amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998, e*xpanding the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO), to provide for appropriate oversight, putting in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the deferred GA costs. (See page 19- OPG Mechanism)

2. Expands electricity support programs for the most vulnerable consumers and moves program costs from the rate base to the tax base. The bill amends the *Ontario Energy Board Act, 1998* to:
   - ~~M~~move the recently expanded Ontario Electricity Support Program (OESP) to the tax base, transition the program to be administered by the Crown, and to enable information exchange between the Ontario Disability Support Program to potentially allow for automatic enrolment procedures to be established;
   - ~~Amends the Ontario Energy Board Act, 1998 to e~~enable a broadening of the Rural or Remote Electricity Rate Protection (RRRP), including harmonizing distribution costs for customers with the highest distribution rates and moving the program to the tax base; and,
   - ~~Amends the *Ontario Energy Board Act, 1998* to~~ require the establishment of a government funded program to provide a delivery credit to prescribed on reserve customers.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price, helping to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, fixed generation costs, such as nuclear contracts, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:

  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - Line Loss: The costs to recover electricity that is lost as heat when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service types are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. The more customers there are in the area, the lower the cost to serve. R1 customers are considered 'medium density' customers and R2 are considered 'low density customers.'
- **Ontario Power Generation (OPG) –** A business corporation owned by the province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to comment on various items.
- **Independent Electricity System Operator (IESO) –** An independent corporation and agency of the Ministry of Energy that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Class A Consumer –** Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A was lowered to 1MW for all consumer types.
- **Non-RPP Class B Consumer –** Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a volumetric rate applied to all electricity consumption. Class B consumers include those that choose not to become Class A.

- **Special Purpose Vehicle (SPV) –**
- **Security Interest –**

Commented [HT3]: TBS: Do you have standard language that you would recommend using?

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. There has been increased media attention and public pressure for the government to provide ratepayer relief. On March 2, 2017, the Ontario government announced its electricity rate mitigation package, Ontario's Fair Hydro Plan, which included the initiatives contained in the proposed legislation. The government has committed to implement further rate relief measures by the summer 2017.

What is the expected cost to government?

The total cost of the proposal is $4.1B [TBC] in 2017/18, $1,599M funded through the fiscal plan and $2.5B to be funded through the electricity rate base.

Commented [HT4]: TBC as this includes the equity injection.

Commented [BA5]: Is it clear here what is mean by "cost"? Fiscal cost plus higher debt.

Commented [JK6]: TBS, pls. check this figure. I believe there is an updated figure ($1,438?).

TABLE 1: Cost Impact ($M)	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	499	753	829	892
GA Financing	2,534	2,668	2,942	3,420
~~OPG Loan /~~ Province's Capital Injection to OPG ~~Share Purchase~~ (i.e. equity injection or debt)	1,100	?	?	?
Cumulative Total	4,133	3,421	3,771	4,312

Commented [BA7]: Maybe should avoid calling this a loan

Commented [BA8]: May be confusing to total these amounts. 1st row is a fiscal impact while equity injection represents increase in debt but no fiscal impact.

Commented [JK9]: Also, 2.5bn in 2017-18 includes the Province's capital injection

The proposed bill identifies OPG as the Financial Services Manager and would therefore take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from the IESO through OPG Trust. The OPG would finance these purchases through a combination of an equity investment by the Province ($1.1 B in 2017-18; See Table 1) and external private sector financing. The structure has been designed to increase gross debt of the Province (to finance the equity injection in OPG), increase interest on debt related to that external debt, increase net investment in OPG, and increase earnings of OPG. The equity investment has been structured so that the underlying regulatory asset will offset the additional debt to not impact the province's net debt.

Commented [HT10]: TBC

Commented [BA11]: Do we need to distinguish between OPG as financial service manager and OPG Trust which would purchase regulatory assets?

The estimate for the combined impact of the non-Global Adjustment initiatives that would begin in 2017/18 is expected to be $499M in 2017/18, growing to $753M in 2018/19 and rising. This represents an additional pressure on the plan. These estimates are based on variable inputs such as program uptake and future energy consumption of various consumer groups, and are therefore subject to change.

Commented [BA12]: Additional to? As proposed this is the only pressure on the fiscal plan. The GA financing as proposed has no impact on the fiscal plan but does impact debt.

TABLE 2: Fiscal Impact ($M)	17-18	18-19	19-20	20-21
RRRP Enhancements*	344	472	484	497

OESP Enhancements	140	261	325	375
First Nations On-Reserve Delivery Credit	15	20	20	20
Total	499**	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate base.
****Note**: Value adjusted from $665 million to reflect July 2017 implementation.

There is inherent risk in the financial estimates because the calculations are highly dependent on forecasts of the total consumption and bills of customers eligible for the RPP, the cost of borrowing, electricity demand and electricity market conditions and accounting assumptions. In addition, under the proposal, electricity prices would increase around 10% above forecast residential monthly bills from 2028 to 2047.The public may expect that the government is committed to reducing or holding constant the absolute cost of electricity for consumers in the longer term. Under the proposal, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future. (See page 17- Fiscal Pressure)

What are the key steps to deliver this proposal?

- May 11, 2017 - introduce legislation.
- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, and LDCs on the implementation of the Fair Hydro Plan.
- Information postings of proposed regulations.
- June ?? 2017- Energy to bring regulations to TB/MBC.
- June ??, 2017- Energy to bring regulations to LRC/Cabinet.
- July 1st, 2017- the remaining Fair Hydro Plan reductions and programs would take effect. Programs that are not established on this day for technical implementation issues will have benefits that are retroactively applied to customers once program is operational in individual LDCs.

Commented [HT13]: Energy: Pelase refine

How will the changes be communicated?

Commented [HT14]: CO and Energy Comms to review.

On March 2, 2017, the Premier made a high profile announcement of additional relief to reduce electricity costs for Ontarians. Coinciding with this event, there was news releases with backgrounders, a technical briefing of the media, a public education campaign to raise awareness of the rebates and initiatives in place to reduce electricity bills, and an Ontario website that includes all the programs and initiatives that the government is undertaking to reduce electricity costs.

Building on the previous announcements, on May 11, 2017, the Premier is to make a high profile announcement of the plans to introduce the necessary legislation to implement Ontario's Fair Hydro Plan to provide additional relief to reduce electricity costs for Ontarians.

Given the risk identified that the GA financing may have a fiscal impact, communication will need to be clear that the proposed draft legislation meets the legal, accounting and financial requirements to not have a fiscal impact.

Notes and Recommendation from LRC

LRC item direct to Cabinet.

Cabinet Office Analysis

The proposed legislation allows for the implementation of the main elements of Ontario's Fair Hydro Plan announced March 2 to provide further rate relief to Ontario electricity ratepayers. The Global Adjustment (GA) smoothing proposal will provide 25% in rate relief on average in aggregate (including the 8% announced in 2016) for eligible consumers of the Regulated Price Plan (RPP) between July 1, 2017 and April 31, 2018 ("The Fair Adjustment"). Electricity rates would then change by amounts prescribed in the regulations under the bill, with the intention to keep rate increases in line with Consumer Price Index (CPI) between May 1, 2018 and April 30, 2022.

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the summer of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement, and conservation. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the Ministry has identified key priorities, and, Ontario's Fair Hydro Plan combined with new policy or program announcements in the LTEP, will provide the comprehensive future planning perspective for Ontario's energy sector.

Commented [AP15]: The 25% is an average or for every customer?

Commented [BA16]: Should sentence read "…25% in rate relief on average…"?

Commented [HT17]: Need to add estimate of benefits from the other programs, particularly RRRP as I think the impact, along with GA, is going to be closer to 40 or 50% for some customers

Commented [HT18]: Confirm with PO and Energy

1. Refinancing the Global Adjustment

The proposed legislation establishes the framework to defer some of the current GA costs to future ratepayers by recognizing the longer term benefit of these assets to the electricity system (similar to extending and re-financing a mortgage). The methodology is based on the assumption that some generation assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts, and that future ratepayers are expected to continue to be able to utilize and benefit from these assets, and that they will also reduce the need to finance the development of new generation assets in the future.

Many of the contracted generation assets are expected to have useful lives that extend beyond the term of their current financial contracts (typically 20 years). Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives can provide benefits to the electricity system over many years.

According to a legal opinion by former Supreme Court Justice Binnie, the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations leaves the process more susceptible to constitutional challenge and could jeopardize the nature of the clean energy adjustment being a regulatory charge, and risk it being deemed an unlawful tax. The bill has been drafted to mitigate this risk and clearly articulates the desire to fairly attribute intergenerational costs and benefits. In addition the bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. (See page 16- Legal Risk)

Key elements of this component of the bill include:

Fair Adjustment

- July 1, 2017- April 30, 2018- the bill outlines an immediate 25% reduction (on average) in rates for eligible consumers in recognition of the investment in clean energy initiatives since 2005.
- May 1, 2018- April 30, 2022- the bill allows for rates to be set by regulation, with the intention that rates will increase in line with CPI over this time, consistent with government commitments. (See page 17- Fiscal Pressure)
- Ontario Energy Board (OEB) would calculate appropriate adjustments for "specified consumers".

Clean Energy Adjustment

- Determined by Ontario Power Generation (OPG) as the Financial Services Manager, the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principal~~e~~, interest, transaction costs and administrative costs associated with the fair adjustment (regulatory/investment asset).
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- May 1, 2022- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing Independent Electricity System Operator (IESO) and Local Distribution Companies (LDC) processes.
- In accordance with the regulations, the OEB to set the rate at which "specified consumers" are invoiced to recover the clean energy adjustment.

Fair Allocation Amount

- The fair allocation amount is calculated by the Financial Services Manager consistent with the principles of the bill.
- Established for the purposes of allocating the costs of the clean energy initiative to provide inter-generational fairness to rate payers; and aligning funding obligations that may be incurred during each reference period (typically every 6 months).

Commented [AP19]: OPG intends to recover interest costs every year through the Trust in order to pay the interest payments from debt sourced from the capital markets. Thus, the clean energy adjustment charge would start in 2017, not 2022.

Commented [SQ220]: I had this comment initially too but the opposite side to this is that they will simply capitalize those costs and will result in increased financing requirements over the first 4 years.

- Provided to the Minister of Energy who will ensure that the information is made public in an appropriate way.
- Principles established in the bill require proper match over time between the costs of providing facilities for clean electricity generation and conservation and the consumers who benefit from these investments in the system. (Page 16- Legal Risk; See page 17- Fiscal Pressure)

Financing Plan

- Prepared by the Financial Services Manager to determine if potential funding obligations should be incurred to acquire an investment interest in accordance with the bill.
- Provided to the Minister Energy who may remove the Financial Services Manager if the Financing Plan is not consistent with the principles of the bill and the Financial Services Manager has been given the opportunity to address the Minister's concerns.
- May be amended as determined by the Financial Services Manager.
- In practical terms, the Financing Plan is intended to show how debt (with varying degrees of incurrence dates, maturities, interest rates) will be used over time.
- The OEB would review the administrative costs of the Financial Services Manager.

Commented [AP21]: Is this a different point from Ernst & Young advice OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.

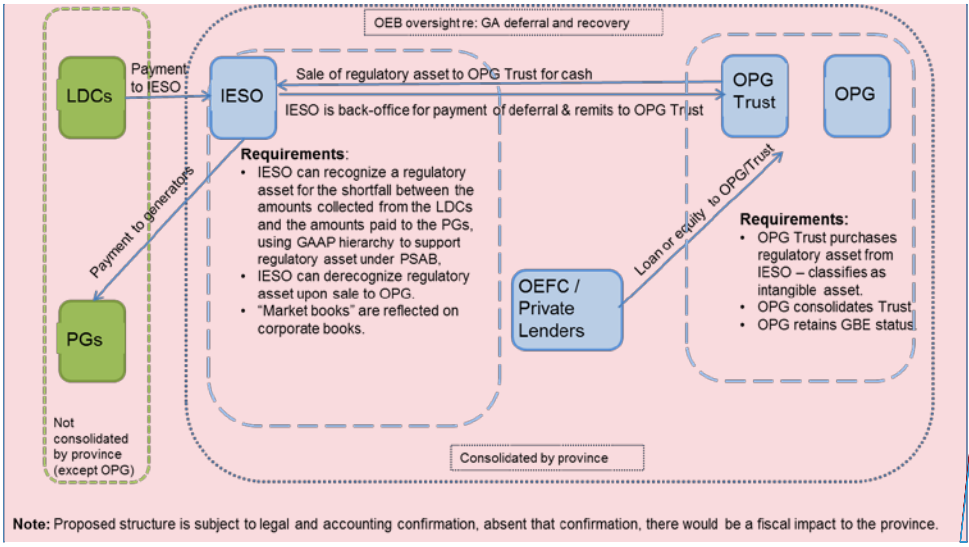
Regulatory Asset and Investment Asset

- Regulatory Asset created as IESO incurs a funding shortfall equal to the difference between the rates it receives after the implementation of the Fair Adjustment and the amounts owed under generation and conservation contracts (i.e. the comparison rate minus rates after fair adjustment).
- Subject to OEB approval, IESO would record the funding shortfall as a regulatory asset. IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until May 1, 2022.
- The Financing Plan contemplates the Financial Services Manager establishing financing entities (OPG Trust/Special Purpose Vehicle (SPV)) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.
- This purchase and sale turns the regulatory asset into an investment asset. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests including by dividend or undivided interest, consistent with the Financing Plan. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.

- After 5 years (May 1, 2022) the IESO has the rights to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. (See page 17- Fiscal Pressure)
- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

Crown Undertaking (Guarantee or Backstop)

- The Crown would undertake not to do anything to adversely affect an investment asset or funding obligation, including hinder, impair, prejudice the charging, collection or remittance of the clean energy adjustment.
- The Minister of Energy, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill.
- The Minister of Finance, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.



Commented [HT22]: Energy: Please provide updated chart with terminology from the legislation embedded.

Commented [JK23]: CEFD/OFA will have an updated version for this provided to Energy.

The bill establishes a structure in which the IESO records the GA cost recovery deferral is recorded as a regulatory asset (regulated by the OEB), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time ("The Fair Adjustment"). Eligible consumers would receive a 25% reduction in electricity rates from July 1, 2017 to April 30, 2018. The IESO may then sell the regulatory asset, at which time it becomes an investment asset. The investment asset owner (OPG Trust/SPV or trust "financing entities") may then further sell or

Commented [HT24]: Section to be compared against the legislation's compendium when available.

securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

Under the proposed framework, OPG, acting in its role as the "Financial Services Manager", and following the principles in the bill, would regularly calculate the "Fair Allocation Amount" to ensure a proper match of the allocation of the intergenerational costs and benefits. To recoup the costs associated with the fair adjustment, consumers, starting in May 2022 would be invoiced the "Clean Energy Adjustment" on their electricity bills through existing IESO and LDC processes. The OEB would set the rates at which the clean energy adjustment could be collected.

OPG is planning to create a SPV or Trust to finance the GA. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. The variability will likely largely result from the financing of the SPV/Trust, and therefore OPG will have the ability to direct the financing of the Trust and both benefit from its financing strategy and be at risk as a result of it.

OPG Trust/SPV will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province (See Table 1 on page 4) and external financing through a securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG. The proposed structure is expected to result in: (1) increase in provincial gross debt offset by an equivalent in regulatory assets resulting in no change in net debt, and (2) an increase in interest on debt paid by the province offset by higher earnings from OPG resulting in no impact on annual deficit of the province.

The legislation commits the government to backstop the financing if the government were to ever hinder the collection of the clean energy adjustment including revoking or changing the legislation or regulations. In other words, the OPG and its debt holders would have their capital guaranteed and paid for directly by the Province if such a situation were to occur. The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time, but could be as high as $1-1.5B annually [TBC]. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future.

The proposed structure has been extensively reviewed by KPMG (Energy advisor and IESO auditor), and the firm has provided an accounting opinion confirming the validity of the structure under PSAB [TBC]. This opinion can be made public [TBC] to support the governments rational for the plan. In addition, MAG and Blakes are confident that the structure is constitutionally sound, but that this will depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism. Based on the current analysis there is a moderately high risk that the GA financing will have a fiscal impact on the Province before 2022.

Commented [SQ225]: Has this been a plan to define? Annually? Semi-annually? Monthly?

Commented [SQ226]: This should be prefaced with the fact that this risk only arises after OPG would have decided to purchase the Regulatory Asset from IESO, which it is not obligated to do so.

Commented [JK27]: In the latest legislative drafting we have seen.

Commented [SQ228]: This is focussed on accounting fiscal impact but cash flow impact is still present. Province would require cash to pay for IOD and unless those higher earnings (re: cash) is divdended back to Province to cover IOD payments, my guess would be that there is a fiscal impact in terms of IOD.

Commented [JK29]: Albeit relatively small compared to the deferred GA amounts.

Commented [HT30]: Based on commentary from implementation meetings. Don't believe this includes estimates of private lender borrowing costs. Please advise

Commented [SQ231]: Furthermore, this would likely be the "additional" impact. The Province's equity injection, which is currently offset by expected higher earnings, would cease to exists resulting in fiscal impact as well. Could result in $2-3B annually. Please confirm.

Commented [HT32]: Energy to confirm

For clarity: the following structural requirements have been met: [TBC]

Commented [HT33]: TBC based on receipt of professional opinions etc.

- IESO requirements :
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB;
  - IESO can derecognize regulatory asset upon sale to OPG;
  - "Market books" are reflected on corporate books; and,
  - OEB to act as regulator.

Commented [SQ234]: Currently, I don't believe this is the case for IESO. Will this be the case going forward?

- OPG requirements:
  - OPG Trust/SPV purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust/SPV; and
  - OPG retains GBE status.

However, despite the fact that the structure has satisfied the legal, fiscal, and accounting requirements outlined in the policy submission, there remain some fundamental risks that the province would need to accept:

- The structure is unique in Canada and possibly the world, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the Unites States, but officials are currently unaware of any example that would compare to the size, complexity, or fluidity of what is proposed;
- Complexity of the structure and length of deferral/recovery increases risk and decrease transparency;
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG's direct operations as the Financial Services Manager. While removal of the Financial Services Manager is provided for in the bill, in practice this may prove problematic once the system is operational; and
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and therefore its saleability. Could decrease amount of rate reduction achievable under this mechanism.

2. Enhancing electricity supports for vulnerable Ontarians and shifting costs from rate payer funded to government funded:

Moving the Ontario Electricity Support Program (OESP) to the tax base:

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The

program was launched in January 2016 and has had roughly 30% enrolment. Consistent with Cabinet direction, the program was recently expanded to increase the existing benefit scales by 50% and provide additional credits to more households.

Under the expanded program the basic OESP benefit scale increased from $30-$50 to $45-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $68-$113 a month for eligible consumers.

The proposed bill amends the *Ontario Energy Board Act, 1998* to allow for the program to transition from the rate base to the tax base, and become administered by a Ministry or other entity as may be prescribed. The cost to the fiscal plan would be $186M in 2017/18. The bill provides further amendments designed to allow information sharing between the Ontario Disability Support Program (ODSP) and the entity responsible for OESP. The intention is that this information sharing will allow for the automat enrolment of individuals that are already enrolled under the ODSP, but it is currently unknown to what extent this will significantly impact the enrolment under the program.

Commented [HT35]: ENERGY: do you have any numbers on this point? Were other programs considered other than ODSP? Can we put something in about continuing efforts to improve the enrolment?

RRRP Enhancement (Delivery Charge Relief):

Currently, RRRP is a $241.9M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial. RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province, including Hydro One R2 customers. The delivery charge includes a distribution cost, which can vary across LDCs, and distribution costs are highest for Hydro One R2 and R1 (medium density) customers.

There are also some LDCs with relatively high distribution costs that, when coupled with high consumption patterns, can result in very high bills for consumers (Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma).

In 2016 the OEB made a ruling that all LDCs need to move to fixed distribution charges. The OEB found that fixed distribution charges would establish a fairer way to recover the costs of providing distribution service, and provides greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a distribution rate protection program and the ability to cap the distribution charges of prescribed distributors. The amendments also establish that this program will be funded by the tax base.

The intention is to draft regulations permitted under this section of the bill to Harmonize the fixed distribution rates to the lowest distribution cost of the LDCs mentioned above at $38/month (which is the forecast rate for Northern Ontario Wires). If the costs of another LDC moved above these in the future, a regulation change would be required to

for that LDC to receive RRRP. These enhancements are expected to benefit approximately 800,000 customers in Ontario.

Targeted RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level and cost to fiscal plan would be $344M in 2017/18, $243M of which is a transfer of existing programs to the tax base. If the legislation and required regulations are passed, the program would become active as of July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Commented [HT36]: Need new estimate of transferred program cost starting from July 1.

On-reserve First Nations Delivery Credit

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances. In this instance, historic grievances relate to lands affected by energy developments.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a tax base funded delivery credit program for on-reserve customers with the details as prescribed in the regulations. The intention is to enact regulations that would eliminate the delivery charge for all on-reserve First Nation household customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.

Eligible recipients would be automatically enrolled in the program (~21,500 customers) and receive an average monthly benefit of $85. The program will cost approximately $20M annually and, provided the legislation and regulations are passed, would become effective July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Expected Impacts of the Proposal on Electricity bills:

The impact of proposed legislation to an eligible customer's bill in July 2017 is an average 25% decrease (combined with the 8% from ORECA effective Jan. 1, 2017), followed by an increase in price over time. This includes the 8% rebate that came into effect on January 1, 2017. Between May 2018 and April 2022 electricity rates will be set by regulation with the intention that rate increases would be kept in line with CPI. Customers that are eligible for the RRRP enhancements and the OESP will see further reductions in their electricity rates beyond the 25%

Commented [HT37]: ENERGY: Can you provide analysis on the impact for customers that will receive the RRRP etc?

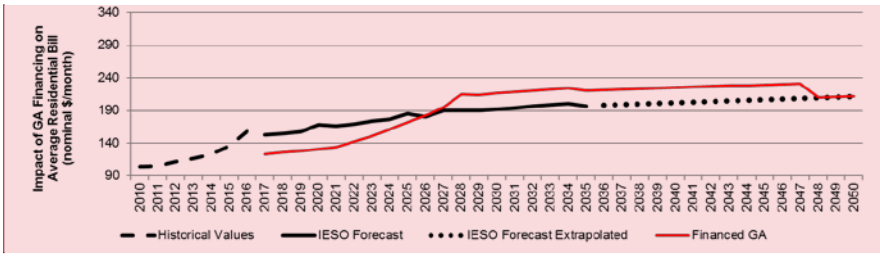
Commented [HT38]: Energy to provide updated chart

Notes: *Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.*

Risks and Considerations:

Future Impacts to Electricity Rates

Borrowing money to defer GA costs for ratepayers would lower costs in the short term but result in substantial debt and higher electricity prices in the future. Based on the GA deferral portion of the plan, electricity prices would increase to about 10% above the actual cost of electricity over the recovery period (peaking at 13%). The proposal may create the expectation that the government is committed to reducing or holding constant the absolute cost of electricity for consumers. Under the proposal, the government would not have the ability to control this portion of electricity rates in the future outside of recourse to the fiscal plan.



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at a maximum of 13% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Commented [HT39]: ENERGY to confirm if this needs to be updated.

The government may be criticized for creating a new debt structure which could be compared to the previous debt retirement charge (DRC). The previous debt retirement charge was removed from residential bills in January 2016 and is scheduled to be removed for remaining customers in April 2018.

Future repayment cost estimates are based on a static interest rate of 5%, and forecast electricity market conditions and demand levels. Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA financing. This would increase the risk that the province would have to absorb some of the debt in the future. To mitigate against the risk that increased self-generation poses, the bill provides that the Clean Energy Adjustment may not be "set-off". In other words, it would exist as a separate and distinct component of the bill that could not be reduced by methods such as net-metering.

Not all generating assets will continue operations at the end of their contract. If the Fair Allocation Amount is not properly designed, future rate payers will be paying the cost for assets that are no longer in use, which would be unconstitutional (See page 16- Legal Risk). High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators will shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the deferred GA and accumulated interest costs.

Accounting and Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. The structure of the GA deferral was designed to result in an (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on

funding to OPG/ OPG Trust from the Province, an increase in interest on debt and an increase on income from OPG will result. The structure is also contingent on the size of the GA deferral that is seen as possible, which, as previously mentioned, increases the likelihood of pressures on the fiscal plan in the near future. (See page 17- Fiscal Pressure)

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust) as an obligation of the Province. Depending on the magnitude of the debt incurred, the Province's borrowing cost may be impacted.

The Ontario Auditor General (OAG) has been briefed on the proposal and has had access to the March 1, 2017 policy submission for the Fair Hydro Plan. While the auditors of OPG and IESO have provided their assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief [TBC] can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount is dependent on increased borrowing. All of the deferral is dependent on increased borrowing. The 18% referenced here is the limit based on review of the contracts and a Eurig assessment and also includes the 8% reduction that was already provided.

Commented [HT40]: To be updated when Navigant prelim report and OPG analysis complete

Legal Risk – constitutionality of financing the GA

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Former Supreme Court Justice Binnie has provided legal analysis of this proposal, stating that the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations could jeopardize the nature of this being a regulatory charge.

A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge

(and would be characterized as a tax).Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

The bill has been drafted to mitigate the constitutional risk of the proposal and clearly articulates the desire to balance the costs and benefits of assets across generations. The bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. In addition, external consultant Navigant has provided an interim report on the costs and benefits of the long lived assets which supports the previous conclusions regarding the size of the GA deferral that would be supportable. This is further supported by the conclusions of OPG's independent analysis of the question.

Commented [HT41]: TBC

Commented [HT42]: ENERGY please confirm. Need to clearly articulate any differences that may exist between these analyses

MAG and Blakes are confident that the structure is constitutionally sound, but, as identified above, that this will highly depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism.

In addition, the structure of the GA refinancing means that the infrastructure included as part of the clean energy adjustment (i.e. amortized over 30 instead of 20 years) will need to be in service over the entire 30 year amortization period or provide benefits to the system in some way over the whole period. In practice this may mean that the government will have limited ability to alter the generation mixture included under the clean energy adjustment, including natural gas generation facilities, which may at some point be seen as inconsistent with the province's commitments to reduce greenhouse gasses. This risk has been mitigated in the bill, by allowing for prescribed natural gas generation contracts to be excluded from the clean energy benefit calculation.

Commented [HT43]: Needs ground truthing

Fiscal Pressure

Commented [HT44]: TBS please review closely

This proposal aligns with the 2017 Budget fiscal plan, but involves significant ongoing risks. The proposal does not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections in this proposal are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant.
- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government has commissioned external opinions on the legal, fiscal, and accounting requirements. Energy's advisor and IESO auditor, KPMG, has provided an accounting opinion that the principles of the structure are sound, and this opinion can be released publicly when desired. This opinion may not change the likelihood of a contrary opinion by the OAG, but does provide a tool for government to point to in justifying its decisions.

Commented [HT45]: TBC

There is also a risk that credit rating agencies and the market may take an alternate view as to the size of the GA deferral that is possible before becoming unconstitutional. If the Fair Adjustment exceeds this analysis, it may increase the perceived risk of the investment asset and therefore its saleability, which would result in reduced market uptake and reduce the amount of near term rate reduction that would be achievable under the plan. This is why the increases in electricity rates between May 2018 and April 2022 are to be set by regulation as opposed to legislating that they increase by CPI. It may not be possible to legally hold the rate reductions to increase by CPI, and if the government wanted to hold to this commitment, the difference would need to come out of the fiscal plan, which has not been forecasted. Each percentage point of reduction that the structure cannot provide would result in an approximate $150M [TBC] cost to the tax base. This has not been provided for in the bill, but it is likely that the government will receive questioning along these lines and why the previously committed CPI increases are not explicitly stated in the bill.

Commented [HT46]: Needs ground truthing

There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Legislative Officers

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the announcement of this suite of initiatives. The OAG was provided copies of the Cabinet Submission seeking policy approval for Ontario's Fair Hydro Plan and has been briefed by officials from the Ministry of Energy. The OAG will have opportunities to publicly state her views through the Public Accounts committee in the summer of 2018 and in her pre-election report.

Commented [HT47]: Energy to update.

The Financial Accountability Officer (FAO) has not been consulted on this proposal and is expected to have an opinion on how this proposal may impact the state of the province's finances.

Commented [HT48]: Energy to update from discussion with FAO

OPG Mechanism

- Accountability
  - Bill attempts to balance the independence of the OPG trust with regulatory oversight and the market's need for certainty in recovering the GA financing that it provides.
  - Accountability to the government or the public, amount of government control of the entity, including future rate increases.

Commented [HT49]: Needs to be recast given limitation on control after initiated

- New structure
  - Structure is complex, involving:
    - IESO as originator of the regulated asset and responsible for flow of funds;
    - OEB as regulator of the new mechanism;
    - OPG responsible for financing and managing the mechanism; and
    - The Province providing ongoing equity capital infusions to OPG and backstop.
  - Addition of financial agency to current operational obligations of OPG – not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, could possibly dilute OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).
  - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise would be required.
  - Connection to BPS compensation framework/lack of national comparator.
  - Unknown transaction, admin, consultant costs. OEB would review OPG's cost as the Financial Services Manager
- Debt
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.
  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates
- Public perception/reaction (could be seen as similar to the process preparing Hydro One for IPO).

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake)
- The OESP matrix no longer follows the Low Income Measure (LIM) which creates inconsistencies between how programs are applied and may put pressure other provincial programs to increase funding amounts.

Benefits for all Consumer Classes

The Fair Hydro Plan includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need. It is likely that the government will be criticized for providing benefits to those who may not be in need (e.g., wealthy cottage communities, etc.).

Stakeholder Considerations:

General public (including residential and small businesses) – Likely support a proposal that is projected to provide up to 25% in rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but likely to question the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications.

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to “keep electricity rate affordable”. Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral the remainder of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to Cap & Trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. **Note:** Funding electricity support programs through the tax-base rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Commented [HT50]: Confirm work still ongoing on this piece

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generation as part of the "Clean Energy Adjustment."

Solar PV sector – May react negatively to price relief as it can be seen to undercut the affordability of distributed renewable generation assets such as solar PV, and undermines the economic arguments behind net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Delivery:

If passed, the legislation will enable the price mitigation measures to begin to take effect on July 1, 2017. The 2017 LTEP will be released to the public in the summer 2017 and would reinforce/integrate with Ontario's Fair Hydro Plan. Regulations are required under the major components of the legislation in order to fully implement the initiative and clarify program details.

Commented [HT51]: TBC

1. **Refinancing Global Adjustment assets in order to defer ratepayer costs / Mechanism to defer GA costs**

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the introduction of enabling legislation.

Commented [HT52]: This needs more elaboration and confirmation. Last discussion I was part of on this point hadn't landed exactly how long it is expected that the IESO retains the Reg Asset for before sale to OPG.

2. **Enhancing Social and Conservation Programs**

OESP Enhancements

New OESP program details would require TB/MBC approval.

Changes to regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modeled after processes used for the OREC (8% rebate). The amendments made in this bill allow for a transition period where the program continues to draw on the existing IESO variance account until the account can no longer maintain the program. IESO is required to notify the Ministry of Energy when it expects the variance account to be depleted (likely sometime in the fall). At this time

The proposed changes will take time to implement as they would require changes to the central system and the LDCs' billing systems. The OEB and their central service provider will need to work with LDCs, MOF, and the CRA on the changes to this program (delivery mechanism, funding source, application system, eligibility).

Commented [HT53]: Requires update

RRRP Enhancement

Regulations would be required to establish the details of the program. OEB estimates that the implementation would take at least six months after finalizing regulations. For this reason it is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st which will put an immediate pressure on the OEB and LDCs as implementation is required no later than October 1, 2017. A mechanism will need to be created to ensure that all parties are aligned in the yearly forecasting and costing of the program.

On-Reserve First Nations Delivery Credit

The OEB would need to work with the LDCs to identify the eligible on-reserve consumers. A communications plan could include public release of the OEB report and a commitment to working with the LDCs on implementation details.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Once available, the rebate would appear on customer's electricity bills as a reduction in, or credit for, their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Linkages:

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer-fall 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The Ontario Rebate for Electricity for Electricity Consumers Act, 2016, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB expired on December 31, 2015.

Debt Retirement Charge – On January 1, 2016 the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, and put in place the low-income targeted OESP, effective 2016. For all other consumers the DRC is scheduled to be removed by April 2018.

Industrial Conservation Initiative – Ministry of Energy program implemented in January 2011 to help large industrial consumers reduce their electricity costs by shirfitn electricity consumption away from peak periods. As part of the Fair Hydro Plan, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all electricity consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – approved as part of Ontario's Fair Hydro Plan, and under development, the Affordability Fund is intended to expand access to conservation funding to targeted consumers that do not currently qualify as low-income for the purposes of the Home Assistance Program (HAP).

Commented [HT54]: insert

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was met by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been addressed. **Note:** Funding electricity support programs through the tax-base rather than the rate base will provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON)- is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and

- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed to "consider options for legislation/regulation change that lessen the impact on residential tenants of increased energy costs from cap and trade". As part of the review of the Residential Tenancies Act, the Ministry of Housing is working on a proposal that will address that commitment. The proposal is expected to come to Cabinet in spring 2017.

Commented [HT55]: To get updated language on the RTA amendments

Proposed Cabinet Minute

Approval of draft bill for introduction

Cabinet approved version XX-XX of this draft legislation for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

Hi Felix and James,

Please find attached the final TB submission for the Ontario Fair Hydro Plan item. Also attached are the materials for the appendix.

This is Minister signed and hard copies will be delivered first thing on Monday morning.

Thanks,

Martin

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

May 9, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on following:

    i. Implementation of Global Adjustment (GA) Refinancing;

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, Ontario Electricity Support Program and First Nations On-Reserve Delivery Credit); and

    iii. Expansion of Industrial Conservation Initiative (ICI).

2) APPROVE the Ministry funding a media buy procurement with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record.

3) NOTE the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

4) NOTE the Ministry of Energy will return to TB/MBC to request a transfer of funds to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to fully recover the costs for the public education campaign.

5) APPROVE the creation of a new transfer payment line entitled "Price Mitigation Support Initiatives" under Vote/Item 2905-01, Electricity Price Mitigation, with a $1,000 placeholder, to support future rate mitigation initiatives.

Note: The Independent Electricity System Operator (IESO) is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current lines of credit with the OFA and OEFC.

2.0 PURPOSE OF REQUEST

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which will lower bills by 25 per cent for a typical residential consumer, starting in the summer of 2017. Up to half a million small businesses and farms are also expected to benefit. Any rate increases for residential consumers over four years would be held to the rate of inflation. Note: These measures include the 8 per cent rebate introduced in January 2017 and builds on previously announced initiatives to deliver broad-based rate relief on electricity bills.

CONFIDENTIAL

As part of the OFHP approval process, TB/MBC requested that the Ministry "report back" before legislation to enable OFHP was introduced on the following items:

1) GA Refinancing;

2) Social Programs; and

3) ICI Expansion.

In addition to the report back, the Ministry is also requesting the creation of a new transfer payment line, "Price Mitigation Support Initiatives" in Vote 2905-01. The purpose for this is to provide the Ministry an appropriate transfer payment line to support future activities and initiatives around electricity price mitigation for Ontarians.

There is no fiscal impact associated with this request. All new funding placed into the transfer payment lines will be offset by services dollars previously approved within the Ministry's multi-year allocation.

In February 2017, the Ministry reported back to TB/MBC on the details related to the establishment of the new Affordability Fund announced in the OFHP. In April 2017, the Affordability Fund Trust was established. It is expected that electricity distributors will be able to begin applying to the Affordability Fund Trust in Summer 2017.

The Ministry has developed proposed legislation to implement key components of OFHP by summer 2017, and address financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations to enable implementation of OFHP.

1. GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity prices increasing.

<u>Proposal</u>

On March 2, 2017, as part of OFHP, it was announced that a portion of the GA would be refinanced in order to fairly allocate costs across present and

future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. For example, by recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.

Under this proposal, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017. In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- Developed proposed legislation to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations;

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY);

- Launched a third party research project to assist with implementation of GA refinancing; and

- Developed comprehensive risk-based costing, including forecast models and sensitivity tests on key assumptions.

Proposed legislation to enable GA refinancing is planned for a May 2017 introduction.

CONFIDENTIAL

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The proposed legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

Proposal

The Government is proposing to introduce legislation and regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.

The legislative proposal enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers.

- R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province.

CONFIDENTIAL

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

Proposed legislation will enable tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

Proposed legislation enables the establishment of a maximum monthly base distribution charge for those prescribed customers. If the proposed legislation is passed, the mechanism to set this charge will be established in regulation.

On-Reserve First Nations Delivery Credit

On July 12, 2016, the Province and First Nations in Ontario announced an agreement-in-principle for the Province to sell to First Nations for their collective benefit, shares of Hydro One Limited.

The Province would sell up to approximately 15 million shares (2.5 per cent of total current outstanding Hydro One common shares), depending on the level of First Nation participation, to a new collective investment fund owned by First Nations.

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The proposal is premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program proposal involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation.

The resulting First Nations Delivery Credit is a reflection of First Nation leadership on this issue and an example of the Political Accord coming to life.

CONFIDENTIAL

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program from the rate base to the tax base, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid by all Ontario consumers on May 1, 2017 ($0.0011 per kilowatt-hour of power consumed). On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will also come into effect on May 1, 2017.

The amendments to the *Ontario Energy Board Act, 1998* pertaining to OESP will move the program funding from the rate-base and transfer it to the tax-base, and enable alignment of the OESP with social assistance programs delivered by the Ministry of Community and Social Services.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB sets amount that LDCs charge for RRRP to all customers. Once the regulatory mechanism is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. Change to the funding structure of the program does not require any additional implementation risks or efforts.

CONFIDENTIAL

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers would be prescribed in regulation, if the legislation is passed. Additionally, the Ontario Energy Board would be empowered by regulation to determine the rate at which affected LDCs would be harmonized.

The efforts required to implement the program will fall upon the impacted LDCs who will need to adjust their billing systems in order to carry out the program.

On-Reserve First Nation Delivery Credit

A new regulation will need to be passed to set out the program particulars including eligibility for the program.

The LDCs will need to enter into communication plans in order to work with local First Nations Band Councils and to increase awareness of the delivery credit to all eligible consumers.

There are transitional provisions for both the enhanced rate protection and First Nations Delivery Credit that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.

Ontario Electricity Support Program

A legislative amendment to the *Ontario Energy Board Act, 1998* will allow funding to shift from the rate base to the tax base. The amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

CONFIDENTIAL

3. ICI Expansion:

Ontario is committed to providing competitive electricity rates for energy intensive consumers in the manufacturing sector while also promoting electricity conservation.

In January 2011, the Industrial Conservation Initiative (ICI) was announced to help large industrial electricity power users better manage their electricity costs while reducing electricity consumption during peak periods.

ICI provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by about one-third. Reducing peak demand increases the reliability of the electricity system, reduces greenhouse gas (GHG) emissions and helps defer the need to procure new resources. There are currently about 300 participating consumers who collectively reduced Ontario's peak demand by an estimated 1,000 MW in 2015.

Proposal

On March 2, 2017, as part of OFHP), the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

- As of January 1, 2017, the regulatory amendments came into effect to make ICI available to electricity consumers with an average monthly peak demand greater than 1 MW. The lowering of the ICI threshold to 1MW and removal of sector restrictions was announced in the 2016 Speech from the Throne.

Implementation

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

- Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and Demand Management (CDM) programs and/or Ontario Climate Change Solutions Deployment Corporations (OCCSDC) programs and pilots.

CONFIDENTIAL

In addition, the Ministry has retained the Ontario Chambers of Commerce (OCC) and the Canadian Manufacturing and Exporting (CME) to undertake targeted stakeholder outreach on ICI and other cost saving energy programs/measures available to the commercial and industrial sectors in Ontario.

3.0 KEY CONTEXT

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would reduce the electricity bills of residential consumers by 25 per cent on average starting in summer 2017. In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and bend the future cost curve of electricity (see Background for details).

On April 20, 2017, the OEB announced new Regulated Price Plan (RPP) rates effective May 1, 2017 that include a portion of the bill reduction proposed under OFHP and the shifting of the funding of the OESP to provincial revenues. The full reduction from OFHP is expected to be addressed through a July 1st RPP rate adjustment.

The Ministry's report back to TB/MBC focuses on the following OFHP initiatives:

1) GA Refinancing:

As part of OFHP, it was announced that a portion of the GA would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

- Today's electricity consumers have been responsible for the costs of investments in developing the clean, modern and reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. There is an opportunity to recognize the long-term benefit of these generation assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

CONFIDENTIAL

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- Developed proposed legislation to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations;

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY);

- Launched a third party research project to assist with implementation of GA refinancing; and

- Developed comprehensive risk-based costing, including forecast models and sensitivity tests on key assumptions.

Financing, Accounting and Legal Risk Considerations / Mitigations

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

OFHP Legislation

The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in the electricity system are allocated fairly among present and future generations of consumers. Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the (GA), including:

- Fair Allocation Amount: Is a calculation and allocation of clean energy costs over time. It is expected that the calculation would lead to decreased rates in the near term with rates higher than forecast in the long term. The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager

CONFIDENTIAL

(OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister.

- Fair Adjustment: Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for the period July 1, 2017 to April 30, 2018. Under the legislation, the OEB must determine the amount within 15 business days of the legislation coming into force. The Fair Adjustment also allows the Lieutenant Governor in Council (LGIC) to make regulations prescribing electricity rates for the period May 1, 2018 to June 30, 2021.

- Clean Energy Adjustment: Is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period. This is an adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing. IESO and each electricity distributor will act as an agent for the financing entity to impose, invoice and collect the clean energy adjustments.

The Ministry has prepared legislation and regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recoverable.

- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

In particular, the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost. Key elements that support this financing structure include:

CONFIDENTIAL

- OPG issuances of subordinated debt to the SPV/Trust representing up to 49% of total borrowing; and

- Conditional (springing) guarantees by the Province to provide a backstop in the event of specific and limited events (e.g., changes to legislation that harm investor interests).

Note: The ability to finance and the cost of financing will only be known with certainty once OPG takes this structure to market.

OPG Financing / OPG Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The proposed legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected over four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a “Regulatory Asset”.

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.

CONFIDENTIAL

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG's capital structure:

- OPG would require monthly "equity injections" from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;

- Funds from the Province would flow from the Ontario Financing Authority (OFA); and

- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.

- It is anticipated that the initial equity injection would take place as early as June 2017.

Through PRRT, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and expenditure increase of $1.1billion in 2017-18 within Vote 2905-5, which is based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty. This approval is pending passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG's business plan process. Note: While included in the business plan, equity requirements will not form part of the Ministry of Energy's concurrence process.

For future funding requirements, the Ministry will seek appropriation through the PRRT process.

OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV / Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

In addition, given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term.

- Should electricity demand be higher than forecast as a result of greater electrification, the cost of paying off the debt will be spread over a greater pool of consumption and decreasing future costs for individual

CONFIDENTIAL

ratepayers. Note: The reverse is also true in regards to decreasing demand.

- Should interest costs increase from the assumed 5%, total borrowing costs would rise. Given that this is a unique offering, managing investor confidence will be key to ensure borrowing costs don't rise. Note: The reverse is also true in regards to interest rates being lower than assumed.

IESO's Credit Facilities

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, IESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The proposed legislation establishes mechanisms to enable the funding, sale and transfer between IESO and OPG that respond to the accounting requirements and advice outlined in the March 1, 2017 Cabinet Submission, such as concerns regarding consolidation by the Province.

Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This satisfies accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.

CONFIDENTIAL

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

KPMG

The Ministry has worked closely with the Independent Electricity System Operator (IESO) and KPMG on the accounting considerations of GA Refinancing (i.e., legislation, applications of accounting standards/principles, minimizing consolidation risks and ability to establish a regulatory asset).

In particular, the proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. Key elements include:

- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset".

- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.

In addition, KMPG provided some commentary on the accounting requirement for the "derecognition" of the regulatory asset once it's sold to OPG SPV/Trust. KPMG advised that the regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG

The Ministry has worked closely with the Ontario Power Generation (OPG) and E&Y, on the accounting requirements to enable GA Refinancing with respect to consolidation (i.e., legislation, applications of accounting standards/principles, establishing a special purpose vehicle (SPV) / Trust).

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust,

CONFIDENTIAL

additional work will be done through the regulations and supporting agreements/documents.

- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.

- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.

Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:

- The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.

- If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-

CONFIDENTIAL

year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).

- By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.

- The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill provides for provincial assurances, guarantees and a statutory cause of action.

The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be

CONFIDENTIAL

imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and

- The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted.

A statutory cause of action may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

Navigant Analysis

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. Specifically, Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

CONFIDENTIAL

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The proposed legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

If passed, the government proposes to identify Hydro One R2 customers, as having their RRRP funded through appropriated funds.

Distribution Rate Protection

New Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, would be established through proposed legislative amendments under the *Fair Hydro Act, 2017,* and the creation of consequential regulations. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhance protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

Eligible on-reserve customers will receive a 100% delivery credit or the elimination of their monthly service charge on their electricity bills. The eligibility requirements will be prescribed under regulation.

There are 11 LDCs identified by OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One,

CONFIDENTIAL

Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 customers may be eligible.

Ontario Electricity Support Program (OESP)

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.

OESP credits vary by income level and family size, and there are two credit scales that include:

- The basic program credit ranges from $30/month to $50/month.
- An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or use certain electrically intensive medical devices.

Ontario's Fair Hydro Plan (OFHP) committed to move the program from the rate base to the tax base, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

The proposed legislative changes will address the move to the tax base, and regulatory changes approved by Cabinet on April 10, 2017 will enable the expansion of the OESP effective May 1, 2017. Discussions are ongoing with the OEB and MCSS on aligning OESP delivery with other social assistance programs.

<u>Roles and Responsibilities</u>

Rural or Remote Rate Protection

The roles and responsibilities of the Board remain the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The Board would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would once again need to appropriate money from the legislature to cover the costs of administering the program.

CONFIDENTIAL

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers. In addition, ENERGY would need to work with LDCs, Chiefs of Ontario and Band Councils to ensure the program is delivered to all eligible consumers.

Ontario Electricity Support Program

The OEB will continue to the deliver the OESP under the current legislative framework until the variance account is depleted. When legislative changes to shift the program from the rate base to the tax base are proclaimed, the OEB will continue to administer the program, but certain decision making responsibilities and oversights will shift to the Minister of Energy.

MCSS will begin supporting OESP uptake by helping social assistance clients to apply to the OESP. Legislative and regulatory changes will enable this work.

The IESO will continue to manage payments to utilities, unit sub-meter providers, and the OEB in relation to OESP credit delivery and program administration costs. When legislative changes are proclaimed, IESO will begin reporting costs to the Ministry to support forecasting and audit.

3) ICI Expansion:

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and “1114”) in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

In addition, the Ministry has retained the OCC and the CME to undertake targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants. **Note:** The extent of the impact will depend on the uptake in the newly

CONFIDENTIAL

expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

4.0 BACKGROUND

Decarbonizing and Modernize Ontario's Energy System

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity prices increasing.

The Ministry of Energy has taken a number of actions to lower electricity costs for all consumers by:

- Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices; and

- Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

Following the 2016 Speech from the Throne, several actions were announced to further reduce electricity costs:

- As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8 per cent.

- Expanded support to eligible rural consumers by updating Rural or Remote Rate Protection (RRRP) with the additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8 per cent rebate.

- Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

- Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in savings.

CONFIDENTIAL

- Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – average annual savings of $15 million.

Ontario's Fair Hydro Plan

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP). The OFHP includes the following:

- Refinancing the GA over a longer period for Regulated Price Plan (RPP) eligible consumers, including residential consumers and most small businesses and farms.

- Shifting cost recovery for Rural or Remote Rate Protection (RRRP) and Ontario Electricity Support Program (OESP) from electricity bills to the tax base, lowering the regulatory charges paid by ratepayers. Consumers of all sizes would benefit from this change.

- Helping vulnerable electricity consumers by enhancing electricity support programs, including:

  - Broadening RRRP to provide delivery charge relief for the customers of the local distribution companies (LDCs) with the highest delivery charges. We currently support approximately 350,000 Ontarians living in rural or remote areas through RRRP. The enhancement would extend relief to approximately 800,000 households in total.

  - Expanding the OESP, which provides relief directly on the bills of low-income consumers who have applied and meet the eligibility criteria. The expansion would increase OESP credits by 50 per cent and allow more Ontarians to benefit from the program.

  - Establishing a new Affordability Fund, which would provide financial support to lower-income Ontarians who are not eligible for the Home Assistance Program to make home energy efficiency improvements, helping to manage their energy costs.

  - Establishing a Delivery Credit to eliminate delivery charges for all First Nations people living on reserve.

- Expanding the Industrial Conservation Initiative (ICI), which allows large consumers to reduce their electricity bills by up to one-third by reducing their consumption during peak hours. The expansion will allow manufacturers and greenhouses between 500 kW and 1 MW to

CONFIDENTIAL

participate, in addition to the consumers over 1 MW that are already eligible.

- OFHP also committed to reducing system costs by improving sector efficiency and modernizing Ontario's electricity market, working in collaboration with the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB).

Legislation to Enable the Refinancing of Global Adjustment

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the Ministry has developed proposed legislation (and is working on supporting regulations) that outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;
- A detailed Preamble, Purpose and Definitions;
- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;
- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and
- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

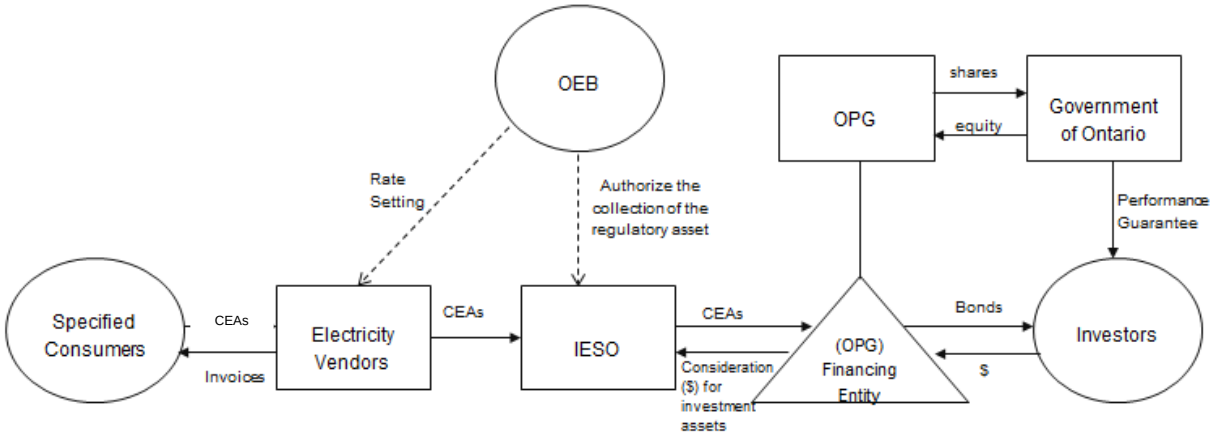
The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the Global Adjustment.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the proposed legislation.

CONFIDENTIAL

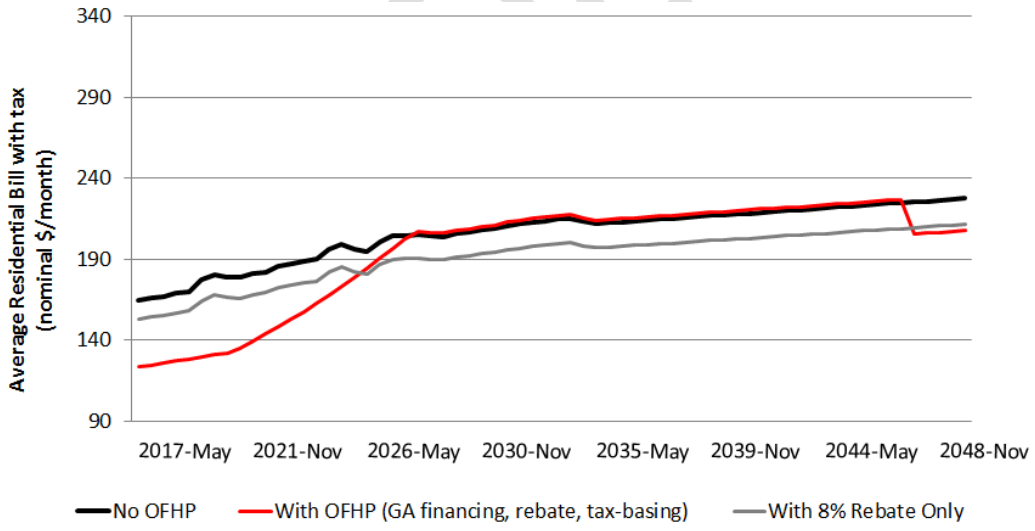
GA Refinancing Implementation Model – Overview

The diagram below outlines how the refinancing of GA would be implemented:



Note: CEAs are “clean energy adjustments”.

Multi-Year Profile of GA Refinancing / Assumptions



The chart above shows the expected multi-year profile under GA Refinancing for each Regulated Price Plan (RPP) period. In the first year, residential bills are projected to be 25 per cent lower as result of the OFHP. In the early years, bills increases are held to the rate of inflation – assumed to be 2% per year in the chart above. From July 1, 2021 onwards, prices increase at a higher rate compared to the first four years on the OFHP.

In the medium to longer term, residential bills exceed what they would have been but for the OFHP. However, in any given year, a typical residential bill under the OFHP cannot exceed what it would have been without OFHP by more than 10 per cent.

OPG's Financing Structure / Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected during four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a "Regulatory Asset".

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an "Investment Asset".

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG's capital structure:

- OPG would require monthly "equity injections" from the Province;

- Funds from the Province would flow from the Ontario Financing Authority (OFA); and

CONFIDENTIAL

- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.

Global Adjustment – Overview

The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.

It is via GA that much of the costs of investments in developing a clean, modern and reliable electricity system with a diverse supply mix are recovered.

The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to improve system reliability and replace coal-fired capacity. Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.

The majority of the province's electricity generators are under 20-year contracts and account for under 50% of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20 years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through GA while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.

The Ministry is proposing in legislation to recognize the long-term benefit of specific assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. The proposed legislation outlines how costs would be fairly allocated among eligible consumers over time.

OEB's Regulated Price Plan (RPP) – Overview

On April 20, 2017, the OEB announced new Regulated Price Plan (RPP) rates effective May 1, 2017 that include a portion of the bill reduction proposed under OFHP and the shifting of the funding of the Ontario Electricity Support Program (OESP) to provincial revenues. The full reduction from OFHP is expected to be addressed through a July 1st RPP rate adjustment.

CONFIDENTIAL

Social Program

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 335,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.
- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.9 million.
- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high distribution costs and are often faced with significantly higher than average bills.

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Energy is proposing legislative amendments that will broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

CONFIDENTIAL

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

Ontario Electricity Support Program (OESP)

The OESP launched on January 1, 2016. By the end of March 2017:

- Almost 192,000 have been enrolled in the program, which is approximately 1/3 of all potentially eligible low-income customers in Ontario.

- Over $60 million in credits have been provided to vulnerable consumers.

- 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.

CONFIDENTIAL

Industrial Conservation Initiative (ICI)

Ontario is committed to providing competitive electricity rates for energy intensive consumers in the manufacturing sector while also promoting electricity conservation.

In January 2011, ICI was announced to help large industrial power users better manage their electricity costs while reducing electricity consumption during peak periods. ICI provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by about one-third. Reducing peak demand increases the reliability of the electricity system, reduces greenhouse gas (GHG) emissions and helps defer the need to procure new resources. There are now about 300 participating consumers who collectively reduced Ontario's peak demand by an estimated 1,000 MW in 2015.

Currently, ICI is available to electricity consumers who have an average monthly peak demand greater than 1 MW (i.e., Class A). Smaller electricity consumers – known as “Class B” consumers – are charged GA based on their total consumption regardless of when it occurs.

ICI provides a strong incentive for participating consumers to reduce their consumption during peak hours to reduce their cost. Note: ICI is administered by the Independently Electricity System Operator (IESO) and Local Distribution Companies (LDCs).

As of January 1, 2017, the regulatory amendments came into effect to make ICI available to electricity consumers with an average monthly peak demand greater than 1 MW. The lowering of the ICI threshold to 1MW and removal of sector restrictions was announced in the 2016 Speech From the Throne.

On March 2, 2017, as part of Ontario’s Fair Hydro Plan (OFHP), the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

- Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and CDM programs and/or OCCSDC programs and pilots.

CONFIDENTIAL

5.0 TIMING

As part of OFHP, the government announced that eligible electricity consumers would see the reduction to their electricity bills in the summer of 2017 (i.e., July).

On April 20, 2017, OEB announced that it has adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing. The Ministry anticipates that the OEB will set an interim rate adjustment following the passage of the legislation to enable GA Refinancing that would account for the full impact (i.e., 25 per cent).

The Ministry is planning to introduce legislation in early May 2017 and develop supporting regulations in early summer 2017 to enable GA Refinancing. Note: The OPG will require legislation and regulations to be in place to support its discussions with rating agencies and third-party financing.

The timeline for all of the social programs, with the exception of the OESP, is identical as the program implementation for the regulations that follow to be passed in unison for July 1, 2017.

Some of Ontario's Fair Hydro Plan commitments for the OESP came into effect on May 1, 2017 (e.g., removal of the OESP charge from customer bills; expanding credit amounts and program eligibility). Remaining changes associated with moving the program from the rate-base to the tax-base will be proclaimed at a later date when the OESP variance account is depleted. Additional regulatory amendments needed to implement this legislative change will come into effect on the same date.

As part of the OFHP, the government also announced the expansion of ICI to enable greater participation from the manufacturing sectors in Ontario.

The April 2017 ICI amendments enabled new electricity consumer's time to opt in to the expanded program ahead of the next ICI billing period (i.e., July 1, 2017). Note: Under ICI, as set out in Ontario Regulation 429/04, eligible electricity consumers must opt in to the ICI program on or before June 15 of each calendar each year.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

As it relates to the "equity injection", these changes are expected to have no impact on the Provincial net debt position as the Province's increased investment in OPG will be offset by the incremental borrowing to fund the

CONFIDENTIAL

equity injections. The Province has assumed incremental income from OPG arising from interest income on the subordinated debt which OPG will lend to the OPG Special Purpose Vehicle (SPV)/Trust. This offsets forecast increases in Provincial interest on debt expenses associated with equity injections.

Proposed legislation to enable GA refinancing has been drafted to mitigate financing, accounting and legal risks. In addition, IESO and OPG have sought independent advice and confirmation with respect to financing, accounting and legal matters.

Note: There would be a significant impact on provincial net debt and the fiscal plan if the legal, financing and accounting conditions change.

2) Social Programs:

As approved in the TB/MBC submission of Mach 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection	344,000,000
Ontario Electricity Support Program	140,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The IESO manages a variance account for the OESP, which holds the difference between the amount of OESP charge collected from the rate base, and the amount of OESP paid out in the form of credits. The amount in the variance account is about $109 million as of March 1, 2017. These funds will be used to fund the OESP program until the variance account is depleted, at which point the transfer payment line will be used to finance the program costs. Due to the potential range in costs of the OESP, which will depend on program uptake and any costs associated with supporting increased participation, the set allocation is required despite the variance account.

ENERGY will report back as part of PRRT with an update on out-year projections following analysis on rate applications before the Ontario Energy Board.

3) ICI Expansion:

Since ICI is funded through the electricity rate-based and not the provincial tax-base, ICI expansion will have no direct financial impact for the Province.

With respect to rate-base impacts, expanding ICI to consumers in the manufacturing and greenhouse sectors (i.e., between 500 kW and 1 MW) is

CONFIDENTIAL

expected to result in a modest increase on electricity bills for non-ICI participants starting in July 2017. For example, preliminary analysis estimates that the increase on a typical residential bill would by up to 0.66% or just over $1/month based on a 2016 bill of about $158.

Note: The extent of the non-ICI participant impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting in July 2017.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16 and April 19, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, 2017 to discuss implementation.
Future Industrial Conservation Initiative (ICI) Participants	• On March 9, 2017, the Ministry posted an ICI expansion proposal for comment on the Regulatory Registry for stakeholder comment. The Ministry has received 7 comments. • The Ministry is also working with the IESO, OCC and the CME regarding targeted outreach in relation to the ICI expansion.

8.0 RISK ASSESSMENT AND MITIGATION

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line.
Managing Interest Cost Risks	M	H	• Proposed legislation has been drafted with input from third-party financers (i.e., dealers). • OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%).
Provincial Guarantee is Triggered	L	H	• The proposed legislation sets out that the province would provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also establishes assurances that the Province would: - Through the Minister of Finance as provided by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and - Not hinder the charging and remittance of the under-collection of GA refinancing (i.e., through a provincial undertaking and guarantee).
IESO Failure to Establish a Regulatory Asset	L	H	• Under the proposed legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to do create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• Proposed legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • The degree of constitutional risk is in direct proportion to the extent the government is not able to show a

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date.
Social Program Cost Estimating	M	M	• OESP costs will depend on uptake of the program, which will be impacted by the 50% increase in credits, enhanced eligibility, and work with MCSS on aligning OESP delivery with their social assistance programs. • Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operatory (IESO) to ensure access to data for regular forecasting • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.
3) Industrial Conservation Initiative (ICI) Expansion			
Perceived Fairness Between Electricity Consumer Classes	M	L	• The expansion of the ICI program include electricity consumers in the manufacturing and greenhouse sectors with average monthly peak demand greater than 500 kW and less than 1 MW will impact those consumers that remain outside the program (i.e., Class B and RPP electricity consumers). • Increases to electricity bills will occur for non-ICI participants to ensure full cost recovery in the electricity system. Note: the extent of the impact on other non-ICI participants would depend on the uptake in the newly expanded ICI, but is expected to be modest. • Restricting eligibility to the manufacturing and greenhouse sector helps to ensure that the expanded ICI is focused on those consumers which are most impacted by GA costs and associated economic competitiveness pressures from neighbouring jurisdictions.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the proposed legislation is model on a those used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

CONFIDENTIAL

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

The ICI program is unique to Ontario and the proposed expansion would not directly impact on other jurisdictions.

10.0 PERFORMANCE MEASURES

The proposed legislation sets parameters within which refinancing of GA can proceed. These parameters include the initial percentage reduction in eligible electricity rates, the number of years that rates will increase at a rate equivalent to CPI and the length of time within which the recovery of funds must take place (i.e., by 2047). In addition, OPG's existing financial reporting process provides an additional framework for monitoring and reporting of OPG's role in OFHP.

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. The Ministry will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing.

With respect to ICI, the Ministry regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting in July 2017.

11.0 COMMUNICATIONS

ENERGY has developed a comprehensive, two-phase media campaign to increase awareness of Ontario's existing rate mitigation measures and new proposed electricity initiatives under Ontario's Fair Hydro Plan OFHP):

- Phase I – Launched on March 13, 2017 and included radio and digital media in English and French. This was followed by multi-cultural extensions on radio in 19 languages. Phase I of the media campaign is complete.

- Phase II – Is expected to launch early Summer 2017 and will include television, radio, print, digital and social media advertising support.

ENERGY received TB/MBC approval on February 6, 2017 for an exemption from the competitive acquisition requirement under the *Procurement Directive on*

CONFIDENTIAL

Advertising, Public and Media Relations, and Creative Communications Services for the development of the electricity cost reduction public education campaign. Through this, ENERGY acquired the services of Rain43, an Agency of Record under Advertising Review Board's corporate vendor of record arrangement for advertising, public and media relations, and communication services, to develop this public education campaign with an estimates maximum value of $1,500,000.

As of July 20, 2015, PHD Canada is the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In 2016-17, through Phase I, ENERGY has spent approximately $1,000,000 on media planning and buying for radio and digital media. The cost of media space for television is substantially higher than radio; as such, ENERGY is forecasting to spend an additional $2,500,000 in 2017-18.

This campaign is integral for demonstrating Ontario's commitment to lower energy costs for ratepayers through the new proposed electricity initiatives. This campaign could also open the Ministry to increased scrutiny as critics may conclude savings are too little or too late to help those suffering from what the media has deemed energy poverty. Public perception may be unchanged as emotional triggers to rising electricity prices and the constant stream of negative news by the media could overpower the campaign.

The Ministry has assessed the risks, and deems the benefits for running this campaign outweigh any risks of not doing so. ENERGY anticipates reaction from electricity consumers is to be generally positive with an awareness that changes to the electricity system have led to a reliable, cleaner system that is now more affordable.

In addition, the communications for GA refinancing, delivery electricity social programs and ICI expansion will be referenced in ongoing announcements related to Ontario's Fair Hydro Plan (OFHP) broadly, and as necessary targeted communications for specific stakeholder group can be developed.

For example, the Ministry has retained the OCC and the CME to undertake targeted stakeholder outreach on ICI and other cost saving energy programs/measures available to the commercial and industrial sectors in Ontario.

The Ministry will ensure that the social programs are communicated effectively to stakeholders and specific target audiences. The Ministry will leverage its agencies and its relationship with LDCs to ensure eligible consumers are aware of the programs.

Chiefs of Ontario (COO) will be a vital partner in communicating the benefits of the First Nations Delivery Credit.

CONFIDENTIAL

The Ministry also believes there is opportunity for consultation on the design of the electricity bill, with a goal to refresh the regulatory framework to improve the value of the bill to the consumer across all LDCs. The Ministry proposes to convene with LDCs in July, once they've had sufficient time to implement the OFHP initiatives and prescribed messaging.

Changes of this nature will require more in-depth consultation with LDCs, as well as broader regulatory amendments to simplify the requirements, necessitating a longer period to implement. This refresh would also include opportunities to communicate OFHP savings in a more personalized and comprehensive manner. For example, each customer could receive a "personalized" message indicating how much they saved as a result of the plan.

Based on this feedback, the Ministry would aim to introduce regulatory amendments to simplify bill presentment and introduce dynamic OFHP messaging in the Fall 2017.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on following:

    i. Implementation of Global Adjustment (GA) Refinancing;

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, Ontario Electricity Support Program and First Nations On-Reserve Delivery Credit); and

    iii. Expansion of Industrial Conservation Initiative (ICI).

2) APPROVE the Ministry funding a media buy procurement with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record.

3) NOTE the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

4) NOTE the Ministry of Energy will return to TB/MBC to request a transfer of funds to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to fully recover the costs for the public education campaign.

5) APPROVE the creation of a new transfer payment line entitled "Price Mitigation Support Initiatives" under Vote/Item 2905-01, Electricity Price Mitigation, with a $1,000 placeholder, to support future rate mitigation initiatives.

FINAL DRAFT

KPMG Letter to the Independent Electricity System Operator

An Accounting Opinion on the Application of PSAS to the Consolidation of a Trust and to the Recognition and Derecognition of a Variance Account in Relation to the Proposed *Ontario Fair Hydro Plan Act, 2017*

This letter has been prepared in draft form and will be updated upon receipt of the adopted legislation (including the amendments of the Electricity Act and the OEB Act) and finalized financial structure (including the bylaws and regulations of the OPG Trust) and other relevant agreements necessary for us to provide our final opinion, of which legislation and other relevant agreements are expected to be enacted/ finalized on or before September 30, 2017.

NOTICE OF NON RELIANCE

This Notice is regarding the accompanying Letter to provide an accounting opinion on the application of Public Sector Accounting Standards to the consolidation of a trust and to the recognition and derecognition of a variance account in relation to the proposed *Ontario Fair Hydro Plan Act, 2017* (the "**Letter**") prepared by KPMG LLP for the Independent Electricity System Operator ("Client").

The following terms apply to any review of the Letter and should you not agree to these terms, please do not review the Letter and delete copy of the same.

The Letter was prepared in connection with certain services we provided to the Client and should not be used for any other purpose or regarded as suitable for use by any person or persons other than the Client

No one other than the Client is authorized by KPMG to rely upon any information or views expressed in the Letter. KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as the Letter has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

KPMG in no way accepts any duty of care to you or any other person or accepts any agreement or other arrangement of a contractually binding nature between our firm and such parties.

KPMG neither warrants nor represents that the Letter is accurate, complete, sufficient or appropriate for any purpose contemplated by you or any other person or body. You shall have no right to disclose the Letter to any other party, unless disclosure is required by law or to fulfill a professional obligation required under applicable professional standards.

Yours very truly,

KPMG LLP

The Board of Directors

Dear Sirs,

We have been engaged to provide you with an accounting opinion on the application of Public Sector Accounting Standards to the consolidation of a trust and to the recognition and derecognition of a variance account in relation to the proposed *Ontario Fair Hydro Plan Act, 2017* ("the proposed Act") (Appendix A, Version 6, to this letter). This letter is being issued to the Independent Electricity System Operator ("IESO" or the "Company") in connection with its evaluation of the consolidation requirements and the accounting for the variance account under Canadian Public Sector Accounting Standards ("PSAS"). Our engagement has been conducted in accordance with generally accepted standards in Canada for such engagements.

The ultimate responsibility for the decision on the appropriate application of PSAS for the specific issues described below rests with management of the Company as preparers of the financial statements.

The adoption of the proposed Act (including the subsequent amendments of the Electricity Act, 1998 ("the Electricity Act") and the Ontario Energy Board ("OEB" or the "Board") Act ("the OEB Act")), and the finalization of the financing structure (including the bylaws and regulations of the OPG Trust) and other agreements will take several weeks. Accordingly, our judgment on the appropriate application of PSAS for the specific matters described below is based on the facts, circumstances and assumptions provided to us. The finalization of the legislation, regulations, financing structure and other agreements may impact the comments and conclusions set out herein. Our comments and conclusions are based on the proposed Act and related matters as they exist at the date of this letter.

The following three issues are addressed in this letter:

Issue #1: Can the IESO recognize a regulatory asset related to the variance account created by the proposed Act?

Issue #2: Is the trust to be established by Ontario Power Generation (the "OPG Trust") controlled by the IESO according to the guidance issued under PSAS 1300 *Government Reporting Entity* and therefore subject to consolidation by IESO?

Issue #3: What is the accounting treatment for derecognition of the regulatory asset by the IESO upon transfer of the variance account to the OPG Trust?

Background for issue #1

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party) are as follows:

1. The IESO's legal status is a not-for-profit, non-taxable, corporation established pursuant to Part II of the Electricity Act. Management of the IESO has determined that the Company is an Other Governmental Organization and accordingly prepares its financial statements in accordance with PSAS.

2. IESO is rate regulated by the OEB in accordance with the Electricity Act and the OEB Act.

3. *Extract from the 2016 IESO financial statements, note 3 New Accounting Policies,* audited by KPMG *"*As of January 1, 2016, the IESO changed its accounting policy regarding the recognition of assets and liabilities subject to rate regulation. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model. This change has been applied retroactively and has increased amounts previously unrecorded for regulatory assets and decreased amounts previously reported for accumulated deficit."

4. *Extract from the 2016 IESO financial statements, note 2(d) Summary of Significant Accounting Policies, Regulatory assets and liabilities.* "As a rate-regulated entity, the IESO, in appropriate circumstances establishes regulated assets or liabilities and thereby defers the impact on the statement of operations of certain expenses or revenues because they are probable to be collected or refunded to market participants through future billings. The IESO applies guidance from United States Generally Accepted Accounting Principles (US GAAP) Topic 980, *Regulated Operations ("ASC 980")*, in this policy."

5. *Extract from Section 78(3.3) of the OEB Act:* In approving or fixing rates under subsection (3.1),

   (a) the Board shall forecast the cost of electricity to be consumed by the consumers to whom the rates apply, taking into consideration the adjustments required under section 25.33 of the Electricity Act, 1998 and shall ensure that the rates reflect these costs; and

   (b) the Board shall take into account balances in the IESO's variance accounts established under section 25.33 of the Electricity Act, 1998 and shall make adjustments with a view to eliminating those balances within 12 months or such shorter time periods as the Minister may direct.

6. Currently, IESO recognizes two regulatory assets for unrecovered smart metering expenses and unrecovered PSAB transition items as permitted by rates approved by the OEB. In addition, in accordance with section 25.33 of the Electricity Act, IESO also recognizes variance accounts (eg. OESP, RPP and RRRP variance accounts) to record all amounts payable or receivable by it in connection with the amounts paid to generators, the Ontario Electricity Financial Corporation ("OEFC"), distributors and to entities with whom the IESO has a procurement contract.

7. The Electricity Act, OEB Act and other regulations will be amended to reflect the following *extracts of the proposed Act:*

   Section 1xx Definitions, Transfer of regulatory asset

   (3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 22xx (3):

1. A reduction in the balance in the variance account.
2. The adjustment of the regulatory asset.
3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Section 20.1xx Variance account to be established

(1) IESO shall establish and maintain a variance account for the purposes of this section.

(2) IESO shall record the following in the variance account:

1. The amount of the IESO funding shortfall for each month.
2. All payments received by IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.
3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences after May 1, 2017 and before the day this section comes into force.

(3) Subject to the correction of any obvious error by IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights of the investment interest owner acquired under the transfer.

Section 21xx Regulatory asset established

(1) Effective May 1, 2017, the IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

(2) Subject to subsection (3), the Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

(3) IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Section 30.1xx Board's Authority

(2) Despite anything to the contrary in the OEB Act, the Board may exercise any of its responsibilities under this Act without a hearing.

8. It is expected that the funding shortfall recorded by the IESO in the variance account (the regulatory asset) will be transferred to an investment asset owner (ie a trust to be established by OPG) on a monthly basis and cash collected within a short period of time. The total IESO funding shortfall for the period from May 1, 2017 to April 30, 2047 is estimated at $28 billion plus interest.

Appropriate Accounting Principle for issue #1

ASC 980 Regulated Operations

– For general-purpose financial reporting, an incurred cost for which a regulator permits recovery in a future period is accounted for like an incurred cost that is reimbursable under a cost-reimbursement-type contract. [980-10-05-6]

- Unless an accounting order indicates the way a cost will be handled for rate-making purposes, it causes no economic effects that would justify deviation from the GAAP applicable to business entities in general. The mere issuance of an accounting order not tied to rate treatment does not change an entity's economic resources or obligations. In other words, the economic effect of regulatory decisions—not the mere existence of regulation—is the pervasive factor that determines the application of GAAP. [980-10-05-8]
- The guidance in the Regulated Operations Topic applies to general-purpose external financial statements of an entity that has regulated operations that meet all of the following criteria:
  (a) The entity's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers.
  (b) The regulated rates are designed to recover the specific entity's costs of providing the regulated services or products. This criterion is intended to be applied to the substance of the regulation, rather than its form.
  (c) In view of the demand for the regulated services or products and the level of competition, direct and indirect, it is reasonable to assume that rates set at levels that will recover the entity's costs can be charged to and collected from customers. This criterion requires consideration of anticipated changes in levels of demand or competition during the recovery period for any capitalized costs. [980-10-15-2]
- A cost arising from cash paid out or obligation to pay for an acquired asset or service, a loss from any cause that has been sustained and has been or must be paid for. [980-10-20] Glossary
- Failure of an entity's operations to continue to meet the criteria in paragraph 980-10-15-2 can result from different causes. Examples include the following:
  (a) Deregulation.
  (b) A change in the regulator's approach to setting rates from cost-based rate-making to another form of regulation.
  (c) Increasing competition that limits the entity's ability to sell utility services or products at rates that will recover costs (as used in paragraph 980-10-15-2).
  (d) Regulatory actions resulting from resistance to rate increases that limit the entity's ability to sell utility services or products at rates that will recover costs if the entity is unable to obtain (or chooses not to seek) relief from prior regulatory actions through appeals to the regulator or the courts. [980-20-15-2]
- Rate actions of a regulator can provide reasonable assurance of the existence of an asset. An entity shall capitalize all or part of an incurred cost that would otherwise be charged to expense if both of the following criteria are met:
  (a) It is probable (as defined in Topic 450) that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes.
  (b) Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.

A cost that does not meet these asset recognition criteria at the date the cost is incurred shall be recognized as a regulatory asset when it does meet those criteria at a later date. [980-340-25-1]

- Rate actions of a regulator can reduce or eliminate the value of an asset. If a regulator excludes all or part of a cost from allowable costs, the carrying amount of any asset recognized pursuant to paragraph 980-340-25-1 shall be reduced to the extent of the excluded cost. Whether other assets have been impaired shall be judged the same as for entities in general and the Impairment or Disposal of Long-Lived Assets Subsections of Subtopic 360-10 shall apply. [980-340-35-1]
- If at any time an entity's incurred cost no longer meets the criteria for the capitalization of an incurred cost (see paragraph 980-340-25-1), that cost shall be charged to earnings. [980-340-40-1]
- In some cases, a regulator may approve rates that are intended to recover an incurred cost over an extended period without a return on the unrecovered cost during the recovery period. [980-340-55-2]
- The regulator's action provides reasonable assurance of the existence of an asset (see paragraph 980-340-25-1). Accordingly, the regulated entity would capitalize the cost and amortize it over the period during which it will be allowed for rate-making purposes. That cost would not be recorded at discounted present value. An exception to this general rule is provided for costs of abandoned plants. [980-340-55-3]

Issue #1: Can the IESO recognize a regulatory asset related to the variance account created by the proposed Act?

As noted above, as of January 1, 2016, the IESO changed its accounting policy to recognize the economic impacts of rate regulation and now applies guidance from US GAAP Topic 980, *Regulated Operations,* as PSAS does not have any specific guidance for entities with rate-regulated activities.

IESO concluded that it met the requirements of PS2120.02, which allows them to reflect the impacts of rate regulation, as it is considered that the change of accounting policy in its 2016 financial statements resulted in a more appropriate presentation of transactions in its financial statements. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The regulatory framework in Ontario relating to the generation and sale of electricity will be significantly impacted by the proposed Act. Currently, a substantial amount of the energy purchased from the generators is collected by IESO from the local distribution companies through the customer billing, with the remaining being recovered through variance accounts over a period of 12 months maximum. As mentioned above, the effect of the proposed Act is to defer the collection of a total estimated amount of $28 billion (plus interest) of energy purchased from the generators over a period of 30 years. The proposed Act will not permit IESO to collect the funding shortfall before May 1, 2021 and the recovery process will be established through regulations. Such a long-term deferred recovery plan requires IESO to consider whether the uncollected energy costs qualify for deferral as a regulatory asset and whether it continues to meet the criteria that allow IESO to use the guidance for regulated operations of Topic 980. These two accounting issues are analyzed in the two tables below.

Criteria for the recognition of regulatory assets

ASC 980-340-25-1 states that rate actions of a regulator can provide reasonable assurance of the existence of an asset. An entity shall capitalize all or part of an incurred cost that would otherwise be charged to expense if both of the following criteria are met:

Criteria	Comment	Evaluation
(a) It is probable that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes. (b) Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. *(emphasis added)* If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.	The proposed Act states that, • *A recording of the balance in the variance account is determinative of the balance as of the time of the recording.* • *Effective May 1, 2017, IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.* • *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.* • *The IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.* Based on the proposed Act, IESO has the right to recover the balance recorded in the variance account. As a result, it is clear that IESO will be able to recover the amount previously incurred rather than to provide for expected levels of similar future costs.	Met

Criteria for the adoption and continued use of ASC 980 guidance

Deferred recovery plans are plans adopted by regulators or legislations in response to significant increases in costs (e.g. purchased power costs). These plans typically provide for rates to remain fixed or increase moderately with a variance account mechanism to capture costs in excess of the level allowed in current rates. A regulated utility subject to such plans is required to consider whether it continues to meet the criteria that allow it to use the guidance for regulated operations of Topic 980, especially criteria ASC 980-10-15-2 (b).

The proposed plan for the recovery of purchase power costs over a 30 year period is considered a deferred recovery plan as the rates for the first four years will remain fixed and subsequently the rates will increase moderately with a variance account to capture energy costs in excess of the level allowed in current rates. The following is an analysis of the ASC 980-10-15-2 criteria.

Criteria	Comment	Evaluation
(a) The entity's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party	Currently, IESO recognizes regulatory assets related to smart meters and PSAS transition costs as permitted by rates approved by the OEB and regulatory liabilities related to the variance accounts (eg. OESP, RPP and RRRP variance accounts) established under section 25.33 of the Electricity Act related to the procurement of energy.	Met

Criteria	Comment	Evaluation
regulator or by its own governing board empowered by statute or contract to establish rates that bind customers.	It is important to note that both Hydro One and OPG are classified as government business enterprises and are reporting under IFRS in their consolidated financial statements, are consolidated by the modified equity method into the province's books, are regulated by the OEB, and their respective regulatory assets and liabilities are reported in the province's books.	

(b) The regulated rates are designed to recover the specific entity's costs of providing the regulated services or products.	Currently, the rates approved by the OEB are designed to recover the IESO's costs of providing the regulated services and the pass-through related to the energy purchased from the generators.
	
	As mentioned above, a regulated utility subject to a deferred recovery plan is required to consider whether it continues to meet the criteria ASC 980-10-15-2 (b).
	
	This criterion requires a cause-and-effect relationship between a reporting entity's costs and its revenue. In addition, the timing of cost recovery and the related frequency of ratemaking is important. A reporting entity should consider its rate case experience, including the design of its rates and timing of recovery, when determining whether this criterion is met. These factors are analyzed below.
	
	Frequency of rate case
	
	- Currently, IESO is subject to OEB's annual reviews
	- Although the recovery of purchase energy costs will be frozen at the approved rate on May 1, 2017 for the first four years, the IESO will be granted a right to recover after May 1, 2021 the funding shortfall recorded in the variance account during the four-year period.
	  - *A recording of the balance in the variance account of the balance is determinative of the balance, as of the time of the recording. (We note that this confirms that there will be no prudence review by the OEB)*
	  - *Right to recover the balance recorded in the variance account.*
	  - *Obligation on the part of the OEB to dispose the variance account in accordance with the regulation.*
	- Subsequent to May 1, 2021, the OEB will be required to determine and set rates payable by specified consumers to allow for IESO to recover the balance
		Met

Criteria	Comment	Evaluation
	recorded in the variance account. - *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.* - *Despite anything to the contrary in the OEB Act, the Board may exercise any of its responsibilities under this Act without a hearing.* *Rates are designed to recover incurred costs* - There is a cause-and-effect relationship between the purchase energy costs and revenue, as IESO will be allowed to recover the costs incurred. - *A recording in the variance account of the balance in the variance account is determinative of the balance as of the time of recording (We note that this confirms that there will be no prudence review).* - *Right to recover the balance recorded in the variance account.* - *Obligation on the part of the OEB to ensure IESO will recover the balance recorded in the variance account.* *Periods of alternative ratemaking (e.g., rate freezes)* Evaluation of the second criterion requires additional judgment if the regulated utility is subject to any form of ratemaking that introduces uncertainty about the cause-and-effect relationship between costs and rates. A rate freeze period is defined as a fixed rate that is charged to customers during a period of time (more than two years) and the utilities are exposed to increases in operating and energy costs with no ability to recover the variances. This is not the case as IESO will be granted the right to recover fully the funding shortfall recorded in the variance account, including the first four-year period. - *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.*	

Criteria	Comment	Evaluation
	Costs uncertainty As the IESO will be granted the right to fully recover the funding shortfall recorded in the variance account, there is no uncertainty about the recovery of the costs. *Disallowances of costs* The OEB has never disallowed the recovery of any material costs incurred by IESO. More importantly, as the IESO will be granted by legislation the right to fully recover the funding shortfall recorded in the variance account, there is no risk of the potential disallowance of the purchase power costs. Based on the analysis of the above factors, there are no indications that this criterion would not be met. The above factors establish that there will be a direct cause-and-effect relationship between IESO's costs and its future collection.	
(c) In view of the demand for the regulated services or products and the level of competition, direct and indirect, it is reasonable to assume that rates set at levels that will recover the entity's costs can be charged to and collected from customers. This criterion requires consideration of anticipated changes in levels of demand or competition during the recovery period for any capitalized costs."	The remaining criterion is whether limitations, including considering demand levels at the approved rates, on the extent of recovery of the regulatory asset could prevent the IESO from recognizing a regulatory asset for the entire balance in the recovery right granted to the IESO. The proposed Act notes that: - *Effective May 1, 2017, the IESO's right to recover the balance in the variance account is subject to the following:* o *The Board shall, from time to time, determine and set rates payable by specified customers to allow for IESO to recover the balance recorded in the variance account.* o *IESO shall not be entitled to collect the variance account from specified consumers before May 1, 2021.* Although the process, especially the timing of the recovery of the regulatory asset has not been established yet by the OEB, the wording and intent of the proposed legislation is clear that it is intended by law to be recoverable over the period of 30 years. Further, given the nature and extent of customer demand for the power generated and distributed in Ontario, both at this time and projected in the future, it is reasonable to conclude that there will be sufficient demand to recover the regulatory asset. As with the other criteria, this will	Met

Criteria	Comment	Evaluation
	need to be continually evaluated throughout the recovery period.	

Management conclusion:

IESO management has concluded that the IESO can recognize a regulatory asset related to the variance account created by the proposed Act based on the foregoing analysis.

The variance account created by the proposed Act is subject to rate regulation by the OEB and the variance account will be established with the right to collect funds against the variance amount in the future. In these circumstances, the IESO is able to establish a regulated asset. The IESO financial statements are prepared in accordance with Canadian public sector accounting standards. Although PSAB does not provide specific guidance on rate regulated accounting, it does under PS 1150 *Generally Accepted Accounting Principles* allow for guidance to be followed from other accounting frameworks. IESO has applied guidance from United States Generally Accepted Accounting Principles (US GAAP) Topic 980, Regulated Operations in its accounting policies.

Our conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that the variance account created by the proposed Act will meet the criteria for the recognition of a regulatory asset stated in ASC 980-340-25-1. Furthermore, we have also considered the criteria stated in ASC 980-10-15-2 and believe that IESO should be allowed to continue to use the guidance for regulated operations of Topic 980.

Background for issue #2

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party), in addition to those described in the background for issue #1, are as follows:

1. The IESO currently has the right to collect the global adjustment ("GA") monthly from ratepayers through provisions in the Electricity Act. It is proposed that collection of a certain portion of the monthly GA be deferred in a regulatory asset for collection in the future, and that the right to recover the deferred GA from ratepayers be used as the basis for structured financing/ securitization.
2. In connection with the proposed Act, it is proposed that a trust to be created as a financial vehicle by OPG in connection with the deferred GA. The OPG Trust will finance the deferral of the GA by purchasing the regulatory asset from the IESO for the principal amount of the GA being deferred.
3. The OPG Trust is expected to finance these purchases from the IESO through a combination of senior secured financing raised in the capital markets, and subordinated financing from OPG (the funding for which will mostly be from equity injections from the OEFC/Province of Ontario).
4. OPG will be appointed as the Financial Services Manager and will be given the responsibility to direct the activities of the OPG Trust, through a services agreement and/or through the Trust's constating documents.

Appropriate Accounting Principle for issue #2

PS1300 *Government Reporting Entity*:

PSAS refer to government or government organizations. For the purpose of this analysis, the PSAS guidance below relating to government or government organizations should be read and understood as being the IESO (emphasis added).

- The government reporting entity should comprise government components and those organizations that are controlled by the government. [PS 1300.07]
- Control is the power to govern the financial and operating policies of another organization with expected benefits or the risk of loss to the government from the other organization's activities. [PS 1300.08] (emphasis added).
- Whether a government controls an organization is a question of fact that must be determined by reference to the definition of control established in paragraph PS 1300.08 and the particular circumstances of each case. The determination of the fact that control exists will require the application of professional judgment. Government achieves its objectives through a wide range of organizations which individually will fall somewhere along a continuum. At one end of the continuum, it will be clear that an organization does not have the power to act independently and is controlled by the government. At the other end, the organization will have the power to act independently and, while government will have a level of influence on the organization, it will be clear that it does not have control. Along the continuum, consideration needs to be given to the nature of the relationship between the government and the organization in order to determine whether control exists. This Section provides guidance intended to assist in this assessment. [PS 1300.10]
- In applying this guidance, it is necessary to determine the substance of the relationship between the government and the organization. The true nature of certain relationships may not be completely reflected by their legal form. All relevant aspects and implications of the relationship would be considered in determining whether or not the government controls the organization. Where various aspects of the relationship are designed, in effect, to achieve an overall objective, they would be viewed as a whole. [PS 1300.11]
- Financial and operating policies are principles and practices that determine how an organization conducts its activities. The ability to govern these policies is an important element of government control because it establishes the fundamental basis for the conduct of the organization's operations and the achievement of its mission and mandate. [PS 1300.13]
- There are a variety of ways to govern the financial and operating policies of an organization. For example:
  (a) a government may establish an organization's fundamental purpose and eliminate or significantly limit the ability of the organization to make future decisions by predetermining the financial and operating policies of the organization;
  (b) a government may direct the financial and operating policies of an organization on an ongoing basis; or
  (c) a government may veto, overrule or modify the financial and operating policies established by an organization. [PS 1300.14]
- A government does not need to manage an organization's activities on a day-to-day basis to control the organization. It is the government's existing authority to determine the policies governing those activities that is important. [PS 1300.15]

– For the purposes of this Section, it is assumed that where the government has the power to govern the financial and operating policies of an organization, it expects to derive a financial or non-financial benefit. The government may also be exposed to the risk of loss. [PS 1300.16]

Issue #2: Is the trust to be established by Ontario Power Generation (the "OPG Trust") controlled by the IESO according to the guidance issued under PSAS 1300 *Government Reporting Entity* and, therefore, subject to consolidation by IESO?

Under PSAS, IESO is required to consolidate all entities that are considered to be part of its reporting entity, applying the guidance provided in *Section PS 1300 Government Reporting Entity.* Under PS 1300, IESO must consolidate all entities it "controls".

In determining whether or not the OPG Trust should be consolidated by IESO, it must first be determined whether or not the IESO exercises control as a consequence of power to govern the financial and operating policies of the OPG Trust resulting in expected benefits to the IESO or the risk of loss from the activities of the OPG Trust.

PS 1300.17 indicates that "whether a government controls an organization is a question of fact that requires the application of professional judgment based on the definition of control in this Section and the substance of the relationship in each case." Under PS 1300.08 control is defined as "the power to govern the financial and operating policies of another organization with expected benefits or the risk of loss to the government from the other organization's activities". Therefore, the determination of whether IESO will consolidate the OPG Trust will be based on an assessment of whether IESO is considered to control the OPG Trust based on the indicia of control set out in PS 1300. The assessment of the IESO's control of the OPG Trust is made based on the proposed Act, facts and nature of the relationship between the IESO and the OPG Trust and based on facts and assumptions provided by IESO. PS 1300.18 and .19 set out 11 potential indicia of control. Several of these indicia have been categorized as more persuasive of a finding of control (see the first four indicators in the table below). For each indicator that applies, the degree of government influence would determine its importance as evidence of control. Finally, the indicia are considered both collectively and individually.

A detailed analysis of the 11 Indicators of control is provided in the following table.

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
Primary (more persuasive) indicators (PS 1300.18):		
Government has the power to unilaterally appoint or remove a majority of the members of the governing body of the organization	- The proposed Act states: - *OPG is appointed as the Financial Services Manager for the purposes of this Act. (Section 13xx)* - *The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners. (Section 14xx (1))* - *Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees to recover, the costs of doing anything the*	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?

	Financial Services Manager is required or permitted to do under this or any other Act; and any other type of expenditure, the recovery of which is permitted by the regulations. (Section 14xx (3))
	- The Electricity Act, 1998 (EA) will be amended as follows:
	  - *In addition to the objects mentioned in subsection (1), the objects of OPG include exercising the powers and rights and performing the duties and obligations assigned to it under the Ontario Fair Hydro Plan Act, 2017 and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services." (Section 53.1 (1.1))*
	  - *"OPG may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects." (Section 53.1 (1.2))*
	- OPG will establish a trust to manage the collection of the regulatory asset and related financing and administrative expenses. The Board of Trustees of the OPG Trust will be the governing body of the Trust and will be appointed by OPG. OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees.
	- The IESO will not have any rights in respect of the appointment or replacement of the Board of Trustees of the OPG Trust.	

Government has ongoing access to the assets of the organization, has the ability to direct the ongoing use of those assets, or has ongoing responsibility for losses	- Section 23xx of the proposed Act states:
	  - *A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.*
	  - *Without limiting subsection (1), any transfer agreement that states an intention of the parties for*
		No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
	IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest. - *At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.* - Based on the proposed Act, *upon transfer by IESO of a portion of the regulatory asset to the OPG Trust, the investment asset resulting from the transfer is immediately vested in the OPG Trust, free and clear of any adverse claim.* (Section 24xx (1.1)) - Therefore, upon transfer of the regulatory asset to the OPG Trust, IESO will no longer have access/ability to direct the regulatory asset nor have the ongoing responsibility for losses. - The credit risk related to the collection of the investment asset is borne by the OPG Trust.	
Government holds the majority of the voting shares or a "golden share" that confers the power to govern the financial and operating policies of the organization	- IESO will not have any ownership in the OPG Trust and will not have the power to govern the financial and operating policies of the OPG Trust.	No
Government has the unilateral power to dissolve the organization and thereby access its assets and become responsible for its obligations	- IESO will not have the power to dissolve the organization.	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
Other indicators that may provide evidence of control exist when government has the power to (PS 1300.18):		
Provide significant input into the appointment of members of the governing body of the organization by appointing a majority of those members from a list of nominees provided by others or being otherwise involved in the appointment or removal of a significant number of members	- OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees of the OPG Trust. - IESO will not provide input in the appointment of members of the Board of Trustees.	No
Appoint or remove the CEO or other key personnel	- OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees of the OPG Trust and other key personnel.	No
Establish or amend the mission or mandate of the organization	- The Trust will be established by OPG and the mandate of the Trust will be set based on the proposed Act.	No

Approve the business plans or budgets for the organization and require amendments, either on a net or line-by-line basis	- The proposed Act states:
	  - *OPG is appointed as the Financial Services Manager for the purposes of this Act. (Section 13xx)*
	  - *"The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of refinancing a funding obligation." (Section 16 (1))*
	- OPG is the Financial Services Manager, not IESO.
	- IESO is not involved in the preparation or approval of the business plans or budget of the OPG Trust.
		No

Establish borrowing or investment limits or restrict the organization's investments	- Section 17 of the proposed Act states: - *The Financial Services Manager shall ensure that funding obligations incurred for the purposes*	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
	of this Act are incurred in a manner that is consistent with the applicable Financing Plan. - OPG not IESO, is responsible for ensuring that the borrowings of the OPG Trust meet the above conditions.	
Restrict the revenue-generating capacity of the organization, notably the sources of revenue	- N/A	No
Establish or amend the policies that the organization uses to manage, such as those relating to accounting, personnel, compensation, collective bargaining or deployment of resources	- As mentioned above, OPG will be granted by legislation the power to establish or amend the policies of the OPG Trust and the ability to appoint and remove all members of the Board of Trustees.	No

Management Conclusion:

IESO management has concluded that the OPG Trust to be established would not be controlled by the IESO and therefore is not subject to consolidation by the IESO.

Based on the foregoing analysis of the 11 indicators of control as defined in Section PS 1300 *Government Reporting Entity,* considered both individually and collectively there is no evidence of control by the IESO in respect of the OPG Trust. The IESO will not have the power to govern the Trust, nor have ongoing access to Trust's assets. The IESO will also not have any voting shares or future rights to the Trust nor the power to dissolve the Trust. Without control, the Trust is not subject to consolidation within the IESO financial statements.

Our Conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that based on the Proposed Act, none of the four primary (more persuasive) indicators of control are considered to be met, and none of the seven other indicators of control are considered to be met. Accordingly, we concur that the IESO does not control the OPG Trust under the proposed Act and hence would not consolidate the OPG Trust.

The adoption of the proposed Act (including the subsequent amendments of the Electricity Act and the OEB Act) and the finalization of the financing structure (including the bylaws and regulations of the OPG Trust) and other agreements will take several weeks. Accordingly, our judgment on the appropriate application of PSAS to the conclusion on control may change subject to further analysis of any changes to the terms of the proposed Act or review of the final regulations, financing structure and other agreements.

Background for issue #3

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party), in addition to those described in the background for issues #1 and 2, are as follows:

1. The total IESO funding shortfall for the period from May 1, 2017 to April 30, 2047 is estimated at $28 billion plus interest and will be recorded by the IESO in a variance account recognized as a regulatory asset.
2. The IESO does not currently have the financial capability to finance the regulatory asset and will transfer the variance account to an investment asset owner (i.e. OPG Trust) on a monthly basis.
3. The IESO will obtain a written legal opinion as to the validity and enforceability of the transfer and sale of the regulatory asset.
4. Based on an assessment of control performed under the issue #2, IESO will not consolidate the OPG Trust. We understand that an assessment of control under International Financial Reporting Standards ("IFRS") has been performed by OPG and they have concluded that the OPG Trust will be consolidated by OPG; we note that the financial reporting framework used by OPG in preparing its financial statements for consolidation into the Province's books is IFRS.
5. The Electricity Act, OEB Act and other regulations will be amended to reflect the following *extracts from the proposed Act:*

   Section 11xx IESO to receive amounts

   (2) The IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

   (4) All amounts received by the IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owner, be received and held in trust by the IESO for the investment interest owners.

   (5) The IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the accounts referred to in subsection (2), to or for the benefit of the investment interest owners in accordance with the regulations.

   Section 12xx Pro rating of payments

   (3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

   Section 22xx Transfer of regulatory asset

   (1) The IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

   (2) An agreement between the IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to the IESO in an amount equal to the amount of the specified portion.

(3) Upon receipt by the IESO of the payment by the financing entity,

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) the IESO shall retain no further right, title or interest in the investment interest.

Section 23xx Validity of transfer

(1) A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.

(3) At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

Section 25xx Investment asset established

(1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, IESO and other prescribed parties.

Section 26xx Transfer of investment interest

(2) An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Section 28xx Investment interest owner may grant security interest

(1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

(3) All provisions of the Personal Property Security Act shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

6. The terms of the transfer agreement between the IESO and the OPG Trust that will be signed and executed upon transfer of the regulatory assets will be in compliance with the dispositions of the proposed Act.

Appropriate Accounting Principle for issue #3

The Derecognition Section of ASC 980-20-40 provides guidance on determining whether and when an entity should remove an item from the financial statements. For example, the entity would derecognize an asset because it no longer has rights to the asset or it would derecognize a liability because it no longer has any obligation. [ASC 980-20-40]

Failure of an entity's operations to continue to meet the criteria in paragraph 980-10-15-2 can result from different causes. Examples include the following:

(e) Deregulation.

(f) A change in the regulator's approach to setting rates from cost-based rate-making to another form of regulation.

(g) Increasing competition that limits the entity's ability to sell utility services or products at rates that will recover costs (as used in paragraph 980-10-15-2).

(h) Regulatory actions resulting from resistance to rate increases that limit the entity's ability to sell utility services or products at rates that will recover costs if the entity is unable to obtain (or chooses not to seek) relief from prior regulatory actions through appeals to the regulator or the courts. [ASC 980-20-15-2]

PS1000 *Financial statement concepts*:

- This Section is to be used by preparers and auditors of financial statements in exercising their professional judgment as to the application of generally accepted accounting principles and in establishing accounting policies in areas in which accounting principles are developing. [PS1000.03]
- Financial statements should communicate information that is relevant to the needs of those for whom the statements are prepared, reliable, comparable, understandable and clearly presented in a manner that maximizes its usefulness. [PS1000.24]
- An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph [PS3210.04]. Thus, for example, an item does not qualify as an asset of a government if the item involves:
  (a) no future economic benefit;
  (b) future economic benefit, but the government cannot obtain it; or
  (c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred. [PS1000.37]

PS3210 *Assets*:

- Assets are economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained. [PS3210.03]
- Assets have three essential characteristics:
  (a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.
  (b) The public sector entity can control the economic resource and access to the future economic benefits.
  (c) The transaction or event giving rise to the public sector entity's control has already occurred. [PS3210.04]
- Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. [PS3210.22]

PS3430 *Restructuring transactions* [1]

- Individual assets and liabilities transferred in a restructuring transaction should be derecognized by the transferor if they no longer meet the definitions of assets and liabilities and applicable recognition criteria at the restructuring date. [PS3430.21]
- When a transferor continues to be involved in the individual assets and/or liabilities it transferred to a recipient subsequent to the restructuring date, it would assess the nature and extent of its continued involvement against the definitions of assets and liabilities and applicable recognition criteria to evaluate whether:
  (a) derecognition of the asset and liability transferred would be appropriate; and
  (b) its continued involvement gives rise to a new asset or new liability that needs to be recognized. [PS3430.24]
- A new asset or new liability may arise from a restructuring due to a transferor's continued involvement in the individual assets and liabilities transferred (for example, if it agrees to guarantee repayment of all or a portion of a transferred liability or leases back a portion of a transferred asset). As the new asset or new liability is not transferred, together with related program or operating responsibilities, they are not part of the restructuring transaction. They would be accounted for in accordance with individual Sections of the PSA Handbook by both the transferors and recipients. [PS3430.25]

1 This Section applies to fiscal years beginning on or after April 1, 2018. […] Earlier adoption is permitted."

Issue #3: What is the accounting treatment for derecognition of the regulatory asset by the IESO upon transfer of the variance account to the OPG Trust?

Although ASC 980-20-40 states that

> *"Derecognition Section provides guidance on determining whether and when an entity should remove an item from the financial statements. For example, the entity would derecognize an asset because it no longer has rights to the asset or it would derecognize a liability because it no longer has any obligation."*

Subtopic 980-20 relates to discontinuation of rate-regulated accounting when an entity no longer meets the criteria in paragraph 980-10-15-2. ASC 980-20-15-2 provides examples of when an entity no longer meets the criteria, including deregulation and change of the form of regulation. Thus, ASC 980 does not provide clear guidance for the derecognition of a regulatory asset other than in connection with the discontinuation of rate-regulated accounting.

The above guidance in ASC 980-20-40 provides general principles for the derecognition of assets.

It should also be noted that PSASs provide limited guidance on derecognition of non-financial assets and liabilities. Section 3430 *Restructuring transactions,* which is applicable for fiscal years on or after April 1, 2018 with early application permitted, has guidance for the derecognition of assets and liabilities.

- Paragraph 21 states that individual assets and liabilities transferred in a restructuring transaction should be derecognized by the transferor if they no longer meet the definitions of assets and liabilities and applicable recognition criteria at the restructuring date.
- As stated in paragraph 24, when a transferor continues to be involved in the individual assets and/or liabilities it transferred to a recipient subsequent to the restructuring date, it would assess the nature and extent of its continued involvement against the definitions of assets and liabilities and applicable recognition criteria to evaluate whether derecognition of the asset and liability transferred would be appropriate and whether its continued involvement gives rise to a new asset or new liability that needs to be recognized.

Recognizing the proposed transaction is not a restructuring transaction, Section 3430, which has recently been issued by PSAB, provides current evidence of thinking in the application of the general PSAS principles in respect of the recognition and derecognition of assets and liabilities. Accordingly, the analysis as to whether the regulatory asset transferred to the OPG Trust can be derecognized is based on the foregoing guidance.

Criteria for the recognition of an asset

PS3210.03 states that assets are economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained. More generally, PSAS PS1000.37 suggests that an asset would no longer be recognized when it fails to meet the definition of an asset:

Criteria	Comment	Evaluation
Assets (PS3210.04/ PS1000.36): Assets have three essential characteristics: (a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows,	Based on the guidance, the regulatory asset does not qualify as an asset of IESO if it cannot obtain the future economic benefits. Upon transfer of the regulatory asset, IESO will have no further rights or obligations in connection with the asset transferred. - *IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.* - *Upon receipt by IESO of the payment by the financing entity, IESO shall retain no further right, title or interest in the corresponding investment interest.*	Not Met

Criteria	Comment	Evaluation
or to reduce cash outflows. (b) The public sector entity can control the economic resource and access to the future economic benefits. (c) The transaction or event giving rise to the public sector entity's control has already occurred. *Financial statement concepts (PS1000.37):* An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph [see above]. Thus, for example, an item does not qualify as an asset of a government if the item involves: (a) no future economic benefit (b) future economic benefit, but the government cannot obtain it.	- *A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.* - *Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.* - *At the time a transfer of the regulatory asset is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor."* Upon transfer of the regulatory asset, the OPG Trust will have the right to sell the asset to another party or to grant a security interest in favour of any person to secure a funding obligation. - *Upon transfer, the financing entity becomes an investment asset owner and acquires an investment interest."* - *An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.* - *An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.* Based on the proposed Act, it is clear that IESO will have no rights to the benefits associated with the future cash inflows related to the regulatory asset as it will have transferred its right to recover the IESO funding shortfall to the OPG Trust. Further, it is also clear that IESO will have lost control over the regulatory asset once it is transferred to OPG Trust.	

Management conclusion:

IESO management has concluded that the regulatory asset will be derecognized upon transfer of the variance account to the OPG Trust.

The transfer of the variance account transfers the control and the benefits associated with the right to collect funds in the future against the variance amount to the OPG Trust. This will eliminate the IESO asset by the amount of the transfer as the IESO will no longer control an economic resource or have access to future economic benefits for that amount. The funds collected from the transfer will in turn reduce the associated debt held by the IESO, maintaining the IESO's net $ nil balance in the market accounts.

Our conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that the regulatory asset should be derecognized on transfer to the OPG Trust as IESO no longer has rights or future economic benefits associated with the asset.

Other Matters

The ultimate responsibility for the decision on the appropriate application of PSAS for the specific transactions rests with management as preparers of the financial statements. Our judgment on the appropriate application of PSAS for the specific transaction is based solely on the facts, circumstances and assumptions provided to us as described above. Should these facts and circumstances differ, our conclusion may change.

This letter has been prepared in draft form and will be updated upon receipt of the adopted legislation (including the amendments of the Electricity Act and the OEB Act) and finalized financial structure (including the bylaws and regulations of the OPG Trust) and other relevant agreements necessary for us to provide our final opinion, of which legislation and other relevant agreements are expected to be enacted/ finalized on or before June 30, 2017. This letter will not be updated as a consequence of pronouncements by the Public Sector Accounting Board, or any other authoritative bodies, that occur subsequent to the date of this letter.

This letter is intended solely for the information and use of the Board of Directors and management of the Company, and is not intended to be and should not be used, quoted, relied upon by, or otherwise referred to by anyone other than these specified parties or for any other purpose.

No one other than the Board of Directors and management of the Company is authorized by KPMG to rely upon any information or views expressed herein**.** KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as this letter has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

Yours very truly,

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL TO ANY FINAL BILL PRIOR TO INTRODUCTION.

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects.[1] These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to residential consumers. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of those consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that residential consumers in the future pay their fair share for the benefits that they receive from the investments already made.

PART I
GENERAL

Interpretation
Definitions

1xx. (1) In this Act,

"Board" means the Ontario Energy Board; ("French")

"clean energy adjustment" means the amount determined under section 10xx and payable by specified consumers; ("French")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("French")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the amounts to be paid or reflected by IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts or amounts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed,

(b) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(c) such other costs or estimated costs as may be prescribed; ("French")

"clean energy initiative" means the policies of the Government of Ontario related to,

Confidential Draft

(a) eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,

(c) promoting conservation, demand management and energy efficiency, and

(d) investing in energy infrastructure to ensure a clean, modern and reliable system; ("French")

"electricity vendor"[2] means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) IESO in circumstances where it directly invoices a specified consumer for electricity used in Ontario, or

(d) such other person as may be prescribed; ("French")

"fair allocation amount" means an amount calculated under section 15xx; ("French")

"finance amount" means the finance amount determined in accordance with the regulations; ("French")

"financing entity" means an entity established or caused to be established as described in subsection 17xx (3); ("French")

"Financial Services Manager" means the Financial Services Manager appointed under section 13xx; ("French")

"Financing Plan" means a plan prepared under section 16xx; ("French")

"funding obligation" means a payment obligation incurred by or on behalf of an investment interest owner to fund its ownership of an investment interest or a payment obligation that meets such other criteria as may be prescribed; ("French")

[2] FLS - this is similar to the definition of "electricity vendor" in the Ontario Rebate for Electricity Consumers Act, 2016

Confidential Draft

"funding rebate" means a payment obligation incurred by IESO as part of the transfer of the regulatory asset; ("French")

"IESO" means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; ("SIERE")

"IESO deferral" means the amount determined under section 20xx; ("French")

"investment asset" means the rights and interests described in section 25xx; ("French")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("French")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("French")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system within the meaning of the *Electricity Act, 1998*; ("French")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("French")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

(a) the period beginning on July 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on April 30, 2047 or ending on such later day as may be prescribed,

(i) every six-month period following the period mentioned in clause (a); or

(ii) any period shorter than six months, as may be prescribed; ("French")

"refinancing" means, subject to the regulations, the incurrence of debt in connection with a redemption, repayment or repurchase of a funding obligation; ("French")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right and interest established under section 21xx; ("French")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2); or

(b) such other person as may be prescribed; ("French")

"transfer" includes, when used in relation to an investment interest, the assignment, conveyance, disposition or sale of the investment interest; ("French")

"true up amount" means a true up amount determined in accordance with the regulations; ("French")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("fournisseur de compteurs divisionnaires d'unité")

"variance account" means the variance account established by IESO under subsection 20.1xx (1). ("French")

Specified consumer

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of 50 kilowatts or less, or such other amount as may be prescribed.

Confidential Draft

2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.

3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or has had the obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.

4. The person's account with the electricity vendor relates to,

    i. a dwelling,

    ii. a property within the meaning of the *Condominium Act, 1998*,

    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.

5. The person satisfies such criteria as may be prescribed.

Transfer of regulatory asset

(3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 22xx (3):

1. A reduction in the balance in the variance account.

2. The adjustment of the regulatory asset.

3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Effect of invalidity, etc.[3]

2xx. (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the

[3] FLS: this is from the *Climate Change Mitigation and Low-carbon Economy Act, 2016*

Confidential Draft

Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purpose

3xx. (1) The purposes of this Act are,[4]

(a) to ensure that clean energy costs and clean energy benefits are fairly allocated among present and future specified consumers;

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province; and

(c) to align clean energy costs with clean energy benefits, in order to provide fairness for specified consumers.

Crown bound

4xx. This Act binds the Crown.

Protection and assurances

Prohibition

5xx. (1) No action or omission by the Board, the Minister or the Crown shall be effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or to impair or postpone the invoicing, collection or remittance of the clean energy adjustment.

Agreements

(2) The Minister and the Minister of Finance may together, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of IESO or electricity vendors under this Act or similar transactions.

Guarantee, indemnification

(3) The Lieutenant Governor in Council may by order,

[4] FLS: Please see the *Electricity Act, 1998* for much of the wording proposed in this section.

Confidential Draft

(a) authorize the Minister and the Minister of Finance, acting together on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions of the guarantee or indemnity and the maximum liability for the guarantee or indemnity;

(b) specify terms and conditions that must be included in any guarantee or indemnity given by the Minister and the Minister of Finance; and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT

Definitions

6xx. In this Part,

"regulated rate consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998* for the purposes of subsection 79.16 (1) of that Act.

2. The consumer would, if the consumer were not subject to this Act, be invoiced the rate determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*. ("French")

Regulated rate consumer, first adjustments

6.1xx (1) Despite any order under subsection 78 (3.1) of the *Ontario Energy Board Act, 1998* and despite section 79.16 of that Act, the electricity rates payable by regulated rate consumers for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would achieve the following outcome: a fictional regulated rate consumer who meets the prescribed criteria would be charged an invoice amount that is 25 per cent less than the invoice amount that would have been charged to that consumer under the comparison rates described in subsection (2).

Comparison rates

(2) The comparison rates are the rates that would have been effective May 1, 2017 if they had been determined by the Board solely using the method prescribed by the

Confidential Draft

regulations made under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*, without taking into account any forecasted impact of any other provisions of this Act.

Invoice amounts

(3) Each invoice amount mentioned in subsection (1) shall be determined in accordance with the regulations.

Other specified consumers, first adjustment

6.2xx (1) For the period beginning on July 1, 2017 and ending on April 30, 2018, the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998* shall, with respect to specified consumers who are not regulated rate consumers, be further adjusted by electricity vendors in accordance with the determinations of the Board under subsection (2).

Board to make determinations

(2) The Board shall, in accordance with the regulations, determine the adjustments to be made by electricity vendors.

Same, regulations

(3) The regulations may specify different adjustments to be made in respect of prescribed classes of specified consumers who are not regulated rate consumers.

Determinations by Board

6.3xx The Board shall make the determinations mentioned in sections 6.1xx and 6.2xx no later than fifteen business days after the day this section receives Royal Assent and, regardless of whether the Board makes the determinations before or after July 1, 2017, the determinations shall be effective as of July 1, 2017.

Implementation by electricity vendors

6.4xx (1) As soon as possible after the Board makes determinations under section 6.3xx, each electricity vendor shall, in respect of electricity used on or after July 1, 2017, ensure that its invoices reflect the determinations of the Board.

Same

(2) The electricity vendor shall ensure that, if any of its specified consumers have been invoiced in a manner that does not reflect the determinations of the Board under section 6.3xx, the specified consumer receives the difference between the amounts shown on the invoice and the amounts reflecting the Board's determinations, provided as a lump sum credit on the first invoice issued after the electricity vendor has adapted its invoices or by such other means as may be prescribed.

Confidential Draft

Subsequent adjustments

7xx. (1) Despite clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998* and subject to subsection (2), the Lieutenant Governor in Council may prescribe the methodology to be applied by the Board after April 30, 2018 for the purpose of determining,

(a) electricity rates for specified consumers; or

(b) adjustments to be applied by electricity vendors to the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998* in respect of prescribed classes of specified consumers.

Limitation

(2) Any prescribed methodology to be applied in respect of a period after June 30, 2021 shall have regard to the following:

1. The fair allocation amount in respect of the period.

2. Any clean energy adjustments payable in respect of the period.

3. Such other matters as may be prescribed.

Sub-metering

7.1xx (1) This section applies if a specified consumer provides to another person electricity in respect of which a determination of the Board referred to in section 6.3xx or section 7xx applies.

Same

(2) If an invoice for the electricity is issued to the person by the specified consumer or a unit sub-meter provider providing unit sub-metering for the specified consumer, the amount payable for the electricity by the person who is liable to pay the invoice shall be determined in accordance with the regulations.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

8xx. (1) Upon receipt of an invoice from an electricity vendor that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor, as agent of the investment interest owners.

Same

(2) For greater certainty, subsection (1) applies regardless of,

Confidential Draft

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was inconsistent with the Financing Plan, including in a manner that failed to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Terms

(3) The payment shall be made in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Unit sub-metering

(6) A specified consumer who provides electricity through sub-metering may collect amounts in respect of the clean energy adjustment payable under this section in accordance with the regulations.

Irrevocability of amount

9xx. (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or by passed.

Exception

(2) Subsection (1) does not apply to the extent that the invoice reflects a clerical, typographical or calculation-related error.

Confidential Draft

Determination of clean energy adjustment
Financial Services Manager to determine

10xx. (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by taking the following steps:

1. Calculate the sum of the following:

    i. The estimated finance amount in respect of the reference period.

    ii. The true up amount in respect of the reference period.

2. Divide the sum calculated under paragraph 1 by the number of months in the reference period.

Regulations re true up amount

(3) The Lieutenant Governor in Council shall, in making regulations with respect to the determination of the true up amount, have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.

2. The method for determining the true up amount should take into account historical and reasonably foreseeable,

    i. differences between the estimated and actual finance amount for the applicable reference period,

    ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and

    ii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(4) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment in respect of a reference period and such other information related to the determination of the clean energy adjustment as may be prescribed.

Confidential Draft

Board to determine rates

(5) Without changing the clean energy adjustment, the Board shall, in accordance with the regulations, determine the rate at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

11xx. (2) IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

Account

(3) All of the following amounts received by IESO shall, until paid to or for the benefit of the investment interest owners in accordance with subsection (5), be deposited promptly into an account established for the purposes of receiving those amounts:

1. Amounts described in subsection 11xx (2).

2. Payments made by specified consumers directly to IESO as electricity vendor under subsection 8xx (1).

3. Proceeds of amounts described in paragraphs 1 and 2.

Same, held in trust

(4) All amounts received by IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owners, be received and held in trust by IESO for the investment interest owners.

IESO to remit

(5) IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the accounts referred to in subsection (2), to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

12xx. (1) Each electricity vendor shall issue an invoice to each of its specified consumers for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 10xx (5) and in accordance with the regulations.

Electricity vendor to report

(1.1) Each electricity vendor shall, in accordance with the regulations, promptly report to IESO the total amount invoiced to its specified consumers in respect of the clean

Confidential Draft

energy adjustment, the amount collected and such other information as may be prescribed.

Electricity vendor to collect

(2) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

Held in trust

(4) Payments received by an electricity vendor from or on behalf of specified consumers in respect of the clean energy adjustment and all proceeds of the payments shall, until paid to or for the benefit of the investment interest owners in accordance with subsection (5), be received by and held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(5) Each electricity vendor shall remit amounts in respect of the clean energy adjustment to IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

13xx. Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Duties and powers

14xx. (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Confidential Draft

Same

(2) The administration of the investment asset may include providing information to IESO in respect of obligations under Part III and such other activities as may be prescribed.

Fees, etc.

(3) Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees in relation to such matters as may be prescribed in accordance with the regulations.

Same, Board approval

(4) Before establishing fees under subsection (3), the Financial Services Manager shall submit them to the Board for approval in accordance with the regulations.

FAIR ALLOCATION AMOUNT

Minister to calculate fair allocation amount

15xx. (1) Subject to subsections (2) and (3), before the first funding obligation is incurred, the Minister shall calculate a fair allocation amount in respect of each reference period, applying such method as the Minister considers appropriate and in accordance with the following steps:

1. Determine the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period.

2. Determine the estimated reduction in the amounts payable by specified consumers as a result of rates determined under Part II in respect of all previous reference periods, including the estimated reduction in clean energy costs described in clause (a) of the definition of "clean energy costs" in subsection 1 (1) that would otherwise have been payable by specified consumers in the absence of this Act.

3. Determine the amount, if any, by which the determination under paragraph 1 exceeds the determination under paragraph 2.

4. Calculate the sum of the amount determined under paragraph 3 and such other amounts as may be prescribed.

Principles

(2) In calculating the fair allocation amount, the Minister shall have regard to the following principles:

Confidential Draft

1. The purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among the specified consumers in respect of each reference period.

2. Calculations should be made having regard to the need to align each fair allocation amount with the estimated finance amount payable during the reference period.

3. Estimated clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the estimated clean energy benefits attributed to the specified consumers in respect of the reference period.

4. Such other principles as may be prescribed.

Assumptions

(3) In calculating the fair allocation amount, the Minister shall make such assumptions as the Minister considers to be reasonable regarding the following:

1. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.

2. The expected number of specified consumers in respect of each reference period.

3. The expected electricity consumption rates in respect of each reference period.

4. Such other assumptions as may be prescribed.

Minister to provide amount to Financial Services Manager

(4) The Minister shall provide the fair allocation amount in respect of each reference period to the Financial Services Manager.

Recalculation

(5) A calculation of the fair allocation amount under this Part may be changed by such person as may be prescribed in accordance with such requirements as may be prescribed.

Same

(6) No change under subsection (5) shall affect any clean energy adjustment that has already been determined under section 10xx or any funding obligations that have already been incurred before the change.

Confidential Draft

Information

(7) The Minister, IESO, the Financial Services Manager, the Board and electricity vendors shall provide such information as may be prescribed in accordance with the regulations for the purposes of facilitating a change to a calculation of the fair allocation amount.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

16xx. (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of a refinancing.

Plan to be provided to Minister

(1.1) The Financial Services Manager shall provide the Financing Plan to the Minister.

Principles

(2) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Funding obligations should be incurred such that, along with any funding obligations already incurred, the estimated finance amount that would, subject to any refinancing, become due and payable during a reference period will reasonably align with the fair allocation amount determined in respect of the reference period, in each case after reducing the fair allocation amount to reflect determinations of the Board under Part II in respect of the reference period.

2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.

3. Reasonable assumptions should be made regarding such matters as may be prescribed.

Limitation

(4) In respect of each reference period from May 1, 2017 to April 30, 2021, no funding obligation shall be incurred that would result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

Confidential Draft

(a) the amounts are payable in respect of a reference period in respect of which the Board has not made any determinations under Part II; or

(b) if the Board has made a determination under Part II in respect of the reference period, the funding obligations incurred would not result in amounts payable in respect of the clean energy adjustment during the reference period in an amount that exceeds the limit determined in accordance with the regulations.

Other reports

(3.1) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this section to the Financing Plan is deemed to be a reference to the plan as amended.

Implementation of Financing Plan

17xx. (1) The Financial Services Manager shall ensure that funding obligations incurred for the purposes of this Act are incurred in a manner that is consistent with the applicable Financing Plan.

Financing entities

(3) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3.1) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Confidential Draft

Same

(2) For greater certainty, subsection (4) applies despite the failure of the Financial Services Manager to comply with subsection (1).

PART V
THE REGULATORY ASSET

IESO deferral

20xx. (1) The IESO deferral for each month, commencing May 1, 2017, shall be determined by IESO in accordance with the regulations.

Same, retrospective amounts

(1.1) For greater certainty, the regulations may provide for the IESO deferral to include an amount that was incurred by IESO on or after May 1, 2017 and before the day this Act comes into force.

Electricity vendors to provide information

(2) Electricity vendors shall provide to IESO such information as IESO may reasonably request for the purposes of determining the IESO deferral under subsection (1) and such further information as may be prescribed.

Same

(3) IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

20.1xx (1) IESO shall establish and maintain a variance account for the purposes of this section.

Recording in variance account

(2) IESO shall record the following in the variance account:

1. The IESO deferral for each month.

2. All payments received by IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.

3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences on or after May 1, 2017 and before the day this section comes into force.

Confidential Draft

Recording determinative

(3) Subject to the correction of any obvious error by IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

Rights of investment interest owner

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights acquired by the investment interest owner under the transfer.

Regulatory asset established

21xx. (1) Effective May 1, 2017, IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Board to set rates

(2) Subject to subsection (3), the Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

Limitation

(3) IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

Same, limitations

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Transfer of regulatory asset

22xx. (1) IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

Agreement

(2) An agreement between IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to IESO in an amount equal to the amount of the specified portion.

Effect of payment

(3) Upon receipt by IESO of the payment by the financing entity,

Confidential Draft

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) IESO shall retain no further right, title or interest in the corresponding investment interest.

Validity of transfer

23xx. (1) A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

Same

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.

Deemed perfection, etc.

(3) At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Effect of transfer

24xx. (1) The transfer of a specified portion of the regulatory asset under section 22x creates an investment asset or, if it is not the first transfer, adds to the investment asset.

Confidential Draft

Same

(1.1) Upon transfer of a specified portion of the regulatory asset under section 22xx to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim.

Investment asset established

25xx. (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, IESO and other prescribed parties.

3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for the clean energy adjustment.

5. The right to enforce the duties and obligations under this Act of each electricity vendor and IESO to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by any electricity vendor to recover payment of the clean energy adjustment.

6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest, including any rights to receive funding rebates.

7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Confidential Draft

Not affected by failure to impose etc. clean energy adjustment

(1.1) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(2) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, IESO, an agent of the investment interest owners or an owner in the Province of a distribution system within the meaning of the *Electricity Act, 1998*;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(3) The rights of the investment interest owners to collect and enforce their rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(4) If one investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest owner collectively and in coordination with all other investment interest owners, and any agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owners as a collective in accordance with its terms.

Transfer of investment interest

26xx. An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

27xx. (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the transferee a valid property right and interest in, to and under the applicable investment interest acquired in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an

Confidential Draft

investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest, subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected as described in the *Personal Property Security Act*, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer, and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

28xx. (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the applicable investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may

Confidential Draft

subsequently attach to the property rights and interests in the investment interest subject to the security interest, subject to the written consent of the person to whom the security interest has been granted.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any account of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to IESO.

Definition

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act*.

PART VII
MISCELLANEOUS

Appointment of agent, invoicing or collection

29xx. If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Not Crown agent

30xx. For greater certainty, a person appointed under section 29xx is not an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Board's authority

30.1xx (1) Each electricity vendor, IESO and the Financial Services Manager shall maintain such accounts and provide such information to the Board as the Board may require for the purposes of carrying out its responsibilities under this Act, in the form and manner and within the time required by the Board.

No hearing required

(2) Despite anything to the contrary in the *Ontario Energy Board Act, 1998*, the Board may exercise any of its responsibilities under this Act without a hearing.

Confidential Draft

Sequestration

31xx. (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections and remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment, including defaults on any required remittance of amounts in respect of the clean energy adjustment, collections or remittances.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

32xx. The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to a transfer under this Act or the creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section 5XX shall be the laws of the Province.

Conflict

33xx. The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

34xx. Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required to be taken under the Financing Plan or in relation to the determination of the fair allocation amount.

Liability

35xx. (1) No action or other civil proceeding shall be commenced against any employee of the Province or Ontario Power Generation Inc. for any act done in good faith in the exercise or performance or the intended exercise or performance of a power or duty under this Act, the regulations under this Act or for any alleged neglect or default in the exercise or performance in good faith of such a power or duty.

Same

(2) Nothing in subsection (1) shall be read as limiting the effect of subsection 19 (1) of the *Electricity Act, 1998* or subsection 11 (1) of the *Ontario Energy Board Act, 1998*.

Confidential Draft

Same

(3) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act*, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.

References in marketing materials and offering documents

36xx. No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5xx unless the prescribed requirements, if any, are satisfied.

Regulations

38xx. (1) The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. [5]Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.

2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.

3. Prescribing types of payment obligations that constitute funding obligations.

4. Governing the determination of classes of specified consumers, which may include determination based on the manner in which rates are determined for different classes of specified consumers.

5. Governing the determination of the finance amount and the true-up amount and how those amounts are to be applied to the clean energy adjustment.

6. Governing the inclusion of information under this Act on or with invoices, which may include requiring notice to be provided by electricity vendors to specified consumers and other prescribed persons regarding the adjustments, including providing for different requirements in different circumstances and for different classes of specified consumers.

7. Governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on or with invoices issued to specified consumers, including the form that the information must take and the

[5] FLS - see s. 78 (1) of the Climate Change Mitigation and Low-carbon Economy Act, 2016 - paras. 1 and 2.

Confidential Draft

form of the invoices and the form of any notice to be provided to the specified consumer under this Act[6];

8. Governing the manner by which invoices or notices provided for under this Act are to be provided to specified consumers and other prescribed persons.

9. Governing the Financial Services Manager's power to establish and charge fees, including the ability to recover costs and expenditures and to earn a return.

9.1 Providing for a right of compensation for investment interest owners affected by a breach of section 25xx and the manner in which such a right may be enforced under this Act.

10. Prescribing the time within which any action required by this Act may be required to be done.

11. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

Limitation

(2) Despite subsection (1) or any other Act, no regulation under this Act shall have the effect of reducing, impairing, postponing or terminating the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or impairing or postponing the invoicing, collection, remittance or recovery of the clean energy adjustment.

PART VIII[7]
AMENDMENTS TO OTHER ACTS

ELECTRICITY ACT, 1998

200x. (1) Subsection 6 (1) of the *Electricity Act, 1998* would be amended by adding the following clauses:

(q.0.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

[6] FLS - see *OEBA s.79.17 and 88(1)(z.11) and (z.12)*

[7] FLS: These amendments are drawn from previous drafting contained in gov2016.146.e05 (which was drafted as amendments to the EA, 1998).

Confidential Draft

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*;

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and to engage in related settlement activities;

(iii) engaging in activities related to the transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(A) incurring liabilities in relation to the regulatory asset,

(B) transferring the regulatory asset under section 22x for consideration, and

(C) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

200.1xx (1) Subsection 25.33 (1) of the Act would be amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*;

(1.1) Subsection 25.33 (2) of the Act would be amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*;

(2) Subsection 25.33 (3) of the Act would be amended by adding the following paragraph:

4. A consumer who is a specified consumer within the meaning of the *Ontario Fair Hydro Plan Act, 2017* or such other consumer as may be prescribed.

(3) Clause 25.33 (4) (b) of the Act would be amended by adding "or as may be required by a regulation made under this Act or the *Ontario Fair Hydro Plan Act, 2017*" at the end.

Confidential Draft

(4) Subsection 25.33 (5) of the Act would be amended by adding "or under the *Ontario Fair Hydro Plan Act, 2017*" at the end

201x. Section 53.1 of the Act would be amended by adding the following subsections:

Same, *Ontario Fair Hydro Plan Act, 2017*

53.1 (1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, non-subsidiary

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is not a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of the financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of the financing entity.

Deemed assets, subsidiary

(1.4) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of that financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries; and,

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries shall not form part of the assets and liabilities of that financing entity.

Confidential Draft

Definition, financing entity

(1.5) For the purposes of this section, "financing entity" has the same meaning as in the *Fair Hydro Plan Act, 2017.*

AMENDMENTS TO ONTARIO ENERGY BOARD ACT, 1998

205x. Subsection 70 (2.1) of the Act would be amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017*.

205.1x Section 70 of the Act would be amended by adding the following subsection:

(2.3) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Fair Hydro Plan Act, 2017* and the regulations made under it.

206x. Section 78.1 of the Act would be amended by adding the following subsection:

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.

2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.

3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.

Confidential Draft

4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

207xx. Subsection 79.16 (3) of the Act would be repealed.

PART IX
COMMENCEMENT AND SHORT TITLE

Short Title - this proposal for legislation would, if approved by the Legislature, have a short title to be determined by Government.

Timing – this proposal for legislation would, if approved by the Legislature, come into force on a date to be established by Government.

The Special Committee of the Board of Directors
Ontario Power Generation Inc. (the "Company")
700 University Avenue
Toronto, ON M5G 1X6

May 5 2017

Dear Sirs/Madames:

This letter is being issued to the Special Committee to assist them in their evaluation of management's analysis of the application of International Financial Reporting Standards ("IFRS") as adopted by the International Accounting Standards Board ("IASB")) to the specific transaction described in the Company's memorandum entitled *OPG Accounting Considerations of Ontario Fair Hydro* dated May 2 2017, herein referred to as "the Management Memorandum". We are issuing this letter in our role as auditors of the Company for the year ending December 31, 2017. As the Province consolidates OPG on an IFRS basis, this letter pertains solely to management's IFRS analysis as contained in the Management Memorandum.

We have read the Management Memorandum and we agree with management's analysis therein, subject to all of the assumptions and limitations identified therein. Specifically, we concur that the existing in draft legislation, along with the yet undrafted Regulation and special purpose vehicle (TRUST) documents, and various other agreements assuming they include the required criteria that Management has identified as outstanding in its Appendix A, would be sufficient to support consolidation of the TRUST with OPG Inc.

Additionally, we specifically refer you to the section entitled "Conclusion" in the Management Memorandum, which indicates that their analysis is based on draft legislation as well as their assumptions regarding the terms and conditions of certain contractual arrangements and other documentary evidence that is not yet drafted. Therefore, the Management Memorandum will be required to be updated to reflect the final contents of the legislation and other relevant contractual arrangements and documentary evidence. We will review the updated Management Memorandum once it is available, and update you on our viewpoints once our review of such updated Management Memorandum is completed.

The scope of this letter and any views expressed herein are limited to the transactions, facts, circumstances and assumptions provided to us by management or the Company as described in the Management Memorandum. If such facts, circumstances or assumptions differ, our conclusions may change.

We have not performed an audit or a review of the Management Memorandum. Additionally, we have not performed an audit as of any date or for any period subsequent to December 31, 2016.

The ultimate responsibility for the proper accounting treatment under IFRS and US GAAP rests with the Company.

We have not been asked for, nor do we express, an opinion on the tax consequences of the transactions described herein.

The accounting for such transactions could be affected by actions of the International Accounting Standards Board, the IFRS Interpretations Committee, the Ontario Securities Commission, or other regulatory bodies. Any such actions occurring prior to the finalization of the 2017 IFRS consolidated financial information will be required to be analyzed by management, and such analysis will be reviewed by us in the context of the audit procedures we will perform on the consolidated IFRS financial information for the year ending December 31, 2017.

Our work does not include the provision of legal advice and we make no representations regarding questions of legal interpretation of any possible structure or strategy. We make no representation regarding the sufficiency of our work for any purpose.

This report is intended solely for the information and use of the Special Committee, Board of Directors and management. We understand that a copy of this letter may be provided to the Province of Ontario, the Independent Electricity System Operator, and/or the Ontario Energy Board. It is not intended to be, and should not be, used by anyone other than these specified parties.

This analysis, or portions thereof, should not be referred to or distributed to any other person or entity, other than those noted in the paragraph directly above. It is not to be referred to or quoted, in whole or in part, in any registration statement, prospectus, public filing, loan agreement, or other agreement or document.

Yours sincerely

OPG ACCOUNTING CONSIDERATIONS OF ONTARIO FAIR HYDRO PLAN

Purpose:

The purpose of this document is to summarize the preliminary views of Ontario Power Generation (OPG) on the ability for OPG to consolidate the Financing Entity Trust associated with the Ontario Fair Hydro Plan.

This memo is assessed against the Legislation proposal 'Ontario Fair Hydro Plan Act, 2017, if enacted V6' sent by Carolyn Calwell on May 1, 2017. Note that this assessment is preliminary pending the finalization of the Legislation, the Trust indentures, Regulations, financing structure and other detailed terms, and all related documentary evidence. This assessment will be updated once final documentation is available.

Background:

On March 2, 2017, the Province of Ontario (the Province) announced Ontario's Fair Hydro Plan (the Plan) aimed at reducing electricity bills by 25 percent on average for all residential consumers in the province. As part of the Plan, the Province has proposed financing a portion of the Global Adjustment costs over a longer time period for Regulated Price Plan eligible customers (e.g., residential, farm, small businesses).

On April 13th, the Province requested that OPG consider administering the financing associated with the Plan, because of OPG's participation in the market, regulatory knowledge and the potential ability to consolidate the related financing activities. To undertake this financing, OPG will establish a Financing Entity Trust (the Trust) to finance and administer the Global Adjustment costs through a mixture of external financing and an equity injection from the Ontario Financing Authority. It is expected that OPG will control the Trust for accounting purposes and that its financial position and results will be consolidated within OPG's consolidated financial statements.

Assumptions made to perform accounting analysis which are not yet addressed in Legislation – it is expected that these matters will be addressed in Regulations, Trust documents, and various other agreements:

- The Regulation must require interest, carrying and administrative costs to be paid to the Trust in cash on a monthly basis, so that the Trust is able to recognize appropriate revenue to offset any ongoing costs.
- The Regulations, Trust documents and various agreements will provide that OPG will have significant variability and exposure from the activities of the Trust relative to the rate of return that OPG would recognize from its role as the Financial Services Manager of the Trust. The performance fee will be meaningful and allow OPG to make decisions that will significantly impact its returns.
- The Minister of Energy will have the ability to replace the Financial Services Manger (OPG) if there is a failure to perform. There will be a bifurcation of roles where the Province could not remove OPG as manager/administrator with respect to the existing debt placed by the Trust, but could remove OPG's responsibility/right to prepare the Financing Plan going forward. The ability for the Minister of Energy to remove OPG as the Financial Services Manager should not impact the recoverability of existing intangible assets.

- The calculation of the Fair Allocation Amount will be performed by the Minister of Energy.
- OPG has the ability to appoint and remove the Trustee (or Board of Trustees) and there are no veto rights by the Province. No party has the ability to remove OPG from its role and authority in the Trust.
- Neither the OEB nor any other party can discretionally reduce the management fee or performance fee except due to a calculation error.
- The margin on the interest rates associated with Tranche B and Tranche C which will be recovered from the ratepayers will be reflective of the risk profile of the debt and the associated market terms.
- The indemnification provided to the Trust by the Minister of Finance on behalf of the Province as described in *Part I – General - Section 5.3 Guarantee, indemnification Protection and assurances* will be subject to terms and conditions in a separate Provincial support agreement. The guarantee is expected to be in place only in the event of a Payment Guarantee Event, such as if the Legislative Assembly of Ontario repeals the Fair Hydro Act or amends the Act in a way that adversely impacts the ability of the Trust to fully recover an intangible asset in order to pay the obligations of the Trust.
- The approval by the Ontario Energy Board of the Financial Services Manager (i.e. OPG's) fees as described in *Part IV – Implementation - Section 14.4 Same, Board Approval* will not allow them to change or limit the management fee structure, but only ensure that it is prudent by ensuring it is calculated in accordance with the Regulations.
- In the event that a different Financial Services Manager is appointed by the Minister of Energy, the IESO is required to continue to make cash payments for interest to the Trust for the existing debt. Principal repayments on existing debt will continue to be repaid by ratepayers to the Trust in accordance with the terms of the issued debt.
- All other items as indicated in *Appendix A.*

Accounting Analysis:

In order to meet the accounting definition of 'control', accounting guidance must be considered. There are no bright lines to determine whether OPG has exposure, or rights, to variable returns from its involvement with the Trust, or whether it has the ability to affect the returns of the Trust through its power over the Trust. Rather, all facts and circumstances are considered when assessing whether an entity has control over another entity.

In order to consolidate the Trust, OPG must be able to demonstrate that it controls the Trust.

Control

An investor controls an investee if and only if the investor has all the following:

a) *power over the investee;*
b) *exposure, or rights, to variable returns from its involvement with the investee; and*
c) *the ability to use its power over the investee to affect the amount of the investor's returns.* [IFRS 10, paragraph 7]

Purpose and design of the investee
When assessing control of an investee, an investor shall consider the purpose and design of the investee in order to identify the relevant activities, how decisions about the relevant activities are made, who has the current ability to direct those activities and who receives returns from those activities. [IFRS 10, paragraph B5]

Criteria	Analysis
Purpose and design of the Trust	The purpose of the Trust is to allow OPG to earn a return on the Intangible Asset from the IESO by effectively managing financing to earn a spread, earn management fees, and earn interest fees.

Purpose and design of the investee *When assessing control of an investee, an investor shall consider the purpose and design of the investee in order to identify the relevant activities, how decisions about the relevant activities are made, who has the current ability to direct those activities and who receives returns from those activities.* [IFRS 10, paragraph B5]	
Relevant activities of the Trust and how decisions are made about those activities	Relevant activities: The relevant activities of the Trust are: • To evaluate and make decisions on financing alternatives, duration, and the strategy to minimize financing costs. • To effectively manage funding obtained through the capital markets and be able to make or lose any spread from financing • To provide funding to the IESO in return for an interest in a future cash flow stream • To obtain funding through the capital markets and other vehicles available to OPG to be able to provide the IESO funding. • To make capital and funding decisions required to meet the Fair Allocation Plan objectives as set out in Legislation • To finance the requirements associated with the short-fall amount • To raise debt, pay bond debt holders, and determine capacity for the Trust to raise additional financing Financing Plan (Legislation: Part IV – Implementation) • OPG's plan for managing the assets of the Trust will be dictated through a 'Financing Plan'. • The Financial Services Manager (i.e. the Trust) shall provide the Financing Plan to the Minister. The Financing Plan is expected to follow Principles as stipulated in the Legislation which indicate that the assumptions must be reasonable and that the Trust has the power to determine what is reasonable and cost-effective. The Trust makes all the decisions in determining the relevant activities as listed above. • OPG can amend the Financing Plan at any time without the approval of the Minister. Fair Allocation Amount (Legislation: Part IV – Implementation) • The 'Fair Allocation Amount' ("FAA") is the amount of the deferral for the reference period and includes finance amounts. The current Legislation dictates that the Minister of Energy is to calculate the FAA. • This does not impact OPG's relevant activities in the Trust as OPG's variable returns are based on financing decisions which are not dictated by the FAA. OPG can choose to accept or reject the purchase of the intangible asset which is based on the Fair Allocation Amount.

Purpose and design of the investee *When assessing control of an investee, an investor shall consider the purpose and design of the investee in order to identify the relevant activities, how decisions about the relevant activities are made, who has the current ability to direct those activities and who receives returns from those activities.* [IFRS 10, paragraph B5]	
	<u>Decisions made and voting rights of the Trust:</u> OPG has the ability to appoint and remove the Trustee (and if applicable Board of Trustees) and there are no veto rights by the Province. No party has the ability to remove OPG from its role and authority in the Trust. **[NOT YET ADDRESSED IN CURRENT LEGISLATION]** *Voting of members:* Except as otherwise stated, all decisions of the members (if applicable) shall be made by the Trustee who will be appointed by OPG. <u>Termination Rights</u> OPG cannot be removed from its role in the Trust. The Province has the right to remove OPG as the 'Financial Services Manager' for failure to perform. This will not impact debt that has already been issued for which OPG is already managing through the Trust or the recoverability of existing intangible assets. It the right is exercised, it serves to reduce or eliminate the scope of new business activities of the Trust but it does not affect OPG's ability to control the Trust. Should a new Financial Services Manager be appointed, a separate assessment would be made as to which party if any would control it.
Assessment	The purpose of the Trust is to allow OPG to earn a return on the Intangible Asset from the IESO by effectively managing financing to earn a spread, earn management fees, and earn interest fees. For the reasons noted above, OPG has control over the decisions to be made about the relevant activities.

Power over the investee	
Criteria	**Analysis**
Identify whether OPG's rights give it the current ability to direct the relevant activities of the Trust (Substantive rights)	See above for relevant activities of the Trust.
Assessment	OPG has the ability to direct the relevant activities of the Trust. OPG can amend the Financing Plan at any time, without approval from the Minister. Further, if the Minister of Energy chooses not to continue with OPG's current Financing Plan, OPG can withdraw its Financing Plan, without impacting the existing debt and related intangible assets that is already in the Trust. The Province would just appoint a new party to participate in future securitizations and OPG would continue to manage the debt that already exists in the Trust. If future financing transactions are with a different SPV, a separate consolidation analysis would be prepared at that time as to which party if any would consolidate the SPV.

Exposure or rights to variable returns	
Criteria	**Analysis**
Dividends, other distributions of economic benefits from an investee and changes in the value of the investor's investment in that investee [IFRS 10, paragraph B57(a)]	OPG is expected to realize management fees from its activities with the Trust.
Remuneration for servicing an investee's assets or liabilities, fees and exposure to loss from providing credit or liquidity support, residual interests in the investee's assets and liabilities on liquidation of that investee, tax benefits, and access to future liquidity that an investor has from its involvement with an investee [IFRS 10, paragraph B57(b)]	**[NOT YET ADDRESSED IN CURRENT LEGISLATION]** OPG has exposure and rights to variable returns from the Trust in the form of the following: • The Regulations, Trust documents and various agreements will provide that OPG will have significant variability and exposure from the activities of the Trust relative to the rate of return that OPG would recognize from its role as the Financial Services Manager of the Trust. The performance fee will be meaningful and allow OPG to make decisions that will significantly impact its returns. • OPG, through ownership of the most subordinated debt, is exposed to risk of non-collection. Given that the program is expected to run until 2047, this 30 year time period results in uncertainty about the future collection of OPG's amount at risk. OPG and the OFA (5% out of 44% contribution) would be the last parties to get paid in the event that the program stops running due to a change in Government, if electricity demand is not high enough to allow for collection from ratepayers in a timely manner, etc. The end date of 2047 that is prescribed in the Legislation results in uncertainty toward whether this program will continue and whether OPG will have collected its amount at risk at that time. • In the event that there is a market disruption whereby OPG is not able to obtain debt from the financial markets (e.g. due to a recession), the Province will provide funding in the event that OPG wishes to continue purchasing intangible assets from the IESO. This is considered to be a protective right as it does not impact the relevant activities of the Trust, but is designed to protect both parties and does not give either party more or less power over the Trust. It is designed to allow OPG to keep purchasing intangible assets if it wishes to. • Protective rights are typically held to prohibit fundamental changes in the activities of an investee that the holder does not agree with and usually apply only in exceptional circumstances (i.e., upon a contingent event). This is true for this right as it is only applicable if there is a market disruption and the Trust is not able to obtain financing from external markets. Further, the fundamental activities of the Trust would change if it were not able to obtain financing from external markets.
Returns that are not available to	• OPG will have synergistic benefits from combining operating

Exposure or rights to variable returns	
other interest holders. For example, an investor might use its assets in combination with the assets of the investee, such as combining operating functions to achieve economies of scale, cost savings, sourcing scarce products, gaining access to proprietary knowledge or limiting some operations or assets, to enhance the value of the investor's other assets [IFRS 10, paragraph B57 (c)]	functions with the Trust given its extensive knowledge on the market and current regulatory knowledge.
Assessment	To determine which party is the most 'at risk' in the event that the loans default, expected loss rates were obtained from Moody's and DBRS. Using the *Moody's Investors Service – Loss Given Default for Speculative Grade Companies* dated December 4, 2015, the 4-year Idealized Expected Loss ranges from 0.00% for a triple A rated bond to 0.30% for an A3 rated bond. DBRS Expected Loss Ratings give an indication of the expected loss of a loan portfolio. As per a November 2016 publication, the 10-year expected loss rates range from 0.1% for a AAA rated bond to 1.7% for an A (low) rated bond. Given that OPG's subordinated debt is equal to 5% of the total debt, which is higher than the default rates above, 100% of the risk is with both OPG and the OFA since they are the last parties to get paid should there be any default with the debt. OPG is also exposed to variable returns from the Trust from its performance on decisions made on financing alternatives, duration, and the strategy to minimize financing costs through the variable fee component of the management fee. Therefore, OPG has the exposure to variable returns from the Trust.

Ability to use power to affect returns	
Criteria	**Analysis**
Ability of investor to use its power to affect the investor's returns from its involvement with the investee	OPG needs to have both power over the Trust (i.e. as a Principal, not an agent), exposure or rights to the variable returns from the Trust, and the ability to use its power to affect OPG's returns from its involvement with the Trust OPG has the ability to use its power over the relevant activities of the Trust to affect its returns from its involvement with the Trust through the variable fee component.

Ability to use power to affect returns	
	Further, the Trust's ability to use its power to affect returns is in a manner that is consistent with being a principal. See *Appendix B* for Principal-Agent analysis.
Assessment	OPG has the ability to use its power to affect returns of the Trust.

Conclusion:

Based on the current **[May 1, 2017]** draft of the legislation, the conditions to ensure the ability of OPG to consolidate the operations of the Trust have not fully been reflected. As noted in Appendix A, several conditions must be evident in the Regulations, Trust documents, and various other agreements which are not yet drafted and therefore not yet available for our review and assessment. In OPG's assessment, while no current clause of the Legislation would hamper the ability to effect a consolidation within OPG Inc.'s financial statements, there are several key conditions for consolidation that are currently not present within the Legislation. On the assumption that future Regulations, Trust documents and various other agreements fully capture these operating conditions, and that no new conditions that would conflict with OPG's control of the trust are introduced, OPG believes that consolidation of the Trust is supportable.

APPENDIX A:

Terms necessary for OPG to consolidate the Global Adjustment Trust

Note that these are assessed against the Legislation proposal 'Ontario Fair Hydro Plan Act, 2017, if enacted V6' sent by Carolyn Calwell on May 1, 2017. These are subject to change as subsequent drafts of the Legislation are issued.

Legend:

✓ **- Addressed by the Legislation drafted May 1, 2017**

RT – Not addressed by Legislation and must be addressed in Regulations, Trust Documentation or various other agreements

Ω - Will not be addressed in Legislation/Regulations or Trust but is the intended plan

Issue	No.	Requirements
Directive	1 ✓	The Trust must be undertaken by OPG as a business initiative on its merits. A Shareholder Directive is to be limited to direct OPG to investigate the option of establishing a Trust vehicle to administer, finance and operate the Global Adjustment plan and the operation of that Trust and the control, risk and rewards of that Trust will determine its consolidation into OPG as a business enterprise. ***MET - The Province will not direct OPG to participate in the Fair Hydro Plan. A letter was issued from the Minister of Energy to OPG on April 13th requesting OPG's involvement in the implementation of the Fair Hydro Plan. OPG's Board Chair responded to the Minister on April 18th committing OPG to work with the IESO and OEB to develop a plan. OPG will have the option to prepare, implement and amend a financing plan (in accordance with principles set out in legislation) and propose the adoption of such plan as the 'Financing Plan'. OPG will have the right to withdraw its financing plan at any time.***
Trust	2 **RT**	The Trust should not operate in a predetermined way such that OPG does not have decision-making authority over the Trust's ongoing activities after its formation (i.e. should not operate on 'autopilot'). ***OPG will be the sole unit holder of the Trust. All decisions over the relevant activities of the Trust (as described above) will be made by OPG.***
	3 **RT**	OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the Trust. ***OPG will be the sole unit holder of the Trust. The Province will be involved in the Board of Trustees, but OPG is expected to have the majority vote.***

<table>
<tr><th>Issue</th><th>No.</th><th>Requirements</th></tr>
<tr><td></td><td></td><td></td></tr>
<tr><td></td><td>4
RT</td><td>The Province cannot have the right to veto OPG's decisions about the relevant activities of the Trust. OPG must have the power over the relevant activities of the Trust and be compensated. The relevant activities of the Trust include (but are not limited to) the evaluation and decisions on financing alternatives, duration, and the strategy to minimize financing costs. OPG must have the power to establish operating and capital budgets of the Trust.

OPG will have the ability to make decisions about the financing alternatives, duration, and the strategy to minimize financing costs. OPG will have the power to establish operating and capital budgets of the Trust with no veto right by the Province.</td></tr>
<tr><td></td><td>5
RT</td><td>OPG must have the power to determine or change operating and financing policies of the Trust, which will affect the variability of risks and returns.

The Regulations, Trust documents and various agreements will provide that OPG will have significant variability and exposure from the activities of the Trust relative to the rate of return that OPG would recognize from its role as the Financial Services Manager of the Trust. The performance fee will be meaningful and allow OPG to make decisions that will significantly impact its returns.</td></tr>
<tr><td></td><td>6
Ω</td><td>The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
a. The Trust
b. The most subordinated debt of the Trust

See below for financing structure.

<table>
<tr><th></th><th>Risk Profile</th><th>Source</th><th>% of Total Fundin Requirement</th></tr>
<tr><td>Tranche A Senior Debt</td><td>the least risky</td><td>Capital Markets</td><td>51%</td></tr>
<tr><td>Tranche B Sub Debt</td><td>In between A&C</td><td>OPG via OEFC</td><td>39%</td></tr>
<tr><td>Tranche C Sub Debt</td><td>the most risky</td><td>OPG via OEFC</td><td>5%</td></tr>
<tr><td></td><td></td><td>OPG via Capital Markets</td><td>5%</td></tr>
</table>
</td></tr>
<tr><td></td><td>7
Ω</td><td>OPG must own at least 50% of the most subordinated debt and must be no less than 5% of the debt of the Trust. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources.

See chart in Point 6 above.</td></tr>
</table>

Issue	No.	Requirements
	8 **RT**	OPG must have the ability to earn variable returns by exercising its authority, which shall be accomplished as follows: a. The cash flow from the restructured asset shall include interest determined based on a relevant benchmark that is appropriate relative to the restructured asset, plus an appropriate margin consistent with the relevant market and other risks ***The cash flow from the restructured asset will include interest income that is equal to the interest expense (i.e. interest expense is passed back to the ratepayers). The Trust will also receive a margin as discussed in the 'Exposure or rights to variable returns' section above.***
	✓	b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the Trust to achieve a more favourable return compared to the benchmark for interest on the restructured asset ***OPG will determine the financing strategy through the proposal of its 'Financing Plan'. The 'Financing Plan' will only be required to follow general Parameters and Principles as set forth in the Legislation but funding decisions will be made entirely by OPG. The Trust will also receive a margin as discussed in the 'Exposure or rights to variable returns' section above.***
	Ω	c. The Trust shall establish classes of liabilities (senior, subordinated and the most subordinated). The classes would allow the Trust to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity. ***OPG's portion of the most subordinated debt will be limited to a reasonable level. If it is determined that OPG's portion is not at a reasonable level, OPG has the option to withdraw its Financing Plan.***
	RT	c. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the restructured asset, or any residual risk of restructured asset. The targeted return of the subordinated liability should be reflective of the underlying risks and compensate holders for active management that would be required.

Issue	No.	Requirements
		OPG will be able to capture the pricing difference between cost of financing and benchmark for interest through the performance fee which is described in point 5) above and the 'Exposure or rights to variable returns' section above.
	Ω	d. OPG should participate in the detailed design of the above and the Trust documentation to ensure that it has substantive power and variability, which will allow OPG's Board of Directors to evaluate the opportunity as a business initiative instead of through a shareholder directive. ***OPG will be involved in the Trust documentation.***
	RT	Defined Forced Majeure for emergency events (e.g. unlikely credit market event or disruption where it is not possible to borrow from the market at a reasonable rate), OFA may provide bridge financing beyond the designated percentage for a defined period. ***This will be structured through a separate indemnification agreement. This is not expected to impact consolidation of the Trust because this is seen as a protective right which is only in affect when a contingency arises and not as a result of the relevant activities of the Trust.***
Legislation	9 ✓	The Legislation must require interest, carrying and administrative costs to be paid to the Trust on a monthly basis, so that the Trust is able to recognize appropriate revenue to offset any ongoing costs. ***Under Part III – Clean Energy Adjustment – Section 8.3 Terms, of the Legislation, the expectation is that the Legislation will allow for interest payments to be paid to the Trust on a monthly basis in cash. The Trust will not accrue interest to the current intangible asset balances but this interest amount could form part of future intangible assets that are purchased from the IESO.***
	10 RT	The Legislation must dictate the manner in which the restructured asset would be determined, collected, and the period of collection, so that the determination of the restructured asset will not be subject to the Province's decisions on an ongoing basis, but determined based on a formula. Alternatively, the Legislation may allow for an adjustment to the pre-determined deferral formula based on specific parameters that would limit the adjustment to the restructured asset. Adjustments beyond the specific parameters would require approval by the Board of Trustee. **The Regulations are expected to dictate the 'Fair Allocation Plan' which will be based on high level Principles and Parameters of the Plan, including the attribution methodology. The Legislation or Regulation determines the following principles:** • **25% Reduction (June 1, 2017) where the average bill will**

Issue	No.	Requirements
		reduce by 25% including of HST and social programs noted above • **Inflation Period (November 2017 – April 2022) where bill increases are capped at inflation** • **Straight-line Increase Period (May 2022 – April 2027) where bills increased at a straight-line rate (i.e., 8% per year) which is set so that borrowing will not exceed the Trust's capacity.** • **Amortization Period (May 2027 – April 2047) where debt built up over the previous periods is repaid by ratepayers.** **OPG will determine the manner in which the intangible asset, once purchased from the IESO will be collected and the period of collection.** **The recoverability of the existing intangible assets cannot be impacted by the Province.** **Although the Province may determine the Principles and Parameters around the 'Fair Allocation Plan', it does not impact the activities of the Trust once OPG has purchased the intangible asset.**
	11 **RT**	The Legislation must be written to avoid legal or constitutional challenges and be irrevocable to reduce the cost of borrowing and with a specific formula which determines the deferral amount. **See above.**
	12 **RT**	The spirit of the above terms should be reflected in the Trust Indenture Agreement as well as Legislation, wherever possible. ***Trust Indenture and Regulations still outstanding.***

APPENDIX B:

Link between power and returns: principal-agency situations

The third criterion for having control is that the investor must have the ability to use its power over the investee to affect the amount of the investor's returns. When decision-making rights have been delegated or are being held for the benefit of others, it is necessary to assess whether the decision-maker is a principal or an agent to determine whether it has control. This is because if the decision-maker has been delegated rights that give it power, the decision-maker must assess whether those rights give it power for its own benefit, or merely power for the benefit of others. As an agent cannot have control over the investee, it does not consolidate the investee. A principal may have control over the investee, and if so, would consolidate the investee.

A decision maker shall consider the overall relationship between itself, the investee being managed and other parties involved with the investee, in particular all the factors below, in determining whether it is an agent:

a) the scope of its decision-making authority over the investee

   As discussed above, OPG has decision-making authority over the Trust and its relevant activities. The Province has no right to determine what sort of funding decisions OPG should make to fund the intangible assets that they will purchase and OPG can choose not to purchase future intangible asset purchases.
   Terms and Conditions to support this point: 1, 2, 3, 4, 5

b) the rights held by other parties (paragraphs B64–B67).

   There are no substantive removal rights held by the Province for debt that already exists in the Trust.

   Terms and Conditions to support this point: 3, 4, 5

c) the remuneration to which it is entitled in accordance with the remuneration agreement(s) (paragraphs B68–B70).

   See section on 'Exposure or rights to variable returns' above.

   Terms and Conditions to support this point: 6, 7, 8, 9

d) the decision maker's exposure to variability of returns from other interests that it holds in the investee (paragraphs B71 and B72).

   See section on 'Exposure or rights to variable returns' above.

   OPG will receive a 44% equity injection from the Province of Ontario, indirectly through the Ontario Financing Authority. Given that currently, the majority (currently 51%) of the Trust debt will be from External Markets and not the Province, it can be argued that OPG did not receive the majority of its interest in the investee as a contribution or loan from the Province. This shows that OPG is a principal, not a de-facto agent.

   Terms and Conditions to support this point: 6, 7, 8, 9

Conclusion: OPG is not an agent for the Province as the arrangement does not provide for the Province to directly absorb any variability associated with the structure. If the Province decides to intervene at a later date due to evolving market conditions, an assessment would be made at that future date.

Analysis on whether OPG is an agent for ratepayers

OPG is not an agent for the ratepayers because OPG has substantive exposure to risk of loss of its own funds. The ratepayers do not have any of their own funds in any of the subordinated tranches and further, no decision making authority is delegated to the ratepayers relating to the relevant activities of the Trust.

Analysis on whether OPG is an agent for the IESO

OPG is not an agent of the IESO because the IESO faces no continuing risk of loss after sale of the intangible asset to OPG.

Hi Tim,

Please find attached the final LRC submission. Also attached are the final legislation, compendium and variance memo.

This is Minister signed and hard copies will be delivered first thing on Monday morning.

Thanks,
Martin

TB/MBC	TB/MBC approval received March 9	

Deputy Minister _____ Date _____

Minister _____ Date _____

s. 1 Proposal and Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), intended to lower bills on average by 25% for a typical residential consumer, starting in the summer of 2017. About half a million small businesses and farms are also expected to benefit.

- Any rate increases for residential consumers over four years would be held to the rate of inflation.

- These measures include the 8% rebate introduced in January and builds on previously announced initiatives to deliver broad-based rate relief on electricity bills.

- The OFHP also announced enhancements to a number of existing programs targeted at more vulnerable electricity consumers, including funding some or all of the costs of these programs from the tax base rather than the electricity ratebase.

- OFHP is part of a significant system restructuring that will address long-standing policy challenges and ensure greater fairness.

- To implement OFHP, the Ministry has prepared the Fair Hydro Act, 2017 in close collaboration with key ministries (i.e., Treasury Board, Finance, Attorney General, Cabinet Office), agencies (i.e., OEB, IESO, OPG) and third party financial advisors and local distribution companies (LDCs).
    - The proposed Fair Hydro Act, 2017 would be an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998 and Electricity Act, 1998.

- The proposed OFHP legislation, supporting regulations and amendments to existing legislation (e.g., Electricity Act and Ontario Energy Board Act) will, if passed, enable implementation of the following key components of the Plan:

    A. Refinancing the Global Adjustment (GA) – The proposed legislation outlines how costs would be fairly allocated among eligible consumers over time.

    B. Helping Vulnerable Electricity Consumers – The proposed legislation broadens the Rural or Remote Rate Protection Program (RRRP) by creating a new distribution rate protection component, expands the Ontario Electricity Support Program (OESP) and establishes a new On-Reserve First Nations Delivery Credit. The legislation also allows for these programs to be funded (partially for RRRP) through the tax-base.

A. GA Refinancing

- The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in clean energy initiatives are allocated fairly among present and future generations of consumers.

- Refinancing the Global Adjustment (GA) would be achieved through the proposed stand-alone legislation, regulations and amendments to existing legislation and regulations.

- Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

- The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the GA. These mechanisms are described below.

B. Social Programs

- The proposed Ontario Fair Hydro Plan would help vulnerable electricity consumers by enhancing electricity support programs and shifting program costs onto the tax-base:
    - Enable Rural or Remote Electricity Rate Protection (RRRP) costs to be funded through provincial revenues;
    - Enhance Rate Protection through creation of new tax-base funded Distribution Rate Protection (DRP);
    - Enable Ontario Electricity Support Program (OESP) costs to be moved to tax base;
    - Create a new First Nation On-Reserve Delivery Credit, funded through provincial revenues

s. 2 Approach and Intended Outcomes

A. GA Refinancing

- The Fair Hydro Act, 2017 attempts to balance several key factors including financeability, accounting requirements and legal considerations.

- Following an extensive consultation process with internal and external experts, the proposed legislation strikes a balance between these three factors by:
    - Supporting financeability through a number of features, including enabling a provincial guarantee and provisions intended to provide certainty to investors in order to reduce borrowing costs and attract a wide investor base;

  - Addressing the necessary accounting requirements through mechanisms to record funding, interest and the transfer of regulatory assets to avoid a fiscal impact to the province; and
  - Mitigating legal risk by developing a methodology that attempts to fairly aligns costs and benefits.

- The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of clean energy initiatives are allocated fairly among present and future generations of consumers.
  - Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

- The proposed legislation would outline:
  - Roles and responsibilities for the OEB, IESO, OPG and the Province;
  - A detailed Preamble, Purpose and Definitions;
  - Details with respect to cost allocation, rate reduction methodology, implementation and financing;
  - Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and
  - Amendments to other acts.

- The associated amendments to existing legislation and regulations include:
  - Electricity Act, 1998: amendments to provide OPG with the authority to establish a special purpose vehicle (SPV) for the investment asset and Ontario Energy Board Act, 1998: amendments to allow for OEB to set rates recognizing GA refinancing.

Preamble and Purpose

- The preamble of the proposed legislation establishes the rationale for the allocation of "clean energy costs" over time. That is, the development of a clean, modern and reliable electricity system has increased costs for ratepayers.

- The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of these investments are allocated fairly among present and future generations of consumers.
  - Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

- The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the Global Adjustment. Note: These mechanisms are described below.

- The legislation also restricts the OEB, Minister of Energy and the Crown from reducing, impairing or ending Clean Energy Adjustments in the future:
  - The Lieutenant Governor in Council may authorize the Ministers of Finance and Energy to enter into guarantees and indemnities related to the Act.

- The proposed legislation aligns eligibility with the Ontario Rebate for Electricity Consumers Act, 2016.

Fair Adjustment

- Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for a typical residential consumer, and to achieve comparable bill reductions for other eligible consumers, for the period July 1, 2017 to April 30, 2018.
    - Under the legislation, the OEB must determine the amount within 15 business days of the legislation receiving Royal Assent.

- The Fair Adjustment also allows the LGIC to make regulations prescribing electricity rates after April 30, 2018.

Clean Energy Adjustment

- The Clean Energy Adjustment is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period.

- The proposed Act outlines:
    - The process for determining the total Clean Energy Adjustment amount;
    - The obligation on individual ratepayers for the repayment of the amount; and
    - The inability to offset or bypass re-collection of the amount.

Fair Allocation Amount

- The Fair Allocation Amount is a calculation and allocation of clean energy costs and clean energy benefits over time.
    - The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager. Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
    - It is expected that the calculation would lead to decreased rates in the near term with upward pressure on rates in the long term.

- Under the legislation the calculation of the Fair Allocation Amount is guided by the principles and purposes of the Act including the proportional allocation of clean energy costs and benefits.

Financial Services Manager

- The legislation appoints OPG as the Financial Services Manager.

Financing Plan

- The Fair Allocation Amount is a calculation and allocation of clean energy costs and clean energy benefits over time.

  - The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager. Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
  - It is expected that the calculation would lead to decreased rates in the near term with upward pressure on rates in the long term.

- Under the legislation the calculation of the Fair Allocation Amount is guided by the principles and purposes of the Act including the proportional allocation of clean energy costs and benefits.

Regulatory Asset

- IESO will have a funding deferral resulting from the reduction in amounts collected during the first four years.

- The legislation enables IESO to record the under-collection of GA in a variance account, and deems the rights associated with this under-collected amount to be a Regulatory Asset.
  - OEB would determine rates to allow IESO to recover under-collection recorded in its variance account in the event the Regulatory Asset is not sold.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust.

Investment Asset

- The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

  - The legislation establishes property rights for the Investment Asset such as the right to collect principal and interest and financing costs in the form of the clean energy adjustment from eligible consumers.

- The Investment Asset may in turn be sold to other investors or group of investors.

- Through the legislation, the Board, Minister and Crown undertake not to hinder the charging and remittance or collection of clean energy adjustments.
  - The Province, through the Minister of Finance and the Minister of Energy may agree to guarantee performance, any debts and obligations and backstop its undertaking.

Amendments to Other Acts

- The legislation stipulates required amendments to existing legislation such as:
  - The Electricity Act, 1998 – to expand the objects of IESO and OPG to enable them to perform their rights and obligations in the proposed Act

- The Ontario Energy Board Act, 1998 – to address license conditions and the determination of regulated payments.

B. Social Programs

- The proposed legislation provides the authority to implement two new rate mitigation programs and expands upon two existing programs.

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- The proposed legislation is intended to provide rate relief and assistance for:

    - **High Distribution Cost Customers**: Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
    - **Low-Income Customers**: Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
    - **First Nation On-Reserve Customers**: On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

Proposed Changes to the Ontario Energy Board Act, 1998 ("OEBA" or "Act")

- The Ontario Energy Board Act, 1998 would be amended to facilitate the roll out, expansion or change in funding of the following programs.

i. Rural or Remote Rate Protection (RRRP)

- RRRP is an existing program currently funded by ratepayers through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 330,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province. For R2 customers the enhanced RRRP, or Distribution Rate Protection (DRP), is provided in addition to the RRRP the customers are already eligible for under the existing RRRP.

- Section 79 would be amended to provide the government the ability to fund a portion of the Rural or Remote Rate Protection Program through the tax base by prescribing certain classes of consumers who will be funded through a legislative appropriation.

- This includes the ability to pass regulations respecting the making of rules for the compensation of distributors with the money appropriated flowing from the legislature through the IESO to the various LDCs who would then provide the rate relief directly on consumers' bills.
- Should the legislation pass, Energy proposes to amend O. Reg 442/04 to enable provincial funding to compensate Hydro One for provision of RRRP to its R2 customers.

ii. Expanded RRRP - Distribution Rate Protection

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs. This relief would be financed from the tax base.
- Mitigation would be provided by harmonizing distribution rates for prescribed LDCs, as set by the Ontario Energy Board. The mechanism for determining this rate would be set out in regulation.

- The new section 79.3 of the Act would enable Distribution Rate Protection, which satisfies the commitment to expand RRRP.
  - The section includes the power to pass regulations prescribing LDCs, the classes of consumers or consumers designated as distribution rate protected consumers, the maximum amount of the monthly base distribution charge, limitation periods, and the type of information required by the Board and Ministry to implement and administer the program, including financial transactions.

iii. Ontario Electricity Support Program (OESP)

- Section 79.2 would be repealed and replaced in order to provide the government with the ability to shift funding for the OESP (once existing rate-based pooled funding has been depleted) from the rate base to the tax base, and the ability to share information with MCSS to coordinate OESP and social assistance programs. The Ministry has already completed a regulatory amendment that, effective May 1, 2017:
  - Increases the existing OESP credit scales by an additional 50%; and
  - Expands the categories of OESP credits.
  - Provides for OESP to be funded from the tax-base once the IESO's OESP variance account has been depleted.

- The legislative amendments would provide authority to make regulations to replace existing O. Reg. 314/15 to implement these changes.

- The total fiscal impacts to the province from the newly enhanced OESP will amount to: $140 million in 2017-18, $261 million in 2018-19, $325 million in 2019-20 and $375 million in 2020-21.

- Schedule 2 amends the OESP provisions by prescribing the ability to fund the program from the tax base.
    - The section also provides that the Ontario Energy Board or any other entity prescribed in legislation would be responsible for administering the program.
    - In addition, the licenses of LDCs, the IESO, unit-sub meter providers or electricity retailers are deemed to include anything which is necessary to administer and implement the program as may be set out in regulations or by the Board.
    - The section also requires that the Ontario Energy Board continue funding the program using the amounts previously accumulated in the IESO's OESP variance account which is the difference between funds collected through the regulatory charge and expended on OESP to date, until these amounts are depleted and the program shifts to the tax-base.
    - The section provides for broad regulation making power and includes the provision for the creation of different classes of rate assisted consumers and establishing rules for the calculation of the rate assistance to be provided.
    - New provisions also provide the necessary authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers in the future to support increased participation in the OESP program among social assistance clients.

- Note: the intended approach involves proclaiming s.79.2 into force on a future date to be named by proclamation. This would allow time for the funds accumulated in the IESO's OESP variance account to be more fully expended prior to the repeal and replacement of s.79.2.
    - However, the MCSS data sharing provisions, along with ss. Amendments to s. 79.2.1, the new sections 79.3 and 79.4, would come into force upon Royal Assent.
    - The OESP charge has been removed from electricity bills, however a surplus account has been accumulated which the OEB will continue to use until depleted.

iv. First Nations On-Reserve Delivery Credit

- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".

- The program is premised around the findings in the OEB report on a First Nations Delivery Rate Assistance. The proposed program features include:
    - Eliminating the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, from the bills of prescribed on-reserve customers. Regulations would then prescribe those on reserve consumers which are eligible for the on reserve credit.

  - Continue to provide eligibility to OESP while not disturbing eligibility for the Low Income Energy Assistance Program (LEAP) currently funded by distributors outside of these amendments to the OEBA; and
  - The program would be carried out by the 11 affected LDCs serving on-reserve consumers identified by the OEB in its report, including; Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution.

- The program is anticipated to have a fiscal impact on Government of $20 million, as estimated by the Ontario Energy Board, to implement.

- The new section 79.4 of the Act would establish the First Nation On-Reserve Delivery Credit. The section provides that for all prescribed consumers, living on-reserve, the entirety of their delivery line items will be removed from their bill as a delivery credit.
  - The program would be entirely funded through the tax base.
  - The section includes the power to make regulations prescribing further program details such as eligibility and funding parameters.

v. Ministry of Finance Accountability Provisions

- The social programs all involve the expenditure of tax money to fund the partial or entire program costs. As a result, the Ministry of Finance and Treasury Board Secretariat require that such money be tracked and accounted for throughout the process.

- Therefore, the OEBA has been amended to include new provisions between ss. 79.5 to 79.11 as follows
  - Section 79.5 – imposes information sharing and auditing requirements for the Ministry of Finance.
  - Section 79.6 – Defines the Finance Minister as the Minister responsible for ss. 79.7 to 79.11.
  - Section 79.7 – mandates record keeping, retention and content requirements.
  - Section 79.8 – enables the Minister of Finance to appoint inspectors who may carry out inquiries
  - Section 79.9 – sets out the regime for the recovery of overpayments
  - Section 79.10 – imposes confidentiality requirements on Ministry staff for the collection of information
  - Section 79.11 – creates offences for false or deceptive statements, fraud and the unlawful destruction of records.

s. 3 **Direction and Urgency**

A. GA Refinancing

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which will lower bills for residential consumers as well as most small businesses and farms. The initiative was announced as starting in the summer of 2017.

- The legislation for GA refinancing requires the OEB to make further rate adjustments no later than fifteen business days after the legislation receives Royal Assent for Regulated Price Plan (RPP) consumers to achieve the full 25% for a typical residential consumer, and for other eligible consumers to also receive a comparable bill reduction.

- The full reduction from the OFHP is expected to be addressed through a July 1st RPP rate adjustment.

B. Social Programs

- The direction for the creation and implementation of the social programs is found in a variety of sources including the Cabinet Minute, throne speech given on the government's efforts to mitigate the high price of electricity in Ontario, and public commitments made by the Minister and other key government spokespeople.

- The program has been announced to commence as of July 1, 2017. This includes both local announcements and organized speeches and press conferences.

s. 4 Impact Assessment and Costs

A. GA Refinancing

- The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.
    - o The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recovered.
    - o The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year.

- It is still possible that the full value of the Regulatory Asset may not be purchased.

- In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

- In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line.
    - The Ministry of Energy has received an appropriation for $1.1 billion operating asset to support these injections for the fiscal year 2017/18, and will report back through PRRT for future funding. Based on the final fair allocation amount calculation, the equity injections would be required until the period of recovery begins.
    - The injections will be fiscally neutral for the province as they will be offset with the value of shares purchased from OPG.

- OPG will seek to achieve the highest possible credit rating (AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV/Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

B. Social Programs

i. Social Programs

Government Impact

- As approved in the TB/MBC submission of Mach 1st, 2017 and confirmed in Vote-Item 2905-1, the financial impacts on Government of the social programs for the period July 1 2017- March 31 2018 are anticipated to be as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection	344,000,000
Ontario Electricity Support Program	140,000,000
On-Reserve First Nations Delivery Credit	15,000,000

- ENERGY will report back to TB/MBC in fall 2017-18 with an update on out-year projections following analysis on rate applications before the Ontario Energy Board.

Stakeholder Impact

The Schedule 2 social programs will impact Local Distribution Companies and their consumers.

- For example, the Distribution Rate Protection program would involve 8 LDCs, the First Nations On-Reserve Delivery Credit will involve 11 LDCs and the only impacted LDC from the changes to the legacy RRRP program is Hydro One Networks Inc. (the R2 rate class).
- There may be modest impacts on unit sub-meter providers and retailers, due to the requirement to flow financial assistance through to consumers served such entities.

- The compliance costs for LDCs will involve the expenditure of money to alter their billing systems in order to carry out the program. This includes costs to alter the bill presentment and to include a new line on the bill that highlights the First Nations On-Reserve Delivery Credit.

Agency Impact

- The Ontario Energy Board would have a role in continuing to administer the OESP and in setting the harmonized monthly base distribution charge for the purposes of the Distribution Rate Protection Program.

- The Independent Electricity System Operator would be responsible for for flowing the funds used to reimburse/compensate LDCs for the costs of delivering the social programs from the money appropriated for such purposes from the legislature. This requires the IESO to monitor program specific variance accounts and flow the amounts necessary to compensate LDCs for the costs incurred in carrying out the programs.

- The proposal advances the government's overarching goal of reducing the cost of electricity paid by residential customers, especially those facing the highest costs of delivery.

s. 5 Implementation

A. GA Refinancing

- On April 20, 2017, the Ontario Energy Board (OEB) announced new Regulated Price Plan (RPP) rates effective May 1 that include a portion of the bill reduction proposed under the OFHP.

- These new RPP rates will include 50% of the estimated reduction in GA. This reduction in RPP rates, along with the removal of the OESP charge and the existing 8% rebate, will mean that May bills will be 17% lower than they would otherwise have been for an average consumer (15% lower for the typical Toronto Hydro consumer).

- The legislation for GA refinancing requires the OEB to make further rate adjustments no later than fifteen business days after the legislation receives Royal Assent for

RPP consumers to achieve the full 25% for a typical consumer and for other eligible consumers to receive a comparable bill reduction.

- The full reduction from the OFHP is expected to be addressed through a July 1st RPP rate adjustment.

- Regulations will be required to supplement the framework of the legislation to ensure that the OEB can make the required rate adjustments and to enable the financing contemplated by OPG SPV/Trust.

- The regulations are anticipated to be brought forward in mid and late June.

B. Social Programs

- The social programs would be implemented through subsequent regulations to follow that will expand upon the legislative framework to provide actual program specifications.

- The regulations are anticipated to be brought forward by late June, to allow for a July 1st program implementation.

- The efforts required to implement the programs would primarily fall upon the impacted LDCs who would need to adjust their billing systems in order to carry out the program.
    - For the OESP, the legislation contains transitional retroactive application of the provisions to offset any potential lapses in implementation.
    - The transitional retroactivity powers mitigate the risk of LDCs being unable to actualize the necessary OESP-related changes to their billings systems in time for the July 1st roll out and provides the utilities an extra prescribed time period (anticipated to be in the range of three months) to sort out any billing system alterations.
    - For the high-cost distribution rate protection and the on-reserve credit, there are more limited transitional provisions provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided.

C. Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a “low” risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the “short” term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in

order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
    - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
    - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
    - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
    - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

- The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

- The bill provides for provincial assurances, guarantees and a statutory cause of action.

- **The provincial assurance provision** is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

- The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

- In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the

Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

- **The guarantee provisions** are intended to backstop the provincial assurance provision and provide that:
    - the Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
    - the Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted.

A statutory cause of action may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

s. 6 Delivery and Results Tracking

A. GA Refinancing

- The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager (OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister. Such update calculations will be required given uncertainty related to electricity demand, interest rates and actual GA costs.

- The legislation establishes a framework for processes once the ratepayer relief is set. There is limited control once the plan is set, which could represent challenges for electricity planning and rate mitigation in future Long-Term Energy Plans.

- Under the legislation, OPG, as the Financial Services Manager, must prepare a Financing Plan and submit it to the Minister.
    - The Financing Plan sets out the funding obligations and amounts related to the financing of the under-collected GA amounts.

B. Social Programs

- As the social programs are funded through the tax-base, and in keeping with normal practice, Treasury Board Secretariat and the Ministry of Finance require that provisions be included that track the flow of tax money and hold all parties accountable for the proper allocation of tax money (proposed new OEBA s. 79.5-79.11).

- The actual implementation of the programs would be required to be shown on the bill (timelines will be in stated in the regulations). This timeline is in accordance with the feedback provided to the Ministry and the Board by affected LDCs.

s.7 Stakeholder Consultations

A. GA Refinancing

- In the development of the proposed legislation, the Ministry of Energy has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors (lawyers and accountants) and third party financiers (i.e., investment dealers).

- In addition, the Ministry hosted LDC workshop sessions on March 16 and April 19, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation.

B. Social Programs

- The Ministry has consulted with Energy agencies such as the Ontario Energy Board and the Independent Electricity System Operator on their respective roles and responsibilities.

- The Chief of Ontario (COO) have publicly supported the introduction of the First Nations Delivery Credit. ENERGY met with COO on April 26, 2017 to discuss implementation.

- The Ministry held working groups with all affected LDCs:
    - The Ministry received several quantitative data submissions from LDCs to help support the program and to buttress the implementation issues flagged by the utilities.
    - The consultations occurred in person and over teleconference.

- The consultations respecting the RRRP, the DRP and the On-Reserve First Nations Delivery Credit revealed concerns from LDCs over the costs of implementation and the timelines and obstacles to implementing the billing system changes.
- The feedback from the OEB helped to shape the estimates for the program costs of the proposed On-Reserve First Nations Delivery Credit as well as implementation timelines for the aforementioned program.

- Other key Ministries such as the Ministry of Finance and Treasury Board Secretariat were consulted as their will be a role for them to play in overseeing the implementation of the program funding.

s.8 Other Jurisdictions and Harmonization

A. GA Refinancing

- The program would not impact upon any other jurisdiction.
- GA refinancing does not harmonize Ontario rules with other jurisdictions and are not comparable to other Canadian jurisdictions.

B. Social Programs

- The program would not impact upon any other jurisdiction.
- The social programs do not harmonize Ontario rules with other jurisdictions and are not comparable to other Canadian jurisdictions.

s. 9 Communications

A. GA Refinancing

- The communications for GA refinancing will be referenced in ongoing announcements related to OFHP broadly, and as necessary targeted communications for specific stakeholder group can be developed.
- Energy has prepared a Communications Snapshot which summarizes the approach to communications.

B. Social Programs

- Energy has prepared a Communications Snapshot which summarizes the approach to communications.
- In respect of the First Nations On-Reserve Delivery Credit, the LDCs will work in collaboration with the Chiefs of Ontario and the Ministry to promote and advertise the availability of the credit to all eligible on-reserve customers.

Fair Hydro Act, 2017

EXPLANATORY NOTE

The Bill enacts a new Act and makes amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998*.

SCHEDULE 1
ONTARIO FAIR HYDRO PLAN ACT, 2017

The Schedule enacts the *Ontario Fair Hydro Plan Act, 2017*. The Act establishes a framework under which the costs and benefits associated with the "clean energy initiative" are to be allocated among present and future consumers of electricity. The "clean energy initiative" is defined in Part I as consisting of the policies of the Government of Ontario related to such matters as eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies.

Under Part II, the Ontario Energy Board is required to determine reduced electricity rates and to determine other adjustments to be made for certain classes of consumers in respect of specified periods of time. For example, for the class of consumers referred to as "regulated rate consumers", the electricity rates payable for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would achieve a 25 per cent reduction in certain costs for a hypothetical member of the class who meets prescribed criteria. Details regarding the determinations are prescribed by regulations.

Part III requires certain electricity consumers to pay an amount in respect of the "clean energy adjustment". The clean energy adjustment is determined by the Financial Services Manager in accordance with rules set out in the Act and the regulations. (Section 18 of the Act appoints Ontario Power Generation Inc. as the Financial Services Manager.) Part III also specifies the roles and responsibilities of electricity vendors and the Independent Electricity System Operator ("IESO") with respect to the collection and remittance of amounts in respect of the clean energy adjustment.

Part IV requires the Minister of Energy to calculate a "fair allocation amount" by taking specified steps in accordance with principles and assumptions set out in the Act. For example, the Act provides that the purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among certain consumers. Part IV also requires the Financial Services Manager to prepare a written

plan entitled the “Financing Plan”, which is to be used to evaluate whether potential funding obligations should be incurred. Principles and limitations regarding the preparation and implementation of the plan are provided.

Part V requires the IESO to determine the “IESO deferral” in accordance with the regulations and to establish and maintain a variance account in which it records the IESO deferral each month. A “regulatory asset” is created under section 25; the IESO has the right to recover the balance recorded in the variance account from certain consumers. The IESO is authorized to transfer a specified portion of the regulatory asset to a financing entity; this transfer results in the creation of the investment asset and the acquisition by the transferee of a corresponding “investment interest”. Various rules respecting the validity and priority of such a transfer are set out.

In Part VI, rules in respect of the “investment asset” are provided. Section 29 provides that the investment asset constitutes a current and irrevocable property right and interest, consisting collectively of various specified rights and interests of investment interest owners. Rules respecting the validity and priority of such a transfer and the granting of a security interest by an investment interest owner are included.

Part VII deals with various miscellaneous matters, including regulation-making authority of the Lieutenant Governor in Council.

The *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* are amended to address various matters relating to the enactment of the new Act. For example, the objects of the IESO and Ontario Power Generation Inc. are expanded to address powers and duties under the new Act.

SCHEDULE 2
AMENDMENTS TO THE ONTARIO ENERGY BOARD ACT, 1998

The *Ontario Energy Board Act, 1998* is amended. Among the amendments:

1. Section 79 of the Act is amended so that compensation for the rate protection provided to certain classes of rural or remote consumers may be funded out of money appropriated by the Legislature, rather than by consumers.

2. Section 79.2 of the Act, which governs the Ontario Electricity Support Program, is repealed and replaced. The program is continued, but will be funded out of money appropriated by the Legislature after the variance account maintained by the Independent Electricity System Operator, formerly established under the Plan, is exhausted, rather than by consumers. There are provisions relating to the sharing, use and disclosure of information relating to the administration of the Ontario Electricity Support Program.

3. Programs are established to aid certain distribution rate-protected residential consumers and on-reserve consumers.

4. Various amendments of a technical and administrative nature are made to support the implementation and oversight of these programs including provisions related to auditing, record-keeping, inspections and inquiries, offences and penalties.

Bill **2018**

An Act to enact the Ontario Fair Hydro Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

Contents of this Act

1. This Act consists of this section, sections 2 and 3 and the Schedules to this Act.

Commencement

2. (1) Subject to subsections (2) and (3), this Act comes into force on the day it receives Royal Assent.

Schedules

(2) The Schedules to this Act come into force as provided in each Schedule.

Different dates for same Schedule

(3) If a Schedule to this Act provides that any of its provisions are to come into force on a day to be named by proclamation of the Lieutenant Governor, a proclamation may apply to one or more of those provisions, and proclamations may be issued at different times with respect to any of those provisions.

Short title

3. The short title of this Act is the *Fair Hydro Act, 2017*.

SCHEDULE 1
ONTARIO FAIR HYDRO PLAN ACT, 2017

CONTENTS

Preamble

PART I
GENERAL

1. Interpretation
2. Effect of invalidity
3. Purposes
4. Crown bound
5. Protection and assurances

PART II
FAIR ADJUSTMENT

6. Definitions
7. Regulated rate consumers, first adjustments
8. Other specified consumers, first adjustments
9. Determinations by Board
10. Implementation by electricity vendors
11. Subsequent adjustments
12. Sub-metering

PART III
CLEAN ENERGY ADJUSTMENT

13. Specified consumers to pay
14. Irrevocability of amount
15. Determination of clean energy adjustment
16. IESO to receive amounts
17. Electricity vendor to invoice specified consumers

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

18. Appointment
19. Duties and powers

FAIR ALLOCATION AMOUNT

20. Minister to calculate fair allocation amount

FINANCING PLAN

21. Financial Services Manager to prepare Financing Plan
22. Incurrence of funding obligations

PART V
THE REGULATORY ASSET

23. IESO deferral
24. Variance account to be established, maintained
25. Regulatory asset established
26. Transfer of regulatory asset
27. Validity of transfer

PART VI
THE INVESTMENT ASSET

28. Investment asset established
29. Investment asset, irrevocable rights and interests
30. Transfer of investment interest
31. Validity of transfer
32. Investment interest owner may grant security interest

PART VII
MISCELLANEOUS

33. Appointment of agent, invoicing or collection
34. Board's authority
35. Sequestration
36. Choice of law
37. Conflict
38. No further approvals, etc.
39. Liability

40. References in marketing materials and offering documents
41. Regulations

PART VIII
AMENDMENTS TO OTHER ACTS

42. Electricity Act, 1998
43. Ontario Energy Board Act, 1998

PART IX
COMMENCEMENT AND SHORT TITLE

44. Commencement
45. Short title

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects. These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to residential consumers. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of those consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that residential consumers in the future pay their fair share for the benefits that they receive from the investments already made.

PART I
GENERAL

Interpretation

Definitions

1. (1) In this Act,

"Board" means the Ontario Energy Board; ("Commission")

"clean energy adjustment" means the amount determined under section 15 and payable by specified consumers; ("ajustement pour l'énergie propre")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("avantages de l'énergie propre")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the amounts to be paid or reflected by the IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts or amounts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by the IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed,

(b) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(c) such other costs or estimated costs as may be prescribed; ("coûts de l'énergie propre")

"clean energy initiative" means the policies of the Government of Ontario related to,

(a) eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,

(c) promoting conservation, demand management and energy efficiency, and

(d) investing in energy infrastructure to ensure a clean, modern and reliable system; (“initiative pour l’énergie propre”)

“electricity vendor” means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) the IESO in circumstances where it directly invoices a specified consumer for electricity used in Ontario, or

(d) such other person as may be prescribed; (“vendeur d’électricité”)

“fair allocation amount” means an amount calculated under section 20; (“French”)

“finance amount” means the finance amount determined in accordance with the regulations; (“French”)

“Financial Services Manager” means the Financial Services Manager appointed under section 18; (“gestionnaire des services financiers”)

“financing entity” means an entity established or caused to be established by the Financial Services Manager as described in subsection 22 (2); (“entité de financement”)

“Financing Plan” means the plan prepared under section 21; (“plan de financement”)

“funding obligation” means a payment obligation incurred by or on behalf of an investment interest owner to fund its ownership of an investment interest or a payment obligation that meets such other criteria as may be prescribed; (“obligation financière”)

“funding rebate” means a payment obligation incurred by the IESO as part of the transfer of the regulatory asset; (“French”)

“IESO” means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; (“SIERE”)

“IESO deferral” means the amount determined under section 23; (“French”)

"investment asset" means the rights and interests described in section 29; ("actif d'investissement")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("participation d'investissement")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("propriétaire de l'actif d'investissement")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system within the meaning of that Act; ("distributeur titulaire d'un permis")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("détaillant titulaire d'un permis")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

(a) the period beginning on July 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on either April 30, 2047 or such later day as may be prescribed,

(i) every six-month period following the period mentioned in clause (a); or

(ii) any period shorter than six months, as may be prescribed; ("période de référence")

"refinancing" means, subject to the regulations, the incurrence of debt in connection with a redemption, repayment or repurchase of a funding obligation; ("refinancement")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right established under section 25; ("actif réglementaire")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2), or

(b) such other person as may be prescribed; ("consommateur déterminé")

"transfer" includes, when used in relation to an investment interest, the assignment, conveyance, disposition or sale of the investment interest; ("transfert")

"true up amount" means a true up amount determined in accordance with the regulations; ("French")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010;* ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010;* ("fournisseur de compteurs divisionnaires d'unité")

"variance account" means the variance account established by the IESO under subsection 24 (1). ("French")

Specified consumer

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of not more than 50 kilowatts, or such other amount as may be prescribed.

2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.

3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or has had the

obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.

4. The person's account with the electricity vendor relates to,

    i. a dwelling,

    ii. a property within the meaning of the *Condominium Act, 1998*,

    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.

5. The person satisfies such criteria as may be prescribed.

Transfer of regulatory asset

(3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 26 (3):

1. A reduction in the balance in the variance account.

2. The adjustment of the regulatory asset.

3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Effect of invalidity

2. (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purposes

3. The purposes of this Act are,

(a) to ensure that clean energy costs and clean energy benefits are fairly allocated among present and future specified consumers;

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province; and

(c) to align clean energy costs with clean energy benefits, in order to provide fairness for specified consumers over time.

Crown bound

4. This Act binds the Crown.

Protection and assurances

Prohibition

5. (1) No action or omission by the Board, the Minister or the Crown shall be effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or to impair or postpone the invoicing, collection or remittance of the clean energy adjustment.

Agreements

(2) The Minister and the Minister of Finance may together, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of the IESO or electricity vendors under this Act or related transactions.

Guarantee, indemnification

(3) The Lieutenant Governor in Council may by order,

(a) authorize the Minister and the Minister of Finance, acting together on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions of the guarantee or indemnity and the maximum liability for the guarantee or indemnity;

(b) specify terms and conditions that must be included in any guarantee or indemnity given by the Minister and the Minister of Finance; and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT

Definitions

6. In this Part,

"regulated rate consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998 for the purposes of subsection 79.16 (1) of that Act.*

2. The consumer would, if the consumer were not subject to this Act, be invoiced the rates determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*. ("French")

Regulated rate consumers, first adjustments

7. (1) Despite any order under subsection 78 (3.1) of the *Ontario Energy Board Act, 1998 and despite section 79.16 of that Act, t*he electricity rates payable by regulated rate consumers for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would result in a hypothetical regulated rate consumer who meets the prescribed criteria being charged an invoice amount that is 25 per cent less than the invoice amount that would have been charged to that consumer under the comparison rates described in subsection (2).

Comparison rates

(2) The comparison rates are the rates that would have been effective May 1, 2017 if they had been determined by the Board *solely using the method prescribed by the regulations made under clause 79.16 (1) (b) of the Ontario Energy Board Act, 1998*, without taking into account any forecasted impact of any other provisions of this Act.

Invoice amounts

(3) The types of amounts to be included or excluded in each invoice amount mentioned in subsection (1) are the types of amounts specified in the regulations.

Other specified consumers, first adjustments

8. (1) For the period beginning on July 1, 2017 and ending on April 30, 2018, the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998 shall, with respect to specified consumers who are not regulated rate consumers, be further adjusted*

*by e*lectricity vendors in accordance with the determinations of the Board under subsection (2).

Board to make determinations

(2) The Board shall, in accordance with the regulations, determine the adjustments to be made by electricity vendors.

Same, regulations

(3) The regulations may specify different adjustments to be made in respect of prescribed classes of specified consumers who are not regulated rate consumers.

Determinations by Board

9. The Board shall make the determinations mentioned in sections 7 and 8 no later than 15 business days after the day this section receives Royal Assent and, regardless of whether the Board makes the determinations before or after July 1, 2017, the determinations shall be effective as of July 1, 2017.

Implementation by electricity vendors

10. (1) As soon as possible after the Board makes determinations under section 9, each electricity vendor shall, in respect of electricity used on or after July 1, 2017, ensure that its invoices reflect the determinations of the Board.

Same

(2) The electricity vendor shall ensure that, if any of its customers who are specified consumers have been invoiced in a manner that does not reflect the determinations of the Board under section 9, the specified consumer receives the difference between the amounts shown on the invoice and the amounts reflecting the Board's determinations, provided as a lump sum credit on the first invoice issued after the electricity vendor has adapted its invoices or by such other means as may be prescribed.

Subsequent adjustments

11. (1) Despite clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998 and s*ubject to subsection (2), the Lieutenant Governor in Council may prescribe the methodology to be applied by the Board after April 30, 2018 for the purpose of determining,

(a) electricity rates for regulated rate consumers; or

(b) adjustments to be applied by electricity vendors to the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998 in respect of prescribed classes of specified consumers who are not regulated rate consumers.*

Limitation

(2) Any prescribed methodology shall have regard to the following:

1. The purposes of this Act.

2. The clean energy costs borne by specified consumers over time.

3. Such other matters as may be prescribed.

Sub-metering

12. (1) This section applies if a specified consumer provides to another person electricity in respect of which a determination of the Board referred to in section 9 or 11 applies.

Same

(2) If an invoice for the electricity is issued to the person by the specified consumer or a unit sub-meter provider providing unit sub-metering for the specified consumer, the amount payable for the electricity by the person who is liable to pay the invoice shall be determined in accordance with the regulations.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

13. (1) Upon receipt of an invoice from an electricity vendor that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor as agent of the investment interest owners.

Same

(2) For greater certainty, subsection (1) applies regardless of,

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was inconsistent with the Financing Plan, including in a manner that failed to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Terms

(3) The payment shall be made in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Unit sub-metering

(6) A specified consumer who provides electricity through unit sub-metering may collect amounts in respect of the clean energy adjustment payable under this section in accordance with the regulations.

Irrevocability of amount

14. (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or bypassed.

Exception

(2) Subsection (1) does not apply to the extent that the invoice reflects a clerical, typographical or calculation-related error.

Determination of clean energy adjustment
Financial Services Manager to determine

15. (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by taking the following steps:

1. Calculate the sum of the following:

    i. The estimated finance amount in respect of the reference period.

    ii. The true up amount in respect of the reference period.

2. Divide the sum calculated under paragraph 1 by the number of months in the reference period.

Regulations re true up amount

(2) The Lieutenant Governor in Council shall, in making regulations with respect to the determination of the true up amount, have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.

2. The method for determining the true up amount should take into account historical and reasonably foreseeable,

   i. differences between the estimated and actual finance amount for the applicable reference period,

   ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and

   iii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(3) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment in respect of a reference period and such other information related to the determination of the clean energy adjustment as may be prescribed.

Board to determine rates

(4) Without changing the clean energy adjustment, the Board shall, in accordance with the regulations, determine the rates at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

16. (1) The IESO shall, as agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the market rules made under section 32 of the *Electricity Act, 1998 or the regulations*.

Account

(2) All of the following amounts received by the IESO shall, until remitted to or for the benefit of the investment interest owners in accordance with subsection (4), be

deposited promptly into an account established for the purposes of receiving those amounts:

1. Amounts described in subsection (1).

2. Payments made by specified consumers directly to the IESO as electricity vendor under subsection 13 (1).

3. Proceeds of amounts described in paragraphs 1 and 2.

Same, held in trust

(3) All amounts received by the IESO in respect of the clean energy adjustment shall, until remitted to or for the benefit of the investment interest owners, be held in trust by the IESO for the investment interest owners.

IESO to remit

(4) The IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the amounts referred to in subsection (1), to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

17. (1) Each electricity vendor shall issue an invoice to each of its customers who is a specified consumer for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 15 (4) and in accordance with the regulations.

Electricity vendor to report

(2) Each electricity vendor shall, in accordance with the regulations, promptly report to the IESO the total amount invoiced to its customers who are specified consumers in respect of the clean energy adjustment, the amount collected and such other information as may be prescribed.

Electricity vendor to collect

(3) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(4) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

Held in trust

(5) Payments received by an electricity vendor from or on behalf of specified consumers in respect of the clean energy adjustment and all proceeds of the payments shall, until remitted to the IESO for the benefit of the investment interest owners in accordance with subsection (6), be held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(6) Each electricity vendor shall remit amounts in respect of the clean energy adjustment to the IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

18. Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Duties and powers

19. (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Same

(2) The administration of the investment asset may include providing information to the IESO in respect of obligations under Part III and such other activities as may be prescribed.

Fees

(3) Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees in relation to such matters as may be prescribed in accordance with the regulations, which regulations may provide for the ability to recover costs and expenditures and to earn a return.

Same, Board approval

(4) Before establishing fees under subsection (3), the Financial Services Manager shall submit them to the Board for approval in accordance with the regulations.

FAIR ALLOCATION AMOUNT

Minister to calculate fair allocation amount

20. (1) Subject to subsections (2) and (3), before the first funding obligation is incurred the Minister shall calculate a fair allocation amount in respect of each reference period, applying such method as the Minister considers appropriate and in accordance with the following steps:

1. Determine the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period.

2. Determine the estimated reduction in the amounts payable by specified consumers as a result of determinations of the Board under Part II in respect of all previous reference periods, including the estimated reduction in clean energy costs described in clause (a) of the definition of "clean energy costs" in subsection 1 (1) that would otherwise have been payable by specified consumers in the absence of this Act.

3. Determine the amount, if any, by which the determination under paragraph 1 exceeds the determination under paragraph 2.

4. Calculate the sum of the amount determined under paragraph 3 and such other amounts as may be prescribed.

Principles

(2) In calculating the fair allocation amount, the Minister shall have regard to the following principles:

1. The purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among the specified consumers in respect of each reference period.

2. Calculations should be made having regard to the need to align each fair allocation amount with the estimated finance amount payable during the reference period.

3. Estimated clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the estimated clean energy benefits attributed to the specified consumers in respect of the reference period.

4. Such other principles as may be prescribed.

Assumptions

(3) In calculating the fair allocation amount, the Minister shall make such assumptions as the Minister considers to be reasonable regarding the following:

1. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.

2. The expected number of specified consumers in respect of each reference period.

3. The expected electricity consumption rates in respect of each reference period.

4. Such other assumptions as may be prescribed.

Minister to provide amount to Financial Services Manager

(4) The Minister shall provide the fair allocation amount in respect of each reference period to the Financial Services Manager.

Recalculation

(5) A calculation of the fair allocation amount under this Part may be changed by such person as may be prescribed in accordance with such requirements as may be prescribed.

Same

(6) No change under subsection (5) shall affect any clean energy adjustment that has already been determined under section 15 or any funding obligations that have already been incurred before the change.

Information

(7) The Minister, the IESO, the Financial Services Manager, the Board and electricity vendors shall provide such information as may be prescribed in accordance with the regulations for the purposes of facilitating a change to a calculation of the fair allocation amount.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

21. (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of a refinancing.

Plan to be provided to Minister

(2) The Financial Services Manager shall provide the Financing Plan to the Minister.

Principles

(3) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Funding obligations should be incurred such that, along with any funding obligations already incurred, the estimated finance amount that would, subject to any refinancing, become due and payable during a reference period will reasonably align with the fair allocation amount determined in respect of the reference period, in each case after reducing the fair allocation amount to reflect determinations of the Board under Part II in respect of the reference period.

2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.

3. Reasonable assumptions should be made regarding such matters as may be prescribed.

4. Such other principles as may be prescribed.

Limitation

(4) In respect of each reference period from July 1, 2017 to April 30, 2021, no funding obligation shall be incurred that would result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

(a) the amounts are payable in respect of a reference period in respect of which the Board has not made any determinations under Part II; or

(b) if the Board has made a determination under Part II in respect of the reference period, the funding obligations incurred would not result in amounts payable in respect of the clean energy adjustment during the reference period in an amount that exceeds the limit determined in accordance with the regulations.

Other reports

(5) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this Act to the Financing Plan is deemed to be a reference to the plan as amended.

Incurrence of funding obligations

22. (1) The Financial Services Manager shall ensure that funding obligations incurred for the purposes of this Act are incurred in a manner that is consistent with the applicable Financing Plan.

Financing entities

(2) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Same

(5) For greater certainty, subsection (4) applies despite the failure of the Financial Services Manager to comply with subsection (1).

PART V
THE REGULATORY ASSET

IESO deferral

23. (1) The IESO deferral for each month, commencing May 1, 2017, shall be determined by the IESO in accordance with the regulations.

Same, retrospective amounts

(2) For greater certainty, the regulations may provide for the IESO deferral to include an amount that was incurred by the IESO on or after May 1, 2017 and before the day this section comes into force.

Electricity vendors to provide information

(3) Electricity vendors shall provide to the IESO such information as the IESO may reasonably request for the purposes of determining the IESO deferral under subsection (1) and such further information as may be prescribed.

Same

(4) The IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

24. (1) The IESO shall establish and maintain a variance account in which it records the following:

1. The IESO deferral for each month.

2. All payments received by the IESO resulting from the exercise of the right of recovery under section 25 and any transfer under section 26.

3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences on or after May 1, 2017 and before the day this section comes into force.

Recording determinative

(2) Subject to the correction of any obvious error by the IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

Rights of investment interest owner

(3) No change made by the IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 26, affect the rights acquired by the investment interest owner under the transfer.

Regulatory asset established

25. (1) Effective May 1, 2017, the IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Board to set rates

(2) Subject to subsection (3), the Board shall, from time to time and in accordance with the regulations, determine and set rates payable by specified consumers to allow for the IESO to recover the balance recorded in the variance account.

Limitation

(3) The IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

Transfer of regulatory asset

26. (1) The IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

Agreement

(2) An agreement between the IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to the IESO in an amount equal to the amount of the specified portion.

Effect of payment

(3) Upon receipt by the IESO of the payment by the financing entity,

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) the IESO shall retain no further right, title or interest in the corresponding investment interest.

Validity of transfer

27. (1) A transfer of a specified portion of the regulatory asset under section 26 constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

Same

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for the IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of the IESO's right to

recover the corresponding amount in the variance account and not merely as a security interest.

Deemed perfection, etc.

(3) At the time a transfer of the regulatory asset is made under section 26, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Investment asset established

28. (1) The transfer of a specified portion of the regulatory asset under section 26 creates an investment asset or, if it is not the first transfer, adds to the investment asset.

Same

(2) Upon transfer of a specified portion of the regulatory asset under section 26 to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim.

Investment asset, irrevocable rights and interests

29. (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover the clean energy adjustment that is imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, the IESO and other prescribed parties.

3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for the clean energy adjustment.

5. The right to enforce the duties and obligations under this Act of each electricity vendor and the IESO to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by any electricity vendor to recover payment of the clean energy adjustment.

6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest, including any rights to receive funding rebates.

7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Not affected by failure to impose etc. clean energy adjustment

(2) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(3) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, the IESO, an agent of the investment interest owners or an owner in the Province of a distribution system within the meaning of the *Electricity Act, 1998*;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(4) The rights of the investment interest owners to collect and enforce their rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(5) If one investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest

owner collectively and in coordination with all other investment interest owners, and any agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owners as a collective in accordance with its terms.

Transfer of investment interest

30. An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

31. (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the transferee a valid property right and interest in, to and under the applicable investment interest acquired in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest, subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected as described in the *Personal Property Security Act*, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer, and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

32. (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the applicable investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may subsequently attach to the property rights and interests in the investment interest subject to the security interest, subject to the written consent of the person to whom the security interest has been granted.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any account of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to the IESO.

Definition

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act.*

PART VII
MISCELLANEOUS

Appointment of agent, invoicing or collection

33. (1) If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Same, not Crown agent

(2) For greater certainty, a person appointed under this section is not an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Board's authority

34. (1) Each electricity vendor, the IESO and the Financial Services Manager shall maintain such accounts and provide such information to the Board as the Board may require for the purposes of carrying out its responsibilities under this Act, in the form and manner and within the time required by the Board.

No hearing required

(2) Despite anything to the contrary in the *Ontario Energy Board Act, 1998*, the Board may exercise any of its responsibilities under this Act without a hearing.

Sequestration

35. (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections and remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment, including defaults on any required remittance of amounts in respect of the clean energy adjustment, collections or remittances.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

36. The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to a transfer under this Act or the creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section 5 shall be the laws of the Province.

Conflict

37. The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

38. Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required to be taken under the Financing Plan or in relation to the determination of the fair allocation amount.

Liability

39. (1) No action or other civil proceeding shall be commenced against any employee of the Province or Ontario Power Generation Inc. for any act done in good faith in the exercise or performance or the intended exercise or performance of a power or duty under this Act, the regulations under this Act or for any alleged neglect or default in the exercise or performance in good faith of such a power or duty.

Same

(2) Nothing in subsection (1) shall be read as limiting the effect of subsection 19 (1) of the *Electricity Act, 1998* or subsection 11 (1) of the *Ontario Energy Board Act, 1998.*

Same

(3) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.*

References in marketing materials and offering documents

40. No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5 unless the prescribed requirements, if any, are satisfied.

Regulations

41. (1) The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.

2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.

3. Governing the incurrence of debt for the purposes of the definition of "refinancing" in subsection 1 (1).

4. Governing the inclusion of information under this Act on or with invoices, which may include requiring notice to be provided by electricity vendors to specified consumers and other prescribed persons regarding the adjustments, including providing for different requirements in different circumstances and for different classes of specified consumers.

5. Governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on or with invoices issued to specified consumers, including the form that the information must take and the form of the invoices and the form of any notice to be provided to the specified consumer under this Act.

6. Governing the manner by which invoices or notices provided for under this Act are to be provided to specified consumers and other prescribed persons.

7. Providing for a right of compensation for investment interest owners affected by a breach under section 29 and the manner in which such a right may be enforced under this Act.

8. Prescribing the time within which any action required by this Act may be required to be done.

9. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

Limitation

(2) Despite subsection (1) or any other Act, no regulation under this Act shall have the effect of reducing, impairing, postponing or terminating the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or impairing or postponing the invoicing, collection, remittance or recovery of the clean energy adjustment.

PART VIII
AMENDMENTS TO OTHER ACTS

Electricity Act, 1998

42. (1) Subsection 6 (1) of the *Electricity Act, 1998* is amended by adding the following clause:

(q.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*,

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and to engage in related settlement activities,

(iii) engaging in activities related to the transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(A) incurring liabilities in relation to the regulatory asset,

(B) transferring the regulatory asset under section 26 for consideration, and

(C) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

(2) Subsection 25.33 (1) of the Act is amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by the IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*.

(3) Subsection 25.33 (2) of the Act is amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by the IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*.

(4) Clause 25.33 (4) (b) of the Act is amended by adding "or as may be required by a regulation made under this Act or the Ontario Fair Hydro Plan Act, 2017" at the end.

(5) Subsection 25.33 (5) of the Act is amended by adding "or under the Ontario Fair Hydro Plan Act, 2017" at the end.

(6) Section 53.1 of the Act is amended by adding the following subsections:

Same, *Ontario Fair Hydro Plan Act, 2017*

(1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, non-subsidiary

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is not a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of the financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of the financing entity.

Deemed assets, subsidiary

(1.4) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of that financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries shall not form part of the assets and liabilities of that financing entity.

Definition, financing entity

(1.5) For the purposes of this section,

"financing entity" has the same meaning as in the *Fair Hydro Plan Act, 2017*.

Ontario Energy Board Act, 1998

43. (1) Subsection 70 (2.1) of the *Ontario Energy Board Act, 1998* is amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017*.

(2) Section 70 of the Act is amended by adding the following subsection:

Deemed condition of licences, unit sub-meter provider, *Ontario Fair Hydro Plan Act, 2017*

(2.4) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Fair Hydro Plan Act, 2017* and the regulations made under it.

(3) Section 78.1 of the Act is amended by adding the following subsections:

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.

2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.

3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.

4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

(4) Subsection 79.16 (3) of the Act is repealed.

PART IX
COMMENCEMENT AND SHORT TITLE

Commencement

44. This Schedule comes into force on the day the *Fair Hydro Act, 2017 receives* Royal Assent.

Short title

45. The short title of the Act set out in this Schedule is the *Ontario Fair Hydro Plan Act, 2017*.

SCHEDULE 2
AMENDMENTS TO THE ONTARIO ENERGY BOARD ACT, 1998

1. (1) Subsection 79 (4) of the *Ontario Energy Board Act, 1998* is repealed and the following substituted:

Liability

(4) All consumers are required, in accordance with the regulations, to contribute towards the amount of any compensation required under subsection (3) that is not otherwise provided under subsection (4.1).

Payments for certain classes

(4.1) Compensation required under subsection (3) may be provided with respect to one or more prescribed classes of consumers who receive rate protection under this section, in a manner provided for in the regulations.

Money appropriated by the Legislature

(4.2) The compensation provided for in subsection (4.1) shall be paid for out of the money appropriated for those purposes by the Legislature.

Information, etc.

(4.3) If provided for in the regulations, the Board, the IESO and distributors, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of the rate protection or of anything else provided for in this section.

(2) Clause 79 (5) (e) of the Act is repealed and the following substituted:

(e) prescribing rules respecting the amounts that must be collected to compensate distributors, taking into account any compensation provided under subsection (4.1), including rules,

(i) respecting the calculation of those amounts,

(ii) respecting the calculation of any off-set to the liability of consumers under subsection (3) having regard to those amounts,

(iii) establishing the time and manner of collection,

(iv) requiring the amounts to be paid in instalments and requiring the payment of interest or penalties on late payments,

(v) prescribing methods of ensuring that the amounts required cannot be bypassed, and

(vi) respecting the distribution of those amounts to consumers;

(e.1) prescribing classes of consumers for the purposes of subsection (4.1), and governing how and when the compensation is to be provided with respect to the rate protection provided to them, including, without restricting the generality of the foregoing, requiring the IESO to receive payments or amounts from the Minister of Energy and to make payments to licensed distributors or to prescribed persons and prescribing how and when payments are to be made;

2. Section 79.2 of the Act is repealed and the following substituted:

Rate assistance

79.2 (1) The Minister shall make provision for rate assistance for rate-assisted consumers having regard to their economic circumstances, and where the Minister makes such provision, shall do so out of the money provided for in subsection (4).

OESP

(2) The program known as the "Ontario Electricity Support Program" in English and "Programme ontarien d'aide relative aux frais d'électricité" in French is continued for the purpose of providing rate assistance to rate-assisted consumers having regard to their economic circumstances.

Administered by Board

(3) The Ontario Electricity Support Program shall be administered by the Board, or when the regulations so provide, by a Minister of the Crown or other entity provided for in the regulations.

Money appropriated by the Legislature

(4) The money required for the purposes of the Ontario Electricity Support Program shall be paid out of the money appropriated for those purposes by the Legislature, once the amounts recorded in the variance account referred to in subsection (5) are no longer sufficient to provide for the funding of the program when taken on their own.

Variance account

(5) The money required for the purposes of the Ontario Electricity Support Program shall be provided out of the credit balance in the variance account maintained by the IESO under the Program as it existed before the coming into force of section 2 of Schedule 2 to the *Fair Hydro Act, 2017* until the amounts recorded in the account are no longer sufficient, when taken on their own, to fund the Program.

Variance account depleted

(6) The IESO shall provide the Ministry of Energy with advance notice, on a timely basis, of the time the IESO estimates that the amounts reflected in the variance account would be less than the amount required to meet its obligations related to funding the Ontario Electricity Support Program for the upcoming month.

How provided

(7) Rate assistance provided under this section shall be provided with respect to consumers prescribed in the regulations, and shall be provided at the times provided for in the regulations and in the amounts and in the manner provided for in the regulations.

Payments with respect to prior use

(8) The regulations may require provision of rate assistance to prescribed classes of rate-assisted consumers with respect to electricity consumed during a period prior to the date of the making of the regulation, but no such rate assistance shall be required under the regulations with respect to electricity consumed before January 1, 2016.

Transitional

(9) The regulations may require the provision of rate assistance for a rate-assisted consumer with respect to a period prior to the date on which the consumer became a rate-assisted consumer if the consumer meets all of the criteria prescribed by the regulations.

Distributors, etc.

(10) A distributor, a unit sub-meter provider and any other person or entity that may be prescribed is entitled to be compensated from the money referred to in subsection (4) or subsection (5), as the case may be, for any lost revenue resulting from the provision of rate assistance under the Ontario Electricity Support Program.

Deemed licence conditions, IESO, settlements, payments, etc.

(11) Every licence issued to the IESO, a distributor or unit sub-meter provider or a retailer of electricity shall be deemed to contain conditions requiring the licensee to do anything necessary to implement and administer the provision of rate assistance under this section as may be required by the regulations or the Board, including requirements with respect to,

(a) making payments to the IESO, distributors, unit sub-meter providers and other persons and entities identified by the regulations;

(b) receiving payments or other amounts from the IESO, distributors, unit sub-meter providers and other persons and entities identified by the Minister;

(c) requiring licensees to pass any rate assistance provided for under this section through to rate-assisted consumers in the manner provided for in the regulations;

(d) engaging in settlement activities;

(e) providing information to and receiving information from the Ministry of Energy, the Board, the IESO, distributors, unit sub-meter providers, retailers of electricity and any other prescribed persons and entities in the time and in the manner provided for by the Board or as may be prescribed; and

(f) entering into agreements or arrangements with licensees and other persons.

Information, etc.

(12) If provided for in the regulations, the Board, the IESO, distributors, retailers of electricity and unit sub-meter providers, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of rate-assistance or of anything else required under this section.

Conflicts, etc.

(13) Where any conflict exists between an order of the Board, a code issued by the Board or a licence condition and this section or a regulation made under this section, this section or the regulation made under this section shall prevail to the extent of the conflict.

Regulations

(14**)** The Lieutenant Governor in Council may make regulations governing anything dealt with in this section and without limiting the generality of the foregoing, may make regulations,

(a) governing anything that is described in this section as being prescribed or as being provided for in the regulations or that is required to be done in accordance with the regulations;

(b) governing the time or times at which rate assistance shall be paid or become payable to rate-assisted consumers;

(c) governing the determination of classes of consumers who are rate-assisted consumers, including providing for different classes of rate-assisted consumers;

(d) requiring that certain costs and expenditures related to the Ontario Electricity Support Program be only incurred with the prior approval of the Minister, and governing those costs and expenditures;

(e) establishing rules for the calculation of the amount of the rate assistance to be provided;

(f) governing payments under this section, including determining the method or methods of calculating the amount of rate assistance to be provided;

(g) setting maximum amounts of the total annual value of rate assistance that may be provided;

(h) requiring a distributor, the IESO or a unit sub-meter provider or other prescribed person or entity to make or receive payments in respect of rate assistance, including requiring them to make or receive payments directly to or from the Ministry of Energy or to receive overpayments directly or indirectly from consumers or other persons entitled to receive the rate assistance and prescribing the circumstances in which such payments are to be made and received and such overpayments are to be received as well as methods for determining the amounts payable or to be received;

(i) requiring the IESO to receive payments from the Minister and requiring the IESO to make payments to the Board, to licensed distributors, to unit sub-meter providers or to prescribed persons, in respect of the rate assistance provided under this section and governing methods for determining the amounts payable;

(j) governing the Board's or other prescribed entity's administration and program-related costs in administering the Ontario Electricity Support Program;

(k) governing transitional matters arising from the changes made to the Ontario Electricity Support Program as a result of the enactment of the *Fair Hydro Financing Plan Act, 2017*.

Retroactivity

(15) A regulation made under this section is, if it so provides, effective with reference to a period before it is filed.

General or particular

(16) A regulation under this section may be general or particular in application, may provide for different classes of persons and entities and may prescribe different rules for different persons or entities or different classes of persons or entities.

Verification of eligibility

(17) Section 11 of the *Ministry of Revenue Act* applies with respect to the Ontario Electricity Support Program as a government assistance program administered by the Board.

Definitions

(18) In this section,

"Government assistance program" has the meaning provided for in subsection 11 (2) of the *Ministry of Revenue Act*; "(programme d'aide gouvernementale)"

"rate-assisted consumer" means a consumer referred to in subsection (7). "(consommateur admissible à l'aide tarifaire)"

3. The Act is amended by adding the following section:

Confidentiality, information sharing, etc.

79.2.1 (1) For the purposes of section 79.2, the Board or the Minister or entity having responsibility for administering the Ontario Electricity Support Program may enter into an agreement with the Minister of Community and Social Services to provide the services to the public listed in subsection (2) on behalf of the Board, Minister or the entity, as the case may be, in relation to the administration of the Ontario Electricity Support Program.

Agreement, etc.

(2) The services that may be included in an agreement referred to in subsection (1) are the following:

1. Providing documents and information about the Ontario Electricity Support Program.

2. Processing applications for the Ontario Electricity Support Program.

Arrangements with others

(3) The Minister of Community and Social Services may arrange with another person or entity to provide, on behalf of that Minister, services that that Minister is authorized to provide under an agreement referred to in subsection (1).

Personal information

(4) The Minister of Community and Social Services is authorized to collect, use, disclose and retain personal information necessary to provide the services authorized by

an agreement referred to in subsection (1), but shall not collect, use, disclose or retain more personal information than is reasonably necessary to provide the services.

Limitation

(5) Except where otherwise authorized under subsection (7), the Minister of Community and Social Services shall not collect, use, disclose or retain personal information provided for in subsection (4) without the consent of the individual to whom the information relates.

Duty to transfer personal information

(6) The Minister of Community and Social Services shall transfer an individual's personal information provided for in subsection (4) into the control of the Board, Minister or entity responsible for administering the Ontario Electricity Support Program promptly after processing an application for the Ontario Electricity Support Program, but may retain such personal information as is reasonably necessary to confirm that an individual has been provided a service.

Use of personal information, etc.

(7) The Minister of Community and Social Services may use personal information maintained by that Minister in connection with the administration of the Ontario Disability Support Program and the program established pursuant to the *Ontario Works Act, 1997*, for the purpose of identifying and contacting individuals eligible for the rate assistance provided under the Ontario Electricity Support Program, and to provide services authorized under an agreement referred to in subsection (1).

Deemed compliance

(8) The use of personal information as allowed by subsection (7) is deemed to comply with section 41 of the *Freedom of Information and Protection of Privacy Act*.

Disclosure of list

(9) In order to assist the Minister of Community and Social Services to identify individuals eligible for rate assistance, the Board or the Minister or entity having responsibility for administering the Ontario Electricity Support Program shall, as soon as practicable after the coming into force of this section, disclose to the Minister of Community and Social Services a list of individuals who are enrolled in the Ontario Electricity Support Program, together with their mailing address and other contact information.

Use of list

(10) The Minister of Community and Social Services may use the information on the list provided under subsection (9) to determine whether an individual who is currently enrolled in the Ontario Disability Support Program or the program established under the *Ontario Works Act, 1997* is also enrolled in the Ontario Electricity Support Program.

Destruction of list

(11) The Minister of Community and Social Services shall destroy the list provided under subsection (9) no later than one year after receiving the list.

Notification about the management of personal information

(12) The Minister of Community and Social Services shall ensure that a notice is published on a website describing,

(a) the purpose for which that Minister collects, uses, discloses and retains personal information in connection with the Ontario Electricity Support Program;

(b) the types of personal information that may be collected, used, disclosed and retained in connection with the Ontario Electricity Support Program, and the circumstances in which the personal information may be collected, used, disclosed and retained in connection with that Program; and

(c) the title, and contact information, including an email address, of an employee who can answer an individual's questions about the use of the personal information under this section.

4. The Act is amended by adding the following sections:

Distribution rate-protected consumers

79.3 (1) The Minister shall provide for distribution rate protection to distribution rate-protected residential consumers having regard to the costs of the distribution of electricity to such consumers with respect to electricity consumed on or after the date prescribed by the regulations.

Money appropriated by the Legislature

(2) The money required for the purposes of the provision of distribution rate protection under this section shall be paid out of the money appropriated for those purposes by the Legislature.

Maximum charge

(3) Despite any order of the Board, or anything else under this Act, where the regulations so provide, a prescribed distributor who distributes electricity to distribution rate-protected residential consumers shall not charge those consumers, or a prescribed class of those consumers, any amount for monthly base distribution charges more than,

(a) the maximum amount for the charge that is provided for in the regulations; or

(b) the amount determined by the Board after applying any calculations, processes or methods provided for in the regulations.

Distributors

(4) A distributor who is prescribed under this section is entitled to be compensated from the money referred to in subsection (2) for lost revenue resulting from the provision of the distribution rate protection to distribution rate-protected residential consumers under this section.

Information, etc.

(5) If provided for in the regulations, the Board, the IESO and distributors, or any of them shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of distribution rate protection or of anything else required under this section.

Limitation periods for distribution rate protection, consumer

(6) Despite any past entitlement of a consumer who is eligible to distribution rate protection under this section, no distribution rate protection is payable to a consumer after a limitation period prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

Limitation, reimbursement of distributor, etc.

(7) Despite any requirement under this Act to reimburse a prescribed distributor or other person for distribution rate protection provided by them to distribution rate-protected residential consumers under this section, no amounts for reimbursement are payable to the prescribed distributor or other person after a limitation period prescribed by the regulations in respect of the prescribed distributor or other person, where such reimbursement is based on a consumer's past entitlement under this section which has not yet been paid or reimbursed under this section, other than in such circumstances as may be prescribed by the regulations.

Transitional

(8) If, for technical or operational reasons, a distributor referred to in subsection (3) is unable to adapt its invoices to comply with this section and the regulations by the time it issues its first invoice for electricity consumed after the prescribed date in respect of an account of a consumer who is eligible for distribution rate protection under this section,

(a) the distributor shall adapt its invoices as soon as possible and, in any event, no later than a date prescribed in the regulations; and

(b) consumers continue to be entitled to receive the distribution rate protection to which they are entitled under this Act and may receive it as a lump sum credit

on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Regulations

(9) The Lieutenant Governor in Council may make regulations,

(a) prescribing consumers or classes of consumers as distribution rate-protected residential consumers for the purposes of this section;

(b) prescribing dates for the purposes of subsections (1) and (8);

(c) prescribing distributors for the purposes of this section;

(d) governing anything that is described in this section as being prescribed or as being provided for in the regulations or that is required to be done in accordance with the regulations;

(e) governing the provision of distribution rate protection by the Minister in respect of distribution rate-protected residential consumers under this section including determining the method or methods of calculating the amount of rate protection to be provided;

(f) requiring the IESO to receive payments from the Minister and to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of the distribution rate protection provided for under this section and prescribing methods for determining the amounts payable to distributors or distribution rate-protected residential consumers in respect of that protection.

Interpretation

(10) In this section,

"distribution rate-protected residential consumer" has the meaning provided for in the regulations; **(French)**

"monthly base distribution charges" has the meaning provided for in the regulations. (frais de distribution mensuels de base)

Delivery credit for on-reserve consumers

79.4 (1) The Minister shall provide a delivery credit to on-reserve consumers who meet the criteria prescribed under this section with respect to electricity consumed on or after the date prescribed by the regulations.

Money appropriated by the Legislature

(2) The money required for the purposes of the provision of the credits required under this section shall be paid out of the money appropriated for those purposes by the Legislature.

Eligible costs

(3) The eligible costs for the delivery credit referred to in subsection (1) are,

(a) the sum of the following charges for which the consumer would otherwise be liable,

(i) all variable and fixed distribution charges,

(ii) all charges based on the retail transmission network service rate,

(iii) all charges based on the retail transmission connection service rate,

(iv) all charges related to losses incurred in the distribution of electricity, except for such amounts that are included in regulatory charges provided for in the regulations, and

(v) any other charges that may be prescribed in the regulations; or

(b) where no separate charges for delivery are provided for by the distributor or other person or entity that may be prescribed in the regulations, the monthly service charge or such other amount as may be prescribed for or in respect of a prescribed distributor.

Delivery credit

(4) A distributor, person or entity shall, unless the regulations provide otherwise, provide the delivery credit referred to in subsection (1) by crediting the account of an on-reserve consumer.

Same

(5) The regulations may require that distributors and any other persons or entities provide a delivery credit to an on-reserve consumer who is entitled to a delivery credit under subsection (1) in such manner or in accordance with such methods as may be prescribed.

Same

(6) A distributor or any person or entity as may be prescribed is entitled to be compensated from the money referred to in subsection (2) for any lost revenue resulting from the provision of the delivery credits under this section.

Information, etc.

(7) If provided for in the regulations, the Board, the IESO and distributors, and other persons or entities, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of the delivery credits or of anything else required under this section.

Limitation periods for delivery credit, consumer

(8) Despite any past entitlement of an on-reserve consumer who is eligible for a delivery credit under this section, no delivery credit is payable to an on-reserve consumer after a limitation period prescribed by the regulations in respect of the on-reserve consumer, other than in such circumstances as may be prescribed by the regulations.

Limitation, reimbursement of distributor, etc.

(9) Despite any requirement under this Act to reimburse a distributor or other persons or entities for delivery credits provided by them to on-reserve consumers under this section, no amounts for reimbursement are payable to the distributor or other persons or entities after a limitation period prescribed by the regulations in respect of the distributor or other persons or entities, where such reimbursement is based on an on-reserve consumer's past entitlement under this section which has not yet been paid or reimbursed under this section, other than in such circumstances as may be prescribed by the regulations.

Transitional

(10) If, for technical or operational reasons, a distributor referred to in subsection (4) is unable to adapt its invoices to comply with this section and the regulations by the time it issues its first invoice for electricity consumed after the prescribed date in respect of an eligible account,

(a) the distributor shall adapt its invoices as soon as possible and, in any event, no later than a date prescribed in the regulations; and

(b) on-reserve consumers continue to be entitled to receive the delivery credit to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Regulations

(11) The Lieutenant Governor in Council may make regulations,

(a) governing who is an on-reserve consumer for the purposes of this section and, without limiting the generality of the foregoing, may provide that consumers

who occupy certain areas are on-reserve consumers, and may do so without regard to whether those areas constitute a "reserve" under any other Act or law;

(b) prescribing dates for the purposes of subsections (1) and (10);

(c) governing provision of the delivery credits provided to on-reserve consumers under this section and, without restricting the generality of the foregoing, governing anything that under this section is to be prescribed or provided for in the regulations, or that is to be done in accordance with the regulations;

(d) determining the method or methods of calculating the amount of the delivery credits to be provided by the Minister in respect of on-reserve consumers under this section;

(e) requiring the IESO to make and receive payments to and from the Minister and to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of the delivery credits provided for under this section and prescribing methods for determining the amounts payable to distributors or on-reserve consumers in respect of the credits provided.

Interpretation

(12) In this section,

"on-reserve consumer" has the meaning provided for in the regulations.

Application

79.5 Sections 79.6 through 79.11 apply to the programs provided for under sections 79, 79.2, 79.3 and 79.4 to the extent that they are funded by money appropriated for those purposes by the Legislature.

Definition

79.6 In sections 79.7 to 79.11,

"Finance Minister" means the Minister of Finance or such other member of the Executive Council to whom the administration of those sections is assigned under the *Executive Council Act*.

Records

79.7 (1) Every distributor and every other person prescribed by regulation shall keep at a location in Ontario such records as are necessary to determine and verify compliance with sections 79, 79.2, 79.3 and 79.4 and the regulations associated with them and any records required by those regulations to be kept.

Electronic records

(2) If a person keeps records in an electronic form, the person shall ensure that, from the time the records are first made and for as long as they are required to be retained,

(a) they remain complete and unaltered, apart from any changes or additions made in the normal course of communication, storage or display; and

(b) they are capable of being printed and of being produced in electronically readable format for inspection, examination or audit.

Retention of records

(3) Records required to be kept under subsection (1) shall not be destroyed unless authorization has been given in writing by the Finance Minister.

Offence

(4) Every person who fails to keep records in accordance with this section is guilty of an offence and, on conviction, is liable to a fine of not less than $50 and not more than $5,000.

Inspections and inquiries

79.8 (1) The Finance Minister may appoint one or more inspectors who are authorized to exercise any of the powers and perform any of the duties of a person authorized by the Minister under subsection 31 (1) of the *Retail Sales Tax Act* for any purpose related to the administration and enforcement of sections 79, 79.2, 79.3 and 79.4 of this Act.

Same

(2) Subsections 31 (1), (2), (2.1) and (2.2) of the *Retail Sales Tax Act* apply, with necessary modifications, with respect to the administration and enforcement of sections 79, 79.2, 79.3 and 79.4 of this Act.

Admission of evidence

(3) The Finance Minister, or a person authorized by the Finance Minister, may, for any purpose related to the administration of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them, reproduce from original data stored electronically any information previously submitted as required under those sections or regulations in any form by any person, and the electronically reproduced document shall be admissible in evidence and shall have the same probative force as the original document would have had if it had been proved in the ordinary way.

Inquiry

(4) The Finance Minister may, for any purpose related to the administration of sections 79, 79.2, 79.3 and 79.4 of this Act or the regulations made in association with

them, authorize any person, whether or not the person is an employee in the Ministry of the Finance Minister, to make such inquiry as the Finance Minister considers necessary with reference to anything relating to the administration of this Act or the regulations.

Copies

(5) If a book, record or other document is examined or produced under this section, the person by whom it is examined or to whom it is produced or any officer of the Ministry may make, or cause to be made, one or more copies of it, and a document purporting to be certified by the person to be a copy made pursuant to this section is admissible in evidence and has the same probative force as the original document would have if proved in the ordinary way.

Compliance

(6) No person shall hinder or molest or interfere with any person doing anything that the person is authorized by this section to do or prevent or attempt to prevent any person doing any such thing.

Same

(7) Despite any other law to the contrary, every person shall, unless the person is unable to do so, do everything the person is required by this section to do.

Administration of oaths

(8) Declarations or affidavits in connection with statements of information submitted pursuant to this section may be taken before any person having authority to administer an oath or before any person specially authorized for that purpose by the Lieutenant Governor in Council, but any person so specially authorized shall not charge any fee for doing so.

Application of *Public Inquiries Act, 2009*

(9) Section 33 of the *Public Inquiries Act, 2009* applies to an inquiry under subsection (4).

Recovery of overpayments

Definitions

79.9. (1) In this section,

"inspector" means an inspector referred to in section 79.8; ("inspecteur")

"overpayment" means an amount received by a person in excess of that to which the person is entitled under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them. ("trop-perçu")

Notice of overpayment

(2) If it appears to an inspector that a person has received an overpayment, the Finance Minister may send a written notice to the person advising the person of the following:

1. That the person has received an overpayment.

2. The amount of the overpayment and how it was calculated.

3. The required steps to be taken by the person with respect to the overpayment.

4. The date, not more than six months after the date of the notice, by which these steps must be completed.

5. That the Finance Minister has the authority to assess the person for the amount of the overpayment, plus interest, if the person fails to complete the required steps by the specified date.

Calculation of amount of overpayment

(3) For the purposes of this section, an inspector shall calculate an overpayment or the outstanding balance of an overpayment in the manner and form and using such procedures as the Finance Minister considers adequate and expedient.

Assessment

(4) If a person fails to complete the steps required in a notice under subsection (2) within the time specified in the notice, and any additional time requested by the person and permitted by the Finance Minister, the Finance Minister may assess or reassess the amount of the overpayment, or the outstanding balance of the overpayment, based on the inspector's calculation described in subsection (3).

Penalty

(5) If the Finance Minister makes an assessment or reassessment under subsection (4) and is satisfied that the person's non-compliance with the required steps in the notice was attributable to neglect, carelessness, wilful default or fraud, the Finance Minister may assess a penalty against the person equal to the outstanding balance of the overpayment when the penalty is assessed.

Time limit

(6) The Finance Minister shall not assess or reassess under subsection (4) more than 48 months after the end of the month in which the person received the overpayment.

Exception, where misrepresentation, etc.

(7) Subsection (6) does not apply if the Finance Minister establishes that the person has made a misrepresentation that is attributable to neglect, carelessness or wilful default or has committed any fraud in supplying information under this Act or the regulations or in omitting to disclose information.

Deeming

(8) An amount assessed or reassessed by the Finance Minister under this section is deemed, for the purposes of the administration and enforcement of this Act, to be a debt retirement charge owing and payable, as defined in subsection 85 (1) of the *Electricity Act, 1998*, that has been collected, on the last day of the month in which the person received the overpayment, by the person as a collector appointed under subsection 85.3 (1) of the *Electricity Act, 1998* and, for those purposes,

(a) sections 85.11, 85.12, 85.14, 85.17 and 85.30 of that Act apply with necessary modifications;

(b) in the application of sections 85.11 and 85.14 of that Act and without limiting the generality of clause (a) of this subsection, references to the Financial Corporation are read as references to the Minister of Finance and references to the Minister of Finance are read as references to the Finance Minister as defined in section 79.6 of this Act;

(c) the regulations made under that Act for the purposes of calculating the rate or rates of interest payable under section 85.11 of that Act and the manner of calculating the amount of interest apply with necessary modifications; and

(d) sections 23 and 36, subsections 37 (1), (1.1) and (2) and sections 37.1, 38 and 39 of the *Retail Sales Tax Act* apply with necessary modifications.

Disposition of repaid amounts

(9) If all or part of an overpayment is repaid to the Finance Minister, the Minister of Energy shall make such financial arrangements and payments as may be necessary to ensure that any person entitled to all or part of the overpayment receives the appropriate amount.

Confidentiality

79.10 (1) Except as authorized by this section, no person employed by the Government of Ontario shall,

(a) knowingly communicate or knowingly allow to be communicated to any person any information obtained by or on behalf of the Minister of Energy or

the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; or

(b) knowingly allow any person to inspect or to have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

Testimony

(2) No person employed by the Government of Ontario shall be required, in connection with any legal proceedings,

(a) to give evidence relating to any information obtained by or on behalf of the Minister of Energy or Finance Minister for the purposes of this Act; or

(b) to produce any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

Exception

(3) Subsections (1) and (2) do not apply in respect of,

(a) criminal proceedings under any Act of the Parliament of Canada;

(b) proceedings in respect of the trial of any person for an offence under an Act of the Legislature; or

(c) proceedings relating to the administration or enforcement of this Act or Part V.1 or VI of the *Electricity Act, 1998*.

Communication

(4) A person employed by the Government of Ontario may, in the course of duties in connection with the administration or enforcement of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them,

(a) communicate or allow to be communicated to another person employed by the Government of Ontario in the administration or enforcement of any law or to an employee of the Board information obtained by or on behalf of either Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; and

(b) allow another person employed by the Government of Ontario in the administration or enforcement of any law or an employee of the Board to inspect or have access to any record or thing obtained by or on behalf of either Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

Reciprocal communication

(5) A person who receives information or obtains access to any record or thing under subsection (4) has a duty to communicate or furnish to that Minister on a reciprocal basis any information, record or thing obtained by the person that affects the administration or enforcement of this Act.

Use of information

(6) Any information, record or thing communicated or furnished under this section may be used only for the administration or enforcement of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them or an Act that is administered or enforced by the person receiving the information, record or thing.

Same

(7) The Finance Minister may permit information or a copy of any record or thing obtained by or on behalf of the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them to be given to,

(a) the person from whom the information, record or thing was obtained;

(b) any person by whom an amount is payable or has been paid under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; or

(c) the legal representative of a person mentioned in clause (a) or (b) or the agent of the person authorized in writing in that behalf.

Information

(8) The Finance Minister may permit information or a copy of any record or thing obtained by or on behalf of the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them to be given to any person employed by any government if,

(a) the information, record or thing obtained by that government for the purpose of any Act that imposes a tax or duty are communicated or furnished on a reciprocal basis to the Minister; and

(b) the information, record or thing will not be used for any purpose other than the administration or enforcement of a law that provides for the imposition of a tax or duty.

Offence

(9) Every person who contravenes any provision of this section is guilty of an offence and on conviction is liable to a fine of not more than $2,000.

Offences

False statements, etc., and fraud

79.11 (1) Every person who engages in any of the following acts or omissions is guilty of an offence:

1. Making, participating in, assenting to or acquiescing in the making of a false or deceptive statement in any document or answer required or submitted under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

2. Destroying, altering, mutilating, hiding or otherwise disposing of information or records of any person, for the purpose of evading compliance with sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

3. Making, assenting to or acquiescing in the making of a false or deceptive entry of a material particular in a record of any person required to maintain records for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

4. Omitting to make or assenting to or acquiescing in the omission of an entry of a material particular in a record of any person required to maintain records for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

5. Wilfully evading or attempting to evade, in any manner, compliance with an obligation under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

Penalty upon conviction

(2) A person convicted of an offence under subsection (1) is liable to either or both of the following penalties in addition to any other penalty assessed under this Act:

1. A fine in an amount that is not less than $1,000 and not more than $10,000.

2. Imprisonment for a term of not more than two years.

General offence

(3) Every person who contravenes, by any act or omission, any other requirement imposed under sections 79, 79.2, 79.3 and 79.4 is guilty of an offence and, on conviction, is liable, where no other penalty is provided for the offence, to a fine of not less than $50 and not more than $5,000.

Limitation period

(4) A proceeding to prosecute an offence provided for in this section must be commenced within six years after the date on which the matter of the offence arose.

Payment of fines

(5) Fines imposed on conviction of an offence provided for in this section are payable to the Finance Minister on behalf of the Crown in right of Ontario.

Commencement

5. (1) Subject to subsection (2), this Schedule comes into force on the day the *Fair Hydro Act, 2017* receives Royal Assent.

(2) Section 2 comes into force on a day to be named by proclamation of the Lieutenant Governor.

Fair Hydro Act, 2017

COMPENDIUM

The proposed Bill, the *Fair Hydro Act, 2017*, if enacted, would enact the *Ontario Fair Hydro Plan Act, 2017* and amend various Acts according to the provisions of Schedules 1 and 2 set out in greater detail below.

Schedule 1
Ontario Fair Hydro Plan Act, 2017

Schedule 1 enacts the *Ontario Fair Hydro Plan Act, 2017*. The Act establishes a framework under which the costs and benefits associated with the "clean energy initiative" are to be allocated among present and future consumers of electricity. The "clean energy initiative" describes the policies of the Government of Ontario related to fostering the development of a clean, modern and reliable electricity system.

Part I of the Act sets out the purposes of the Act and includes protections and assurances related to investor interests.

Under Part II of the Act, the Ontario Energy Board is required to determine reduced electricity rates that would achieve a 25% reduction in monthly invoice amounts from July 1, 2017 to April 30, 2018 for a hypothetical "regulated rate consumer" who meets prescribed criteria. The methodology to be applied by the Ontario Energy Board to determine electricity rates after April 30, 2018 would be prescribed by regulations.

Part III of the Act requires "specified consumers" to pay an amount in respect of the "clean energy adjustment". The clean energy adjustment is determined by the Financial Services Manager in accordance with rules set out in the Act and the regulations. Part III also specifies the roles and responsibilities of electricity vendors and the Independent Electricity System Operator ("IESO") with respect to the collection and remittance of amounts in respect of the clean energy adjustment.

Part IV of the Act requires the Minister of Energy to calculate a "fair allocation amount" by taking specified steps in accordance with principles and assumptions set out in the Act. The purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among specified consumers.

Also under Part IV, Ontario Power Generation Inc. is appointed as the Financial Services Manager. The Financial Services Manager is required to prepare a written "Financing Plan" to evaluate whether potential funding obligations should be incurred to acquire and

finance investment assets (under Part V). Constraints are placed on incurring funding obligations that would result in amounts becoming payable in respect of the clean energy adjustment from July 1, 2017 to April 30, 2021. In accordance with the Financing Plan, the Financial Services Manager may establish financing entities that may incur funding obligations.

Part V of the Act requires the IESO to determine the "IESO deferral" in accordance with the regulations and to establish and maintain a variance account in which it records the IESO deferral for each month. The balance in the variance account becomes a "regulatory asset", which the IESO has the right to recover from specified consumers through rates set by the Ontario Energy Board. The IESO is authorized to transfer a specified portion of the regulatory asset to a financing entity. The transfer results in the financing entity acquiring a corresponding "investment interest". The Act sets out various rules respecting the validity and priority of such a transfer.

In Part VI, the Act provides various rules in respect of the "investment asset" created by the transfer under Part V of a specified portion of the regulatory asset. Part VI provides that the investment asset constitutes a current and irrevocable property right and interest, consisting collectively of various specified rights and interests of investment interest owners. The Act also includes rules respecting the validity and priority of transfers of investment interests and the granting of a security interest in an investment interest by an investment interest owner.

Part VII deals with various administrative and miscellaneous matters, including regulation-making authority of the Lieutenant Governor in Council.

Part VIII includes consequential amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1999* to address various matters relating to the enactment of the new Act.

Schedule 2
Amendments to the Ontario Energy Board Act, 1998

Schedule 2 amends the *Ontario Energy Board Act, 1998*.

Section 79 of the Act is amended so that the rate protection provided to certain classes of rural or remote rate protected (RRRP) consumers may be funded out of money appropriated by the Legislature, rather than by consumers. Consumers would still be required to fund the remaining portion of RRRP not funded through appropriations.

Section 79.2 of the Act, which governs the Ontario Electricity Support Program (OESP), is repealed and replaced on a date to be named by proclamation of the LGIC. Once s.79.2 is proclaimed, the program would be continued, but will be funded out of money

appropriated by the Legislature after the variance account maintained by the IESO is exhausted, rather than by consumers. There are provisions relating to the sharing, use and disclosure of information relating to the administration of the OESP.

New provisions are created in the Act to establish programs to provide rate protection to certain distribution rate-protected residential consumers and a delivery credit to on-reserve consumers.

The Schedule also contains various amendments of a technical and administrative nature to support the implementation and oversight of these programs including provisions related to auditing, record-keeping, inspections and inquiries, offences and penalties.

The Schedule contains regulation-making authority in order to specify the details required to implement the various government-funded.

PRIVILEGED AND CONFIDENTIAL

Memorandum To: The Honourable Glen Murray
Chair of the Legislation and Regulations Committee

From: Carolyn Calwell
Director, Legal Services Branch

Date: May 5, 2017

Re: Ontario's Fair Hydro Plan
An Act to enact the Ontario Fair Hydro Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

I have examined the draft of the above-referenced item being submitted to Legislation and Regulations Committee on May 10, 2017 and have compared that draft with the policy approved by Cabinet on March 1, 2017.

As a result of this comparison, I am able to advise you that the draft corresponds to the approved policy with the exception of the variances identified on the attached chart.

_____
Carolyn Calwell
Director

Ontario's Fair Hydro Plan
An Act to enact the Ontario Fair Hydro Act, 2017
and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

Minute Item	Approved Policy/Policy Sought to be Approved	Proposed Variance	Degree of Variance	Rationale/Commentary
1.A	Total projected bill increases will be kept in line with Consumer Price Index (CPI) **until the end of 2021.**	Bill increases will be prescribed by regulation for the period May 1, 2018 **to June 30, 2021**.	Low	June 30, 2021 aligns with public communications that rate increases will be held to inflation over the next four years. This regulation making authority would enable the government to keep bill increases in line with CPI.
1.A	Cap bill increases due to repayments at around 10% of the total bill.	Bill increases will not be capped.	High	Consultation with stakeholders and external advisors revealed that a legislated cap would undermine investors' certainty in recovering their investment. However, the debt rating will be impaired if modelling suggests that rates could increase more than 10%, providing a cap in practical terms.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – March 1, 2017	**Tracking to: Fast Track** LRC at Cabinet – March 10, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan Legislation

I. DECISION BEFORE THE BOARD

Receive a report back on Ontario Fair Hydro Plan implementation, supporting implementation decisions and recommending the proposed Ontario Fair Hydro Plan Act to proceed to LRC and Cabinet for approval.

II. RECOMMENDATIONS:

• Receive a report Ontario Fair Hydro Plan implementation: o Proposed legislation ▪ Note key aspects of proposed legislation ▪ Recommend proposed legislation o Approve up to $3.5M funding for media buy procurement, to be followed later by a transfer later from the Bulk Media program to fully recover costs for the public education campaign.	*Board Judgement*
• Direct the Ministry to return to TB/MBC with regulations support implementation prior to going to LRC. • Note outstanding report back requirements, • Direct in-year reporting through quarterly reporting and PRRT planning process on spending to date versus funding allocation for Electricity social programs and Global Adjustment Refinancing	

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**

Total Potential Fiscal Impact		0.0	0.0	0.0

* Subject to enacting proposed Ontario Fair Hydro Plan legislation.
^ As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget, linked to proposed legislation

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017 the Ministry received TB/MBC approval for additional rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016 for an average household in 2017. The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017. This submission deals with three key elements of the OFHP:

- Refinancing Portion of Global Adjustment (GA) to partially defer RPP eligible ratepayer GA costs (Implementing a non-fiscal impact approach over government funding).
- Expanding, enhancing ratepayer funded electricity social programs and shifting them to being government funded (OESP, RRRP), along with a new government funded On-Reserve First Nations Delivery Credit.
- Expansion of Industrial Conservation Initiative (ICI).

The Ministry was directed to report back to the Board with proposed legislation supporting OFHP implementation, including the following specific direction regarding a non-fiscal mechanism (approach) to refinancing a portion of Global Adjustment costs (Appendix C provides the March 1, 2017 minute):

- Formal accounting opinions from OPG and IESO auditors.
- Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
- Report on the multi-year profile of GA smoothing, identifying specific assumptions.
- Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
- Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

Direction was also given to report back with final details for electricity support programs, as well as programs' effectiveness, efficiency, and sustainability.

The current submission does not address all report back requirements. The proposed legislation would establish the legislative framework, to be followed by further program related details being set by regulations at a later date (Ministry is targeting June 2017).

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two Schedules (Appendix D provides details of each part):

- Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment partial refinancing)
- Schedule 2: Legislative amendments for electricity social programs

Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment (GA) Refinancing)

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

The Ministry indicates under OFHP, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017 (This includes the 8% Ontario Rebate for Electricity Consumers). In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Reflecting March 2017 approvals (See Appendix C for March 2017 TB/MBC minute), proposed legislation for GA Refinancing is designed to establish a non-fiscal impact mechanism. Minuting indicated proceeding with GA Refinancing requires completed legal, accounting and financing risk assessments.

The proposed approach to GA Refinancing is complex. Appendix D provides proposed legislative details.

- At a high level, the proposed legislation establishes the framework to refinance a portion of the current GA costs to future ratepayers by recognizing the longer term benefit many of these generating assets to the electricity system. The methodology is based on the assumption that some assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets in the future.

    - July 1, 2017, to April 30, 2018, reduces, on average, after-tax electricity costs for "specified consumers" by 25% (inclusive of the 8% rebate and shifting of support program to be government funded).
    - May 1, 2018, to June 30, 2021, electricity rates will be prescribed by regulation with the intention to keep increases in line with the Consumer Price Index (CPI).
    - July 1, 2021, to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and administrative costs.
    - Through the bill and amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998, expands the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO) to provide for appropriate oversight, put in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the refinanced GA costs.

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG, through a special purpose vehicle (OPG Trust) is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

The bill includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Schedule 2: Legislative amendments for electricity social programs

Electricity social programs becoming government funded under OFHP target residential electricity customers disproportionately affected by increased electricity costs.

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The bill amends the *Ontario Energy Board Act, 1998* for various electricity social programs:

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001. The bill enables the funding of existing Rural or Remote Rate Protection (RRRP) for prescribed customers to be provided for through provincial appropriations, rather than from electricity.

Appropriated funds would be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the government funding provided.

Distribution Rate Protection (Broadened RRRP)

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

The proposed legislation would enable a broader government funded Distribution Rate Protection (DRP) program (broadened RRRP) which provides additional distribution rate protection to residential customers of prescribed higher cost LDCs by enabling the regulations to prescribe a maximum distribution charge for consumption on or after July 1, 2017.

If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

The legislation contains retroactive application of the provisions to offset any potential lapses in implementation and ensure that consumers receive the benefit following the July 1st effective date through to the final effective date of October 1st, 2017.

On-Reserve First Nations Delivery Credit

The proposed bill would enable the provision of a government funded on-reserve First Nations Delivery Credit (FNDC), which would eliminate the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation.

The program is premised around the findings in an OEB Report submitted to the Ministry on December 29, 2016 providing advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers.

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program to being government funded, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid

by all Ontario consumers on May 1, 2017. On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will come into effect on May 1, 2017.

The proposed bill would move the recently expanded Ontario Electricity Support Program (OESP) to government funding, allow for the potential transition of the program administration to the Crown or other entity, and to enable information exchange between the Ontario Disability Support Program (ODSP) and Ontario Works (OW) to potentially allow for automatic enrolment procedures to be established.

The Ministry indicates the proposed legislative amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

Expansion of Industrial Conservation Initiative (ICI)

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and “1114”) in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and Demand Management (CDM) programs and/or Ontario Climate Change Solutions Deployment Corporations (OCCSDC) programs and pilots.

The Ministry is also undertaking targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants.

- The extent of the impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

Financials

Electricity Social Programs:

March 1, 2017 TB/MBC approvals supporting OFHP included full year projected costs. The 2017 Ontario Budget included refined projected costs shifting expanded/enhanced electricity social programs from ratepayers to being government funded starting in 2017-18, lowering the total amount from $665M to $499M to reflect rollout timing not full year costs. The table below shows expense amounts currently in the PRRT multi-year fiscal plan related to these support programs for the most vulnerable consumers.

Government Funded Social Programs ($million)	2017-18	2018-19	2019-20	2020-22
Rural or Remote Rate Protection (RRRP)	344	472	484	497
Ontario Electricity Support Program	140	261	325	375
On-Reserve First Nations Delivery Credit	15	20	20	20
Total	**499**	**753**	**829**	**892**

GA Refinancing:

The 2017 Budget also includes an investment operating asset of $1.1B related to the Province's equity injection to OPG, enabling the OPG Trust to regularly purchase IESO's regulatory asset through 2017-18. The structure would increase gross debt of the Province (to finance the equity injection in OPG), increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. The Province's net debt will remain unchanged as the equity investment in OPG would offset the additional Provincial borrowing.

Projected annual amounts of GA deferrals (i.e., the regulatory asset) are shown below and are not part of the province's multi-year fiscal plan (2017 Budget(Assumed to be funded from electricity ratepayers udner the proposed legisation). Appendix E provides analysis of financial models.

($million)	2017-18	2018-19	2019-20	2020-22
GA Refinancing - Residential Bills lowered by 25%	2,534	2,668	2,942	3,420
Interest Portion (5% annually, compounded monthly)	32	162	298	449

Under GA refinancing, ratepayers will incur interest costs and will be added to the GA payments ratepayers make.

- OPG intends to use a Special Purpose Vehicle (OPG Trust) to purchase the "right to collect" assets from the IESO in return for cash. OPG Trust will be structured to finance 51% of its funding requirements through the capital market with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed though debt from the capital markets (about 5%) and through equity injections from the Province (44%).

- The proposed legislation does not compel the OPG Trust to purchase 100% of the regulatory asset created by IESO at any given time. IESO have noted that it may need to cover clean energy costs if for some reason the OPG Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. On behalf of IESO, the Ministry is requesting a credit facility for IESO, up to about $3B, and notes the use of this credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO. Appendix F provides more information.

Financial, Accounting, Legal Risk Assessments:

In the March 1, 2017 TB/MBC Minute, refinancing the Global Adjustment to partially defer RPP eligible ratepayer GA costs, was subject to completed legal, accounting and financing risk assessments. Appendix G provides more details from the Ministry.

Financial

The Ministry indicates it has prepared legislation and is working on developing regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure

that the full value of any investment is recoverable.

- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year.

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

The Ministry indicates the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost.

The Ministry also acknowledges given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term, and the rate of inflation.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The Ministry indicates the following:

- Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations, satisfying accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.
- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

KPMG:

- The proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements.
- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.
- The regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG/E&Y:

- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.
- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-

making, funding and ongoing operation.

- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.
- Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.
- Judges can be expected to take a careful look at the government's evidence in support of the re-allocation of Global Adjustment.
- The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.
- The provincial assurance provision - Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes. The proposed legislation focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers.
- The provincial guarantee provisions are intended to backstop the provincial assurance provision Legal risk to the province will be assessed as the agreements are negotiated and drafted.
    - The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
    - The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.
- Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry indicates it retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements.

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. The Ministry indicates Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social,

health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

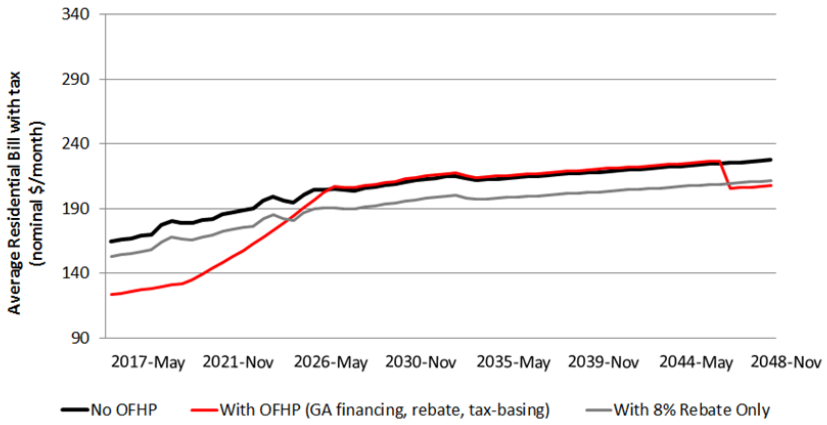
The Ministry's signed submission included external opinions and assessments for Ontario Power Generation (Accounting), KPMG Letter to the Independent Electricity System Operator (Accounting Opinion), Ernst &Young (as auditors) letter to OPG concurring with OPG's description of OPG accounting considerations of OFHP.

TBS staff note external opinions and assessments are supportive of the Ministry's intended plan for implementing Ontario's Fair Hydro Plan, noting the opinions and assessments must be revisited once key implementation details are finalised (e.g. draft legislation, regulations, special purpose vehicle documents, terms of conditions within various other agreements etc). Future reassessments and other factors such as Ontario electricity demand, interest rates in the medium to long-term, and the rate of inflation may contribute to fiscal plan implications emerging over time.

TBS staff also note, while submission details and related discussions have not indicated a non-fiscal mechanism cannot be established, the complexity of the transaction and the time frame involved suggest it is not reasonable, at present, to support a claim of no impact on the province's fiscal plan as the Ontario Fair Hydro Plan is implemented (Appendix H includes a strategic level risk assessment prepared by TBS staff). .

Ultimately, GA Refinancing being a sustainable strategy assumes electricity consumers' willingness to accept later to bear the extra costs of deferring electricity price hikes.

- The following graphic from the Ministry indicates the multi-year profile of GA Refinancing:



The chart above shows the expected multi-year profile under GA Refinancing for each Regulated Price Plan (RPP) period. In the first year, residential bills are projected to be 25 per cent lower as result of the OFHP. In the early years, bills increases are held to the rate of inflation – assumed to be 2% per year in the chart above. From July 1, 2021 onwards, prices increase at a higher rate compared to the first four years on the OFHP.

In the medium to longer term, residential bills exceed what they would have been but for the OFHP. However, in any given year, a typical residential bill under the OFHP cannot exceed what it would have been without OFHP by more than 10 per cent.

Media Procurement Request

The Ministry is requesting approval up to $3.5M funding for media buy procurement, to be followed later by a transfer later from the Bulk Media program to fully recover costs for the public education campaign.

The Ministry indicates spending about $1M on media planning and buying for radio and digital media. The Ministry is forecasting $2.5M in 2017-18 (Q clarifying the remaining $1M).

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Should TB/MBC wish to proceed with the Ministry's request, the following minute could be considered:

Receive the report back on proposed legislation supporting implementation of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

i) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

a) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
b) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
c) Shift from electricity consumer funding to funding out of voted appropriations for Ontario Electricity Support Program, and for majority of costs for existing RRRP.
d) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

a) Establishing the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
b) Requirement for future consumers to pay the clean energy adjustment that backs financings
c) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
d) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
e) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights
f) Sets out that security interests can be granted in investment interests in the investment asset

ii) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

iii) Note a new credit facility is being sought by the IESO to ensure that it has the flexibility to cover clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments.

iv) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC.

In this regard,

a) Direct the Ministry to include a report on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates
b) Direct the Ministry to report back with final program details for 2017-18 for GA Refinancing and Social Programs, including fiscal plan implications.

Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

…Placeholder for media procurement minute…

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX D: PROPOSED FAIR HYDRO ACT OVERVIEW

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two schedules:

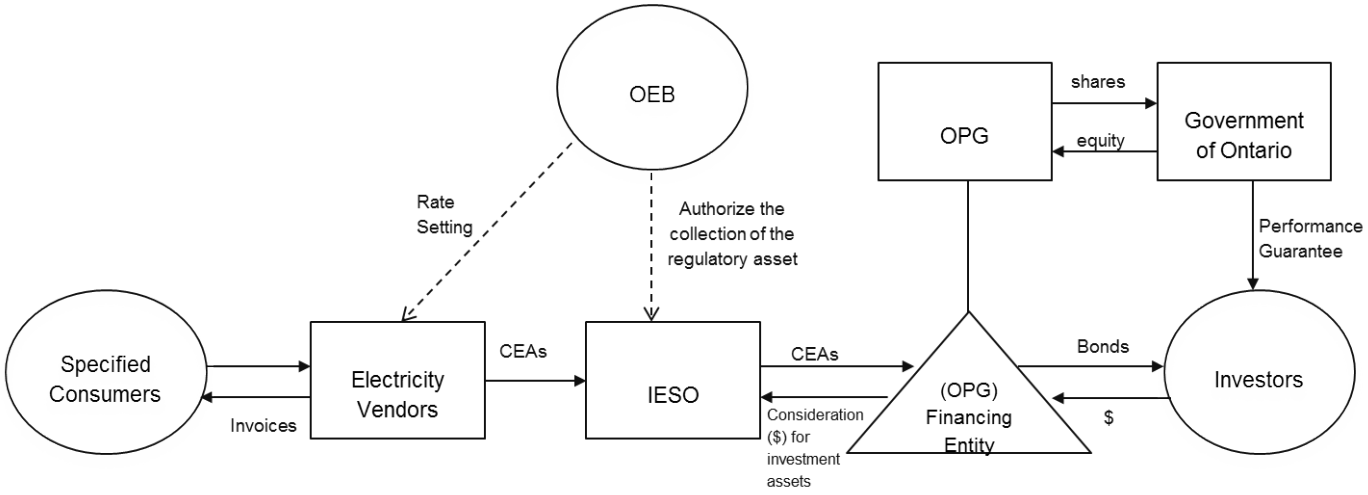
- Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Dealing with Global Adjustment (GA) refinancing).
- Schedule 2: Legislative amendments for electricity social programs (See Appendix D1)

The Ministry has provided the following overview of the proposed legislation:

Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (GA refinancing).

Legislation is based on the principle that the costs incurred to move to a clean, modern and reliable electricity system (Clean Energy Initiative) creates benefits that will be experienced by multiple generations of Ontario ratepayers and, therefore, in the interest of fairness, those costs should be shared by those multiple generations.

The legislation does two things: (i) it establishes the fundamental elements of the fair allocation program, and, (ii) it puts the mechanisms in place to permit the financing of periodic shortfalls in revenue that are created by the fair allocation of electricity costs over multiple generations. The diagram below outlines how the refinancing of GA would be implemented.



Note: CEAs are "clean energy adjustments"

Clean Energy Costs and Benefits:

- The costs included in the "clean energy costs" include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act* (the Global Adjustment provisions) which relate to contracts for:
  - Renewable energy generation or capacity
  - Conservation and demand management, including shortage
  - Energy efficiency
  - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act* or as prescribed); and
  - Payments made under section 78.5 of the *Ontario Energy Board Act.*
  - Other such costs to be included in "clean energy costs" may be prescribed

- These are the costs to be distributed fairly among the specified consumers through the "fair allocation amount".

Fair Allocation Adjustment:

- Part II establishes that the rate that will be payable by "specified RPP consumers" from May 1, 2017 to April 30, 2018 for the first fair adjustment is the rate that would be required from this program to contribute to that consumer to receiving a total a monthly invoice amount that is 25 per cent lower than the monthly invoice amount for that consumer under the "comparison rate". The comparison rate is a rate to be determined by the OEB using the method prescribed by regulation under s 79.16(1)(b) of the OEB Act.
- Part II includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program (i.e., adaptation of invoices must be implemented by August 1, 2017 followed by a subsequent lump sum credit to the consumer once the invoice is adapted).
- The Lieutenant General in Council is given the authority after April 30, 2018 to make regulations prescribing the rate for electricity (and therefore prescribing the "fair adjustment" until June 30, 2021). After June 30, 2021, regulations will have regard to the fair allocation amount and clean energy adjustments.
- The Minister sets the fair allocation amount.

    - The establishment of the "fair allocation amount" is required to,
        - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the "specified consumers" for applicable "reference periods"; and
        - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers).
    - The "fair allocation amount" is to have regard to:
        - Clean energy costs and allocating the appropriate proportionate amount of the clean energy benefits to the "specified consumers" (in the applicable "reference periods");
        - Reasonable assumptions regarding the time value of money, the number of consumers in the "reference period"; and
        - Expected electricity consumption for the reference period.

Regulatory Asset and Investment Asset:

- IESO will have a funding deferral resulting from the reduction in amounts collected from specified consumers during the first 4 years because of the fair adjustment. The IESO's funding deferral will be financed indirectly through the debt capital markets.
- The Act enables the financing of this IESO funding deferral, on an ongoing basis, by establishing the funding deferral as a "regulatory asset". In simple terms, the regulatory asset is IESO's right to recover the revenues that it has deferred collecting.
- IESO will then legally transfer portions of this right to recover revenues to the (OPG) financing entities. OPG financing entities are not required to purchase the regulatory asset.
- The (OPG) financing entity that receives the transfer of the right to recover revenues acquires a right to impose, invoice and collect those regulatory charges (called the "clean energy adjustments"). This is generally described in the legislation as the "investment asset".
- The (OPG) financing entity will need to finance its acquisition (from IESO) of the investment asset, and it will do so in the capital markets.

Issuance and Payment of Debt:

- Debt securities and related funding obligations will be incurred by one or more (OPG) financing entities. These entities will be managed by OPG, as the financial services manager.
- The financings will be backed primarily by the "clean energy adjustments" payable by specified consumers. The "clean energy adjustments" will track the actual payment obligations incurred by the financing entities when they become due and payable. To ensure intergenerational fairness, these amounts will be managed by OPG to align with the "fair allocation amounts" ascribed to each of the next 60 six month periods ending in 2047 (or such later period as prescribed).
- IESO and each electricity distributor will act as agent for the financing entities to impose, invoice and collect the clean energy adjustments, which will be channeled through to pay each financing entity's related funding obligations.
- To support the program, the Government of Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be achieve highest rated securities, although that will largely depend on issues such as the strength of the Government of Ontario's undertakings not to adversely affect the program through subsequent legislation.

Financing Plan:

- The Financing Plan is prepared by the Financial Services Manager (OPG).
- The Financing Plan is the plan which is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO.
- There are rules that apply to the Financing Plan:
  - It must align with the "estimated finance amount" that will become due and payable during a "reference period";
  - It must take into account the "fair allocation" and any "fair adjustment";
  - It must plan to implement the financing in a reasonable and cost effective manner that reflects prevailing market terms and conditions; and
  - It must be based on certain reasonable assumptions set out in regulations (for example, related to anticipated IESO shortfalls, maturity of funding obligations, availability of refinancing, redemption opportunities and liquidity, and similar assumptions).
- The (OPG) Financial Services Manager must incur funding obligations in conformity with the applicable Financing Plan.
- The Financing Plan will guide OPG's decisions regarding the repayment terms of the debt securities to be issued by financing entities. The Financing Plan will also deal with fundamental issues, such as the alignment (using derivatives) of any foreign currency obligations incurred by financing entities with the Canadian dollar cash flows arising through the clean energy adjustments.

Who Does What?

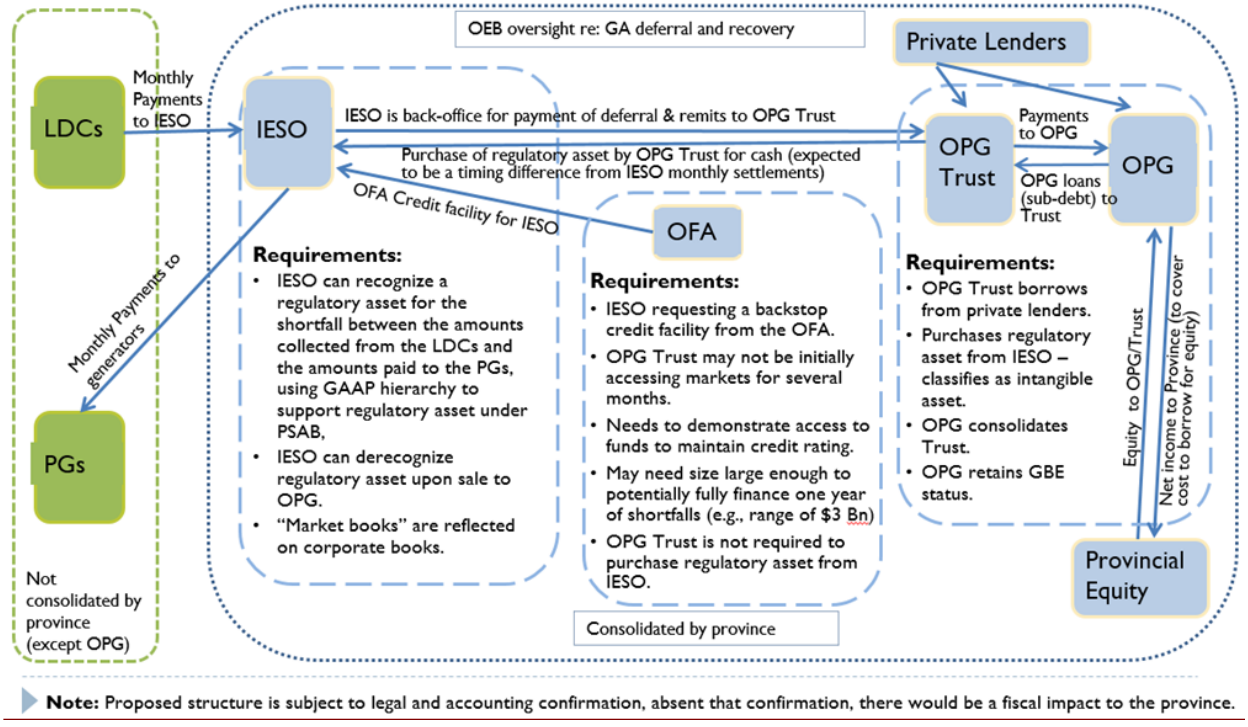
- Minister of Energy – Determine the "fair allocation amount" applicable for each reference period. The fair allocation amounts will be set for all reference periods at the beginning of the program, based on reasonable expectations and forecasts at that time.
- Ontario Power Generation (OPG) – As financial services manager, OPG will be responsible for the following under the Act:
  - Prepare and implement Financing Plan.
  - Establish and administer the financing entities.
  - Capitalize the financing entities by acquiring subordinated debt and equity, as required to achieve OPG's accounting and capital markets objectives.

- Estimate and "true up" periodic finance amounts, to be passed through as regulatory charges in the form of Clean Energy Adjustments.

- Independent Electricity System Operator (IESO):
  - Calculate and record IESO funding shortfalls from time to time in a variance account, giving rise to a right of recovery from specified consumers to the extent not funded through the financings.
  - Transfer the IESO's rights of recovery to (OPG) financing entities, in consideration for cash payments made by the financing entities from the proceeds of their financings.
  - Coordinates the collection of "clean energy adjustments" from Electricity Distributors.
  - Remit "clean energy adjustments" to (OPG) financing entity, for payment of financing entity funding obligations.
  - Fund initial interest costs and expenses during the first 4 years.

- Local Distribution Companies (LDCs):
  - Obligation to invoice specified consumers.
  - Collect, as agent of the investment interest owners, "clean energy adjustments" from specified consumers.
  - Hold money received for clean energy adjustments in trust until remittance to the IESO.

- Ontario Energy Board:
  - Determine and set rates to account for fair adjustments, fair allocations and clean energy adjustments (monthly adjustments).
  - Determine and set rates and process to allow IESO to recover funding shortfalls (to the extent such amounts are not transferred to an (OPG) financing entity and financed in the capital markets).
  - Review the administrative costs of OPG in connection with the administration of the program.



Schedule 2: Legislative amendments for electricity social programs moving to being government funded

As part of the proposed Ontario Fair Hydro Plan, the Ministry of Energy is proposing amendments the *Ontario Energy Board Act, 1998* (OEBA) to enable the following measures:

- Enhancing and providing government funding for Rural or Remote Electricity Rate Protection (RRRP) through new enhanced rate protection for residential customers with high distribution rates
- Enhancing and providing government funding for the Ontario Electricity Support Program (OESP)
- Creating a new First Nation On-Reserve Delivery Credit and providing for government funding

Overview of RRRP and Broadened Distribution Rate Protection:

- Section 79 of the Ontario Energy Board Act would be amended to provide the Ministry the authority to prescribe, through regulation, classes of consumers whose cost would be transferred from the rate-base to the tax-base.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would prescribe Hydro One's R2 customers as receiving RRRP from appropriated funds effective July 1, 2017. This would fulfill the government's intention to transfer the majority of the costs of administering the RRRP program to the tax-base.
- In addition, Energy is proposing legislative amendments that would broaden rate protection by creating a new distribution rate protection program to complement RRRP. This new program would be funded through tax payers.
- Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution cost.
  - Proposed legislative amendments would enable a maximum monthly base distribution charge to established through regulations.
- If the proposed legislative amendments are approved, the government intends to prescribe by regulation both program details and the residential customers eligible for broadened distribution rate protection served by the following LDCs:
  - Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

Ontario Electricity Support Program:

- Proposed legislation related to the Ontario Electricity Support Program (OESP) would shift program funding from the rate base to the tax base.
  - Tax-based funding would only kick in once the existing OESP variance account is depleted, which is expected to happen in the fall of 2017.
- To allow for the existing program structure to stay in place until tax-based funding kicks in, proposed new legislation would only come into force via a proclamation Order in Council, on a date to be determined.
  - This would ensure that existing OEB authorities remain in place while ratepayer funding is being used.
- In addition, a new authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers to support increased participation in the OESP program among Ontario Works and Ontario Disability and Support Program clients would be put in place.

- Information Privacy Commissioner (IPC) staff were consulted, and customer consent is reflected.
- This information sharing component will come into force at Royal Assent, allowing OEB and MCSS to begin this process quickly, and support increasing OESP participation levels.

First Nations Delivery Credit:

- Energy is proposing legislative amendments that would establish a First Nation Delivery Credit for On-Reserve Consumers. This new program would be funded through tax payers.
- The proposed First Nation Delivery Credit would provide:
  - All prescribed on-reserve consumers with a credit for the entirety of their delivery line or with a credit for the monthly service charge.
  - The costs that are covered by the delivery credit are also described in legislation.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would:
  - Establish the class of customers eligible;
  - Determine what is considered on-reserve; and
  - Determine the method of calculating the delivery credit.

APPENDIX E: ANALYSIS OF FINANCIAL MODELS AND RISKS (UNDER DEVELOPMENT)

Treasury Board Secretariat received two models related to global adjustment refinancing.

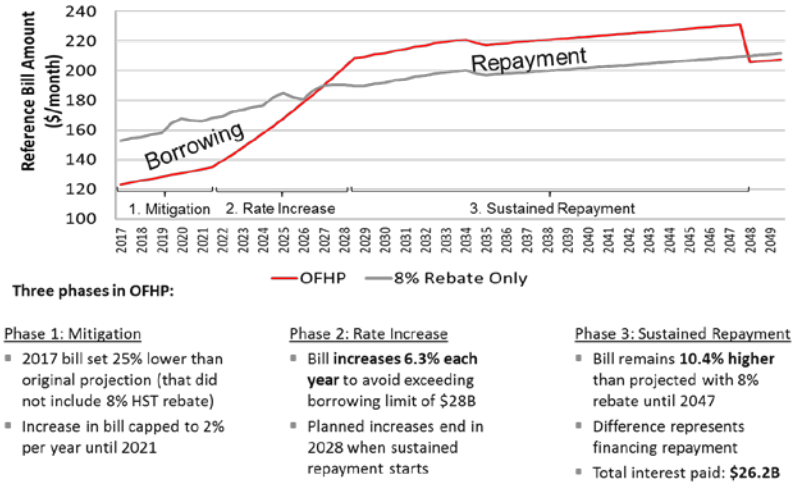
- The model the Ministry of Energy developed and used to support the March 2017 submission
- The financial model that was developed by the Ontario Power Generation (OPG) that provides details regarding the financing of the proposed structure

TBS staff noted the models received are based on high level aggregates and do not allow for running different scenarios that would allow TBS to determine the financial impact of potential changes in variables. In discussions with the Ministry of Energy and OPG, it has been agreed that these scenarios must be developed – both to help creation of a risk-based outlook for the province, as well as to respond to questions that will inevitably arise from the credit rating agencies.

- For example, the current model is based on a static interest rate of 5%. While this assumption is accurate within the current historically low interest rate environment, should interest rates increase above 5% after 2020, residential bills would also significantly increase during the repayment phase of the plan. For instance, if the interest rates increase from 5% to 7% (historical 30 year average) between 2020 and 2024, financing costs would increase by $11.2B (for a total of $37B), requiring much higher price increases in the out-years. Under this scenario, the increases required from 2022 to 2029 would be 7.3% annually (compared to 6.3% per year increases required under the base case) and the bill would remain 12.5% higher (compared to 10.4% in the base case).

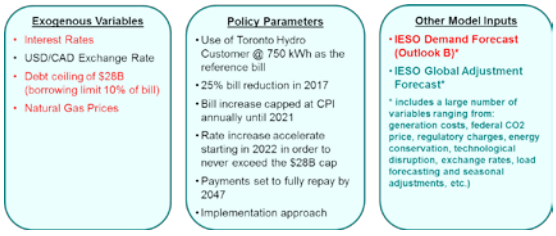
The OFHP can be thought of as having three phases:

The model is a high level and aggregate model, which is build on other independent forecasts (e.g. IESO demand forecast). There are a large number of assumptions built into the model explicitly and implicitly (as a large number of assumptions are embedded into the other forecasts that are used as inputs into this model).



Analysis is currently underway to better understand intergenerational costs and benefits and the impact of GA smoothing on recovery charges that would be allowed under the current Eurig compliance rules.

Depending on the legal determination, if the annual increases in bills or the commodity prices will be subject to caps, additional borrowing/provincial funding may be required.



With the shift of electricity social programs costs moving to being funded by government appropriations (Including the 8% rebate, total costs are forecast to be $1.4B in 2017-18), cost forecasting models/assumptions should also under go sensitivity analysis to inform future funding requests.

APPENDIX F: PROVIDING A CREDIT FACILITY TO IESO

After IESO's review of the proposed legislation, it has indicated to the Ministry and the Ontario Financing Authority (OFA)/MOF that IESO may need to cover clean energy costs if for some reason the Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. IESO noted that the proposed legislation does not compel the Trust to purchase 100% of the regulatory asset at anytime. Also, the establishment of the regulatory asset and purchase by the Trust is expected to take three to six months to implement following the introduction of enabling legislation.

The OFA currently provides a $975 million credit facility to the IESO for other purposes, it is proposed that the OFA provide a new credit facility to the IESO, in an amount of up to about $3 billion.

The use of this new credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO.

Approvals Required for OFA Financing

OFA indicates the recommended TB/MBC minute should note a new credit facility is being sought by the IESO to ensure that it has the flexibility to cover clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An order-in-council will be sought to allow the OFA to be able to provide the new credit facility to the IESO, for an amount to be determined as per the requirements of the Fair Hydro Plan.

The following approvals are required by the OFA to accommodate the request to provide financing to the IESO:

1) An Order-in-Council is required for the Minister of Finance to lend to the OFA.
2) A Directive from Minister of Finance is required for the OFA to on-lend to the IESO.
3) An executed credit agreement between the OFA and the IESO.

1. Order-in-Council (OIC)

An OIC is required to authorize the Minister of Finance to lend to the OFA. Ministry of Finance Legal Services Branch would need to be engaged to facilitate the request.

- The existing $975 million credit facility was covered under OIC 675/97 which authorized the Minister of Finance to lend a revolving $2.16 billion to the OFA. This OIC was originally obtained in 1997.

It is understood that upon drafting the OIC (by MOF Legal), the OIC would need final approval from Lieutenant Governor in Council LGIC as required under section 22(1) of the *Capital Investment Plan Act*, 1993.

- The OIC would go through Deputy Minister of Finance, Minister of Finance, Chair of Cabinet for briefing/sign-offs and finally to the LGIC for approval.

To draft the OIC, the following details will be required:

i. Dollar Value of Loan from the Minister of Finance to the OFA
ii. Maturity Date of the Loan
iii. Interest Rate of the Loan

The following are recommended to accommodate IESO's need for financing:

i. Dollar Value of Loan:
   $3 billion, as per request. The OIC would provide the maximum limit of any loan to IESO and it may be advisable to add a cushion and provide an OIC for $3.5 billion.

ii. Maturity Date of the Loan:
OIC maturing March 31, 2048 would provide approximately 30-year term to match the Fair Hydro Plan. It may be advisable to add a cushion and set a maturity date to March 31, 2053 (cushion of 5-years).

iii. Interest Rate of the Loan
Interest rates on the loans from the Minister of Finance to the OFA have typically been a 1) Ontario 90-day t-bill rates, 2) flow-through of the rates charged to the third-party by the OFA and/or 3) the rate charged to the third-party by the OFA less 25bps.

OFA recommends to keep this unchanged to provide consistency with past OICs but also to provide flexibility in the rates that could potentially be charged to IESO, to be determined by the Minister of Finance, by way of the Minister's Directive.

2. Minister's Directive

Once the Minister of Finance has the authority under an OIC, a Minister's Directive can authorize the OFA to lend to IESO. The Directive can outline specific terms and conditions as needed.

3. Executed Credit Agreement

With a Minister's Directive approved, the OFA and IESO can work to execute a credit agreement, subject to any terms and conditions of the Directive and any policy considerations.

APPENDIX G: FINANCIAL, LEGAL, ACCOUNTING RISK ASSESSMENTS

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

OFHP Legislation

The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in the electricity system are allocated fairly among present and future generations of consumers. Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the (GA), including:

- Fair Allocation Amount: Is a calculation and allocation of clean energy costs over time. It is expected that the calculation would lead to decreased rates in the near term with rates higher than forecast in the long term. The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager (OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
- Fair Adjustment: Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for the period July 1, 2017 to April 30, 2018. Under the legislation, the OEB must determine the amount within 15 business days of the legislation coming into force. The Fair Adjustment also allows the Lieutenant Governor in Council (LGIC) to make regulations prescribing electricity rates for the period May 1, 2018 to June 30, 2021.
- Clean Energy Adjustment: Is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period. This is an adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing. IESO and each electricity distributor will act as an agent for the financing entity to impose, invoice and collect the clean energy adjustments.

The Ministry has prepared legislation and regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recoverable.
- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

In particular, the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost. Key elements that support this financing structure include:

- OPG issuances of subordinated debt to the SPV/Trust representing up to 49% of total borrowing; and
- Conditional (springing) guarantees by the Province to provide a backstop in the event of specific and limited events (e.g., changes to legislation that harm investor interests).

Note: The ability to finance and the cost of financing will only be known with certainty once OPG takes this structure to market.

OPG Financing / OPG Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The proposed legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected over four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a “Regulatory Asset”.

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.
- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG’s capital structure:

- OPG would require monthly “equity injections” from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;
- Funds from the Province would flow from the Ontario Financing Authority (OFA); and
- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.
- It is anticipated that the initial equity injection would take place as early as June 2017.

Through PRRT, the Ministry of Energy received approval for the creation of an operating asset ”OPG Share Purchase” and expenditure increase of $1.1billion in 2017-18 within Vote 2905-5, which is based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty. This approval is pending passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG’s business plan process. Note: While included in the business plan, equity requirements will not form part of the Ministry of Energy’s concurrence process.

For future funding requirements, the Ministry will seek appropriation through the PRRT process.

OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV / Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

In addition, given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term.

- Should electricity demand be higher than forecast as a result of greater electrification, the cost of paying off the debt will be spread over a greater pool of consumption and decreasing future costs for individual ratepayers. Note: The reverse is also true in regards to decreasing demand.
- Should interest costs increase from the assumed 5%, total borrowing costs would rise. Given that this is a unique offering, managing investor confidence will be key to ensure borrowing costs don't rise. Note: The reverse is also true in regards to interest rates being lower than assumed.

IESO's Credit Facilities

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, IESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The proposed legislation establishes mechanisms to enable the funding, sale and transfer between IESO and OPG that respond to the accounting requirements and advice outlined in the March 1, 2017 Cabinet Submission, such as concerns regarding consolidation by the Province.

Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This satisfies accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

KPMG

The Ministry has worked closely with the Independent Electricity System Operator (IESO) and KPMG on the accounting considerations of GA Refinancing (i.e., legislation, applications of accounting standards/principles, minimizing consolidation risks and ability to establish a regulatory asset).

In particular, the proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. Key elements include:

- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset".
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.

In addition, KMPG provided some commentary on the accounting requirement for the "derecognition" of the regulatory asset once it's sold to OPG SPV/Trust. KPMG advised that the regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG

The Ministry has worked closely with the Ontario Power Generation (OPG) and E&Y, on the accounting requirements to enable GA Refinancing with respect to consolidation (i.e., legislation, applications of accounting standards/principles, establishing a special purpose vehicle (SPV) / Trust).

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.

- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.
- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.

Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:

- The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
- If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
- By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
- The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill provides for provincial assurances, guarantees and a statutory cause of action.

The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
- The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted. **A statutory cause of action** may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry retained Blakes to provide external legal advice in the development of the legislation.The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

Navigant Analysis

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. Specifically, Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

APPENDIX H: OVERVIEW OF RISKS

Prepared by TBS staff, the following chart provides an overview of strategic (versus operational) risks to inform the approval/decision making process regarding the proposed legislation. Each part, GA Partial Refinancing & Electricity social programs, is a separate table.

Global Adjustment Partial Refinancing:

Objective: Provide immediate ratepayer relief by capping rate increases at Consumer Price Index (CPI) for four years and refinancing GA costs over a longer period of time. Develop and implement a financing structure that increases provincial borrowing, but has no impact on annual provincial surplus/deficit.

Risk	Level of Risk	Risk Response
The determination of the appropriate legal and accounting treatment to be applied to the financing model may result in the costs of GA smoothing being allocated to the province.	**Risk Likelihood:** Possible **Risk Impact:** Critical **Time Scale:** 6 to 12 months **Rationale:** • The structure of the GA deferral was designed to result in an increase in provincial borrowing, no increase in net debt and no impact on surplus/deficit. • The proposal assumes GA refinancing does not have a fiscal impact because the legal authority and accounting treatments are met. • If a favourable legal and accounting treatment is not implemented, there would be a negative impact on the province's fiscal plan of $2.5B in 2017-18 and rising. • Rating agencies and investors in Province's debt may view all of the borrowing as an obligation of the Province, which could put pressure on the Province's credit rating and overall borrowing capacity. • Proposed structure may result in negative response from Ontario Auditor General (OAG) due to previous concerns regarding recognition of rate regulated assets and liabilities. The OAG may take this into account when the provincial books are audited. • Initial assessment of the accounting considerations suggests that the proposed model is in alignment with established accounting standards.	Risk can be mitigated by: • Commissioning external opinions on the legal, fiscal and accounting requirements, which could be used by the Province to justify structure of financial model and be utilized in discussions with the OAG.

Risk	Level of Risk	Risk Response
Uncertainty in the financial model due to dependence on assumptions that are subject to potential volatility may result in higher than anticipated future costs for rate payers and the province.	**Risk Likelihood:** Likely **Risk Impact:** Major **Time Scale:** More than 36 months **Rationale** • The financial model developed is a high level and aggregate model, which is built on independent forecasts. There are a large number of assumptions built into the model explicitly and implicitly (as a larger number of assumptions are embedded into the other forecasts that are used as inputs into the model). • The proposal financing structure will accrue total interest of about $26.2 billion, which is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the financial impact of potential changes in variables used in the financial models. • Building permissive language in the legislation and regulations to allow for timely course correction mechanisms (i.e. higher payment amounts and/or rate increases) • Regulations to prescribe the methodology to be applied by the Ontario Energy Board (OEB) to determine electricity rates in response to potential deviation from forecasted financing plans.
A legal determination that the Province is spreading the costs of GA financing in order to lower the price in the short term by increasing the price in the long term may result in the GA charge characterized as a tax and deemed unconstitutional.	**Risk Likelihood:** Medium **Risk Impact:** High **Time Scale:** Long-Term (More than 36 months) **Rationale** • If characterized as a tax, the GA charge could be subject to legal challenge and struck down as unconstitutional, allowing consumers to recover their payments. • Likelihood dependent on the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year. The bigger the reduction in charges to current consumers, the higher likelihood of the risk being realized. • Internal and external expertise have provided opinion that the proposed structure is constitutionally sound in the short-term (2017-18), but the likelihood of the risk increases in the proceeding four years, which will impact commitment to keep rate increase in line with CPI. • If annual increases in bills or the commodity prices are subject to caps, additional borrowing/provincial funding may be required.	Risk can be avoided by: • Imposition of a valid tax. • Change in policy (i.e. allow greater rate increases during the remainder of the rate mitigation phase and higher increases and payment amounts throughout rate increase and payment phase). • Use of public funds to ease pressure. Risk can be mitigated by: • Improve forecasting model and close monitoring of costs and changes in variables built into model. • Analyze the costs and benefits of the long lived assets (specifically usability beyond a 20 year period) to assist in determining a supportable GA deferral structure. • Draft legislation with built-in provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court.

Risk	Level of Risk	Risk Response
Financing the costs of GA smoothing through OPG SPV/Trust and the volatility of interest rates may increase the cost of GA smoothing and/or require additional provincial funding.	**Risk Likelihood:** Possible **Risk Impact:** Moderate **Time Scale:** 12 to 24 months **Rationale** • The proposed structure will be reviewed by credit agencies to allow OPG to borrow in the open market. Depending on assessment, there may be an impact on interest rate for borrowing, the amount of equity/funding the province may need to provide and the requirement for a provincial guarantee. • As the OPG SPV/Trust will be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • If the Trust can't raise the full funding requirements, additional cash injections would be required. If the borrowing cap of $28B is reached sooner than forecast, the province may have to provide incremental funding to float the program to 2047. • Beyond 2022, when steep increases are required, there will likely be additional pressure on the government to offset a part of the scheduled increases. • Risk that credit rating agencies may perceive OPG SPV/Trust's borrowing as debt supported by Province, impacting Province's ratings and cost of borrowing.	Risk can be avoided by: • Province providing a potential guarantee for the cost of borrowing – however, would redirect risk back to the Province and negate benefits of proposed financing structure. Risk can be mitigated by: • Equity injections from the province to support OPG as the owner and manager of GA refinancing and allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • Proposed legislation to enable GA refinancing has been draft with input from third-party financers. Provides a 'narrow' provincial guarantee and ensuring that debt holders have the right of action against a future government to recover the amount outstanding including interest, fees, expenses and any damages.

Electricity social programs (Enhancing Electricity Support & Conservation Programs):

Objective: Shift funding of existing and new electricity support programs (RRRP, OESP, Affordability Fund, First Nations Credit) from rate to tax base.

Risk	Level of Risk	Risk Response
Uncertainty in forecasting due to exposure to changes and/or volatility (i.e. interest rates, electricity usage patterns, and distribution costs) may result in higher than anticipated fiscal impacts for the Province.	**Risk Likelihood:** Possible **Risk Impact:** Major **Timescale:** 12 to 24 months **Rationale:** • The energy sector is complex and a number of key assumptions used as inputs into forecasting model are variables/forecasts themselves, resulting in a high inherent risk that cost estimates are inaccurate. • Fiscal projection is highly dependent on factors which can fluctuate from year to year, including: o electricity usage; o distributions costs; and o consumer consumption patterns that may change due to extreme weather or other factors. • Fiscal projection is subject to knowledge of future distribution costs and dependent on submission of cost of service applications by Hydro One and LDCs. o Enhanced RRRP may create disincentives from the eligible LDCs towards productivity and performance improvements and/or cause ineligible LDC's to drive up distribution costs to gain access to program.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the financial impact of potential changes in variables used in the financial models.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET

REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – March 1, 2017	**Tracking to:** LRC at Cabinet – March 10, 2017

SUBMISSION TITLE: Report back on Ontario Fair Hydro Plan Legislation

Prepared without draft submission

I. DECISION BEFORE THE BOARD

Receive a report back on Ontario Fair Hydro Plan implementation, and recommend the proposed Ontario Fair Hydro Plan Act to proceed to LRC and Cabinet for approval.

II. RECOMMENDATIONS:

• Receive a report on proposed legislation o Note key aspects of proposed legislation o Recommend proposed legislation	*Board Judgement*
• Direct the Ministry to return to TB/MBC with regulations support implementation prior to going to LRC. • Note outstanding report back requirements, • Direct in-year reporting through quarterly reporting and PRRT planning process on spending to date versus funding allocation for Social Programs and Global Adjustment Refinancing	

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Affordability Fund	0.0	0.0	0.0
	Global Adjustment Refinancing*^	0.0	0.0	0.0
	Social Programs*	499.0	753.0	829.0
	Ontario Rebate for Electricity Consumers	939.0	882.0	882.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

* Subject to enacting proposed Ontario Fair Hydro Plan legislation.

^ As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget, linked to proposed legislation

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017 the Ministry received TB/MBC approval for additional rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016 for an average household in 2017. The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017. This submission deals with two key parts of the OFHP:

- Refinancing Global Adjustment (GA) to partially defer RPP eligible ratepayer GA costs (Implementing a non-fiscal impact approach over government funding).
- Expanding, enhancing ratepayer funded social programs and shifting them to being government funded (OESP, RRRP), along with a new government funded On-Reserve First Nations Delivery Credit.

The Ministry was directed to report back to the Board with proposed legislation supporting OFHP implementation, including the following specific direction regarding a non-fiscal mechanism (approach) to refinance Global Adjustment costs (Appendix C provides the March 1, 2017 minute):

- Formal accounting opinions from OPG and IESO auditors.
- Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
- Report on the multi-year profile of GA smoothing, identifying specific assumptions.
- Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
- Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two components (Appendix D provides details of each part):

- Part 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment refinancing)
- Part 2: Legislative amendments for social programs

<u>Part 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment refinancing)</u>

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

The Ministry indicates under OFHP, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017 (This includes the 8% Ontario Rebate for Electricity Consumers). In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Reflecting March 2017 approvals (See Appendix C for March 2017 TB/MBC minute), proposed legislation for GA Refinancing is designed to establish a non-fiscal impact mechanism. Minuting indicated proceeding with GA Refinancing requires completed legal, accounting and financing risk assessments.

The proposed approach to GA Refinancing is complex. Appendix D provides a more detailed narrative. Appendix E provides proposed legislative details.

- At a high level, the proposed legislation establishes the framework to refinance a portion of the current GA costs to future ratepayers by recognizing the longer term benefit many of these generating assets to the electricity system. The methodology is based on the assumption that some assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets in the future.

The bill establishes a structure in which the Independent Electricity System Operator (IESO) records the GA cost recovery deferral as a "regulatory asset" (regulated by the Ontario Energy Board (OEB)). "Specified consumers" would receive, on average, a 25% reduction in electricity rates from July 1, 2017 to June 30, 2018. The IESO may then sell the regulatory asset, at which time it becomes an "investment asset." The investment asset owner (OPG Trust/Special Purpose Vehicle (SPV) or "financing entities") may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation (backstopped by guarantees from the province).

Starting in July 2021, to recoup the costs associated with the fair adjustment, consumers would be invoiced the Clean Energy Adjustment on their electricity bills through existing IESO and Local Distribution Companies (LDC) processes, which will be channeled through to pay each financing entity's related funding obligations.

Part 2: Legislative amendments for social programs

Social programs becoming government funded under OFHP target residential electricity customers disproportionately affected by increased electricity costs.

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001. The legislative proposal enables, through regulation, the transfer government funding of the program costs for Hydro One's R2 customers from the ratepayers.

- R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province.

Appropriated funds would be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the government funding provided.

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

Proposed legislation will enable government funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates for consumption on or after July 1, 2017. If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in

the province (as well as six additional higher-distribution cost LDCs).

Proposed legislation enables the establishment of a maximum monthly base distribution charge for those prescribed customers. If the proposed legislation is passed, the mechanism to set this charge will be established in regulation. LDCs and eligible customers would be prescribed in regulation. The Ontario Energy Board would be empowered by regulation to determine the rate at which affected LDCs would be harmonized.

- The legislation contains retroactive application of the provisions to offset any potential lapses in implementation and ensure that consumers receive the benefit following the July 1st effective date through to the final effective date of October 1st, 2017.

On-Reserve First Nations Delivery Credit

On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The proposal is premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program proposal involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation. LDCs will need to enter into communication plans in order to work with local First Nations Band Councils and to spread awareness of the delivery credit to all eligible consumers.

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program to being government funded, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid by all Ontario consumers on May 1, 2017. On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will come into effect on May 1, 2017.

The amendments to the *Ontario Energy Board Act, 1998* pertaining to OESP will move the program to being government funded, and enable alignment of the OESP with social assistance programs delivered by the Ministry of Community and Social Services.

A legislative amendment to the *Ontario Energy Board Act, 1998* will allow shift to government funding. The amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

Financials

March 1, 2017 TB/MBC approvals supporting OFHP included full year projected costs. The 2017 Ontario Budget included refined projected costs shifting expanded/enhanced social programs from ratepayers to being government funded starting in 2017-18, lowering the total amount from $665M to $499M to reflect

rollout timing (not full year costs). The table below shows expense amounts currently in the PRRT multi-year fiscal plan related to these support programs for the most vulnerable consumers.

Government Funded Social Programs ($million)	2017-18	2018-19	2019-20	2020-22
Rural or Remote Rate Protection (RRRP)	344	472	484	497
Ontario Electricity Support Program	140	261	325	375
On-Reserve First Nations Delivery Credit	15	20	20	20
Total	**499**	**753**	**829**	**892**

Regarding GA refinancing, the 2017 Budget also includes an investment operating asset of $1.1B related to the Province's equity injection to OPG, enabling the OPG Trust to regularly purchase IESO's regulatory asset through 2017-18. The structure would increase gross debt of the Province (to finance the equity injection in OPG), increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. The Province's net debt will remain unchanged as the equity investment in OPG would offset the additional Provincial borrowing.

- OPG intends to use a Special Purpose Vehicle (OPG Trust) to purchase the "right to collect" assets from the IESO in return for cash. OPG Trust will be structured to finance 51% of its funding requirements through the capital market with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed though debt from the capital markets (about 5%) and through equity injections from the Province (44%).

  Projected annual amounts of GA deferrals (i.e., the regulatory asset) are shown below and not part of the province's fiscal plan.

($million)	2017-18	2018-19	2019-20	2020-22
GA Refinancing - Residential Bills lowered by 25%	2,534	2,668	2,942	3,420
Interest Portion (5% annually, compounded monthly)	32	162	298	449

Under GA refinancing, ratepayers will incur interest costs and will be added to the GA payments ratepayers make.

Central Agencies staff note the following risks:

GA Refinancing

- The structure is unique in Canada, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the United States, Ministry staff are unaware of any example that would compare to the size, complexity, or fluidity of what is proposed.
- Complexity of the structure and length of deferral/recovery increases risk and decrease transparency.
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan.
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG's direct operations as the Financial Services Manager. Removal of the Financial Services Manager is provided for in the bill, in practice this may prove problematic once the system is operational.
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and therefore its saleability. This could in turn, decrease the amount of rate reduction achievable under this mechanism.
- If the government intends to keep rate increases to the pace of CPI from 2018 to 2022, this may require recourse to the fiscal plan to maintain the constitutionality of the GA refinancing structure.
- There is inherent risk in the financial estimates given the number of variables that are included in the calculations (e.g. cost of borrowing, electricity demand and electricity market conditions and

accounting assumptions). In addition, electricity prices are forecast to exceed forecast residential monthly bills by about 10 per cent each year from what otherwise would have been from 2028 to 2047. Additional work needed to enhance data modelling to determine the financial impact of potential changes in variables. See Appendix

- The public may expect that the government is committed to reducing or holding constant the absolute cost of electricity for consumers in the longer term. Under the mechanism, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future (See page 17- Fiscal Pressure).
- The proposed legislation also provides that no action or omission by the OEB, the Minister, or the Crown is effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay the clean energy adjustment. Additionally, to support the program, Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be to achieve the highest rated securities, although that will depend on issues such as the strength of the Ontario's undertakings not to adversely affect the program through subsequent legislation.

    - The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future

External Opinions – Under Development

- Former Supreme Court Justice Ian Binnie has provided a legal opinion which concludes that the current proposal is at a moderately high risk of being a tax. The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.

  If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).

  By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

The Ministry indicates the risk identified by Mr. Binnie could be eliminated, either up front or retroactively, by the imposition of a valid tax. Risk assessments would need to consider the implications of this kind of change.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Receive the report back on proposed legislation supporting implementation of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

i) Note that the proposed Fair Hydro Act, 2017, includes:

Social Programs:

a) Establishment of new programs
b) Note shift from electricity consumer funding to funding out of voted appropriations for rate protection and OESP
c) Note for OESP, if proposed amendments are passed, the Ministry does not intend to seek proclamation of them until the IESO variance account is close to wound down.

Global Adjustment Refinancing:

a) Establishing the fair adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
b) Requirement for future consumers to pay the clean energy adjustment that backs financings
c) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
d) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
e) Setting out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights
f) Sets out that that security interests can be granted in investment interests in the investment asset

ii) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

iii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC.

In this regard,

a) Direct the Ministry to include a report on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates
b) Direct the Ministry to report back with final program details for 2017-18 for GA Refinancing and Social Programs, including fiscal plan implications.

Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

   - Current program outcomes identified and results achieved to date.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**

	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX D: OVERVIEW OF MINISTRY'S REPORT BACK ON OFHP INITIATIVES

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would reduce the electricity bills of residential consumers by 25 per cent on average starting in summer 2017. In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and bend the future cost curve of electricity (see Background for details).

On April 20, 2017, the OEB announced that it has adjusted the Regulated Price Plan (RPP) rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing. The Ministry anticipates that the OEB will set an interim rate adjustment following the passage of the proposed legislation to enable GA Refinancing that would account for the full impact (i.e., 25 per cent).

The Ministry's report back to TB/MBC focuses on the following OFHP initiatives:

1) GA Refinancing:

As part of OFHP, it was announced that a portion of the GA would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The proposed legislation establishes the framework to defer some of the current Global Adjustment (GA) costs to future ratepayers by recognizing the longer term benefit of these assets to the electricity system. The methodology is based on the assumption that some generation assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets, and that they will also reduce the need to finance the development of new generation assets in the future. Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives can provide benefits to the electricity system over many years.

The bill establishes a structure in which the Independent Electricity System Operator (IESO) records the GA cost recovery deferral as a "regulatory asset" (regulated by the Ontario Energy Board (OEB)), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time ("the Fair Adjustment" and "IESO deferral"). "Specified consumers" would receive, on average, a 25% reduction in electricity rates from July 1, 2017 to April 30, 2018. The IESO may then sell the regulatory asset, at which time it becomes an "investment asset." The investment asset owner (OPG Trust/Special Purpose Vehicle (SPV) or "financing entities") may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

The Minister, following the principles in the bill, would regularly calculate the "Fair Allocation Amount" to ensure a proper match of the allocation of the intergenerational costs and benefits in relation to each on the next 60 six month "reference periods." The financings will be backed primarily by the clean energy adjustments payable by specified consumers. The "clean energy adjustments" will track the actual payment obligations incurred by the financing entities when they become due and payable. OPG, in its role as the Financial Services Manager will calculate the aggregate clean energy adjustment payable in each month of the reference period, and to ensure intergenerational fairness, these amounts will be managed to align with the fair allocation amounts determined by the Minister. The OEB would set the rates at which the clean energy adjustment could be collected from specified consumers. Starting in May 2022, to recoup the costs associated with the fair adjustment, consumers would be invoiced the Clean Energy Adjustment on their electricity bills through existing IESO and Local Distribution Companies

(LDC) processes, which will be channeled through to pay each financing entity's related funding obligations.

OPG is planning to create a SPV or Trust to finance the GA smoothing. To maintain the integrity of the structure, OPG must have the ability to appoint and remove the Trustee (or Board of Trustees) of the SPV/Trust, with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV/Trust. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. OPG will have the ability to direct the financing of the SPV/Trust and both benefit from its financing strategy and be at risk as a result of it.

Once the OPG Trust/SPV has purchased the regulatory asset, which is under no obligation to do, it will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province through the OFA [TBC] and external financing through sale or securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG (to offset the interest on debt).

The legislation also provides that no action or omission by the OEB, the Minister, or the Crown is effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay the clean energy adjustment. Additionally, to support the program, the Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be to achieve the highest rated securities, although that will largely depend on issues such as the strength of the Ontario's undertakings not to adversely affect the program through subsequent legislation.

The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time, but could be as high as $2-3B annually [TBC]. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future.

Key elements of this component of the bill include:

<u>Specified Consumers:</u>

- The defined group of consumers to whom the "Fair Adjustment" applies. Primarily residences, farms and small businesses under the RPP.

<u>Fair Adjustment</u>

- The adjustment to rates, starting on July 1, 2017, to ensure intergenerational fairness.
- July 1, 2017- April 30, 2018- 25% average reduction in rates for "specified consumers."
- May 1, 2018- April 30, 2022- the bill allows for rates to be set by regulation (See page 17- Fiscal Pressure).

<u>Fair Allocation Amount</u>

- Principles established in the bill require proper match over time between the costs of providing facilities for clean electricity generation and conservation "clean energy costs" and the consumers who benefit from these investments in the system.
- The Minister sets the fair allocation amount, and is required to:
    - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the "specified consumers" for applicable "reference periods" (typically every 6 months); and

- Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers)(Page 16- Legal Risk; See page 17- Fiscal Pressure).

Clean Energy Adjustment

- Determined by Financial Services Manager (OPG), the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principle, interest, transaction costs and administrative costs associated with the fair adjustment and consistent with the fair allocation amount.
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- July 1, 2017- April 30, 2022- OPG to internally capitalize the costs related to the fair adjustment, which will result in increased financing costs during this time.
- May 1, 2022- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing IESO and LDC processes.
- In accordance with the regulations, the OEB to set the rate at which specified consumers are invoiced to recover the clean energy adjustment.

Regulatory Asset and Investment Asset

- A regulatory asset is created as IESO defers its right collect a portion of the rates that it would have otherwise would have received from customers/LDCs if not for the implementation of the Fair Adjustment.
- Subject to OEB approval, IESO records the funding shortfall as a regulatory asset, as IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until May 1, 2022.
- The Financing Plan contemplates the Financial Services Manager (OPG) establishing financing entities (OPG Trust/SPV) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.
- This purchase and sale turns the regulatory asset into an investment asset for the investment asset owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests including by dividend or undivided interest, consistent with the Financing Plan. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 5 years (May 1, 2022) the IESO has the right to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority (OFA) (See page 17- Fiscal Pressure).
- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

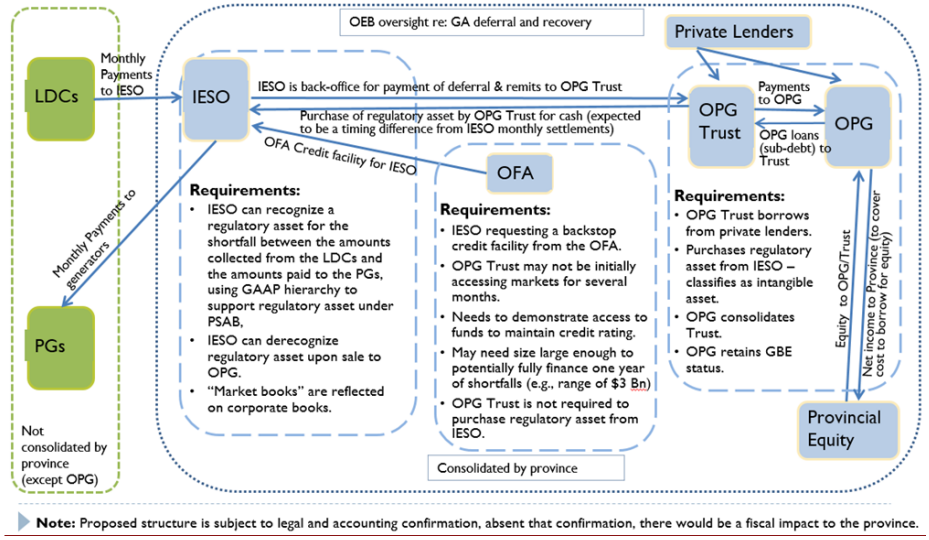
Financing Plan

- In practical terms, the Financing Plan is intended to show how debt (with varying degrees of incurrence dates, maturities, interest rates) will be used over time.
- Prepared by the Financial Services Manager (OPG) the Financing Plan is intended to set out when a “funding obligation” (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the “investment interest” from IESO.
- Provided to the Minister Energy who may remove the Financial Services Manager if the Financing Plan is not consistent with the principles of the bill and the Financial Services Manager has been given the opportunity to address the Minister’s concerns.

Crown Undertaking (Guarantee or Backstop)

- The bill provides that no action or omission of the Crown, the OEB, or the Minister would be effective to reduce, impair, or postpone or terminate the obligations of specified consumers to pay the clean energy adjustment.

- The Ministers of Energy and Finance together, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill, including agreements regarding the performance of the IESO or electricity vendors under the bill.
- The Ministers of Energy and Finance together, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.



Financing, Accounting and Legal Risk Considerations / Mitigations

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

Legislation
Proposed legislation to enable GA refinancing has been draft with input from third-party financers (i.e., dealers). OPG plans to borrow a small portion of the 49% from the market. This amount has not yet been finalized, but could represent up to 5% of the total financing requirement.

The proposed legislation sets out that the province would provide assurances in the form of a narrow provincial guarantee to OPG and investors regarding the permanence of the GA Refinancing framework. *… pending language on assurances*

Despite the assurances provided in the legislation it is still possible that the full value of the Regulatory Asset may not be purchased.

Commented [JS1]: Risk

[Placeholder comment for OFA/TD re financability]

OPG's Equity Financing

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

Under the proposed legislation, the mechanisms to enable this right and transfer of rights are the "Regulatory Asset" and "Investment Asset".

- IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.
- The Province will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG's capital structure:

- OPG would require monthly "equity injections" from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;
- Funds from the Province would flow from the Ontario Financing Authority (OFA); and
- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.

It is anticipated that the initial equity injection would take place as early as June 2017. To facilitate these ongoing equity injections, the Ministry of Energy, through the PRRT process received approval for the creation of an operating asset "OPG Share Purchase" in Vote/Item 2905-5 ($1.1billion in 2017-18, based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty). This approval is linked to passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG's business plan process. While included in the business plan, equity requirements will not form part of the Ministry of Energy's concurrence process. For future funding requirements, the Ministry will seek appropriation through the PRRT process.

<u>IESO's Credit Facilities</u>

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, ESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or the entire regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds. To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

The proposed legislation sets out that the OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This, the Ministry indicates, satisfies the accounting emphasis on having OEB oversight in the establishment of the Regulatory Asset.

[Placeholder comment regarding E&Y and KPMG accounting commentary / opinion/ letter]

Legal

…pending…

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The proposed legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

If passed, the government proposes to identify Hydro One R2 customers, as having their RRRP funded through appropriated funds.

Distribution Rate Protection

New Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, would be established through proposed legislative amendments under the *Fair Hydro Act, 2017,* and the creation of consequential regulations. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

On-Reserve First Nations Delivery Credit

Eligible on-reserve customers will receive a 100% delivery credit or the elimination of their monthly service charge on their electricity bills. The eligibility requirements will be prescribed under regulation.

Ontario Electricity Support Program (OESP)

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.

OESP credits vary by income level and family size, and there are two credit scales that include:

- The basic program credit ranges from $30/month to $50/month.
- An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or use certain electrically intensive medical devices.

Ontario's Fair Hydro Plan (OFHP) committed to move the program from the rate base to the tax base, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

The proposed legislative changes will address the move to the tax base, and regulatory changes approved by Cabinet on April 10, 2017 will enable the expansion of the OESP effective May 1, 2017. Discussions are ongoing with the OEB and MCSS on aligning OESP delivery with other social assistance programs.

Roles and Responsibilities

Rural or Remote Rate Protection

The roles and responsibilities of the Board remain the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The Board (TBC?) would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

The Ministry expects the need to appropriate money from the legislature to cover the costs of administering the program.

Commented [JS2]: Fiscal pressure

On-Reserve First Nations Delivery Credit

The Ministry would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers. In addition, The Ministry would need to work with LDCs, Chiefs of Ontario and Band Councils to ensure the program is delivered to all eligible consumers.

Ontario Electricity Support Program

The OEB will continue to the deliver the OESP under the current legislative framework until the variance account is depleted. When legislative changes to shift the program from the rate base to the tax base are proclaimed, the OEB will continue to administer the program, but certain decision making responsibilities and oversights will shift to the Minister of Energy.

MCSS will begin supporting OESP uptake by helping social assistance clients to apply to the OESP. Legislative and regulatory changes will enable this work.

The IESO will continue to manage payments to utilities, unit sub-meter providers, and the OEB in relation to OESP credit delivery and program administration costs. When legislative changes are proclaimed, IESO will begin reporting costs to the Ministry to support forecasting and audit.

3) ICI Expansion:

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and “1114”) in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

In addition, the Ministry has retained the OCC and the CME to undertake targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants.

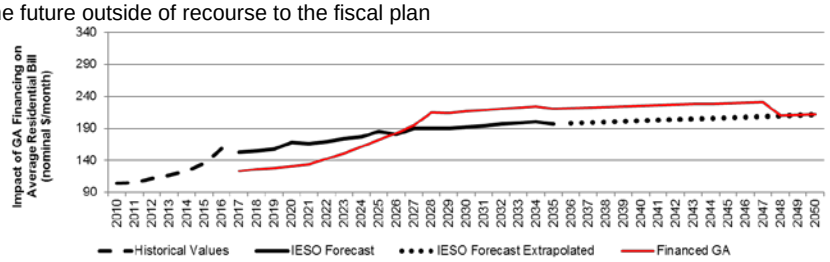
- The extent of the impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

Bill Impacts

The impact of proposed legislation to an eligible customer’s bill in July 2017 is an average 25% decrease combined with the 8% from ORECA effective Jan. 1, 2017 and shifting of the funding of OESP and RRRP to provincial revenues), followed by an increase in price over time. Between May 2018 and June 2021 electricity rates will be set by regulation with the intention that rate increases would be kept in line with CPI. Customers that are eligible for the RRRP enhancement, OESP, and the First Nations On-Reserve Delivery Credit will see further reductions in their electricity rates beyond the average 25% (as much as 40-50%).

Future impacts on Electricity Rates

Borrowing money to refinance GA costs for ratepayers would lower costs in the short term but result in substantial debt and higher electricity prices in the future. Based on the GA deferral portion of the plan, electricity prices would increase to about 10% [TBC] above the forecast cost of electricity which would have otherwise been paid over the recovery period (peaking at 13% [TBC]). The proposal may create the expectation that the government is committed to reducing or holding constant the cost of electricity for consumers. The government would not have the ability to control this portion of electricity rates in the future outside of recourse to the fiscal plan



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at a maximum of 13% of total bill. IESO forecast is based on IESO’s revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. [TBC]

APPENDIX E: PROPOSED FAIR HYDRO ACT OVERVIEW

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two components:

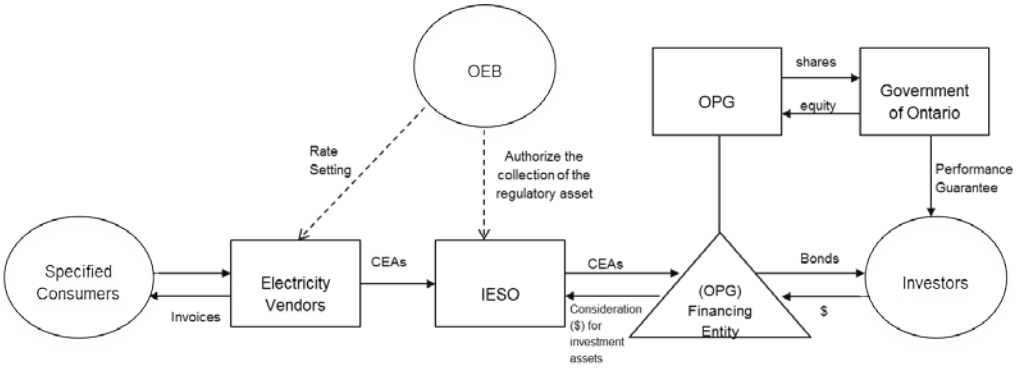
- Part 1: Legislation to provide for the fair allocation of costs of electricity over time (Dealing with Global Adjustment (GA) refinancing).
- Part 2: Legislative amendments for social programs (See Appendix D1)

The Ministry has provided the following overview of the proposed legislation:

Part 1: Legislation to provide for the fair allocation of costs of electricity over time (GA refinancing).

Legislation is based on the principle that the costs incurred to move to a clean, modern and reliable electricity system (Clean Energy Initiative) creates benefits that will be experienced by multiple generations of Ontario ratepayers and, therefore, in the interest of fairness, those costs should be shared by those multiple generations.

The legislation does two things: (i) it establishes the fundamental elements of the fair allocation program, and, (ii) it puts the mechanisms in place to permit the financing of periodic shortfalls in revenue that are created by the fair allocation of electricity costs over multiple generations.



Note: CEAs are "clean energy adjustments"

Clean Energy Costs and Benefits:

- The costs included in the "clean energy costs" include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act* (the Global Adjustment provisions) which relate to contracts for:
  - Renewable energy generation or capacity
  - Conservation and demand management, including shortage
  - Energy efficiency
  - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act* or as prescribed); and
  - Payments made under section 78.5 of the *Ontario Energy Board Act.*

- Other such costs to be included in “clean energy costs” may be prescribed
- These are the costs to be distributed fairly among the specified consumers through the “fair allocation amount”.

Fair Allocation Adjustment:

- Part II establishes that the rate that will be payable by “specified RPP consumers” from May 1, 2017 to April 30, 2018 for the first fair adjustment is the rate that would be required from this program to contribute to that consumer to receiving a total a monthly invoice amount that is 25 per cent lower than the monthly invoice amount for that consumer under the “comparison rate”. The comparison rate is a rate to be determined by the OEB using the method prescribed by regulation under s 79.16(1)(b) of the OEB Act.

- Part II includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program (i.e., adaptation of invoices must be implemented by August 1, 2017 followed by a subsequent lump sum credit to the consumer once the invoice is adapted).

- The Lieutenant General in Council is given the authority after April 30, 2018 to make regulations prescribing the rate for electricity (and therefore prescribing the “fair adjustment” until June 30, 2021). After June 30, 2021, regulations will have regard to the fair allocation amount and clean energy adjustments.

- The Minister sets the fair allocation amount.

    - The establishment of the “fair allocation amount” is required to,
        - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the “specified consumers” for applicable “reference periods”; and
        - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers).
    - The “fair allocation amount” is to have regard to:
        - Clean energy costs and allocating the appropriate proportionate amount of the clean energy benefits to the “specified consumers” (in the applicable “reference periods”);
        - Reasonable assumptions regarding the time value of money, the number of consumers in the “reference period”; and
        - Expected electricity consumption for the reference period.

Regulatory Asset and Investment Asset:

- IESO will have a funding deferral resulting from the reduction in amounts collected from specified consumers during the first 4 years because of the fair adjustment. The IESO’s funding deferral will be financed indirectly through the debt capital markets.

- The Act enables the financing of this IESO funding deferral, on an ongoing basis, by establishing the funding deferral as a “regulatory asset”. In simple terms, the regulatory asset is IESO’s right to recover the revenues that it has deferred collecting.

- IESO will then legally transfer portions of this right to recover revenues to the (OPG) financing entities.

- The (OPG) financing entity that receives the transfer of the right to recover revenues acquires a right to impose, invoice and collect those regulatory charges (called the "clean energy adjustments"). This is generally described in the legislation as the "investment asset".

- The (OPG) financing entity will need to finance its acquisition (from IESO) of the investment asset, and it will do so in the capital markets.

Issuance and Payment of Debt:

- Debt securities and related funding obligations will be incurred by one or more (OPG) financing entities. These entities will be managed by OPG, as the financial services manager.

- The financings will be backed primarily by the "clean energy adjustments" payable by specified consumers. The "clean energy adjustments" will track the actual payment obligations incurred by the financing entities when they become due and payable. To ensure intergenerational fairness, these amounts will be managed by OPG to align with the "fair allocation amounts" ascribed to each of the next 60 six month periods ending in 2047 (or such later period as prescribed).

- IESO and each electricity distributor will act as agent for the financing entities to impose, invoice and collect the clean energy adjustments, which will be channeled through to pay each financing entity's related funding obligations.

- To support the program, the Government of Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be achieve highest rated securities, although that will largely depend on issues such as the strength of the Government of Ontario's undertakings not to adversely affect the program through subsequent legislation.

Financing Plan:

- The Financing Plan is prepared by the Financial Services Manager (OPG).

- The Financing Plan is the plan which is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO.

- There are rules that apply to the Financing Plan:
  - It must align with the "estimated finance amount" that will become due and payable during a "reference period";
  - It must take into account the "fair allocation" and any "fair adjustment";
  - It must plan to implement the financing in a reasonable and cost effective manner that reflects prevailing market terms and conditions; and
  - It must be based on certain reasonable assumptions set out in regulations (for example, related to anticipated IESO shortfalls, maturity of funding obligations, availability of refinancing, redemption opportunities and liquidity, and similar assumptions).

- The (OPG) Financial Services Manager must incur funding obligations in conformity with the applicable Financing Plan.

- The Financing Plan will guide OPG's decisions regarding the repayment terms of the debt securities to be issued by financing entities. The Financing Plan will also deal with fundamental issues, such as the alignment (using derivatives) of any foreign currency obligations incurred by

financing entities with the Canadian dollar cash flows arising through the clean energy adjustments.

Who Does What?

- Minister of Energy – Determine the "fair allocation amount" applicable for each reference period. The fair allocation amounts will be set for all reference periods at the beginning of the program, based on reasonable expectations and forecasts at that time.

- Ontario Power Generation (OPG) – As financial services manager, OPG will be responsible for the following under the Act:
    - Prepare and implement Financing Plan.
    - Establish and administer the financing entities.
    - Capitalize the financing entities by acquiring subordinated debt and equity, as required to achieve OPG's accounting and capital markets objectives.
    - Estimate and "true up" periodic finance amounts, to be passed through as regulatory charges in the form of Clean Energy Adjustments.

- Independent Electricity System Operator (IESO):
    - Calculate and record IESO funding shortfalls from time to time in a variance account, giving rise to a right of recovery from specified consumers to the extent not funded through the financings.
    - Transfer the IESO's rights of recovery to (OPG) financing entities, in consideration for cash payments made by the financing entities from the proceeds of their financings.
    - Coordinates the collection of "clean energy adjustments" from Electricity Distributors.
    - Remit "clean energy adjustments" to (OPG) financing entity, for payment of financing entity funding obligations.
    - Fund initial interest costs and expenses during the first 4 years.

- Local Distribution Companies (LDCs):
    - Obligation to invoice specified consumers.
    - Collect, as agent of the investment interest owners, "clean energy adjustments" from specified consumers.
    - Hold money received for clean energy adjustments in trust until remittance to the IESO.

- Ontario Energy Board:
    - Determine and set rates to account for fair adjustments, fair allocations and clean energy adjustments (monthly adjustments).
    - Determine and set rates and process to allow IESO to recover funding shortfalls (to the extent such amounts are not transferred to an (OPG) financing entity and financed in the capital markets).
    - Review the administrative costs of OPG in connection with the administration of the program.

Part 2: Legislative amendments for social programs moving to being government funded

As part of the proposed Ontario Fair Hydro Plan, the Ministry of Energy is proposing amendments the *Ontario Energy Board Act, 1998* (OEBA) to enable the following measures:

- Enhancing and providing government funding for Rural or Remote Electricity Rate Protection (RRRP) through new enhanced rate protection for residential customers with high distribution rates
- Enhancing and providing government funding for the Ontario Electricity Support Program (OESP)
- Creating a new First Nation On-Reserve Delivery Credit and providing for government funding

Overview of RRRP and Broadened Distribution Rate Protection:

- Section 79 of the Ontario Energy Board Act would be amended to provide the Ministry the authority to prescribe, through regulation, classes of consumers whose cost would be transferred from the rate-base to the tax-base.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would prescribe Hydro One's R2 customers as receiving RRRP from appropriated funds effective July 1, 2017. This would fulfill the government's intention to transfer the majority of the costs of administering the RRRP program to the tax-base.
- In addition, Energy is proposing legislative amendments that would broaden rate protection by creating a new distribution rate protection program to complement RRRP. This new program would be funded through tax payers.
- Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution cost.
  - Proposed legislative amendments would enable a maximum monthly base distribution charge to established through regulations.
- If the proposed legislative amendments are approved, the government intends to prescribe by regulation both program details and the residential customers eligible for broadened distribution rate protection served by the following LDCs:
  - Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

Ontario Electricity Support Program:

- Proposed legislation related to the Ontario Electricity Support Program (OESP) would shift program funding from the rate base to the tax base.
  - Tax-based funding would only kick in once the existing OESP variance account is depleted, which is expected to happen in the fall of 2017.
- To allow for the existing program structure to stay in place until tax-based funding kicks in, proposed new legislation would only come into force via a proclamation Order in Council, on a date to be determined.
  - This would ensure that existing OEB authorities remain in place while ratepayer funding is being used.
- In addition, a new authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers to support increased participation in the OESP program among Ontario Works and Ontario Disability and Support Program clients would be put in place.

- Information Privacy Commissioner (IPC) staff were consulted, and customer consent is reflected.
- This information sharing component will come into force at Royal Assent, allowing OEB and MCSS to begin this process quickly, and support increasing OESP participation levels.

First Nations Delivery Credit:

- Energy is proposing legislative amendments that would establish a First Nation Delivery Credit for On-Reserve Consumers. This new program would be funded through tax payers.
- The proposed First Nation Delivery Credit would provide:
  - All prescribed on-reserve consumers with a credit for the entirety of their delivery line or with a credit for the monthly service charge.
  - The costs that are covered by the delivery credit are also described in legislation.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would:
  - Establish the class of customers eligible;
  - Determine what is considered on-reserve; and
  - Determine the method of calculating the delivery credit.

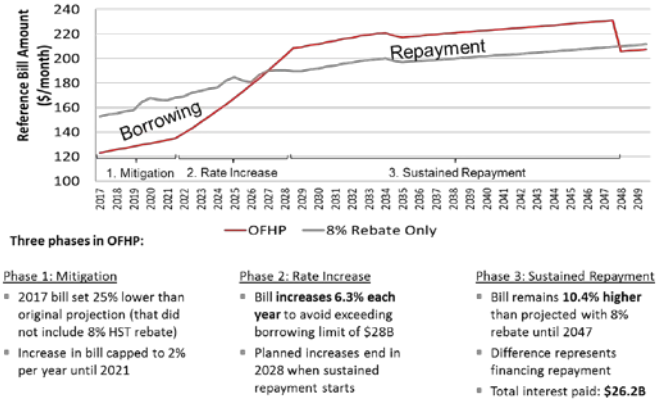
APPENDIX F: ANALYSIS OF FINANCIAL MODELS AND RISKS (UNDER DEVELOPMENT)

Treasury Board Secretariat received two models related to global adjustment refinancing.

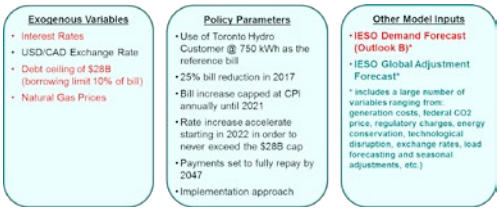
- The model the Ministry of Energy developed and used to support the March submission; and
- The financial model that was developed by the Ontario Power Generation (OPG) that provides details regarding the financing of the proposed structure.

TBS staff noted the models received are based on high level aggregates and do not allow for running different scenarios that would allow TBS to determine the financial impact of potential changes in variables. In discussions with the Ministry of Energy and OPG, it has been agreed that these scenarios must be developed – both to help creation of a risk-based outlook for the province, as well as to respond to questions that will inevitably arise from the credit rating agencies. ….Supporting Minute…

Through refinancing of the Global Adjustment (GA), which provides immediate rate relief by spreading the cost of electricity investments over a longer period of time, the OFHP reduces electricity bills by 25% for the typical residential customer in 2017, and holds rate increases to 2% (the expected rate of inflation). The OFHP can be thought of as having three phases:



The model is a high level and aggregate model, which is build on other independent forecasts (e.g. IESO demand forecast). There are a large number of assumptions built into the model explicitly and implicitly (as a large number of assumptions are embedded into the other forecasts that are used as inputs into this model).



Analysis is currently underway to better understand intergenerational costs and benefits and the impact of GA smoothing on recovery charges that would be allowed under the current Eurig compliance rules.

Depending on the legal determination, if the annual increases in bills or the commodity prices will be subject to caps, additional borrowing/provincial funding may be required.

TAB 4

TREASURY BOARD / MANAGEMENT BOARD OF CABINET

REQUEST ASSESSMENT NOTE

Ministry:	Energy	
Meeting Date:	May 9, 2017	
Agenda Class:	Discussion (In Camera)	
Last reviewed by: TB/MBC September 27, 2016		**Tracking to:** Cabinet (May 17, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2017-2019 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*Direct OPG review of delegated financial authority in consultation with TBS*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to

annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment refinancing, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining 44-49% equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection).

    - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
    - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
    - 2017 Budget projections were based on the figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291M in 2016-17 and $556M in 2017-18 compared to the 2016

Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of nuclear asset retirement obligations-related IFRS risks, followed by an increase of $12M in 2018-19 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $463M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, before OFA and MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

Also, in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

The first table in Appendix E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget 2016 fiscal plan.

- Key Operational Metrics:
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

    OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.
- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent

with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016 and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.

  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

    TBS staff note that to obtain a special status, ministries are required to provide a comprehensive business case that would demonstrate how the special status would support the organization's business plan and mandate, and include details related to its annual forecast activity, internal audit controls, governance structure, and robust reporting processes that would be in place to support governance of the proposed

delegated authority.

As the Ministry is interested in streamlining the approval process related to approvals for international travel, it is recommended that the Ministry explores its current delegated financial authority framework and consult with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing) and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) Direct OPG to review its current delegated financial authority framework in consultation with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

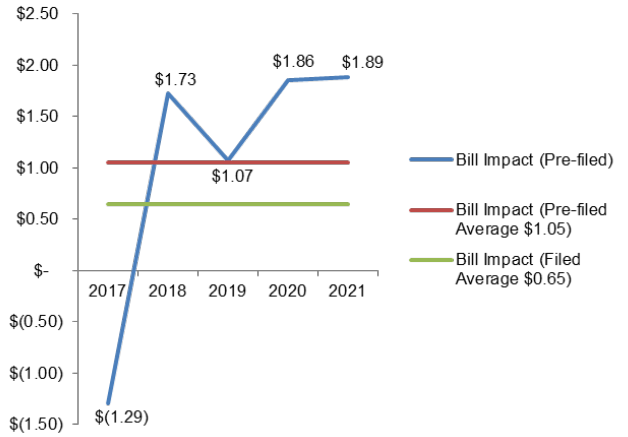
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

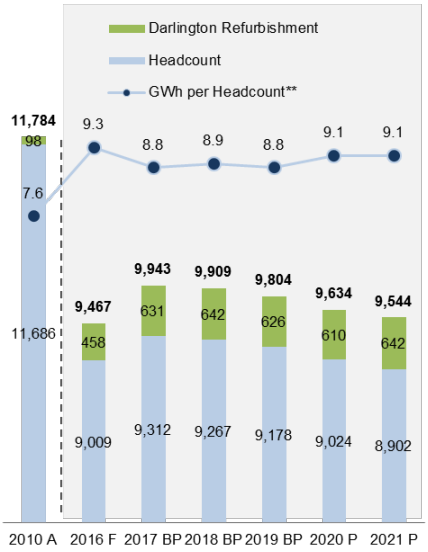
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



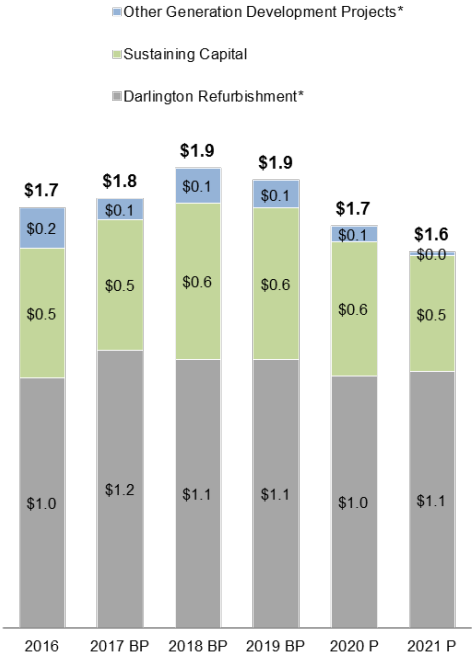
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF OPG BUSINESS PLAN PROCEEDING

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only). Net Income and PILs contributions from OPG Head Office are included in Sales and Rental under Other Non-Tax Revenue in the 2017 Budget.

OPG Net Income and Income Tax ($ Millions)				
	2016-17	2017-18	2018-19	2019-20
2016 Budget[1]				
Net Income	471	586	673	
Income Tax	224	159	182	
2017-2019 OPG Business Plan				
Net Income	349	702	678	726
Income Tax	96	166	135	170
2017 Budget				
Net Income				
OPG 2017-19 Business Plan	349	702	678	726
Adjustments:				
OPG Update[2]	30			
IFRS Risk adjustment[3]	(75)	(400)		(200)
related to OPG Head Office Sale[4] (reported under Sales & Rentals)		(222)		
GA – OPG Trust Net Inc. Impact (assumed to offset IOD)		17	54	99
Nuclear Funds fair value adjustment[5]	8			
Net Income 2017 Budget	312	97	732	625
Income Tax				
OPG 2017-19 Business Plan	96	166	135	170
Adjustments				
OPG Update[2]	(4)			
related to OPG Head Office Sale[4] (reported under Sales & Rentals)		(74)		
Income tax 2017 Budget	92	92	135	170
2016 Budget vs. 2017 Budget (including IFRS and sales &rental adjustments)				
Net Income	(159)	(489)	59	
Income taxes	(132)	(67)	(47)	
2016 Budget vs. 2017 Budget (Before IFRS and sales &rental adjustments)				
Net Income	(84)	133	59	200
Income taxes	(132)	7	(47)	0

1. 2016 Budget fiscal plan was largely based on OPG's 2015 multi-year business plan, as the 2016 multi-year business plan was approved and submitted following the timeframe for locking the numbers for the early 2016 Budget.
2. OPG February 2017 Monthly Update

3. IFRS risk is related to Province's reporting of nuclear asset retirement obligations. The Ontario Auditor General recommended (2016 AG Report) that the Province include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards, versus the companies U.S. GAAP basis of reporting.
4. For public Budget reporting, projected net impacts of Province asset optimization strategy including, OPG Head Office sale, are reported under Sales and Rentals for commercial confidentiality. OPG proceeds estimate updated per 2017 Budget.
5. Provincial consolidation adjustments for unrealized earnings on decommissioning and used fuel segregated funds net of Bruce variance account and change in Due to the Province on the decommissioning and used fuel segregated funds.

OPG's fiscal results are also impacted by Other PILs to the Ontario Electricity Financial Corporation (OEFC) and the Province. The following table reflects these others impacts in addition to the latest net income and income tax PILs from OPG's August update.

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**
2016 Ontario Budget				
Combined Other PILs & Other GRC	342	351	359	
Other PILs (GRC to OEFC, Proxy Property Tax)	213	223	232	
Other GRC (to MOF & Niagara Parks Commission)	129	128	137	
2017-19 OPG Business Plan				
Combined Other PILs & Other GRC	329	350	363	362
Other PILs (GRC to OEFC, Proxy Property Tax)[3]	218	232	243	241
Other PILs (GRC to MOF & Niagara Parks Commission)	110	118	120	121

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

June 13, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back with updates to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

2.0 PURPOSE OF REQUEST

On May 31, 2017, Bill 132, the *Fair Hydro Act, 2017* (*FHA*), which enables Ontario's Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017*, (*OFHPA*) and the implementation of electricity social program-related amendments to the *Ontario Energy Board Act, 1998*, was passed by the legislature.

- The OFHPA will lower bills by 25 per cent for a typical residential consumer, starting July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to half a million small businesses and farms would also benefit.

- OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

  Note: These measures include the 8 per cent rebate introduced in January 2017 and build on previously announced initiatives to deliver broad-based rate relief on electricity bills for consumers.

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (*OEBA*); and

- Schedule 2 – includes the electricity social program-related amendments to the *OEBA.*

CONFIDENTIAL

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

On May 9, 2017, as part of its *FHA* review, TB/MBC requested that the Ministry report back on key updates and the details of the proposed regulations that would support OFHP.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review a first package of proposed regulation and amendments and on June 27, 2017, a second package of regulations. These are necessary to ensure that the 25 per cent reduction on electricity bills is in place by July 1, 2017.

The new *OFHPA* and the proposed regulations and amendments described throughout, along with the independent accounting analysis, legal support and technical analysis and future financial agreements (i.e., expected to be reached and signed in fall 2017) should together mitigate the financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission and the May 9, 2017 TB submission.

1. Implementation of GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity prices increasing.

On March 2, 2017, as part of OFHP, it was announced that a portion of the Global Adjustment (GA) would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Under the *OFHPA* which enables GA Refinancing, electricity bills of typical residential consumers would be reduced by 25 per cent starting in July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

CONFIDENTIAL

Proposal

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II of the *Ontario Fair Hydro Plan Act, 2017* which is under Schedule 1 of the *Fair Hydro Act, 2017;* and
- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the Electricity Act, 1998.

On June 27, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation:

- Creating a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Act, 2017*.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- On June 1, 2017, the *OFHPA*, which enables GA refinancing and responds to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission, received Royal assent. Note: The Ministry has also prepared regulations to support implementation (as noted above);

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched third party technical analysis to assist with implementation of GA refinancing.

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

CONFIDENTIAL

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.

- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.

- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

In addition to amending two existing regulations and introducing two new regulations to roll out the social programs, the Ministry is also making several consequential amendments to other regulations and introducing a new invoicing regulation under the *Fair Hydro Act, 2017*. These changes include:

- Creating a new Invoicing Regulation made under the Ontario Fair Hydro Plan Act, 2017.

- Amending the O. Reg 363/16 (General) under the *Ontario Rebate for Electricity Consumers Act, 2016.*

- Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) made under the *Ontario Energy Board Act, 1998.*

Proposal

The Government introduced legislation and is now developing regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy

CONFIDENTIAL

program of the old Ontario Hydro and has existed in its current form since 2001.

The new legislation enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers. The regulation will also prescribe the monthly amount of rate protection available to Hydro One R2 customers through RRRP.

- R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province.

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher distribution cost LDCs.

The new legislation enables tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. Eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

The regulation will set out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers. In future years, this harmonized monthly charge, by design, cannot decrease as it adjusts to reflect the higher of either the lowest rate LDC in the program, or the maximum monthly charge of the previous year, as determined by the OEB.

On-Reserve First Nations Delivery Credit

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The legislative amendments to the *Ontario Energy Board Act, 1998*, are premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a

CONFIDENTIAL

delivery charge, for on-reserve residential First Nations customers as prescribed in regulation. Eligibility is restricted to those residential rate class First Nations customers who are members of a band as defined under the *Indian Act* (Canada).

The regulation does not stipulate any process for identifying on-reserve customers eligible for the credit but rather allows LDCs the flexibility to continue using their existing HST exemption processes.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of RRRP available to Hydro One R2 customers for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB currently sets the amount of the charge that recovers the cost of RRRP from all Ontario electricity customers. Once the regulatory mechanism is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. The regulation will also contain transition provisions to bridge the transition from rate payer funding to provincial funding, as well as mechanisms for sharing of information and funding flows. Change to the funding structure of the program does not require any additional implementation risks or efforts.

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers will be prescribed in regulation. The regulation will prescribe the process by which the Ontario Energy Board would determine a maximum monthly distribution charge for prescribed customers of prescribed high-cost LDCs.

Affected LDCs would be impacted through the efforts required to adjust their billing systems in order to carry out the program. There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three

CONFIDENTIAL

month transitional period to begin delivering the rate assistance by no later than October 1, 2017. The regulation will also contain mechanisms for sharing of information and funding flows.

On-Reserve First Nation Delivery Credit

The new regulation will set out the program particulars including eligibility for the program. The regulation limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs.

There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.
11 affected LDCs will need to alter their billing systems to reflect the regulatory requirement to include a First Nations Delivery Credit line item on the bill directly below the delivery charge, or blended rate if applicable.

3.0 KEY CONTEXT

On June 1, 2017, the *Fair Hydro Act, 2017*, the legislation to enable the Ontario Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) received Royal assent. The OFHPA will reduce the electricity bills of typical residential consumers by 25 per cent starting in summer 2017. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

The Ministry's report back and update to TB/MBC focuses on the following OFHP initiatives:

1) Implementation of GA Refinancing:

Under the *OFHPA*, a portion of the GA would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Today's electricity consumers have been bearing disproportionate cost responsibility for the investments in developing the clean, modern and

CONFIDENTIAL

reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. The legislation recognizes the long-term benefit of clean energy investments to more appropriately allocate costs into the future to account for long-term benefits.

Refinancing a portion of GA would provide significant and immediate rate relief to electricity consumers that have been burdened with the costs of the necessary investments that have been made to decarbonize and modernize the province's electricity infrastructure, by spreading the cost of electricity investments so that they are shared proportionately by future consumers who cause a need for or benefit from the province's multi-billion dollar investments in electricity infrastructure.

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- Developed the *Fair Hydro Act, 2017* which enables the OFHP under the *Ontario Fair Hydro Plan Act (OFHPA), 2017*, to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: On June 1, 2017, the *OFHPA* received Royal assent.

- Developed supporting regulations which further contribute to the implementation of the OFHP under the legislation;

    - One new regulation and one amendment to existing regulation is due to go to the June 14, 2017 LRC/Cabinet; and

    - A further new proposed regulation is due to go to the June 27,2017 LRC/Cabinet – a draft of this proposed regulation will be available as part of that LRC package.

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched a third party technical analysis project to assist with implementation of GA refinancing.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

CONFIDENTIAL

- Creating a new Regulation made Under Part II under the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*:
  - The Ministry of Energy is seeking LRC approval to create a new Regulation under the *Ontario Fair Hydro Plan Act* (*OFHPA*) to support the required calculations to be made by the Ontario Energy Board (OEB) under Part II of that Act (sections 6-12).
  - The proposed regulation outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP)) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.
  - The proposed regulation sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments to the Part II regulation.
  - In addition, the proposed regulation also sets out that customers of unit sub-meter providers (USMPs) would receive a proportionate share of near-term OFHPA reductions.
  - If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.
  - For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary. Note: Consumers not paying RPP would also receive GA refinancing if they meet the other criteria defined in the OFHPA under "specified consumers" in the OFHPA. These include consumers that have opted-out of RPP to sign contracts with electricity retailers or become wholesale consumers and those who are eligible for *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA), but not RPP, such as long-term care homes.
  - In accordance with the *Ontario Fair Hydro Plan Act,* the OEB will determine the adjustment to be made to the GA charge on eligible non-RPP consumers' bills, effective July 1st. Electricity vendors will be expected to ensure the adjustment is reflected on their customers' bills as soon as possible, and to make retroactive payments where necessary.

- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*:

CONFIDENTIAL

- The Ministry of Energy is seeking LRC approval to amend O.Reg. 280/14 in response to the *OFHPA* and related regulations.

- The proposed amendments would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its *OFHPA* activities, including the funding, borrowing and financial arrangements contemplated under the *OFHPA*. The IESO would be responsible for selling specified portions of the regulatory asset to OPG's financing entities, and to fund the IESO monthly deferrals which are to commence July 1, 2017, as provided for under section 23 of the OFHPA.

- The additional authority set out in the proposed amendments to O.Reg. 280/14 would enable IESO to borrow amounts to fund the above-noted deferrals related to GA refinancing.

- IESO would be expected to amend its Statement of Borrowing in a manner consistent with the amended regulation, once approved.

- On June 27, 2017, to further support implementation of OFHP, LRC / Cabinet will review a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Plan Act*, 2017.

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

The government will identify Hydro One R2 customers, by regulation, as having RRRP funded through appropriated funds.

Distribution Rate Protection

The new Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, was established through legislative amendments under the *Fair Hydro Act, 2017*. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

CONFIDENTIAL

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhanced protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

The regulation prescribes eligibility to all First Nation residential rate class customers living on-reserve. First Nations customers are p-prescribed in regulation as account holders who are members of a band as defined by the *Indian Act* (Canada).

There are 11 LDCs identified by the OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 residential customers may be eligible.

The credit will automatically apply to the bills of those customers who have already registered with their LDC as HST exempt. Customers who have yet to register with their LDC will need to identify themselves to their LDC in order to receive the benefit.

Roles and Responsibilities

Rural or Remote Rate Protection

The roles and responsibilities of the Board remain the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The Board would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would once again need to appropriate money from the legislature to cover the costs of administering the program.

CONFIDENTIAL

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers.

4.0 BACKGROUND

Legislation to Implement Ontario's Fair Hydro Plan

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (OEBA); and
- Schedule 2 – includes the electricity social program-related amendments to the *Ontario Energy Board Act, 1998.*

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

Legislation to Implement GA Refinancing

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the *Ontario Fair Hydro Plan Act, 2017* outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;
- A detailed Preamble, Purpose and Definitions;
- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;
- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and
- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

CONFIDENTIAL

The legislation defines the mechanisms and framework that would achieve the refinancing of the GA.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the legislation.

To support the implementation of GA refinancing under the *Fair Hydro Act, 2017*, the Ministry has developed supporting regulations:

- Ontario Regulation made Under Part II of the *Fair Hydro Act, 2017* ("the Part II Reg.") – sets out in detail the methodology that the Ontario Energy Board will use to make determinations under the *OFHPA*.

- Amendment to O. Reg. 280/14 to be made under the *Electricity Act, 1998* ("IESO Eligible Investments and Borrowing Reg.") – provides IESO with the necessary authority related to its OFHPA activities including the funding, borrowing and financial arrangements contemplated under the *OFHPA*.

- Ontario Regulation to be made under the *Fair Hydro Act, 2017* ("the General Reg.") – will provide for the implementation of the roles and responsibilities of the Financial Services Manager and IESO in relation to the refinancing of GA. Note: The General Reg. will be brought forward to LRC/Cabinet on June 27, 2017.

<u>Social Programs</u>

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 330,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.

- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.6 million.

- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.

- These customers still have high distribution costs and are often faced with significantly higher than average bills.

CONFIDENTIAL

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Legislative amendments under the Fair Hydro Act broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the majority of the existing RRRP program costs to the tax-base and funding all of the broadened distribution rate protection enhancements from the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

CONFIDENTIAL

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

5.0 TIMING

Under the *OFHPA*, a portion of the GA will be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

On April 20, 2017, OEB announced that it adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing.

If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.

The OEB must make a determination of RPP rates no later than 15 days from June 2nd, 2017, when the legislation received Royal Assent. As stipulated in the Act, these RPP rates would come into effect as of July 1, 2017.

For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

The Part II regulation lays out the methodology for the OEB to calculate electricity rates for consumers eligible for GA refinancing. As such it has not financial impact.

2) Social Programs:

As reported in the TB/MBC submission of May 9, 2017 and as approved in the TB/MBC submission of March 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

CONFIDENTIAL

Program	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board. Cost forecasts are subject to some uncertainty surrounding consumer uptake, future consumption levels, and future rates as set by the OEB.

Subsequent to the development of the above financial impacts for RRRP/DRP, Hydro One Networks Inc. submitted a distribution rate application to the OEB for rates effective 2018-2022. ENERGY is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application. Note that final Hydro One rates are not expected until 2018.

Per the Regulations, the Ministry has the authority to request social program costs forecasts from the OEB.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16, April 19, and May 17, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation. The Ministry has also held separate engagements with LDCs in particular to the social programs.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, May 23, and June 1 to discuss implementation.

CONFIDENTIAL

8.0 RISK ASSESSMENT AND MITIGATION – UPDATES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• The Ministry, IESO, OPG and other ministries have worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **<u>Update:</u>** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **Update:** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			Update: • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
a Charter challenge on the First Nations On-Reserve Delivery Credit Program			reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the legislation is modelled on frameworks used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

10.0 PERFORMANCE MEASURES

The proposed new regulation under *OFHPA* outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.

The proposed amendments to O. Reg. 280/10 would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its OFHPA activities, including the funding, borrowing and financial arrangements contemplated under the OFHPA

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. This is the primary success metric for these programs. In future report backs, the Ministry will include the presentation of data collected through the IESO reporting portals to demonstrate the impact of these programs on customers. The Ministry

CONFIDENTIAL

will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing.

Ontario's Fair Hydro Plan also included a commitment to work with the OEB to drive distribution sector efficiencies within LDCs over the long-term. The Ministry is developing its policy approach to achieving these efficiencies, including potentially through LDC consolidation, through the Long-Term Energy Planning process.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

CONFIDENTIAL

Hi Bruno,

Not sure if you remember this note…..wouldn't mind putting the DRC vs. FHP contents, some of it at least, in table format. I'm terrible at tables but I think we have staff that are very good.

John

DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS

Comments on Ministry of Energy's February 6 Draft "Rate Mitigation Plan Options"

The Ministry of Energy (Energy) is providing options for potential price mitigation initiatives.

OVERVIEW

- The largest impacts on rates and largest potential fiscal exposures are from the proposed deferred recovery of Global Adjustment costs (about $1.3 to $7.5 billion per fiscal year or more, depending on the option).
- Other Energy proposals involve placing or shifting costs or risks of rate mitigation measures from the rate base to the tax base. Based on CEFD analysis the fiscal exposure could range to about $0.7 to $0.9 billion per year, depending on the option selected.
- In addition, Energy raises a sub-option to a GA variant: increase the rebate from 8% to 15%.
- The above measures would be in addition to the existing fiscally-funded electricity price mitigation efforts that, over the past five years, have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of the Ontario Rebate for Electricity Consumers (OREC) in 2017-18.
- The government introduced OREC, which is providing a rebate equal to the 8% provincial portion of the Harmonized Sales Tax (HST), saving $11 per month starting January 1, 2017, for eligible small businesses, farms and residential consumers, and has expanded the Rural or Remote Electricity Rate Protection (RRRP) program, saving eligible RRRP customers about $45 per month, when combined with OREC.
- The existing program costs are summarized in the table below:

($M)	2011-12	2012-13	2013-14	2014-15	2015-16	2016-17[1]	2017-18[1]
OCEB	1,033	994	1,006	1,078	860	-	-
OREC	-	-	-	-	-	300	1,100*
Ending DRC[2]	-	-	-	-	85	330	330
NIERP	120	120	115	108	120	120	120
NOEC	23	24	25	24	26	25	25
OEPTC[3]	354	406	418	429	444	450	460
TOTAL	1,530	1,544	1,564	1,639	1,535	1,225	2,035

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt Retirement Charge
OEPTC – Ont. Energy & Property Tax Credit

ENERGY'S BROAD POLICY THEMES / RATIONALES – BASED ON DECKS FROM Jan 24th, FEB 1ST, FEB 6TH (Subject to Updates)

- In recognition of the costs borne by ratepayers related to decarbonizing and modernizing the province's electricity sector, options for further rate mitigation include:
    1. Provide significant and immediate rate relief through cost deferral of the global adjustment (GA).
    2. Initiate delivery rate relief, which would allow a monthly cap on delivery charges for Hydro One low density ~~all~~ residential customers ~~across the province~~.

3. Provide a greater focus on vulnerable consumers by expanding electricity support programs, such as the Ontario Electricity Support Program (OESP), and greater support for lower income conservation benefit and First Nations Rate program and funding them through the tax-base.

SUMMARY OF ENERGY PRICE MITIGATION OPTIONS

Energy Theme / Rationale / Savings	Key Staff Comments	Estimated Fiscal Cost
(Based on Feb 45th Deck) **1) Consider options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA).** *(Based on Feb 45th Deck)* **"February 54 - Option 1a"** GA paid lowered by $5B in 2017 and 2018 below the true cost of GA. Part of combination of initiatives to reduce residential bill by 25%. In out-years, incremental monthly cost about $40. **"February 54 - Option 1b"** GA paid lowered by $7B in 2017 and 2018 below the true cost of GA. Part of combination of initiatives to reduce residential bill by 33%. In out-years, incremental monthly cost rises to almost $90. **"February 54 - Option 1c"** GA paid lowered by $4B in 2017 below the true cost of GA. Part of combination of initiatives to reduce residential bill by 25%, including increasing the OREC rebate from the current 8% to 15% [Check].	• Incurring debt to pay the generators their contracted or regulated payments while deferring supply cost pass-through. • Accumulated debt and financing costs would be very high, particularly if third party financing is sought. • Energy's deck analyzes the system cost and ratepayer impacts of the option. o Larger the initial savings is also reflected as larger incremental costs in out years when annual GA recovery is greater than GA costs. • Based on preliminary discussions with KPMG, Energy has identified key steps for there not to be a fiscal impact: ▪ Have a non-consolidated entity hold the liability. **OR** ▪ Need to be able to create an asset. o Energy has proposed options for the GA financing recovery mechanisms such as a new GA Deferral Account or a new arms-length entity. o Energy is working with IESO, MOF, TBS and external accountants on accounting issues and legislative and regulatory requirements. o Likely requires legislation to implement. Should assess legal risks. • Scenarios provided in the February 4th deck indicate, on a preliminary basis [Energy has not provided detailed modelling figures], significant annual fiscal exposures (depending on accounting) and debt accumulation up to $62Bn for Option 1a, $99Bn for Option 1b and $31Bn for Option 1c. • Revised scenarios are significantly higher in potential annual fiscal impacts and increases in debt, $19Bn - $23Bn for Options 1a and 1b [January 24 scenarios], about $65 Bn for Option 4 [in February 1 deck] .	If consolidated: Risk of fiscal impact ranges (as per Feb 46th deck: • About$5Bn in 17-18 and 18-19 for Scenario 1a, • About $7Bn for 17-18 and 18-19 for Senario 1b • About $3-4Bn in 17-18 and 18-19 for Scenario 1c Scenarios in Jan 24th & Feb 1 decks: • "Moderate" scenarios of more than $1.1 to $3.4 billion in 2017-18 • $4.4 – 5 Bn in the "high" scenario.
(Updated for Feb 1 Deck) **2) RRRP Enhancement: Delivery Charge Relief for Hydro One Customers.**	• Energy characterizes this enhanced relief as an acceleration toward the OEB initiative for LDCs to have fixed distribution delivery rates, based on average cost to serve.	Cost of Enhancement:

Energy Theme / Rationale / Savings	Key Staff Comments	Estimated Fiscal Cost
R1 (mid-density) **R2 (low-density)** • **Cap delivery rates for R1 customers to $55.70 per month and $64.64 per month for R2 customers.**	o Benefits higher volume users, who will pay less than currently. o Lower volume users will pay more than currently. • Energy indicates that the cap will not be needed after 2022 when most distributors will have fixed delivery charges. • Energy does not clarify if the cap would increase every year to reflect increasing costs as the cap values are based on 2017 estimates of what Hydro One distribution rates would be under a fixed rate regime. • RRRP is not income tested. • Moving to fixed distribution rates will result in below-average volume consumers experiencing cost increases.	2017-18: $64-90M decreasing to $26-36M in 2020-21.
(Updated for Feb 1 Deck) **3) Electricity Support Programs Funded Through the Tax Base** **Provide greater support for lower income Ontarians by enhancing the OESP, expanding eligibility, and simplifying access to achieve 100% take-up.** • **Estimated to reduce average monthly residential bill by $0.83 based on current OESP charge.**	• There may be a risk that changes to the design of the OESP may change the view of the federal government that it is not a taxable benefit. When OESP was created, TPD worked with Finance Canada and Energy to ensure that it was not considered a taxable benefit. • Feds may be unwilling or unable to administer OESP due to complexity and the significant restrictions that apply to using federal tax forms. • Would provide on-bill benefits. • Could contemplate phase-in to manage fiscal impact. • Could look at phasing out existing fiscally-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC). o Not on the bill, so less direct and less visible electricity cost mitigation. o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households.	<u>OESP</u> • 2017: $162M • Increasing to $408M in 2022.
4) Low Income / Affordability **Low Income Conservation Benefit Program** **LDC Affordability Fund**	• Existing low-income programs delivered by LDCs and IESO help qualified residential customers and social and/or assisted housing providers improve their energy efficiency. Programs include a Home Assistance Program and a Retrofit Program. • Energy is currently working with IESO to explore options to enhance and/or expand the existing Home Assistance Program for residential customers. o Participants could receive incentives for improved weatherization measures, appliances and lighting controls (e.g., new or upgraded furnace and central AC; windows/doors; washer/dryers, heat pumps. • Energy is exploring the potential to establish an Affordability Fund.	<u>Low Income Conservation Benefit</u> $12.5M in 2017-18 to $30M in 2018-19 and 2019-20, and $22.5M in 2020-21. <u>(In addition to current $10M/Yr)</u>

Energy Theme / Rationale / Savings	Key Staff Comments	Estimated Fiscal Cost
	o To allow for funds to flow in 2017/18, Energy would sign a Transfer Payment Agreement with a qualified third party/ies to administer the Fund. o LDCs would apply for funding and redistribute support to those customers that meet the targeted eligibility criteria. Energy states that establishing an Affordability Fund could provide a means to help struggling customers who do not qualify for low income programs and cannot upgrade their homes without financial assistance.	LDC Affordability Fund TBD. Energy notes $200M as an illustrative amount.

Formatted: Indent: Left: 0.17", No bullets or numbering

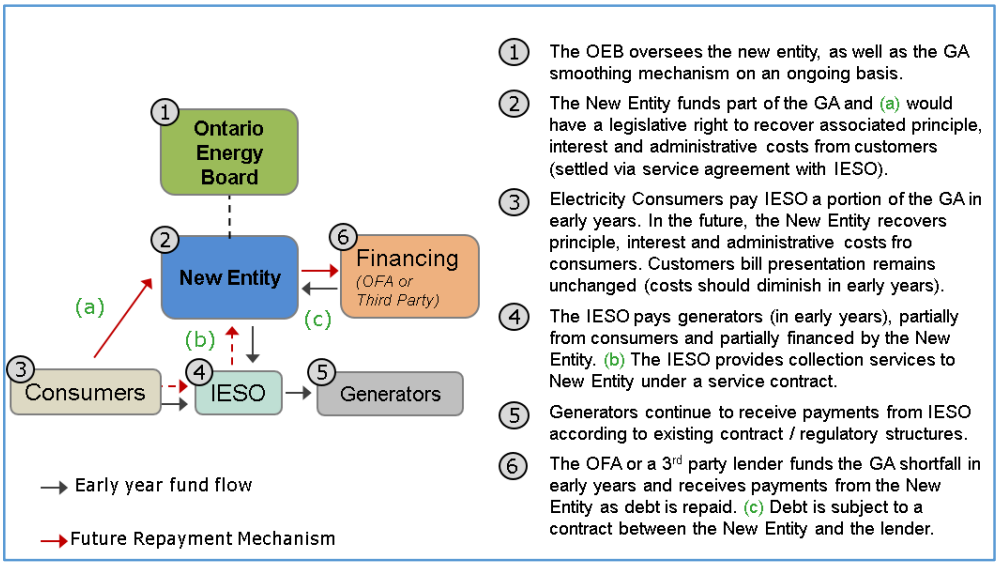
GA DEFERRAL IMPLEMENTATION OPTIONS

- The Ministry of Energy (Energy) indicates that it is continuing to consider options in terms of implementing the GA deferral mechanism.
- Objective includes accounting treatment that would not result in a fiscal impact.
- Two leading options currently under consideration are as follows:

    - Option A: Create a new special purpose entity, independent from the Province that would be dedicated to GA smoothing.
        a) Objective would be that it not be a consolidated entity in Public Accounts.
        b) Would need to be not controlled by the Province for accounting purposes.
        c) Energy has introduced the OEB into this model, where the OEB could be empowered to approve the GA smoothing mechanism and oversee the operations of the entity ~~on,~~ e.g., on compensation.

    - Option B: Make changes to IESO in order to enable it to assume responsibility for GA smoothing.
        a) Objective would be for it to be able to not have the annual deferral of the GA amounts affect its bottom line, and not affect the Province on consolidation.
        b) Energy discusses achieving Government Business Enetrprise (GBE) accounting treatment.
        c) Would require legislative changes for the IESO.
        d) Would need to enhance OEB's role in regulating the IESO and GA deferrals and recovery.



Control / Governance of a New GA Entity

- To achieve the desired accounting treatment, the entity would have to be structured as follows:
  - While the Province would choose the first board of directors or trustees, future directors or trustees would be selected in accordance with a mechanism created at the time the entity is created. The Province would have no ongoing role in appointments or in selection of key personnel, including the CEO.
  - The Province would not have a determining vote in the entity's business decisions.
  - The Province would have no recourse to the entity's assets and would not be responsible for the debt.
  - The Province could not dissolve the entity and having access to its assets and obligations.
  - The Province would not be able to change the mission or mandate of the entity, once it is created.
  - The Province would have no right to approve business plans or budgets or to require amendments to them.
  - The Province would not be able to alter the terms of the entity's debt arrangements.
  - The Province would not be able to affect the debt by controlling the entity's financial and operating policies.
  - The Province would not have input into the operational and financial policies of the entity, including accounting, personnel, compensation, collective bargaining or deployment of resources. For example, legislation like the *Broader Public Sector Executive Compensation Act, 2014* would not apply.
- As a result,
  - Staff would not be OPS employees.
  - Oversight would not be provided by Offices of the Legislature (AG, FAO etc.).
  - The *Freedom of Information and Protection of Privacy Act* would not apply.

GBE Status

- Energy notes that it would need to determine whether it is likely that IESO could be sufficiently transformed in order to meet the following accounting tests:
  - Government Business Enterprise (GBE) Treatment: consistent with OPG and Hydro One, this treatment would require consolidation of only net income and equity (as opposed to line-by-line consolidations currently applied to IESO). This test includes the following components:
    - Separate entity.
    - Delegated financial / operational authority to carry out a business.
    - Sells goods and services to individuals and organizations outside of the government reporting entity as its principal activity.
    - Can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity.
    - Power to contract in own name.
    - Sue and be sued.

Comments:

- Without a favourable outcome on the discussions and implementation of the accounting treatment of the GA-related debt financing, the accumulated debt would potentially represent a fiscal exposure to the Province.
  - In addition, the outcome may not be known until after the implementation of the proposal and at such a later stage as following the review of the Province's Public Accounts by the Auditor General.
- For Option A, the issue of control is ~~a~~ significant ~~issue~~ in determining whether the entity would need to be consolidated with the Province or not.

- ~~Although public sector entities may not control variable interest entities, they are the ultimate beneficiaries if they are exposed to the majority of potential losses, or will receive the majority of potential returns.~~
- ~~This relationship may constitutes an economic ownership where a public sector entity does not legally own or directly control a variable interest entity, but does derive economic benefit from the prospective risks and rewards of its financial activity.~~
- ~~If Should the OFA provides funding to the new entity, the Province, through related party transactions, is would essentially redirecting funds to itself:~~
- ~~The Province (OFA) → New Entity → The Province (IESO) [where the IESO is consolidated line-by-line to the Province]~~
- ~~The Province is would indirectly benefiting from this arrangement and is affected by the risks and arewards; thus, consolidation is likely.~~
- ~~If a third party were to lend to the New Entity, there is the question of what assets or activities would be placed into the New Entity to secure the loans.~~
- ~~The accounting standards applicable to the entity, as well as the ability for regulatory accounts to be recognized, are additional concerns for the creation of this entity.~~
- ~~Special purpose vehicles (SPVs) are generally intended to isolate risk for the entity with the variable interest in the SPV.~~
- ~~If a related party to the Province funds the SPV, the risks and rewards have would have not been transferred.~~

Formatted: Indent: Left: 0.5", Bulleted + Level: 3 + Aligned at: 1" + Indent at: 1.25"

- ~~If an arm's length third party not associated with the government should provides the funding, substantial assets in the SPV as collateral and/or significantly high return would likely be required for any organization to consider this proposition.~~Energy has been meeting with OPCD, KPMG and the IESO on accounting issues.

Formatted: Indent: Left: 0.5", Bulleted + Level: 3 + Aligned at: 1" + Indent at: 1.25"

- ~~a)~~

- For Option B, it remains to be seen if the IESO could be transformed sufficiently to be treated as a Government Business Enterprise (GBE), as in the case with Ontario Power Generation and Hydro One.
  - GBEs are incorporated into the Province's financial statements through the modified equity method; inter-organizational transactions and balances are not eliminated under the modified equity method as per CICA Public Sector Accounting Standards.
  - While not mentioned in the slides, an objective may be to have the IESO be able to have rate-regulated accounting so that it can have a regulatory asset for deferred recovery of the GA costs, as approved by the OEB.
  - A key question for the IESO include it being able to demonstrate that it is self-sustaining.
  - ~~GBEs are incorporated into the Province's financial statements through the modified equity method; inter-organizational transactions and balances are not eliminated under the modified equity method as per CICA Public Sector Accounting Standards.~~
  - ~~The IESO is already in a negative net asset position, with liabilities exceedings assets, which puts into question its ability to be considered a GBE in the first place.~~
  - ~~High risk that even if IESO is considered a GBE in the onset of the program, it could lose that status during the debt borrowing program due to uncertainty surrounding the ability to recognize regulatory assets, and IESO's history of accumulated deficits in its operations and balance sheet.~~
  - ~~When the nature of a government organization changes such that it no longer meets the definition of a GBE, the organization would become a governmental unit and would be consolidated in the Province's summary financial statements.~~
  - ~~o~~
- Both proposals will require significant legislative changes with no clear indication of success in achieving the desired accounting outcome.

- The GBE option involving the IESO could still ~~lead~~have to the ~~rating agencies~~ treatment of the GBE's debt as part of the Province's rating calculations by rating agencies~~, defeating the intent of the proposal~~.

PROBABILITY ASSESSMENT OF A FAVOURABLE ACCOUNTING TREATMENT

- Energy's proposal involving either the new entity, as mentioned above, or the IESO being transformed sufficiently into a GBE is intended to separate the deferred GA-related debt from the Province's accounts and ~~insulate~~avoid ~~from~~ consolidation.
- ~~CEFD staff are of the view that t~~The fiscal consolidation exposure of the deferred GA amount, as a risk, is significant ~~and that most of the deferred GA amount, if not all, would be a fiscal hit in the eyes of an independent reviewer~~.

~~From a policy advice perspective, a probability assessment would be beneficial in helping the decision makers make the right policy decision.~~

~~A policy decision with less than 50% probability of success, say 30%, and that leaves the ultimate outcome in the hands of an Auditor General, with a significant uncertainty, may not be a sound policy advice.~~

- ~~Furthermore, e~~Even if the preferred accounting treatment is initially accepted (i.e., treating the new entity as an SPV that is not consolidated and/or the IESO as a GBE), there is a high risk that this status can change over time due to uncertainty in OEB rulings, continuously changing accounting standards, and the financial operations of the entity options being considered.~~[Could we add the accounting implications about control, etc. here?]~~

~~A fair question to ask the accounting experts involved would be to provide a probability statement they would be prepared to defend.~~

- If fiscal consolidation of the GA option is likely, ~~A full~~ consideration of a more ~~well- defined and~~ targeted relief in the form of, e.g., an enhanced OREC or a revised and enhanced version of the former Ontario Clean Energy Benefit (OCEB), which provided a 10% ~~relieve~~benefit on the entire electricity bill, including the Harmonized Sales Tax (HST), may be a policy alternative worth considering.
  - As was the case with the former OCEB, the revised version of the OCEB may have a time-limited aspect with an effective end date and not have the negative aspects of the GA-related proposals which may have a long-lived legacy with intergenerational implications and related legal challenges.

APPENDIX

- As an alternative to the GA financing, in addition to the delivery rate relief and other electricity support programs funded through the tax-base, Energy had previously proposed that other mitigation measures could be pursued, including:

  Alt 1. Enhanced Tax-Based RPP Rebate (5%)

  Alt 2. Contract Renegotiations:
  - Contract Extensions – Wind and Solar;
  - Clean Energy Supply (CES) Contracts

  CEFD staff are of the view that contract renegotiations, such as contract extensions, could provide potentially beneficial outcome and warrant as much consideration as the Global Adjustment-related proposals. While contract renegotiations are thought to be difficult, implementation of GA-related proposals would expect to have its own significant challenges.

  Alt 3. Amortization of Conservation Expenses

Alternative Options if not proceeding with the GA proposal		
Energy Theme / Rationale / Savings	**Key Staff Comments**	**Estimated Fiscal Cost**
(Based on Jan 24th Deck) **Alt 1) Enhance Tax-base RPP Rebate by 5%, to 13% [or 15% in Scenario 1c in the Feb ~~46~~ 6th version]** • **Estimated to reduce average monthly residential bill by $7.04 in 2017 to $7.83 in 2022**	• This proposal would increase the funding requirement of the newly established Ontario Rebate for Electricity Consumers (OREC) by about $700 million per fiscal year, to reduce an average residential bill by about $7 each month or $84 annually. • The current OREC provides average savings of about $11 each month or $130 annually. • Note OREC and RPP have slight variations in eligibility. o Hotels, motels and various other buildings are eligible for OREC while being ineligible to RPP.	• About $700M per year [when enhancing the rebate by 5%]
(Based on Jan 24th Deck) **Alt 2) Alternative to GA Financing – Contract Renegotiations** **Alt 2a) Wind and Solar Contract Extensions** **Alt 2b) Clean Energy Supply Contracts**	• This proposal involves renegotiating current IESO contracts with wind, solar, and natural gas providers in order to reduce rates in the near term. • Potential to defer costs into the future for the Global Adjustment without provincial borrowing for wind and solar contracts. o Estimated savings could be higher than $0.09 per month for the average bill for the first five years when rates are kept to a minimum. • For the Clean Energy Supply (CES) contracts, the outright purchase of natural gas assets in order to temporarily idle them could reduce monthly residential bills by an estimated $2.37 to $4.00 from 2017-2019.	• TBD • Impact from wind and solar contract extension depends on success of IESO negotiations. Generally will be funded by the ratebase. • Potential fiscal impact from reduction in OPG Net Income and

Alternative Options if not proceeding with the GA proposal		
Energy Theme / Rationale / Savings	**Key Staff Comments**	**Estimated Fiscal Cost**
	o Provincial borrowing would be required to fund the asset purchase. o Suggested targets like Portland and Brighton Beach are currently valued at $324M on OPG's balance sheet for OPG's 50% ownership interest; would likely cost significantly more than $324M to acquire the remaining 50%. • For all contract negotiations, the potential rate mitigation depends on each individual contract/project as well as the success of the negotiation. • Risk that the strong bargaining position of counterparties to IESO contracts leads to additional value extracted from negotiations. • The additional costs to extend contracts and to lower near term costs may lead to larger rate increases in the future.	provincial borrowing required for gas asset purchases for the CES option
(Based on Jan 24th Deck)		
Alt 3) Conservation Amortization • **Pursuing this option would result in approximately $1/month in savings from 2017 to 2020.**	• Approximately $3 billion will be spent on conservation programs between 2015 and 2020, which is recovered through the GA. Alternatively, a certain portion of this amount could be amortized over 10-year or 15-year terms with the IESO borrowing from the OFA to fund these incentives. • This benefit would turn into a cost due to growing interest charges. • Interest charges (at 3%) would be approximately $712 million (10-year amortization or $1.3 million (15-year amortization) which would be recovered from ratepayers, subject to legislative changes or from the Consolidated Revenue Fund (i.e., taxpayer) • If this option is pursued, the Ministry of Energy would seek a formal opinion from the Ontario Provincial Controller whether certain costs can be amortized in accordance with rate-regulated accounting standards. Further legal analysis would also be required.	• Potential for interest costs to be recovered from Taxpayers • Alternatively, portion of the conservation program costs to be recovered from the tax base.

ELECTRICITY PRICE MITIGATION DISCUSSION – MMMP
FEBRUARY 9, 2017

POTENTIAL SPEAKING POINTS

General Comments

- I want to thank the Ministry of Energy for developing options to deliver on government initiatives to lower electricity costs for consumers.

- I would encourage the Ministry of Energy to work with Ministry of Finance staff and Treasury Board Secretariat staff, including the Provincial Controller, on the analysis of the options to ensure that the government is well-informed on the options so that decisions are based on sound analysis and advice.

- I understand the need for mitigating electricity price pressures and to help those electricity consumers most in need but we could be creating new added cost pressures for decades to come under many of the GA-related scenarios.

- The options on the table - involving hundreds of millions to billions of dollars per year - require a significant amount of due diligence and review, and a full discussion amongst us and the full Cabinet.

- I understand that the details of the structure still need further analysis, such as on the accounting treatment and whether it would then affect the Province's Public Accounts.
    - A key fiscal objective is to have the entity performing the Global Adjustment deferral financing not be consolidated into Public Accounts on a line-by-line basis and avoid a fiscal impact.
    - Structures that have been looked at include a new, separate, non-controlled entity; restructuring the IESO as a government business enterprise (GBE); or OPG.
    - Some key considerations, generally and for accounting, is to evaluate if the entity is self-sustaining; and, if with the IESO or OPG, that it is a

business that sells goods and services to entities outside of the government reporting entity.
    - The entity would have to be able to recognise as an asset the future recoverability of the deferred costs, including the billions of dollars of accumulated interest costs.

- It is important to take the take the time to do a full analysis of the options to make sure that
    - They are properly costed based on the best information available, and with cost sensitivities identified too, if electricity costs or consumption volumes change, or if the interest rate environment changes.
    - The accounting treatment considerations are well-understood, that would affect how these options might affect our path to budget balance and the Province's net debt to GDP ratio.
    - The required legislative changes are well-thought out and drafted so that there are no surprises.

- It would be very important to get this right first to ensure the best possible launch of a major new initiative.
    - This will need to be considered carefully and not be rushed to meet some hypothetical public communications rollout timelines, and here will be significant communications challenges.

- It's also important to weigh any decisions on the electricity price mitigation options against other key government objectives:
    - Balancing the 2017 Budget in the 2017-18 fiscal year, and on-going.
    - Depending on the accounting treatment the Global Adjustment deferral options would add significantly to the challenge to meet the balanced budget commitment.
    - The fiscal exposure could be in the range of $6 billion per year in the non-targeted options, or in the $1.5 Bn to $3 Bn range if targeted to residential and small business consumers on the Regulated Price Plan.

- The accumulated debt in the broader plan could reach $90 Bn in the broad-based options, or a still significant $18 to $32 Bn in the RPP-targeted options.
- The various electricity price mitigation options would also compete with resources that could be used to meet other government priorities.

Comments on Potential Options

- Global Adjustment (GA) Smoothing
  - Using the GA to provide electricity rate mitigation to consumers will be providing a benefit to a wide range of customers, even if limited to Regulated Price Plan (RPP) customers, some of whom may be more or less challenged by electricity costs than others.
  - In an environment of other objectives on balancing the budget and other priority initiatives, focussing on targeting relief for the most vulnerable to electricity costs should be seriously considered.
  - Smoothing the GA amounts by deferring payments would add a significant amount of debt to be serviced and repaid by future ratepayers in the Province.
  - This would include a significant amount of interest cost associated with the GA cost deferral -- with perhaps almost as much or more in interest costs to be paid over time than the actual amount of cost deferred – just like a mortgage on a house.
  - Even at an assumed about 5% interest rate, that's a lot of added costs to future ratepayers, and they'd be exposed to potentially higher interest costs too, depending on who does the borrowing (the OFA or another entity), and future interest rates.

- I understand that a number of options have been explored on what entity would be established to be responsible for financing the deferred costs and holding the debt that it would to pay off from future payments from ratepayers: Potentially a new entity, or an existing entity such as the IESO, or, more recently, the option of restructuring Ontario Power Generation into a

holding company with a new subsidiary established to finance the GA cost deferral.

- The objective would be to have a structure that could cost effectively defer the GA costs while not have an in-year consolidation impact on the Province's bottom line.

Other Options

- Tax-basing existing electricity price mitigation programs such as the existing Rural or Remote Rate Protection (RRRP) program and the Ontario Electricity Support Program (OESP) (combined about $400 million per year and climbing) would be a fiscal challenge.

    - As these are already supported on the rate base, with costs spread out widely, fiscal considerations should be raised.

- Aggressively pushing OPG to find efficiencies and building prospective cost reductions into OPG rates would be a significant fiscal exposure.

    - If OPG were not able to find these further efficiencies, that would result in a negative fiscal impact estimated at up to $240 M per year by Energy.

Subject:	FHP Act - 25% reduction mechanism
Date:	Wednesday, May 03, 2017 1:06:21 PM

Hi all,

To Bruno's question about how the 25% reduction will occur, I looked through the latest regulation and below is a quick summary of how the transaction will work. All language is from the Act:

1. With respect to the 25% rate reduction determination, the latest regulation goes on as follows:

(2) Subject to subsection (3), [to more fairly measure and allocate the clean energy costs and clean energy benefits among present and future generations of specified consumers,] the rate for electricity payable by a specified consumer for the period beginning on May 1, 2017 and ending on April 30, 2018 is the average rate that would be payable by a representative consumer in order for the representative consumer to receive a monthly invoice amount that is 25 per cent less than the average baseline invoice amount.

First:
"average baseline invoice amount" means the average monthly invoice amount that would be payable by a representative consumer under the average baseline rate

Second:

For the purposes of the definition of "representative consumer" in subsection (1), the consumer,

(a) purchases electricity directly from Toronto Hydro;
(b) has an account with Toronto Hydro that falls within a residential-rate classification as specified in a rate order made by the Board under section 78 of the Ontario Energy Board Act, 1998;
(c) is invoiced by Toronto Hydro on a monthly basis;
(d) is not invoiced by Toronto Hydro for electricity on an equal monthly payment plan or an equal billing plan; and
(e) uses, on average, 750 kilowatt hours of electricity each month.

Third:

"average baseline rate" means the average rate *that would be* payable effective May 1, 2017 by the class of consumers prescribed by the regulations under the *Ontario Energy Board Act, 1998* for the purposes of subsection 79.16 (1) of that Act, as determined by the Board *by applying the method prescribed by the regulations under clause 79.16 (1) (b) of that Act*

2. With respect to how the financing charges are flowed through:

- **Essentially IESO will have funding shortfall, as defined below, which will be the regulatory asset. Funding shortfall will include finance amounts that would have otherwise flowed to consumers.**

First:

Upon receipt of an invoice that includes a clean energy adjustment, a specified consumer shall pay the clean energy adjustment to the electricity vendor, as agent of the investment asset owners, in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Second:

Determination of clean energy adjustment

10xx. (1) The clean energy adjustment payable by all specified consumers in respect of a reference period shall be determined as follows:

1. Calculate the estimated finance amount for the reference period in accordance with Schedule 1 and such additional rules as may be prescribed.
2. Add the true up amount for the reference period, as determined in accordance with the prescribed method, to the estimated finance amount calculated under paragraph 1.

Third:

11xx. (1) The IESO shall, in accordance with the regulations, issue a remittance notice to each electricity vendor for the electricity vendor's portion, as determined in accordance with the regulations, of the clean energy adjustment in respect of a reference period.

Forth:

"reference period" means,

(a) the period beginning on May 1, 2017 and ending on October 31, 2017,

(b) every six-month period following the period mentioned in clause (a) or such shorter period as may be set out in the Fair Allocation Plan

In effect to:

The IESO shall determine the IESO funding shortfall for each month in the following manner:

1. Calculate the sum of all invoice amounts issued to specified consumers for the

month if Part II of this Act did not apply.

2. Calculate the sum of all invoice amounts issued to specified consumers for the month.

3. Subtract the amount calculated under paragraph 2 from the amount calculated under paragraph 1, and make any other adjustments as may be prescribed.

Regulatory asset established

21xx. (1) The IESO has the right, exercisable in accordance with this Act and the regulations, to recover the IESO funding shortfall.

Other points to mention:

The IESO shall not be entitled to collect the IESO funding shortfall from specified consumers before May 1, 2022.

Hi Anna and Colleen,

Tomorrow at Fiscal Prep (1015-1145), ENERGY is presenting on their submission for the Fair Hydro Plan Act. Attached is the agenda and deck.

Could you please line up Gadi and Scott to attend with the Deputy? Please let me know if there are any issues.

Thanks!
Gwen.

Room 6501, Whitney Block

ITEM AND MINISTRY	ESTIMATED TIME
Energy- Fair Hydro Plan Legislation	10:15 – 11:45

The Proposed Fair Hydro Act

May 3, 2017

Purpose

- Purpose is to walkthrough the main elements of the legislation.

- The Act consists of two components:
  - Part 1: Legislation to provide for the fair allocation of costs of electricity over time \
  - Part 2: Legislative amendments for social programs

- The proposed *Fair Hydro Act, 2017* would be an omnibus bill with 2 schedules: the *Ontario Fair Hydro Plan Act, 2017* and amendments to the *Ontario Energy Board Act, 1998*

Part 1 – Overview of Legislation to Provide for the Fair Allocation of Costs of Electricity Over Time

1. Ontario Fair Hydro Plan Act – Fundamental Principles
2. Brief Overview of the Legislation
3. Stakeholder Consultation and the Process to Prepare the Legislation
4. Building Blocks of the Legislation
   - What costs are part of the program?
   - How are the costs allocated fairly amount ratepayers now and in the future?
   - What consumers does the program apply to?
   - How is the program financed?
4. How the Legislation Works
   - Clean Energy Initiative
   - Clean Energy Costs and Benefits
   - Clean Energy Adjustments
   - Fair Adjustment
   - Fair Allocation Amount
   - Regulatory Asset and the Investment Asset
   - Issuance and Payment of Debt
   - Financing Plan
5. Who Does What
   - Minister of Energy
   - Role of OPG
   - Role of IESO
   - Role of LDCs
   - Role of OEB

Ontario Fair Hydro Plan Act – Fundamental Principles

- The actions taken by the Government of Ontario to achieve a clean, modern, and reliable electricity system have resulted in significant costs. The burden of financing the electricity system improvements and funding key programs has unfairly fallen on the shoulders of today's consumers.

- The proposed Ontario Fair Hydro Plan Act (OFPA) is founded on the principle that costs related to the development of a clean, modern and reliable electricity system (with a diverse supply mix) ought to be charged to those consumers, today and in the future, who will be the beneficiaries of those costs.

- The Government of Ontario is committed to ensuring that the costs of financing these investments are allocated fairly among present and future generations of consumers.

- The challenge inherent in the development of the legislation was the need to balance several key factors: the fundamental principles of the program, the program's desired accounting treatment, ratepayer interests, expectations of the financial markets, financeability, and legal considerations.

Stakeholder Consultation and the Process to Prepare the Legislation

- The development of the Ontario Fair Hydro Plan Act was preceded by extensive consultation, on an ongoing basis, with representatives from the Ontario Energy Board (OEB), IESO, Ontario Power Generation (OPG), the Ontario Provincial Controller's Office Division (OPCD), the Ministry of Energy, the Ministry of Finance, dealers, investment advisors and Canadian (and in some cases U.S.) counsel for each of the involved parties.

- As appropriate, other Ministries were circulated with drafts of the legislation and consulted on particular issues.

- Several drafts of the legislation were circulated among stakeholders and several mark-ups of draft legislation were received in response.

- Lengthy face to face meetings also took place with stakeholders and their counsel both as a group and individually.

- Legislative counsel were involved on a daily basis and produced multiple versions of the legislation.

- A steering committee chaired by the Deputy Minister met and were briefed weekly on the status of the legislation (i.e., the "Rate Mitigation Implementation Group" consisting of senior executives of the Ministry of Energy, Cabinet Office, Ministry of Finance, Treasury Board Secretariat, OFA, OPCD, OPG, OEB and IESO.

Brief Overview of the Legislation – Fair Allocation

- Legislation is based on the principle that the costs incurred to move to a clean, modern and reliable electricity system creates benefits that will be experienced by multiple generations of Ontario ratepayers and, therefore, in the interest of fairness, those costs should be shared by those multiple generations.

- The legislation does two things: (i) it establishes the fundamental elements of the fair allocation program, and, (ii) it puts the mechanisms in place to permit the financing of periodic shortfalls in revenue that are created by the fair allocation of electricity costs over multiple generations.

- With respect to the “fair allocation”, the legislation identifies:
  - What costs ought to be more fairly allocated (“clean energy costs”);
  - Mechanisms to allocate costs fairly among generations of consumers (“fair adjustment” and “fair allocation”);
  - The consumers to whom the program applies (“specified consumers”);
  - How the program is funded (borrowing on the strength of the revenue stream from consumers); and
  - The roles of various provincial entities in the program (i.e., Minister of Energy, Ontario Energy Board, IESO and OPG).

Brief Overview of the Legislation – Financeability

- In order to ensure the financeability of the program, considerable portions of the legislation are devoted to dealing with the “nuts and bolts” of what is required for successful financing including,
  - The quantification of the value of the regulatory asset;
  - The transfer of the regulatory asset to the (OPG) financing entity (which creates the “investment asset”);
  - The establishment of the “invoicing” process that ensures the investor’s “line of sight” to the investment asset;
  - The establishment of an OPG financing plan to ensure, among other things, an appropriate program of financing the shortfalls that are created by the deferred collection of revenues; and
  - Provisions setting out the way in which the financings are backed by amounts payable by specified consumers.

Building Blocks of the Legislation – What Costs are Part of the Program?

- In order to achieve its purpose, the legislation establishes the following “building blocks”:
  - Clean Energy Initiative – This is the term used to describe the Government of Ontario’s policies to foster growth and investment in and remove barriers and promote opportunities for clean and renewable energy sources and technologies and promoting conservation and demand management. The “clean energy costs” under the legislation arise from the “clean energy initiative”.
  - Clean Energy Costs – These are costs (attributable to the “clean energy initiative”) that are to be more fairly distributed among generations of consumers.
  - Clean Energy Benefits – These are the value of the benefits derived by the “specified consumers” (including the clean energy costs).
  - Clean Energy Adjustments – This is adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing.

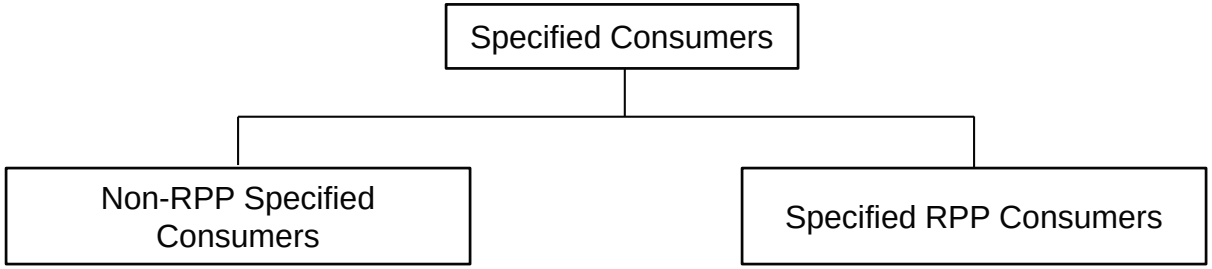
Building Blocks of the Legislation – How are the Costs to be Allocated?

- Fair Adjustment – This is the adjustment that gives the “relief” to certain specified consumers during the period from July 1, 2017 to June 30, 2021 (including this program’s portion of the 25 per cent reduction).

- Fair Allocation Amount – This is the concept/mechanism by which the fair distribution of “clean energy costs” (including, for example, financing costs, the cost of the power contracts, and the costs of the fair adjustment) is calculated and implemented.

Building Blocks of the Legislation – What Groups of Consumers Does the Program Apply To?

- Specified Consumers – This is the defined group of consumers to whom the legislative program applies. These consumers are persons who have an account with an electricity vendor for the supply of electricity in Ontario and,
  - Have a demand for electricity of 50 kilowatts or less (or as otherwise prescribed);
  - Annually use not more than 250,000 kilowatt hours of electricity (or as otherwise prescribed);
  - Carry on a farming business (basically pursuant to the *Farm Registration and Farm Organizations Funding Act*);
  - Have an account with an electricity vendor that is for a “dwelling”, condominium property, residential complex or co-operative housing; or
  - Are otherwise prescribed.



Building Blocks of the Legislation – How is the Program Financed?

- The ability to engage in the fair distribution of clean energy costs among the specified consumers requires financing during periods where the collection of the clean energy costs is, as part of the fair allocation, deferred to later years (thereby creating a revenue shortfall). A series of complex provisions are required to:
  - (i) Enable the financing, and
  - (ii) Meet requirements known to be important to rating agencies and investors.

- Regulatory Asset – This is fundamentally IESO's right to recover the revenues that it has deferred collecting because the clean electricity costs are being allocated across generations of ratepayers.

- Investment Asset – This is the asset that results when the regulatory asset is transferred to the (OPG) financing entities.

- The (OPG) financing entities will fund the acquisition (transfer) of the investment asset in the capital markets.

How the Legislation Works – Clean Energy Initiative

- The “clean energy initiative” concept is set out by definition. Its purpose is to establish the fundamental basis for the legislation.

- The definition is self-explanatory and is as follows:

“clean energy initiative” means the policies of the Government of Ontario related to,

a) eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,,

b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,

c) promoting conservation, demand management and energy efficiency; and

d) investing in energy infrastructure to ensure a clean, modern and reliable system;

How the Legislation Works – Clean Energy Costs and Benefits

- "Clean energy costs" are those costs that arise from the "clean energy initiative" and are allocated to the specified consumers for past, present and expected costs.

- The costs included in the "clean energy costs" include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act* (basically, the Global Adjustment provisions) which relate to contracts for,
  - Renewable energy generation or capacity;
  - Conservation and demand management, including shortage;
  - Energy efficiency; and
  - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act* or as prescribed); and
  - Payments made under section 78.5 of the *Ontario Energy Board Act.*

- Other such costs to be included in "clean energy costs" may be prescribed

- These are the costs to be distributed fairly among the specified consumers through the "fair allocation amount".

How the Legislation Works – Fair Allocation Adjustment

- The fair adjustment provisions are set out in Part II of the legislation.

- Part II establishes that the rate that will be payable by "specified RPP consumers" from May 1, 2017 to April 30, 2018 for the first fair adjustment is the rate that would be required from this program to contribute to that consumer to receiving a total a monthly invoice amount that is 25 per cent lower than the monthly invoice amount for that consumer under the "comparison rate". The comparison rate is a rate to be determined by the OEB using the method prescribed by regulation under s 79.16(1)(b) of the OEB Act.

- Part II includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program (i.e., adaptation of invoices must be implemented by August 1, 2017 followed by a subsequent lump sum credit to the consumer once the invoice is adapted).

- The Lieutenant General in Council is given the authority after April 30, 2018 to make regulations prescribing the rate for electricity (and therefore prescribing the "fair adjustment" until June 30, 2021). After June 30, 2021, regulations will have regard to the fair allocation amount and clean energy adjustments.

How the Legislation Works – Fair Allocation Amount

- The Minister sets the fair allocation amount.

- The establishment of the “fair allocation amount” is required to,
  - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the “specified consumers” for applicable “reference periods”; and
  - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers).

- The “fair allocation amount” is to have regard to:
  - Clean energy costs and allocating the appropriate proportionate amount of the clean energy benefits to the “specified consumers” (in the applicable “reference periods”);
  - Reasonable assumptions regarding the time value of money, the number of consumers in the “reference period”; and
  - Expected electricity consumption for the reference period.

How the Legislation Works – Regulatory Asset and Investment Asset

- IESO will have a funding deferral resulting from the reduction in amounts collected from specified consumers during the first 4 years because of the fair adjustment. The IESO's funding deferral will be financed indirectly through the debt capital markets.

- The Act enables the financing of this IESO funding deferral, on an ongoing basis, by establishing the funding deferral as a "regulatory asset". In simple terms, the regulatory asset is IESO's right to recover the revenues that it has deferred collecting.

- IESO will then legally transfer portions of this right to recover revenues to the (OPG) financing entities.

- The (OPG) financing entity that receives the transfer of the right to recover revenues acquires a right to impose, invoice and collect those regulatory charges (called the "clean energy adjustments"). This is generally described in the legislation as the "investment asset".

- The (OPG) financing entity will need to finance its acquisition (from IESO) of the investment asset, and it will do so in the capital markets.

How the Legislation Works – Issuance and Payment of Debt

- Debt securities and related funding obligations will be incurred by one or more (OPG) financing entities. These entities will be managed by OPG, as the financial services manager.

- The financings will be backed primarily by the “clean energy adjustments” payable by specified consumers. The “clean energy adjustments” will track the actual payment obligations incurred by the financing entities when they become due and payable. To ensure intergenerational fairness, these amounts will be managed by OPG to align with the “fair allocation amounts” ascribed to each of the next 60 six month periods ending in 2047 (or such later period as prescribed).

- IESO and each electricity distributor will act as agent for the financing entities to impose, invoice and collect the clean energy adjustments, which will be channeled through to pay each financing entity’s related funding obligations.

- To support the program, the Government of Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be achieve highest rated securities, although that will largely depend on issues such as the strength of the Government of Ontario’s undertakings not to adversely affect the program through subsequent legislation.

How the Legislation Works – Financing Plan

- The Financing Plan is prepared by the Financial Services Manager (OPG).

- The Financing Plan is the plan which is intended to set out when a “funding obligation” (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the “investment interest” from IESO.

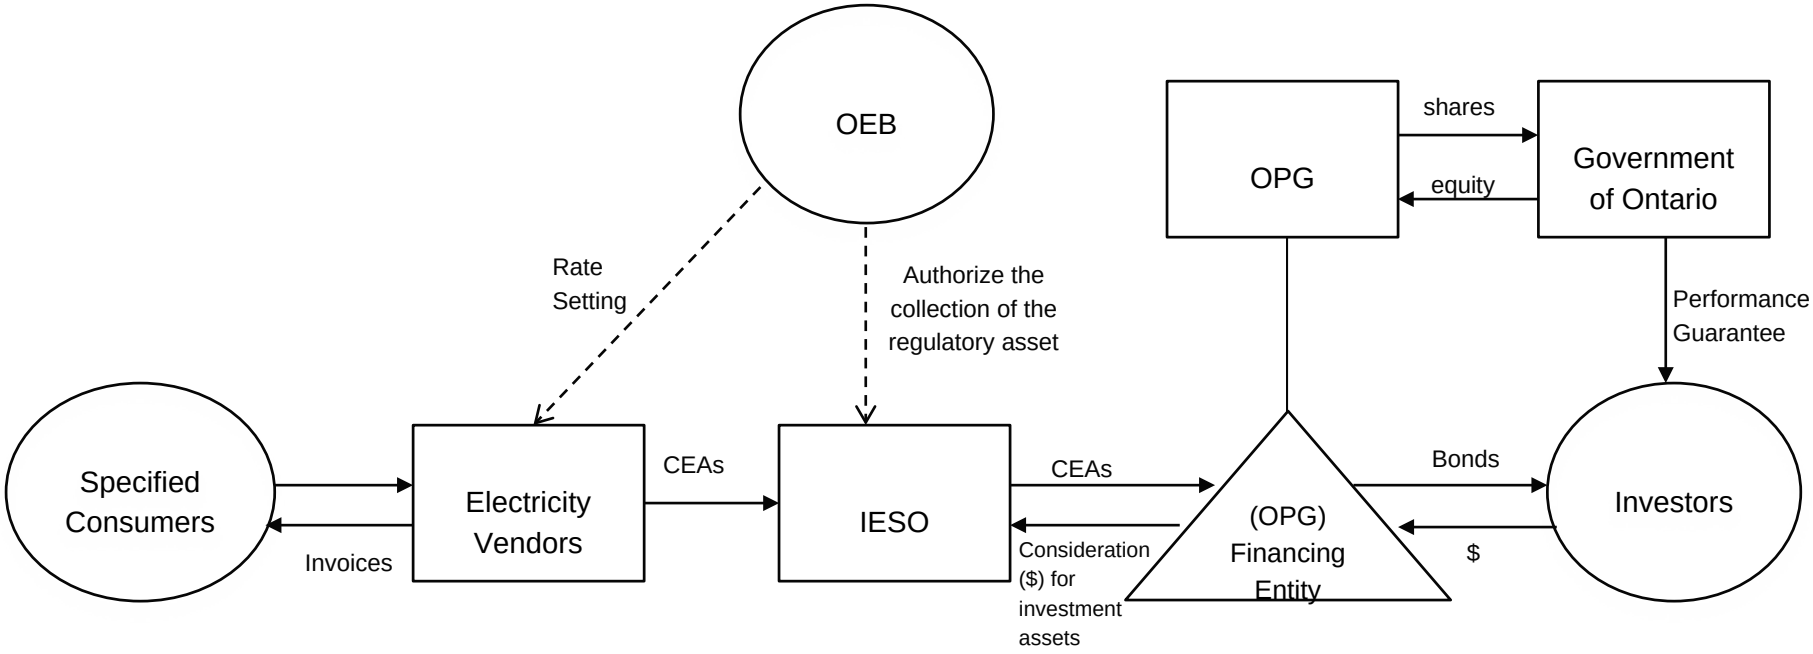
- There are rules that apply to the Financing Plan:
  - It must align with the “estimated finance amount” that will become due and payable during a “reference period”;
  - It must take into account the “fair allocation” and any “fair adjustment”;
  - It must plan to implement the financing in a reasonable and cost effective manner that reflects prevailing market terms and conditions; and
  - It must be based on certain reasonable assumptions set out in regulations (for example, related to anticipated IESO shortfalls, maturity of funding obligations, availability of refinancings, redemption opportunities and liquidity, and similar assumptions).

How the Legislation Works – Financing Plan (Continued)

- The (OPG) Financial Services Manager must incur funding obligations in conformity with the applicable Financing Plan.

- The Financing Plan will guide OPG's decisions regarding the repayment terms of the debt securities to be issued by financing entities. The Financing Plan will also deal with fundamental issues, such as the alignment (using derivatives) of any foreign currency obligations incurred by financing entities with the Canadian dollar cash flows arising through the clean energy adjustments.

How the Financing Structure Works



Note: CEAs are “clean energy adjustments”

Who Does What – Role of the Minister of Energy

- Determine the “fair allocation amount” applicable for each reference period. The fair allocation amounts will be set for all reference periods at the beginning of the program, based on reasonable expectations and forecasts at that time.

Who Does What – Role of the OPG

- As financial services manager, OPG will be responsible for the following under the Act:
  - Prepare and implement Financing Plan.
  - Establish and administer the financing entities.
  - Capitalize the financing entities by acquiring subordinated debt and equity, as required to achieve OPG's accounting and capital markets objectives.
  - Estimate and "true up" periodic finance amounts, to be passed through as regulatory charges in the form of Clean Energy Adjustments.

Who Does What – Role of IESO

- Calculate and record IESO funding shortfalls from time to time in a variance account, giving rise to a right of recovery from specified consumers to the extent not funded through the financings.

- Transfer the IESO's rights of recovery to (OPG) financing entities, in consideration for cash payments made by the financing entities from the proceeds of their financings.

- Coordinates the collection of "clean energy adjustments" from Electricity Distributors.

- Remit "clean energy adjustments" to (OPG) financing entity, for payment of financing entity funding obligations.

- Fund initial interest costs and expenses during the first 4 years.

Who Does What – Role of LDCs

- Obligation to invoice specified consumers.
- Collect, as agent of the investment interest owners, “clean energy adjustments” from specified consumers.
- Hold money received for clean energy adjustments in trust until remittance to the IESO.

Who Does What – Role of the OEB

- Determine and set rates to account for fair adjustments, fair allocations and clean energy adjustments (monthly adjustments).

- Determine and set rates and process to allow IESO to recover funding shortfalls (to the extent such amounts are not transferred to an (OPG) financing entity and financed in the capital markets).

- Review the administrative costs of OPG in connection with the administration of the program.

Part 2 – Overview of Legislative Amendments for Social Programs

- As part of the proposed Ontario Fair Hydro Plan, the Ministry of Energy is proposing amendments the *Ontario Energy Board Act, 1998* (OEBA) to enable the following measures:
  - Enhancing and providing tax-based funding for Rural or Remote Electricity Rate Protection (RRRP) through new enhanced rate protection for residential customers with high distribution rates;
  - Enhancing and providing tax-based funding for the Ontario Electricity Support Program (OESP); and
  - Creating a new First Nation On-Reserve Delivery Credit and providing for tax-based funding.

Overview of RRRP and Broadened Distribution Rate Protection

- Section 79 of the *Ontario Energy Board Act* would be amended to provide the Ministry the authority to prescribe, through regulation, classes of consumers whose cost would be transferred from the rate-base to the tax-base.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would prescribe Hydro One's R2 customers as receiving RRRP from appropriated funds effective July 1, 2017. This would fulfill the government's intention to transfer the majority of the costs of administering the RRRP program to the tax-base.
- In addition, Energy is proposing legislative amendments that would broaden rate protection by creating a new distribution rate protection program to complement RRRP. This new program would be funded through tax payers.
- Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs.
  - Proposed legislative amendments would enable a maximum monthly base distribution charge to established through regulations.
- If the proposed legislative amendments are approved, the government intends to prescribe by regulation both program details and the residential customers eligible for broadened distribution rate protection served by the following LDCs:
  - Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

Ontario Electricity Support Program

- Proposed legislation related to the Ontario Electricity Support Program (OESP) would shift program funding from the rate base to the tax base.
  - Tax-based funding would only kick in once the existing OESP variance account is depleted, which is expected to happen in the fall of 2017.

- To allow for the existing program structure to stay in place until tax-based funding kicks in, proposed new legislation would only come into force via a proclamation Order in Council, on a date to be determined.
  - This would ensure that existing OEB authorities remain in place while ratepayer funding is being used.

- In addition, a new authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers to support increased participation in the OESP program among Ontario Works and Ontario Disability and Support Program clients would be put in place.
  - Information Privacy Commissioner (IPC) staff were consulted, and customer consent is reflected.
  - This information sharing component will come into force at Royal Assent, allowing OEB and MCSS to begin this process quickly, and support increasing OESP participation levels.

First Nations Delivery Credit

- Energy is proposing legislative amendments that would establish a first Nation Delivery Credit for On-Reserve Consumers. This new program would be funded through tax payers.

- The proposed First Nation Delivery Credit would provide:
  - All prescribed on-reserve consumers with a credit for the entirety of their delivery line or with a credit for the monthly service charge.
  - The costs that are covered by the delivery credit are also described in legislation.

- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would:
  - Establish the class of customers eligible;
  - Determine what is considered on-reserve; and
  - Determine the method of calculating the delivery credit.

Subject: RE: Benchmarking and Performance for the Trust manager

Hey john - wanted to check in with you on this. Has there been any update since our call? I think carlos was going to try and figure out some additional details?

Separate but related note - I know Clara is anxious to get some details and figure out how this is going to work moving forward - I had this note from a while back so I have updated to reflect the approval ENE received. Do you think its worth updating this note to bring forward any decision points that we need direction on so that we can get something over to OPG?

Happy to chat
Kaitlin

Hi Carlos,

I'm sure I'm not mis-representing Kaitlin's position if I say we would like you to walk me and Kaitlin through the proposals.

I have a reasonable sense of what they are brain-storming but need to understand some of the details better and at what level of OPG these proposals are coming from.

Thanks,

John

Subject: FW: Benchmarking and Performance for the Trust manager

Hi John and Kaitlin
I am just starting to work with Sheen at OPG on the benchmarking rate. Attached is OPG's initial proposal and my comments highlighted back to OPG.

OPG management is recommending the following:
1.Gain and loss are capped at +/-1.5% of notional amount of incremental sub-debt issuance for each year 2.If there is a gain, OPG shall realize 80% of it; if there is a loss, OPG shall realize 20% of it 3.Loss could be carried forward to offset future gain

Can you provide comments regarding the unequal sharing arrangement proposed by OPG And also about capping any gains and losses to +/- 1.50% in any one year

Thanks
Carlos

GA Financing – Equity Injection

Briefing Note

PURPOSE:

- Provide an overview on the timing / mechanics for equity injections by the Province to OPG to support GA financing

CONTEXT:

- IESO will effectively sell the "right to collect" deferred future revenue from ratepayers (GA Asset) to the OPG Trust in return for cash proceeds
- In order for the OPG Trust to finance the GA asset on a long-term will obtain financing from two sources on an ongoing basis
    - 51% from capital markets
    - 49% as subordinated debt from OPG, which OPG will finance through:
        - **44% from equity injections from the Province**
        - 5% from capital markets
- OPG will require equity injections on an ongoing basis in order to keep its capital structure in line, and will require flexibility in order to issues shares as needed

LONG TERM APPROVALS:

Equity Injection Plan

- OPG would include forecasts of its equity requirements in its business plan each year (Fall), though this portion of the business plan would not be subject to concurrence by the shareholder
- The Ministry of Energy would seek appropriation on an annual basis through PRRT for the amounts requested by OPG
    - The Ministry of Energy has received appropriation for up to $1.1B in equity injections for the fiscal year 2017/18

SHORT TERM EQUITY INJECTION PROCESS:

- IESO settles contracts with and payments from LDCs / ratepayers
- IESO identifies shortfall and notifies OPG Trust and determines amount to purchase
- OPG Trust notifies OFA of corresponding equity injection requirement and number of shares issued
- OFA and OPG Trust settle equity injection amounts
- Timing for settlement of payments
    - [Five] business day window from notice to OFA to payment and settlement with OPG

    - XX business day window for final payment and settlement with IESO
- Equity injections by OFA to OPG expected to occur monthly; no Provincial involvement on approvals

OTHER CONSIDERATIONS:

- Share issuances currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares
    - Would provide the Province with a flexible mechanism to redeem its equity investment and for OPG to return to a more suitable capital structure as GA financing program progresses
    - Shares may or may not be valued at par (i.e., $20 per share – as at December 31, 2016, OPG had 256,300,010 common shares outstanding at $5,126 million)
- Potential for ongoing valuation of shares either from financial statements or market-based valuation
    - Book value basis could be viewed as a subsidy and [risk GBE status]
    - Market valuation would account for premiums that are built over time
- May require a natural mechanism for OPG to return equity as borrowing ramps up and principal is repaid
    - Consider potential for OPG to also pay interest/dividends
    - Would also account for Province's cost of funding
- Private financing by OPG Trust (51%) and OPG (5%) will initially be through short term debt (e.g., Canadian money-markets) to be subsequently rolled over to long-term debt as soon as possible

Subject: FW: CBN Fact Check

Hi David,

A few comments from us:

- Suggest a mention of accounting risks in the Fiscal subsection, particularly given the AG's stated position at Committee on this. May want to seek input from OPCD/TBS.
- Suggest including on page 6, as part of the objectives of the proposed regulations:
  - Details on how the interest on the Trust debt will be managed; and
  - The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

Comments from CEFD will be relayed separately by Gavin.

Thanks, Anna

Subject: RE: CBN Fact Check

Anna/Gadi

Agree with Gadi's point re accounting risks. No need for regulations for both the guarantee and the new credit facility to IESO(confirmed with Malle). I would also suggest that the objectives of the

proposed regulations spelled out on page 6 include:

- Details on how the interest on the Trust debt will be managed and
- The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

Thanks

Subject: Re: CBN Fact Check

I find it interesting that in the Risks section there is a lengthy description of the constitutional risk in the Legal subsection, but there is no mention of the accounting risks in the Fiscal subsection, in spite of the AG's stated position at Committee on this. I think that it's a gap that needs to be at least mentioned in the CBN, doesn't it?

I'm assuming, because it isn't mentioned anywhere in the CBN, that there are no regs required for the guarantees that Mike has been working on with Blakes and OPG? Also, our direction on the $2 billion line of credit for the IESO can be done independently of these regs?

Thanks,
Gadi

Subject: RE: CBN Fact Check

Hi Gadi,

As a comment, yes, no reg is needed for the OFA-IESO credit facility, but you've seen the OIC package to expand the OFA's borrowing room from the Province under CIPA to allow for the expanded credit facility. That's still tracking for the 27th.

And I had understood from the Energy weekly that the Energy regs would not all be ready at once (note the list from the materials Energy sent yesterday, as attached, where only some are listed as ready – though I did not see the IESO borrowing one mentioned in the CBN, though listed as "ready"), so this would just be the first set (not that I have yet to see any of the actual proposed regs, just this CBN).

One more point James along this line. It's fairly important in my view….

In the Minute, could we have something like:

"Note that the IESO has requested a credit facility from the OFA to manage liquidity issues between the time IESO requires financing for monthly settlements to meet the requirements of the FHP, and the time when OPG's SPV purchases the IESO regulatory asset, or as a backstop in the case of the regulatory asset not being purchased for a period of time. Note that the Minister of Finance will provide a directive to the OFA to provide a new or expanded credit facility for this purpose."

We are open to better wording from the experts on the Minute item and also as tied to the legislation terminology.

Hi Felix and Chris:

As mentioned earlier in the week, please find attached the draft CBN re the rate mitigation legislation for the TBS' review (password same as previous materials). This has been prepared with no materials and should be reviewed closely. I have left comments in the margin where I am looking for specific review or confirmation of particular details. I am interested in ensuring alignment in how we are characterizing the proposal and its risks.

The note is a bit on the longer side at the moment, so suggestions to economize without losing key pieces would also be helpful.

The note is undergoing concurrent review with Energy and my management now. My ADM will likely pass this along to Cindy and Karen for concurrent review given the time crunch, but please feel to pass along as well.

Please try to have any comments to me by EOD on Monday so I can get it to my DM and the Secretary on Tuesday.

Have a great weekend,

Hi John,

Just digging around on the question about what sort of approvals the OFA would need. The Capital Investment Plan Act states the following:

> Policies
> 16. (1) The Lieutenant Governor in Council may formulate policies for a corporation. 1993, c. 23, s. 16 (1).
>
> Directives
> (2) Subject to any policies under subsection (1), the minister may issue directives in writing to a corporation on matters relating to the corporation's exercise of its powers and duties under this or any other Act. 1993, c. 23, s. 16 (2).

TBC but it looks like we would need LGIC to formulate the policy? It looks like the OFA needs to borrow money from the Province (Minister of Finance) and that requires LGIC direction to authorize the Minister to lend to the OFA – who then on-lends. I checked the past OFA Loans directives and they all reference OIC (see attached for example). It may be a question for OFA/MOF legal…

I also looked for the original directives for the OFA credit facility and found one from 2005 for the OPA – but it is not the original. It does not make reference to any OICs…. The original one seemed to have been dated December 22, 2004.

One more point James along this line. It's fairly important in my view….

In the Minute, could we have something like:

"Note that the IESO has requested a credit facility from the OFA to manage liquidity issues between the time IESO requires financing for monthly settlements to meet the requirements of the FHP, and the time when OPG's SPV purchases the IESO regulatory asset, or as a backstop in the case of the regulatory asset not being purchased for a period of time. Note that the Minister of Finance will provide a directive to the OFA to provide a new or expanded credit facility for this purpose."

We are open to better wording from the experts on the Minute item and also as tied to the legislation terminology.

While I don't see why we wouldn't facilitate the request, we would require Minister's authorization of some sort and staff level, we view that TB/MBC should be made aware of the request/requirement.

Thanks James.

At a few points in the OFA comments they say "The IESO has requested a backstop credit facility from the OFA." Do you know if the plan is to grant this request?

Thanks!

Subject: DRAFT CBN For Review- Rate Mitigation- Due EOD May 1st
Importance: High

Hi Felix and Chris:

As mentioned earlier in the week, please find attached the draft CBN re the rate mitigation legislation for the TBS' review (password same as previous materials). This has been prepared with no materials and should be reviewed closely. I have left comments in the margin where I am looking for specific review or confirmation of particular details. I am interested in ensuring alignment in how we are characterizing the proposal and its risks.

The note is a bit on the longer side at the moment, so suggestions to economize without losing key pieces would also be helpful.

The note is undergoing concurrent review with Energy and my management now. My ADM will likely pass this along to Cindy and Karen for concurrent review given the time crunch, but please feel to pass along as well.

Please try to have any comments to me by EOD on Monday so I can get it to my DM and the Secretary on Tuesday.

Have a great weekend,

DIRECTIVE AND DETERMINATION
MINISTER OF FINANCE
OFA LOANS TO CONSOLIDATED PUBLIC BODIES

To: Ontario Financing Authority ("OFA")

Pursuant to subsection 16(2) of the *Capital Investment Plan Act, 1993*, the OFA is directed to make loans to (i) the public bodies and (ii) individual public bodies within the class of public bodies (i.e. colleges and school boards) as set out in the OFA's Annual Borrowing and On-Lending Plan Fiscal Year 2016-17 which are listed in Schedule "A" hereto in a total aggregate amount of up to CAD $305,800,000 (the "Loans").

The following terms and conditions shall apply in respect of the Loans:

1. The maximum amount of each Loan to a public body and the aggregate maximum amount of Loans to a class of public bodies will be the amount specified in Schedule A hereto for each such public body or class of public bodies.

2. Each Loan shall be made for the purpose specified for that Loan in Schedule A.

3. A Loan to a public body will only be made at the request and on the recommendation of the responsible ministry for the public body.

4. Except in the case of Loans to school boards, each Loan is conditional upon prior written approval pursuant to Section 28 of the *Financial Administration Act* (FAA) to be requested by the ministry responsible for the public body. The CEO of the OFA will not act as the delegate of the Minister of Finance to provide approval under Section 28 of the FAA for any of the Loans.

5. The OFA will charge interest on the each of the Loans determined in accordance with the OFA's Lending Policy as approved by the OFA Board of Directors (the "Loan Rate"); provided that the Loan Rate shall be comprised of

    a. The Province's total cost of funds, including commissions,to fund the Loan (the "Province's Cost of Funds"),

b. a two and one-half (2.5) basis point spread over the Province's Cost of Funds to recover the OFA's lending costs (the "Cost Recovery Fee"), and
c. in addition to the Cost Recovery Fee, on Loans for projects of a commercial nature, a spread over the Province's Cost of Funds of up to sixty-five (65) basis points to reflect commercial rates, determined in accordance with the OFA's Lending Policy (the "Commercial Spread").

6. Each of the Loans shall be evidenced by a loan agreement containing terms and conditions consistent with this Directive and the OFA's Lending Policy and approved by the CEO of the OFA or the Assistant Deputy Minister, Corporate and Electricity Finance Division, OFA, or a person designated by either of them.

Pursuant to Orders in Council 675/97, 767/99, 1883/2006, 2144/2007, 300/2010, 163/2012, 1051/2012 and 354/2014, all as amended, made under subsection 22(1) of the *Capital Investment Plan Act, 1993,* the Minister of Finance is authorized to make loans to the OFA and to determine the amount of the spread to be retained by the OFA where those funds are subsequently loaned to public bodies. It is hereby determined that for each Loan made under the authority of this Directive, the amount of the spread retained by the OFA is equal to the sum of the Cost Recovery Fee and the Commercial Spread, if any, for the Loan as set out above.

MEMORANDUM TO: Colin Andersen
Deputy Minister

FROM: Gadi Mayman
CEO & Vice Chair

SUBJECT: **Ontario Power Authority: Credit Facility**

The Ontario Power Authority (OPA) has requested an increase to its existing credit facility with the Ontario Financing Authority (OFA) to meet an expected increase in cash needs that could exceed the current $500 million credit facility limit. The purpose of this memo and the attached material is to request a direction from the Minister of Finance which would increase the amount of loans that the OFA is able to provide to the OPA by $475 million.

Please let me know if you require a further briefing or have any questions.

September 26, 2005

MEMORANDUM TO: The Honourable Greg Sorbara
Minister of Finance

FROM: Colin Andersen
Deputy Minister

SUBJECT: **Directive to the Ontario Financing Authority**

I wanted to make you aware of an emerging issue with the Ontario Power Authority (OPA) and to seek your approval to increase the credit facility provided by the Ontario Financing Authority (OFA). The OPA has requested an increase of $475 million to its existing credit facility with the OFA to meet an expected increase in cash needs that could exceed the current $500 million credit facility limit. As you know, the OPA is a newly created institution and an integral part of the Government's restructured electricity market.

An existing Directive, executed on December 22, 2004, directed the OFA to provide loans to the OPA on a transitional basis until the OPA is able to access the capital markets. This Directive also established that the aggregate amount of the loans shall not exceed $500 million at any time and that all loans outstanding must be repaid in full by December 31, 2006. It was originally estimated that $500 million would be sufficient to meet the OPA's financing requirements for the current fiscal year. However, as a result of higher than forecast electricity prices and consumption, the OPA's financing requirements have increased substantially over the past few months.

The bulk of the OPA's financing requirements stem from its responsibility for managing and funding the Regulated Price Plan (RPP) variance account. This account tracks the difference between the price paid by low-volume and designated consumers under the Ontario Energy Board's (OEB) RPP and the actual cost of electricity. Since the province was faced with record-levels of electricity consumption and subsequently high prices throughout the summer months, the size of this account has grown significantly since June 2005.

The value of OPA's loan currently outstanding is about $386 million (for transactions up to August 2005). Since electricity prices for September continue to be significantly higher than forecast, it is expected that the OPA could require additional financing above its existing $500 million credit facility as early as the middle of October. In addition, if prices continue to be significantly higher than originally forecasted over the next six months, then the OPA's financing requirements could be as much as $920 million by March 2006. To ensure that the OPA has the ability to meet its financing requirements in the event that electricity prices continue to be high, staff recommend that the maximum amount of loans available to the OPA be increased by $475 to $975 million.

The OPA's ability to repay its loans come from its legislative authority to recover any deficit in the RPP variance account from consumers. More specifically, the existing legislation provides that when establishing the new RPP, the OEB must take into account any outstanding balance within the RPP variance account with a view to eliminate this balance over time. Therefore, when the new RPP is established on May 1, 2006, prices will reflect any RPP variance account deficit which accumulated during the 2005-06 period. In addition, a portion of the RPP variance account deficit will be recovered through a rebate from Ontario Power Generation (OPG). OPG's revenues on most of the output from its unregulated assets have an upper limit of 4.7 cents/kWh. OPG is required to pay a rebate on revenues over this amount. The payment of this rebate is currently expected to take place sometime after April 2006 and the portion of the rebate that will be paid to OPA is currently estimated to be about $316 million.

I've attached for your review and consideration a Minister's Directive to the OFA, which would increase the amount of loans that the OFA is able to provide to the OPA by $475 million. This Directive is necessary to ensure that the OPA will have the ability to meet its future financing requirements. If you agree with this direction, please sign the attached.

Please let me know if you require a further briefing or have any questions.

Ontario Power Authority: Financing Requirements

September 23, 2005

Ontario Financing Authority

Confidential Advice to Minister

Decision Sought

- The Ontario Power Authority (OPA) has requested an increase to their existing credit facility with the Ontario Financing Authority (OFA). As a result of higher than forecast electricity prices and consumption since April 2005, the OPA's financing requirements could exceed the current $500 million credit facility limit as early as the middle of October.

Seeking approval for:

- An increase in the OPA's existing credit facility, from $500 million to $975 million.

OPA's Financing Requirements

- The OPA undertakes a number of activities that have financing implications. Specifically, the OPA is responsible for managing and funding two accounts:
  - **Regulated Price Plan Variance Account (RPP Variance Account)** – This account tracks the difference between the price paid by low-volume and designated consumers under the OEB's RPP and the actual cost of electricity.
  - **Regulated Price Plan Retailer Variance Account (Retailer Variance Account)** – This account tracks the difference between the hourly Ontario electricity prices (HOEP) and retail contract prices
- In order to ensure that the OPA has the ability to effectively manage its financing requirements, the OFA is providing financial services and loans to the OPA on a transitional basis.
  - These financial services and loans are being provided by the OFA under a direction from the Minister of Finance, which was executed in December 2004.
  - The loans are provided under a Credit Agreement in the form of a credit facility of $500 million, which provides the OPA with the flexibility to manage efficiently its cash needs by borrowing when it requires cash and repaying any loans under the credit facility when it has excess cash.
  - The interest rate charged on the loans is equal to the Province's cost of borrowing for a similar term, plus 25 basis points (i.e. 0.25%).
  - The Credit Agreement has a term of two years and all loans outstanding must be repaid in full by December 31, 2006.

OPA's Financing Shortfall

- The amount of OPA's loan with the OFA is currently about $386 million, which represents the sum of the RPP Variance Account and the Retailer Variance Account (up to August 2005) plus the interest that has accrued on loans from previous months.

- Since electricity prices for September continue to be significantly higher than forecast, it is expected that the OPA could require additional financing above its existing $500 million credit facility as early as the middle of October (for September activity).

  - Specifically, it is estimated that if average spot market prices exceed 8.80 cents/kWh for the month of September then the OPA's financing requirements will exceed $500 million.
  - As of September 19, 2005, the weighted average price for September is 10.15 cents/kWh

- It was originally estimated that a $500 million credit facility would be sufficient to meet the OPA's financing requirements for the current fiscal year. As a result of higher than forecast electricity prices and consumption, the OPA's financing requirements have increased substantially since April 2005.

  - Electricity prices have been about 23% higher than previously forecast during this period – an average of 7.53 cents/kWh versus a forecast of 6.10 cents/kWh.

OPA's Financing Requirements Could Exceed $900 Million

- The value of OPA's loan currently outstanding is about $386 million (for transactions up to August 2005). Based on the original price forecast that was used by the OEB in establishing the RPP for 2005-06, it is estimated the OPA's financing requirements would grow to $591 million by March 2006. However, if prices continue to be significantly higher than originally forecasted, then the OPA's financing requirements could be as much as $920 million by March 2006.

	Original Forecast		Revised Forecast[1]	
	Monthly Requirement	Cumulative Balance	Monthly Requirement	Cumulative Balance
Current Loan Outstanding (millions) $386				
Future Financing Requirements (millions)				
September	$12	$398	$64	$450
October	$30	$428	$76	$526
November	$15	$443	$54	$580
December	$23	$466	$67	$646
January	$55	$521	$111	$757
February	$44	$565	$91	$848
March	$26	$591	$72	$920

[1] Assumes prices continue to be 23% higher than originally forecasted.

Proposed Direction

- Recommend to the Minister of Finance that the amount of the OPA's existing credit facility with the OFA be increased from $500 million to $975 million.
  - Provides OPA with the ability to meet its future financing requirements if electricity prices continue to be significantly higher than forecast.

Next Steps

- Brief Minister of Finance on OPA credit facility.
- Draft proposed Directive for Minister's consideration.
- Amend the Credit Agreement between the OFA and OPA.

Note

- OPA Board meeting on September 27 – OPA staff have indicated desire to provide a status report/and or resolution to issue at Board meeting.

Appendix

OPA's Financing Activities To Date

- The following table summarizes the monthly activity within the variance accounts managed by the OPA:

	RPP Variance Account[1]	Retailer Variance Account[2]
January		$3,308,609.02
February		$3,326,152.93
March		$941,659.52
April	$37,746,763.14	($294,514.80)
May	$834,094.44	($1,332,169.81)
June	$73,740,977.97	($1,569,966.45)
July	$115,756.091.04	($6,819,673.06)
August	$175,497,486.25	($16,279,198.87)
Total	**$403,575,412.84**	**($18,719,101.52)**

[1] For the first three months of 2005, the RPP Variance Account was funded by OEFC from the surplus accumulated in the Electricity Consumer Price Protection Fund (ECPPF). Beginning in April 2005, all balances have been funded by the OPA through an OFA loan

[2] The Retailer Balancing Account has been funded through an OFA loan since January 2005

OPA's Ability To Repay Its Loans

Recovery Through New RPP

- OEB will be establishing a new RPP for May 1, 2006. Existing legislation provides that when establishing the new RPP the OEB must take into account any outstanding balance within the RPP Variance Account, with a view to eliminate these balances over time.

OPG Rebate

- OPG's revenues on most of the output from its unregulated assets (non-baseload hydroelectric, coal and gas-fired stations), have an upper limit of 4.7 cents/kWh. OPG is required to pay a rebate on revenues over this amount. The payment of this rebate is currently expected to take place sometime after April 2006 (i.e. after the initial RPP period).

- To the end of March 2006, it is estimated that OPG could accumulate excess revenues of approximately $658 million on the output from its regulated assets. Of this amount, about $316 million would be owed to the OPA.

DIRECTIVE
MINISTER OF FINANCE

To: Ontario Financing Authority

Pursuant to a directive dated December 22nd 2004 (the "December 22, 2004 Directive") the Minister of Finance approved and directed the Ontario Financing Authority (the "OFA") to make loans (the "Loans") to the Ontario Power Authority (the "OPA") from time to time, as considered necessary by the OPA to meets its purposes, as set out below:

- The Loans shall be provided to the OPA at a rate equal to the Province of Ontario's cost of borrowing, as determined by the OFA, plus a spread of twenty-five basis points and on such other terms as the OFA deems appropriate.

- The terms of the Loans shall be set out in a Loan Agreement to be entered into by the OFA and the OPA.

- The aggregate amount of the Loans shall not exceed $500 million at any time, and

- All amounts outstanding under the Loan Agreement shall be repaid in full by December 31, 2006.

The Minister of Finance hereby approves and directs the OFA to increase the maximum aggregate amount of the Loans from $500 million to $975 million. All of the other terms and conditions to which the Loans are subject pursuant to the provisions of the December 22, 2004 Directive shall remain the same.

Dated: October 3, 2005

The Honourable Greg Sorbara
Minister of Finance

Ontario
Executive Council
Conseil exécutif

Order in Council
Décret

On the recommendation of the undersigned, the Lieutenant Governor, by and with the advice and concurrence of the Executive Council, orders that:

Sur la recommandation de la personne soussignée, le lieutenant-gouverneur, sur l'avis et avec le consentement du Conseil exécutif, décrète ce qui suit :

WHEREAS pursuant to Order in Council 675/97 made under subsection 22(1) of the *Capital Investment Plan Act, 1993*, the Minister of Finance is authorized to lend Two Billion One Hundred and Sixty Million Dollars in lawful money of Canada to the Ontario Financing Authority (the "OFA");

AND WHEREAS pursuant to Order in Council 767/99 made under subsection 22(1) of the *Capital Investment Plan Act, 1993*, the Minister of Finance is authorized to lend Six Hundred and Fifty-six Million Dollars in lawful money of Canada to the OFA;

AND WHEREAS pursuant to Order in Council 1883/2006 made under subsection 22(1) of the *Capital Investment Plan Act, 1993*, the Minister of Finance is authorized to lend Eight Hundred Million Dollars in lawful money of Canada to the OFA;

AND WHEREAS pursuant to Order in Council 2144/2007 made under subsection 22(1) of the *Capital Investment Plan Act, 1993*, the Minister of Finance is authorized to lend Two Billion Dollars in lawful money of Canada to the OFA;

AND WHEREAS pursuant to Order in Council 300/2010 made under subsection 22(1) of the *Capital Investment Plan Act, 1993,* the Minister of Finance is authorized to lend One Billion Eight Hundred Million Dollars in lawful money of Canada to the OFA;

AND WHEREAS pursuant to Order in Council 163/2012 made under subsection 22(1) of the *Capital Investment Plan Act, 1993,* the Minister of Finance is authorized to lend One Billion Seven Hundred Million Dollars in lawful money of Canada to the OFA;

AND WHEREAS the Province considers it expedient to amend Order in Council 675/97, Order in Council 767/99, Order in Council 1883/2006, Order in Council 2144/2007, Order in Council 300/2010 and Order in Council 163/2012 to allow the Minister of Finance to determine the spread to be retained by the OFA on advances made by the Minister of Finance to the OFA where the OFA subsequently loans those moneys to public bodies;

THEREFORE:

1. Order in Council 675/97, as amended by Order in Council 1709/98, Order in Council 844/2008, Order in Council 1723/2009 and Order in Council 1268/2010, is hereby amended by:

(i) deleting subparagraph (d)(ii) and replacing said subparagraph with the following subparagraph:

"(d)(ii) in the event that moneys included in an Advance are used by the OFA for the purpose of funding loans to third parties (a "Third Party Loan"), the rate of interest payable by the OFA to the Province on the portion of the Advance so used shall be adjusted effective as of the date that the portion of the Advance is used to fund the Third Party Loan so that the per annum rate of interest payable by the OFA on such moneys is equivalent to the per annum rate of interest payable to the OFA under the Third Party Loan less an amount as may be determined by the Minister of Finance in respect of such Third Party Loan or a class of such Third Party Loans, until but excluding the date on which the Third Party Loan is repaid, at which time the interest rate set out in subparagraph (i) shall again be applicable to that portion of the Advance; and"

2. Order in Council 767/99, as amended by Order in Council 844/2008, Order in Council 1723/2009 and Order in Council 1268/2010, is hereby amended by:

(i) deleting subparagraph (d)(ii) and replacing said subparagraph with the following subparagraph:

"(d)(ii) in the event that moneys included in an Advance are used by the OFA for the purpose of funding loans to third parties (a "Third Party Loan"), the rate of interest payable by the OFA to the Province on the portion of the Advance so used shall be adjusted effective as of the date that the portion of the Advance is used to fund the Third Party Loan so that the per annum rate of interest payable by the OFA on such moneys is equivalent to the per annum rate of interest payable to the OFA under the Third Party Loan less an amount as may be determined by the Minister of Finance in respect of such Third Party Loan or a class of such Third Party Loans, until but excluding the date on which the Third Party Loan is repaid, at which time the interest rate set out in

subparagraph (i) shall again be applicable to that portion of the Advance; and"

3. Order in Council 1883/2006, as amended by Order in Council 844/2008, Order in Council 1723/2009 and Order in Council 1268/2010, is hereby amended by:

(i) deleting subparagraph (c)(ii) and replacing said subparagraph with the following subparagraph:

"(c)(ii) in the event that moneys included in an Advance are used by the OFA for the purpose of funding loans to third parties (a "Third Party Loan"), the rate of interest payable by the OFA to the Province on the portion of the Advance so used shall be adjusted effective as of the date that the portion of the Advance is used to fund the Third Party Loan so that the per annum rate of interest payable by the OFA on such moneys is equivalent to the per annum rate of interest payable to the OFA under the Third Party Loan less an amount as may be determined by the Minister of Finance in respect of such Third Party Loan or a class of such Third Party Loans, until but excluding the date on which the Third Party Loan is repaid, at which time the interest rate set out in subparagraph (i) shall again be applicable to that portion of the Advance; and"

4. Order in Council 2144/2007, as amended by Order in Council 844/2008, Order in Council 1723/2009 and Order in Council 1268/2010, is hereby amended by:

(i) deleting subparagraph (c)(ii) and replacing said subparagraph with the following subparagraph:

"(c)(ii) in the event that moneys included in an Advance are used by the OFA for the purpose of funding loans to third parties (a "Third Party Loan"), the rate of interest payable by the OFA to the Province on the portion of the Advance so used shall be adjusted effective as of the date that the portion of the Advance is used to fund the Third Party Loan so that the per annum rate of interest payable by the OFA on such moneys is equivalent to the per annum rate of interest payable to the OFA under the Third Party Loan less an amount as may be determined by the Minister of Finance in respect of such Third Party Loan or a class of such Third Party Loans, until but excluding the date on which the Third Party Loan is repaid, at which time the interest rate set out in subparagraph (i) shall again be applicable to that portion of the Advance; and"

5. Order in Council 300/2010, as amended by Order in Council 1268/2010, is hereby amended by:

(i) deleting subparagraph (c)(ii) and replacing said subparagraph with the following subparagraph:

"(c)(ii) in the event that moneys included in an Advance are used by the OFA for the purpose of funding loans to third parties (a "Third Party Loan"), the rate of interest payable by the OFA to the Province on the portion of the Advance so used shall be adjusted effective as of the date that the portion of the Advance is used to fund the Third Party Loan so that the per annum rate of interest payable by the OFA on such moneys is equivalent to the per annum rate of interest payable to the OFA under the Third Party Loan less an amount as may be determined by the Minister of Finance in respect of such Third Party Loan or a class of such Third Party Loans, until but excluding the date on which the Third Party Loan is repaid, at which time the interest rate set out in subparagraph (i) shall again be applicable to that portion of the Advance: and"

6. Order in Council 163/2012 is hereby amended by:

(i) deleting subparagraph (c)(ii) and replacing said subparagraph with the following subparagraph:

"(c)(ii) in the event that moneys included in an Advance are used by the OFA for the purpose of funding loans to third parties (a "Third Party Loan"), the rate of interest payable by the OFA to the Province on the portion of the Advance so used shall be adjusted effective as of the date that the portion of the Advance is used to fund the Third Party Loan so that the per annum rate of interest payable by the OFA on such moneys is equivalent to the per annum rate of interest payable to the OFA under the Third Party Loan less an amount as may be determined by the Minister of Finance in respect of such Third Party Loan or a class of such Third Party Loans, until but excluding the date on which the Third Party Loan is repaid, at which time the interest rate set out in subparagraph (i) shall again be applicable to that portion of the Advance: and"

7. The forms of promissory note which evidence the loans pursuant to Order in Council 675/97, Order in Council 767/99, Order in Council 1883/2006, Order in Council 2144/2007, Order in Council 300/2010 and Order in Council 163/2012, are

hereby amended, as applicable, to reflect the above changes to the Orders in Council in respect of all amounts advanced to the OFA on or after the date of this Order.

I take this to mean that he's fine with the inclusion of it in the RAN note…let's next check with legal the wording.

Thanks,

John

I'm a little confused. At this time, I thought we were only going to respond to the IESO with a short term facility, and seek a longer one only if needed. So, while it might be a risk that it might have to be converted in future to long-term, do we need so much 30-year wording here?

Hi Ron,

On this, we are reviewing the materials but it looks like they dropped our staff level note contents OIC right into their RAN. (Appendix F) Could you have a look and let us know if you have concerns as we would like to let them know of any issues.

Thanks,

John

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – March 1, 2017	**Tracking to: Fast Track** LRC at Cabinet – March 10, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan Legislation

I. DECISION BEFORE THE BOARD

Receive a report back on Ontario Fair Hydro Plan implementation, supporting implementation decisions and recommending the proposed Ontario Fair Hydro Plan Act to proceed to LRC and Cabinet for approval.

II. RECOMMENDATIONS:

• Receive a report Ontario Fair Hydro Plan implementation: o Proposed legislation ▪ Note key aspects of proposed legislation ▪ Recommend proposed legislation o Approve up to $3.5M funding for media buy procurement, to be followed later by a transfer later from the Bulk Media program to fully recover costs for the public education campaign.	*Board Judgement*
• Direct the Ministry to return to TB/MBC with regulations support implementation prior to going to LRC. • Note outstanding report back requirements, • Direct in-year reporting through quarterly reporting and PRRT planning process on spending to date versus funding allocation for Electricity social programs and Global Adjustment Refinancing	

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Affordability Fund	0.0	0.0	0.0
	Global Adjustment Refinancing*^	0.0	0.0	0.0
	Electricity social programs*	499.0	753.0	829.0
	Ontario Rebate for Electricity Consumers	939.0	882.0	882.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

* Subject to enacting proposed Ontario Fair Hydro Plan legislation.
^ As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget, linked to proposed legislation

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017 the Ministry received TB/MBC approval for additional rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016 for an average household in 2017. The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017. This submission deals with three key elements of the OFHP:

- Refinancing Portion of Global Adjustment (GA) to partially defer RPP eligible ratepayer GA costs (Implementing a non-fiscal impact approach over government funding).
- Expanding, enhancing ratepayer funded electricity social programs and shifting them to being government funded (OESP, RRRP), along with a new government funded On-Reserve First Nations Delivery Credit.
- Expansion of Industrial Conservation Initiative (ICI).

The Ministry was directed to report back to the Board with proposed legislation supporting OFHP implementation, including the following specific direction regarding a non-fiscal mechanism (approach) to refinancing a portion of Global Adjustment costs (Appendix C provides the March 1, 2017 minute):

- Formal accounting opinions from OPG and IESO auditors.
- Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
- Report on the multi-year profile of GA smoothing, identifying specific assumptions.
- Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
- Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

Direction was also given to report back with final details for electricity support programs, as well as programs' effectiveness, efficiency, and sustainability.

The current submission does not address all report back requirements. The proposed legislation would establish the legislative framework, to be followed by further program related details being set by regulations at a later date (Ministry is targeting June 2017).

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two Schedules (Appendix D provides details of each part):

- Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment partial refinancing)
- Schedule 2: Legislative amendments for electricity social programs

Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment (GA) Refinancing)

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

The Ministry indicates under OFHP, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017 (This includes the 8% Ontario Rebate for Electricity Consumers). In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Reflecting March 2017 approvals (See Appendix C for March 2017 TB/MBC minute), proposed legislation for GA Refinancing is designed to establish a non-fiscal impact mechanism. Minuting indicated proceeding with GA Refinancing requires completed legal, accounting and financing risk assessments.

The proposed approach to GA Refinancing is complex. Appendix D provides proposed legislative details.

- At a high level, the proposed legislation establishes the framework to refinance a portion of the current GA costs to future ratepayers by recognizing the longer term benefit many of these generating assets to the electricity system. The methodology is based on the assumption that some assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets in the future.

    - July 1, 2017, to April 30, 2018, reduces, on average, after-tax electricity costs for "specified consumers" by 25% (inclusive of the 8% rebate and shifting of support program to be government funded).
    - May 1, 2018, to June 30, 2021, electricity rates will be prescribed by regulation with the intention to keep increases in line with the Consumer Price Index (CPI).
    - July 1, 2021, to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and administrative costs.
    - Through the bill and amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998, expands the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO) to provide for appropriate oversight, put in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the refinanced GA costs.

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG, through a special purpose vehicle (OPG Trust) is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

The bill includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Schedule 2: Legislative amendments for electricity social programs

Electricity social programs becoming government funded under OFHP target residential electricity customers disproportionately affected by increased electricity costs.

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The bill amends the *Ontario Energy Board Act, 1998* for various electricity social programs:

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001. The bill enables the funding of existing Rural or Remote Rate Protection (RRRP) for prescribed customers to be provided for through provincial appropriations, rather than from electricity.

Appropriated funds would be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the government funding provided.

Distribution Rate Protection (Broadened RRRP)

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

The proposed legislation would enable a broader government funded Distribution Rate Protection (DRP) program (broadened RRRP) which provides additional distribution rate protection to residential customers of prescribed higher cost LDCs by enabling the regulations to prescribe a maximum distribution charge for consumption on or after July 1, 2017.

If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

The legislation contains retroactive application of the provisions to offset any potential lapses in implementation and ensure that consumers receive the benefit following the July 1st effective date through to the final effective date of October 1st, 2017.

On-Reserve First Nations Delivery Credit

The proposed bill would enable the provision of a government funded on-reserve First Nations Delivery Credit (FNDC), which would eliminate the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation.

The program is premised around the findings in an OEB Report submitted to the Ministry on December 29, 2016 providing advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers.

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program to being government funded, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid

by all Ontario consumers on May 1, 2017. On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will come into effect on May 1, 2017.

The proposed bill would move the recently expanded Ontario Electricity Support Program (OESP) to government funding, allow for the potential transition of the program administration to the Crown or other entity, and to enable information exchange between the Ontario Disability Support Program (ODSP) and Ontario Works (OW) to potentially allow for automatic enrolment procedures to be established.

The Ministry indicates the proposed legislative amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

Expansion of Industrial Conservation Initiative (ICI)

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and “1114”) in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and Demand Management (CDM) programs and/or Ontario Climate Change Solutions Deployment Corporations (OCCSDC) programs and pilots.

The Ministry is also undertaking targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants.

- The extent of the impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

Financials

Electricity Social Programs:

March 1, 2017 TB/MBC approvals supporting OFHP included full year projected costs. The 2017 Ontario Budget included refined projected costs shifting expanded/enhanced electricity social programs from ratepayers to being government funded starting in 2017-18, lowering the total amount from $665M to $499M to reflect rollout timing not full year costs. The table below shows expense amounts currently in the PRRT multi-year fiscal plan related to these support programs for the most vulnerable consumers.

Government Funded Social Programs ($million)	2017-18	2018-19	2019-20	2020-22
Rural or Remote Rate Protection (RRRP)	344	472	484	497
Ontario Electricity Support Program	140	261	325	375
On-Reserve First Nations Delivery Credit	15	20	20	20
Total	**499**	**753**	**829**	**892**

GA Refinancing:

The 2017 Budget also includes an investment operating asset of $1.1B related to the Province's equity injection to OPG, enabling the OPG Trust to regularly purchase IESO's regulatory asset through 2017-18. The structure would increase gross debt of the Province (to finance the equity injection in OPG), increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. The Province's net debt will remain unchanged as the equity investment in OPG would offset the additional Provincial borrowing.

Projected annual amounts of GA deferrals (i.e., the regulatory asset) are shown below and are not part of the province's multi-year fiscal plan (2017 Budget(Assumed to be funded from electricity ratepayers udner the proposed legisation). Appendix E provides analysis of financial models.

($million)	2017-18	2018-19	2019-20	2020-22
GA Refinancing - Residential Bills lowered by 25%	2,534	2,668	2,942	3,420
Interest Portion (5% annually, compounded monthly)	32	162	298	449

Under GA refinancing, ratepayers will incur interest costs and will be added to the GA payments ratepayers make.

- OPG intends to use a Special Purpose Vehicle (OPG Trust) to purchase the "right to collect" assets from the IESO in return for cash. OPG Trust will be structured to finance 51% of its funding requirements through the capital market with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed though debt from the capital markets (about 5%) and through equity injections from the Province (44%).

- The proposed legislation does not compel the OPG Trust to purchase 100% of the regulatory asset created by IESO at any given time. IESO have noted that it may need to cover clean energy costs if for some reason the OPG Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. On behalf of IESO, the Ministry is requesting a credit facility for IESO, up to about $3B, and notes the use of this credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO. Appendix F provides more information.

Financial, Accounting, Legal Risk Assessments:

In the March 1, 2017 TB/MBC Minute, refinancing the Global Adjustment to partially defer RPP eligible ratepayer GA costs, was subject to completed legal, accounting and financing risk assessments. Appendix G provides more details from the Ministry.

Financial

The Ministry indicates it has prepared legislation and is working on developing regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure

that the full value of any investment is recoverable.

- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year.

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

The Ministry indicates the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost.

The Ministry also acknowledges given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term, and the rate of inflation.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The Ministry indicates the following:

- Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations, satisfying accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.
- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

KPMG:

- The proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements.
- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.
- The regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG/E&Y:

- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.
- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-

making, funding and ongoing operation.

- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.
- Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.
- Judges can be expected to take a careful look at the government's evidence in support of the re-allocation of Global Adjustment.
- The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.
- The provincial assurance provision - Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes. The proposed legislation focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers.
- The provincial guarantee provisions are intended to backstop the provincial assurance provision Legal risk to the province will be assessed as the agreements are negotiated and drafted.
    - The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
    - The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.
- Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry indicates it retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements.

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. The Ministry indicates Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social,

health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

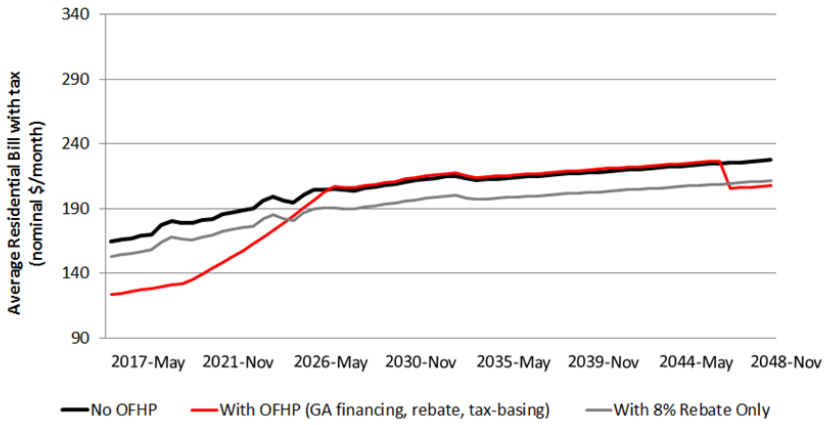
The Ministry's signed submission included external opinions and assessments for Ontario Power Generation (Accounting), KPMG Letter to the Independent Electricity System Operator (Accounting Opinion), Ernst &Young (as auditors) letter to OPG concurring with OPG's description of OPG accounting considerations of OFHP.

TBS staff note external opinions and assessments are supportive of the Ministry's intended plan for implementing Ontario's Fair Hydro Plan, noting the opinions and assessments must be revisited once key implementation details are finalised (e.g. draft legislation, regulations, special purpose vehicle documents, terms of conditions within various other agreements etc). Future reassessments and other factors such as Ontario electricity demand, interest rates in the medium to long-term, and the rate of inflation may contribute to fiscal plan implications emerging over time.

TBS staff also note, while submission details and related discussions have not indicated a non-fiscal mechanism cannot be established, the complexity of the transaction and the time frame involved suggest it is not reasonable, at present, to support a claim of no impact on the province's fiscal plan as the Ontario Fair Hydro Plan is implemented (Appendix H includes a strategic level risk assessment prepared by TBS staff). .

Ultimately, GA Refinancing being a sustainable strategy assumes electricity consumers' willingness to accept later to bear the extra costs of deferring electricity price hikes.

- The following graphic from the Ministry indicates the multi-year profile of GA Refinancing:



The chart above shows the expected multi-year profile under GA Refinancing for each Regulated Price Plan (RPP) period. In the first year, residential bills are projected to be 25 per cent lower as result of the OFHP. In the early years, bills increases are held to the rate of inflation – assumed to be 2% per year in the chart above. From July 1, 2021 onwards, prices increase at a higher rate compared to the first four years on the OFHP.

In the medium to longer term, residential bills exceed what they would have been but for the OFHP. However, in any given year, a typical residential bill under the OFHP cannot exceed what it would have been without OFHP by more than 10 per cent.

Media Procurement Request

The Ministry is requesting approval up to $3.5M funding for media buy procurement, to be followed later by a transfer later from the Bulk Media program to fully recover costs for the public education campaign.

The Ministry indicates spending about $1M on media planning and buying for radio and digital media. The Ministry is forecasting $2.5M in 2017-18 (Q clarifying the remaining $1M).

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Should TB/MBC wish to proceed with the Ministry's request, the following minute could be considered:

Receive the report back on proposed legislation supporting implementation of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

i) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

a) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
b) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
c) Shift from electricity consumer funding to funding out of voted appropriations for Ontario Electricity Support Program, and for majority of costs for existing RRRP.
d) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

a) Establishing the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
b) Requirement for future consumers to pay the clean energy adjustment that backs financings
c) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
d) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
e) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights
f) Sets out that security interests can be granted in investment interests in the investment asset

ii) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

iii) Note a new credit facility is being sought by the IESO to ensure that it has the flexibility to cover clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments.

iv) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC.

In this regard,

a) Direct the Ministry to include a report on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates
b) Direct the Ministry to report back with final program details for 2017-18 for GA Refinancing and Social Programs, including fiscal plan implications.

Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

…Placeholder for media procurement minute…

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX D: PROPOSED FAIR HYDRO ACT OVERVIEW

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two schedules:

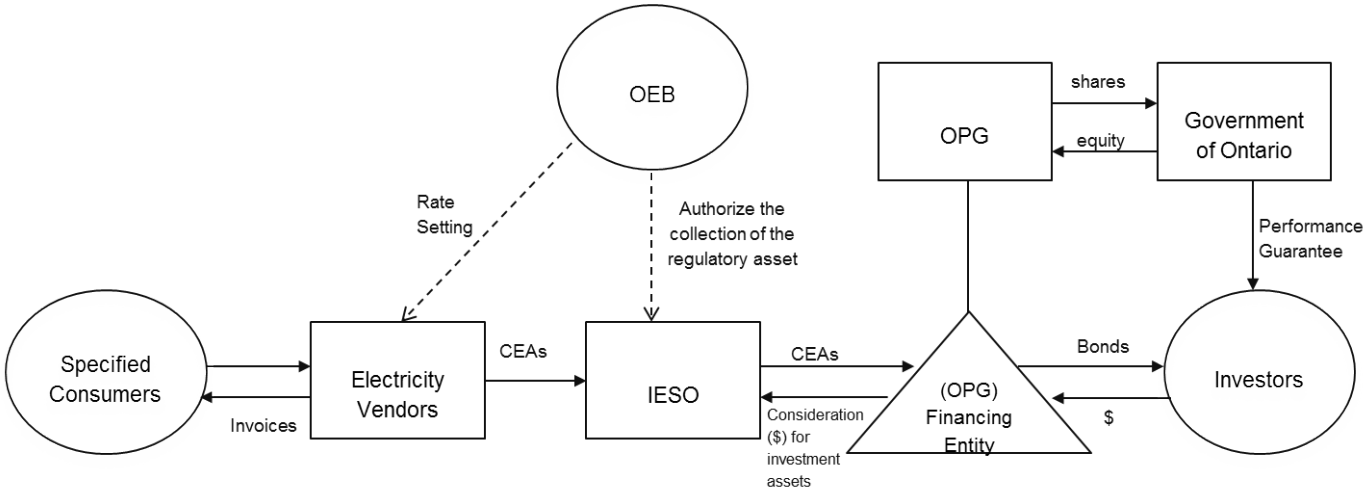
- Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Dealing with Global Adjustment (GA) refinancing).
- Schedule 2: Legislative amendments for electricity social programs (See Appendix D1)

The Ministry has provided the following overview of the proposed legislation:

Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (GA refinancing).

Legislation is based on the principle that the costs incurred to move to a clean, modern and reliable electricity system (Clean Energy Initiative) creates benefits that will be experienced by multiple generations of Ontario ratepayers and, therefore, in the interest of fairness, those costs should be shared by those multiple generations.

The legislation does two things: (i) it establishes the fundamental elements of the fair allocation program, and, (ii) it puts the mechanisms in place to permit the financing of periodic shortfalls in revenue that are created by the fair allocation of electricity costs over multiple generations. The diagram below outlines how the refinancing of GA would be implemented.



Note: CEAs are "clean energy adjustments"

Clean Energy Costs and Benefits:

- The costs included in the "clean energy costs" include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act* (the Global Adjustment provisions) which relate to contracts for:
  - Renewable energy generation or capacity
  - Conservation and demand management, including shortage
  - Energy efficiency
  - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act* or as prescribed); and
  - Payments made under section 78.5 of the *Ontario Energy Board Act.*
  - Other such costs to be included in "clean energy costs" may be prescribed

- These are the costs to be distributed fairly among the specified consumers through the "fair allocation amount".

Fair Allocation Adjustment:

- Part II establishes that the rate that will be payable by "specified RPP consumers" from May 1, 2017 to April 30, 2018 for the first fair adjustment is the rate that would be required from this program to contribute to that consumer to receiving a total a monthly invoice amount that is 25 per cent lower than the monthly invoice amount for that consumer under the "comparison rate". The comparison rate is a rate to be determined by the OEB using the method prescribed by regulation under s 79.16(1)(b) of the OEB Act.
- Part II includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program (i.e., adaptation of invoices must be implemented by August 1, 2017 followed by a subsequent lump sum credit to the consumer once the invoice is adapted).
- The Lieutenant General in Council is given the authority after April 30, 2018 to make regulations prescribing the rate for electricity (and therefore prescribing the "fair adjustment" until June 30, 2021). After June 30, 2021, regulations will have regard to the fair allocation amount and clean energy adjustments.
- The Minister sets the fair allocation amount.

    - The establishment of the "fair allocation amount" is required to,
        - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the "specified consumers" for applicable "reference periods"; and
        - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers).
    - The "fair allocation amount" is to have regard to:
        - Clean energy costs and allocating the appropriate proportionate amount of the clean energy benefits to the "specified consumers" (in the applicable "reference periods");
        - Reasonable assumptions regarding the time value of money, the number of consumers in the "reference period"; and
        - Expected electricity consumption for the reference period.

Regulatory Asset and Investment Asset:

- IESO will have a funding deferral resulting from the reduction in amounts collected from specified consumers during the first 4 years because of the fair adjustment. The IESO's funding deferral will be financed indirectly through the debt capital markets.
- The Act enables the financing of this IESO funding deferral, on an ongoing basis, by establishing the funding deferral as a "regulatory asset". In simple terms, the regulatory asset is IESO's right to recover the revenues that it has deferred collecting.
- IESO will then legally transfer portions of this right to recover revenues to the (OPG) financing entities. OPG financing entities are not required to purchase the regulatory asset.
- The (OPG) financing entity that receives the transfer of the right to recover revenues acquires a right to impose, invoice and collect those regulatory charges (called the "clean energy adjustments"). This is generally described in the legislation as the "investment asset".
- The (OPG) financing entity will need to finance its acquisition (from IESO) of the investment asset, and it will do so in the capital markets.

Issuance and Payment of Debt:

- Debt securities and related funding obligations will be incurred by one or more (OPG) financing entities. These entities will be managed by OPG, as the financial services manager.
- The financings will be backed primarily by the "clean energy adjustments" payable by specified consumers. The "clean energy adjustments" will track the actual payment obligations incurred by the financing entities when they become due and payable. To ensure intergenerational fairness, these amounts will be managed by OPG to align with the "fair allocation amounts" ascribed to each of the next 60 six month periods ending in 2047 (or such later period as prescribed).
- IESO and each electricity distributor will act as agent for the financing entities to impose, invoice and collect the clean energy adjustments, which will be channeled through to pay each financing entity's related funding obligations.
- To support the program, the Government of Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be achieve highest rated securities, although that will largely depend on issues such as the strength of the Government of Ontario's undertakings not to adversely affect the program through subsequent legislation.

Financing Plan:

- The Financing Plan is prepared by the Financial Services Manager (OPG).
- The Financing Plan is the plan which is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO.
- There are rules that apply to the Financing Plan:
  - It must align with the "estimated finance amount" that will become due and payable during a "reference period";
  - It must take into account the "fair allocation" and any "fair adjustment";
  - It must plan to implement the financing in a reasonable and cost effective manner that reflects prevailing market terms and conditions; and
  - It must be based on certain reasonable assumptions set out in regulations (for example, related to anticipated IESO shortfalls, maturity of funding obligations, availability of refinancing, redemption opportunities and liquidity, and similar assumptions).
- The (OPG) Financial Services Manager must incur funding obligations in conformity with the applicable Financing Plan.
- The Financing Plan will guide OPG's decisions regarding the repayment terms of the debt securities to be issued by financing entities. The Financing Plan will also deal with fundamental issues, such as the alignment (using derivatives) of any foreign currency obligations incurred by financing entities with the Canadian dollar cash flows arising through the clean energy adjustments.

Who Does What?

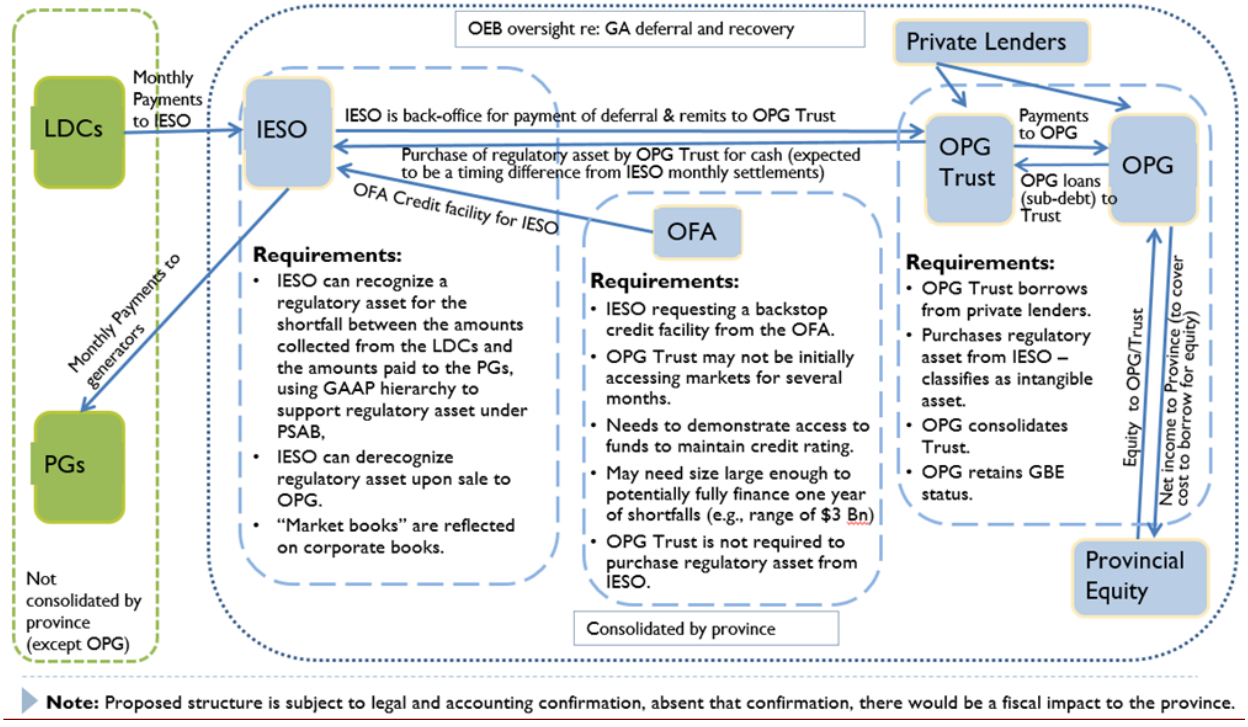
- Minister of Energy – Determine the "fair allocation amount" applicable for each reference period. The fair allocation amounts will be set for all reference periods at the beginning of the program, based on reasonable expectations and forecasts at that time.
- Ontario Power Generation (OPG) – As financial services manager, OPG will be responsible for the following under the Act:
  - Prepare and implement Financing Plan.
  - Establish and administer the financing entities.
  - Capitalize the financing entities by acquiring subordinated debt and equity, as required to achieve OPG's accounting and capital markets objectives.

- Estimate and "true up" periodic finance amounts, to be passed through as regulatory charges in the form of Clean Energy Adjustments.

- Independent Electricity System Operator (IESO):
  - Calculate and record IESO funding shortfalls from time to time in a variance account, giving rise to a right of recovery from specified consumers to the extent not funded through the financings.
  - Transfer the IESO's rights of recovery to (OPG) financing entities, in consideration for cash payments made by the financing entities from the proceeds of their financings.
  - Coordinates the collection of "clean energy adjustments" from Electricity Distributors.
  - Remit "clean energy adjustments" to (OPG) financing entity, for payment of financing entity funding obligations.
  - Fund initial interest costs and expenses during the first 4 years.

- Local Distribution Companies (LDCs):
  - Obligation to invoice specified consumers.
  - Collect, as agent of the investment interest owners, "clean energy adjustments" from specified consumers.
  - Hold money received for clean energy adjustments in trust until remittance to the IESO.

- Ontario Energy Board:
  - Determine and set rates to account for fair adjustments, fair allocations and clean energy adjustments (monthly adjustments).
  - Determine and set rates and process to allow IESO to recover funding shortfalls (to the extent such amounts are not transferred to an (OPG) financing entity and financed in the capital markets).
  - Review the administrative costs of OPG in connection with the administration of the program.



Schedule 2: Legislative amendments for electricity social programs moving to being government funded

As part of the proposed Ontario Fair Hydro Plan, the Ministry of Energy is proposing amendments the *Ontario Energy Board Act, 1998* (OEBA) to enable the following measures:

- Enhancing and providing government funding for Rural or Remote Electricity Rate Protection (RRRP) through new enhanced rate protection for residential customers with high distribution rates
- Enhancing and providing government funding for the Ontario Electricity Support Program (OESP)
- Creating a new First Nation On-Reserve Delivery Credit and providing for government funding

Overview of RRRP and Broadened Distribution Rate Protection:

- Section 79 of the Ontario Energy Board Act would be amended to provide the Ministry the authority to prescribe, through regulation, classes of consumers whose cost would be transferred from the rate-base to the tax-base.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would prescribe Hydro One's R2 customers as receiving RRRP from appropriated funds effective July 1, 2017. This would fulfill the government's intention to transfer the majority of the costs of administering the RRRP program to the tax-base.
- In addition, Energy is proposing legislative amendments that would broaden rate protection by creating a new distribution rate protection program to complement RRRP. This new program would be funded through tax payers.
- Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution cost.
  - Proposed legislative amendments would enable a maximum monthly base distribution charge to established through regulations.
- If the proposed legislative amendments are approved, the government intends to prescribe by regulation both program details and the residential customers eligible for broadened distribution rate protection served by the following LDCs:
  - Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

Ontario Electricity Support Program:

- Proposed legislation related to the Ontario Electricity Support Program (OESP) would shift program funding from the rate base to the tax base.
  - Tax-based funding would only kick in once the existing OESP variance account is depleted, which is expected to happen in the fall of 2017.
- To allow for the existing program structure to stay in place until tax-based funding kicks in, proposed new legislation would only come into force via a proclamation Order in Council, on a date to be determined.
  - This would ensure that existing OEB authorities remain in place while ratepayer funding is being used.
- In addition, a new authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers to support increased participation in the OESP program among Ontario Works and Ontario Disability and Support Program clients would be put in place.

- Information Privacy Commissioner (IPC) staff were consulted, and customer consent is reflected.
- This information sharing component will come into force at Royal Assent, allowing OEB and MCSS to begin this process quickly, and support increasing OESP participation levels.

First Nations Delivery Credit:

- Energy is proposing legislative amendments that would establish a First Nation Delivery Credit for On-Reserve Consumers. This new program would be funded through tax payers.
- The proposed First Nation Delivery Credit would provide:
  - All prescribed on-reserve consumers with a credit for the entirety of their delivery line or with a credit for the monthly service charge.
  - The costs that are covered by the delivery credit are also described in legislation.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would:
  - Establish the class of customers eligible;
  - Determine what is considered on-reserve; and
  - Determine the method of calculating the delivery credit.

APPENDIX E: ANALYSIS OF FINANCIAL MODELS AND RISKS (UNDER DEVELOPMENT)

Treasury Board Secretariat received two models related to global adjustment refinancing.

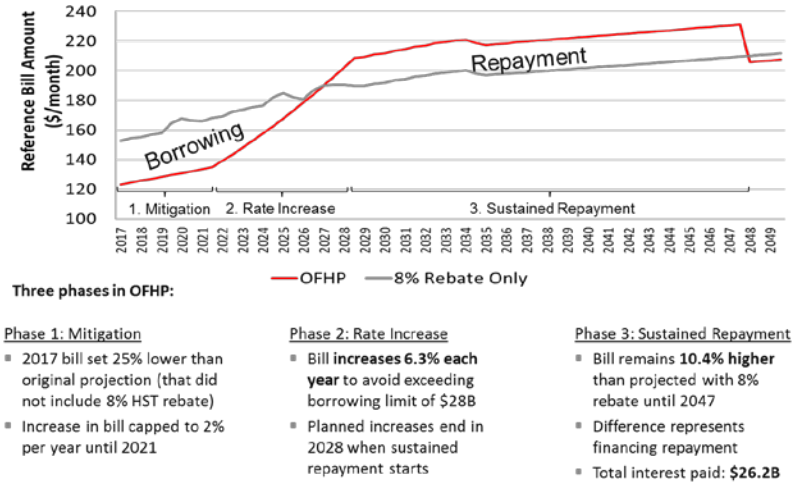
- The model the Ministry of Energy developed and used to support the March 2017 submission
- The financial model that was developed by the Ontario Power Generation (OPG) that provides details regarding the financing of the proposed structure

TBS staff noted the models received are based on high level aggregates and do not allow for running different scenarios that would allow TBS to determine the financial impact of potential changes in variables. In discussions with the Ministry of Energy and OPG, it has been agreed that these scenarios must be developed – both to help creation of a risk-based outlook for the province, as well as to respond to questions that will inevitably arise from the credit rating agencies.

- For example, the current model is based on a static interest rate of 5%. While this assumption is accurate within the current historically low interest rate environment, should interest rates increase above 5% after 2020, residential bills would also significantly increase during the repayment phase of the plan. For instance, if the interest rates increase from 5% to 7% (historical 30 year average) between 2020 and 2024, financing costs would increase by $11.2B (for a total of $37B), requiring much higher price increases in the out-years. Under this scenario, the increases required from 2022 to 2029 would be 7.3% annually (compared to 6.3% per year increases required under the base case) and the bill would remain 12.5% higher (compared to 10.4% in the base case).

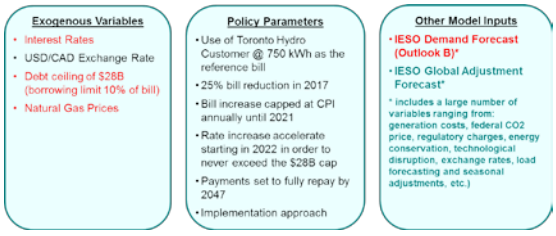
The OFHP can be thought of as having three phases:

The model is a high level and aggregate model, which is build on other independent forecasts (e.g. IESO demand forecast). There are a large number of assumptions built into the model explicitly and implicitly (as a large number of assumptions are embedded into the other forecasts that are used as inputs into this model).



Analysis is currently underway to better understand intergenerational costs and benefits and the impact of GA smoothing on recovery charges that would be allowed under the current Eurig compliance rules.

Depending on the legal determination, if the annual increases in bills or the commodity prices will be subject to caps, additional borrowing/provincial funding may be required.



With the shift of electricity social programs costs moving to being funded by government appropriations (Including the 8% rebate, total costs are forecast to be $1.4B in 2017-18), cost forecasting models/assumptions should also under go sensitivity analysis to inform future funding requests.

APPENDIX F: PROVIDING A CREDIT FACILITY TO IESO

After IESO's review of the proposed legislation, it has indicated to the Ministry and the Ontario Financing Authority (OFA)/MOF that IESO may need to cover clean energy costs if for some reason the Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. IESO noted that the proposed legislation does not compel the Trust to purchase 100% of the regulatory asset at anytime. Also, the establishment of the regulatory asset and purchase by the Trust is expected to take three to six months to implement following the introduction of enabling legislation.

The OFA currently provides a $975 million credit facility to the IESO for other purposes, it is proposed that the OFA provide a new credit facility to the IESO, in an amount of up to about $3 billion.

The use of this new credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO.

Approvals Required for OFA Financing

OFA indicates the recommended TB/MBC minute should note a new credit facility is being sought by the IESO to ensure that it has the flexibility to cover clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An order-in-council will be sought to allow the OFA to be able to provide the new credit facility to the IESO, for an amount to be determined as per the requirements of the Fair Hydro Plan.

The following approvals are required by the OFA to accommodate the request to provide financing to the IESO:

1) An Order-in-Council is required for the Minister of Finance to lend to the OFA.
2) A Directive from Minister of Finance is required for the OFA to on-lend to the IESO.
3) An executed credit agreement between the OFA and the IESO.

1. Order-in-Council (OIC)

An OIC is required to authorize the Minister of Finance to lend to the OFA. Ministry of Finance Legal Services Branch would need to be engaged to facilitate the request.

- The existing $975 million credit facility was covered under OIC 675/97 which authorized the Minister of Finance to lend a revolving $2.16 billion to the OFA. This OIC was originally obtained in 1997.

It is understood that upon drafting the OIC (by MOF Legal), the OIC would need final approval from Lieutenant Governor in Council LGIC as required under section 22(1) of the *Capital Investment Plan Act*, 1993.

- The OIC would go through Deputy Minister of Finance, Minister of Finance, Chair of Cabinet for briefing/sign-offs and finally to the LGIC for approval.

To draft the OIC, the following details will be required:

i. Dollar Value of Loan from the Minister of Finance to the OFA
ii. Maturity Date of the Loan
iii. Interest Rate of the Loan

The following are recommended to accommodate IESO's need for financing:

i. Dollar Value of Loan:
   $3 billion, as per request. The OIC would provide the maximum limit of any loan to IESO and it may be advisable to add a cushion and provide an OIC for $3.5 billion.

ii. Maturity Date of the Loan:
OIC maturing March 31, 2048 would provide approximately 30-year term to match the Fair Hydro Plan. It may be advisable to add a cushion and set a maturity date to March 31, 2053 (cushion of 5-years).

iii. Interest Rate of the Loan
Interest rates on the loans from the Minister of Finance to the OFA have typically been a 1) Ontario 90-day t-bill rates, 2) flow-through of the rates charged to the third-party by the OFA and/or 3) the rate charged to the third-party by the OFA less 25bps.

OFA recommends to keep this unchanged to provide consistency with past OICs but also to provide flexibility in the rates that could potentially be charged to IESO, to be determined by the Minister of Finance, by way of the Minister's Directive.

2. Minister's Directive

Once the Minister of Finance has the authority under an OIC, a Minister's Directive can authorize the OFA to lend to IESO. The Directive can outline specific terms and conditions as needed.

3. Executed Credit Agreement

With a Minister's Directive approved, the OFA and IESO can work to execute a credit agreement, subject to any terms and conditions of the Directive and any policy considerations.

APPENDIX G: FINANCIAL, LEGAL, ACCOUNTING RISK ASSESSMENTS

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

OFHP Legislation

The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in the electricity system are allocated fairly among present and future generations of consumers. Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the (GA), including:

- Fair Allocation Amount: Is a calculation and allocation of clean energy costs over time. It is expected that the calculation would lead to decreased rates in the near term with rates higher than forecast in the long term. The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager (OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
- Fair Adjustment: Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for the period July 1, 2017 to April 30, 2018. Under the legislation, the OEB must determine the amount within 15 business days of the legislation coming into force. The Fair Adjustment also allows the Lieutenant Governor in Council (LGIC) to make regulations prescribing electricity rates for the period May 1, 2018 to June 30, 2021.
- Clean Energy Adjustment: Is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period. This is an adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing. IESO and each electricity distributor will act as an agent for the financing entity to impose, invoice and collect the clean energy adjustments.

The Ministry has prepared legislation and regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recoverable.
- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

In particular, the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost. Key elements that support this financing structure include:

- OPG issuances of subordinated debt to the SPV/Trust representing up to 49% of total borrowing; and
- Conditional (springing) guarantees by the Province to provide a backstop in the event of specific and limited events (e.g., changes to legislation that harm investor interests).

Note: The ability to finance and the cost of financing will only be known with certainty once OPG takes this structure to market.

OPG Financing / OPG Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The proposed legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected over four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a “Regulatory Asset”.

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.
- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG’s capital structure:

- OPG would require monthly “equity injections” from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;
- Funds from the Province would flow from the Ontario Financing Authority (OFA); and
- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.
- It is anticipated that the initial equity injection would take place as early as June 2017.

Through PRRT, the Ministry of Energy received approval for the creation of an operating asset ”OPG Share Purchase” and expenditure increase of $1.1billion in 2017-18 within Vote 2905-5, which is based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty. This approval is pending passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG’s business plan process. Note: While included in the business plan, equity requirements will not form part of the Ministry of Energy’s concurrence process.

For future funding requirements, the Ministry will seek appropriation through the PRRT process.

OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV / Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

In addition, given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term.

- Should electricity demand be higher than forecast as a result of greater electrification, the cost of paying off the debt will be spread over a greater pool of consumption and decreasing future costs for individual ratepayers. Note: The reverse is also true in regards to decreasing demand.
- Should interest costs increase from the assumed 5%, total borrowing costs would rise. Given that this is a unique offering, managing investor confidence will be key to ensure borrowing costs don't rise. Note: The reverse is also true in regards to interest rates being lower than assumed.

IESO's Credit Facilities

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, IESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The proposed legislation establishes mechanisms to enable the funding, sale and transfer between IESO and OPG that respond to the accounting requirements and advice outlined in the March 1, 2017 Cabinet Submission, such as concerns regarding consolidation by the Province.

Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This satisfies accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

KPMG

The Ministry has worked closely with the Independent Electricity System Operator (IESO) and KPMG on the accounting considerations of GA Refinancing (i.e., legislation, applications of accounting standards/principles, minimizing consolidation risks and ability to establish a regulatory asset).

In particular, the proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. Key elements include:

- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset".
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.

In addition, KMPG provided some commentary on the accounting requirement for the "derecognition" of the regulatory asset once it's sold to OPG SPV/Trust. KPMG advised that the regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG

The Ministry has worked closely with the Ontario Power Generation (OPG) and E&Y, on the accounting requirements to enable GA Refinancing with respect to consolidation (i.e., legislation, applications of accounting standards/principles, establishing a special purpose vehicle (SPV) / Trust).

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.

- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.
- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.

Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:

- The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
- If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
- By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
- The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill provides for provincial assurances, guarantees and a statutory cause of action.

The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
- The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted. **A statutory cause of action** may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry retained Blakes to provide external legal advice in the development of the legislation.The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

Navigant Analysis

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. Specifically, Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

APPENDIX H: OVERVIEW OF RISKS

Prepared by TBS staff, the following chart provides an overview of strategic (versus operational) risks to inform the approval/decision making process regarding the proposed legislation. Each part, GA Partial Refinancing & Electricity social programs, is a separate table.

Global Adjustment Partial Refinancing:

Objective: Provide immediate ratepayer relief by capping rate increases at Consumer Price Index (CPI) for four years and refinancing GA costs over a longer period of time. Develop and implement a financing structure that increases provincial borrowing, but has no impact on annual provincial surplus/deficit.

Risk	Level of Risk	Risk Response
The determination of the appropriate legal and accounting treatment to be applied to the financing model may result in the costs of GA smoothing being allocated to the province.	**Risk Likelihood:** Possible **Risk Impact:** Critical **Time Scale:** 6 to 12 months **Rationale:** • The structure of the GA deferral was designed to result in an increase in provincial borrowing, no increase in net debt and no impact on surplus/deficit. • The proposal assumes GA refinancing does not have a fiscal impact because the legal authority and accounting treatments are met. • If a favourable legal and accounting treatment is not implemented, there would be a negative impact on the province's fiscal plan of $2.5B in 2017-18 and rising. • Rating agencies and investors in Province's debt may view all of the borrowing as an obligation of the Province, which could put pressure on the Province's credit rating and overall borrowing capacity. • Proposed structure may result in negative response from Ontario Auditor General (OAG) due to previous concerns regarding recognition of rate regulated assets and liabilities. The OAG may take this into account when the provincial books are audited. • Initial assessment of the accounting considerations suggests that the proposed model is in alignment with established accounting standards.	Risk can be mitigated by: • Commissioning external opinions on the legal, fiscal and accounting requirements, which could be used by the Province to justify structure of financial model and be utilized in discussions with the OAG.

Risk	Level of Risk	Risk Response
Uncertainty in the financial model due to dependence on assumptions that are subject to potential volatility may result in higher than anticipated future costs for rate payers and the province.	**Risk Likelihood:** Likely **Risk Impact:** Major **Time Scale:** More than 36 months **Rationale** • The financial model developed is a high level and aggregate model, which is built on independent forecasts. There are a large number of assumptions built into the model explicitly and implicitly (as a larger number of assumptions are embedded into the other forecasts that are used as inputs into the model). • The proposal financing structure will accrue total interest of about $26.2 billion, which is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the financial impact of potential changes in variables used in the financial models. • Building permissive language in the legislation and regulations to allow for timely course correction mechanisms (i.e. higher payment amounts and/or rate increases) • Regulations to prescribe the methodology to be applied by the Ontario Energy Board (OEB) to determine electricity rates in response to potential deviation from forecasted financing plans.
A legal determination that the Province is spreading the costs of GA financing in order to lower the price in the short term by increasing the price in the long term may result in the GA charge characterized as a tax and deemed unconstitutional.	**Risk Likelihood:** Medium **Risk Impact:** High **Time Scale:** Long-Term (More than 36 months) **Rationale** • If characterized as a tax, the GA charge could be subject to legal challenge and struck down as unconstitutional, allowing consumers to recover their payments. • Likelihood dependent on the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year. The bigger the reduction in charges to current consumers, the higher likelihood of the risk being realized. • Internal and external expertise have provided opinion that the proposed structure is constitutionally sound in the short-term (2017-18), but the likelihood of the risk increases in the proceeding four years, which will impact commitment to keep rate increase in line with CPI. • If annual increases in bills or the commodity prices are subject to caps, additional borrowing/provincial funding may be required.	Risk can be avoided by: • Imposition of a valid tax. • Change in policy (i.e. allow greater rate increases during the remainder of the rate mitigation phase and higher increases and payment amounts throughout rate increase and payment phase). • Use of public funds to ease pressure. Risk can be mitigated by: • Improve forecasting model and close monitoring of costs and changes in variables built into model. • Analyze the costs and benefits of the long lived assets (specifically usability beyond a 20 year period) to assist in determining a supportable GA deferral structure. • Draft legislation with built-in provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court.

Risk	Level of Risk	Risk Response
Financing the costs of GA smoothing through OPG SPV/Trust and the volatility of interest rates may increase the cost of GA smoothing and/or require additional provincial funding.	**Risk Likelihood:** Possible **Risk Impact:** Moderate **Time Scale:** 12 to 24 months **Rationale** • The proposed structure will be reviewed by credit agencies to allow OPG to borrow in the open market. Depending on assessment, there may be an impact on interest rate for borrowing, the amount of equity/funding the province may need to provide and the requirement for a provincial guarantee. • As the OPG SPV/Trust will be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • If the Trust can't raise the full funding requirements, additional cash injections would be required. If the borrowing cap of $28B is reached sooner than forecast, the province may have to provide incremental funding to float the program to 2047. • Beyond 2022, when steep increases are required, there will likely be additional pressure on the government to offset a part of the scheduled increases. • Risk that credit rating agencies may perceive OPG SPV/Trust's borrowing as debt supported by Province, impacting Province's ratings and cost of borrowing.	Risk can be avoided by: • Province providing a potential guarantee for the cost of borrowing – however, would redirect risk back to the Province and negate benefits of proposed financing structure. Risk can be mitigated by: • Equity injections from the province to support OPG as the owner and manager of GA refinancing and allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • Proposed legislation to enable GA refinancing has been draft with input from third-party financers. Provides a 'narrow' provincial guarantee and ensuring that debt holders have the right of action against a future government to recover the amount outstanding including interest, fees, expenses and any damages.

Electricity social programs (Enhancing Electricity Support & Conservation Programs):

Objective: Shift funding of existing and new electricity support programs (RRRP, OESP, Affordability Fund, First Nations Credit) from rate to tax base.

Risk	Level of Risk	Risk Response
Uncertainty in forecasting due to exposure to changes and/or volatility (i.e. interest rates, electricity usage patterns, and distribution costs) may result in higher than anticipated fiscal impacts for the Province.	**Risk Likelihood:** Possible **Risk Impact:** Major **Timescale:** 12 to 24 months **Rationale:** • The energy sector is complex and a number of key assumptions used as inputs into forecasting model are variables/forecasts themselves, resulting in a high inherent risk that cost estimates are inaccurate. • Fiscal projection is highly dependent on factors which can fluctuate from year to year, including: o electricity usage; o distributions costs; and o consumer consumption patterns that may change due to extreme weather or other factors. • Fiscal projection is subject to knowledge of future distribution costs and dependent on submission of cost of service applications by Hydro One and LDCs. o Enhanced RRRP may create disincentives from the eligible LDCs towards productivity and performance improvements and/or cause ineligible LDC's to drive up distribution costs to gain access to program.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the financial impact of potential changes in variables used in the financial models.

Hi everyone,

In advance of our 11:45 am meeting with Karen - please find attached our latest draft TB/MBC assessment note for the OFHP along with the TB submission and LRC submission received from Energy.

Thanks,
Felix

Hi Felix and James,

Please find attached the final TB submission for the Ontario Fair Hydro Plan item. Also attached are the materials for the appendix.

This is Minister signed and hard copies will be delivered first thing on Monday morning.

Thanks,

Martin

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

May 9, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on following:

    i. Implementation of Global Adjustment (GA) Refinancing;

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, Ontario Electricity Support Program and First Nations On-Reserve Delivery Credit); and

    iii. Expansion of Industrial Conservation Initiative (ICI).

2) APPROVE the Ministry funding a media buy procurement with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record.

3) NOTE the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

4) NOTE the Ministry of Energy will return to TB/MBC to request a transfer of funds to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to fully recover the costs for the public education campaign.

5) APPROVE the creation of a new transfer payment line entitled "Price Mitigation Support Initiatives" under Vote/Item 2905-01, Electricity Price Mitigation, with a $1,000 placeholder, to support future rate mitigation initiatives.

Note: The Independent Electricity System Operator (IESO) is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current lines of credit with the OFA and OEFC.

2.0 PURPOSE OF REQUEST

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which will lower bills by 25 per cent for a typical residential consumer, starting in the summer of 2017. Up to half a million small businesses and farms are also expected to benefit. Any rate increases for residential consumers over four years would be held to the rate of inflation. Note: These measures include the 8 per cent rebate introduced in January 2017 and builds on previously announced initiatives to deliver broad-based rate relief on electricity bills.

CONFIDENTIAL

As part of the OFHP approval process, TB/MBC requested that the Ministry "report back" before legislation to enable OFHP was introduced on the following items:

1) GA Refinancing;

2) Social Programs; and

3) ICI Expansion.

In addition to the report back, the Ministry is also requesting the creation of a new transfer payment line, "Price Mitigation Support Initiatives" in Vote 2905-01. The purpose for this is to provide the Ministry an appropriate transfer payment line to support future activities and initiatives around electricity price mitigation for Ontarians.

There is no fiscal impact associated with this request. All new funding placed into the transfer payment lines will be offset by services dollars previously approved within the Ministry's multi-year allocation.

In February 2017, the Ministry reported back to TB/MBC on the details related to the establishment of the new Affordability Fund announced in the OFHP. In April 2017, the Affordability Fund Trust was established. It is expected that electricity distributors will be able to begin applying to the Affordability Fund Trust in Summer 2017.

The Ministry has developed proposed legislation to implement key components of OFHP by summer 2017, and address financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations to enable implementation of OFHP.

1. GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity prices increasing.

<u>Proposal</u>

On March 2, 2017, as part of OFHP, it was announced that a portion of the GA would be refinanced in order to fairly allocate costs across present and

future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. For example, by recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.

Under this proposal, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017. In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- Developed proposed legislation to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations;

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY);

- Launched a third party research project to assist with implementation of GA refinancing; and

- Developed comprehensive risk-based costing, including forecast models and sensitivity tests on key assumptions.

Proposed legislation to enable GA refinancing is planned for a May 2017 introduction.

CONFIDENTIAL

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The proposed legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

Proposal

The Government is proposing to introduce legislation and regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.

The legislative proposal enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers.

- R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province.

CONFIDENTIAL

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

Proposed legislation will enable tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

Proposed legislation enables the establishment of a maximum monthly base distribution charge for those prescribed customers. If the proposed legislation is passed, the mechanism to set this charge will be established in regulation.

On-Reserve First Nations Delivery Credit

On July 12, 2016, the Province and First Nations in Ontario announced an agreement-in-principle for the Province to sell to First Nations for their collective benefit, shares of Hydro One Limited.

The Province would sell up to approximately 15 million shares (2.5 per cent of total current outstanding Hydro One common shares), depending on the level of First Nation participation, to a new collective investment fund owned by First Nations.

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The proposal is premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program proposal involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation.

The resulting First Nations Delivery Credit is a reflection of First Nation leadership on this issue and an example of the Political Accord coming to life.

CONFIDENTIAL

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program from the rate base to the tax base, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid by all Ontario consumers on May 1, 2017 ($0.0011 per kilowatt-hour of power consumed). On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will also come into effect on May 1, 2017.

The amendments to the *Ontario Energy Board Act, 1998* pertaining to OESP will move the program funding from the rate-base and transfer it to the tax-base, and enable alignment of the OESP with social assistance programs delivered by the Ministry of Community and Social Services.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB sets amount that LDCs charge for RRRP to all customers. Once the regulatory mechanism is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. Change to the funding structure of the program does not require any additional implementation risks or efforts.

CONFIDENTIAL

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers would be prescribed in regulation, if the legislation is passed. Additionally, the Ontario Energy Board would be empowered by regulation to determine the rate at which affected LDCs would be harmonized.

The efforts required to implement the program will fall upon the impacted LDCs who will need to adjust their billing systems in order to carry out the program.

On-Reserve First Nation Delivery Credit

A new regulation will need to be passed to set out the program particulars including eligibility for the program.

The LDCs will need to enter into communication plans in order to work with local First Nations Band Councils and to increase awareness of the delivery credit to all eligible consumers.

There are transitional provisions for both the enhanced rate protection and First Nations Delivery Credit that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.

Ontario Electricity Support Program

A legislative amendment to the *Ontario Energy Board Act, 1998* will allow funding to shift from the rate base to the tax base. The amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

CONFIDENTIAL

3. ICI Expansion:

Ontario is committed to providing competitive electricity rates for energy intensive consumers in the manufacturing sector while also promoting electricity conservation.

In January 2011, the Industrial Conservation Initiative (ICI) was announced to help large industrial electricity power users better manage their electricity costs while reducing electricity consumption during peak periods.

ICI provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by about one-third. Reducing peak demand increases the reliability of the electricity system, reduces greenhouse gas (GHG) emissions and helps defer the need to procure new resources. There are currently about 300 participating consumers who collectively reduced Ontario's peak demand by an estimated 1,000 MW in 2015.

Proposal

On March 2, 2017, as part of OFHP), the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

- As of January 1, 2017, the regulatory amendments came into effect to make ICI available to electricity consumers with an average monthly peak demand greater than 1 MW. The lowering of the ICI threshold to 1MW and removal of sector restrictions was announced in the 2016 Speech from the Throne.

Implementation

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

- Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and Demand Management (CDM) programs and/or Ontario Climate Change Solutions Deployment Corporations (OCCSDC) programs and pilots.

CONFIDENTIAL

In addition, the Ministry has retained the Ontario Chambers of Commerce (OCC) and the Canadian Manufacturing and Exporting (CME) to undertake targeted stakeholder outreach on ICI and other cost saving energy programs/measures available to the commercial and industrial sectors in Ontario.

3.0 KEY CONTEXT

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would reduce the electricity bills of residential consumers by 25 per cent on average starting in summer 2017. In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and bend the future cost curve of electricity (see Background for details).

On April 20, 2017, the OEB announced new Regulated Price Plan (RPP) rates effective May 1, 2017 that include a portion of the bill reduction proposed under OFHP and the shifting of the funding of the OESP to provincial revenues. The full reduction from OFHP is expected to be addressed through a July 1st RPP rate adjustment.

The Ministry's report back to TB/MBC focuses on the following OFHP initiatives:

1) GA Refinancing:

As part of OFHP, it was announced that a portion of the GA would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

- Today's electricity consumers have been responsible for the costs of investments in developing the clean, modern and reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. There is an opportunity to recognize the long-term benefit of these generation assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

CONFIDENTIAL

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- Developed proposed legislation to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations;

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY);

- Launched a third party research project to assist with implementation of GA refinancing; and

- Developed comprehensive risk-based costing, including forecast models and sensitivity tests on key assumptions.

Financing, Accounting and Legal Risk Considerations / Mitigations

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

OFHP Legislation

The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in the electricity system are allocated fairly among present and future generations of consumers. Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the (GA), including:

- Fair Allocation Amount: Is a calculation and allocation of clean energy costs over time. It is expected that the calculation would lead to decreased rates in the near term with rates higher than forecast in the long term. The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager

CONFIDENTIAL

(OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister.

- Fair Adjustment: Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for the period July 1, 2017 to April 30, 2018. Under the legislation, the OEB must determine the amount within 15 business days of the legislation coming into force. The Fair Adjustment also allows the Lieutenant Governor in Council (LGIC) to make regulations prescribing electricity rates for the period May 1, 2018 to June 30, 2021.

- Clean Energy Adjustment: Is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period. This is an adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing. IESO and each electricity distributor will act as an agent for the financing entity to impose, invoice and collect the clean energy adjustments.

The Ministry has prepared legislation and regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recoverable.

- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

In particular, the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost. Key elements that support this financing structure include:

CONFIDENTIAL

- OPG issuances of subordinated debt to the SPV/Trust representing up to 49% of total borrowing; and

- Conditional (springing) guarantees by the Province to provide a backstop in the event of specific and limited events (e.g., changes to legislation that harm investor interests).

Note: The ability to finance and the cost of financing will only be known with certainty once OPG takes this structure to market.

OPG Financing / OPG Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The proposed legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected over four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a “Regulatory Asset”.

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.

CONFIDENTIAL

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG's capital structure:

- OPG would require monthly "equity injections" from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;

- Funds from the Province would flow from the Ontario Financing Authority (OFA); and

- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.

- It is anticipated that the initial equity injection would take place as early as June 2017.

Through PRRT, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and expenditure increase of $1.1billion in 2017-18 within Vote 2905-5, which is based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty. This approval is pending passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG's business plan process. Note: While included in the business plan, equity requirements will not form part of the Ministry of Energy's concurrence process.

For future funding requirements, the Ministry will seek appropriation through the PRRT process.

OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV / Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

In addition, given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term.

- Should electricity demand be higher than forecast as a result of greater electrification, the cost of paying off the debt will be spread over a greater pool of consumption and decreasing future costs for individual

CONFIDENTIAL

ratepayers. Note: The reverse is also true in regards to decreasing demand.

- Should interest costs increase from the assumed 5%, total borrowing costs would rise. Given that this is a unique offering, managing investor confidence will be key to ensure borrowing costs don't rise. Note: The reverse is also true in regards to interest rates being lower than assumed.

IESO's Credit Facilities

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, IESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The proposed legislation establishes mechanisms to enable the funding, sale and transfer between IESO and OPG that respond to the accounting requirements and advice outlined in the March 1, 2017 Cabinet Submission, such as concerns regarding consolidation by the Province.

Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This satisfies accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.

CONFIDENTIAL

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

KPMG

The Ministry has worked closely with the Independent Electricity System Operator (IESO) and KPMG on the accounting considerations of GA Refinancing (i.e., legislation, applications of accounting standards/principles, minimizing consolidation risks and ability to establish a regulatory asset).

In particular, the proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. Key elements include:

- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset".

- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.

In addition, KMPG provided some commentary on the accounting requirement for the "derecognition" of the regulatory asset once it's sold to OPG SPV/Trust. KPMG advised that the regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG

The Ministry has worked closely with the Ontario Power Generation (OPG) and E&Y, on the accounting requirements to enable GA Refinancing with respect to consolidation (i.e., legislation, applications of accounting standards/principles, establishing a special purpose vehicle (SPV) / Trust).

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust,

CONFIDENTIAL

additional work will be done through the regulations and supporting agreements/documents.

- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.

- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.

Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:

- The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.

- If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-

CONFIDENTIAL

year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).

- By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.

- The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill provides for provincial assurances, guarantees and a statutory cause of action.

The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be

CONFIDENTIAL

imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and

- The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted.

A statutory cause of action may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

Navigant Analysis

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. Specifically, Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

CONFIDENTIAL

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The proposed legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

If passed, the government proposes to identify Hydro One R2 customers, as having their RRRP funded through appropriated funds.

Distribution Rate Protection

New Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, would be established through proposed legislative amendments under the *Fair Hydro Act, 2017,* and the creation of consequential regulations. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhance protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

Eligible on-reserve customers will receive a 100% delivery credit or the elimination of their monthly service charge on their electricity bills. The eligibility requirements will be prescribed under regulation.

There are 11 LDCs identified by OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One,

CONFIDENTIAL

Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 customers may be eligible.

Ontario Electricity Support Program (OESP)

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.

OESP credits vary by income level and family size, and there are two credit scales that include:

- The basic program credit ranges from $30/month to $50/month.
- An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or use certain electrically intensive medical devices.

Ontario's Fair Hydro Plan (OFHP) committed to move the program from the rate base to the tax base, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

The proposed legislative changes will address the move to the tax base, and regulatory changes approved by Cabinet on April 10, 2017 will enable the expansion of the OESP effective May 1, 2017. Discussions are ongoing with the OEB and MCSS on aligning OESP delivery with other social assistance programs.

<u>Roles and Responsibilities</u>

Rural or Remote Rate Protection

The roles and responsibilities of the Board remain the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The Board would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would once again need to appropriate money from the legislature to cover the costs of administering the program.

CONFIDENTIAL

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers. In addition, ENERGY would need to work with LDCs, Chiefs of Ontario and Band Councils to ensure the program is delivered to all eligible consumers.

Ontario Electricity Support Program

The OEB will continue to the deliver the OESP under the current legislative framework until the variance account is depleted. When legislative changes to shift the program from the rate base to the tax base are proclaimed, the OEB will continue to administer the program, but certain decision making responsibilities and oversights will shift to the Minister of Energy.

MCSS will begin supporting OESP uptake by helping social assistance clients to apply to the OESP. Legislative and regulatory changes will enable this work.

The IESO will continue to manage payments to utilities, unit sub-meter providers, and the OEB in relation to OESP credit delivery and program administration costs. When legislative changes are proclaimed, IESO will begin reporting costs to the Ministry to support forecasting and audit.

3) ICI Expansion:

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and “1114”) in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

In addition, the Ministry has retained the OCC and the CME to undertake targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants. **Note:** The extent of the impact will depend on the uptake in the newly

CONFIDENTIAL

expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

4.0 BACKGROUND

Decarbonizing and Modernize Ontario's Energy System

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity prices increasing.

The Ministry of Energy has taken a number of actions to lower electricity costs for all consumers by:

- Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices; and

- Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

Following the 2016 Speech from the Throne, several actions were announced to further reduce electricity costs:

- As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8 per cent.

- Expanded support to eligible rural consumers by updating Rural or Remote Rate Protection (RRRP) with the additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8 per cent rebate.

- Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

- Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in savings.

CONFIDENTIAL

- Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – average annual savings of $15 million.

Ontario's Fair Hydro Plan

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP). The OFHP includes the following:

- Refinancing the GA over a longer period for Regulated Price Plan (RPP) eligible consumers, including residential consumers and most small businesses and farms.

- Shifting cost recovery for Rural or Remote Rate Protection (RRRP) and Ontario Electricity Support Program (OESP) from electricity bills to the tax base, lowering the regulatory charges paid by ratepayers. Consumers of all sizes would benefit from this change.

- Helping vulnerable electricity consumers by enhancing electricity support programs, including:

  - Broadening RRRP to provide delivery charge relief for the customers of the local distribution companies (LDCs) with the highest delivery charges. We currently support approximately 350,000 Ontarians living in rural or remote areas through RRRP. The enhancement would extend relief to approximately 800,000 households in total.

  - Expanding the OESP, which provides relief directly on the bills of low-income consumers who have applied and meet the eligibility criteria. The expansion would increase OESP credits by 50 per cent and allow more Ontarians to benefit from the program.

  - Establishing a new Affordability Fund, which would provide financial support to lower-income Ontarians who are not eligible for the Home Assistance Program to make home energy efficiency improvements, helping to manage their energy costs.

  - Establishing a Delivery Credit to eliminate delivery charges for all First Nations people living on reserve.

- Expanding the Industrial Conservation Initiative (ICI), which allows large consumers to reduce their electricity bills by up to one-third by reducing their consumption during peak hours. The expansion will allow manufacturers and greenhouses between 500 kW and 1 MW to

CONFIDENTIAL

participate, in addition to the consumers over 1 MW that are already eligible.

- OFHP also committed to reducing system costs by improving sector efficiency and modernizing Ontario's electricity market, working in collaboration with the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB).

Legislation to Enable the Refinancing of Global Adjustment

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the Ministry has developed proposed legislation (and is working on supporting regulations) that outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;
- A detailed Preamble, Purpose and Definitions;
- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;
- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and
- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

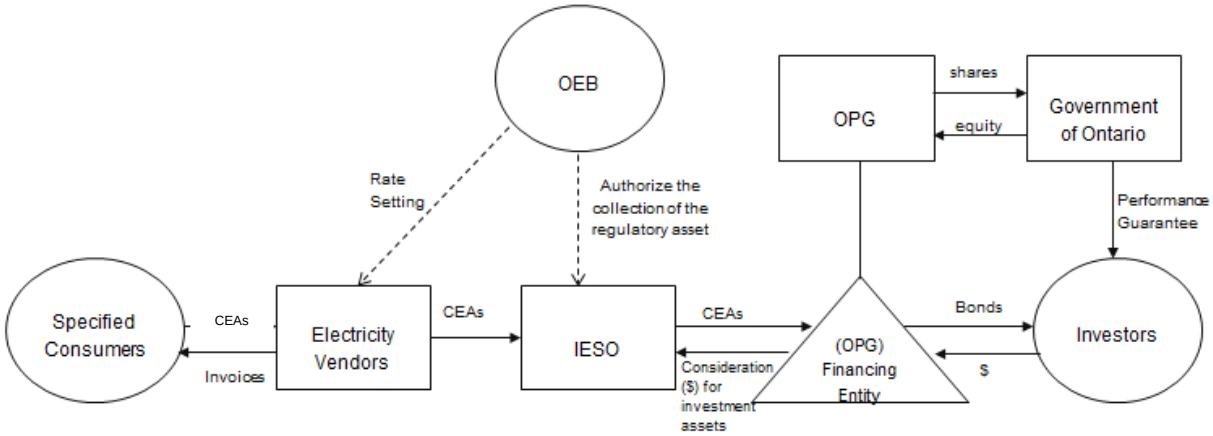
The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the Global Adjustment.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the proposed legislation.

CONFIDENTIAL

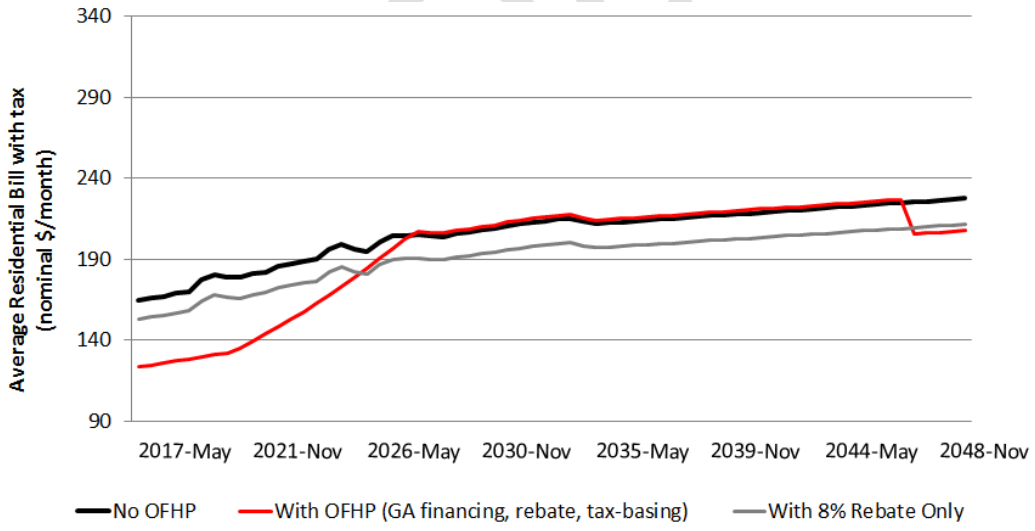
GA Refinancing Implementation Model – Overview

The diagram below outlines how the refinancing of GA would be implemented:



Note: CEAs are “clean energy adjustments”.

Multi-Year Profile of GA Refinancing / Assumptions



The chart above shows the expected multi-year profile under GA Refinancing for each Regulated Price Plan (RPP) period. In the first year, residential bills are projected to be 25 per cent lower as result of the OFHP. In the early years, bills increases are held to the rate of inflation – assumed to be 2% per year in the chart above. From July 1, 2021 onwards, prices increase at a higher rate compared to the first four years on the OFHP.

In the medium to longer term, residential bills exceed what they would have been but for the OFHP. However, in any given year, a typical residential bill under the OFHP cannot exceed what it would have been without OFHP by more than 10 per cent.

OPG's Financing Structure / Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected during four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a "Regulatory Asset".

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an "Investment Asset".

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG's capital structure:

- OPG would require monthly "equity injections" from the Province;

- Funds from the Province would flow from the Ontario Financing Authority (OFA); and

CONFIDENTIAL

- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.

Global Adjustment – Overview

The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.

It is via GA that much of the costs of investments in developing a clean, modern and reliable electricity system with a diverse supply mix are recovered.

The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to improve system reliability and replace coal-fired capacity. Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.

The majority of the province's electricity generators are under 20-year contracts and account for under 50% of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20 years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through GA while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.

The Ministry is proposing in legislation to recognize the long-term benefit of specific assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. The proposed legislation outlines how costs would be fairly allocated among eligible consumers over time.

OEB's Regulated Price Plan (RPP) – Overview

On April 20, 2017, the OEB announced new Regulated Price Plan (RPP) rates effective May 1, 2017 that include a portion of the bill reduction proposed under OFHP and the shifting of the funding of the Ontario Electricity Support Program (OESP) to provincial revenues. The full reduction from OFHP is expected to be addressed through a July 1st RPP rate adjustment.

CONFIDENTIAL

Social Program

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 335,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.
- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.9 million.
- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high distribution costs and are often faced with significantly higher than average bills.

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Energy is proposing legislative amendments that will broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

CONFIDENTIAL

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

Ontario Electricity Support Program (OESP)

The OESP launched on January 1, 2016. By the end of March 2017:

- Almost 192,000 have been enrolled in the program, which is approximately 1/3 of all potentially eligible low-income customers in Ontario.

- Over $60 million in credits have been provided to vulnerable consumers.

- 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.

CONFIDENTIAL

Industrial Conservation Initiative (ICI)

Ontario is committed to providing competitive electricity rates for energy intensive consumers in the manufacturing sector while also promoting electricity conservation.

In January 2011, ICI was announced to help large industrial power users better manage their electricity costs while reducing electricity consumption during peak periods. ICI provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by about one-third. Reducing peak demand increases the reliability of the electricity system, reduces greenhouse gas (GHG) emissions and helps defer the need to procure new resources. There are now about 300 participating consumers who collectively reduced Ontario's peak demand by an estimated 1,000 MW in 2015.

Currently, ICI is available to electricity consumers who have an average monthly peak demand greater than 1 MW (i.e., Class A). Smaller electricity consumers – known as “Class B” consumers – are charged GA based on their total consumption regardless of when it occurs.

ICI provides a strong incentive for participating consumers to reduce their consumption during peak hours to reduce their cost. Note: ICI is administered by the Independently Electricity System Operator (IESO) and Local Distribution Companies (LDCs).

As of January 1, 2017, the regulatory amendments came into effect to make ICI available to electricity consumers with an average monthly peak demand greater than 1 MW. The lowering of the ICI threshold to 1MW and removal of sector restrictions was announced in the 2016 Speech From the Throne.

On March 2, 2017, as part of Ontario’s Fair Hydro Plan (OFHP), the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

- Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and CDM programs and/or OCCSDC programs and pilots.

CONFIDENTIAL

5.0 TIMING

As part of OFHP, the government announced that eligible electricity consumers would see the reduction to their electricity bills in the summer of 2017 (i.e., July).

On April 20, 2017, OEB announced that it has adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing. The Ministry anticipates that the OEB will set an interim rate adjustment following the passage of the legislation to enable GA Refinancing that would account for the full impact (i.e., 25 per cent).

The Ministry is planning to introduce legislation in early May 2017 and develop supporting regulations in early summer 2017 to enable GA Refinancing. Note: The OPG will require legislation and regulations to be in place to support its discussions with rating agencies and third-party financing.

The timeline for all of the social programs, with the exception of the OESP, is identical as the program implementation for the regulations that follow to be passed in unison for July 1, 2017.

Some of Ontario's Fair Hydro Plan commitments for the OESP came into effect on May 1, 2017 (e.g., removal of the OESP charge from customer bills; expanding credit amounts and program eligibility). Remaining changes associated with moving the program from the rate-base to the tax-base will be proclaimed at a later date when the OESP variance account is depleted. Additional regulatory amendments needed to implement this legislative change will come into effect on the same date.

As part of the OFHP, the government also announced the expansion of ICI to enable greater participation from the manufacturing sectors in Ontario.

The April 2017 ICI amendments enabled new electricity consumer's time to opt in to the expanded program ahead of the next ICI billing period (i.e., July 1, 2017). Note: Under ICI, as set out in Ontario Regulation 429/04, eligible electricity consumers must opt in to the ICI program on or before June 15 of each calendar each year.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

As it relates to the "equity injection", these changes are expected to have no impact on the Provincial net debt position as the Province's increased investment in OPG will be offset by the incremental borrowing to fund the

CONFIDENTIAL

equity injections. The Province has assumed incremental income from OPG arising from interest income on the subordinated debt which OPG will lend to the OPG Special Purpose Vehicle (SPV)/Trust. This offsets forecast increases in Provincial interest on debt expenses associated with equity injections.

Proposed legislation to enable GA refinancing has been drafted to mitigate financing, accounting and legal risks. In addition, IESO and OPG have sought independent advice and confirmation with respect to financing, accounting and legal matters.

Note: There would be a significant impact on provincial net debt and the fiscal plan if the legal, financing and accounting conditions change.

2) Social Programs:

As approved in the TB/MBC submission of Mach 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection	344,000,000
Ontario Electricity Support Program	140,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The IESO manages a variance account for the OESP, which holds the difference between the amount of OESP charge collected from the rate base, and the amount of OESP paid out in the form of credits. The amount in the variance account is about $109 million as of March 1, 2017. These funds will be used to fund the OESP program until the variance account is depleted, at which point the transfer payment line will be used to finance the program costs. Due to the potential range in costs of the OESP, which will depend on program uptake and any costs associated with supporting increased participation, the set allocation is required despite the variance account.

ENERGY will report back as part of PRRT with an update on out-year projections following analysis on rate applications before the Ontario Energy Board.

3) ICI Expansion:

Since ICI is funded through the electricity rate-based and not the provincial tax-base, ICI expansion will have no direct financial impact for the Province.

With respect to rate-base impacts, expanding ICI to consumers in the manufacturing and greenhouse sectors (i.e., between 500 kW and 1 MW) is

CONFIDENTIAL

expected to result in a modest increase on electricity bills for non-ICI participants starting in July 2017. For example, preliminary analysis estimates that the increase on a typical residential bill would by up to 0.66% or just over $1/month based on a 2016 bill of about $158.

Note: The extent of the non-ICI participant impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting in July 2017.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16 and April 19, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, 2017 to discuss implementation.
Future Industrial Conservation Initiative (ICI) Participants	• On March 9, 2017, the Ministry posted an ICI expansion proposal for comment on the Regulatory Registry for stakeholder comment. The Ministry has received 7 comments. • The Ministry is also working with the IESO, OCC and the CME regarding targeted outreach in relation to the ICI expansion.

8.0 RISK ASSESSMENT AND MITIGATION

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line.
Managing Interest Cost Risks	M	H	• Proposed legislation has been drafted with input from third-party financers (i.e., dealers). • OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%).
Provincial Guarantee is Triggered	L	H	• The proposed legislation sets out that the province would provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also establishes assurances that the Province would: - Through the Minister of Finance as provided by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and - Not hinder the charging and remittance of the under-collection of GA refinancing (i.e., through a provincial undertaking and guarantee).
IESO Failure to Establish a Regulatory Asset	L	H	• Under the proposed legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to do create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• Proposed legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • The degree of constitutional risk is in direct proportion to the extent the government is not able to show a

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date.
Social Program Cost Estimating	M	M	• OESP costs will depend on uptake of the program, which will be impacted by the 50% increase in credits, enhanced eligibility, and work with MCSS on aligning OESP delivery with their social assistance programs. • Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operatory (IESO) to ensure access to data for regular forecasting • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.
3) Industrial Conservation Initiative (ICI) Expansion			
Perceived Fairness Between Electricity Consumer Classes	M	L	• The expansion of the ICI program include electricity consumers in the manufacturing and greenhouse sectors with average monthly peak demand greater than 500 kW and less than 1 MW will impact those consumers that remain outside the program (i.e., Class B and RPP electricity consumers). • Increases to electricity bills will occur for non-ICI participants to ensure full cost recovery in the electricity system. Note: the extent of the impact on other non-ICI participants would depend on the uptake in the newly expanded ICI, but is expected to be modest. • Restricting eligibility to the manufacturing and greenhouse sector helps to ensure that the expanded ICI is focused on those consumers which are most impacted by GA costs and associated economic competitiveness pressures from neighbouring jurisdictions.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the proposed legislation is model on a those used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

CONFIDENTIAL

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

The ICI program is unique to Ontario and the proposed expansion would not directly impact on other jurisdictions.

10.0 PERFORMANCE MEASURES

The proposed legislation sets parameters within which refinancing of GA can proceed. These parameters include the initial percentage reduction in eligible electricity rates, the number of years that rates will increase at a rate equivalent to CPI and the length of time within which the recovery of funds must take place (i.e., by 2047). In addition, OPG's existing financial reporting process provides an additional framework for monitoring and reporting of OPG's role in OFHP.

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. The Ministry will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing.

With respect to ICI, the Ministry regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting in July 2017.

11.0 COMMUNICATIONS

ENERGY has developed a comprehensive, two-phase media campaign to increase awareness of Ontario's existing rate mitigation measures and new proposed electricity initiatives under Ontario's Fair Hydro Plan OFHP):

- Phase I – Launched on March 13, 2017 and included radio and digital media in English and French. This was followed by multi-cultural extensions on radio in 19 languages. Phase I of the media campaign is complete.

- Phase II – Is expected to launch early Summer 2017 and will include television, radio, print, digital and social media advertising support.

ENERGY received TB/MBC approval on February 6, 2017 for an exemption from the competitive acquisition requirement under the *Procurement Directive on*

CONFIDENTIAL

Advertising, Public and Media Relations, and Creative Communications Services for the development of the electricity cost reduction public education campaign. Through this, ENERGY acquired the services of Rain43, an Agency of Record under Advertising Review Board's corporate vendor of record arrangement for advertising, public and media relations, and communication services, to develop this public education campaign with an estimates maximum value of $1,500,000.

As of July 20, 2015, PHD Canada is the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In 2016-17, through Phase I, ENERGY has spent approximately $1,000,000 on media planning and buying for radio and digital media. The cost of media space for television is substantially higher than radio; as such, ENERGY is forecasting to spend an additional $2,500,000 in 2017-18.

This campaign is integral for demonstrating Ontario's commitment to lower energy costs for ratepayers through the new proposed electricity initiatives. This campaign could also open the Ministry to increased scrutiny as critics may conclude savings are too little or too late to help those suffering from what the media has deemed energy poverty. Public perception may be unchanged as emotional triggers to rising electricity prices and the constant stream of negative news by the media could overpower the campaign.

The Ministry has assessed the risks, and deems the benefits for running this campaign outweigh any risks of not doing so. ENERGY anticipates reaction from electricity consumers is to be generally positive with an awareness that changes to the electricity system have led to a reliable, cleaner system that is now more affordable.

In addition, the communications for GA refinancing, delivery electricity social programs and ICI expansion will be referenced in ongoing announcements related to Ontario's Fair Hydro Plan (OFHP) broadly, and as necessary targeted communications for specific stakeholder group can be developed.

For example, the Ministry has retained the OCC and the CME to undertake targeted stakeholder outreach on ICI and other cost saving energy programs/measures available to the commercial and industrial sectors in Ontario.

The Ministry will ensure that the social programs are communicated effectively to stakeholders and specific target audiences. The Ministry will leverage its agencies and its relationship with LDCs to ensure eligible consumers are aware of the programs.

Chiefs of Ontario (COO) will be a vital partner in communicating the benefits of the First Nations Delivery Credit.

CONFIDENTIAL

The Ministry also believes there is opportunity for consultation on the design of the electricity bill, with a goal to refresh the regulatory framework to improve the value of the bill to the consumer across all LDCs. The Ministry proposes to convene with LDCs in July, once they've had sufficient time to implement the OFHP initiatives and prescribed messaging.

Changes of this nature will require more in-depth consultation with LDCs, as well as broader regulatory amendments to simplify the requirements, necessitating a longer period to implement. This refresh would also include opportunities to communicate OFHP savings in a more personalized and comprehensive manner. For example, each customer could receive a "personalized" message indicating how much they saved as a result of the plan.

Based on this feedback, the Ministry would aim to introduce regulatory amendments to simplify bill presentment and introduce dynamic OFHP messaging in the Fall 2017.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on following:

    i. Implementation of Global Adjustment (GA) Refinancing;

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, Ontario Electricity Support Program and First Nations On-Reserve Delivery Credit); and

    iii. Expansion of Industrial Conservation Initiative (ICI).

2) APPROVE the Ministry funding a media buy procurement with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record.

3) NOTE the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

4) NOTE the Ministry of Energy will return to TB/MBC to request a transfer of funds to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to fully recover the costs for the public education campaign.

5) APPROVE the creation of a new transfer payment line entitled "Price Mitigation Support Initiatives" under Vote/Item 2905-01, Electricity Price Mitigation, with a $1,000 placeholder, to support future rate mitigation initiatives.

FINAL DRAFT

KPMG Letter to the Independent Electricity System Operator

An Accounting Opinion on the Application of PSAS to the Consolidation of a Trust and to the Recognition and Derecognition of a Variance Account in Relation to the Proposed *Ontario Fair Hydro Plan Act, 2017*

This letter has been prepared in draft form and will be updated upon receipt of the adopted legislation (including the amendments of the Electricity Act and the OEB Act) and finalized financial structure (including the bylaws and regulations of the OPG Trust) and other relevant agreements necessary for us to provide our final opinion, of which legislation and other relevant agreements are expected to be enacted/ finalized on or before September 30, 2017.

NOTICE OF NON RELIANCE

This Notice is regarding the accompanying Letter to provide an accounting opinion on the application of Public Sector Accounting Standards to the consolidation of a trust and to the recognition and derecognition of a variance account in relation to the proposed *Ontario Fair Hydro Plan Act, 2017* (the "**Letter**") prepared by KPMG LLP for the Independent Electricity System Operator ("Client").

The following terms apply to any review of the Letter and should you not agree to these terms, please do not review the Letter and delete copy of the same.

The Letter was prepared in connection with certain services we provided to the Client and should not be used for any other purpose or regarded as suitable for use by any person or persons other than the Client

No one other than the Client is authorized by KPMG to rely upon any information or views expressed in the Letter. KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as the Letter has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

KPMG in no way accepts any duty of care to you or any other person or accepts any agreement or other arrangement of a contractually binding nature between our firm and such parties.

KPMG neither warrants nor represents that the Letter is accurate, complete, sufficient or appropriate for any purpose contemplated by you or any other person or body. You shall have no right to disclose the Letter to any other party, unless disclosure is required by law or to fulfill a professional obligation required under applicable professional standards.

Yours very truly,

KPMG LLP

The Board of Directors

Dear Sirs,

We have been engaged to provide you with an accounting opinion on the application of Public Sector Accounting Standards to the consolidation of a trust and to the recognition and derecognition of a variance account in relation to the proposed *Ontario Fair Hydro Plan Act, 2017* ("the proposed Act") (Appendix A, Version 6, to this letter). This letter is being issued to the Independent Electricity System Operator ("IESO" or the "Company") in connection with its evaluation of the consolidation requirements and the accounting for the variance account under Canadian Public Sector Accounting Standards ("PSAS"). Our engagement has been conducted in accordance with generally accepted standards in Canada for such engagements.

The ultimate responsibility for the decision on the appropriate application of PSAS for the specific issues described below rests with management of the Company as preparers of the financial statements.

The adoption of the proposed Act (including the subsequent amendments of the Electricity Act, 1998 ("the Electricity Act") and the Ontario Energy Board ("OEB" or the "Board") Act ("the OEB Act")), and the finalization of the financing structure (including the bylaws and regulations of the OPG Trust) and other agreements will take several weeks. Accordingly, our judgment on the appropriate application of PSAS for the specific matters described below is based on the facts, circumstances and assumptions provided to us. The finalization of the legislation, regulations, financing structure and other agreements may impact the comments and conclusions set out herein. Our comments and conclusions are based on the proposed Act and related matters as they exist at the date of this letter.

The following three issues are addressed in this letter:

Issue #1: Can the IESO recognize a regulatory asset related to the variance account created by the proposed Act?

Issue #2: Is the trust to be established by Ontario Power Generation (the "OPG Trust") controlled by the IESO according to the guidance issued under PSAS 1300 *Government Reporting Entity* and therefore subject to consolidation by IESO?

Issue #3: What is the accounting treatment for derecognition of the regulatory asset by the IESO upon transfer of the variance account to the OPG Trust?

Background for issue #1

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party) are as follows:

1. The IESO's legal status is a not-for-profit, non-taxable, corporation established pursuant to Part II of the Electricity Act. Management of the IESO has determined that the Company is an Other Governmental Organization and accordingly prepares its financial statements in accordance with PSAS.

2. IESO is rate regulated by the OEB in accordance with the Electricity Act and the OEB Act.

3. *Extract from the 2016 IESO financial statements, note 3 New Accounting Policies,* audited by KPMG *"*As of January 1, 2016, the IESO changed its accounting policy regarding the recognition of assets and liabilities subject to rate regulation. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model. This change has been applied retroactively and has increased amounts previously unrecorded for regulatory assets and decreased amounts previously reported for accumulated deficit."

4. *Extract from the 2016 IESO financial statements, note 2(d) Summary of Significant Accounting Policies, Regulatory assets and liabilities.* "As a rate-regulated entity, the IESO, in appropriate circumstances establishes regulated assets or liabilities and thereby defers the impact on the statement of operations of certain expenses or revenues because they are probable to be collected or refunded to market participants through future billings. The IESO applies guidance from United States Generally Accepted Accounting Principles (US GAAP) Topic 980, *Regulated Operations ("ASC 980")*, in this policy."

5. *Extract from Section 78(3.3) of the OEB Act:* In approving or fixing rates under subsection (3.1),

   (a) the Board shall forecast the cost of electricity to be consumed by the consumers to whom the rates apply, taking into consideration the adjustments required under section 25.33 of the Electricity Act, 1998 and shall ensure that the rates reflect these costs; and

   (b) the Board shall take into account balances in the IESO's variance accounts established under section 25.33 of the Electricity Act, 1998 and shall make adjustments with a view to eliminating those balances within 12 months or such shorter time periods as the Minister may direct.

6. Currently, IESO recognizes two regulatory assets for unrecovered smart metering expenses and unrecovered PSAB transition items as permitted by rates approved by the OEB. In addition, in accordance with section 25.33 of the Electricity Act, IESO also recognizes variance accounts (eg. OESP, RPP and RRRP variance accounts) to record all amounts payable or receivable by it in connection with the amounts paid to generators, the Ontario Electricity Financial Corporation ("OEFC"), distributors and to entities with whom the IESO has a procurement contract.

7. The Electricity Act, OEB Act and other regulations will be amended to reflect the following *extracts of the proposed Act:*

   Section 1xx Definitions, Transfer of regulatory asset

   (3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 22xx (3):

1. A reduction in the balance in the variance account.
2. The adjustment of the regulatory asset.
3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Section 20.1xx Variance account to be established

(1) IESO shall establish and maintain a variance account for the purposes of this section.

(2) IESO shall record the following in the variance account:

1. The amount of the IESO funding shortfall for each month.
2. All payments received by IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.
3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences after May 1, 2017 and before the day this section comes into force.

(3) Subject to the correction of any obvious error by IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights of the investment interest owner acquired under the transfer.

Section 21xx Regulatory asset established

(1) Effective May 1, 2017, the IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

(2) Subject to subsection (3), the Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

(3) IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Section 30.1xx Board's Authority

(2) Despite anything to the contrary in the OEB Act, the Board may exercise any of its responsibilities under this Act without a hearing.

8. It is expected that the funding shortfall recorded by the IESO in the variance account (the regulatory asset) will be transferred to an investment asset owner (ie a trust to be established by OPG) on a monthly basis and cash collected within a short period of time. The total IESO funding shortfall for the period from May 1, 2017 to April 30, 2047 is estimated at $28 billion plus interest.

Appropriate Accounting Principle for issue #1

ASC 980 Regulated Operations

– For general-purpose financial reporting, an incurred cost for which a regulator permits recovery in a future period is accounted for like an incurred cost that is reimbursable under a cost-reimbursement-type contract. [980-10-05-6]

- Unless an accounting order indicates the way a cost will be handled for rate-making purposes, it causes no economic effects that would justify deviation from the GAAP applicable to business entities in general. The mere issuance of an accounting order not tied to rate treatment does not change an entity's economic resources or obligations. In other words, the economic effect of regulatory decisions—not the mere existence of regulation—is the pervasive factor that determines the application of GAAP. [980-10-05-8]
- The guidance in the Regulated Operations Topic applies to general-purpose external financial statements of an entity that has regulated operations that meet all of the following criteria:
  (a) The entity's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers.
  (b) The regulated rates are designed to recover the specific entity's costs of providing the regulated services or products. This criterion is intended to be applied to the substance of the regulation, rather than its form.
  (c) In view of the demand for the regulated services or products and the level of competition, direct and indirect, it is reasonable to assume that rates set at levels that will recover the entity's costs can be charged to and collected from customers. This criterion requires consideration of anticipated changes in levels of demand or competition during the recovery period for any capitalized costs. [980-10-15-2]
- A cost arising from cash paid out or obligation to pay for an acquired asset or service, a loss from any cause that has been sustained and has been or must be paid for. [980-10-20] Glossary
- Failure of an entity's operations to continue to meet the criteria in paragraph 980-10-15-2 can result from different causes. Examples include the following:
  (a) Deregulation.
  (b) A change in the regulator's approach to setting rates from cost-based rate-making to another form of regulation.
  (c) Increasing competition that limits the entity's ability to sell utility services or products at rates that will recover costs (as used in paragraph 980-10-15-2).
  (d) Regulatory actions resulting from resistance to rate increases that limit the entity's ability to sell utility services or products at rates that will recover costs if the entity is unable to obtain (or chooses not to seek) relief from prior regulatory actions through appeals to the regulator or the courts. [980-20-15-2]
- Rate actions of a regulator can provide reasonable assurance of the existence of an asset. An entity shall capitalize all or part of an incurred cost that would otherwise be charged to expense if both of the following criteria are met:
  (a) It is probable (as defined in Topic 450) that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes.
  (b) Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.

A cost that does not meet these asset recognition criteria at the date the cost is incurred shall be recognized as a regulatory asset when it does meet those criteria at a later date. [980-340-25-1]

- Rate actions of a regulator can reduce or eliminate the value of an asset. If a regulator excludes all or part of a cost from allowable costs, the carrying amount of any asset recognized pursuant to paragraph 980-340-25-1 shall be reduced to the extent of the excluded cost. Whether other assets have been impaired shall be judged the same as for entities in general and the Impairment or Disposal of Long-Lived Assets Subsections of Subtopic 360-10 shall apply. [980-340-35-1]
- If at any time an entity's incurred cost no longer meets the criteria for the capitalization of an incurred cost (see paragraph 980-340-25-1), that cost shall be charged to earnings. [980-340-40-1]
- In some cases, a regulator may approve rates that are intended to recover an incurred cost over an extended period without a return on the unrecovered cost during the recovery period. [980-340-55-2]
- The regulator's action provides reasonable assurance of the existence of an asset (see paragraph 980-340-25-1). Accordingly, the regulated entity would capitalize the cost and amortize it over the period during which it will be allowed for rate-making purposes. That cost would not be recorded at discounted present value. An exception to this general rule is provided for costs of abandoned plants. [980-340-55-3]

Issue #1: Can the IESO recognize a regulatory asset related to the variance account created by the proposed Act?

As noted above, as of January 1, 2016, the IESO changed its accounting policy to recognize the economic impacts of rate regulation and now applies guidance from US GAAP Topic 980, *Regulated Operations,* as PSAS does not have any specific guidance for entities with rate-regulated activities.

IESO concluded that it met the requirements of PS2120.02, which allows them to reflect the impacts of rate regulation, as it is considered that the change of accounting policy in its 2016 financial statements resulted in a more appropriate presentation of transactions in its financial statements. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The regulatory framework in Ontario relating to the generation and sale of electricity will be significantly impacted by the proposed Act. Currently, a substantial amount of the energy purchased from the generators is collected by IESO from the local distribution companies through the customer billing, with the remaining being recovered through variance accounts over a period of 12 months maximum. As mentioned above, the effect of the proposed Act is to defer the collection of a total estimated amount of $28 billion (plus interest) of energy purchased from the generators over a period of 30 years. The proposed Act will not permit IESO to collect the funding shortfall before May 1, 2021 and the recovery process will be established through regulations. Such a long-term deferred recovery plan requires IESO to consider whether the uncollected energy costs qualify for deferral as a regulatory asset and whether it continues to meet the criteria that allow IESO to use the guidance for regulated operations of Topic 980. These two accounting issues are analyzed in the two tables below.

Criteria for the recognition of regulatory assets

ASC 980-340-25-1 states that rate actions of a regulator can provide reasonable assurance of the existence of an asset. An entity shall capitalize all or part of an incurred cost that would otherwise be charged to expense if both of the following criteria are met:

Criteria	Comment	Evaluation
(a) It is probable that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes. (b) Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. *(emphasis added)* If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.	The proposed Act states that, • *A recording of the balance in the variance account is determinative of the balance as of the time of the recording.* • *Effective May 1, 2017, IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.* • *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.* • *The IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.* Based on the proposed Act, IESO has the right to recover the balance recorded in the variance account. As a result, it is clear that IESO will be able to recover the amount previously incurred rather than to provide for expected levels of similar future costs.	Met

Criteria for the adoption and continued use of ASC 980 guidance

Deferred recovery plans are plans adopted by regulators or legislations in response to significant increases in costs (e.g. purchased power costs). These plans typically provide for rates to remain fixed or increase moderately with a variance account mechanism to capture costs in excess of the level allowed in current rates. A regulated utility subject to such plans is required to consider whether it continues to meet the criteria that allow it to use the guidance for regulated operations of Topic 980, especially criteria ASC 980-10-15-2 (b).

The proposed plan for the recovery of purchase power costs over a 30 year period is considered a deferred recovery plan as the rates for the first four years will remain fixed and subsequently the rates will increase moderately with a variance account to capture energy costs in excess of the level allowed in current rates. The following is an analysis of the ASC 980-10-15-2 criteria.

Criteria	Comment	Evaluation
(a) The entity's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party	Currently, IESO recognizes regulatory assets related to smart meters and PSAS transition costs as permitted by rates approved by the OEB and regulatory liabilities related to the variance accounts (eg. OESP, RPP and RRRP variance accounts) established under section 25.33 of the Electricity Act related to the procurement of energy.	Met

Criteria	Comment	Evaluation
regulator or by its own governing board empowered by statute or contract to establish rates that bind customers.	It is important to note that both Hydro One and OPG are classified as government business enterprises and are reporting under IFRS in their consolidated financial statements, are consolidated by the modified equity method into the province's books, are regulated by the OEB, and their respective regulatory assets and liabilities are reported in the province's books.	

(b) The regulated rates are designed to recover the specific entity's costs of providing the regulated services or products.	Currently, the rates approved by the OEB are designed to recover the IESO's costs of providing the regulated services and the pass-through related to the energy purchased from the generators.
	
	As mentioned above, a regulated utility subject to a deferred recovery plan is required to consider whether it continues to meet the criteria ASC 980-10-15-2 (b).
	
	This criterion requires a cause-and-effect relationship between a reporting entity's costs and its revenue. In addition, the timing of cost recovery and the related frequency of ratemaking is important. A reporting entity should consider its rate case experience, including the design of its rates and timing of recovery, when determining whether this criterion is met. These factors are analyzed below.
	
	Frequency of rate case
	
	- Currently, IESO is subject to OEB's annual reviews
	- Although the recovery of purchase energy costs will be frozen at the approved rate on May 1, 2017 for the first four years, the IESO will be granted a right to recover after May 1, 2021 the funding shortfall recorded in the variance account during the four-year period.
	  - *A recording of the balance in the variance account of the balance is determinative of the balance, as of the time of the recording. (We note that this confirms that there will be no prudence review by the OEB)*
	  - *Right to recover the balance recorded in the variance account.*
	  - *Obligation on the part of the OEB to dispose the variance account in accordance with the regulation.*
	- Subsequent to May 1, 2021, the OEB will be required to determine and set rates payable by specified consumers to allow for IESO to recover the balance
		Met

Criteria	Comment	Evaluation
	recorded in the variance account. - *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.* - *Despite anything to the contrary in the OEB Act, the Board may exercise any of its responsibilities under this Act without a hearing.* *Rates are designed to recover incurred costs* - There is a cause-and-effect relationship between the purchase energy costs and revenue, as IESO will be allowed to recover the costs incurred. - *A recording in the variance account of the balance in the variance account is determinative of the balance as of the time of recording (We note that this confirms that there will be no prudence review).* - *Right to recover the balance recorded in the variance account.* - *Obligation on the part of the OEB to ensure IESO will recover the balance recorded in the variance account.* *Periods of alternative ratemaking (e.g., rate freezes)* Evaluation of the second criterion requires additional judgment if the regulated utility is subject to any form of ratemaking that introduces uncertainty about the cause-and-effect relationship between costs and rates. A rate freeze period is defined as a fixed rate that is charged to customers during a period of time (more than two years) and the utilities are exposed to increases in operating and energy costs with no ability to recover the variances. This is not the case as IESO will be granted the right to recover fully the funding shortfall recorded in the variance account, including the first four-year period. - *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.*	

Criteria	Comment	Evaluation
	Costs uncertainty As the IESO will be granted the right to fully recover the funding shortfall recorded in the variance account, there is no uncertainty about the recovery of the costs. *Disallowances of costs* The OEB has never disallowed the recovery of any material costs incurred by IESO. More importantly, as the IESO will be granted by legislation the right to fully recover the funding shortfall recorded in the variance account, there is no risk of the potential disallowance of the purchase power costs. Based on the analysis of the above factors, there are no indications that this criterion would not be met. The above factors establish that there will be a direct cause-and-effect relationship between IESO's costs and its future collection.	
(c) In view of the demand for the regulated services or products and the level of competition, direct and indirect, it is reasonable to assume that rates set at levels that will recover the entity's costs can be charged to and collected from customers. This criterion requires consideration of anticipated changes in levels of demand or competition during the recovery period for any capitalized costs."	The remaining criterion is whether limitations, including considering demand levels at the approved rates, on the extent of recovery of the regulatory asset could prevent the IESO from recognizing a regulatory asset for the entire balance in the recovery right granted to the IESO. The proposed Act notes that: - *Effective May 1, 2017, the IESO's right to recover the balance in the variance account is subject to the following:* o *The Board shall, from time to time, determine and set rates payable by specified customers to allow for IESO to recover the balance recorded in the variance account.* o *IESO shall not be entitled to collect the variance account from specified consumers before May 1, 2021.* Although the process, especially the timing of the recovery of the regulatory asset has not been established yet by the OEB, the wording and intent of the proposed legislation is clear that it is intended by law to be recoverable over the period of 30 years. Further, given the nature and extent of customer demand for the power generated and distributed in Ontario, both at this time and projected in the future, it is reasonable to conclude that there will be sufficient demand to recover the regulatory asset. As with the other criteria, this will	Met

Criteria	Comment	Evaluation
	need to be continually evaluated throughout the recovery period.	

Management conclusion:

IESO management has concluded that the IESO can recognize a regulatory asset related to the variance account created by the proposed Act based on the foregoing analysis.

The variance account created by the proposed Act is subject to rate regulation by the OEB and the variance account will be established with the right to collect funds against the variance amount in the future. In these circumstances, the IESO is able to establish a regulated asset. The IESO financial statements are prepared in accordance with Canadian public sector accounting standards. Although PSAB does not provide specific guidance on rate regulated accounting, it does under PS 1150 *Generally Accepted Accounting Principles* allow for guidance to be followed from other accounting frameworks. IESO has applied guidance from United States Generally Accepted Accounting Principles (US GAAP) Topic 980, Regulated Operations in its accounting policies.

Our conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that the variance account created by the proposed Act will meet the criteria for the recognition of a regulatory asset stated in ASC 980-340-25-1. Furthermore, we have also considered the criteria stated in ASC 980-10-15-2 and believe that IESO should be allowed to continue to use the guidance for regulated operations of Topic 980.

Background for issue #2

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party), in addition to those described in the background for issue #1, are as follows:

1. The IESO currently has the right to collect the global adjustment ("GA") monthly from ratepayers through provisions in the Electricity Act. It is proposed that collection of a certain portion of the monthly GA be deferred in a regulatory asset for collection in the future, and that the right to recover the deferred GA from ratepayers be used as the basis for structured financing/ securitization.
2. In connection with the proposed Act, it is proposed that a trust to be created as a financial vehicle by OPG in connection with the deferred GA. The OPG Trust will finance the deferral of the GA by purchasing the regulatory asset from the IESO for the principal amount of the GA being deferred.
3. The OPG Trust is expected to finance these purchases from the IESO through a combination of senior secured financing raised in the capital markets, and subordinated financing from OPG (the funding for which will mostly be from equity injections from the OEFC/Province of Ontario).
4. OPG will be appointed as the Financial Services Manager and will be given the responsibility to direct the activities of the OPG Trust, through a services agreement and/or through the Trust's constating documents.

Appropriate Accounting Principle for issue #2

PS1300 *Government Reporting Entity*:

PSAS refer to government or government organizations. For the purpose of this analysis, the PSAS guidance below relating to government or government organizations should be read and understood as being the IESO (emphasis added).

- The government reporting entity should comprise government components and those organizations that are controlled by the government. [PS 1300.07]
- Control is the power to govern the financial and operating policies of another organization with expected benefits or the risk of loss to the government from the other organization's activities. [PS 1300.08] (emphasis added).
- Whether a government controls an organization is a question of fact that must be determined by reference to the definition of control established in paragraph PS 1300.08 and the particular circumstances of each case. The determination of the fact that control exists will require the application of professional judgment. Government achieves its objectives through a wide range of organizations which individually will fall somewhere along a continuum. At one end of the continuum, it will be clear that an organization does not have the power to act independently and is controlled by the government. At the other end, the organization will have the power to act independently and, while government will have a level of influence on the organization, it will be clear that it does not have control. Along the continuum, consideration needs to be given to the nature of the relationship between the government and the organization in order to determine whether control exists. This Section provides guidance intended to assist in this assessment. [PS 1300.10]
- In applying this guidance, it is necessary to determine the substance of the relationship between the government and the organization. The true nature of certain relationships may not be completely reflected by their legal form. All relevant aspects and implications of the relationship would be considered in determining whether or not the government controls the organization. Where various aspects of the relationship are designed, in effect, to achieve an overall objective, they would be viewed as a whole. [PS 1300.11]
- Financial and operating policies are principles and practices that determine how an organization conducts its activities. The ability to govern these policies is an important element of government control because it establishes the fundamental basis for the conduct of the organization's operations and the achievement of its mission and mandate. [PS 1300.13]
- There are a variety of ways to govern the financial and operating policies of an organization. For example:
  (a) a government may establish an organization's fundamental purpose and eliminate or significantly limit the ability of the organization to make future decisions by predetermining the financial and operating policies of the organization;
  (b) a government may direct the financial and operating policies of an organization on an ongoing basis; or
  (c) a government may veto, overrule or modify the financial and operating policies established by an organization. [PS 1300.14]
- A government does not need to manage an organization's activities on a day-to-day basis to control the organization. It is the government's existing authority to determine the policies governing those activities that is important. [PS 1300.15]

– For the purposes of this Section, it is assumed that where the government has the power to govern the financial and operating policies of an organization, it expects to derive a financial or non-financial benefit. The government may also be exposed to the risk of loss. [PS 1300.16]

Issue #2: Is the trust to be established by Ontario Power Generation (the "OPG Trust") controlled by the IESO according to the guidance issued under PSAS 1300 *Government Reporting Entity* and, therefore, subject to consolidation by IESO?

Under PSAS, IESO is required to consolidate all entities that are considered to be part of its reporting entity, applying the guidance provided in *Section PS 1300 Government Reporting Entity.* Under PS 1300, IESO must consolidate all entities it "controls".

In determining whether or not the OPG Trust should be consolidated by IESO, it must first be determined whether or not the IESO exercises control as a consequence of power to govern the financial and operating policies of the OPG Trust resulting in expected benefits to the IESO or the risk of loss from the activities of the OPG Trust.

PS 1300.17 indicates that "whether a government controls an organization is a question of fact that requires the application of professional judgment based on the definition of control in this Section and the substance of the relationship in each case." Under PS 1300.08 control is defined as "the power to govern the financial and operating policies of another organization with expected benefits or the risk of loss to the government from the other organization's activities". Therefore, the determination of whether IESO will consolidate the OPG Trust will be based on an assessment of whether IESO is considered to control the OPG Trust based on the indicia of control set out in PS 1300. The assessment of the IESO's control of the OPG Trust is made based on the proposed Act, facts and nature of the relationship between the IESO and the OPG Trust and based on facts and assumptions provided by IESO. PS 1300.18 and .19 set out 11 potential indicia of control. Several of these indicia have been categorized as more persuasive of a finding of control (see the first four indicators in the table below). For each indicator that applies, the degree of government influence would determine its importance as evidence of control. Finally, the indicia are considered both collectively and individually.

A detailed analysis of the 11 Indicators of control is provided in the following table.

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
Primary (more persuasive) indicators (PS 1300.18):		
Government has the power to unilaterally appoint or remove a majority of the members of the governing body of the organization	- The proposed Act states: - *OPG is appointed as the Financial Services Manager for the purposes of this Act. (Section 13xx)* - *The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners. (Section 14xx (1))* - *Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees to recover, the costs of doing anything the*	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?

	Financial Services Manager is required or permitted to do under this or any other Act; and any other type of expenditure, the recovery of which is permitted by the regulations. (Section 14xx (3))
	- The Electricity Act, 1998 (EA) will be amended as follows:
	  - *In addition to the objects mentioned in subsection (1), the objects of OPG include exercising the powers and rights and performing the duties and obligations assigned to it under the Ontario Fair Hydro Plan Act, 2017 and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services." (Section 53.1 (1.1))*
	  - *"OPG may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects." (Section 53.1 (1.2))*
	- OPG will establish a trust to manage the collection of the regulatory asset and related financing and administrative expenses. The Board of Trustees of the OPG Trust will be the governing body of the Trust and will be appointed by OPG. OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees.
	- The IESO will not have any rights in respect of the appointment or replacement of the Board of Trustees of the OPG Trust.	

Government has ongoing access to the assets of the organization, has the ability to direct the ongoing use of those assets, or has ongoing responsibility for losses	- Section 23xx of the proposed Act states:
	  - *A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.*
	  - *Without limiting subsection (1), any transfer agreement that states an intention of the parties for*
		No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
	IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest. - *At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.* - Based on the proposed Act, *upon transfer by IESO of a portion of the regulatory asset to the OPG Trust, the investment asset resulting from the transfer is immediately vested in the OPG Trust, free and clear of any adverse claim.* (Section 24xx (1.1)) - Therefore, upon transfer of the regulatory asset to the OPG Trust, IESO will no longer have access/ability to direct the regulatory asset nor have the ongoing responsibility for losses. - The credit risk related to the collection of the investment asset is borne by the OPG Trust.	
Government holds the majority of the voting shares or a "golden share" that confers the power to govern the financial and operating policies of the organization	- IESO will not have any ownership in the OPG Trust and will not have the power to govern the financial and operating policies of the OPG Trust.	No
Government has the unilateral power to dissolve the organization and thereby access its assets and become responsible for its obligations	- IESO will not have the power to dissolve the organization.	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
Other indicators that may provide evidence of control exist when government has the power to (PS 1300.18):		
Provide significant input into the appointment of members of the governing body of the organization by appointing a majority of those members from a list of nominees provided by others or being otherwise involved in the appointment or removal of a significant number of members	- OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees of the OPG Trust. - IESO will not provide input in the appointment of members of the Board of Trustees.	No
Appoint or remove the CEO or other key personnel	- OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees of the OPG Trust and other key personnel.	No
Establish or amend the mission or mandate of the organization	- The Trust will be established by OPG and the mandate of the Trust will be set based on the proposed Act.	No

Approve the business plans or budgets for the organization and require amendments, either on a net or line-by-line basis	- The proposed Act states:
	  - *OPG is appointed as the Financial Services Manager for the purposes of this Act. (Section 13xx)*
	  - *"The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of refinancing a funding obligation." (Section 16 (1))*
	- OPG is the Financial Services Manager, not IESO.
	- IESO is not involved in the preparation or approval of the business plans or budget of the OPG Trust.
		No

Establish borrowing or investment limits or restrict the organization's investments	- Section 17 of the proposed Act states: - *The Financial Services Manager shall ensure that funding obligations incurred for the purposes*	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
	of this Act are incurred in a manner that is consistent with the applicable Financing Plan. - OPG not IESO, is responsible for ensuring that the borrowings of the OPG Trust meet the above conditions.	
Restrict the revenue-generating capacity of the organization, notably the sources of revenue	- N/A	No
Establish or amend the policies that the organization uses to manage, such as those relating to accounting, personnel, compensation, collective bargaining or deployment of resources	- As mentioned above, OPG will be granted by legislation the power to establish or amend the policies of the OPG Trust and the ability to appoint and remove all members of the Board of Trustees.	No

Management Conclusion:

IESO management has concluded that the OPG Trust to be established would not be controlled by the IESO and therefore is not subject to consolidation by the IESO.

Based on the foregoing analysis of the 11 indicators of control as defined in Section PS 1300 *Government Reporting Entity,* considered both individually and collectively there is no evidence of control by the IESO in respect of the OPG Trust. The IESO will not have the power to govern the Trust, nor have ongoing access to Trust's assets. The IESO will also not have any voting shares or future rights to the Trust nor the power to dissolve the Trust. Without control, the Trust is not subject to consolidation within the IESO financial statements.

Our Conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that based on the Proposed Act, none of the four primary (more persuasive) indicators of control are considered to be met, and none of the seven other indicators of control are considered to be met. Accordingly, we concur that the IESO does not control the OPG Trust under the proposed Act and hence would not consolidate the OPG Trust.

The adoption of the proposed Act (including the subsequent amendments of the Electricity Act and the OEB Act) and the finalization of the financing structure (including the bylaws and regulations of the OPG Trust) and other agreements will take several weeks. Accordingly, our judgment on the appropriate application of PSAS to the conclusion on control may change subject to further analysis of any changes to the terms of the proposed Act or review of the final regulations, financing structure and other agreements.

Background for issue #3

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party), in addition to those described in the background for issues #1 and 2, are as follows:

1. The total IESO funding shortfall for the period from May 1, 2017 to April 30, 2047 is estimated at $28 billion plus interest and will be recorded by the IESO in a variance account recognized as a regulatory asset.
2. The IESO does not currently have the financial capability to finance the regulatory asset and will transfer the variance account to an investment asset owner (i.e. OPG Trust) on a monthly basis.
3. The IESO will obtain a written legal opinion as to the validity and enforceability of the transfer and sale of the regulatory asset.
4. Based on an assessment of control performed under the issue #2, IESO will not consolidate the OPG Trust. We understand that an assessment of control under International Financial Reporting Standards ("IFRS") has been performed by OPG and they have concluded that the OPG Trust will be consolidated by OPG; we note that the financial reporting framework used by OPG in preparing its financial statements for consolidation into the Province's books is IFRS.
5. The Electricity Act, OEB Act and other regulations will be amended to reflect the following *extracts from the proposed Act:*

   Section 11xx IESO to receive amounts

   (2) The IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

   (4) All amounts received by the IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owner, be received and held in trust by the IESO for the investment interest owners.

   (5) The IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the accounts referred to in subsection (2), to or for the benefit of the investment interest owners in accordance with the regulations.

   Section 12xx Pro rating of payments

   (3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

   Section 22xx Transfer of regulatory asset

   (1) The IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

   (2) An agreement between the IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to the IESO in an amount equal to the amount of the specified portion.

(3) Upon receipt by the IESO of the payment by the financing entity,

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) the IESO shall retain no further right, title or interest in the investment interest.

Section 23xx Validity of transfer

(1) A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.

(3) At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

Section 25xx Investment asset established

(1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, IESO and other prescribed parties.

Section 26xx Transfer of investment interest

(2) An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Section 28xx Investment interest owner may grant security interest

(1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

(3) All provisions of the Personal Property Security Act shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

6. The terms of the transfer agreement between the IESO and the OPG Trust that will be signed and executed upon transfer of the regulatory assets will be in compliance with the dispositions of the proposed Act.

Appropriate Accounting Principle for issue #3

The Derecognition Section of ASC 980-20-40 provides guidance on determining whether and when an entity should remove an item from the financial statements. For example, the entity would derecognize an asset because it no longer has rights to the asset or it would derecognize a liability because it no longer has any obligation. [ASC 980-20-40]

Failure of an entity's operations to continue to meet the criteria in paragraph 980-10-15-2 can result from different causes. Examples include the following:

(e) Deregulation.

(f) A change in the regulator's approach to setting rates from cost-based rate-making to another form of regulation.

(g) Increasing competition that limits the entity's ability to sell utility services or products at rates that will recover costs (as used in paragraph 980-10-15-2).

(h) Regulatory actions resulting from resistance to rate increases that limit the entity's ability to sell utility services or products at rates that will recover costs if the entity is unable to obtain (or chooses not to seek) relief from prior regulatory actions through appeals to the regulator or the courts. [ASC 980-20-15-2]

PS1000 *Financial statement concepts*:

- This Section is to be used by preparers and auditors of financial statements in exercising their professional judgment as to the application of generally accepted accounting principles and in establishing accounting policies in areas in which accounting principles are developing. [PS1000.03]
- Financial statements should communicate information that is relevant to the needs of those for whom the statements are prepared, reliable, comparable, understandable and clearly presented in a manner that maximizes its usefulness. [PS1000.24]
- An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph [PS3210.04]. Thus, for example, an item does not qualify as an asset of a government if the item involves:
  (a) no future economic benefit;
  (b) future economic benefit, but the government cannot obtain it; or
  (c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred. [PS1000.37]

PS3210 *Assets*:

- Assets are economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained. [PS3210.03]
- Assets have three essential characteristics:
  (a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.
  (b) The public sector entity can control the economic resource and access to the future economic benefits.
  (c) The transaction or event giving rise to the public sector entity's control has already occurred. [PS3210.04]
- Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. [PS3210.22]

PS3430 *Restructuring transactions* [1]

- Individual assets and liabilities transferred in a restructuring transaction should be derecognized by the transferor if they no longer meet the definitions of assets and liabilities and applicable recognition criteria at the restructuring date. [PS3430.21]
- When a transferor continues to be involved in the individual assets and/or liabilities it transferred to a recipient subsequent to the restructuring date, it would assess the nature and extent of its continued involvement against the definitions of assets and liabilities and applicable recognition criteria to evaluate whether:
  (a) derecognition of the asset and liability transferred would be appropriate; and
  (b) its continued involvement gives rise to a new asset or new liability that needs to be recognized. [PS3430.24]
- A new asset or new liability may arise from a restructuring due to a transferor's continued involvement in the individual assets and liabilities transferred (for example, if it agrees to guarantee repayment of all or a portion of a transferred liability or leases back a portion of a transferred asset). As the new asset or new liability is not transferred, together with related program or operating responsibilities, they are not part of the restructuring transaction. They would be accounted for in accordance with individual Sections of the PSA Handbook by both the transferors and recipients. [PS3430.25]

1 This Section applies to fiscal years beginning on or after April 1, 2018. […] Earlier adoption is permitted."

Issue #3: What is the accounting treatment for derecognition of the regulatory asset by the IESO upon transfer of the variance account to the OPG Trust?

Although ASC 980-20-40 states that

> *"Derecognition Section provides guidance on determining whether and when an entity should remove an item from the financial statements. For example, the entity would derecognize an asset because it no longer has rights to the asset or it would derecognize a liability because it no longer has any obligation."*

Subtopic 980-20 relates to discontinuation of rate-regulated accounting when an entity no longer meets the criteria in paragraph 980-10-15-2. ASC 980-20-15-2 provides examples of when an entity no longer meets the criteria, including deregulation and change of the form of regulation. Thus, ASC 980 does not provide clear guidance for the derecognition of a regulatory asset other than in connection with the discontinuation of rate-regulated accounting.

The above guidance in ASC 980-20-40 provides general principles for the derecognition of assets.

It should also be noted that PSASs provide limited guidance on derecognition of non-financial assets and liabilities. Section 3430 *Restructuring transactions,* which is applicable for fiscal years on or after April 1, 2018 with early application permitted, has guidance for the derecognition of assets and liabilities.

- Paragraph 21 states that individual assets and liabilities transferred in a restructuring transaction should be derecognized by the transferor if they no longer meet the definitions of assets and liabilities and applicable recognition criteria at the restructuring date.
- As stated in paragraph 24, when a transferor continues to be involved in the individual assets and/or liabilities it transferred to a recipient subsequent to the restructuring date, it would assess the nature and extent of its continued involvement against the definitions of assets and liabilities and applicable recognition criteria to evaluate whether derecognition of the asset and liability transferred would be appropriate and whether its continued involvement gives rise to a new asset or new liability that needs to be recognized.

Recognizing the proposed transaction is not a restructuring transaction, Section 3430, which has recently been issued by PSAB, provides current evidence of thinking in the application of the general PSAS principles in respect of the recognition and derecognition of assets and liabilities. Accordingly, the analysis as to whether the regulatory asset transferred to the OPG Trust can be derecognized is based on the foregoing guidance.

Criteria for the recognition of an asset

PS3210.03 states that assets are economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained. More generally, PSAS PS1000.37 suggests that an asset would no longer be recognized when it fails to meet the definition of an asset:

Criteria	Comment	Evaluation
Assets (PS3210.04/ PS1000.36): Assets have three essential characteristics: (a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows,	Based on the guidance, the regulatory asset does not qualify as an asset of IESO if it cannot obtain the future economic benefits. Upon transfer of the regulatory asset, IESO will have no further rights or obligations in connection with the asset transferred. - *IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.* - *Upon receipt by IESO of the payment by the financing entity, IESO shall retain no further right, title or interest in the corresponding investment interest.*	Not Met

Criteria	Comment	Evaluation
or to reduce cash outflows. (b) The public sector entity can control the economic resource and access to the future economic benefits. (c) The transaction or event giving rise to the public sector entity's control has already occurred. *Financial statement concepts (PS1000.37):* An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph [see above]. Thus, for example, an item does not qualify as an asset of a government if the item involves: (a) no future economic benefit (b) future economic benefit, but the government cannot obtain it.	- *A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.* - *Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.* - *At the time a transfer of the regulatory asset is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor."* Upon transfer of the regulatory asset, the OPG Trust will have the right to sell the asset to another party or to grant a security interest in favour of any person to secure a funding obligation. - *Upon transfer, the financing entity becomes an investment asset owner and acquires an investment interest."* - *An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.* - *An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.* Based on the proposed Act, it is clear that IESO will have no rights to the benefits associated with the future cash inflows related to the regulatory asset as it will have transferred its right to recover the IESO funding shortfall to the OPG Trust. Further, it is also clear that IESO will have lost control over the regulatory asset once it is transferred to OPG Trust.	

Management conclusion:

IESO management has concluded that the regulatory asset will be derecognized upon transfer of the variance account to the OPG Trust.

The transfer of the variance account transfers the control and the benefits associated with the right to collect funds in the future against the variance amount to the OPG Trust. This will eliminate the IESO asset by the amount of the transfer as the IESO will no longer control an economic resource or have access to future economic benefits for that amount. The funds collected from the transfer will in turn reduce the associated debt held by the IESO, maintaining the IESO's net $ nil balance in the market accounts.

Our conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that the regulatory asset should be derecognized on transfer to the OPG Trust as IESO no longer has rights or future economic benefits associated with the asset.

Other Matters

The ultimate responsibility for the decision on the appropriate application of PSAS for the specific transactions rests with management as preparers of the financial statements. Our judgment on the appropriate application of PSAS for the specific transaction is based solely on the facts, circumstances and assumptions provided to us as described above. Should these facts and circumstances differ, our conclusion may change.

This letter has been prepared in draft form and will be updated upon receipt of the adopted legislation (including the amendments of the Electricity Act and the OEB Act) and finalized financial structure (including the bylaws and regulations of the OPG Trust) and other relevant agreements necessary for us to provide our final opinion, of which legislation and other relevant agreements are expected to be enacted/ finalized on or before June 30, 2017. This letter will not be updated as a consequence of pronouncements by the Public Sector Accounting Board, or any other authoritative bodies, that occur subsequent to the date of this letter.

This letter is intended solely for the information and use of the Board of Directors and management of the Company, and is not intended to be and should not be used, quoted, relied upon by, or otherwise referred to by anyone other than these specified parties or for any other purpose.

No one other than the Board of Directors and management of the Company is authorized by KPMG to rely upon any information or views expressed herein**.** KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as this letter has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

Yours very truly,

Draft of the Ontario Fair Hydro Plan Act, 2017

Version 6

This confidential draft document is provided for discussion purposes only. It should not be construed as representing the position adopted by the Government of Ontario on any of the topics included or not included in this document. The notes included in this document are intended only to help facilitate a discussion of the topics to which they relate. Any potential legislation is subject to the approval of the Ontario Legislature.

Confidential Draft

A proposal to create Legislation.

Ontario Fair Hydro Plan Act, 2017, if enacted

A proposal to create Legislation.

Ontario Fair Hydro Plan Act, 2017, if enacted

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL TO ANY FINAL BILL PRIOR TO INTRODUCTION.

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects.[1] These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to residential consumers. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of those consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that residential consumers in the future pay their fair share for the benefits that they receive from the investments already made.

Definitions

1xx. (1) In this Act,

"Board" means the Ontario Energy Board; ("French")

"clean energy adjustment" means the amount determined under section 10xx and payable by specified consumers; ("French")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("French")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the amounts to be paid or reflected by IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts or amounts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed,

(b) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(c) such other costs or estimated costs as may be prescribed; ("French")

"clean energy initiative" means the policies of the Government of Ontario related to,

Confidential Draft

(a) eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,

(c) promoting conservation, demand management and energy efficiency, and

(d) investing in energy infrastructure to ensure a clean, modern and reliable system; ("French")

"electricity vendor"[2] means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) IESO in circumstances where it directly invoices a specified consumer for electricity used in Ontario, or

(d) such other person as may be prescribed; ("French")

"fair allocation amount" means an amount calculated under section 15xx; ("French")

"finance amount" means the finance amount determined in accordance with the regulations; ("French")

"financing entity" means an entity established or caused to be established as described in subsection 17xx (3); ("French")

"Financial Services Manager" means the Financial Services Manager appointed under section 13xx; ("French")

"Financing Plan" means a plan prepared under section 16xx; ("French")

"funding obligation" means a payment obligation incurred by or on behalf of an investment interest owner to fund its ownership of an investment interest or a payment obligation that meets such other criteria as may be prescribed; ("French")

[2] FLS - this is similar to the definition of "electricity vendor" in the Ontario Rebate for Electricity Consumers Act, 2016

Confidential Draft

"funding rebate" means a payment obligation incurred by IESO as part of the transfer of the regulatory asset; ("French")

"IESO" means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; ("SIERE")

"IESO deferral" means the amount determined under section 20xx; ("French")

"investment asset" means the rights and interests described in section 25xx; ("French")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("French")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("French")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system within the meaning of the *Electricity Act, 1998*; ("French")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("French")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

(a) the period beginning on July 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on April 30, 2047 or ending on such later day as may be prescribed,

(i) every six-month period following the period mentioned in clause (a); or

(ii) any period shorter than six months, as may be prescribed; ("French")

"refinancing" means, subject to the regulations, the incurrence of debt in connection with a redemption, repayment or repurchase of a funding obligation; ("French")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right and interest established under section 21xx; ("French")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2); or

(b) such other person as may be prescribed; ("French")

"transfer" includes, when used in relation to an investment interest, the assignment, conveyance, disposition or sale of the investment interest; ("French")

"true up amount" means a true up amount determined in accordance with the regulations; ("French")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("fournisseur de compteurs divisionnaires d'unité")

"variance account" means the variance account established by IESO under subsection 20.1xx (1). ("French")

Specified consumer

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of 50 kilowatts or less, or such other amount as may be prescribed.

Confidential Draft

2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.

3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or has had the obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.

4. The person's account with the electricity vendor relates to,

    i. a dwelling,

    ii. a property within the meaning of the *Condominium Act, 1998*,

    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.

5. The person satisfies such criteria as may be prescribed.

Transfer of regulatory asset

(3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 22xx (3):

1. A reduction in the balance in the variance account.

2. The adjustment of the regulatory asset.

3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Effect of invalidity, etc.[3]

2xx. (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the

[3] FLS: this is from the *Climate Change Mitigation and Low-carbon Economy Act, 2016*

Confidential Draft

Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purpose

3xx. (1) The purposes of this Act are,[4]

(a) to ensure that clean energy costs and clean energy benefits are fairly allocated among present and future specified consumers;

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province; and

(c) to align clean energy costs with clean energy benefits, in order to provide fairness for specified consumers.

Crown bound

4xx. This Act binds the Crown.

Protection and assurances

Prohibition

5xx. (1) No action or omission by the Board, the Minister or the Crown shall be effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or to impair or postpone the invoicing, collection or remittance of the clean energy adjustment.

Agreements

(2) The Minister and the Minister of Finance may together, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of IESO or electricity vendors under this Act or similar transactions.

Guarantee, indemnification

(3) The Lieutenant Governor in Council may by order,

[4] FLS: Please see the *Electricity Act, 1998* for much of the wording proposed in this section.

Confidential Draft

(a) authorize the Minister and the Minister of Finance, acting together on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions of the guarantee or indemnity and the maximum liability for the guarantee or indemnity;

(b) specify terms and conditions that must be included in any guarantee or indemnity given by the Minister and the Minister of Finance; and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT

Definitions

6xx. In this Part,

"regulated rate consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998* for the purposes of subsection 79.16 (1) of that Act.

2. The consumer would, if the consumer were not subject to this Act, be invoiced the rate determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*. ("French")

Regulated rate consumer, first adjustments

6.1xx (1) Despite any order under subsection 78 (3.1) of the *Ontario Energy Board Act, 1998* and despite section 79.16 of that Act, the electricity rates payable by regulated rate consumers for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would achieve the following outcome: a fictional regulated rate consumer who meets the prescribed criteria would be charged an invoice amount that is 25 per cent less than the invoice amount that would have been charged to that consumer under the comparison rates described in subsection (2).

Comparison rates

(2) The comparison rates are the rates that would have been effective May 1, 2017 if they had been determined by the Board solely using the method prescribed by the

Confidential Draft

regulations made under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*, without taking into account any forecasted impact of any other provisions of this Act.

Invoice amounts

(3) Each invoice amount mentioned in subsection (1) shall be determined in accordance with the regulations.

Other specified consumers, first adjustment

6.2xx (1) For the period beginning on July 1, 2017 and ending on April 30, 2018, the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998* shall, with respect to specified consumers who are not regulated rate consumers, be further adjusted by electricity vendors in accordance with the determinations of the Board under subsection (2).

Board to make determinations

(2) The Board shall, in accordance with the regulations, determine the adjustments to be made by electricity vendors.

Same, regulations

(3) The regulations may specify different adjustments to be made in respect of prescribed classes of specified consumers who are not regulated rate consumers.

Determinations by Board

6.3xx The Board shall make the determinations mentioned in sections 6.1xx and 6.2xx no later than fifteen business days after the day this section receives Royal Assent and, regardless of whether the Board makes the determinations before or after July 1, 2017, the determinations shall be effective as of July 1, 2017.

Implementation by electricity vendors

6.4xx (1) As soon as possible after the Board makes determinations under section 6.3xx, each electricity vendor shall, in respect of electricity used on or after July 1, 2017, ensure that its invoices reflect the determinations of the Board.

Same

(2) The electricity vendor shall ensure that, if any of its specified consumers have been invoiced in a manner that does not reflect the determinations of the Board under section 6.3xx, the specified consumer receives the difference between the amounts shown on the invoice and the amounts reflecting the Board's determinations, provided as a lump sum credit on the first invoice issued after the electricity vendor has adapted its invoices or by such other means as may be prescribed.

Confidential Draft

Subsequent adjustments

7xx. (1) Despite clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998* and subject to subsection (2), the Lieutenant Governor in Council may prescribe the methodology to be applied by the Board after April 30, 2018 for the purpose of determining,

(a) electricity rates for specified consumers; or

(b) adjustments to be applied by electricity vendors to the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998* in respect of prescribed classes of specified consumers.

Limitation

(2) Any prescribed methodology to be applied in respect of a period after June 30, 2021 shall have regard to the following:

1. The fair allocation amount in respect of the period.

2. Any clean energy adjustments payable in respect of the period.

3. Such other matters as may be prescribed.

Sub-metering

7.1xx (1) This section applies if a specified consumer provides to another person electricity in respect of which a determination of the Board referred to in section 6.3xx or section 7xx applies.

Same

(2) If an invoice for the electricity is issued to the person by the specified consumer or a unit sub-meter provider providing unit sub-metering for the specified consumer, the amount payable for the electricity by the person who is liable to pay the invoice shall be determined in accordance with the regulations.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

8xx. (1) Upon receipt of an invoice from an electricity vendor that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor, as agent of the investment interest owners.

Same

(2) For greater certainty, subsection (1) applies regardless of,

Confidential Draft

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was inconsistent with the Financing Plan, including in a manner that failed to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Terms

(3) The payment shall be made in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Unit sub-metering

(6) A specified consumer who provides electricity through sub-metering may collect amounts in respect of the clean energy adjustment payable under this section in accordance with the regulations.

Irrevocability of amount

9xx. (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or by passed.

Exception

(2) Subsection (1) does not apply to the extent that the invoice reflects a clerical, typographical or calculation-related error.

Confidential Draft

Determination of clean energy adjustment
Financial Services Manager to determine

10xx. (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by taking the following steps:

1. Calculate the sum of the following:

    i. The estimated finance amount in respect of the reference period.

    ii. The true up amount in respect of the reference period.

2. Divide the sum calculated under paragraph 1 by the number of months in the reference period.

Regulations re true up amount

(3) The Lieutenant Governor in Council shall, in making regulations with respect to the determination of the true up amount, have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.

2. The method for determining the true up amount should take into account historical and reasonably foreseeable,

    i. differences between the estimated and actual finance amount for the applicable reference period,

    ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and

    ii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(4) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment in respect of a reference period and such other information related to the determination of the clean energy adjustment as may be prescribed.

Confidential Draft

Board to determine rates

(5) Without changing the clean energy adjustment, the Board shall, in accordance with the regulations, determine the rate at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

11xx. (2) IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

Account

(3) All of the following amounts received by IESO shall, until paid to or for the benefit of the investment interest owners in accordance with subsection (5), be deposited promptly into an account established for the purposes of receiving those amounts:

1. Amounts described in subsection 11xx (2).

2. Payments made by specified consumers directly to IESO as electricity vendor under subsection 8xx (1).

3. Proceeds of amounts described in paragraphs 1 and 2.

Same, held in trust

(4) All amounts received by IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owners, be received and held in trust by IESO for the investment interest owners.

IESO to remit

(5) IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the accounts referred to in subsection (2), to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

12xx. (1) Each electricity vendor shall issue an invoice to each of its specified consumers for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 10xx (5) and in accordance with the regulations.

Electricity vendor to report

(1.1) Each electricity vendor shall, in accordance with the regulations, promptly report to IESO the total amount invoiced to its specified consumers in respect of the clean

Confidential Draft

energy adjustment, the amount collected and such other information as may be prescribed.

Electricity vendor to collect

(2) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

Held in trust

(4) Payments received by an electricity vendor from or on behalf of specified consumers in respect of the clean energy adjustment and all proceeds of the payments shall, until paid to or for the benefit of the investment interest owners in accordance with subsection (5), be received by and held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(5) Each electricity vendor shall remit amounts in respect of the clean energy adjustment to IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

13xx. Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Duties and powers

14xx. (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Confidential Draft

Same

(2) The administration of the investment asset may include providing information to IESO in respect of obligations under Part III and such other activities as may be prescribed.

Fees, etc.

(3) Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees in relation to such matters as may be prescribed in accordance with the regulations.

Same, Board approval

(4) Before establishing fees under subsection (3), the Financial Services Manager shall submit them to the Board for approval in accordance with the regulations.

FAIR ALLOCATION AMOUNT

Minister to calculate fair allocation amount

15xx. (1) Subject to subsections (2) and (3), before the first funding obligation is incurred, the Minister shall calculate a fair allocation amount in respect of each reference period, applying such method as the Minister considers appropriate and in accordance with the following steps:

1. Determine the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period.

2. Determine the estimated reduction in the amounts payable by specified consumers as a result of rates determined under Part II in respect of all previous reference periods, including the estimated reduction in clean energy costs described in clause (a) of the definition of "clean energy costs" in subsection 1 (1) that would otherwise have been payable by specified consumers in the absence of this Act.

3. Determine the amount, if any, by which the determination under paragraph 1 exceeds the determination under paragraph 2.

4. Calculate the sum of the amount determined under paragraph 3 and such other amounts as may be prescribed.

Principles

(2) In calculating the fair allocation amount, the Minister shall have regard to the following principles:

Confidential Draft

1. The purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among the specified consumers in respect of each reference period.

2. Calculations should be made having regard to the need to align each fair allocation amount with the estimated finance amount payable during the reference period.

3. Estimated clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the estimated clean energy benefits attributed to the specified consumers in respect of the reference period.

4. Such other principles as may be prescribed.

Assumptions

(3) In calculating the fair allocation amount, the Minister shall make such assumptions as the Minister considers to be reasonable regarding the following:

1. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.

2. The expected number of specified consumers in respect of each reference period.

3. The expected electricity consumption rates in respect of each reference period.

4. Such other assumptions as may be prescribed.

Minister to provide amount to Financial Services Manager

(4) The Minister shall provide the fair allocation amount in respect of each reference period to the Financial Services Manager.

Recalculation

(5) A calculation of the fair allocation amount under this Part may be changed by such person as may be prescribed in accordance with such requirements as may be prescribed.

Same

(6) No change under subsection (5) shall affect any clean energy adjustment that has already been determined under section 10xx or any funding obligations that have already been incurred before the change.

Confidential Draft

Information

(7) The Minister, IESO, the Financial Services Manager, the Board and electricity vendors shall provide such information as may be prescribed in accordance with the regulations for the purposes of facilitating a change to a calculation of the fair allocation amount.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

16xx. (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of a refinancing.

Plan to be provided to Minister

(1.1) The Financial Services Manager shall provide the Financing Plan to the Minister.

Principles

(2) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Funding obligations should be incurred such that, along with any funding obligations already incurred, the estimated finance amount that would, subject to any refinancing, become due and payable during a reference period will reasonably align with the fair allocation amount determined in respect of the reference period, in each case after reducing the fair allocation amount to reflect determinations of the Board under Part II in respect of the reference period.

2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.

3. Reasonable assumptions should be made regarding such matters as may be prescribed.

Limitation

(4) In respect of each reference period from May 1, 2017 to April 30, 2021, no funding obligation shall be incurred that would result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

Confidential Draft

(a) the amounts are payable in respect of a reference period in respect of which the Board has not made any determinations under Part II; or

(b) if the Board has made a determination under Part II in respect of the reference period, the funding obligations incurred would not result in amounts payable in respect of the clean energy adjustment during the reference period in an amount that exceeds the limit determined in accordance with the regulations.

Other reports

(3.1) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this section to the Financing Plan is deemed to be a reference to the plan as amended.

Implementation of Financing Plan

17xx. (1) The Financial Services Manager shall ensure that funding obligations incurred for the purposes of this Act are incurred in a manner that is consistent with the applicable Financing Plan.

Financing entities

(3) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3.1) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Confidential Draft

Same

(2) For greater certainty, subsection (4) applies despite the failure of the Financial Services Manager to comply with subsection (1).

PART V
THE REGULATORY ASSET

IESO deferral

20xx. (1) The IESO deferral for each month, commencing May 1, 2017, shall be determined by IESO in accordance with the regulations.

Same, retrospective amounts

(1.1) For greater certainty, the regulations may provide for the IESO deferral to include an amount that was incurred by IESO on or after May 1, 2017 and before the day this Act comes into force.

Electricity vendors to provide information

(2) Electricity vendors shall provide to IESO such information as IESO may reasonably request for the purposes of determining the IESO deferral under subsection (1) and such further information as may be prescribed.

Same

(3) IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

20.1xx (1) IESO shall establish and maintain a variance account for the purposes of this section.

Recording in variance account

(2) IESO shall record the following in the variance account:

1. The IESO deferral for each month.

2. All payments received by IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.

3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences on or after May 1, 2017 and before the day this section comes into force.

Confidential Draft

Recording determinative

(3) Subject to the correction of any obvious error by IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

Rights of investment interest owner

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights acquired by the investment interest owner under the transfer.

Regulatory asset established

21xx. (1) Effective May 1, 2017, IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Board to set rates

(2) Subject to subsection (3), the Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

Limitation

(3) IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

Same, limitations

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Transfer of regulatory asset

22xx. (1) IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

Agreement

(2) An agreement between IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to IESO in an amount equal to the amount of the specified portion.

Effect of payment

(3) Upon receipt by IESO of the payment by the financing entity,

Confidential Draft

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) IESO shall retain no further right, title or interest in the corresponding investment interest.

Validity of transfer

23xx. (1) A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

Same

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.

Deemed perfection, etc.

(3) At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Effect of transfer

24xx. (1) The transfer of a specified portion of the regulatory asset under section 22x creates an investment asset or, if it is not the first transfer, adds to the investment asset.

Confidential Draft

Same

(1.1) Upon transfer of a specified portion of the regulatory asset under section 22xx to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim.

Investment asset established

25xx. (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, IESO and other prescribed parties.

3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for the clean energy adjustment.

5. The right to enforce the duties and obligations under this Act of each electricity vendor and IESO to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by any electricity vendor to recover payment of the clean energy adjustment.

6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest, including any rights to receive funding rebates.

7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Confidential Draft

Not affected by failure to impose etc. clean energy adjustment

(1.1) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(2) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, IESO, an agent of the investment interest owners or an owner in the Province of a distribution system within the meaning of the *Electricity Act, 1998*;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(3) The rights of the investment interest owners to collect and enforce their rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(4) If one investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest owner collectively and in coordination with all other investment interest owners, and any agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owners as a collective in accordance with its terms.

Transfer of investment interest

26xx. An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

27xx. (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the transferee a valid property right and interest in, to and under the applicable investment interest acquired in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an

Confidential Draft

investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest, subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected as described in the *Personal Property Security Act*, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer, and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

28xx. (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the applicable investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may

Confidential Draft

subsequently attach to the property rights and interests in the investment interest subject to the security interest, subject to the written consent of the person to whom the security interest has been granted.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any account of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to IESO.

Definition

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act*.

PART VII
MISCELLANEOUS

Appointment of agent, invoicing or collection

29xx. If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Not Crown agent

30xx. For greater certainty, a person appointed under section 29xx is not an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Board's authority

30.1xx (1) Each electricity vendor, IESO and the Financial Services Manager shall maintain such accounts and provide such information to the Board as the Board may require for the purposes of carrying out its responsibilities under this Act, in the form and manner and within the time required by the Board.

No hearing required

(2) Despite anything to the contrary in the *Ontario Energy Board Act, 1998*, the Board may exercise any of its responsibilities under this Act without a hearing.

Confidential Draft

Sequestration

31xx. (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections and remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment, including defaults on any required remittance of amounts in respect of the clean energy adjustment, collections or remittances.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

32xx. The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to a transfer under this Act or the creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section 5XX shall be the laws of the Province.

Conflict

33xx. The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

34xx. Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required to be taken under the Financing Plan or in relation to the determination of the fair allocation amount.

Liability

35xx. (1) No action or other civil proceeding shall be commenced against any employee of the Province or Ontario Power Generation Inc. for any act done in good faith in the exercise or performance or the intended exercise or performance of a power or duty under this Act, the regulations under this Act or for any alleged neglect or default in the exercise or performance in good faith of such a power or duty.

Same

(2) Nothing in subsection (1) shall be read as limiting the effect of subsection 19 (1) of the *Electricity Act, 1998* or subsection 11 (1) of the *Ontario Energy Board Act, 1998*.

Confidential Draft

Same

(3) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act*, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.

References in marketing materials and offering documents

36xx. No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5xx unless the prescribed requirements, if any, are satisfied.

Regulations

38xx. (1) The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. [5]Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.

2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.

3. Prescribing types of payment obligations that constitute funding obligations.

4. Governing the determination of classes of specified consumers, which may include determination based on the manner in which rates are determined for different classes of specified consumers.

5. Governing the determination of the finance amount and the true-up amount and how those amounts are to be applied to the clean energy adjustment.

6. Governing the inclusion of information under this Act on or with invoices, which may include requiring notice to be provided by electricity vendors to specified consumers and other prescribed persons regarding the adjustments, including providing for different requirements in different circumstances and for different classes of specified consumers.

7. Governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on or with invoices issued to specified consumers, including the form that the information must take and the

[5] FLS - see s. 78 (1) of the Climate Change Mitigation and Low-carbon Economy Act, 2016 - paras. 1 and 2.

Confidential Draft

form of the invoices and the form of any notice to be provided to the specified consumer under this Act[6];

8. Governing the manner by which invoices or notices provided for under this Act are to be provided to specified consumers and other prescribed persons.

9. Governing the Financial Services Manager's power to establish and charge fees, including the ability to recover costs and expenditures and to earn a return.

9.1 Providing for a right of compensation for investment interest owners affected by a breach of section 25xx and the manner in which such a right may be enforced under this Act.

10. Prescribing the time within which any action required by this Act may be required to be done.

11. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

Limitation

(2) Despite subsection (1) or any other Act, no regulation under this Act shall have the effect of reducing, impairing, postponing or terminating the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or impairing or postponing the invoicing, collection, remittance or recovery of the clean energy adjustment.

PART VIII[7]
AMENDMENTS TO OTHER ACTS

ELECTRICITY ACT, 1998

200x. (1) Subsection 6 (1) of the *Electricity Act, 1998* would be amended by adding the following clauses:

(q.0.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

[6] FLS - see *OEBA s.79.17 and 88(1)(z.11) and (z.12)*

[7] FLS: These amendments are drawn from previous drafting contained in gov2016.146.e05 (which was drafted as amendments to the EA, 1998).

Confidential Draft

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*;

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and to engage in related settlement activities;

(iii) engaging in activities related to the transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(A) incurring liabilities in relation to the regulatory asset,

(B) transferring the regulatory asset under section 22x for consideration, and

(C) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

200.1xx (1) Subsection 25.33 (1) of the Act would be amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*;

(1.1) Subsection 25.33 (2) of the Act would be amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*;

(2) Subsection 25.33 (3) of the Act would be amended by adding the following paragraph:

4. A consumer who is a specified consumer within the meaning of the *Ontario Fair Hydro Plan Act, 2017* or such other consumer as may be prescribed.

(3) Clause 25.33 (4) (b) of the Act would be amended by adding "or as may be required by a regulation made under this Act or the *Ontario Fair Hydro Plan Act, 2017*" at the end.

Confidential Draft

(4) Subsection 25.33 (5) of the Act would be amended by adding "or under the *Ontario Fair Hydro Plan Act, 2017*" at the end

201x. Section 53.1 of the Act would be amended by adding the following subsections:

Same, *Ontario Fair Hydro Plan Act, 2017*

53.1 (1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, non-subsidiary

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is not a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of the financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of the financing entity.

Deemed assets, subsidiary

(1.4) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of that financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries; and,

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries shall not form part of the assets and liabilities of that financing entity.

Confidential Draft

Definition, financing entity

(1.5) For the purposes of this section, "financing entity" has the same meaning as in the *Fair Hydro Plan Act, 2017.*

AMENDMENTS TO ONTARIO ENERGY BOARD ACT, 1998

205x. Subsection 70 (2.1) of the Act would be amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017*.

205.1x Section 70 of the Act would be amended by adding the following subsection:

(2.3) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Fair Hydro Plan Act, 2017* and the regulations made under it.

206x. Section 78.1 of the Act would be amended by adding the following subsection:

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.

2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.

3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.

Confidential Draft

4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

207xx. Subsection 79.16 (3) of the Act would be repealed.

PART IX
COMMENCEMENT AND SHORT TITLE

Short Title - this proposal for legislation would, if approved by the Legislature, have a short title to be determined by Government.

Timing – this proposal for legislation would, if approved by the Legislature, come into force on a date to be established by Government.

The Special Committee of the Board of Directors
Ontario Power Generation Inc. (the "Company")
700 University Avenue
Toronto, ON M5G 1X6

May 5 2017

Dear Sirs/Madames:

This letter is being issued to the Special Committee to assist them in their evaluation of management's analysis of the application of International Financial Reporting Standards ("IFRS") as adopted by the International Accounting Standards Board ("IASB")) to the specific transaction described in the Company's memorandum entitled *OPG Accounting Considerations of Ontario Fair Hydro* dated May 2 2017, herein referred to as "the Management Memorandum". We are issuing this letter in our role as auditors of the Company for the year ending December 31, 2017. As the Province consolidates OPG on an IFRS basis, this letter pertains solely to management's IFRS analysis as contained in the Management Memorandum.

We have read the Management Memorandum and we agree with management's analysis therein, subject to all of the assumptions and limitations identified therein. Specifically, we concur that the existing in draft legislation, along with the yet undrafted Regulation and special purpose vehicle (TRUST) documents, and various other agreements assuming they include the required criteria that Management has identified as outstanding in its Appendix A, would be sufficient to support consolidation of the TRUST with OPG Inc.

Additionally, we specifically refer you to the section entitled "Conclusion" in the Management Memorandum, which indicates that their analysis is based on draft legislation as well as their assumptions regarding the terms and conditions of certain contractual arrangements and other documentary evidence that is not yet drafted. Therefore, the Management Memorandum will be required to be updated to reflect the final contents of the legislation and other relevant contractual arrangements and documentary evidence. We will review the updated Management Memorandum once it is available, and update you on our viewpoints once our review of such updated Management Memorandum is completed.

The scope of this letter and any views expressed herein are limited to the transactions, facts, circumstances and assumptions provided to us by management or the Company as described in the Management Memorandum. If such facts, circumstances or assumptions differ, our conclusions may change.

We have not performed an audit or a review of the Management Memorandum. Additionally, we have not performed an audit as of any date or for any period subsequent to December 31, 2016.

The ultimate responsibility for the proper accounting treatment under IFRS and US GAAP rests with the Company.

We have not been asked for, nor do we express, an opinion on the tax consequences of the transactions described herein.

The accounting for such transactions could be affected by actions of the International Accounting Standards Board, the IFRS Interpretations Committee, the Ontario Securities Commission, or other regulatory bodies. Any such actions occurring prior to the finalization of the 2017 IFRS consolidated financial information will be required to be analyzed by management, and such analysis will be reviewed by us in the context of the audit procedures we will perform on the consolidated IFRS financial information for the year ending December 31, 2017.

Our work does not include the provision of legal advice and we make no representations regarding questions of legal interpretation of any possible structure or strategy. We make no representation regarding the sufficiency of our work for any purpose.

This report is intended solely for the information and use of the Special Committee, Board of Directors and management. We understand that a copy of this letter may be provided to the Province of Ontario, the Independent Electricity System Operator, and/or the Ontario Energy Board. It is not intended to be, and should not be, used by anyone other than these specified parties.

This analysis, or portions thereof, should not be referred to or distributed to any other person or entity, other than those noted in the paragraph directly above. It is not to be referred to or quoted, in whole or in part, in any registration statement, prospectus, public filing, loan agreement, or other agreement or document.

Yours sincerely

OPG ACCOUNTING CONSIDERATIONS OF ONTARIO FAIR HYDRO PLAN

Purpose:

The purpose of this document is to summarize the preliminary views of Ontario Power Generation (OPG) on the ability for OPG to consolidate the Financing Entity Trust associated with the Ontario Fair Hydro Plan.

This memo is assessed against the Legislation proposal 'Ontario Fair Hydro Plan Act, 2017, if enacted V6' sent by Carolyn Calwell on May 1, 2017. Note that this assessment is preliminary pending the finalization of the Legislation, the Trust indentures, Regulations, financing structure and other detailed terms, and all related documentary evidence. This assessment will be updated once final documentation is available.

Background:

On March 2, 2017, the Province of Ontario (the Province) announced Ontario's Fair Hydro Plan (the Plan) aimed at reducing electricity bills by 25 percent on average for all residential consumers in the province. As part of the Plan, the Province has proposed financing a portion of the Global Adjustment costs over a longer time period for Regulated Price Plan eligible customers (e.g., residential, farm, small businesses).

On April 13th, the Province requested that OPG consider administering the financing associated with the Plan, because of OPG's participation in the market, regulatory knowledge and the potential ability to consolidate the related financing activities. To undertake this financing, OPG will establish a Financing Entity Trust (the Trust) to finance and administer the Global Adjustment costs through a mixture of external financing and an equity injection from the Ontario Financing Authority. It is expected that OPG will control the Trust for accounting purposes and that its financial position and results will be consolidated within OPG's consolidated financial statements.

Assumptions made to perform accounting analysis which are not yet addressed in Legislation – it is expected that these matters will be addressed in Regulations, Trust documents, and various other agreements:

- The Regulation must require interest, carrying and administrative costs to be paid to the Trust in cash on a monthly basis, so that the Trust is able to recognize appropriate revenue to offset any ongoing costs.
- The Regulations, Trust documents and various agreements will provide that OPG will have significant variability and exposure from the activities of the Trust relative to the rate of return that OPG would recognize from its role as the Financial Services Manager of the Trust. The performance fee will be meaningful and allow OPG to make decisions that will significantly impact its returns.
- The Minister of Energy will have the ability to replace the Financial Services Manger (OPG) if there is a failure to perform. There will be a bifurcation of roles where the Province could not remove OPG as manager/administrator with respect to the existing debt placed by the Trust, but could remove OPG's responsibility/right to prepare the Financing Plan going forward. The ability for the Minister of Energy to remove OPG as the Financial Services Manager should not impact the recoverability of existing intangible assets.

- The calculation of the Fair Allocation Amount will be performed by the Minister of Energy.
- OPG has the ability to appoint and remove the Trustee (or Board of Trustees) and there are no veto rights by the Province. No party has the ability to remove OPG from its role and authority in the Trust.
- Neither the OEB nor any other party can discretionally reduce the management fee or performance fee except due to a calculation error.
- The margin on the interest rates associated with Tranche B and Tranche C which will be recovered from the ratepayers will be reflective of the risk profile of the debt and the associated market terms.
- The indemnification provided to the Trust by the Minister of Finance on behalf of the Province as described in *Part I – General - Section 5.3 Guarantee, indemnification Protection and assurances* will be subject to terms and conditions in a separate Provincial support agreement. The guarantee is expected to be in place only in the event of a Payment Guarantee Event, such as if the Legislative Assembly of Ontario repeals the Fair Hydro Act or amends the Act in a way that adversely impacts the ability of the Trust to fully recover an intangible asset in order to pay the obligations of the Trust.
- The approval by the Ontario Energy Board of the Financial Services Manager (i.e. OPG's) fees as described in *Part IV – Implementation - Section 14.4 Same, Board Approval* will not allow them to change or limit the management fee structure, but only ensure that it is prudent by ensuring it is calculated in accordance with the Regulations.
- In the event that a different Financial Services Manager is appointed by the Minister of Energy, the IESO is required to continue to make cash payments for interest to the Trust for the existing debt. Principal repayments on existing debt will continue to be repaid by ratepayers to the Trust in accordance with the terms of the issued debt.
- All other items as indicated in *Appendix A.*

Accounting Analysis:

In order to meet the accounting definition of 'control', accounting guidance must be considered. There are no bright lines to determine whether OPG has exposure, or rights, to variable returns from its involvement with the Trust, or whether it has the ability to affect the returns of the Trust through its power over the Trust. Rather, all facts and circumstances are considered when assessing whether an entity has control over another entity.

In order to consolidate the Trust, OPG must be able to demonstrate that it controls the Trust.

Control

An investor controls an investee if and only if the investor has all the following:

a) *power over the investee;*
b) *exposure, or rights, to variable returns from its involvement with the investee; and*
c) *the ability to use its power over the investee to affect the amount of the investor's returns.* [IFRS 10, paragraph 7]

Purpose and design of the investee
When assessing control of an investee, an investor shall consider the purpose and design of the investee in order to identify the relevant activities, how decisions about the relevant activities are made, who has the current ability to direct those activities and who receives returns from those activities. [IFRS 10, paragraph B5]

Criteria	Analysis
Purpose and design of the Trust	The purpose of the Trust is to allow OPG to earn a return on the Intangible Asset from the IESO by effectively managing financing to earn a spread, earn management fees, and earn interest fees.

Purpose and design of the investee *When assessing control of an investee, an investor shall consider the purpose and design of the investee in order to identify the relevant activities, how decisions about the relevant activities are made, who has the current ability to direct those activities and who receives returns from those activities.* [IFRS 10, paragraph B5]	
Relevant activities of the Trust and how decisions are made about those activities	Relevant activities: The relevant activities of the Trust are: • To evaluate and make decisions on financing alternatives, duration, and the strategy to minimize financing costs. • To effectively manage funding obtained through the capital markets and be able to make or lose any spread from financing • To provide funding to the IESO in return for an interest in a future cash flow stream • To obtain funding through the capital markets and other vehicles available to OPG to be able to provide the IESO funding. • To make capital and funding decisions required to meet the Fair Allocation Plan objectives as set out in Legislation • To finance the requirements associated with the short-fall amount • To raise debt, pay bond debt holders, and determine capacity for the Trust to raise additional financing Financing Plan (Legislation: Part IV – Implementation) • OPG's plan for managing the assets of the Trust will be dictated through a 'Financing Plan'. • The Financial Services Manager (i.e. the Trust) shall provide the Financing Plan to the Minister. The Financing Plan is expected to follow Principles as stipulated in the Legislation which indicate that the assumptions must be reasonable and that the Trust has the power to determine what is reasonable and cost-effective. The Trust makes all the decisions in determining the relevant activities as listed above. • OPG can amend the Financing Plan at any time without the approval of the Minister. Fair Allocation Amount (Legislation: Part IV – Implementation) • The 'Fair Allocation Amount' ("FAA") is the amount of the deferral for the reference period and includes finance amounts. The current Legislation dictates that the Minister of Energy is to calculate the FAA. • This does not impact OPG's relevant activities in the Trust as OPG's variable returns are based on financing decisions which are not dictated by the FAA. OPG can choose to accept or reject the purchase of the intangible asset which is based on the Fair Allocation Amount.

Purpose and design of the investee *When assessing control of an investee, an investor shall consider the purpose and design of the investee in order to identify the relevant activities, how decisions about the relevant activities are made, who has the current ability to direct those activities and who receives returns from those activities.* [IFRS 10, paragraph B5]	
	<u>Decisions made and voting rights of the Trust:</u> OPG has the ability to appoint and remove the Trustee (and if applicable Board of Trustees) and there are no veto rights by the Province. No party has the ability to remove OPG from its role and authority in the Trust. **[NOT YET ADDRESSED IN CURRENT LEGISLATION]** *Voting of members:* Except as otherwise stated, all decisions of the members (if applicable) shall be made by the Trustee who will be appointed by OPG. <u>Termination Rights</u> OPG cannot be removed from its role in the Trust. The Province has the right to remove OPG as the 'Financial Services Manager' for failure to perform. This will not impact debt that has already been issued for which OPG is already managing through the Trust or the recoverability of existing intangible assets. It the right is exercised, it serves to reduce or eliminate the scope of new business activities of the Trust but it does not affect OPG's ability to control the Trust. Should a new Financial Services Manager be appointed, a separate assessment would be made as to which party if any would control it.
Assessment	The purpose of the Trust is to allow OPG to earn a return on the Intangible Asset from the IESO by effectively managing financing to earn a spread, earn management fees, and earn interest fees. For the reasons noted above, OPG has control over the decisions to be made about the relevant activities.

Power over the investee	
Criteria	**Analysis**
Identify whether OPG's rights give it the current ability to direct the relevant activities of the Trust (Substantive rights)	See above for relevant activities of the Trust.
Assessment	OPG has the ability to direct the relevant activities of the Trust. OPG can amend the Financing Plan at any time, without approval from the Minister. Further, if the Minister of Energy chooses not to continue with OPG's current Financing Plan, OPG can withdraw its Financing Plan, without impacting the existing debt and related intangible assets that is already in the Trust. The Province would just appoint a new party to participate in future securitizations and OPG would continue to manage the debt that already exists in the Trust. If future financing transactions are with a different SPV, a separate consolidation analysis would be prepared at that time as to which party if any would consolidate the SPV.

Exposure or rights to variable returns	
Criteria	**Analysis**
Dividends, other distributions of economic benefits from an investee and changes in the value of the investor's investment in that investee [IFRS 10, paragraph B57(a)]	OPG is expected to realize management fees from its activities with the Trust.
Remuneration for servicing an investee's assets or liabilities, fees and exposure to loss from providing credit or liquidity support, residual interests in the investee's assets and liabilities on liquidation of that investee, tax benefits, and access to future liquidity that an investor has from its involvement with an investee [IFRS 10, paragraph B57(b)]	**[NOT YET ADDRESSED IN CURRENT LEGISLATION]** OPG has exposure and rights to variable returns from the Trust in the form of the following: • The Regulations, Trust documents and various agreements will provide that OPG will have significant variability and exposure from the activities of the Trust relative to the rate of return that OPG would recognize from its role as the Financial Services Manager of the Trust. The performance fee will be meaningful and allow OPG to make decisions that will significantly impact its returns. • OPG, through ownership of the most subordinated debt, is exposed to risk of non-collection. Given that the program is expected to run until 2047, this 30 year time period results in uncertainty about the future collection of OPG's amount at risk. OPG and the OFA (5% out of 44% contribution) would be the last parties to get paid in the event that the program stops running due to a change in Government, if electricity demand is not high enough to allow for collection from ratepayers in a timely manner, etc. The end date of 2047 that is prescribed in the Legislation results in uncertainty toward whether this program will continue and whether OPG will have collected its amount at risk at that time. • In the event that there is a market disruption whereby OPG is not able to obtain debt from the financial markets (e.g. due to a recession), the Province will provide funding in the event that OPG wishes to continue purchasing intangible assets from the IESO. This is considered to be a protective right as it does not impact the relevant activities of the Trust, but is designed to protect both parties and does not give either party more or less power over the Trust. It is designed to allow OPG to keep purchasing intangible assets if it wishes to. • Protective rights are typically held to prohibit fundamental changes in the activities of an investee that the holder does not agree with and usually apply only in exceptional circumstances (i.e., upon a contingent event). This is true for this right as it is only applicable if there is a market disruption and the Trust is not able to obtain financing from external markets. Further, the fundamental activities of the Trust would change if it were not able to obtain financing from external markets.
Returns that are not available to	• OPG will have synergistic benefits from combining operating

Exposure or rights to variable returns	
other interest holders. For example, an investor might use its assets in combination with the assets of the investee, such as combining operating functions to achieve economies of scale, cost savings, sourcing scarce products, gaining access to proprietary knowledge or limiting some operations or assets, to enhance the value of the investor's other assets [IFRS 10, paragraph B57 (c)]	functions with the Trust given its extensive knowledge on the market and current regulatory knowledge.
Assessment	To determine which party is the most 'at risk' in the event that the loans default, expected loss rates were obtained from Moody's and DBRS. Using the *Moody's Investors Service – Loss Given Default for Speculative Grade Companies* dated December 4, 2015, the 4-year Idealized Expected Loss ranges from 0.00% for a triple A rated bond to 0.30% for an A3 rated bond. DBRS Expected Loss Ratings give an indication of the expected loss of a loan portfolio. As per a November 2016 publication, the 10-year expected loss rates range from 0.1% for a AAA rated bond to 1.7% for an A (low) rated bond. Given that OPG's subordinated debt is equal to 5% of the total debt, which is higher than the default rates above, 100% of the risk is with both OPG and the OFA since they are the last parties to get paid should there be any default with the debt. OPG is also exposed to variable returns from the Trust from its performance on decisions made on financing alternatives, duration, and the strategy to minimize financing costs through the variable fee component of the management fee. Therefore, OPG has the exposure to variable returns from the Trust.

Ability to use power to affect returns	
Criteria	**Analysis**
Ability of investor to use its power to affect the investor's returns from its involvement with the investee	OPG needs to have both power over the Trust (i.e. as a Principal, not an agent), exposure or rights to the variable returns from the Trust, and the ability to use its power to affect OPG's returns from its involvement with the Trust OPG has the ability to use its power over the relevant activities of the Trust to affect its returns from its involvement with the Trust through the variable fee component.

Ability to use power to affect returns	
	Further, the Trust's ability to use its power to affect returns is in a manner that is consistent with being a principal. See *Appendix B* for Principal-Agent analysis.
Assessment	OPG has the ability to use its power to affect returns of the Trust.

Conclusion:

Based on the current **[May 1, 2017]** draft of the legislation, the conditions to ensure the ability of OPG to consolidate the operations of the Trust have not fully been reflected. As noted in Appendix A, several conditions must be evident in the Regulations, Trust documents, and various other agreements which are not yet drafted and therefore not yet available for our review and assessment. In OPG's assessment, while no current clause of the Legislation would hamper the ability to effect a consolidation within OPG Inc.'s financial statements, there are several key conditions for consolidation that are currently not present within the Legislation. On the assumption that future Regulations, Trust documents and various other agreements fully capture these operating conditions, and that no new conditions that would conflict with OPG's control of the trust are introduced, OPG believes that consolidation of the Trust is supportable.

APPENDIX A:

Terms necessary for OPG to consolidate the Global Adjustment Trust

Note that these are assessed against the Legislation proposal 'Ontario Fair Hydro Plan Act, 2017, if enacted V6' sent by Carolyn Calwell on May 1, 2017. These are subject to change as subsequent drafts of the Legislation are issued.

Legend:

✓ **- Addressed by the Legislation drafted May 1, 2017**

RT – Not addressed by Legislation and must be addressed in Regulations, Trust Documentation or various other agreements

Ω - Will not be addressed in Legislation/Regulations or Trust but is the intended plan

Issue	No.	Requirements
Directive	1 ✓	The Trust must be undertaken by OPG as a business initiative on its merits. A Shareholder Directive is to be limited to direct OPG to investigate the option of establishing a Trust vehicle to administer, finance and operate the Global Adjustment plan and the operation of that Trust and the control, risk and rewards of that Trust will determine its consolidation into OPG as a business enterprise. ***MET - The Province will not direct OPG to participate in the Fair Hydro Plan. A letter was issued from the Minister of Energy to OPG on April 13th requesting OPG's involvement in the implementation of the Fair Hydro Plan. OPG's Board Chair responded to the Minister on April 18th committing OPG to work with the IESO and OEB to develop a plan. OPG will have the option to prepare, implement and amend a financing plan (in accordance with principles set out in legislation) and propose the adoption of such plan as the 'Financing Plan'. OPG will have the right to withdraw its financing plan at any time.***
Trust	2 **RT**	The Trust should not operate in a predetermined way such that OPG does not have decision-making authority over the Trust's ongoing activities after its formation (i.e. should not operate on 'autopilot'). ***OPG will be the sole unit holder of the Trust. All decisions over the relevant activities of the Trust (as described above) will be made by OPG.***
	3 **RT**	OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the Trust. ***OPG will be the sole unit holder of the Trust. The Province will be involved in the Board of Trustees, but OPG is expected to have the majority vote.***

<table>
<tr><th>Issue</th><th>No.</th><th>Requirements</th></tr>
<tr><td></td><td></td><td></td></tr>
<tr><td></td><td>4
RT</td><td>The Province cannot have the right to veto OPG's decisions about the relevant activities of the Trust. OPG must have the power over the relevant activities of the Trust and be compensated. The relevant activities of the Trust include (but are not limited to) the evaluation and decisions on financing alternatives, duration, and the strategy to minimize financing costs. OPG must have the power to establish operating and capital budgets of the Trust.

OPG will have the ability to make decisions about the financing alternatives, duration, and the strategy to minimize financing costs. OPG will have the power to establish operating and capital budgets of the Trust with no veto right by the Province.</td></tr>
<tr><td></td><td>5
RT</td><td>OPG must have the power to determine or change operating and financing policies of the Trust, which will affect the variability of risks and returns.

The Regulations, Trust documents and various agreements will provide that OPG will have significant variability and exposure from the activities of the Trust relative to the rate of return that OPG would recognize from its role as the Financial Services Manager of the Trust. The performance fee will be meaningful and allow OPG to make decisions that will significantly impact its returns.</td></tr>
<tr><td></td><td>6
Ω</td><td>The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
a. The Trust
b. The most subordinated debt of the Trust

See below for financing structure.

<table>
<tr><th></th><th>Risk Profile</th><th>Source</th><th>% of Total Fundin Requirement</th></tr>
<tr><td>Tranche A Senior Debt</td><td>the least risky</td><td>Capital Markets</td><td>51%</td></tr>
<tr><td>Tranche B Sub Debt</td><td>In between A&C</td><td>OPG via OEFC</td><td>39%</td></tr>
<tr><td>Tranche C Sub Debt</td><td>the most risky</td><td>OPG via OEFC</td><td>5%</td></tr>
<tr><td></td><td></td><td>OPG via Capital Markets</td><td>5%</td></tr>
</table>
</td></tr>
<tr><td></td><td>7
Ω</td><td>OPG must own at least 50% of the most subordinated debt and must be no less than 5% of the debt of the Trust. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources.

See chart in Point 6 above.</td></tr>
</table>

Issue	No.	Requirements
	8 **RT**	OPG must have the ability to earn variable returns by exercising its authority, which shall be accomplished as follows: a. The cash flow from the restructured asset shall include interest determined based on a relevant benchmark that is appropriate relative to the restructured asset, plus an appropriate margin consistent with the relevant market and other risks ***The cash flow from the restructured asset will include interest income that is equal to the interest expense (i.e. interest expense is passed back to the ratepayers). The Trust will also receive a margin as discussed in the 'Exposure or rights to variable returns' section above.***
	✓	b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the Trust to achieve a more favourable return compared to the benchmark for interest on the restructured asset ***OPG will determine the financing strategy through the proposal of its 'Financing Plan'. The 'Financing Plan' will only be required to follow general Parameters and Principles as set forth in the Legislation but funding decisions will be made entirely by OPG. The Trust will also receive a margin as discussed in the 'Exposure or rights to variable returns' section above.***
	Ω	c. The Trust shall establish classes of liabilities (senior, subordinated and the most subordinated). The classes would allow the Trust to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity. ***OPG's portion of the most subordinated debt will be limited to a reasonable level. If it is determined that OPG's portion is not at a reasonable level, OPG has the option to withdraw its Financing Plan.***
	RT	c. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the restructured asset, or any residual risk of restructured asset. The targeted return of the subordinated liability should be reflective of the underlying risks and compensate holders for active management that would be required.

Issue	No.	Requirements
		OPG will be able to capture the pricing difference between cost of financing and benchmark for interest through the performance fee which is described in point 5) above and the 'Exposure or rights to variable returns' section above.
	Ω	d. OPG should participate in the detailed design of the above and the Trust documentation to ensure that it has substantive power and variability, which will allow OPG's Board of Directors to evaluate the opportunity as a business initiative instead of through a shareholder directive. ***OPG will be involved in the Trust documentation.***
	RT	Defined Forced Majeure for emergency events (e.g. unlikely credit market event or disruption where it is not possible to borrow from the market at a reasonable rate), OFA may provide bridge financing beyond the designated percentage for a defined period. ***This will be structured through a separate indemnification agreement. This is not expected to impact consolidation of the Trust because this is seen as a protective right which is only in affect when a contingency arises and not as a result of the relevant activities of the Trust.***
Legislation	9 ✓	The Legislation must require interest, carrying and administrative costs to be paid to the Trust on a monthly basis, so that the Trust is able to recognize appropriate revenue to offset any ongoing costs. ***Under Part III – Clean Energy Adjustment – Section 8.3 Terms, of the Legislation, the expectation is that the Legislation will allow for interest payments to be paid to the Trust on a monthly basis in cash. The Trust will not accrue interest to the current intangible asset balances but this interest amount could form part of future intangible assets that are purchased from the IESO.***
	10 RT	The Legislation must dictate the manner in which the restructured asset would be determined, collected, and the period of collection, so that the determination of the restructured asset will not be subject to the Province's decisions on an ongoing basis, but determined based on a formula. Alternatively, the Legislation may allow for an adjustment to the pre-determined deferral formula based on specific parameters that would limit the adjustment to the restructured asset. Adjustments beyond the specific parameters would require approval by the Board of Trustee. **The Regulations are expected to dictate the 'Fair Allocation Plan' which will be based on high level Principles and Parameters of the Plan, including the attribution methodology. The Legislation or Regulation determines the following principles:** • **25% Reduction (June 1, 2017) where the average bill will**

Issue	No.	Requirements
		reduce by 25% including of HST and social programs noted above • **Inflation Period (November 2017 – April 2022) where bill increases are capped at inflation** • **Straight-line Increase Period (May 2022 – April 2027) where bills increased at a straight-line rate (i.e., 8% per year) which is set so that borrowing will not exceed the Trust's capacity.** • **Amortization Period (May 2027 – April 2047) where debt built up over the previous periods is repaid by ratepayers.** **OPG will determine the manner in which the intangible asset, once purchased from the IESO will be collected and the period of collection.** **The recoverability of the existing intangible assets cannot be impacted by the Province.** **Although the Province may determine the Principles and Parameters around the 'Fair Allocation Plan', it does not impact the activities of the Trust once OPG has purchased the intangible asset.**
	11 **RT**	The Legislation must be written to avoid legal or constitutional challenges and be irrevocable to reduce the cost of borrowing and with a specific formula which determines the deferral amount. **See above.**
	12 **RT**	The spirit of the above terms should be reflected in the Trust Indenture Agreement as well as Legislation, wherever possible. ***Trust Indenture and Regulations still outstanding.***

APPENDIX B:

Link between power and returns: principal-agency situations

The third criterion for having control is that the investor must have the ability to use its power over the investee to affect the amount of the investor's returns. When decision-making rights have been delegated or are being held for the benefit of others, it is necessary to assess whether the decision-maker is a principal or an agent to determine whether it has control. This is because if the decision-maker has been delegated rights that give it power, the decision-maker must assess whether those rights give it power for its own benefit, or merely power for the benefit of others. As an agent cannot have control over the investee, it does not consolidate the investee. A principal may have control over the investee, and if so, would consolidate the investee.

A decision maker shall consider the overall relationship between itself, the investee being managed and other parties involved with the investee, in particular all the factors below, in determining whether it is an agent:

a) the scope of its decision-making authority over the investee

   As discussed above, OPG has decision-making authority over the Trust and its relevant activities. The Province has no right to determine what sort of funding decisions OPG should make to fund the intangible assets that they will purchase and OPG can choose not to purchase future intangible asset purchases.
   Terms and Conditions to support this point: 1, 2, 3, 4, 5

b) the rights held by other parties (paragraphs B64–B67).

   There are no substantive removal rights held by the Province for debt that already exists in the Trust.

   Terms and Conditions to support this point: 3, 4, 5

c) the remuneration to which it is entitled in accordance with the remuneration agreement(s) (paragraphs B68–B70).

   See section on 'Exposure or rights to variable returns' above.

   Terms and Conditions to support this point: 6, 7, 8, 9

d) the decision maker's exposure to variability of returns from other interests that it holds in the investee (paragraphs B71 and B72).

   See section on 'Exposure or rights to variable returns' above.

   OPG will receive a 44% equity injection from the Province of Ontario, indirectly through the Ontario Financing Authority. Given that currently, the majority (currently 51%) of the Trust debt will be from External Markets and not the Province, it can be argued that OPG did not receive the majority of its interest in the investee as a contribution or loan from the Province. This shows that OPG is a principal, not a de-facto agent.

   Terms and Conditions to support this point: 6, 7, 8, 9

Conclusion: OPG is not an agent for the Province as the arrangement does not provide for the Province to directly absorb any variability associated with the structure. If the Province decides to intervene at a later date due to evolving market conditions, an assessment would be made at that future date.

Analysis on whether OPG is an agent for ratepayers

OPG is not an agent for the ratepayers because OPG has substantive exposure to risk of loss of its own funds. The ratepayers do not have any of their own funds in any of the subordinated tranches and further, no decision making authority is delegated to the ratepayers relating to the relevant activities of the Trust.

Analysis on whether OPG is an agent for the IESO

OPG is not an agent of the IESO because the IESO faces no continuing risk of loss after sale of the intangible asset to OPG.

Hi Tim,

Please find attached the final LRC submission. Also attached are the final legislation, compendium and variance memo.

This is Minister signed and hard copies will be delivered first thing on Monday morning.

Thanks,
Martin

Proposed Items for Review

1. New legislation titled the Ontario Fair Hydro Act, 2017

Approvals required prior to LRC

	Committee and date	Cabinet Date
Policy	Cabinet approval received March 1	
TB/MBC	TB/MBC approval received March 9	

Deputy Minister _____ Date _____

Minister _____ Date _____

s. 1 Proposal and Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), intended to lower bills on average by 25% for a typical residential consumer, starting in the summer of 2017. About half a million small businesses and farms are also expected to benefit.

- Any rate increases for residential consumers over four years would be held to the rate of inflation.

- These measures include the 8% rebate introduced in January and builds on previously announced initiatives to deliver broad-based rate relief on electricity bills.

- The OFHP also announced enhancements to a number of existing programs targeted at more vulnerable electricity consumers, including funding some or all of the costs of these programs from the tax base rather than the electricity ratebase.

- OFHP is part of a significant system restructuring that will address long-standing policy challenges and ensure greater fairness.

- To implement OFHP, the Ministry has prepared the Fair Hydro Act, 2017 in close collaboration with key ministries (i.e., Treasury Board, Finance, Attorney General, Cabinet Office), agencies (i.e., OEB, IESO, OPG) and third party financial advisors and local distribution companies (LDCs).
    - The proposed Fair Hydro Act, 2017 would be an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998 and Electricity Act, 1998.

- The proposed OFHP legislation, supporting regulations and amendments to existing legislation (e.g., Electricity Act and Ontario Energy Board Act) will, if passed, enable implementation of the following key components of the Plan:

    A. Refinancing the Global Adjustment (GA) – The proposed legislation outlines how costs would be fairly allocated among eligible consumers over time.

    B. Helping Vulnerable Electricity Consumers – The proposed legislation broadens the Rural or Remote Rate Protection Program (RRRP) by creating a new distribution rate protection component, expands the Ontario Electricity Support Program (OESP) and establishes a new On-Reserve First Nations Delivery Credit. The legislation also allows for these programs to be funded (partially for RRRP) through the tax-base.

A. GA Refinancing

- The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in clean energy initiatives are allocated fairly among present and future generations of consumers.

- Refinancing the Global Adjustment (GA) would be achieved through the proposed stand-alone legislation, regulations and amendments to existing legislation and regulations.

- Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

- The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the GA. These mechanisms are described below.

B. Social Programs

- The proposed Ontario Fair Hydro Plan would help vulnerable electricity consumers by enhancing electricity support programs and shifting program costs onto the tax-base:
    - Enable Rural or Remote Electricity Rate Protection (RRRP) costs to be funded through provincial revenues;
    - Enhance Rate Protection through creation of new tax-base funded Distribution Rate Protection (DRP);
    - Enable Ontario Electricity Support Program (OESP) costs to be moved to tax base;
    - Create a new First Nation On-Reserve Delivery Credit, funded through provincial revenues

s. 2 Approach and Intended Outcomes

A. GA Refinancing

- The Fair Hydro Act, 2017 attempts to balance several key factors including financeability, accounting requirements and legal considerations.

- Following an extensive consultation process with internal and external experts, the proposed legislation strikes a balance between these three factors by:
    - Supporting financeability through a number of features, including enabling a provincial guarantee and provisions intended to provide certainty to investors in order to reduce borrowing costs and attract a wide investor base;

  - Addressing the necessary accounting requirements through mechanisms to record funding, interest and the transfer of regulatory assets to avoid a fiscal impact to the province; and
  - Mitigating legal risk by developing a methodology that attempts to fairly aligns costs and benefits.

- The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of clean energy initiatives are allocated fairly among present and future generations of consumers.
  - Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

- The proposed legislation would outline:
  - Roles and responsibilities for the OEB, IESO, OPG and the Province;
  - A detailed Preamble, Purpose and Definitions;
  - Details with respect to cost allocation, rate reduction methodology, implementation and financing;
  - Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and
  - Amendments to other acts.

- The associated amendments to existing legislation and regulations include:
  - Electricity Act, 1998: amendments to provide OPG with the authority to establish a special purpose vehicle (SPV) for the investment asset and Ontario Energy Board Act, 1998: amendments to allow for OEB to set rates recognizing GA refinancing.

Preamble and Purpose

- The preamble of the proposed legislation establishes the rationale for the allocation of "clean energy costs" over time. That is, the development of a clean, modern and reliable electricity system has increased costs for ratepayers.

- The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of these investments are allocated fairly among present and future generations of consumers.
  - Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

- The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the Global Adjustment. Note: These mechanisms are described below.

- The legislation also restricts the OEB, Minister of Energy and the Crown from reducing, impairing or ending Clean Energy Adjustments in the future:
  - The Lieutenant Governor in Council may authorize the Ministers of Finance and Energy to enter into guarantees and indemnities related to the Act.

- The proposed legislation aligns eligibility with the Ontario Rebate for Electricity Consumers Act, 2016.

Fair Adjustment

- Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for a typical residential consumer, and to achieve comparable bill reductions for other eligible consumers, for the period July 1, 2017 to April 30, 2018.
    - Under the legislation, the OEB must determine the amount within 15 business days of the legislation receiving Royal Assent.

- The Fair Adjustment also allows the LGIC to make regulations prescribing electricity rates after April 30, 2018.

Clean Energy Adjustment

- The Clean Energy Adjustment is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period.

- The proposed Act outlines:
    - The process for determining the total Clean Energy Adjustment amount;
    - The obligation on individual ratepayers for the repayment of the amount; and
    - The inability to offset or bypass re-collection of the amount.

Fair Allocation Amount

- The Fair Allocation Amount is a calculation and allocation of clean energy costs and clean energy benefits over time.
    - The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager. Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
    - It is expected that the calculation would lead to decreased rates in the near term with upward pressure on rates in the long term.

- Under the legislation the calculation of the Fair Allocation Amount is guided by the principles and purposes of the Act including the proportional allocation of clean energy costs and benefits.

Financial Services Manager

- The legislation appoints OPG as the Financial Services Manager.

Financing Plan

- The Fair Allocation Amount is a calculation and allocation of clean energy costs and clean energy benefits over time.

  - The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager. Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
  - It is expected that the calculation would lead to decreased rates in the near term with upward pressure on rates in the long term.

- Under the legislation the calculation of the Fair Allocation Amount is guided by the principles and purposes of the Act including the proportional allocation of clean energy costs and benefits.

Regulatory Asset

- IESO will have a funding deferral resulting from the reduction in amounts collected during the first four years.

- The legislation enables IESO to record the under-collection of GA in a variance account, and deems the rights associated with this under-collected amount to be a Regulatory Asset.
  - OEB would determine rates to allow IESO to recover under-collection recorded in its variance account in the event the Regulatory Asset is not sold.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust.

Investment Asset

- The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

  - The legislation establishes property rights for the Investment Asset such as the right to collect principal and interest and financing costs in the form of the clean energy adjustment from eligible consumers.

- The Investment Asset may in turn be sold to other investors or group of investors.

- Through the legislation, the Board, Minister and Crown undertake not to hinder the charging and remittance or collection of clean energy adjustments.
  - The Province, through the Minister of Finance and the Minister of Energy may agree to guarantee performance, any debts and obligations and backstop its undertaking.

Amendments to Other Acts

- The legislation stipulates required amendments to existing legislation such as:
  - The Electricity Act, 1998 – to expand the objects of IESO and OPG to enable them to perform their rights and obligations in the proposed Act

- The Ontario Energy Board Act, 1998 – to address license conditions and the determination of regulated payments.

B. Social Programs

- The proposed legislation provides the authority to implement two new rate mitigation programs and expands upon two existing programs.

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- The proposed legislation is intended to provide rate relief and assistance for:

    - **High Distribution Cost Customers**: Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
    - **Low-Income Customers**: Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
    - **First Nation On-Reserve Customers**: On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

Proposed Changes to the Ontario Energy Board Act, 1998 ("OEBA" or "Act")

- The Ontario Energy Board Act, 1998 would be amended to facilitate the roll out, expansion or change in funding of the following programs.

i. Rural or Remote Rate Protection (RRRP)

- RRRP is an existing program currently funded by ratepayers through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 330,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province. For R2 customers the enhanced RRRP, or Distribution Rate Protection (DRP), is provided in addition to the RRRP the customers are already eligible for under the existing RRRP.

- Section 79 would be amended to provide the government the ability to fund a portion of the Rural or Remote Rate Protection Program through the tax base by prescribing certain classes of consumers who will be funded through a legislative appropriation.

- This includes the ability to pass regulations respecting the making of rules for the compensation of distributors with the money appropriated flowing from the legislature through the IESO to the various LDCs who would then provide the rate relief directly on consumers' bills.
- Should the legislation pass, Energy proposes to amend O. Reg 442/04 to enable provincial funding to compensate Hydro One for provision of RRRP to its R2 customers.

ii. Expanded RRRP - Distribution Rate Protection

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs. This relief would be financed from the tax base.
- Mitigation would be provided by harmonizing distribution rates for prescribed LDCs, as set by the Ontario Energy Board. The mechanism for determining this rate would be set out in regulation.

- The new section 79.3 of the Act would enable Distribution Rate Protection, which satisfies the commitment to expand RRRP.
  - The section includes the power to pass regulations prescribing LDCs, the classes of consumers or consumers designated as distribution rate protected consumers, the maximum amount of the monthly base distribution charge, limitation periods, and the type of information required by the Board and Ministry to implement and administer the program, including financial transactions.

iii. Ontario Electricity Support Program (OESP)

- Section 79.2 would be repealed and replaced in order to provide the government with the ability to shift funding for the OESP (once existing rate-based pooled funding has been depleted) from the rate base to the tax base, and the ability to share information with MCSS to coordinate OESP and social assistance programs. The Ministry has already completed a regulatory amendment that, effective May 1, 2017:
  - Increases the existing OESP credit scales by an additional 50%; and
  - Expands the categories of OESP credits.
  - Provides for OESP to be funded from the tax-base once the IESO's OESP variance account has been depleted.

- The legislative amendments would provide authority to make regulations to replace existing O. Reg. 314/15 to implement these changes.

- The total fiscal impacts to the province from the newly enhanced OESP will amount to: $140 million in 2017-18, $261 million in 2018-19, $325 million in 2019-20 and $375 million in 2020-21.

- Schedule 2 amends the OESP provisions by prescribing the ability to fund the program from the tax base.
    - The section also provides that the Ontario Energy Board or any other entity prescribed in legislation would be responsible for administering the program.
    - In addition, the licenses of LDCs, the IESO, unit-sub meter providers or electricity retailers are deemed to include anything which is necessary to administer and implement the program as may be set out in regulations or by the Board.
    - The section also requires that the Ontario Energy Board continue funding the program using the amounts previously accumulated in the IESO's OESP variance account which is the difference between funds collected through the regulatory charge and expended on OESP to date, until these amounts are depleted and the program shifts to the tax-base.
    - The section provides for broad regulation making power and includes the provision for the creation of different classes of rate assisted consumers and establishing rules for the calculation of the rate assistance to be provided.
    - New provisions also provide the necessary authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers in the future to support increased participation in the OESP program among social assistance clients.

- Note: the intended approach involves proclaiming s.79.2 into force on a future date to be named by proclamation. This would allow time for the funds accumulated in the IESO's OESP variance account to be more fully expended prior to the repeal and replacement of s.79.2.
    - However, the MCSS data sharing provisions, along with ss. Amendments to s. 79.2.1, the new sections 79.3 and 79.4, would come into force upon Royal Assent.
    - The OESP charge has been removed from electricity bills, however a surplus account has been accumulated which the OEB will continue to use until depleted.

iv. First Nations On-Reserve Delivery Credit

- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".

- The program is premised around the findings in the OEB report on a First Nations Delivery Rate Assistance. The proposed program features include:
    - Eliminating the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, from the bills of prescribed on-reserve customers. Regulations would then prescribe those on reserve consumers which are eligible for the on reserve credit.

  - Continue to provide eligibility to OESP while not disturbing eligibility for the Low Income Energy Assistance Program (LEAP) currently funded by distributors outside of these amendments to the OEBA; and
  - The program would be carried out by the 11 affected LDCs serving on-reserve consumers identified by the OEB in its report, including; Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution.

- The program is anticipated to have a fiscal impact on Government of $20 million, as estimated by the Ontario Energy Board, to implement.

- The new section 79.4 of the Act would establish the First Nation On-Reserve Delivery Credit. The section provides that for all prescribed consumers, living on-reserve, the entirety of their delivery line items will be removed from their bill as a delivery credit.
  - The program would be entirely funded through the tax base.
  - The section includes the power to make regulations prescribing further program details such as eligibility and funding parameters.

v. Ministry of Finance Accountability Provisions

- The social programs all involve the expenditure of tax money to fund the partial or entire program costs. As a result, the Ministry of Finance and Treasury Board Secretariat require that such money be tracked and accounted for throughout the process.

- Therefore, the OEBA has been amended to include new provisions between ss. 79.5 to 79.11 as follows
  - Section 79.5 – imposes information sharing and auditing requirements for the Ministry of Finance.
  - Section 79.6 – Defines the Finance Minister as the Minister responsible for ss. 79.7 to 79.11.
  - Section 79.7 – mandates record keeping, retention and content requirements.
  - Section 79.8 – enables the Minister of Finance to appoint inspectors who may carry out inquiries
  - Section 79.9 – sets out the regime for the recovery of overpayments
  - Section 79.10 – imposes confidentiality requirements on Ministry staff for the collection of information
  - Section 79.11 – creates offences for false or deceptive statements, fraud and the unlawful destruction of records.

s. 3 **Direction and Urgency**

A. GA Refinancing

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which will lower bills for residential consumers as well as most small businesses and farms. The initiative was announced as starting in the summer of 2017.

- The legislation for GA refinancing requires the OEB to make further rate adjustments no later than fifteen business days after the legislation receives Royal Assent for Regulated Price Plan (RPP) consumers to achieve the full 25% for a typical residential consumer, and for other eligible consumers to also receive a comparable bill reduction.

- The full reduction from the OFHP is expected to be addressed through a July 1st RPP rate adjustment.

B. Social Programs

- The direction for the creation and implementation of the social programs is found in a variety of sources including the Cabinet Minute, throne speech given on the government's efforts to mitigate the high price of electricity in Ontario, and public commitments made by the Minister and other key government spokespeople.

- The program has been announced to commence as of July 1, 2017. This includes both local announcements and organized speeches and press conferences.

s. 4 Impact Assessment and Costs

A. GA Refinancing

- The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.
    - o The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recovered.
    - o The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year.

- It is still possible that the full value of the Regulatory Asset may not be purchased.

- In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

- In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line.
    - The Ministry of Energy has received an appropriation for $1.1 billion operating asset to support these injections for the fiscal year 2017/18, and will report back through PRRT for future funding. Based on the final fair allocation amount calculation, the equity injections would be required until the period of recovery begins.
    - The injections will be fiscally neutral for the province as they will be offset with the value of shares purchased from OPG.

- OPG will seek to achieve the highest possible credit rating (AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV/Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

B. Social Programs

i. Social Programs

Government Impact

- As approved in the TB/MBC submission of Mach 1st, 2017 and confirmed in Vote-Item 2905-1, the financial impacts on Government of the social programs for the period July 1 2017- March 31 2018 are anticipated to be as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection	344,000,000
Ontario Electricity Support Program	140,000,000
On-Reserve First Nations Delivery Credit	15,000,000

- ENERGY will report back to TB/MBC in fall 2017-18 with an update on out-year projections following analysis on rate applications before the Ontario Energy Board.

Stakeholder Impact

The Schedule 2 social programs will impact Local Distribution Companies and their consumers.

- For example, the Distribution Rate Protection program would involve 8 LDCs, the First Nations On-Reserve Delivery Credit will involve 11 LDCs and the only impacted LDC from the changes to the legacy RRRP program is Hydro One Networks Inc. (the R2 rate class).
- There may be modest impacts on unit sub-meter providers and retailers, due to the requirement to flow financial assistance through to consumers served such entities.

- The compliance costs for LDCs will involve the expenditure of money to alter their billing systems in order to carry out the program. This includes costs to alter the bill presentment and to include a new line on the bill that highlights the First Nations On-Reserve Delivery Credit.

Agency Impact

- The Ontario Energy Board would have a role in continuing to administer the OESP and in setting the harmonized monthly base distribution charge for the purposes of the Distribution Rate Protection Program.

- The Independent Electricity System Operator would be responsible for for flowing the funds used to reimburse/compensate LDCs for the costs of delivering the social programs from the money appropriated for such purposes from the legislature. This requires the IESO to monitor program specific variance accounts and flow the amounts necessary to compensate LDCs for the costs incurred in carrying out the programs.

- The proposal advances the government's overarching goal of reducing the cost of electricity paid by residential customers, especially those facing the highest costs of delivery.

s. 5 Implementation

A. GA Refinancing

- On April 20, 2017, the Ontario Energy Board (OEB) announced new Regulated Price Plan (RPP) rates effective May 1 that include a portion of the bill reduction proposed under the OFHP.

- These new RPP rates will include 50% of the estimated reduction in GA. This reduction in RPP rates, along with the removal of the OESP charge and the existing 8% rebate, will mean that May bills will be 17% lower than they would otherwise have been for an average consumer (15% lower for the typical Toronto Hydro consumer).

- The legislation for GA refinancing requires the OEB to make further rate adjustments no later than fifteen business days after the legislation receives Royal Assent for

RPP consumers to achieve the full 25% for a typical consumer and for other eligible consumers to receive a comparable bill reduction.

- The full reduction from the OFHP is expected to be addressed through a July 1st RPP rate adjustment.

- Regulations will be required to supplement the framework of the legislation to ensure that the OEB can make the required rate adjustments and to enable the financing contemplated by OPG SPV/Trust.

- The regulations are anticipated to be brought forward in mid and late June.

B. Social Programs

- The social programs would be implemented through subsequent regulations to follow that will expand upon the legislative framework to provide actual program specifications.

- The regulations are anticipated to be brought forward by late June, to allow for a July 1st program implementation.

- The efforts required to implement the programs would primarily fall upon the impacted LDCs who would need to adjust their billing systems in order to carry out the program.
    - For the OESP, the legislation contains transitional retroactive application of the provisions to offset any potential lapses in implementation.
    - The transitional retroactivity powers mitigate the risk of LDCs being unable to actualize the necessary OESP-related changes to their billings systems in time for the July 1st roll out and provides the utilities an extra prescribed time period (anticipated to be in the range of three months) to sort out any billing system alterations.
    - For the high-cost distribution rate protection and the on-reserve credit, there are more limited transitional provisions provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided.

C. Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a “low” risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the “short” term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in

order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
    - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
    - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
    - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
    - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

- The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

- The bill provides for provincial assurances, guarantees and a statutory cause of action.

- **The provincial assurance provision** is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

- The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

- In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the

Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

- **The guarantee provisions** are intended to backstop the provincial assurance provision and provide that:
    - the Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
    - the Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted.

A statutory cause of action may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

s. 6 Delivery and Results Tracking

A. GA Refinancing

- The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager (OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister. Such update calculations will be required given uncertainty related to electricity demand, interest rates and actual GA costs.

- The legislation establishes a framework for processes once the ratepayer relief is set. There is limited control once the plan is set, which could represent challenges for electricity planning and rate mitigation in future Long-Term Energy Plans.

- Under the legislation, OPG, as the Financial Services Manager, must prepare a Financing Plan and submit it to the Minister.
    - The Financing Plan sets out the funding obligations and amounts related to the financing of the under-collected GA amounts.

B. Social Programs

- As the social programs are funded through the tax-base, and in keeping with normal practice, Treasury Board Secretariat and the Ministry of Finance require that provisions be included that track the flow of tax money and hold all parties accountable for the proper allocation of tax money (proposed new OEBA s. 79.5-79.11).

- The actual implementation of the programs would be required to be shown on the bill (timelines will be in stated in the regulations). This timeline is in accordance with the feedback provided to the Ministry and the Board by affected LDCs.

s.7 Stakeholder Consultations

A. GA Refinancing

- In the development of the proposed legislation, the Ministry of Energy has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors (lawyers and accountants) and third party financiers (i.e., investment dealers).

- In addition, the Ministry hosted LDC workshop sessions on March 16 and April 19, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation.

B. Social Programs

- The Ministry has consulted with Energy agencies such as the Ontario Energy Board and the Independent Electricity System Operator on their respective roles and responsibilities.

- The Chief of Ontario (COO) have publicly supported the introduction of the First Nations Delivery Credit. ENERGY met with COO on April 26, 2017 to discuss implementation.

- The Ministry held working groups with all affected LDCs:
    - The Ministry received several quantitative data submissions from LDCs to help support the program and to buttress the implementation issues flagged by the utilities.
    - The consultations occurred in person and over teleconference.

- The consultations respecting the RRRP, the DRP and the On-Reserve First Nations Delivery Credit revealed concerns from LDCs over the costs of implementation and the timelines and obstacles to implementing the billing system changes.
- The feedback from the OEB helped to shape the estimates for the program costs of the proposed On-Reserve First Nations Delivery Credit as well as implementation timelines for the aforementioned program.

- Other key Ministries such as the Ministry of Finance and Treasury Board Secretariat were consulted as their will be a role for them to play in overseeing the implementation of the program funding.

s.8 Other Jurisdictions and Harmonization

A. GA Refinancing

- The program would not impact upon any other jurisdiction.
- GA refinancing does not harmonize Ontario rules with other jurisdictions and are not comparable to other Canadian jurisdictions.

B. Social Programs

- The program would not impact upon any other jurisdiction.
- The social programs do not harmonize Ontario rules with other jurisdictions and are not comparable to other Canadian jurisdictions.

s. 9 Communications

A. GA Refinancing

- The communications for GA refinancing will be referenced in ongoing announcements related to OFHP broadly, and as necessary targeted communications for specific stakeholder group can be developed.
- Energy has prepared a Communications Snapshot which summarizes the approach to communications.

B. Social Programs

- Energy has prepared a Communications Snapshot which summarizes the approach to communications.
- In respect of the First Nations On-Reserve Delivery Credit, the LDCs will work in collaboration with the Chiefs of Ontario and the Ministry to promote and advertise the availability of the credit to all eligible on-reserve customers.

Fair Hydro Act, 2017

EXPLANATORY NOTE

The Bill enacts a new Act and makes amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998*.

SCHEDULE 1
ONTARIO FAIR HYDRO PLAN ACT, 2017

The Schedule enacts the *Ontario Fair Hydro Plan Act, 2017*. The Act establishes a framework under which the costs and benefits associated with the "clean energy initiative" are to be allocated among present and future consumers of electricity. The "clean energy initiative" is defined in Part I as consisting of the policies of the Government of Ontario related to such matters as eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies.

Under Part II, the Ontario Energy Board is required to determine reduced electricity rates and to determine other adjustments to be made for certain classes of consumers in respect of specified periods of time. For example, for the class of consumers referred to as "regulated rate consumers", the electricity rates payable for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would achieve a 25 per cent reduction in certain costs for a hypothetical member of the class who meets prescribed criteria. Details regarding the determinations are prescribed by regulations.

Part III requires certain electricity consumers to pay an amount in respect of the "clean energy adjustment". The clean energy adjustment is determined by the Financial Services Manager in accordance with rules set out in the Act and the regulations. (Section 18 of the Act appoints Ontario Power Generation Inc. as the Financial Services Manager.) Part III also specifies the roles and responsibilities of electricity vendors and the Independent Electricity System Operator ("IESO") with respect to the collection and remittance of amounts in respect of the clean energy adjustment.

Part IV requires the Minister of Energy to calculate a "fair allocation amount" by taking specified steps in accordance with principles and assumptions set out in the Act. For example, the Act provides that the purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among certain consumers. Part IV also requires the Financial Services Manager to prepare a written

plan entitled the “Financing Plan”, which is to be used to evaluate whether potential funding obligations should be incurred. Principles and limitations regarding the preparation and implementation of the plan are provided.

Part V requires the IESO to determine the “IESO deferral” in accordance with the regulations and to establish and maintain a variance account in which it records the IESO deferral each month. A “regulatory asset” is created under section 25; the IESO has the right to recover the balance recorded in the variance account from certain consumers. The IESO is authorized to transfer a specified portion of the regulatory asset to a financing entity; this transfer results in the creation of the investment asset and the acquisition by the transferee of a corresponding “investment interest”. Various rules respecting the validity and priority of such a transfer are set out.

In Part VI, rules in respect of the “investment asset” are provided. Section 29 provides that the investment asset constitutes a current and irrevocable property right and interest, consisting collectively of various specified rights and interests of investment interest owners. Rules respecting the validity and priority of such a transfer and the granting of a security interest by an investment interest owner are included.

Part VII deals with various miscellaneous matters, including regulation-making authority of the Lieutenant Governor in Council.

The *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* are amended to address various matters relating to the enactment of the new Act. For example, the objects of the IESO and Ontario Power Generation Inc. are expanded to address powers and duties under the new Act.

SCHEDULE 2
AMENDMENTS TO THE ONTARIO ENERGY BOARD ACT, 1998

The *Ontario Energy Board Act, 1998* is amended. Among the amendments:

1. Section 79 of the Act is amended so that compensation for the rate protection provided to certain classes of rural or remote consumers may be funded out of money appropriated by the Legislature, rather than by consumers.

2. Section 79.2 of the Act, which governs the Ontario Electricity Support Program, is repealed and replaced. The program is continued, but will be funded out of money appropriated by the Legislature after the variance account maintained by the Independent Electricity System Operator, formerly established under the Plan, is exhausted, rather than by consumers. There are provisions relating to the sharing, use and disclosure of information relating to the administration of the Ontario Electricity Support Program.

3. Programs are established to aid certain distribution rate-protected residential consumers and on-reserve consumers.

4. Various amendments of a technical and administrative nature are made to support the implementation and oversight of these programs including provisions related to auditing, record-keeping, inspections and inquiries, offences and penalties.

Bill **2018**

An Act to enact the Ontario Fair Hydro Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

Contents of this Act

1. This Act consists of this section, sections 2 and 3 and the Schedules to this Act.

Commencement

2. (1) Subject to subsections (2) and (3), this Act comes into force on the day it receives Royal Assent.

Schedules

(2) The Schedules to this Act come into force as provided in each Schedule.

Different dates for same Schedule

(3) If a Schedule to this Act provides that any of its provisions are to come into force on a day to be named by proclamation of the Lieutenant Governor, a proclamation may apply to one or more of those provisions, and proclamations may be issued at different times with respect to any of those provisions.

Short title

3. The short title of this Act is the *Fair Hydro Act, 2017*.

PART IX
COMMENCEMENT AND SHORT TITLE

44. Commencement
45. Short title

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects. These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to residential consumers. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of those consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that residential consumers in the future pay their fair share for the benefits that they receive from the investments already made.

PART I
GENERAL

Interpretation

Definitions

1. (1) In this Act,

"Board" means the Ontario Energy Board; ("Commission")

"clean energy adjustment" means the amount determined under section 15 and payable by specified consumers; ("ajustement pour l'énergie propre")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("avantages de l'énergie propre")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the amounts to be paid or reflected by the IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts or amounts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by the IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed,

(b) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(c) such other costs or estimated costs as may be prescribed; ("coûts de l'énergie propre")

"clean energy initiative" means the policies of the Government of Ontario related to,

(a) eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,

(c) promoting conservation, demand management and energy efficiency, and

(d) investing in energy infrastructure to ensure a clean, modern and reliable system; (“initiative pour l’énergie propre”)

“electricity vendor” means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) the IESO in circumstances where it directly invoices a specified consumer for electricity used in Ontario, or

(d) such other person as may be prescribed; (“vendeur d’électricité”)

“fair allocation amount” means an amount calculated under section 20; (“French”)

“finance amount” means the finance amount determined in accordance with the regulations; (“French”)

“Financial Services Manager” means the Financial Services Manager appointed under section 18; (“gestionnaire des services financiers”)

“financing entity” means an entity established or caused to be established by the Financial Services Manager as described in subsection 22 (2); (“entité de financement”)

“Financing Plan” means the plan prepared under section 21; (“plan de financement”)

“funding obligation” means a payment obligation incurred by or on behalf of an investment interest owner to fund its ownership of an investment interest or a payment obligation that meets such other criteria as may be prescribed; (“obligation financière”)

“funding rebate” means a payment obligation incurred by the IESO as part of the transfer of the regulatory asset; (“French”)

“IESO” means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; (“SIERE”)

“IESO deferral” means the amount determined under section 23; (“French”)

"investment asset" means the rights and interests described in section 29; ("actif d'investissement")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("participation d'investissement")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("propriétaire de l'actif d'investissement")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system within the meaning of that Act; ("distributeur titulaire d'un permis")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("détaillant titulaire d'un permis")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

(a) the period beginning on July 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on either April 30, 2047 or such later day as may be prescribed,

(i) every six-month period following the period mentioned in clause (a); or

(ii) any period shorter than six months, as may be prescribed; ("période de référence")

"refinancing" means, subject to the regulations, the incurrence of debt in connection with a redemption, repayment or repurchase of a funding obligation; ("refinancement")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right established under section 25; ("actif réglementaire")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2), or

(b) such other person as may be prescribed; ("consommateur déterminé")

"transfer" includes, when used in relation to an investment interest, the assignment, conveyance, disposition or sale of the investment interest; ("transfert")

"true up amount" means a true up amount determined in accordance with the regulations; ("French")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010;* ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010;* ("fournisseur de compteurs divisionnaires d'unité")

"variance account" means the variance account established by the IESO under subsection 24 (1). ("French")

Specified consumer

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of not more than 50 kilowatts, or such other amount as may be prescribed.

2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.

3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or has had the

obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.

4. The person's account with the electricity vendor relates to,

    i. a dwelling,

    ii. a property within the meaning of the *Condominium Act, 1998*,

    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.

5. The person satisfies such criteria as may be prescribed.

Transfer of regulatory asset

(3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 26 (3):

1. A reduction in the balance in the variance account.

2. The adjustment of the regulatory asset.

3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Effect of invalidity

2. (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purposes

3. The purposes of this Act are,

(a) to ensure that clean energy costs and clean energy benefits are fairly allocated among present and future specified consumers;

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province; and

(c) to align clean energy costs with clean energy benefits, in order to provide fairness for specified consumers over time.

Crown bound

4. This Act binds the Crown.

Protection and assurances

Prohibition

5. (1) No action or omission by the Board, the Minister or the Crown shall be effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or to impair or postpone the invoicing, collection or remittance of the clean energy adjustment.

Agreements

(2) The Minister and the Minister of Finance may together, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of the IESO or electricity vendors under this Act or related transactions.

Guarantee, indemnification

(3) The Lieutenant Governor in Council may by order,

(a) authorize the Minister and the Minister of Finance, acting together on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions of the guarantee or indemnity and the maximum liability for the guarantee or indemnity;

(b) specify terms and conditions that must be included in any guarantee or indemnity given by the Minister and the Minister of Finance; and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT

Definitions

6. In this Part,

"regulated rate consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998 for the purposes of subsection 79.16 (1) of that Act.*

2. The consumer would, if the consumer were not subject to this Act, be invoiced the rates determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*. ("French")

Regulated rate consumers, first adjustments

7. (1) Despite any order under subsection 78 (3.1) of the *Ontario Energy Board Act, 1998 and despite section 79.16 of that Act, t*he electricity rates payable by regulated rate consumers for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would result in a hypothetical regulated rate consumer who meets the prescribed criteria being charged an invoice amount that is 25 per cent less than the invoice amount that would have been charged to that consumer under the comparison rates described in subsection (2).

Comparison rates

(2) The comparison rates are the rates that would have been effective May 1, 2017 if they had been determined by the Board *solely using the method prescribed by the regulations made under clause 79.16 (1) (b) of the Ontario Energy Board Act, 1998*, without taking into account any forecasted impact of any other provisions of this Act.

Invoice amounts

(3) The types of amounts to be included or excluded in each invoice amount mentioned in subsection (1) are the types of amounts specified in the regulations.

Other specified consumers, first adjustments

8. (1) For the period beginning on July 1, 2017 and ending on April 30, 2018, the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998 shall, with respect to specified consumers who are not regulated rate consumers, be further adjusted*

*by e*lectricity vendors in accordance with the determinations of the Board under subsection (2).

Board to make determinations

(2) The Board shall, in accordance with the regulations, determine the adjustments to be made by electricity vendors.

Same, regulations

(3) The regulations may specify different adjustments to be made in respect of prescribed classes of specified consumers who are not regulated rate consumers.

Determinations by Board

9. The Board shall make the determinations mentioned in sections 7 and 8 no later than 15 business days after the day this section receives Royal Assent and, regardless of whether the Board makes the determinations before or after July 1, 2017, the determinations shall be effective as of July 1, 2017.

Implementation by electricity vendors

10. (1) As soon as possible after the Board makes determinations under section 9, each electricity vendor shall, in respect of electricity used on or after July 1, 2017, ensure that its invoices reflect the determinations of the Board.

Same

(2) The electricity vendor shall ensure that, if any of its customers who are specified consumers have been invoiced in a manner that does not reflect the determinations of the Board under section 9, the specified consumer receives the difference between the amounts shown on the invoice and the amounts reflecting the Board's determinations, provided as a lump sum credit on the first invoice issued after the electricity vendor has adapted its invoices or by such other means as may be prescribed.

Subsequent adjustments

11. (1) Despite clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998 and s*ubject to subsection (2), the Lieutenant Governor in Council may prescribe the methodology to be applied by the Board after April 30, 2018 for the purpose of determining,

(a) electricity rates for regulated rate consumers; or

(b) adjustments to be applied by electricity vendors to the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998 in respect of prescribed classes of specified consumers who are not regulated rate consumers.*

Limitation

(2) Any prescribed methodology shall have regard to the following:

1. The purposes of this Act.

2. The clean energy costs borne by specified consumers over time.

3. Such other matters as may be prescribed.

Sub-metering

12. (1) This section applies if a specified consumer provides to another person electricity in respect of which a determination of the Board referred to in section 9 or 11 applies.

Same

(2) If an invoice for the electricity is issued to the person by the specified consumer or a unit sub-meter provider providing unit sub-metering for the specified consumer, the amount payable for the electricity by the person who is liable to pay the invoice shall be determined in accordance with the regulations.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

13. (1) Upon receipt of an invoice from an electricity vendor that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor as agent of the investment interest owners.

Same

(2) For greater certainty, subsection (1) applies regardless of,

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was inconsistent with the Financing Plan, including in a manner that failed to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Terms

(3) The payment shall be made in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Unit sub-metering

(6) A specified consumer who provides electricity through unit sub-metering may collect amounts in respect of the clean energy adjustment payable under this section in accordance with the regulations.

Irrevocability of amount

14. (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or bypassed.

Exception

(2) Subsection (1) does not apply to the extent that the invoice reflects a clerical, typographical or calculation-related error.

Determination of clean energy adjustment
Financial Services Manager to determine

15. (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by taking the following steps:

1. Calculate the sum of the following:

    i. The estimated finance amount in respect of the reference period.

    ii. The true up amount in respect of the reference period.

2. Divide the sum calculated under paragraph 1 by the number of months in the reference period.

Regulations re true up amount

(2) The Lieutenant Governor in Council shall, in making regulations with respect to the determination of the true up amount, have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.

2. The method for determining the true up amount should take into account historical and reasonably foreseeable,

   i. differences between the estimated and actual finance amount for the applicable reference period,

   ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and

   iii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(3) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment in respect of a reference period and such other information related to the determination of the clean energy adjustment as may be prescribed.

Board to determine rates

(4) Without changing the clean energy adjustment, the Board shall, in accordance with the regulations, determine the rates at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

16. (1) The IESO shall, as agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the market rules made under section 32 of the *Electricity Act, 1998 or the regulations*.

Account

(2) All of the following amounts received by the IESO shall, until remitted to or for the benefit of the investment interest owners in accordance with subsection (4), be

deposited promptly into an account established for the purposes of receiving those amounts:

1. Amounts described in subsection (1).

2. Payments made by specified consumers directly to the IESO as electricity vendor under subsection 13 (1).

3. Proceeds of amounts described in paragraphs 1 and 2.

Same, held in trust

(3) All amounts received by the IESO in respect of the clean energy adjustment shall, until remitted to or for the benefit of the investment interest owners, be held in trust by the IESO for the investment interest owners.

IESO to remit

(4) The IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the amounts referred to in subsection (1), to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

17. (1) Each electricity vendor shall issue an invoice to each of its customers who is a specified consumer for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 15 (4) and in accordance with the regulations.

Electricity vendor to report

(2) Each electricity vendor shall, in accordance with the regulations, promptly report to the IESO the total amount invoiced to its customers who are specified consumers in respect of the clean energy adjustment, the amount collected and such other information as may be prescribed.

Electricity vendor to collect

(3) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(4) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

Held in trust

(5) Payments received by an electricity vendor from or on behalf of specified consumers in respect of the clean energy adjustment and all proceeds of the payments shall, until remitted to the IESO for the benefit of the investment interest owners in accordance with subsection (6), be held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(6) Each electricity vendor shall remit amounts in respect of the clean energy adjustment to the IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

18. Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Duties and powers

19. (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Same

(2) The administration of the investment asset may include providing information to the IESO in respect of obligations under Part III and such other activities as may be prescribed.

Fees

(3) Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees in relation to such matters as may be prescribed in accordance with the regulations, which regulations may provide for the ability to recover costs and expenditures and to earn a return.

Same, Board approval

(4) Before establishing fees under subsection (3), the Financial Services Manager shall submit them to the Board for approval in accordance with the regulations.

FAIR ALLOCATION AMOUNT

Minister to calculate fair allocation amount

20. (1) Subject to subsections (2) and (3), before the first funding obligation is incurred the Minister shall calculate a fair allocation amount in respect of each reference period, applying such method as the Minister considers appropriate and in accordance with the following steps:

1. Determine the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period.

2. Determine the estimated reduction in the amounts payable by specified consumers as a result of determinations of the Board under Part II in respect of all previous reference periods, including the estimated reduction in clean energy costs described in clause (a) of the definition of "clean energy costs" in subsection 1 (1) that would otherwise have been payable by specified consumers in the absence of this Act.

3. Determine the amount, if any, by which the determination under paragraph 1 exceeds the determination under paragraph 2.

4. Calculate the sum of the amount determined under paragraph 3 and such other amounts as may be prescribed.

Principles

(2) In calculating the fair allocation amount, the Minister shall have regard to the following principles:

1. The purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among the specified consumers in respect of each reference period.

2. Calculations should be made having regard to the need to align each fair allocation amount with the estimated finance amount payable during the reference period.

3. Estimated clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the estimated clean energy benefits attributed to the specified consumers in respect of the reference period.

4. Such other principles as may be prescribed.

Assumptions

(3) In calculating the fair allocation amount, the Minister shall make such assumptions as the Minister considers to be reasonable regarding the following:

1. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.

2. The expected number of specified consumers in respect of each reference period.

3. The expected electricity consumption rates in respect of each reference period.

4. Such other assumptions as may be prescribed.

Minister to provide amount to Financial Services Manager

(4) The Minister shall provide the fair allocation amount in respect of each reference period to the Financial Services Manager.

Recalculation

(5) A calculation of the fair allocation amount under this Part may be changed by such person as may be prescribed in accordance with such requirements as may be prescribed.

Same

(6) No change under subsection (5) shall affect any clean energy adjustment that has already been determined under section 15 or any funding obligations that have already been incurred before the change.

Information

(7) The Minister, the IESO, the Financial Services Manager, the Board and electricity vendors shall provide such information as may be prescribed in accordance with the regulations for the purposes of facilitating a change to a calculation of the fair allocation amount.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

21. (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of a refinancing.

Plan to be provided to Minister

(2) The Financial Services Manager shall provide the Financing Plan to the Minister.

Principles

(3) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Funding obligations should be incurred such that, along with any funding obligations already incurred, the estimated finance amount that would, subject to any refinancing, become due and payable during a reference period will reasonably align with the fair allocation amount determined in respect of the reference period, in each case after reducing the fair allocation amount to reflect determinations of the Board under Part II in respect of the reference period.

2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.

3. Reasonable assumptions should be made regarding such matters as may be prescribed.

4. Such other principles as may be prescribed.

Limitation

(4) In respect of each reference period from July 1, 2017 to April 30, 2021, no funding obligation shall be incurred that would result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

(a) the amounts are payable in respect of a reference period in respect of which the Board has not made any determinations under Part II; or

(b) if the Board has made a determination under Part II in respect of the reference period, the funding obligations incurred would not result in amounts payable in respect of the clean energy adjustment during the reference period in an amount that exceeds the limit determined in accordance with the regulations.

Other reports

(5) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this Act to the Financing Plan is deemed to be a reference to the plan as amended.

Incurrence of funding obligations

22. (1) The Financial Services Manager shall ensure that funding obligations incurred for the purposes of this Act are incurred in a manner that is consistent with the applicable Financing Plan.

Financing entities

(2) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Same

(5) For greater certainty, subsection (4) applies despite the failure of the Financial Services Manager to comply with subsection (1).

PART V
THE REGULATORY ASSET

IESO deferral

23. (1) The IESO deferral for each month, commencing May 1, 2017, shall be determined by the IESO in accordance with the regulations.

Same, retrospective amounts

(2) For greater certainty, the regulations may provide for the IESO deferral to include an amount that was incurred by the IESO on or after May 1, 2017 and before the day this section comes into force.

Electricity vendors to provide information

(3) Electricity vendors shall provide to the IESO such information as the IESO may reasonably request for the purposes of determining the IESO deferral under subsection (1) and such further information as may be prescribed.

Same

(4) The IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

24. (1) The IESO shall establish and maintain a variance account in which it records the following:

1. The IESO deferral for each month.

2. All payments received by the IESO resulting from the exercise of the right of recovery under section 25 and any transfer under section 26.

3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences on or after May 1, 2017 and before the day this section comes into force.

Recording determinative

(2) Subject to the correction of any obvious error by the IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

Rights of investment interest owner

(3) No change made by the IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 26, affect the rights acquired by the investment interest owner under the transfer.

Regulatory asset established

25. (1) Effective May 1, 2017, the IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Board to set rates

(2) Subject to subsection (3), the Board shall, from time to time and in accordance with the regulations, determine and set rates payable by specified consumers to allow for the IESO to recover the balance recorded in the variance account.

Limitation

(3) The IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

Transfer of regulatory asset

26. (1) The IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

Agreement

(2) An agreement between the IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to the IESO in an amount equal to the amount of the specified portion.

Effect of payment

(3) Upon receipt by the IESO of the payment by the financing entity,

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) the IESO shall retain no further right, title or interest in the corresponding investment interest.

Validity of transfer

27. (1) A transfer of a specified portion of the regulatory asset under section 26 constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

Same

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for the IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of the IESO's right to

recover the corresponding amount in the variance account and not merely as a security interest.

Deemed perfection, etc.

(3) At the time a transfer of the regulatory asset is made under section 26, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Investment asset established

28. (1) The transfer of a specified portion of the regulatory asset under section 26 creates an investment asset or, if it is not the first transfer, adds to the investment asset.

Same

(2) Upon transfer of a specified portion of the regulatory asset under section 26 to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim.

Investment asset, irrevocable rights and interests

29. (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover the clean energy adjustment that is imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, the IESO and other prescribed parties.

3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for the clean energy adjustment.

5. The right to enforce the duties and obligations under this Act of each electricity vendor and the IESO to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by any electricity vendor to recover payment of the clean energy adjustment.

6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest, including any rights to receive funding rebates.

7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Not affected by failure to impose etc. clean energy adjustment

(2) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(3) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, the IESO, an agent of the investment interest owners or an owner in the Province of a distribution system within the meaning of the *Electricity Act, 1998*;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(4) The rights of the investment interest owners to collect and enforce their rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(5) If one investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest

owner collectively and in coordination with all other investment interest owners, and any agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owners as a collective in accordance with its terms.

Transfer of investment interest

30. An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

31. (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the transferee a valid property right and interest in, to and under the applicable investment interest acquired in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest, subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected as described in the *Personal Property Security Act*, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer, and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

32. (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the applicable investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may subsequently attach to the property rights and interests in the investment interest subject to the security interest, subject to the written consent of the person to whom the security interest has been granted.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any account of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to the IESO.

Definition

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act.*

PART VII
MISCELLANEOUS

Appointment of agent, invoicing or collection

33. (1) If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Same, not Crown agent

(2) For greater certainty, a person appointed under this section is not an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Board's authority

34. (1) Each electricity vendor, the IESO and the Financial Services Manager shall maintain such accounts and provide such information to the Board as the Board may require for the purposes of carrying out its responsibilities under this Act, in the form and manner and within the time required by the Board.

No hearing required

(2) Despite anything to the contrary in the *Ontario Energy Board Act, 1998*, the Board may exercise any of its responsibilities under this Act without a hearing.

Sequestration

35. (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections and remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment, including defaults on any required remittance of amounts in respect of the clean energy adjustment, collections or remittances.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

36. The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to a transfer under this Act or the creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section 5 shall be the laws of the Province.

Conflict

37. The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

38. Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required to be taken under the Financing Plan or in relation to the determination of the fair allocation amount.

Liability

39. (1) No action or other civil proceeding shall be commenced against any employee of the Province or Ontario Power Generation Inc. for any act done in good faith in the exercise or performance or the intended exercise or performance of a power or duty under this Act, the regulations under this Act or for any alleged neglect or default in the exercise or performance in good faith of such a power or duty.

Same

(2) Nothing in subsection (1) shall be read as limiting the effect of subsection 19 (1) of the *Electricity Act, 1998* or subsection 11 (1) of the *Ontario Energy Board Act, 1998.*

Same

(3) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.*

References in marketing materials and offering documents

40. No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5 unless the prescribed requirements, if any, are satisfied.

Regulations

41. (1) The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.

2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.

3. Governing the incurrence of debt for the purposes of the definition of "refinancing" in subsection 1 (1).

4. Governing the inclusion of information under this Act on or with invoices, which may include requiring notice to be provided by electricity vendors to specified consumers and other prescribed persons regarding the adjustments, including providing for different requirements in different circumstances and for different classes of specified consumers.

5. Governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on or with invoices issued to specified consumers, including the form that the information must take and the form of the invoices and the form of any notice to be provided to the specified consumer under this Act.

6. Governing the manner by which invoices or notices provided for under this Act are to be provided to specified consumers and other prescribed persons.

7. Providing for a right of compensation for investment interest owners affected by a breach under section 29 and the manner in which such a right may be enforced under this Act.

8. Prescribing the time within which any action required by this Act may be required to be done.

9. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

Limitation

(2) Despite subsection (1) or any other Act, no regulation under this Act shall have the effect of reducing, impairing, postponing or terminating the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or impairing or postponing the invoicing, collection, remittance or recovery of the clean energy adjustment.

PART VIII
AMENDMENTS TO OTHER ACTS

Electricity Act, 1998

42. (1) Subsection 6 (1) of the *Electricity Act, 1998* is amended by adding the following clause:

(q.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*,

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and to engage in related settlement activities,

(iii) engaging in activities related to the transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(A) incurring liabilities in relation to the regulatory asset,

(B) transferring the regulatory asset under section 26 for consideration, and

(C) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

(2) Subsection 25.33 (1) of the Act is amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by the IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*.

(3) Subsection 25.33 (2) of the Act is amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by the IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*.

(4) Clause 25.33 (4) (b) of the Act is amended by adding "or as may be required by a regulation made under this Act or the Ontario Fair Hydro Plan Act, 2017" at the end.

(5) Subsection 25.33 (5) of the Act is amended by adding "or under the Ontario Fair Hydro Plan Act, 2017" at the end.

(6) Section 53.1 of the Act is amended by adding the following subsections:

Same, *Ontario Fair Hydro Plan Act, 2017*

(1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, non-subsidiary

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is not a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of the financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of the financing entity.

Deemed assets, subsidiary

(1.4) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of that financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries shall not form part of the assets and liabilities of that financing entity.

Definition, financing entity

(1.5) For the purposes of this section,

"financing entity" has the same meaning as in the *Fair Hydro Plan Act, 2017*.

Ontario Energy Board Act, 1998

43. (1) Subsection 70 (2.1) of the *Ontario Energy Board Act, 1998* is amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017*.

(2) Section 70 of the Act is amended by adding the following subsection:

Deemed condition of licences, unit sub-meter provider, *Ontario Fair Hydro Plan Act, 2017*

(2.4) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Fair Hydro Plan Act, 2017* and the regulations made under it.

(3) Section 78.1 of the Act is amended by adding the following subsections:

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.

2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.

3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.

4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

(4) Subsection 79.16 (3) of the Act is repealed.

PART IX
COMMENCEMENT AND SHORT TITLE

Commencement

44. This Schedule comes into force on the day the *Fair Hydro Act, 2017 receives* Royal Assent.

Short title

45. The short title of the Act set out in this Schedule is the *Ontario Fair Hydro Plan Act, 2017*.

SCHEDULE 2
AMENDMENTS TO THE ONTARIO ENERGY BOARD ACT, 1998

1. (1) Subsection 79 (4) of the *Ontario Energy Board Act, 1998* is repealed and the following substituted:

Liability

(4) All consumers are required, in accordance with the regulations, to contribute towards the amount of any compensation required under subsection (3) that is not otherwise provided under subsection (4.1).

Payments for certain classes

(4.1) Compensation required under subsection (3) may be provided with respect to one or more prescribed classes of consumers who receive rate protection under this section, in a manner provided for in the regulations.

Money appropriated by the Legislature

(4.2) The compensation provided for in subsection (4.1) shall be paid for out of the money appropriated for those purposes by the Legislature.

Information, etc.

(4.3) If provided for in the regulations, the Board, the IESO and distributors, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of the rate protection or of anything else provided for in this section.

(2) Clause 79 (5) (e) of the Act is repealed and the following substituted:

(e) prescribing rules respecting the amounts that must be collected to compensate distributors, taking into account any compensation provided under subsection (4.1), including rules,

(i) respecting the calculation of those amounts,

(ii) respecting the calculation of any off-set to the liability of consumers under subsection (3) having regard to those amounts,

(iii) establishing the time and manner of collection,

(iv) requiring the amounts to be paid in instalments and requiring the payment of interest or penalties on late payments,

(v) prescribing methods of ensuring that the amounts required cannot be bypassed, and

(vi) respecting the distribution of those amounts to consumers;

(e.1) prescribing classes of consumers for the purposes of subsection (4.1), and governing how and when the compensation is to be provided with respect to the rate protection provided to them, including, without restricting the generality of the foregoing, requiring the IESO to receive payments or amounts from the Minister of Energy and to make payments to licensed distributors or to prescribed persons and prescribing how and when payments are to be made;

2. Section 79.2 of the Act is repealed and the following substituted:

Rate assistance

79.2 (1) The Minister shall make provision for rate assistance for rate-assisted consumers having regard to their economic circumstances, and where the Minister makes such provision, shall do so out of the money provided for in subsection (4).

OESP

(2) The program known as the "Ontario Electricity Support Program" in English and "Programme ontarien d'aide relative aux frais d'électricité" in French is continued for the purpose of providing rate assistance to rate-assisted consumers having regard to their economic circumstances.

Administered by Board

(3) The Ontario Electricity Support Program shall be administered by the Board, or when the regulations so provide, by a Minister of the Crown or other entity provided for in the regulations.

Money appropriated by the Legislature

(4) The money required for the purposes of the Ontario Electricity Support Program shall be paid out of the money appropriated for those purposes by the Legislature, once the amounts recorded in the variance account referred to in subsection (5) are no longer sufficient to provide for the funding of the program when taken on their own.

Variance account

(5) The money required for the purposes of the Ontario Electricity Support Program shall be provided out of the credit balance in the variance account maintained by the IESO under the Program as it existed before the coming into force of section 2 of Schedule 2 to the *Fair Hydro Act, 2017* until the amounts recorded in the account are no longer sufficient, when taken on their own, to fund the Program.

Variance account depleted

(6) The IESO shall provide the Ministry of Energy with advance notice, on a timely basis, of the time the IESO estimates that the amounts reflected in the variance account would be less than the amount required to meet its obligations related to funding the Ontario Electricity Support Program for the upcoming month.

How provided

(7) Rate assistance provided under this section shall be provided with respect to consumers prescribed in the regulations, and shall be provided at the times provided for in the regulations and in the amounts and in the manner provided for in the regulations.

Payments with respect to prior use

(8) The regulations may require provision of rate assistance to prescribed classes of rate-assisted consumers with respect to electricity consumed during a period prior to the date of the making of the regulation, but no such rate assistance shall be required under the regulations with respect to electricity consumed before January 1, 2016.

Transitional

(9) The regulations may require the provision of rate assistance for a rate-assisted consumer with respect to a period prior to the date on which the consumer became a rate-assisted consumer if the consumer meets all of the criteria prescribed by the regulations.

Distributors, etc.

(10) A distributor, a unit sub-meter provider and any other person or entity that may be prescribed is entitled to be compensated from the money referred to in subsection (4) or subsection (5), as the case may be, for any lost revenue resulting from the provision of rate assistance under the Ontario Electricity Support Program.

Deemed licence conditions, IESO, settlements, payments, etc.

(11) Every licence issued to the IESO, a distributor or unit sub-meter provider or a retailer of electricity shall be deemed to contain conditions requiring the licensee to do anything necessary to implement and administer the provision of rate assistance under this section as may be required by the regulations or the Board, including requirements with respect to,

(a) making payments to the IESO, distributors, unit sub-meter providers and other persons and entities identified by the regulations;

(b) receiving payments or other amounts from the IESO, distributors, unit sub-meter providers and other persons and entities identified by the Minister;

(c) requiring licensees to pass any rate assistance provided for under this section through to rate-assisted consumers in the manner provided for in the regulations;

(d) engaging in settlement activities;

(e) providing information to and receiving information from the Ministry of Energy, the Board, the IESO, distributors, unit sub-meter providers, retailers of electricity and any other prescribed persons and entities in the time and in the manner provided for by the Board or as may be prescribed; and

(f) entering into agreements or arrangements with licensees and other persons.

Information, etc.

(12) If provided for in the regulations, the Board, the IESO, distributors, retailers of electricity and unit sub-meter providers, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of rate-assistance or of anything else required under this section.

Conflicts, etc.

(13) Where any conflict exists between an order of the Board, a code issued by the Board or a licence condition and this section or a regulation made under this section, this section or the regulation made under this section shall prevail to the extent of the conflict.

Regulations

(14**)** The Lieutenant Governor in Council may make regulations governing anything dealt with in this section and without limiting the generality of the foregoing, may make regulations,

(a) governing anything that is described in this section as being prescribed or as being provided for in the regulations or that is required to be done in accordance with the regulations;

(b) governing the time or times at which rate assistance shall be paid or become payable to rate-assisted consumers;

(c) governing the determination of classes of consumers who are rate-assisted consumers, including providing for different classes of rate-assisted consumers;

(d) requiring that certain costs and expenditures related to the Ontario Electricity Support Program be only incurred with the prior approval of the Minister, and governing those costs and expenditures;

(e) establishing rules for the calculation of the amount of the rate assistance to be provided;

(f) governing payments under this section, including determining the method or methods of calculating the amount of rate assistance to be provided;

(g) setting maximum amounts of the total annual value of rate assistance that may be provided;

(h) requiring a distributor, the IESO or a unit sub-meter provider or other prescribed person or entity to make or receive payments in respect of rate assistance, including requiring them to make or receive payments directly to or from the Ministry of Energy or to receive overpayments directly or indirectly from consumers or other persons entitled to receive the rate assistance and prescribing the circumstances in which such payments are to be made and received and such overpayments are to be received as well as methods for determining the amounts payable or to be received;

(i) requiring the IESO to receive payments from the Minister and requiring the IESO to make payments to the Board, to licensed distributors, to unit sub-meter providers or to prescribed persons, in respect of the rate assistance provided under this section and governing methods for determining the amounts payable;

(j) governing the Board's or other prescribed entity's administration and program-related costs in administering the Ontario Electricity Support Program;

(k) governing transitional matters arising from the changes made to the Ontario Electricity Support Program as a result of the enactment of the *Fair Hydro Financing Plan Act, 2017*.

Retroactivity

(15) A regulation made under this section is, if it so provides, effective with reference to a period before it is filed.

General or particular

(16) A regulation under this section may be general or particular in application, may provide for different classes of persons and entities and may prescribe different rules for different persons or entities or different classes of persons or entities.

Verification of eligibility

(17) Section 11 of the *Ministry of Revenue Act* applies with respect to the Ontario Electricity Support Program as a government assistance program administered by the Board.

Definitions

(18) In this section,

"Government assistance program" has the meaning provided for in subsection 11 (2) of the *Ministry of Revenue Act*; "(programme d'aide gouvernementale)"

"rate-assisted consumer" means a consumer referred to in subsection (7). "(consommateur admissible à l'aide tarifaire)"

3. The Act is amended by adding the following section:

Confidentiality, information sharing, etc.

79.2.1 (1) For the purposes of section 79.2, the Board or the Minister or entity having responsibility for administering the Ontario Electricity Support Program may enter into an agreement with the Minister of Community and Social Services to provide the services to the public listed in subsection (2) on behalf of the Board, Minister or the entity, as the case may be, in relation to the administration of the Ontario Electricity Support Program.

Agreement, etc.

(2) The services that may be included in an agreement referred to in subsection (1) are the following:

1. Providing documents and information about the Ontario Electricity Support Program.

2. Processing applications for the Ontario Electricity Support Program.

Arrangements with others

(3) The Minister of Community and Social Services may arrange with another person or entity to provide, on behalf of that Minister, services that that Minister is authorized to provide under an agreement referred to in subsection (1).

Personal information

(4) The Minister of Community and Social Services is authorized to collect, use, disclose and retain personal information necessary to provide the services authorized by

an agreement referred to in subsection (1), but shall not collect, use, disclose or retain more personal information than is reasonably necessary to provide the services.

Limitation

(5) Except where otherwise authorized under subsection (7), the Minister of Community and Social Services shall not collect, use, disclose or retain personal information provided for in subsection (4) without the consent of the individual to whom the information relates.

Duty to transfer personal information

(6) The Minister of Community and Social Services shall transfer an individual's personal information provided for in subsection (4) into the control of the Board, Minister or entity responsible for administering the Ontario Electricity Support Program promptly after processing an application for the Ontario Electricity Support Program, but may retain such personal information as is reasonably necessary to confirm that an individual has been provided a service.

Use of personal information, etc.

(7) The Minister of Community and Social Services may use personal information maintained by that Minister in connection with the administration of the Ontario Disability Support Program and the program established pursuant to the *Ontario Works Act, 1997*, for the purpose of identifying and contacting individuals eligible for the rate assistance provided under the Ontario Electricity Support Program, and to provide services authorized under an agreement referred to in subsection (1).

Deemed compliance

(8) The use of personal information as allowed by subsection (7) is deemed to comply with section 41 of the *Freedom of Information and Protection of Privacy Act*.

Disclosure of list

(9) In order to assist the Minister of Community and Social Services to identify individuals eligible for rate assistance, the Board or the Minister or entity having responsibility for administering the Ontario Electricity Support Program shall, as soon as practicable after the coming into force of this section, disclose to the Minister of Community and Social Services a list of individuals who are enrolled in the Ontario Electricity Support Program, together with their mailing address and other contact information.

Use of list

(10) The Minister of Community and Social Services may use the information on the list provided under subsection (9) to determine whether an individual who is currently enrolled in the Ontario Disability Support Program or the program established under the *Ontario Works Act, 1997* is also enrolled in the Ontario Electricity Support Program.

Destruction of list

(11) The Minister of Community and Social Services shall destroy the list provided under subsection (9) no later than one year after receiving the list.

Notification about the management of personal information

(12) The Minister of Community and Social Services shall ensure that a notice is published on a website describing,

(a) the purpose for which that Minister collects, uses, discloses and retains personal information in connection with the Ontario Electricity Support Program;

(b) the types of personal information that may be collected, used, disclosed and retained in connection with the Ontario Electricity Support Program, and the circumstances in which the personal information may be collected, used, disclosed and retained in connection with that Program; and

(c) the title, and contact information, including an email address, of an employee who can answer an individual's questions about the use of the personal information under this section.

4. The Act is amended by adding the following sections:

Distribution rate-protected consumers

79.3 (1) The Minister shall provide for distribution rate protection to distribution rate-protected residential consumers having regard to the costs of the distribution of electricity to such consumers with respect to electricity consumed on or after the date prescribed by the regulations.

Money appropriated by the Legislature

(2) The money required for the purposes of the provision of distribution rate protection under this section shall be paid out of the money appropriated for those purposes by the Legislature.

Maximum charge

(3) Despite any order of the Board, or anything else under this Act, where the regulations so provide, a prescribed distributor who distributes electricity to distribution rate-protected residential consumers shall not charge those consumers, or a prescribed class of those consumers, any amount for monthly base distribution charges more than,

(a) the maximum amount for the charge that is provided for in the regulations; or

(b) the amount determined by the Board after applying any calculations, processes or methods provided for in the regulations.

Distributors

(4) A distributor who is prescribed under this section is entitled to be compensated from the money referred to in subsection (2) for lost revenue resulting from the provision of the distribution rate protection to distribution rate-protected residential consumers under this section.

Information, etc.

(5) If provided for in the regulations, the Board, the IESO and distributors, or any of them shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of distribution rate protection or of anything else required under this section.

Limitation periods for distribution rate protection, consumer

(6) Despite any past entitlement of a consumer who is eligible to distribution rate protection under this section, no distribution rate protection is payable to a consumer after a limitation period prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

Limitation, reimbursement of distributor, etc.

(7) Despite any requirement under this Act to reimburse a prescribed distributor or other person for distribution rate protection provided by them to distribution rate-protected residential consumers under this section, no amounts for reimbursement are payable to the prescribed distributor or other person after a limitation period prescribed by the regulations in respect of the prescribed distributor or other person, where such reimbursement is based on a consumer's past entitlement under this section which has not yet been paid or reimbursed under this section, other than in such circumstances as may be prescribed by the regulations.

Transitional

(8) If, for technical or operational reasons, a distributor referred to in subsection (3) is unable to adapt its invoices to comply with this section and the regulations by the time it issues its first invoice for electricity consumed after the prescribed date in respect of an account of a consumer who is eligible for distribution rate protection under this section,

(a) the distributor shall adapt its invoices as soon as possible and, in any event, no later than a date prescribed in the regulations; and

(b) consumers continue to be entitled to receive the distribution rate protection to which they are entitled under this Act and may receive it as a lump sum credit

on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Regulations

(9) The Lieutenant Governor in Council may make regulations,

(a) prescribing consumers or classes of consumers as distribution rate-protected residential consumers for the purposes of this section;

(b) prescribing dates for the purposes of subsections (1) and (8);

(c) prescribing distributors for the purposes of this section;

(d) governing anything that is described in this section as being prescribed or as being provided for in the regulations or that is required to be done in accordance with the regulations;

(e) governing the provision of distribution rate protection by the Minister in respect of distribution rate-protected residential consumers under this section including determining the method or methods of calculating the amount of rate protection to be provided;

(f) requiring the IESO to receive payments from the Minister and to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of the distribution rate protection provided for under this section and prescribing methods for determining the amounts payable to distributors or distribution rate-protected residential consumers in respect of that protection.

Interpretation

(10) In this section,

"distribution rate-protected residential consumer" has the meaning provided for in the regulations; **(French)**

"monthly base distribution charges" has the meaning provided for in the regulations. (frais de distribution mensuels de base)

Delivery credit for on-reserve consumers

79.4 (1) The Minister shall provide a delivery credit to on-reserve consumers who meet the criteria prescribed under this section with respect to electricity consumed on or after the date prescribed by the regulations.

Money appropriated by the Legislature

(2) The money required for the purposes of the provision of the credits required under this section shall be paid out of the money appropriated for those purposes by the Legislature.

Eligible costs

(3) The eligible costs for the delivery credit referred to in subsection (1) are,

(a) the sum of the following charges for which the consumer would otherwise be liable,

(i) all variable and fixed distribution charges,

(ii) all charges based on the retail transmission network service rate,

(iii) all charges based on the retail transmission connection service rate,

(iv) all charges related to losses incurred in the distribution of electricity, except for such amounts that are included in regulatory charges provided for in the regulations, and

(v) any other charges that may be prescribed in the regulations; or

(b) where no separate charges for delivery are provided for by the distributor or other person or entity that may be prescribed in the regulations, the monthly service charge or such other amount as may be prescribed for or in respect of a prescribed distributor.

Delivery credit

(4) A distributor, person or entity shall, unless the regulations provide otherwise, provide the delivery credit referred to in subsection (1) by crediting the account of an on-reserve consumer.

Same

(5) The regulations may require that distributors and any other persons or entities provide a delivery credit to an on-reserve consumer who is entitled to a delivery credit under subsection (1) in such manner or in accordance with such methods as may be prescribed.

Same

(6) A distributor or any person or entity as may be prescribed is entitled to be compensated from the money referred to in subsection (2) for any lost revenue resulting from the provision of the delivery credits under this section.

Information, etc.

(7) If provided for in the regulations, the Board, the IESO and distributors, and other persons or entities, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of the delivery credits or of anything else required under this section.

Limitation periods for delivery credit, consumer

(8) Despite any past entitlement of an on-reserve consumer who is eligible for a delivery credit under this section, no delivery credit is payable to an on-reserve consumer after a limitation period prescribed by the regulations in respect of the on-reserve consumer, other than in such circumstances as may be prescribed by the regulations.

Limitation, reimbursement of distributor, etc.

(9) Despite any requirement under this Act to reimburse a distributor or other persons or entities for delivery credits provided by them to on-reserve consumers under this section, no amounts for reimbursement are payable to the distributor or other persons or entities after a limitation period prescribed by the regulations in respect of the distributor or other persons or entities, where such reimbursement is based on an on-reserve consumer's past entitlement under this section which has not yet been paid or reimbursed under this section, other than in such circumstances as may be prescribed by the regulations.

Transitional

(10) If, for technical or operational reasons, a distributor referred to in subsection (4) is unable to adapt its invoices to comply with this section and the regulations by the time it issues its first invoice for electricity consumed after the prescribed date in respect of an eligible account,

(a) the distributor shall adapt its invoices as soon as possible and, in any event, no later than a date prescribed in the regulations; and

(b) on-reserve consumers continue to be entitled to receive the delivery credit to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Regulations

(11) The Lieutenant Governor in Council may make regulations,

(a) governing who is an on-reserve consumer for the purposes of this section and, without limiting the generality of the foregoing, may provide that consumers

who occupy certain areas are on-reserve consumers, and may do so without regard to whether those areas constitute a "reserve" under any other Act or law;

(b) prescribing dates for the purposes of subsections (1) and (10);

(c) governing provision of the delivery credits provided to on-reserve consumers under this section and, without restricting the generality of the foregoing, governing anything that under this section is to be prescribed or provided for in the regulations, or that is to be done in accordance with the regulations;

(d) determining the method or methods of calculating the amount of the delivery credits to be provided by the Minister in respect of on-reserve consumers under this section;

(e) requiring the IESO to make and receive payments to and from the Minister and to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of the delivery credits provided for under this section and prescribing methods for determining the amounts payable to distributors or on-reserve consumers in respect of the credits provided.

Interpretation

(12) In this section,

"on-reserve consumer" has the meaning provided for in the regulations.

Application

79.5 Sections 79.6 through 79.11 apply to the programs provided for under sections 79, 79.2, 79.3 and 79.4 to the extent that they are funded by money appropriated for those purposes by the Legislature.

Definition

79.6 In sections 79.7 to 79.11,

"Finance Minister" means the Minister of Finance or such other member of the Executive Council to whom the administration of those sections is assigned under the *Executive Council Act*.

Records

79.7 (1) Every distributor and every other person prescribed by regulation shall keep at a location in Ontario such records as are necessary to determine and verify compliance with sections 79, 79.2, 79.3 and 79.4 and the regulations associated with them and any records required by those regulations to be kept.

Electronic records

(2) If a person keeps records in an electronic form, the person shall ensure that, from the time the records are first made and for as long as they are required to be retained,

(a) they remain complete and unaltered, apart from any changes or additions made in the normal course of communication, storage or display; and

(b) they are capable of being printed and of being produced in electronically readable format for inspection, examination or audit.

Retention of records

(3) Records required to be kept under subsection (1) shall not be destroyed unless authorization has been given in writing by the Finance Minister.

Offence

(4) Every person who fails to keep records in accordance with this section is guilty of an offence and, on conviction, is liable to a fine of not less than $50 and not more than $5,000.

Inspections and inquiries

79.8 (1) The Finance Minister may appoint one or more inspectors who are authorized to exercise any of the powers and perform any of the duties of a person authorized by the Minister under subsection 31 (1) of the *Retail Sales Tax Act* for any purpose related to the administration and enforcement of sections 79, 79.2, 79.3 and 79.4 of this Act.

Same

(2) Subsections 31 (1), (2), (2.1) and (2.2) of the *Retail Sales Tax Act* apply, with necessary modifications, with respect to the administration and enforcement of sections 79, 79.2, 79.3 and 79.4 of this Act.

Admission of evidence

(3) The Finance Minister, or a person authorized by the Finance Minister, may, for any purpose related to the administration of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them, reproduce from original data stored electronically any information previously submitted as required under those sections or regulations in any form by any person, and the electronically reproduced document shall be admissible in evidence and shall have the same probative force as the original document would have had if it had been proved in the ordinary way.

Inquiry

(4) The Finance Minister may, for any purpose related to the administration of sections 79, 79.2, 79.3 and 79.4 of this Act or the regulations made in association with

them, authorize any person, whether or not the person is an employee in the Ministry of the Finance Minister, to make such inquiry as the Finance Minister considers necessary with reference to anything relating to the administration of this Act or the regulations.

Copies

(5) If a book, record or other document is examined or produced under this section, the person by whom it is examined or to whom it is produced or any officer of the Ministry may make, or cause to be made, one or more copies of it, and a document purporting to be certified by the person to be a copy made pursuant to this section is admissible in evidence and has the same probative force as the original document would have if proved in the ordinary way.

Compliance

(6) No person shall hinder or molest or interfere with any person doing anything that the person is authorized by this section to do or prevent or attempt to prevent any person doing any such thing.

Same

(7) Despite any other law to the contrary, every person shall, unless the person is unable to do so, do everything the person is required by this section to do.

Administration of oaths

(8) Declarations or affidavits in connection with statements of information submitted pursuant to this section may be taken before any person having authority to administer an oath or before any person specially authorized for that purpose by the Lieutenant Governor in Council, but any person so specially authorized shall not charge any fee for doing so.

Application of *Public Inquiries Act, 2009*

(9) Section 33 of the *Public Inquiries Act, 2009* applies to an inquiry under subsection (4).

Recovery of overpayments

Definitions

79.9. (1) In this section,

"inspector" means an inspector referred to in section 79.8; ("inspecteur")

"overpayment" means an amount received by a person in excess of that to which the person is entitled under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them. ("trop-perçu")

Notice of overpayment

(2) If it appears to an inspector that a person has received an overpayment, the Finance Minister may send a written notice to the person advising the person of the following:

1. That the person has received an overpayment.

2. The amount of the overpayment and how it was calculated.

3. The required steps to be taken by the person with respect to the overpayment.

4. The date, not more than six months after the date of the notice, by which these steps must be completed.

5. That the Finance Minister has the authority to assess the person for the amount of the overpayment, plus interest, if the person fails to complete the required steps by the specified date.

Calculation of amount of overpayment

(3) For the purposes of this section, an inspector shall calculate an overpayment or the outstanding balance of an overpayment in the manner and form and using such procedures as the Finance Minister considers adequate and expedient.

Assessment

(4) If a person fails to complete the steps required in a notice under subsection (2) within the time specified in the notice, and any additional time requested by the person and permitted by the Finance Minister, the Finance Minister may assess or reassess the amount of the overpayment, or the outstanding balance of the overpayment, based on the inspector's calculation described in subsection (3).

Penalty

(5) If the Finance Minister makes an assessment or reassessment under subsection (4) and is satisfied that the person's non-compliance with the required steps in the notice was attributable to neglect, carelessness, wilful default or fraud, the Finance Minister may assess a penalty against the person equal to the outstanding balance of the overpayment when the penalty is assessed.

Time limit

(6) The Finance Minister shall not assess or reassess under subsection (4) more than 48 months after the end of the month in which the person received the overpayment.

Exception, where misrepresentation, etc.

(7) Subsection (6) does not apply if the Finance Minister establishes that the person has made a misrepresentation that is attributable to neglect, carelessness or wilful default or has committed any fraud in supplying information under this Act or the regulations or in omitting to disclose information.

Deeming

(8) An amount assessed or reassessed by the Finance Minister under this section is deemed, for the purposes of the administration and enforcement of this Act, to be a debt retirement charge owing and payable, as defined in subsection 85 (1) of the *Electricity Act, 1998*, that has been collected, on the last day of the month in which the person received the overpayment, by the person as a collector appointed under subsection 85.3 (1) of the *Electricity Act, 1998* and, for those purposes,

(a) sections 85.11, 85.12, 85.14, 85.17 and 85.30 of that Act apply with necessary modifications;

(b) in the application of sections 85.11 and 85.14 of that Act and without limiting the generality of clause (a) of this subsection, references to the Financial Corporation are read as references to the Minister of Finance and references to the Minister of Finance are read as references to the Finance Minister as defined in section 79.6 of this Act;

(c) the regulations made under that Act for the purposes of calculating the rate or rates of interest payable under section 85.11 of that Act and the manner of calculating the amount of interest apply with necessary modifications; and

(d) sections 23 and 36, subsections 37 (1), (1.1) and (2) and sections 37.1, 38 and 39 of the *Retail Sales Tax Act* apply with necessary modifications.

Disposition of repaid amounts

(9) If all or part of an overpayment is repaid to the Finance Minister, the Minister of Energy shall make such financial arrangements and payments as may be necessary to ensure that any person entitled to all or part of the overpayment receives the appropriate amount.

Confidentiality

79.10 (1) Except as authorized by this section, no person employed by the Government of Ontario shall,

(a) knowingly communicate or knowingly allow to be communicated to any person any information obtained by or on behalf of the Minister of Energy or

the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; or

(b) knowingly allow any person to inspect or to have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

Testimony

(2) No person employed by the Government of Ontario shall be required, in connection with any legal proceedings,

(a) to give evidence relating to any information obtained by or on behalf of the Minister of Energy or Finance Minister for the purposes of this Act; or

(b) to produce any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

Exception

(3) Subsections (1) and (2) do not apply in respect of,

(a) criminal proceedings under any Act of the Parliament of Canada;

(b) proceedings in respect of the trial of any person for an offence under an Act of the Legislature; or

(c) proceedings relating to the administration or enforcement of this Act or Part V.1 or VI of the *Electricity Act, 1998*.

Communication

(4) A person employed by the Government of Ontario may, in the course of duties in connection with the administration or enforcement of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them,

(a) communicate or allow to be communicated to another person employed by the Government of Ontario in the administration or enforcement of any law or to an employee of the Board information obtained by or on behalf of either Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; and

(b) allow another person employed by the Government of Ontario in the administration or enforcement of any law or an employee of the Board to inspect or have access to any record or thing obtained by or on behalf of either Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

Reciprocal communication

(5) A person who receives information or obtains access to any record or thing under subsection (4) has a duty to communicate or furnish to that Minister on a reciprocal basis any information, record or thing obtained by the person that affects the administration or enforcement of this Act.

Use of information

(6) Any information, record or thing communicated or furnished under this section may be used only for the administration or enforcement of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them or an Act that is administered or enforced by the person receiving the information, record or thing.

Same

(7) The Finance Minister may permit information or a copy of any record or thing obtained by or on behalf of the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them to be given to,

(a) the person from whom the information, record or thing was obtained;

(b) any person by whom an amount is payable or has been paid under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; or

(c) the legal representative of a person mentioned in clause (a) or (b) or the agent of the person authorized in writing in that behalf.

Information

(8) The Finance Minister may permit information or a copy of any record or thing obtained by or on behalf of the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them to be given to any person employed by any government if,

(a) the information, record or thing obtained by that government for the purpose of any Act that imposes a tax or duty are communicated or furnished on a reciprocal basis to the Minister; and

(b) the information, record or thing will not be used for any purpose other than the administration or enforcement of a law that provides for the imposition of a tax or duty.

Offence

(9) Every person who contravenes any provision of this section is guilty of an offence and on conviction is liable to a fine of not more than $2,000.

Offences

False statements, etc., and fraud

79.11 (1) Every person who engages in any of the following acts or omissions is guilty of an offence:

1. Making, participating in, assenting to or acquiescing in the making of a false or deceptive statement in any document or answer required or submitted under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

2. Destroying, altering, mutilating, hiding or otherwise disposing of information or records of any person, for the purpose of evading compliance with sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

3. Making, assenting to or acquiescing in the making of a false or deceptive entry of a material particular in a record of any person required to maintain records for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

4. Omitting to make or assenting to or acquiescing in the omission of an entry of a material particular in a record of any person required to maintain records for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

5. Wilfully evading or attempting to evade, in any manner, compliance with an obligation under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

Penalty upon conviction

(2) A person convicted of an offence under subsection (1) is liable to either or both of the following penalties in addition to any other penalty assessed under this Act:

1. A fine in an amount that is not less than $1,000 and not more than $10,000.

2. Imprisonment for a term of not more than two years.

General offence

(3) Every person who contravenes, by any act or omission, any other requirement imposed under sections 79, 79.2, 79.3 and 79.4 is guilty of an offence and, on conviction, is liable, where no other penalty is provided for the offence, to a fine of not less than $50 and not more than $5,000.

Limitation period

(4) A proceeding to prosecute an offence provided for in this section must be commenced within six years after the date on which the matter of the offence arose.

Payment of fines

(5) Fines imposed on conviction of an offence provided for in this section are payable to the Finance Minister on behalf of the Crown in right of Ontario.

Commencement

5. (1) Subject to subsection (2), this Schedule comes into force on the day the *Fair Hydro Act, 2017* receives Royal Assent.

(2) Section 2 comes into force on a day to be named by proclamation of the Lieutenant Governor.

Fair Hydro Act, 2017

COMPENDIUM

The proposed Bill, the *Fair Hydro Act, 2017*, if enacted, would enact the *Ontario Fair Hydro Plan Act, 2017* and amend various Acts according to the provisions of Schedules 1 and 2 set out in greater detail below.

Schedule 1
Ontario Fair Hydro Plan Act, 2017

Schedule 1 enacts the *Ontario Fair Hydro Plan Act, 2017*. The Act establishes a framework under which the costs and benefits associated with the "clean energy initiative" are to be allocated among present and future consumers of electricity. The "clean energy initiative" describes the policies of the Government of Ontario related to fostering the development of a clean, modern and reliable electricity system.

Part I of the Act sets out the purposes of the Act and includes protections and assurances related to investor interests.

Under Part II of the Act, the Ontario Energy Board is required to determine reduced electricity rates that would achieve a 25% reduction in monthly invoice amounts from July 1, 2017 to April 30, 2018 for a hypothetical "regulated rate consumer" who meets prescribed criteria. The methodology to be applied by the Ontario Energy Board to determine electricity rates after April 30, 2018 would be prescribed by regulations.

Part III of the Act requires "specified consumers" to pay an amount in respect of the "clean energy adjustment". The clean energy adjustment is determined by the Financial Services Manager in accordance with rules set out in the Act and the regulations. Part III also specifies the roles and responsibilities of electricity vendors and the Independent Electricity System Operator ("IESO") with respect to the collection and remittance of amounts in respect of the clean energy adjustment.

Part IV of the Act requires the Minister of Energy to calculate a "fair allocation amount" by taking specified steps in accordance with principles and assumptions set out in the Act. The purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among specified consumers.

Also under Part IV, Ontario Power Generation Inc. is appointed as the Financial Services Manager. The Financial Services Manager is required to prepare a written "Financing Plan" to evaluate whether potential funding obligations should be incurred to acquire and

finance investment assets (under Part V). Constraints are placed on incurring funding obligations that would result in amounts becoming payable in respect of the clean energy adjustment from July 1, 2017 to April 30, 2021. In accordance with the Financing Plan, the Financial Services Manager may establish financing entities that may incur funding obligations.

Part V of the Act requires the IESO to determine the "IESO deferral" in accordance with the regulations and to establish and maintain a variance account in which it records the IESO deferral for each month. The balance in the variance account becomes a "regulatory asset", which the IESO has the right to recover from specified consumers through rates set by the Ontario Energy Board. The IESO is authorized to transfer a specified portion of the regulatory asset to a financing entity. The transfer results in the financing entity acquiring a corresponding "investment interest". The Act sets out various rules respecting the validity and priority of such a transfer.

In Part VI, the Act provides various rules in respect of the "investment asset" created by the transfer under Part V of a specified portion of the regulatory asset. Part VI provides that the investment asset constitutes a current and irrevocable property right and interest, consisting collectively of various specified rights and interests of investment interest owners. The Act also includes rules respecting the validity and priority of transfers of investment interests and the granting of a security interest in an investment interest by an investment interest owner.

Part VII deals with various administrative and miscellaneous matters, including regulation-making authority of the Lieutenant Governor in Council.

Part VIII includes consequential amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1999* to address various matters relating to the enactment of the new Act.

Schedule 2
Amendments to the Ontario Energy Board Act, 1998

Schedule 2 amends the *Ontario Energy Board Act, 1998*.

Section 79 of the Act is amended so that the rate protection provided to certain classes of rural or remote rate protected (RRRP) consumers may be funded out of money appropriated by the Legislature, rather than by consumers. Consumers would still be required to fund the remaining portion of RRRP not funded through appropriations.

Section 79.2 of the Act, which governs the Ontario Electricity Support Program (OESP), is repealed and replaced on a date to be named by proclamation of the LGIC. Once s.79.2 is proclaimed, the program would be continued, but will be funded out of money

appropriated by the Legislature after the variance account maintained by the IESO is exhausted, rather than by consumers. There are provisions relating to the sharing, use and disclosure of information relating to the administration of the OESP.

New provisions are created in the Act to establish programs to provide rate protection to certain distribution rate-protected residential consumers and a delivery credit to on-reserve consumers.

The Schedule also contains various amendments of a technical and administrative nature to support the implementation and oversight of these programs including provisions related to auditing, record-keeping, inspections and inquiries, offences and penalties.

The Schedule contains regulation-making authority in order to specify the details required to implement the various government-funded.

PRIVILEGED AND CONFIDENTIAL

Memorandum To: The Honourable Glen Murray
Chair of the Legislation and Regulations Committee

From: Carolyn Calwell
Director, Legal Services Branch

Date: May 5, 2017

Re: Ontario's Fair Hydro Plan
An Act to enact the Ontario Fair Hydro Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

I have examined the draft of the above-referenced item being submitted to Legislation and Regulations Committee on May 10, 2017 and have compared that draft with the policy approved by Cabinet on March 1, 2017.

As a result of this comparison, I am able to advise you that the draft corresponds to the approved policy with the exception of the variances identified on the attached chart.

_____
Carolyn Calwell
Director

Ontario's Fair Hydro Plan
An Act to enact the Ontario Fair Hydro Act, 2017
and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

Minute Item	Approved Policy/Policy Sought to be Approved	Proposed Variance	Degree of Variance	Rationale/Commentary
1.A	Total projected bill increases will be kept in line with Consumer Price Index (CPI) **until the end of 2021.**	Bill increases will be prescribed by regulation for the period May 1, 2018 **to June 30, 2021**.	Low	June 30, 2021 aligns with public communications that rate increases will be held to inflation over the next four years. This regulation making authority would enable the government to keep bill increases in line with CPI.
1.A	Cap bill increases due to repayments at around 10% of the total bill.	Bill increases will not be capped.	High	Consultation with stakeholders and external advisors revealed that a legislated cap would undermine investors' certainty in recovering their investment. However, the debt rating will be impaired if modelling suggests that rates could increase more than 10%, providing a cap in practical terms.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – March 1, 2017	**Tracking to: Fast Track** LRC at Cabinet – March 10, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan Legislation

I. DECISION BEFORE THE BOARD

Receive a report back on Ontario Fair Hydro Plan implementation, supporting implementation decisions and recommending the proposed Ontario Fair Hydro Plan Act to proceed to LRC and Cabinet for approval.

II. RECOMMENDATIONS:

• Receive a report Ontario Fair Hydro Plan implementation: o Proposed legislation ▪ Note key aspects of proposed legislation ▪ Recommend proposed legislation o Approve up to $3.5M funding for media buy procurement, to be followed later by a transfer later from the Bulk Media program to fully recover costs for the public education campaign.	*Board Judgement*
• Direct the Ministry to return to TB/MBC with regulations support implementation prior to going to LRC. • Note outstanding report back requirements, • Direct in-year reporting through quarterly reporting and PRRT planning process on spending to date versus funding allocation for Electricity social programs and Global Adjustment Refinancing	

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Affordability Fund	0.0	0.0	0.0
	Global Adjustment Refinancing*^	0.0	0.0	0.0

	Ontario Rebate for Electricity Consumers	939.0	882.0	882.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

* Subject to enacting proposed Ontario Fair Hydro Plan legislation.
^ As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget, linked to proposed legislation

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017 the Ministry received TB/MBC approval for additional rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016 for an average household in 2017. The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017. This submission deals with three key elements of the OFHP:

- Refinancing Portion of Global Adjustment (GA) to partially defer RPP eligible ratepayer GA costs (Implementing a non-fiscal impact approach over government funding).
- Expanding, enhancing ratepayer funded electricity social programs and shifting them to being government funded (OESP, RRRP), along with a new government funded On-Reserve First Nations Delivery Credit.
- Expansion of Industrial Conservation Initiative (ICI).

The Ministry was directed to report back to the Board with proposed legislation supporting OFHP implementation, including the following specific direction regarding a non-fiscal mechanism (approach) to refinancing a portion of Global Adjustment costs (Appendix C provides the March 1, 2017 minute):

- Formal accounting opinions from OPG and IESO auditors.
- Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
- Report on the multi-year profile of GA smoothing, identifying specific assumptions.
- Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
- Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

Direction was also given to report back with final details for electricity support programs, as well as programs' effectiveness, efficiency, and sustainability.

The current submission does not address all report back requirements. The proposed legislation would establish the legislative framework, to be followed by further program related details being set by regulations at a later date (Ministry is targeting June 2017).

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two Schedules (Appendix D provides details of each part):

- Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment partial refinancing)
- Schedule 2: Legislative amendments for electricity social programs

Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment (GA) Refinancing)

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

The Ministry indicates under OFHP, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017 (This includes the 8% Ontario Rebate for Electricity Consumers). In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Reflecting March 2017 approvals (See Appendix C for March 2017 TB/MBC minute), proposed legislation for GA Refinancing is designed to establish a non-fiscal impact mechanism. Minuting indicated proceeding with GA Refinancing requires completed legal, accounting and financing risk assessments.

The proposed approach to GA Refinancing is complex. Appendix D provides proposed legislative details.

- At a high level, the proposed legislation establishes the framework to refinance a portion of the current GA costs to future ratepayers by recognizing the longer term benefit many of these generating assets to the electricity system. The methodology is based on the assumption that some assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets in the future.

    - July 1, 2017, to April 30, 2018, reduces, on average, after-tax electricity costs for "specified consumers" by 25% (inclusive of the 8% rebate and shifting of support program to be government funded).
    - May 1, 2018, to June 30, 2021, electricity rates will be prescribed by regulation with the intention to keep increases in line with the Consumer Price Index (CPI).
    - July 1, 2021, to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and administrative costs.
    - Through the bill and amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998, expands the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO) to provide for appropriate oversight, put in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the refinanced GA costs.

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG, through a special purpose vehicle (OPG Trust) is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

The bill includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Schedule 2: Legislative amendments for electricity social programs

Electricity social programs becoming government funded under OFHP target residential electricity customers disproportionately affected by increased electricity costs.

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The bill amends the *Ontario Energy Board Act, 1998* for various electricity social programs:

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001. The bill enables the funding of existing Rural or Remote Rate Protection (RRRP) for prescribed customers to be provided for through provincial appropriations, rather than from electricity.

Appropriated funds would be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the government funding provided.

Distribution Rate Protection (Broadened RRRP)

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

The proposed legislation would enable a broader government funded Distribution Rate Protection (DRP) program (broadened RRRP) which provides additional distribution rate protection to residential customers of prescribed higher cost LDCs by enabling the regulations to prescribe a maximum distribution charge for consumption on or after July 1, 2017.

If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

The legislation contains retroactive application of the provisions to offset any potential lapses in implementation and ensure that consumers receive the benefit following the July 1st effective date through to the final effective date of October 1st, 2017.

On-Reserve First Nations Delivery Credit

The proposed bill would enable the provision of a government funded on-reserve First Nations Delivery Credit (FNDC), which would eliminate the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation.

The program is premised around the findings in an OEB Report submitted to the Ministry on December 29, 2016 providing advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers.

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program to being government funded, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid

by all Ontario consumers on May 1, 2017. On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will come into effect on May 1, 2017.

The proposed bill would move the recently expanded Ontario Electricity Support Program (OESP) to government funding, allow for the potential transition of the program administration to the Crown or other entity, and to enable information exchange between the Ontario Disability Support Program (ODSP) and Ontario Works (OW) to potentially allow for automatic enrolment procedures to be established.

The Ministry indicates the proposed legislative amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

Expansion of Industrial Conservation Initiative (ICI)

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and “1114”) in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and Demand Management (CDM) programs and/or Ontario Climate Change Solutions Deployment Corporations (OCCSDC) programs and pilots.

The Ministry is also undertaking targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants.

- The extent of the impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

Financials

Electricity Social Programs:

March 1, 2017 TB/MBC approvals supporting OFHP included full year projected costs. The 2017 Ontario Budget included refined projected costs shifting expanded/enhanced electricity social programs from ratepayers to being government funded starting in 2017-18, lowering the total amount from $665M to $499M to reflect rollout timing not full year costs. The table below shows expense amounts currently in the PRRT multi-year fiscal plan related to these support programs for the most vulnerable consumers.

Government Funded Social Programs ($million)	2017-18	2018-19	2019-20	2020-22
Rural or Remote Rate Protection (RRRP)	344	472	484	497
Ontario Electricity Support Program	140	261	325	375
On-Reserve First Nations Delivery Credit	15	20	20	20
Total	**499**	**753**	**829**	**892**

GA Refinancing:

The 2017 Budget also includes an investment operating asset of $1.1B related to the Province's equity injection to OPG, enabling the OPG Trust to regularly purchase IESO's regulatory asset through 2017-18. The structure would increase gross debt of the Province (to finance the equity injection in OPG), increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. The Province's net debt will remain unchanged as the equity investment in OPG would offset the additional Provincial borrowing.

Projected annual amounts of GA deferrals (i.e., the regulatory asset) are shown below and are not part of the province's multi-year fiscal plan (2017 Budget(Assumed to be funded from electricity ratepayers udner the proposed legisation). Appendix E provides analysis of financial models.

($million)	2017-18	2018-19	2019-20	2020-22
GA Refinancing - Residential Bills lowered by 25%	2,534	2,668	2,942	3,420
Interest Portion (5% annually, compounded monthly)	32	162	298	449

Under GA refinancing, ratepayers will incur interest costs and will be added to the GA payments ratepayers make.

- OPG intends to use a Special Purpose Vehicle (OPG Trust) to purchase the "right to collect" assets from the IESO in return for cash. OPG Trust will be structured to finance 51% of its funding requirements through the capital market with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed though debt from the capital markets (about 5%) and through equity injections from the Province (44%).

- The proposed legislation does not compel the OPG Trust to purchase 100% of the regulatory asset created by IESO at any given time. IESO have noted that it may need to cover clean energy costs if for some reason the OPG Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. On behalf of IESO, the Ministry is requesting a credit facility for IESO, up to about $3B, and notes the use of this credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO. Appendix F provides more information.

Financial, Accounting, Legal Risk Assessments:

In the March 1, 2017 TB/MBC Minute, refinancing the Global Adjustment to partially defer RPP eligible ratepayer GA costs, was subject to completed legal, accounting and financing risk assessments. Appendix G provides more details from the Ministry.

Financial

The Ministry indicates it has prepared legislation and is working on developing regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure

that the full value of any investment is recoverable.

- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year.

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

The Ministry indicates the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost.

The Ministry also acknowledges given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term, and the rate of inflation.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The Ministry indicates the following:

- Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations, satisfying accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.
- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

KPMG:

- The proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements.
- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.
- The regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG/E&Y:

- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.
- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-

making, funding and ongoing operation.

- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.
- Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.
- Judges can be expected to take a careful look at the government's evidence in support of the re-allocation of Global Adjustment.
- The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.
- The provincial assurance provision - Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes. The proposed legislation focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers.
- The provincial guarantee provisions are intended to backstop the provincial assurance provision Legal risk to the province will be assessed as the agreements are negotiated and drafted.
    - The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
    - The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.
- Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry indicates it retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements.

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. The Ministry indicates Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social,

health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

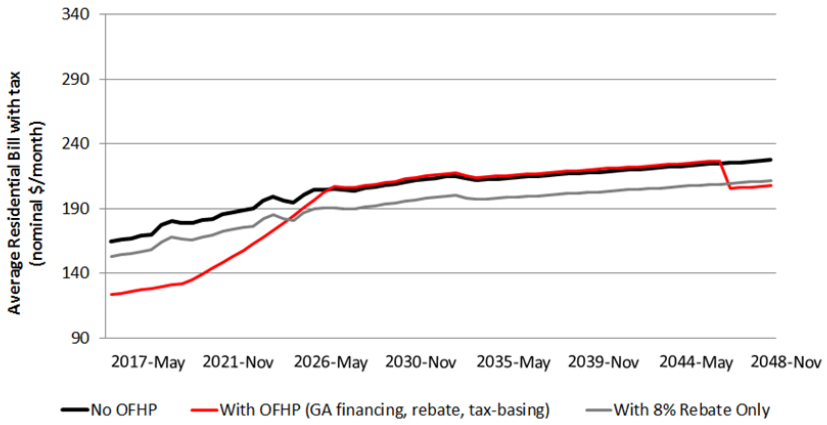
The Ministry's signed submission included external opinions and assessments for Ontario Power Generation (Accounting), KPMG Letter to the Independent Electricity System Operator (Accounting Opinion), Ernst &Young (as auditors) letter to OPG concurring with OPG's description of OPG accounting considerations of OFHP.

TBS staff note external opinions and assessments are supportive of the Ministry's intended plan for implementing Ontario's Fair Hydro Plan, noting the opinions and assessments must be revisited once key implementation details are finalised (e.g. draft legislation, regulations, special purpose vehicle documents, terms of conditions within various other agreements etc). Future reassessments and other factors such as Ontario electricity demand, interest rates in the medium to long-term, and the rate of inflation may contribute to fiscal plan implications emerging over time.

TBS staff also note, while submission details and related discussions have not indicated a non-fiscal mechanism cannot be established, the complexity of the transaction and the time frame involved suggest it is not reasonable, at present, to support a claim of no impact on the province's fiscal plan as the Ontario Fair Hydro Plan is implemented (Appendix H includes a strategic level risk assessment prepared by TBS staff). .

Ultimately, GA Refinancing being a sustainable strategy assumes electricity consumers' willingness to accept later to bear the extra costs of deferring electricity price hikes.

- The following graphic from the Ministry indicates the multi-year profile of GA Refinancing:



The chart above shows the expected multi-year profile under GA Refinancing for each Regulated Price Plan (RPP) period. In the first year, residential bills are projected to be 25 per cent lower as result of the OFHP. In the early years, bills increases are held to the rate of inflation – assumed to be 2% per year in the chart above. From July 1, 2021 onwards, prices increase at a higher rate compared to the first four years on the OFHP.

In the medium to longer term, residential bills exceed what they would have been but for the OFHP. However, in any given year, a typical residential bill under the OFHP cannot exceed what it would have been without OFHP by more than 10 per cent.

Media Procurement Request

The Ministry is requesting approval up to $3.5M funding for media buy procurement, to be followed later by a transfer later from the Bulk Media program to fully recover costs for the public education campaign.

The Ministry indicates spending about $1M on media planning and buying for radio and digital media. The Ministry is forecasting $2.5M in 2017-18 (Q clarifying the remaining $1M).

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Should TB/MBC wish to proceed with the Ministry's request, the following minute could be considered:

Receive the report back on proposed legislation supporting implementation of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

i) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

a) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
b) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
c) Shift from electricity consumer funding to funding out of voted appropriations for Ontario Electricity Support Program, and for majority of costs for existing RRRP.
d) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

a) Establishing the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
b) Requirement for future consumers to pay the clean energy adjustment that backs financings
c) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
d) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
e) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights
f) Sets out that security interests can be granted in investment interests in the investment asset

ii) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

iii) Note a new credit facility is being sought by the IESO to ensure that it has the flexibility to cover clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments.

iv) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC.

In this regard,

a) Direct the Ministry to include a report on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates
b) Direct the Ministry to report back with final program details for 2017-18 for GA Refinancing and Social Programs, including fiscal plan implications.

Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

…Placeholder for media procurement minute…

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX D: PROPOSED FAIR HYDRO ACT OVERVIEW

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two schedules:

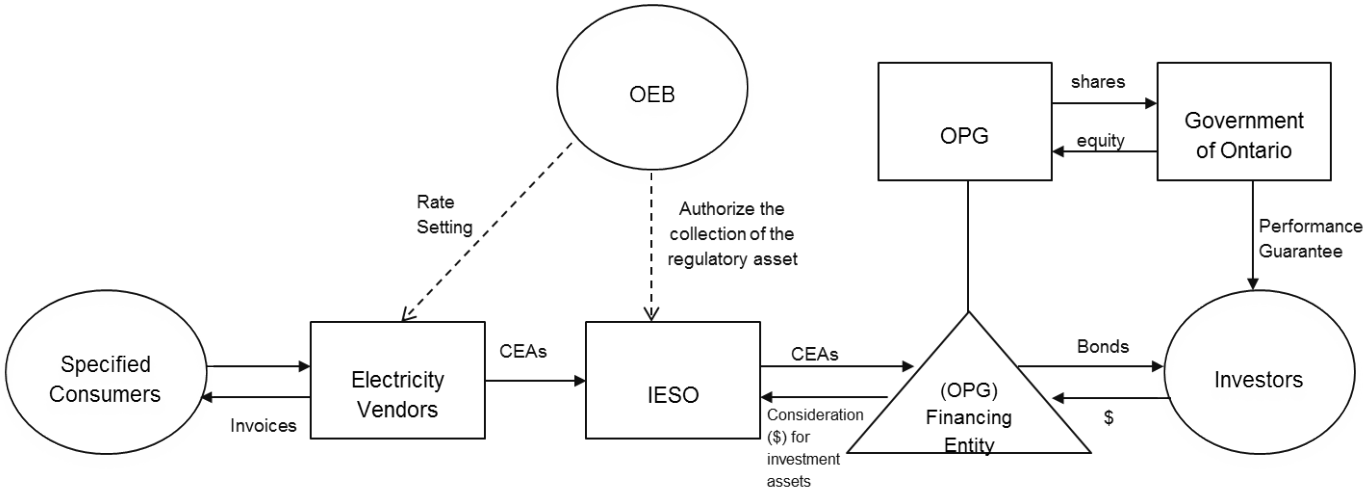
- Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Dealing with Global Adjustment (GA) refinancing).
- Schedule 2: Legislative amendments for electricity social programs (See Appendix D1)

The Ministry has provided the following overview of the proposed legislation:

Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (GA refinancing).

Legislation is based on the principle that the costs incurred to move to a clean, modern and reliable electricity system (Clean Energy Initiative) creates benefits that will be experienced by multiple generations of Ontario ratepayers and, therefore, in the interest of fairness, those costs should be shared by those multiple generations.

The legislation does two things: (i) it establishes the fundamental elements of the fair allocation program, and, (ii) it puts the mechanisms in place to permit the financing of periodic shortfalls in revenue that are created by the fair allocation of electricity costs over multiple generations. The diagram below outlines how the refinancing of GA would be implemented.



Note: CEAs are "clean energy adjustments"

Clean Energy Costs and Benefits:

- The costs included in the "clean energy costs" include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act* (the Global Adjustment provisions) which relate to contracts for:
  - Renewable energy generation or capacity
  - Conservation and demand management, including shortage
  - Energy efficiency
  - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act* or as prescribed); and
  - Payments made under section 78.5 of the *Ontario Energy Board Act.*
  - Other such costs to be included in "clean energy costs" may be prescribed

- These are the costs to be distributed fairly among the specified consumers through the "fair allocation amount".

Fair Allocation Adjustment:

- Part II establishes that the rate that will be payable by "specified RPP consumers" from May 1, 2017 to April 30, 2018 for the first fair adjustment is the rate that would be required from this program to contribute to that consumer to receiving a total a monthly invoice amount that is 25 per cent lower than the monthly invoice amount for that consumer under the "comparison rate". The comparison rate is a rate to be determined by the OEB using the method prescribed by regulation under s 79.16(1)(b) of the OEB Act.
- Part II includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program (i.e., adaptation of invoices must be implemented by August 1, 2017 followed by a subsequent lump sum credit to the consumer once the invoice is adapted).
- The Lieutenant General in Council is given the authority after April 30, 2018 to make regulations prescribing the rate for electricity (and therefore prescribing the "fair adjustment" until June 30, 2021). After June 30, 2021, regulations will have regard to the fair allocation amount and clean energy adjustments.
- The Minister sets the fair allocation amount.

    - The establishment of the "fair allocation amount" is required to,
        - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the "specified consumers" for applicable "reference periods"; and
        - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers).
    - The "fair allocation amount" is to have regard to:
        - Clean energy costs and allocating the appropriate proportionate amount of the clean energy benefits to the "specified consumers" (in the applicable "reference periods");
        - Reasonable assumptions regarding the time value of money, the number of consumers in the "reference period"; and
        - Expected electricity consumption for the reference period.

Regulatory Asset and Investment Asset:

- IESO will have a funding deferral resulting from the reduction in amounts collected from specified consumers during the first 4 years because of the fair adjustment. The IESO's funding deferral will be financed indirectly through the debt capital markets.
- The Act enables the financing of this IESO funding deferral, on an ongoing basis, by establishing the funding deferral as a "regulatory asset". In simple terms, the regulatory asset is IESO's right to recover the revenues that it has deferred collecting.
- IESO will then legally transfer portions of this right to recover revenues to the (OPG) financing entities. OPG financing entities are not required to purchase the regulatory asset.
- The (OPG) financing entity that receives the transfer of the right to recover revenues acquires a right to impose, invoice and collect those regulatory charges (called the "clean energy adjustments"). This is generally described in the legislation as the "investment asset".
- The (OPG) financing entity will need to finance its acquisition (from IESO) of the investment asset, and it will do so in the capital markets.

Issuance and Payment of Debt:

- Debt securities and related funding obligations will be incurred by one or more (OPG) financing entities. These entities will be managed by OPG, as the financial services manager.
- The financings will be backed primarily by the "clean energy adjustments" payable by specified consumers. The "clean energy adjustments" will track the actual payment obligations incurred by the financing entities when they become due and payable. To ensure intergenerational fairness, these amounts will be managed by OPG to align with the "fair allocation amounts" ascribed to each of the next 60 six month periods ending in 2047 (or such later period as prescribed).
- IESO and each electricity distributor will act as agent for the financing entities to impose, invoice and collect the clean energy adjustments, which will be channeled through to pay each financing entity's related funding obligations.
- To support the program, the Government of Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be achieve highest rated securities, although that will largely depend on issues such as the strength of the Government of Ontario's undertakings not to adversely affect the program through subsequent legislation.

Financing Plan:

- The Financing Plan is prepared by the Financial Services Manager (OPG).
- The Financing Plan is the plan which is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO.
- There are rules that apply to the Financing Plan:
  - It must align with the "estimated finance amount" that will become due and payable during a "reference period";
  - It must take into account the "fair allocation" and any "fair adjustment";
  - It must plan to implement the financing in a reasonable and cost effective manner that reflects prevailing market terms and conditions; and
  - It must be based on certain reasonable assumptions set out in regulations (for example, related to anticipated IESO shortfalls, maturity of funding obligations, availability of refinancing, redemption opportunities and liquidity, and similar assumptions).
- The (OPG) Financial Services Manager must incur funding obligations in conformity with the applicable Financing Plan.
- The Financing Plan will guide OPG's decisions regarding the repayment terms of the debt securities to be issued by financing entities. The Financing Plan will also deal with fundamental issues, such as the alignment (using derivatives) of any foreign currency obligations incurred by financing entities with the Canadian dollar cash flows arising through the clean energy adjustments.

Who Does What?

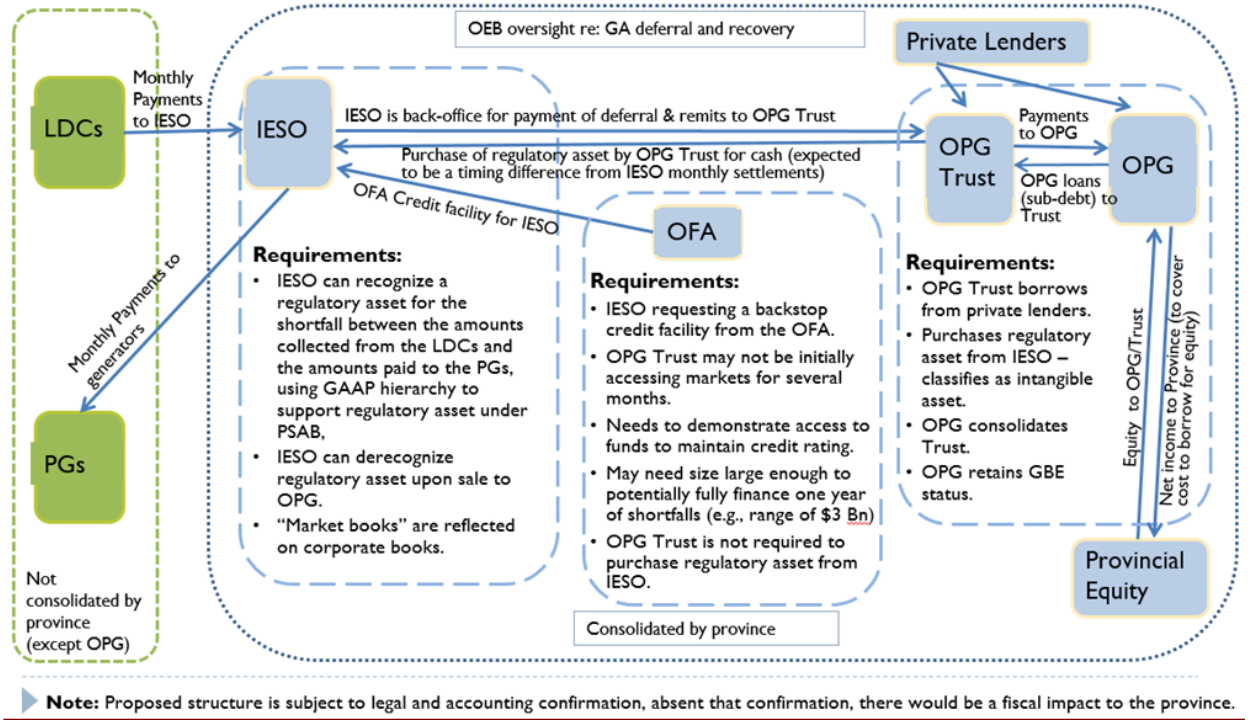
- Minister of Energy – Determine the "fair allocation amount" applicable for each reference period. The fair allocation amounts will be set for all reference periods at the beginning of the program, based on reasonable expectations and forecasts at that time.
- Ontario Power Generation (OPG) – As financial services manager, OPG will be responsible for the following under the Act:
  - Prepare and implement Financing Plan.
  - Establish and administer the financing entities.
  - Capitalize the financing entities by acquiring subordinated debt and equity, as required to achieve OPG's accounting and capital markets objectives.

- Estimate and "true up" periodic finance amounts, to be passed through as regulatory charges in the form of Clean Energy Adjustments.

- Independent Electricity System Operator (IESO):
  - Calculate and record IESO funding shortfalls from time to time in a variance account, giving rise to a right of recovery from specified consumers to the extent not funded through the financings.
  - Transfer the IESO's rights of recovery to (OPG) financing entities, in consideration for cash payments made by the financing entities from the proceeds of their financings.
  - Coordinates the collection of "clean energy adjustments" from Electricity Distributors.
  - Remit "clean energy adjustments" to (OPG) financing entity, for payment of financing entity funding obligations.
  - Fund initial interest costs and expenses during the first 4 years.

- Local Distribution Companies (LDCs):
  - Obligation to invoice specified consumers.
  - Collect, as agent of the investment interest owners, "clean energy adjustments" from specified consumers.
  - Hold money received for clean energy adjustments in trust until remittance to the IESO.

- Ontario Energy Board:
  - Determine and set rates to account for fair adjustments, fair allocations and clean energy adjustments (monthly adjustments).
  - Determine and set rates and process to allow IESO to recover funding shortfalls (to the extent such amounts are not transferred to an (OPG) financing entity and financed in the capital markets).
  - Review the administrative costs of OPG in connection with the administration of the program.



Schedule 2: Legislative amendments for electricity social programs moving to being government funded

As part of the proposed Ontario Fair Hydro Plan, the Ministry of Energy is proposing amendments the *Ontario Energy Board Act, 1998* (OEBA) to enable the following measures:

- Enhancing and providing government funding for Rural or Remote Electricity Rate Protection (RRRP) through new enhanced rate protection for residential customers with high distribution rates
- Enhancing and providing government funding for the Ontario Electricity Support Program (OESP)
- Creating a new First Nation On-Reserve Delivery Credit and providing for government funding

Overview of RRRP and Broadened Distribution Rate Protection:

- Section 79 of the Ontario Energy Board Act would be amended to provide the Ministry the authority to prescribe, through regulation, classes of consumers whose cost would be transferred from the rate-base to the tax-base.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would prescribe Hydro One's R2 customers as receiving RRRP from appropriated funds effective July 1, 2017. This would fulfill the government's intention to transfer the majority of the costs of administering the RRRP program to the tax-base.
- In addition, Energy is proposing legislative amendments that would broaden rate protection by creating a new distribution rate protection program to complement RRRP. This new program would be funded through tax payers.
- Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution cost.
  - Proposed legislative amendments would enable a maximum monthly base distribution charge to established through regulations.
- If the proposed legislative amendments are approved, the government intends to prescribe by regulation both program details and the residential customers eligible for broadened distribution rate protection served by the following LDCs:
  - Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

Ontario Electricity Support Program:

- Proposed legislation related to the Ontario Electricity Support Program (OESP) would shift program funding from the rate base to the tax base.
  - Tax-based funding would only kick in once the existing OESP variance account is depleted, which is expected to happen in the fall of 2017.
- To allow for the existing program structure to stay in place until tax-based funding kicks in, proposed new legislation would only come into force via a proclamation Order in Council, on a date to be determined.
  - This would ensure that existing OEB authorities remain in place while ratepayer funding is being used.
- In addition, a new authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers to support increased participation in the OESP program among Ontario Works and Ontario Disability and Support Program clients would be put in place.

- Information Privacy Commissioner (IPC) staff were consulted, and customer consent is reflected.
- This information sharing component will come into force at Royal Assent, allowing OEB and MCSS to begin this process quickly, and support increasing OESP participation levels.

First Nations Delivery Credit:

- Energy is proposing legislative amendments that would establish a First Nation Delivery Credit for On-Reserve Consumers. This new program would be funded through tax payers.
- The proposed First Nation Delivery Credit would provide:
  - All prescribed on-reserve consumers with a credit for the entirety of their delivery line or with a credit for the monthly service charge.
  - The costs that are covered by the delivery credit are also described in legislation.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would:
  - Establish the class of customers eligible;
  - Determine what is considered on-reserve; and
  - Determine the method of calculating the delivery credit.

APPENDIX E: ANALYSIS OF FINANCIAL MODELS AND RISKS (UNDER DEVELOPMENT)

Treasury Board Secretariat received two models related to global adjustment refinancing.

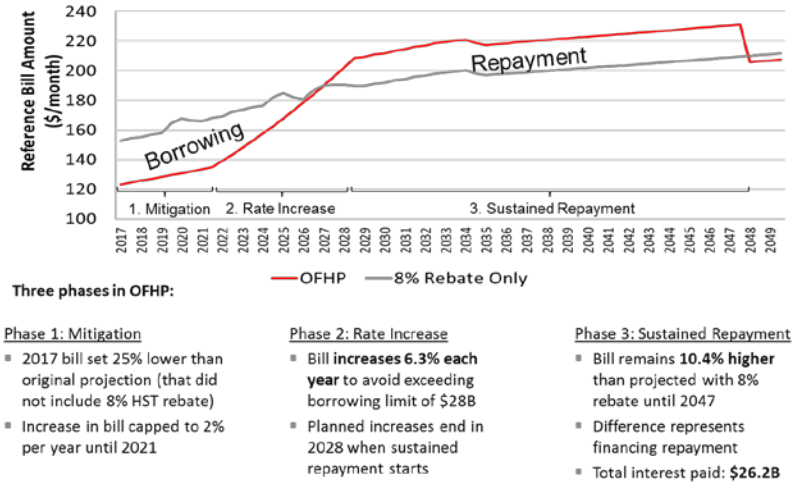
- The model the Ministry of Energy developed and used to support the March 2017 submission
- The financial model that was developed by the Ontario Power Generation (OPG) that provides details regarding the financing of the proposed structure

TBS staff noted the models received are based on high level aggregates and do not allow for running different scenarios that would allow TBS to determine the financial impact of potential changes in variables. In discussions with the Ministry of Energy and OPG, it has been agreed that these scenarios must be developed – both to help creation of a risk-based outlook for the province, as well as to respond to questions that will inevitably arise from the credit rating agencies.

- For example, the current model is based on a static interest rate of 5%. While this assumption is accurate within the current historically low interest rate environment, should interest rates increase above 5% after 2020, residential bills would also significantly increase during the repayment phase of the plan. For instance, if the interest rates increase from 5% to 7% (historical 30 year average) between 2020 and 2024, financing costs would increase by $11.2B (for a total of $37B), requiring much higher price increases in the out-years. Under this scenario, the increases required from 2022 to 2029 would be 7.3% annually (compared to 6.3% per year increases required under the base case) and the bill would remain 12.5% higher (compared to 10.4% in the base case).

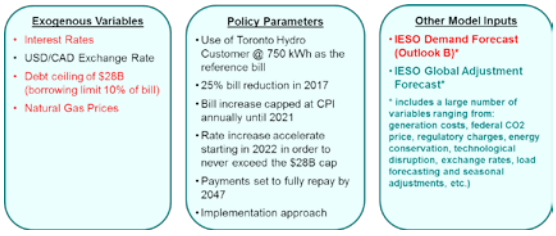
The OFHP can be thought of as having three phases:

The model is a high level and aggregate model, which is build on other independent forecasts (e.g. IESO demand forecast). There are a large number of assumptions built into the model explicitly and implicitly (as a large number of assumptions are embedded into the other forecasts that are used as inputs into this model).



Analysis is currently underway to better understand intergenerational costs and benefits and the impact of GA smoothing on recovery charges that would be allowed under the current Eurig compliance rules.

Depending on the legal determination, if the annual increases in bills or the commodity prices will be subject to caps, additional borrowing/provincial funding may be required.



With the shift of electricity social programs costs moving to being funded by government appropriations (Including the 8% rebate, total costs are forecast to be $1.4B in 2017-18), cost forecasting models/assumptions should also under go sensitivity analysis to inform future funding requests.

APPENDIX F: PROVIDING A CREDIT FACILITY TO IESO

After IESO's review of the proposed legislation, it has indicated to the Ministry and the Ontario Financing Authority (OFA)/MOF that IESO may need to cover clean energy costs if for some reason the Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. IESO noted that the proposed legislation does not compel the Trust to purchase 100% of the regulatory asset at anytime. Also, the establishment of the regulatory asset and purchase by the Trust is expected to take three to six months to implement following the introduction of enabling legislation.

The OFA currently provides a $975 million credit facility to the IESO for other purposes, it is proposed that the OFA provide a new credit facility to the IESO, in an amount of up to about $3 billion.

The use of this new credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO.

Approvals Required for OFA Financing

OFA indicates the recommended TB/MBC minute should note a new credit facility is being sought by the IESO to ensure that it has the flexibility to cover clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An order-in-council will be sought to allow the OFA to be able to provide the new credit facility to the IESO, for an amount to be determined as per the requirements of the Fair Hydro Plan.

The following approvals are required by the OFA to accommodate the request to provide financing to the IESO:

1) An Order-in-Council is required for the Minister of Finance to lend to the OFA.
2) A Directive from Minister of Finance is required for the OFA to on-lend to the IESO.
3) An executed credit agreement between the OFA and the IESO.

1. Order-in-Council (OIC)

An OIC is required to authorize the Minister of Finance to lend to the OFA. Ministry of Finance Legal Services Branch would need to be engaged to facilitate the request.

- The existing $975 million credit facility was covered under OIC 675/97 which authorized the Minister of Finance to lend a revolving $2.16 billion to the OFA. This OIC was originally obtained in 1997.

It is understood that upon drafting the OIC (by MOF Legal), the OIC would need final approval from Lieutenant Governor in Council LGIC as required under section 22(1) of the *Capital Investment Plan Act*, 1993.

- The OIC would go through Deputy Minister of Finance, Minister of Finance, Chair of Cabinet for briefing/sign-offs and finally to the LGIC for approval.

To draft the OIC, the following details will be required:

i. Dollar Value of Loan from the Minister of Finance to the OFA
ii. Maturity Date of the Loan
iii. Interest Rate of the Loan

The following are recommended to accommodate IESO's need for financing:

i. Dollar Value of Loan:
   $3 billion, as per request. The OIC would provide the maximum limit of any loan to IESO and it may be advisable to add a cushion and provide an OIC for $3.5 billion.

ii. Maturity Date of the Loan:
OIC maturing March 31, 2048 would provide approximately 30-year term to match the Fair Hydro Plan. It may be advisable to add a cushion and set a maturity date to March 31, 2053 (cushion of 5-years).

iii. Interest Rate of the Loan
Interest rates on the loans from the Minister of Finance to the OFA have typically been a 1) Ontario 90-day t-bill rates, 2) flow-through of the rates charged to the third-party by the OFA and/or 3) the rate charged to the third-party by the OFA less 25bps.

OFA recommends to keep this unchanged to provide consistency with past OICs but also to provide flexibility in the rates that could potentially be charged to IESO, to be determined by the Minister of Finance, by way of the Minister's Directive.

2. Minister's Directive

Once the Minister of Finance has the authority under an OIC, a Minister's Directive can authorize the OFA to lend to IESO. The Directive can outline specific terms and conditions as needed.

3. Executed Credit Agreement

With a Minister's Directive approved, the OFA and IESO can work to execute a credit agreement, subject to any terms and conditions of the Directive and any policy considerations.

APPENDIX G: FINANCIAL, LEGAL, ACCOUNTING RISK ASSESSMENTS

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

OFHP Legislation

The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in the electricity system are allocated fairly among present and future generations of consumers. Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the (GA), including:

- Fair Allocation Amount: Is a calculation and allocation of clean energy costs over time. It is expected that the calculation would lead to decreased rates in the near term with rates higher than forecast in the long term. The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager (OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
- Fair Adjustment: Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for the period July 1, 2017 to April 30, 2018. Under the legislation, the OEB must determine the amount within 15 business days of the legislation coming into force. The Fair Adjustment also allows the Lieutenant Governor in Council (LGIC) to make regulations prescribing electricity rates for the period May 1, 2018 to June 30, 2021.
- Clean Energy Adjustment: Is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period. This is an adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing. IESO and each electricity distributor will act as an agent for the financing entity to impose, invoice and collect the clean energy adjustments.

The Ministry has prepared legislation and regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recoverable.
- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

In particular, the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost. Key elements that support this financing structure include:

- OPG issuances of subordinated debt to the SPV/Trust representing up to 49% of total borrowing; and
- Conditional (springing) guarantees by the Province to provide a backstop in the event of specific and limited events (e.g., changes to legislation that harm investor interests).

Note: The ability to finance and the cost of financing will only be known with certainty once OPG takes this structure to market.

OPG Financing / OPG Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The proposed legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected over four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a “Regulatory Asset”.

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.
- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG’s capital structure:

- OPG would require monthly “equity injections” from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;
- Funds from the Province would flow from the Ontario Financing Authority (OFA); and
- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.
- It is anticipated that the initial equity injection would take place as early as June 2017.

Through PRRT, the Ministry of Energy received approval for the creation of an operating asset ”OPG Share Purchase” and expenditure increase of $1.1billion in 2017-18 within Vote 2905-5, which is based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty. This approval is pending passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG’s business plan process. Note: While included in the business plan, equity requirements will not form part of the Ministry of Energy’s concurrence process.

For future funding requirements, the Ministry will seek appropriation through the PRRT process.

OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV / Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

In addition, given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term.

- Should electricity demand be higher than forecast as a result of greater electrification, the cost of paying off the debt will be spread over a greater pool of consumption and decreasing future costs for individual ratepayers. Note: The reverse is also true in regards to decreasing demand.
- Should interest costs increase from the assumed 5%, total borrowing costs would rise. Given that this is a unique offering, managing investor confidence will be key to ensure borrowing costs don't rise. Note: The reverse is also true in regards to interest rates being lower than assumed.

IESO's Credit Facilities

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, IESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The proposed legislation establishes mechanisms to enable the funding, sale and transfer between IESO and OPG that respond to the accounting requirements and advice outlined in the March 1, 2017 Cabinet Submission, such as concerns regarding consolidation by the Province.

Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This satisfies accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

KPMG

The Ministry has worked closely with the Independent Electricity System Operator (IESO) and KPMG on the accounting considerations of GA Refinancing (i.e., legislation, applications of accounting standards/principles, minimizing consolidation risks and ability to establish a regulatory asset).

In particular, the proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. Key elements include:

- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset".
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.

In addition, KMPG provided some commentary on the accounting requirement for the "derecognition" of the regulatory asset once it's sold to OPG SPV/Trust. KPMG advised that the regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG

The Ministry has worked closely with the Ontario Power Generation (OPG) and E&Y, on the accounting requirements to enable GA Refinancing with respect to consolidation (i.e., legislation, applications of accounting standards/principles, establishing a special purpose vehicle (SPV) / Trust).

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.

- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.
- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.

Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:

- The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
- If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
- By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
- The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill provides for provincial assurances, guarantees and a statutory cause of action.

The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
- The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted. **A statutory cause of action** may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry retained Blakes to provide external legal advice in the development of the legislation.The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

Navigant Analysis

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. Specifically, Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

APPENDIX H: OVERVIEW OF RISKS

Prepared by TBS staff, the following chart provides an overview of strategic (versus operational) risks to inform the approval/decision making process regarding the proposed legislation. Each part, GA Partial Refinancing & Electricity social programs, is a separate table.

Global Adjustment Partial Refinancing:

Objective: Provide immediate ratepayer relief by capping rate increases at Consumer Price Index (CPI) for four years and refinancing GA costs over a longer period of time. Develop and implement a financing structure that increases provincial borrowing, but has no impact on annual provincial surplus/deficit.

Risk	Level of Risk	Risk Response
The determination of the appropriate legal and accounting treatment to be applied to the financing model may result in the costs of GA smoothing being allocated to the province.	**Risk Likelihood:** Possible **Risk Impact:** Critical **Time Scale:** 6 to 12 months **Rationale:** • The structure of the GA deferral was designed to result in an increase in provincial borrowing, no increase in net debt and no impact on surplus/deficit. • The proposal assumes GA refinancing does not have a fiscal impact because the legal authority and accounting treatments are met. • If a favourable legal and accounting treatment is not implemented, there would be a negative impact on the province's fiscal plan of $2.5B in 2017-18 and rising. • Rating agencies and investors in Province's debt may view all of the borrowing as an obligation of the Province, which could put pressure on the Province's credit rating and overall borrowing capacity. • Proposed structure may result in negative response from Ontario Auditor General (OAG) due to previous concerns regarding recognition of rate regulated assets and liabilities. The OAG may take this into account when the provincial books are audited. • Initial assessment of the accounting considerations suggests that the proposed model is in alignment with established accounting standards.	Risk can be mitigated by: • Commissioning external opinions on the legal, fiscal and accounting requirements, which could be used by the Province to justify structure of financial model and be utilized in discussions with the OAG.

Risk	Level of Risk	Risk Response
Uncertainty in the financial model due to dependence on assumptions that are subject to potential volatility may result in higher than anticipated future costs for rate payers and the province.	**Risk Likelihood:** Likely **Risk Impact:** Major **Time Scale:** More than 36 months **Rationale** • The financial model developed is a high level and aggregate model, which is built on independent forecasts. There are a large number of assumptions built into the model explicitly and implicitly (as a larger number of assumptions are embedded into the other forecasts that are used as inputs into the model). • The proposal financing structure will accrue total interest of about $26.2 billion, which is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the financial impact of potential changes in variables used in the financial models. • Building permissive language in the legislation and regulations to allow for timely course correction mechanisms (i.e. higher payment amounts and/or rate increases) • Regulations to prescribe the methodology to be applied by the Ontario Energy Board (OEB) to determine electricity rates in response to potential deviation from forecasted financing plans.
A legal determination that the Province is spreading the costs of GA financing in order to lower the price in the short term by increasing the price in the long term may result in the GA charge characterized as a tax and deemed unconstitutional.	**Risk Likelihood:** Medium **Risk Impact:** High **Time Scale:** Long-Term (More than 36 months) **Rationale** • If characterized as a tax, the GA charge could be subject to legal challenge and struck down as unconstitutional, allowing consumers to recover their payments. • Likelihood dependent on the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year. The bigger the reduction in charges to current consumers, the higher likelihood of the risk being realized. • Internal and external expertise have provided opinion that the proposed structure is constitutionally sound in the short-term (2017-18), but the likelihood of the risk increases in the proceeding four years, which will impact commitment to keep rate increase in line with CPI. • If annual increases in bills or the commodity prices are subject to caps, additional borrowing/provincial funding may be required.	Risk can be avoided by: • Imposition of a valid tax. • Change in policy (i.e. allow greater rate increases during the remainder of the rate mitigation phase and higher increases and payment amounts throughout rate increase and payment phase). • Use of public funds to ease pressure. Risk can be mitigated by: • Improve forecasting model and close monitoring of costs and changes in variables built into model. • Analyze the costs and benefits of the long lived assets (specifically usability beyond a 20 year period) to assist in determining a supportable GA deferral structure. • Draft legislation with built-in provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court.

Risk	Level of Risk	Risk Response
Financing the costs of GA smoothing through OPG SPV/Trust and the volatility of interest rates may increase the cost of GA smoothing and/or require additional provincial funding.	**Risk Likelihood:** Possible **Risk Impact:** Moderate **Time Scale:** 12 to 24 months **Rationale** • The proposed structure will be reviewed by credit agencies to allow OPG to borrow in the open market. Depending on assessment, there may be an impact on interest rate for borrowing, the amount of equity/funding the province may need to provide and the requirement for a provincial guarantee. • As the OPG SPV/Trust will be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • If the Trust can't raise the full funding requirements, additional cash injections would be required. If the borrowing cap of $28B is reached sooner than forecast, the province may have to provide incremental funding to float the program to 2047. • Beyond 2022, when steep increases are required, there will likely be additional pressure on the government to offset a part of the scheduled increases. • Risk that credit rating agencies may perceive OPG SPV/Trust's borrowing as debt supported by Province, impacting Province's ratings and cost of borrowing.	Risk can be avoided by: • Province providing a potential guarantee for the cost of borrowing – however, would redirect risk back to the Province and negate benefits of proposed financing structure. Risk can be mitigated by: • Equity injections from the province to support OPG as the owner and manager of GA refinancing and allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • Proposed legislation to enable GA refinancing has been draft with input from third-party financers. Provides a 'narrow' provincial guarantee and ensuring that debt holders have the right of action against a future government to recover the amount outstanding including interest, fees, expenses and any damages.

Electricity social programs (Enhancing Electricity Support & Conservation Programs):

Objective: Shift funding of existing and new electricity support programs (RRRP, OESP, Affordability Fund, First Nations Credit) from rate to tax base.

Risk	Level of Risk	Risk Response
Uncertainty in forecasting due to exposure to changes and/or volatility (i.e. interest rates, electricity usage patterns, and distribution costs) may result in higher than anticipated fiscal impacts for the Province.	**Risk Likelihood:** Possible **Risk Impact:** Major **Timescale:** 12 to 24 months **Rationale:** • The energy sector is complex and a number of key assumptions used as inputs into forecasting model are variables/forecasts themselves, resulting in a high inherent risk that cost estimates are inaccurate. • Fiscal projection is highly dependent on factors which can fluctuate from year to year, including: o electricity usage; o distributions costs; and o consumer consumption patterns that may change due to extreme weather or other factors. • Fiscal projection is subject to knowledge of future distribution costs and dependent on submission of cost of service applications by Hydro One and LDCs. o Enhanced RRRP may create disincentives from the eligible LDCs towards productivity and performance improvements and/or cause ineligible LDC's to drive up distribution costs to gain access to program.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the financial impact of potential changes in variables used in the financial models.

Subject: DRAFT RAN Ontario Fair Hydro Plan

Hi everyone,

In advance of our 11:45 am meeting with Karen - please find attached our latest draft TB/MBC assessment note for the OFHP along with the TB submission and LRC submission received from Energy.

Thanks,
Felix

Attachment 4: GA Consolidated Memo_May 2_FINAL.PDF

Hi Felix and James,

Please find attached the final TB submission for the Ontario Fair Hydro Plan item. Also attached are the materials for the appendix.

This is Minister signed and hard copies will be delivered first thing on Monday morning.

Thanks,

Martin

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

May 9, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on following:

    i. Implementation of Global Adjustment (GA) Refinancing;

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, Ontario Electricity Support Program and First Nations On-Reserve Delivery Credit); and

    iii. Expansion of Industrial Conservation Initiative (ICI).

2) APPROVE the Ministry funding a media buy procurement with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record.

3) NOTE the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

4) NOTE the Ministry of Energy will return to TB/MBC to request a transfer of funds to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to fully recover the costs for the public education campaign.

5) APPROVE the creation of a new transfer payment line entitled "Price Mitigation Support Initiatives" under Vote/Item 2905-01, Electricity Price Mitigation, with a $1,000 placeholder, to support future rate mitigation initiatives.

Note: The Independent Electricity System Operator (IESO) is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current lines of credit with the OFA and OEFC.

2.0 PURPOSE OF REQUEST

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which will lower bills by 25 per cent for a typical residential consumer, starting in the summer of 2017. Up to half a million small businesses and farms are also expected to benefit. Any rate increases for residential consumers over four years would be held to the rate of inflation. Note: These measures include the 8 per cent rebate introduced in January 2017 and builds on previously announced initiatives to deliver broad-based rate relief on electricity bills.

CONFIDENTIAL

As part of the OFHP approval process, TB/MBC requested that the Ministry "report back" before legislation to enable OFHP was introduced on the following items:

1) GA Refinancing;

2) Social Programs; and

3) ICI Expansion.

In addition to the report back, the Ministry is also requesting the creation of a new transfer payment line, "Price Mitigation Support Initiatives" in Vote 2905-01. The purpose for this is to provide the Ministry an appropriate transfer payment line to support future activities and initiatives around electricity price mitigation for Ontarians.

There is no fiscal impact associated with this request. All new funding placed into the transfer payment lines will be offset by services dollars previously approved within the Ministry's multi-year allocation.

In February 2017, the Ministry reported back to TB/MBC on the details related to the establishment of the new Affordability Fund announced in the OFHP. In April 2017, the Affordability Fund Trust was established. It is expected that electricity distributors will be able to begin applying to the Affordability Fund Trust in Summer 2017.

The Ministry has developed proposed legislation to implement key components of OFHP by summer 2017, and address financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations to enable implementation of OFHP.

1. GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity prices increasing.

<u>Proposal</u>

On March 2, 2017, as part of OFHP, it was announced that a portion of the GA would be refinanced in order to fairly allocate costs across present and

future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. For example, by recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.

Under this proposal, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017. In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- Developed proposed legislation to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations;

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY);

- Launched a third party research project to assist with implementation of GA refinancing; and

- Developed comprehensive risk-based costing, including forecast models and sensitivity tests on key assumptions.

Proposed legislation to enable GA refinancing is planned for a May 2017 introduction.

CONFIDENTIAL

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The proposed legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

Proposal

The Government is proposing to introduce legislation and regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.

The legislative proposal enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers.

- R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province.

CONFIDENTIAL

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

Proposed legislation will enable tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

Proposed legislation enables the establishment of a maximum monthly base distribution charge for those prescribed customers. If the proposed legislation is passed, the mechanism to set this charge will be established in regulation.

On-Reserve First Nations Delivery Credit

On July 12, 2016, the Province and First Nations in Ontario announced an agreement-in-principle for the Province to sell to First Nations for their collective benefit, shares of Hydro One Limited.

The Province would sell up to approximately 15 million shares (2.5 per cent of total current outstanding Hydro One common shares), depending on the level of First Nation participation, to a new collective investment fund owned by First Nations.

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The proposal is premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program proposal involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation.

The resulting First Nations Delivery Credit is a reflection of First Nation leadership on this issue and an example of the Political Accord coming to life.

CONFIDENTIAL

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program from the rate base to the tax base, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid by all Ontario consumers on May 1, 2017 ($0.0011 per kilowatt-hour of power consumed). On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will also come into effect on May 1, 2017.

The amendments to the *Ontario Energy Board Act, 1998* pertaining to OESP will move the program funding from the rate-base and transfer it to the tax-base, and enable alignment of the OESP with social assistance programs delivered by the Ministry of Community and Social Services.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB sets amount that LDCs charge for RRRP to all customers. Once the regulatory mechanism is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. Change to the funding structure of the program does not require any additional implementation risks or efforts.

CONFIDENTIAL

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers would be prescribed in regulation, if the legislation is passed. Additionally, the Ontario Energy Board would be empowered by regulation to determine the rate at which affected LDCs would be harmonized.

The efforts required to implement the program will fall upon the impacted LDCs who will need to adjust their billing systems in order to carry out the program.

On-Reserve First Nation Delivery Credit

A new regulation will need to be passed to set out the program particulars including eligibility for the program.

The LDCs will need to enter into communication plans in order to work with local First Nations Band Councils and to increase awareness of the delivery credit to all eligible consumers.

There are transitional provisions for both the enhanced rate protection and First Nations Delivery Credit that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.

Ontario Electricity Support Program

A legislative amendment to the *Ontario Energy Board Act, 1998* will allow funding to shift from the rate base to the tax base. The amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

CONFIDENTIAL

3. ICI Expansion:

Ontario is committed to providing competitive electricity rates for energy intensive consumers in the manufacturing sector while also promoting electricity conservation.

In January 2011, the Industrial Conservation Initiative (ICI) was announced to help large industrial electricity power users better manage their electricity costs while reducing electricity consumption during peak periods.

ICI provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by about one-third. Reducing peak demand increases the reliability of the electricity system, reduces greenhouse gas (GHG) emissions and helps defer the need to procure new resources. There are currently about 300 participating consumers who collectively reduced Ontario's peak demand by an estimated 1,000 MW in 2015.

Proposal

On March 2, 2017, as part of OFHP), the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

- As of January 1, 2017, the regulatory amendments came into effect to make ICI available to electricity consumers with an average monthly peak demand greater than 1 MW. The lowering of the ICI threshold to 1MW and removal of sector restrictions was announced in the 2016 Speech from the Throne.

Implementation

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

- Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and Demand Management (CDM) programs and/or Ontario Climate Change Solutions Deployment Corporations (OCCSDC) programs and pilots.

CONFIDENTIAL

In addition, the Ministry has retained the Ontario Chambers of Commerce (OCC) and the Canadian Manufacturing and Exporting (CME) to undertake targeted stakeholder outreach on ICI and other cost saving energy programs/measures available to the commercial and industrial sectors in Ontario.

3.0 KEY CONTEXT

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would reduce the electricity bills of residential consumers by 25 per cent on average starting in summer 2017. In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and bend the future cost curve of electricity (see Background for details).

On April 20, 2017, the OEB announced new Regulated Price Plan (RPP) rates effective May 1, 2017 that include a portion of the bill reduction proposed under OFHP and the shifting of the funding of the OESP to provincial revenues. The full reduction from OFHP is expected to be addressed through a July 1st RPP rate adjustment.

The Ministry's report back to TB/MBC focuses on the following OFHP initiatives:

1) GA Refinancing:

As part of OFHP, it was announced that a portion of the GA would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

- Today's electricity consumers have been responsible for the costs of investments in developing the clean, modern and reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. There is an opportunity to recognize the long-term benefit of these generation assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.

Refinancing a portion of GA provides significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

CONFIDENTIAL

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing (i.e., dealers);

- Developed proposed legislation to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: The Ministry is also preparing a number of supporting regulations;

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY);

- Launched a third party research project to assist with implementation of GA refinancing; and

- Developed comprehensive risk-based costing, including forecast models and sensitivity tests on key assumptions.

Financing, Accounting and Legal Risk Considerations / Mitigations

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

OFHP Legislation

The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in the electricity system are allocated fairly among present and future generations of consumers. Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the (GA), including:

- Fair Allocation Amount: Is a calculation and allocation of clean energy costs over time. It is expected that the calculation would lead to decreased rates in the near term with rates higher than forecast in the long term. The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager

CONFIDENTIAL

(OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister.

- Fair Adjustment: Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for the period July 1, 2017 to April 30, 2018. Under the legislation, the OEB must determine the amount within 15 business days of the legislation coming into force. The Fair Adjustment also allows the Lieutenant Governor in Council (LGIC) to make regulations prescribing electricity rates for the period May 1, 2018 to June 30, 2021.

- Clean Energy Adjustment: Is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period. This is an adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing. IESO and each electricity distributor will act as an agent for the financing entity to impose, invoice and collect the clean energy adjustments.

The Ministry has prepared legislation and regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recoverable.

- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

In particular, the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost. Key elements that support this financing structure include:

CONFIDENTIAL

- OPG issuances of subordinated debt to the SPV/Trust representing up to 49% of total borrowing; and

- Conditional (springing) guarantees by the Province to provide a backstop in the event of specific and limited events (e.g., changes to legislation that harm investor interests).

Note: The ability to finance and the cost of financing will only be known with certainty once OPG takes this structure to market.

OPG Financing / OPG Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The proposed legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected over four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a “Regulatory Asset”.

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.

CONFIDENTIAL

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG's capital structure:

- OPG would require monthly "equity injections" from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;

- Funds from the Province would flow from the Ontario Financing Authority (OFA); and

- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.

- It is anticipated that the initial equity injection would take place as early as June 2017.

Through PRRT, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and expenditure increase of $1.1billion in 2017-18 within Vote 2905-5, which is based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty. This approval is pending passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG's business plan process. Note: While included in the business plan, equity requirements will not form part of the Ministry of Energy's concurrence process.

For future funding requirements, the Ministry will seek appropriation through the PRRT process.

OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV / Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

In addition, given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term.

- Should electricity demand be higher than forecast as a result of greater electrification, the cost of paying off the debt will be spread over a greater pool of consumption and decreasing future costs for individual

CONFIDENTIAL

ratepayers. Note: The reverse is also true in regards to decreasing demand.

- Should interest costs increase from the assumed 5%, total borrowing costs would rise. Given that this is a unique offering, managing investor confidence will be key to ensure borrowing costs don't rise. Note: The reverse is also true in regards to interest rates being lower than assumed.

IESO's Credit Facilities

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, IESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The proposed legislation establishes mechanisms to enable the funding, sale and transfer between IESO and OPG that respond to the accounting requirements and advice outlined in the March 1, 2017 Cabinet Submission, such as concerns regarding consolidation by the Province.

Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This satisfies accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.

CONFIDENTIAL

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

KPMG

The Ministry has worked closely with the Independent Electricity System Operator (IESO) and KPMG on the accounting considerations of GA Refinancing (i.e., legislation, applications of accounting standards/principles, minimizing consolidation risks and ability to establish a regulatory asset).

In particular, the proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. Key elements include:

- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset".

- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.

In addition, KMPG provided some commentary on the accounting requirement for the "derecognition" of the regulatory asset once it's sold to OPG SPV/Trust. KPMG advised that the regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG

The Ministry has worked closely with the Ontario Power Generation (OPG) and E&Y, on the accounting requirements to enable GA Refinancing with respect to consolidation (i.e., legislation, applications of accounting standards/principles, establishing a special purpose vehicle (SPV) / Trust).

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust,

CONFIDENTIAL

additional work will be done through the regulations and supporting agreements/documents.

- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.

- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.

Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:

- The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.

- If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-

CONFIDENTIAL

year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).

- By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.

- The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill provides for provincial assurances, guarantees and a statutory cause of action.

The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be

CONFIDENTIAL

imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and

- The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted.

A statutory cause of action may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

Navigant Analysis

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. Specifically, Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

CONFIDENTIAL

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The proposed legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

If passed, the government proposes to identify Hydro One R2 customers, as having their RRRP funded through appropriated funds.

Distribution Rate Protection

New Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, would be established through proposed legislative amendments under the *Fair Hydro Act, 2017,* and the creation of consequential regulations. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhance protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

Eligible on-reserve customers will receive a 100% delivery credit or the elimination of their monthly service charge on their electricity bills. The eligibility requirements will be prescribed under regulation.

There are 11 LDCs identified by OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One,

CONFIDENTIAL

Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 customers may be eligible.

Ontario Electricity Support Program (OESP)

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.

OESP credits vary by income level and family size, and there are two credit scales that include:

- The basic program credit ranges from $30/month to $50/month.
- An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or use certain electrically intensive medical devices.

Ontario's Fair Hydro Plan (OFHP) committed to move the program from the rate base to the tax base, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

The proposed legislative changes will address the move to the tax base, and regulatory changes approved by Cabinet on April 10, 2017 will enable the expansion of the OESP effective May 1, 2017. Discussions are ongoing with the OEB and MCSS on aligning OESP delivery with other social assistance programs.

<u>Roles and Responsibilities</u>

Rural or Remote Rate Protection

The roles and responsibilities of the Board remain the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The Board would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would once again need to appropriate money from the legislature to cover the costs of administering the program.

CONFIDENTIAL

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers. In addition, ENERGY would need to work with LDCs, Chiefs of Ontario and Band Councils to ensure the program is delivered to all eligible consumers.

Ontario Electricity Support Program

The OEB will continue to the deliver the OESP under the current legislative framework until the variance account is depleted. When legislative changes to shift the program from the rate base to the tax base are proclaimed, the OEB will continue to administer the program, but certain decision making responsibilities and oversights will shift to the Minister of Energy.

MCSS will begin supporting OESP uptake by helping social assistance clients to apply to the OESP. Legislative and regulatory changes will enable this work.

The IESO will continue to manage payments to utilities, unit sub-meter providers, and the OEB in relation to OESP credit delivery and program administration costs. When legislative changes are proclaimed, IESO will begin reporting costs to the Ministry to support forecasting and audit.

3) ICI Expansion:

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and “1114”) in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

In addition, the Ministry has retained the OCC and the CME to undertake targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants. **Note:** The extent of the impact will depend on the uptake in the newly

CONFIDENTIAL

expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

4.0 BACKGROUND

Decarbonizing and Modernize Ontario's Energy System

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity prices increasing.

The Ministry of Energy has taken a number of actions to lower electricity costs for all consumers by:

- Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices; and

- Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

Following the 2016 Speech from the Throne, several actions were announced to further reduce electricity costs:

- As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8 per cent.

- Expanded support to eligible rural consumers by updating Rural or Remote Rate Protection (RRRP) with the additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8 per cent rebate.

- Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

- Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in savings.

CONFIDENTIAL

- Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – average annual savings of $15 million.

Ontario's Fair Hydro Plan

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP). The OFHP includes the following:

- Refinancing the GA over a longer period for Regulated Price Plan (RPP) eligible consumers, including residential consumers and most small businesses and farms.

- Shifting cost recovery for Rural or Remote Rate Protection (RRRP) and Ontario Electricity Support Program (OESP) from electricity bills to the tax base, lowering the regulatory charges paid by ratepayers. Consumers of all sizes would benefit from this change.

- Helping vulnerable electricity consumers by enhancing electricity support programs, including:

  - Broadening RRRP to provide delivery charge relief for the customers of the local distribution companies (LDCs) with the highest delivery charges. We currently support approximately 350,000 Ontarians living in rural or remote areas through RRRP. The enhancement would extend relief to approximately 800,000 households in total.

  - Expanding the OESP, which provides relief directly on the bills of low-income consumers who have applied and meet the eligibility criteria. The expansion would increase OESP credits by 50 per cent and allow more Ontarians to benefit from the program.

  - Establishing a new Affordability Fund, which would provide financial support to lower-income Ontarians who are not eligible for the Home Assistance Program to make home energy efficiency improvements, helping to manage their energy costs.

  - Establishing a Delivery Credit to eliminate delivery charges for all First Nations people living on reserve.

- Expanding the Industrial Conservation Initiative (ICI), which allows large consumers to reduce their electricity bills by up to one-third by reducing their consumption during peak hours. The expansion will allow manufacturers and greenhouses between 500 kW and 1 MW to

CONFIDENTIAL

participate, in addition to the consumers over 1 MW that are already eligible.

- OFHP also committed to reducing system costs by improving sector efficiency and modernizing Ontario's electricity market, working in collaboration with the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB).

Legislation to Enable the Refinancing of Global Adjustment

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the Ministry has developed proposed legislation (and is working on supporting regulations) that outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;
- A detailed Preamble, Purpose and Definitions;
- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;
- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and
- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the Global Adjustment.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the proposed legislation.

CONFIDENTIAL

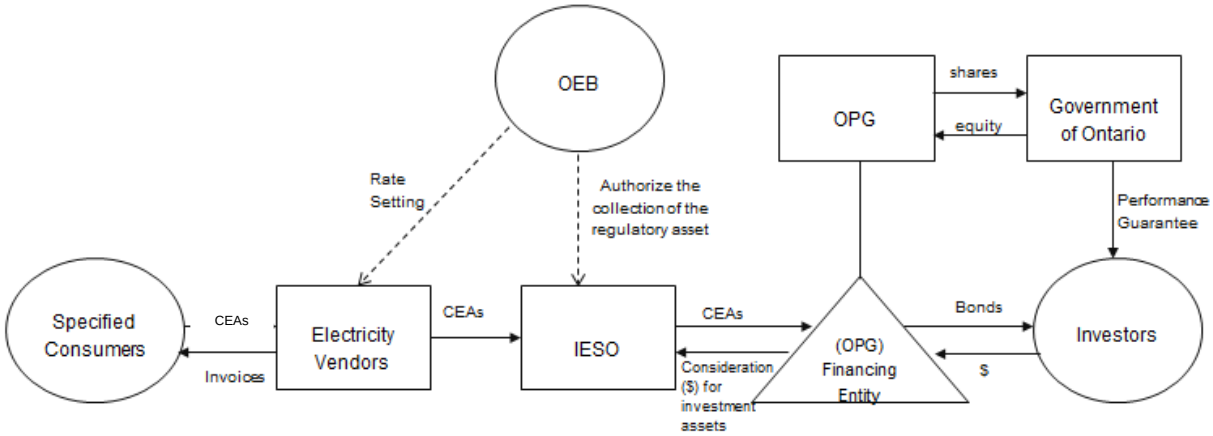
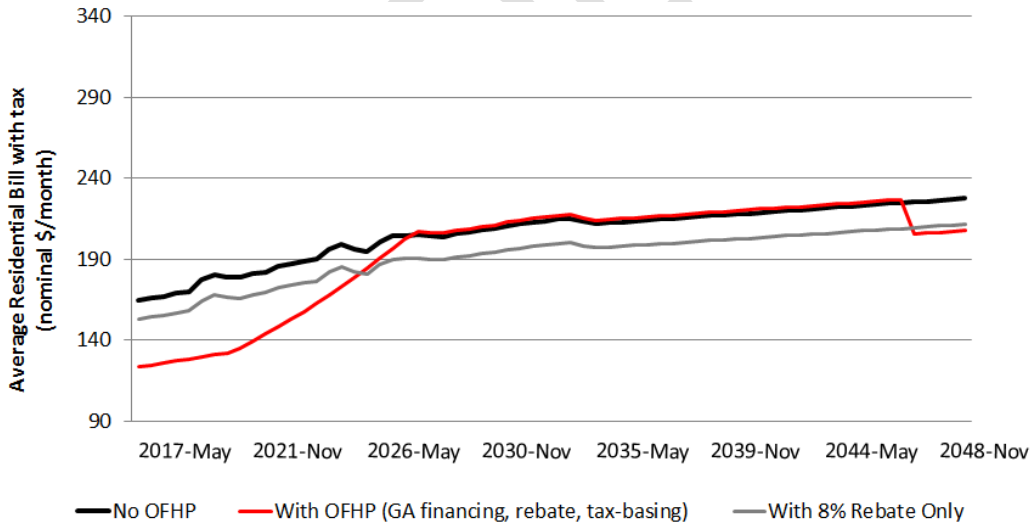
GA Refinancing Implementation Model – Overview

The diagram below outlines how the refinancing of GA would be implemented:



Note: CEAs are “clean energy adjustments”.

Multi-Year Profile of GA Refinancing / Assumptions



The chart above shows the expected multi-year profile under GA Refinancing for each Regulated Price Plan (RPP) period. In the first year, residential bills are projected to be 25 per cent lower as result of the OFHP. In the early years, bills increases are held to the rate of inflation – assumed to be 2% per year in the chart above. From July 1, 2021 onwards, prices increase at a higher rate compared to the first four years on the OFHP.

In the medium to longer term, residential bills exceed what they would have been but for the OFHP. However, in any given year, a typical residential bill under the OFHP cannot exceed what it would have been without OFHP by more than 10 per cent.

OPG's Financing Structure / Equity Financing

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected during four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a "Regulatory Asset".

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.

- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an "Investment Asset".

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG's capital structure:

- OPG would require monthly "equity injections" from the Province;

- Funds from the Province would flow from the Ontario Financing Authority (OFA); and

CONFIDENTIAL

- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.

Global Adjustment – Overview

The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.

It is via GA that much of the costs of investments in developing a clean, modern and reliable electricity system with a diverse supply mix are recovered.

The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to improve system reliability and replace coal-fired capacity. Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.

The majority of the province's electricity generators are under 20-year contracts and account for under 50% of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20 years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through GA while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.

The Ministry is proposing in legislation to recognize the long-term benefit of specific assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. The proposed legislation outlines how costs would be fairly allocated among eligible consumers over time.

OEB's Regulated Price Plan (RPP) – Overview

On April 20, 2017, the OEB announced new Regulated Price Plan (RPP) rates effective May 1, 2017 that include a portion of the bill reduction proposed under OFHP and the shifting of the funding of the Ontario Electricity Support Program (OESP) to provincial revenues. The full reduction from OFHP is expected to be addressed through a July 1st RPP rate adjustment.

CONFIDENTIAL

Social Program

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 335,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.
- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.9 million.
- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high distribution costs and are often faced with significantly higher than average bills.

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Energy is proposing legislative amendments that will broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

CONFIDENTIAL

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

Ontario Electricity Support Program (OESP)

The OESP launched on January 1, 2016. By the end of March 2017:

- Almost 192,000 have been enrolled in the program, which is approximately 1/3 of all potentially eligible low-income customers in Ontario.

- Over $60 million in credits have been provided to vulnerable consumers.

- 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.

CONFIDENTIAL

Industrial Conservation Initiative (ICI)

Ontario is committed to providing competitive electricity rates for energy intensive consumers in the manufacturing sector while also promoting electricity conservation.

In January 2011, ICI was announced to help large industrial power users better manage their electricity costs while reducing electricity consumption during peak periods. ICI provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by about one-third. Reducing peak demand increases the reliability of the electricity system, reduces greenhouse gas (GHG) emissions and helps defer the need to procure new resources. There are now about 300 participating consumers who collectively reduced Ontario's peak demand by an estimated 1,000 MW in 2015.

Currently, ICI is available to electricity consumers who have an average monthly peak demand greater than 1 MW (i.e., Class A). Smaller electricity consumers – known as “Class B” consumers – are charged GA based on their total consumption regardless of when it occurs.

ICI provides a strong incentive for participating consumers to reduce their consumption during peak hours to reduce their cost. Note: ICI is administered by the Independently Electricity System Operator (IESO) and Local Distribution Companies (LDCs).

As of January 1, 2017, the regulatory amendments came into effect to make ICI available to electricity consumers with an average monthly peak demand greater than 1 MW. The lowering of the ICI threshold to 1MW and removal of sector restrictions was announced in the 2016 Speech From the Throne.

On March 2, 2017, as part of Ontario’s Fair Hydro Plan (OFHP), the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

- Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and CDM programs and/or OCCSDC programs and pilots.

CONFIDENTIAL

5.0 TIMING

As part of OFHP, the government announced that eligible electricity consumers would see the reduction to their electricity bills in the summer of 2017 (i.e., July).

On April 20, 2017, OEB announced that it has adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing. The Ministry anticipates that the OEB will set an interim rate adjustment following the passage of the legislation to enable GA Refinancing that would account for the full impact (i.e., 25 per cent).

The Ministry is planning to introduce legislation in early May 2017 and develop supporting regulations in early summer 2017 to enable GA Refinancing. Note: The OPG will require legislation and regulations to be in place to support its discussions with rating agencies and third-party financing.

The timeline for all of the social programs, with the exception of the OESP, is identical as the program implementation for the regulations that follow to be passed in unison for July 1, 2017.

Some of Ontario's Fair Hydro Plan commitments for the OESP came into effect on May 1, 2017 (e.g., removal of the OESP charge from customer bills; expanding credit amounts and program eligibility). Remaining changes associated with moving the program from the rate-base to the tax-base will be proclaimed at a later date when the OESP variance account is depleted. Additional regulatory amendments needed to implement this legislative change will come into effect on the same date.

As part of the OFHP, the government also announced the expansion of ICI to enable greater participation from the manufacturing sectors in Ontario.

The April 2017 ICI amendments enabled new electricity consumer's time to opt in to the expanded program ahead of the next ICI billing period (i.e., July 1, 2017). Note: Under ICI, as set out in Ontario Regulation 429/04, eligible electricity consumers must opt in to the ICI program on or before June 15 of each calendar each year.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

As it relates to the "equity injection", these changes are expected to have no impact on the Provincial net debt position as the Province's increased investment in OPG will be offset by the incremental borrowing to fund the

CONFIDENTIAL

equity injections. The Province has assumed incremental income from OPG arising from interest income on the subordinated debt which OPG will lend to the OPG Special Purpose Vehicle (SPV)/Trust. This offsets forecast increases in Provincial interest on debt expenses associated with equity injections.

Proposed legislation to enable GA refinancing has been drafted to mitigate financing, accounting and legal risks. In addition, IESO and OPG have sought independent advice and confirmation with respect to financing, accounting and legal matters.

Note: There would be a significant impact on provincial net debt and the fiscal plan if the legal, financing and accounting conditions change.

2) Social Programs:

As approved in the TB/MBC submission of Mach 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection	344,000,000
Ontario Electricity Support Program	140,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The IESO manages a variance account for the OESP, which holds the difference between the amount of OESP charge collected from the rate base, and the amount of OESP paid out in the form of credits. The amount in the variance account is about $109 million as of March 1, 2017. These funds will be used to fund the OESP program until the variance account is depleted, at which point the transfer payment line will be used to finance the program costs. Due to the potential range in costs of the OESP, which will depend on program uptake and any costs associated with supporting increased participation, the set allocation is required despite the variance account.

ENERGY will report back as part of PRRT with an update on out-year projections following analysis on rate applications before the Ontario Energy Board.

3) ICI Expansion:

Since ICI is funded through the electricity rate-based and not the provincial tax-base, ICI expansion will have no direct financial impact for the Province.

With respect to rate-base impacts, expanding ICI to consumers in the manufacturing and greenhouse sectors (i.e., between 500 kW and 1 MW) is

CONFIDENTIAL

expected to result in a modest increase on electricity bills for non-ICI participants starting in July 2017. For example, preliminary analysis estimates that the increase on a typical residential bill would by up to 0.66% or just over $1/month based on a 2016 bill of about $158.

Note: The extent of the non-ICI participant impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting in July 2017.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16 and April 19, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, 2017 to discuss implementation.
Future Industrial Conservation Initiative (ICI) Participants	• On March 9, 2017, the Ministry posted an ICI expansion proposal for comment on the Regulatory Registry for stakeholder comment. The Ministry has received 7 comments. • The Ministry is also working with the IESO, OCC and the CME regarding targeted outreach in relation to the ICI expansion.

8.0 RISK ASSESSMENT AND MITIGATION

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line.
Managing Interest Cost Risks	M	H	• Proposed legislation has been drafted with input from third-party financers (i.e., dealers). • OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%).
Provincial Guarantee is Triggered	L	H	• The proposed legislation sets out that the province would provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also establishes assurances that the Province would: - Through the Minister of Finance as provided by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and - Not hinder the charging and remittance of the under-collection of GA refinancing (i.e., through a provincial undertaking and guarantee).
IESO Failure to Establish a Regulatory Asset	L	H	• Under the proposed legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to do create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• Proposed legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • The degree of constitutional risk is in direct proportion to the extent the government is not able to show a

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date.
Social Program Cost Estimating	M	M	• OESP costs will depend on uptake of the program, which will be impacted by the 50% increase in credits, enhanced eligibility, and work with MCSS on aligning OESP delivery with their social assistance programs. • Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operatory (IESO) to ensure access to data for regular forecasting • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program.

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.
3) Industrial Conservation Initiative (ICI) Expansion			
Perceived Fairness Between Electricity Consumer Classes	M	L	• The expansion of the ICI program include electricity consumers in the manufacturing and greenhouse sectors with average monthly peak demand greater than 500 kW and less than 1 MW will impact those consumers that remain outside the program (i.e., Class B and RPP electricity consumers). • Increases to electricity bills will occur for non-ICI participants to ensure full cost recovery in the electricity system. Note: the extent of the impact on other non-ICI participants would depend on the uptake in the newly expanded ICI, but is expected to be modest. • Restricting eligibility to the manufacturing and greenhouse sector helps to ensure that the expanded ICI is focused on those consumers which are most impacted by GA costs and associated economic competitiveness pressures from neighbouring jurisdictions.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the proposed legislation is model on a those used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

CONFIDENTIAL

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

The ICI program is unique to Ontario and the proposed expansion would not directly impact on other jurisdictions.

10.0 PERFORMANCE MEASURES

The proposed legislation sets parameters within which refinancing of GA can proceed. These parameters include the initial percentage reduction in eligible electricity rates, the number of years that rates will increase at a rate equivalent to CPI and the length of time within which the recovery of funds must take place (i.e., by 2047). In addition, OPG's existing financial reporting process provides an additional framework for monitoring and reporting of OPG's role in OFHP.

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. The Ministry will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing.

With respect to ICI, the Ministry regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting in July 2017.

11.0 COMMUNICATIONS

ENERGY has developed a comprehensive, two-phase media campaign to increase awareness of Ontario's existing rate mitigation measures and new proposed electricity initiatives under Ontario's Fair Hydro Plan OFHP):

- Phase I – Launched on March 13, 2017 and included radio and digital media in English and French. This was followed by multi-cultural extensions on radio in 19 languages. Phase I of the media campaign is complete.

- Phase II – Is expected to launch early Summer 2017 and will include television, radio, print, digital and social media advertising support.

ENERGY received TB/MBC approval on February 6, 2017 for an exemption from the competitive acquisition requirement under the *Procurement Directive on*

CONFIDENTIAL

Advertising, Public and Media Relations, and Creative Communications Services for the development of the electricity cost reduction public education campaign. Through this, ENERGY acquired the services of Rain43, an Agency of Record under Advertising Review Board's corporate vendor of record arrangement for advertising, public and media relations, and communication services, to develop this public education campaign with an estimates maximum value of $1,500,000.

As of July 20, 2015, PHD Canada is the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In 2016-17, through Phase I, ENERGY has spent approximately $1,000,000 on media planning and buying for radio and digital media. The cost of media space for television is substantially higher than radio; as such, ENERGY is forecasting to spend an additional $2,500,000 in 2017-18.

This campaign is integral for demonstrating Ontario's commitment to lower energy costs for ratepayers through the new proposed electricity initiatives. This campaign could also open the Ministry to increased scrutiny as critics may conclude savings are too little or too late to help those suffering from what the media has deemed energy poverty. Public perception may be unchanged as emotional triggers to rising electricity prices and the constant stream of negative news by the media could overpower the campaign.

The Ministry has assessed the risks, and deems the benefits for running this campaign outweigh any risks of not doing so. ENERGY anticipates reaction from electricity consumers is to be generally positive with an awareness that changes to the electricity system have led to a reliable, cleaner system that is now more affordable.

In addition, the communications for GA refinancing, delivery electricity social programs and ICI expansion will be referenced in ongoing announcements related to Ontario's Fair Hydro Plan (OFHP) broadly, and as necessary targeted communications for specific stakeholder group can be developed.

For example, the Ministry has retained the OCC and the CME to undertake targeted stakeholder outreach on ICI and other cost saving energy programs/measures available to the commercial and industrial sectors in Ontario.

The Ministry will ensure that the social programs are communicated effectively to stakeholders and specific target audiences. The Ministry will leverage its agencies and its relationship with LDCs to ensure eligible consumers are aware of the programs.

Chiefs of Ontario (COO) will be a vital partner in communicating the benefits of the First Nations Delivery Credit.

CONFIDENTIAL

The Ministry also believes there is opportunity for consultation on the design of the electricity bill, with a goal to refresh the regulatory framework to improve the value of the bill to the consumer across all LDCs. The Ministry proposes to convene with LDCs in July, once they've had sufficient time to implement the OFHP initiatives and prescribed messaging.

Changes of this nature will require more in-depth consultation with LDCs, as well as broader regulatory amendments to simplify the requirements, necessitating a longer period to implement. This refresh would also include opportunities to communicate OFHP savings in a more personalized and comprehensive manner. For example, each customer could receive a "personalized" message indicating how much they saved as a result of the plan.

Based on this feedback, the Ministry would aim to introduce regulatory amendments to simplify bill presentment and introduce dynamic OFHP messaging in the Fall 2017.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on following:

    i. Implementation of Global Adjustment (GA) Refinancing;

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, Ontario Electricity Support Program and First Nations On-Reserve Delivery Credit); and

    iii. Expansion of Industrial Conservation Initiative (ICI).

2) APPROVE the Ministry funding a media buy procurement with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record.

3) NOTE the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

4) NOTE the Ministry of Energy will return to TB/MBC to request a transfer of funds to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to fully recover the costs for the public education campaign.

5) APPROVE the creation of a new transfer payment line entitled "Price Mitigation Support Initiatives" under Vote/Item 2905-01, Electricity Price Mitigation, with a $1,000 placeholder, to support future rate mitigation initiatives.

FINAL DRAFT

KPMG Letter to the Independent Electricity System Operator

An Accounting Opinion on the Application of PSAS to the Consolidation of a Trust and to the Recognition and Derecognition of a Variance Account in Relation to the Proposed *Ontario Fair Hydro Plan Act, 2017*

This letter has been prepared in draft form and will be updated upon receipt of the adopted legislation (including the amendments of the Electricity Act and the OEB Act) and finalized financial structure (including the bylaws and regulations of the OPG Trust) and other relevant agreements necessary for us to provide our final opinion, of which legislation and other relevant agreements are expected to be enacted/ finalized on or before September 30, 2017.

NOTICE OF NON RELIANCE

This Notice is regarding the accompanying Letter to provide an accounting opinion on the application of Public Sector Accounting Standards to the consolidation of a trust and to the recognition and derecognition of a variance account in relation to the proposed *Ontario Fair Hydro Plan Act, 2017* (the "**Letter**") prepared by KPMG LLP for the Independent Electricity System Operator ("Client").

The following terms apply to any review of the Letter and should you not agree to these terms, please do not review the Letter and delete copy of the same.

The Letter was prepared in connection with certain services we provided to the Client and should not be used for any other purpose or regarded as suitable for use by any person or persons other than the Client

No one other than the Client is authorized by KPMG to rely upon any information or views expressed in the Letter. KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as the Letter has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

KPMG in no way accepts any duty of care to you or any other person or accepts any agreement or other arrangement of a contractually binding nature between our firm and such parties.

KPMG neither warrants nor represents that the Letter is accurate, complete, sufficient or appropriate for any purpose contemplated by you or any other person or body. You shall have no right to disclose the Letter to any other party, unless disclosure is required by law or to fulfill a professional obligation required under applicable professional standards.

Yours very truly,

KPMG LLP

The Board of Directors

Dear Sirs,

We have been engaged to provide you with an accounting opinion on the application of Public Sector Accounting Standards to the consolidation of a trust and to the recognition and derecognition of a variance account in relation to the proposed *Ontario Fair Hydro Plan Act, 2017* ("the proposed Act") (Appendix A, Version 6, to this letter). This letter is being issued to the Independent Electricity System Operator ("IESO" or the "Company") in connection with its evaluation of the consolidation requirements and the accounting for the variance account under Canadian Public Sector Accounting Standards ("PSAS"). Our engagement has been conducted in accordance with generally accepted standards in Canada for such engagements.

The ultimate responsibility for the decision on the appropriate application of PSAS for the specific issues described below rests with management of the Company as preparers of the financial statements.

The adoption of the proposed Act (including the subsequent amendments of the Electricity Act, 1998 ("the Electricity Act") and the Ontario Energy Board ("OEB" or the "Board") Act ("the OEB Act")), and the finalization of the financing structure (including the bylaws and regulations of the OPG Trust) and other agreements will take several weeks. Accordingly, our judgment on the appropriate application of PSAS for the specific matters described below is based on the facts, circumstances and assumptions provided to us. The finalization of the legislation, regulations, financing structure and other agreements may impact the comments and conclusions set out herein. Our comments and conclusions are based on the proposed Act and related matters as they exist at the date of this letter.

The following three issues are addressed in this letter:

Issue #1: Can the IESO recognize a regulatory asset related to the variance account created by the proposed Act?

Issue #2: Is the trust to be established by Ontario Power Generation (the "OPG Trust") controlled by the IESO according to the guidance issued under PSAS 1300 *Government Reporting Entity* and therefore subject to consolidation by IESO?

Issue #3: What is the accounting treatment for derecognition of the regulatory asset by the IESO upon transfer of the variance account to the OPG Trust?

Background for issue #1

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party) are as follows:

1. The IESO's legal status is a not-for-profit, non-taxable, corporation established pursuant to Part II of the Electricity Act. Management of the IESO has determined that the Company is an Other Governmental Organization and accordingly prepares its financial statements in accordance with PSAS.

2. IESO is rate regulated by the OEB in accordance with the Electricity Act and the OEB Act.

3. *Extract from the 2016 IESO financial statements, note 3 New Accounting Policies,* audited by KPMG *"*As of January 1, 2016, the IESO changed its accounting policy regarding the recognition of assets and liabilities subject to rate regulation. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model. This change has been applied retroactively and has increased amounts previously unrecorded for regulatory assets and decreased amounts previously reported for accumulated deficit."

4. *Extract from the 2016 IESO financial statements, note 2(d) Summary of Significant Accounting Policies, Regulatory assets and liabilities.* "As a rate-regulated entity, the IESO, in appropriate circumstances establishes regulated assets or liabilities and thereby defers the impact on the statement of operations of certain expenses or revenues because they are probable to be collected or refunded to market participants through future billings. The IESO applies guidance from United States Generally Accepted Accounting Principles (US GAAP) Topic 980, *Regulated Operations ("ASC 980")*, in this policy."

5. *Extract from Section 78(3.3) of the OEB Act:* In approving or fixing rates under subsection (3.1),

   (a) the Board shall forecast the cost of electricity to be consumed by the consumers to whom the rates apply, taking into consideration the adjustments required under section 25.33 of the Electricity Act, 1998 and shall ensure that the rates reflect these costs; and

   (b) the Board shall take into account balances in the IESO's variance accounts established under section 25.33 of the Electricity Act, 1998 and shall make adjustments with a view to eliminating those balances within 12 months or such shorter time periods as the Minister may direct.

6. Currently, IESO recognizes two regulatory assets for unrecovered smart metering expenses and unrecovered PSAB transition items as permitted by rates approved by the OEB. In addition, in accordance with section 25.33 of the Electricity Act, IESO also recognizes variance accounts (eg. OESP, RPP and RRRP variance accounts) to record all amounts payable or receivable by it in connection with the amounts paid to generators, the Ontario Electricity Financial Corporation ("OEFC"), distributors and to entities with whom the IESO has a procurement contract.

7. The Electricity Act, OEB Act and other regulations will be amended to reflect the following *extracts of the proposed Act:*

   Section 1xx Definitions, Transfer of regulatory asset

   (3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 22xx (3):

1. A reduction in the balance in the variance account.
2. The adjustment of the regulatory asset.
3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Section 20.1xx Variance account to be established

(1) IESO shall establish and maintain a variance account for the purposes of this section.

(2) IESO shall record the following in the variance account:

1. The amount of the IESO funding shortfall for each month.
2. All payments received by IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.
3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences after May 1, 2017 and before the day this section comes into force.

(3) Subject to the correction of any obvious error by IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights of the investment interest owner acquired under the transfer.

Section 21xx Regulatory asset established

(1) Effective May 1, 2017, the IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

(2) Subject to subsection (3), the Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

(3) IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Section 30.1xx Board's Authority

(2) Despite anything to the contrary in the OEB Act, the Board may exercise any of its responsibilities under this Act without a hearing.

8. It is expected that the funding shortfall recorded by the IESO in the variance account (the regulatory asset) will be transferred to an investment asset owner (ie a trust to be established by OPG) on a monthly basis and cash collected within a short period of time. The total IESO funding shortfall for the period from May 1, 2017 to April 30, 2047 is estimated at $28 billion plus interest.

Appropriate Accounting Principle for issue #1

ASC 980 Regulated Operations

– For general-purpose financial reporting, an incurred cost for which a regulator permits recovery in a future period is accounted for like an incurred cost that is reimbursable under a cost-reimbursement-type contract. [980-10-05-6]

- Unless an accounting order indicates the way a cost will be handled for rate-making purposes, it causes no economic effects that would justify deviation from the GAAP applicable to business entities in general. The mere issuance of an accounting order not tied to rate treatment does not change an entity's economic resources or obligations. In other words, the economic effect of regulatory decisions—not the mere existence of regulation—is the pervasive factor that determines the application of GAAP. [980-10-05-8]
- The guidance in the Regulated Operations Topic applies to general-purpose external financial statements of an entity that has regulated operations that meet all of the following criteria:
  (a) The entity's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers.
  (b) The regulated rates are designed to recover the specific entity's costs of providing the regulated services or products. This criterion is intended to be applied to the substance of the regulation, rather than its form.
  (c) In view of the demand for the regulated services or products and the level of competition, direct and indirect, it is reasonable to assume that rates set at levels that will recover the entity's costs can be charged to and collected from customers. This criterion requires consideration of anticipated changes in levels of demand or competition during the recovery period for any capitalized costs. [980-10-15-2]
- A cost arising from cash paid out or obligation to pay for an acquired asset or service, a loss from any cause that has been sustained and has been or must be paid for. [980-10-20] Glossary
- Failure of an entity's operations to continue to meet the criteria in paragraph 980-10-15-2 can result from different causes. Examples include the following:
  (a) Deregulation.
  (b) A change in the regulator's approach to setting rates from cost-based rate-making to another form of regulation.
  (c) Increasing competition that limits the entity's ability to sell utility services or products at rates that will recover costs (as used in paragraph 980-10-15-2).
  (d) Regulatory actions resulting from resistance to rate increases that limit the entity's ability to sell utility services or products at rates that will recover costs if the entity is unable to obtain (or chooses not to seek) relief from prior regulatory actions through appeals to the regulator or the courts. [980-20-15-2]
- Rate actions of a regulator can provide reasonable assurance of the existence of an asset. An entity shall capitalize all or part of an incurred cost that would otherwise be charged to expense if both of the following criteria are met:
  (a) It is probable (as defined in Topic 450) that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes.
  (b) Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.

A cost that does not meet these asset recognition criteria at the date the cost is incurred shall be recognized as a regulatory asset when it does meet those criteria at a later date. [980-340-25-1]

- Rate actions of a regulator can reduce or eliminate the value of an asset. If a regulator excludes all or part of a cost from allowable costs, the carrying amount of any asset recognized pursuant to paragraph 980-340-25-1 shall be reduced to the extent of the excluded cost. Whether other assets have been impaired shall be judged the same as for entities in general and the Impairment or Disposal of Long-Lived Assets Subsections of Subtopic 360-10 shall apply. [980-340-35-1]
- If at any time an entity's incurred cost no longer meets the criteria for the capitalization of an incurred cost (see paragraph 980-340-25-1), that cost shall be charged to earnings. [980-340-40-1]
- In some cases, a regulator may approve rates that are intended to recover an incurred cost over an extended period without a return on the unrecovered cost during the recovery period. [980-340-55-2]
- The regulator's action provides reasonable assurance of the existence of an asset (see paragraph 980-340-25-1). Accordingly, the regulated entity would capitalize the cost and amortize it over the period during which it will be allowed for rate-making purposes. That cost would not be recorded at discounted present value. An exception to this general rule is provided for costs of abandoned plants. [980-340-55-3]

Issue #1: Can the IESO recognize a regulatory asset related to the variance account created by the proposed Act?

As noted above, as of January 1, 2016, the IESO changed its accounting policy to recognize the economic impacts of rate regulation and now applies guidance from US GAAP Topic 980, *Regulated Operations,* as PSAS does not have any specific guidance for entities with rate-regulated activities.

IESO concluded that it met the requirements of PS2120.02, which allows them to reflect the impacts of rate regulation, as it is considered that the change of accounting policy in its 2016 financial statements resulted in a more appropriate presentation of transactions in its financial statements. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The regulatory framework in Ontario relating to the generation and sale of electricity will be significantly impacted by the proposed Act. Currently, a substantial amount of the energy purchased from the generators is collected by IESO from the local distribution companies through the customer billing, with the remaining being recovered through variance accounts over a period of 12 months maximum. As mentioned above, the effect of the proposed Act is to defer the collection of a total estimated amount of $28 billion (plus interest) of energy purchased from the generators over a period of 30 years. The proposed Act will not permit IESO to collect the funding shortfall before May 1, 2021 and the recovery process will be established through regulations. Such a long-term deferred recovery plan requires IESO to consider whether the uncollected energy costs qualify for deferral as a regulatory asset and whether it continues to meet the criteria that allow IESO to use the guidance for regulated operations of Topic 980. These two accounting issues are analyzed in the two tables below.

Criteria for the recognition of regulatory assets

ASC 980-340-25-1 states that rate actions of a regulator can provide reasonable assurance of the existence of an asset. An entity shall capitalize all or part of an incurred cost that would otherwise be charged to expense if both of the following criteria are met:

Criteria	Comment	Evaluation
(a) It is probable that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes. (b) Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. *(emphasis added)* If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.	The proposed Act states that, • *A recording of the balance in the variance account is determinative of the balance as of the time of the recording.* • *Effective May 1, 2017, IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.* • *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.* • *The IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.* Based on the proposed Act, IESO has the right to recover the balance recorded in the variance account. As a result, it is clear that IESO will be able to recover the amount previously incurred rather than to provide for expected levels of similar future costs.	Met

Criteria for the adoption and continued use of ASC 980 guidance

Deferred recovery plans are plans adopted by regulators or legislations in response to significant increases in costs (e.g. purchased power costs). These plans typically provide for rates to remain fixed or increase moderately with a variance account mechanism to capture costs in excess of the level allowed in current rates. A regulated utility subject to such plans is required to consider whether it continues to meet the criteria that allow it to use the guidance for regulated operations of Topic 980, especially criteria ASC 980-10-15-2 (b).

The proposed plan for the recovery of purchase power costs over a 30 year period is considered a deferred recovery plan as the rates for the first four years will remain fixed and subsequently the rates will increase moderately with a variance account to capture energy costs in excess of the level allowed in current rates. The following is an analysis of the ASC 980-10-15-2 criteria.

Criteria	Comment	Evaluation
(a) The entity's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party	Currently, IESO recognizes regulatory assets related to smart meters and PSAS transition costs as permitted by rates approved by the OEB and regulatory liabilities related to the variance accounts (eg. OESP, RPP and RRRP variance accounts) established under section 25.33 of the Electricity Act related to the procurement of energy.	Met

Criteria	Comment	Evaluation
regulator or by its own governing board empowered by statute or contract to establish rates that bind customers.	It is important to note that both Hydro One and OPG are classified as government business enterprises and are reporting under IFRS in their consolidated financial statements, are consolidated by the modified equity method into the province's books, are regulated by the OEB, and their respective regulatory assets and liabilities are reported in the province's books.	

(b) The regulated rates are designed to recover the specific entity's costs of providing the regulated services or products.	Currently, the rates approved by the OEB are designed to recover the IESO's costs of providing the regulated services and the pass-through related to the energy purchased from the generators.
	
	As mentioned above, a regulated utility subject to a deferred recovery plan is required to consider whether it continues to meet the criteria ASC 980-10-15-2 (b).
	
	This criterion requires a cause-and-effect relationship between a reporting entity's costs and its revenue. In addition, the timing of cost recovery and the related frequency of ratemaking is important. A reporting entity should consider its rate case experience, including the design of its rates and timing of recovery, when determining whether this criterion is met. These factors are analyzed below.
	
	Frequency of rate case
	
	- Currently, IESO is subject to OEB's annual reviews
	- Although the recovery of purchase energy costs will be frozen at the approved rate on May 1, 2017 for the first four years, the IESO will be granted a right to recover after May 1, 2021 the funding shortfall recorded in the variance account during the four-year period.
	  - *A recording of the balance in the variance account of the balance is determinative of the balance, as of the time of the recording. (We note that this confirms that there will be no prudence review by the OEB)*
	  - *Right to recover the balance recorded in the variance account.*
	  - *Obligation on the part of the OEB to dispose the variance account in accordance with the regulation.*
	- Subsequent to May 1, 2021, the OEB will be required to determine and set rates payable by specified consumers to allow for IESO to recover the balance
		Met

Criteria	Comment	Evaluation
	recorded in the variance account. - *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.* - *Despite anything to the contrary in the OEB Act, the Board may exercise any of its responsibilities under this Act without a hearing.* *Rates are designed to recover incurred costs* - There is a cause-and-effect relationship between the purchase energy costs and revenue, as IESO will be allowed to recover the costs incurred. - *A recording in the variance account of the balance in the variance account is determinative of the balance as of the time of recording (We note that this confirms that there will be no prudence review).* - *Right to recover the balance recorded in the variance account.* - *Obligation on the part of the OEB to ensure IESO will recover the balance recorded in the variance account.* *Periods of alternative ratemaking (e.g., rate freezes)* Evaluation of the second criterion requires additional judgment if the regulated utility is subject to any form of ratemaking that introduces uncertainty about the cause-and-effect relationship between costs and rates. A rate freeze period is defined as a fixed rate that is charged to customers during a period of time (more than two years) and the utilities are exposed to increases in operating and energy costs with no ability to recover the variances. This is not the case as IESO will be granted the right to recover fully the funding shortfall recorded in the variance account, including the first four-year period. - *The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.*	

Criteria	Comment	Evaluation
	Costs uncertainty As the IESO will be granted the right to fully recover the funding shortfall recorded in the variance account, there is no uncertainty about the recovery of the costs. *Disallowances of costs* The OEB has never disallowed the recovery of any material costs incurred by IESO. More importantly, as the IESO will be granted by legislation the right to fully recover the funding shortfall recorded in the variance account, there is no risk of the potential disallowance of the purchase power costs. Based on the analysis of the above factors, there are no indications that this criterion would not be met. The above factors establish that there will be a direct cause-and-effect relationship between IESO's costs and its future collection.	
(c) In view of the demand for the regulated services or products and the level of competition, direct and indirect, it is reasonable to assume that rates set at levels that will recover the entity's costs can be charged to and collected from customers. This criterion requires consideration of anticipated changes in levels of demand or competition during the recovery period for any capitalized costs."	The remaining criterion is whether limitations, including considering demand levels at the approved rates, on the extent of recovery of the regulatory asset could prevent the IESO from recognizing a regulatory asset for the entire balance in the recovery right granted to the IESO. The proposed Act notes that: - *Effective May 1, 2017, the IESO's right to recover the balance in the variance account is subject to the following:* o *The Board shall, from time to time, determine and set rates payable by specified customers to allow for IESO to recover the balance recorded in the variance account.* o *IESO shall not be entitled to collect the variance account from specified consumers before May 1, 2021.* Although the process, especially the timing of the recovery of the regulatory asset has not been established yet by the OEB, the wording and intent of the proposed legislation is clear that it is intended by law to be recoverable over the period of 30 years. Further, given the nature and extent of customer demand for the power generated and distributed in Ontario, both at this time and projected in the future, it is reasonable to conclude that there will be sufficient demand to recover the regulatory asset. As with the other criteria, this will	Met

Criteria	Comment	Evaluation
	need to be continually evaluated throughout the recovery period.	

Management conclusion:

IESO management has concluded that the IESO can recognize a regulatory asset related to the variance account created by the proposed Act based on the foregoing analysis.

The variance account created by the proposed Act is subject to rate regulation by the OEB and the variance account will be established with the right to collect funds against the variance amount in the future. In these circumstances, the IESO is able to establish a regulated asset. The IESO financial statements are prepared in accordance with Canadian public sector accounting standards. Although PSAB does not provide specific guidance on rate regulated accounting, it does under PS 1150 *Generally Accepted Accounting Principles* allow for guidance to be followed from other accounting frameworks. IESO has applied guidance from United States Generally Accepted Accounting Principles (US GAAP) Topic 980, Regulated Operations in its accounting policies.

Our conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that the variance account created by the proposed Act will meet the criteria for the recognition of a regulatory asset stated in ASC 980-340-25-1. Furthermore, we have also considered the criteria stated in ASC 980-10-15-2 and believe that IESO should be allowed to continue to use the guidance for regulated operations of Topic 980.

Background for issue #2

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party), in addition to those described in the background for issue #1, are as follows:

1. The IESO currently has the right to collect the global adjustment ("GA") monthly from ratepayers through provisions in the Electricity Act. It is proposed that collection of a certain portion of the monthly GA be deferred in a regulatory asset for collection in the future, and that the right to recover the deferred GA from ratepayers be used as the basis for structured financing/ securitization.
2. In connection with the proposed Act, it is proposed that a trust to be created as a financial vehicle by OPG in connection with the deferred GA. The OPG Trust will finance the deferral of the GA by purchasing the regulatory asset from the IESO for the principal amount of the GA being deferred.
3. The OPG Trust is expected to finance these purchases from the IESO through a combination of senior secured financing raised in the capital markets, and subordinated financing from OPG (the funding for which will mostly be from equity injections from the OEFC/Province of Ontario).
4. OPG will be appointed as the Financial Services Manager and will be given the responsibility to direct the activities of the OPG Trust, through a services agreement and/or through the Trust's constating documents.

Appropriate Accounting Principle for issue #2

PS1300 *Government Reporting Entity*:

PSAS refer to government or government organizations. For the purpose of this analysis, the PSAS guidance below relating to government or government organizations should be read and understood as being the IESO (emphasis added).

- The government reporting entity should comprise government components and those organizations that are controlled by the government. [PS 1300.07]
- Control is the power to govern the financial and operating policies of another organization with expected benefits or the risk of loss to the government from the other organization's activities. [PS 1300.08] (emphasis added).
- Whether a government controls an organization is a question of fact that must be determined by reference to the definition of control established in paragraph PS 1300.08 and the particular circumstances of each case. The determination of the fact that control exists will require the application of professional judgment. Government achieves its objectives through a wide range of organizations which individually will fall somewhere along a continuum. At one end of the continuum, it will be clear that an organization does not have the power to act independently and is controlled by the government. At the other end, the organization will have the power to act independently and, while government will have a level of influence on the organization, it will be clear that it does not have control. Along the continuum, consideration needs to be given to the nature of the relationship between the government and the organization in order to determine whether control exists. This Section provides guidance intended to assist in this assessment. [PS 1300.10]
- In applying this guidance, it is necessary to determine the substance of the relationship between the government and the organization. The true nature of certain relationships may not be completely reflected by their legal form. All relevant aspects and implications of the relationship would be considered in determining whether or not the government controls the organization. Where various aspects of the relationship are designed, in effect, to achieve an overall objective, they would be viewed as a whole. [PS 1300.11]
- Financial and operating policies are principles and practices that determine how an organization conducts its activities. The ability to govern these policies is an important element of government control because it establishes the fundamental basis for the conduct of the organization's operations and the achievement of its mission and mandate. [PS 1300.13]
- There are a variety of ways to govern the financial and operating policies of an organization. For example:
  (a) a government may establish an organization's fundamental purpose and eliminate or significantly limit the ability of the organization to make future decisions by predetermining the financial and operating policies of the organization;
  (b) a government may direct the financial and operating policies of an organization on an ongoing basis; or
  (c) a government may veto, overrule or modify the financial and operating policies established by an organization. [PS 1300.14]
- A government does not need to manage an organization's activities on a day-to-day basis to control the organization. It is the government's existing authority to determine the policies governing those activities that is important. [PS 1300.15]

– For the purposes of this Section, it is assumed that where the government has the power to govern the financial and operating policies of an organization, it expects to derive a financial or non-financial benefit. The government may also be exposed to the risk of loss. [PS 1300.16]

Issue #2: Is the trust to be established by Ontario Power Generation (the "OPG Trust") controlled by the IESO according to the guidance issued under PSAS 1300 *Government Reporting Entity* and, therefore, subject to consolidation by IESO?

Under PSAS, IESO is required to consolidate all entities that are considered to be part of its reporting entity, applying the guidance provided in *Section PS 1300 Government Reporting Entity.* Under PS 1300, IESO must consolidate all entities it "controls".

In determining whether or not the OPG Trust should be consolidated by IESO, it must first be determined whether or not the IESO exercises control as a consequence of power to govern the financial and operating policies of the OPG Trust resulting in expected benefits to the IESO or the risk of loss from the activities of the OPG Trust.

PS 1300.17 indicates that "whether a government controls an organization is a question of fact that requires the application of professional judgment based on the definition of control in this Section and the substance of the relationship in each case." Under PS 1300.08 control is defined as "the power to govern the financial and operating policies of another organization with expected benefits or the risk of loss to the government from the other organization's activities". Therefore, the determination of whether IESO will consolidate the OPG Trust will be based on an assessment of whether IESO is considered to control the OPG Trust based on the indicia of control set out in PS 1300. The assessment of the IESO's control of the OPG Trust is made based on the proposed Act, facts and nature of the relationship between the IESO and the OPG Trust and based on facts and assumptions provided by IESO. PS 1300.18 and .19 set out 11 potential indicia of control. Several of these indicia have been categorized as more persuasive of a finding of control (see the first four indicators in the table below). For each indicator that applies, the degree of government influence would determine its importance as evidence of control. Finally, the indicia are considered both collectively and individually.

A detailed analysis of the 11 Indicators of control is provided in the following table.

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
Primary (more persuasive) indicators (PS 1300.18):		
Government has the power to unilaterally appoint or remove a majority of the members of the governing body of the organization	- The proposed Act states: - *OPG is appointed as the Financial Services Manager for the purposes of this Act. (Section 13xx)* - *The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners. (Section 14xx (1))* - *Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees to recover, the costs of doing anything the*	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?

	Financial Services Manager is required or permitted to do under this or any other Act; and any other type of expenditure, the recovery of which is permitted by the regulations. (Section 14xx (3))
	- The Electricity Act, 1998 (EA) will be amended as follows:
	  - *In addition to the objects mentioned in subsection (1), the objects of OPG include exercising the powers and rights and performing the duties and obligations assigned to it under the Ontario Fair Hydro Plan Act, 2017 and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services." (Section 53.1 (1.1))*
	  - *"OPG may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects." (Section 53.1 (1.2))*
	- OPG will establish a trust to manage the collection of the regulatory asset and related financing and administrative expenses. The Board of Trustees of the OPG Trust will be the governing body of the Trust and will be appointed by OPG. OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees.
	- The IESO will not have any rights in respect of the appointment or replacement of the Board of Trustees of the OPG Trust.	

Government has ongoing access to the assets of the organization, has the ability to direct the ongoing use of those assets, or has ongoing responsibility for losses	- Section 23xx of the proposed Act states:
	  - *A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.*
	  - *Without limiting subsection (1), any transfer agreement that states an intention of the parties for*
		No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
	IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest. - *At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.* - Based on the proposed Act, *upon transfer by IESO of a portion of the regulatory asset to the OPG Trust, the investment asset resulting from the transfer is immediately vested in the OPG Trust, free and clear of any adverse claim.* (Section 24xx (1.1)) - Therefore, upon transfer of the regulatory asset to the OPG Trust, IESO will no longer have access/ability to direct the regulatory asset nor have the ongoing responsibility for losses. - The credit risk related to the collection of the investment asset is borne by the OPG Trust.	
Government holds the majority of the voting shares or a "golden share" that confers the power to govern the financial and operating policies of the organization	- IESO will not have any ownership in the OPG Trust and will not have the power to govern the financial and operating policies of the OPG Trust.	No
Government has the unilateral power to dissolve the organization and thereby access its assets and become responsible for its obligations	- IESO will not have the power to dissolve the organization.	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
Other indicators that may provide evidence of control exist when government has the power to (PS 1300.18):		
Provide significant input into the appointment of members of the governing body of the organization by appointing a majority of those members from a list of nominees provided by others or being otherwise involved in the appointment or removal of a significant number of members	- OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees of the OPG Trust. - IESO will not provide input in the appointment of members of the Board of Trustees.	No
Appoint or remove the CEO or other key personnel	- OPG will have the power to unilaterally appoint or remove all members of the Board of Trustees of the OPG Trust and other key personnel.	No
Establish or amend the mission or mandate of the organization	- The Trust will be established by OPG and the mandate of the Trust will be set based on the proposed Act.	No

Approve the business plans or budgets for the organization and require amendments, either on a net or line-by-line basis	- The proposed Act states:
	  - *OPG is appointed as the Financial Services Manager for the purposes of this Act. (Section 13xx)*
	  - *"The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of refinancing a funding obligation." (Section 16 (1))*
	- OPG is the Financial Services Manager, not IESO.
	- IESO is not involved in the preparation or approval of the business plans or budget of the OPG Trust.
		No

Establish borrowing or investment limits or restrict the organization's investments	- Section 17 of the proposed Act states: - *The Financial Services Manager shall ensure that funding obligations incurred for the purposes*	No

INDICATOR OF CONTROLS	EVIDENCE OF CONTROL	CONTROL EXIST?
	of this Act are incurred in a manner that is consistent with the applicable Financing Plan. - OPG not IESO, is responsible for ensuring that the borrowings of the OPG Trust meet the above conditions.	
Restrict the revenue-generating capacity of the organization, notably the sources of revenue	- N/A	No
Establish or amend the policies that the organization uses to manage, such as those relating to accounting, personnel, compensation, collective bargaining or deployment of resources	- As mentioned above, OPG will be granted by legislation the power to establish or amend the policies of the OPG Trust and the ability to appoint and remove all members of the Board of Trustees.	No

Management Conclusion:

IESO management has concluded that the OPG Trust to be established would not be controlled by the IESO and therefore is not subject to consolidation by the IESO.

Based on the foregoing analysis of the 11 indicators of control as defined in Section PS 1300 *Government Reporting Entity,* considered both individually and collectively there is no evidence of control by the IESO in respect of the OPG Trust. The IESO will not have the power to govern the Trust, nor have ongoing access to Trust's assets. The IESO will also not have any voting shares or future rights to the Trust nor the power to dissolve the Trust. Without control, the Trust is not subject to consolidation within the IESO financial statements.

Our Conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that based on the Proposed Act, none of the four primary (more persuasive) indicators of control are considered to be met, and none of the seven other indicators of control are considered to be met. Accordingly, we concur that the IESO does not control the OPG Trust under the proposed Act and hence would not consolidate the OPG Trust.

The adoption of the proposed Act (including the subsequent amendments of the Electricity Act and the OEB Act) and the finalization of the financing structure (including the bylaws and regulations of the OPG Trust) and other agreements will take several weeks. Accordingly, our judgment on the appropriate application of PSAS to the conclusion on control may change subject to further analysis of any changes to the terms of the proposed Act or review of the final regulations, financing structure and other agreements.

Background for issue #3

The facts, circumstances, and assumptions relevant to the specific transactions as provided to us by the management of the Company (responsible party), in addition to those described in the background for issues #1 and 2, are as follows:

1. The total IESO funding shortfall for the period from May 1, 2017 to April 30, 2047 is estimated at $28 billion plus interest and will be recorded by the IESO in a variance account recognized as a regulatory asset.
2. The IESO does not currently have the financial capability to finance the regulatory asset and will transfer the variance account to an investment asset owner (i.e. OPG Trust) on a monthly basis.
3. The IESO will obtain a written legal opinion as to the validity and enforceability of the transfer and sale of the regulatory asset.
4. Based on an assessment of control performed under the issue #2, IESO will not consolidate the OPG Trust. We understand that an assessment of control under International Financial Reporting Standards ("IFRS") has been performed by OPG and they have concluded that the OPG Trust will be consolidated by OPG; we note that the financial reporting framework used by OPG in preparing its financial statements for consolidation into the Province's books is IFRS.
5. The Electricity Act, OEB Act and other regulations will be amended to reflect the following *extracts from the proposed Act:*

   Section 11xx IESO to receive amounts

   (2) The IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

   (4) All amounts received by the IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owner, be received and held in trust by the IESO for the investment interest owners.

   (5) The IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the accounts referred to in subsection (2), to or for the benefit of the investment interest owners in accordance with the regulations.

   Section 12xx Pro rating of payments

   (3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

   Section 22xx Transfer of regulatory asset

   (1) The IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

   (2) An agreement between the IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to the IESO in an amount equal to the amount of the specified portion.

(3) Upon receipt by the IESO of the payment by the financing entity,

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) the IESO shall retain no further right, title or interest in the investment interest.

Section 23xx Validity of transfer

(1) A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.

(3) At the time a transfer of the regulatory asset is made under section 22xx, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

Section 25xx Investment asset established

(1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, IESO and other prescribed parties.

Section 26xx Transfer of investment interest

(2) An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Section 28xx Investment interest owner may grant security interest

(1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

(3) All provisions of the Personal Property Security Act shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

6. The terms of the transfer agreement between the IESO and the OPG Trust that will be signed and executed upon transfer of the regulatory assets will be in compliance with the dispositions of the proposed Act.

Appropriate Accounting Principle for issue #3

The Derecognition Section of ASC 980-20-40 provides guidance on determining whether and when an entity should remove an item from the financial statements. For example, the entity would derecognize an asset because it no longer has rights to the asset or it would derecognize a liability because it no longer has any obligation. [ASC 980-20-40]

Failure of an entity's operations to continue to meet the criteria in paragraph 980-10-15-2 can result from different causes. Examples include the following:

(e) Deregulation.

(f) A change in the regulator's approach to setting rates from cost-based rate-making to another form of regulation.

(g) Increasing competition that limits the entity's ability to sell utility services or products at rates that will recover costs (as used in paragraph 980-10-15-2).

(h) Regulatory actions resulting from resistance to rate increases that limit the entity's ability to sell utility services or products at rates that will recover costs if the entity is unable to obtain (or chooses not to seek) relief from prior regulatory actions through appeals to the regulator or the courts. [ASC 980-20-15-2]

PS1000 *Financial statement concepts*:

- This Section is to be used by preparers and auditors of financial statements in exercising their professional judgment as to the application of generally accepted accounting principles and in establishing accounting policies in areas in which accounting principles are developing. [PS1000.03]
- Financial statements should communicate information that is relevant to the needs of those for whom the statements are prepared, reliable, comparable, understandable and clearly presented in a manner that maximizes its usefulness. [PS1000.24]
- An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph [PS3210.04]. Thus, for example, an item does not qualify as an asset of a government if the item involves:
  (a) no future economic benefit;
  (b) future economic benefit, but the government cannot obtain it; or
  (c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred. [PS1000.37]

PS3210 *Assets*:

- Assets are economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained. [PS3210.03]
- Assets have three essential characteristics:
  (a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.
  (b) The public sector entity can control the economic resource and access to the future economic benefits.
  (c) The transaction or event giving rise to the public sector entity's control has already occurred. [PS3210.04]
- Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. [PS3210.22]

PS3430 *Restructuring transactions* [1]

- Individual assets and liabilities transferred in a restructuring transaction should be derecognized by the transferor if they no longer meet the definitions of assets and liabilities and applicable recognition criteria at the restructuring date. [PS3430.21]
- When a transferor continues to be involved in the individual assets and/or liabilities it transferred to a recipient subsequent to the restructuring date, it would assess the nature and extent of its continued involvement against the definitions of assets and liabilities and applicable recognition criteria to evaluate whether:
  (a) derecognition of the asset and liability transferred would be appropriate; and
  (b) its continued involvement gives rise to a new asset or new liability that needs to be recognized. [PS3430.24]
- A new asset or new liability may arise from a restructuring due to a transferor's continued involvement in the individual assets and liabilities transferred (for example, if it agrees to guarantee repayment of all or a portion of a transferred liability or leases back a portion of a transferred asset). As the new asset or new liability is not transferred, together with related program or operating responsibilities, they are not part of the restructuring transaction. They would be accounted for in accordance with individual Sections of the PSA Handbook by both the transferors and recipients. [PS3430.25]

1 This Section applies to fiscal years beginning on or after April 1, 2018. […] Earlier adoption is permitted."

Issue #3: What is the accounting treatment for derecognition of the regulatory asset by the IESO upon transfer of the variance account to the OPG Trust?

Although ASC 980-20-40 states that

> *"Derecognition Section provides guidance on determining whether and when an entity should remove an item from the financial statements. For example, the entity would derecognize an asset because it no longer has rights to the asset or it would derecognize a liability because it no longer has any obligation."*

Subtopic 980-20 relates to discontinuation of rate-regulated accounting when an entity no longer meets the criteria in paragraph 980-10-15-2. ASC 980-20-15-2 provides examples of when an entity no longer meets the criteria, including deregulation and change of the form of regulation. Thus, ASC 980 does not provide clear guidance for the derecognition of a regulatory asset other than in connection with the discontinuation of rate-regulated accounting.

The above guidance in ASC 980-20-40 provides general principles for the derecognition of assets.

It should also be noted that PSASs provide limited guidance on derecognition of non-financial assets and liabilities. Section 3430 *Restructuring transactions,* which is applicable for fiscal years on or after April 1, 2018 with early application permitted, has guidance for the derecognition of assets and liabilities.

- Paragraph 21 states that individual assets and liabilities transferred in a restructuring transaction should be derecognized by the transferor if they no longer meet the definitions of assets and liabilities and applicable recognition criteria at the restructuring date.
- As stated in paragraph 24, when a transferor continues to be involved in the individual assets and/or liabilities it transferred to a recipient subsequent to the restructuring date, it would assess the nature and extent of its continued involvement against the definitions of assets and liabilities and applicable recognition criteria to evaluate whether derecognition of the asset and liability transferred would be appropriate and whether its continued involvement gives rise to a new asset or new liability that needs to be recognized.

Recognizing the proposed transaction is not a restructuring transaction, Section 3430, which has recently been issued by PSAB, provides current evidence of thinking in the application of the general PSAS principles in respect of the recognition and derecognition of assets and liabilities. Accordingly, the analysis as to whether the regulatory asset transferred to the OPG Trust can be derecognized is based on the foregoing guidance.

Criteria for the recognition of an asset

PS3210.03 states that assets are economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained. More generally, PSAS PS1000.37 suggests that an asset would no longer be recognized when it fails to meet the definition of an asset:

Criteria	Comment	Evaluation
Assets (PS3210.04/ PS1000.36): Assets have three essential characteristics: (a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows,	Based on the guidance, the regulatory asset does not qualify as an asset of IESO if it cannot obtain the future economic benefits. Upon transfer of the regulatory asset, IESO will have no further rights or obligations in connection with the asset transferred. - *IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.* - *Upon receipt by IESO of the payment by the financing entity, IESO shall retain no further right, title or interest in the corresponding investment interest.*	Not Met

Criteria	Comment	Evaluation
or to reduce cash outflows. (b) The public sector entity can control the economic resource and access to the future economic benefits. (c) The transaction or event giving rise to the public sector entity's control has already occurred. *Financial statement concepts (PS1000.37):* An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph [see above]. Thus, for example, an item does not qualify as an asset of a government if the item involves: (a) no future economic benefit (b) future economic benefit, but the government cannot obtain it.	- *A transfer of a specified portion of the regulatory asset under section 22xx constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.* - *Without limiting subsection (1), any transfer agreement that states an intention of the parties for IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.* - *At the time a transfer of the regulatory asset is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor."* Upon transfer of the regulatory asset, the OPG Trust will have the right to sell the asset to another party or to grant a security interest in favour of any person to secure a funding obligation. - *Upon transfer, the financing entity becomes an investment asset owner and acquires an investment interest."* - *An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.* - *An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.* Based on the proposed Act, it is clear that IESO will have no rights to the benefits associated with the future cash inflows related to the regulatory asset as it will have transferred its right to recover the IESO funding shortfall to the OPG Trust. Further, it is also clear that IESO will have lost control over the regulatory asset once it is transferred to OPG Trust.	

Management conclusion:

IESO management has concluded that the regulatory asset will be derecognized upon transfer of the variance account to the OPG Trust.

The transfer of the variance account transfers the control and the benefits associated with the right to collect funds in the future against the variance amount to the OPG Trust. This will eliminate the IESO asset by the amount of the transfer as the IESO will no longer control an economic resource or have access to future economic benefits for that amount. The funds collected from the transfer will in turn reduce the associated debt held by the IESO, maintaining the IESO's net $ nil balance in the market accounts.

Our conclusion:

We have considered the foregoing analysis and management's conclusion. We concur that the regulatory asset should be derecognized on transfer to the OPG Trust as IESO no longer has rights or future economic benefits associated with the asset.

Other Matters

The ultimate responsibility for the decision on the appropriate application of PSAS for the specific transactions rests with management as preparers of the financial statements. Our judgment on the appropriate application of PSAS for the specific transaction is based solely on the facts, circumstances and assumptions provided to us as described above. Should these facts and circumstances differ, our conclusion may change.

This letter has been prepared in draft form and will be updated upon receipt of the adopted legislation (including the amendments of the Electricity Act and the OEB Act) and finalized financial structure (including the bylaws and regulations of the OPG Trust) and other relevant agreements necessary for us to provide our final opinion, of which legislation and other relevant agreements are expected to be enacted/ finalized on or before June 30, 2017. This letter will not be updated as a consequence of pronouncements by the Public Sector Accounting Board, or any other authoritative bodies, that occur subsequent to the date of this letter.

This letter is intended solely for the information and use of the Board of Directors and management of the Company, and is not intended to be and should not be used, quoted, relied upon by, or otherwise referred to by anyone other than these specified parties or for any other purpose.

No one other than the Board of Directors and management of the Company is authorized by KPMG to rely upon any information or views expressed herein**.** KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as this letter has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

Draft of the Ontario Fair Hydro Plan Act, 2017

Version 6

This confidential draft document is provided for discussion purposes only. It should not be construed as representing the position adopted by the Government of Ontario on any of the topics included or not included in this document. The notes included in this document are intended only to help facilitate a discussion of the topics to which they relate. Any potential legislation is subject to the approval of the Ontario Legislature.

Confidential Draft

A proposal to create Legislation.

Ontario Fair Hydro Plan Act, 2017, if enacted

A proposal to create Legislation.

Ontario Fair Hydro Plan Act, 2017, if enacted

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL TO ANY FINAL BILL PRIOR TO INTRODUCTION.

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects.[1] These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.
