  - Difficult for tenants to understand, with the most vulnerable tenants potentially less able to pursue remedies through the LTB.
- The kinds of potential RTA remedies would depend on various specifics regarding the way in which relief was being provided to landlords including whether:
  - The actual electricity cost savings for landlords are transparent to facilitate easy calculation of rent reductions or relief;
  - Hydro relief measures are permanent or temporary; and
  - All relief should be passed on to tenants, or just a portion of the relief (e.g., global adjustment fund, 8% rebate, any other relief).

Support for Tenants – Potential RTA Hydro Relief Measures / Other Considerations (cont'd)

- As part of Climate Change Action Plan, MHO has been directed to mitigate the impact of carbon costs on tenants, and is proposing to prevent landlords from charging above-guideline rent increases for extraordinary utility costs increases.
  - May seem unfair that landlords are required to reduce rents or provide relief when utility costs decrease but cannot increase rents when utility costs increase.
- Relief would be limited to certain segments of tenant population:
  - Post-1991 buildings are exempt from the Rent Increase Guideline and landlords could negate any savings to tenants in these buildings through a higher subsequent rent increase.
    - Over 19% of tenant households are estimated to live in post-1991 private rental units including individually rented condos; a high proportion may already pay for electricity separately.
  - Relief may not be required for social housing tenants:
    - Most social housing tenants (80%) pay as per utility scales, which covers electricity usage other than electric heat; and
    - Utility scales were last updated in 2000 and are reflective electricity prices at that time.
- MHO, working with ENERGY and MAG will report back in Spring 2017 with options for electricity rate mitigation for tenants.

Legislative Authority – Considerations

GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The OPG Trust will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the OPG's SPV/Trust and settle accounts with the OPG Trust as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the SPV/Trust to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the SPV/Trust (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Class B

- **Targeted Lowering ICI Threshold Below 1 MW (to 500kW):** Regulatory amendments (O.Reg. 429/04) will be required to address program details.

Legislative Authority – Considerations (cont'd)

Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **Affordability Fund:** In order to implement new affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement and Technical Briefing
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

APPENDIX: SEE MINISTRY OF ENERGY'S ELECTRICITY PRICE MITIGATION – APPENDIX

Q&A Response

Q. What is the revised cost forecast for the 8% rebate as result of the measures announced in Ontario's Fair Hydro Plan?

Key measures announced in Ontario's Fair Hydro Plan (OFHP) are expected to reduce the cost of the 8% rebate for the Province. The cost to the Province is expected to decrease as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced.

ENERGY has updated the cost forecast for the 8% rebate based upon the following:

- Independent Electricity System Operator updated its Ontario Planning Outlook (OPO) with respect to a typical bill for a residential consumer as outlined in the March 1, 2017 Cabinet Submission. This revised OPO price outlook is inclusive of all the recently announced measures including cancellation of LRP II and EFW and expansion of ICI.

- ENERGY's estimates of the reduction to a typical bill for a residential consumer as a result of the Global Adjustment (GA) refinancing and funding electricity support programs through provincial revenues as announced in the OFHP.

- ENERGY's estimates of the reduction in costs for consumers that benefit from electricity support programs as announced in the OFHP (i.e., expanded Rural or Remote Rate Protection, enhanced Ontario Electricity Support Program and the First Nations Delivery Rebate). For Fiscal Year 2017-2018 this includes a 50% adjustment to the cost given that implementation of the expanded programs is expected to be deferred to September 2017.

	2017-2018	**2018-2019**	**2019-2020**	**2020-2021**
ENERGY Estimate **(August 26, 2016)** ($ million)	1,006	1,004	944	n/a
ENERGY's Revised Cost Estimate **(September 8, 2016)** ($ million)	1,119	1,086	1,171	n/a
ENERGY Revised Estimate **(March 15, 2017)** ($ million)	939	882	882	895
Change: **March 15, 2017** vs **August 26, 2016**	-7%	-12%	-7%	n/a
Change: **March 15, 2017** vs **September 8, 2016**	-16%	-19%	-25%	n/a

NOTE: The above estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

Hi John

I think original email are the slides that I commented on this a.m. and sent to you. It was all pretty minor stuff so not suggesting to send on, but just reminding in case you were feeling compelled to provide some feedback. I dont have any comments on the QA attachment.

Subject: RE: OFHP Placemat/definitions

Hi Scott,

On the numbers for the second slide, they do not appear to reflect the numbers from the March 1, 2017, Energy CabSub in each year (see attached). Also, the 17-18 numbers in the fiscal plan were adjusted to reflect ¾ of a year, per a July 1, 2017 implementation date (see attached Q&A file). With regard to the latter file, it might be useful to add to the second slide the revised OREC estimated cost numbers too.

On slide 1, I'd suggest separating out the Province and OFA bubble, to show the credit facility and

equity injection separately.

Ron

Subject: OFHP Placemat/definitions

Hi Nancy, Ron, Gadi,

Attached is an early cut at products we thought may be helpful as guides for the Fair Hydro plan. We have developed a two page overview placemat that follows Brandon's format. We also have a 1-pager with definitions that help to decode language in the OFHP legislation.

These products still require some refinement particularly on next steps for the tax based social programs (2nd slide). I need to check back with Energy to get some dates and to ensure what we have is correct. Ron, it would also be very helpful if your group could take a look at the numbers to ensure they align with the Budget forecasts. If anyone has additional key issues they would suggest flagging, please let us know and I we will drop them in. Also happy to take suggestions on format as we crashed this together fairly quickly (note that some of the numbers show up small on the screen, but hopefully look better on 11x17 sheets). We will treat this as an iterative product over the next few days / week.

While not perfect, I realize fiscal prep and MMP meetings are occurring tomorrow. I wanted to get this into the system in case it is helpful to have a reasonably accurate summary of a very complex initiative.

Thanks,
Scott

Ontario

Electricity Price Mitigation

Ministry of Energy

March 1, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

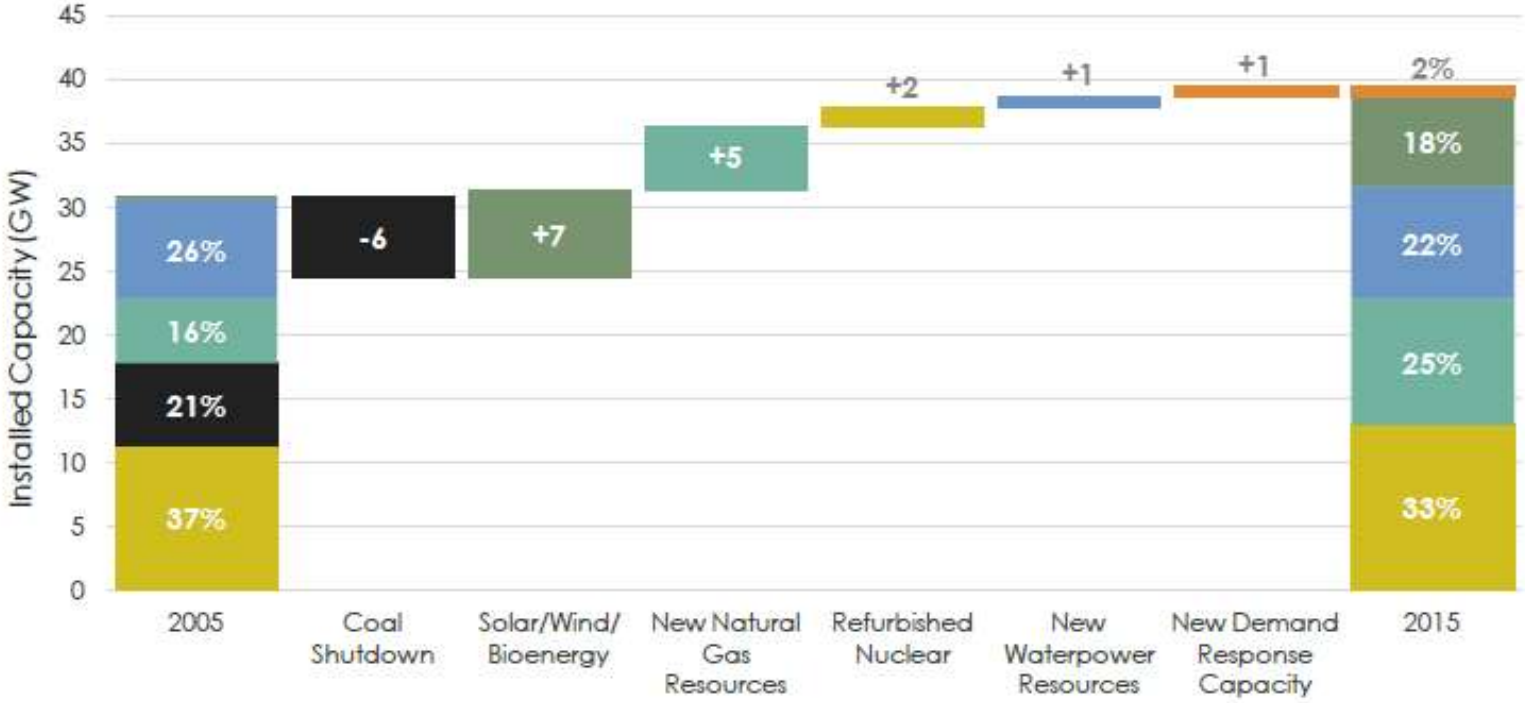
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



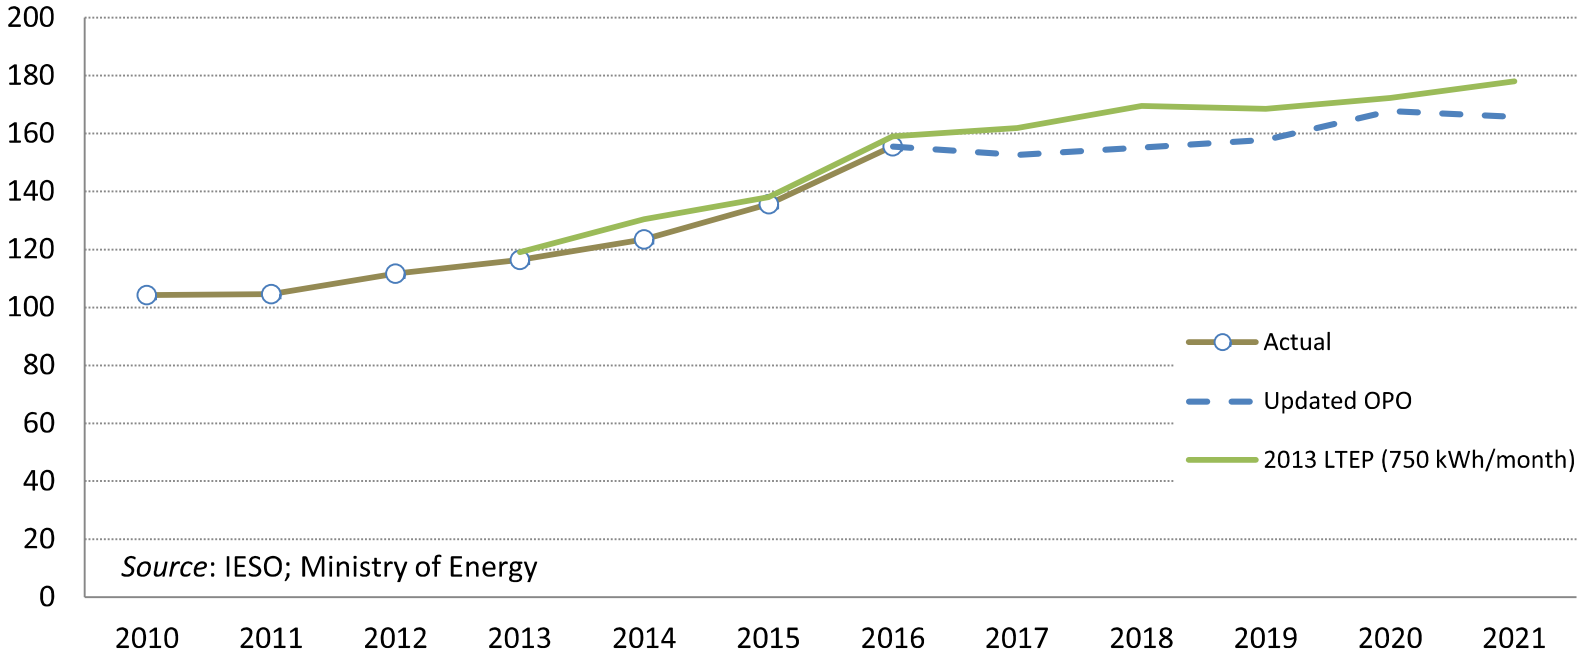
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



CONFIDENTIAL CABINET DOCUMENT

Context – Recent and Existing Government Funded Electricity Cost Mitigations

($Millions)	14-15	15-16	16-17[1]	17-18[1]	18-19[1]	19-20[1]	20-21[1]	Who Benefits
Ontario Clean Energy Benefit (OCEB) [2]	1,078	860	***OCEB ended on December 31, 2015***					• Residential customers, farms, small business (i.e., 10% off, on up to 3,000 kWh/month)
Ontario Rebate for Electricity Consumers (OREC or 8% rebate)*	-	-	300	1,100	1,200	1,200	1,200	• Residential customers, farms, small business (i.e., amount equal to the 8% Provincial portion of HST)
Ending Debt Retirement Charge (DRC) for Residential[3]	-	85	330	330	--	--	--	• Residential customers (i.e., saves about $70 per year for a typical residential consumer)
Northern Ontario Energy Credit (NOEC) [4]	24	26	25	25	25	25	25	• For eligible northern Ontario residents (i.e., for 2017, single people can receive up to $148,and families up to $227, depending on adjusted family income)
Ontario Energy and Property Tax Credit (OEPTC) (Energy component only)[4]	429	444	450	460	470	481	481	• For eligible low-to moderate-income individuals and families, & qualifying seniors (i.e., for 2017, up to $227, depending on adjusted family income)
Northern Industrial Electricity Rate Program (NIERP)	108	120	120	120	120	120	120	• Qualifying northern Ontario large industrial electricity consumers (i.e., rebate of 2cents/kilowatt-hour)
TOTAL	**1,639**	**1,535**	**1,225**	**2,035**	**1,815**	**1,826**	**1,826**	

Notes:

1. 2016-17 to 2020-21 based on forecasted numbers
2. OCEB ended December 31, 2015
3. 2015-16 estimated for 3 months of reduced DRC revenue. Estimated impact up to March 31, 2018.
4. Part of the Ontario Trillium Benefit. While related to energy generally, key policy driver for OEPTC when introduced in 2010 was electricity, as prices were forecast to rise, while fossil fuel prices, particularly natural gas, were low and falling.

CONFIDENTIAL CABINET DOCUMENT

Context – Recent Actions Taken To Mitigate Electricity Rates

- Following the 2016 Throne Speech, the several actions were announced to further reduce electricity costs.

1. As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8%.

2. Expanded support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.

3. Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

4. Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

5. Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – an average annual savings of $15 million.

Ontario

Rate Mitigation Proposal

- The following approaches are proposed:

1) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
   - Smoothing Mechanism (i.e., 25% reduction); and
   - Implementation Model.

2) Enhancing competitiveness for Class B electricity consumers (i.e. manufacturing) by lowering the eligibility threshold for Industrial Conservation Initiative (ICI).

3) Helping vulnerable electricity consumers by enhancing electricity support and conservation programs and shifting cost onto the tax-base:
   - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
   - Ontario Electricity Support Program (OESP) Expansion;
   - New Affordability Fund; and
   - On-Reserve First Nations Delivery Credit.

4) Ongoing activities to bend the future cost curve of electricity:
   - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
   - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing option under consideration is illustrative and show potential rate mitigation measures to meet a targeted 25% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to Regulated Price Plan (RPP) -eligible;
  - Rate increases would be capped at Consumer Price Index (CPI) for the first four years. Subsequent years would be set above CPI in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

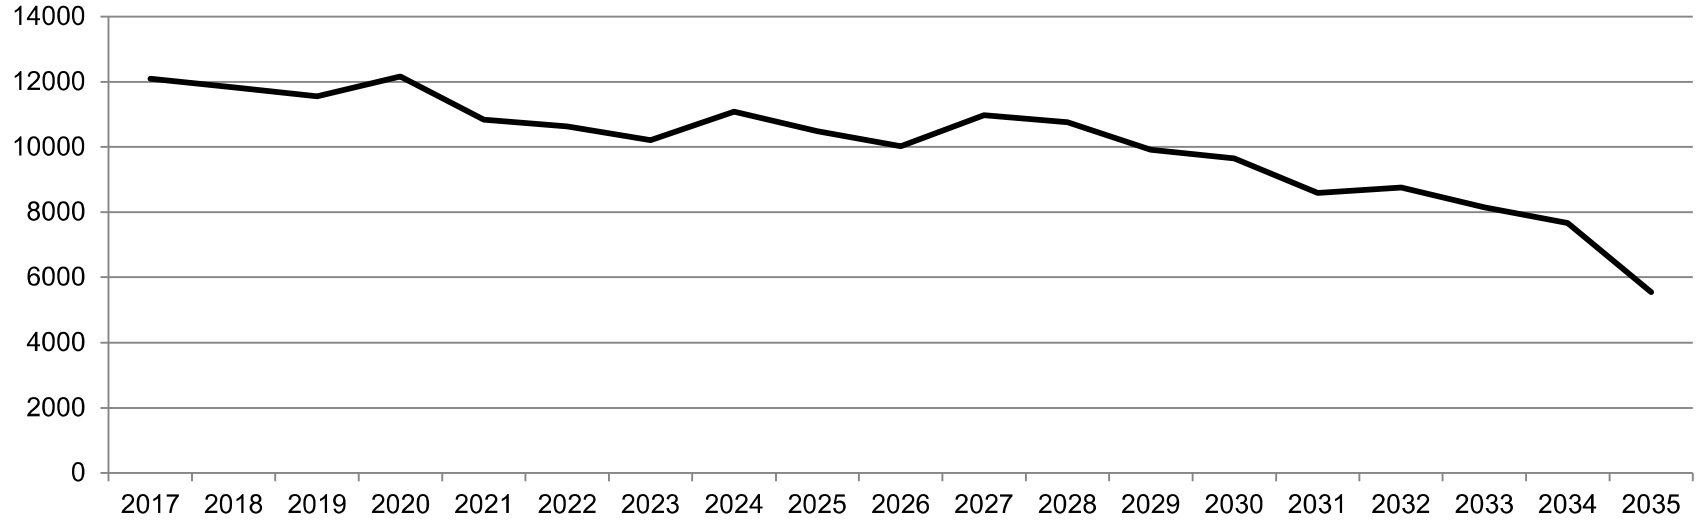
CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators**.**
**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

GA Smoothing – Global Adjustment Forecast

- The amount of Global Adjustment (GA) is forecast to decrease through the forecast period. Several factors contribute to the decline of GA, including:
  - Expiry of electricity generation contracts;
  - Cost of existing contracts reduced due to Inflation; and
  - Higher wholesale electricity prices due to higher natural gas/carbon prices, higher demand and reduced nuclear generating capacity.

Forecast Global Adjustment Cost (nominal $ million)



CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Expected Life of Electricity Generating Assets

- Gas, wind and solar generators are typically contracted for a 20-year period (e.g., with the Ontario Electricity System Operator (IESO), etc).
  - Nuclear and hydroelectric generators are contracted for a much longer period or regulated by the Ontario Energy Board (OEB) on a cost-of-service basis.
- While it is likely that gas, wind and solar generators will be able to operate beyond their current contracts, IESO advises that generators will need to decide what level of capital investment is appropriate for ongoing operations (i.e., by replacing and/or refurbishing major facility components).
  - In IESO's 2016 Ontario Planning Outlook (OPO), it was assumed that the service lives of generators could be extended beyond their contract term based on additional investments and ongoing costs. **Note:** This was not an assessment of the cost/benefits or a prediction of what the generators would actually do at the end of their contracts.
- The table below outlines IESO's current estimates for service lives of gas, wind and solar facilities. The ongoing service lives of these facilities depend on: initial facility design & build, operating activities (e.g., hours of operation, etc.) and level of facility maintenance (i.e., ongoing component repair and replacement).

Technology	Contract Life (yrs)	Expected Life (yrs)	Expected Cost Post-Contract Life
Gas	20	Up to 30	Life varies with initial design, how it is operated and maintained.
Wind	20	Up to 30	Older technologies may deteriorate faster. Elements such as foundations and electrical integration can last longer.
Solar	20	Up to 30	Performance deteriorates to about 80% by end of contract. Some facilities built in the initial contract periods may deteriorate more; however, technology is improving rapidly. Components need to replaced 5 to 30 years depending on design.

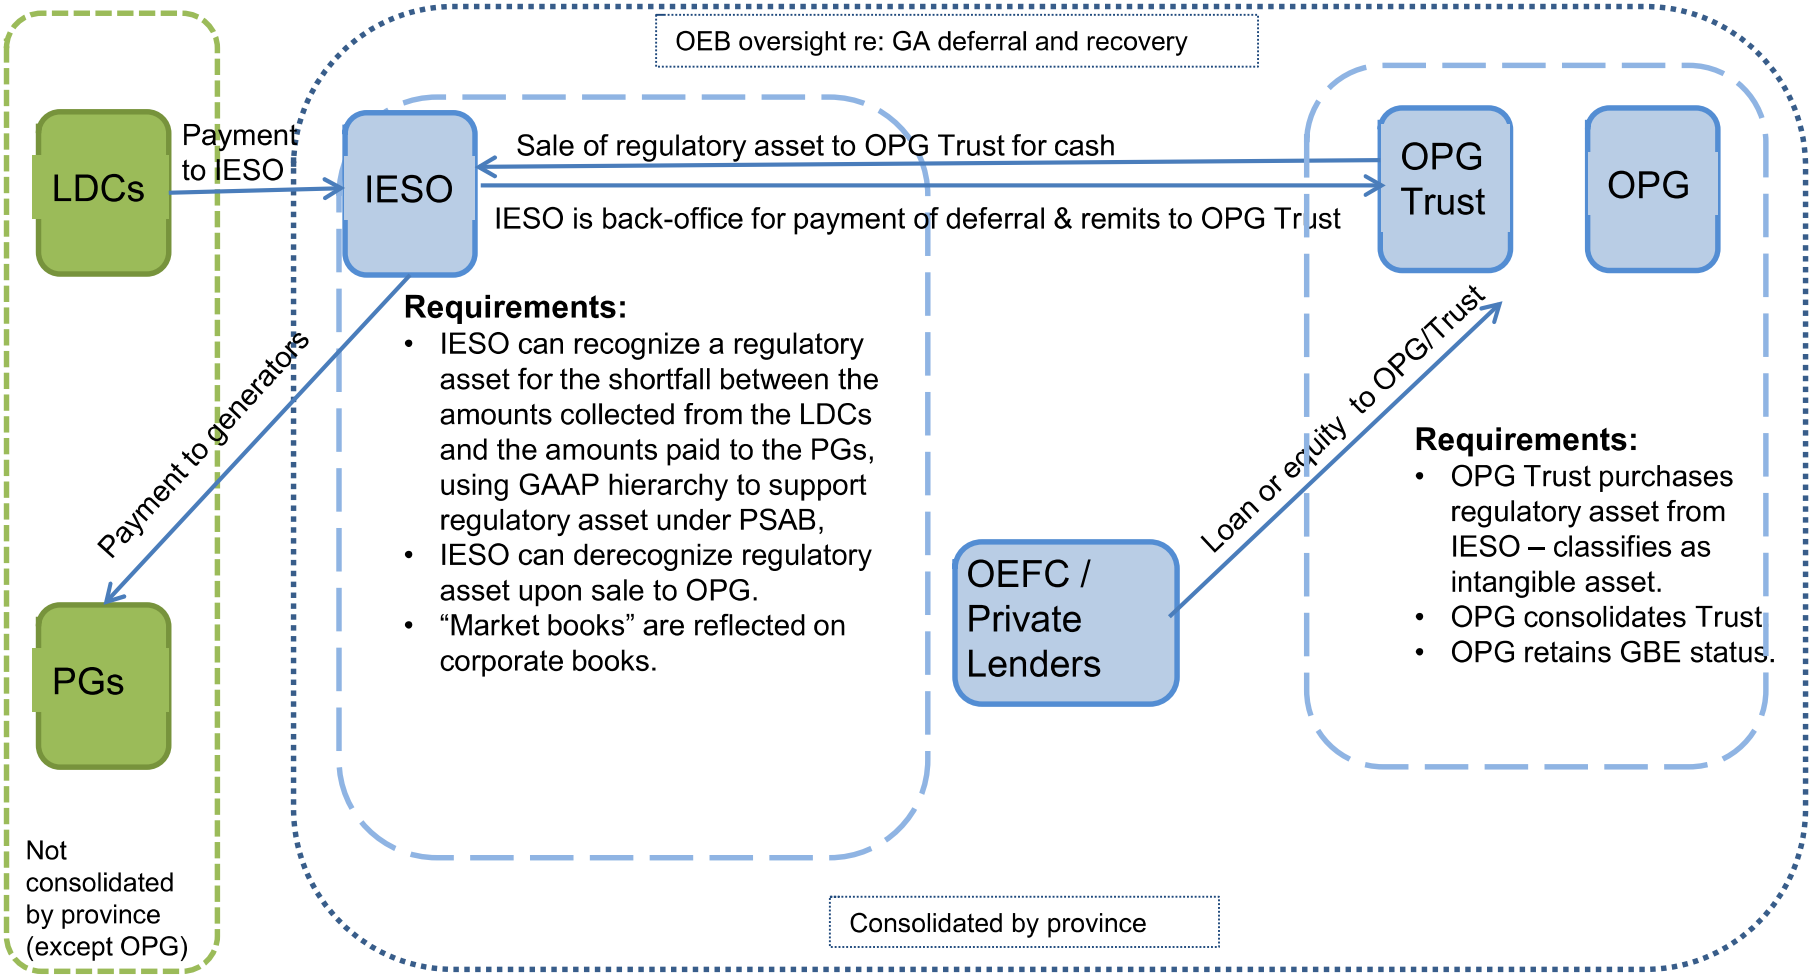
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

B. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



CONFIDENTIAL CABINET DOCUMENT

Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

B. GA Smoothing – Accounting Considerations

- OPCD advises that analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure and length of deferral/recovery increase risk and decrease transparency
- If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG will result.
- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

B. GA Smoothing – IESO Considerations

- The Electricity Act enables the Independent Electricity System Operator (IESO) to recover from ratepayers the amounts paid to generators, distributors or other contracted entities.
- The accounting advice received by IESO is that reflecting market balances and regulated assets is a more appropriate presentation for its financial statements going forward.
- IESO is characterized as an "Other Government Organization" (OGO) and consolidated on a line-by-line basis into the Provincial books.

Issue	Response
1. Can IESO adopt regulatory accounting?	• Public sector accounting does not address regulated assets. • Guidance can be drawn from other accounting bodies. • US Federal Accounting Standards Advisory Board (FASB), US Governmental Accounting Standards Board (GASB) and International Accounting Standards Board (IASB) do provide guidance. • FASB accounting standard 980 and IASB have specific references that support the adoption of regulatory accounting. **Conclusion:** There is a hierarchy of accounting principles that support this approach.

B. GA Smoothing – IESO Considerations

Issue	Response
2. Can IESO recognize the GA deferral as a regulatory variance account?	Criteria for recognition are: • Rates are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers. • Rates are designed to recover the specific costs of regulated business-type activities. • In view of demand, it is reasonable to assume that rates will be set to recover the regulated business-type and can be collected from customers. **Conclusion:** Legislation creates the right to collection, currently and in the future. With either OEB or IESO board involvement a regulatory asset can be recognized.
3. Can IESO sell the variance account related to the deferral of the annual Global Adjustment account?	• The sale of the variance account to OPG Trust must be structured as an absolute assignment of future economic benefits of the Asset with no obligations, rights or benefits remaining of IESO. • In that case, this would represent a sale of the future right to collect these amounts from the ratepayer. **Conclusion:** Based upon proposed terms of the sale agreement, there would be no future economic benefit for IESO. Risk and rewards are entirely transferred to OPG Trust.

B. GA Smoothing – OPG Accounting Considerations

- OPG's Special Purpose Vehicle (SPV)/Trust is a stand-alone entity able to conduct business separately under a Trust agreement. **Note:** The conditions required for OPG to consolidate the SPV/Trust are outlined in the following table:

Issue	Response
1. Decision Making	• OPG must have decision making authority on the operation of the SPV/Trust (without a veto right by the Province), including naming of trustees, establishing operating plans and budgets, setting or changing financing policies. • The SPV/Trust while operating within the legislation, must be controlled by OPG to operate freely and to alter terms and conditions not specified in the legislation to ensure recovery of the deferred amounts.
2. Business Risk	• The SPV/Trust must have variability of returns as a normal business enterprise would, including such things as interest charged on deferred amounts, decisions on how to finance these deferred amounts, the ability to make / lose and keep any spread from financing.
3. Funding	• The Province cannot directly or indirectly fund more than 50% of SPV/Trust or any investment in the SPV/Trust. • OPG must own at least 50% of the most exposed equity /sub-debt in the SPV/Trust.
4. Directive	• Directive that is issued should not be prescriptive or direct OPG to set up this business. The directive should only be "guiding" i.e. to allow OPG to evaluate options and put forward to the OPG Board a recommended plan for Shareholder approval.

B. GA Smoothing – OPG Accounting Considerations (cont'd)

Issue	Response
5. Other required Attributes	• The legislation that supports the formation of the SPV/Trust must have the following attributes: – Must require interest, carrying and administrative costs be paid to the Trust to allow for Revenue recognition; – The amount to be deferred must either be specified or be calculated based on a specific formula that is not subject to ongoing decision making by the Province. **The Province cannot have the ability to override this formula;** – SPV/Trust and its debt holders will require their capital guaranteed and paid for directly by the Province if the Province revokes the legislation; and – The spirit of the legislation should be reflected in the Trust Indenture Agreement.

B. GA Smoothing – OPG's Financing Structure Requirements

KEY ELEMENTS REQUIRED TO ENSURE THE DEFERRAL OF GA CHARGES CAN BE FINANCED:

Creating the Right to Recover Deferred GA

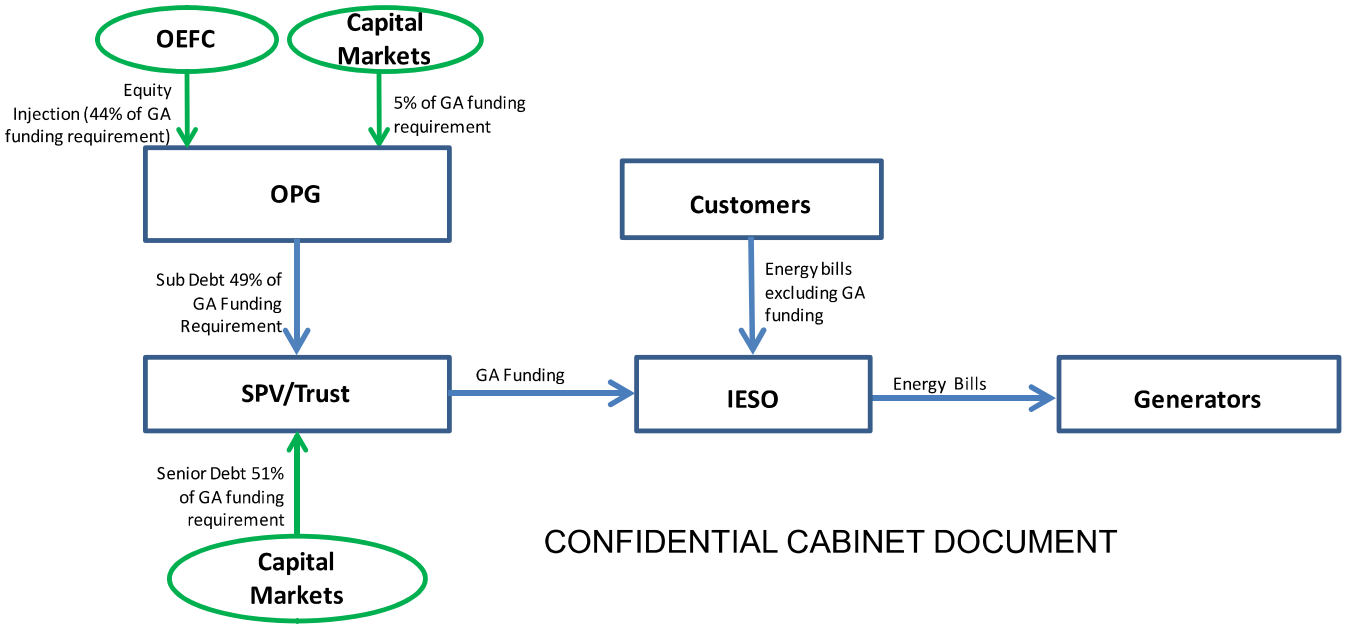
- Legislation enshrines the ability of the IESO to create a Right to charge customers in the future for the Global Adjustment (GA) deferred today including principal amount deferred, interest and other financing costs on the amount deferred and fees, expenses and other administrative costs.
- The Right can be sold to an appropriate Trust or Special Purpose Vehicle (SPV) to obtain funds to pay amounts due to generators under contracts or regulation. These SPVs are generally single purpose entities with no other operations that could add risk to the entity, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings.
- Right must be irrevocable and if the Right is amended by future governments the debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment.
- Right must specify the recovery period or the mechanism for setting the recovery rate including true up of the rate to ensure all amounts are recovered.

Economic Factors

- Limits on the recovery amount (principal, interest, fees and expenses) charged to customers in future periods must have compensating elements such as longer recovery period to ensure the full amount deferred plus interest, financing and other administration costs is recovered from customers.
- Need to balance customer relief with debt holder risk. Longer recovery periods and larger deferred balances increase risk to the debt holder of future government intervention.
- The amount required by the SPV to purchase and service the Right will be funded 51% from debt holders, 5% from OPG through capital markets and 44% from OPG via equity injection to OPG from the Province. The funding from OPG will be loaned to the SPV as subordinated debt.

B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.



CONFIDENTIAL CABINET DOCUMENT

Ontario

GA Smoothing – OEB Considerations

- Ontario Energy Board (OEB) oversight may be required as part of creating a regulatory asset.
- Subject to final confirmation, there are several other spheres for possible OEB oversight:
  - The rate payer impact of IESO deferral account and eventual repayment of the deferred Global Adjustment (GA), within pre-defined legislative parameters;
  - The administrative costs of the OPG's Special Purpose Vehicle (SPV) /Trust (e.g., as the OEB reviews and approves IESO's expenditure and revenue requirements and makes orders fixing just and reasonable rates for the Smart Metering Entity);
  - The SPV/Trust's returns (e.g., as the OEB does with OPG's regulated assets) and whether any income to OPG can be used for the benefit of rate payers;
  - The review of the final structure of the debt issuance for the limited purpose of ensuring requirements of law have been met; and
  - In out years, review of the collection of charges to ensure that collection is sufficient, and not greater than necessary, to pay debt service.
- The scope of OEB oversight will ultimately need to balance the interests and needs of rate payers, the market, OPG and the Province.

B. GA Smoothing – Ontario Financing Authority (OFA) Considerations

- Under the proposed structure, the financing of the deferred Global Adjustment (GA) costs would be effectively done in part by each of the OPG Special Purpose Vehicle (SPV)/Trust, the Province and OPG: the OPG SPV/Trust would borrow 51%, the Province 44% and OPG 5% of the required GA amounts needed to be financed.
  - In the alternative, the Province (through the OFA/OEFC) could borrow the required amounts each year, likely at a lower cost. However, the target for an arms-length trust and potential risk transfer would not be achieved.

	OPG Structured Financing	OFA/OEFC/Provincial Financing
Financing Considerations	• As the OPG SPV/Trust would be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • This would increase the cost of GA smoothing and the ultimate rate impact on future consumers. • The Trust would be exposed to interest rate changes. • Availability of debt financing may also be limited, depending on the overall amount of deferral, and the subsequent rate impact during the recovery period. OPG has cited examples of a 10% threshold on overall rate impacts of the deferral recovery amounts. • With a potential guarantee from the Province for the borrowing of the OPG SPV/Trust, OPG could see borrowing costs closer to the Province. However, this would redirect the risk back to the Province, removing the intended benefits of using this particular structure, and could add risk to the targeted accounting treatment. • With, or potentially even without a provincial guarantee, OPG SPV/Trust's borrowing could be seen as debt effectively supported by the Province by credit rating agencies and included in their analysis and determination of the Province's ratings. • If a Provincial guarantee endangers the targeted accounting treatment, it may be hard to justify the higher cost borrowing by OPG SPV/Trust to be passed through to ratepayers.	• Province's borrowing from the public markets would add to the borrowing program and the Province's gross debt. • The Province would expect to be able to finance the GA deferral at a lower financing cost than the OPG SPV/Trust, but would likely not achieve the targeted accounting treatment based on OPG's analysis. • Net debt would not increase, to the extent supported by increased equity in OPG under that model, and/or if the accounting treatment can be achieved as backed by a GA-related asset (OPG does not consider that the accounting can be achieved if the SPV/Trust is financed by the Province). • The Province's interest on debt (IOD)cost would need to be effectively recovered through the GA. – E.g., an OPG equity return to cover the cost of borrowing for the equity injection. – Or more directly if the Province is providing financing directly to the GA entity. • The cost of borrowing for the Province could change: 1. The Province's credit rating could be at risk of being re-evaluated by Rating Agencies, which may negatively impact the cost at which the Province borrows and 2. An increase in the Province`s borrowing rates, as a result of increased borrowing. The market may not have adequate demand for the Province to carry-out these borrowings without increasing the interest rate on the debt issues for GA financing and for all of the Province's borrowings. • The interest cost of GA deferral would be exposed to changes in the interest rate environment generally.

GA Smoothing – Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
  - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
  - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
  - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
  - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- Although Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA smoothing (i.e., because it is only targeted to RPP consumers), the Ministry has a proposal later in the submission to address competitiveness for Class B consumers (i.e., targeted lowering of the Industrial Conservation Initiative (ICI) eligibility thresholder from 1 MW to 500 kW).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - **Note:** Although Class B and Class A consumers will not receive the rate relief benefits of GA smoothing, both consumers will benefit from tax-basing the electricity social programs.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

- The GA smoothing proposal will accrue total interest of $25 billion based on the proposed option. This amount of interest is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.
  - An increase in the borrowing rate from 5% to 6% would increase the total interest costs by almost $9 billion and would require an extension of the financing term beyond 30 years.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there would be a negative impact on the province's fiscal plan, as shown below.

Fiscal Impact ($M)	2017-18	2018-19	2019-20	2020-21	2021-22
Bills Lowered by 25%, RPP-Eligible Only*	2,534	2,668	2,942	3,420	3,232

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

Source: Ministry of Energy

ENHANCING COMPETITIVENESS FOR CLASS B ELECTRICITY CONSUMERS

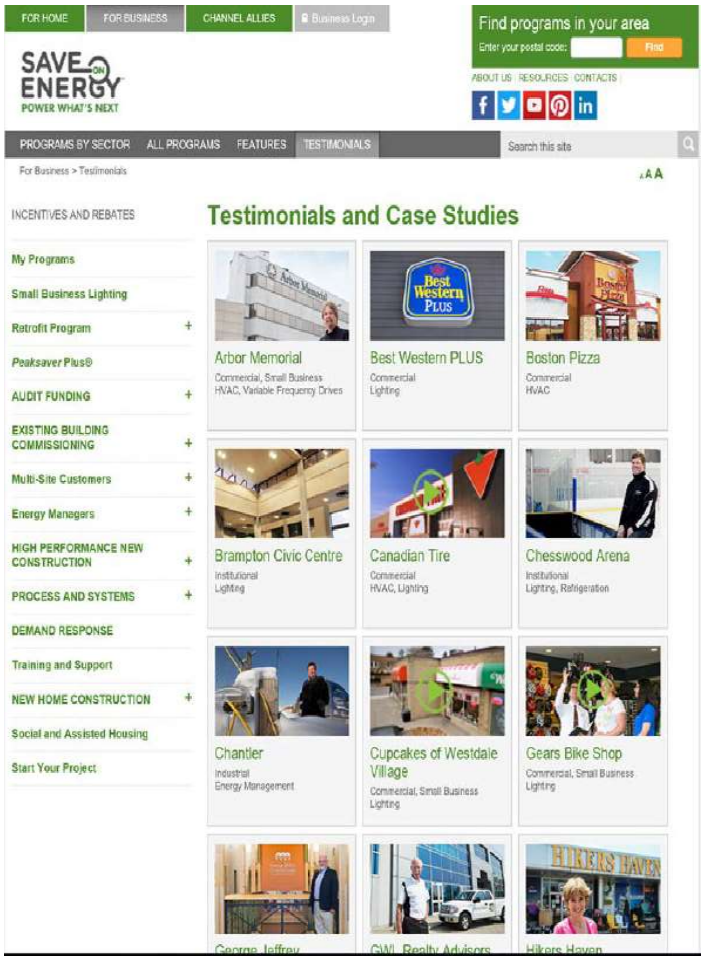
Support for Class B Consumers

- Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

- Through saveONenergy, many Class B consumers have already taken advantage of energy efficiency programs.

  - Although saveONenergy programs like Process and Systems Upgrade Incentive exist, these programs generally require significant investment on behalf of the customer in addition to the incentives and therefore may be difficult to take advantage of.

  - For Class B manufacturers whose electricity consumption is primarily based on process activities (e.g., injection moulding, welding, etc), traditional conservation measures like lighting and ventilation upgrades have limited benefit.



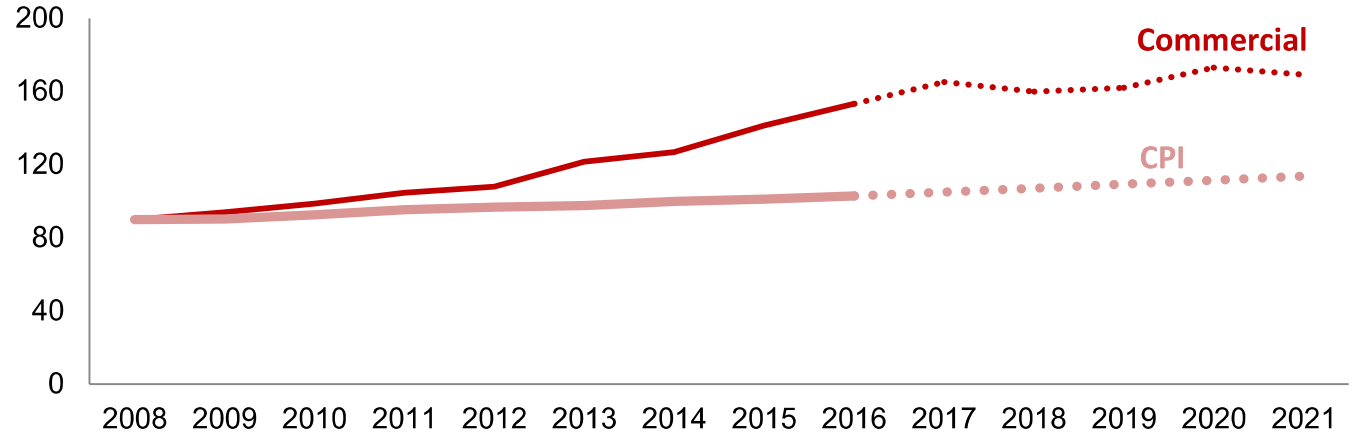
Support for Class B Consumers (cont'd)

- Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers).

- Price mitigation initiatives could be provided to Class B to address stakeholders' concerns (e.g., Coalition of Concerned Manufacturers of Ontario, etc).

- The chart below highlights that the cost of electricity for Class B consumers has risen faster than CPI.

Illustrative Electricity Prices
in $/MWh



***Source*:** IESO; OEB; Ministry of Energy

CONFIDENTIAL CABINET DOCUMENT

Lower ICI Threshold Below 1 MW for Energy Intensive Industry

- The Industrial Conservation Initiative's (ICI) eligibility threshold for participation was recently lowered to 1 MW. The lowering of the ICI eligibility threshold provides an opportunity for additional Class B consumers to save on their electricity costs if they choose to opt-in to ICI (i.e., and become new Class A consumers):
  - Beginning in July 2017, new participants will be billed Global Adjustment (GA) on the basis of their contribution to province-wide peak demand.
  - Prior to lowering the ICI eligibility threshold, electricity consumers with peak demand between 3 and 5 MW could only participate in ICI if they belonged to the following sectors: manufacturing, mining, data processing, refrigerated warehousing and greenhouses. **Note:** To achieve the benefits of ICI, participants must reduce their electricity demand during the five system peak hours.

- To enhance the competitiveness of larger Class B consumers whose electricity demand are too low to currently qualify for ICI, the Ministry proposed to:
  1. Expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts; and
  2. Target the expansion to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing).

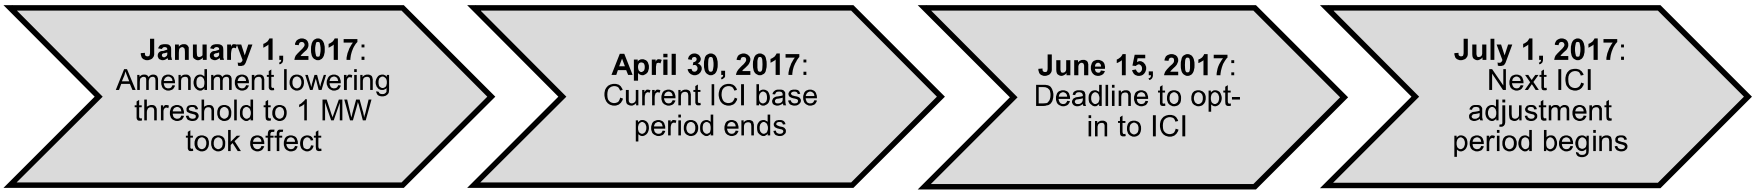
- In addition, the Ministry will assist Class B participation in ICI through a targeted outreach campaign delivered by the Ontario Chamber of Commerce (OCC).

Lower ICI Threshold Below 1 MW – Considerations

- A targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW provides benefit to larger Class B consumers (i.e., manufacturing) while limiting the cost shift to other electricity consumers.
  - **Note:** A Class B consumer that run only a day shift, resulting in fairly peaky load profiles would need to adjusted its behaviour to maximize the benefits of ICI.

- Preliminary analysis by ENERGY staff show that the estimated impact of a targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW would increase a typical residential bill by up to 0.66% or just over $1/month based on a 2016 bill of about $158.
  - The actual impact would vary depending on uptake and consumer responsiveness.
  - With the recent lowering of the ICI eligibility threshold to 1 MW, there is no information available regarding the actual impact on new participants and the electricity system.

- In order for any changes to ICI eligibility to take effect before the next 12-month billing period beginning July 1, 2017, regulatory amendments would have to be made before the end of April 2017.



Lower ICI Threshold Below 1 MW – Legal Considerations

- The quantum of a regulatory charge may be set at different rates within a regulatory structure where the differential prices are intended to serve other regulatory goals including an intention to modify the behavior of persons within the scheme.

- Expanding access to the Class A pricing regime is intended to serve regulatory goals by encouraging consumers to shift their electricity use away from peak hours, which benefits the electricity system as a whole. While Class B consumers will have to pay more of the GA cost in order to finance the reduction for Class A consumers, this is generally permissible since Class B consumers are not modifying their behaviour and the total amount recovered for the GA does not exceed its cost. CLB has previously advised that the differential pricing structure generally only attracts a **moderately low risk** of being a tax, and this risk level does not change if the option of Class A pricing is extended to a broader class of consumers.

- It is more difficult to justify a differential regulatory charge on the basis of behavioral modification when the lower charge is not available to some participants in the regulatory scheme whose conduct could equally serve the same goals. To the extent that there is not a regulatory rationale for extending the new class A option only to certain sectors, risk increases. The amount of risk in this scenario will vary depending on the quantum of the premium that Class B consumers pay to create the behavior modification incentive for Class A and the degree to which the excluded sectors can credibly claim to be able to achieve the same outcome were they permitted to participate in this aspect of the program.

ELECTRICITY SUPPORT AND CONSERVATION PROGRAMS TO HELP VULNERABLE ELECTRICITY CONSUMERS

Electricity Support and Conservation Programs to Help Vulnerable Electricity Consumers

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to deliver electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  A. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  B. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  C. **Establish a new Affordability Fund**, providing energy efficiency measures at no or minimal cost to those who are ineligible for low-income conservation programs, have difficulty paying their electricity bills and who cannot make energy efficiency upgrades without financial assistance.

  D. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

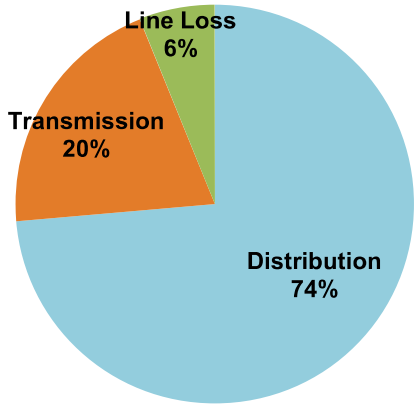
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

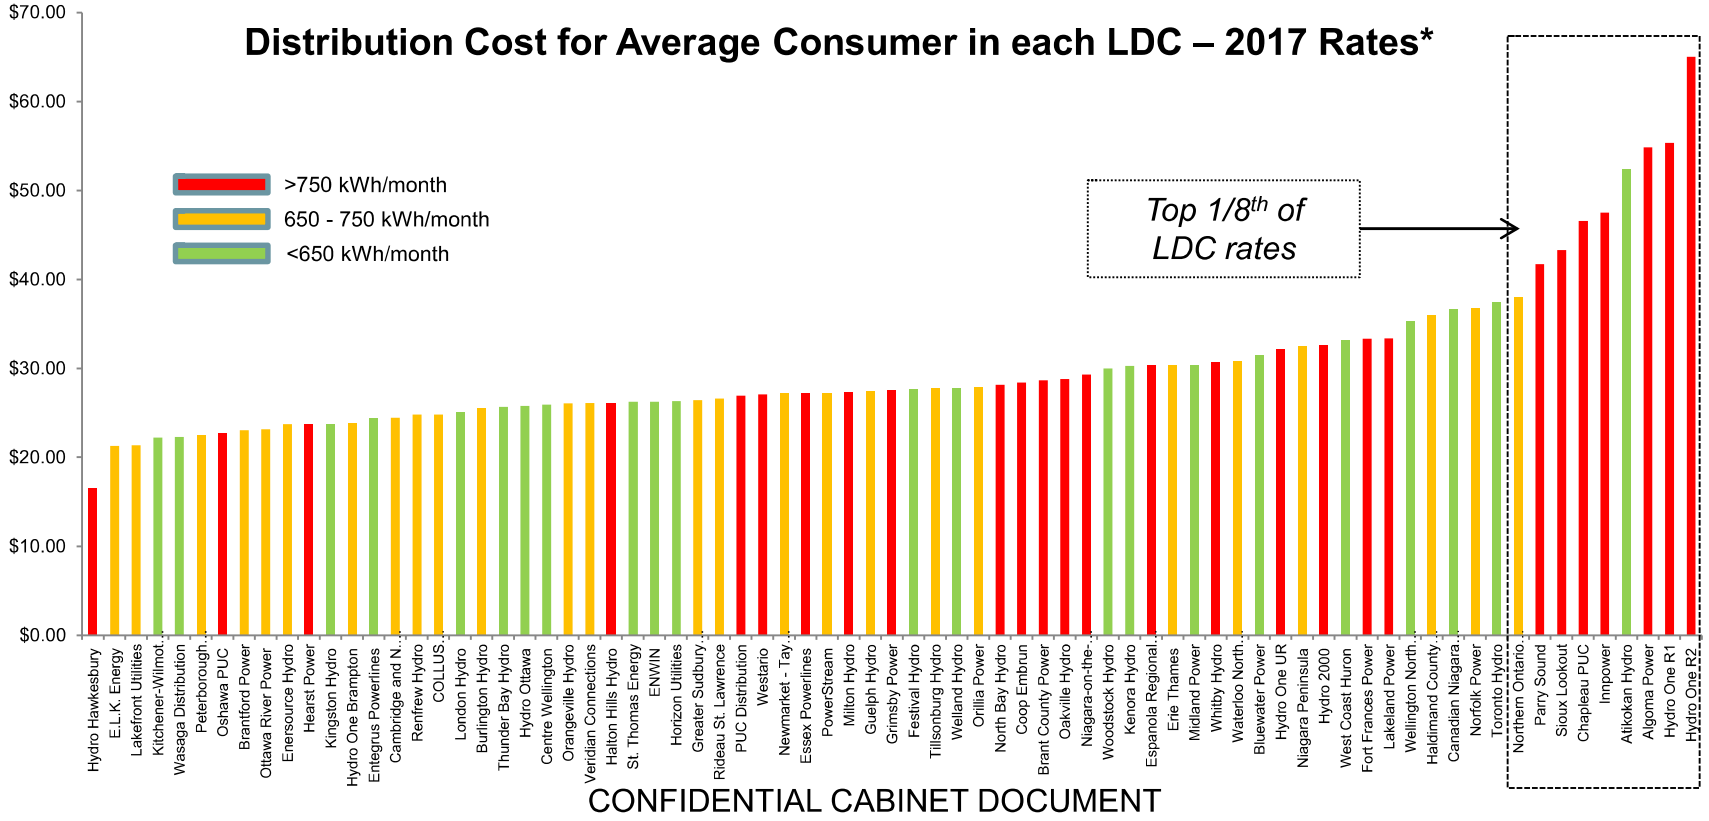
- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario and funded through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - Roughly 800,000 customers would receive benefits from the current RRRP program and from these additional enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.



CONFIDENTIAL CABINET DOCUMENT

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

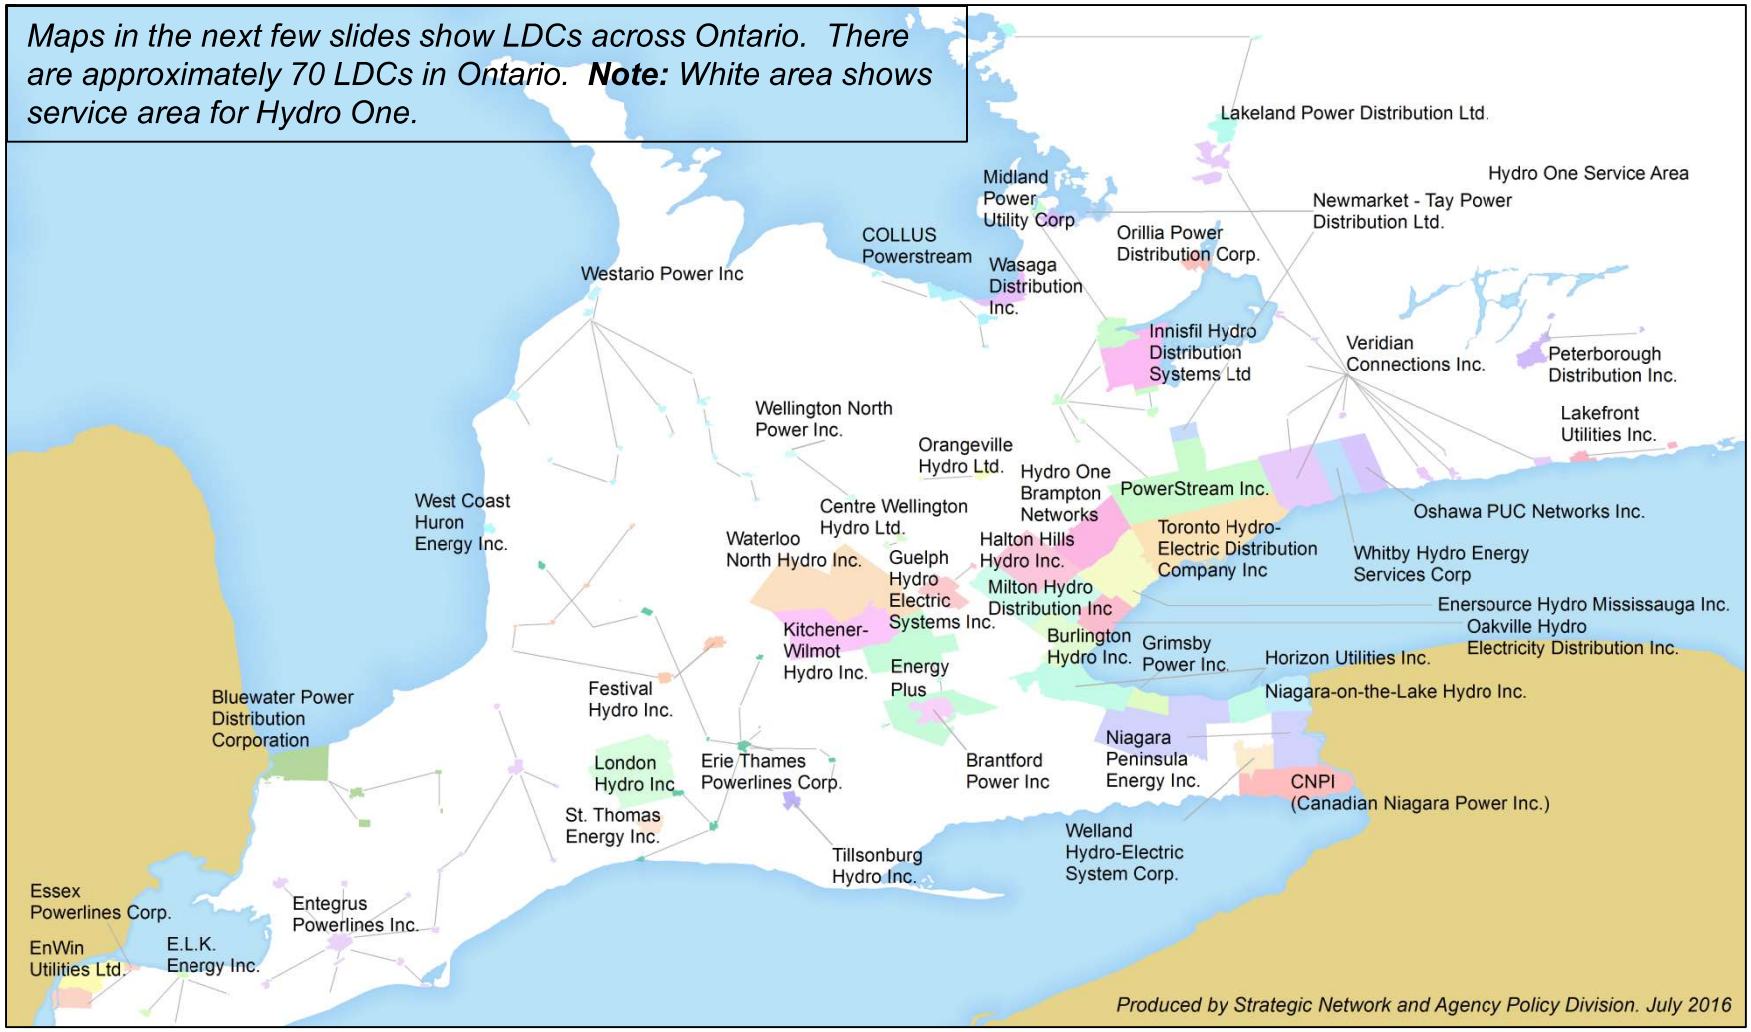
- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board (OEB).

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136
2016 Speech from the Throne Enhancements to R2 Customers	-	117	120	123	127
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234
TOTAL	-	**459**	**472**	**484**	**497**

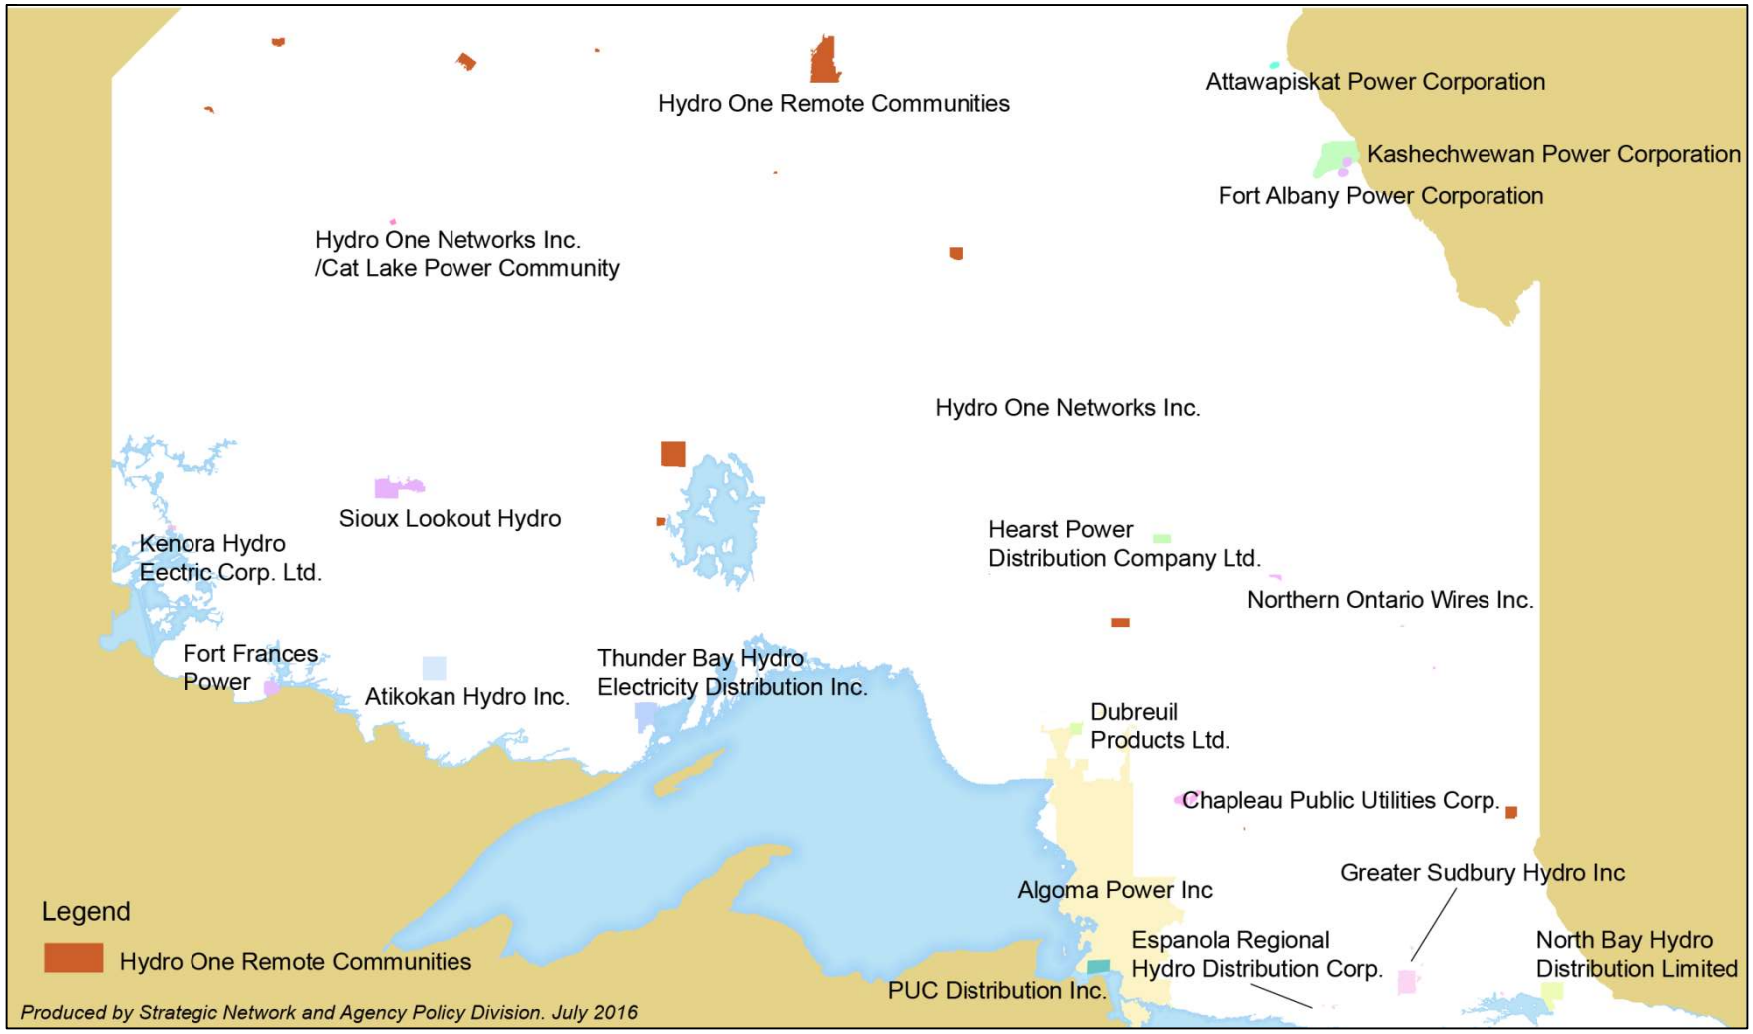
Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.

A. RRRP Enhancement – LDC Service Territory (Southwestern Ontario)

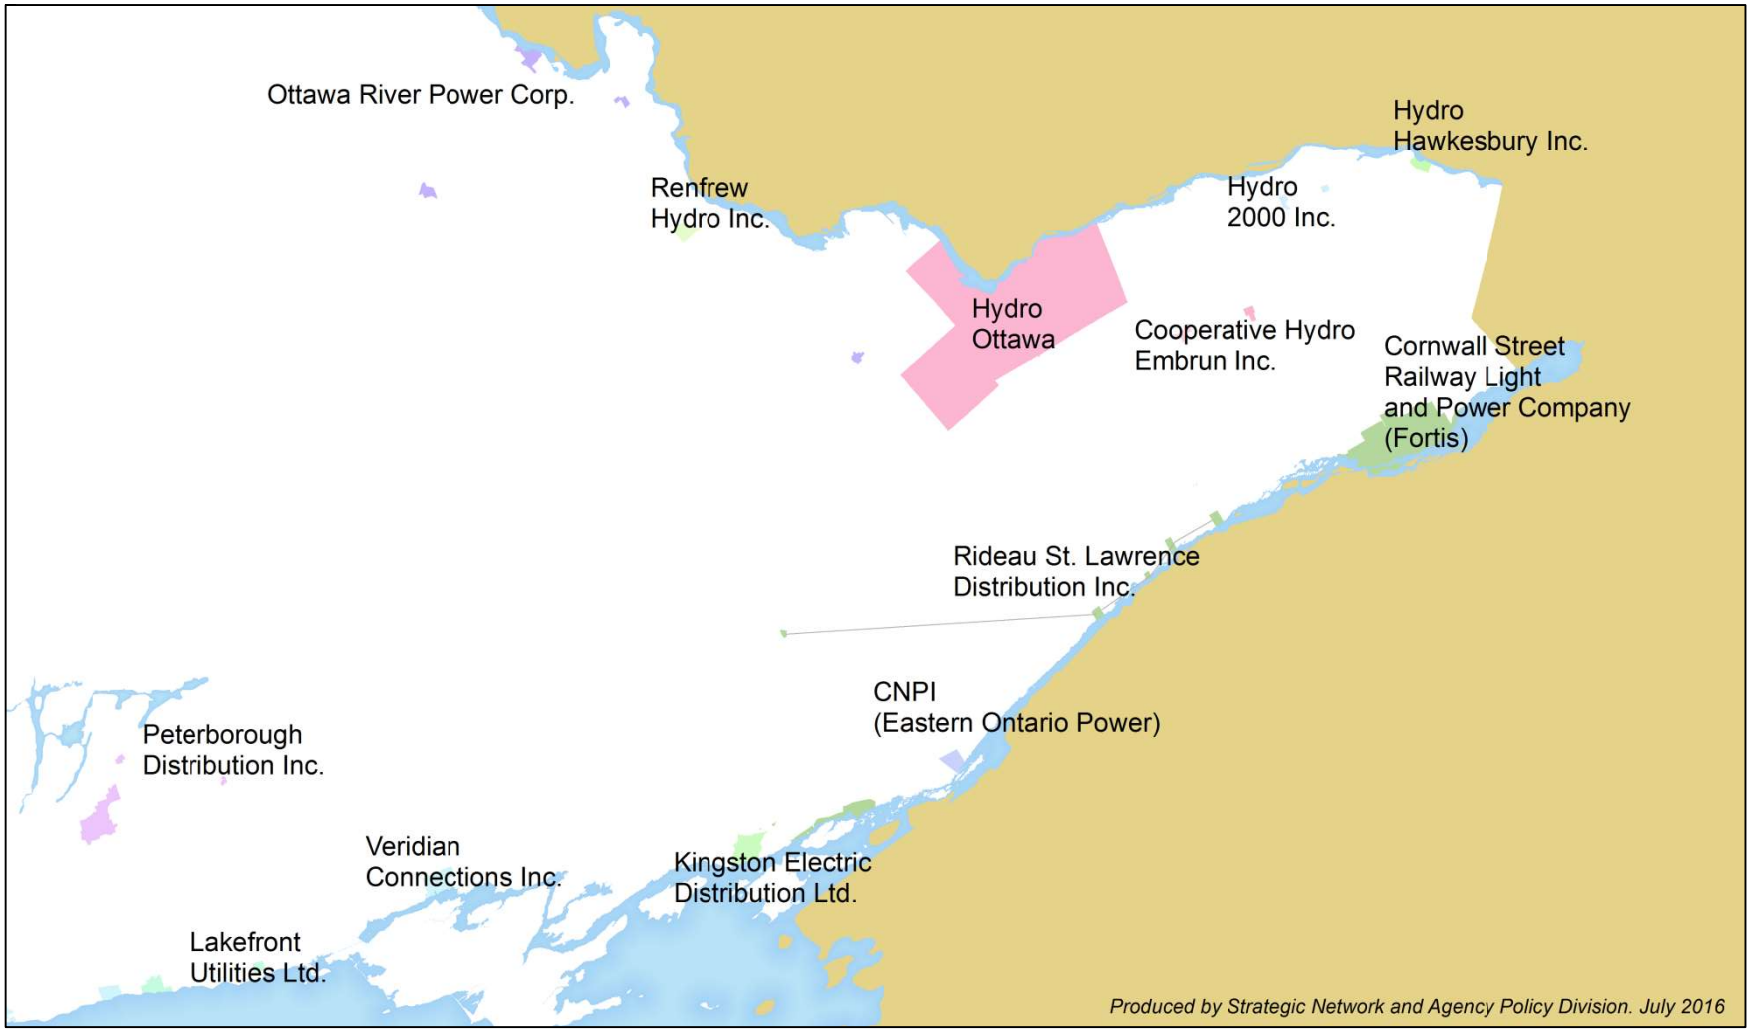
Maps in the next few slides show LDCs across Ontario. There are approximately 70 LDCs in Ontario. ***Note:*** *White area shows service area for Hydro One.*



A. RRRP Enhancement – LDC Service Territory (Northern Ontario)



A. RRRP Enhancement – LDC Service Territory (Eastern Ontario)



B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP credits vary by income level and family size, and there are two credit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in credits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced:
  - Streamline the OESP process to drive participation toward 100%:
    - ENERGY and the Ministry of Community and Social Services (MCSS) have been working on automatic OESP qualification for Ontario Works (OW) and Ontario's Disability Support Program (ODSP) recipients who pay electricity bills.
      - MCSS estimates some 110,000 OW and ODSP recipients pay electricity bills;
      - This process could follow the "deemed eligibility" model used for the Healthy Smiles program. Using an existing model should simplify the implementation process.
      - The qualification process may have to be done manually at first, with a more automated IT solution in the longer-term.
    - Working with the CRA to make the application process easier / quicker to get through by finding an alternative to the requirement to mail-in signed consent forms;
    - Putting in place a more aggressive communications strategy and application intake clinics across the Province to increase awareness of/enrollment in the OESP.
  - Increasing the existing OESP credit scales by an additional 50%; and
  - Expanding the categories of OESP credits.

- It is also recommended that the OESP be supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes):

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

C. Establishing a New Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as “low-income” but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000* residential electricity accounts in arrears; of these about 19,900** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.

* **Note:** Unverified numbers reported by LDCs to the OEB
** **Note:** Low-income customers identified through participation in LEAP

Ontario

C. Establishing a New Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who cannot qualify for low-income conservation programs and are in need, such as those who are facing disconnection.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the principles of the Fund and is working with Hydro One to set up an independent Trust to serve as the Fund Administrator.
  - The Fund Administrator would manage the flow of funds to LDCs based on principles set by the province, and be responsible for establishing processes, administration, and criteria for funding applications, thereby ensuring the program is managed on a consistent basis across the province.
  - LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers in their service territories that meet the targeted eligibility criteria.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

C. Establishing a New Affordability Fund (cont'd)

<u>Implementation</u> (cont'd)

- Recipients could receive measures ranging from an average of $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
  - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
  - Programmable thermostats, weather stripping, insulation (in homes with electric heating).

- Cold climate air source heat pumps would also be an eligible measure under the Affordability Fund. Heat pumps range in cost from $7,000 to $13,000.

- As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New Affordability Fund – Considerations

Considerations

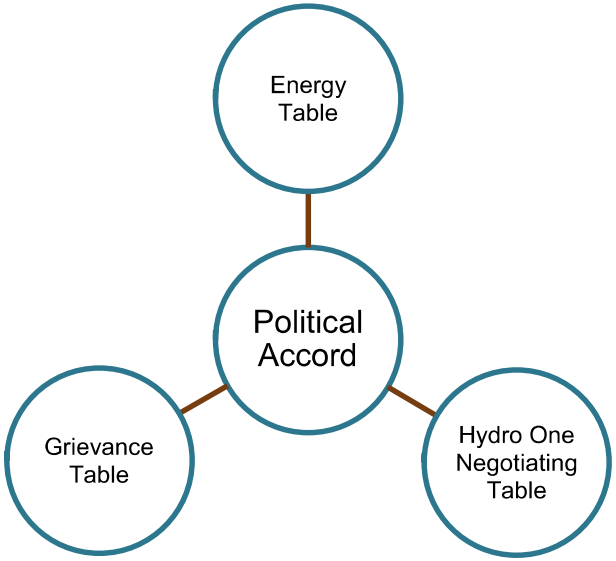
- The Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to seek input from the OEB, LDCs and potentially low income organizations to help develop funding allocation and eligibility principles for the Trust.
- While eligibility principles will be established, LDCs will need a degree of flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with Hydro One and transfer money before end of fiscal year to ensure Hydro One can establish the Trust and the Trust can begin operation as the Fund Administrator.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal. The proposal has an ameliorative purpose as it targets First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities, that affect electricity affordability.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements*	-	459	472	484	497
Ontario Electricity Support Program, including the 50% Enhancement & New Matrix Categories	-	186	261	325	375
On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.
****Note:** Funding for the Affordability Fund is one-time in 2016/17.

BENDING THE FUTURE COST CURVE OF ELECTRICITY

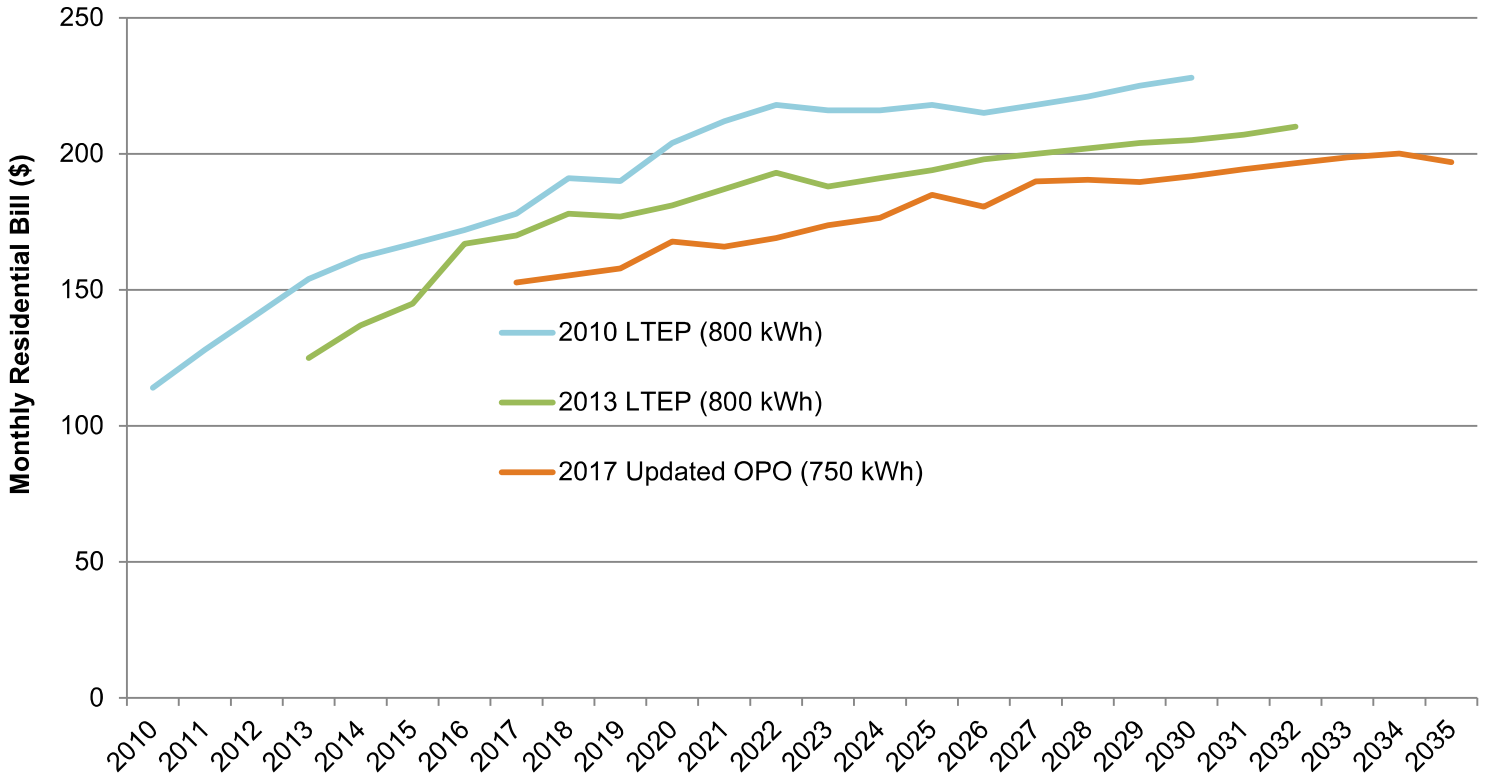
Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.
  - Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – up to [$xx] cost savings.

CONFIDENTIAL CABINET DOCUMENT

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of February 2017) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

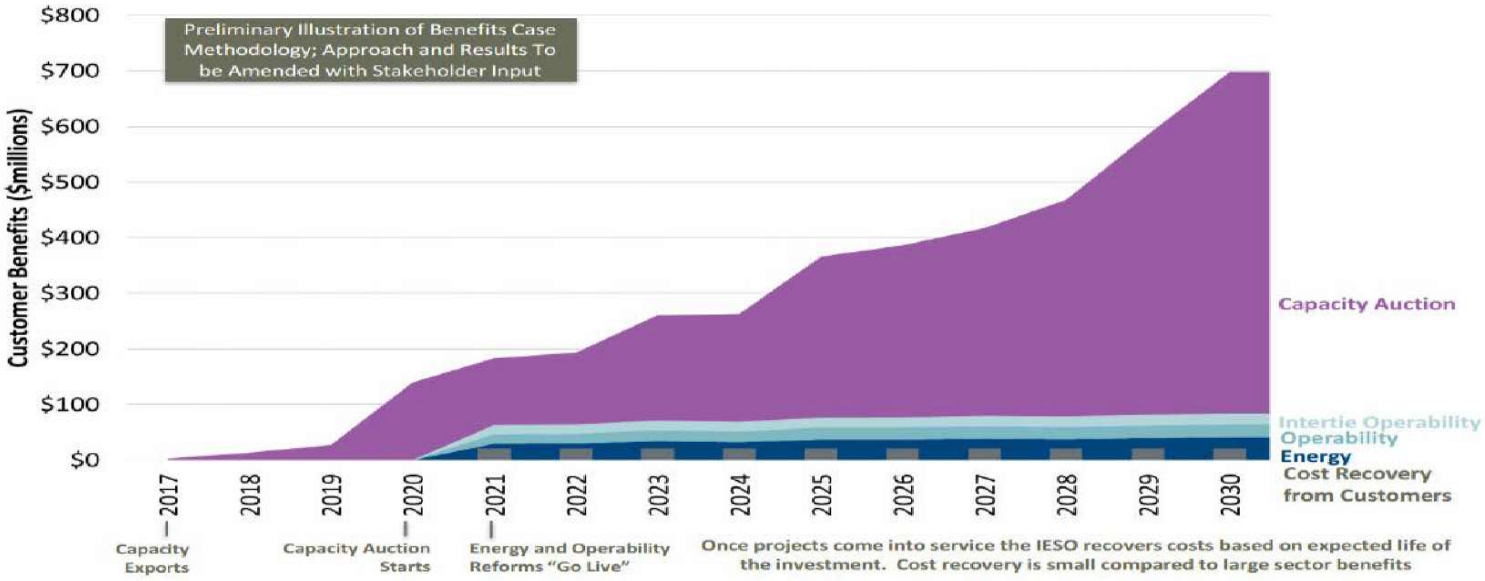
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



CONFIDENTIAL CABINET DOCUMENT

SUPPORT FOR TENANTS

Support for Tenants – Context

- The government is considering measures to provide relief from high electricity prices, and is interested in ensuring that tenants also receive electricity cost reductions and/or relief.

- Currently, tenants generally either pay for their own electricity use through suite meters (i.e., sub-meters or direct arrangements with hydro providers) or pay for electricity indirectly as a service included in their rent:
  - Tenants who pay for their own electricity will receive electricity costs savings directly through their bills; and
  - Low-income tenants who pay own electricity bills can access energy support programs such as the Ontario Electricity Support Program administered by the Ontario Energy Board (OEB).

- Any potential initiatives could focus on the following options:

For tenants who pay own electricity bills

1. Expand OESP to increase relief or raise income thresholds.

For tenants whose electricity is included in rent

2. Require that landlords pass savings on to tenants (could be addressed by MHO through RTA amendments).
   - Options could include requiring landlords to automatically reduce rents, or allow tenants to apply the Landlord and Tenant Board for relief.
3. Provide energy rebates directly to tenants whose rent includes electricity.

Support for Tenants – Potential RTA Hydro Relief Measures / Considerations

- RTA amendments with respect to tenant relief, remedies, and enforcement would be complex, and unable to provide immediate, direct and transparent cost remedies to tenants:
  - Impact of hydro relief measures and electricity cost savings for landlords may vary depending on size of rental building and location (urban/rural):
    - One size fits all approaches would not match actual landlord savings to direct tenant relief; and
    - More targeted approaches would add extreme complexity, leading to greater confusion for landlords and tenants, and difficulty administering enforcement.
  - Passing on actual savings could likely only be done after landlords have experienced decreased costs for a period of time (i.e. one year).
  - Difficulty in informing landlords of their responsibilities and enforcing reductions; would likely have significant resource implications for the Landlord & Tenant Board/Ministry of Attorney General.
  - Difficult for tenants to understand, with the most vulnerable tenants potentially less able to pursue remedies through the LTB.
- The kinds of potential RTA remedies would depend on various specifics regarding the way in which relief was being provided to landlords including whether:
  - The actual electricity cost savings for landlords are transparent to facilitate easy calculation of rent reductions or relief;
  - Hydro relief measures are permanent or temporary; and
  - All relief should be passed on to tenants, or just a portion of the relief (e.g., global adjustment fund, 8% rebate, any other relief).

Support for Tenants – Potential RTA Hydro Relief Measures / Other Considerations (cont'd)

- As part of Climate Change Action Plan, MHO has been directed to mitigate the impact of carbon costs on tenants, and is proposing to prevent landlords from charging above-guideline rent increases for extraordinary utility costs increases.
  - May seem unfair that landlords are required to reduce rents or provide relief when utility costs decrease but cannot increase rents when utility costs increase.
- Relief would be limited to certain segments of tenant population:
  - Post-1991 buildings are exempt from the Rent Increase Guideline and landlords could negate any savings to tenants in these buildings through a higher subsequent rent increase.
    - Over 19% of tenant households are estimated to live in post-1991 private rental units including individually rented condos; a high proportion may already pay for electricity separately.
  - Relief may not be required for social housing tenants:
    - Most social housing tenants (80%) pay as per utility scales, which covers electricity usage other than electric heat; and
    - Utility scales were last updated in 2000 and are reflective electricity prices at that time.
- MHO, working with ENERGY and MAG will report back in Spring 2017 with options for electricity rate mitigation for tenants.

Legislative Authority – Considerations

GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The OPG Trust will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the OPG's SPV/Trust and settle accounts with the OPG Trust as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the SPV/Trust to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the SPV/Trust (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Class B

- **Targeted Lowering ICI Threshold Below 1 MW (to 500kW):** Regulatory amendments (O.Reg. 429/04) will be required to address program details.

Legislative Authority – Considerations (cont'd)

Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **Affordability Fund:** In order to implement new affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement and Technical Briefing
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

APPENDIX: SEE MINISTRY OF ENERGY'S ELECTRICITY PRICE MITIGATION – APPENDIX

Q&A Response

Q. What is the revised cost forecast for the 8% rebate as result of the measures announced in Ontario's Fair Hydro Plan?

Key measures announced in Ontario's Fair Hydro Plan (OFHP) are expected to reduce the cost of the 8% rebate for the Province. The cost to the Province is expected to decrease as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced.

ENERGY has updated the cost forecast for the 8% rebate based upon the following:

- Independent Electricity System Operator updated its Ontario Planning Outlook (OPO) with respect to a typical bill for a residential consumer as outlined in the March 1, 2017 Cabinet Submission. This revised OPO price outlook is inclusive of all the recently announced measures including cancellation of LRP II and EFW and expansion of ICI.

- ENERGY's estimates of the reduction to a typical bill for a residential consumer as a result of the Global Adjustment (GA) refinancing and funding electricity support programs through provincial revenues as announced in the OFHP.

- ENERGY's estimates of the reduction in costs for consumers that benefit from electricity support programs as announced in the OFHP (i.e., expanded Rural or Remote Rate Protection, enhanced Ontario Electricity Support Program and the First Nations Delivery Rebate). For Fiscal Year 2017-2018 this includes a 50% adjustment to the cost given that implementation of the expanded programs is expected to be deferred to September 2017.

	2017-2018	**2018-2019**	**2019-2020**	**2020-2021**
ENERGY Estimate **(August 26, 2016)** ($ million)	1,006	1,004	944	n/a
ENERGY's Revised Cost Estimate **(September 8, 2016)** ($ million)	1,119	1,086	1,171	n/a
ENERGY Revised Estimate **(March 15, 2017)** ($ million)	939	882	882	895
Change: **March 15, 2017** vs **August 26, 2016**	-7%	-12%	-7%	n/a
Change: **March 15, 2017** vs **September 8, 2016**	-16%	-19%	-25%	n/a

NOTE: The above estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

Estimate Assumptions:

	2017	2018	2019	2020
Annual Average Electricity Price, Pre-tax, after Mitigation Programs ($ per month)	127*	120	122	125

***Note:** Value adjusted from $117 to account for deferral of implementation to May 2017 (GA refinancing) and July 2017 (tax-basing electricity support programs).

Subject: RE: OFHP Placemat/definitions

Hi Scott,

On the numbers for the second slide, they do not appear to reflect the numbers from the March 1, 2017, Energy CabSub in each year (see attached). Also, the 17-18 numbers in the fiscal plan were adjusted to reflect ¾ of a year, per a July 1, 2017 implementation date (see attached Q&A file). With regard to the latter file, it might be useful to add to the second slide the revised OREC estimated cost numbers too.

On slide 1, I'd suggest separating out the Province and OFA bubble, to show the credit facility and equity injection separately.

Ron

Subject: OFHP Placemat/definitions

Hi Nancy, Ron, Gadi,

Attached is an early cut at products we thought may be helpful as guides for the Fair Hydro plan. We have developed a two page overview placemat that follows Brandon's format. We also have a 1-pager with definitions that help to decode language in the OFHP legislation.

These products still require some refinement particularly on next steps for the tax based social programs (2nd slide). I need to check back with Energy to get some dates and to ensure what we have is correct. Ron, it would also be very helpful if your group could take a look at the numbers to ensure they align with the Budget forecasts. If anyone has additional key issues they would suggest flagging, please let us know and I we will drop them in. Also happy to take suggestions on format as we crashed this together fairly quickly (note that some of the numbers show up small on the screen, but hopefully look better on 11x17 sheets). We will treat this as an iterative product over the next few days / week.

While not perfect, I realize fiscal prep and MMP meetings are occurring tomorrow. I wanted to get this into the system in case it is helpful to have a reasonably accurate summary of a very complex initiative.

Thanks,
Scott

Ontario

Electricity Price Mitigation

Ministry of Energy

March 1, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

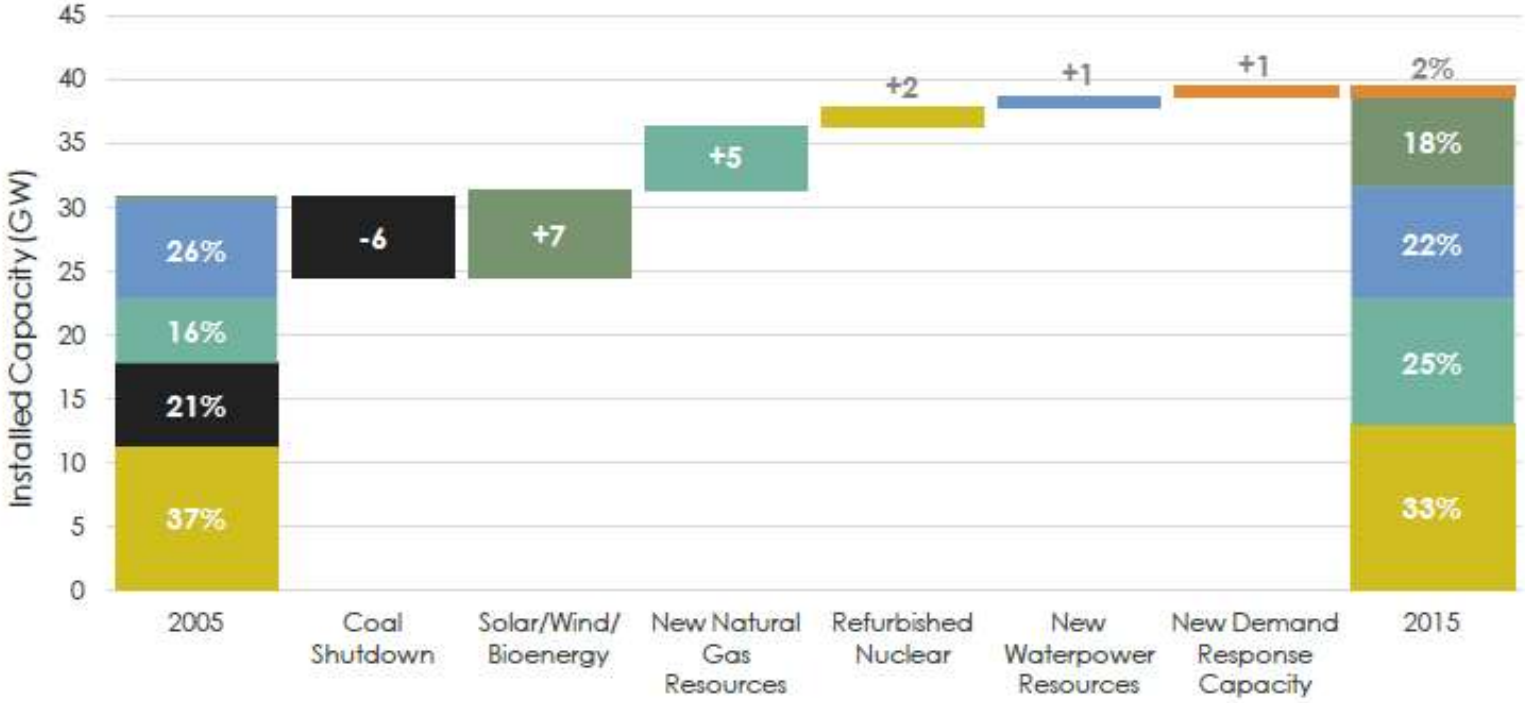
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



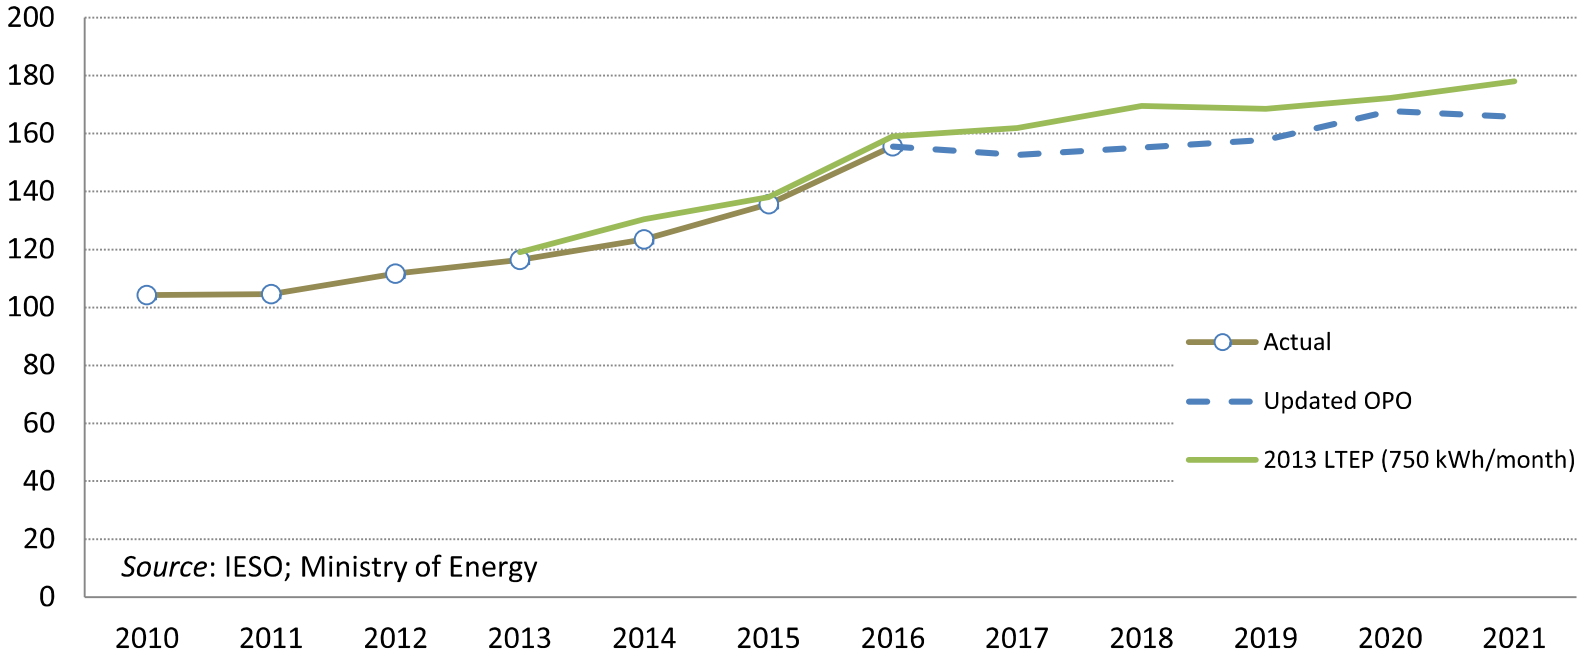
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



CONFIDENTIAL CABINET DOCUMENT

Context – Recent and Existing Government Funded Electricity Cost Mitigations

($Millions)	14-15	15-16	16-17[1]	17-18[1]	18-19[1]	19-20[1]	20-21[1]	Who Benefits
Ontario Clean Energy Benefit (OCEB) [2]	1,078	860	***OCEB ended on December 31, 2015***					• Residential customers, farms, small business (i.e., 10% off, on up to 3,000 kWh/month)
Ontario Rebate for Electricity Consumers (OREC or 8% rebate)*	-	-	300	1,100	1,200	1,200	1,200	• Residential customers, farms, small business (i.e., amount equal to the 8% Provincial portion of HST)
Ending Debt Retirement Charge (DRC) for Residential[3]	-	85	330	330	--	--	--	• Residential customers (i.e., saves about $70 per year for a typical residential consumer)
Northern Ontario Energy Credit (NOEC) [4]	24	26	25	25	25	25	25	• For eligible northern Ontario residents (i.e., for 2017, single people can receive up to $148,and families up to $227, depending on adjusted family income)
Ontario Energy and Property Tax Credit (OEPTC) (Energy component only)[4]	429	444	450	460	470	481	481	• For eligible low-to moderate-income individuals and families, & qualifying seniors (i.e., for 2017, up to $227, depending on adjusted family income)
Northern Industrial Electricity Rate Program (NIERP)	108	120	120	120	120	120	120	• Qualifying northern Ontario large industrial electricity consumers (i.e., rebate of 2cents/kilowatt-hour)
TOTAL	**1,639**	**1,535**	**1,225**	**2,035**	**1,815**	**1,826**	**1,826**	

Notes:

1. 2016-17 to 2020-21 based on forecasted numbers
2. OCEB ended December 31, 2015
3. 2015-16 estimated for 3 months of reduced DRC revenue. Estimated impact up to March 31, 2018.
4. Part of the Ontario Trillium Benefit. While related to energy generally, key policy driver for OEPTC when introduced in 2010 was electricity, as prices were forecast to rise, while fossil fuel prices, particularly natural gas, were low and falling.

CONFIDENTIAL CABINET DOCUMENT

Context – Recent Actions Taken To Mitigate Electricity Rates

- Following the 2016 Throne Speech, the several actions were announced to further reduce electricity costs.

1. As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8%.

2. Expanded support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.

3. Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

4. Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

5. Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – an average annual savings of $15 million.

Rate Mitigation Proposal

- The following approaches are proposed:

1) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
   - Smoothing Mechanism (i.e., 25% reduction); and
   - Implementation Model.

2) Enhancing competitiveness for Class B electricity consumers (i.e. manufacturing) by lowering the eligibility threshold for Industrial Conservation Initiative (ICI).

3) Helping vulnerable electricity consumers by enhancing electricity support and conservation programs and shifting cost onto the tax-base:
   - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
   - Ontario Electricity Support Program (OESP) Expansion;
   - New Affordability Fund; and
   - On-Reserve First Nations Delivery Credit.

4) Ongoing activities to bend the future cost curve of electricity:
   - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
   - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing option under consideration is illustrative and show potential rate mitigation measures to meet a targeted 25% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to Regulated Price Plan (RPP) -eligible;
  - Rate increases would be capped at Consumer Price Index (CPI) for the first four years. Subsequent years would be set above CPI in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators**.**
**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

GA Smoothing – Global Adjustment Forecast

- The amount of Global Adjustment (GA) is forecast to decrease through the forecast period. Several factors contribute to the decline of GA, including:
  - Expiry of electricity generation contracts;
  - Cost of existing contracts reduced due to Inflation; and
  - Higher wholesale electricity prices due to higher natural gas/carbon prices, higher demand and reduced nuclear generating capacity.

Forecast Global Adjustment Cost (nominal $ million)

CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Expected Life of Electricity Generating Assets

- Gas, wind and solar generators are typically contracted for a 20-year period (e.g., with the Ontario Electricity System Operator (IESO), etc).
  - Nuclear and hydroelectric generators are contracted for a much longer period or regulated by the Ontario Energy Board (OEB) on a cost-of-service basis.
- While it is likely that gas, wind and solar generators will be able to operate beyond their current contracts, IESO advises that generators will need to decide what level of capital investment is appropriate for ongoing operations (i.e., by replacing and/or refurbishing major facility components).
  - In IESO's 2016 Ontario Planning Outlook (OPO), it was assumed that the service lives of generators could be extended beyond their contract term based on additional investments and ongoing costs. **Note:** This was not an assessment of the cost/benefits or a prediction of what the generators would actually do at the end of their contracts.
- The table below outlines IESO's current estimates for service lives of gas, wind and solar facilities. The ongoing service lives of these facilities depend on: initial facility design & build, operating activities (e.g., hours of operation, etc.) and level of facility maintenance (i.e., ongoing component repair and replacement).

Technology	Contract Life (yrs)	Expected Life (yrs)	Expected Cost Post-Contract Life
Gas	20	Up to 30	Life varies with initial design, how it is operated and maintained.
Wind	20	Up to 30	Older technologies may deteriorate faster. Elements such as foundations and electrical integration can last longer.
Solar	20	Up to 30	Performance deteriorates to about 80% by end of contract. Some facilities built in the initial contract periods may deteriorate more; however, technology is improving rapidly. Components need to replaced 5 to 30 years depending on design.

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

B. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.

CONFIDENTIAL CABINET DOCUMENT

Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

B. GA Smoothing – Accounting Considerations

- OPCD advises that analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure and length of deferral/recovery increase risk and decrease transparency
- If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG will result.
- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

B. GA Smoothing – IESO Considerations

- The Electricity Act enables the Independent Electricity System Operator (IESO) to recover from ratepayers the amounts paid to generators, distributors or other contracted entities.
- The accounting advice received by IESO is that reflecting market balances and regulated assets is a more appropriate presentation for its financial statements going forward.
- IESO is characterized as an "Other Government Organization" (OGO) and consolidated on a line-by-line basis into the Provincial books.

Issue	Response
1. Can IESO adopt regulatory accounting?	• Public sector accounting does not address regulated assets. • Guidance can be drawn from other accounting bodies. • US Federal Accounting Standards Advisory Board (FASB), US Governmental Accounting Standards Board (GASB) and International Accounting Standards Board (IASB) do provide guidance. • FASB accounting standard 980 and IASB have specific references that support the adoption of regulatory accounting. **Conclusion:** There is a hierarchy of accounting principles that support this approach.

B. GA Smoothing – IESO Considerations

Issue	Response
2. Can IESO recognize the GA deferral as a regulatory variance account?	Criteria for recognition are: • Rates are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers. • Rates are designed to recover the specific costs of regulated business-type activities. • In view of demand, it is reasonable to assume that rates will be set to recover the regulated business-type and can be collected from customers. **Conclusion:** Legislation creates the right to collection, currently and in the future. With either OEB or IESO board involvement a regulatory asset can be recognized.
3. Can IESO sell the variance account related to the deferral of the annual Global Adjustment account?	• The sale of the variance account to OPG Trust must be structured as an absolute assignment of future economic benefits of the Asset with no obligations, rights or benefits remaining of IESO. • In that case, this would represent a sale of the future right to collect these amounts from the ratepayer. **Conclusion:** Based upon proposed terms of the sale agreement, there would be no future economic benefit for IESO. Risk and rewards are entirely transferred to OPG Trust.

B. GA Smoothing – OPG Accounting Considerations

- OPG's Special Purpose Vehicle (SPV)/Trust is a stand-alone entity able to conduct business separately under a Trust agreement. **Note:** The conditions required for OPG to consolidate the SPV/Trust are outlined in the following table:

Issue	Response
1. Decision Making	• OPG must have decision making authority on the operation of the SPV/Trust (without a veto right by the Province), including naming of trustees, establishing operating plans and budgets, setting or changing financing policies. • The SPV/Trust while operating within the legislation, must be controlled by OPG to operate freely and to alter terms and conditions not specified in the legislation to ensure recovery of the deferred amounts.
2. Business Risk	• The SPV/Trust must have variability of returns as a normal business enterprise would, including such things as interest charged on deferred amounts, decisions on how to finance these deferred amounts, the ability to make / lose and keep any spread from financing.
3. Funding	• The Province cannot directly or indirectly fund more than 50% of SPV/Trust or any investment in the SPV/Trust. • OPG must own at least 50% of the most exposed equity /sub-debt in the SPV/Trust.
4. Directive	• Directive that is issued should not be prescriptive or direct OPG to set up this business. The directive should only be "guiding" i.e. to allow OPG to evaluate options and put forward to the OPG Board a recommended plan for Shareholder approval.

B. GA Smoothing – OPG Accounting Considerations (cont'd)

Issue	Response
5. Other required Attributes	• The legislation that supports the formation of the SPV/Trust must have the following attributes: – Must require interest, carrying and administrative costs be paid to the Trust to allow for Revenue recognition; – The amount to be deferred must either be specified or be calculated based on a specific formula that is not subject to ongoing decision making by the Province. **The Province cannot have the ability to override this formula;** – SPV/Trust and its debt holders will require their capital guaranteed and paid for directly by the Province if the Province revokes the legislation; and – The spirit of the legislation should be reflected in the Trust Indenture Agreement.

B. GA Smoothing – OPG's Financing Structure Requirements

KEY ELEMENTS REQUIRED TO ENSURE THE DEFERRAL OF GA CHARGES CAN BE FINANCED:

Creating the Right to Recover Deferred GA

- Legislation enshrines the ability of the IESO to create a Right to charge customers in the future for the Global Adjustment (GA) deferred today including principal amount deferred, interest and other financing costs on the amount deferred and fees, expenses and other administrative costs.
- The Right can be sold to an appropriate Trust or Special Purpose Vehicle (SPV) to obtain funds to pay amounts due to generators under contracts or regulation. These SPVs are generally single purpose entities with no other operations that could add risk to the entity, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings.
- Right must be irrevocable and if the Right is amended by future governments the debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment.
- Right must specify the recovery period or the mechanism for setting the recovery rate including true up of the rate to ensure all amounts are recovered.

Economic Factors

- Limits on the recovery amount (principal, interest, fees and expenses) charged to customers in future periods must have compensating elements such as longer recovery period to ensure the full amount deferred plus interest, financing and other administration costs is recovered from customers.
- Need to balance customer relief with debt holder risk. Longer recovery periods and larger deferred balances increase risk to the debt holder of future government intervention.
- The amount required by the SPV to purchase and service the Right will be funded 51% from debt holders, 5% from OPG through capital markets and 44% from OPG via equity injection to OPG from the Province. The funding from OPG will be loaned to the SPV as subordinated debt.

B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.

CONFIDENTIAL CABINET DOCUMENT

Ontario

GA Smoothing – OEB Considerations

- Ontario Energy Board (OEB) oversight may be required as part of creating a regulatory asset.
- Subject to final confirmation, there are several other spheres for possible OEB oversight:
  - The rate payer impact of IESO deferral account and eventual repayment of the deferred Global Adjustment (GA), within pre-defined legislative parameters;
  - The administrative costs of the OPG's Special Purpose Vehicle (SPV) /Trust (e.g., as the OEB reviews and approves IESO's expenditure and revenue requirements and makes orders fixing just and reasonable rates for the Smart Metering Entity);
  - The SPV/Trust's returns (e.g., as the OEB does with OPG's regulated assets) and whether any income to OPG can be used for the benefit of rate payers;
  - The review of the final structure of the debt issuance for the limited purpose of ensuring requirements of law have been met; and
  - In out years, review of the collection of charges to ensure that collection is sufficient, and not greater than necessary, to pay debt service.
- The scope of OEB oversight will ultimately need to balance the interests and needs of rate payers, the market, OPG and the Province.

B. GA Smoothing – Ontario Financing Authority (OFA) Considerations

- Under the proposed structure, the financing of the deferred Global Adjustment (GA) costs would be effectively done in part by each of the OPG Special Purpose Vehicle (SPV)/Trust, the Province and OPG: the OPG SPV/Trust would borrow 51%, the Province 44% and OPG 5% of the required GA amounts needed to be financed.
  - In the alternative, the Province (through the OFA/OEFC) could borrow the required amounts each year, likely at a lower cost. However, the target for an arms-length trust and potential risk transfer would not be achieved.

	OPG Structured Financing	OFA/OEFC/Provincial Financing
Financing Considerations	• As the OPG SPV/Trust would be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • This would increase the cost of GA smoothing and the ultimate rate impact on future consumers. • The Trust would be exposed to interest rate changes. • Availability of debt financing may also be limited, depending on the overall amount of deferral, and the subsequent rate impact during the recovery period. OPG has cited examples of a 10% threshold on overall rate impacts of the deferral recovery amounts. • With a potential guarantee from the Province for the borrowing of the OPG SPV/Trust, OPG could see borrowing costs closer to the Province. However, this would redirect the risk back to the Province, removing the intended benefits of using this particular structure, and could add risk to the targeted accounting treatment. • With, or potentially even without a provincial guarantee, OPG SPV/Trust's borrowing could be seen as debt effectively supported by the Province by credit rating agencies and included in their analysis and determination of the Province's ratings. • If a Provincial guarantee endangers the targeted accounting treatment, it may be hard to justify the higher cost borrowing by OPG SPV/Trust to be passed through to ratepayers.	• Province's borrowing from the public markets would add to the borrowing program and the Province's gross debt. • The Province would expect to be able to finance the GA deferral at a lower financing cost than the OPG SPV/Trust, but would likely not achieve the targeted accounting treatment based on OPG's analysis. • Net debt would not increase, to the extent supported by increased equity in OPG under that model, and/or if the accounting treatment can be achieved as backed by a GA-related asset (OPG does not consider that the accounting can be achieved if the SPV/Trust is financed by the Province). • The Province's interest on debt (IOD)cost would need to be effectively recovered through the GA. – E.g., an OPG equity return to cover the cost of borrowing for the equity injection. – Or more directly if the Province is providing financing directly to the GA entity. • The cost of borrowing for the Province could change: 1. The Province's credit rating could be at risk of being re-evaluated by Rating Agencies, which may negatively impact the cost at which the Province borrows and 2. An increase in the Province`s borrowing rates, as a result of increased borrowing. The market may not have adequate demand for the Province to carry-out these borrowings without increasing the interest rate on the debt issues for GA financing and for all of the Province's borrowings. • The interest cost of GA deferral would be exposed to changes in the interest rate environment generally.

GA Smoothing – Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
  - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
  - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
  - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
  - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- Although Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA smoothing (i.e., because it is only targeted to RPP consumers), the Ministry has a proposal later in the submission to address competitiveness for Class B consumers (i.e., targeted lowering of the Industrial Conservation Initiative (ICI) eligibility thresholder from 1 MW to 500 kW).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - **Note:** Although Class B and Class A consumers will not receive the rate relief benefits of GA smoothing, both consumers will benefit from tax-basing the electricity social programs.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

- The GA smoothing proposal will accrue total interest of $25 billion based on the proposed option. This amount of interest is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.
  - An increase in the borrowing rate from 5% to 6% would increase the total interest costs by almost $9 billion and would require an extension of the financing term beyond 30 years.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there would be a negative impact on the province's fiscal plan, as shown below.

Fiscal Impact ($M)	2017-18	2018-19	2019-20	2020-21	2021-22
Bills Lowered by 25%, RPP-Eligible Only*	2,534	2,668	2,942	3,420	3,232

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

ENHANCING COMPETITIVENESS FOR CLASS B ELECTRICITY CONSUMERS

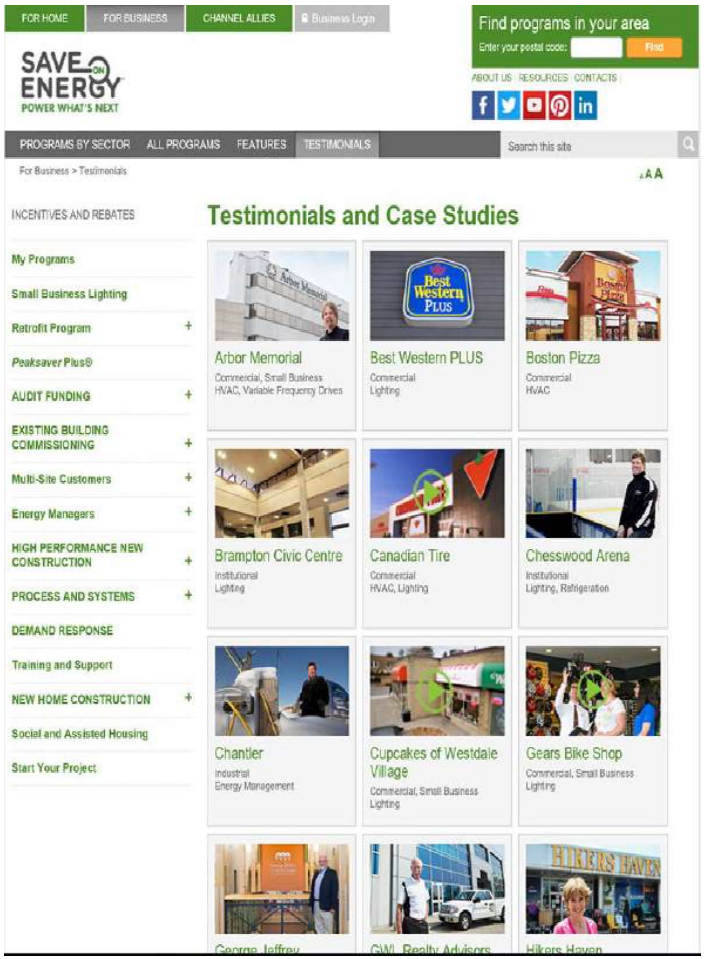
Support for Class B Consumers

- Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

- Through saveONenergy, many Class B consumers have already taken advantage of energy efficiency programs.

  - Although saveONenergy programs like Process and Systems Upgrade Incentive exist, these programs generally require significant investment on behalf of the customer in addition to the incentives and therefore may be difficult to take advantage of.

  - For Class B manufacturers whose electricity consumption is primarily based on process activities (e.g., injection moulding, welding, etc), traditional conservation measures like lighting and ventilation upgrades have limited benefit.



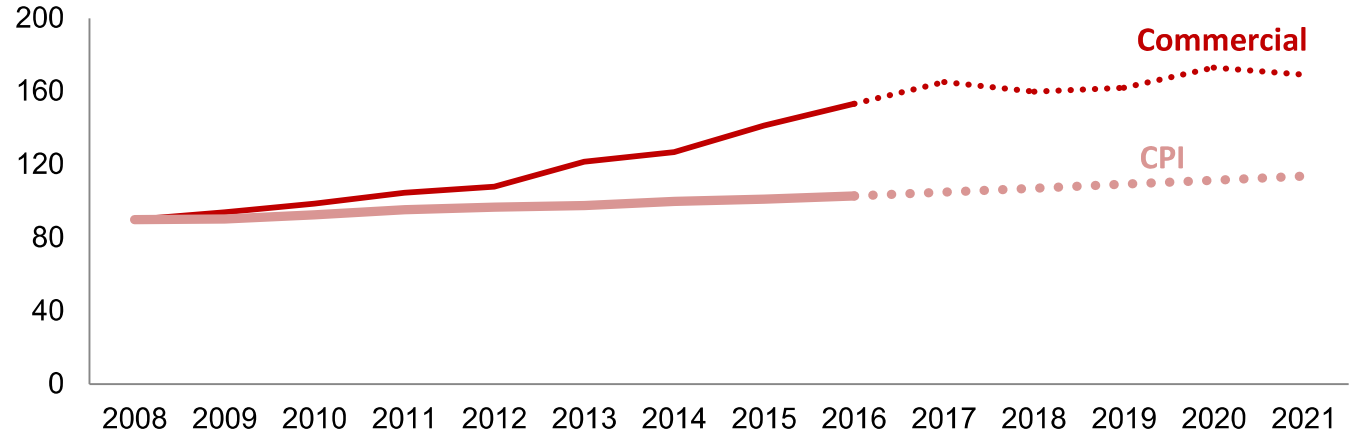
Support for Class B Consumers (cont'd)

- Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers).

- Price mitigation initiatives could be provided to Class B to address stakeholders' concerns (e.g., Coalition of Concerned Manufacturers of Ontario, etc).

- The chart below highlights that the cost of electricity for Class B consumers has risen faster than CPI.

Illustrative Electricity Prices
in $/MWh



***Source*:** IESO; OEB; Ministry of Energy

CONFIDENTIAL CABINET DOCUMENT

Lower ICI Threshold Below 1 MW for Energy Intensive Industry

- The Industrial Conservation Initiative's (ICI) eligibility threshold for participation was recently lowered to 1 MW. The lowering of the ICI eligibility threshold provides an opportunity for additional Class B consumers to save on their electricity costs if they choose to opt-in to ICI (i.e., and become new Class A consumers):
  - Beginning in July 2017, new participants will be billed Global Adjustment (GA) on the basis of their contribution to province-wide peak demand.
  - Prior to lowering the ICI eligibility threshold, electricity consumers with peak demand between 3 and 5 MW could only participate in ICI if they belonged to the following sectors: manufacturing, mining, data processing, refrigerated warehousing and greenhouses. **Note:** To achieve the benefits of ICI, participants must reduce their electricity demand during the five system peak hours.

- To enhance the competitiveness of larger Class B consumers whose electricity demand are too low to currently qualify for ICI, the Ministry proposed to:
  1. Expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts; and
  2. Target the expansion to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing).

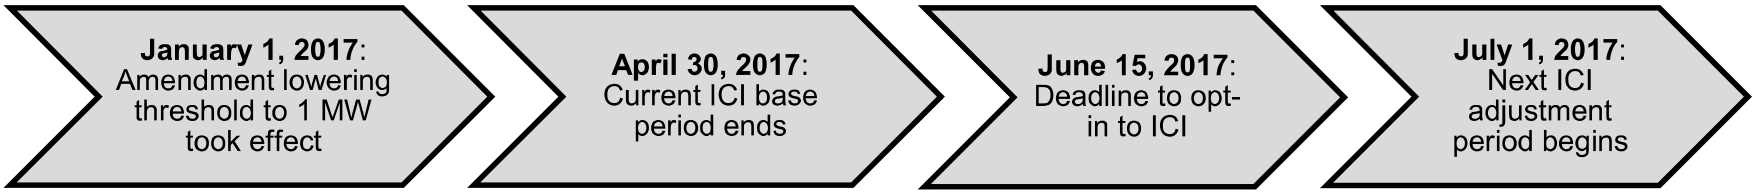
- In addition, the Ministry will assist Class B participation in ICI through a targeted outreach campaign delivered by the Ontario Chamber of Commerce (OCC).

Lower ICI Threshold Below 1 MW – Considerations

- A targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW provides benefit to larger Class B consumers (i.e., manufacturing) while limiting the cost shift to other electricity consumers.
  - **Note:** A Class B consumer that run only a day shift, resulting in fairly peaky load profiles would need to adjusted its behaviour to maximize the benefits of ICI.

- Preliminary analysis by ENERGY staff show that the estimated impact of a targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW would increase a typical residential bill by up to 0.66% or just over $1/month based on a 2016 bill of about $158.
  - The actual impact would vary depending on uptake and consumer responsiveness.
  - With the recent lowering of the ICI eligibility threshold to 1 MW, there is no information available regarding the actual impact on new participants and the electricity system.

- In order for any changes to ICI eligibility to take effect before the next 12-month billing period beginning July 1, 2017, regulatory amendments would have to be made before the end of April 2017.



Lower ICI Threshold Below 1 MW – Legal Considerations

- The quantum of a regulatory charge may be set at different rates within a regulatory structure where the differential prices are intended to serve other regulatory goals including an intention to modify the behavior of persons within the scheme.

- Expanding access to the Class A pricing regime is intended to serve regulatory goals by encouraging consumers to shift their electricity use away from peak hours, which benefits the electricity system as a whole. While Class B consumers will have to pay more of the GA cost in order to finance the reduction for Class A consumers, this is generally permissible since Class B consumers are not modifying their behaviour and the total amount recovered for the GA does not exceed its cost. CLB has previously advised that the differential pricing structure generally only attracts a **moderately low risk** of being a tax, and this risk level does not change if the option of Class A pricing is extended to a broader class of consumers.

- It is more difficult to justify a differential regulatory charge on the basis of behavioral modification when the lower charge is not available to some participants in the regulatory scheme whose conduct could equally serve the same goals. To the extent that there is not a regulatory rationale for extending the new class A option only to certain sectors, risk increases. The amount of risk in this scenario will vary depending on the quantum of the premium that Class B consumers pay to create the behavior modification incentive for Class A and the degree to which the excluded sectors can credibly claim to be able to achieve the same outcome were they permitted to participate in this aspect of the program.

ELECTRICITY SUPPORT AND CONSERVATION PROGRAMS TO HELP VULNERABLE ELECTRICITY CONSUMERS

Electricity Support and Conservation Programs to Help Vulnerable Electricity Consumers

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to deliver electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  A. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  B. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  C. **Establish a new Affordability Fund**, providing energy efficiency measures at no or minimal cost to those who are ineligible for low-income conservation programs, have difficulty paying their electricity bills and who cannot make energy efficiency upgrades without financial assistance.

  D. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

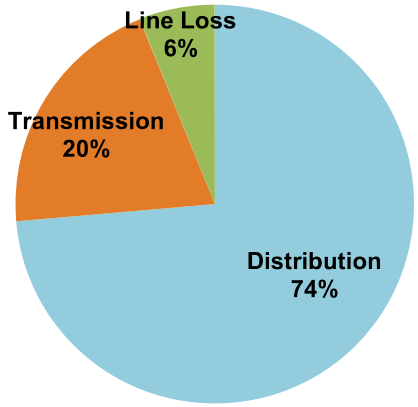
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario and funded through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - Roughly 800,000 customers would receive benefits from the current RRRP program and from these additional enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.

CONFIDENTIAL CABINET DOCUMENT

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board (OEB).

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21

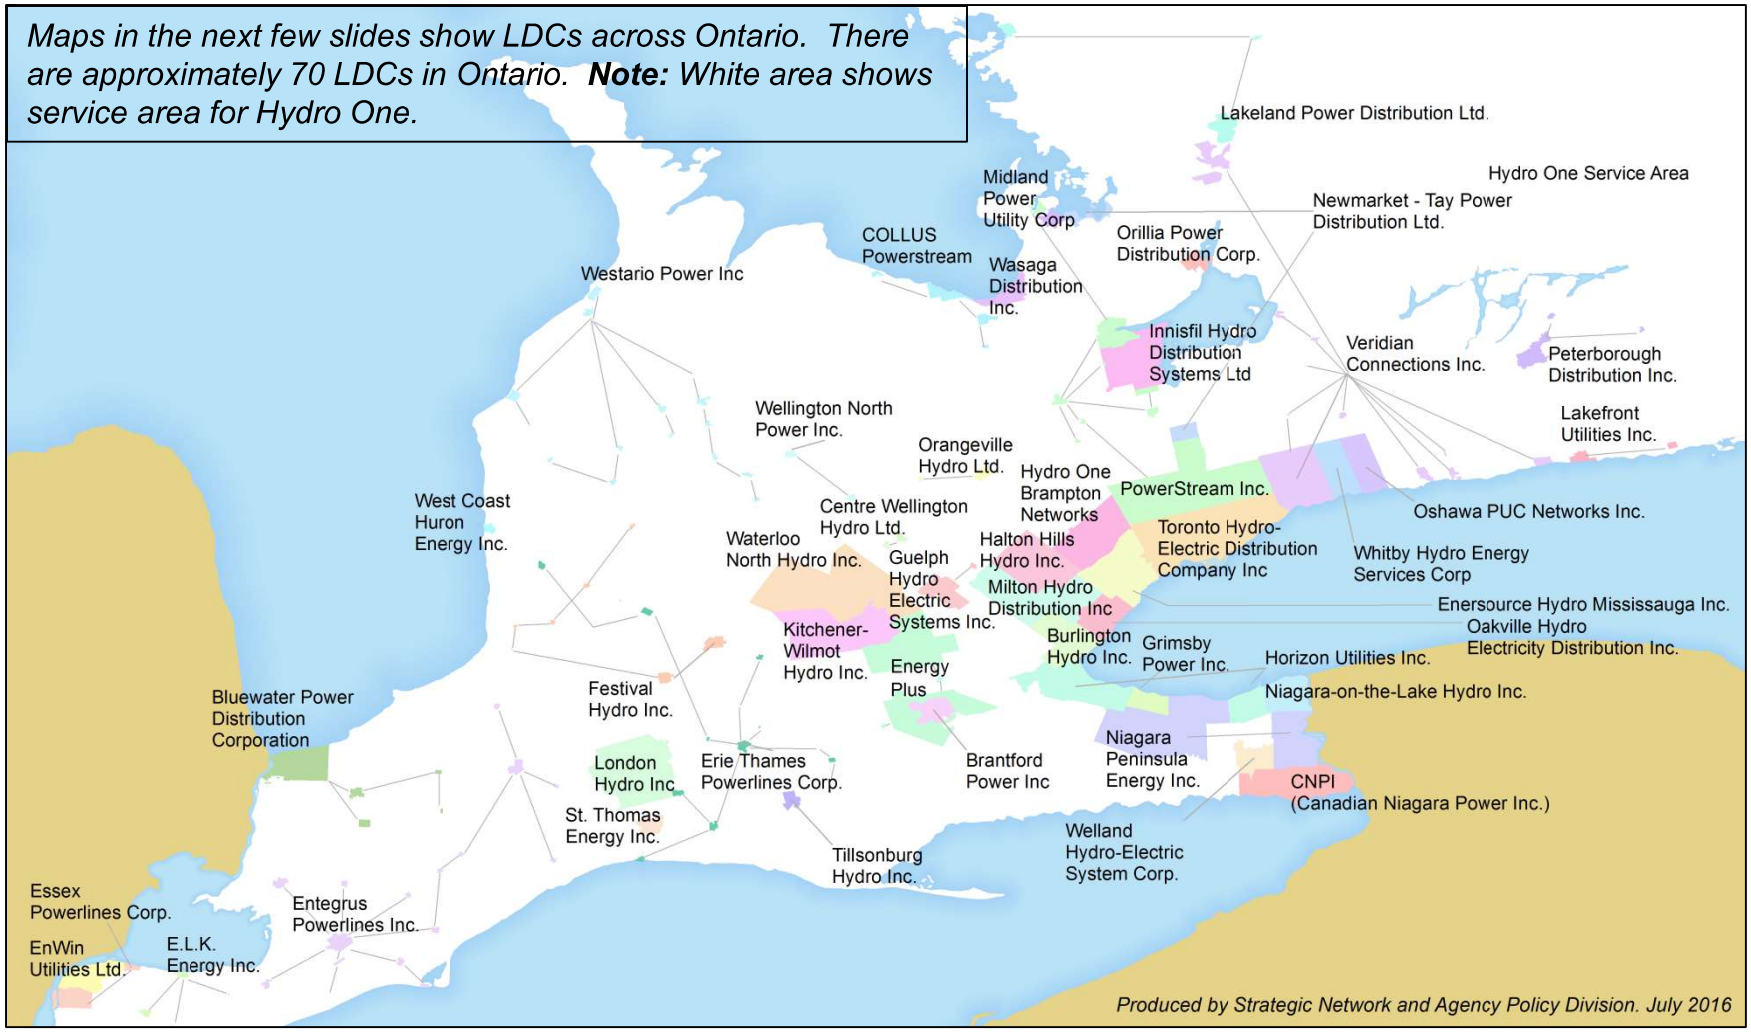
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234
TOTAL	-	**459**	**472**	**484**	**497**

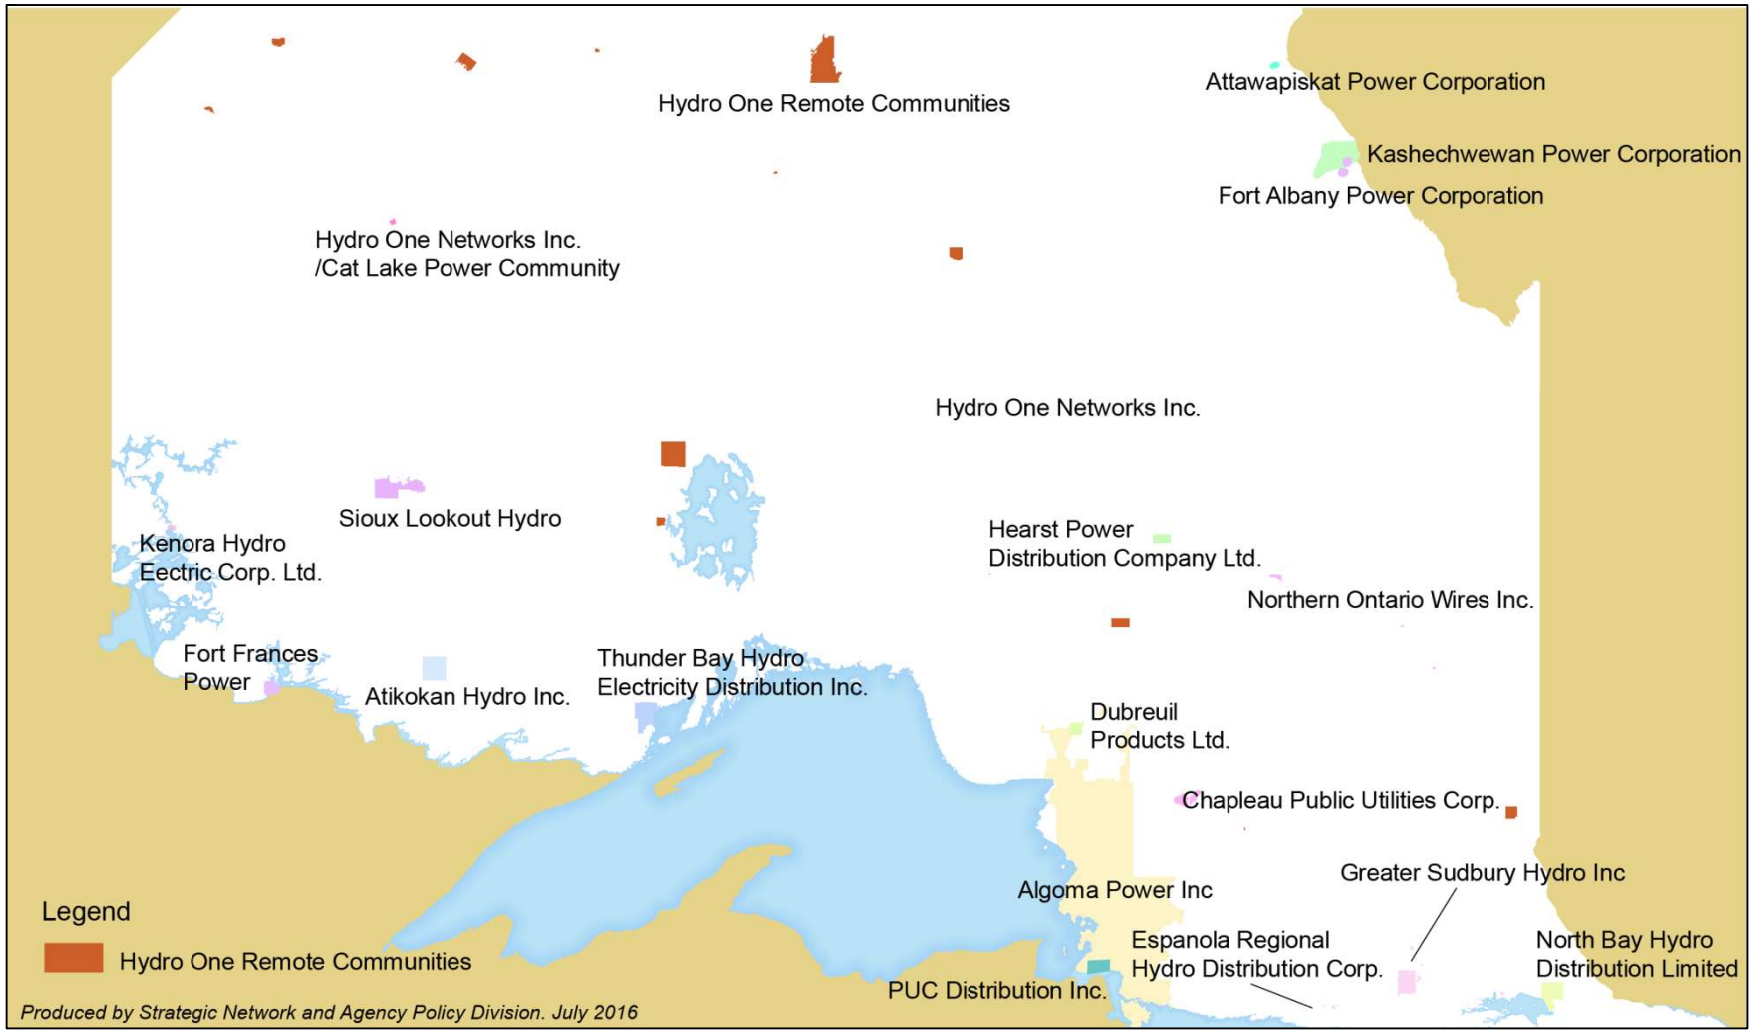
Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.

A. RRRP Enhancement – LDC Service Territory (Southwestern Ontario)

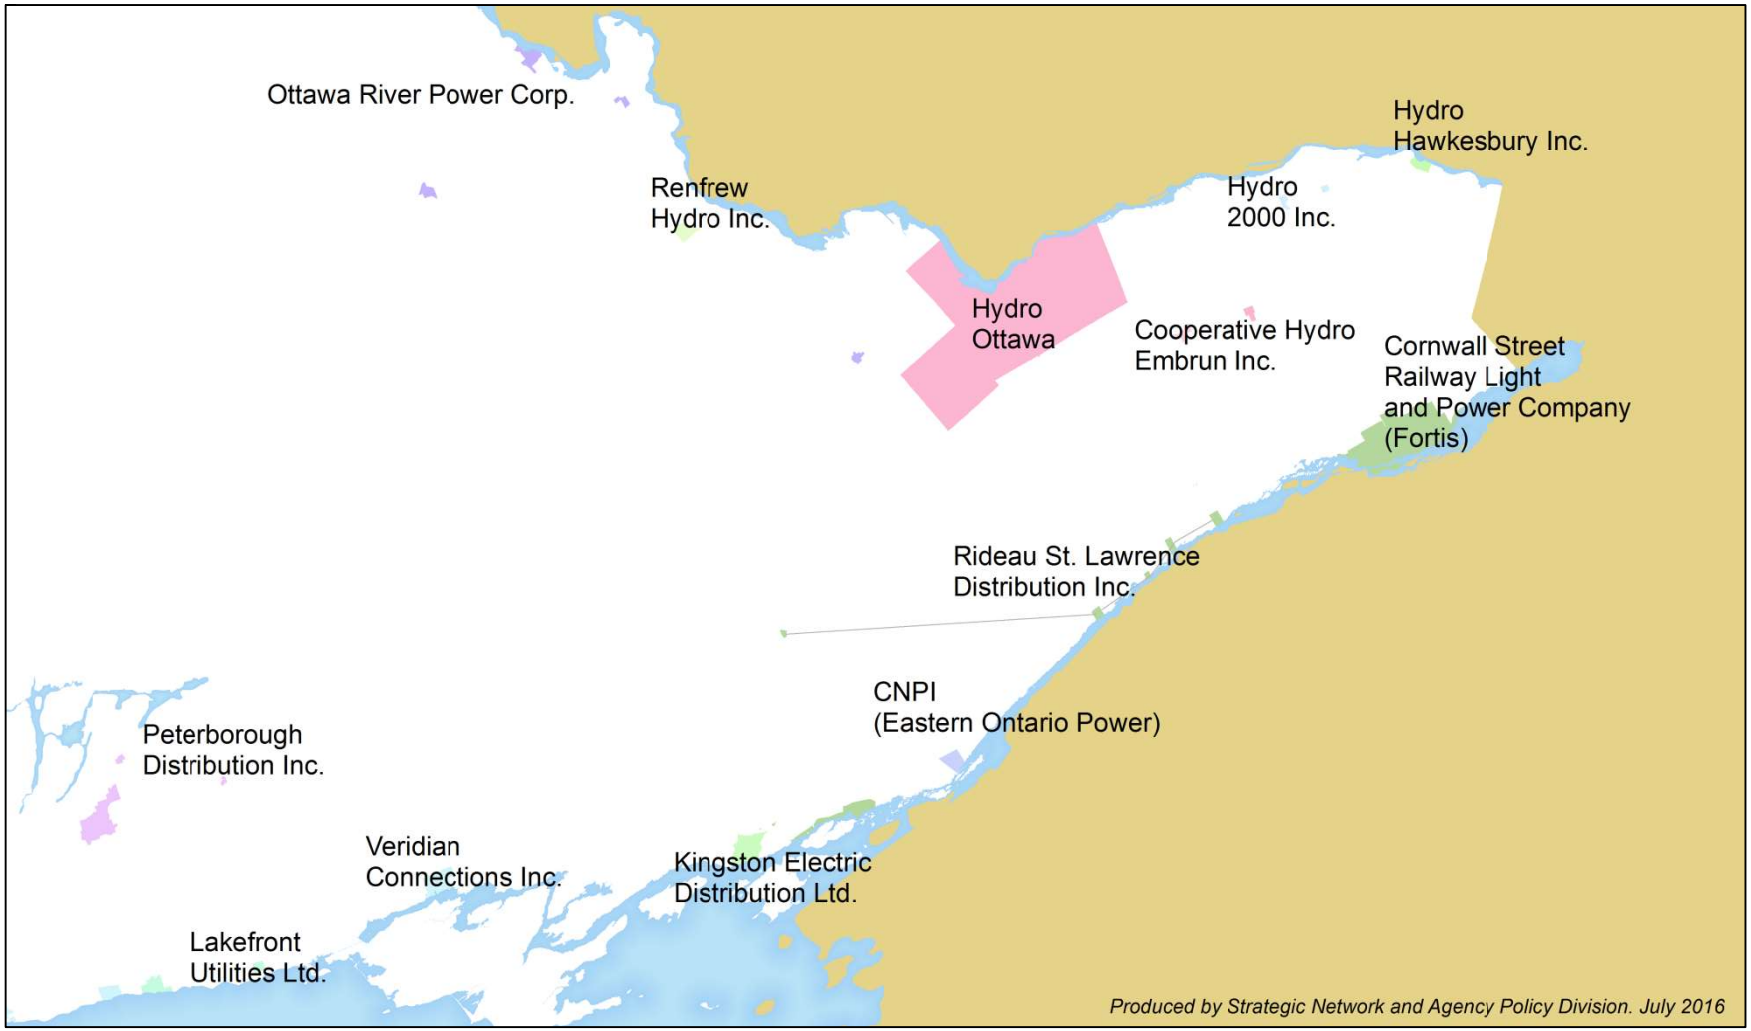
Maps in the next few slides show LDCs across Ontario. There are approximately 70 LDCs in Ontario. ***Note:*** *White area shows service area for Hydro One.*



A. RRRP Enhancement – LDC Service Territory (Northern Ontario)



A. RRRP Enhancement – LDC Service Territory (Eastern Ontario)



B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP credits vary by income level and family size, and there are two credit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in credits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced:
  - Streamline the OESP process to drive participation toward 100%:
    - ENERGY and the Ministry of Community and Social Services (MCSS) have been working on automatic OESP qualification for Ontario Works (OW) and Ontario's Disability Support Program (ODSP) recipients who pay electricity bills.
      - MCSS estimates some 110,000 OW and ODSP recipients pay electricity bills;
      - This process could follow the "deemed eligibility" model used for the Healthy Smiles program. Using an existing model should simplify the implementation process.
      - The qualification process may have to be done manually at first, with a more automated IT solution in the longer-term.
    - Working with the CRA to make the application process easier / quicker to get through by finding an alternative to the requirement to mail-in signed consent forms;
    - Putting in place a more aggressive communications strategy and application intake clinics across the Province to increase awareness of/enrollment in the OESP.
  - Increasing the existing OESP credit scales by an additional 50%; and
  - Expanding the categories of OESP credits.

- It is also recommended that the OESP be supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes):

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

C. Establishing a New Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as “low-income” but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000* residential electricity accounts in arrears; of these about 19,900** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.

* **Note:** Unverified numbers reported by LDCs to the OEB
** **Note:** Low-income customers identified through participation in LEAP

Ontario

C. Establishing a New Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who cannot qualify for low-income conservation programs and are in need, such as those who are facing disconnection.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the principles of the Fund and is working with Hydro One to set up an independent Trust to serve as the Fund Administrator.
  - The Fund Administrator would manage the flow of funds to LDCs based on principles set by the province, and be responsible for establishing processes, administration, and criteria for funding applications, thereby ensuring the program is managed on a consistent basis across the province.
  - LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers in their service territories that meet the targeted eligibility criteria.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

C. Establishing a New Affordability Fund (cont'd)

<u>Implementation</u> (cont'd)

- Recipients could receive measures ranging from an average of $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
  - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
  - Programmable thermostats, weather stripping, insulation (in homes with electric heating).

- Cold climate air source heat pumps would also be an eligible measure under the Affordability Fund. Heat pumps range in cost from $7,000 to $13,000.

- As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New Affordability Fund – Considerations

Considerations

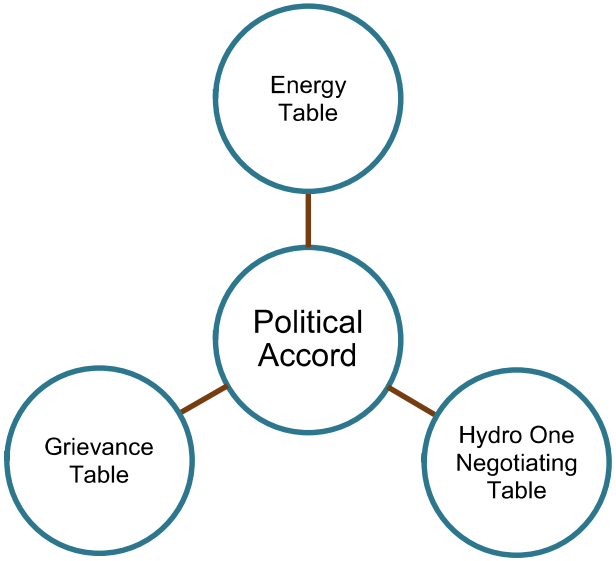
- The Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to seek input from the OEB, LDCs and potentially low income organizations to help develop funding allocation and eligibility principles for the Trust.
- While eligibility principles will be established, LDCs will need a degree of flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with Hydro One and transfer money before end of fiscal year to ensure Hydro One can establish the Trust and the Trust can begin operation as the Fund Administrator.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal. The proposal has an ameliorative purpose as it targets First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities, that affect electricity affordability.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Ontario Electricity Support Program, including the 50% Enhancement & New Matrix Categories	-	186	261	325	375
On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.
****Note:** Funding for the Affordability Fund is one-time in 2016/17.

BENDING THE FUTURE COST CURVE OF ELECTRICITY

Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.
  - Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – up to [$xx] cost savings.

CONFIDENTIAL CABINET DOCUMENT

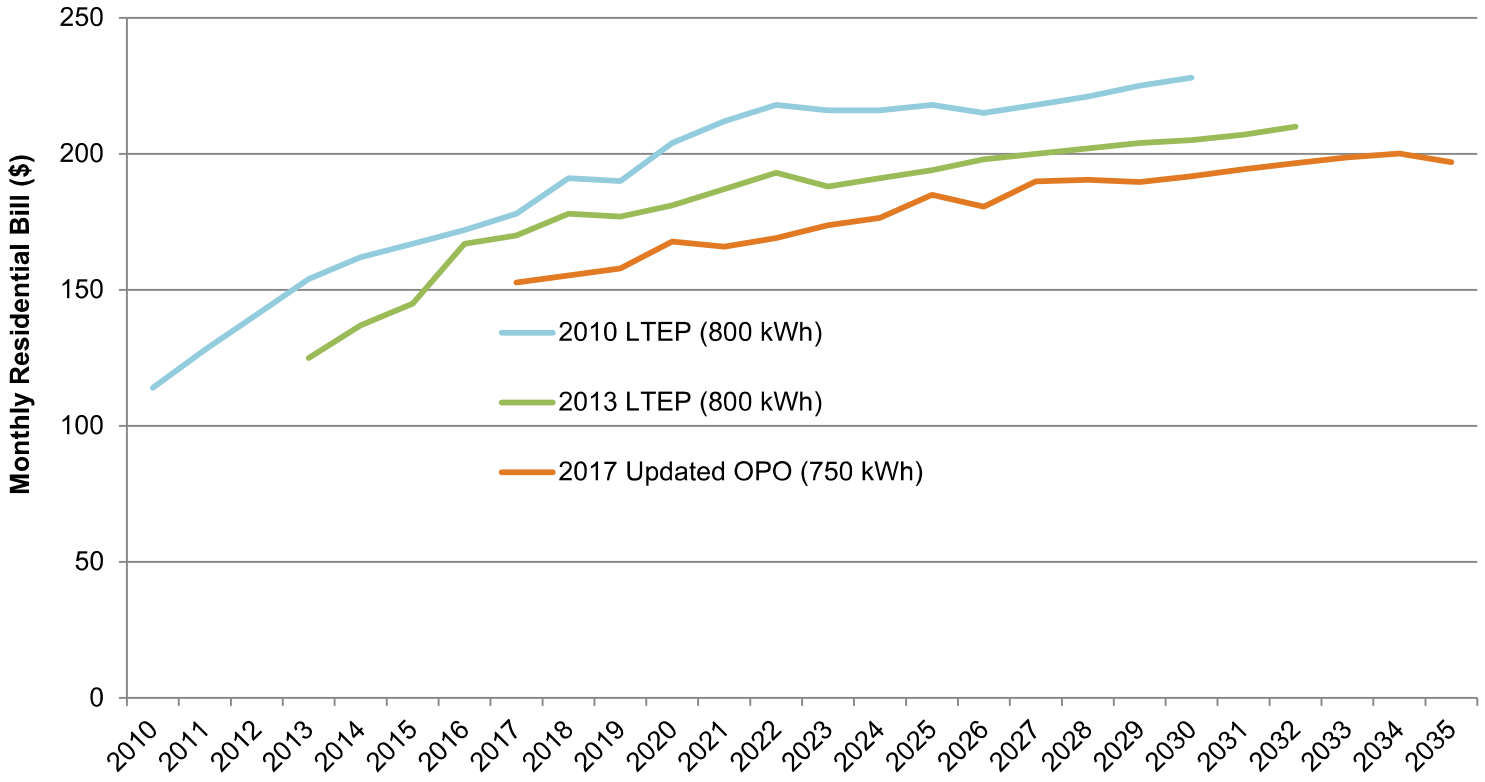
Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of February 2017) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.

CONFIDENTIAL CABINET DOCUMENT

SUPPORT FOR TENANTS

Support for Tenants – Context

- The government is considering measures to provide relief from high electricity prices, and is interested in ensuring that tenants also receive electricity cost reductions and/or relief.

- Currently, tenants generally either pay for their own electricity use through suite meters (i.e., sub-meters or direct arrangements with hydro providers) or pay for electricity indirectly as a service included in their rent:
  - Tenants who pay for their own electricity will receive electricity costs savings directly through their bills; and
  - Low-income tenants who pay own electricity bills can access energy support programs such as the Ontario Electricity Support Program administered by the Ontario Energy Board (OEB).

- Any potential initiatives could focus on the following options:

For tenants who pay own electricity bills

1. Expand OESP to increase relief or raise income thresholds.

For tenants whose electricity is included in rent

2. Require that landlords pass savings on to tenants (could be addressed by MHO through RTA amendments).
   - Options could include requiring landlords to automatically reduce rents, or allow tenants to apply the Landlord and Tenant Board for relief.
3. Provide energy rebates directly to tenants whose rent includes electricity.

Support for Tenants – Potential RTA Hydro Relief Measures / Considerations

- RTA amendments with respect to tenant relief, remedies, and enforcement would be complex, and unable to provide immediate, direct and transparent cost remedies to tenants:
  - Impact of hydro relief measures and electricity cost savings for landlords may vary depending on size of rental building and location (urban/rural):
    - One size fits all approaches would not match actual landlord savings to direct tenant relief; and
    - More targeted approaches would add extreme complexity, leading to greater confusion for landlords and tenants, and difficulty administering enforcement.
  - Passing on actual savings could likely only be done after landlords have experienced decreased costs for a period of time (i.e. one year).
  - Difficulty in informing landlords of their responsibilities and enforcing reductions; would likely have significant resource implications for the Landlord & Tenant Board/Ministry of Attorney General.
  - Difficult for tenants to understand, with the most vulnerable tenants potentially less able to pursue remedies through the LTB.
- The kinds of potential RTA remedies would depend on various specifics regarding the way in which relief was being provided to landlords including whether:
  - The actual electricity cost savings for landlords are transparent to facilitate easy calculation of rent reductions or relief;
  - Hydro relief measures are permanent or temporary; and
  - All relief should be passed on to tenants, or just a portion of the relief (e.g., global adjustment fund, 8% rebate, any other relief).

Support for Tenants – Potential RTA Hydro Relief Measures / Other Considerations (cont'd)

- As part of Climate Change Action Plan, MHO has been directed to mitigate the impact of carbon costs on tenants, and is proposing to prevent landlords from charging above-guideline rent increases for extraordinary utility costs increases.
  - May seem unfair that landlords are required to reduce rents or provide relief when utility costs decrease but cannot increase rents when utility costs increase.
- Relief would be limited to certain segments of tenant population:
  - Post-1991 buildings are exempt from the Rent Increase Guideline and landlords could negate any savings to tenants in these buildings through a higher subsequent rent increase.
    - Over 19% of tenant households are estimated to live in post-1991 private rental units including individually rented condos; a high proportion may already pay for electricity separately.
  - Relief may not be required for social housing tenants:
    - Most social housing tenants (80%) pay as per utility scales, which covers electricity usage other than electric heat; and
    - Utility scales were last updated in 2000 and are reflective electricity prices at that time.
- MHO, working with ENERGY and MAG will report back in Spring 2017 with options for electricity rate mitigation for tenants.

Legislative Authority – Considerations

GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The OPG Trust will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the OPG's SPV/Trust and settle accounts with the OPG Trust as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the SPV/Trust to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the SPV/Trust (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Class B

- **Targeted Lowering ICI Threshold Below 1 MW (to 500kW):** Regulatory amendments (O.Reg. 429/04) will be required to address program details.

Legislative Authority – Considerations (cont'd)

Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **Affordability Fund:** In order to implement new affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement and Technical Briefing
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

APPENDIX: SEE MINISTRY OF ENERGY'S ELECTRICITY PRICE MITIGATION – APPENDIX

Q&A Response

Q. What is the revised cost forecast for the 8% rebate as result of the measures announced in Ontario's Fair Hydro Plan?

Key measures announced in Ontario's Fair Hydro Plan (OFHP) are expected to reduce the cost of the 8% rebate for the Province. The cost to the Province is expected to decrease as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced.

ENERGY has updated the cost forecast for the 8% rebate based upon the following:

- Independent Electricity System Operator updated its Ontario Planning Outlook (OPO) with respect to a typical bill for a residential consumer as outlined in the March 1, 2017 Cabinet Submission. This revised OPO price outlook is inclusive of all the recently announced measures including cancellation of LRP II and EFW and expansion of ICI.

- ENERGY's estimates of the reduction to a typical bill for a residential consumer as a result of the Global Adjustment (GA) refinancing and funding electricity support programs through provincial revenues as announced in the OFHP.

- ENERGY's estimates of the reduction in costs for consumers that benefit from electricity support programs as announced in the OFHP (i.e., expanded Rural or Remote Rate Protection, enhanced Ontario Electricity Support Program and the First Nations Delivery Rebate). For Fiscal Year 2017-2018 this includes a 50% adjustment to the cost given that implementation of the expanded programs is expected to be deferred to September 2017.

	2017-2018	**2018-2019**	**2019-2020**	**2020-2021**
ENERGY Estimate **(August 26, 2016)** ($ million)	1,006	1,004	944	n/a
ENERGY's Revised Cost Estimate **(September 8, 2016)** ($ million)	1,119	1,086	1,171	n/a
ENERGY Revised Estimate **(March 15, 2017)** ($ million)	939	882	882	895
Change: **March 15, 2017** vs **August 26, 2016**	-7%	-12%	-7%	n/a
Change: **March 15, 2017** vs **September 8, 2016**	-16%	-19%	-25%	n/a

NOTE: The above estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

Estimate Assumptions:

	2017	2018	2019	2020
Annual Average Electricity Price, Pre-tax, after Mitigation Programs ($ per month)	127*	120	122	125

***Note:** Value adjusted from $117 to account for deferral of implementation to May 2017 (GA refinancing) and July 2017 (tax-basing electricity support programs).

Subject: OFHP Placemat/definitions

Hi Nancy, Ron, Gadi,

Attached is an early cut at products we thought may be helpful as guides for the Fair Hydro plan. We have developed a two page overview placemat that follows Brandon's format. We also have a 1-pager with definitions that help to decode language in the OFHP legislation.

These products still require some refinement particularly on next steps for the tax based social programs (2nd slide). I need to check back with Energy to get some dates and to ensure what we have is correct. Ron, it would also be very helpful if your group could take a look at the numbers to ensure they align with the Budget forecasts. If anyone has additional key issues they would suggest flagging, please let us know and I we will drop them in. Also happy to take suggestions on format as we crashed this together fairly quickly (note that some of the numbers show up small on the screen, but hopefully look better on 11x17 sheets). We will treat this as an iterative product over the next few days / week.

While not perfect, I realize fiscal prep and MMP meetings are occurring tomorrow. I wanted to get this into the system in case it is helpful to have a reasonably accurate summary of a very complex initiative.

Thanks,
Scott

Ontario Fair Hydro Plan – Key Definitions

- **Clean Energy Initiative** – This is the term used to describe the Government of Ontario's policies to foster growth and investment in and remove barriers and promote opportunities for clean and renewable energy sources and technologies and promoting conservation and demand management. The "clean energy costs" under the legislation arise from the "clean energy initiative". Its purpose is to establish the fundamental basis for the legislation. The definition is self-explanatory and is as follows:

  "clean energy initiative" means the policies of the Government of Ontario related to,

  a) *eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,,*
  b) *removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,*
  c) *promoting conservation, demand management and energy efficiency; and*
  d) *investing in energy infrastructure to ensure a clean, modern and reliable system;*

- **Clean Energy Costs** – These are costs (attributable to the "clean energy initiative") that are to be more fairly distributed among generations of consumers.
- **Clean Energy Benefits** – These are the value of the benefits derived by the "specified consumers" (including the clean energy costs).
- **Clean Energy Adjustments** – This is adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing.
- **Fair Adjustment** – This is the adjustment that gives the "relief" to certain specified consumers during the period from July 1, 2017 to June 30, 2021 (including this program's portion of the 25 per cent reduction).
- **Fair Allocation Amount** – This is the concept/mechanism by which the fair distribution of "clean energy costs" (including, for example, financing costs, the cost of the power contracts, and the costs of the fair adjustment) is calculated and implemented.
- **Specified Consumers** – This is the defined group of consumers to whom the legislative program applies. These consumers are persons who have an account with an electricity vendor for the supply of electricity in Ontario and,
  - have a demand for electricity of 50 kilowatts or less (or as otherwise prescribed);
  - annually use not more than 250,000 kilowatt hours of electricity (or as otherwise prescribed);
  - carry on a farming business (basically pursuant to the *Farm Registration and Farm Organizations Funding Act*);
  - have an account with an electricity vendor that is for a "dwelling", condominium property, residential complex or co-operative housing; or
  - are otherwise prescribed.
- **Regulatory Asset** – This is fundamentally IESO's right to recover the revenues that it has deferred collecting because the clean electricity costs are being allocated across generations of ratepayers.
- **Investment Asset** – This is the asset that results when the regulatory asset is transferred to the (OPG) financing entities.
- **The Financing Plan** is the plan which is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO.

Ontario's Fair Hydro Plan

Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit.
- Any rate increases for typical residential consumers over the next four years would be held to inflation
- To implement the OFHP, ENERGY has prepared legislation (Ontario Fair Hydro Plan Act) in close collaboration with the OEB, Independent Electricity System Operator (IESO), Ontario Power Generation (OPG), partner ministries (TBS, MOF and MAG), external advisors.

OFHP Act Overview

- The Legislation balances ratepayer interests, accounting objectives, market expectations and legal considerations
- Built around core principle that costs incurred to move to a clean, reliable system creates benefits across generations, and costs that should be spread more fairly. Pre-defined terms (see definitions) form the building blocks for this structure
- Roles and responsibilities are established in legislation:
  - Minister of Energy: sets Fair Allocation Amounts for all periods, at the beginning of the plan
  - OPG: Financial Services Manager, sets the Financing Plan, establishes financing entities, purchases assets from IESO, and will drive invoice amounts to customers
  - IESO: creates funding shortfall / regulatory asset, sells to OPG, acts as agent to collect from ratepayers and fund initial interest costs
  - OEB: sets customer rates, establishes regulatory asset for IESO, reviews OPG's admin. costs
- Large part of legislation designed to ensure the financeability of the program
- Key considerations
  - Legislation sets the first Fair Allocation Adjustment and end date of 2047; amounts for intervening years set in regulation
  - Several Provincial guarantees to be negotiated to enable financing without imposing undue cost / risk on Province
  - Province's role constrained once the program underway (e.g. cannot remove OPG as financial services manager)
  - Modelling underway to ensure principle of cost / benefit alignment underlying the program is justifiable
  - Energy has received approval to provide monthly equity injections to OPG to fund sub-debt (see diagram)
  - OFA working with IESO to provide an additional credit facility (see diagram)

GA Financing Overview

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average monthly residential bill w GA financing impact and tax *($/month)*	104	105	112	116	124	136	158	123	126	128	131	133	142	151	161	172	183	195	215	214	216	219	221	223	224	221	222	222	223	224	225	226	227	228	229	230	230	231	210

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Ontario's Fair Hydro Plan (cont'd)

Electricity Support to Help the Most Vulnerable

Rural / Remote Electricity Rate Protection	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	454	450	446
Overview	Expand the existing program and harmonize distribution rates for customers in the top 1/8 of distribution rate classes, and shifting costs to the tax base			
Updates	Amend S. 79 of OEBA to provide through regulation classes of customer costs to be shifted to tax base, and create distribution rate protection program to complement RRRP			
Next Steps	Amend regulation to prescribe H1's R2 customers as receiving RRRP & prescribe by regulation program details/customers eligible for broadened distribution rate protection			

Ontario Electricity Support Program	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	178	239	290
Overview	Improve the existing program to enhance benefits and increase uptake through streamlined applications and expanded eligibility to include additional households			
Updates	Shift program funding to tax base and authority to allow data sharing between OEB/MCSS to support participation of Ontario Works/Ontario Disability and Support Program clients			
Next Steps	Move to tax base once variance account depleted (exp. fall 2017), with legislation to be proclaimed via OIC at that time to ensure OEB authorities while ratepayer funding is used			

On-Reserve First Nations Delivery Credit	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	0	20	20	20
Overview	Establish a credit to remove delivery charges for 21,500 on-reserve First Nations residential customers			
Updates	Establish authority to create delivery credit and provide for tax-based funding			
Next Steps	Regulatory amendments with details - class of customers eligible, determine what is considered on-reserve and determine the method of calculating the delivery credit			

Affordability Fund	2016-17	2017-18	2018-19	2019-20
Fiscal Impact ($ Millions)	100	Up to 100 additional		
Overview	Fund has been established through local distribution companies to help consumers in need to make energy efficiency improvements			
Updates	Advisory committee established and has recommended reps. from Hydro One, Alectra and Thunder Bay Hydro to act as trustees; 2 social services trustees to be selected soon			
Next Steps	Report back to TB/MBC in June 2017 with final program details and a performance management framework; LDCs begin to apply to the Trust for funds in summer 2017			

Other Elements / Considerations

- Industrial Conservation Initiative: Program expanded to include greenhouses. Energy working with CME and OCC on outreach campaigns on benefits of ICI and other conservation initiatives
- Bill Presentment: Targeting a re-design of the bill for Fall 2017. For the interim period the Ministry plans to include bill inserts describing the program
- Auditor General (AG) / Financial Accountability Officer (FAO): The Ministry has met with both offices and is circulating information in response to follow up requests. The AG also engaged with IESO through its IT value-for-money audit

Hi Scott,

On the numbers for the second slide, they do not appear to reflect the numbers from the March 1, 2017, Energy CabSub in each year (see attached). Also, the 17-18 numbers in the fiscal plan were adjusted to reflect ¾ of a year, per a July 1, 2017 implementation date (see attached Q&A file). With regard to the latter file, it might be useful to add to the second slide the revised OREC estimated cost numbers too.

On slide 1, I'd suggest separating out the Province and OFA bubble, to show the credit facility and equity injection separately.

Ron

Ontario's Fair Hydro Plan

Context

- On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit.
- Any rate increases for typical residential consumers over the next four years would be held to inflation
- To implement the OFHP, ENERGY has prepared proposed legislation (Bill xx: Ontario Fair Hydro Plan Act) in close collaboration with the OEB, Independent Electricity System Operator (IESO), Ontario Power Generation (OPG), partner ministries (TBS, MOF and MAG), external advisors.

Bill xx: OFHP Act Overview

- The proposed Legislation balances ratepayer interests, accounting objectives, market expectations and legal considerations
- Built around core principle that costs incurred to move to a clean, reliable system creates benefits across generations, and costs that should be spread more fairly. Pre-defined terms (see definitions) form the building blocks for this structure
- Roles and responsibilities are established in legislation:
  - Minister of Energy: sets Fair Allocation Amounts for all periods, at the beginning of the plan
  - OPG: Financial Services Manager, sets the Financing Plan, establishes financing entities, purchases assets from IESO, and will drive invoice amounts to customers
  - IESO: creates funding shortfall / regulatory asset, sells to OPG, acts as agent to collect from ratepayers and fund initial interest costs
  - OEB: sets customer rates, establishes regulatory asset for IESO, reviews OPG's admin. costs
- Large part of legislation designed to ensure the financeability of the program
- Key considerations
  - Legislation sets the first Fair Allocation Adjustment and end date of 2047; amounts for intervening years set in regulation
  - Several Provincial guarantees to be negotiated to enable financing without imposing undue cost / risk on Province
  - Province's role constrained once the program underway (e.g. cannot remove OPG as financial services manager)
  - Modelling underway to ensure principle of cost / benefit alignment underlying the program is justifiable
  - Energy has received approval to provide monthly equity injections to OPG to fund sub-debt (see diagram)
  - OFA working with IESO to provide an additional credit facility -- requires approvals / Directive from Minister of Finance to OFA (see diagram)

Electricity Support to Help the Most Vulnerable

Rural / Remote Electricity Rate Protection	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	344	472	484	497
Overview	Expand the existing program and harmonize distribution rates for customers in the top 1/8 of distribution rate classes, and shifting costs to the tax base				
Updates	Amend S. 79 of OEBA to provide through regulation classes of customer costs to be shifted to tax base, and create distribution rate protection program to complement RRRP				
Next Steps	Amend regulation to prescribe H1's R2 customers as receiving RRRP & prescribe by regulation program details/customers eligible for broadened distribution rate protection				

Ontario Electricity Support Program	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	140	261	325	375
Overview	Improve the existing program to enhance benefits and increase uptake through streamlined applications and expanded eligibility to include additional households				
Updates	Shift program funding to tax base and authority to allow data sharing between OEB/MCSS to support participation of Ontario Works/Ontario Disability and Support Program clients				
Next Steps	Move to tax base once variance account depleted (exp. fall 2017), with legislation to be proclaimed via OIC at that time to ensure OEB authorities while ratepayer funding is used				

On-Reserve First Nations Delivery Credit	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	0	15	20	20	20
Overview	Establish a credit to remove delivery charges for 21,500 on-reserve First Nations residential customers				
Updates	Establish authority to create delivery credit and provide for tax-based funding				
Next Steps	Regulatory amendments with details - class of customers eligible, determine what is considered on-reserve and determine the method of calculating the delivery credit				

Affordability Fund	2016-17	2017-18	2018-19	2019-20	2020-21
Fiscal Impact ($ Millions)	100		Up to 100 additional		
Overview	Fund has been established through local distribution companies to help consumers in need to make energy efficiency improvements				
Updates	Advisory committee established and has recommended reps. from Hydro One, Alectra and Thunder Bay Hydro to act as trustees; 2 social services trustees to be selected soon				
Next Steps	Report back to TB/MBC in June 2017 with final program details and a performance management framework; LDCs begin to apply to the Trust for funds in summer 2017				

Other Elements / Considerations

- *Revised cost forecast for "Ontario Rebate for Electricity Consumers" for amount equivalent to 8% provincial portion of HST:* Key measures announced in OFHP are expected to reduce the cost of the rebate for the Province as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced. The revisions are as follows compared with estimates in September 8, 2016*:

	2017-2018	2018-2019	2019-2020	2020-2021
ENERGY Estimate (Sept 8, 2016) ($ million)	1,119	1,086	1,171	n/a
ENERGY Revised Estimate (March 15, 2017) ($ million)	939	882	882	895
Change: March 15, 2017 vs Sept 8, 2016	*-16%*	*-19%*	*-25%*	*n/a*

***NOTE:** The estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

- *Industrial Conservation Initiative:* Under the FHP, the program was expanded for manufacturing sectors, plus greenhouses, to a lower threshold, down to 500 kilowatts (vs 1 MW for other consumers). Energy working with CME and OCC on outreach campaigns on benefits of ICI and other conservation initiatives
- *Bill Presentment:* Targeting a re-design of the bill for Fall 2017. For the interim period the Ministry plans to include bill inserts describing the program
- *Auditor General (AG) / Financial Accountability Officer (FAO):* The Ministry has met with both offices and is circulating information in response to follow up requests. The AG also engaged with IESO through its IT value-for-money audit

Hi Bruno,

I think Shajee may have sent this out already (just can't find his email) but here is Bill 132, Fair Hydro Plan Act on the ONTLA website.

http://www.ontla.on.ca/web/bills/bills_detail.do?locale=en&Intranet=&BillID=4875

Legislative Assembly of Ontario

Assemblée législative de l'Ontario

2ND SESSION, 41ST LEGISLATURE, ONTARIO
66 ELIZABETH II, 2017

Bill 132

An Act to enact the Ontario Fair Hydro Plan Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

The Hon. G. Thibeault
Minister of Energy

Government Bill

1st Reading May 11, 2017

2nd Reading

3rd Reading

Royal Assent

EXPLANATORY NOTE

The Bill enacts a new Act and makes amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998*.

SCHEDULE 1
ONTARIO FAIR HYDRO PLAN ACT, 2017

The Schedule enacts the *Ontario Fair Hydro Plan Act, 2017*. The Act establishes a framework under which the costs and benefits associated with the "clean energy initiative" are to be allocated among present and future consumers of electricity. The "clean energy initiative" is defined in Part I as consisting of the policies of the Government of Ontario related to such matters as eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies.

Under Part II, the Ontario Energy Board is required to determine reduced electricity rates and to determine other adjustments to be made for certain classes of consumers in respect of specified periods of time. For example, for the class of consumers referred to as "regulated rate consumers", the electricity rates payable for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would achieve a 25 per cent reduction in certain costs for a hypothetical member of the class who meets prescribed criteria. Details regarding the determinations are prescribed by regulations.

Part III requires certain electricity consumers to pay an amount in respect of the "clean energy adjustment". The clean energy adjustment is determined by the Financial Services Manager in accordance with rules set out in the Act and the regulations. (Section 18 of the Act appoints Ontario Power Generation Inc. as the Financial Services Manager.) Part III also specifies the roles and responsibilities of electricity vendors and the Independent Electricity System Operator ("IESO") with respect to the collection and remittance of amounts in respect of the clean energy adjustment.

Part IV requires the Minister of Energy to calculate a "fair allocation amount" by taking specified steps in accordance with principles and assumptions set out in the Act. For example, the Act provides that the purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among certain consumers. Part IV also requires the Financial Services Manager to prepare a written plan entitled the "Financing Plan", which is to be used to evaluate whether potential funding obligations should be incurred. Principles and limitations regarding the preparation and implementation of the plan are provided.

Part V requires the IESO to determine the "IESO deferral" in accordance with the regulations and to establish and maintain a variance account in which it records the IESO deferral each month. A "regulatory asset" is created under section 25; the IESO has the right to recover the balance recorded in the variance account from certain consumers. The IESO is authorized to transfer a specified portion of the regulatory asset to a financing entity; this transfer results in the creation of the investment asset and the acquisition by the transferee of a corresponding "investment interest". Various rules respecting the validity and priority of a transfer of an investment asset are set out.

In Part VI, rules in respect of the "investment asset" are provided. Section 29 provides that the investment asset constitutes a current and irrevocable property right and interest, consisting collectively of various specified rights and interests of investment interest owners. Rules respecting the validity and priority of such a transfer and the granting of a security interest by an investment interest owner are included.

Part VII deals with various miscellaneous matters, including regulation-making authority of the Lieutenant Governor in Council.

The *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* are amended to address various matters relating to the enactment of the new Act. For example, the objects of the IESO and Ontario Power Generation Inc. are expanded to address powers and duties under the new Act.

SCHEDULE 2
AMENDMENTS TO THE ONTARIO ENERGY BOARD ACT, 1998

The *Ontario Energy Board Act, 1998* is amended. Among the amendments:

1. Section 79 of the Act is amended so that compensation for the rate protection provided to certain classes of rural or remote consumers may be funded out of money appropriated by the Legislature, rather than by consumers.
2. Section 79.2 of the Act, which governs the Ontario Electricity Support Program, is repealed and replaced. The program is continued, but will be funded out of money appropriated by the Legislature after the variance account maintained by the Independent Electricity System Operator, formerly established under the Plan, is exhausted, rather than by consumers. There are provisions relating to the sharing, use and disclosure of information relating to the administration of the Ontario Electricity Support Program.

3. Programs are established to aid certain distribution rate-protected residential consumers and on-reserve consumers.
4. Various amendments of a technical and administrative nature are made to support the implementation and oversight of these programs including provisions related to auditing, record-keeping, inspections and inquiries, offences and penalties.

Bill 132 **2017**

An Act to enact the Ontario Fair Hydro Plan Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

Contents of this Act

1 This Act consists of this section, sections 2 and 3 and the Schedules to this Act.

Commencement

2 (1) Subject to subsections (2) and (3), this Act comes into force on the day it receives Royal Assent.

(2) The Schedules to this Act come into force as provided in each Schedule.

(3) If a Schedule to this Act provides that any of its provisions are to come into force on a day to be named by proclamation of the Lieutenant Governor, a proclamation may apply to one or more of those provisions, and proclamations may be issued at different times with respect to any of those provisions.

Short title

3 The short title of this Act is the *Fair Hydro Act, 2017*.

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects. These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to residential consumers. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of those consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that residential consumers in the future pay their fair share for the benefits that they receive from the investments already made.

PART I
GENERAL

Interpretation

Definitions

1 (1) In this Act,

"Board" means the Ontario Energy Board; ("Commission")

"clean energy adjustment" means the amount determined under section 15 and payable by specified consumers; ("ajustement pour l'énergie propre")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("avantages de l'énergie propre")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the amounts to be paid or reflected by the IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts or amounts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by the IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed,

(b) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(c) such other costs or estimated costs as may be prescribed; ("coûts de l'énergie propre")

"clean energy initiative" means the policies of the Government of Ontario related to,

(a) eliminating coal generation and fostering the growth of and investment in clean, modern and reliable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies,

(c) promoting conservation, demand management and energy efficiency, and

(d) investing in energy infrastructure to ensure a clean, modern and reliable system; ("initiative pour l'énergie propre")

"electricity vendor" means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) the IESO in circumstances where it directly invoices a specified consumer for electricity used in Ontario, or

(d) such other person as may be prescribed; ("vendeur d'électricité")

"fair allocation amount" means an amount calculated under section 20; ("montant de répartition équitable")

"finance amount" means the finance amount determined in accordance with the regulations; ("montant de financement")

"Financial Services Manager" means the Financial Services Manager appointed under section 18; ("gestionnaire des services financiers")

"financing entity" means an entity established or caused to be established by the Financial Services Manager as described in subsection 22 (2); ("entité de financement")

"Financing Plan" means the plan prepared under section 21; ("Plan de financement")

"funding obligation" means a payment obligation incurred by or on behalf of an investment interest owner to fund its ownership of an investment interest or a payment obligation that meets such other criteria as may be prescribed; ("obligation de financement")

"funding rebate" means a payment obligation incurred by the IESO as part of the transfer of the regulatory asset; ("remboursement de financement")

"IESO" means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; ("SIERE")

"IESO deferral" means the amount determined under section 23; ("report de la SIERE")

"investment asset" means the rights and interests described in section 29; ("actif d'investissement")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("participation d'investissement")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("détenteur d'une participation d'investissement")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system within the meaning of that Act; ("distributeur titulaire d'un permis")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("détaillant titulaire d'un permis")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

(a) the period beginning on July 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on either April 30, 2047 or such later day as may be prescribed,

(i) every six-month period following the period mentioned in clause (a), or

(ii) any period shorter than six months, as may be prescribed; ("période de référence")

"refinancing" means, subject to the regulations, the incurrence of debt in connection with a redemption, repayment or repurchase of a funding obligation; ("refinancement")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right established under section 25; ("actif réglementaire")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2), or

(b) such other person as may be prescribed; ("consommateur déterminé")

"transfer" includes, when used in relation to an investment interest, the assignment, conveyance, disposition or sale of the investment interest; ("transfert")

"true up amount" means a true up amount determined in accordance with the regulations; ("montant d'égalisation")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010;* ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010;* ("fournisseur de compteurs divisionnaires d'unité")

"variance account" means the variance account established by the IESO under subsection 24 (1). ("compte d'écart")

Specified consumer

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of not more than 50 kilowatts, or such other amount as may be prescribed.
2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.
3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or has had the obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.
4. The person's account with the electricity vendor relates to,
    i. a dwelling,
    ii. a property within the meaning of the *Condominium Act, 1998*,
    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or
    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.
5. The person satisfies such criteria as may be prescribed.

Transfer of regulatory asset

(3) In this Act, a reference to the transfer of a specified portion of the regulatory asset is a reference to the following, as provided for in subsection 26 (3):

1. A reduction in the balance in the variance account.
2. The adjustment of the regulatory asset.
3. The acquisition by a financing entity of the investment interest corresponding to the specified portion of the regulatory asset.

Effect of invalidity

2 (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purposes

3 The purposes of this Act are,

(a) to ensure that clean energy costs and clean energy benefits are fairly allocated among present and future specified consumers;

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province; and

(c) to align clean energy costs with clean energy benefits, in order to provide fairness for specified consumers over time.

Crown bound

4 This Act binds the Crown.

Protection and assurances

Prohibition

5 (1) No action or omission by the Board, the Minister or the Crown shall be effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or to impair or postpone the invoicing, collection or remittance of the clean energy adjustment.

Agreements

(2) The Minister and the Minister of Finance may together, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of the IESO or electricity vendors under this Act or related transactions.

Guarantee, indemnification

(3) The Lieutenant Governor in Council may by order,

(a) authorize the Minister and the Minister of Finance, acting together on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions of the guarantee or indemnity and the maximum liability for the guarantee or indemnity;

(b) specify terms and conditions that must be included in any guarantee or indemnity given by the Minister and the Minister of Finance; and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT

Definition

6 In this Part,

"regulated rate consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998* for the purposes of subsection 79.16 (1) of that Act.
2. The consumer would, if the consumer were not subject to this Act, be invoiced the rates determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*.

Regulated rate consumers, first adjustments

7 (1) Despite any order under subsection 78 (3.1) of the *Ontario Energy Board Act, 1998* and despite section 79.16 of that Act, the electricity rates payable by regulated rate consumers for the period beginning on July 1, 2017 and ending on April 30, 2018 are the rates, as determined by the Board, that would result in a hypothetical regulated rate consumer who meets the prescribed criteria being charged an invoice amount that is 25 per cent less than the invoice amount that would have been charged to that consumer under the comparison rates described in subsection (2).

Comparison rates

(2) The comparison rates are the rates that would have been effective May 1, 2017 if they had been determined by the Board solely using the method prescribed by the regulations made under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*, without taking into account any forecasted impact of any other provisions of this Act.

Invoice amounts

(3) The types of amounts to be included or excluded in each invoice amount mentioned in subsection (1) are the types of amounts specified in the regulations.

Other specified consumers, first adjustments

8 (1) For the period beginning on July 1, 2017 and ending on April 30, 2018, the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998* shall, with respect to specified consumers who are not regulated rate consumers, be further adjusted by electricity vendors in accordance with the determinations of the Board under subsection (2).

Board to make determinations

(2) The Board shall, in accordance with the regulations, determine the adjustments to be made by electricity vendors.

Same, regulations

(3) The regulations may specify different adjustments to be made in respect of prescribed classes of specified consumers who are not regulated rate consumers.

Determinations by Board

9 The Board shall make the determinations mentioned in sections 7 and 8 no later than 15 business days after the day this section receives Royal Assent and, regardless of whether the Board makes the determinations before or after July 1, 2017, the determinations shall be effective as of July 1, 2017.

Implementation by electricity vendors

10 (1) As soon as possible after the Board makes determinations under section 9, each electricity vendor shall, in respect of electricity used on or after July 1, 2017, ensure that its invoices reflect the determinations of the Board.

Same

(2) The electricity vendor shall ensure that, if any of its customers who are specified consumers have been invoiced in a manner that does not reflect the determinations of the Board under section 9, the specified consumer receives the difference between the amounts shown on the invoice and the amounts reflecting the Board's determinations, provided as a lump sum credit on the first invoice issued after the electricity vendor has adapted its invoices or by such other means as may be prescribed.

Subsequent adjustments

11 (1) Despite clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998* and subject to subsection (2), the Lieutenant Governor in Council may prescribe the methodology to be applied by the Board after April 30, 2018 for the purpose of determining,

(a) electricity rates for regulated rate consumers; or

(b) adjustments to be applied by electricity vendors to the adjustments made by the IESO under section 25.33 of the *Electricity Act, 1998* in respect of prescribed classes of specified consumers who are not regulated rate consumers.

Limitation

(2) Any prescribed methodology shall have regard to the following:

1. The purposes of this Act.
2. The clean energy costs borne by specified consumers over time.
3. Such other matters as may be prescribed.

Sub-metering

12 (1) This section applies if a specified consumer provides to another person electricity in respect of which a determination of the Board referred to in section 9 or 11 applies.

Same

(2) If an invoice for the electricity is issued to the person by the specified consumer or a unit sub-meter provider providing unit sub-metering for the specified consumer, the amount payable for the electricity by the person who is liable to pay the invoice shall be determined in accordance with the regulations.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

13 (1) Upon receipt of an invoice from an electricity vendor that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor as agent of the investment interest owners.

Same

(2) For greater certainty, subsection (1) applies regardless of,

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was inconsistent with the Financing Plan, including in a manner that failed to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Terms

(3) The payment shall be made in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Unit sub-metering

(6) A specified consumer who provides electricity through unit sub-metering may collect amounts in respect of the clean energy adjustment payable under this section in accordance with the regulations.

Irrevocability of amount

14 (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or bypassed.

Exception

(2) Subsection (1) does not apply to the extent that the invoice reflects a clerical, typographical or calculation-related error.

Determination of clean energy adjustment

Financial Services Manager to determine

15 (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by taking the following steps:

1. Calculate the sum of the following:
    i. The estimated finance amount in respect of the reference period.
    ii. The true up amount in respect of the reference period.
2. Divide the sum calculated under paragraph 1 by the number of months in the reference period.

Regulations re true up amount

(2) The Lieutenant Governor in Council shall, in making regulations with respect to the determination of the true up amount, have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.
2. The method for determining the true up amount should take into account historical and reasonably foreseeable,
    i. differences between the estimated and actual finance amount for the applicable reference period,
    ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and
    iii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(3) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment in respect of a reference period and such other information related to the determination of the clean energy adjustment as may be prescribed.

Board to determine rates

(4) Without changing the clean energy adjustment, the Board shall, in accordance with the regulations, determine the rates at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

16 (1) The IESO shall, as agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the market rules made under section 32 of the *Electricity Act, 1998* or the regulations.

Account

(2) All of the following amounts received by the IESO shall, until remitted to or for the benefit of the investment interest owners in accordance with subsection (4), be deposited promptly into an account established for the purposes of receiving those amounts:

1. Amounts described in subsection (1).
2. Payments made by specified consumers directly to the IESO as electricity vendor under subsection 13 (1).
3. Proceeds of amounts described in paragraphs 1 and 2.

Same, held in trust

(3) All amounts received by the IESO in respect of the clean energy adjustment shall, until remitted to or for the benefit of the investment interest owners, be held in trust by the IESO for the investment interest owners.

IESO to remit

(4) The IESO shall remit amounts received by it in respect of the clean energy adjustment, inclusive of interest earned on the amounts referred to in subsection (1), to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

17 (1) Each electricity vendor shall issue an invoice to each of its customers who is a specified consumer for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 15 (4) and in accordance with the regulations.

Electricity vendor to report

(2) Each electricity vendor shall, in accordance with the regulations, promptly report to the IESO the total amount invoiced to its customers who are specified consumers in respect of the clean energy adjustment, the amount collected and such other information as may be prescribed.

Electricity vendor to collect

(3) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(4) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same invoice period.

Held in trust

(5) Payments received by an electricity vendor from or on behalf of specified consumers in respect of the clean energy adjustment and all proceeds of the payments shall, until remitted to the IESO for the benefit of the investment interest owners in accordance with subsection (6), be held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(6) Each electricity vendor shall remit amounts in respect of the clean energy adjustment to the IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

18 Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Duties and powers

19 (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Same

(2) The administration of the investment asset may include providing information to the IESO in respect of obligations under Part III and such other activities as may be prescribed.

Fees

(3) Subject to any prescribed limitations, the Financial Services Manager may establish and charge fees in relation to such matters as may be prescribed in accordance with the regulations, which regulations may provide for the ability to recover costs and expenditures and to earn a return.

Same, Board approval

(4) Before establishing fees under subsection (3), the Financial Services Manager shall submit them to the Board for approval in accordance with the regulations.

FAIR ALLOCATION AMOUNT

Minister to calculate fair allocation amount

20 (1) Subject to subsections (2) and (3), before the first funding obligation is incurred the Minister shall calculate a fair allocation amount in respect of each reference period, applying such method as the Minister considers appropriate and in accordance with the following steps:

1. Determine the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period.
2. Determine the estimated reduction in the amounts payable by specified consumers as a result of determinations of the Board under Part II in respect of all previous reference periods, including the estimated reduction in clean energy costs described in clause (a) of the definition of "clean energy costs" in subsection 1 (1) that would otherwise have been payable by specified consumers in the absence of this Act.
3. Determine the amount, if any, by which the determination under paragraph 1 exceeds the determination under paragraph 2.
4. Calculate the sum of the amount determined under paragraph 3 and such other amounts as may be prescribed.

Principles

(2) In calculating the fair allocation amount, the Minister shall have regard to the following principles:

1. The purpose of calculating the fair allocation amount is to measure and allocate the estimated clean energy costs and estimated clean energy benefits fairly among the specified consumers in respect of each reference period.
2. Calculations should be made having regard to the need to align each fair allocation amount with the estimated finance amount payable during the reference period.
3. Estimated clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the estimated clean energy benefits attributed to the specified consumers in respect of the reference period.
4. Such other principles as may be prescribed.

Assumptions

(3) In calculating the fair allocation amount, the Minister shall make such assumptions as the Minister considers to be reasonable regarding the following:

1. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.
2. The expected number of specified consumers in respect of each reference period.
3. The expected electricity consumption rates in respect of each reference period.
4. Such other assumptions as may be prescribed.

Minister to provide amount to Financial Services Manager

(4) The Minister shall provide the fair allocation amount in respect of each reference period to the Financial Services Manager.

Recalculation

(5) A calculation of the fair allocation amount under this Part may be changed by such person as may be prescribed in accordance with such requirements as may be prescribed.

Same

(6) No change under subsection (5) shall affect any clean energy adjustment that has already been determined under section 15 or any funding obligations that have already been incurred before the change.

Information

(7) The Minister, the IESO, the Financial Services Manager, the Board and electricity vendors shall provide such information as may be prescribed in accordance with the regulations for the purposes of facilitating a change to a calculation of the fair allocation amount.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

21 (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring and financing an investment asset in accordance with this Act or for the purposes of a refinancing.

Plan to be provided to Minister

(2) The Financial Services Manager shall provide the Financing Plan to the Minister.

Principles

(3) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Funding obligations should be incurred such that, along with any funding obligations already incurred, the estimated finance amount that would, subject to any refinancing, become due and payable during a reference period will reasonably align with the fair allocation amount determined in respect of the reference period, in each case after reducing the fair allocation amount to reflect determinations of the Board under Part II in respect of the reference period.
2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.
3. Reasonable assumptions should be made regarding such matters as may be prescribed.
4. Such other principles as may be prescribed.

Limitation

(4) In respect of each reference period from July 1, 2017 to April 30, 2021, no funding obligation shall be incurred that would result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

(a) the amounts are payable in respect of a reference period in respect of which the Board has not made any determinations under Part II; or

(b) if the Board has made a determination under Part II in respect of the reference period, the funding obligations incurred would not result in amounts payable in respect of the clean energy adjustment during the reference period in an amount that exceeds the limit determined in accordance with the regulations.

Other reports

(5) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this Act to the Financing Plan is deemed to be a reference to the plan as amended.

Incurrence of funding obligations

22 (1) The Financial Services Manager shall ensure that funding obligations incurred for the purposes of this Act are incurred in a manner that is consistent with the applicable Financing Plan.

Financing entities

(2) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and to provide for the reasonable alignment of the estimated finance amount with the fair allocation amount.

Same

(5) For greater certainty, subsection (4) applies despite the failure of the Financial Services Manager to comply with subsection (1).

PART V
THE REGULATORY ASSET

IESO deferral

23 (1) The IESO deferral for each month, commencing May 1, 2017, shall be determined by the IESO in accordance with the regulations.

Same, retrospective amounts

(2) For greater certainty, the regulations may provide for the IESO deferral to include an amount that was incurred by the IESO on or after May 1, 2017 and before the day this section comes into force.

Electricity vendors to provide information

(3) Electricity vendors shall provide to the IESO such information as the IESO may reasonably request for the purposes of determining the IESO deferral under subsection (1) and such further information as may be prescribed.

Same

(4) The IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

24 (1) The IESO shall establish and maintain a variance account in which it records the following:

1. The IESO deferral for each month.
2. All payments received by the IESO resulting from the exercise of the right of recovery under section 25 and any transfer under section 26.
3. Such other adjustments as may be prescribed, including adjustments in respect of the period that commences on or after May 1, 2017 and before the day this section comes into force.

Recording determinative

(2) Subject to the correction of any obvious error by the IESO, its recording of the balance in the variance account is determinative of the balance as of the time of the recording.

Rights of investment interest owner

(3) No change made by the IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 26, affect the rights acquired by the investment interest owner under the transfer.

Regulatory asset established

25 (1) Effective May 1, 2017, the IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Board to set rates

(2) Subject to subsection (3), the Board shall, from time to time and in accordance with the regulations, determine and set rates payable by specified consumers to allow for the IESO to recover the balance recorded in the variance account.

Limitation

(3) The IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2021.

Transfer of regulatory asset

26 (1) The IESO may from time to time, in accordance with this Act and the regulations, transfer a specified portion of the regulatory asset to a financing entity in accordance with this section.

Agreement

(2) An agreement between the IESO and a financing entity in relation to the transfer of a specified portion of the regulatory asset shall provide for consideration of a payment by the financing entity to the IESO in an amount equal to the amount of the specified portion.

Effect of payment

(3) Upon receipt by the IESO of the payment by the financing entity,

(a) the balance in the variance account shall be reduced by the amount of the payment;

(b) the regulatory asset shall be adjusted accordingly;

(c) the financing entity shall acquire a corresponding investment interest; and

(d) the IESO shall retain no further right, title or interest in the corresponding investment interest.

Validity of transfer

27 (1) A transfer of a specified portion of the regulatory asset under section 26 constitutes a valid and enforceable absolute assignment, conveyance and sale of the corresponding investment interest to the transferee.

Same

(2) Without limiting subsection (1), any transfer agreement that states an intention of the parties for the IESO to dispose of a specified portion of the regulatory asset and to assign, convey or sell a corresponding investment interest shall be treated for all purposes as an absolute assignment, conveyance, disposition and sale of the IESO's right to recover the corresponding amount in the variance account and not merely as a security interest.

Deemed perfection, etc.

(3) At the time a transfer of the regulatory asset is made under section 26, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Investment asset established

28 (1) The transfer of a specified portion of the regulatory asset under section 26 creates an investment asset or, if it is not the first transfer, adds to the investment asset.

Same

(2) Upon transfer of a specified portion of the regulatory asset under section 26 to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim.

Investment asset, irrevocable rights and interests

29 (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right and interest to impose, invoice, collect, receive and recover the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.
2. The right to receive, collect and recover the clean energy adjustment that is imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors, the IESO and other prescribed parties.
3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for the clean energy adjustment.
5. The right to enforce the duties and obligations under this Act of each electricity vendor and the IESO to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by any electricity vendor to recover payment of the clean energy adjustment.
6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest, including any rights to receive funding rebates.
7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Not affected by failure to impose etc. clean energy adjustment

(2) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(3) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, the IESO, an agent of the investment interest owners or an owner in the Province of a distribution system within the meaning of the *Electricity Act, 1998*;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(4) The rights of the investment interest owners to collect the clean energy adjustment and enforce their rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(5) If one investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest owner collectively and in coordination with all other investment interest owners, and any agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owners as a collective in accordance with its terms.

Transfer of investment interest

30 An investment interest owner may transfer all or a portion of an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

31 (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the transferee a valid property right and interest in, to and under the applicable investment interest acquired in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected as described in the *Personal Property Security Act*, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer, and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

32 (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that the investment asset and each investment interest is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by an investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by registering a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may subsequently attach to the property rights and interests in the investment interest subject to the security interest, unless the person to whom the security interest has been granted consents otherwise.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any account of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to the IESO.

Interpretation

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act.*

PART VII
MISCELLANEOUS

Appointment of agent, invoicing or collection

33 (1) If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Same, not Crown agent

(2) For greater certainty, a person appointed under this section is not an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Board's authority

34 (1) Each electricity vendor, the IESO and the Financial Services Manager shall maintain such accounts and provide such information to the Board as the Board may require for the purposes of carrying out its responsibilities under this Act, in the form and manner and within the time required by the Board.

No hearing required

(2) Despite anything to the contrary in the *Ontario Energy Board Act, 1998*, the Board may exercise any of its responsibilities under this Act without a hearing.

Sequestration

35 (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections or remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

36 The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to a transfer under this Act or the creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section 5 shall be the laws of the Province.

Conflict

37 The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

38 Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required under the Financing Plan or in relation to the determination of the fair allocation amount.

Liability

39 (1) No action or other civil proceeding shall be commenced against any employee of the Province or Ontario Power Generation Inc. for any act done in good faith in the exercise or performance or the intended exercise or performance of a power or duty under this Act, the regulations or for any alleged neglect or default in the exercise or performance in good faith of such a power or duty.

Same

(2) Nothing in subsection (1) shall be read as limiting the effect of subsection 19 (1) of the *Electricity Act, 1998* or subsection 11 (1) of the *Ontario Energy Board Act, 1998.*

Same

(3) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act,* subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.

References in marketing materials and offering documents

40 No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5 unless the prescribed requirements, if any, are satisfied.

Regulations

41 (1) The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.
2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.
3. Governing the incurrence of debt for the purposes of the definition of "refinancing" in subsection 1 (1).
4. Governing the inclusion of information under this Act on or with invoices, which may include requiring notice to be provided by electricity vendors to specified consumers and other prescribed persons regarding the adjustments, including providing for different requirements in different circumstances and for different classes of specified consumers.
5. Governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on or with invoices issued to specified consumers, including the form that the information must take and the form of the invoices and the form of any notice to be provided to the specified consumer under this Act.
6. Governing the manner by which invoices or notices provided for under this Act are to be provided to specified consumers and other prescribed persons.
7. Providing for a right of compensation for investment interest owners affected by a breach under section 29 and the manner in which such a right may be enforced under this Act.
8. Prescribing the time within which any action required by this Act may be required to be done.
9. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

Limitation

(2) Despite subsection (1) or any other Act, no regulation under this Act shall have the effect of reducing, impairing, postponing or terminating the obligations of specified consumers to pay amounts in respect of the clean energy adjustment or impairing or postponing the invoicing, collection, remittance or recovery of the clean energy adjustment.

PART VIII
AMENDMENTS TO OTHER ACTS

Electricity Act, 1998

42 (1) Subsection 6 (1) of the *Electricity Act, 1998* is amended by adding the following clause:

(q.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*,

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and related settlement activities,

(iii) engaging in activities related to the transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(A) incurring liabilities in relation to the regulatory asset,

(B) transferring the regulatory asset under section 26 of the *Ontario Fair Hydro Plan Act, 2017* for consideration, and

(C) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

(2) Subsection 25.33 (1) of the Act is amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by the IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*.

(3) Subsection 25.33 (2) of the Act is amended by striking out "and" at the end of clause (a), by adding "and" at the end of clause (b) and by adding the following clause:

(c) such amounts as may be prescribed that are paid or incurred by the IESO in relation to the *Ontario Fair Hydro Plan Act, 2017*.

(4) Clause 25.33 (4) (b) of the Act is amended by adding "or as may be required by a regulation made under this Act or the *Ontario Fair Hydro Plan Act, 2017*" at the end.

(5) Subsection 25.33 (5) of the Act is amended by adding "or under the *Ontario Fair Hydro Plan Act, 2017*" at the end.

(6) Section 53.1 of the Act is amended by adding the following subsections:

Same, *Ontario Fair Hydro Plan Act, 2017*

(1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities and performing other services on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships, limited partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, non-subsidiary

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is not a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of the financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of the financing entity.

Deemed assets, subsidiary

(1.4) Despite any other provision of this Act, the *Business Corporations Act* or any other Act, if a financing entity is a subsidiary of Ontario Power Generation Inc.,

(a) the assets and liabilities of that financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its other subsidiaries shall not form part of the assets and liabilities of that financing entity.

Definition, financing entity

(1.5) For the purposes of this section,

"financing entity" has the same meaning as in the *Ontario Fair Hydro Plan Act, 2017.*

Ontario Energy Board Act, 1998

43 (1) Subsection 70 (2.1) of the *Ontario Energy Board Act, 1998* is amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017.*

(2) Section 70 of the Act is amended by adding the following subsection:

Deemed condition of licences, unit sub-meter provider, *Ontario Fair Hydro Plan Act, 2017*

(2.4) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Fair Hydro Plan Act, 2017* and the regulations made under it.

(3) Section 78.1 of the Act is amended by adding the following subsections:

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.
2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.
3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.
4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

(4) Subsection 79.16 (3) of the Act is repealed.

PART IX
COMMENCEMENT AND SHORT TITLE

Commencement

44 This Schedule comes into force on the day the *Fair Hydro Act, 2017 receives* Royal Assent.

Short title

45 The short title of the Act set out in this Schedule is the *Ontario Fair Hydro Plan Act, 2017*.

SCHEDULE 2
AMENDMENTS TO THE ONTARIO ENERGY BOARD ACT, 1998

1 (1) Subsection 79 (4) of the *Ontario Energy Board Act, 1998* is repealed and the following substituted:

Liability

(4) All consumers are required, in accordance with the regulations, to contribute towards the amount of any compensation required under subsection (3) that is not otherwise provided under subsection (4.1).

Payments for certain classes

(4.1) Compensation required under subsection (3) may be provided with respect to one or more prescribed classes of consumers who receive rate protection under this section, in a manner provided for in the regulations.

Money appropriated by the Legislature

(4.2) The compensation provided for in subsection (4.1) shall be paid for out of the money appropriated for those purposes by the Legislature.

Information, etc.

(4.3) If provided for in the regulations, the Board, the IESO and distributors, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of the rate protection or of anything else provided for in this section.

(2) Clause 79 (5) (e) of the Act is repealed and the following substituted:

(e) prescribing rules respecting the amounts that must be collected to compensate distributors, taking into account any compensation provided under subsection (4.1), including rules,

(i) respecting the calculation of those amounts,

(ii) respecting the calculation of any off-set to the liability of consumers under subsection (3) having regard to those amounts,

(iii) establishing the time and manner of collection,

(iv) requiring the amounts to be paid in instalments and requiring the payment of interest or penalties on late payments,

(v) prescribing methods of ensuring that the amounts required cannot be bypassed, and

(vi) respecting the distribution of those amounts to consumers;

(e.1) prescribing classes of consumers for the purposes of subsection (4.1), and governing how and when the compensation is to be provided with respect to the rate protection provided to them, including, without restricting the generality of the foregoing, requiring the IESO to receive payments or amounts from the Minister of Energy and to make payments to licensed distributors or to prescribed persons and prescribing how and when payments are to be made;

2 Section 79.2 of the Act is repealed and the following substituted:

Rate assistance

79.2 (1) The Minister shall make provision for rate assistance for rate-assisted consumers having regard to their economic circumstances, and where the Minister makes such provision, shall do so out of the money provided for in subsection (4).

OESP

(2) The program known as the "Ontario Electricity Support Program" in English and "Programme ontarien d'aide relative aux frais d'électricité" in French is continued for the purpose of providing rate assistance to rate-assisted consumers having regard to their economic circumstances.

Administered by Board

(3) The Ontario Electricity Support Program shall be administered by the Board, or when the regulations so provide, by a Minister of the Crown or other entity provided for in the regulations.

Money appropriated by the Legislature

(4) The money required for the purposes of the Ontario Electricity Support Program shall be paid out of the money appropriated for those purposes by the Legislature, once the amounts recorded in the variance account referred to in subsection (5) are no longer sufficient to provide for the funding of the program when taken on their own.

Variance account

(5) The money required for the purposes of the Ontario Electricity Support Program shall be provided out of the credit balance in the variance account maintained by the IESO under the Program as it existed before the coming into force of

section 2 of Schedule 2 to the *Fair Hydro Act, 2017* until the amounts recorded in the account are no longer sufficient, when taken on their own, to fund the Program.

Variance account depleted

(6) The IESO shall provide the Ministry of Energy with advance notice, on a timely basis, of the time the IESO estimates that the amounts reflected in the variance account would be less than the amount required to meet its obligations related to funding the Ontario Electricity Support Program for the upcoming month.

How provided

(7) Rate assistance provided under this section shall be provided with respect to consumers prescribed in the regulations, and shall be provided at the times provided for in the regulations and in the amounts and in the manner provided for in the regulations.

Payments with respect to prior use

(8) The regulations may require provision of rate assistance to prescribed classes of rate-assisted consumers with respect to electricity consumed during a period prior to the date of the making of the regulation, but no such rate assistance shall be required under the regulations with respect to electricity consumed before January 1, 2016.

Transitional

(9) The regulations may require the provision of rate assistance for a rate-assisted consumer with respect to a period prior to the date on which the consumer became a rate-assisted consumer if the consumer meets all of the criteria prescribed by the regulations.

Distributors, etc.

(10) A distributor, a unit sub-meter provider and any other person or entity that may be prescribed is entitled to be compensated from the money referred to in subsection (4) or (5), as the case may be, for any lost revenue resulting from the provision of rate assistance under the Ontario Electricity Support Program.

Deemed licence conditions, IESO, settlements, payments, etc.

(11) Every licence issued to the IESO, a distributor or unit sub-meter provider or a retailer of electricity shall be deemed to contain conditions requiring the licensee to do anything necessary to implement and administer the provision of rate assistance under this section as may be required by the regulations or the Board, including requirements with respect to,

(a) making payments to the IESO, distributors, unit sub-meter providers and other persons and entities identified by the regulations;

(b) receiving payments or other amounts from the IESO, distributors, unit sub-meter providers and other persons and entities identified by the Minister;

(c) requiring licensees to pass any rate assistance provided for under this section through to rate-assisted consumers in the manner provided for in the regulations;

(d) engaging in settlement activities;

(e) providing information to and receiving information from the Ministry of Energy, the Board, the IESO, distributors, unit sub-meter providers, retailers of electricity and any other prescribed persons and entities in the time and in the manner provided for by the Board or as may be prescribed; and

(f) entering into agreements or arrangements with licensees and other persons.

Information, etc.

(12) If provided for in the regulations, the Board, the IESO, distributors, retailers of electricity and unit sub-meter providers, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of rate-assistance or of anything else required under this section.

Conflicts, etc.

(13) Where any conflict exists between an order of the Board, a code issued by the Board or a licence condition and this section or a regulation made under this section, this section or the regulation made under this section shall prevail to the extent of the conflict.

Regulations

(14**)** The Lieutenant Governor in Council may make regulations governing anything dealt with in this section and without limiting the generality of the foregoing, may make regulations,

(a) governing anything that is described in this section as being prescribed or as being provided for in the regulations or that is required to be done in accordance with the regulations;

(b) governing the time or times at which rate assistance shall be paid or become payable to rate-assisted consumers;

(c) governing the determination of classes of consumers who are rate-assisted consumers, including providing for different classes of rate-assisted consumers;

(d) requiring that certain costs and expenditures related to the Ontario Electricity Support Program be only incurred with the prior approval of the Minister, and governing those costs and expenditures;

(e) establishing rules for the calculation of the amount of the rate assistance to be provided;

(f) governing payments under this section, including determining the method or methods of calculating the amount of rate assistance to be provided;

(g) setting maximum amounts of the total annual value of rate assistance that may be provided;

(h) requiring a distributor, the IESO or a unit sub-meter provider or other prescribed person or entity to make or receive payments in respect of rate assistance, including requiring them to make or receive payments directly to or from the Ministry of Energy or to receive overpayments directly or indirectly from consumers or other persons entitled to receive the rate assistance and prescribing the circumstances in which such payments are to be made and received and such overpayments are to be received as well as methods for determining the amounts payable or to be received;

(i) requiring the IESO to receive payments from the Minister and requiring the IESO to make payments to the Board, to licensed distributors, to unit sub-meter providers or to prescribed persons, in respect of the rate assistance provided under this section and governing methods for determining the amounts payable;

(j) governing the Board's or other prescribed entity's administration and program-related costs in administering the Ontario Electricity Support Program;

(k) governing transitional matters arising from the changes made to the Ontario Electricity Support Program as a result of the enactment of the *Fair Hydro Act, 2017*.

Retroactivity

(15) A regulation made under this section is, if it so provides, effective with reference to a period before it is filed.

General or particular

(16) A regulation under this section may be general or particular in application, may provide for different classes of persons and entities and may prescribe different rules for different persons or entities or different classes of persons or entities.

Verification of eligibility

(17) Section 11 of the *Ministry of Revenue Act* applies with respect to the Ontario Electricity Support Program as a government assistance program administered by the Board.

Definitions

(18) In this section,

"Government assistance program" has the meaning provided for in subsection 11 (2) of the *Ministry of Revenue Act*; ("programme d'aide gouvernementale")

"rate-assisted consumer" means a consumer referred to in subsection (7). ("consommateur admissible à l'aide tarifaire")

3 The Act is amended by adding the following section:

Confidentiality, information sharing, etc.

79.2.1 (1) For the purposes of section 79.2, the Board or the Minister or entity having responsibility for administering the Ontario Electricity Support Program may enter into an agreement with the Minister of Community and Social Services to provide the services to the public listed in subsection (2) on behalf of the Board, Minister or the entity, as the case may be, in relation to the administration of the Ontario Electricity Support Program.

Agreement, etc.

(2) The services that may be included in an agreement referred to in subsection (1) are the following:

1. Providing documents and information about the Ontario Electricity Support Program.
2. Processing applications for the Ontario Electricity Support Program.

Arrangements with others

(3) The Minister of Community and Social Services may arrange with another person or entity to provide, on behalf of that Minister, services that that Minister is authorized to provide under an agreement referred to in subsection (1).

Personal information

(4) The Minister of Community and Social Services is authorized to collect, use, disclose and retain personal information necessary to provide the services authorized by an agreement referred to in subsection (1), but shall not collect, use, disclose or retain more personal information than is reasonably necessary to provide the services.

Limitation

(5) Except where otherwise authorized under subsection (7), the Minister of Community and Social Services shall not collect, use, disclose or retain personal information provided for in subsection (4) without the consent of the individual to whom the information relates.

Duty to transfer personal information

(6) The Minister of Community and Social Services shall transfer an individual's personal information provided for in subsection (4) into the control of the Board, Minister or entity responsible for administering the Ontario Electricity Support Program promptly after processing an application for the Ontario Electricity Support Program, but may retain such personal information as is reasonably necessary to confirm that an individual has been provided a service.

Use of personal information, etc.

(7) The Minister of Community and Social Services may use personal information maintained by that Minister in connection with the administration of the Ontario Disability Support Program and the program established pursuant to the *Ontario Works Act, 1997*, for the purpose of identifying and contacting individuals eligible for the rate assistance provided under the Ontario Electricity Support Program, and to provide services authorized under an agreement referred to in subsection (1).

Deemed compliance

(8) The use of personal information as allowed by subsection (7) is deemed to comply with section 41 of the *Freedom of Information and Protection of Privacy Act*.

Disclosure of list

(9) In order to assist the Minister of Community and Social Services to identify individuals eligible for rate assistance, the Board or the Minister or entity having responsibility for administering the Ontario Electricity Support Program shall, as soon as practicable after the coming into force of this section, disclose to the Minister of Community and Social Services a list of individuals who are enrolled in the Ontario Electricity Support Program, together with their mailing address and other contact information.

Use of list

(10) The Minister of Community and Social Services may use the information on the list provided under subsection (9) to determine whether an individual who is currently enrolled in the Ontario Disability Support Program or the program established under the *Ontario Works Act, 1997* is also enrolled in the Ontario Electricity Support Program.

Destruction of list

(11) The Minister of Community and Social Services shall destroy the list provided under subsection (9) no later than one year after receiving the list.

Notification about the management of personal information

(12) The Minister of Community and Social Services shall ensure that a notice is published on a website describing,

(a) the purpose for which that Minister collects, uses, discloses and retains personal information in connection with the Ontario Electricity Support Program;

(b) the types of personal information that may be collected, used, disclosed and retained in connection with the Ontario Electricity Support Program, and the circumstances in which the personal information may be collected, used, disclosed and retained in connection with that Program; and

(c) the title, and contact information, including an email address, of an employee who can answer an individual's questions about the use of the personal information under this section.

4 The Act is amended by adding the following sections:

Distribution rate-protected consumers

79.3 (1) The Minister shall provide for distribution rate protection to distribution rate-protected residential consumers having regard to the costs of the distribution of electricity to such consumers with respect to electricity consumed on or after the date prescribed by the regulations.

Money appropriated by the Legislature

(2) The money required for the purposes of the provision of distribution rate protection under this section shall be paid out of the money appropriated for those purposes by the Legislature.

Maximum charge

(3) Despite any order of the Board, or anything else under this Act, where the regulations so provide, a prescribed distributor who distributes electricity to distribution rate-protected residential consumers shall not charge those consumers, or a prescribed class of those consumers, any amount for monthly base distribution charges more than,

(a) the maximum amount for the charge that is provided for in the regulations; or

(b) the amount determined by the Board after applying any calculations, processes or methods provided for in the regulations.

Distributors

(4) A distributor who is prescribed under this section is entitled to be compensated from the money referred to in subsection (2) for lost revenue resulting from the provision of the distribution rate protection to distribution rate-protected residential consumers under this section.

Information, etc.

(5) If provided for in the regulations, the Board, the IESO and distributors, or any of them shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of distribution rate protection or of anything else required under this section.

Limitation periods for distribution rate protection, consumer

(6) Despite any past entitlement of a consumer who is eligible to distribution rate protection under this section, no distribution rate protection is payable to a consumer after a limitation period prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

Limitation, reimbursement of distributor, etc.

(7) Despite any requirement under this Act to reimburse a prescribed distributor or other person for distribution rate protection provided by them to distribution rate-protected residential consumers under this section, no amounts for reimbursement are payable to the prescribed distributor or other person after a limitation period prescribed by the regulations in respect of the prescribed distributor or other person, where such reimbursement is based on a consumer's past entitlement under this section which has not yet been paid or reimbursed under this section, other than in such circumstances as may be prescribed by the regulations.

Transitional

(8) If, for technical or operational reasons, a distributor referred to in subsection (3) is unable to adapt its invoices to comply with this section and the regulations by the time it issues its first invoice for electricity consumed after the prescribed date in respect of an account of a consumer who is eligible for distribution rate protection under this section,

(a) the distributor shall adapt its invoices as soon as possible and, in any event, no later than a date prescribed in the regulations; and

(b) consumers continue to be entitled to receive the distribution rate protection to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Regulations

(9) The Lieutenant Governor in Council may make regulations,

(a) prescribing consumers or classes of consumers as distribution rate-protected residential consumers for the purposes of this section;

(b) prescribing dates for the purposes of subsections (1) and (8);

(c) prescribing distributors for the purposes of this section;

(d) governing anything that is described in this section as being prescribed or as being provided for in the regulations or that is required to be done in accordance with the regulations;

(e) governing the provision of distribution rate protection by the Minister in respect of distribution rate-protected residential consumers under this section including determining the method or methods of calculating the amount of rate protection to be provided;

(f) requiring the IESO to receive payments from the Minister and to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of the distribution rate protection provided for under this section and prescribing methods for determining the amounts payable to distributors or distribution rate-protected residential consumers in respect of that protection.

Interpretation

(10) In this section,

"distribution rate-protected residential consumer" has the meaning provided for in the regulations; ("consommateur résidentiel protégé contre les frais de distribution")

"monthly base distribution charges" has the meaning provided for in the regulations. ("frais de distribution mensuels de base")

Delivery credit for on-reserve consumers

79.4 (1) The Minister shall provide a delivery credit to on-reserve consumers who meet the criteria prescribed under this section with respect to electricity consumed on or after the date prescribed by the regulations.

Money appropriated by the Legislature

(2) The money required for the purposes of the provision of the credits required under this section shall be paid out of the money appropriated for those purposes by the Legislature.

Eligible costs

(3) The eligible costs for the delivery credit referred to in subsection (1) are,

(a) the sum of the following charges for which the consumer would otherwise be liable,

(i) all variable and fixed distribution charges,

(ii) all charges based on the retail transmission network service rate,

(iii) all charges based on the retail transmission connection service rate,

(iv) all charges related to losses incurred in the distribution of electricity, except for such amounts that are included in regulatory charges provided for in the regulations, and

(v) any other charges that may be prescribed in the regulations; or

(b) where no separate charges for delivery are provided for by the distributor or other person or entity that may be prescribed in the regulations, the monthly service charge or such other amount as may be prescribed for or in respect of a prescribed distributor.

Delivery credit

(4) A distributor, person or entity shall, unless the regulations provide otherwise, provide the delivery credit referred to in subsection (1) by crediting the account of an on-reserve consumer.

Same

(5) The regulations may require that distributors and any other persons or entities provide a delivery credit to an on-reserve consumer who is entitled to a delivery credit under subsection (1) in such manner or in accordance with such methods as may be prescribed.

Same

(6) A distributor or any person or entity as may be prescribed is entitled to be compensated from the money referred to in subsection (2) for any lost revenue resulting from the provision of the delivery credits under this section.

Information, etc.

(7) If provided for in the regulations, the Board, the IESO and distributors, and other persons or entities, or any of them, shall provide such information and reports to the Ministry of Energy and to one another as are necessary to facilitate the implementation, administration, funding and delivery of the delivery credits or of anything else required under this section.

Limitation periods for delivery credit, consumer

(8) Despite any past entitlement of an on-reserve consumer who is eligible for a delivery credit under this section, no delivery credit is payable to an on-reserve consumer after a limitation period prescribed by the regulations in respect of the on-reserve consumer, other than in such circumstances as may be prescribed by the regulations.

Limitation, reimbursement of distributor, etc.

(9) Despite any requirement under this Act to reimburse a distributor or other persons or entities for delivery credits provided by them to on-reserve consumers under this section, no amounts for reimbursement are payable to the distributor or other persons or entities after a limitation period prescribed by the regulations in respect of the distributor or other persons or entities, where such reimbursement is based on an on-reserve consumer's past entitlement under this section which has not yet been paid or reimbursed under this section, other than in such circumstances as may be prescribed by the regulations.

Transitional

(10) If, for technical or operational reasons, a distributor referred to in subsection (4) is unable to adapt its invoices to comply with this section and the regulations by the time it issues its first invoice for electricity consumed after the prescribed date in respect of an eligible account,

(a) the distributor shall adapt its invoices as soon as possible and, in any event, no later than a date prescribed in the regulations; and

(b) on-reserve consumers continue to be entitled to receive the delivery credit to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Regulations

(11) The Lieutenant Governor in Council may make regulations,

(a) governing who is an on-reserve consumer for the purposes of this section and, without limiting the generality of the foregoing, may provide that consumers who occupy certain areas are on-reserve consumers, and may do so without regard to whether those areas constitute a "reserve" under any other Act or law;

(b) prescribing dates for the purposes of subsections (1) and (10);

(c) governing provision of the delivery credits provided to on-reserve consumers under this section and, without restricting the generality of the foregoing, governing anything that under this section is to be prescribed or provided for in the regulations, or that is to be done in accordance with the regulations;

(d) determining the method or methods of calculating the amount of the delivery credits to be provided by the Minister in respect of on-reserve consumers under this section;

(e) requiring the IESO to make and receive payments to and from the Minister and to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of the delivery credits provided for under this section and prescribing methods for determining the amounts payable to distributors or on-reserve consumers in respect of the credits provided.

Interpretation

(12) In this section,

"on-reserve consumer" has the meaning provided for in the regulations.

Application

79.5 Sections 79.6 through 79.11 apply to the programs provided for under sections 79, 79.2, 79.3 and 79.4 to the extent that they are funded by money appropriated for those purposes by the Legislature.

Definition

79.6 In sections 79.7 to 79.11,

"Finance Minister" means the Minister of Finance or such other member of the Executive Council to whom the administration of those sections is assigned under the *Executive Council Act*.

Records

79.7 (1) Every distributor and every other person prescribed by regulation shall keep at a location in Ontario such records as are necessary to determine and verify compliance with sections 79, 79.2, 79.3 and 79.4 and the regulations associated with them and any records required by those regulations to be kept.

Electronic records

(2) If a person keeps records in an electronic form, the person shall ensure that, from the time the records are first made and for as long as they are required to be retained,

(a) they remain complete and unaltered, apart from any changes or additions made in the normal course of communication, storage or display; and

(b) they are capable of being printed and of being produced in electronically readable format for inspection, examination or audit.

Retention of records

(3) Records required to be kept under subsection (1) shall not be destroyed unless authorization has been given in writing by the Finance Minister.

Offence

(4) Every person who fails to keep records in accordance with this section is guilty of an offence and, on conviction, is liable to a fine of not less than $50 and not more than $5,000.

Inspections and inquiries

79.8 (1) The Finance Minister may appoint one or more inspectors who are authorized to exercise any of the powers and perform any of the duties of a person authorized by the Minister under subsection 31 (1) of the *Retail Sales Tax Act* for any purpose related to the administration and enforcement of sections 79, 79.2, 79.3 and 79.4 of this Act.

Same

(2) Subsections 31 (1), (2), (2.1) and (2.2) of the *Retail Sales Tax Act* apply, with necessary modifications, with respect to the administration and enforcement of sections 79, 79.2, 79.3 and 79.4 of this Act.

Admission of evidence

(3) The Finance Minister, or a person authorized by the Finance Minister, may, for any purpose related to the administration of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them, reproduce from original data stored electronically any information previously submitted as required under those sections or regulations in any form by any person, and the electronically reproduced document shall be admissible in evidence and shall have the same probative force as the original document would have had if it had been proved in the ordinary way.

Inquiry

(4) The Finance Minister may, for any purpose related to the administration of sections 79, 79.2, 79.3 and 79.4 of this Act or the regulations made in association with them, authorize any person, whether or not the person is an employee in the Ministry of the Finance Minister, to make such inquiry as the Finance Minister considers necessary with reference to anything relating to the administration of this Act or the regulations.

Copies

(5) If a book, record or other document is examined or produced under this section, the person by whom it is examined or to whom it is produced or any officer of the Ministry may make, or cause to be made, one or more copies of it, and a document purporting to be certified by the person to be a copy made pursuant to this section is admissible in evidence and has the same probative force as the original document would have if proved in the ordinary way.

Compliance

(6) No person shall hinder or molest or interfere with any person doing anything that the person is authorized by this section to do or prevent or attempt to prevent any person doing any such thing.

Same

(7) Despite any other law to the contrary, every person shall, unless the person is unable to do so, do everything the person is required by this section to do.

Administration of oaths

(8) Declarations or affidavits in connection with statements of information submitted pursuant to this section may be taken before any person having authority to administer an oath or before any person specially authorized for that purpose by the Lieutenant Governor in Council, but any person so specially authorized shall not charge any fee for doing so.

Application of *Public Inquiries Act, 2009*

(9) Section 33 of the *Public Inquiries Act, 2009* applies to an inquiry under subsection (4).

Recovery of overpayments

Definitions

79.9 (1) In this section,

"inspector" means an inspector referred to in section 79.8; ("inspecteur")

"overpayment" means an amount received by a person in excess of that to which the person is entitled under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them. ("trop-perçu")

Notice of overpayment

(2) If it appears to an inspector that a person has received an overpayment, the Finance Minister may send a written notice to the person advising the person of the following:

1. That the person has received an overpayment.
2. The amount of the overpayment and how it was calculated.
3. The required steps to be taken by the person with respect to the overpayment.

4. The date, not more than six months after the date of the notice, by which these steps must be completed.
5. That the Finance Minister has the authority to assess the person for the amount of the overpayment, plus interest, if the person fails to complete the required steps by the specified date.

Calculation of amount of overpayment

(3) For the purposes of this section, an inspector shall calculate an overpayment or the outstanding balance of an overpayment in the manner and form and using such procedures as the Finance Minister considers adequate and expedient.

Assessment

(4) If a person fails to complete the steps required in a notice under subsection (2) within the time specified in the notice, and any additional time requested by the person and permitted by the Finance Minister, the Finance Minister may assess or reassess the amount of the overpayment, or the outstanding balance of the overpayment, based on the inspector's calculation described in subsection (3).

Penalty

(5) If the Finance Minister makes an assessment or reassessment under subsection (4) and is satisfied that the person's non-compliance with the required steps in the notice was attributable to neglect, carelessness, wilful default or fraud, the Finance Minister may assess a penalty against the person equal to the outstanding balance of the overpayment when the penalty is assessed.

Time limit

(6) The Finance Minister shall not assess or reassess under subsection (4) more than 48 months after the end of the month in which the person received the overpayment.

Exception, where misrepresentation, etc.

(7) Subsection (6) does not apply if the Finance Minister establishes that the person has made a misrepresentation that is attributable to neglect, carelessness or wilful default or has committed any fraud in supplying information under this Act or the regulations or in omitting to disclose information.

Deeming

(8) An amount assessed or reassessed by the Finance Minister under this section is deemed, for the purposes of the administration and enforcement of this Act, to be a debt retirement charge owing and payable, as defined in subsection 85 (1) of the *Electricity Act, 1998*, that has been collected, on the last day of the month in which the person received the overpayment, by the person as a collector appointed under subsection 85.3 (1) of the *Electricity Act, 1998* and, for those purposes,

(a) sections 85.11, 85.12, 85.14, 85.17 and 85.30 of that Act apply with necessary modifications;

(b) in the application of sections 85.11 and 85.14 of that Act and without limiting the generality of clause (a) of this subsection, references to the Financial Corporation are read as references to the Minister of Finance and references to the Minister of Finance are read as references to the Finance Minister as defined in section 79.6 of this Act;

(c) the regulations made under that Act for the purposes of calculating the rate or rates of interest payable under section 85.11 of that Act and the manner of calculating the amount of interest apply with necessary modifications; and

(d) sections 23 and 36, subsections 37 (1), (1.1) and (2) and sections 37.1, 38 and 39 of the *Retail Sales Tax Act* apply with necessary modifications.

Disposition of repaid amounts

(9) If all or part of an overpayment is repaid to the Finance Minister, the Minister of Energy shall make such financial arrangements and payments as may be necessary to ensure that any person entitled to all or part of the overpayment receives the appropriate amount.

Confidentiality

79.10 (1) Except as authorized by this section, no person employed by the Government of Ontario shall,

(a) knowingly communicate or knowingly allow to be communicated to any person any information obtained by or on behalf of the Minister of Energy or the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; or

(b) knowingly allow any person to inspect or to have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

Testimony

(2) No person employed by the Government of Ontario shall be required, in connection with any legal proceedings,

(a) to give evidence relating to any information obtained by or on behalf of the Minister of Energy or Finance Minister for the purposes of this Act; or

(b) to produce any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

Exception

(3) Subsections (1) and (2) do not apply in respect of,

(a) criminal proceedings under any Act of the Parliament of Canada;

(b) proceedings in respect of the trial of any person for an offence under an Act of the Legislature; or

(c) proceedings relating to the administration or enforcement of this Act or Part V.1 or VI of the *Electricity Act, 1998*.

Communication

(4) A person employed by the Government of Ontario may, in the course of duties in connection with the administration or enforcement of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them,

(a) communicate or allow to be communicated to another person employed by the Government of Ontario in the administration or enforcement of any law or to an employee of the Board information obtained by or on behalf of either Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; and

(b) allow another person employed by the Government of Ontario in the administration or enforcement of any law or an employee of the Board to inspect or have access to any record or thing obtained by or on behalf of either Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

Reciprocal communication

(5) A person who receives information or obtains access to any record or thing under subsection (4) has a duty to communicate or furnish to that Minister on a reciprocal basis any information, record or thing obtained by the person that affects the administration or enforcement of this Act.

Use of information

(6) Any information, record or thing communicated or furnished under this section may be used only for the administration or enforcement of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them or an Act that is administered or enforced by the person receiving the information, record or thing.

Same

(7) The Finance Minister may permit information or a copy of any record or thing obtained by or on behalf of the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them to be given to,

(a) the person from whom the information, record or thing was obtained;

(b) any person by whom an amount is payable or has been paid under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them; or

(c) the legal representative of a person mentioned in clause (a) or (b) or the agent of the person authorized in writing in that behalf.

Information

(8) The Finance Minister may permit information or a copy of any record or thing obtained by or on behalf of the Finance Minister for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them to be given to any person employed by any government if,

(a) the information, record or thing obtained by that government for the purpose of any Act that imposes a tax or duty are communicated or furnished on a reciprocal basis to the Minister; and

(b) the information, record or thing will not be used for any purpose other than the administration or enforcement of a law that provides for the imposition of a tax or duty.

Offence

(9) Every person who contravenes any provision of this section is guilty of an offence and on conviction is liable to a fine of not more than $2,000.

Offences

False statements, etc., and fraud

79.11 (1) Every person who engages in any of the following acts or omissions is guilty of an offence:

1. Making, participating in, assenting to or acquiescing in the making of a false or deceptive statement in any document or answer required or submitted under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.
2. Destroying, altering, mutilating, hiding or otherwise disposing of information or records of any person, for the purpose of evading compliance with sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.
3. Making, assenting to or acquiescing in the making of a false or deceptive entry of a material particular in a record of any person required to maintain records for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.
4. Omitting to make or assenting to or acquiescing in the omission of an entry of a material particular in a record of any person required to maintain records for the purposes of sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.
5. Wilfully evading or attempting to evade, in any manner, compliance with an obligation under sections 79, 79.2, 79.3 and 79.4 or the regulations made in association with them.

Penalty upon conviction

(2) A person convicted of an offence under subsection (1) is liable to either or both of the following penalties in addition to any other penalty assessed under this Act:

1. A fine in an amount that is not less than $1,000 and not more than $10,000.
2. Imprisonment for a term of not more than two years.

General offence

(3) Every person who contravenes, by any act or omission, any other requirement imposed under sections 79, 79.2, 79.3 and 79.4 is guilty of an offence and, on conviction, is liable, where no other penalty is provided for the offence, to a fine of not less than $50 and not more than $5,000.

Limitation period

(4) A proceeding to prosecute an offence provided for in this section must be commenced within six years after the date on which the matter of the offence arose.

Payment of fines

(5) Fines imposed on conviction of an offence provided for in this section are payable to the Finance Minister on behalf of the Crown in right of Ontario.

Commencement

5 (1) Subject to subsection (2), this Schedule comes into force on the day the *Fair Hydro Act, 2017* receives Royal Assent.

(2) Section 2 comes into force on a day to be named by proclamation of the Lieutenant Governor.

Subject: OPG Business Plan BN - Review and Input Needed

John,

Attached is the note for the OPG Business Plan item going to TB/MBC same time as OFHP May 9, 2017. Please review and provide comments, and clarification regarding what's in the OPG #s in the 2017 Budget numbers (There are references in the note and the tables on the last two pages need updating to be complete).

Sec Briefing is tomorrow afternoon, would it be possible to get the updated tables in the morning tomorrow? Fair Hydro Plan is also scheduled, but not sure if it or both will be bumped to a separate briefing cycle in advance of May 9, 2017.

Laurie (for Judy) – I've included a description of the international travel aspect (around slide 11, deck in the attached email) and a placeholder for a minute (Judy was aware of the item).

James

Hi James,

Attached is a copy of the signed submission for the OPG Business Plan.

We'll walk the original over to the Agenda Office this afternoon.

Thanks,

Pratima Gounden, Team Lead (A)

ONTARIO POWER GENERATION (OPG) 2017-19 BUSINESS PLAN AND SPECIAL STATUS APPLICATION

May 2017

CONFIDENTIAL

MINISTRY OF ENERGY

ONTARIO POWER GENERATION (OPG)
2017-19 BUSINESS PLAN AND SPECIAL STATUS APPLICATION

MINISTRY REQUEST

The Ministry of ENERGY is requesting that Treasury Board/Management Board of Cabinet (TB/MBC):

1. NOTE the receipt of OPG's 2017-2019 Business Plan.
2. NOTE that the Minister of Energy will provide concurrence with OPG's Business Plan.
3. APPROVE OPG's application for Special Status to Approve International Travel under Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive dated January 1, 2017.

CONTEXT

- As required by the Memorandum of Agreement (MOA) between Ontario Power Generation and the Minister of Energy, OPG provided its Business Plan for 2017-2019 to the Ministry of Energy on November 29, 2016 for concurrence
    - Note that while OPG is seeking concurrence for its three year 2017-19 business plan, the plan also includes financial projections for 2020 and 2021
- With this Business Plan OPG is also making an application for Special Status under the Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive, which allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business
- The Minister's concurrence requires presentation of OPG's business plan before TB/MBC
- The Ministry of Energy review and analysis of OPG's business plan is supported by the Electricity Investment and Governance Secretariat, a unit within the Ministry of Finance and the Corporate and Electricity Finance Division of the Ontario Financing Authority (OFA)
- The following provides an overview of OPG's business plan, including:
    1. Business Plan Overview
    2. Other Considerations
- Proceeding with Provincial concurrence now will demonstrate that OPG has support from its shareholder as it implements the plan and provides clarity to

the Ontario Energy Board (OEB) as it reviews OPG's current rate application covering the 2017-2021 period

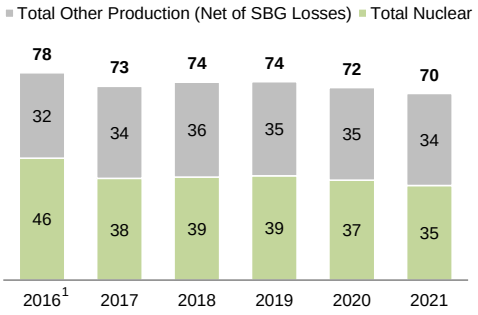
- Business plan forecasts may be affected by Ontario's Fair Hydro Plan (OFHP). Given the stage of implementation of OFHP and the timing of the receipt of the business plan in November 2016, these changes are not reflected in OPG's plan
    - The Ministry anticipates that as part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed partly by capital infusions from the Province, and majority by third-party lending
    - These changes are generally expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
    - In addition, the Province's net debt position would remain unchanged

1. BUSINESS PLAN OVERVIEW

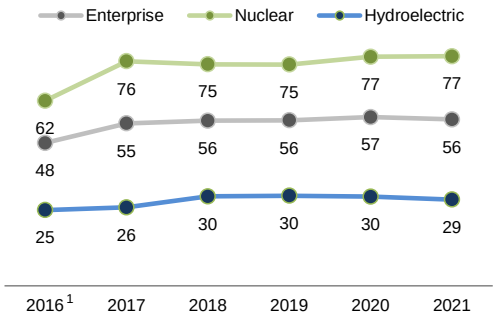
a) Production & Total Cost of Generation

- OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016
    - Reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016
    - Includes a partial overlap starting in 2021 between second and third unit refurbishments, and
    - Includes the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage
- While OM&A remains relatively stable over the planning period (see next slide), total generating cost (TGC)* shows an increasing trend over the planning period relative to 2016, reflecting:
    - Lower nuclear production due to Darlington refurbishment outages, and
    - Increased sustaining capital spending (included in TGC) on two large hydroelectric projects, the Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation

Production (TWh)



Total Generating Cost ($/MWh)



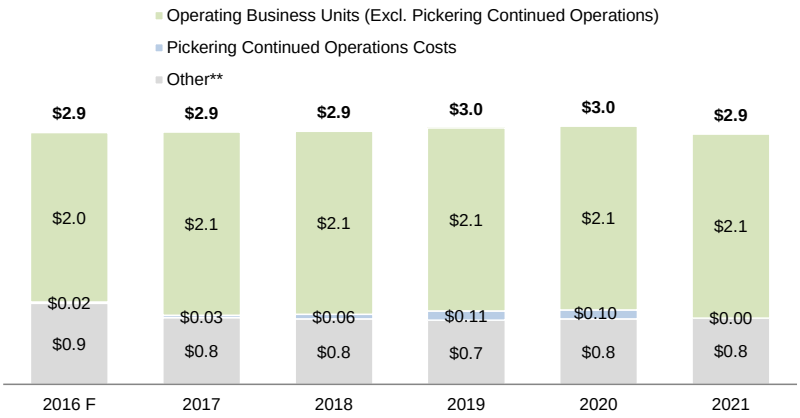
1. Actuals

*TGC = operations, maintenance and administration (OM&A) expenses from ongoing operations + fuel and Gross Revenue Charge expenses for OPG-operated stations + sustaining capital expenditures) divided by OPG generation adjusted for surplus baseload generation losses

b) Operations, Maintenance and Administration (OM&A) Expenses

- Annual OM&A expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year
- Increases over 2016 are mainly attributable to:
    - Increases in business unit expenditures, including changes in nuclear outage scope at Darlington, and planned hiring to fill staffing gaps
    - Incremental outage and other program costs to enable Pickering continued operations
- These increases are partially offset by declining pension and Other Post-Employment Benefits (OPEB) costs over the period due to projected pension asset returns, increased employee contributions, and adoption of a new method for applying discount rates to determine interest components of pension costs

OM&A from Ongoing Operations* ($B)



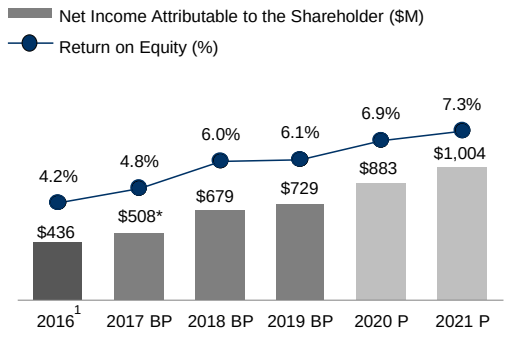
*Excludes Darlington refurbishment OM&A expenses and all OEB variance and deferral account offsets

** Includes centrally held pension /OPEB costs and support services

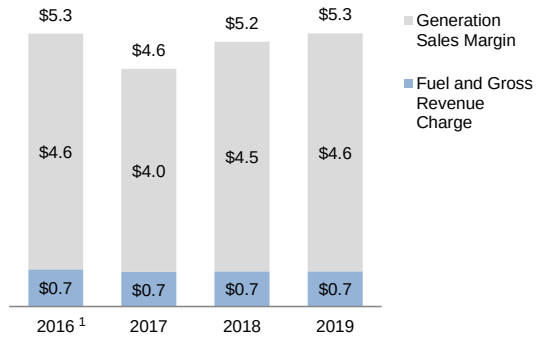
c) Financials

- OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016
    - 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations
    - Net income in 2018 and 2019 is planned to increase, primarily due to higher forecast production, and earnings from Peter Sutherland Sr. GS starting in 2017 and Nanticoke solar facility starting in 2019
- As a result, return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021
- Overall, the 2017-19 Business Plan is largely unchanged relative to last year's plan in terms of commitments for Net Income, and Total Shareholder Return
- In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

Net Income ($M) and ROE (%)



Revenue Margin ($B)



1. Actuals

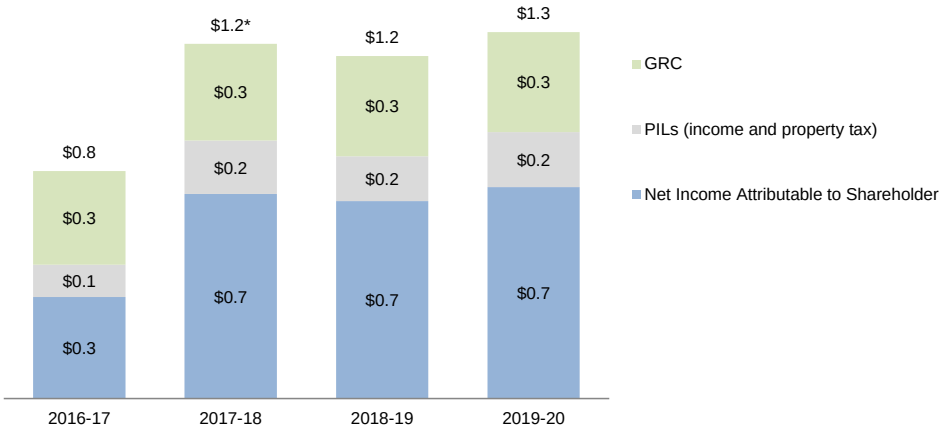
*Includes extraordinary gain associated with the sale of OPG head office

d) Provincial Fiscal Impacts: Shareholder Return and Payments-in-Lieu of Taxes

- Total fiscal revenue impacts to the Province, including net income return to the shareholder and payments-in-lieu of taxes, averages ~$1B over the period
    - Provincial revenues from OPG are dedicated to servicing and paying down stranded debt and the investment cost of the Province acquiring the equity in OPG[1]

- Return to the shareholder improves due to changes in net income, which OPG attributes to:
    - Assumed OEB rate outcomes
    - Completion of the first Darlington unit refurbishment
    - Further cost efficiencies
- Net income is consolidated by the Province as Revenue from Government Business Enterprises (GBEs)
- Income tax PILs, Gross Revenue Charges (GRC) and property tax PILs paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down stranded debt are consolidated in Public Accounts under Taxation Revenue
- OPG also pays a portion of the GRC to the Province's Consolidated Revenue Fund (CRF)

Total Fiscal Revenues ($B)



1. Aside from the water power rental portion of the GRC, paid to the CRF.

*Includes gain associated with the sale of OPG head office

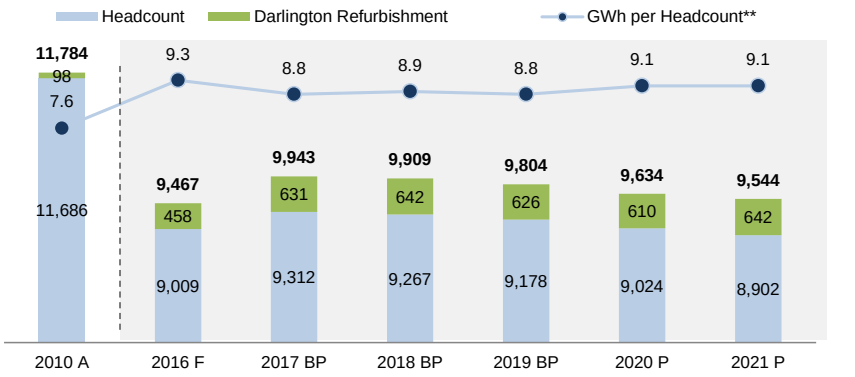
e) Business Transformation Initiative & Labour Costs

- As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016
    - Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3
- However, OPG is ramping up recruitment between 2016 and 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition from employee demographics, as well as continued Pickering operations beyond 2020

- OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021

- In addition, to date OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
  - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity

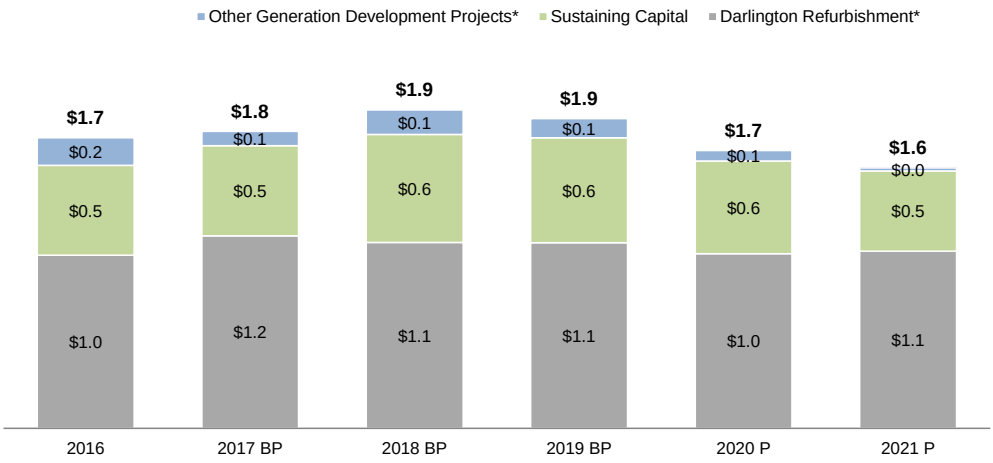


**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

f) Operating Highlights - Projects and Capital Expenditures

- OPG continues to focus on delivery of its major projects over the plan period, including:
  - **Darlington Refurbishment**: Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained
  - **Sustaining Capital:** Expenditures average $570M, including:
    - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
    - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
    - Lower Mattagami upgrades in 2018 and 2019
  - **Other Generation Development Projects:** Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



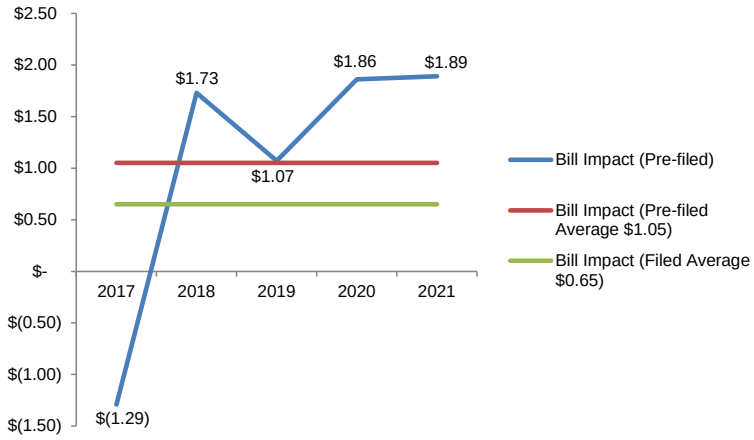
*Includes expenditures budgeted by Support Services

2. OTHER CONSIDERATIONS

Rate Application

- OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021
- Oral hearings began February 21, 2017 with a decision expected in Q4 2017
- OPG's 2017-19 Business Plan assumes new rates are effective January 1, 2017
    - The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay*
- Rate-Smoothing Proposal:
    - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only
        - Rate smoothing is expected to be fiscally neutral due to rate regulated accounting
    - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

Comparison of Annual Bill Impact ($/Month per year)



*Forecasted in May 2016

Sales

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

Special Status for OPG to Approve International Travel

- On January 24, 2017, OPG's President and CEO wrote to the Deputy Minister to provide a business case and request authority for OPG to approve international travel for its employees. In summary:
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business

- OPG believes that international travel is integral to the safe and prudent operation of its business and having OPG's CEO approve international travel will enable more efficient decision-making while significantly lowering travel costs
- OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for over $30 billion in pension fund and nuclear funds
- OPG requires a high level of international business travel at approximately 90-100 trips annually, while the Darlington Refurbishment Project accounts for 45% of OPG's international travel and is expected see increases over the 10 year life of the project
- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date
- OPG believes the inability to make timely commitments on events and meetings impacts employee engagement as well as its international relationships and reputation

- OPG is seeking Special Status as part of concurrence with its business plan. OPG has committed to providing semi-annual reports to the Ministry on international travel taken, and continue to be accountable for compliance with all applicable OPS directives, policies and procedures

RECOMMENDATION

The Ministry of ENERGY is requesting that Treasury Board/Management Board of Cabinet (TB/MBC):

1. NOTE the receipt of OPG's 2017-2019 Business Plan.
2. NOTE that the Minister of Energy will provide concurrence with OPG's Business Plan.
3. APPROVE OPG's application for Special Status to Approve International Travel under Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive dated January 1, 2017.

Ontario Power Generation (OPG) 2017-19 Business Plan and Special Status Application

May 2017

Context

- As required by the Memorandum of Agreement (MOA) between Ontario Power Generation and the Minister of Energy, OPG provided its Business Plan for 2017-2019 to the Ministry of Energy on November 29, 2016 for concurrence
  - Note that while OPG is seeking concurrence for its three year 2017-19 business plan, the plan also includes financial projections for 2020 and 2021
- With this Business Plan OPG is also making an application for Special Status under the Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive, which allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business
- The Minister's concurrence requires presentation of OPG's business plan before TB/MBC
- The Ministry of Energy review and analysis of OPG's business plan is supported by the Electricity Investment and Governance Secretariat, a unit within the Ministry of Finance and the Corporate and Electricity Finance Division of the Ontario Financing Authority (OFA)
- The following presentation provides an overview of OPG's business plan, including:
  1. Business Plan Overview
  2. Other Considerations

Context *(cont'd)*

- Proceeding with Provincial concurrence now will demonstrate that OPG has support from its shareholder as it implements the plan and provides clarity to the Ontario Energy Board (OEB) as it reviews OPG's current rate application covering the 2017-2021 period

- Business plan forecasts may be affected by Ontario's Fair Hydro Plan (OFHP). Given the stage of implementation of OFHP and the timing of the receipt of the business plan in November 2016, these changes are not reflected in OPG's plan

  - The Ministry anticipates that as part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed partly by capital infusions from the Province, and majority by third-party lending

  - These changes are generally expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income

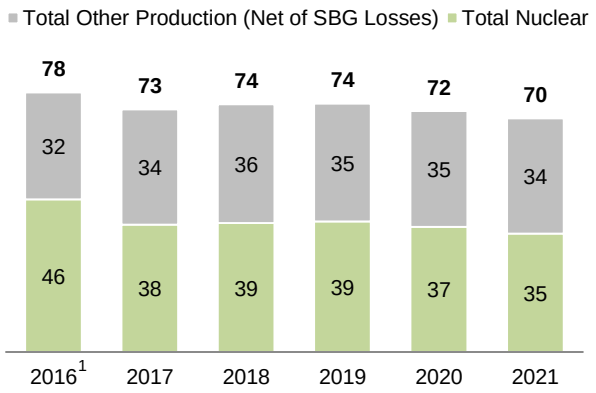
  - In addition, the Province's net debt position would remain unchanged

1. Business Plan Overview

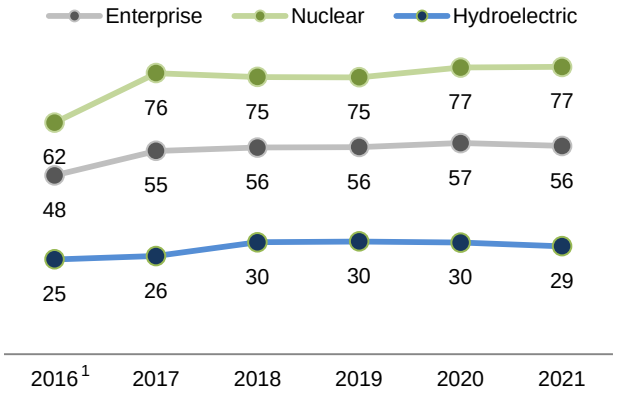
a) Production & Total Cost of Generation

- OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016
  - Reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016
  - Includes a partial overlap starting in 2021 between second and third unit refurbishments, and
  - Includes the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage
- While Operations, Maintenance and Administration (OM&A) remains relatively stable over the planning period (see next slide), total generating cost (TGC)* shows an increasing trend over the planning period relative to 2016, reflecting:
  - Lower nuclear production due to Darlington refurbishment outages, and
  - Increased sustaining capital spending (included in TGC) on two large hydroelectric projects, the Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation

Production (TWh)



Total Generating Cost ($/MWh)



1. Actuals

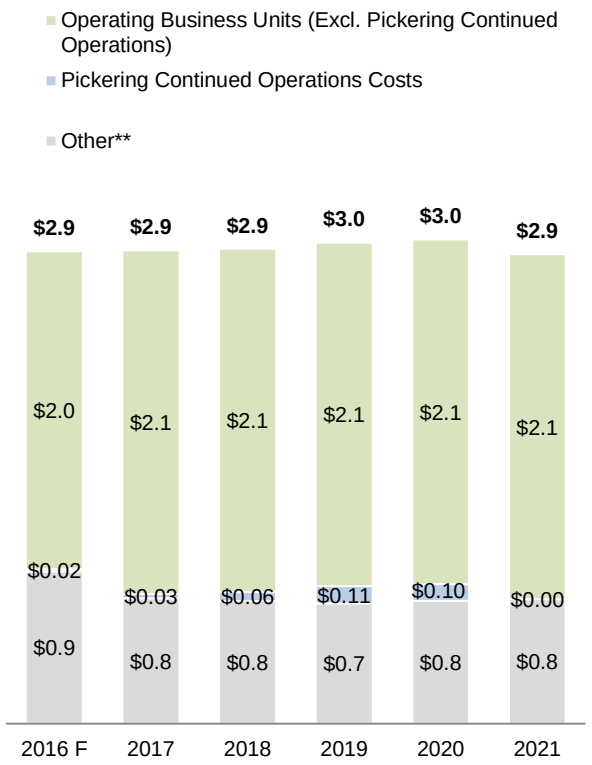
*TGC = OM&A expenses from ongoing operations + fuel and Gross Revenue Charge expenses for OPG-operated stations + sustaining capital expenditures) divided by OPG generation adjusted for surplus baseload generation losses

1. Business Plan Overview

b) Operations, Maintenance and Administration (OM&A) Expenses

- Annual OM&A expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year
- Increases over 2016 are mainly attributable to:
  - Increases in business unit expenditures, including changes in nuclear outage scope at Darlington, and planned hiring to fill staffing gaps
  - Incremental outage and other program costs to enable Pickering continued operations
- These increases are partially offset by declining pension and Other Post Employment Benefits (OPEB) costs over the period due to projected pension asset returns, increased employee contributions, and adoption of a new method for applying discount rates to determine interest components of pension costs

OM&A from Ongoing Operations* ($B)



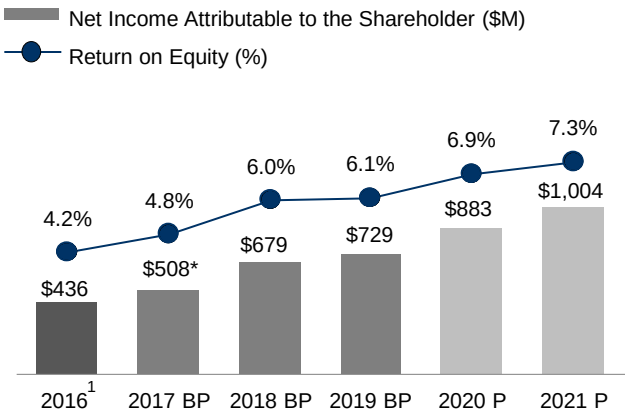
*Excludes Darlington refurbishment OM&A expenses and all OEB variance and deferral account offsets
** Includes centrally held pension /OPEB costs and support services

1. Business Plan Overview

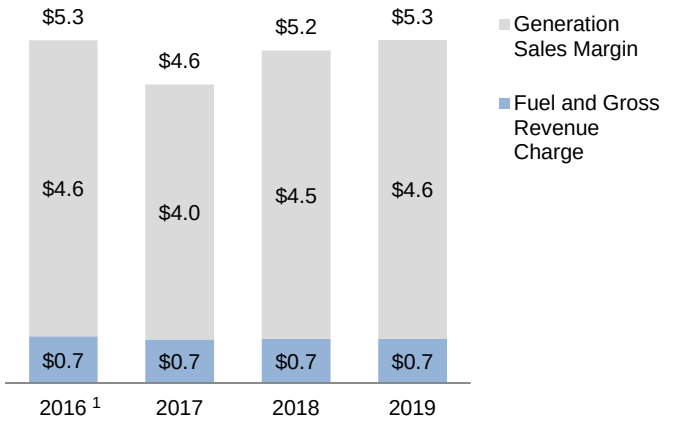
c) Financials

- OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016
  - 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations
  - Net income in 2018 and 2019 is planned to increase, primarily due to higher forecast production, and earnings from Peter Sutherland Sr. GS starting in 2017 and Nanticoke solar facility starting in 2019
- As a result, return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021
- Overall, the 2017-19 Business Plan is largely unchanged relative to last year's plan in terms of commitments for Net Income, and Total Shareholder Return
- In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust

Net Income ($M) and ROE (%)



Revenue Margin ($B)



*Includes extraordinary gain associated with the sale of OPG head office

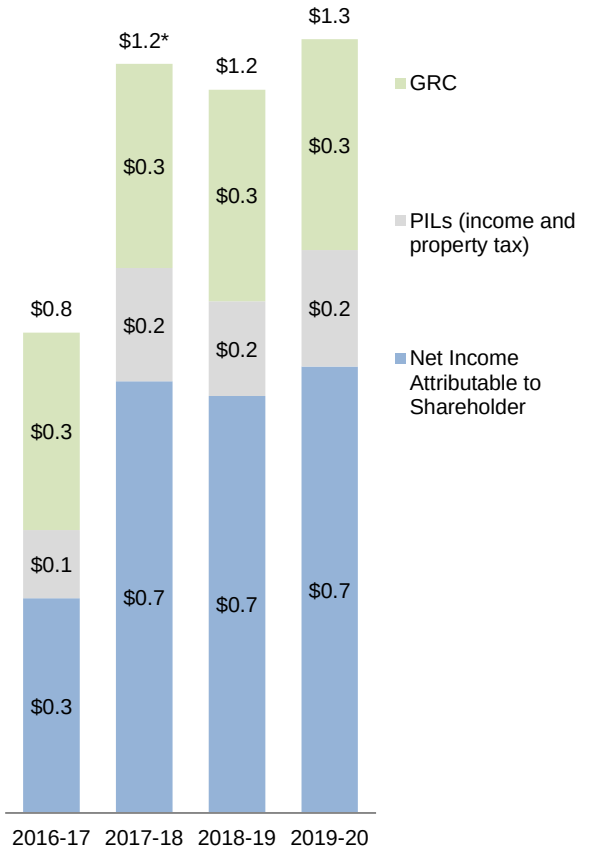
1. Actuals

1. Business Plan Overview

d) Provincial Fiscal Impacts: Shareholder Return and Payments-in-Lieu of Taxes

- Total fiscal revenue impacts to the Province, including net income return to the shareholder and payments-in-lieu of taxes, averages ~$1B over the period
  - Provincial revenues from OPG are dedicated to servicing and paying down stranded debt and the investment cost of the Province acquiring the equity in OPG[1]
- Return to the shareholder improves due to changes in net income, which OPG attributes to:
  - Assumed OEB rate outcomes
  - Completion of the first Darlington unit refurbishment
  - Further cost efficiencies
- Net income is consolidated by the Province as Revenue from Government Business Enterprises (GBEs)
- Income tax PILs, Gross Revenue Charges (GRC) and property tax PILs paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down stranded debt are consolidated in Public Accounts under Taxation Revenue
- OPG also pays a portion of the GRC to the Province's Consolidated Revenue Fund (CRF)

Total Fiscal Revenues ($B)



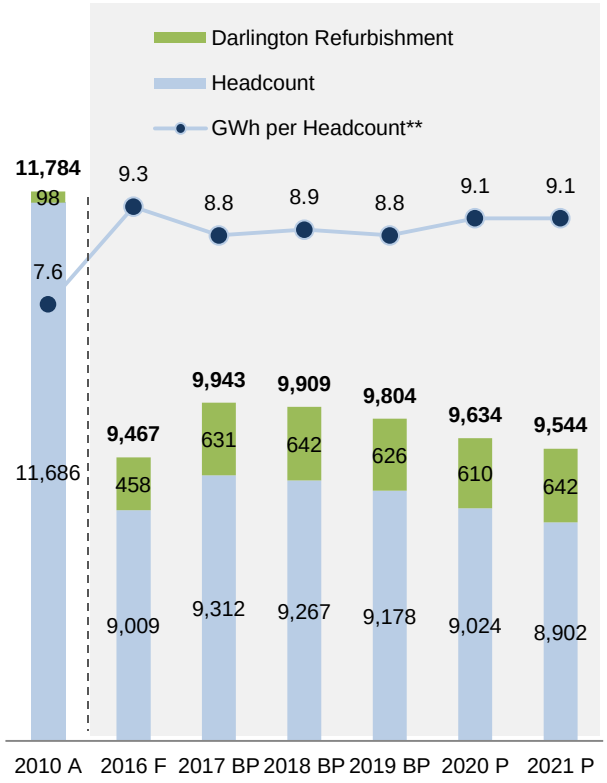
1. Aside from the water power rental portion of the GRC, paid to the CRF.
*Includes gain associated with the sale of OPG head office

1. Business Plan Overview

e) Business Transformation Initiative & Labour Costs

- As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016
  - Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3
- However, OPG is ramping up recruitment between 2016 and 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition from employee demographics, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
- In addition, to date OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
  - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



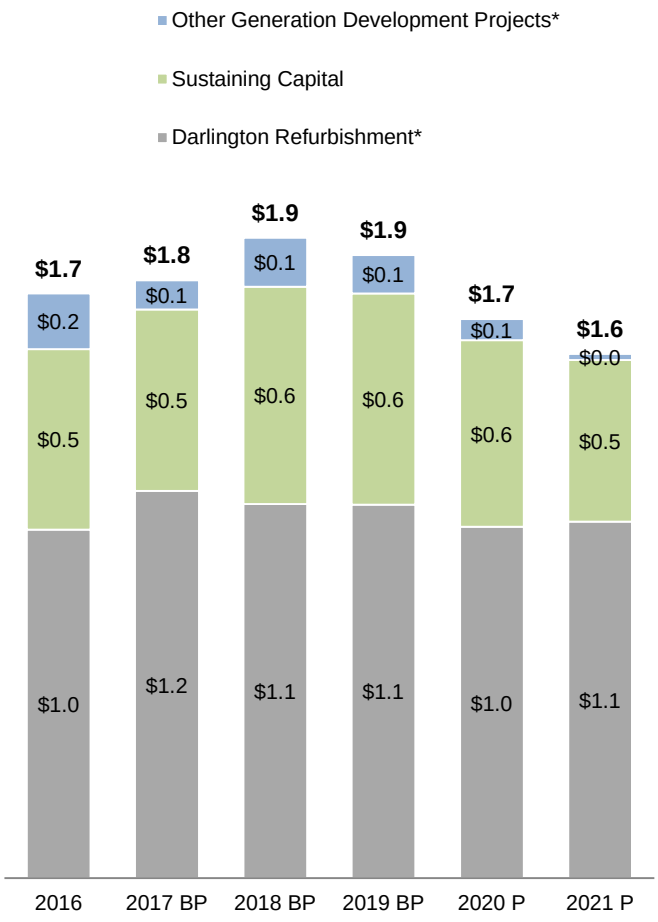
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

1. Business Plan Overview

f) Operating Highlights - Projects and Capital Expenditures

- OPG continues to focus on delivery of its major projects over the plan period, including:
  - **Darlington Refurbishment**: Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained
  - **Sustaining Capital:** Expenditures average $570M, including:
    - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
    - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew II
    - Lower Mattagami upgrades in 2018 and 2019
  - **Other Generation Development Projects:** Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

2. Other Considerations

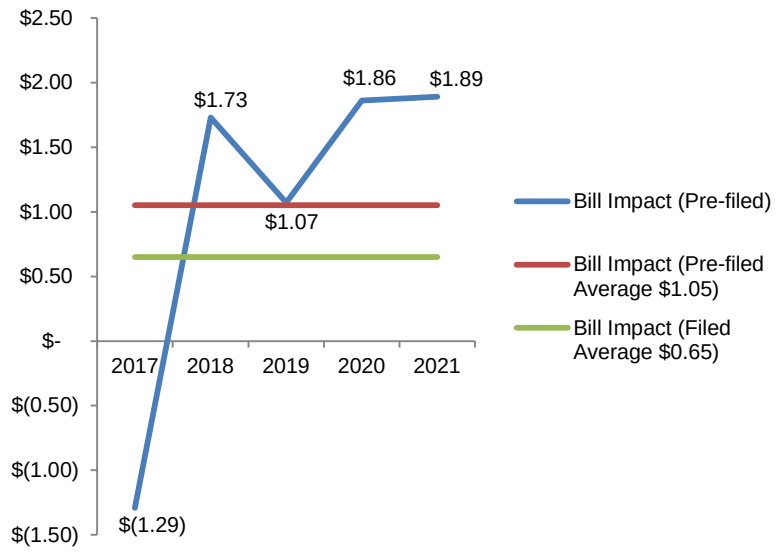
Rate Application

- OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021
- Oral hearings began February 21, 2017 with a decision expected in Q4 2017
- OPG's 2017-19 Business Plan assumes new rates are effective January 1, 2017
  - The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay*

Rate-Smoothing Proposal:

- On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only
  - Rate smoothing is expected to be fiscally neutral due to rate regulated accounting
- On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

Comparison of Annual Bill Impact ($/Month per year)



*Forecasted in May 2016

2. Other Considerations

Sales

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

2. Other Considerations

Special Status for OPG to Approve International Travel

- On January 24, 2017, OPG's President and CEO wrote to the Deputy Minister to provide a business case and request authority for OPG to approve international travel for its employees. In summary:
  - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business
  - OPG believes that international travel is integral to the safe and prudent operation of its business and having OPG's CEO approve international travel will enable more efficient decision-making while significantly lowering travel costs
  - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for over $30 billion in pension fund and nuclear funds
  - OPG requires a high level of international business travel at approximately 90-100 trips annually, while the Darlington Refurbishment Project accounts for 45% of OPG's international travel and is expected see increases over the 10 year life of the project
  - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date
  - OPG believes the inability to make timely commitments on events and meetings impacts employee engagement as well as its international relationships and reputation
- OPG is seeking Special Status as part of concurrence with its business plan. OPG has committed to providing semi-annual reports to the Ministry on international travel taken, and continue to be accountable for compliance with all applicable OPS directives, policies and procedures

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan,

how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its 2017-2019 Business Plan (Board-approved?) to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO.~~,~~ It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province with OPG raising the remaining 5% from capital markets. ~~financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending~~ (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged (Check is OFA)

Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2017.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan~~, along with OFA forecast updates for OFHP (TBC),~~ show a decrease in earnings before tax of $~~84M~~ 299M in 201~~6-17~~ ~~-18~~ and $~~89M~~ 556M in 2017-18, primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by increases of $~~59M~~ 12M in 2018-19 and $~~120M~~ 182M in 2019-20 over the estimates in the 2016 Budget.~~.~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019 is planned to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity

(ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year

net income by ~$50-60M per month of delay.

- On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
- On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

Total Fiscal Impact (draw from c-funds)		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

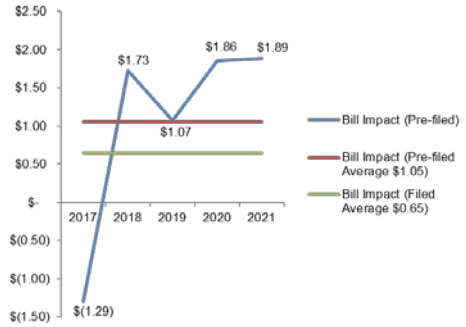
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

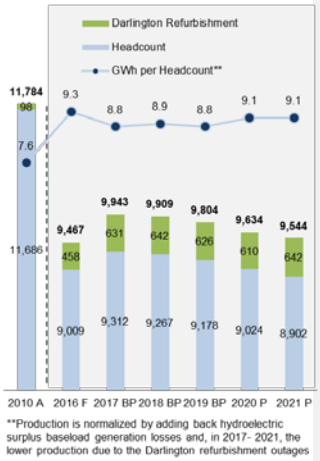
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



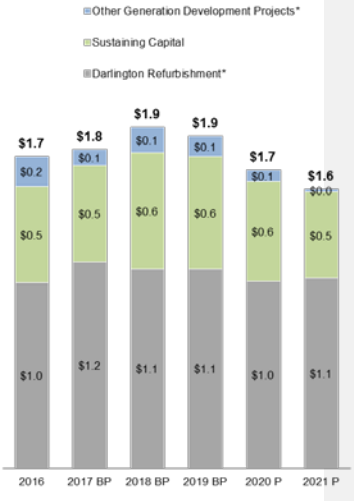
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**
2016 Ontario Budget				
Ontario Power Generation				
Net Income	471	586	673	705
Income Tax	224	159	182	108
2017-2019 OPG Business Plan				
Ontario Power Generation				
Net Income	349	702	678	726
Income Tax	~~111~~96	~~184~~166	~~154~~135	~~189~~170
2017 Ontario Budget				
Ontario Power Generation				
Net Income (before IFRS Risk)	379	480	678	726
ONFA-related IFRS Risk	(75)	(400)		
GA – OPG Trust Interest Revenue	17	54	99	153
OPG Head Office*		222		
Net Income	~~387~~304	~~497~~97	732	825
Income Tax	?92	?92	?135	?170
OPG Head Office*		74		
Change in GBE Net Income (Between Budgets)				
Ontario Power Generation	~~(84)~~(167)	~~(89)~~(489)	59	120
Change in GBE Income Tax PILs +/(-)				
Ontario Power Generation	?(132)	?(67)	?(47)	?6
TOTAL OF OPG CHANGES	?(299)	?(556)	?12	?182

- Net Income and PILs contributions from OPG Head Office are included in Sales and Rental under Other Non-Tax Revenue in the 2017 Budget.

Formatted: Bulleted + Level: 1 + Aligned at: 0.25" + Tab after: 0.5" + Indent at: 0.5"

OPG's fiscal results are also impacted by Other PILs to the Ontario Electricity Financial Corporation (OEFC) and the Province. The following table reflects these others impacts in addition to the latest net income and income tax PILs from OPG's August update.

Table below to be updated – OFA

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**
2016 Ontario Budget				
Combined Other PILs & Other GRC	342	351	359	
Other PILs (GRC to OEFC, Proxy Property Tax)	213	223	232	
Other GRC (to MOF & Niagara Parks Commission)[1]	129	128	137

Subject: RE: OPG Performance fees

I talked to OPG on this. Here are some other considerations:

- Risk / reward goes both ways. Unlike most management fee structures where the performance fee provides an at risk upside to the manager, but no downside, the distribution of potential benefits and losses is symmetric between ratepayers and OPG.
- OPG's current thinking is that it would work with OFA to set a benchmark for borrowing costs at the start of the year based on GOC yields + a premium. If OPG over-performs (under-performs) the benefit (downside) would be shared between the company and ratepayers 50/50 up to +/- $1M. Above or below $1M, all of the benefit (downside) would flow to ratepayers.
- OPG does not particularly like this symmetry but this is apparently required to meet accounting requirements.
- From my perspective, $1M is a small number, so I am not too concerned about overall impacts on ratepayers.

Thanks,

Scott

Subject: RE: OPG Performance fees

Hi Scott

Yes the MOF does like OPG to make money since on a PSAB basis it benefits the Province's fiscal position. In this instance however, the marginal increase to the fiscal bottom line comes at the expense of the ratepayers in terms of additional debt, hence our push back.

Pls see below my responses on the two issues that you have raised. I am cc'ing Cindy as well since she may have her own thoughts and a discussion maybe value added in terms of arriving at a common understanding.

Thanks

MoF asking OPG to make less money! This feels so backward!

I will chat with OPG to dig in to the rationale. I take your point that OPG will benefit from the loans to the trust. However, I see two weaknesses with the argument:

1) Lenders don't typically consolidate borrowers, so it takes more than interest revenues to meet this test. Not sure if you are referring to the "Power" or "profit" principle. If the former the Province lends to IO for all its needs and yet exercises power since IO is consolidated with the Province in much the same way the Trust and OPG will be consolidated. Note that OPG benefits from the interest income on the 44% relating to the equity injection even if the Trust is not consolidated.
2) Earning interest income on equity is going to take down the company's ROE (one of the key metrics that we are tracking on overall company performance). Therefore I wouldn't see this as a particularly compelling allocation of funds from a commercial perspective. This is a good point however, OPG considers the 44% it lends to the Trust as sub-debt most likely priced higher than the debt borrowed by the Trust from the markets. In the event the

interest on the 44% is less than OPG's current ROE of the company, your point holds however, if the interest is higher it actually adds to OPG's ROE.

Subject: OPG Performance fees

Hi Scott

This issue has come up a couple of times and after discussing with Gadi we felt that you may be able to raise it either directly with OPG or via Energy. As the Financial Services Manager, OPG is proposing a performance fee for itself based beating a benchmark for borrowing costs the Trust incurs in presumably the 51% it seeks to borrow from the capital markets.

OPG argues that the latter of the two fundamental principles, "Power" and "Profit" allowing the Trust to be consolidated with OPG requires the implementation of a performance fee structure. The counter argument is that OPG already has access to profit, by virtue of its position as the funding entity for 44% of the debt incurred by the Trust. OPG uses the funds it receives from the Province's equity injection, for which it pays no interest, for this purpose.

Upon consolidation with the Trust, OPG's interest income will therefore increase by the amount of the interest the Trust receives on 44% of its overall debt, a relatively risk free profit source, at least over the duration of the Fair Hydro Plan. While the use of a benchmark is appropriate and contributes to an efficient borrowing program, any performance fees arising from beating the benchmark will effectively be funded by the ratepayers, by increasing the investment asset and the associated debt to be repaid by ratepayers.

Mike and I will be happy to provide any further technical assistance that you may require as you raise this issue.

Thanks

Hi Ron,

Some early comments. OPG has been coming up with these ideas, we had one earlier that seems to have changed to the 1M one. If the idea is to meet accounting requirements and the impact is fairly small, it looks OK to me.

Might be a good idea to not get all fussed over some of these ideas as could end up looking like over-reacting and I'm not even sure at what level of OPG these ideas are being originated.

I take power and profit to mean OPG having the ability to make commercial decisions and profit to mean for conducting business for commercial/profit-making reasons.

Hi Sriram,

A Provincial support agreement (or agreements) is being worked on, and there are services or performance guarantee portions discussed but a tax or PILs component does not sound familiar to me. I'll enquire.

It's more about a Provincial payment guarantee to bondholders of the financing entity under certain circumstances.

Ron

Subject: RE: OPG

Hi Sriram,

Perhaps I missed the reference on the call, as I was drawn away for part.

I think the potential impact on the proposed provincial support agreement is arguably tenuous.

The payment guarantee (drafting is on-going) could be potentially triggered under certain circumstances (basically if there is an impact on bondholder) such as the Act is repealed; or if it is amended, or a regulation is amended, in a way that adversely impacts the ability of a Financing Entity to fully pay all funding obligations.

Given that the financing entity can recover, under the Act, taxes or PILs, if payable, from ratepayers (as I understand it), should mean that there should be no such impact on the financing entity's ability to pay bondholders -- there would just be a ratepayer impact if PILs or taxes are paid, which is why the PILs exemption is being asked for.

That said, if OPG is making such an argument, I'd want to hear the strength of their case too, of course, but it seems a stretch.

Perhaps Scott or John would have more to add on this.

Ron

Subject: RE: OPG

Hi Sriram,

I believe the MO is aware of the proposal for a provincial support agreement / guarantees.

We can try drafting a short summary on what that is about. Not sure how it would fit into a tax-related note. Perhaps John could discuss with Ann and Rob.

Ron

Hi Sriram,

A Provincial support agreement (or agreements) is being worked on, and there are services or performance guarantee portions discussed but a tax or PILs component does not sound familiar to me. I'll enquire.

It's more about a Provincial payment guarantee to bondholders of the financing entity under certain circumstances.

Ron

Ron, no sure if you were on the call this morning. OPG mentioned a provincial guarantee to negate tax or (I think) other liabilities, and that they're working on the wording. Do you have a copy of this, or any detail?

thanks

Hi John

Salman added a bullet with respect to the indemnity request. S.22. We can discuss the S.22 vs. S.28. I note that James Strang's BN on this changed it to s.22 although his Qs and As still refer to S.28.

Bruno

Outstanding Business Issues – Ontario Fair Hydro Plan
Briefing Note

PURPOSE
Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Service and Performance Guarantees**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA and working towards the development of a term sheet
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - The Province would like to minimize to the extent possible , the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers
   - The Province is considering regulation changes to exempt the income arising as a consequence of the Fair Hydro Plan from PILs
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity
   - **Next Steps:**
     - The Ministries of Finance, OFA and OPG are working together to determine required regulation changes
     - Timing: [Next steps for a decision / when is a decision required / when would these regulation changes occur]

3. **Equity Injection Process**
   - OPG will require equity injections on a monthly basis in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province

- The Ministry of Energy received appropriation for $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT
- **Next Steps:**
    - The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.
    - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June

4. Management Fees

- OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
- The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations which are currently in development
- OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements
- **Next Steps:**
    - OPG and OEB will bring forward a recommended framework for developing management fees
    - Timing: For incorporation into regulations being brought forward in June

5. OPG Indemnity

- OPG (and IESO) are asking for the Province to indemnify the IESO, OPG (the entities) and their respective directors, officers and employee in order to allow them to carry out their roles in implementing the Ontario Fair Hydro Plan and primarily the Global Adjustment refinancing.
- If approved, indemnity would be provided under section 22(1) of the *Financial Administration Act.*
- Consideration will need to be given as to how providing an indemnity will be perceived given that the GA refinancing structure is meant to be independent of the Province.
- **Next Steps:**
    - Staff in Ministry of Finance and Treasury Board Secretariat have received initial documents and are currently reviewing.
    - If the Province is to provide the indemnity, section 22(1) of the FAA specifies that an OIC will be required to authorize the Minister of Finance.
    - Upcoming Cabinet date is June 27, 2017, for which documents are past due. Next possible LRC/Cabinet date is scheduled for July 26, 2017.

Fyi – here is a document that we have pulled together for Thursday's discussion. I think Kaitlin has also shared with colleagues at OFA for review. I shared with John at OPG and he asked that we include a few bullets on the sub debt term sheet in development between OPG and OFA. We plan to add that in.

    - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June

4. Management Fees

- OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
- The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations which are currently in development
- OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements
- There are two components to the model proposed by OPG:
    - Cost recovery: the structure will also allow for recovery of costs, subject to OEB's prudence review. OEB and OPG are in discussions in order to develop a model that is consistent with OEB's processes.
    - Performance management fee: OPG has the ability to over-earn or lose depending on its cost of funds for sr. debt relative to a benchmark. Any savings / costs would be shared equally between ratepayers and OPG to +/-$1M. Above or below $1M, all savings / costs flow to ratepayers.
- **Next Steps:**
    - OPG and OEB will bring forward a recommended framework for developing management fees
    - Timing: For incorporation into regulations being brought forward in June

Subject: RE: Privileged and Confidential - Fair Hydro Plan - PILs Exemptions

Hi Sriram,

I received the following responses to your question on structure and types of potential income:

1) OPG is planning for the initial financing entity to be a trust. However, the Fair Hydro Plan Act allows for flexibility on the types of structures that can be used (trusts, corporations, partnerships, limited partnerships, other special purpose entities). Because the Fair Hydro Plan envisions a 30 year program, it is important that the PILs exemptions be broad enough to cover all of the various types of entities in the event that a different form is used for one or more future financing entities.

2) The memo we sent addressed types of income that might arise in a trust. As you'll have seen from the memo, it is strongly recommended that a PILs exemption be promulgated

which would exempt from PILs any income distributed by a trust financing entity to OPG as beneficiary. This would allow the trust to flush its income to OPG as beneficiary. If a corporation is used as a financing entity, it is important that any income earned in that corporation be exempt from PILs. If a partnership or limited partnership is used as a financing entity, it is important that any income distributed to OPG (or any of its subsidiaries) as a partner or limited partner be exempt from PILs.

OPG is keen to move forward on these regulations. Without the regulations and the PILs exemptions, any taxes payable by a financing entity (whether it's a trust, corporation or otherwise), will be collected from ratepayers which will eat up part of the fair allocation amounts. In addition, the costs of the Fair Hydro Plan will increase as the rating may be affected and the capacity available from the debt markets will decrease as the lenders add a contingency for future taxes that may be collectible at some point in the future from ratepayers.

I would suggest we set up a call to further discuss, perhaps next week.

Please let me know if that makes sense,
Scott

Scott,

Thank you for sharing the Torys Memorandum, dated May 17, 2017, with us.

The structure was not finalized at the time we first reviewed the proposal. Based on the Memorandum, it appears that the type of structure is still being determined. If there has been progress in this regard, we would be happy to conference with Torys and OPG to discuss the appropriate next steps.

As the PILs relief sought appears to be appropriate given the policy objective, we would probably recommend amendments to ensure the structure is not subject to PILs. However, we would suggest that a ruling from the tax administration division may be appropriate in this case, provided the final structure is not subject to regular federal tax and if authority can be found in the existing legislation and regulations.

Our recommendation would depend on the type of structure that is ultimately selected and on other particulars such as the types of income that would be earned in the special purpose vehicle.

Regards,

Sriram

TORYS LLP

MEMORANDUM

PRIVILEGED AND CONFIDENTIAL

To	Ontario Power Generation Inc.	**Date**	May 17, 2017
From	Torys LLP, Toronto Tax		
Re	Fair Hydro Plan – PILs Exemption		

As part of the Fair Hydro Plan (the "Plan"), it is expected that Ontario Power Generation Inc. will act as the financial services manager and that Ontario Power Generation Inc., or a wholly-owned corporate subsidiary of Ontario Power Generation Inc. (in either case, "OPG"), will establish one or more new financing entities that will raise debt to acquire "investment assets" from the IESO. A Bill to implement the Plan has been introduced to the Provincial Legislature [1] and there is flexibility under the Bill for the new financing entity to be a corporation, a trust, a limited partnership or a partnership.

We understand that the Province would like to minimize, to the extent possible, Federal and Provincial taxes and "payments in lieu of taxes" ("PILs") under the *Electricity Act, 1998* (Ontario) (the "OEA") payable by a financing entity as the costs of any of those taxes payable by a financing entity will be passed on to ratepayers through the collection of the clean energy adjustment under the Bill and the associated regulations. Accordingly, we understand that the Province is considering the possibility of making regulation changes to exempt the income arising as a consequence of the Plan from PILs. In order to assist the Province in their consideration of this regulation change, including the scope of any such amendment, we have set out below a summary of: (i) the tax treatment of the income of the financing entity under the *Income Tax Act* (Canada) (the "ITA"), the *Taxation Act, 2007* (Ontario) (the "OTA"), and the OEA, (ii) certain matters relating to the computation of the financing entity's income for tax purposes, and (iii) our recommendations with respect to how the Province can ensure that PILs arising from the Plan are minimized.

It is also important to note that Ontario Power Generation Inc. will not bear any of the tax costs arising as a consequence of participating in the Plan. If there are any tax costs, they will be borne by ratepayers through the clean energy adjustment.

---

[1] Bill 132, *An Act to enact the Ontario Fair Hydro Plan Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998*, 2nd Sess, 41st Leg, Ontario, 2017 (first reading May 11, 2017).

Tax Treatment of Income of Financing Entity

As noted above, there is flexibility in the draft legislation to implement the Plan relating to the form of a financing entity. What follows is a summary of the tax treatment of the income of the financing entity if it is a corporation, a trust or a limited partnership/partnership, as well as the tax treatment of amounts paid or allocated to OPG as a shareholder, beneficiary or a partner, respectively, of the financing entity:

Form of Financing Entity / OPG	Treatment of Income under ITA/OTA	Income Subject to PILs
Corporation	-Income of the corporation should be exempt from tax	Yes
OPG as shareholder of corporation[2]	-Dividends paid to OPG should be exempt from tax	Yes
Trust	-Income should be subject to tax, although the trust can reduce its income by the amount of its income which is paid or made payable to its beneficiaries	No
OPG as beneficiary of trust	-Trust income paid or made payable to OPG as a beneficiary should be exempt from tax	Yes
Limited Partnership/Partnership	-Limited Partnership/Partnership is not generally a "taxpayer" although income is computed at the partnership level and allocated to partners for tax purposes	No
OPG as partner of limited partnership/partnership	-Partnership income allocated to OPG as a partner should be exempt from tax	Yes

As summarized, if the financing entity is a corporation, the income of this corporation would be subject to PILs, and further, any amounts paid or allocated by the financing entity to OPG, as a shareholder, beneficiary or limited partner/partner of the financing entity, would similarly be subject to PILs. Consequently, any regulation change to exempt the income of the financing entity from PILs under the OEA should be broad enough to accommodate the three possible forms of financing entity and address PILs at both the financing entity level (in the case of a corporation) and the shareholder, beneficiary and limited partner/partner level.

[2] We note that corporations are generally entitled to claim a deduction under section 112 of the ITA (and any OTA equivalent) equal to the amount of taxable dividends received from another Canadian corporation, with the result that taxable dividends are generally not subject to tax under Part I of the ITA (and any OTA equivalent). To illustrate the scope of the PILs exemption under consideration by the Province, we have ignored this deduction in preparing this chart.

Income Computation Matters

As part of the Plan, it is expected that the financing entity will raise debt and acquire "investment assets" from the IESO. The investment assets do not appear to be debt instruments from a commercial perspective on the date they are acquired, but rather seem to be intangible assets. Given the unique nature of the investment assets, the tax analysis that is generally relied on by a financing entity in a typical securitization transaction (which involves interest-bearing debt obligations) is not applicable. There are no specific rules in the ITA or OTA which govern the manner which the investments assets should be treated for tax purposes, such that further analysis will need to be conducted in order to determine whether the investment assets are on income or capital account to the financing entity, and that the "cost" of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.

In addition to the tax implications relating to the investments assets, the following additional matters, among others, are relevant in computing the income of the financing entity:

- In order to be deductible, an expense must satisfy the requisite income earning purpose test;

- Expenses which are owing to a non-arm's length person must be paid in a timely fashion so that the expense does not give rise to an income inclusion;

- Capital losses may generally only be offset against capital gains, such that consideration must be given to the character of the assets and liabilities of the financing entity to ensure there are no mismatches;

- If the financing entity incurs foreign-currency denominated debt, any related foreign currency hedging instrument will need to be sufficiently "linked" to the underlying debt to ensure capital treatment of the hedge; for example, if the period of the hedge does l not match the period of the related debt, the financing entity will realize gains or losses on the hedge that will not be offset with realized losses or gains on the debt; and

- If the financing entity is a trust, it will be necessary for interests in the trust to "vest indefeasibly" or be structured as units where at least 95% of the units, by fair market value, are redeemable on demand by the holder to ensure that the trust is not deemed to dispose of any capital property under the "21 year" rule.

Recommendations

In order to ensure that the taxes arising under the Plan are minimized so that the overall cost of the Plan (over its 30 or more years of existence) to ratepayers is minimized and to ensure that Ontario Power Generation Inc. is kept whole from tax costs arising as a consequence of participating in the Plan, the following exemptions from PILs are required:

1) If the financing entity is a trust: Any income paid or made payable to OPG by the trust should be exempt from PILs. If this PILs exemption is not promulgated, the income will

not be distributed out of the trust, tax will be payable by the trust on the income and the costs of that tax payable will be passed on to ratepayers through the clean energy adjustment. This will be a significant cost.

2) If the financing entity is a corporation: The corporate financing entity should be exempt from PILs and any dividends paid to OPG should be exempt from PILs. Again, if these PILs exemptions are not promulgated, no dividends will be paid to OPG and the costs of all PILs paid by the financing entity will be passed on to ratepayers through the clean energy adjustment. This will be a significant cost.

3) If the financing entity is a partnership or limited partnership, any income allocated to OPG should be exempt from PILs.

4) If the financing entity is any other form of special purpose vehicle, the income of such entity should be exempt from PILs and any income from such special purpose vehicle allocated, paid or taxable in the hands of OPG should be exempt from PILs.

Good evening,

Please find attached the material for discussion tomorrow morning.

Thanks,
Martin

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
June 1, 2017

Agenda

1) GA Refinancing
    - Committee Debrief (LSB)
    - Regulation Drafting (Energy / All)
    - Critical Paths (OPG / IESO / OEB)
    - Comparison of Clean Energy Adjustment to Debt Retirement Charge (OFA)
    - Draft Provincial Guarantees for Dealers (OPG/OFA)
    - Business Item (OPG/IGS)

2) Other OFHP Initiatives
    - RRRP, OESP and FN (SNAP)
    - Affordability Fund (CRED)

Notes:

Outstanding Business Issues – Ontario Fair Hydro Plan

Briefing Note

PURPOSE

Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Provincial Support Agreement Term Sheet (Performance and Payment Guarantees)**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA have discussed a draft term sheet and the OFA, MOF and Blakes will work together to provide comments
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July.

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - Provincial staff, with OPG's concurrence, recommends minimizing, to the extent possible, the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers.
   - The Province is considering regulation changes to exempt from PILs the income arising to the OPG financing vehicle / OPG as a consequence of the Fair Hydro Plan.
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.
   - **Next Steps:**
     - The MOF, OFA and OPG are working together to determine required regulation changes.
     - Torys prepared a memo on the item
     - Timing: MOF will be setting up a call with tax policy, OPG and Torys to discuss a memo Torys prepared on the item in the next few days

3. **Fair Hydro Plan - Master Subscription Agreement Term Sheet (Equity Injection Process)**
    - OPG will require equity injections on a monthly basis, to match the timing of the purchase of the IESO regulatory asset, as applicable, in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province.
    - The Ministry of Energy received appropriation for a fiscally-neutral operating asset expenditure of $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT.
    - **Next Steps:**
        - The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process, which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.
        - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June.

4. **Management Fees**
    - OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
    - The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations, which are currently in development.
    - OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements.
    - There are two components to the model proposed by OPG:
        - Base fee: the structure will allow OPG to earn a commercial fee, an accounting consolidation requirement, with periodic OEB review of the commercial basis of that fee. OEB and OPG are in discussions in order to develop a model that satisfies the accounting requirements and is consistent with OEB's processes.
        - Performance management fee: OPG has the ability to gain or lose depending on the actual financing cost relative to a benchmark, which would be shared equally between ratepayers and OPG. Gain/loss is capped at 1% of annual incremental issuance amount.
    - **Next Steps:**
        - OPG and OEB will bring forward a recommended framework for developing management fees.
        - Timing: TBD

5. **Subordinated Debt Loan Agreement**
    - OPG will lend the equity injection from the Province to the Fair Hydro Trust by way of subordinated debt

- Based on monthly funding requirements of the GA asset, the Trust will use short term financing and take out bonds once short term funding reaches certain levels
- OPG and OFA are working on a Debt Loan Arrangement that would establish the interest rates on the subordinated debt
- **Next Steps:**
    - OPG and OFA will bring forward a recommended framework for determining interest rates
    - Timing: TBD

6. IESO – Increased OFA Credit Facilities

- THE OPG financing entity is not expected to be immediately operational, so the IESO will need to have transitional financing in place to manage the difference in the payments to generators and other service providers vs payments from loads / LDCs.
- There may also be on-going monthly cash flow timing differences that the IESO will need a credit facility for.
- In addition, the OPG financing entity has the right to purchase the regulatory asset from IESO but is not required to purchase it.
- IESO is working with the OFA to increase the credit facilities in the event that the OPG financing entity does not purchase the regulatory asset
- **Next Steps:**
    - OFA is drafting a new agreement for a $2 billion credit facility for the OFA to lend funds to IESO for FHP purposes. Concurrently, the OFA is seeking the Minister's approval for an LRC submission to approve an OIC for an additional $2 billion in borrowing capacity, as well as a Directive from the Minister of Finance, which are both necessary for the OFA to lend funds to IESO under the requested new Credit Facility.
    - Timing: The OIC is scheduled for the June 27, 2017 LRC meeting. The Directive and Credit Facility Agreement are currently being drafted, to be in place by July 1st, 2017

7. OPG Indemnity

- OPG (and IESO) are asking for the Province to indemnify the IESO, OPG (the entities) and their respective directors, officers and employee in order to allow them to carry out their roles in implementing the Ontario Fair Hydro Plan and primarily the Global Adjustment refinancing.
- Indemnification will need to ensure separation between the Province and OPG is maintained
- **Next Steps:**

- Staff in Ministry of Finance and Treasury Board Secretariat have received initial documents and are currently reviewing.
- Depending on the structure of the indemnity requested, an OIC may be required to provide authority to the Minister of Finance
- Timing: If an OIC is required this would be included in the June 27th, 2017 submission

Good evening,

Please find attached the material for discussion tomorrow morning.

Thanks,
Martin

Action Items – May 18

1) GA Refinancing
    - Ministry working on motions which need to be filled a week from today. Draft motions to be shared early next week.
    - Ministry also working on regulations for mid and end of June timelines
    - OPG to set up SPV after regulations in June, which requires rating agencies review expected by the end of July
        - Documents will include commentary on credit worthiness
        - Potential engagement of Moody's/S&P/DBRS
    - Agencies (OPG/IESO/OEB) to provide critical paths for the next meeting
    - OPG to go to the market in Sept/Oct
    - IESO letter went to OFA to request $2.5B total credit
    - IESO expecting purchase and sale agreement by end of June
    - IESO memo and KPMG accounting opinion has been delivered to Ministry
    - OPG memo and E&Y accounting opinion has been delivered to Ministry
    - IESO is producing a document to respond to AG questions – to be shared with TBS for review
    - IESO to offer FAO separate meeting with KPMG (FAO declined)
    - FAO report to be provided to MO on Tuesday morning and be released on Wednesday at 9AM
    - OFA to work on analysis of comparison of clean energy adjustments to Debt Retirement Charge
    - Indemnities for Boards are tracking forward to be in place when legislation comes into force
    - Guarantees for dealers are still being explored and to be done in conjunction with rating process
        - Time is required to appropriately brief decision makers
        - OPG to provide draft version of Term Sheet to Ministry of Energy

2) Other OFHP Initiatives
    - RRRP, OESP and FN:
        - Ministry working on regulation details
        - OESP regulations will be the focus of the post-July 1 work stream
        - Products for both June 14
        - Ministry working with 5 Chiefs to determine the qualification of FN rebate based on existing processes
        - Ministry working to minimize number of individuals who qualify for credits but don't receive them on July 1
        - OEB calculation needs to be completed 15 business days from Royal Assent
    - Affordability Fund:
        - Waiting for social service agencies to respond
    - ICI:
        - No update

3) A Plan for Monitoring / Oversight
    - Ministry to develop implementation road map to track and ensure alignment of different work streams

Subject: FW: Revised Electricity Assessment Note

Hi Everyone – Please see the attached draft assessment note for the electricity reg's tracking to TB/MBC tomorrow. I'd appreciate any input or feedback by first thing tomorrow. As you can see in the below chain, we've also simultaneously shared the latest version with senior management so the note is subject to change.

OPCD/TBS Legal – We've left placeholders in the risk section for accounting and legal risks. I am hoping that risks from previous assessment notes can be re-purposed and used for this note (assuming they haven't been mitigated). Frankly, I just didn't know which ones were the most important to flag. Please let me know if you have any concerns.

Thanks and happy to discuss.

Chris

Subject: Revised Electricity Assessment Note

Hi Everyone – Please see the attached revised electricity note taking into consideration the conversation at today's re-group.

For the financial risks, we were unable to locate any material that spoke about the source of data or assumptions that supports the voted appropriation estimates for the social programs. As such, we haven't been able to address Karen's concern on documenting the assumptions behind the financials. We'll continue to look.

Please let me know if Maria, Cindy or Karen have any further comments on the material. Also, sharing the latest draft of the submission with tracked changes from the version shared this morning.

Thanks,
Chris Skubel

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Global Adjustment Refinancing*	0.0	0.0	0.0
	Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
	Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.

^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	**359**	**492**	**504**	**517**

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Name of analyst:	Chris Skubel/ Afshin Malekzadeh	**Phone number:**	416-327-2151
Date:	June 13, 2017	**Log number:**	
Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.

- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.

- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **<u>Update:</u>** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **<u>Update:</u>** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **<u>Update:</u>** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

June 13, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back with updates to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

2.0 PURPOSE OF REQUEST

On May 31, 2017, Bill 132, the *Fair Hydro Act, 2017* (*FHA*), which enables Ontario's Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017*, (*OFHPA*) and the implementation of electricity social program-related amendments to the *Ontario Energy Board Act, 1998*, was passed by the legislature.

- The OFHPA will lower bills by 25 per cent for a typical residential consumer, starting July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to half a million small businesses and farms would also benefit.

- OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

  Note: These measures include the 8 per cent rebate introduced in January 2017 and build on previously announced initiatives to deliver broad-based rate relief on electricity bills for consumers.

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (*OEBA*); and

- Schedule 2 – includes the electricity social program-related amendments to the *OEBA.*

CONFIDENTIAL

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

On May 9, 2017, as part of its *FHA* review, TB/MBC requested that the Ministry report back on key updates and the details of the proposed regulations that would support OFHP.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review a first package of proposed regulation and amendments and on June 27, 2017, a second package of regulations. These are necessary to ensure that the 25 per cent reduction on electricity bills is in place by July 1, 2017.

The new *OFHPA* and the proposed regulations and amendments described throughout, along with the independent accounting analysis, legal support and technical analysis and future financial agreements (i.e., expected to be reached and signed in fall 2017) should together mitigate the financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission and the May 9, 2017 TB submission.

1. Implementation of GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity price~~s~~ increas~~esing~~.

On March 2, 2017, as part of OFHP, it was announced that a portion of the Global Adjustment (GA) would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Under the *OFHPA* which enables GA Refinancing, electricity bills of typical residential consumers would be reduced by 25 per cent starting in July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

CONFIDENTIAL

Proposal

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II of the *Ontario Fair Hydro Plan Act, 2017* which is under Schedule 1 of the *Fair Hydro Act, 2017;* and
- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the Electricity Act, 1998.

On June 27, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation:

- Creating a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Act, 2017*.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financ~~ing~~iers (i.e., dealers);

- On June 1, 2017, the *OFHPA*, which enables GA refinancing and responds to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission, received Royal assent. Note: The Ministry has also prepared regulations to support implementation (as noted above);

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched third party technical analysis to assist with implementation of GA refinancing.

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

CONFIDENTIAL

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.

- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.

- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

In addition to amending two existing regulations and introducing two new regulations to roll out the social programs, the Ministry is also making several consequential amendments to other regulations and introducing a new invoicing regulation under the *Fair Hydro Act, 2017*. These changes include:

- Creating a new Invoicing Regulation made under the Ontario Fair Hydro Plan Act, 2017.

- Amending the O. Reg 363/16 (General) under the *Ontario Rebate for Electricity Consumers Act, 2016.*

- Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) made under the *Ontario Energy Board Act, 1998.*

<u>Proposal</u>

The Government introduced legislation and is now developing regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy

CONFIDENTIAL

program of the old Ontario Hydro and has existed in its current form since 2001.

The new legislation enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers~~. The regulation will also prescribe the monthly amount of rate protection available to Hydro One R2 customers through RRRP.~~
(R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province).

Proposed amendments to O. Reg 442/01 would provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and would remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits in addition to RRRP for Hydro One's R2 customers, making the escalating factor unnecessary.

New benefits under section 79.3 of the OEBA would hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit.

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher distribution cost LDCs.

The new legislation enables tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. Eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province.

The proposed prescribed distributors are:

- Atikokan Hydro Inc.
- InnPower Corporation
- Chapleau Public Utilities Corporation
- Sioux Lookout Hydro Inc.
- Northern Ontario Wires Inc.
- Lakeland Power Distribution Ltd. (Parry Sound Rate Zone)

CONFIDENTIAL

- Algoma Power Inc. (residential)
- Hydro One Networks Inc. (Low & medium density classified customers)

~~(as well as six additional higher-distribution cost LDCs).~~

The regulation will set out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers. In future years, this harmonized monthly charge, by design, cannot decrease as it adjusts to reflect the higher of either the lowest rate LDC in the program, or the maximum monthly charge of the previous year, as determined by the OEB.

On-Reserve First Nations Delivery Credit

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The legislative amendments to the *Ontario Energy Board Act, 1998*, are premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers as prescribed in regulation. Eligibility is restricted to those residential rate class First Nations customers who are members of a band as defined under the federal *Indian Act* ~~(Canada)~~.

The regulation does not stipulate any process for identifying on-reserve customers eligible for the credit but rather allows LDCs the flexibility to continue using their existing HST exemption processes.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of RRRP available to Hydro One R2 customers for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB currently sets the amount of the charge that recovers the cost of RRRP from all Ontario electricity customers. Once the regulatory mechanism

CONFIDENTIAL

is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. The regulation will also contain transition provisions to bridge the transition from rate payer funding to provincial funding, as well as mechanisms for sharing of information and funding flows. Change to the funding structure of the program does not require any additional implementation risks or efforts.

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers will be prescribed in regulation. The regulation will prescribe the process by which the Ontario Energy Board would determine a maximum monthly distribution charge for prescribed customers of prescribed high-cost LDCs.

Affected LDCs would be impacted through the efforts required to adjust their billing systems in order to carry out the program. There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017. The regulation will also contain mechanisms for sharing of information and funding flows.

On-Reserve First Nation Delivery Credit

The new regulation will set out the program particulars including eligibility for the program. The regulation limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs. The 11 affected LDCs serving on-reserve consumers identified by the OEB in its report include: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017.

CONFIDENTIAL

Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.
11 affected LDCs will need to alter their billing systems to reflect the regulatory requirement to include a First Nations Delivery Credit line item on the bill directly below the delivery charge, or blended rate if applicable.

3.0 KEY CONTEXT

On June 1, 2017, the *Fair Hydro Act, 2017*, the legislation to enable the Ontario Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) received Royal assent. The OFHPA will reduce the electricity bills of typical residential consumers by 25 per cent starting in summer 2017. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

The Ministry's report back and update to TB/MBC focuses on the following OFHP initiatives:

1) Implementation of GA Refinancing:

Under the *OFHPA*, a portion of the GA would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Today's electricity consumers have been bearing disproportionate cost responsibility for the investments in developing the clean, modern and reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. The legislation recognizes the long-term benefit of clean energy investments to more appropriately allocate costs into the future to account for long-term benefits.

Refinancing a portion of GA would provide significant and immediate rate relief to electricity consumers that have been burdened with the costs of the necessary investments that have been made to decarbonize and modernize the province's electricity infrastructure, by spreading the cost of electricity investments so that they are shared proportionately by future consumers who cause a need for or benefit from the province's multi-billion dollar investments in electricity infrastructure.

CONFIDENTIAL

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financiersing (i.e., dealers);

- Developed the *Fair Hydro Act, 2017* which enables the OFHP under the *Ontario Fair Hydro Plan Act (OFHPA), 2017*, to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: On June 1, 2017, the *OFHPA* received Royal assent.

- Developed supporting regulations which further contribute to the implementation of the OFHP under the legislation;

    - One new regulation and one amendment to existing regulation is due to go to the June 14, 2017 LRC/Cabinet; and

    - A further new proposed regulation is due to go to the June 27,2017 LRC/Cabinet – a draft of this proposed regulation will be available as part of that LRC package.

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched a third party technical analysis project to assist with implementation of GA refinancing.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II under the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*:
    - The Ministry of Energy is seeking LRC approval to create a new Regulation under the *Ontario Fair Hydro Plan Act* (*OFHPA*) to support the required calculations to be made by the Ontario Energy Board (OEB) under Part II of that Act (sections 6-12).
    - The proposed regulation outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP)) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.
    - The proposed regulation sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April

CONFIDENTIAL

30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments to the Part II regulation.

- In addition, the proposed regulation also sets out that customers of unit sub-meter providers (USMPs) would receive a proportionate share of near-term OFHPA reductions.
- If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.
- For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary. Note: Consumers not paying RPP would also receive GA refinancing if they meet the other criteria defined in the OFHPA under "specified consumers" in the OFHPA. These include consumers that have opted-out of RPP to sign contracts with electricity retailers or become wholesale consumers and those who are eligible for *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA), but not RPP, such as long-term care homes.
- In accordance with the *Ontario Fair Hydro Plan Act,* the OEB will determine the adjustment to be made to the GA charge on eligible non-RPP consumers' bills, effective July 1st. Electricity vendors will be expected to ensure the adjustment is reflected on their customers' bills as soon as possible, and to make retroactive payments where necessary.

- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*:
  - The Ministry of Energy is seeking LRC approval to amend O.Reg. 280/14 in response to the *OFHPA* and related regulations.
  - The proposed amendments would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its *OFHPA* activities, including the funding, borrowing and financial arrangements contemplated under the *OFHPA*. The IESO would be responsible for selling specified portions of the regulatory asset to OPG's financing entities, and to fund the IESO monthly deferrals which are to commence July 1, 2017, as provided for under section 23 of the OFHPA.
  - The additional authority set out in the proposed amendments to O.Reg. 280/14 would enable IESO to borrow amounts to fund the above-noted deferrals related to GA refinancing.

CONFIDENTIAL

- IESO would be expected to amend its Statement of Borrowing in a manner consistent with the amended regulation, once approved.

- On June 27, 2017, to further support implementation of OFHP, LRC / Cabinet will review a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Plan Act*, 2017.

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

The government will identify Hydro One R2 customers, by regulation, as having RRRP funded through appropriated funds.

Distribution Rate Protection

The new Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, was established through legislative amendments under the *Fair Hydro Act, 2017*. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhanced protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

The regulation prescribes eligibility to all First Nation residential rate class customers living on-reserve. First Nations customers are ~~p~~prescribed in regulation as account holders who are members of a band as defined by the federal *Indian Act* ~~(Canada)~~.

CONFIDENTIAL

There are 11 LDCs identified by the OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 residential customers may be eligible.

The credit will automatically apply to the bills of those customers who have already registered with their LDC as HST exempt. Customers who have yet to register with their LDC will need to identify themselves to their LDC in order to receive the benefit.

The Ministry of Energy, in collaboration with the Chiefs of Ontario (COO), has crafted the policy in a manner which best reflects the needs and wishes of Ontario's many varied indigenous communities. COO has also developed a Communiqué to send out to all First Nation Chiefs to encourage them to make sure their members are receiving the HST exemption from their LDC. COO will finalize the Communiqué and release in June.

Roles and Responsibilities

Rural or Remote Rate Protection

The roles and responsibilities of the ~~Board~~ OEB remains the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The ~~Board~~ OEB would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would ~~once again need to appropriate~~be responsible for appropriating money from the legislature to cover the costs of administering the program.

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers.

CONFIDENTIAL

4.0 BACKGROUND

Legislation to Implement Ontario's Fair Hydro Plan

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (OEBA); and

- Schedule 2 – includes the electricity social program-related amendments to the *Ontario Energy Board Act, 1998.*

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

Legislation to Implement GA Refinancing

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the *Ontario Fair Hydro Plan Act, 2017* outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;

- A detailed Preamble, Purpose and Definitions;

- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;

- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and

- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

The legislation defines the mechanisms and framework that would achieve the refinancing of the GA.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the legislation.

To support the implementation of GA refinancing under the *Fair Hydro Act, 2017*, the Ministry has developed supporting regulations:

CONFIDENTIAL

- Ontario Regulation made Under Part II of the *Fair Hydro Act, 2017* ("the Part II Reg.") – sets out in detail the methodology that the Ontario Energy Board will use to make determinations under the *OFHPA*.

- Amendment to O. Reg. 280/14 to be made under the *Electricity Act, 1998* ("IESO Eligible Investments and Borrowing Reg.") – provides IESO with the necessary authority related to its OFHPA activities including the funding, borrowing and financial arrangements contemplated under the *OFHPA*.

- Ontario Regulation to be made under the *Fair Hydro Act, 2017* ("the General Reg.") – will provide for the implementation of the roles and responsibilities of the Financial Services Manager and IESO in relation to the refinancing of GA. Note: The General Reg. will be brought forward to LRC/Cabinet on June 27, 2017.

Social Programs

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 330,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.

- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.6 million.

- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.

- These customers still have high distribution costs and are often faced with significantly higher than average bills.

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

CONFIDENTIAL

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Legislative amendments under the Fair Hydro Act broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the majority of the existing RRRP program costs to the tax-base and funding all of the broadened distribution rate protection enhancements from the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

5.0 TIMING

CONFIDENTIAL

Under the *OFHPA*, a portion of the GA will be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

On April 20, 2017, OEB announced that it adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing.

If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.

The OEB must make a determination of RPP rates no later than 15 days from June 2nd, 2017, when the legislation received Royal Assent. As stipulated in the Act, these RPP rates would come into effect as of July 1, 2017.

For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

The Part II regulation lays out the methodology for the OEB to calculate electricity rates for consumers eligible for GA refinancing. As such it has not financial impact.

2) Social Programs:

As reported in the TB/MBC submission of May 9, 2017 and as approved in the TB/MBC submission of March 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution

CONFIDENTIAL

company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board. Cost forecasts are subject to some uncertainty surrounding consumer uptake, future consumption levels, and future rates as set by the OEB.

Subsequent to the development of the above financial impacts for RRRP/DRP, Hydro One Networks Inc. submitted a distribution rate application to the OEB for rates effective 2018-2022. ENERGY is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application. Note that final Hydro One rates are not expected until 2018, as the application is subject the OEB's rate setting process and the review is expected to take at least 8 months.

Per the Regulations, the Ministry has the authority to request social program costs forecasts from the OEB.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16, April 19, and May 17, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation. The Ministry has also held separate engagements with LDCs in particular to the social programs.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, May 23, and June 1 to discuss implementation.

8.0 RISK ASSESSMENT AND MITIGATION – UPDATES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-party financial advisors in advance of and throughout the drafting process to help to

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:**

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• The legislation was developed with input of third-party financiers (i.e., dealers) to ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset,

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the legislation is modelled on frameworks used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

10.0 PERFORMANCE MEASURES

The proposed new regulation under *OFHPA* outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.

The proposed amendments to O. Reg. 280/10 would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its OFHPA activities, including the funding, borrowing and financial arrangements contemplated under the OFHPA

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. This is the primary success metric for these programs. In future report backs, the Ministry will include the presentation of data collected through the IESO reporting portals to demonstrate the impact of these programs on customers. The Ministry will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing. Energy is also working with the Ministry of Community and Social

CONFIDENTIAL

Services on expanding program participation. Regulatory amendments needed to implement those policy objectives will be brought forward to the next LRC.

Ontario's Fair Hydro Plan also included a commitment to work with the OEB to drive distribution sector efficiencies within LDCs over the long-term. The Ministry is developing its policy approach to achieving these efficiencies, including potentially through LDC consolidation, through the Long-Term Energy Planning process.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

CONFIDENTIAL

Hi Everyone – Please see the attached draft assessment note for the electricity reg's tracking to TB/MBC tomorrow. I'd appreciate any input or feedback by first thing tomorrow. As you can see in the below chain, we've also simultaneously shared the latest version with senior management so the note is subject to change.

OPCD/TBS Legal – We've left placeholders in the risk section for accounting and legal risks. I am hoping that risks from previous assessment notes can be re-purposed and used for this note (assuming they haven't been mitigated). Frankly, I just didn't know which ones were the most important to flag. Please let me know if you have any concerns.

Thanks and happy to discuss.

Chris

Subject: Revised Electricity Assessment Note

Hi Everyone – Please see the attached revised electricity note taking into consideration the conversation at today's re-group.

For the financial risks, we were unable to locate any material that spoke about the source of data or assumptions that supports the voted appropriation estimates for the social programs. As such, we haven't been able to address Karen's concern on documenting the assumptions behind the financials. We'll continue to look.

Please let me know if Maria, Cindy or Karen have any further comments on the material. Also, sharing the latest draft of the submission with tracked changes from the version shared this morning.

Thanks,

Chris Skubel

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Global Adjustment Refinancing*	0.0	0.0	0.0
	Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
	Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.

^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	**359**	**492**	**504**	**517**

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Name of analyst:	Chris Skubel/ Afshin Malekzadeh	**Phone number:**	416-327-2151

Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.

- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.

- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **<u>Update:</u>** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **<u>Update:</u>** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **<u>Update:</u>** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

June 13, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back with updates to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

2.0 PURPOSE OF REQUEST

On May 31, 2017, Bill 132, the *Fair Hydro Act, 2017* (*FHA*), which enables Ontario's Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017*, (*OFHPA*) and the implementation of electricity social program-related amendments to the *Ontario Energy Board Act, 1998*, was passed by the legislature.

- The OFHPA will lower bills by 25 per cent for a typical residential consumer, starting July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to half a million small businesses and farms would also benefit.

- OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

  Note: These measures include the 8 per cent rebate introduced in January 2017 and build on previously announced initiatives to deliver broad-based rate relief on electricity bills for consumers.

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (*OEBA*); and

- Schedule 2 – includes the electricity social program-related amendments to the *OEBA.*

CONFIDENTIAL

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

On May 9, 2017, as part of its *FHA* review, TB/MBC requested that the Ministry report back on key updates and the details of the proposed regulations that would support OFHP.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review a first package of proposed regulation and amendments and on June 27, 2017, a second package of regulations. These are necessary to ensure that the 25 per cent reduction on electricity bills is in place by July 1, 2017.

The new *OFHPA* and the proposed regulations and amendments described throughout, along with the independent accounting analysis, legal support and technical analysis and future financial agreements (i.e., expected to be reached and signed in fall 2017) should together mitigate the financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission and the May 9, 2017 TB submission.

1. Implementation of GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity price~~s~~ increas~~esing~~.

On March 2, 2017, as part of OFHP, it was announced that a portion of the Global Adjustment (GA) would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Under the *OFHPA* which enables GA Refinancing, electricity bills of typical residential consumers would be reduced by 25 per cent starting in July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

CONFIDENTIAL

Proposal

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II of the *Ontario Fair Hydro Plan Act, 2017* which is under Schedule 1 of the *Fair Hydro Act, 2017;* and
- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the Electricity Act, 1998.

On June 27, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation:

- Creating a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Act, 2017*.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financ~~ing~~iers (i.e., dealers);

- On June 1, 2017, the *OFHPA*, which enables GA refinancing and responds to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission, received Royal assent. Note: The Ministry has also prepared regulations to support implementation (as noted above);

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched third party technical analysis to assist with implementation of GA refinancing.

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

CONFIDENTIAL

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.

- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.

- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

In addition to amending two existing regulations and introducing two new regulations to roll out the social programs, the Ministry is also making several consequential amendments to other regulations and introducing a new invoicing regulation under the *Fair Hydro Act, 2017*. These changes include:

- Creating a new Invoicing Regulation made under the Ontario Fair Hydro Plan Act, 2017.

- Amending the O. Reg 363/16 (General) under the *Ontario Rebate for Electricity Consumers Act, 2016.*

- Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) made under the *Ontario Energy Board Act, 1998.*

<u>Proposal</u>

The Government introduced legislation and is now developing regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy

CONFIDENTIAL

program of the old Ontario Hydro and has existed in its current form since 2001.

The new legislation enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers~~. The regulation will also prescribe the monthly amount of rate protection available to Hydro One R2 customers through RRRP.~~
(R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province).

Proposed amendments to O. Reg 442/01 would provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and would remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits in addition to RRRP for Hydro One's R2 customers, making the escalating factor unnecessary.

New benefits under section 79.3 of the OEBA would hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit.

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher distribution cost LDCs.

The new legislation enables tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. Eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province.

The proposed prescribed distributors are:

- Atikokan Hydro Inc.
- InnPower Corporation
- Chapleau Public Utilities Corporation
- Sioux Lookout Hydro Inc.
- Northern Ontario Wires Inc.
- Lakeland Power Distribution Ltd. (Parry Sound Rate Zone)

CONFIDENTIAL

- Algoma Power Inc. (residential)
- Hydro One Networks Inc. (Low & medium density classified customers)

~~(as well as six additional higher-distribution cost LDCs).~~

The regulation will set out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers. In future years, this harmonized monthly charge, by design, cannot decrease as it adjusts to reflect the higher of either the lowest rate LDC in the program, or the maximum monthly charge of the previous year, as determined by the OEB.

On-Reserve First Nations Delivery Credit

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The legislative amendments to the *Ontario Energy Board Act, 1998*, are premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers as prescribed in regulation. Eligibility is restricted to those residential rate class First Nations customers who are members of a band as defined under the federal *Indian Act* ~~(Canada)~~.

The regulation does not stipulate any process for identifying on-reserve customers eligible for the credit but rather allows LDCs the flexibility to continue using their existing HST exemption processes.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of RRRP available to Hydro One R2 customers for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB currently sets the amount of the charge that recovers the cost of RRRP from all Ontario electricity customers. Once the regulatory mechanism

CONFIDENTIAL

is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. The regulation will also contain transition provisions to bridge the transition from rate payer funding to provincial funding, as well as mechanisms for sharing of information and funding flows. Change to the funding structure of the program does not require any additional implementation risks or efforts.

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers will be prescribed in regulation. The regulation will prescribe the process by which the Ontario Energy Board would determine a maximum monthly distribution charge for prescribed customers of prescribed high-cost LDCs.

Affected LDCs would be impacted through the efforts required to adjust their billing systems in order to carry out the program. There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017. The regulation will also contain mechanisms for sharing of information and funding flows.

On-Reserve First Nation Delivery Credit

The new regulation will set out the program particulars including eligibility for the program. The regulation limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs. The 11 affected LDCs serving on-reserve consumers identified by the OEB in its report include: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017.

CONFIDENTIAL

Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.
11 affected LDCs will need to alter their billing systems to reflect the regulatory requirement to include a First Nations Delivery Credit line item on the bill directly below the delivery charge, or blended rate if applicable.

3.0 KEY CONTEXT

On June 1, 2017, the *Fair Hydro Act, 2017*, the legislation to enable the Ontario Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) received Royal assent. The OFHPA will reduce the electricity bills of typical residential consumers by 25 per cent starting in summer 2017. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

The Ministry's report back and update to TB/MBC focuses on the following OFHP initiatives:

1) Implementation of GA Refinancing:

Under the *OFHPA*, a portion of the GA would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Today's electricity consumers have been bearing disproportionate cost responsibility for the investments in developing the clean, modern and reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. The legislation recognizes the long-term benefit of clean energy investments to more appropriately allocate costs into the future to account for long-term benefits.

Refinancing a portion of GA would provide significant and immediate rate relief to electricity consumers that have been burdened with the costs of the necessary investments that have been made to decarbonize and modernize the province's electricity infrastructure, by spreading the cost of electricity investments so that they are shared proportionately by future consumers who cause a need for or benefit from the province's multi-billion dollar investments in electricity infrastructure.

CONFIDENTIAL

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financiersing (i.e., dealers);

- Developed the *Fair Hydro Act, 2017* which enables the OFHP under the *Ontario Fair Hydro Plan Act (OFHPA), 2017*, to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: On June 1, 2017, the *OFHPA* received Royal assent.

- Developed supporting regulations which further contribute to the implementation of the OFHP under the legislation;

    - One new regulation and one amendment to existing regulation is due to go to the June 14, 2017 LRC/Cabinet; and

    - A further new proposed regulation is due to go to the June 27,2017 LRC/Cabinet – a draft of this proposed regulation will be available as part of that LRC package.

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched a third party technical analysis project to assist with implementation of GA refinancing.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II under the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*:
    - The Ministry of Energy is seeking LRC approval to create a new Regulation under the *Ontario Fair Hydro Plan Act* (*OFHPA*) to support the required calculations to be made by the Ontario Energy Board (OEB) under Part II of that Act (sections 6-12).
    - The proposed regulation outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP)) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.
    - The proposed regulation sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April

CONFIDENTIAL

30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments to the Part II regulation.

- In addition, the proposed regulation also sets out that customers of unit sub-meter providers (USMPs) would receive a proportionate share of near-term OFHPA reductions.
- If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.
- For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary. Note: Consumers not paying RPP would also receive GA refinancing if they meet the other criteria defined in the OFHPA under "specified consumers" in the OFHPA. These include consumers that have opted-out of RPP to sign contracts with electricity retailers or become wholesale consumers and those who are eligible for *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA), but not RPP, such as long-term care homes.
- In accordance with the *Ontario Fair Hydro Plan Act,* the OEB will determine the adjustment to be made to the GA charge on eligible non-RPP consumers' bills, effective July 1st. Electricity vendors will be expected to ensure the adjustment is reflected on their customers' bills as soon as possible, and to make retroactive payments where necessary.

- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*:
  - The Ministry of Energy is seeking LRC approval to amend O.Reg. 280/14 in response to the *OFHPA* and related regulations.
  - The proposed amendments would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its *OFHPA* activities, including the funding, borrowing and financial arrangements contemplated under the *OFHPA*. The IESO would be responsible for selling specified portions of the regulatory asset to OPG's financing entities, and to fund the IESO monthly deferrals which are to commence July 1, 2017, as provided for under section 23 of the OFHPA.
  - The additional authority set out in the proposed amendments to O.Reg. 280/14 would enable IESO to borrow amounts to fund the above-noted deferrals related to GA refinancing.

CONFIDENTIAL

- IESO would be expected to amend its Statement of Borrowing in a manner consistent with the amended regulation, once approved.

- On June 27, 2017, to further support implementation of OFHP, LRC / Cabinet will review a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Plan Act*, 2017.

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

The government will identify Hydro One R2 customers, by regulation, as having RRRP funded through appropriated funds.

Distribution Rate Protection

The new Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, was established through legislative amendments under the *Fair Hydro Act, 2017*. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhanced protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

The regulation prescribes eligibility to all First Nation residential rate class customers living on-reserve. First Nations customers are ~~p~~prescribed in regulation as account holders who are members of a band as defined by the federal *Indian Act* ~~(Canada)~~.

CONFIDENTIAL

There are 11 LDCs identified by the OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 residential customers may be eligible.

The credit will automatically apply to the bills of those customers who have already registered with their LDC as HST exempt. Customers who have yet to register with their LDC will need to identify themselves to their LDC in order to receive the benefit.

The Ministry of Energy, in collaboration with the Chiefs of Ontario (COO), has crafted the policy in a manner which best reflects the needs and wishes of Ontario's many varied indigenous communities. COO has also developed a Communiqué to send out to all First Nation Chiefs to encourage them to make sure their members are receiving the HST exemption from their LDC. COO will finalize the Communiqué and release in June.

Roles and Responsibilities

Rural or Remote Rate Protection

The roles and responsibilities of the ~~Board~~ OEB remains the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The ~~Board~~ OEB would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would ~~once again need to appropriate~~be responsible for appropriating money from the legislature to cover the costs of administering the program.

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers.

CONFIDENTIAL

4.0 BACKGROUND

Legislation to Implement Ontario's Fair Hydro Plan

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (OEBA); and

- Schedule 2 – includes the electricity social program-related amendments to the *Ontario Energy Board Act, 1998.*

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

Legislation to Implement GA Refinancing

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the *Ontario Fair Hydro Plan Act, 2017* outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;

- A detailed Preamble, Purpose and Definitions;

- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;

- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and

- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

The legislation defines the mechanisms and framework that would achieve the refinancing of the GA.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the legislation.

To support the implementation of GA refinancing under the *Fair Hydro Act, 2017*, the Ministry has developed supporting regulations:

CONFIDENTIAL

- Ontario Regulation made Under Part II of the *Fair Hydro Act, 2017* ("the Part II Reg.") – sets out in detail the methodology that the Ontario Energy Board will use to make determinations under the *OFHPA*.

- Amendment to O. Reg. 280/14 to be made under the *Electricity Act, 1998* ("IESO Eligible Investments and Borrowing Reg.") – provides IESO with the necessary authority related to its OFHPA activities including the funding, borrowing and financial arrangements contemplated under the *OFHPA*.

- Ontario Regulation to be made under the *Fair Hydro Act, 2017* ("the General Reg.") – will provide for the implementation of the roles and responsibilities of the Financial Services Manager and IESO in relation to the refinancing of GA. Note: The General Reg. will be brought forward to LRC/Cabinet on June 27, 2017.

Social Programs

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 330,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.

- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.6 million.

- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.

- These customers still have high distribution costs and are often faced with significantly higher than average bills.

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

CONFIDENTIAL

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Legislative amendments under the Fair Hydro Act broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the majority of the existing RRRP program costs to the tax-base and funding all of the broadened distribution rate protection enhancements from the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

5.0 TIMING

CONFIDENTIAL

Under the *OFHPA*, a portion of the GA will be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

On April 20, 2017, OEB announced that it adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing.

If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.

The OEB must make a determination of RPP rates no later than 15 days from June 2nd, 2017, when the legislation received Royal Assent. As stipulated in the Act, these RPP rates would come into effect as of July 1, 2017.

For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

The Part II regulation lays out the methodology for the OEB to calculate electricity rates for consumers eligible for GA refinancing. As such it has not financial impact.

2) Social Programs:

As reported in the TB/MBC submission of May 9, 2017 and as approved in the TB/MBC submission of March 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution

CONFIDENTIAL

company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board. Cost forecasts are subject to some uncertainty surrounding consumer uptake, future consumption levels, and future rates as set by the OEB.

Subsequent to the development of the above financial impacts for RRRP/DRP, Hydro One Networks Inc. submitted a distribution rate application to the OEB for rates effective 2018-2022. ENERGY is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application. Note that final Hydro One rates are not expected until 2018, as the application is subject the OEB's rate setting process and the review is expected to take at least 8 months.

Per the Regulations, the Ministry has the authority to request social program costs forecasts from the OEB.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16, April 19, and May 17, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation. The Ministry has also held separate engagements with LDCs in particular to the social programs.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, May 23, and June 1 to discuss implementation.

8.0 RISK ASSESSMENT AND MITIGATION – UPDATES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-party financial advisors in advance of and throughout the drafting process to help to

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:**

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• The legislation was developed with input of third-party financiers (i.e., dealers) to ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset,

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the legislation is modelled on frameworks used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

10.0 PERFORMANCE MEASURES

The proposed new regulation under *OFHPA* outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.

The proposed amendments to O. Reg. 280/10 would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its OFHPA activities, including the funding, borrowing and financial arrangements contemplated under the OFHPA

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. This is the primary success metric for these programs. In future report backs, the Ministry will include the presentation of data collected through the IESO reporting portals to demonstrate the impact of these programs on customers. The Ministry will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing. Energy is also working with the Ministry of Community and Social

CONFIDENTIAL

Services on expanding program participation. Regulatory amendments needed to implement those policy objectives will be brought forward to the next LRC.

Ontario's Fair Hydro Plan also included a commitment to work with the OEB to drive distribution sector efficiencies within LDCs over the long-term. The Ministry is developing its policy approach to achieving these efficiencies, including potentially through LDC consolidation, through the Long-Term Energy Planning process.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

CONFIDENTIAL

Subject: FW: Revised Electricity Assessment Note

Hi Everyone – Please see the attached draft assessment note for the electricity reg's tracking to TB/MBC tomorrow. I'd appreciate any input or feedback by first thing tomorrow. As you can see in the below chain, we've also simultaneously shared the latest version with senior management so the note is subject to change.

OPCD/TBS Legal – We've left placeholders in the risk section for accounting and legal risks. I am hoping that risks from previous assessment notes can be re-purposed and used for this note (assuming they haven't been mitigated). Frankly, I just didn't know which ones were the most important to flag. Please let me know if you have any concerns.

Thanks and happy to discuss.

Subject: Revised Electricity Assessment Note

Hi Everyone – Please see the attached revised electricity note taking into consideration the conversation at today's re-group.

For the financial risks, we were unable to locate any material that spoke about the source of data or assumptions that supports the voted appropriation estimates for the social programs. As such, we haven't been able to address Karen's concern on documenting the assumptions behind the financials. We'll continue to look.

Please let me know if Maria, Cindy or Karen have any further comments on the material. Also, sharing the

latest draft of the submission with tracked changes from the version shared this morning.

Thanks,
Chris Skubel

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Global Adjustment Refinancing*	0.0	0.0	0.0
	Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
	Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.

^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	**359**	**492**	**504**	**517**

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Name of analyst:	Chris Skubel/ Afshin Malekzadeh	**Phone number:**	416-327-2151

Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.

- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.

- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **<u>Update:</u>** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **<u>Update:</u>** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **<u>Update:</u>** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

June 13, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back with updates to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

2.0 PURPOSE OF REQUEST

On May 31, 2017, Bill 132, the *Fair Hydro Act, 2017* (*FHA*), which enables Ontario's Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017*, (*OFHPA*) and the implementation of electricity social program-related amendments to the *Ontario Energy Board Act, 1998*, was passed by the legislature.

- The OFHPA will lower bills by 25 per cent for a typical residential consumer, starting July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to half a million small businesses and farms would also benefit.

- OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

  Note: These measures include the 8 per cent rebate introduced in January 2017 and build on previously announced initiatives to deliver broad-based rate relief on electricity bills for consumers.

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (*OEBA*); and

- Schedule 2 – includes the electricity social program-related amendments to the *OEBA.*

CONFIDENTIAL

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

On May 9, 2017, as part of its *FHA* review, TB/MBC requested that the Ministry report back on key updates and the details of the proposed regulations that would support OFHP.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review a first package of proposed regulation and amendments and on June 27, 2017, a second package of regulations. These are necessary to ensure that the 25 per cent reduction on electricity bills is in place by July 1, 2017.

The new *OFHPA* and the proposed regulations and amendments described throughout, along with the independent accounting analysis, legal support and technical analysis and future financial agreements (i.e., expected to be reached and signed in fall 2017) should together mitigate the financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission and the May 9, 2017 TB submission.

1. Implementation of GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity price~~s~~ increas~~esing~~.

On March 2, 2017, as part of OFHP, it was announced that a portion of the Global Adjustment (GA) would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Under the *OFHPA* which enables GA Refinancing, electricity bills of typical residential consumers would be reduced by 25 per cent starting in July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

CONFIDENTIAL

Proposal

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II of the *Ontario Fair Hydro Plan Act, 2017* which is under Schedule 1 of the *Fair Hydro Act, 2017;* and
- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the Electricity Act, 1998.

On June 27, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation:

- Creating a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Act, 2017*.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financ~~ing~~iers (i.e., dealers);

- On June 1, 2017, the *OFHPA*, which enables GA refinancing and responds to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission, received Royal assent. Note: The Ministry has also prepared regulations to support implementation (as noted above);

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched third party technical analysis to assist with implementation of GA refinancing.

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

CONFIDENTIAL

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.

- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.

- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

In addition to amending two existing regulations and introducing two new regulations to roll out the social programs, the Ministry is also making several consequential amendments to other regulations and introducing a new invoicing regulation under the *Fair Hydro Act, 2017*. These changes include:

- Creating a new Invoicing Regulation made under the Ontario Fair Hydro Plan Act, 2017.

- Amending the O. Reg 363/16 (General) under the *Ontario Rebate for Electricity Consumers Act, 2016.*

- Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) made under the *Ontario Energy Board Act, 1998.*

<u>Proposal</u>

The Government introduced legislation and is now developing regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy

CONFIDENTIAL

program of the old Ontario Hydro and has existed in its current form since 2001.

The new legislation enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers~~. The regulation will also prescribe the monthly amount of rate protection available to Hydro One R2 customers through RRRP.~~
(R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province).

Proposed amendments to O. Reg 442/01 would provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and would remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits in addition to RRRP for Hydro One's R2 customers, making the escalating factor unnecessary.

New benefits under section 79.3 of the OEBA would hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit.

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher distribution cost LDCs.

The new legislation enables tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. Eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province.

The proposed prescribed distributors are:

- Atikokan Hydro Inc.
- InnPower Corporation
- Chapleau Public Utilities Corporation
- Sioux Lookout Hydro Inc.
- Northern Ontario Wires Inc.
- Lakeland Power Distribution Ltd. (Parry Sound Rate Zone)

CONFIDENTIAL

- Algoma Power Inc. (residential)
- Hydro One Networks Inc. (Low & medium density classified customers)

~~(as well as six additional higher-distribution cost LDCs).~~

The regulation will set out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers. In future years, this harmonized monthly charge, by design, cannot decrease as it adjusts to reflect the higher of either the lowest rate LDC in the program, or the maximum monthly charge of the previous year, as determined by the OEB.

On-Reserve First Nations Delivery Credit

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The legislative amendments to the *Ontario Energy Board Act, 1998*, are premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers as prescribed in regulation. Eligibility is restricted to those residential rate class First Nations customers who are members of a band as defined under the federal *Indian Act* ~~(Canada)~~.

The regulation does not stipulate any process for identifying on-reserve customers eligible for the credit but rather allows LDCs the flexibility to continue using their existing HST exemption processes.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of RRRP available to Hydro One R2 customers for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB currently sets the amount of the charge that recovers the cost of RRRP from all Ontario electricity customers. Once the regulatory mechanism

CONFIDENTIAL

is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. The regulation will also contain transition provisions to bridge the transition from rate payer funding to provincial funding, as well as mechanisms for sharing of information and funding flows. Change to the funding structure of the program does not require any additional implementation risks or efforts.

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers will be prescribed in regulation. The regulation will prescribe the process by which the Ontario Energy Board would determine a maximum monthly distribution charge for prescribed customers of prescribed high-cost LDCs.

Affected LDCs would be impacted through the efforts required to adjust their billing systems in order to carry out the program. There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017. The regulation will also contain mechanisms for sharing of information and funding flows.

On-Reserve First Nation Delivery Credit

The new regulation will set out the program particulars including eligibility for the program. The regulation limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs. The 11 affected LDCs serving on-reserve consumers identified by the OEB in its report include: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017.

CONFIDENTIAL

Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.
11 affected LDCs will need to alter their billing systems to reflect the regulatory requirement to include a First Nations Delivery Credit line item on the bill directly below the delivery charge, or blended rate if applicable.

3.0 KEY CONTEXT

On June 1, 2017, the *Fair Hydro Act, 2017*, the legislation to enable the Ontario Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) received Royal assent. The OFHPA will reduce the electricity bills of typical residential consumers by 25 per cent starting in summer 2017. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

The Ministry's report back and update to TB/MBC focuses on the following OFHP initiatives:

1) Implementation of GA Refinancing:

Under the *OFHPA*, a portion of the GA would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Today's electricity consumers have been bearing disproportionate cost responsibility for the investments in developing the clean, modern and reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. The legislation recognizes the long-term benefit of clean energy investments to more appropriately allocate costs into the future to account for long-term benefits.

Refinancing a portion of GA would provide significant and immediate rate relief to electricity consumers that have been burdened with the costs of the necessary investments that have been made to decarbonize and modernize the province's electricity infrastructure, by spreading the cost of electricity investments so that they are shared proportionately by future consumers who cause a need for or benefit from the province's multi-billion dollar investments in electricity infrastructure.

CONFIDENTIAL

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financiersing (i.e., dealers);

- Developed the *Fair Hydro Act, 2017* which enables the OFHP under the *Ontario Fair Hydro Plan Act (OFHPA), 2017*, to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: On June 1, 2017, the *OFHPA* received Royal assent.

- Developed supporting regulations which further contribute to the implementation of the OFHP under the legislation;

    - One new regulation and one amendment to existing regulation is due to go to the June 14, 2017 LRC/Cabinet; and

    - A further new proposed regulation is due to go to the June 27,2017 LRC/Cabinet – a draft of this proposed regulation will be available as part of that LRC package.

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched a third party technical analysis project to assist with implementation of GA refinancing.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II under the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*:
    - The Ministry of Energy is seeking LRC approval to create a new Regulation under the *Ontario Fair Hydro Plan Act* (*OFHPA*) to support the required calculations to be made by the Ontario Energy Board (OEB) under Part II of that Act (sections 6-12).
    - The proposed regulation outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP)) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.
    - The proposed regulation sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April

CONFIDENTIAL

30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments to the Part II regulation.

- In addition, the proposed regulation also sets out that customers of unit sub-meter providers (USMPs) would receive a proportionate share of near-term OFHPA reductions.
- If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.
- For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary. Note: Consumers not paying RPP would also receive GA refinancing if they meet the other criteria defined in the OFHPA under "specified consumers" in the OFHPA. These include consumers that have opted-out of RPP to sign contracts with electricity retailers or become wholesale consumers and those who are eligible for *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA), but not RPP, such as long-term care homes.
- In accordance with the *Ontario Fair Hydro Plan Act,* the OEB will determine the adjustment to be made to the GA charge on eligible non-RPP consumers' bills, effective July 1st. Electricity vendors will be expected to ensure the adjustment is reflected on their customers' bills as soon as possible, and to make retroactive payments where necessary.

- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*:
  - The Ministry of Energy is seeking LRC approval to amend O.Reg. 280/14 in response to the *OFHPA* and related regulations.
  - The proposed amendments would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its *OFHPA* activities, including the funding, borrowing and financial arrangements contemplated under the *OFHPA*. The IESO would be responsible for selling specified portions of the regulatory asset to OPG's financing entities, and to fund the IESO monthly deferrals which are to commence July 1, 2017, as provided for under section 23 of the OFHPA.
  - The additional authority set out in the proposed amendments to O.Reg. 280/14 would enable IESO to borrow amounts to fund the above-noted deferrals related to GA refinancing.

CONFIDENTIAL

- IESO would be expected to amend its Statement of Borrowing in a manner consistent with the amended regulation, once approved.

- On June 27, 2017, to further support implementation of OFHP, LRC / Cabinet will review a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Plan Act*, 2017.

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

The government will identify Hydro One R2 customers, by regulation, as having RRRP funded through appropriated funds.

Distribution Rate Protection

The new Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, was established through legislative amendments under the *Fair Hydro Act, 2017*. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhanced protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

The regulation prescribes eligibility to all First Nation residential rate class customers living on-reserve. First Nations customers are ~~p~~prescribed in regulation as account holders who are members of a band as defined by the federal *Indian Act* ~~(Canada)~~.

CONFIDENTIAL

There are 11 LDCs identified by the OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 residential customers may be eligible.

The credit will automatically apply to the bills of those customers who have already registered with their LDC as HST exempt. Customers who have yet to register with their LDC will need to identify themselves to their LDC in order to receive the benefit.

The Ministry of Energy, in collaboration with the Chiefs of Ontario (COO), has crafted the policy in a manner which best reflects the needs and wishes of Ontario's many varied indigenous communities. COO has also developed a Communiqué to send out to all First Nation Chiefs to encourage them to make sure their members are receiving the HST exemption from their LDC. COO will finalize the Communiqué and release in June.

Roles and Responsibilities

Rural or Remote Rate Protection

The roles and responsibilities of the ~~Board~~ OEB remains the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The ~~Board~~ OEB would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would ~~once again need to appropriate~~be responsible for appropriating money from the legislature to cover the costs of administering the program.

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers.

CONFIDENTIAL

4.0 BACKGROUND

Legislation to Implement Ontario's Fair Hydro Plan

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (OEBA); and

- Schedule 2 – includes the electricity social program-related amendments to the *Ontario Energy Board Act, 1998.*

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

Legislation to Implement GA Refinancing

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the *Ontario Fair Hydro Plan Act, 2017* outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;

- A detailed Preamble, Purpose and Definitions;

- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;

- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and

- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

The legislation defines the mechanisms and framework that would achieve the refinancing of the GA.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the legislation.

To support the implementation of GA refinancing under the *Fair Hydro Act, 2017*, the Ministry has developed supporting regulations:

CONFIDENTIAL

- Ontario Regulation made Under Part II of the *Fair Hydro Act, 2017* ("the Part II Reg.") – sets out in detail the methodology that the Ontario Energy Board will use to make determinations under the *OFHPA*.

- Amendment to O. Reg. 280/14 to be made under the *Electricity Act, 1998* ("IESO Eligible Investments and Borrowing Reg.") – provides IESO with the necessary authority related to its OFHPA activities including the funding, borrowing and financial arrangements contemplated under the *OFHPA*.

- Ontario Regulation to be made under the *Fair Hydro Act, 2017* ("the General Reg.") – will provide for the implementation of the roles and responsibilities of the Financial Services Manager and IESO in relation to the refinancing of GA. Note: The General Reg. will be brought forward to LRC/Cabinet on June 27, 2017.

Social Programs

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 330,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.

- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.6 million.

- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.

- These customers still have high distribution costs and are often faced with significantly higher than average bills.

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

CONFIDENTIAL

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Legislative amendments under the Fair Hydro Act broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the majority of the existing RRRP program costs to the tax-base and funding all of the broadened distribution rate protection enhancements from the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

5.0 TIMING

CONFIDENTIAL

Under the *OFHPA*, a portion of the GA will be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

On April 20, 2017, OEB announced that it adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing.

If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.

The OEB must make a determination of RPP rates no later than 15 days from June 2nd, 2017, when the legislation received Royal Assent. As stipulated in the Act, these RPP rates would come into effect as of July 1, 2017.

For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

The Part II regulation lays out the methodology for the OEB to calculate electricity rates for consumers eligible for GA refinancing. As such it has not financial impact.

2) Social Programs:

As reported in the TB/MBC submission of May 9, 2017 and as approved in the TB/MBC submission of March 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution

CONFIDENTIAL

company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board. Cost forecasts are subject to some uncertainty surrounding consumer uptake, future consumption levels, and future rates as set by the OEB.

Subsequent to the development of the above financial impacts for RRRP/DRP, Hydro One Networks Inc. submitted a distribution rate application to the OEB for rates effective 2018-2022. ENERGY is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application. Note that final Hydro One rates are not expected until 2018, as the application is subject the OEB's rate setting process and the review is expected to take at least 8 months.

Per the Regulations, the Ministry has the authority to request social program costs forecasts from the OEB.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16, April 19, and May 17, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation. The Ministry has also held separate engagements with LDCs in particular to the social programs.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, May 23, and June 1 to discuss implementation.

8.0 RISK ASSESSMENT AND MITIGATION – UPDATES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-party financial advisors in advance of and throughout the drafting process to help to

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:**

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• The legislation was developed with input of third-party financiers (i.e., dealers) to ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset,

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the legislation is modelled on frameworks used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

10.0 PERFORMANCE MEASURES

The proposed new regulation under *OFHPA* outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.

The proposed amendments to O. Reg. 280/10 would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its OFHPA activities, including the funding, borrowing and financial arrangements contemplated under the OFHPA

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. This is the primary success metric for these programs. In future report backs, the Ministry will include the presentation of data collected through the IESO reporting portals to demonstrate the impact of these programs on customers. The Ministry will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing. Energy is also working with the Ministry of Community and Social

CONFIDENTIAL

Services on expanding program participation. Regulatory amendments needed to implement those policy objectives will be brought forward to the next LRC.

Ontario's Fair Hydro Plan also included a commitment to work with the OEB to drive distribution sector efficiencies within LDCs over the long-term. The Ministry is developing its policy approach to achieving these efficiencies, including potentially through LDC consolidation, through the Long-Term Energy Planning process.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

CONFIDENTIAL

---

Hi Everyone – Please see the attached draft assessment note for the electricity reg's tracking to TB/MBC tomorrow. I'd appreciate any input or feedback by first thing tomorrow. As you can see in the below chain, we've also simultaneously shared the latest version with senior management so the note is subject to change.

OPCD/TBS Legal – We've left placeholders in the risk section for accounting and legal risks. I am hoping that risks from previous assessment notes can be re-purposed and used for this note (assuming they haven't been mitigated). Frankly, I just didn't know which ones were the most important to flag. Please let me know if you have any concerns.

Thanks and happy to discuss.

Chris

Subject: Revised Electricity Assessment Note

Hi Everyone – Please see the attached revised electricity note taking into consideration the conversation at today's re-group.

For the financial risks, we were unable to locate any material that spoke about the source of data or assumptions that supports the voted appropriation estimates for the social programs. As such, we haven't been able to address Karen's concern on documenting the assumptions behind the financials. We'll continue to look.

Please let me know if Maria, Cindy or Karen have any further comments on the material. Also, sharing the latest draft of the submission with tracked changes from the version shared this morning.

Thanks,
Chris Skubel

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**

Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.

^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	**359**	**492**	**504**	**517**

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1

Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
- Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.

- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.

- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **<u>Update:</u>** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **<u>Update:</u>** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **<u>Update:</u>** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO'S FAIR HYDRO PLAN – REPORT BACK

June 13, 2017

CONFIDENTIAL
MINISTRY OF ENERGY

1.0 MINISTRY REQUEST

1. The Ministry of Energy is reporting back with updates to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

2.0 PURPOSE OF REQUEST

On May 31, 2017, Bill 132, the *Fair Hydro Act, 2017* (*FHA*), which enables Ontario's Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017*, (*OFHPA*) and the implementation of electricity social program-related amendments to the *Ontario Energy Board Act, 1998*, was passed by the legislature.

- The OFHPA will lower bills by 25 per cent for a typical residential consumer, starting July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to half a million small businesses and farms would also benefit.

- OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

  Note: These measures include the 8 per cent rebate introduced in January 2017 and build on previously announced initiatives to deliver broad-based rate relief on electricity bills for consumers.

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (*OEBA*); and

- Schedule 2 – includes the electricity social program-related amendments to the *OEBA.*

CONFIDENTIAL

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

On May 9, 2017, as part of its *FHA* review, TB/MBC requested that the Ministry report back on key updates and the details of the proposed regulations that would support OFHP.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review a first package of proposed regulation and amendments and on June 27, 2017, a second package of regulations. These are necessary to ensure that the 25 per cent reduction on electricity bills is in place by July 1, 2017.

The new *OFHPA* and the proposed regulations and amendments described throughout, along with the independent accounting analysis, legal support and technical analysis and future financial agreements (i.e., expected to be reached and signed in fall 2017) should together mitigate the financing, accounting and legal issues raised in the March 1, 2017 Cabinet Submission and the May 9, 2017 TB submission.

1. Implementation of GA Refinancing:

Ontario's energy system is being transformed – more than $50 billion has been invested to decarbonize and modernize the electricity system, including an investment of over $35 billion in clean and renewable generation.

Over the last decade the government has invested in Ontario's transmission and distribution infrastructure (i.e., the grid), clean generation and phased out the use of coal-fired generation, which has resulted in electricity price~~s~~ increas~~esing~~.

On March 2, 2017, as part of OFHP, it was announced that a portion of the Global Adjustment (GA) would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Under the *OFHPA* which enables GA Refinancing, electricity bills of typical residential consumers would be reduced by 25 per cent starting in July 1, 2017. In addition, increases to electricity bills would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

CONFIDENTIAL

Proposal

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II of the *Ontario Fair Hydro Plan Act, 2017* which is under Schedule 1 of the *Fair Hydro Act, 2017;* and
- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the Electricity Act, 1998.

On June 27, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation:

- Creating a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Act, 2017*.

Implementation

To implement GA refinancing and mitigate financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financ~~ing~~iers (i.e., dealers);

- On June 1, 2017, the *OFHPA*, which enables GA refinancing and responds to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission, received Royal assent. Note: The Ministry has also prepared regulations to support implementation (as noted above);

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched third party technical analysis to assist with implementation of GA refinancing.

2. Social Programs:

To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

CONFIDENTIAL

These customers include:

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.

- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.

- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The legislative amendments enable the creation or expansion of programs that provide meaningful rate relief to these customers.

In addition to amending two existing regulations and introducing two new regulations to roll out the social programs, the Ministry is also making several consequential amendments to other regulations and introducing a new invoicing regulation under the *Fair Hydro Act, 2017*. These changes include:

- Creating a new Invoicing Regulation made under the Ontario Fair Hydro Plan Act, 2017.

- Amending the O. Reg 363/16 (General) under the *Ontario Rebate for Electricity Consumers Act, 2016.*

- Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) made under the *Ontario Energy Board Act, 1998.*

<u>Proposal</u>

The Government introduced legislation and is now developing regulatory changes for the enhanced electricity support programs which will shift costs from the rate base to the tax base, as well as establish the necessary frameworks to deliver these new or enhanced programs.

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy

CONFIDENTIAL

program of the old Ontario Hydro and has existed in its current form since 2001.

The new legislation enables, through regulation, the transfer of the costs of funding the program for Hydro One's R2 customers from the rate-base to the tax-base for prescribed customers~~. The regulation will also prescribe the monthly amount of rate protection available to Hydro One R2 customers through RRRP.~~
(R2 customers are those customers of Hydro One classified as living in the lowest density areas of the Province).

Proposed amendments to O. Reg 442/01 would provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and would remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits in addition to RRRP for Hydro One's R2 customers, making the escalating factor unnecessary.

New benefits under section 79.3 of the OEBA would hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit.

Distribution Rate Protection

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher distribution cost LDCs.

The new legislation enables tax-based funding to support distribution rate protection for prescribed residential customers of LDCs with high-cost distribution rates. Eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province.

The proposed prescribed distributors are:

- Atikokan Hydro Inc.
- InnPower Corporation
- Chapleau Public Utilities Corporation
- Sioux Lookout Hydro Inc.
- Northern Ontario Wires Inc.
- Lakeland Power Distribution Ltd. (Parry Sound Rate Zone)

CONFIDENTIAL

- Algoma Power Inc. (residential)
- Hydro One Networks Inc. (Low & medium density classified customers)

~~(as well as six additional higher-distribution cost LDCs).~~

The regulation will set out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers. In future years, this harmonized monthly charge, by design, cannot decrease as it adjusts to reflect the higher of either the lowest rate LDC in the program, or the maximum monthly charge of the previous year, as determined by the OEB.

On-Reserve First Nations Delivery Credit

As part of discussions on Hydro One shares and rates at COO's All Chiefs Conference and the First Nations-Ontario Energy Table, the Minister of Energy issued a letter directing the OEB to prepare a report providing "advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers". The legislative amendments to the *Ontario Energy Board Act, 1998*, are premised around the findings in the OEB Report submitted to the Ministry on December 29, 2016.

The program involves the elimination of the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers as prescribed in regulation. Eligibility is restricted to those residential rate class First Nations customers who are members of a band as defined under the federal *Indian Act* ~~(Canada)~~.

The regulation does not stipulate any process for identifying on-reserve customers eligible for the credit but rather allows LDCs the flexibility to continue using their existing HST exemption processes.

Implementation

Rural or Remote Rate Protection (RRRP)

Appropriated funds shall be used to offset the cost of RRRP available to Hydro One R2 customers for electricity consumed on or after July 1, 2017.

The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the money appropriated from the legislature by the Ministry of Finance (MOF).

The OEB currently sets the amount of the charge that recovers the cost of RRRP from all Ontario electricity customers. Once the regulatory mechanism

CONFIDENTIAL

is in place to enable the recovery of the majority of RRRP costs from the tax base, the OEB will significantly reduce the RRRP charge. The regulation will also contain transition provisions to bridge the transition from rate payer funding to provincial funding, as well as mechanisms for sharing of information and funding flows. Change to the funding structure of the program does not require any additional implementation risks or efforts.

Distribution Rate Protection

Appropriated funds shall be used to offset the cost of providing distribution rate protection to prescribed residential distribution rate protected consumers based on electricity consumed on or after July 1, 2017.

LDCs and eligible customers will be prescribed in regulation. The regulation will prescribe the process by which the Ontario Energy Board would determine a maximum monthly distribution charge for prescribed customers of prescribed high-cost LDCs.

Affected LDCs would be impacted through the efforts required to adjust their billing systems in order to carry out the program. There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017. Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017. The regulation will also contain mechanisms for sharing of information and funding flows.

On-Reserve First Nation Delivery Credit

The new regulation will set out the program particulars including eligibility for the program. The regulation limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs. The 11 affected LDCs serving on-reserve consumers identified by the OEB in its report include: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

There are transitional provisions that provide distributors with a prescribed time by which they must have adapted their billing systems while maintaining program eligibility for the rate assistance being provided. As part of the regulations, Energy intends to prescribe eligibility as of July 1, 2017.

CONFIDENTIAL

Distributors would be given a three month transitional period to begin delivering the rate assistance by no later than October 1, 2017.
11 affected LDCs will need to alter their billing systems to reflect the regulatory requirement to include a First Nations Delivery Credit line item on the bill directly below the delivery charge, or blended rate if applicable.

3.0 KEY CONTEXT

On June 1, 2017, the *Fair Hydro Act, 2017*, the legislation to enable the Ontario Fair Hydro Plan (OFHP) under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) received Royal assent. The OFHPA will reduce the electricity bills of typical residential consumers by 25 per cent starting in summer 2017. Up to 500,000 small businesses and farms would also benefit.

OFHP also announced other measures to enhance business competitiveness, helping vulnerable consumers and reduce the cost of electricity over the longer term.

The Ministry's report back and update to TB/MBC focuses on the following OFHP initiatives:

1) Implementation of GA Refinancing:

Under the *OFHPA*, a portion of the GA would be refinanced in order to more fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

Today's electricity consumers have been bearing disproportionate cost responsibility for the investments in developing the clean, modern and reliable electricity system that Ontario has today and that will continue to provide benefit to future generations. The legislation recognizes the long-term benefit of clean energy investments to more appropriately allocate costs into the future to account for long-term benefits.

Refinancing a portion of GA would provide significant and immediate rate relief to electricity consumers that have been burdened with the costs of the necessary investments that have been made to decarbonize and modernize the province's electricity infrastructure, by spreading the cost of electricity investments so that they are shared proportionately by future consumers who cause a need for or benefit from the province's multi-billion dollar investments in electricity infrastructure.

CONFIDENTIAL

To implement GA refinancing and to mitigate the financing, accounting and legal risks, the Ministry has:

- Worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financiersing (i.e., dealers);

- Developed the *Fair Hydro Act, 2017* which enables the OFHP under the *Ontario Fair Hydro Plan Act (OFHPA), 2017*, to respond to the financing, accounting and legal issues outlined in the March 1, 2017 Cabinet Submission. Note: On June 1, 2017, the *OFHPA* received Royal assent.

- Developed supporting regulations which further contribute to the implementation of the OFHP under the legislation;

    - One new regulation and one amendment to existing regulation is due to go to the June 14, 2017 LRC/Cabinet; and

    - A further new proposed regulation is due to go to the June 27,2017 LRC/Cabinet – a draft of this proposed regulation will be available as part of that LRC package.

- Sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY); and

- Launched a third party technical analysis project to assist with implementation of GA refinancing.

On June 14, 2017, to support implementation of OFHP, LRC / Cabinet will review the following proposed regulation and amendments:

- Creating a new Regulation made Under Part II under the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*:
    - The Ministry of Energy is seeking LRC approval to create a new Regulation under the *Ontario Fair Hydro Plan Act* (*OFHPA*) to support the required calculations to be made by the Ontario Energy Board (OEB) under Part II of that Act (sections 6-12).
    - The proposed regulation outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP)) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.
    - The proposed regulation sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April

CONFIDENTIAL

30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments to the Part II regulation.

- In addition, the proposed regulation also sets out that customers of unit sub-meter providers (USMPs) would receive a proportionate share of near-term OFHPA reductions.
- If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.
- For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary. Note: Consumers not paying RPP would also receive GA refinancing if they meet the other criteria defined in the OFHPA under "specified consumers" in the OFHPA. These include consumers that have opted-out of RPP to sign contracts with electricity retailers or become wholesale consumers and those who are eligible for *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA), but not RPP, such as long-term care homes.
- In accordance with the *Ontario Fair Hydro Plan Act,* the OEB will determine the adjustment to be made to the GA charge on eligible non-RPP consumers' bills, effective July 1st. Electricity vendors will be expected to ensure the adjustment is reflected on their customers' bills as soon as possible, and to make retroactive payments where necessary.

- Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*:
  - The Ministry of Energy is seeking LRC approval to amend O.Reg. 280/14 in response to the *OFHPA* and related regulations.
  - The proposed amendments would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its *OFHPA* activities, including the funding, borrowing and financial arrangements contemplated under the *OFHPA*. The IESO would be responsible for selling specified portions of the regulatory asset to OPG's financing entities, and to fund the IESO monthly deferrals which are to commence July 1, 2017, as provided for under section 23 of the OFHPA.
  - The additional authority set out in the proposed amendments to O.Reg. 280/14 would enable IESO to borrow amounts to fund the above-noted deferrals related to GA refinancing.

CONFIDENTIAL

- IESO would be expected to amend its Statement of Borrowing in a manner consistent with the amended regulation, once approved.

- On June 27, 2017, to further support implementation of OFHP, LRC / Cabinet will review a new Regulation ("General Regulation") to be made under the *Ontario Fair Hydro Plan Act*, 2017.

2) Social Programs:

Program Design

Rural or Remote Rate Protection (RRRP)

The legacy RRRP program remains intact with no changes made to the amount of the rate protection or the eligible LDCs. The legislation provides the authority for the government to prescribe classes of customers, customers or LDCs that would be funded through the tax-base rather than the rate-base.

The government will identify Hydro One R2 customers, by regulation, as having RRRP funded through appropriated funds.

Distribution Rate Protection

The new Distribution Rate Protection program, to complement the Rural or Remote Electricity Rate Protection (RRRP) program, was established through legislative amendments under the *Fair Hydro Act, 2017*. Eligible residential customers would have their monthly base distribution charges held to a maximum amount.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

Customers of the following LDCs are eligible for the enhanced protection: Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

On-Reserve First Nations Delivery Credit

The regulation prescribes eligibility to all First Nation residential rate class customers living on-reserve. First Nations customers are ~~p~~prescribed in regulation as account holders who are members of a band as defined by the federal *Indian Act* ~~(Canada)~~.

CONFIDENTIAL

There are 11 LDCs identified by the OEB that provide service to on-reserve customers affected by the program. These include: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Remote Communities, PUC(Sault Ste. Marie), Thunder Bay. In total, about 21,500 residential customers may be eligible.

The credit will automatically apply to the bills of those customers who have already registered with their LDC as HST exempt. Customers who have yet to register with their LDC will need to identify themselves to their LDC in order to receive the benefit.

The Ministry of Energy, in collaboration with the Chiefs of Ontario (COO), has crafted the policy in a manner which best reflects the needs and wishes of Ontario's many varied indigenous communities. COO has also developed a Communiqué to send out to all First Nation Chiefs to encourage them to make sure their members are receiving the HST exemption from their LDC. COO will finalize the Communiqué and release in June.

Roles and Responsibilities

Rural or Remote Rate Protection

The roles and responsibilities of the ~~Board~~ OEB remains the same in terms of administering the legacy RRRP program. ENERGY will now be responsible for appropriating the funds from the legislature on an annual basis to cover the costs faced by those consumers or classes of consumers prescribed under regulation (namely Hydro One R2 customers).

Enhanced RRRP or Distribution Rate Protection

The ~~Board~~ OEB would be empowered, by regulation, to set the maximum monthly base distribution charge, based on prescribed criteria.

ENERGY would ~~once again need to appropriate~~be responsible for appropriating money from the legislature to cover the costs of administering the program.

On-Reserve First Nations Delivery Credit

ENERGY would be responsible for appropriating the money from the legislature to cover the costs of administering the credit to on-reserve customers.

CONFIDENTIAL

4.0 BACKGROUND

Legislation to Implement Ontario's Fair Hydro Plan

On May 11, 2017, the government introduced Bill 132, *Fair Hydro Act, 2017* (FHA) which is comprised of two Schedules:

- Schedule 1 – is the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and related amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998* (OEBA); and

- Schedule 2 – includes the electricity social program-related amendments to the *Ontario Energy Board Act, 1998.*

On May 31, 2017, the Bill passed third reading and received Royal Assent on June 1, 2017.

Legislation to Implement GA Refinancing

To enable implementation of GA refinancing and mitigate financing, accounting and legal risks, the *Ontario Fair Hydro Plan Act, 2017* outlines:

- Roles and responsibilities for the OEB, IESO, OPG and the Province;

- A detailed Preamble, Purpose and Definitions;

- Details with respect to Fair Adjustment, Clean Energy Adjustment, Implementation (i.e., Financial Services Manager, Fair Allocation Amount, Financing Plan), Regulatory Asset and Investment Asset;

- Scope of provincial undertaking and enabling the Province to provide guarantees and indemnities to back stop that undertaking; and

- Amendments to other acts (i.e., *Electricity Act* and *Ontario Energy Board)*.

The legislation defines the mechanisms and framework that would achieve the refinancing of the GA.

The Ministry has worked closely with key ministries (i.e., TBS-OPCD, MOF-OFA/IGS, MAG, CO), OEB, IESO, OPG and their independent advisors and third party financing in the development of the legislation.

To support the implementation of GA refinancing under the *Fair Hydro Act, 2017*, the Ministry has developed supporting regulations:

CONFIDENTIAL

- Ontario Regulation made Under Part II of the *Fair Hydro Act, 2017* ("the Part II Reg.") – sets out in detail the methodology that the Ontario Energy Board will use to make determinations under the *OFHPA*.

- Amendment to O. Reg. 280/14 to be made under the *Electricity Act, 1998* ("IESO Eligible Investments and Borrowing Reg.") – provides IESO with the necessary authority related to its OFHPA activities including the funding, borrowing and financial arrangements contemplated under the *OFHPA*.

- Ontario Regulation to be made under the *Fair Hydro Act, 2017* ("the General Reg.") – will provide for the implementation of the roles and responsibilities of the Financial Services Manager and IESO in relation to the refinancing of GA. Note: The General Reg. will be brought forward to LRC/Cabinet on June 27, 2017.

Social Programs

Rural or Remote Rate Protection (RRRP)

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are approximately 330,000 R2 customers across the Province. These customers have some of the highest distribution costs in the Province.

- From 2001-2016 the program provided $125.4 million annually to help defray these costs.

- In the 2016 Speech from the Throne, this funding was expanded by $116.4 million to a total of $241.6 million.

- As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.

- These customers still have high distribution costs and are often faced with significantly higher than average bills.

The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

RRRP is currently funded by rate-payers. All IESO-grid connected consumers pay a charge of $0.0021 per kilowatt-hour to off-set the costs of delivering RRRP. For an average residential customer this amounts to ~$1.60 per month. This charge will be substantially reduced once the R2 portion of the RRRP program is funded through the tax-base, rather than rate payers.

CONFIDENTIAL

Distribution Rate Protection (DRP)

RRRP is targeted to customers based on geographic and density-based criteria. Many customers, including those in rural areas, face higher than average distribution costs, but are not eligible to receive rate protection under RRRP.

Legislative amendments under the Fair Hydro Act broaden rate protection by creating a new distribution rate protection program to complement the Rural or Remote Electricity Rate Protection program.

Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution costs. Roughly 800,000 customers would receive benefits from the broadened rate protection.

- Providing distribution rate protection to a broader number of consumers would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.

Mitigation for all electricity consumers would be provided by moving the majority of the existing RRRP program costs to the tax-base and funding all of the broadened distribution rate protection enhancements from the tax-base.

On-Reserve First Nations Delivery Credit

On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

ENERGY has a number of Bilateral Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.

The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).

The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.

5.0 TIMING

CONFIDENTIAL

Under the *OFHPA*, a portion of the GA will be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

On April 20, 2017, OEB announced that it adjusted the RPP rates effective May 1, 2017 to account for its estimation of the impact of a portion of GA Refinancing.

If the regulation is approved, the OEB intends to release new RPP rates effective July 1, 2017 that will include the full impact of OFHP as determined under the Part II adjustments.

The OEB must make a determination of RPP rates no later than 15 days from June 2nd, 2017, when the legislation received Royal Assent. As stipulated in the Act, these RPP rates would come into effect as of July 1, 2017.

For consumers eligible for GA refinancing that are not on the RPP, adjustments would be made on their electricity consumption from July 1, 2017 onwards as necessary.

6.0 FINANCIAL IMPACT

1) GA Refinancing:

The Part II regulation lays out the methodology for the OEB to calculate electricity rates for consumers eligible for GA refinancing. As such it has not financial impact.

2) Social Programs:

As reported in the TB/MBC submission of May 9, 2017 and as approved in the TB/MBC submission of March 1, 2017 and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31 2018 are as follows:

Program	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344,000,000
On-Reserve First Nations Delivery Credit	15,000,000

The cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution

CONFIDENTIAL

company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board. Cost forecasts are subject to some uncertainty surrounding consumer uptake, future consumption levels, and future rates as set by the OEB.

Subsequent to the development of the above financial impacts for RRRP/DRP, Hydro One Networks Inc. submitted a distribution rate application to the OEB for rates effective 2018-2022. ENERGY is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application. Note that final Hydro One rates are not expected until 2018, as the application is subject the OEB's rate setting process and the review is expected to take at least 8 months.

Per the Regulations, the Ministry has the authority to request social program costs forecasts from the OEB.

7.0 STAKEHOLDER ANALYSIS

Stakeholder	Comments
Eligible Electricity Consumers	• As a result of OFHP, eligible electricity consumers will welcome the immediate reduction in electricity bills that they will experience in the short to medium term.
Electricity Agencies	• In the development of legislation to enable implementation of OFHP, the Ministry has been working closely with OEB, IESO and OPG and their independent advisors.
Local Distribution Companies (LDCs)	• The Ministry hosted LDC workshop sessions on March 16, April 19, and May 17, 2017. Nearly 40 LDC representatives attended in person or by phone and were briefed on OFHP, including implementation. The Ministry has also held separate engagements with LDCs in particular to the social programs.
Chief of Ontario (COO)	• COO have publicly supported the introduction of the First Nations Delivery Credit. • ENERGY met with COO on April 26, May 23, and June 1 to discuss implementation.

8.0 RISK ASSESSMENT AND MITIGATION – UPDATES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
1) Global Adjustment (GA) Refinancing			

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **<u>Update:</u>** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-party financial advisors in advance of and throughout the drafting process to help to

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:**

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			• The legislation was developed with input of third-party financiers (i.e., dealers) to ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset,

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some

CONFIDENTIAL

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
			people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

9.0 JURISDICTIONAL ANALYSIS

GA Refinancing approached outlined in the legislation is modelled on frameworks used in the United States (e.g., Duke Energy), where utility debt is financed by selling it to investors with recovery from ratepayers over time.

The Ministry conducted no jurisdictional analysis related to the expansion of social program funding as the structure of Ontario's electricity sector, and thus the delivery of these benefits, is unique.

10.0 PERFORMANCE MEASURES

The proposed new regulation under *OFHPA* outlines the methodology that the OEB will use in applying *OFHPA* reductions to eligible consumers who participate in the OEB's Regulated Rate Plan (RPP) and non-regulated consumers who are eligible for GA refinancing under *OFHPA*.

The proposed amendments to O. Reg. 280/10 would provide the Independent Electricity System Operator (IESO) with the necessary authority related to its OFHPA activities, including the funding, borrowing and financial arrangements contemplated under the OFHPA

With respect to the social programs, performance will be evaluated by the amount of funding flowed to consumers in order to reduce their electricity bills. This is the primary success metric for these programs. In future report backs, the Ministry will include the presentation of data collected through the IESO reporting portals to demonstrate the impact of these programs on customers. The Ministry will work with the OEB over the coming years to ensure that data is available to determine if the programs continue to provide meaningful rate relief.

The Ministry and the OEB have engaged with the Behavioral Insights Office at the TBS to consider ways to increase program participation. Discussions are ongoing. Energy is also working with the Ministry of Community and Social

CONFIDENTIAL

Services on expanding program participation. Regulatory amendments needed to implement those policy objectives will be brought forward to the next LRC.

Ontario's Fair Hydro Plan also included a commitment to work with the OEB to drive distribution sector efficiencies within LDCs over the long-term. The Ministry is developing its policy approach to achieving these efficiencies, including potentially through LDC consolidation, through the Long-Term Energy Planning process.

12.0 RECOMMENDATION

1) The Ministry of Energy is reporting back to the Treasury Board/Management Board of Cabinet (TB/MBC) on the following:

    i. Implementation of Global Adjustment (GA) Refinancing; and

    ii. Delivery of Electricity Social Programs (i.e., Rural or Remote Rate Protection, and First Nations On-Reserve Delivery Credit).

CONFIDENTIAL

Subject: FW: Revised Electricity Assessment Note

Hi Everyone – Please see the attached draft assessment note for the electricity reg's tracking to TB/MBC tomorrow. I'd appreciate any input or feedback by first thing tomorrow. As you can see in the below chain, we've also simultaneously shared the latest version with senior management so the note is subject to change.

OPCD/TBS Legal – We've left placeholders in the risk section for accounting and legal risks. I am hoping that risks from previous assessment notes can be re-purposed and used for this note (assuming they haven't been mitigated). Frankly, I just didn't know which ones were the most important to flag. Please let me know if you have any concerns.

Thanks and happy to discuss.

Chris

Subject: Revised Electricity Assessment Note

Hi Everyone – Please see the attached revised electricity note taking into consideration the conversation at today's re-group.

For the financial risks, we were unable to locate any material that spoke about the source of data or assumptions that supports the voted appropriation estimates for the social programs. As such, we haven't been able to address Karen's concern on documenting the assumptions behind the financials. We'll continue to look.

Please let me know if Maria, Cindy or Karen have any further comments on the material. Also, sharing the latest draft of the submission with tracked changes from the version shared this morning.

Thanks,
Chris Skubel

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.
^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Commented [npp1]: For an interim period and/or as required? The role of the OPGTrust may not be fully presented otherwise.

Commented [npp2]: •Consider whether additional details are necessary to more clearly present the transaction overview:
•The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a Regulatory Asset.
–OEB would determine rates to allow IESO to recover under-collection recorded in its variance account in the event the under-collection is not sold.
IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust

Investment Asset
•The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an "Investment Asset".
–The legislation establishes property rights for the Investment Asset such as the right to collect principal and interest and financing costs in the form of the clean energy adjustment from eligible consumers.
•The Investment Asset may in turn be sold to other investors or group of investors.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	359	492	504	517

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

Commented [npp3]: For purposes of…have been provided?

Commented [npp4]: Details in the regulations will impact the final accounting analysis (IESO ability to recognize a rate regulated asset, control of OPG Trust by OPG, etc.)

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

The fiscal impact associated with the Fair Hydro Plan will be determined by how the series of complex transactions are accounted for on the Province's Consolidated Financial Statements which are prepared in accordance with public sector accounting standards established by CPA Canada. A number of details yet to be finalized through the regulations and various commercial agreements will impact the final accounting analysis.

It is anticipated that both the IESO's and OPG's external auditors will provide independent accounting opinions on the appropriate accounting for elements of the FHP structure related to each entity, respectively. Based on the audited financial results for these organizations, supported by the anticipated accounting opinions, the Office of the Provincial Controller will prepare the Province's consolidated financial statements.

At this time, the Auditor General has voiced several concerns regarding the planned accounting treatment for the Fair Hydro Plan as related specifically to the Global Adjustment component which is expected to impact the Province's financial results for the first time in 2017/18. The Auditor General has also publicly communicated her opposition to a change in the IESO's accounting policy to reflect rate regulated balances on its books. The Province supports the IESO's accounting treatment as more fairly presenting the economic substance of the entity's market-related activities.

The Auditor is currently reviewing the Province's accounting analysis related to the Affordability Fund which reflects a $100M transfer payment to be reflected in the Province's 2016/17 Public Accounts.

If the Auditor General does not concur with the Province's accounting treatment, including the change in accounting treatment by the IESO, she may qualify her audit opinion on the Provinces' financial statements in the Public Accounts.

- ~~*Placeholder for accounting issues… [OPCD]*~~

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Name of analyst:	Chris Skubel/ Afshin Malekzadeh	**Phone number:**	416-327-2151
Date:	June 13, 2017	**Log number:**	
Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **Update:** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **<u>Update:</u>** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **<u>Update:</u>** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset. • In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **<u>Update:</u>** • The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **<u>Update:</u>** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be ~~created~~ increated in regulation to ensure that all parties are aligned in the yearly forecasting and costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

Version 4

This confidential draft document is provided for discussion purposes only. It should not be construed as representing the position adopted by the Government of Ontario on any of the topics included or not included in this document. The notes included in this document are intended only to help facilitate a discussion of the topics to which they relate. Any potential legislation is subject to the approval of the Ontario Legislature.

A proposal to create Legislation.

An Act to provide for the fair allocation of costs of electricity over time, if enacted

A proposal to create Legislation.

An Act to provide for the fair allocation of costs of electricity over time, if enacted

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL
TO ANY FINAL BILL PRIOR TO INTRODUCTION.

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects.[1] These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to consumers today. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of today's consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations of consumers.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that consumers in the future pay their fair share for the benefits that they receive from the investments already made.

PART I
GENERAL

Interpretation
Definitions

1xx. (1) In this Act,

"Board" means the Ontario Energy Board; ("French")

"clean energy adjustment" means the amount determined under section 10xx; ("French")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to the specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("French")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the estimated amounts to be paid or reflected by the IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by the IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed, or

(vi) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(b) such other estimated costs as may be prescribed; ("French")

"clean energy initiative" means the policies of the Government of Ontario related to,

(a) fostering the growth of and investment in clean and renewable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies, and

(c) promoting conservation and demand management; ("French")

"electricity vendor"[2] means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) the IESO in circumstances where the IESO directly invoices a specified consumer, or

(d) such other person as may be prescribed; ("French")

"fair allocation amount" means the amount determined in under section 15xx;

"financing entity" means an entity established or caused to be established under subsection 17xx (3); ("French")

"Financial Services Manager" means the Financial Services Manager appointed under section 13xx; ("French")

"Financing Plan" means the plan prepared under section 16xx, as amended from time to time in accordance with this Act; ("French")

"funding obligation" means,

(a) a payment obligation incurred in connection with the transfer of a regulatory asset or the refinancing of an existing funding obligation, or

(b) a payment obligation that meets such other criteria as may be prescribed; ("French")

[2] FLS - this is similar to the definition of "electricity vendor" in the Ontario Rebate for Electricity Consumers Act, 2016

"IESO" means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; ("SIERE")

"IESO funding shortfall" means the amount determined under section 20xx; ("French")

"investment asset" means the rights and interests described in section 22xx; ("French")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("French")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("French")

"invoice amount" means, in respect of an invoice period, the sum of the amounts set out in subsection (2.1) in relation to the provision of electricity in Ontario to a specified consumer; ("French")

"invoice period" means the period in respect of which an invoice amount applies, as specified on an invoice issued by an electricity vendor; ("French")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system; ("French")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("French")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

(a) the period beginning on May 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on April 30, 2047,

(i) every six-month period following the period mentioned in clause (a); or

(ii) any period shorter than six months, as may be prescribed; ("French")

"refinancing" means, subject to the regulations, a redemption, repayment or repurchase of a funding obligation; ("French")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right and interest established under section 21xx; ("French")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2); or

(b) such other person as may be prescribed; ("French")

"sub-meter customer" means a person who is supplied electricity by a specified consumer, if an invoice for the electricity is issued to the person by the specified consumer, by an agent of the specified consumer or by a unit sub-meter provider providing unit sub-metering for the specified consumer; ("French")

"transfer" means [TBD]; ("French")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("fournisseur de compteurs divisionnaires d'unité")

Specified consumers

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of 50 kilowatts or less, or such other amount as may be prescribed.

2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.

3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or the has had the obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.

4. The person's account with the electricity vendor relates to,

    i. a dwelling,

    ii. a property within the meaning of the *Condominium Act, 1998*,

    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.

5. The person satisfies such criteria as may be prescribed.

Invoice amount

(2.1) Subject to the regulations, the invoice amount for a specified consumer in respect of an invoice period includes the following amounts:

1. In circumstances where the electricity is provided by a licensed distributor or a licensed retailer, the following amounts in respect of the invoice period:

    i. The commodity price of the electricity used.

    ii. The rates and charges set out in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998* and in effect on April 30, 2017.

    iii. Any adjustment on the invoice required under section 25.33 of the *Electricity Act, 1998*.

iv. The amount of any harmonized sales tax payable by the consumer under Part IX of the *Excise Tax Act* (Canada) in respect of the amounts mentioned in subparagraphs i, ii and iii;

v. Any other amounts as may be prescribed.

2. In circumstances where the electricity is provided by the IESO or other prescribed entity, such amounts as may be prescribed in respect of the invoice period. ("French")

Same, exclusions

(2.2) Subject to the regulations, an invoice amount does not include any of the following amounts:

1. The balance of any amounts carried forward from previous invoices in respect of previous invoice periods.

2. Penalties or interest.

3. Charges that do not relate to the use of electricity.

4. Any of the following charges that may be set out in an order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998*:

   i. A fixed monthly service charge payable by a generation facility within the meaning of section 56 of the *Ontario Energy Board Act, 1998* and classified as "microFIT".

   ii. A charge labelled as a "specific service charge" or "retail service charge".

   iii. A rate rider [of the prescribed type or class].

5. Any other prescribed amounts.

Effect of invalidity, etc.[3]

2xx. (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

[3] FLS: this is from the *Climate Change Mitigation and Low-carbon Economy Act, 2016*

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred under this Act before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purpose

3xx. (1) The purposes of this Act are,[4]

(a) to ensure that clean energy costs are fairly allocated among present and future specified consumers and reflect the fair allocation; and

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province.

Crown bound

4xx. This Act binds the Crown.

Protection and assurances

Prohibition

5xx. (1) The Crown shall not do anything that would,

(a) hinder, delay, impair or prejudice the charging, collection or remittance of amounts in respect of the clean energy adjustment;

(b) except as expressly permitted by this Act, reduce the clean energy adjustment determined under this Act or lower the priority of the clean energy adjustment over other debts; or

(c) adversely affect an investment asset or a funding obligation.

Clarification with respect to regulations

(2) For greater certainty, the things prohibited under subsection (1) include the making or approving of a regulation under this Act.

Agreements for compensation

(3) The Minister may, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of IESO or electricity vendors under this Act or similar transactions.

[4] FLS: Please see the *Electricity Act, 1998* for much of the wording proposed in this section.

Guarantee, indemnification

(4) The Lieutenant Governor in Council may by order,

(a) authorize the Minister of Finance, on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions and the amount on which the guarantee or indemnity will be given;

(b) impose terms and conditions, as it considers advisable, on which the Minister of Finance may, on behalf of the Province, agree to guarantee or indemnify as described in subclause (a) (ii); and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT OF ELECTRICITY RATES

Definitions

6xx. In this Part,

"effective date" means the date determined under section 6.5xx; ("French")

"RPP rate" means the rate determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*, which rate is commonly referred to as the Regulated Price Plan"; ("French")

"specified RPP consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998* for the purposes of subsection 79.16 (1) of that Act.

2. The consumer is subject to the RPP rate. ("French")

Specified RPP consumer, first fair adjustment

6.1xx (1) The rate for electricity payable by a specified RPP consumer for the period beginning on the effective date and ending on April 30, 2018 is the rate required for a specified RPP consumer who meets the prescribed criteria to receive a monthly invoice

amount that is 25 per cent lower than the monthly invoice amount for that consumer under the comparison rate described in subsection (2).

Comparison rate

(2) The comparison rate is the rate that would be effective May 1, 2017, determined by the Board solely using the method prescribed by the regulations made under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*.

Same

(3) For the purposes of subsection (2), the applicable method is the method on the day this section comes into force.

Specified consumers (non-RPP), first fair adjustment

6.2xx The rate for electricity payable by a specified consumer who is not a specified RPP consumer for the period beginning on the effective date and ending on April 30, 2018 is the rate that would be necessary in order for [the monthly global adjustment rate] in respect of a specified consumer who is not a specified RPP consumer (RPP) and who meets the prescribed criteria to be reduced by the same amount as the difference between the comparison rate referred to in subsection 6.1xx (2) and the rate determined under subsection 6.1xx (1).

Determination by Board

6.3xx The Board shall determine the rates mentioned in sections 6.1xx and 6.2xx no later than seven business days after the day this section receives Royal Assent.

Implementation of rates

6.4xx Each electricity vendor, [specified consumer who provides electricity to a sub-meter customer and unit sub-meter provider who provides unit sub-metering for a specified consumer] shall, no later than seven business days after the day on which the Board determines the rates under section 6.3xx, adapt is billing practices and invoices to reflect the new rates.

Effective date

6.5xx The rates determined under section 6.3xx are effective on the earlier of the following days:

1. The first day of the month immediately following the last day of the seven-day period referred to in section 6.4xx.

2. July 1, 2017.

Transition

6.6xx (1) This section applies if an electricity vendor, specified consumer or unit sub-meter provider is unable to comply with section 6.4xx for one of the following reasons:

1. There are fewer than seven days between the day of the Board's determination of rates under section 6.3xx and the effective date.

2. Technical or operational reasons.

Same

(2) In the circumstances described in subsection (1), the electricity vendor, specified consumer or unit sub-meter provider shall,

(a) adapt its invoices as soon as possible and, in any event, no later than August 1, 2017; and

(b) ensure that any specified consumer or sub-meter customer invoiced at a rate higher than the applicable rate determined by the Board receives the difference between the rate shown on their invoice and the applicable rate as a lump sum credit on the first invoice issued after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Subsequent fair adjustments

7xx. The Lieutenant Governor in Council may make regulations prescribing the methodology to be applied by the Board to determine rates for electricity payable by specified consumers and sub-meter customers during the period beginning on May 1, 2018 and ending on April 30, 2022.

Sub-meter customers

7.1xx A specified consumer who provides electricity to a sub-meter customer and any unit sub-meter provider who provides unit sub-metering for the specified consumer shall ensure that the rate payable by each sub-meter customer is the applicable rate determined under this Part.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

8xx. (1) Upon receipt of an invoice that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor, as agent of the investment interest owners, in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Same

(2) For greater certainty, subsection (1) applies regardless of,

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was not in material conformity with the Financing Plan.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Recovery from sub-meter consumers

(6) A specified consumer who provides electricity to a sub-meter customer may recover amounts in respect of the clean energy adjustment payable under this section from each sub-meter customer on a pro rata basis.

Irrevocability of amount

9xx. (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or by passed.

Exception

(2) Subsection (1) does not apply to the extent that there is a clerical, typographical or calculation-related error by the electricity vendor.

Determination of clean energy adjustment
Financial Services Manager to determine

10xx. (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by adding the estimated finance amount in respect of the reference period to the true up amount in respect of the reference period.

Estimated finance amount, true up amount

(2) The estimated finance amount and the true up amount shall be determined in accordance with the regulations.

Regulations re true up amount

(3) The regulations under subsection (2) shall have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.

2. The method for determining the true up amount should take into account historical and reasonably foreseeable,

    i. differences between the estimated and actual finance amount for the immediately preceding reference period,

    ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and

    ii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(4) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment and such other information related to the determination of the clean energy adjustment as may be prescribed.

Board to determine rates

(5) The Board shall, in accordance with the regulations, determine the rate at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

11xx. (2) The IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

Account

(3) All of the following amounts received by the IESO shall, until paid to or for the benefit of the investment interest owner in accordance with subsection (5), be deposited promptly into an account established for the purposes of receiving those amounts:

1. Amounts described in subsection 11xx (2).

2. Payments made by specified consumers directly to the IESO as electricity vendor under subsection 8xx (1).

Same, held in trust

(4) All amounts received by the IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owner, be received and held in trust by the IESO for the investment interest owners or a secured party to whom a security interest in an investment interest is granted under this Act.

IESO to remit

(5) The IESO shall remit amounts received by it in respect of the clean energy adjustment to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

12xx. (1) Each electricity vendor shall issue an invoice to each of its specified consumers for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 10xx (2) and in accordance with the regulations.

Electricity vendor to report

(1.1) Each electricity vendor shall, in accordance with the regulations, promptly report to the IESO the total amount invoiced to its specified consumers in respect of the clean energy adjustment, the amount collected and such further information as may be prescribed.

Electricity vendor to collect

(2) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same period.

Held in trust

(4) Payments received by an electricity vendor from or on behalf of specified consumers shall, until paid to or for the benefit of the investment interest owner in accordance with subsection (5), be received by and held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(5) Each electricity vendor shall remit amounts described in subsection (5) to the IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

13xx. (1) Subject to subsection (2), Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Replacement

(2) The Minister may terminate an appointment of a Financial Services Manager and may, in accordance with the regulations, appoint a new person or entity as the Financial Services Manager.

Duties and powers

14xx. (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Same

(2) The administration of the investment asset may include the following:

1. Providing information, in accordance with the regulations, to the Board in respect of funding obligations and the determination of the clean energy adjustment in accordance with section 10xx.

2. Providing information to the IESO in respect of obligations under Part III.

3. Such other matters as may be prescribed.

Review of costs

(3) The Board shall review the administrative costs of the Financial Services Manager in accordance with the regulations.

FAIR ALLOCATION AMOUNT

Financial Services Manager to calculate fair allocation amount

15xx. (1) The Financial Services Manager shall calculate a fair allocation amount in respect of each reference period, having regard to the need to align that amount with the finance amount payable during the reference period, for the purpose of fairly measuring and allocating the estimated clean energy costs and estimated clean energy benefits among the specified consumers in respect of the reference period.

Timing of calculation

(1.1) The Financial Services Manager shall calculate a fair allocation amount in respect of each reference period before any funding obligation is incurred [by a financing entity during the reference period].

Amount

(1.2) The fair allocation amount in respect of a reference period is the sum of the following amounts:

1. The amount, if any, by which, if this Act had not been enacted, the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period would have exceeded the estimated amount of the adjustments provided for under section 25.33 of the *Electricity Act, 1998* and the regulations made under that provision that would have been borne by the specified consumers in respect of clean energy costs for the reference period.

2. A portion of the value of any fair adjustment that has been made under Part II in respect of any previous reference period.

Principles

(2) In calculating the estimated clean energy costs and estimated clean energy benefits to be allocated to specified consumers in respect of a reference period, the Financial Services Manager shall [comply with the regulations and] have regard to the following principles:

1. Clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the clean energy benefits attributed to the specified consumers in respect of the reference period.

2. The clean energy benefits allocated to the specified consumers in respect of a reference period should be determined in accordance with the regulations.

3. The fair allocation calculation should include reasonable assumptions regarding the following:

    i. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.

    ii. The expected number of specified consumers in respect of each reference period.

    iii. The expected electricity consumption rates in respect of each reference period.

Method

(3) The Financial Services Manager shall calculate a fair allocation amount in accordance with such methods as the Financial Services Manager considers appropriate, having regard to the requirements of this Act.

Notification to Minister

(4) The Financial Services Manager shall notify the Minister of the methods used to calculate the fair allocation amount and any changes to those methods.

Effective date

(6) The fair allocation calculation or an amendment to the fair allocation calculation takes effect on the day that is 30 days after the fair allocation calculation or the amendment, as the case may be, is provided to the Minister in writing.

Publication

(7) The Minister shall ensure that the fair allocation calculation and any amendments to it are made available to the public in a manner that the Minister considers appropriate.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

16xx. (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring an investment interest in accordance with this Act.

Plan to be provided to Minister

(1.1) The Financial Services Manager shall provide the Financing Plan to the Minister.

Principles

(2) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Any incurrence of a funding obligation should reasonably align with the estimated finance amount, as determined in accordance with the regulations, that would, subject to any refinancing, become due and payable during a reference period with the fair allocation amount determined in respect of the reference period under this Part as of the time of the incurrence, in each case after reducing the fair allocation calculation by the amount of any fair adjustment in respect of the reference period.

2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.

3. Reasonable assumptions should be made regarding such matters as may be prescribed.

Limitation, first five year period

(4) In respect of each reference period from May 1, 2017 to April 30, 2022, no funding obligation shall be incurred that would become payable during the reference period and result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

(a) no fair adjustment has been made under Part II in respect of the reference period; or

(b) if a fair adjustment has been made under Part II in respect of the reference period, the funding obligations incurred would not be payable during the reference period in an amount that exceeds the [difference between the fair allocation amount in respect of the reference period and the amount of the fair adjustment in respect of the reference period].

Other reports

(3.1) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Confidentiality

(5) The following are deemed to be records subject to clauses 18 (1) (c) and (d) of the *Freedom of Information and Protection of Privacy Act*:

1. The Financing Plan.

2. Reports referred to in subsection (3.1).

3. Any other document that would reveal information contained in the Financing Plan or the reports.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this section to the Financing Plan is deemed to be a reference to the plan as amended.

Implementation of Financing Plan

17xx. (1) The Financial Services Manager shall incur funding obligations in material conformity with the applicable Financing Plan.

Same

(2) For greater certainty, subsection 17xx (5) applies despite the failure of the Financial Services Manager to comply with subsection (1).

Financing entities

(3) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3.1) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and [the fair allocation amount].

PART V
THE REGULATORY ASSET

IESO funding shortfall

20xx. (1) The IESO funding shortfall for each month shall be determined in accordance with the regulations.

Electricity vendors to provide information

(2) Electricity vendors shall provide to IESO such information as IESO may reasonably request for the purposes of determining the IESO shortfall under subsection (1) and such further information as may be prescribed.

Same

(3) IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

20.1xx (1) The IESO shall establish and maintain a variance account for the purposes of this section.

Recording in variance account

(2) The IESO shall record the following in the variance account:

1. The amount of the IESO funding shortfall for each month.

2. All payments received by the IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.

3. Such other adjustments as may be prescribed.

Recording determinative

(3) Subject to any finding of [manifest error], a recording by the IESO in the variance account of the balance is, as of the time of the recording, determinative of the balance at the time.

Rights of investment interest owner

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights of the investment interest owner acquired under the transfer.

Regulatory asset established

21xx. (1) The IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Limitation

(2) Despite subsection (1), the IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2022.[is this wrt inflation limit?]

Board to set rates

(3) The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

Same, limitations

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Transfer of regulatory asset

22xx. (1) The IESO may from time to time transfer all or a portion of the regulatory asset to any financing entity.

Same

(2) Upon receipt by IESO of payment in consideration of a transfer of all or a portion of the regulatory asset, the transfer shall be valid and enforceable against the IESO and the IESO shall retain no further right, title or interest in, or any obligations in respect of, the regulatory asset or in the investment asset created by the transfer.

Same

(3) Upon transfer, the financing entity acquires an investment interest and becomes an investment asset owner.

Validity of transfer

23xx. (1) A transfer of a regulatory asset under this Act is a valid and enforceable sale and absolute transfer to the investment interest owner of the regulatory asset.

Same

(2) Without limiting subsection (1), any transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of IESO's right to recover the IESO funding shortfall, and not merely as a security interest, and upon the absolute transfer the transferor shall retain no right, title or interest in the regulatory asset, including all rights to recover the IESO funding shortfall.

Deemed perfection, etc.

(3) At the time a transfer of a regulatory asset is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Effect of transfer

24xx. (1) The first transfer of the regulatory asset or a portion of it creates the investment asset.

Same

(2) Upon any transfer of all or a portion of the regulatory asset to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim, and the financing entity becomes an investment interest owner and acquires an investment interest**.**

Investment asset established

25xx. (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right to impose, invoice, collect, receive and recover amounts in respect of the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.**[what does this mean?]**

2. The right to receive, collect and recover amounts in respect of the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors or other prescribed parties.

3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for amounts in respect of the clean energy adjustment.

5. The right to enforce the duties and obligations under this Act of each electricity vendor to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by an electricity vendor to recover payment of amounts in respect of the clean energy adjustment.

6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest.

7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Not affected by failure to impose etc. clean energy adjustment

(1.1) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(2) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, an agent of the investment interest owner or an owner of distribution system assets in the Province;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(3) The rights of the investment asset owner to collect and enforce its rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(4) If the investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest owner collectively and in coordination with all other investment interest owners, and any

agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owner as a collective in accordance with its terms.

Transfer of investment interest

26xx. An investment interest owner may transfer all or a portion of its rights and interests in an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

27xx. (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the investment asset owner a valid property right and interest in, to and under the applicable investment interest in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest, subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

28xx. (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that it is intangible personal property, except as otherwise provided for in this section, and any granting of a security interest by the investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the applicable investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may subsequently attach to the property rights and interests in the investment interest subject to the security interest, subject to the written consent of the person to whom the security interest has been granted.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any ccount of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to the IESO.

Definition

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act.*

PART VI
MISCELLANEOUS

Appointment of agent, invoicing or collection

29xx. If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity

vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Not Crown agent

30xx. For greater certainty, no agent appointed under this Act is an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Sequestration

31xx. (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections and remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment, including defaults on any required remittance of amounts in respect of the clean energy adjustment, collections or remittances.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

32xx. The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to the transfer of an interest or right or creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section x shall be the laws of the Province.

Conflict

33xx. The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

34xx. Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required to be taken under the Financing Plan or in relation to the determination of the fair allocation amount.

Immunity

35xx. (1) No action or other proceeding for damages shall be instituted against any employee of the Province, IESO, OPG or OEB for any act done in good faith in the execution or intended execution of any duty or authority under this Act or for any alleged neglect or default in the execution in good faith of any duty or authority under this Act.

Same

(2) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act*, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.

References in marketing materials and offering documents

36xx. No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5xx unless the prescribed requirements, if any, are satisfied.

Non-application, Financial Administration Act, s. 28[5]

37xx. Section 28 of the *Financial Administration Act* does not apply with respect to any transaction or agreement or undertaking required, permitted, contemplated or authorized, directly or indirectly, under this Act.

Regulations

38xx. The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. [6]Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.

2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.

x. Prescribing types of payment obligations that constitute funding obligations;

x. governing the calculation [true-up amount] and how the amount is to be applied to the clean energy adjustment;

x. governing the inclusion of information under this Act on invoices, which may include requiring notice to be provided by electricity vendors to specified persons regarding the adjustments;

x. governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on invoices issued to specified consumers, including the form that the information must take and the form of

[5] FLS - see s. 51 of the Electricity Act, 1998
[6] FLS - see s. 78 (1) of the Climate Change Mitigation and Low-carbon Economy Act, 2016 - paras. 1 and 2.

the invoices and any notice to be provided to the specified consumer under this Act[7];

x. prescribing the time within which any action required by this Act may be required to be done;

x. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

PART VII[8]
AMENDMENTS TO OTHER ACTS

ELECTRICITY ACT, 1998

200x. (1) Subsection 6 (1) of the *Electricity Act, 1998* is amended by adding the following clauses:

(q.0.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*;

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and to engage in related settlement activities;

(iii) engaging in activities related to the creation, transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(iv) incurring liabilities in relation to the regulatory asset

(v) transferring the regulatory asset for consideration;

(vi) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

[7] FLS - see *OEBA s.79.17 and 88(1)(z.11) and (z.12)*
[8] FLS: These amendments are drawn from previous drafting contained in gov2016.146.e05 (which was drafted as amendments to the EA, 1998).

200.1xx (1) Subsection 25.33 (1) of the Act is amended by striking out "and" at the end of clause (a) and by adding the following clauses:

(c) amounts paid to or received from a [prescribed] financial services entity or [a financing entity prescribed under] the *Ontario Fair Hydro Plan Act, 2017* and any related amounts; and

(d) amounts collected from consumers who are [specified consumers within the meaning of] the *Ontario Fair Hydro Plan Act, 2017* in respect of the clean energy adjustment and any related amounts.

(1.1) Subsection 25.33 (2) of the Act is amended by striking out "and" at the end of clause (a) and by adding the following clauses:

(c) amounts paid to or received from a [prescribed] financial services entity or [a financing entity prescribed under] the *Ontario Fair Hydro Plan Act, 2017* and any related amounts; and

(d) amounts collected from consumers who are [specified consumers within the meaning of] the *Ontario Fair Hydro Plan Act, 2017* in respect of the clean energy adjustment and any related amounts.

(2) Subsection 25.33 (3) of the Act is amended by adding the following paragraph:

4. A consumer who is,

   i. a [specified consumer within the meaning of] the *Ontario Fair Hydro Plan Act, 2017*, or

   ii. prescribed by the regulations [made under the *Ontario Energy Board Act, 1998]*.

(3) Clause 25.33 (4) (b) of the Act is amended by adding "or as may be required under a regulation made under the *Ontario Fair Hydro Plan Act, 2017* or the *Ontario Energy Board Act, 1998*" at the end.

(4) Subsection 25.33 (5) of the Act is amended by adding "or under the *Ontario Fair Hydro Plan Act, 2017*" at the end

201x. Section 53.1 of the Act is amended by adding the following subsections:

Same, *Ontario Fair Hydro Plan Act, 2017*

53.1 (1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, entity

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act,

(a) the assets and liabilities of a special purpose financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of a financing entity.

Definition, financing entity

(1.4) For the purposes of this section, "financing entity" has the same meaning as in the *Fair Hydro Plan Act, 2017*.

AMENDMENTS TO ONTARIO ENERGY BOARD ACT, 1998

204x. Subsection 1 (1) of the *Ontario Energy Board Act, 1998* is amended by adding the following paragraph:

6. To facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*.

205x. Subsection 70 (2.1) of the Act is amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017*.

206x. Section 78.1 of the Act is amended by adding the following subsection:

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.

2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.

3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.

4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

Short Title - this proposal for legislation would, if approved by the Legislature, have a short title to be determined by Government.

Timing – this proposal for legislation would, if approved by the Legislature, come into force on a date to be established by Government.

Funding the Ontario Fair Hydro Plan – Global Adjustment Refinancing

EXECUTIVE SUMMARY

The Ontario Fair Hydro Plan was announced in March 2017 to lower electricity rates for consumers. A large part of this plan was the refinancing of the global adjustment (GA) charge[1].

Refinancing

In the early years, a portion of the costs covered by the GA would be refinanced to reduce pressure on today's electricity ratepayers. In later years, the cost of refinancing would be recovered from ratepayers. Under current forecasts, the immediate reduction in the GA would be about $2.5 billion per year on average over the first 10 years, with annual interest costs not exceeding $1.4 billion.

The government intends to introduce legislation that would, if passed, enable the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to refinance the GA over a longer period of time. OPG and IESO will be used in a GA deferral structure for a variety of reasons, including:

- The ability of OPG to recognize regulatory assets as a government business enterprise – this allows the costs to be recovered from ratepayers and recognized under an established accounting framework to eliminate fiscal impacts.
- To reduce the borrowing pressure on the Province's credit rating, as debt from OPG is not consolidated on a line-by-line basis.
- To allow for a commercialization process in line with similar structures regarding utility assets from a historical precedent.
- To lower financing costs to ratepayers to allow gradual increases in rates.

Funding Criteria

The current proposal is to have the Province fund up to 44% of the annual GA refinancing (analogous to "GA deferral"). In determining the method of funding for the GA deferral structure, there are several interrelated issues that need to be addressed in order to achieve critical objectives. The following are some of the critical objectives considered in this document:

1. **Maintaining OPG's status as a Government Business Enterprise**
2. **Credit rating agency considerations (including capital structure)**

---

[1] The GA covers the cost of building new electricity infrastructure in the province, as well as delivering Ontario's conservation programs − ensuring that enough electricity supply will be available over the long term. The global adjustment is set monthly to reflect:

- The differences between the wholesale market price for electricity, known as Hourly Ontario Energy Price (HOEP) and:
  - Regulated rates for Ontario Power Generation's nuclear and hydroelectric generating stations;
  - Payments for building or refurbishing infrastructure such as gas-fired and renewable facilities and other nuclear, as well as the contracted rates paid to a number of generators across the province;
- The cost of delivering conservation programs.

Responding to changes in the HOEP, the global adjustment varies from month to month − generally, when the HOEP is lower, the global adjustment is higher in order to cover the costs of regulated and contracted generation.

    a. **Maintaining a good credit rating for OPG**
    b. **Maintaining a good credit rating for tranches in the SPV, particularly the senior tranche for capital markets**
    c. **Maintaining a good credit rating for the Province**
3. **Allowing for the consolidation of the SPV onto OPG's books**
4. **Enabling OPG and the Province to recover the costs of financing**
5. **Maintaining the profitability and viability of the GA deferral structure**
6. **Eliminating or mitigating the annual fiscal impact over the refinancing period**

Funding Options

A variety of funding options from the Province are being considered, in the range between debt and equity, including:

1. **Equity Injection – cash given to OPG in exchange for common shares**
2. **Equity Injection – cash given to OPG in exchange for preferred shares**
3. **Debt – cash given to OPG in exchange for debt (market level interest)**
4. **Other Mezzanine debt – cash given to OPG in exchange for some type of convertible debt**
5. **Debt into SPV – the Province buys debt securities directly from the SPV in exchange for cash**

Recommendation

Based on the available funding options and key objectives, the following risks have been identified in Figure 1:

Figure 1 – Risk Table*

	Common Equity to OPG	Preferred Shares to OPG	Debt to OPG	Other Mezzanine Debt to OPG	Debt to SPV
Maintaining GBE status	M – H	L – M	L – M	L – M	L – M
Credit Rating	L	L – M	M – H	L – M	M
Accounting Consolidation	L – MH	L – MH	L – MH	L – MH	L – MH
Cost Recovery	M – H	L – M	L – M	L - M	L
Profitability & viability	L	L – M	M	L – M	L – M
Fiscal Impact	M	L – M	L – M	L – M	L

**Level of risk of objectives not being achieved*
L = Low, M = Medium, MH = Medium High, H = High

The recommended strategy would be not to limit provincial funding to a certain type of debt or equity, but rather to implement a financing plan that benefits all parties (i.e., the Province, OPG,

IESO, security holders, LDCs, and ratepayers). Such a strategy could involve issuing more equity (e.g., a mix of common and preferred shares) in earlier years to establish the viability of the financing structure, and gradually moving to more debt-like financing options as the financing structure reaches the repayment "inflection point", and as the mechanism establishes a history of profitable operations as well as timely payments.

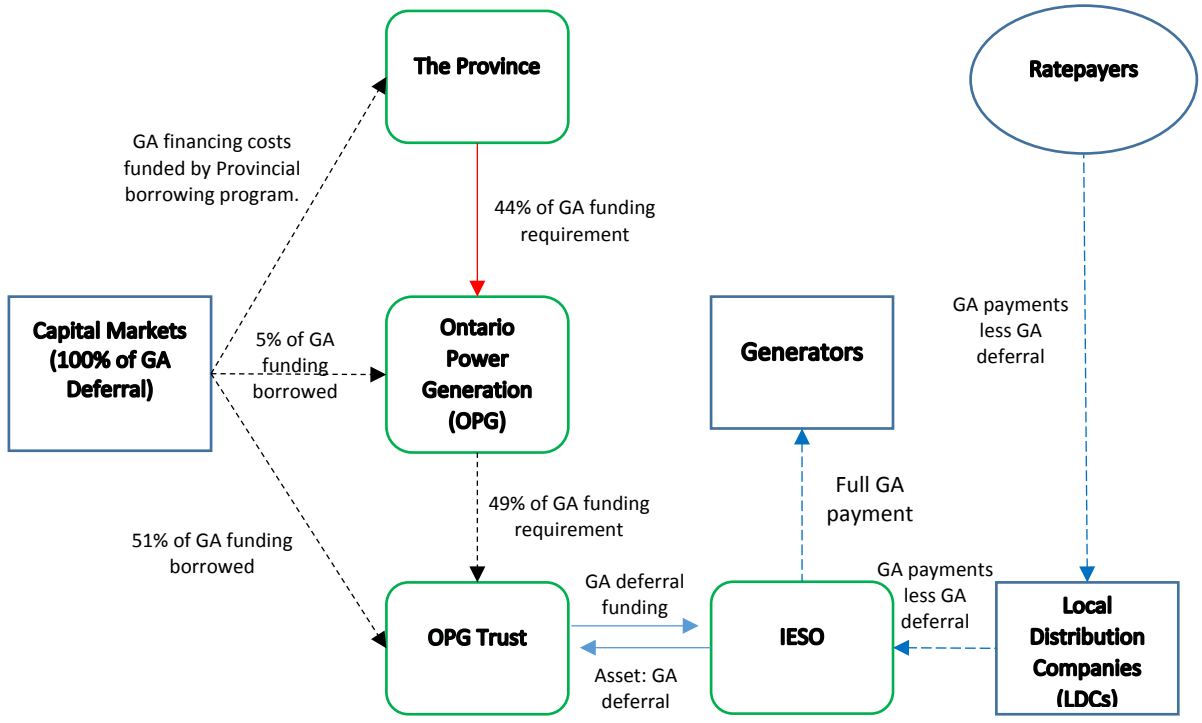
External auditors, accounting experts, and credit rating agencies need to be brought into the discussion to ensure the required objectives can be obtained.

Current Proposed Structure

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators. Figure 2 illustrates a simplified version of the GA refinancing structure.

Figure 2 – GA Refinancing Structure



Based on the OPG white paper (*Appendix B*) - a collection of proposed requirements for the structure to get the preferred accounting treatment from OPG's auditors and accounting advisors - it is important to note that:

- The 44% funding provided by the Province is the **maximum** amount that can be provided to OPG for the SPV, either indirectly (through OPG) or directly (into the SPV).
    - Can be **debt** or **equity**
    - Can be **less than 44%**
    - Nothing in the proposed requirements requires the Province to invest in OPG directly rather than directly in the SPV; **need a written confirmation from external auditors/advisors to illustrate why this is necessary**.
- The 51% of the funding directly into the SPV from the capital markets is **not a minimum** amount that must be provided, based on the language provided.
    - For example, OPG could borrow 20% of the GA deferral from capital markets and separate that into the SPV, the Province could provide 40% of the deferral directly or indirectly, and capital markets could provide the remaining 40% directly into the SPV. This would satisfy the requirements (since the capital markets are funding the OPG's 20%).
    - Rephrased, capital markets must fund the majority of the SPV, either directly or through OPG.
- OPG must own at least 5% of the total debt, and over 50% of the most junior debt in the SPV (i.e., the equity tranche).
    - This is to fulfill consolidation requirements for IFRS and US GAAP for an SPV (explained later).
    - Based on the notion that the minimal amount of the equity tranche is 10% (with OPG owning more than half of this amount).

Critical Objectives

1. Maintaining OPG's status as a Government Business Enterprise

Appendix A highlights the relevant Public Sector Accounting Standards (PSAS or "PS") issued by the Public Sector Accounting Board (PSAB). The December 2014 version is the latest available standard. PSAS is the accounting framework followed by the Province for its financial statements.

A government business enterprise is accounted for under the modified equity method – it is reported at its net asset value (i.e., total assets – total liabilities, with adjustments) on the Provincial accounts, without conforming to PSAB standards or being consolidated on a line-by-line basis. For OPG, even though the company is using US GAAP as its accounting framework, it is now accounted for under the modified equity method using IFRS as the accounting framework. This is the Auditor General's preference, as there are now interim IFRS standards (*IFRS 14 Regulated Deferral Accounts*) that allow for rate regulation. The original rationale for

OPG and Hydro One using US GAAP was because PSAB and IFRS had no standards for rate regulation.

The rationale for using the modified equity method rather than line-by-line consolidation like other government reporting entities is explained under PS 1300.33:

> *Accounting for a government business enterprise by the equity method avoids commingling the independently-managed business enterprise's budget and actual results with those of other government organizations on a line-by-line basis. It also avoids including the business enterprise's gross debt with that of other government organizations as the business enterprise is expected to repay that debt from its own revenues.*

There are four requirements to be considered a government business enterprise (GBE):

> *PS 3070.03 (and PS 1300.28) - a government business enterprise is an organization that* ***has <u>all</u> of the following characteristics****:*
> *(a) It is a separate legal entity with the power to contract in its own name and that can sue and be sued;*
> *(b) It has been delegated the financial and operational authority to carry on a business;*
> *(c) It sells goods and services to individuals and organizations outside of the government reporting entity as its principal activity; and*
> *(d) It can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity.*

If one of these conditions fails for OPG, it would lose its status as a GBE, resulting in line-by-line consolidation with the province. This will cause considerable consolidation problems because:

- OPG has rate regulated assets that would likely not be recognized under PSAB in the Provincial accounts – could result in a fiscal impact.
- OPG's nuclear liabilities and assets would be consolidated onto the public accounts, potentially impacting credit ratings.
- In the case of the GA structure, the debt in the SPV from capital markets would be recognized directly on the Province's balance sheet and the offsetting regulatory assets may be derecognized/written down – a fiscal impact.

In terms of the SPV structure, the fourth requirement from PS 3070.03 is the most at risk – if OPG can, in the normal course of its operations, maintain its operations and meets its liabilities from revenues received from sources outside of the government reporting entity. PS 1300.30 and 1300.31.b further explain this standard:

> *.30 A government business enterprise should, in the normal course of its operations, be able to maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity. These revenues include not only amounts from the sale of goods and services, but also* ***transfers received from other governments or sources outside of the government reporting entity****.*

> *.31 When determining if an organization can maintain its operations and meet its liabilities with revenues received from outside of the government reporting entity, the following factors should be considered:*
> *(a) The organization's history of maintaining its operations and meeting its liabilities;*
> *(b) Whether the organization would continue to maintain its operations and meet its liabilities without relying on* ***sales to, or subsidies in cash or kind from, the government reporting entity****;*
> *(c) Past, present and future economic conditions within which the organization operates; and*
> *(d)* ***Whether the organization has realistic and specific plans that show how it expects to be able to maintain its operations and meet its liabilities in the future****.*

There is nothing specific in PSAB about equity injections, but in terms of debt, there is the following standard:

> *PS 3230.09 If a government* ***charges little or no interest to the government business enterprise for the use of debt proceeds****, the difference between the interest cost to the government and the interest charged to the government business enterprise is in the* ***nature of a subsidy****. Such circumstances would be* ***taken into account in assessing if the organization continues to meet the financial self-sustainability requirement*** *inherent in the definition of a government business enterprise in GOVERNMENT REPORTING ENTITY, Section PS 1300.*

For an equity injection from the Province to OPG, there is a risk that it could be viewed as subsidy due to:

a) **The frequency and size of the transactions** – It has been proposed that the equity injection be monthly and over a period of ten years. Such a reliance on continually injected funds without a mandatory "cost" such as interest could be viewed as a subsidy, akin to an interest-free loan.
    a. The notion that OPG is operating as a "going concern" is also threatened by the reliance on the equity funding.

b) Ontario is already the sole shareholder – The Province already owns 100% of OPG, and is essentially dictating that OPG use equity injections for a specific mandate which threatens the idea of autonomy.

c) There needs to be a rate of return that justifies an equity injection from a commercial standpoint: the cost of equity is always higher than the cost of debt due to the lowest claim on assets that an equity holder possesses – debtholders get paid first. Thus, equity holders must be compensated for taking this risk. In order for the equity injection to not be viewed as a subsidy, the return from the GA deferral mechanism must be substantially higher than the cost of borrowing for the Province to fund these equity injections.
    - Several wholly-owned state-owned enterprises (SOEs), which are similar to GBEs in definition, were examined for the rationale behind recapitalization from their respective governments. Australia, Estonia, Hungary, New Zealand, Slovenia, and

Norway all demonstrate that wholly-owned unlisted SOEs have requirements that recapitalizations from the government are subject to minimum expected rates-of-return. This is usually at least the cost of capital or a market comparable rate. Other countries (Chile, Finland, Israel, Korea, Lithuania, Netherlands, Poland, and UK) have no specific mechanisms to ensure market-consistent equity costs, but have several other methods including:

- Recapitalization is subject to a regular feasibility study
- Both public interest and expected financial return are taken into account when deciding on recapitalization
- Considering a market consistent benchmark
- Considering the risk of the investment.

As long as the weighted average return from the SPV (i.e., the rate that is charged to ratepayers) adequately compensates the Province for the risk associated with an equity injection, it is unlikely that the equity injections will be viewed as a subsidy.

In terms of credit ratings, there is nothing in PSAB that dictates that a GBE requires certain ratios or credit ratings in order to maintain that status:

- As of April 6, 2017, OPG has a credit rating of A(low) from DBRS.
- Even if OPG was downgraded in the BBB range, this would still be investment grade.
- OPG would have a higher cost of debt, but this would passed on to consumers (higher cost of debt for the regulated activities, excluding the SPV mechanism).
- The credit rating section will further address rating agency issues.

2. Credit rating agency considerations (including capital structure)

Page 21 from the Cabinet submission PowerPoint (*Appendix C*) states a number of assumptions about the financing of the GA deferral structure, which are assessed below:

- *"Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt, OPG would be downgraded"*.
  - **Comments:**
  - The purpose of the SPV is to separate the risk from the regulatory assets from the business risk of OPG – the SPV is bankruptcy remote if setup correctly.
  - The SPV is consolidated on an accounting basis, but only the percentage of the GA deferral funded directly by OPG to the SPV would be considered as part of the normal operations structure of OPG.
    - However, as DBRS views securitization as a form of debt financing, securitized assets of non-financial companies are normally added back to debt to calculate adjusted debt ratios.

- If OPG goes bankrupt, it will not impact the SPV – OPG has no right to the assets in the SPV as a separate legal entity.
- If the SPV fails, the capital market debtholders (**expected to 51% of the GA deferral)** have the right to the regulatory assets in the SPV that were securitized, but have no recourse from OPG since the SPV is a separate legal entity.
- The tranches that make up the SPV will be given a separate credit rating assessment by rating agencies.

- "*To manage the exposure and minimize the cost of funding. The required funding would be split into 2 buckets:*

  1. 56% from capital markets; and

  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt."
  - **Comments:**
  - The remainder does not need to be financed from the Province – both OPG and the capital markets have the potential to take on more debt from the SPV.
  - The cost of funding for OPG may be minimized, but the cost of funding overall may not be due to the higher cost of equity.
  - "Exposure" is already being minimized through the SPV.
- *The use of equity to fund a portion of the GA deferral allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.*
  - **Comments:**
  - There would be an improvement in net income and the structure theoretically would have no fiscal impact.
- "*Credit rating metrics are generally maintained within established limits*":
  - **Comments:**
  - No supplementary evidence to support this.

Maintaining a strong credit rating for OPG

On April 6, 2017, DBRS confirmed the issuer rating and Unsecured Debt rating of OPG at A(low) as well as its Commercial Paper at R-1 (low). The outlook for OPG was stable, with the ratings supported by four key factors:

1) The reasonable regulatory regime in place for the Company's generation facilities
2) Continuing financial support from its shareholder, the Province of Ontario (rated AA (low) Stable, by DBRS)
3) Strong cash flow-to-debt ratios
4) Strong debt-to-capital ratios

With the GA deferral and recovery mechanism, assuming the supporting legislation is passed, the first two factors would remain strong. In terms of cash flow-to-debt and debt-to-capital ratios, there may be a difference in the total debt and total debt amounts on an accounting, legal, regulatory, and rating agency basis:

- **Accounting basis**: The entire Trust, i.e., 100% of the GA deferral and the associated regulatory assets, would be consolidated onto OPG's books, increasing total debt and total capital.
- **Legal basis**: the SPV is considered separate from OPG.
- **Regulatory basis**: From the latest draft legislation, the expectation is that the SPV would not be part of the rate-setting process. It remains to be seen how equity injections from the Province to OPG would be treated.
- **Rating agency basis**: A discussion with rating agencies needs to be conferenced to confirm how they would treat the debt in the SPV in the calculation of risk assessment ratios such as total debt-to-capital.

DBRS's primary financial risk assessment (FRA) metrics for utilities are highlighted in Figure 3 below:

Figure 3. Regulated Electric, Natural Gas, and Water Utilities – Primary DBRS FRA Metrics

Primary Metric	AA	A	BBB	BB/B
Cashflow-to-debt	> 17.5%	12.5% to 17.5%	10.0% to 12.5%	0.0% to 10.0%
Debt-to-capital	< 55%	55% to 65%	65% to 75%	75% to 90%
EBIT-to-interest	> 2.8x	1.8x to 2.8x	1.5x to 1.8x	1.0x to 1.5x

OPG's historical performance on these key ratios are illustrated below in Figure 4:

Figure 4. OPG Historical DBRS Primary FRA Metrics

(CAD millions)	2015	2014	2013	2012	2011
Cash flow/Total debt 1	33.2%	27.0%	22.9%	20.8%	28.9%
Total debt in capital structure 1, 2	35.9%	36.9%	38.9%	36.9%	36.8%
EBIT gross interest coverage (times) 3	(0.86)	0.24	(1.12)	0.66	0.02
EBITDA gross interest coverage (times) 3	2.89	2.75	2.21	3.15	2.71
(Cash flow - n.w.f.)/Total debt 4	27.5%	21.3%	16.5%	13.8%	21.1%

1 Including operating leases. 2 Adjusted for Accumulated Other Comprehensive Income. 3 Excluding earnings from nuclear fixed asset removal and nuclear waste management funds. 4 Included nuclear waste funding (n.w.f.) payments as they are not discretionary.

OPG has been outperforming two of the three key metrics for the past five years (within AA range), but has been rated at A (low) for several reasons including the negative EBIT coverage, among other factors. *Appendix E* includes additional information from DBRS's general methodology for regulated utilities.

The effect of different scenarios on capital structure, assuming that the Province uses either preferred equity or debt instead of equity injections to finance 44% of the GA deferral annually, is shown below:

Figure 5. Financing effect on Capital Structure ($20.3B total borrowing)

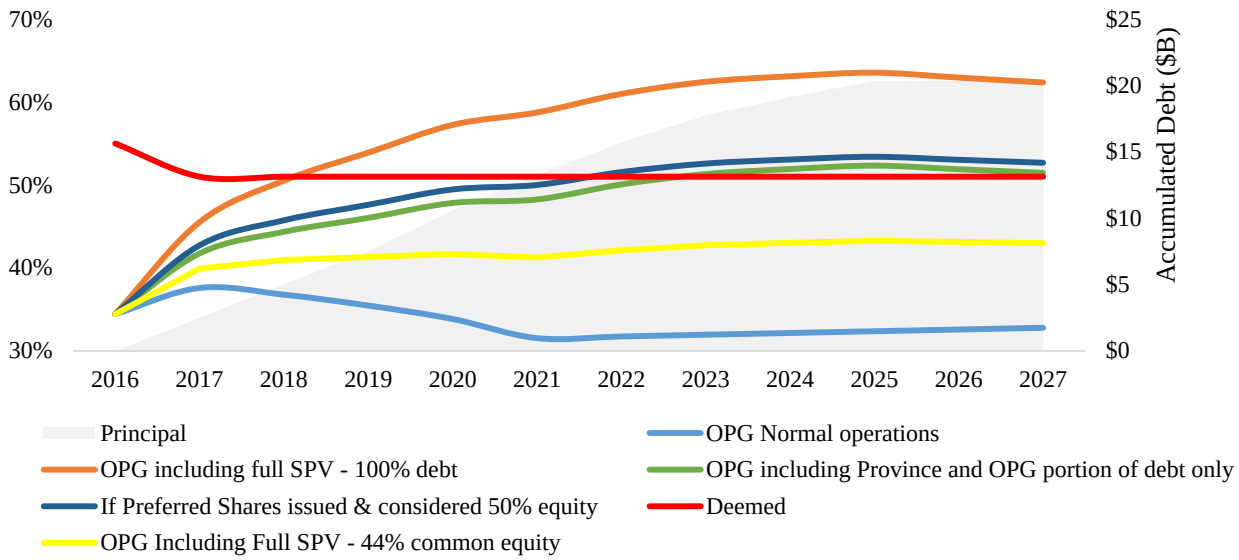


Figure 6. Financing effect on Capital Structure ($28B total borrowing)

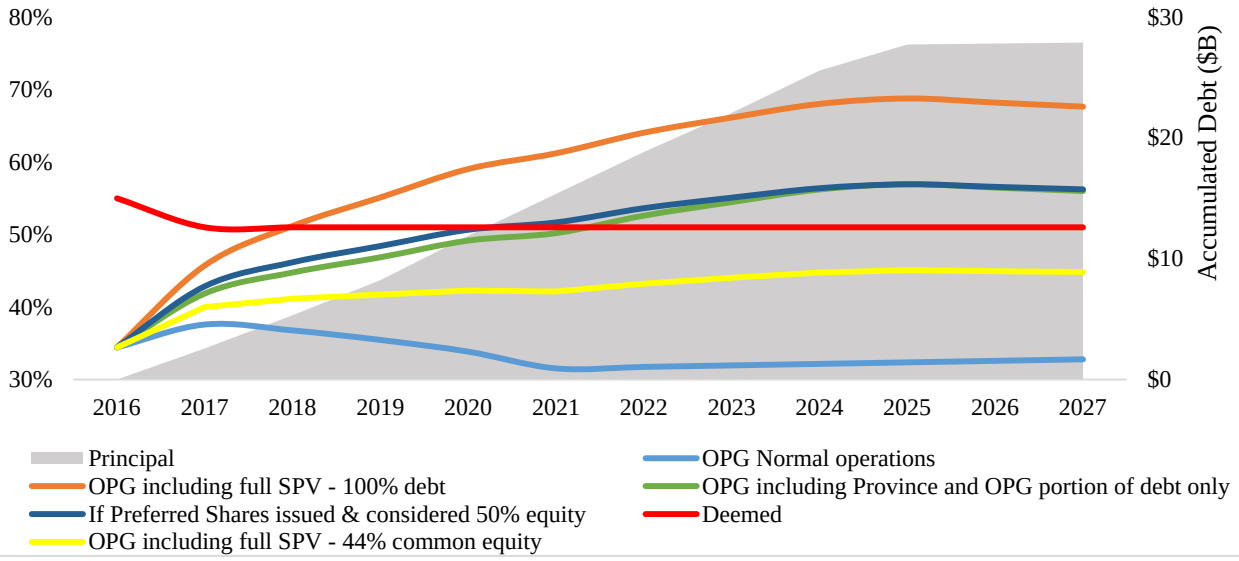


**Figures generated from model based on OPG BP forecasts, Ministry of Energy cabinet submission, and internal CEFD assumptions*.

It is recommended that OPG provide a forecast and rationale on key credit rating ratios and capital structure to justify its insistence that common equity is required to maintain a good credit rating.

Maintaining a good credit rating for the SPV

In order to understand the proposed GA financing structure, one can examine the components of the structure and similar historical undertakings.

SPV

An SPV (special purpose vehicle or special purpose entity) is a bankruptcy-remote entity established for the sole purpose of issuing debt securities. The bankruptcy remote component of the SPV is crucial to the securitization and isolates the bondholders from event risk associated with the originator and servicer. The debt securities typically issued by an SPV are asset-backed securities (ABS) which are bonds collateralized by a distinct pool of assets. The most common collateral types found in asset-backed securities are credit card receivables, auto and equipment loans or leases, home equity loans, student loans and installment sales contracts for manufactured housing units.

- The performance of the underlying collateral will largely determine the performance of the bond.
- **In recent conversations, it has been flagged that the proposed structure will not result in a securitization transaction, despite its similarities.**

US Rate Reduction Bonds

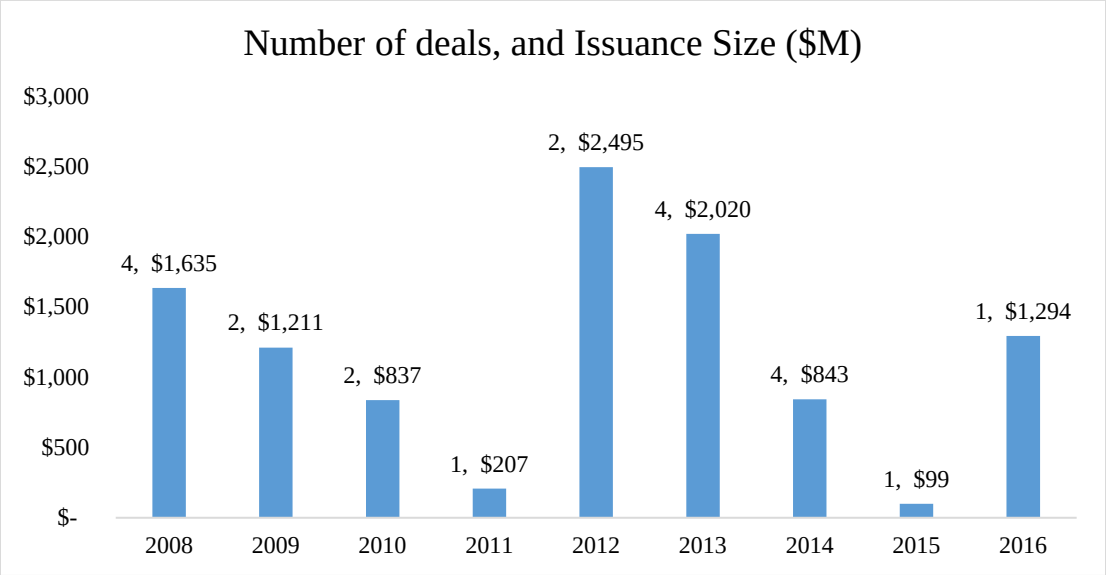
The proposed GA mechanism is most similar to rated reduction bonds (RRBs) from the United States. An RRB is the securitization of a cashflow stream generated by a fee charged to utility consumers. RRBs came into prominence in the US after the passing of the Energy Policy Act of 1992 that led to the privatization of the electricity market. Deregulation of the electric utilities was introduced to foster a competitive environment and to reduce the rates charged to customers. However, when states deregulated utilities, the resulting decrease in revenue caused many utility company assets to become uneconomic to operate. These uneconomic assets are referred to as "stranded assets". RRBs were developed to enable utilities to bridge the gap between the book value of stranded assets in the previously regulated environment and their current market value in a deregulated one. The use of RRBs allows for an extended recovery period of those costs at an AAA funding rate.

The fee or transition charge is collected by utilities over a specific period of time. Because the state legislature designates the transition charge to be a statutory property right, it can be sold by a utility to an SPV and then securitized. It is the legislative designation of the transition charge as an asset that makes RRBs different from the typical asset securitized.

Transition charges are initially calculated based on projections of utility usage and the ability to collect revenues. However, actual collection experience may differ from initial projections. Because of this, there is a “true up” mechanism in these securitizations. This mechanism permits the utility to recompute the transition charges on a periodic basis over the term of the securitization

based on actual collection experience. The advantage of the true-up mechanism to the bond classes is that it provides cash flow stability as well as a form of credit enhancement.

From 1995 to 2003, there were more than $31B issuances of RRBs (about $45B total since 2012) in over 20 states. The deal size has been between $35M and $3B in the past for the US. RRBs have traded at spreads comparable to AAA-rated credit cards in the US. Figure 7 below is a summary of RRB deals since 2008:



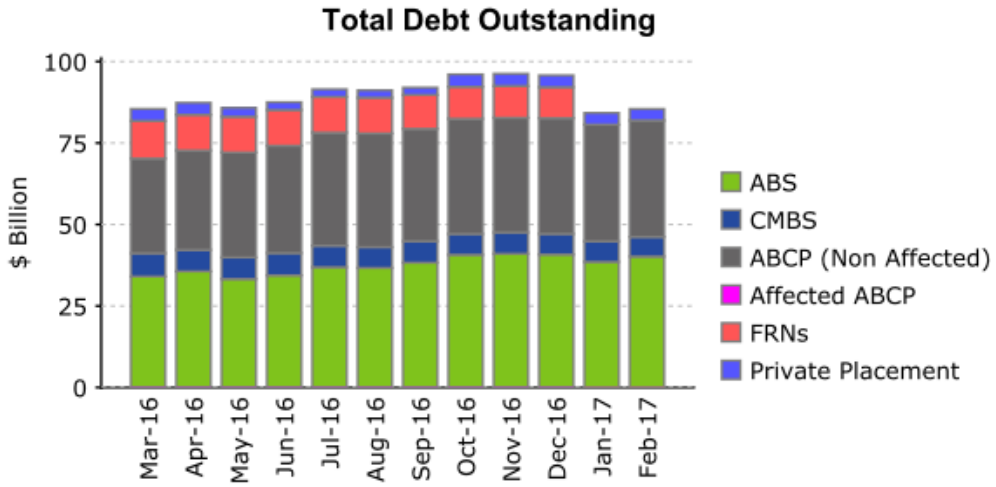
Appendix D contains details of each of the historical RRB issuances from Figure 7 above.

A key difference between RRBs and the proposed debt securities from the GA financing structure is that there is more uncertainty surrounding the GA deferral mechanism.

- RRBs book value and current market value are relatively known at the time of issuance, thus it may be easier to determine the fee that is needed to recuperate the stranded assets from the start.
- The extent of borrowing needed for the GA adjustment is not known ahead of time.
    - However, reasonable estimation and the true-up mechanism can mitigate this issue.
    - Once a history of forecast accuracy and fees collected from ratepayers has been established, there will be more certainty in the amount and timing of cashflows.

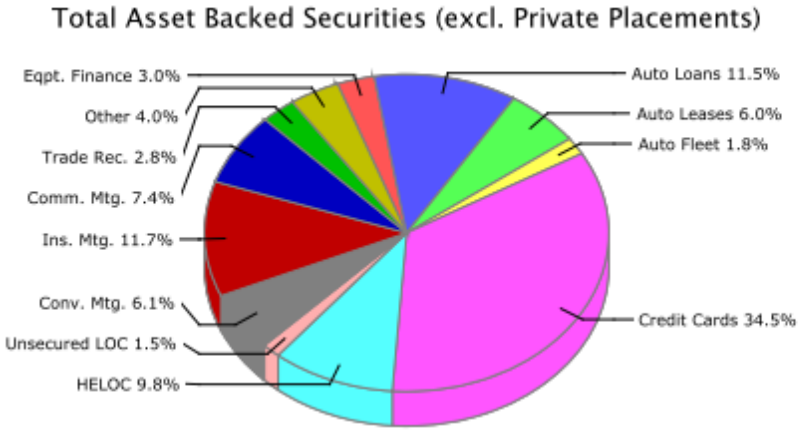
Canadian Securitization Market

The total amount outstanding in the Canadian securitization market ended February 2017 at $85.0 billion. The figures below illustrate the market composition as of February 2017.



Total Asset Backed Securities (excl. Private Placements)

Dealer/Administrator	Outstanding Amount	Market Share
TD Securities Inc.	21,108,826,721	25.8%
RBC Capital Markets Inc.	15,849,571,935	19.3%
BMO Capital Markets	14,880,241,648	18.2%
CIBC World Markets Inc.	9,648,552,341	11.8%
Scotia Capital Inc.	7,732,545,756	9.4%
Other	5,941,339,645	7.3%
National Bank Financial Inc.	4,376,185,678	5.3%
Bank of Nova Scotia (BNS)	1,551,896,531	1.9%
Merrill Lynch Canada Inc.	591,797,636	0.7%
HSBC Securities (Canada) Inc.	92,500,000	0.1%
Canadian Tire Bank	89,698,890	0.1%
National Bank of Canada (NBC)	60,910,750	0.1%
HSBC Bank Canada	4,349,881	0.0%
Total	**$81,928,417,413**	**100.0%**



Asset Classes in Other	Percent
Auto Floorplan	0.65 %
Equipment Floorplan	0.72 %
Auto Rental	0.82 %
Reverse Mtg.	0.73 %
Ins. Premium Loans	0.20 %
Fran. Loans	0.87 %

An issuance of $2.5 billion a year by the SPV (including the "private placement" to the Province) would be approximately 3% of the total Canadian market. There has also been discussion of entrance into the US market.

Credit Enhancement

There are a variety of methods for credit enhancement of securitized assets:

1) Excess spread – The difference between the utility fee cash flows brought in from the regulated asset and the costs of the securitization (financing costs, servicing fees, etc.). If ratepayers are charged 6% and bondholders have an interest at 4%, the excess spread of 2% helps cover if some ratepayers have late payments.
2) Cash reserve account: holding excess cash.
3) Overcollateralization: having the regulatory assets value higher than the issued notes.
4) Subordination
5) Letter of credit from a third party.

SPV Credit rating

Rate reduction bonds minimize costs by qualifying for triple A ratings and accordingly are issued with yields considerably lower than those based on the sponsoring utility's long-term debt rating. In order to be eligible for this level of credit quality, rate reduction bonds must possess certain common structural characteristics.

- First, the bonds must be authorized by specific state enabling legislation entitling the utility to impose and collect usage-based customer charges that are dedicated to payment of the bonds.
- The charges must be non-bypassable; that is, they cannot be eliminated by switching to alternative providers of service.
- The legislation requires the utility to seek and receive an irrevocable financing order from the state utility regulator. The financing order creates a present intangible property right to impose and collect the non-bypassable charge in amounts necessary to service the bonds.
- The legislation and financing order provide for a periodic true-up rate mechanism, by which at least annually, and more frequently in many cases, the special charges are reviewed and adjusted to correct for any under collection, to assure timely payment of the principal and interest on the bonds.
- The legislation also provides for a covenant by the state that until the bonds have been paid, the state will not impair the value of the securitization collateral or, but for the true-up process, reduce, alter or impair the special charges to the utility's customers.

Legislation

- The current draft of the legislation has similar provisions discussed above.
- A Triple AAA rating is likely with the supporting legislation and the proposed credit enhancements of subordination, excess spread, and the true-up mechanism.
    - For RRBs, the difference between market value and book value (i.e., the stranded assets) was relatively known at the time of issuance.

- In this case, the extent of the total borrowing is not known, which may put the credit rating at risk with more uncertain cash flows than the precedent from RRB.

Maintaining a good credit rating for the Province

Maintaining the Province's credit rating is critical to lowering the borrowing costs over the refinancing period. Keeping the SPV consolidated onto OPG's books and minimizing Provincial borrowing are the two critical objectives needed to reduce fiscal impacts and the probability of a rating downgrade.

3. Allowing for the consolidation of the SPV onto OPG's books

The SPV needs to be consolidated onto OPG's balance sheets in order for the rate regulated assets to be recognized under US GAAP. When OPG is consolidated onto the Province's accounts, it will be recognized under the modified equity method under PSAB. The modified equity method has the net asset value of OPG recognized as an equity investment on the province's books, with OPG able to maintain an IFRS accounting framework when calculating the net assets and not conforming to PSAB. If the Province or related government reporting entity that is not a GBE is seen as controlling the SPV, then line-by-line consolidation will occur with potential fiscal impacts from the loss of recognition of the regulatory assets that are not recognized under PSAB.

Appendix F highlights how the Province could indirectly or indirectly fund the SPV while allowing OPG to consolidate the SPV on its books. In general terms, the two main criteria to be satisfied are:

1) **OPG must be seen as controlling the Trust** – the way the legislation is being drafted is to have OPG have full control of the Trust, including controlling the economic performance of the Trust.
2) **OPG must have the majority of the equity tranche in the SPV** – this is because OPG must be exposed to either the majority of expected losses, the majority of expected residual returns, or both, under general accounting consolidation requirements. The equity tranche gets all of the residual returns but is the first to absorb losses – thus satisfying this requirement.

It is important to note that:

- There are no clear rules under PSAB for the consolidation of a special purpose vehicle or special purpose entity.
  - The OPG white paper requirements do not prohibit the Province from directly funding the SPV.
- There are no public sector accounting standards specifically related to a provincial investment in the subsidiary of a government business enterprise.
- There may be the possibility of the Province issuing debt to OPG that is then moved to the SPV, thus giving the Province access to the returns from the SPV without the Province going through OPG.

4-6. Cost Recovery, Profitability, and Fiscal impact

The options for the Province to fund the GA deferral structure are in the continuum of common equity to pure debt:

Common equity to OPG

- Gives OPG the most flexibility in managing the trust and ability to absorb temporary losses.
- Preferred method by OPG.
- Lower chance of a ratings downgrade.
- Return charged to ratepayers, on a weighted average basis, would need to justify the proportion of equity injected into OPG that is ultimately put into the SPV, otherwise could be seen as a subsidy to the Province.
- OPG would be able to, but not obliged to, flow dividends back to the Province that would be used to settle interest/principal costs.
- Issue of "double leverage" – the Province's equity stake in OPG (and ultimately the SPV) is funded by debt.
- There could be no fiscal impact with the profit to OPG from the Trust offsetting the interest on Provincial borrowing.
    - However, on a cash basis, there is no guarantee that OPG would pass the required payments to the Province to settle interest and principal payments – there are timing issues.
    - This could lead to fiscal costs eventually once the Trust is dissolved with OPG potentially hanging on to billions of dollars of cash to use for its own initiatives.

Preferred Equity to OPG

- The suggested method would have cumulative dividends that could be deferred for at least 10 years, payable with cash, and with the preferred shares redeemable after ten years from the time of issuance.
    - Under DBRS rating criteria, would likely get 50% equity treatment (*Appendix E*)
- The deferral of dividends would still give OPG flexibility in managing the trust and the ability to absorb temporary losses.
- Lower chance of a ratings downgrade than using debt.
- Lower return to be charged to ratepayers versus common equity to justify preferred equity funding.
- Allows for the Province to eventually receive payments, with the cumulative dividends compensating the Province for the interest payments on its borrowed portion.
    - The preferred share rate of return would need to be higher than the cost of debt for the Province to be compensating for capitalized interest costs.
- OPG would be obliged to pay back dividends, but could delay this outcome for ten years.
- The fiscal impact risk would be expected to be less than common equity with a reasonably guaranteed flow of cash from OPG to the Province through dividends and redemption.

Debt to OPG

- Gives OPG the least flexibility in managing the trust and ability to absorb temporary losses.
- Highest chance of a ratings downgrade.
- Provides a mechanism for the Province to get timely interest and principal payments back from the Trust.
- Fiscal impact risk is the lowest in terms of receiving principal and interest payments.

Various other options would be between the equity and debt spectrum.

Appendix A. Public Sector Accounting Standards related to Government Business Enterprises

Key sections have been highlighted.

SECTION PS 3070 – Investments in Government Business Enterprises

.03 A government business enterprise is a government organization that has all of the following characteristics:
(i) It is a separate legal entity with the power to contract in its own name and that can sue and be sued;
(ii) It has been delegated the financial and operational authority to carry on a business;
(iii) **It sells goods and services to individuals and organizations outside of the government reporting entity as its principal activity**; and
(iv) **It can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity**.

These criteria are explained in GOVERNMENT REPORTING ENTITY, paragraphs PS 1300.29-.31.

Inter-organizational transactions and balances

.29 Inter-organizational transactions and balances are not eliminated under the modified equity method.

.30 Inter-organizational gains and losses are, however, eliminated on assets remaining within the government reporting entity at the financial statement date. As a result, gains or losses related to sales and purchases of services for example, between a government business enterprise and other government organizations would not be eliminated when the government business enterprise is included in government consolidated financial statements by the modified equity method.

.31 For financial assets, such as inventories for resale, that are transferred between a governmental unit and a government business enterprise, unrealized gains or losses may occur. The existence of unrealized losses may indicate a permanent decline in the value of the relevant assets. It may be necessary to recognize this decline by writing down such assets.

.32 Transfers of assets from a governmental unit to a government business enterprise normally result in an increase to the assets and contributed surplus of the government business enterprise. When tangible capital assets are transferred, an unrealized increase in the financial position of the government reporting entity may be created. When tangible capital assets are transferred to a government business enterprise, they are recorded by the government reporting entity as an investment and reported as a financial asset in government consolidated financial statements. Any unrealized gains on tangible capital assets would be eliminated when the government business enterprise is included in government consolidated financial statements on a modified equity basis.

.33 The situation in paragraph PS 3070.32 is analogous to that which arises regarding tangible capital assets when a governmental unit changes in status to be a government business enterprise as described in ADDITIONAL AREAS OF CONSOLIDATION, paragraphs PS 2510.46-.49. The amount of the adjustment to eliminate an unrealized gain arising on the transfer of a tangible capital asset to a government business enterprise in any given period would vary depending on whether the transferred asset is depreciable and, if so, the extent of the depreciation recorded on the asset by the government business enterprise. Any impairment or other adjustment made by a government business enterprise to the recorded value of a tangible capital asset transferred from a governmental unit to the government business enterprise would also affect the amount of the elimination entry.

.34 *The transfer or sale of a tangible capital asset from a governmental unit to a government business enterprise should not improve the net operating results of the period or otherwise improve the net financial position of the government reporting entity*

Inter-organizational bond holdings

.35 From the point of view of the government reporting entity, constructive debt retirement occurs when:

(a) Another government organization purchases the bonds, notes or other debt instruments of a government business enterprise; or

(b) A government business enterprise purchases the bonds, notes or other debt instruments of another government organization, from an organization external to the government reporting entity.

The debt retirement is "constructive" because the debt remains outstanding from the viewpoint of the issuer as a separate legal entity and remains an investment from the point of view of the acquirer as a separate legal entity. As a result of such purchases, a constructive gain or loss, equal to the difference between the carrying value of the debt in the accounts of the issuer and the cost to the acquirer, is recognized in government consolidated financial statements at the date of acquisition. The gain or loss is "constructive" because it is realized and recognized at acquisition from the viewpoint of the government reporting entity, but no gain or loss is recognized at acquisition in the books of the issuing or the acquiring government organization. A constructive gain or loss arises because the acquirer has purchased the debt at a premium or discount and/or the issuer originally issued the debt at a premium or discount.

.36 Neither the carrying values of the inter-organizational bond holdings between a government business enterprise and another government organization, nor the related interest income and expense would be eliminated when the government business enterprise is included in government consolidated financial statements by the modified equity method. However, the amortization of the premium or discount on the books of the acquirer and the amortization of the premium or discount on the books of the issuer would be eliminated. The eliminations would be reflected in the government's investment in a government business enterprise and its income from an investment in a government business enterprise.

.37 Because the debt remains outstanding from the viewpoint of the acquirer and the issuer, they would continue to account for the portion of the debt deemed to be constructively retired, and any related premiums or discounts, and would, therefore, recognize the constructive gain or loss in their own accounts over the period to the maturity or sale of the debt. As the constructive gain or loss was recognized by the government reporting entity in the period the debt was constructively retired, elimination of the gain or loss being recognized by the acquirer and the issuer in each subsequent accounting period through the amortization of any premium or discount related to the debt will be required when the government business enterprise is included in government consolidated financial statements by the modified equity method. In making such eliminations, the government's proportionate ownership of the government business enterprise would need to be taken into account when the government business enterprise is the issuer of the debt.

.38 Regardless of whether the government or a government business enterprise is the acquirer in such a transaction, the government's investment in a government business enterprise and its income from an investment in a government business enterprise would be adjusted to recognize the constructive gain or loss in government consolidated financial statements in the year of the acquisition. In recognizing the gain or loss, the government's proportionate ownership of the government business enterprise would need to be taken into account when the government business enterprise is the issuer of the debt.

WHEN AN ORGANIZATION NO LONGER MEETS THE DEFINITION OF A GOVERNMENT BUSINESS ENTERPRISE

.48 The circumstances affecting a government organization may change so that it no longer meets the definition of a government business enterprise. Failure to meet any of the four characteristics of the government business enterprise definition would require such a change in status of the enterprise.

.49 **When the nature of a government organization changes such that it no longer meets the definition of a government business enterprise, the organization would become a governmental unit and would be consolidated in government financial statements in accordance with BASIC PRINCIPLES OF CONSOLIDATION, Section PS 2500 and ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510, instead of being accounted for on a modified equity basis. (i.e., line-by-line consolidation)**

.50 When the change in status of a government business enterprise to a governmental unit is the result of an observable event, a government would apply both modified equity and consolidation accounting to the organization in the period, as appropriate. The individual revenues and expenses of the former government business enterprise would be included with those of the other governmental units and recognized in the consolidated statement of operations subsequent to the date the status of the organization changes. Prior to the date of change, only income from an investment in a government business enterprise would be recorded, calculated in accordance with the modified equity method.

.51 When the change in status of a government business enterprise to a governmental unit is not a specific observable event, but occurs over time, a government would account for the organization as a governmental unit for the reporting period in which the change in status occurs.

.52 When an organization ceases to meet the definition of a government business enterprise and that organization applies accounting policies that differ from those of the government reporting entity, the accounting policies of that organization must be conformed to those of the government reporting entity for the purposes of its consolidation in government financial statements. For example, when an acquired government business enterprise changes its status to a governmental unit, any remaining unamortized purchase premium would be written off to consolidated operating results in the period the status changed in accordance with the accounting treatment for purchase premiums required by ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510.

.53 *In the period that a government organization no longer meets the definition of a government business enterprise, the effect of conforming its accounting policies to those of the government reporting entity for the purposes of consolidation should be included in the determination of consolidated operating results.* [APRIL 2000]

.54 When part of a government business enterprise, such as a division or other discrete component, is sold, but the government still retains control of the organization that remains, that organization is still considered to be part of the government reporting entity. If the part of the organization that remains does not on its own meet the definition of a government business enterprise, it would be consolidated in government financial statements. If the part of the organization that remains continues on its own to meet the definition of a government business enterprise, it would continue to be accounted for on the modified equity basis as a government business enterprise.

.55 **When the circumstances affecting a government organization change so that it no longer meets the definition of a government business enterprise, the change in accounting treatment would not be applied retroactively**. The alteration of an accounting treatment necessitated by events or transactions that reflect a difference in substance from those previously occurring is not considered to be a change in accounting policy 3 or a change in classification. 4 The financial position and results of prior periods would not be adjusted to reflect the change in status of the organization as if it had always been a governmental unit. It is important for government consolidated financial statements to show that a government business enterprise has changed its status to become a governmental unit.

.56 *When the circumstances affecting a government organization change such that it no longer meets the definition of a government business enterprise, the resulting change in accounting treatment, the underlying reasons for the change, and the financial effect of the change should be disclosed.* [APRIL 2000]

.65 Government business enterprises may enter into significant transactions with other government organizations in the government reporting entity. Since the modified equity method of accounting does not eliminate inter-organizational transactions and balances, such as loans and advances, users need supplementary information to identify amounts

owing to or receivable from, and revenues received from or paid to, other government organizations in the government reporting entity.

.66 In addition, because unrealized gains or losses on amounts that remain within the government reporting entity are eliminated, users need information on any adjustments that have been made to the reported net assets and net income of the government business enterprise. Furthermore, users need information on any contractual obligations and contingencies of government business enterprises to understand and assess the future revenue requirements of the government reporting entity.

.67 One result of accounting for a government business enterprise by the modified equity method is that the outstanding debt issued by a government business enterprise is not included in the debt reported by the government reporting entity on its consolidated statement of financial position. Disclosure in government consolidated financial statements of the nature and terms of any government guarantees relating to debt issued by a government business enterprise would serve to highlight a government's contingent exposure to and responsibility for any debt of government business enterprises arising as a result of specific guarantees.

.68 When the nature of the business of a government business enterprise is not self-explanatory, governments are also encouraged to disclose by enterprise, or category of enterprise where appropriate, the nature of the business in which the enterprise(s) are engaged

SECTION PS 1300 – Government Reporting Entity

.27 *Government financial statements should consolidate the financial statements of governmental units comprising the government reporting entity.* 2 [Former paragraph PS 1300.27 retained in Archived Pronouncements.] [JUNE 1996 *]

Defining a government business enterprise

.28 A government business enterprise is an organization that has all of the following characteristics:

(a) It is a separate legal entity with the power to contract in its own name and that can sue and be sued;

(b) It has been delegated the financial and operational authority to carry on a business;

(c) It sells goods and services to individuals and organizations outside of the government reporting entity as its principal activity; and

(d) It can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity

.29 Selling goods and services involves a direct exchange relationship between the revenues and the goods and services provided. Selling prices are related to the quantity and quality of goods or services sold, and not just to the recovery of administrative costs. Imposed fees and penalties, such

as licenses and fines, do not represent sales of goods and services. Insurance premiums charged by a government organization are a sale of a service and not an imposed fee.

.30 A government business enterprise should, in the normal course of its operations, be able to maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity. These revenues include not only amounts from the sale of goods and services, but also transfers received from other governments or sources outside of the government reporting entity.

.31 When determining if an organization can maintain its operations and meet its liabilities with revenues received from outside of the government reporting entity, the following factors should be considered:

(a) The organization's history of maintaining its operations and meeting its liabilities;

(b) Whether the organization would continue to maintain its operations and meet its liabilities without relying on sales to, or subsidies in cash or kind from, the government reporting entity;

(c) Past, present and future economic conditions within which the organization operates; and

(d) Whether the organization has realistic and specific plans that show how it expects to be able to maintain its operations and meet its liabilities in the future.

Accounting for a government business enterprise

.32 A government business enterprise differs from other government organizations in its relationship to the government, and its objectives, and operations. A government enterprise represents a financial asset of the government and given its autonomy, business-oriented objectives, and financial self-sufficiency, equity accounting is appropriate.

.33 Accounting for a government business enterprise by the equity method avoids commingling the independently-managed business enterprise's budget and actual results with those of other government organizations on a line-by-line basis. It also avoids including the business enterprise's gross debt with that of other government organizations as the business enterprise is expected to repay that debt from its own revenues.

.34 Because a government enterprise carries on a business, its financial statements should be prepared on the same basis as a private sector business. This basis is most appropriate for measuring the government's investment in the organization and the impact it has on the government's financial position and results. As such, the modified equity method is the most suitable form of equity accounting.

.35 Government business enterprises should be accounted for by the modified equity method. [JUNE 1996]

.36 Accounting for government business enterprises by the modified equity method is outlined in INVESTMENTS IN GOVERNMENT BUSINESS ENTERPRISES, Section PS 3070.

SECTION PS 3230 – Long-term Debt

.09 If a government charges little or no interest to the government business enterprise for the use of debt proceeds, the difference between the interest cost to the government and the interest charged to the government business enterprise is in the nature of a subsidy. Such circumstances would be taken into account in assessing if the organization continues to meet the financial self-sustainability requirement inherent in the definition of a government business enterprise in GOVERNMENT REPORTING ENTITY, Section PS 1300.

.10 ***When there is sufficient evidence that debt has been issued by a government specifically on behalf of a government business enterprise:***

(a) The debt issued on behalf of the government business enterprise and the related receivable from the government business enterprise should be presented on a net basis in the consolidated statement of financial position; and

(b) The interest expense on the debt issued on behalf of the government business enterprise and the related interest revenue from the government business enterprise should be presented on a net basis in the consolidated statement of operations. **[APRIL 2000]**

Appendix B – OPG Global Adjustment White Paper Conditions

A. Ability to Recognize an Asset and Record Revenue

Accounting Requirements under International Financial Reporting Standards (IFRS)

1) It is our understanding that the IESO and KPMG have concluded that the sale of this 'right to collect' future revenue (or regulatory asset) is not a financing transaction and will not be recorded as a financial liability. Based on that conclusion, the right to collect will be accounted for as an intangible asset in the SPV.

2) In order to the SPV to record this right as an intangible asset, the right must meet the following conditions:

- The intangible asset must be separable and arise from a contractual or legal right (i.e. mandated by the Legislation and SPV Indenture Agreement).
- The SPV must have the control and power to obtain future economic benefits from the intangible asset.
- The SPV must be able to demonstrate that the intangible asset is purchased at fair value.

3) In order for the SPV to recognize appropriate revenue to offset any ongoing costs, the **Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis**. **This may result in additional amounts to be deferred to achieve the desired customer impact**. Payment of revenue to the SPV is also important to service the interest expenses of the debt.

B. Ability to Consolidate the SPV into OPG under IFRS

OPG 'Control' of the SPV - Accounting Requirements

1) In order to meet the accounting definition of 'control', accounting guidance must be considered. There are no bright lines to determine whether OPG has exposure, or rights, to variable returns from its involvement with the SPV, or whether it has the ability to affect the returns of the SPV through its power over the SPV. Rather, all facts and circumstances are considered when assessing whether an entity has control over another entity. Based on the relevant accounting guidance under IFRS, OPG has proposed terms necessary to demonstrate that OPG has control over the SPV. OPG's external auditors, Ernst & Young, has provided their concurrence that based on the information provided to them to date that the following conditions should permit consolidation of the SPV by OPG.

Directive:

1. **The SPV must be undertaken by OPG as a business initiative on its merits**. A Shareholder Directive is to be limited to direct OPG to investigate the option of establishing a SPV vehicle to administer, finance and operate the Global Adjustment plan. The control, risk and rewards of that SPV will determine its consolidation into OPG as a business enterprise.

SPV:

2. **The SPV should not operate in a predetermined way such that OPG does not have decision-making authority over the SPV's ongoing activities after its formation** (i.e. should not operate on 'autopilot').

3. **OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.**

4. The Province cannot have the right to veto OPG's decisions about the relevant activities of the SPV. **OPG must have the power over the relevant activities of the SPV and be compensated**. The relevant activities of the SPV include (but are not limited to) the evaluation and decisions on financing alternatives, duration, and the strategy to minimize financing costs. **OPG must have the power to establish operating and capital budgets of the SPV.**

5. OPG must have the power to determine or change operating and financing policies of the SPV, which will affect the variability of risks and returns.

6**. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of** the following:

- **The SPV**
- **Any of OPG's investments in the most subordinated debt of the Trust**

7. OPG must own greater than 50% of the most subordinated debt and targeted to be no less than 5%[2] of the total debt of the SPV. **Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources**. A quantitative analysis should be performed at a later date to corroborate the **appropriateness of the 5% threshold to support that the 5% subordinated debt investment is sufficient to absorb most of the expected variability in the SPV.**

8. OPG must have the ability to earn variable returns by exercising its authority, which shall be accomplished as follows:

a. The cash flow from the restructured asset shall include interest determined based on a relevant benchmark that is appropriate relative to the restructured asset, plus an appropriate margin consistent with the relevant market and other risks

b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the SPV to achieve a more favourable return compared to the return from the restructured asset

c. The SPV shall establish classes of liabilities (senior, subordinated and the most subordinated). The classes would allow the SPV to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would

---

[2] *While the rest of the letter refers to a 10% investment in the most junior subordinated debt with OPG owning 5%, it should be noted that OPG should own more than 50% of the most subordinate debt. For simplicity, the degree to which OPG's ownership beyond 50% is not shown in this letter.*

limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity.

d. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the restructured asset, or any residual risk of restructured asset. The targeted return of the subordinated liability should be reflective of the underlying risks and compensate holders for active management that would be required.

e. OPG should participate in the detailed design of the above and the SPV documentation to ensure that it has substantive power and variability, which will allow OPG's Board of Directors to evaluate the opportunity as a business initiative instead of through a shareholder directive.

Notwithstanding the above, under certain Defined Forced Majeure for emergency events (e.g. unlikely credit market event or disruption where it is not possible to borrow from the market at a reasonable rate), the OEFC may provide bridge financing beyond the designated percentage for a defined period. The relevant terms should ensure that this temporary measure does not detract from the rights of OPG to direct all of the relevant activities of the SPV. Additionally, OPG should not be protected from risk of loss by the OEFC with respect to its subordinated investment, nor should it lose its right to derive the residual returns should such bridge financing be required.

Legislation

9. **The Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis, so that the SPV is able to recognize appropriate revenue to offset any ongoing costs.**

10. The Legislation must dictate the manner in which the restructured asset would be determined, collected, and the period of collection, so that the determination of the restructured asset will not be subject to the Province's decisions on an ongoing basis, but determined based on a formula. Alternatively, the Legislation may allow for an adjustment to the pre-determined deferral formula based on specific parameters that would limit the adjustment to the restructured asset. Adjustments beyond the specific parameters would require approval by the Board of Trustees.

11. The Legislation must be written to avoid legal or constitutional challenges and be irrevocable to reduce the cost of borrowing and with a specific formula which determines the deferral amount. As irrevocability would be difficult under Canadian law one mitigation would be to provide a Provincial guarantee which only applies with cancellation or amendment of the legislation.

12. The spirit of the above terms should be reflected in the SPV Indenture Agreement as well as Legislation, wherever possible.

2) The Trust is expected to be financed as follows:

- 51% senior secured debt from external markets
- 39% senior subordinated debt from OPG (via Province equity injection into OPG)
- 10% junior subordinated debt from OPG (5% from external markets and 5% from Province equity injection into OPG).

When assessing control, an investor shall consider the nature of its relationship with other parties and whether those parties are acting on the investor's behalf (i.e. they are 'de facto agents'). If OPG is assessed to be a 'de facto agent' of the Province, it will compromise the ability for OPG to consolidate the Trust. The split above is to meet the following conditions to ensure that OPG is not considered a 'de facto agent' of the Province:

- The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    - The Trust
    - Any of OPG's investments in the most subordinated debt of the Trust
- OPG must own greater than 50% of the most subordinated debt and targeted to own no less than 5% of the total debt of the Trust. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources.

3) The Province will need to conclude on whether OPG still meets the definition of a Government Business Enterprise as defined under Public Sector Accounting Board standards in order to obtain the preferred consolidation treatment after the transaction. We also recommend that the Province to undertake the analysis deemed necessary to confirm the accounting treatment in its consolidated Public Accounts, **including if the recognition of the intangible asset would result in an offsetting liability in the Public Accounts.**

Appendix C – Cabinet Submission Reference to SPV and GBE

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations.
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage the exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.

Appendix E – Key Aspects of DBRS Credit Rating Methodology

DBRS Limited (DBRS) has today confirmed the Issuer Rating and the Unsecured Debt rating of Ontario Power Generation Inc. (OPG or the Company) at A(low) as well as its Commercial Paper rating at R-1 (low). All trends are Stable. OPG's ratings continue to be supported by (1) the reasonable regulatory regime in place for the Company's generation facilities, (2) continuing financial support from its shareholder, the Province of Ontario (rated AA (low), Stable, by DBRS) and (3) strong cash flow-to-debt and debt-to-capital ratios.

http://www.dbrs.com/research/308279/dbrs-confirms-ontario-power-generation-inc-at-a-low-r-1-low-stable-trends.html

DBRS Criteria: Preferred Share and Hybrid Security Criteria for Corporate Issuers DBRS.COM 6

Hybrid Features	25%	50%	75%	100%
Subordination	Required – to ALL debt types	Required - to ALL debt types	Required - to ALL debt types	Required – to ALL debt types
Assumed Remaining Term to Maturity (as determined by DBRS)	> Five years	> Ten years	> 50 years	> 100 years
Interest Deferral	Optional; Cumulative for up to five years; Payable with cash	Optional; Cumulative for up to ten years; Payable with cash	Optional; Non-cumulative or cumulative and payable with equity	Mandatory; Non-cumulative or cumulative and payable with equity
Redemption Rights without Make-Whole and Replacement Language	Acceptable	Acceptable	Acceptable	**Not acceptable while senior debt is outstanding**
Tax- and Rating Agency Event-Based Redemption Rights with no Make-Whole	Acceptable	Acceptable	**Not Acceptable**	**Not Acceptable**

CASH FLOW-TO-DEBT = CASH FLOW FROM OPERATIONS / TOTAL DEBT

Cash flow from operations = core net income + depreciation + amortization + deferred taxes + other non-cash items from income statement (before changes in non-cash working capital items).

Total debt = short-term debt + long-term debt + hybrid debt portion + capital leases.

Gross interest expense = all interest expense + debt hybrid interest expenses + capitalized interest (excludes any International Financial Reporting Standards (IFRS) adjustments).

DEBT-TO-CAPITAL = TOTAL DEBT / TOTAL CAPITAL

Total capital = total debt + total preferred equity + total common equity + minority interest + capital leases.

EBIT-TO-INTEREST = EBIT / GROSS INTEREST EXPENSE

EBIT = revenue – cost of goods sold – selling, general and administrative expenses – depreciation – amortization.

Gross interest expense = all interest expense + debt hybrid interest expenses + capitalized interest (excludes any IFRS adjustments).

- To determine the BRA for regulation (see page 6), DBRS reviews the eight considerations found below, which assess the regulatory framework in which the utility conducts its business.
- The ranking of the factors is based on a five-point scale (excellent, good, satisfactory, below average and poor).
- The first four factors are generally of greater importance than the others when assessing regulatory risk; however, the factors are not given a specific weighting when assessing the regulatory framework.

Consideration 1: Deemed Equity Ratio

Definition

The deemed equity ratio is the percentage of equity investment in the rate base on which a utility could earn a return. In general, the higher the deemed equity ratio, the higher the earnings for a utility.

Score	Item	Definition
Excellent	50.00%+	• The deemed equity ratio represents 50.00% or more of the utility's rate base. • The treatment of the deemed equity ratio is consistent historically.
Good	45.00% to 49.99%	• The deemed equity ratio represents 45.00% to 49.99% of the utility's capital structure. • The treatment of the deemed equity ratio is consistent historically.
Satisfactory	40.00% to 44.99%	• The deemed equity ratio represents 40.00% to 44.99% of the utility's capital structure. • The treatment of the deemed equity ratio has not been consistent historically.
Below Average	35.00% to 39.99%	• The deemed equity ratio represents 35.00% to 39.99% of the utility's capital structure. • The treatment of the deemed equity ratio has not been consistent historically.
Poor	Below 34.99%	• The deemed equity ratio represents less than 34.99% of the utility's capital structure. • The treatment of the deemed equity ratio has not been consistent historically.

Consideration 2: Allowed ROE

Definition

Allowed ROE is a measurement of returns on the deemed equity portion of the rate base. The regulator assesses and sets an allowed ROE based on a utility's business risk level. These allowed ROE levels assume a current North American or Western European inflationary environment.

Score	Item	Definition
Excellent	10%+	• An allowed ROE is set at 10.00% or higher. • The regulatory treatment of allowed ROE has been consistent historically.
Good	9.00% to 10.00%	• An allowed ROE is set at 9.00% to 10.00%. • The regulatory treatment of allowed ROE has been consistent historically.
Satisfactory	8.00% to 8.99%	• An allowed ROE is set at 8.00% to 8.99%. • The regulatory treatment of allowed ROE has been consistent historically.
Below Average	7.00% to 7.99%	• An allowed ROE is set at 7.00% to 7.99%. • The regulatory treatment of allowed ROE has not been consistent historically.
Poor	Below 7.00%	• An allowed ROE is set at below 7.00%. • The regulatory treatment of allowed ROE has not been consistent historically.

Consideration 3: Energy Cost Recovery

Definition

Fuel and purchased energy cost (F&PE) recovery certainty and the timing of recovery are critical in DBRS's assessment of a regulatory system within a certain jurisdiction. DBRS looks at the following factors: (1) whether F&PE costs are fully passed through to the customers, (2) how often a utility is allowed to adjust the F&PE costs in retail rates charged to customers and (3) if there is a mechanism within a jurisdiction to allow utilities to make F&PE cost adjustments with no or minimal regulatory review. In addition, DBRS also focuses on the generation mix within a certain market. A high power cost market could have an impact on the utility's ability to recover the purchased power costs in a timely manner. DBRS notes that this factor is not applicable for water and waste-water utilities.

Score	Item	Definition
Excellent	Monthly/bimonthly	• F&PE costs are fully passed through. • Adjustment is made on a monthly basis. • There is an automatic adjustment mechanism. • The jurisdiction is in a favourable generation mix market, resulting in low power cost.
Good	Quarterly	• F&PE costs are fully passed through. • Adjustment is made on a quarterly basis. • There is an automatic adjustment mechanism. • The jurisdiction is in a favourable generation mix market, resulting in low power cost.
Satisfactory	Quarterly with regulatory review	• F&PE costs are fully passed through. • Adjustment is made on a quarterly basis. • F&PE cost deferrals are subject to some regulatory review. • The jurisdiction is in a good generation mix market.
Below Average	Annually with automatic adjustment	• F&PE costs are fully passed through or utilities have minimal exposure to energy price volatility. • Adjustment is made on an annual basis and is subject to minimal or some regulatory review. • The jurisdiction is in an above-average power cost market.
Poor	Annually with no automatic adjustment mechanism	• F&PE costs are fully passed through or utilities have minimal exposure to energy price volatility. • Adjustment is made on an annual basis. • F&PE cost deferrals are subject to regulatory review. • The jurisdiction is in an above-average power cost market.

Consideration 4: Capital and Operating Cost Recoveries

Definition

In assessing CCR and OCR, DBRS focuses on the likelihood of a utility's capex being added to its rate base, along with the timing of such an addition. In addition, DBRS focuses on cost-inflation adjustments that could affect the timing of the OCR. In particular, DBRS looks at the following factors: (1) the utilization of future test periods for rate decisions, (2) whether the spending is allowed to be added to the rate base during the construction or will only be added when the project is completed, (3) the level of upfront capital spending required without regulatory approval, (4) the degree of regulatory lag and uncertainty with respect to the CCR and (5) whether or not there is a reasonable mechanism to deal with cost overruns.

Score	Item	Definition
Excellent	Minimal CCR and OCR lag risk	• Work-in-progress costs can be added to the rate base if capex is significant. • Interim base-rate increases have been frequently authorized. • Future test periods are fully incorporated for rate-case decisions. • Rate cases are typically decided well within one year unless the rate cases are litigated or unusual circumstances occur. • There is a reasonable mechanism to deal with cost overruns.
Good	Reasonable CCR and OCR lag risk	• Capital costs are added to the rate base after completion of work. • Interim base-rate increases have been authorized from time to time. • Future test periods are at least partially incorporated for rate-case decisions. • Rate cases are typically decided within one year unless the rate cases are litigated or unusual circumstances occur. • There is a reasonable mechanism to deal with cost overruns.
Satisfactory	Modestly elevated CCR and OCR lag risk	• Capex is generally pre-approved by the regulator, but there is some modest upfront capital spending before regulatory approval. • Interim base-rate increases have been rarely authorized. • Historical test periods are commonly incorporated for rate-case decisions. • Rate cases are typically decided within one year unless the rate cases are litigated or unusual circumstances occur. • There is a reasonable mechanism to deal with cost overruns.
Below Average	Below-average CCR and OCR lag risk	• There is significant upfront capital spending before regulatory approval. • Interim base-rate increases have been rarely authorized. • Historical test periods are commonly incorporated for rate-case decisions. • Rate-case decisions typically take more than one year because of frequent court cases and other circumstances. • There are some mechanisms to deal with cost overruns.
Poor	Significant CCR and OCR lag risk	• Capex is generally not pre-approved by the regulator. • Capital costs are added to the rate base after completion of work. • Utilities face significant regulatory lag risk with respect to the CCR and the OCR. • There is no meaningful mechanism to deal with cost overruns.

Consideration 5: COS versus IRM

Definition

In general, under COS, regulated utilities are allowed to recover prudently incurred operating costs and earn a reasonable return on their investment. Under IRM, revenue requirements for the year are based on a COS base year, adjusted for inflation (using the consumer price index (CPI)) and subtracted a productivity factor, which is set by the regulator. This forces utilities to maintain their operational efficiency to achieve allowed ROE. DBRS views COS as lower risk than IRM. In addition, DBRS also considers the length of an IRM period between COS years. DBRS's scoring system gives a higher score for a shorter IRM period.

Score	Item	Definition
Excellent	COS	• The COS regime allows utilities to recover prudently and reasonably incurred operating costs.
Good	IRM (three years or shorter)	• The IRM regime is a maximum of three years between COS years. • For an IRM period of more than three years, there are reasonable mechanisms in place to mitigate unexpected capital investment and operating costs. In addition, key IRM assumptions, including CPI and productivity factors, are reasonable.
Satisfactory	IRM (four- to five-year framework)	• The IRM period is four to five years.
Below Average	IRM (six- to ten-year framework)	• The IRM period is six to ten years.
Poor	IRM (ten-plus years)	• The IRM period is over ten years.

Consideration 6: Political Interference

Definition

Political interference refers to political risk that could occur within a jurisdiction. Political interference could be in the following forms: (1) influence on the regulator's ability to independently and impartially arrive at a decision, (2) passing legislation to override a decision made by the regulator and (3) the regulator being elected instead of being appointed.

Score	Definition
Excellent	• There is no government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed.
Good	• There is a low degree of government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed.
Satisfactory	• There is a low degree of government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed or elected.
Below Average	• There is a modest degree of government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed or elected.
Poor	• There is a high degree of government influence on the regulatory decision-making process. • There has been some adverse legislation in the regulated utility sector. • The regulator is appointed or elected.

Consideration 7: Stranded Cost Recovery

Definition

Stranded costs occur when a utility has already incurred costs (F&PE, operating cost or capital spending) and faces uncertainty as to when it can recover these costs. In some cases, stranded costs are written off if it is certain that these costs cannot be recovered. DBRS looks at the following factors: (1) whether stranded costs exist and their magnitude, (2) the likelihood of recovering stranded costs, (3) the frequency and materiality of writedowns and (4) the time it takes to recover these costs.

Score	Item	Definition
Excellent	No stranded cost	• No stranded costs associated with legitimate or reasonable costs incurred by utilities.
Good	Full recovery	• Some stranded costs exist. • Stranded costs are fully recovered in a timely manner. • No historical stranded cost writedowns.
Satisfactory	Occasional writedowns	• Some stranded costs exist. • Stranded costs are recovered but subject to some regulatory lag. • Occasional writedowns.
Below Average	Frequent writedowns	• Some stranded costs exist. • Stranded costs are sometimes recovered. • Frequent writedowns. • Takes considerable time to recover costs.
Poor	Frequent significant writedowns	• Significant stranded costs exist. • Stranded costs are not fully recovered. • Significant writedowns occur. • Significant regulatory lag associated with the recovery.

Consideration 8: Rate Freeze

Definition

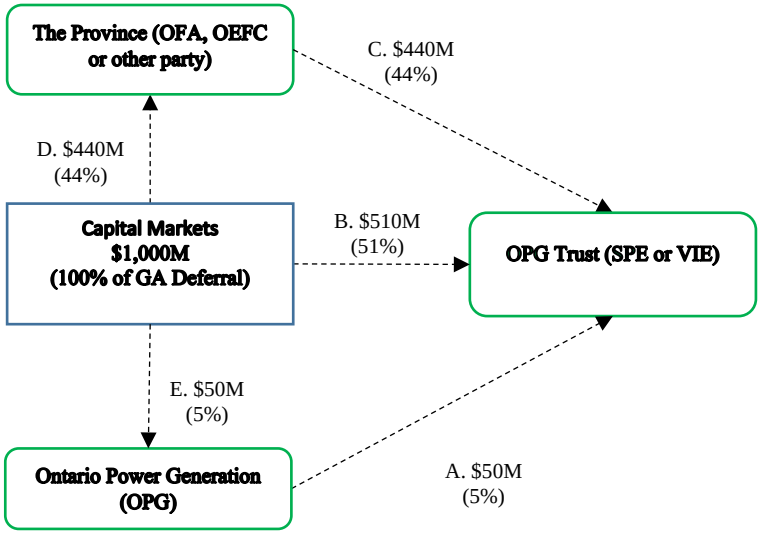
A rate freeze refers to a fixed retail rate that is charged to customers during a period of time (more than two years). During the rate-freeze period, utilities are exposed to increases in operating and energy costs. The longer the rate-freeze period or the more frequency with which a rate freeze occurs within a jurisdiction, the riskier it is for the utility.

Score	Item	Definition
Excellent	Never	• Rates are never frozen.
Good	Potential	• Rates have the potential to be frozen.
Satisfactory	Occasional	• Rates are occasionally frozen. • The frozen period is fewer than three years.
Below Average	Frequently	• Rates are frequently frozen. • The frozen period is fewer than three years.
Poor	Rate freeze	• Rates are currently frozen. • The frozen period is three years and longer.

Appendix F. GA Deferral Structure – Accounting Considerations for Consolidation of SPV

Assumptions: Year #1 – GA Deferral of $1B
Rate Charged to ratepayers – 5%
Interest Collected Year 1 - $50M*
Tranche A – 4.0%, $20.4M annually
Tranche B – 5.5%, $24.2M annually
Tranche C - 10.8%, $5.4M annually (the **residual return**)
**Assume straight interest for simplicity, 5% x $1B = $50M*

Scenario



Under US GAAP (OPG's Perspective)

- The relevant standard is FASB ASC Topic 810 [*Consolidation*]
- An SPE is an enterprise created to accommodate specific needs of the sponsoring entity.
- A SPE is classified as a VIE if
  - **Total equity at risk is insufficient to finance activities without financial support from other parties, or**
  - Equity investors lack any one of the following:
    - The ability to make decisions
    - The obligation to absorb losses
    - **The right to receive returns**
- The **primary beneficiary** of a VIE must consolidate it as its subsidiary **regardless of how much of an equity investment it has in the VIE**.
- The primary beneficiary (**usually the sponsor**, **which in this case is OPG)** is the entity that is expected to **absorb the majority of the VIE's expected losses**, receives the **majority of the VIE's residual returns,** or both.
- The primary beneficiary has the **power to direct the activities of the VIE that most significantly impact the entity's economic performance**.
- If one entity will absorb the majority of the VIE's expected losses and another unrelated entity will receive a majority of the VIE's expected residual returns, the entity absorbing a majority of the losses must consolidate the VIE.
- The SPE borrowing from the debt market acquires or constructs an asset – the asset may be acquired from the sponsoring company (i.e., OPG) or from an outside source (e.g., IESO).
- Under US GAAP, with the Province indirectly or directly financing the SPV, since OPG will absorb the majority of the **expected** losses from the equity tranche, will receive the **majority** of the **residual returns**, and will have the **power to direct activities of the VIE**, it would likely be considered the primary beneficiary and would consolidate the VIE.

Setting up the Trust (in no particular order)
A. OPG Trust, the Special Purpose Entity (SPE) under IFRS and Variable Interest Entity (VIE) under US GAAP, receives 5% of the GA Deferral to fund the purchase of the IESO's regulatory asset. This 5% represents the junior "equity" tranche ("Tranche C").
B. The SPE funds 51% **(or more)** of the GA deferral by issuing **debt securities** to the capital markets. This forms the senior tranche ("Tranche A").
C. The SPE funds 44% (**or less**) of the GA deferral by issuing **debt securities** to the Province. This could form part of Tranche A or a more subordinated debt ("Tranche B") that is higher than Tranche C. The alternative option is from Figure 1.
D. The Province uses general borrowing to finance the 44% of the GA deferral given to the SPV as **debt**. Or given to OPG → SPV.
E. OPG borrows the 5% (**minimum**) from the capital markets directly (minimum based on white paper).

Under PSAB (Province's Perspective for the SPV)

- OPG already receives all its financing from the Province through standard debt issuances, credit facilities, and non-recourse project financing.
- The white paper states that the Province cannot "indirectly or directly" fund the SPV through debt or equity.
- Arguably, the Province investing directly into the SPV (with debt not equity) rather than OPG directly is more arm's length, with the Province securing a better chance of return than with equity injections.
  - A lower interest rate can be secured due to the securitization of the regulatory asset (or intangible asset once purchased) – as the assets in a SPV are bankruptcy remote.
  - The fact that the debt, treated as an interorganizational loan under PSAB, is related to cashflows from a rate regulated asset should not impact its recognition on the balance sheet (similar to how OPG and Hydro One have debt and equity from the Province that gain a return from regulated assets).
  - There is a risk that if the SPV structure dissolves, then the rate regulated assets would be the recourse for the debt, resulting in a fiscal impact with their inability to be recognized on Provincial Accounts.
- **To be confirmed by external accountants – regardless of if the Province invest directly in the SPV or indirectly through OPG, all else being equal, there would be no line-by-line consolidation.**

Under IFRS (Province's Perspective for OPG modified equity method)

- The Province is required under PSAB to consolidate OPG in its books **under the modified equity method, but under IFRS**.
- Thus, OPG Trust must also be considered an SPE for OPG under IFRS for the preferred accounting treatment to be attained.
- The relevant standard is IFRS 10 (below taken from **2017 IFRS standards**) are similar to US GAAP:
- **Par 7** - an investor controls an investee if and only if the investor has **all the following:**
  - **power over the investee**
  - **exposure, or rights, to variable returns** from its involvement with the investee; and
  - **the ability to use its power over the investee to affect the amount of the investor's returns**.
- **Par 17** - An investor controls an investee if the investor not only has power over the investee and exposure or rights to variable returns from its involvement with the investee, but also has the ability to use its power to affect the investor's returns from its involvement with the investee.
- **Relationship with other parties: Par B73** - When assessing control, an investor shall consider the nature of its relationship with other parties and whether those other parties are acting on the investor's behalf (i.e. they are 'de facto agents'). The determination of whether other parties are acting as de facto agents requires judgement, considering not only the nature of the relationship but also how those parties interact with each other and the investor.
- **Par B74** - Such a relationship need not involve a contractual arrangement. A party is a de facto agent when the investor has, or those that direct the activities of the investor have, the ability to direct that party to act on the investor's behalf. In these circumstances, the investor shall consider its de facto agent's decision-making rights and its indirect exposure, or rights, to variable returns through the de facto agent together with its own when assessing control of an investee.
- **Par B75** - Here are examples of parties that, by the nature of their relationship, might act as de facto agents for the investor:
- (a) the investor's related parties. **Criterion is met as Province is a related party.**
- (b) a party that received its interest in the investee as a contribution or loan from the investor. **OPG's only interest in the investee is the 5% if Province funds SPV directly – 5% from capital markets. Criteria not met (TBC).**
- (c) a party that has agreed not to sell, transfer or encumber its interests in the investee without the investor's prior approval (except for situations in which the investor and the other party have the right of prior approval and the rights are based on mutually agreed terms by willing independent parties). **Criterion met based on latest legislation draft**.
- (d) a party that cannot finance operations without subordinated financial support from the investor. **OPG is self-sufficient GBE.**
- (e) an investee for which the majority of the members of its governing body or for which its key management personnel are the same as those of the investor. **Test not met – OPG governing body (Board of directors) is separate from the Province.**
- (f) a party that has a close business relationship with the investor, such as the relationship between a professional service provider and one of its significant clients**. Criterion met**.
- **CEFD interpretation**: The Province directly funding the SPV has the same consolidation effect as indirect funding through OPG.

Hi James,

And would you have the latest version of the CBN that you could share as well?

Thanks,
Ron

Hi James,

Would "finance" be more accurate than "cover" -- at least at this time as per the intent? Cover might suggest funding, vs financing.

Also, the OIC we think would go to LRC. And the authority would be under CIPA.

I'd need to check with staff, and your advice, if such an OIC would need to go to TB.

Ron

CABINET BRIEFING NOTE
AND LRC RECOMMENDATION

Energy
Implementation of Ontario's Fair Hydro Plan

Cabinet (info)	TB/MBC	Cabinet	Announcement	TB/MBC	Cabinet	Introduction
Feb 15, 2017	March 1, 2017	March 1, 2017	March 2, 2017	May 9, 2017	May 10, 2017	May 11, 2017

Summary of Proposal

The proposed legislation contains a variance from Cabinet direction, which is detailed in the ministry's variance memo and within this note.

Context for Decision:

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. Up to 500,000 small businesses and farms would also benefit. These measures include the 8% rebate introduced in January 2017 and builds on previously announced initiatives to deliver broad-based rate relief on electricity bills. OFHP includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need, and includes the following major components:

- Refinancing the Global Adjustment (GA);
- Helping vulnerable electricity consumers;
- Extending the Industrial Conservation Initiative (ICI);
- Improving sector efficiency; and
- Modernizing Ontario's electricity market.

Since March 2, 2017, the Affordability Fund and ICI expansion have been implemented.

This proposal follows Cabinet direction to the Ministry of Energy to take the necessary steps to implement electricity price mitigation initiatives that support OFHP to provide additional rate relief to Ontario electricity ratepayers.

The proposed legislation, the *Fair Hydro Act, 2017*, if enacted, enables approaches to fairly allocate a portion of GA amongst specified current and future electricity rate payers ("Schedule 1- *Ontario Fair Hydro Plan Act, 2017*"), and help the most vulnerable Ontarians through enhancements to electricity support programs through government funding ("Schedule 2- Amendments to the *Ontario Energy Board Act, 1998*"). To fully implement the initiative, the ministry will be seeking future approvals for regulations identified in the proposed bill.

The proposed legislation:

1. Establishes a framework to refinance a portion of the GA costs in order to reduce costs for eligible electricity ratepayers ("specified consumers") in the near term while recovering these costs over the mid- to long-term:
   - July 1, 2017, to April 30, 2018, reduces, on average, after-tax electricity costs for prescribed typical consumers by 25% (inclusive of the 8% rebate and shifting of support program to be government funded).
   - May 1, 2018, to June 30, 2021, electricity rates will be prescribed by regulation. This regulation making authority would enable the government keep increases in line with the Consumer Price Index (CPI) (see page 17- Fiscal Pressure)
   - July 1, 2021, to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and administrative costs (see page 14- Future Impacts to Electricity Rates). Time period may be extended by regulation.
   - Provides for amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998*, to enable Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO) to address payment, settlement and cost-recovery obligations and to manage the refinanced GA costs. (see page 19- OPG Mechanism).
2. Expands electricity support programs for the most vulnerable consumers and moves program costs from the rate base to the tax base. The bill amends the *Ontario Energy Board Act, 1998* to:
   - Move the recently expanded Ontario Electricity Support Program (OESP) to government funding, allow for the potential transition of the program administration to the Crown or other entity, and to enable information exchange between the Ontario Disability Support Program (ODSP) and Ontario Works (OW) to potentially allow for automatic enrolment procedures to be established;
   - Enable the funding of existing Rural or Remote Rate Protection (RRRP) for prescribed customers to be provided for through provincial revenues, rather than from electricity customers.
   - Enable a broader government funded Distribution Rate Protection (DRP) program (broadened RRRP) which provides additional distribution rate protection to residential customers of prescribed higher cost LDCs by enabling the regulations to prescribe a maximum distribution charge.
   - Enable the provision of a government funded on-reserve First Nations Delivery Credit (FNDC), which would cover 100% of the delivery charge for on-reserve First Nation residential customers.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price in order to

recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.

- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.) LDCs recover their costs through distribution rates. LDCs are licensed to serve a specific geographic area by the Ontario Energy Board (OEB). An LDC must receive Ontario Energy Board approval to charge a distribution rate.
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates for residential customers are moving to a fully-fixed charge by 2019 for most LDCs. Some LDCs, such as Hydro One and Algoma Power are transitioning over a longer period.
  - Line Loss: The costs to recover electricity that is lost when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service classes are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. Lower customer density increases the cost to serve. Residential class R1 customers are considered ‘medium density’ customers and residential class R2 are considered ‘low density customers.’ Hydro One also served urban residential customers, considered “high density” through its UR class. Hydro One also has urban and non-urban general service classes.
- **Ontario Power Generation (OPG) –** A business corporation owned by the Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario’s electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario’s electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to participate in quasi-judicial

proceedings and formal stakeholder consultations.

- **Independent Electricity System Operator (IESO) –** An independent corporation established under the *Electricity Act, 1998* that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Special Purpose Vehicle (SPV)** – **Special Purpose Vehicle (SPV) –** A Special Purpose Vehicle (SPV) sometimes referred to as a Special Purpose Entity (SPE) is an off-balance sheet legal entity created by the sponsor or originator. SPVs can be viewed as a method of isolating the risks of an underlying pool of exposures held by the sponsor and reallocating them to the SPV and often investors. This allows investors access to investment opportunities which would not otherwise exist, and provides a new source of revenue generation for the sponsor.
- **Security Interest –** A security interest is a type of property interest created by agreement or by operation of law over assets to secure the performance of an obligation, usually the payment of a debt. It gives the beneficiary of the security interest certain preferential rights in the disposition of secured assets.

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. On March 2, 2017, the Ontario government announced OFHP, and since then, there has been increased media attention and public pressure for the government to bring forward the legislation which would enact the commitments made in the Plan. The government has committed to implement further rate relief measures by the summer 2017. On April 20, 2017, the OEB announced that, starting in May, electricity rates would be 17% lower than would have otherwise been without the 8% rebate (OREC), the anticipated move of OESP costs to government funding, and a portion of the reductions estimated under OFHP based on a comfort letter sent from the Minister of Energy.

What is the expected cost to government?

While the GA refinancing structure is intended to result in no fiscal impact to the province, the total projected cost to the electricity rate base is $24.7B amortized until 2047, or longer as may be prescribed. In 2017-18, the GA refinancing cost is forecast to be $2.5B which would eventually be recovered through the rate base. Enhancing electricity support programs and moving to government funding will cost government $499M in 2017-18.

TABLE 1: Cost Impact ($M)	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	499	753	829	892
GA Financing (Assumes funded from the electricity rate base)*	2,500	2,600	3,000	3,500
Cumulative Total	2,933	3,353	3,829	4,392

***Note:** GA Financing includes equity injection from the province to OPG. $1.1B investment operating asset in 2017-18 (Ministry has received appropriations)

The GA refinancing portion of the bill establishes a structure in which the IESO records the GA cost recovery deferral as a regulatory asset (regulated by the OEB). The IESO may then sell the regulatory asset, at which time it becomes an investment asset. The investment asset owner (OPG Trust/Special Purpose Vehicle (SPV) or "financing entities") may then further sell or securitize all or part of the investment asset to other parties in exchange for a funding obligation. Under this structure, OPG, acting as the "Financial Services Manager," would therefore take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from IESO. OPG would finance these purchases through a combination of an equity investment by the Province flowed through the OFA ($1.1 B in 2017-18; see Table 1) and external private sector financing. The structure would increase gross debt of the Province (to finance the equity injection in OPG), increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. The Province's net debt will remain unchanged as the equity investment in OPG will offset the additional Provincial borrowing. This is expected to be fiscally neutral to the Province.

The estimate for the combined impact of the support programs for the most vulnerable consumers would begin in 2017-18 and is expected to be $499M in 2017-18, growing to $753M in 2018-19 and rising. This investment has been factored into the 2017 Ontario Budget's fiscal plan. These estimates are based on variable inputs such as program uptake, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

TABLE 2: Fiscal Impact ($M) of Social Programs	2017-18 Budget
Rural or Remote Rate Protection	344
Ontario Electricity Support Program	140
On-Reserve First Nations Delivery Credit	15

Note: As approved in the TB/MBC submission of Mach 1, 2017, and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31, 2018. ENERGY will return updated out-year figures following program implementation

There is inherent risk in the financial estimates given the number of variables that are included in the calculations (e.g. cost of borrowing (projections assume 5%), electricity demand and electricity market conditions and accounting assumptions). Under the mechanism, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future (see page 17- Fiscal Pressure).

What are the key steps to deliver this proposal?

- May 11, 2017 - Introduce legislation.
- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of OFHP.

- Energy will post a proposal to the regulatory registry in early May outlining proposed new regulations and amendments needed to support implementation.
- Early June 2017 [TBD]- Energy to bring regulations to TB/MBC.
- Early June 2017 [TBD]- Energy to bring regulations to Cabinet/LRC.
- July 1, 2017- the remaining reductions and initiatives associated with the OFHP would take effect. Programs that are not established on this day for technical implementation issues will have benefits that are retroactively applied to customers once program is operational in individual LDCs.

How will the changes be communicated?

On March 2, 2017, the Premier announced OFHP, which would lower electricity bills by 25% for all residential customers including many small businesses and farms. Communications was sustained through minister announcements, local MPP echoes, a radio campaign, and a webpage that features all the programs and initiatives the government is taking to reduce electricity costs.

On May 11, 2017, there will be a news release to announce the introduction of legislation to implement OFHP. Phase two of the marketing campaign will start this summer and will include radio and television.

A robust issues management plan will be developed to mitigate the GA financing risks.

Notes and Recommendation from LRC

LRC item direct to Cabinet.

Cabinet Office Analysis

The proposed legislation allows for the implementation of the key elements of Ontario's Fair Hydro Plan (OFHP) announced on March 2, 2017, to provide further rate relief to Ontario electricity ratepayers. The Global Adjustment (GA) partial refinancing proposal will provide, on average, 25% in electricity rate relief (including the 8% announced in 2016 and shifting of support program costs to the tax base) to "specified consumers" (i.e., residential, farms, small businesses, condominiums, long-term care homes and co-operative housing as prescribed) between July 1, 2017, and April 31, 2018 ("The Fair Adjustment"). Electricity rates would then change by amounts prescribed in the regulations. Regulation making authority would enable the government to keep rate increases in line with Consumer Price Index (CPI) between May 1, 2018, and June 30, 2021 (see page 17- Legal Risks). Additional relief will be provided to Ontarians most in need through enhancements to electricity support programs through government funding.

1. Partial Refinancing of the Global Adjustment:

The proposed legislation establishes the framework to refinance a portion of the current GA costs to future ratepayers by recognizing the longer term benefit many of these

generating assets to the electricity system. The methodology is based on the assumption that some assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets in the future. Similarly, conservation costs are currently recovered through the GA in the year they occurred while conservation initiatives can provide benefits to the system over many years.

The proposed *Fair Hydro Act, 2017* attempts to balance several key factors including financeability, accounting treatment and legal considerations by:

- Supporting financeability through a number of features, including a provincial undertaking not to interfere with clean energy adjustments once determined, which will be backstopped by a guarantee, and provisions intended to reduce borrowing costs and attract a wide investor base;
- Addressing the necessary accounting requirements through mechanisms to record funding, interest and the transfer of regulatory assets to avoid a fiscal impact to the province; and
- Mitigating legal risk by developing a methodology that attempts to ensure an alignment of costs with benefits to future rate payers.

In order for the clean energy adjustment to be characterized as a regulatory charge, the amount that could be refinanced would need to reflect the true value of the underlying assets being amortized over a longer period of time. According to a legal opinion by former Supreme Court Justice Binnie, there is a moderately high risk that the proposed change would be characterized as an unconstitutional tax rather than a valid regulatory charge because future consumers are being required to subsidize current consumers (see page 16- Legal Risk).

The bill establishes a structure in which the Independent Electricity System Operator (IESO) records the GA cost recovery deferral as a “regulatory asset” (regulated by the Ontario Energy Board (OEB)), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time from “specified consumers” (“the Fair Adjustment” and “IESO deferral”). Specified consumers would receive a reduction in electricity rates from July 1, 2017 to June 30, 2018 as based on a 25% reduction for a prescribed typical residential consumer. IESO may then sell the regulatory asset, at which time it becomes an “investment asset.” The investment asset owner (OPG Trust/Special Purpose Vehicle (SPV) or “financing entities”) may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

The Minister, following the principles in the bill, would regularly calculate the “Fair Allocation Amount” to ensure a proper match of the allocation of the intergenerational costs and benefits in relation to each on the next 60 six month “reference periods.” The financings will be backed primarily by the clean energy adjustments payable by specified consumers. The clean energy adjustments will track the actual payment obligations incurred by the financing entities when they become due and payable.

OPG, in its role as the Financial Services Manager, will calculate the aggregate clean energy adjustment payable in each month of the reference period, and, to ensure intergenerational fairness, these amounts will be managed to align with the fair allocation amounts determined by the Minister. OEB would calculate the rates at which the clean energy adjustment could be collected from specified consumers. To recoup the costs associated with the fair adjustment, consumers would be invoiced the clean energy adjustment on their electricity bills through existing IESO and Local Distribution Companies' (LDC) processes, which will be channeled through to pay each financing entity's related funding obligations. However, electricity rates are projected to remain lower than would have otherwise been until about 2026-27 (pending the development of the fair allocation amount), and the clean energy benefit will appear on customer's bills once repayment of the accumulated debt begins.

OPG is planning to create a SPV or Trust to finance the partial GA refinancing. To maintain the integrity of the structure, OPG must have the ability to appoint and remove the Trustee (or Board of Trustees) of the SPV/Trust, with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV/Trust. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. OPG will have the ability to direct the financing of the SPV/Trust and both benefit from its financing strategy and be at risk as a result of it.

Once the OPG Trust/SPV has purchased the regulatory asset, which it is under no obligation to do, it will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province through the OFA (see page 4: Table 1) and external financing through sale or securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG (to offset the interest on debt).

The legislation also provides that no action or omission by the OEB, the Minister, or the Crown is effective to reduce, impair, postpone or terminate the obligations of specified consumers to pay the clean energy adjustment. Additionally, to support the program, the government will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The legislation enables these agreements. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be to achieve the highest rated securities, although that will depend on issues such as the strength of the undertaking not to adversely affect the program through subsequent legislation.

The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future (see page 14- Risks and Considerations).

Key elements of this schedule of the bill include:

Specified Consumers

- The defined group of consumers to whom the “Fair Adjustment” applies. Prescribed consumers include residential consumers, farms, small businesses, condominiums, long-term care homes and co-operative housing. These are primarily consumers eligible for the RPP, and aligns with the eligibility under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA).

Clean Energy Costs

- Clean energy costs are those costs that arise from the “clean energy initiative” and are allocated to the specified consumers for past, present and expected costs.
- The clean energy costs include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act*, *1998* (basically, the GA) which relate to contracts for:
    - Renewable energy generation or capacity, conservation and demand management, energy storage, and energy efficiency;
    - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act, 1998* or as prescribed);
    - Payments made under section 78.5 of the *Ontario Energy Board Act, 1998*; and,
    - Other costs as may be prescribed.

Fair Adjustment

- The adjustment to rates to ensure intergenerational fairness.
- July 1, 2017- April 30, 2018- reduction in rates for “specified consumers” based on a 25% reduction for a prescribed typical consumer.
- May 1, 2018- June 30, 2021- the bill allows for rates to be set by regulation (see page 17- Fiscal Pressure).

Fair Allocation Amount

- Principles established in the bill require proper alignment over time between the costs of providing facilities for clean electricity generation and conservation (“clean energy costs”) and the consumers who benefit from these investments.
- The Minister of Energy sets the fair allocation amount, and is required to:
    - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the “specified consumers” for applicable “reference periods” (typically every 6 months); and,
    - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (see page 16- Legal Risk; page 17- Fiscal Pressure);

  - Align these costs with clean energy benefits expected to be received by rate payers in the future.

- Subsequent calculations may be undertaken by other agents as prescribed.

Clean Energy Adjustment

- Determined by Financial Services Manager (OPG), the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principal, interest, transaction costs and administrative costs associated with the fair adjustment and consistent with the fair allocation amount.
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- July 1, 2017- June 30, 2021- OPG to internally capitalize the costs related to the fair adjustment, which will result in increased financing costs during this time.
- July 1, 2021- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing IESO and LDC processes. Note: it is not certain when the clean energy adjustment will ultimately appear on electricity bills as this will be tied to when repayment of the accumulated debt begins.
- In accordance with the regulations, the OEB to calculate the rate at which specified consumers are invoiced to recover the clean energy adjustment.

Regulatory Asset and Investment Asset

- A regulatory asset is created as IESO defers its right collect a portion of the rates that it would have otherwise received from customers/LDCs if not for the implementation of the Fair Adjustment.
- Subject to OEB approval, IESO records the funding shortfall as a regulatory asset, as IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until July 1, 2021.
- The Financing Plan contemplates the Financial Services Manager (OPG) establishing financing entities (OPG Trust/SPV) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.
- This purchase and sale turns the regulatory asset into an investment asset for the investment asset owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 4 years (July 1, 2021) the IESO has the right to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority (OFA) (see page 17- Fiscal Pressure).

- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

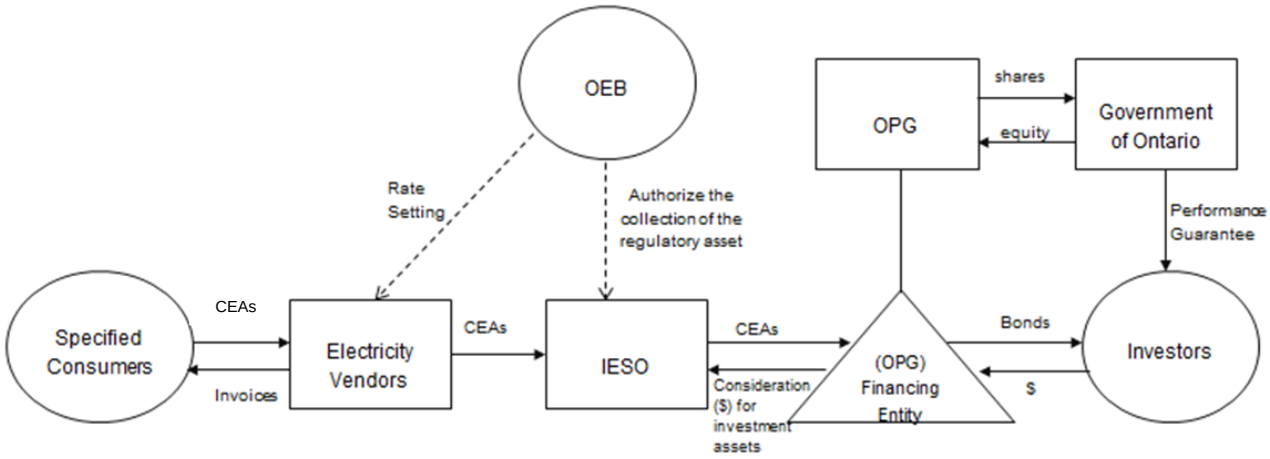
Financing Plan

- In practical terms, the Financing Plan is intended to show how debt (with varying incurrence dates, maturities and interest rates) will be used over time.
- Prepared by the Financial Services Manager (OPG), the Financing Plan is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO. Plan to be provided to the Minister of Energy.

Crown Undertaking (Guarantee or Backstop)

- The bill provides that no action or omission of the Crown, OEB, or the Minister would be effective to reduce, impair, or postpone or terminate the obligations of specified consumers to pay the clean energy adjustment.
- The Ministers of Energy and Finance together, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill, including regarding the performance of the IESO or electricity vendors under the bill.
- The Ministers of Energy and Finance together, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.

Figure 1: Financing Structure



Note: CEAs are "clean energy adjustments".

External Opinions

The proposed structure's impacts on IESO has been extensively reviewed by KPMG (IESO auditor), and the firm has provided a final draft accounting opinion confirming the validity of the structure under Public Sector Accounting Board (PSAB) standards, which will be updated after the legislation, regulations, and commercial arrangements are complete. KPMG advises that the variance account created by the proposed legislation meets the accounting criteria for the recognition of a "regulatory asset". The KPMG

opinion is highly technical and contains information pertaining to the proposed legislation. While it would be possible to make the opinion public, the ministry is not recommending this approach and is considering alternative options to propose.

If the government intends to keep rate increases to the pace of CPI from May 2018 to July 2021, this may require recourse to the fiscal plan to maintain the constitutionality of the GA refinancing structure.

For clarity, the below requirements were to be met to ensure the structure was defensible, and, based on the opinions received, the ministry is confident that the bill achieves these objectives:

- IESO requirements:
    - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB; IESO can derecognize regulatory asset upon sale to OPG; “Market books” are reflected on corporate books; and, OEB to act as regulator.
- OPG requirements:
    - OPG Trust/SPV purchases regulatory asset from IESO – classifies as intangible asset; OPG consolidates Trust/SPV; and, OPG retains GBE status.

The ministry retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

However, despite the fact that the structure has satisfied the fiscal, and accounting requirements and mitigated to the extent possible the legal risks outlined in the policy submission, there remain some fundamental risks:

- The structure is unique in Canada and possibly the world, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the Unites States, but officials are currently unaware of any example that would compare to the size, complexity or fluidity of the proposal;
- Complexity of the structure and length of deferral/recovery increases risk and decreases transparency;
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG’s direct operations as the Financial Services Manager; and,
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and

therefore its saleability. This could in turn, decrease the amount of rate reduction achievable under this mechanism.

2. Enhancing Electricity Supports and Shifting Costs to Government Funding:

Moving the Ontario Electricity Support Program (OESP) to Government Funding

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The program was launched in January 2016 and has had roughly 30% enrolment. Under OFHP the program was recently expanded to increase the existing benefit credit amounts by 50% and provide additional credits to more households. Under the expanded program the basic OESP benefit scale increased from $30-$50 to $35-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $52-$113 a month for eligible consumers.

The proposed bill amends the *Ontario Energy Board Act, 1998* to allow for the program to transition from the rate base to the government funding, and allow for the potential transition of the program administration to the Crown or other entity. The cost to the fiscal plan would be $186 million in 2017-18. The bill provides further amendments designed to allow information sharing between the Ontario Works (OW) and the Ontario Disability Support Program (ODSP) and the entity responsible for OESP. The intention is that this information sharing will allow for the automatic enrolment of individuals that are already enrolled under the ODSP or OW, but it is currently unknown to what extent this will significantly impact new enrolment under the program. The ministry is continuing to work with MCSS to increase the uptake of the program and automate enrolment of current social assistance clients. The ministry and OEB are also working with the Canada Revenue Agency (CRA) to eliminate the CRA requirement for “wet signatures” on OESP application forms to streamline the application process.

Enhancing RRRP (Delivery Charge Relief) and Moving to Government Funding

Rural or Remote Rate Protection (RRRP) helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. Currently, RRRP is a $290M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial.

The proposed bill amends the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The intention is to draft regulations permitted under this section to move the portion of RRRP costs used to support Hydro One R2 customers from rate payers to government funding. This is the majority of the cost associated with RRRP.

The bill would further amend the *Ontario Energy Board Act, 1998* to enable the creation of a government funded distribution rate protection program and the ability to prescribe a maximum distribution charge for prescribed classes of residential customers for certain prescribed high cost distributors. The intention is to draft regulations permitted under this section of the bill to prescribe residential customers of the following LDCs to receive distribution rate protection: Hydro One R1 and R2 rate classes, Algoma Power (excluding reclassified residential customers), Atikokan Hydro, Sioux Lookout Hydro, Lakeland Power – Parry Sound, InnPower, Chapleau PUC, and Northern Ontario Wires.

The OEB would continue its usual rate setting activities for prescribed LDCs, as authorized under the *Ontario Energy Board Act, 1998*, and prescribed LDCs would continue to collect the revenue they are entitled. However, prescribed customers (~800,000 customers) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up of out provincial funds.

Targeted broadened RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level. Cost to fiscal plan would be $344 million in 2017/18. If the legislation and required regulations are passed, the program would become active as of a prescribed effective date (planned: July 1, 2017).

On-Reserve First Nations Delivery Credit

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances related to lands affected by energy developments.

The proposed bill amends the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers with the details to be prescribed in the regulations. The intention is to enact regulations that would eliminate the delivery charge for all on-reserve First Nation residential customers served by licenced electricity distributors, and eliminate the monthly service charge for customers of licensed distributors that charge a bundled rate.

Eligible recipients would be automatically enrolled in the program. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed effective date (planned: July 1, 2017).

RISKS AND CONSIDERATIONS

Future Impacts to Electricity Rates

The impact of proposed legislation to a typical eligible customer’s bill in July 2017 is a 25% decrease (combined with the 8% rebate effective January 1, 2017, and shifting of the funding of OESP and RRRP to provincial revenues), followed by an increase in

price over time. Between May 2018 and June 2021 electricity rates will be set in accordance with a methodology established by regulation which would enable rate increases to be kept in line with CPI (see page 17 – Legal Risk). Customers that are eligible for the RRRP enhancement, OESP, and the On-reserve First Nations Delivery Credit will see further reductions in their electricity rates by as much as 40-50%.

Original policy direction was to keep electricity rate increases in line with CPI until the end of 2021. While the government will have regulatory authority under the bill to establish rates after April 30, 2018, bills are expecting to begin to increase above the rate of inflation as of July 1, 2021 under current forecasts. This constitutes a variance from Cabinet direction. However, the government has publicly committed to 4 years of increases tied to the rate of inflation, which this plan addresses.

Borrowing money to refinance a portion of the GA costs for ratepayers lowers costs in the short term but results in substantial debt and higher electricity prices in the future. Under the plan, electricity prices have been projected to exceed forecast residential monthly bills by about 10% each year from what otherwise would have been from 2028 to 2047 (Note: Values are subject to change). Cabinet policy direction provided that electricity rates increases due to repayments should be capped at around 10% of the total electricity bill during the repayment phase of the plan. To maintain the integrity of the structure, the legislation does not provide a mechanism by which this level of bill increase can be ensured and therefore constitutes a variance from Cabinet direction. However, the debt rating will be impaired if the modelling suggests that rates could increase more than 10%, providing a cap in practical terms. The public may expect that the government is committed to reducing or holding constant the absolute cost of in the longer term and the government would not have the ability to control this portion of rates in the future.

Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA refinancing. IESO forecasted demand has historically been over-projected which also increases the risk of the static demand assumption. However, the reverse is also true, that if higher levels of electrification are achieved and demand increases, the cost of paying off the debt will be spread over a greater number of consumers. To partly mitigate against the risk that increased self-generation poses, the bill also provides that the clean energy adjustments may not be “set-off.” In other words, it would exist as a separate and distinct component of the bill that could not be reduced by methods such as net-metering.

The current model is based on a static interest rate of 5%. While this assumption is accurate within the current historically low interest rate environment, should interest rates increase above 5%, residential bills would also significantly increase during the repayment phase of the plan. All of these factors increase the risk that the province would have to absorb some of the debt in the future.

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2020 such that the average monthly residential electricity bill increases by 6.3% per year to a maximum of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Data shown above is by RPP period. Assumes RPP prices are adjusted in July 2021 instead of May 2021 to coincide with the end of the inflation cap. Fair allocation amounts subject to third party review.

Not all generating assets will continue operations at the end of their contract. If the fair allocation amount is not properly designed, future rate payers will be paying the cost for assets that are no longer in use, which would be unconstitutional, unless legislatively authorised as a tax (see page 16- Legal Risk). High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators may shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the refinanced GA and accumulated interest costs, and it would need to be justified that these assets are still providing some kind of benefit to the system after they cease operation.

Bill Presentment

Over the fall/winter of 2017, the Ministry will be working with LDCs to undertake a comprehensive review of electricity bill presentment regulations.

The ministry expects to prescribe LDCs:

- To include certain basic messaging on electricity bills;
- Starting July 1, 2017, for those eligible, include the On-reserve First Nations Delivery Credit as a line item; and
- Prescribe LDCs to include bill inserts over the next year with OFHP messaging.

With respect to the OFHP, while the 8% rebate is expected to continue to appear on eligible consumer's bills, the further reductions as part of the GA refinancing and moving social programs to government funding will not appear as a specific line item. It is uncertain when customers will begin to be invoiced the clean energy adjustment as a distinct item on their electricity bill. This will commence once repayment of the accumulated debt begins.

Accounting, Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. The structure of the GA refinancing was designed to result in an (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on funding to OPG from the Province, an increase in interest on debt and an increase on income from OPG will result. The structure is also contingent on the size of the partial GA refinancing that is seen as possible, which, as mentioned, increases the likelihood of pressures on the fiscal plan in the near future (see page 17- Fiscal Pressure).

In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt.

- The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line.
- The ministry has received an appropriation for $1.1 billion operating asset to support these injections for the fiscal year 2017/18, and will report back through PRRT for future funding. Based on the final fair allocation amount calculation, the equity injections would be required until the period of recovery begins.
- The injections will be fiscally neutral for the province as they will be offset with the value of shares purchased from OPG.
- To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements /documents. E&Y concurs with OPG's assessment that accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust/SPV) as an obligation of the Province. Depending on the magnitude of the debt, the Province's borrowing cost may be impacted. The structure of the guarantees from the Province that will be required by the market at the transaction stage may also impact the accounting analysis. These will be negotiated at a later stage.

OPG will seek to achieve the highest possible credit rating (AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV/Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide.

The Ontario Auditor General (OAG) has been briefed on the proposal and has had access to the March 1, 2017, policy submission for Ontario's Fair Hydro Plan. While the auditors of OPG and IESO have provided assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount by this method could undermine the nature of the regulatory charge and could only be achieved by relying on increased borrowing.

Legal Risk

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional

tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Former Supreme Court Justice Binnie has provided legal analysis of this proposal, stating that the amount that could be constitutionally financed as a regulatory charge as opposed to a tax would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations would jeopardize the nature of this being a regulatory charge.

A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. If the government fails to establish that the relevant electricity generating assets and conservation investments will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge and would be characterized as a tax. If characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and conservation and the group of consumers who benefit year to year from those facilities and investments. By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

Mr. Binnie concluded that the proposed charge faces a moderately high risk of being characterized as an unauthorized tax rather than as valid regulatory charge because (1) there is a disproportionate back-end loading of the charge on 2021-2047 consumers for the benefit of 2017-2021 consumers and (2) because an unknown number of generating assets whose financing costs will be partly recovered from 2021-2047 consumers will not benefit them as they will no longer be in operation.

In addition, the structure of the GA refinancing means that the infrastructure included as part of the clean energy adjustment (i.e. amortized over 30 instead of 20 years) will need to be in service over the entire 30 year amortization period or provide benefits to the system in some way over the whole period. In practice this may mean that the government will have limited ability to alter the generation mixture included under the clean energy adjustments, including natural gas generation facilities, which may at some point be seen as inconsistent with the province’s commitments to reduce greenhouse gasses.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs

with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill also provides for provincial assurances, guarantees and a statutory cause of action. The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction. The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- the Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
- the Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted.

A statutory cause of action may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

Fiscal Pressure

This proposal aligns with the 2017 Budget's fiscal plan, but involves significant ongoing risks. Parts of the proposal do not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant ($2.5B in 2017-18, escalating annually).
- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government has commissioned external opinions on the fiscal and accounting requirements, and external legal advice. IESO auditor, KPMG, has provided a final draft accounting opinion that the principles of the structure are sound, which will be updated after the legislation, regulations and commercial agreements are complete. KPMG advises that the variance account created by the proposed legislation meets the accounting criteria for the recognition of a "regulatory asset." This opinion can be released publicly if desired; however, given that the KPMG opinion is highly technical and contains information pertaining to the proposed legislation, the ministry is not recommending its immediate release and is considering alternative options to propose. In addition, the opinion may not change the likelihood of a contrary opinion by the OAG, but does provide a tool for government to point to in justifying its decisions.

There is also a risk that credit rating agencies and the market may take a view as to the size of the GA refinancing that is possible before becoming unconstitutional. If the fair adjustment and fair allocation amounts exceeds this outlook, it may increase the perceived risk of the investment asset and therefore its financeability/saleability, which would result in reduced market uptake and reduce the amount of near term rate reduction that would be achievable under this mechanism. This may require rate increases greater than the rate of CPI to maintain the integrity of the structure. This is why the increases in electricity rates between May 2018 and June 2021 are to be set by regulation as opposed to legislating that they increase by CPI.

It may not be possible to legally hold the rate reductions to increase by CPI, and if the government wanted to hold to this commitment, the difference would need to come out of the tax base, which has not been forecasted nor included in the fiscal plan. Each percentage point of reduction that the structure cannot provide would need to be addressed by an appropriate alternative mechanism and would result in an approximate $125-150M cost to the government annually.

Further, if IESO is not able to sell the regulatory asset (i.e., the OPG SPV/Trust is unable to get financing to purchase it), then IESO would require financing from an alternative source. IESO has requested a backstop credit facility from the OFA. This would be associated with a fiscal impact risk.

<u>Legislative Officers</u>

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the implementation of this suite of initiatives. The OAG was provided copies of the Cabinet Submission seeking policy approval for

Ontario's Fair Hydro Plan and has been briefed by officials from the Ministry of Energy. The OAG will have opportunities to publicly state her views through the 2017 Public Accounts based on the IESO adoption of regulated accounting in its 2016 financial statements, as well as in the Public Accounts committee in the summer of 2018 and in her pre-election report.

Data and assumptions that underpin the GA refinancing proposal have been submitted to the Financial Accountability Officer (FAO). The FAO is expected to have an opinion on how this proposal may impact the state of the province's finances.

OPG Mechanism

There are several risks associated with the proposed OPG mechanism:

- Accountability:
    - Bill attempts to balance the independence of the OPG Trust/SPV with regulatory oversight and the market's need for certainty in recovering the GA financing;
    - As mentioned, no party will have the ability to remove OPG in its role as the investment asset owner. The mechanism could be criticised for not providing for an appropriate level of accountability to the government or the public, due to the limited amount of government control of the entity, and future rate increases. However, this is seen by the markets as an essential component for the structure to operate.
- New structure:
    - The structure is complex and involves: IESO as originator of the regulated asset and responsible for flow of funds; OEB as regulator of the new mechanism; OPG responsible for financing and managing the mechanism; and Ontario providing ongoing equity capital infusions to OPG and backstop.
    - The addition of financial agency to the current operational obligations of OPG is not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, this new role could possibly dilute OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).
    - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise required.
    - There is a risk that at the next opportunity to review the OPG compensation framework, they make the case that there is no national comparator for this aspect of their work and they should therefore receive further exemptions from the rules (OPG nuclear executives do not need to find national comparators for compensation determination).
    - It is unknown what the magnitude of transaction, administrative, and consultant costs that OPG would incur would be. OEB would review OPG's cost as the Financial Services Manager to ensure appropriateness.

- Debt:
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.
  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates
- The public could claim that the government is simply putting off a problem and making it worse for future generations. The complexity of the structure may be seen as government attempting to cover up its actions.

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake)
- The OESP matrix no longer follows the Low Income Measure (LIM) which creates inconsistencies between how programs are applied and may put pressure other provincial programs to increase funding amounts.

Connection to the Province's Next Long-Term Energy Plan

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the summer of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement, and conservation. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the ministry has identified key priorities, and, OFHP combined with new policy or program announcements in the LTEP, will provide the comprehensive future planning perspective for Ontario's energy sector. Note: The legislation associated with GA refinancing establishes a framework for the period after the ratepayer relief is set. By design, to achieve financing requirements there is limited control once the plan is set.

STAKEHOLDER AND PARTNER CONSIDERATIONS

General public (including residential and small businesses) – Likely support a proposal that is projected to provide 25% in average rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but likely to question the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and

recent changes will heavily depend on government communications. There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral on the rest of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to cap and trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. Funding electricity support programs through government funding rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generators as part of the clean energy costs.

Solar PV sector – May react negatively to price relief as it can be seen to undercut the economics of net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

DELIVERY

If passed, the legislation will enable the price mitigation measures to begin to take effect on July 1, 2017. The 2017 LTEP will be released to the public in the summer 2017 and would reinforce/integrate with Ontario's Fair Hydro Plan. Regulations are required under the major components of the legislation in order to fully implement the initiative and clarify program details.

1. Partial Refinancing of the Global Adjustment:

The ratepayer benefit of the OFHP will be in place as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the coming into force of the enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

The bill includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

2. Enhancing Electricity Supports and Shifting Costs to Government Funding:

OESP Enhancements

Changes to regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modeled after processes used for the ORECA (8% rebate). The amendments made in this bill allow for a transition period where the program continues to draw on the existing IESO variance account. IESO is required to notify the Ministry of Energy when it expects the variance account to be depleted (likely sometime in the fall).

The OEB and utilities implemented the 50% credit increase and added the additional eligibility so that more households could qualify for the program as of May 1, 2017.

RRRP Enhancement

Regulations would be required to establish the details of the program. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed effective date. In this case, the regulation will dictate the eligibility of July 1st and give until October 1, 2017 for LDCs to get their systems in place. The LDCs would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting.

On-Reserve First Nations Delivery Credit

The ministry is consulting with affected LDCs, the OEB, the IESO and Chiefs of Ontario (COO) to help develop a plan to identify eligible on-reserve consumers, as well as identify any potential implementation issues.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed effective date (planned: July 1, 2017). The bill includes transitional provisions that would ensure customers remain eligible for the delivery credit from the prescribed date. Once available, the rebate would appear on the eligible customer's electricity bills as a credit for their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based

program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

LINKAGES

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The *Ontario Rebate for Electricity for Electricity Consumers Act, 2016*, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) – Was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB program ended on December 31, 2015.

Debt Retirement Charge – On January 1, 2016, the government ended the electricity DRC on residential users earlier than planned. For all other consumers the DRC will be removed by April 2018.

Industrial Conservation Initiative (ICI) – Implemented in January 2011 to help large industrial consumers reduce electricity costs by reducing consumption in peak periods. As part of OFHP, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – Approved as part of OFHP, and under development, the Affordability Fund is intended to provide energy efficiency measures to Ontarians who are not eligible for low income conservation programs, and who are otherwise unable to make energy efficiency improvements without financial assistance.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the

two recent expansions to the ICI provides for significant potential savings. Funding electricity support programs through government funds rather than the rate base will also provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON) - is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and,
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed that the government consult on and develop options to mitigate the impact of carbon pricing and resulting increased utility costs on residential tenants. The mitigation is proposed because tenants do not usually have the opportunity to make changes to their building envelope (e.g. windows, insulation) or major appliances that would allow them to address utility costs themselves. On April 24, 2017, the government introduced the *Rental Fairness Act, 2017* which, if passed, would remove above-guideline rent increases for utilities, to protect tenants from carbon costs and encourage landlords to make their buildings more energy efficient.

Proposed Cabinet Minute

Approval of draft bill for introduction

Cabinet approved version 1-TP of this draft legislation for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

2. ENERGY report back, pending Royal Assent, with regulation and associated regulatory amendments for approval.

3. ENERGY work with Cabinet Office and Premier's office to develop a communications plan.

Hi Martin,

Energy's edits taken (mostly up front), except for the edit to the ICI minute (based on your clarification to stay with quarterly reporting process.

Also, OFA has asked to refine the credit facility note.

Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

Hi Felix,

Attached are our proposed edits. They are mostly technical. Let us know if you are able to incorporate them.

Thanks,
Martin

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – March 1, 2017	**Tracking to: Fast Track** LRC at Cabinet – May 10, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Implementation Update

I. DECISION BEFORE THE BOARD

Receive a report back on Ontario Fair Hydro Plan implementation, supporting implementation decisions and recommending the proposed Ontario Fair Hydro Plan Act to proceed to LRC and Cabinet for approval.

II. RECOMMENDATIONS:

• Receive a report back on Ontario Fair Hydro Plan implementation progress	*Receive*
• Proposed legislation: o Note key aspects of proposed legislation o Recommend proposed legislation o Direct the Ministry to return to TB/MBC with regulations supporting implementation prior to going to LRC.	*Recommend*
• Note outstanding report back requirements	*Note*
• Approve up to $3.5M funding for media buy procurement, to be followed later by a transfer from the Bulk Media program to fully recover costs for the public education campaign.	*Approve*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Affordability Fund	0.0	0.0	0.0
	Global Adjustment Refinancing*^	0.0	0.0	0.0
	Electricity social programs*	499.0	753.0	829.0
	Ontario Rebate for Electricity Consumers	939.0	882.0	882.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

* Subject to enacting proposed Ontario Fair Hydro Plan legislation.
^ As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget, linked to proposed legislation

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017 the Ministry received TB/MBC approval for additional rate mitigation actions that support a 25% electricity bill reduction (including the 8% reduction announced in 2016 for typical household in 2017). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017.

This submission deals with several elements of the OFHP:

- Refinancing Portion of Global Adjustment (GA) to provide immediate relief in the short-term for RPP eligible ratepayers (based on a planned non-fiscal impact approach over government funding).
- Expanding and enhancing ratepayer funded electricity social programs and shifting them to being government funded (OESP, RRRP), along with a new government funded On-Reserve First Nations Delivery Credit.
- Expansion of Industrial Conservation Initiative (ICI).
- Media buy approval for OFHP

The Ministry was directed to report back to the Board with proposed legislation supporting OFHP implementation, including the following specific direction regarding a non-fiscal mechanism (approach) to refinancing a portion of Global Adjustment costs (Appendix C provides the March 1, 2017 minute):

- Formal accounting opinions from OPG and IESO auditors.
- Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
- Report on the multi-year profile of GA smoothing, identifying specific assumptions.
- Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
- Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

Direction was also given to report back with final program details, regulations, sensitivity analysis of financial models, and performance metrics for electricity support programs.

OFHP Implementation Update:

The ministry's current submission does not address all required report back elements. The proposed legislation would establish the legislative framework but key details necessary to assess fiscal and legal risks are outstanding, including regulations, commercial agreements, sensitivity analysis etc. (Ministry is targeting regulations by June 2017 and commercial agreements subsequently).

Appendix D provides an overview of the Ministry's implementation update.

Financial Implications

Electricity Social Programs:

March 1, 2017 TB/MBC approvals supporting OFHP included full year projected costs. The 2017 Ontario Budget included refined projected costs shifting expanded/enhanced electricity social programs from ratepayers to being government funded starting in 2017-18, lowering the total amount from $665M to $499M to reflect rollout timing not full year costs. The table below shows expense amounts currently in the PRRT multi-year fiscal plan related to these support programs for the most vulnerable consumers.

Government Funded Social Programs ($million)	2017-18	2018-19	2019-20	2020-22
Rural or Remote Rate Protection (RRRP)	344	472	484	497
Ontario Electricity Support Program	140	261	325	375
On-Reserve First Nations Delivery Credit	15	20	20	20
Total	**499**	**753**	**829**	**892**

TBS Staff Comments:
The energy sector is complex and a number of key assumptions used as inputs into forecasting model are variables/forecasts themselves, resulting in a high inherent risk that cost estimates are inaccurate, and factors which can fluctuate from year to year. Also, fiscal projection is subject to knowledge of future distribution costs and dependent on submission of cost of service applications by Hydro One and LDCs. To mitigate risk, development of a risk-based outlook, based on an analysis of scenarios, to determine the sensitivity and financial impact of potential changes in variables used in the forecasting models should be undertaken to inform future updates to cost forecasts for the programs above and the Ontario Rebate for Electricity Consumers (With 2017-18 costs estimated at about $1B).

GA Refinancing:

The proposed Fair Hydro Act, 2017 is a complex transaction and attempts to balance several key factors including financeability, accounting treatment and legal considerations by:

- Supporting financeability through a number of features, including a provincial undertaking not to interfere with clean energy adjustments once determined, which will be backstopped by a guarantee, and provisions intended to reduce borrowing costs and attract a wide investor base;
- Addressing the necessary accounting requirements through mechanisms to record funding, interest and the transfer of regulatory assets to avoid a fiscal impact to the province; and
- Mitigating legal risk by developing a methodology that attempts to ensure an alignment of costs with benefits to future rate payers.

Key elements of this schedule of the bill include (Appendix E provides more information on elements):

<u>Specified Consumers</u>
- The defined group of consumers to whom the “Fair Adjustment” and “clean Energy Adjustment” applies. Prescribed consumers include residential consumers, farms, small businesses, condominiums, long-term care homes and co-operative housing. These are primarily consumers eligible for the RPP, and aligns with the eligibility under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA).

<u>Clean Energy Costs</u>
- Clean energy costs are those costs that arise from the “clean energy initiative” and are allocated to the specified consumers for past, present and expected costs.
- The clean energy costs include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act*, *1998* (basically, the GA)

<u>Fair Adjustment</u>
- The adjustment to rates to ensure intergenerational fairness.
- July 1, 2017- April 30, 2018- reduction in rates for “specified consumers” based on a 25% reduction for a prescribed typical consumer.
- May 1, 2018- June 30, 2021- the bill allows for rates to be set by regulation (see page 17- Fiscal Pressure).

<u>Fair Allocation Amount</u>
- Principles established in the bill require proper alignment over time between the costs of providing

facilities for clean electricity generation and conservation ("clean energy costs") and the consumers who benefit from these investments.
- The Minister of Energy sets the fair allocation amount, and is required to:
  - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the "specified consumers" for applicable "reference periods" (typically every 6 months); and,
  - Take into account (in the fair allocation) funding obligations (financing) that have been incurred;
  - Align these costs with clean energy benefits expected to be received by rate payers in the future.

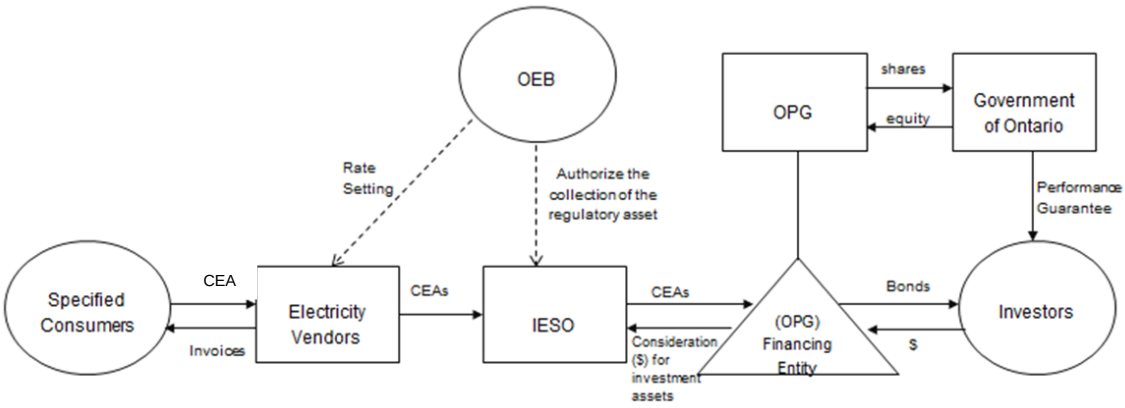
Clean Energy Adjustment
- Determined by Financial Services Manager (OPG), the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principal, interest, transaction costs and administrative costs associated with the fair adjustment and consistent with the fair allocation amount.
- In accordance with the regulations, the OEB to calculate the rate at which specified consumers are invoiced to recover the clean energy adjustment.

Regulatory Asset and Investment Asset
- A regulatory asset is created as IESO defers its right collect a portion of the rates that it would have otherwise received from customers/LDCs if not for the implementation of the Fair Adjustment.
- Subject to OEB approval, IESO records the funding shortfall as a regulatory asset. Collection rights are deferred until July 1, 2021.
- The Financing Plan contemplates the Financial Services Manager (OPG) establishing financing entities (OPG Trust/SPV) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.
- This purchase and sale turns the regulatory asset into an investment asset for the investment asset owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 4 years (July 1, 2021) the IESO has the right to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority (OFA) (see page 17- Fiscal Pressure).
- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

Financing Plan
- In practical terms, the Financing Plan is intended to show how debt (with varying incurrence dates, maturities and interest rates) will be used over time.
- Prepared by the Financial Services Manager (OPG), the Financing Plan is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO. Plan to be provided to the Minister of Energy.

Crown Undertaking (Guarantee or Backstop)
- The bill provides that no action or omission of the Crown, OEB, or the Minister would be effective to reduce, impair, or postpone or terminate the obligations of specified consumers to pay the clean energy adjustment.
- The Ministers of Energy and Finance together, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill, including regarding the performance of the IESO or electricity vendors under the bill.
- The Ministers of Energy and Finance together, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.

Financing Structure (Provided by Ministry)



Note: CEAs are "clean energy adjustments".

TBS Staff Comments – 2017 Ontario Budget:
The 2017 Budget also includes an investment operating asset of $1.1B related to the Province's equity injection to OPG, enabling the OPG Trust to regularly purchase IESO's regulatory asset through 2017-18. The structure would increase gross debt of the Province (to finance the equity injection in OPG), increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt which would be offset by increased earnings of OPG from interest revenue. Under the anticipated accounting treatment, the Province's net debt would remain unchanged as the equity investment in OPG would offset the additional Provincial borrowing.

Projected annual amounts of GA deferrals (i.e., the regulatory asset) are shown below and are not part of the province's multi-year fiscal plan (2017 Budget (as they are assumed to be funded from electricity ratepayers under the proposed legislation). Appendix F provides analysis of financial models. The maximum amount of GA deferral under the proposed model would be about $3.5B in 2020, prior to the start of the rate recovery period.

($million)	2017	2018	2019	2020
GA Refinancing - (As part of Residential Bills lowered by 25%)	2,500	2,600	3,000	3,500

- *OPG intends to use a Special Purpose Vehicle (OPG Trust) to purchase for cash the "right to collect" the deferred amounts from the IESO which would be reflected as intangible assets by the Trust. OPG Trust will be structured to finance 51% of its funding requirements through the capital market with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed though debt from the capital markets (about 5%) and through equity injections from the Province (44%).*

- *The proposed legislation does not compel the OPG Trust to purchase 100% of the regulatory asset created by IESO at any given time. The IESO has noted that it may need to cover clean energy costs if for some reason the OPG Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. On behalf of IESO, the Ministry is requesting a credit facility for IESO, up to about $3B, and notes the use of this credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO, especially where GA deferrals remain on the IESO's books at fiscal year-end. Appendix G provides more information.*

<u>Financial, Accounting, Legal Risk Assessments:</u>

The March 1, 2017 TB/MBC Minute, refinancing the Global Adjustment to partially defer RPP eligible ratepayer GA costs, was subject to completed legal, accounting and financing risk assessments.

Appendix H provides more details from the Ministry to what appears below. TBS staff comments are flagged.

Financial

The Ministry indicates it has prepared legislation and is working on developing regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is not rendered not fully recoverable based on a future change made in the legislation.

- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year. The intention of the guarantees is to make them as narrow as possible.

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

The Ministry indicates the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost.

The Ministry also acknowledges given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term, and the rate of inflation.

TBS Staff Comments – (See Appendix I for a more in-depth discussion)

- *Internal and external expertise have provided opinion that the proposed structure is constitutionally sound in the short-term (2017-18), but the likelihood of the risk increases in the proceeding four years, which will impact commitment to keep rate increases in line with CPI.*
- *If annual increases in bills or the commodity prices are subject to caps, additional borrowing/ provincial funding may be required.*
- *If a favourable legal and accounting treatment is not implemented, there could be a negative impact on the province's fiscal plan up to $2.5B in 2017-18 and rising.*
- *The proposed structure will be reviewed by credit agencies to allow OPG to borrow in the open market. Depending on assessment, there may be an impact on interest rate for borrowing, the amount of equity/funding the province may need to provide and the requirement for a provincial guarantee.*
- *Uncertainty in the financial model due to dependence on assumptions that are subject to potential volatility may result in higher than anticipated future costs for rate payers and the province.*
- *Financing the costs of GA smoothing through OPG SPV/Trust and the volatility of interest rates may increase the cost of GA smoothing and/or require additional provincial funding.*
- *Credit rating agencies may perceive OPG SPV/Trust's borrowing as debt supported by Province, impacting Province's ratings and cost of borrowing.*

- *Providing a credit facility for IESO to manage while GA deferrals are pending sale, up to about $3B, could result in fiscal plan implications if GA deferrals remain on the IESO's books at the Province's fiscal year-end. IESO is consolidated onto the Province's books.*

Accounting

The ability to implement the GA deferral plan under a non-fiscal impact approach is subject to some uncertainty. While the legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y, many specifics remain outstanding and will only be addressed through future regulations and commercial agreements.

The Ministry indicates the following:

- Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations, satisfying accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.
- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

KPMG:

- The proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. KPMG's accounting opinion however, is in draft pending additional details to be addressed in regulations and commercial agreements.
- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.
- The regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset on IESO books to an investment asset on OPG Trust's books).

TBS Staff Comment – The Auditor General has raised concerns regarding the appropriateness of reporting rate regulated assets on the IESO's books under public sector accounting standards, which may lead to a qualified audit opinion on the consolidated financial statements of the Province.

OPG/E&Y:

- The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.
- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.
- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.
- Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

TBS Staff Comment – OPG's external auditors, E&Y, have provided feedback regarding the proposed

accounting treatment; however, it is subject to assumptions and limitations, including outstanding details to be addressed in supporting regulations and commercial agreements.

Legal

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.
- Judges can be expected to take a careful look at the government's evidence in support of the re-allocation of Global Adjustment.
- The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.
- The provincial assurance provision - Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes. The proposed legislation focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers.
- The provincial guarantee provisions are intended to backstop the provincial assurance provision Legal risk to the province will be assessed as the agreements are negotiated and drafted.
    - The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
    - The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.
- Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry indicates it retained Blakes to provide external legal advice in the development of the legislation. The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements.

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. The Ministry indicates Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

The Ministry's signed submission included external opinions and assessments for Ontario Power Generation (Accounting), KPMG Letter to the Independent Electricity System Operator (Accounting Opinion), Ernst &Young (as auditors) letter to OPG concurring with OPG's description of OPG

accounting considerations of OFHP.

TBS Staff Comments Overall:
TBS staff note external opinions and assessments are supportive of the Ministry's intended plan for implementing Ontario's Fair Hydro Plan, noting the opinions and assessments must be revisited once key implementation details are finalised (e.g. draft legislation, regulations, special purpose vehicle documents, terms of conditions within various other agreements). Future reassessments, Navigant's analysis of expected lifecycle for existing generation infrastructure (key), and other factors such as Ontario electricity demand, interest rates in the medium to long-term, and the rate of inflation may contribute to fiscal plan implications emerging over time.

The Auditor General has raised concerns regarding the appropriateness of reporting rate regulated assets on the IESO's books under public sector accounting standards, which may lead to a qualified audit opinion on the consolidated financial statements of the Province.

TBS staff also note, while submission details and related discussions have not indicated a non-fiscal mechanism cannot be established, the complexity of the transaction and the time frame involved suggest it is not reasonable, at present, to support a claim of no impact on the province's fiscal plan as the Ontario Fair Hydro Plan is implemented (Appendix I includes a strategic level risk assessment prepared by TBS staff).

Ultimately, GA Refinancing being a sustainable strategy assumes electricity consumers' willingness to accept later to bear the extra costs of deferring electricity price hikes.

Media Buy Request

The Ministry is requesting approval up to $3.5M funding for media buy, to be followed later by a transfer from the Bulk Media program, $2.5M in 2017-18, to recover costs for the public education campaign in 2017-18 only.

- The Ministry indicates spending about $1M on media planning and buying for radio and digital media in 2016-17, forecasting $2.5M in 2017-18 as the cost for television media space is substantially higher than radio, and has indicated no ask for 2018-19. The $3.5M approval request looks to be partly retroactive to include the $1M in 2016-17.

APPENDIX A: PROPOSED MINUTE

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

i) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

a) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
b) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
c) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
d) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

a) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
b) Requirement for future consumers to pay the clean energy adjustment that backs financings.
c) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
d) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
e) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
f) Sets out that security interests can be granted in investment interests in the investment asset.

ii) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

iii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

iv) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of

proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.
b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.
c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.
d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

v) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
    - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
    - Establishing program performance management framework including targets for the broadened program now government funded
    - Report on and assessment of impacts of consolidation of LDCs
    - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
    - Identify eligibility criteria, and refinements being made.
    - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
    - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vi) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.
b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX D: ONTARIO FAIR HYDRO PLAN IMPLEMENTATION UPDATE

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998 (Appendix E provides details of each):

- Legislative amendments for electricity social programs
- Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment partial refinancing)

Legislative amendments for electricity social programs

Electricity social programs becoming government funded under OFHP target residential electricity customers disproportionately affected by increased electricity costs.

- **High Distribution Cost Customers:** Some customers in rural areas where the cost to distribute electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
- **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
- **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

The proposed bill amends the *Ontario Energy Board Act, 1998* for various electricity social programs:

Rural or Remote Rate Protection

Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001. The bill enables the funding of existing Rural or Remote Rate Protection (RRRP) for prescribed customers to be provided for through provincial appropriations, rather than from electricity.

Appropriated funds would be used to offset the cost of the RRRP program for electricity consumed on or after July 1, 2017.The implementation of the amended RRRP program (moving the majority of costs to the tax base) will require oversight of the government funding provided.

Distribution Rate Protection (Broadened RRRP)

While the RRRP program helps mitigate some of the higher distribution costs for Hydro One R2 customers, as well as certain customers served by Algoma Power, Hydro One Remote Communities and James Bay First Nation LDCs, there is an opportunity to provide further relief to consumers served by higher cost distribution cost LDCs.

The proposed legislation would enable a broader government funded Distribution Rate Protection (DRP) program (broadened RRRP) which provides additional distribution rate protection to residential customers of prescribed higher cost LDCs by enabling the regulations to prescribe a maximum distribution charge for consumption on or after July 1, 2017.

If passed, the eight high-distribution cost LDCs whose customers are eligible customers will be prescribed in regulation. Residential customers of Algoma Power and Hydro One R2 customers would be eligible for additional relief as these LDCs are the highest cost distributors in the province (as well as six additional higher-distribution cost LDCs).

The legislation contains retroactive application of the provisions to offset any potential lapses in implementation and ensure that consumers receive the benefit following the July 1st effective date through to the final effective date of October 1st, 2017.

On-Reserve First Nations Delivery Credit

The proposed bill would enable the provision of a government funded on-reserve First Nations Delivery Credit (FNDC), which would eliminate the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve customers prescribed in regulation.

The program is premised around the findings in an OEB Report submitted to the Ministry on December 29, 2016 providing advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers.

Ontario Electricity Support Program (OESP)

The OESP began on January 1, 2016 as a rate-payer funded program to provide relief to low income Ontarians who are struggling to afford their electricity bills. The OEB administers the program.

The Fair Hydro Plan committed to move the program to being government funded, and to expand the OESP by increasing the credit amounts by 50 per cent, making more Ontarians eligible for the program, and aligning the OESP with other social assistance programs to increase uptake.

On March 23, 2017, the OEB issued a Decision and Order to end the OESP volumetric charge paid by all Ontario consumers on May 1, 2017. On April 10, 2017, Cabinet approved amendments to the OESP regulation (O.Reg. 314/15) to increase credit amounts by 50% and introduce new eligibility categories so more Ontarians can access the program. These changes will come into effect on May 1, 2017.

The proposed bill would move the recently expanded Ontario Electricity Support Program (OESP) to government funding, allow for the potential transition of the program administration to the Crown or other entity, and to enable information exchange between the Ontario Disability Support Program (ODSP) and Ontario Works (OW) to potentially allow for automatic enrolment procedures to be established.

The Ministry indicates the proposed legislative amendments will be proclaimed into force at a later date when the OESP charges collected to date (which are being held in an IESO variance account) are depleted. Amendments to the OESP regulation (O.Reg. 314/15) will be needed to implement these legislative changes.

Legislation to provide for the fair allocation of costs of electricity over time (Global Adjustment (GA) Refinancing)

Refinancing a portion of GA is intended to provide significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

The Ministry indicates under OFHP, the electricity bills of current residential consumers would be reduced by 25 per cent on average starting in summer 2017 (This includes the 8% Ontario Rebate for Electricity Consumers). In addition, increases to electricity bill would be held to the rate of inflation for four years. Up to 500,000 small businesses and farms would also benefit.

Reflecting March 2017 approvals (See Appendix C for March 2017 TB/MBC minute), proposed legislation for GA Refinancing is designed to establish a non-fiscal impact mechanism. Minuting indicated proceeding with GA Refinancing requires completed legal, accounting and financing risk assessments.

The proposed approach to GA Refinancing is complex. Appendix E provides proposed legislative details.

- At a high level, the proposed legislation establishes the framework to refinance a portion of the current GA costs to future ratepayers by recognizing the longer term benefit many of these generating assets to the electricity system. The methodology is based on the assumption that some assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts (typically 20 years), and that future ratepayers are expected to continue to be able to utilize and benefit from these assets in the future.

    - July 1, 2017, to April 30, 2018, reduces, on average, after-tax electricity costs for "specified consumers" by 25% (inclusive of the 8% rebate and shifting of support program to be government funded).
    - May 1, 2018, to June 30, 2021, electricity rates will be prescribed by regulation with the intention to keep increases in line with the Consumer Price Index (CPI).
    - July 1, 2021, to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and administrative costs.
    - Through the proposed bill and amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998, expands the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO) to provide for appropriate oversight, put in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the refinanced GA costs.

Consumers would see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG, through a special purpose vehicle (OPG Trust) is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

The proposed bill includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Expansion of Industrial Conservation Initiative (ICI)

As part of OFHP, the government announced plans to further reduce the ICI threshold from 1 megawatt (MW) to 500 kilowatts (kW) and to target more small manufacturing and industrial consumers.

Effective April 13, 2017, electricity consumers and market participants in the manufacturing and greenhouse sectors (i.e., with North American Industry Classification Standard (NAICS) codes commencing with the digits "31", "32", "33", and "1114") in Ontario with an average monthly peak demand of greater than 500 kW and less than or equal to 1 MW are eligible to opt-in to ICI. Billing for electricity consumers that opt-in to ICI begins July 1, 2017.

Provisions were also provided to allow electricity consumers to continue their participation in ICI if their demand falls below the monthly peak demand threshold while participating in certain prescribed Conservation and Demand Management (CDM) programs and/or Ontario Climate Change Solutions Deployment Corporations (OCCSDC) programs and pilots.

The Ministry is also undertaking targeted stakeholder outreach.

The rate-base impact of expanding ICI to consumers in the manufacturing and greenhouse sectors is expected to be modest for non-ICI participants.

- The extent of the impact will depend on the uptake in the newly expanded ICI. The Ministry of Energy regularly monitors electricity prices and electricity demand for all classes of electricity consumers and would be able to assess the potential impacts of the regulatory amendments, starting after July 2017.

APPENDIX E: PROPOSED FAIR HYDRO ACT OVERVIEW

The proposed Fair Hydro Act is an omnibus bill with 2 schedules: the Ontario Fair Hydro Plan Act, 2017 and amendments to the Ontario Energy Board Act, 1998, consisting of two schedules:

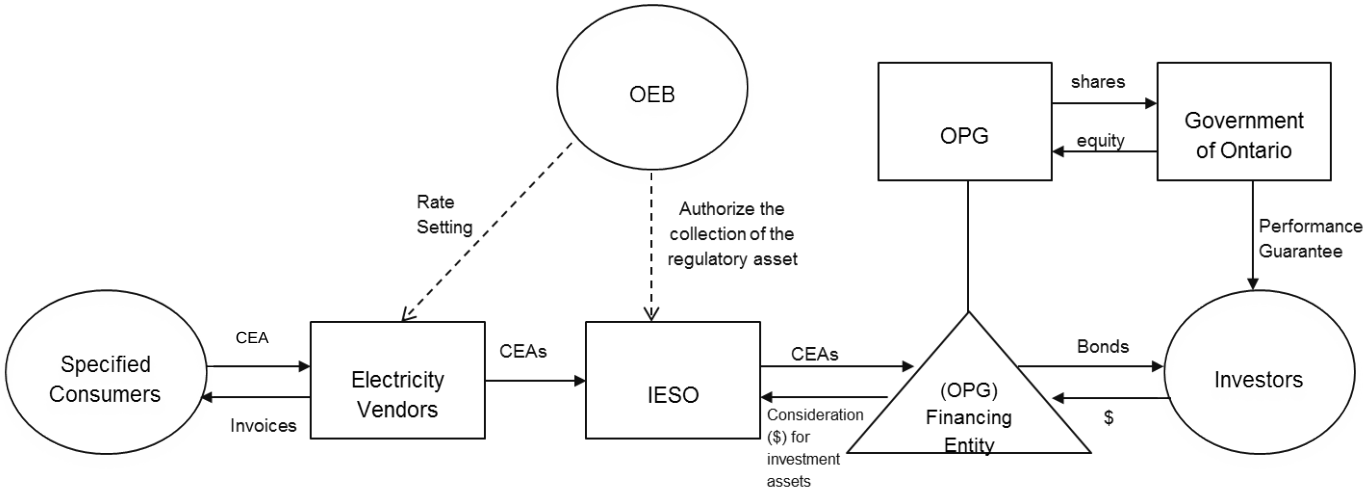
- Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (Dealing with Global Adjustment (GA) refinancing).
- Schedule 2: Legislative amendments for electricity social programs

The Ministry has provided the following overview of the proposed legislation:

Schedule 1: Legislation to provide for the fair allocation of costs of electricity over time (GA refinancing).

Legislation is based on the principle that the costs incurred to move to a clean, modern and reliable electricity system (Clean Energy Initiative) creates benefits that will be experienced by multiple generations of Ontario ratepayers and, therefore, in the interest of fairness, those costs should be shared by those multiple generations.

The legislation does two things: (i) it establishes the fundamental elements of the fair allocation program, and, (ii) it puts the mechanisms in place to permit the financing of periodic shortfalls in revenue that are created by the fair allocation of electricity costs over multiple generations. The diagram below outlines how the refinancing of GA would be implemented.



Note: CEAs are "clean energy adjustments"

Clean Energy Costs and Benefits:

- The costs included in the "clean energy costs" include estimated amounts to be paid by IESO in adjustments made under section 25.33 of the *Electricity Act* (the Global Adjustment provisions) which relate to contracts for:
  - Renewable energy generation or capacity
  - Conservation and demand management, including shortage
  - Energy efficiency
  - Natural gas generation and capacity (excluding certain contracts under section 78.2 of the *Ontario Energy Board Act* or as prescribed); and
  - Payments made under section 78.5 of the *Ontario Energy Board Act.*
  - Other such costs to be included in "clean energy costs" may be prescribed

- These are the costs to be distributed fairly among the specified consumers through the "fair allocation amount".

Fair Allocation Adjustment:

- Part II establishes that the rate that will be payable by "specified RPP consumers" from May 1, 2017 to April 30, 2018 for the first fair adjustment is the rate that would be required from this program to contribute to that consumer to receiving a total a monthly invoice amount that is 25 per cent lower than the monthly invoice amount for that consumer under the "comparison rate". The comparison rate is a rate to be determined by the OEB using the method prescribed by regulation under s 79.16(1)(b) of the OEB Act.
- Part II includes a transition provision in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program (i.e., adaptation of invoices must be implemented by August 1, 2017 followed by a subsequent lump sum credit to the consumer once the invoice is adapted).
- The Lieutenant General in Council is given the authority after April 30, 2018 to make regulations prescribing the rate for electricity (and therefore prescribing the "fair adjustment" until June 30, 2021). After June 30, 2021, regulations will have regard to the fair allocation amount and clean energy adjustments.
- The Minister sets the fair allocation amount.

    - The establishment of the "fair allocation amount" is required to,
        - Fairly measure and allocate the estimated clean energy costs (and the clean energy benefits) among the "specified consumers" for applicable "reference periods"; and
        - Take into account (in the fair allocation) funding obligations (financing) that have been incurred (largely arising from the redistribution of cost across generations of consumers).
    - The "fair allocation amount" is to have regard to:
        - Clean energy costs and allocating the appropriate proportionate amount of the clean energy benefits to the "specified consumers" (in the applicable "reference periods");
        - Reasonable assumptions regarding the time value of money, the number of consumers in the "reference period"; and
        - Expected electricity consumption for the reference period.

Regulatory Asset and Investment Asset:

- IESO will have a funding deferral resulting from the reduction in amounts collected from specified consumers during the first 4 years because of the fair adjustment. The IESO's funding deferral will be financed indirectly through the debt capital markets.
- The Act enables the financing of this IESO funding deferral, on an ongoing basis, by establishing the funding deferral as a "regulatory asset". In simple terms, the regulatory asset is IESO's right to recover the revenues that it has deferred collecting.
- IESO will then legally transfer portions of this right to recover revenues to the (OPG) financing entities. OPG financing entities are not required to purchase the regulatory asset.
- The (OPG) financing entity that receives the transfer of the right to recover revenues acquires a right to impose, invoice and collect those regulatory charges (called the "clean energy adjustments"). This is generally described in the legislation as the "investment asset".
- The (OPG) financing entity will need to finance its acquisition (from IESO) of the investment asset, and it will do so in the capital markets.

Issuance and Payment of Debt:

- Debt securities and related funding obligations will be incurred by one or more (OPG) financing entities. These entities will be managed by OPG, as the financial services manager.
- The financings will be backed primarily by the "clean energy adjustments" payable by specified consumers. The "clean energy adjustments" will track the actual payment obligations incurred by the financing entities when they become due and payable. To ensure intergenerational fairness, these amounts will be managed by OPG to align with the "fair allocation amounts" ascribed to each of the next 60 six month periods ending in 2047 (or such later period as prescribed).
- IESO and each electricity distributor will act as agent for the financing entities to impose, invoice and collect the clean energy adjustments, which will be channeled through to pay each financing entity's related funding obligations.
- To support the program, the Government of Ontario will be expected to provide certain performance guarantees, indemnities and bond-purchase covenants. The terms of these obligations will be worked out over time in connection with the marketing of financings through OPG. The goal will be achieve highest rated securities, although that will largely depend on issues such as the strength of the Government of Ontario's undertakings not to adversely affect the program through subsequent legislation.

Financing Plan:

- The Financing Plan is prepared by the Financial Services Manager (OPG).
- The Financing Plan is the plan which is intended to set out when a "funding obligation" (financing) should be incurred so that the (OPG) financing entity can raise money to acquire the "investment interest" from IESO.
- There are rules that apply to the Financing Plan:
  - It must align with the "estimated finance amount" that will become due and payable during a "reference period";
  - It must take into account the "fair allocation" and any "fair adjustment";
  - It must plan to implement the financing in a reasonable and cost effective manner that reflects prevailing market terms and conditions; and
  - It must be based on certain reasonable assumptions set out in regulations (for example, related to anticipated IESO shortfalls, maturity of funding obligations, availability of refinancing, redemption opportunities and liquidity, and similar assumptions).
- The (OPG) Financial Services Manager must incur funding obligations in conformity with the applicable Financing Plan.
- The Financing Plan will guide OPG's decisions regarding the repayment terms of the debt securities to be issued by financing entities. The Financing Plan will also deal with fundamental issues, such as the alignment (using derivatives) of any foreign currency obligations incurred by financing entities with the Canadian dollar cash flows arising through the clean energy adjustments.

Who Does What?

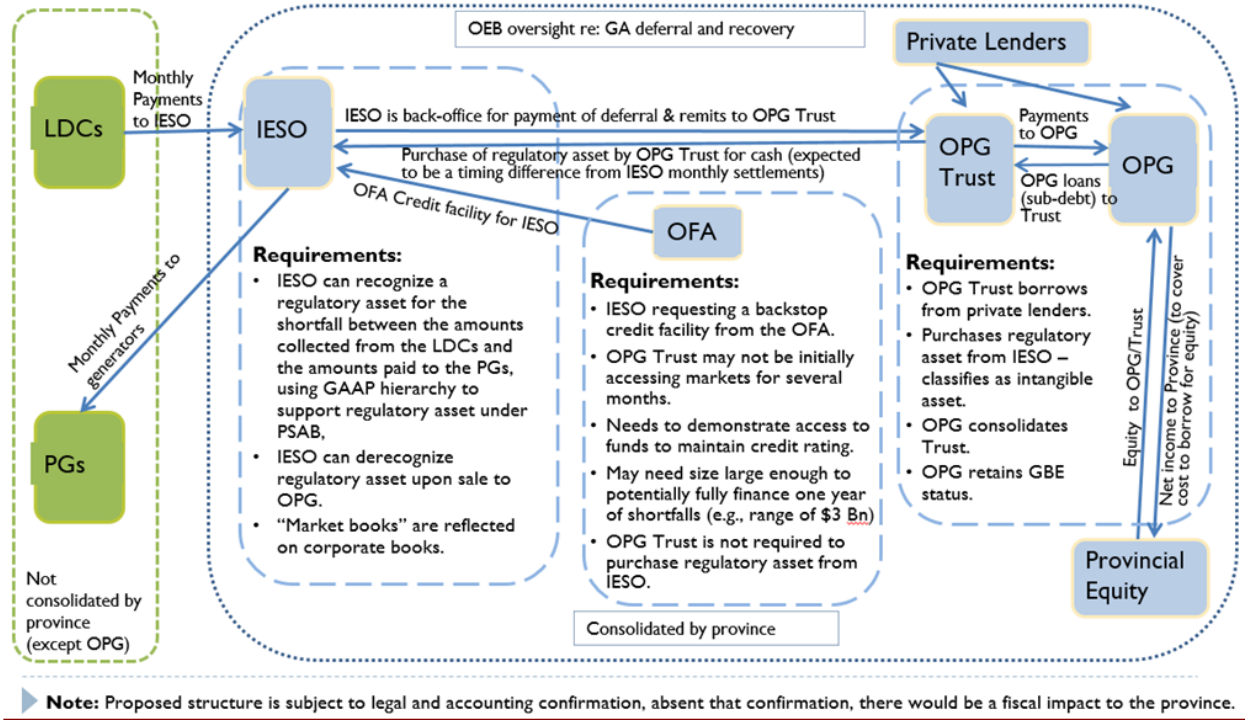
- Minister of Energy – Determine the "fair allocation amount" applicable for each reference period. The fair allocation amounts will be set for all reference periods at the beginning of the program, based on reasonable expectations and forecasts at that time.
- Ontario Power Generation (OPG) – As financial services manager, OPG will be responsible for the following under the Act:
  - Prepare and implement Financing Plan.
  - Establish and administer the financing entities.
  - Capitalize the financing entities by acquiring subordinated debt and equity, as required to achieve OPG's accounting and capital markets objectives.

- Estimate and "true up" periodic finance amounts, to be passed through as regulatory charges in the form of Clean Energy Adjustments.

- Independent Electricity System Operator (IESO):
  - Calculate and record IESO funding shortfalls from time to time in a variance account, giving rise to a right of recovery from specified consumers to the extent not funded through the financings.
  - Transfer the IESO's rights of recovery to (OPG) financing entities, in consideration for cash payments made by the financing entities from the proceeds of their financings.
  - Coordinates the collection of "clean energy adjustments" from Electricity Distributors.
  - Remit "clean energy adjustments" to (OPG) financing entity, for payment of financing entity funding obligations.
  - Fund initial interest costs and expenses during the first 4 years.

- Local Distribution Companies (LDCs):
  - Obligation to invoice specified consumers.
  - Collect, as agent of the investment interest owners, "clean energy adjustments" from specified consumers.
  - Hold money received for clean energy adjustments in trust until remittance to the IESO.

- Ontario Energy Board:
  - Determine and set rates to account for fair adjustments, fair allocations and clean energy adjustments (monthly adjustments).
  - Determine and set rates and process to allow IESO to recover funding shortfalls (to the extent such amounts are not transferred to an (OPG) financing entity and financed in the capital markets).
  - Review the administrative costs of OPG in connection with the administration of the program.



Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2020 such that the average monthly residential electricity bill increases by 6.3% per year to a maximum of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Data shown above is by RPP period. Assumes RPP prices are adjusted in July 2021 instead of May 2021 to coincide with the end of the inflation cap. Fair allocation amounts subject to third party review.

Schedule 2: Legislative amendments for electricity social programs moving to being government funded

As part of the proposed Ontario Fair Hydro Plan, the Ministry of Energy is proposing amendments the *Ontario Energy Board Act, 1998* (OEBA) to enable the following measures:

- Enhancing and providing government funding for Rural or Remote Electricity Rate Protection (RRRP) through new enhanced rate protection for residential customers with high distribution rates
- Enhancing and providing government funding for the Ontario Electricity Support Program (OESP)
- Creating a new First Nation On-Reserve Delivery Credit and providing for government funding

Overview of RRRP and Broadened Distribution Rate Protection:

- Section 79 of the Ontario Energy Board Act would be amended to provide the Ministry the authority to prescribe, through regulation, classes of consumers whose cost would be transferred from the rate-base to the tax-base.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would prescribe Hydro One's R2 customers as receiving RRRP from appropriated funds effective July 1, 2017. This would fulfill the government's intention to transfer the majority of the costs of administering the RRRP program to the tax-base.
- In addition, Energy is proposing legislative amendments that would broaden rate protection by creating a new distribution rate protection program to complement RRRP. This new program would be funded through tax payers.
- Distribution rate protection would be extended to eligible residential customers served by LDCs with the highest distribution cost.
  - Proposed legislative amendments would enable a maximum monthly base distribution charge to established through regulations.
- If the proposed legislative amendments are approved, the government intends to prescribe by regulation both program details and the residential customers eligible for broadened distribution rate protection served by the following LDCs:
  - Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc.

Ontario Electricity Support Program:

- Proposed legislation related to the Ontario Electricity Support Program (OESP) would shift program funding from the rate base to the tax base.
  - Tax-based funding would only kick in once the existing OESP variance account is depleted, which is expected to happen in the fall of 2017.
- To allow for the existing program structure to stay in place until tax-based funding kicks in, proposed new legislation would only come into force via a proclamation Order in Council, on a date to be determined.
  - This would ensure that existing OEB authorities remain in place while ratepayer funding is being used.
- In addition, a new authority to allow the OEB and the Ministry of Community and Social Services (MCSS) to share data on customers to support increased participation in the OESP program among Ontario Works and Ontario Disability and Support Program clients would be put in place.

- Information Privacy Commissioner (IPC) staff were consulted, and customer consent is reflected.
- This information sharing component will come into force at Royal Assent, allowing OEB and MCSS to begin this process quickly, and support increasing OESP participation levels.

First Nations Delivery Credit:

- Energy is proposing legislative amendments that would establish a First Nation Delivery Credit for On-Reserve Consumers. This new program would be funded through tax payers.
- The proposed First Nation Delivery Credit would provide:
  - All prescribed on-reserve consumers with a credit for the entirety of their delivery line or with a credit for the monthly service charge.
  - The costs that are covered by the delivery credit are also described in legislation.
- If the proposed legislative amendments are approved, the government intends to propose regulatory amendments that would:
  - Establish the class of customers eligible;
  - Determine what is considered on-reserve; and
  - Determine the method of calculating the delivery credit.

APPENDIX F: ANALYSIS OF FINANCIAL MODELS AND RISKS

Treasury Board Secretariat received two models related to global adjustment refinancing on April 12, 2017:

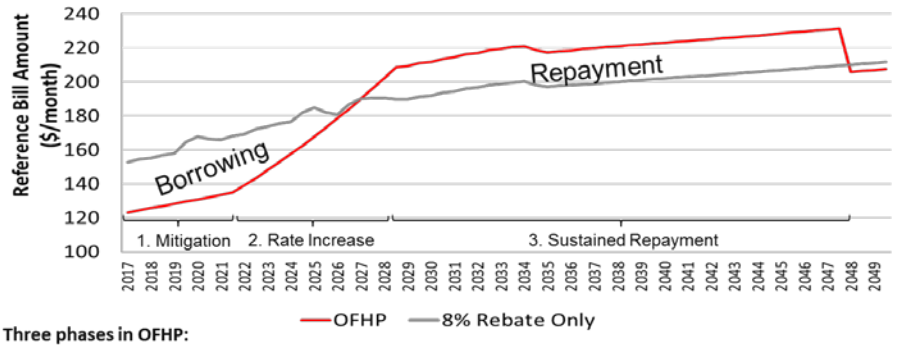
- The model the Ministry of Energy developed and used to support the March 2017 submission
- The financial model that was developed by the Ontario Power Generation (OPG) that provides details regarding the financing of the proposed structure

These models are based on high level aggregates and do not allow TBS to determine the financial impact of potential scenarios in which conditions and forecasts are different. TBS staff have met Ministry of Energy and OPG, and there is agreement for scenarios to be run and for further sensitivity analysis to be undertaken – both to create a risk-based outlook for the province, and to respond to questions that are expected from credit rating agencies.

The Model:

The OFHP can be thought of as having three phases (see diagram):

The model is high level and aggregate, built on other independent forecasts (e.g. IESO demand forecast). There are a large number of assumptions built into the model explicitly and implicitly (as a large number of assumptions are embedded into the other forecasts that are used as inputs into this model).



Three phases in OFHP:

Phase 1: Mitigation
- 2017 bill set 25% lower than original projection (that did not include 8% HST rebate)
- Increase in bill capped to 2% per year until 2021

Phase 2: Rate Increase
- Bill **increases 6.3% each year** to avoid exceeding borrowing limit of $28B
- Planned increases end in 2028 when sustained repayment starts

Phase 3: Sustained Repayment
- Bill remains **10.4% higher** than projected with 8% rebate until 2047
- Difference represents financing repayment
- Total interest paid: **$26.2B**

Model Inputs:

Exogenous Variables
- Interest Rates
- USD/CAD Exchange Rate
- Debt ceiling of $28B (borrowing limit 10% of bill)
- Natural Gas Prices

Policy Parameters
- Use of Toronto Hydro Customer @ 750 kWh as the reference bill
- 25% bill reduction in 2017
- Bill increase capped at CPI annually until 2021
- Rate increase accelerate starting in 2022 in order to never exceed the $28B cap
- Payments set to fully repay by 2047
- Implementation approach

Other Model Inputs
- IESO Demand Forecast (Outlook B)*
- IESO Global Adjustment Forecast*

* includes a large number of variables ranging from: generation costs, federal CO2 price, regulatory charges, energy conservation, technological disruption, exchange rates, load forecasting and seasonal adjustments, etc.)

Analysis of Variables and Risks:

- Interest Rates: the current model is based on a static interest rate of 5%. While this assumption is reasonable in the current low interest rate environment, an increase in interest rates would result in substantially higher residential bills after 2022. For instance, if the interest rates increase from 5% to 7% (historical 30 year average) between 2020 and 2024, financing costs would increase by $11.2B (for a total of $37B). Bill increases from 2022 to 2029 would need to

be 7.3% annually (compared to 6.3% in base case) and the bill would remain 12.5% higher from 2029 to 2047 (compared to 10.4% in the base case).

- Demand: The model uses electricity demand from IESO (Outlook B) as a key input.
    - While IESO forecasts have been very accurate in the short to medium term, historically the forecasts have overestimated demand in medium to long term. If the current forecast, used on the projections, has the same bias, the costs borne by customers in the future may be higher.
    - Similarly, other factors that lower demand (conservation, technology adoption, and self-generation) would increase the costs borne by remaining customers to decease the debt associated with GA refinancing.
    - It should be noted that the reverse is also true, that if higher levels of electrification are achieved and demand increases, the cost of paying off the debt will be spread over a greater number of consumers.

- Any scenario that results in higher financing costs for ratepayers in later years may increase the risk that the regulatory charge to repay would be characterized as an unauthorized tax.

- Appendix I provides a more detailed overview of risks.

Analysis is currently underway to better understand intergenerational costs and benefits and the impact of GA smoothing on recovery charges that would be allowed under the current Eurig compliance rules.

Depending on the legal determination, if the annual increases in bills or the commodity prices will be subject to caps, additional borrowing/provincial funding may be required.

With the shift of electricity social programs costs moving to being funded by government appropriations (Including the 8% rebate, total costs are forecast to be $1.4B in 2017-18), cost forecasting models/assumptions should also under go sensitivity analysis to inform future funding requests.

APPENDIX G: PROVIDING A CREDIT FACILITY TO IESO

After IESO's review of the proposed legislation, it has indicated to the Ministry and the Ontario Financing Authority (OFA)/MOF that IESO may need to cover clean energy costs if for some reason the Trust, at any time, chooses not to purchase a portion of the deferred Global Adjustment amounts. IESO noted that the proposed legislation does not compel the Trust to purchase 100% of the regulatory asset at anytime. Also, the establishment of the regulatory asset and purchase by the Trust is expected to take three to six months to implement following the introduction of enabling legislation.

The OFA currently provides a $975 million credit facility to the IESO for other purposes, it is proposed that the OFA provide a new credit facility to the IESO, in an amount of up to about $3 billion.

The use of this new credit facility for a length of time could pose a potential fiscal impact to the Province upon consolidation of IESO.

Approvals Required for OFA Financing

OFA indicates the recommended TB/MBC minute should note a new credit facility is being sought by the IESO to ensure that it has the flexibility to cover clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An order-in-council will be sought to allow the OFA to be able to provide the new credit facility to the IESO, for an amount to be determined as per the requirements of the Fair Hydro Plan.

The following approvals are required by the OFA to accommodate the request to provide financing to the IESO:

1) An Order-in-Council is required for the Minister of Finance to lend to the OFA.
2) A Directive from Minister of Finance is required for the OFA to on-lend to the IESO.
3) An executed credit agreement between the OFA and the IESO.

1. Order-in-Council (OIC)

An OIC is required to authorize the Minister of Finance to lend to the OFA. Ministry of Finance Legal Services Branch would need to be engaged to facilitate the request.

- The existing $975 million credit facility was covered under OIC 675/97 which authorized the Minister of Finance to lend a revolving $2.16 billion to the OFA. This OIC was originally obtained in 1997.

It is understood that upon drafting the OIC (by MOF Legal), the OIC would need final approval from Lieutenant Governor in Council LGIC as required under section 22(1) of the *Capital Investment Plan Act*, 1993.

- The OIC would go through Deputy Minister of Finance, Minister of Finance, Chair of Cabinet for briefing/sign-offs and finally to the LGIC for approval.

To draft the OIC, the following details will be required:

i. Dollar Value of Loan from the Minister of Finance to the OFA
ii. Maturity Date of the Loan
iii. Interest Rate of the Loan

The following are recommended to accommodate IESO's need for financing:

i. Dollar Value of Loan:
   $3 billion, as per request. The OIC would provide the maximum limit of any loan to IESO and it may be advisable to add a cushion and provide an OIC for $3.5 billion.

ii. Maturity Date of the Loan:
OIC maturing March 31, 2048 would provide approximately 30-year term to match the Fair Hydro Plan. It may be advisable to add a cushion and set a maturity date to March 31, 2053 (cushion of 5-years).

iii. Interest Rate of the Loan
Interest rates on the loans from the Minister of Finance to the OFA have typically been a 1) Ontario 90-day t-bill rates, 2) flow-through of the rates charged to the third-party by the OFA and/or 3) the rate charged to the third-party by the OFA less 25bps.

OFA recommends to keep this unchanged to provide consistency with past OICs but also to provide flexibility in the rates that could potentially be charged to IESO, to be determined by the Minister of Finance, by way of the Minister's Directive.

2. Minister's Directive

Once the Minister of Finance has the authority under an OIC, a Minister's Directive can authorize the OFA to lend to IESO. The Directive can outline specific terms and conditions as needed.

3. Executed Credit Agreement

With a Minister's Directive approved, the OFA and IESO can work to execute a credit agreement, subject to any terms and conditions of the Directive and any policy considerations.

APPENDIX H: FINANCIAL, LEGAL, ACCOUNTING RISK ASSESSMENTS (MINISTRY)

The Ministry was asked to report back to TBS/MBC with on details on how financing, accounting and legal risks would be mitigated.

Financing

OFHP Legislation

The purpose of the proposed legislation is to support the Government of Ontario's commitment to ensure that the costs of investments in the electricity system are allocated fairly among present and future generations of consumers. Costs to be allocated include clean and renewable generation facilities, conservation, demand management, energy efficiency programs.

The supporting legislation defines the mechanisms and framework that would achieve the refinancing of the (GA), including:

- Fair Allocation Amount: Is a calculation and allocation of clean energy costs over time. It is expected that the calculation would lead to decreased rates in the near term with rates higher than forecast in the long term. The Minister of Energy is to calculate the Fair Allocation Amount and provide the amount to the Financial Services Manager (OPG). Subsequent calculations may be undertaken by other agents as prescribed by the Minister.
- Fair Adjustment: Sets out the mechanism for the Ontario Energy Board (OEB) to determine the "relief", including the initial decrease in rates to achieve the 25% decrease, for the period July 1, 2017 to April 30, 2018. Under the legislation, the OEB must determine the amount within 15 business days of the legislation coming into force. The Fair Adjustment also allows the Lieutenant Governor in Council (LGIC) to make regulations prescribing electricity rates for the period May 1, 2018 to June 30, 2021.
- Clean Energy Adjustment: Is the mechanism to recover the under-collection of GA from eligible consumers during the recovery period. This is an adjustment to a consumer invoice on a monthly basis to repay principal, interest and other financing. IESO and each electricity distributor will act as an agent for the financing entity to impose, invoice and collect the clean energy adjustments.

The Ministry has prepared legislation and regulations in close collaboration with key ministries (i.e., TB, MOF, AG and CO), agencies (i.e., OEB, IESO, OPG) and third party financial advisors.

- The proposed legislation enables the province to provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework and the authority of the legislature to pass the legislation. The intent is to ensure that the full value of any investment is recoverable.
- The legislation also enables the Province to guarantee borrowing of the trust in the event of a market disruption to mitigate OPG's financing risk. Specifics of these guarantees will be determined in agreements to be negotiated later this year

It is still possible that the full value of the Regulatory Asset may not be purchased. In such cases, IESO may be able to retain the unsold amounts recorded in its variance account for a short period of time.

In addition, the Ministry has been worked closely with the Ontario Financing Authority (OFA) and TD Securities (TD), as the Province's external financial advisor, on the financing structure (i.e., legislation, provincial guarantees, OPG's equity injections and IESO's enhanced credit facilities).

In particular, the proposed legislation enables a structure that OFA and TD believe will enable financing at a reasonable cost. Key elements that support this financing structure include:

- OPG issuances of subordinated debt to the SPV/Trust representing up to 49% of total borrowing; and
- Conditional (springing) guarantees by the Province to provide a backstop in the event of specific and limited events (e.g., changes to legislation that harm investor interests).

Note: The ability to finance and the cost of financing will only be known with certainty once OPG takes this structure to market.

<u>OPG Financing / OPG Equity Financing</u>

The ability to engage in the fair distribution of clean energy costs requires financing during periods where the collection of the clean energy costs is deferred to later years. The proposed legislation outlines mechanisms that are required to enable the financing and meet requirements for rating agencies and investors.

IESO will have a funding gap resulting from the reduction in amounts collected over four years. The legislation enables IESO to record the under-collection of GA in a variance account, and deems this under-collected amount to be a “Regulatory Asset”.

- OEB would determine rates to allow IESO to recover under-collection recorded in its variance account.
- IESO is authorized to sell all or a portion to the OPG Special Purpose Vehicle (SPV)/Trust under the Financing Plan.

As part of supporting the financing and administration of the GA refinancing mechanism, it is expected that OPG would purchase the right to future cash flows from IESO on an ongoing basis.

The sale of the regulatory asset from IESO to the OPG Special Purpose Vehicle (SPV)/Trust creates an “Investment Asset”.

- The Investment Asset allows for the recovery of the under-collected GA as the Investment Asset may in turn be sold to other investors or group of investors.

The Ministry has worked closely with third-party financial advisors in advance of and throughout the drafting process to help to ensure that the proposed legislation enables refinancing of the GA.

These purchases would be financed in part by capital infusions from the Province to OPG for the purposes of stabilizing OPG’s capital structure:

- OPG would require monthly “equity injections” from the Province which would be fiscally neutral as OPG would issue new shares to the Province in exchange;
- Funds from the Province would flow from the Ontario Financing Authority (OFA); and
- The Ministry, OFA and OPG are working through the specific mechanisms, timelines and share features.
- It is anticipated that the initial equity injection would take place as early as June 2017.

Through PRRT, the Ministry of Energy received approval for the creation of an operating asset ”OPG Share Purchase” and expenditure increase of $1.1billion in 2017-18 within Vote 2905-5, which is based on the latest estimates by IESO, and provides flexibility to account for forecasting uncertainty. This approval is pending passage of the proposed legislation.

OPG will provide a two year forecast of its equity requirements to the Ministry on annual basis, as part of OPG’s business plan process. Note: While included in the business plan, equity requirements will not form part of the Ministry of Energy’s concurrence process.

For future funding requirements, the Ministry will seek appropriation through the PRRT process.

OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. Credit ratings will depend on provisions in legislation, regulation and agreements as well as the capital structure of the SPV / Trust. Despite these factors, rating agencies may see the Province's rating forming a ceiling given the contingent guarantees that the Province will provide (described above).

In addition, given the long term nature of this program (i.e., approximately thirty-years), the calculations related to refinancing of the GA set out in the proposed legislation will be subject to fluctuations in Ontario electricity demand, GA and interest rates in the medium to long-term.

- Should electricity demand be higher than forecast as a result of greater electrification, the cost of paying off the debt will be spread over a greater pool of consumption and decreasing future costs for individual ratepayers. Note: The reverse is also true in regards to decreasing demand.
- Should interest costs increase from the assumed 5%, total borrowing costs would rise. Given that this is a unique offering, managing investor confidence will be key to ensure borrowing costs don't rise. Note: The reverse is also true in regards to interest rates being lower than assumed.

IESO's Credit Facilities

IESO is in discussions with the Ontario Financing Authority (OFA) regarding an increase to its current "line of credit" with the OFA and OEFC (i.e., credit facilities). The increases are in response to IESO role in the delivery of OFHP and to provide a necessary buffer to fund short periods where OPG SPV/Trust does not fund a shortfall.

IESO advises that this is important not only for IESO solvency, but also to maintain its credit rating (i.e., IESO's contracted suppliers' credit arrangements are often based on IESO maintaining a certain rating).

IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period. OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset. Therefore, IESO will need a credit facility for interim financing. IESO may also require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.

Accounting

The legislation to enable GA refinancing has benefitted from the review and input of IESO/KPMG, OPG/E&Y and OPCD/E&Y.

The proposed legislation establishes mechanisms to enable the funding, sale and transfer between IESO and OPG that respond to the accounting requirements and advice outlined in the March 1, 2017 Cabinet Submission, such as concerns regarding consolidation by the Province.

Under the proposed legislation, OEB will issue an "accounting order" to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. This satisfies accounting concerns regarding OEB oversight in the establishment of the Regulatory Asset.

IESO will effectively sell the "right to collect" deferred future revenue from ratepayers to OPG in return for cash proceeds.

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement.

To recover its revenue shortfall, IESO will establish a Regulatory Asset that it would sell to OPG's SPV/Trust.

KPMG

The Ministry has worked closely with the Independent Electricity System Operator (IESO) and KPMG on the accounting considerations of GA Refinancing (i.e., legislation, applications of accounting standards/principles, minimizing consolidation risks and ability to establish a regulatory asset).

In particular, the proposed legislation provides a structure that IESO and KMPG believe meets the necessary accounting requirements. Key elements include:

- An IESO variance account created by the proposed legislation that would be recognized as a "regulatory asset".
- An Ontario Power Generation (OPG) special purpose vehicle (SPV) / Trust that would not controlled by IESO and thus have no consolidation risk for IESO.

In addition, KMPG provided some commentary on the accounting requirement for the "derecognition" of the regulatory asset once it's sold to OPG SPV/Trust. KPMG advised that the regulatory asset should be derecognized upon transfer to the OPG SPV/Trust as IESO no longer has rights or obligations to the asset (i.e., the transformation from a regulatory asset to an investment asset).

OPG

The Ministry has worked closely with the Ontario Power Generation (OPG) and E&Y, on the accounting requirements to enable GA Refinancing with respect to consolidation (i.e., legislation, applications of accounting standards/principles, establishing a special purpose vehicle (SPV) / Trust).

The proposed legislation and the associated amendments to the Electricity Act, 1998, enable OPG to create OPG's SPV/Trust as a stand-alone entity able to conduct business separately under a Trust agreement. Note: To further support the operations and mechanics of the OPG SPV/Trust, additional work will be done through the regulations and supporting agreements/documents.

- OPG will have the authority to set up the SPV/Trust and assign it with powers regarding decision-making, funding and ongoing operation.
- OPG and IESO are developing a process that will allow interest payments to occur under GA Refinancing.

Based on the existing and proposed legislation, key operating conditions being addressed in regulations and supporting agreements/documents and no introduction of new conditions that would conflict with OPG's control of the SPV/Trust, E&Y concurs with OPG's assessment that the accounting requirements to support "consolidation" of OPG SPV / Trust with OPG Inc. can be met.

Legal

In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:

- The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
- If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30-year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
- By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
- The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period. Limiting the near-term rate reductions to such amounts which can be justified as counterbalancing disproportionate GA payments during the 2005-2017 period ensures that the statutory 25% reduction is consistent with proportionate reallocation.

The bill provides for provincial assurances, guarantees and a statutory cause of action.

The provincial assurance provision is intended to mirror as closely as possible the language of a similar provision that appears in legislation in the United States that purports to limit a state legislature's ability to enact legislation that would affect the transaction.

The main legal risk associated with the provision is that its precise legal purpose and intended effect are not clear. Under Canadian law, it is not possible for legislation to limit the future exercise of legislative power by the Legislature, including the power to amend or repeal statutory provisions or to expropriate private rights conferred under past statutes.

In light of this limitation, the U.S. provision has been modified to focus on possible actions by the executive branch of government that might undermine the value of the proposed securities (including regulation-making), rather than seeking to constrain the Legislature's powers. However, in the absence of some future statutory amendment, it is not clear what, if any, executive action could have the effect of undermining the payment obligation that would be imposed on consumers under the Act and, therefore, it is not clear what practical risk the provision is designed to mitigate against. This uncertainty creates a risk that a reviewing court could construe the provision in unanticipated ways.

The guarantee provisions are intended to backstop the provincial assurance provision and provide that:

- The Minister of Energy and Minister of Finance may, with LGIC approval, enter into agreements regarding the performance of IESO or electricity vendors; and
- The Minister of Energy and Minister of Finance may, pursuant to LGIC order, agree to guarantee and indemnify any debt, obligation, security or undertaking associated with an investment interest.

Legal risk to the province will be assessed as the agreements are negotiated and drafted. **A statutory cause of action** may be created by LGIC regulation. Much like the provincial assurance provision, the statutory cause of action provision is intended to mirror features of US legislation. Legal risk to the province will be assessed as the regulation defining the statutory cause of action is developed.

The Ministry retained Blakes to provide external legal advice in the development of the legislation.The Blakes team provided securitization, constitutional law, energy sector and government expertise. This team was integral to balancing the accounting, legal and finaceability imperatives, as well as differing interests among OPG, IESO, OEB and investment dealers, in crafting the legislation. Blakes will continue to advise through the development of regulations and the commercial agreements that will ensue.

Navigant Analysis

Navigant Consulting has been retained and is conducting research and analysis that would support the implementation of GA refinancing. Specifically, Navigant is conducting analysis that would inform the expected lifecycle of existing generation infrastructure. Navigant is also analyzing the financial benefits that could be achieved by more closely aligning the costs of this infrastructure with the period over which it is expected to provide benefits. In addition, the Ministry has asked for analysis of the social, health and environmental benefits of phasing-out of coal-fired generation in the province and identify which, if any of these benefits are already accounted for in generator contracts.

APPENDIX I: OVERVIEW OF RISKS

Prepared by TBS staff, the following chart provides an overview of strategic (versus operational) risks to inform the approval/decision making process regarding the proposed legislation. Each part, GA Partial Refinancing & Electricity social programs, is a separate table.

Global Adjustment Partial Refinancing:

Objective: Provide immediate ratepayer relief by capping rate increases at Consumer Price Index (CPI) for four years and refinancing GA costs over a longer period of time. Develop and implement a financing structure that increases provincial borrowing, but has no impact on annual provincial surplus/deficit.

Risk	Level of Risk	Risk Response
The determination of the appropriate legal and accounting treatment to be applied to the financing model may result in the costs of GA smoothing being allocated to the province.	**Risk Likelihood:** Possible **Risk Impact:** Critical **Time Scale:** 6 to 12 months **Rationale:** • The structure of the GA deferral was designed to result in an increase in provincial borrowing, no increase in net debt and no impact on surplus/deficit. • The proposal assumes GA refinancing does not have a fiscal impact because the legal authority and accounting treatments are met. • If a favourable legal and accounting treatment is not implemented, there could be a negative impact on the province's fiscal plan up to $2.5B in 2017-18 and rising. • Rating agencies and investors in the Province's debt may view all of the borrowing as an obligation of the Province, especially taking into account the nature of provincial guarantees, which could put pressure on the Province's credit rating and overall borrowing capacity. • Proposed structure may result in a negative response from Ontario Auditor General (OAG) due to previous concerns regarding recognition of rate regulated assets and liabilities. The AG has already expressed concerns regarding the accounting treatment on the IESO's books which could lead to a qualification of the Province's consolidated financial statements. • Initial assessment of the accounting considerations suggests that the proposed model is in alignment with established accounting standards.	Risk can be mitigated by: • Commissioning external opinions on the legal, fiscal and accounting requirements, which could be used by the Province to justify structure of financial model and be utilized in discussions with the OAG. • Identify potential options to minimize the balance of rate regulated assets remaining on the IESO's books at fiscal year-end.

Risk	Level of Risk	Risk Response
Uncertainty in the financial model due to dependence on assumptions that are subject to potential volatility may result in higher than anticipated future costs for rate payers and the province.	**Risk Likelihood:** Likely **Risk Impact:** Major **Time Scale:** More than 36 months **Rationale** • The financial model developed is a high level and aggregate model, which is built on independent forecasts. There are a large number of assumptions built into the model explicitly and implicitly (as a larger number of assumptions are embedded into the other forecasts that are used as inputs into the model). • The proposal financing structure will accrue total interest of about $26.2 billion, which is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the financial impact of potential changes in variables used in the financial models. • Building permissive language in the legislation and regulations to allow for timely course correction mechanisms (i.e. higher payment amounts and/or rate increases) • Regulations to prescribe the methodology to be applied by the Ontario Energy Board (OEB) to determine electricity rates in response to potential deviation from forecasted financing plans.
A legal determination that the Province is spreading the costs of GA financing in order to lower the price in the short term by increasing the price in the long term may result in the GA charge characterized as a tax and deemed unconstitutional.	**Risk Likelihood:** Medium **Risk Impact:** High **Time Scale:** Long-Term (More than 36 months) **Rationale** • If characterized as a tax, the GA charge could be subject to legal challenge and struck down as unconstitutional, allowing consumers to recover their payments. • Likelihood dependent on the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year. The bigger the reduction in charges to current consumers, the higher likelihood of the risk being realized. • Internal and external expertise have provided opinion that the proposed structure is constitutionally sound in the short-term (2017-18), but the likelihood of the risk increases in the proceeding four years, which will impact commitment to keep rate increase in line with CPI. • If annual increases in bills or the commodity prices are subject to caps, additional borrowing/provincial funding may be required.	Risk can be avoided by: • Imposition of a valid tax. • Change in policy (i.e. allow greater rate increases during the remainder of the rate mitigation phase and higher increases and payment amounts throughout rate increase and payment phase). • Use of public funds to ease pressure. Risk can be mitigated by: • Improve forecasting model and close monitoring of costs and changes in variables built into model. • Analyze the costs and benefits of the long lived assets (specifically usability beyond a 20 year period) to assist in determining a supportable GA deferral structure. • Draft legislation with built-in provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court.

Risk	Level of Risk	Risk Response
Financing the costs of GA smoothing through OPG SPV/Trust and the volatility of interest rates may increase the cost of GA smoothing and/or require additional provincial funding.	**Risk Likelihood:** Possible **Risk Impact:** Moderate **Time Scale:** 12 to 24 months **Rationale** • The proposed structure will be reviewed by credit agencies to allow OPG to borrow in the open market. Depending on assessment, there may be an impact on interest rate for borrowing, the amount of equity/funding the province may need to provide and the requirement for a provincial guarantee. • As the OPG SPV/Trust will be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • If the Trust can't raise the full funding requirements, additional cash injections would be required. If the borrowing cap of $28B is reached sooner than forecast, the province may have to provide incremental funding to float the program to 2047. • Beyond 2022, when steep increases are required, there will likely be additional pressure on the government to offset a part of the scheduled increases. • Risk that credit rating agencies may perceive OPG SPV/Trust's borrowing as debt supported by Province, impacting Province's ratings and cost of borrowing.	Risk can be avoided by: • Province providing a potential guarantee for the cost of borrowing – however, would redirect risk back to the Province and negate benefits of proposed financing structure. Risk can be mitigated by: • Equity injections from the province to support OPG as the owner and manager of GA refinancing and allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • Proposed legislation to enable GA refinancing has been draft with input from third-party financers. Provides a 'narrow' provincial guarantee and ensuring that debt holders have the right of action against a future government to recover the amount outstanding including interest, fees, expenses and any damages.
Risk	**Level of Risk**	**Risk Response**

Risk	Level of Risk	Risk Response
The determination of the appropriate legal and accounting treatment to be applied to the financing model may result in the costs of GA Refinancing having a fiscal impact to the province.	**Risk Likelihood:** Possible **Risk Impact:** Critical **Time Scale:** 6 to 12 months **Rationale:** • The structure of the GA deferral was designed to result in an increase in provincial borrowing, no increase in net debt and no impact on surplus/deficit. • The proposal assumes GA refinancing does not have a fiscal impact because the legal authority and accounting treatments are met. • If a favourable legal and accounting treatment is not implemented, there would be a negative impact on the province's fiscal plan of up to $2.5B in 2017-18 and rising. • Rating agencies and investors in Province's debt may view all of the borrowing as an obligation of the Province, which could put pressure on the Province's credit rating and overall borrowing capacity. • The proposed structure may result in an opinion from the Ontario Auditor General (OAG) considering previous concerns regarding recognition of rate regulated assets and liabilities. The OAG may take this into account when the provincial books are audited. • An initial assessment of the accounting considerations suggests that the proposed model is in alignment with established accounting standards. Additional analysis is still required.	Risk can be mitigated by: • Commissioning external opinions on the legal, fiscal and accounting requirements, which could be used by the Province to support discussions of the financial model with the OAG.
Uncertainty in the financial model due to dependence on assumptions that are subject to potential volatility may result in higher than anticipated future costs for rate payers and the province.	**Risk Likelihood:** Likely **Risk Impact:** Major **Time Scale:** More than 36 months **Rationale** • The financial model developed is a high level and aggregate model, which is built on independent forecasts. There are a large number of assumptions built into the model explicitly and implicitly (as a larger number of assumptions are embedded into the other forecasts that are used as inputs into the model). • The proposal financing structure will accrue total interest of about $26.2 billion, which is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the sensitivity and financial impact of potential changes in variables used in the financial models. • Building permissive language in the legislation and regulations to allow for timely course correction mechanisms (i.e. higher payment amounts and/or rate increases) • Regulations to prescribe the methodology to be applied by the Ontario Energy Board (OEB) to determine electricity rates in response to potential deviation from forecasted financing plans.

Risk	Level of Risk	Risk Response
A legal determination that the Province is spreading the costs of GA refinancing in order to lower the price in the short term by increasing the price in the long term may result in the GA charge characterized as a tax and deemed unconstitutional.	**Risk Likelihood:** Possible **Risk Impact:** Major **Time Scale:** Long-Term (More than 36 months) **Rationale** • If characterized as a tax, the GA charge could be subject to legal challenge and struck down as unconstitutional, allowing consumers to recover their payments. • Likelihood dependent on the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year. The bigger the reduction in charges to current consumers, the higher likelihood of the risk being realized. • Internal and external expertise have provided opinion that the proposed structure is constitutionally sound in the short-term (2017-18), but the likelihood of the risk increases in the proceeding four years, which will impact commitment to keep rate increase in line with CPI. • If annual increases in bills or the commodity prices are subject to caps, additional borrowing/provincial funding may be required.	Risk can be avoided by: • Imposition of a valid tax. • Change in policy (i.e. allow greater rate increases during the remainder of the rate mitigation phase and higher increases and payment amounts throughout rate increase and payment phase). • Use of public funds to ease pressure. Risk can be mitigated by: • Improve forecasting model and ongoing monitoring of costs and changes in variables built into model. • Analysis of the costs and benefits of the long lived assets (specifically usability beyond a 20 year period) to assist in determining a supportable GA deferral structure. • Draft legislation with built-in provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court.

Risk	Level of Risk	Risk Response
Refinancing GA costs through an OPG SPV Trust may increase costs and/or require provincial funding.	**Risk Likelihood:** Possible **Risk Impact:** Major **Time Scale:** 12 to 24 months **Rationale** • The proposed borrowing structure will be reviewed by credit agencies to allow OPG to borrow in the open market. Depending on assessment, there may be an impact on the interest rate for borrowing, the amount of equity / funding the province may need to provide and the requirement for a provincial guarantee. • As the OPG SPV/Trust will be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • There is a risk that credit rating agencies may perceive OPG SPV/Trust's borrowing as debt supported by Province, impacting Province's own ratings and cost of borrowing. • If the Trust can't raise the full funding requirements, additional cash injections would be required. If the borrowing cap of $28B (in the March 1, 2017 Cabinet Submission) is reached sooner than forecast, the province may have to provide incremental funding to float the program to 2047. • Beyond 2022, when steep increases are required, there will likely be additional pressure on the province to offset a part of the scheduled increases. • Fiscal impacts will be subject to fluctuations in Ontario electricity demand, GA and interests rates in the medium-to long term.	Risk can be mitigated by: • Providing a "provincial guarantee" for the cost of borrowing. • Drafting legislation to provide assurance to OPG and investors regarding the permanence of the GA refinancing framework and the authority of the legislation to pass the legislation; and enable the Province to guarantee borrowing of the trust in the event of a market disruption. • Specifics of a guarantee are dependent on the negotiation of agreements not yet initiated. • Equity injections from the province to support OPG as the owner and manager of GA refinancing and allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost.

Electricity social programs (Enhancing Electricity Support & Conservation Programs):

Objective: Shift funding of existing and new electricity support programs (RRRP, OESP, Affordability Fund, First Nations Credit) from rate to tax base.

Risk	Level of Risk	Risk Response
Uncertainty in forecasting due to exposure to changes and/or volatility (i.e. interest rates, electricity usage patterns, and distribution costs) may result in higher than anticipated fiscal impacts for the Province.	**Risk Likelihood:** Possible **Risk Impact:** Major **Timescale:** 12 to 24 months **Rationale:** • The energy sector is complex and a number of key assumptions used as inputs into forecasting model are variables/forecasts themselves, resulting in a high inherent risk that cost estimates are inaccurate. • Fiscal projection is highly dependent on factors which can fluctuate from year to year, including: o electricity usage; o distributions costs; and o consumer consumption patterns that may change due to extreme weather or other factors. • Fiscal projection is subject to knowledge of future distribution costs and dependent on submission of cost of service applications by Hydro One and LDCs. o Enhanced RRRP may create disincentives from the eligible LDCs towards productivity and performance improvements and/or cause ineligible LDC's to drive up distribution costs to gain access to program.	Risk can be mitigated by: • Development of a risk-based outlook, based on an analysis of scenarios, to determine the sensitivity and financial impact of potential changes in variables used in the forecasting models.

> During today's call there was a general reference to potential credit rating agency concerns. That concern may not have come across clearly enough and here is some perspective on the specific concern. Given that this structure is very unique in the Canadian environment the credit rating agency will likely request a legal opinion – tax

neutrality or run flat for tax – establishing that any activity of the financing entity will not result in a tax liability that would rank ahead of security holders.

> Hi Sriram,

A Provincial support agreement (or agreements) is being worked on, and there are services or performance guarantee portions discussed but a tax or PILs component does not sound familiar to me. I'll enquire.

It's more about a Provincial payment guarantee to bondholders of the financing entity under certain circumstances.

Ron

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE: Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Global Adjustment Refinancing*	0.0	0.0	0.0
	Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
	Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.
^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	359	492	504	517

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

In addition, in the implementation of the OFHP, a number of supporting arrangements are being sought by the IESO and OPG, including the following:

Commented [JK1]: May want to just list and add the details down below in Appendix G.

Commented [JK2R1]: Left the whole text but maybe cut the repetitiveness

IESO Credit Facility – FHP Requirements

- IESO raised the requirements for financing the Fair Hydro forecast variances.
  - A letter requesting incremental credit facility room of $1.5 Bn in potential borrowing requirements is requested, composed of a new FHP-purpose facility of $2 bn and a reduction of the existing $975 million facility to $475 million.
- MOF/OFA staff are preparing a draft Minister of Finance's Directive to the OFA to provide the new and revised facilities to the IESO.
- An Order-in-Council (OIC) will be required for the OFA to borrow money from the Province. The approval package has been provided to the Minister for signature and it's tracking towards the June 27th LRC date, together with Energy's LRC submission.

Section 28 Approval for Indemnities under the Financial Administration Act

- Ministry of Energy staff are putting together a s.28 approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.
  - The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan.
  - IESO and OPG have stated that these indemnities are required for their participation in the implementation of the OFHP Act.
  - In order for the OFHP Act to be successful, the draft materials, under review by MOF Legal and MOF/OFA staff, indicate that it is recommended by the Minister of Energy that the Minister of Finance approve this request.
- As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault.
  - Draft materials from Energy state that the likelihood of this indemnity being called upon is low and that the fiscal exposure is unquantifiable at this time.
  - Energy has confirmed in its draft request letter that it bears responsibility for funding, within its approved allocation, for payments associated with the indemnities provided under the Agreements.

- CEFD staff is working on a note and analysis on the request with MOF Legal and TBS staff, including OPCD members.
    - A set of questions on the draft materials have been provided to Energy Legal and relevant policy sections of the ministry.

Provincial Support Agreement or Provincial Guarantee Agreement

- As part of the OFHP and in order to provide support to those with claims against the Financing Entity (i.e., planned to be the OPG Trust) and with the ultimate objective of providing the highest possible credit ratings (and corresponding impact on interest costs to the ratepayers), the Province has been asked to provide both a Service Guarantee and a Performance Guarantee to support obligations of the IESO and the debt instruments issued by the Financing Entity.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

Name of analyst:	Chris Skubel/ Afshin Malekzadeh	**Phone number:**	416-327-2151
Date:	June 13, 2017	**Log number:**	
Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **Update:** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **Update:** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July. There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
Indemnities provided to OPG are triggered/called	L	H	• Ministry of Energy staff are putting together a s.28 (under the Financial Administration Act) approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			o The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan. o As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault. **Update:** • Work is ongoing to finalize the s.28 (under the Financial Administration Act) approval for indemnities. Note: There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:**

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

Attachments:	Outstanding Business Issues – Ontario Fair Hydro Plan.docx

---

Hi all,

ENE MO asked for a quick note on 4 of the outstanding business issues that are being worked through and are hoping to see something tomorrow morning.

I've pulled together a high level explanation of each of the items and next steps/timing (to the extent I know).

Would greatly appreciate if you guys could take a look and provide any edits/comments today/early tomorrow if possible. I'm also not too involved in a few of these discussions so if there's others within OFA you think should review feel free to pass along.

Thanks in advance,
Kaitlin

Outstanding Business Issues – Ontario Fair Hydro Plan
Briefing Note

PURPOSE
Provide an overview of a few of the key remaining outstanding business issues that OPG and the Province are working through

BUSINESS ISSUES

1. **Service and Performance Guarantees**
   - As part of the OFHP, the IESO will create and sell a regulatory asset to the OPG financing entity
   - In order to provide assurances to those with claims against the Financing Entity (eg. Holders of debt), and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of the IESO are carried out including obligations related to collecting and remitting clean energy adjustments.
   - **Next Steps:**
     - OPG and OFA and working towards the development of a term sheet
     - Timing: Guarantees are required to support rating agency review which is expected by the end of July

2. **Payments in Lieu of Taxes (PILs) Exemption**
   - The Province would like to minimize to the extent possible , the PILs payable by the OPG financing vehicle, as those costs will be recovered from ratepayers
   - The Province is considering regulation changes to exempt the income arising as a consequence of the Fair Hydro Plan from PILs
   - As part of the OFHP, the financing entity will raise debt and acquire "investment assets" from the IESO. Given the unique nature of the investment assets, there are no specific rules which govern the manner which investment assets should be treated for tax purposes, and further analysis is required to ensure the cost of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity
   - **Next Steps:**
     - The Ministries of Finance, OFA and OPG are working together to determine required regulation changes
     - Timing: [Next steps for a decision / when is a decision required / when would these regulation changes occur]

3. **Equity Injection Process**
   - OPG will require equity injections on a monthly basis in order to maintain its capital structure, and will require flexibility in order to issue shares as needed by the Province

- The Ministry of Energy received appropriation for $1.1B through PRRT to support equity injections for the 2017-18 period, and will continue to provide multi-year forecasts each year through PRRT
- **Next Steps:**
    - The Ministry of Energy, OFA and OPG are working through the short term mechanics of this process which will ultimately feed into a Master Subscription Agreement. A draft term sheet is underway.
    - Timing: OPG will require the ability to issue equity in July, so mechanics and agreements should be finalized in June

4. Management Fees

- OPG will be providing all required services to the Trust as part of the OFHP, including planning, strategy, financing, deal execution etc.
- The legislation allows OPG to establish and charge a management fee for those services in accordance with the regulations which are currently in development
- OPG and OEB are currently working together on a management fee structure that balances the interests of minimizing costs and satisfying accounting consolidation requirements
- **Next Steps:**
    - OPG and OEB will bring forward a recommended framework for developing management fees
    - Timing: For incorporation into regulations being brought forward in June

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceeding to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Global Adjustment Refinancing*	0.0	0.0	0.0
	Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
	Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.
^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing ~~a~~ new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and F~~f~~irst N~~n~~ations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identify~~ies~~ who is eligible for RRRP funding (Hydro One R2 customers);
- Establish~~es~~ the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identify~~ies~~ the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limit~~s~~ eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provide~~s~~ a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	359	492	504	517

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.
- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of

the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

In addition, in the implementation of the OFHP, a number of supporting arrangements are being sought by the IESO and OPG, including the following:

Commented [JK1]: May want to just list and add the details down below in Appendix G.

Commented [JK2R1]: Left the whole text but maybe cut the repetitiveness

IESO Credit Facility – FHP Requirements

- IESO raised the requirements for financing the Fair Hydro forecast variances.
  - A letter requesting incremental credit facility room of $1.5 Bn in potential borrowing requirements is requested, composed of a new FHP-purpose facility of $2 bn and a reduction of the existing $975 million facility to $475 million.
- MOF/OFA staff are preparing a draft Minister of Finance's Directive to the OFA to provide the new and revised facilities to the IESO.
- An Order-in-Council (OIC) will be required for the OFA to borrow money from the Province. The approval package has been provided to the Minister for signature and it's tracking towards the June 27th LRC date, together with Energy's LRC submission.

Section 28 Approval for Indemnities under the Financial Administration Act

- Ministry of Energy staff are preparing ~~utting together~~ a s.28 approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.
  - The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan.
  - IESO and OPG have stated that these indemnities are required for their participation in the implementation of the OFHP Act.
  - ~~In order for the OFHP Act to be successful, the draft materials, under review by MOF Legal and MOF/OFA staff, indicate that it is recommended by the Minister of Energy that the Minister of Finance approve this request.~~

~~As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault.~~

- ~~Draft materials from Energy state that the likelihood of this indemnity being called upon is low and that the fiscal exposure is unquantifiable at this time.~~
- ~~Energy has confirmed in its draft request letter that it bears responsibility for funding, within its approved allocation, for payments associated with the indemnities provided under the Agreements.~~

- CEFD staff is working on a note and analysis on the request with MOF Legal and TBS staff, including

OPCD members.

- A set of questions on the draft materials have been provided to Energy Legal and relevant policy sections of the ministry.

Provincial Support Agreement or Provincial Guarantee Agreement

- As part of the OFHP and in order to provide support to those with claims against the Financing Entity (i.e., planned to be the OPG Trust) and with the ultimate objective of providing the highest possible credit ratings (and corresponding impact on interest costs to the ratepayers), the Province has been asked to provide both a Service Guarantee and a Performance Guarantee to support obligations of the IESO and the debt instruments issued by the Financing Entity.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

To provide a report back on the status of the additional supporting arrangement, including the s.28 approval for indemnities, the Provincial guarantees and the credit facility to the IESO.

Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceeding to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **Update:** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **Update:** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July. There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
Indemnities provided to OPG are triggered/called	L	H	• Ministry of Energy staff are putting together a s.28 (under the Financial Administration Act) approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			o The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan. o As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault. **Update:** • Work is ongoing to finalize the s.28 (under the Financial Administration Act) approval for indemnities. Note: There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:**

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

I added a sentence for report back. A bit rough.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE: Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Global Adjustment Refinancing*	0.0	0.0	0.0
	Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
	Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.
^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing a new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and first nations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identifies who is eligible for RRRP funding (Hydro One R2 customers);
- Establishes the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identifies the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limits eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provides a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	359	492	504	517

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.

- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

In addition, in the implementation of the OFHP, a number of supporting arrangements are being sought by the IESO and OPG, including the following:

Commented [JK1]: May want to just list and add the details down below in Appendix G.

Commented [JK2R1]: Left the whole text but maybe cut the repetitiveness

IESO Credit Facility – FHP Requirements

- IESO raised the requirements for financing the Fair Hydro forecast variances.
  - A letter requesting incremental credit facility room of $1.5 Bn in potential borrowing requirements is requested, composed of a new FHP-purpose facility of $2 bn and a reduction of the existing $975 million facility to $475 million.
- MOF/OFA staff are preparing a draft Minister of Finance's Directive to the OFA to provide the new and revised facilities to the IESO.
- An Order-in-Council (OIC) will be required for the OFA to borrow money from the Province. The approval package has been provided to the Minister for signature and it's tracking towards the June 27th LRC date, together with Energy's LRC submission.

Section 28 Approval for Indemnities under the Financial Administration Act

- Ministry of Energy staff are putting together a s.28 approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.
  - The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan.
  - IESO and OPG have stated that these indemnities are required for their participation in the implementation of the OFHP Act.
  - In order for the OFHP Act to be successful, the draft materials, under review by MOF Legal and MOF/OFA staff, indicate that it is recommended by the Minister of Energy that the Minister of Finance approve this request.
- As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault.
  - Draft materials from Energy state that the likelihood of this indemnity being called upon is low and that the fiscal exposure is unquantifiable at this time.
  - Energy has confirmed in its draft request letter that it bears responsibility for funding, within its approved allocation, for payments associated with the indemnities provided under the Agreements.

- CEFD staff is working on a note and analysis on the request with MOF Legal and TBS staff, including OPCD members.
    - A set of questions on the draft materials have been provided to Energy Legal and relevant policy sections of the ministry.

Provincial Support Agreement or Provincial Guarantee Agreement

- As part of the OFHP and in order to provide support to those with claims against the Financing Entity (i.e., planned to be the OPG Trust) and with the ultimate objective of providing the highest possible credit ratings (and corresponding impact on interest costs to the ratepayers), the Province has been asked to provide both a Service Guarantee and a Performance Guarantee to support obligations of the IESO and the debt instruments issued by the Financing Entity.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

To provide a report back on the status of the additional supporting arrangement, including the s.28 approval for indemnities, the Provincial guarantees and the credit facility to the IESO.

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**

	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **Update:** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **Update:** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July. There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
Indemnities provided to OPG are triggered/called	L	H	• Ministry of Energy staff are putting together a s.28 (under the Financial Administration Act) approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			o The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan. o As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault. **Update:** • Work is ongoing to finalize the s.28 (under the Financial Administration Act) approval for indemnities. Note: There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:**

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

Hi Ron,

Pls. see attached.

We can send as 'staff level' as an option given the requested timeline.

Thanks,

John

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	June 13, 2017
Agenda Class:	Major Item
Last reviewed by: TB/MBC – May 9, 2017	**Tracking to: Fast Track** LRC & Cabinet – June 14, 2017

SUBMISSION TITLE:	Report back on Ontario Fair Hydro Plan – Regulations Part 1

I. DECISION BEFORE THE BOARD

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceed to LRC and Cabinet for approval

II. RECOMMENDATIONS:

• Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceeding to LRC and Cabinet for approval including: o Global Adjustment Refinancing; o Electricity Social Programs; and, o Bill Presentment.	*Receive*
• Proposed regulations: o Note key aspects of proposed regulations; o Recommend proposed regulations; and, o Direct the Ministry to return to TB/MBC with any additional regulations with financial implications supporting implementation of the Ontario Fair Hydro Plan prior to proceeding to LRC.	*Recommend*
• Direct the Ministry to report back to TB/MBC on: o The details of additional proposed regulations with financial implications prior to proceeding to LRC; and, o An update on previously minuted report back requirements.	*Direct*

III. FINANCIAL SUMMARY

$ Millions		**2017-18**	**2018-19**	**2019-20**
Initiative cost requested		0.0	0.0	0.0
Initiative cost recommended		0.0	0.0	0.0
Recommended program base:	Global Adjustment Refinancing*	0.0	0.0	0.0
	Electricity social programs – RRRP/DRP^	344.0	472.0	484.0
	Electricity social programs – FNDC^	15.0	20.0	20.0
Offset Recommended		0.0	0.0	0.0
Total Potential Fiscal Impact		0.0	0.0	0.0

*As part of Global Adjustment Refinancing, an Operating Asset for $1.1B for OPG Share Purchase was included as part of 2017 Budget.
^Multi-year appropriation approved as part of the 2017 Budget.

IV. KEY COMMENTS AND CONSIDERATIONS

In March 2017, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for electricity price mitigation measures that support a 25% electricity bill reduction on average (including the 8% Ontario Rebate For Electricity Consumers announced in 2016). The Ontario Fair Hydro Plan (OFHP) was announced on March 2, 2017 which includes refinancing a portion of the Global Adjustment (GA) and helping vulnerable electricity consumers ("social programs") amongst other initiatives for residential consumers (see Appendix C). The Ministry was directed to report back to TB/MBC on a number of items including the proposed legislation required to enact the initiatives under OFHP (see Appendix D).

In May 2017, the Ministry reported back to TB/MBC with an implementation update on the OFHP and the enabling legislation. TB/MBC recommended the proposed legislation proceed to Cabinet for approval and Ontario's *Fair Hydro Act, 2017* ("the Act") received Royal Assent on June 1, 2017. The Ministry was directed to report back to TB/MBC on a number of items including the proposed regulations required to support the implementation of the OFHP (see Appendix E).

Proposed Regulations

The proposed regulations are the next step in implementation of the OFHP and would establish and amend the necessary regulations under the *Ontario Energy Board Act, 1998*, *Ontario Rebate for Electricity Consumers Act, 2016,* and the *Fair Hydro Plan Act, 2017*.

Implementation of Global Adjustment (GA) Refinancing

On March 2, 2017, as part of OFHP, it was announced that a portion of the GAs would be refinanced in order to fairly allocate costs across present and future generations of electricity consumers with respect to investments made to decarbonize (i.e., phase-out coal) and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system).

The Ministry is proposing ~~a~~ new regulations and amendments to existing regulations that would (for example):

- Define the typical consumer upon which the calculations to achieve the reduction will be based;
- Support the required calculations related to refinancing the GA which will implement rate reductions for the typical residential consumer; and,
- Authorize the Independent Electricity System Operator to borrow to fund the regulatory asset.

The Ontario Energy Board will calculate the electricity rates that consumers will pay as of July 1, 2017.

Delivery of Electricity Social Programs

To date, a number of electricity support programs exist and there is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base (including high distribution cost, low income and F~~f~~irst N~~n~~ations on-reserve customers).

The Ministry is proposing new regulations and amendments to existing regulations to support the implementation, establish frameworks and clarify program details for the new and enhanced social programs which will be effective July 1, 2017.

Local Delivery Companies will be reimbursed for credits provided via social programs to customers by IESO, which is subsequently reimbursed by the Ministry's voted appropriation.

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province. The proposed new regulations and regulatory amendments will (for example):

- Identify~~ies~~ who is eligible for RRRP funding (Hydro One R2 customers);
- Establish~~es~~ the DRP to complement RRRP whereby eligible residential customers would have their monthly base distribution charges held to a maximum amount (it is estimated that ~800,000 customers will benefit); and,
- Identify~~ies~~ the LDC's whose customers are eligible for enhanced protection.

On-Reserve First Nations Delivery Credit (FNDC)

The program will be available to on-reserve customers serviced by licensed distributors and would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The proposed new regulations and regulatory amendments will (for example):

- Set out the program particulars including eligibility for the program (it is estimated that ~21,000 customers will benefit);
- Limit~~s~~ eligibility to all residential rate class First Nations customers living on reserve served by the 11 affected LDCs; and,
- Provide~~s~~ a transitional period for LDCs to deliver the rate assistance.

Bill Presentment

The Ministry is proposing new regulations and amendments to existing regulations to support transparency and communications of the changes made under the OFHP on consumer invoices.

See Appendix F for additional details on the proposed regulations.

Analysis/Risks

Financial

- The financials submitted by the Ministry as part of this submission (below) are consistent with the voted appropriation approved for the Ministry through the 2017 Budget. Cost forecasts for these programs were made through a combination of Ministry analysis that utilized consumption data and local distribution company rates to estimate program costs, and information provided to the Ministry by the Ontario Energy Board (OEB). TB/MBC has requested the details of the forecasting models and costing estimates including assumptions.

$M	2017-18	2018-19	2019-20	2020-21
Rural or Remoate Rate Protection (RRRP)	344	472	484	497
On-Reserve First Nations Delivery Credit (FNDC)	15	20	20	20
Total	359	492	504	517

- The regulatory amendments do not result in a fiscal impact however the Ministry notes it is currently assessing the potential impact of the Hydro One rate application and will report back to TB/MBC with the potential out-year impacts of this rate application.
- The social programs allocations are based on a number of variable inputs such as program uptake, electricity market conditions and forecasting models that are subject to change and represent an on-going fiscal risk. Sensitivity analysis, which would allow the government to develop a risk based outlook to understand potential fluctuations in the cost of these initiatives, has been requested by TB/MBC to support better decision making and support meeting the government's fiscal targets.
- Lastly, there are no sunset dates for the programs and it is important to understand the full cost of

the initiatives (including electricity price projections) for the longer term, beyond the year 2021-22.

Accounting

- *Placeholder for accounting issues… [OPCD]*

Legal

- *Placeholder for legal issues… [TBS Legal]*

The Ministry has also reported back with an update to key risks including mitigation strategies (see Appendix G). In addition, the Ministry has also sought independent advice regarding financing, accounting and legal requirements from E&Y (OPG), KPMG (IESO), TD Securities (OFA) and Blakes (ENERGY), and launched third party technical analysis to assist with implementation of GA refinancing.

In addition, in the implementation of the OFHP, a number of supporting arrangements are being sought by the IESO and OPG, including the following:

Commented [JK1]: May want to just list and add the details down below in Appendix G.

Commented [JK2R1]: Left the whole text but maybe cut the repetitiveness

IESO Credit Facility – FHP Requirements

- IESO raised the requirements for financing the Fair Hydro forecast variances.
  - A letter requesting incremental credit facility room of $1.5 Bn in potential borrowing requirements is requested, composed of a new FHP-purpose facility of $2 bn and a reduction of the existing $975 million facility to $475 million.
- MOF/OFA staff are preparing a draft Minister of Finance's Directive to the OFA to provide the new and revised facilities to the IESO.
- An Order-in-Council (OIC) will be required for the OFA to borrow money from the Province. The approval package has been provided to the Minister for signature and it's tracking towards the June 27th LRC date, together with Energy's LRC submission.

Section 28 Approval for Indemnities under the Financial Administration Act

- Ministry of Energy staff are preparing ~~utting together~~ a s.28 approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.
  - The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan.
  - IESO and OPG have stated that these indemnities are required for their participation in the implementation of the OFHP Act.
  - ~~In order for the OFHP Act to be successful, the draft materials, under review by MOF Legal and MOF/OFA staff, indicate that it is recommended by the Minister of Energy that the Minister of Finance approve this request.~~

~~As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault.~~

- ~~Draft materials from Energy state that the likelihood of this indemnity being called upon is low and that the fiscal exposure is unquantifiable at this time.~~
- ~~Energy has confirmed in its draft request letter that it bears responsibility for funding, within its approved allocation, for payments associated with the indemnities provided under the Agreements.~~

- CEFD staff is working on a note and analysis on the request with MOF Legal and TBS staff, including

OPCD members.

- A set of questions on the draft materials have been provided to Energy Legal and relevant policy sections of the ministry.

Provincial Support Agreement or Provincial Guarantee Agreement

- As part of the OFHP and in order to provide support to those with claims against the Financing Entity (i.e., planned to be the OPG Trust) and with the ultimate objective of providing the highest possible credit ratings (and corresponding impact on interest costs to the ratepayers), the Province has been asked to provide both a Service Guarantee and a Performance Guarantee to support obligations of the IESO and the debt instruments issued by the Financing Entity.

Additional Report Backs

To continue to implement the OFHP, the ministry will be returning to TB/MBC on June 27, 2017 with part 2 of the report back on the creation and amendment of regulations (related to Global Adjustment and the Ontario Electricity Support Program) prior to proceeding to LRC including an update on previously minuted report back requirements.

To provide a report back on the status of the additional supporting arrangement, including the s.28 approval for indemnities, the Provincial guarantees and the credit facility to the IESO.

Name of analyst:	Chris Skubel/ Afshin Malekzadeh	**Phone number:**	416-327-2151
Date:	June 13, 2017	**Log number:**	
Branch / Division:	GGPR / PEMD / Treasury Board Secretariat		

APPENDIX A: PROPOSED MINUTE

Receive the first of two report backs on proposed regulations related to the Ontario Fair Hydro Plan that require a recommendation prior to proceeding to LRC and Cabinet for approval.

In this regard, the Board:

i) Note that the proposed regulatory amendments include the following program parameters:

Electricity Social Programs:

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

a) Provide for a fixed monthly credit ($60.50), replacing the existing prescribed annual amount and making the escalating factor unnecessary;
b) Hold R2 customers to a maximum monthly base distribution charge – in addition to the $60.50 monthly RRRP benefit; and
c) Sets out a process that the OEB will utilize to determine the maximum monthly distribution charge that all prescribed high-cost distributors will charge their customers; and,
    a. Sets out the proposed distributors as Atikokan Hydro Inc.; InnPower Corporation; Chapleau Public Utilities Corporation; Sioux Lookout Hydro Inc.; Northern Ontario Wires Inc.; Lakeland Power Distribution Ltd. (Parry Sound Rate Zone); Algoma Power Inc. (residential); and, Hydro One Networks Inc. (Low & medium density classified customers).

On-Reserve First Nations Delivery Credit (FNDC)

a) Defines eligibility as being restricted to those residential rate class First Nations customers who are members of a band as defined under the federal Indian Act;
b) Eliminates the delivery charge, or monthly service charge for those customers served by LDCs that do not have a delivery charge, for on-reserve residential First Nations customers; and,
c) Limits eligibility to 11 affected LDCs serving on-reserve consumers identified by the OEB including: Algoma Power Inc., Attawapiskat Power Corporation, Bluewater Power Distribution Corporation, Cat Lake Power Utility Ltd., Cornwall Electric Distribution, Hydro One Networks Inc. Hydro One Remote Communities Inc., PUC Distribution Inc., and Thunder Bay Hydro Electricity Distribution; Fort Albany Power Corporation; and Kashechewan Power Corporation.

Implementation of GA Refinancing:

a) Support the required calculations to be made by the Ontario Energy Board (OEB);
b) Provides the methodology that the OEB will use in applying reductions to eligible and non-regulated consumers who are eligible for GA refinancing;
c) Sets out the near-term reductions (i.e., the reductions that will be applied by the OEB from July 1, 2017 to April 30, 2018), as well as the reductions from May 1, 2018 to April 30, 2019. Further adjustments to be made for future periods beginning May 1, 2019 would be set out in further amendments the regulation; and,
d) Provides provide the Independent Electricity System Operator (IESO) with the necessary authority related to its activities, including the funding, borrowing and financial arrangements.

ii) Recommend the below proposed new and amendments to existing regulations proceed to Cabinet for approval:

a) New Regulation to be made under Part II of the *Ontario Fair Hydro Plan Act, 2017*, which is Schedule 1 of the *Fair Hydro Act, 2017*;
b) Amendment to O. Reg. 280/14 (IESO Eligible Investments and Borrowing) to be made under the *Electricity Act, 1998*;
c) New Invoicing Regulation to be made under the *Ontario Fair Hydro Plan Act, 2017*;
d) New Regulation (First Nation Delivery Credit) to be made under the *Ontario Energy Board Act, 1998* (OEBA);
e) New Regulation (Distribution Rate Protection) to be made under the OEBA;
f) Amendments to O. Reg. 442/01 (Rural or Remote Electricity Rate Protection) to be made under the OEBA;
g) Amendments to the O. Reg 363/16 (General) to be made under the *Ontario Rebate for Electricity Consumers Act, 2016* (ORECA); and,
h) Amendments to O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumers of Electricity) to be made under the OEBA.

iii) Direct the Ministry to report back to TB/MBC on the details of additional proposed regulations with financial implications prior to proceeding to LRC.

iv) Direct the Ministry to report back to TB/MBC on June 27th with an update on previously minuted report back requirements.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2017-18**	**2018-19**	**2019-20**	**2017-18**
Initiative cost		0.000	0.000	0.000	
Expense changes:					
	Oper	0.0000	0.000	0.0000	0.0000
	Oper	0.0000	0.0000	0.0000	0.0000
Total Fiscal Impact		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: OFHP OVERVIEW

Ontario Rebate for Electricity Consumers

The *Ontario Rebate for Electricity Consumers Act, 2016* will reduce electricity costs by 8 per cent on the amount before tax, an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

Eligible rural electricity ratepayers will receive additional relief, decreasing total electricity bills by an average of $540 a year or $45 each month.

Commercial, institutional and industrial ratepayers would also benefit from up to 34 per cent lower electricity costs through the expansion of the Industrial Conservation Initiative.

Details:

- The province is reducing costs for eligible rural ratepayers by providing additional funding to the Rural or Remote Rate Protection (RRRP) program.
- The Industrial Conservation Initiative (ICI) provides a strong incentive for large electricity consumers to shift their electricity consumption to off-peak hours to reduce their bills by up to one-third. Ontario intends to expand ICI to help reduce cost pressures on the electricity system and enable more consumers to reduce their electricity bill by up to one third.
- Ontario has removed the Debt Retirement Charge from residential electricity bills and introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements to help reduce electricity costs.

Fair Hydro Act

The *Ontario Fair Hydro Act, 2017* reduces electricity bills for all residential consumers and as many as half a million small businesses and farms, starting this summer. Lower-income Ontarians and those living in eligible rural and northern communities will receive even greater reductions, as much as 40 to 50 per cent. As part of this plan, rate increases will be held to the rate of inflation for four years.

These measures include the eight per cent rebate introduced in January and build on previously announced initiatives to deliver broad-based rate relief on all electricity bills. Taken together, these changes are delivering the largest reduction to electricity rates in Ontario's history. To facilitate these immediate savings, the legislation:

Details:

- Enables the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to spread out the costs of Ontario's clean energy investments over a longer period of time, which ensures that the costs of these investments are allocated fairly among current and future ratepayers. This will be accomplished through refinancing a portion of the Global Adjustment (GA), resulting in significant and immediate rate reductions.
- Modifies and broadens the Ontario Electricity Support Program (OESP) to expand benefits and ensure it is funded by government instead of ratepayers, reducing bills for all.
- Enhances the Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief to a total of approximately 800,000 customers and shift costs from ratepayers to provincial revenues. The enhancement will benefit customers served by local distribution companies (LDCs) with the highest distribution rates. These savings will begin July 1, 2017.
- Provides on-reserve First Nations households serviced by licensed distributors with a 100 per cent credit of the delivery line on their monthly electricity bills, starting July 1, 2017.

APPENDIX D: PREVIOUS TB/MBC MINUTE (MARCH 1, 2017)

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

   b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   c) If a non-fiscal mechanism cannot be established:
      1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
      2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

   a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service

territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX E: PREVIOUS TB/MBC MINUTE (MAY 9, 2017)

Receive a report back providing an update on current implementation status, including proposed legislation, of the Ontario Fair Hydro Plan, previously at TB/MBC March 1, 2017 and announced on March 2, 2017.

In this regard, the Board:

v) Note that the proposed Fair Hydro Act, 2017, includes:

Electricity Social Programs:

d) Establishment of a First Nation Delivery Credit for On-Reserve Consumers, funded from voted appropriations.
e) Establishment of new distribution rate protection program to eligible residential customers served by LDCs with the highest distribution costs, funded from voted appropriations.
f) Shift from costs recovered from ratepayers to funding out of voted appropriations for Ontario Electricity Support Programs.
g) Delayed proclamation for OESP once proposed amendments are passed until the IESO variance account for the program is close to wound down.

Global Adjustment Refinancing:

e) Establishes the fair allocation adjustment that gives the relief to certain specified consumers during the period July 1, 2017 to June 30, 2021 to ensure intergenerational fairness.
f) Requirement for future consumers to pay the clean energy adjustment that backs financings.
g) Sets out that the Financial Services Manager (OPG) prepares the Financing Plan establishing when a funding obligation should be incurred so that the OPG entity can raise money to acquire the Investment Interest.
h) Establishes the LGIC's power to authorize the Ministers of Finance and Energy to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.
i) Sets out how the regulatory asset will be determined and how it can be converted into the investment asset, and the investment asset rights.
j) Sets out that security interests can be granted in investment interests in the investment asset.

vi) Recommend the proposed Fair Hydro Act, 2017 to proceed to Cabinet for approval.

vii) Note a new credit facility is being sought by the IESO from the Ontario Financing Authority to ensure that it has the flexibility to finance clean energy costs if for some reason the OPG Trust, at any time, does not purchase any portion of the deferred Global Adjustment amounts payments. An Order in Council to allow the Ontario Financial Authority to provide an expanded credit facility will be requested.

viii) Direct the Ministry of Energy to work with Treasury Board Secretariat and the Ministry of Finance/Ontario Financing Authority and report back to TB/MBC on the details of proposed regulations prior to going to LRC, and to provide the Board with an update towards completed legal, accounting and financing risk assessments.

In this regard, direct the Ministry to:

a) Include a report related to GA Refinancing on findings from sensitivity analysis completed as assumptions vary, such as under different recovery rates, different interest rates, different

demand, etc., and combinations of key factors, and then to quantify the likelihood of high/medium/low impact scenarios, with assumptions and methodologies clearly specified and documented.

b) Include electricity social programs with details of forecasting models and costing estimates, including assumptions, sensitivities analysis that would allow identification of risks to the fiscal plan for Broadening RRRP, OESP. The Ministry is to include similar information for the Ontario Rebate for Electricity Consumers.

c) To report back with final program details for 2017-18 for GA Refinancing and Electricity Social Programs, including fiscal plan implications and consumer impacts with detailed assumptions and methodologies specified and documented.

d) To report back with updates to risk mitigation strategies that address key financial and operational risks.

ix) Note the following outstanding report back requirements from March 1, 2017 minute:

a) Broadening RRRP – Direct the Ministry to report back to TB/MBC in 2017-18 on the effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the broadened program now government funded
   - Report on and assessment of impacts of consolidation of LDCs
   - Assessment of distribution rates and implications for the program

b) OESP – Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:
   - Identify eligibility criteria, and refinements being made.
   - Current program outcomes identified and results achieved to date, not just amount of funding flowed to consumers.
   - Establishing program performance management framework including targets for the expanded program now government funded.

c) Affordability Fund – Direct the Ministry to report back through quarterly reporting process with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

d) On-Reserve First Nations Delivery Charge – Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

e) Industrial Conservation Initiative – Direct the Ministry to report back through quarterly reporting process with results achieved versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

x) Approve the Ministry to fund a media buy plan with a maximum value of $3,500,000 with PHD Canada, the Advertising Review Board's mandatory-use media planning and buying Agency of Record. In this regard,

a) Note the Ministry of Energy has already spent approximately $1,000,000 with PHD Media in 2016-17 and is forecasting expense of approximately $2,500,000 in 2017-18.

b) Note the Ministry of Energy will return to request a transfer of funds of up to $2,500,000 in 2017-18 to the Ministry of Energy from the Bulk Media Buy program in Treasury Board Secretariat to recover costs for the public education campaign.

APPENDIX F: DETAILS OF PROPOSED REGULATIONS

Partial Refinancing of the GA

The Ministry is proposing new regulations that would support the implementation of refinancing the GA including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the *Ontario Fair Hydro Act, 2017*.

The ministry is also proposing amendments to an existing regulation to authorize Independent Electricity System Operators to borrow for the purposes of funding the regulatory asset, including borrowing from the Ontario Financing Authority.

Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The *Fair Hydro Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, making the escalating factor unnecessary.

The ministry is proposing a new regulation to create a government funded DRP program. The regulation establishes a mechanism for the Ontario Energy Board (OEB) to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up by provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

The *Ontario Fair Hydro Plan Act, 2017* amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program.

The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate.

The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. It is estimated that as many as ~7000 eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program as they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under *Ontario Rebate For Electricity Consumers Act, 2016*, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.
If the required regulations are approved, the program would be in effect July 1, 2017.

Ontario Electricity Support Program

Additional regulatory amendments will be forthcoming in late June 2017.

Bill Presentment

The ministry is proposing to create new regulations under the *Ontario Fair Hydro Plan Act, 2017* that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments message. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017. The requirement for Hydro One to provide an on-bill message related to RRRP (which has become out-of-date with these program updates) is also repealed with proposed amendments. For clarity, Hydro One would not be exempt from including the messaging related to OFHP.

In anticipation of these new OFHP invoicing requirements, the ministry has made an amendment to revoke the “8% provincial rebate” messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an “8% Provincial Rebate” line item remains.

APPENDIX G: UPDATE ON RISKS AND MITIGATION STRATEGIES

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
1) Global Adjustment (GA) Refinancing			
Maintaining OPG's Financial Viability / Capital Structure	L	H	• OPG requires equity injections on an on-going basis from the Province (i.e., Ministry of Energy). • Equity injections are necessary to support OPG as the owner and manager of GA refinancing. The equity injections allow OPG to strengthen the capital structure of the Trust in order to secure financing at a reasonable cost. • In order to provide financing, OPG would develop a special purpose vehicle (SPV). • OPG has a great deal of experience managing the risks associated with borrowing through its experience developing capital-intensive generation projects as well as their management of Nuclear Funds. • OPG will seek to achieve the highest possible credit rating (i.e., AAA is possible) in order to reduce borrowing costs and attract a wide investor base. **Update:** • In April 2017, the Ministry of Energy received approval for the creation of an operating asset "OPG Share Purchase" and an increase in operating asset allocation for $1.1 billion. • This approval was dependent on the passing of the legislation (i.e., the *OFHPA* that received Royal assent on June 1, 2017). • Work is ongoing to finalize a draft term sheet that would serve as the basis for the Master Subscription Agreement between OPG/ENERGY and OFA. In addition, OFA and ENE to develop Service Level Agreement for monthly cash management services.
OPG Securing Capital Markets Funding	L	H	• OPG will need to obtain a portion of the required funding from the capital markets. • The Ministry, IESO, OPG and other ministries have worked closely with third-

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			party financial advisors in advance of and throughout the drafting process to help to ensure that the legislation enables refinancing of the GA. • In order to provide financing, OPG would develop a special purpose vehicle (SPV) which will use 100% debt financing to purchase the regulatory asset, financing 51% through capital markets as senior debt, with the remaining 49% being provided by OPG as subordinated debt. • The 49% subordinated debt from OPG will be financed through debt OPG issues in its own capacity, through capital markets (up to 5%) with the remainder (44-49%) financed through equity injections from the Province. This will help to ensure OPG's capital structure remains in line. **Update:** • The legislation was developed with input from third-party financiers (i.e., dealers) to ensure that the *OFHPA* enables the refinancing of the Global Adjustment (GA). • OPG is continuing to work through the mechanics of securing financing (e.g., engaging rate agencies, etc). • In addition, in order to provide assurances to those with claims against the "Financing Entity" (e.g., holders of debt) and support credit ratings, the Province is providing both a Service Guarantee and a Performance Guarantee to ensure that the obligations of IESO are carried out including obligations related to collecting and remitting clean energy adjustments. Working is ongoing.
Managing Interest Cost Risks	M	H	• OPG's Special Purpose Vehicle (SPV) / Trust is borrowing in its own corporate capacity from the capital markets. • Risk that it may incur a higher interest cost than what was originally forecast (i.e., 5%). **Update:** • The legislation was developed with input of third-party financiers (i.e., dealers) to

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			ensure that the OFHPA enables the refinancing of the GA • The provincial guarantee as set out in legislation should provide comfort to dealers, thereby increasing the likelihood of achieving more favourable interest rates. • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July.
Provincial Guarantee is Triggered	L	H	• The legislation sets out that the province could provide assurances in the form of a "provincial guarantee" to OPG and investors regarding the permanence of the GA Refinancing framework. The intent is to ensure that the full value is recovered. • The legislation also enables the Province to: o Through the Ministers of Energy and Finance upon approval by Lieutenant Governor in Council, agree to guarantee any debts and obligations; and **Update:** • Work is ongoing to finalize the scope of the provincial guarantees. Note: The guarantees are required to support rating agency review which is expected by the end of July. There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
Indemnities provided to OPG are triggered/called	L	H	• Ministry of Energy staff are putting together a s.28 (under the Financial Administration Act) approvals package for submission to the Minister of Finance for the Minister of Energy, on behalf of the Crown, to enter into Indemnity Agreements in favour of OPG, including its subsidiaries, and the IESO with respect to their respective roles in carrying out the implementation of the Ontario Fair Hydro Plan.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			o The indemnities are expected to provide coverage for both organizations and their respective Board members, officers and employees involved in implementing the plan. o As currently proposed, the Minister will be requested to consider and sign the section 28 approval forms and the transmittal letter to Minister Thibeault. **Update:** • Work is ongoing to finalize the s.28 (under the Financial Administration Act) approval for indemnities. Note: There could be potential interactions between the provincial guarantees and the indemnities sought by OPG and the IESO, discussed below. A due diligence is currently ongoing by MOF Legal, OFA and Energy staff. A final draft indemnities package is pending.
IESO Failure to Establish a Regulatory Asset / Maintaining IESO Financial Viability	L	H	• Under the legislation, the Ontario Energy Board (OEB) is providing the necessary oversight required to enable IESO the ability to establish a Regulatory Asset. • To recover its revenue shortfall, IESO will establish as a Regulatory Asset that it would sell to OPG's SPV / Trust. • The OEB will issue an accounting order to authorize IESO to create a variance account in which it will record the funding shortfall and recover the shortfall in accordance with the legislation and regulations. • IESO requires short-term financing to be in place for initial and expected monthly timing differences, or in the event that the OPG SPV, at any time, does not purchase a portion of the regulatory asset. **Update:** • IESO has received an accounting opinion from KPMG that concurs with IESO's view that it has the ability to establish the regulatory asset.

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• In addition, OFA is planning to increase IESO's credit facility to support its role in implementing the OFHPA. OFA is proposing an OIC that would authorize the OFA to borrow an additional $2.0 billion, which would be in addition to existing authority for the Minister of Finance to provide loans to the OFA, to ensure that there is sufficient borrowing authority in place for the OFA to meet the IESO requested requirements.
GA Refinancing Approach is Viewed as an Indirect-tax	L	H	• The legislation to enable GA refinancing the costs associated with electricity generation facilities will be allocated across present and future electricity consumers will be set out in the Fair Allocation Amount. • In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a "low" risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. • Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the "short" term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. • The legislation attempts to mitigate the risks identified above by requiring that the costs moved into the future align with the benefits that future rate payers will receive. To create the flexibility to achieve this requirement, the amounts of the costs and benefits will not be enshrined in the legislation. **Update:**

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			• The legislation was designed to limit this risk. • The Fair Allocation Amount will help to ensure that the allocation of costs associated with electricity generation facilities is reflected over the term of GA Refinancing.
2) Social Programs			
Social Program Implementation Delays	L	M	• Work with LDCs; provide transitional provisions. • Work with Chiefs of Ontario (COO) to develop a plan to identify eligible on-reserve customers. • The bill includes transitional provisions that would ensure customers remain eligible for the rate protection and First Nations Delivery Credit from the prescribed date. **Update:** • The Ministry convened multiple working groups on the social programs, attended by all impacted LDCs. No LDC has raised issue with providing the programs by July 1st. • The Ministry continues to work with COO and affected LDCs to reach out to unidentified First Nations Delivery Credit eligible customers. This includes development of a communications postcard in the near term, to be followed by more targeted outreach.
Social Program Cost Estimating	M	M	• Distribution Rate Protection costs are driven by a number of variable factors including: the OEB's rate setting process; the lowest cost distributor in the prescribed cohort of "high cost distributors" and consumption patterns. • Work with Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO) to ensure access to data for regular forecasting. • A mechanism would be created in regulation to ensure that all parties are aligned in the yearly forecasting and

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy/Update
			costing of the program. **Update:** • Hydro One's cost-of-service application for 2018-2022 distribution rates is currently before the OEB. This application will affect the out year cost projections for Distribution Rate Protection. The Ministry is monitoring this application and will report back as the OEB review continues. • Social program regulations include provisions to require the IESO and the OEB to provide the Ministry with information required to update cost projections based on up-to-date figures.
Non-Status Indigenous communities without reserves or Metis could raise a Charter challenge on the First Nations On-Reserve Delivery Credit Program	L	L	• This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal as per section 15(2) of the Charter. **Update:** • This mitigation remains in place. The Ministry has received support letters from the Chiefs of Ontario approving the approach to restrict FNDC to on-reserve.

Hi John,

For our records, and future alignment and analysis, would you ask TBS staff for a copy of Energy's final TB submission.

Thanks,
Ron

---

There is an exception to preferred share 20% rule:

"There are cases where a parent may invest in a subsidiary through deeply subordinated debt for tax or other reasons with the intention that the security mirrors the attributes of equity. DBRS would typically assess a range of factors to establish if the latter has been achieved, such as cross-default trigger covenants, term and ability to defer interest. Regardless of these factors, the parent-subsidiary relationship is key and represents the only reason that DBRS would consider these debt instruments for high equity treatment. In these cases, the 20% cap rule does not apply."

See attached file.

DBRS is a full-service credit rating agency established in 1976. Spanning North America, Europe and Asia, DBRS is respected for its independent, third-party evaluations of corporate and government issues. DBRS's extensive coverage of securitizations and structured finance transactions solidifies our standing as a leading provider of comprehensive, in-depth credit analysis.

All DBRS ratings and research are available in hard-copy format and electronically on Bloomberg and at DBRS.com, our lead delivery tool for organized, web-based, up-to-the-minute information. We remain committed to continuously refining our expertise in the analysis of credit quality and are dedicated to maintaining objective and credible opinions within the global financial marketplace.

Scope and Limitations

This criteria represents the current DBRS approach to preferred shares and hybrid securities (hybrids) for corporate issuers other than financial institutions. The methods described herein may not be applicable in all cases; the considerations outlined in DBRS methodologies are not exhaustive and the relative importance of any specific consideration can vary by issuer. This criteria applies to all non-banking/non-financial corporate sectors across the rating spectrum, investment-grade and non-investment grade issuers. Further, this criteria is meant to provide guidance regarding the DBRS methods used in the areas outlined and should not be interpreted with formulaic inflexibility, but understood in the context of the dynamic environment in which it is intended to be applied.

Overview

"Hybrid" is a term used by DBRS to describe financial instruments that combine both debt and equity characteristics. There is a wide variety of hybrids combining numerous features in the marketplace, with new versions emerging from time to time.

The following criteria outlines the DBRS approach to preferred shares and hybrids for corporate issuers other than financial institutions, with a primary focus on the equity treatment assigned by DBRS to these instruments. For non-banking financial institutions (insurance companies, finance companies, etc.), the main Equity Weightings section is not applicable but, in some cases, the *Rating the Instruments section may still be applicable.* For banking-related issuers, DBRS would instead typically use the criteria entitled *Rating Bank Capital Securities – Subordinated, Hybrid, Preferred and Contingent Capital Securities*. This criteria would not generally have any application to sovereign or public finance issuers since they do not generally issue such instruments. Also, with respect to considerations applied by DBRS to subordinated debt instruments in public-private partnership transactions, while some of the same broad principles discussed below will apply, given the nature of these transactions, DBRS applies a specific set of criteria to these subordinated debt instruments (see Appendix 1 to the *Rating Public-Private Partnerships* methodology).

This criteria is divided into two major sections summarized below:

Equity Weightings

- DBRS assigns to hybrids and preferred shares one of five potential equity weightings (0%, 25%, 50%, 75% or 100%) based on the extent of equity characteristics that are exhibited by each instrument.
- DBRS uses a two-stage determination process: the instrument is first scored based on primary considerations, after which secondary factors are incorporated into the analysis to finalize the equity weighting.
- DBRS generally caps the combined equity treatment assigned to all hybrid and preferred securities of an issuer to 20% of common equity (as adjusted by DBRS); the remainder is treated as debt. One exception in which the 20% rule does not apply is when the security is held by the parent of the issuer, as discussed in more detail in the Cap on Use of Hybrids and Preferred Shares section.
- Equity weightings are used by DBRS to adjust debt and equity levels in several leverage metrics, such as debt-to-EBITDA and cash flow-to-debt. Except for subordinated debt instruments qualifying for 100% equity weighting, however, no relief is provided to coverage ratios linked to interest expenses and preferred share dividends, such as interest and fixed-charge coverage ratios, as a result of equity treatment considerations.

Rating the Instruments

This section discusses the key considerations related to assigning an instrument rating to a given hybrid or preferred share security.

Equity Weightings

The determination of the equity treatment given to hybrid debt or preferred equity instruments is an important step in the assessment of an issuer's creditworthiness because it contributes to a more precise measurement of the financial burden carried by an issuer as those instruments are typically more flexible than traditional debt. When assessing hybrids or preferred shares for equity treatment, DBRS is guided by the following key question: how closely does the instrument replicate the attributes of common equity that are beneficial to the issuer and higher-ranking bondholders and creditors? In DBRS's view, those beneficial attributes include:

1. Subordination – equity provides a buffer or loss-absorption mechanism for all other creditors;
2. Permanence in the capital structure – there is no maturity date and therefore no liquidity or repayment risk posed at maturity; and
3. Servicing flexibility/cash flow relief – There are no ongoing payment obligations that could trigger default or cross default if missed.

The extent to which these aforementioned characteristics are present in a hybrid largely determines which of DBRS's 0%, 25%, 50%, 75% or 100% equity weightings is allocated to the instrument. As explained below, however, other factors can also influence the final determination.

Primary Factors

While the terms of hybrids can vary widely across issuers, certain fundamental characteristics are normally expected to be found in hybrids in order to justify any equity treatment. Such characteristics include:

i. Subordination in right of payment and security to all unsecured debt.

ii. A minimum assumed remaining term to maturity (as explained in the next section) of more than five years unaffected by issuer redemption rights with coupon step-up exceeding a certain threshold or debtholder redemption rights, except for hybrids where conversion to longer-term and/or more junior capital is a key factor.

iii. Ability to defer interest payments with no default for at least five years in order to provide operating flexibility.

The following provides details on the primary factors used by DBRS to assign equity treatment to hybrids.

i. Subordination

Although generally not as low-ranking as common equity, most hybrid instruments are deeply subordinated, typically ranking just above any traditional outstanding preferred shares. To qualify for equity treatment, DBRS generally expects a hybrid to be subordinated in right of payment and security to all other debt classes to provide loss absorption benefiting higher-ranking debt holders and creditors upon bankruptcy. The subordination requirement is the same for all equity weighting categories.

ii. Tenor and Redemption Rights

Term to maturity is an important consideration in the assessment of equity treatment of a hybrid and reflects the potential for equity-like permanence. Early redemption dates, however, particularly when combined with interest rate step-ups or triggers tied to rating agency downgrades or accounting changes, detract from the concept of permanence. Where an early redemption feature exists, DBRS will typically assume this early redemption date (rather than the contractual maturity) to be the maturity date for equity treatment purposes, subject to the discussion below.

Replacement Language

DBRS may consider the assumed remaining term to maturity to be later than a contractual early redemption date,[1] provided that there is written replacement language indicating an issuer's intention to replace notes that are redeemed at an early redemption date, with new notes having features that provide comparable rating agency equity treatment. Such replacement language need not be a contractual covenant; DBRS will accept written language in the offering documentation, provided that the language is sufficiently clear, transparent and has minimal exceptions. DBRS may also take into account qualitative considerations in the context of the issuer's past and expected future capital structure plans when gauging the issuer's intent to maintain the permanence of the hybrids in the capital structure.

Provided that there is proper written replacement language, DBRS may still extend the assumed maturity date beyond the contractual early redemption date even if there is no make-whole premium and even if the early redemption is triggered by changes in income tax treatment or weaker equity treatment resulting from a change to, or interpretation of, a rating agency's hybrid methodology or criteria. The contractual language describing income tax or rating agency triggers, however, must be narrowly defined. Early redemption triggers that have a broad scope, include a rating downgrade or entail a change in accounting rules seriously detract from permanence and may cause DBRS to assume that the maturity date will be the contractual early redemption date. In addition, where such triggers are present, DBRS may cap any equity treatment to 0% or, at most, 25%.

Step-Up in Coupon Rate

Even in the presence of replacement language, if there is a cumulative step-up in the hybrid note coupon of more than 1%, DBRS will assume the date of the 1% cumulative step-up to be the maturity date of the notes. For example, a hybrid (with suitable replacement language) that has a 60-year term, subject to an early redemption and step-up first exercisable in year ten but for which the step-up only reaches 1% in year 20, would be assumed to have a 20-year term for equity-treatment purposes.

Minimum Remaining Term to Maturity

Per the table below, for an equity weighting of 25%, DBRS requires an assumed remaining term to maturity of more than five years. Longer perceived permanence is expected for higher equity weightings, namely more than ten, 50 and 100 years for the 50%, 75% and 100% equity weightings, respectively.

iii. Interest Deferral

Interest deferability can provide significant shock absorption capability to an issuer's financial flexibility. The most favourable type of deferability is when accrued interest is non-cumulative and is cancelled when the issuer is unable to pay. In DBRS's view, this type of deferability is the closest to preferred equity and is required for equity weightings of 75% or 100%. To achieve 100% equity treatment, however, the deferral feature must be mandatory as opposed to optional and must be based on a meaningful test (e.g., cash flow-to-debt or debt service coverage) that forces deferability before the issuer's financial position gets unduly eroded. The second type of deferability occurs when interest is cumulative but payable with preferred or common equity. This form of deferability attracts the same equity treatment by DBRS as non-cumulative deferability as it also relieves the issuer of the liquidity pressure resulting from debt servicing obligations. The third and least favourable type of deferability occurs when interest is cumulative but payable with cash at the end of the grace period. While this feature provides relief, it is limited to the length of the grace period. As such, for hybrid notes with deferrable interest payable with cash, minimum grace periods of five years for 25% equity treatment and ten years for 50% equity treatment are required. A grace period shorter than five years results in a 0% equity weighting. To achieve equity treatment for the ability to defer interest, DBRS would expect restrictions in place that prevent dividend and/or interest payments to more junior instruments and the repurchase of common shares until the deferral period ends and all deferred payments are made.

The table below summarizes the primary characteristics used by DBRS to assign equity treatment to hybrids; however, the equity weighting can also be influenced by a wide range of secondary factors, some of which are described in the next section. While a negative consideration may sometimes be offset by a positive one, the absence of a primary characteristic is generally difficult to offset with any other consideration.

1. Acceptable replacement language can extend the maturity date beyond an early redemption date for all but the 100% equity weighting category. Acceptable replacement language is only of benefit up to the 75% equity weighting category; DBRS will not assign a 100% equity weighting benefit to any note with an early redemption feature.

Hybrid Features	25%	50%	75%	100%
Subordination	Required – to ALL debt types	Required - to ALL debt types	Required - to ALL debt types	Required – to ALL debt types
Assumed Remaining Term to Maturity (as determined by DBRS)	> Five years	> Ten years	> 50 years	> 100 years
Interest Deferral	Optional; Cumulative for up to five years; Payable with cash	Optional; Cumulative for up to ten years; Payable with cash	Optional; Non-cumulative or cumulative and payable with equity	Mandatory; Non-cumulative or cumulative and payable with equity
Redemption Rights without Make-Whole and Replacement Language	Acceptable	Acceptable	Acceptable	**Not acceptable while senior debt is outstanding**
Tax- and Rating Agency Event-Based Redemption Rights with no Make-Whole	Acceptable	Acceptable	**Not Acceptable**	**Not Acceptable**

Additional Factors

In addition to the primary factors described above, other considerations have the potential to influence DBRS' assessment of hybrid notes. The list below is not meant to be exhaustive, but outlines factors generally subject to enhanced scrutiny by DBRS. If deemed material, these additional factors are incorporated into the analysis to establish the final equity weighting. These factors are typically secondary in importance, but can be important considerations in selective cases.

Covenants and Events of Default: Events of default and covenants should be relatively benign and very limited in scope. Broad-reaching or unduly stringent debt terms may introduce vulnerability into the capital structure and can reduce the equity weighting of the hybrid notes.

Cross-Default: DBRS expects there to be no events of default that could automatically trigger a cross-default or cross-acceleration to higher-ranking debt noting, however, that the failure to pay amounts after application of all permitted deferral periods may trigger a wider default to higher-ranking debt, in which case lower equity treatment would likely result.

Standstill on Remedies: Standstill provisions prohibit holders of certain types of subordinated debt from taking any action upon an event of default to enforce their rights and remedies or to accelerate payment as long as senior debt is outstanding. This feature can provide resilience to an issuer and isolate senior bondholders from financial stress affecting lower-ranking debt instruments. Hybrids rarely carry a standstill provision as it significantly dampens the marketability of the notes, but DBRS requires it to achieve 100% equity treatment.

Voting Rights: By virtue of voting rights or required consent, subordinated debtholders should typically not be in a position to influence the issuer's decisions or its capital structure to the detriment of higher-ranking debtholders.

Lookback Provisions/Dividend Pushers: There can be provisions that may delay the issuer's ability to defer payments on a hybrid note because of the timing of common dividends or other capital instruments that rank in parity with the hybrid notes and, in some cases, the latter can also apply with declaration of such payments. DBRS would typically view these provisions as negative considerations in determining the equity weighting that would otherwise be possible. The degree of impact would depend on factors such as the length of time that deferral could be affected and the number of other securities to which the provision relates.

Payment in Kind (PIK) and Conversion Features: There are various types of securities with PIK or conversion features. From an equity treatment perspective, the most favourable structures involve mandatory payments with common equity or mandatory conversion to common equity at a future date. The sooner the conversion to common equity occurs, the more predictable it is and the more equity credit can be given to the hybrid; however, securities where conversion to equity depends on the ability of a trustee to sell common shares in the open market can be problematic in weak markets or when major company issues exist. As such, DBRS gives no equity consideration when this feature is present since the potential for the trustee to sell in an open market cannot be relied on. Securities where the conversion is at the option of the debtholder may attract partial equity treatment when the conversion price is deep in the money and the conversion is both possible and likely in the near term; however, a high level of equity treatment is normally precluded by the volatile nature of the stock market, which can quickly change an in-the-money position to one that is out of the money.

Preferred Shares

Preferred shares are normally less complicated than hybrids and, next to common equity, typically hold the ranking as the most junior security. Preferred shares are by, definition, equity and typically command a very high level of equity weighting. Preferred shares generally attract a 100% equity weighting, provided that DBRS is satisfied that the issuer has no intention to eventually replace the preferred shares with debt. This acknowledges the key features of the instrument such as permanence, the generally light terms (i.e., non-cumulative, contains no events of default or covenants) and the ability to defer dividends despite typical reluctance among issuers to suspend them. While issuers generally maintain the ability to redeem preferred shares with debt at any time after an initial non-call period, this element of uncertainty is more than offset by the broad above-mentioned benefits contributed by the instrument. Moreover, common stocks can also be bought back at any time. A reversal in the issuer's intention to preserve its preferred equity base would be treated by DBRS as an event, with potential implications for the rating(s) and any equity weightings assigned to the issuer's financial instruments. All preferred share dividend payments (not just those in excess of the 20% cap explained in the next section) are considered in coverage metrics as the fixed-charge coverage ratio and in the analysis of free cash flow.

It is not an event of default for preferred share dividends to be undeclared; however, failing to declare a preferred share dividend does not typically occur until a company is under severe stress. The same holds true for common dividends. As noted above, DBRS assesses both in the context of free cash flow. Preferred share dividends are seldom the leading factor for cash flow issues, which are more commonly the result of items such as reduced business prospects, high debt levels, common dividends and capital expenditure requirements.

Cap on Use of Hybrids and Preferred Shares

Even when all of these factors are satisfied, DBRS may still assign little or no equity treatment to a hybrid if an issuer uses such securities excessively. Accordingly, irrespective of the equity weighing assigned to a specific instrument, DBRS will treat as debt all incremental preferred shares and hybrids that lead the ratio of preferred equity and hybrids to common equity to exceed 20%. The amount of common equity will typically be the unadjusted figure reported by the issuer on its audited balance sheet, noting that DBRS retains flexibility to make certain adjustments to the numbers as deemed appropriate, such as for the accounting treatment of certain items (e.g., inclusion of non-cash marked-to-market derivative gains (losses) in retained earnings and in accumulated other comprehensive income).

There are cases where a parent may invest in a subsidiary through deeply subordinated debt for tax or other reasons with the intention that the security mirrors the attributes of equity. DBRS would typically assess a range of factors to establish if the latter has been achieved, such as cross-default trigger covenants, term and ability to defer interest. Regardless of these factors, the parent-subsidiary relationship is key and represents the only reason that DBRS would consider these debt instruments for high equity treatment. In these cases, the 20% cap rule does not apply.

Ratio Analysis

Where the amount of hybrids and preferred shares is material, DBRS will make adjustments to some of its key leverage ratios such as debt-to-EBITDA and cash flow-to-debt to reflect some of the flexibility contributed by these instruments. Except for deeply subordinated debt instruments qualifying for 100% equity treatment, DBRS does not make any adjustments to interest expenses and preferred share dividends for the purpose of calculating coverage ratios. Until an entity exercises its discretion to defer or adjust its payments per the terms of the instrument, DBRS expects payments to be made. As a result, related coverage ratios should include such payments.

Rating the Instruments

Relationship between the Instrument Rating and its Equity Weighting

Excluding normal notching considerations related to the ranking of securities, there is no direct correlation between the rating of a hybrid instrument and the level of equity weighting that it is assigned. This is because DBRS views the embedded covenants and other terms carried by hybrids as not materially affecting credit risk and, as such, does not penalize the rating of the instrument.

Nomenclature

As with the choice of rating scale, the name of the instrument is not to be viewed as a determining factor in DBRS's decision regarding equity value. Hybrids may be referred to as debt equivalents for tax, accounting or regulatory reasons, but this label does not preclude the fact that they may have significant equity value.

Choice of Rating Scale – Canadian-Only Issue

DBRS uses a separate rating scale for preferred shares issued in the Canadian securities market (Pfd-1 to Pfd-5) while debt hybrid instruments are rated using the global DBRS Long-Term Obligations Ratings Scale (AAA to C). Typically, there is a standard ranking relationship between debt and preferred share ratings whereby an entity with an "A" issuer rating will usually have its preferred shares rated as Pfd-2 and an entity with a BBB issuer rating will have a preferred shares rating of Pfd-3, and so on.

In those rare cases in which it is not automatically clear which scale should be used in rating a security, DBRS will look to elements such as the legal status of the instrument, whether payments are dividends or interest, the tax treatment of payments, the relative ranking of the issue in relation to other debt and outstanding preferred share issues and other relevant factors. It is thus possible that instruments with very similar underlying attributes could be rated on different scales. In these types of cases, DBRS believes that the choice of rating scale is independent of the decision on equity weighting and that securities with similar underlying attributes should receive similar equity weighting.

The sections that follow discuss situations in which ratings may deviate from the standard rating mapping.

Lower-than-Standard Mapping to Debt Ratings

When preferred shares become a proportionately large segment of the capital structure, the preferred share dividends will absorb a higher proportion of cash and earnings. DBRS may, in some situations, consider it appropriate to rate the preferred share rating one notch lower than suggested in the standard mapping; however, a very high level of preferred equity (and related dividend payments) could also be an issue for the issuer rating, which would in turn have an impact on all debt and preferred share ratings of the issuer. Because any preferred equity in excess of 20% of common equity (as adjusted) is already treated as debt, an additional notch reduction would only be considered necessary in unique circumstances where the ratio of preferred shares to common equity is at a high enough level that an issuer who is under pressure may have an additional incentive to pass on preferred dividends simply because of the relative size of the cash savings. DBRS approaches these situations on a case-by-case basis and would typically not consider such action unless the ratio of preferred to common equity is at least in the 40% to 50% range (based on preferred shares outstanding, not the amount that is given equity weighting) and the fixed-charge coverage ratio is considered weak. Credits with issuer ratings in non-investment grade territory are also more likely to encounter wider-than-typical notching differences.

Higher-than-Standard Mapping to Debt Ratings

In a case where an issuer has no or very minimal debt outstanding and no plans to issue in the future (including subordinated debt and intermediate hybrid instruments), the preferred shares may warrant a rating that is one notch higher than is typical as there are no debt obligations senior to it. The issuer would ideally document such intention in a covenant although, absent such covenants, DBRS may also consider management comments, past actions and whether the situation at hand supports making an exception; however, most issuers have non-debt unsecured obligations ranking higher than preferred equity, such as accounts payable and off-balance sheet liabilities, which are also factored into the analysis. This situation is rare and should not be considered the norm.

Subject:	Privileged and Confidential - Fair Hydro Plan - PILs Exemptions
Date:	Wednesday, May 31, 2017 1:10:33 PM
Attachments:	Memo re_ PILs Exemption.DOCX

Hi Sriram, Ron,

Further to our conversations from earlier this spring, we received the following from OPG on its request for PILs exemptions relating to Ontario's Fair Hydro Plan. Please let me know if you have questions or comments. Torys and OPG have also asked whether we would like to set up a call in the next few days to discuss.

Thanks,
Scott

TORYS LLP

MEMORANDUM

PRIVILEGED AND CONFIDENTIAL

To	Ontario Power Generation Inc.	**Date**	May 17, 2017
From	Torys LLP, Toronto Tax		
Re	Fair Hydro Plan – PILs Exemption		

As part of the Fair Hydro Plan (the "Plan"), it is expected that Ontario Power Generation Inc. will act as the financial services manager and that Ontario Power Generation Inc., or a wholly-owned corporate subsidiary of Ontario Power Generation Inc. (in either case, "OPG"), will establish one or more new financing entities that will raise debt to acquire "investment assets" from the IESO. A Bill to implement the Plan has been introduced to the Provincial Legislature [1] and there is flexibility under the Bill for the new financing entity to be a corporation, a trust, a limited partnership or a partnership.

We understand that the Province would like to minimize, to the extent possible, Federal and Provincial taxes and "payments in lieu of taxes" ("PILs") under the *Electricity Act, 1998* (Ontario) (the "OEA") payable by a financing entity as the costs of any of those taxes payable by a financing entity will be passed on to ratepayers through the collection of the clean energy adjustment under the Bill and the associated regulations. Accordingly, we understand that the Province is considering the possibility of making regulation changes to exempt the income arising as a consequence of the Plan from PILs. In order to assist the Province in their consideration of this regulation change, including the scope of any such amendment, we have set out below a summary of: (i) the tax treatment of the income of the financing entity under the *Income Tax Act* (Canada) (the "ITA"), the *Taxation Act, 2007* (Ontario) (the "OTA"), and the OEA, (ii) certain matters relating to the computation of the financing entity's income for tax purposes, and (iii) our recommendations with respect to how the Province can ensure that PILs arising from the Plan are minimized.

It is also important to note that Ontario Power Generation Inc. will not bear any of the tax costs arising as a consequence of participating in the Plan. If there are any tax costs, they will be borne by ratepayers through the clean energy adjustment.

---

[1] Bill 132, *An Act to enact the Ontario Fair Hydro Plan Act, 2017 and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998*, 2nd Sess, 41st Leg, Ontario, 2017 (first reading May 11, 2017).

Tax Treatment of Income of Financing Entity

As noted above, there is flexibility in the draft legislation to implement the Plan relating to the form of a financing entity. What follows is a summary of the tax treatment of the income of the financing entity if it is a corporation, a trust or a limited partnership/partnership, as well as the tax treatment of amounts paid or allocated to OPG as a shareholder, beneficiary or a partner, respectively, of the financing entity:

Form of Financing Entity / OPG	Treatment of Income under ITA/OTA	Income Subject to PILs
Corporation	-Income of the corporation should be exempt from tax	Yes
OPG as shareholder of corporation[2]	-Dividends paid to OPG should be exempt from tax	Yes
Trust	-Income should be subject to tax, although the trust can reduce its income by the amount of its income which is paid or made payable to its beneficiaries	No
OPG as beneficiary of trust	-Trust income paid or made payable to OPG as a beneficiary should be exempt from tax	Yes
Limited Partnership/Partnership	-Limited Partnership/Partnership is not generally a "taxpayer" although income is computed at the partnership level and allocated to partners for tax purposes	No
OPG as partner of limited partnership/partnership	-Partnership income allocated to OPG as a partner should be exempt from tax	Yes

As summarized, if the financing entity is a corporation, the income of this corporation would be subject to PILs, and further, any amounts paid or allocated by the financing entity to OPG, as a shareholder, beneficiary or limited partner/partner of the financing entity, would similarly be subject to PILs. Consequently, any regulation change to exempt the income of the financing entity from PILs under the OEA should be broad enough to accommodate the three possible forms of financing entity and address PILs at both the financing entity level (in the case of a corporation) and the shareholder, beneficiary and limited partner/partner level.

[2] We note that corporations are generally entitled to claim a deduction under section 112 of the ITA (and any OTA equivalent) equal to the amount of taxable dividends received from another Canadian corporation, with the result that taxable dividends are generally not subject to tax under Part I of the ITA (and any OTA equivalent). To illustrate the scope of the PILs exemption under consideration by the Province, we have ignored this deduction in preparing this chart.

Income Computation Matters

As part of the Plan, it is expected that the financing entity will raise debt and acquire "investment assets" from the IESO. The investment assets do not appear to be debt instruments from a commercial perspective on the date they are acquired, but rather seem to be intangible assets. Given the unique nature of the investment assets, the tax analysis that is generally relied on by a financing entity in a typical securitization transaction (which involves interest-bearing debt obligations) is not applicable. There are no specific rules in the ITA or OTA which govern the manner which the investments assets should be treated for tax purposes, such that further analysis will need to be conducted in order to determine whether the investment assets are on income or capital account to the financing entity, and that the "cost" of the investment assets are appropriately recognized as a deduction or offset in computing the income of the financing entity.

In addition to the tax implications relating to the investments assets, the following additional matters, among others, are relevant in computing the income of the financing entity:

- In order to be deductible, an expense must satisfy the requisite income earning purpose test;

- Expenses which are owing to a non-arm's length person must be paid in a timely fashion so that the expense does not give rise to an income inclusion;

- Capital losses may generally only be offset against capital gains, such that consideration must be given to the character of the assets and liabilities of the financing entity to ensure there are no mismatches;

- If the financing entity incurs foreign-currency denominated debt, any related foreign currency hedging instrument will need to be sufficiently "linked" to the underlying debt to ensure capital treatment of the hedge; for example, if the period of the hedge does l not match the period of the related debt, the financing entity will realize gains or losses on the hedge that will not be offset with realized losses or gains on the debt; and

- If the financing entity is a trust, it will be necessary for interests in the trust to "vest indefeasibly" or be structured as units where at least 95% of the units, by fair market value, are redeemable on demand by the holder to ensure that the trust is not deemed to dispose of any capital property under the "21 year" rule.

Recommendations

In order to ensure that the taxes arising under the Plan are minimized so that the overall cost of the Plan (over its 30 or more years of existence) to ratepayers is minimized and to ensure that Ontario Power Generation Inc. is kept whole from tax costs arising as a consequence of participating in the Plan, the following exemptions from PILs are required:

1) If the financing entity is a trust: Any income paid or made payable to OPG by the trust should be exempt from PILs. If this PILs exemption is not promulgated, the income will

not be distributed out of the trust, tax will be payable by the trust on the income and the costs of that tax payable will be passed on to ratepayers through the clean energy adjustment. This will be a significant cost.

2) If the financing entity is a corporation: The corporate financing entity should be exempt from PILs and any dividends paid to OPG should be exempt from PILs. Again, if these PILs exemptions are not promulgated, no dividends will be paid to OPG and the costs of all PILs paid by the financing entity will be passed on to ratepayers through the clean energy adjustment. This will be a significant cost.

3) If the financing entity is a partnership or limited partnership, any income allocated to OPG should be exempt from PILs.

4) If the financing entity is any other form of special purpose vehicle, the income of such entity should be exempt from PILs and any income from such special purpose vehicle allocated, paid or taxable in the hands of OPG should be exempt from PILs.

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy
Fair Hydro Plan Regulations

Cabinet (info) Feb 15, 2017	TB/MBC and Cabinet March 1, 2017	Announcement March 2, 2017	TB/MBC May 9, 2017	Cabinet May 10, 2017	Introduction May 11, 2017
Royal Assent June 1, 2017	TB/MBC June 13, 2017	Cabinet June 14, 2017	Program Effective Date July 1, 2017		

Summary of Proposal

The proposed regulations are consistent with Cabinet direction. [TBC]

Context for Decision:

On March 2, 2017, the government announced Ontario's Fair Hydro Plan (OFHP), which would lower bills by 25% for a typical residential consumer, starting in the summer of 2017. OFHP includes some benefits for all consumer classes as well as targeted benefits to those identified as having the greatest need, and includes the following major components:

- Refinancing a portion of the Global Adjustment (GA);
- Helping vulnerable electricity consumers ("social programs");
- Expanding the Industrial Conservation Initiative (ICI);
- Improving sector efficiency; and
- Modernizing Ontario's electricity market.

The *Fair Hydro Act, 2017,* was introduced on May 11, 2017, passed on May 31, 2017 and received Royal Assent June 1, 2017.

Proposal

This proposal is the next step in the implementation of the OFHP and would establish most of the necessary regulations under the *Ontario Energy Board Act, 1998* (OEBA), *Ontario Rebate for Electricity Consumers Act, 2016,* (ORECA) and the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) related to:

1. Partial Refinancing of the Global Adjustment (GA):

The ministry is proposing a new regulation under Part II of the OFHPA that would support the required calculations related to the refinancing of GA. More specifically, the proposed regulation would implement the reduction in rates for the typical residential consumer effective July 1, 2017.

2. Social Programs and Bill Presentment:

The ministry is proposing three new regulations under the OFHPA and the OEBA and amendments to existing regulations under the OEBA and ORECA to support implementation and clarify program details of the social programs, as well as support transparency and communication of the changes made under the OFHP.

To fully implement the required regulations for the OFHP, the ministry will be seeking approvals of three additional regulations in late June 2017.

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. Since the OFHP was announced there has been increased media attention and public pressure for the government to take the necessary steps to enact the commitments made in the plan. The *Fair Hydro Act, 2017,* identifies a July 1 implementation date for the various price mitigation initiatives contained within. Pending approval of the regulations, the OEB will recalculate rates to be implemented for July 1, 2017.

~~In addition~~Effective May 1, 2017, the OEB ~~has announced that~~reduced electricity prices ~~dropping~~ for eligible households and small businesses ~~effective May 1, 2017~~. ~~Upon the approval of the OFHP~~At the time, the OEB also announced, upon passage of the Act, that it would further adjust Regulated Price Plan (RPP) prices as needed so that RPP customers receive the full rate relief as legislated.

What is the expected cost to government?

The estimate for the combined impact of the social programs in this proposal is expected to be $359M in 2017-18, growing in 2018-19 once annualized. The ministry will return to TB/MBC with updated out-year figures following program implementation. This investment has been factored into the fiscal plan in the 2017 Ontario Budget. These estimates are based on variable inputs such as program uptake, future energy consumption of various consumer groups and future distribution rates, and are therefore subject to change.

TABLE 1: Fiscal Impact ($M) of Social Programs	2017-18 Budget
Rural or Remote Rate Protection / Distribution Rate Protection	344
On-Reserve First Nations Delivery Credit	15

Note: As approved in the TB/MBC submission of Mach 1, 2017, and confirmed in Vote-Item 2905-1, the financial impacts of the social programs for the period July 1 2017- March 31, 2018.

What are the key steps to deliver this proposal?

- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of OFHP.
- July 1, 2017- the remaining reductions and initiatives associated with the OFHP would take effect. Programs that are not established on this day for technical implementation issues will allow benefits to be retroactively applied to customers once programs are reflected in bills by individual LDCs.

How will the changes be communicated?

The proposed changes will be communicated via a news release or backgrounder in late June.

Cabinet Office Analysis

The proposed new regulations under the *Ontario Fair Hydro Plan Act, 2017* (OFHPA) and the regulatory amendments under the *Ontario Energy Board Act, 1998* (OEBA) allow for the implementation of the key elements of Ontario's Fair Hydro Plan (OFHP) announced on March 2, 2017 and are consistent with Cabinet direction [TBC].

1. Partial Refinancing of the Global Adjustment:

The ministry is proposing a new regulation under Part II of the OFHPA that would support the implementation of the refinancing of GA, including:

- defining the typical consumer upon which the OFHPA calculations to achieve the 25% reduction will be based;
- the methodology required for OEB to apply rate reductions under the OFHPA for regulated rate consumers;
- the methodology required for OEB to determine adjustments to be made in respect of specified consumers as defined in the OFHPA who are not regulated rate consumers;
- the methodology for setting electricity rates and adjustments to GA costs for the year beginning April 30, 2018 to limit increases to inflation; and
- the flow-through of rates and adjustments in circumstances involving unit sub-metering.

The new regulation is required for the Ontario Energy Board (OEB) to recalculate electricity rates in advance of the July 1 implementation deadline outlined in the OFHPA. If approved, the OEB is targeting June 22 to announce changes to rates for the July 1 effective date.

Critics of the OFHP may see the implementation of this component of the plan as compromising the independence of the OEB. This is mitigated by the fact that the government has always, through legislation and regulation, established the parameters

within which the OEB operates, and has no control over the day to day operations of the Board.

2. Social Programs

Rural and Remote Rate Protection (RRRP) and Distribution Rate Protection (DRP)

Rural or Remote Rate Protection (RRRP) helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

The Fair Hydro Act, 2017 amended the *Ontario Energy Board Act, 1998* to enable the funding of existing RRRP for prescribed customers to be provided for through provincial revenues, rather than from electricity customers. The proposed amendments to O. Reg. 442/01 moves a portion of RRRP costs used to support Hydro One R2 customers from electricity rates to be government funded. This is the majority of the cost associated with RRRP.

Currently, under O. Reg. 442/01, the amount of RRRP available to Hydro One's R2 customers is capped at a fixed annual amount of $241.6 million – which amounts to a monthly subsidy of $60.50 for R2 customers. Proposed amendments will replace the existing prescribed annual amount with a fixed monthly credit of $60.50, and will remove the escalating factor, as provisions under the new section 79.3 under the OEBA provides benefits beyond RRRP, making the escalating factor unnecessary.

The ministry is proposing a new regulation under the OEBA to create a government funded distribution rate protection (DRP) program. The regulation establishes a mechanism for the OEB to calculate a maximum monthly distribution charge for prescribed consumers by calculating the fully-fixed base distribution rates, using approved 2017 rates for the prescribed residential rate classes of a prescribed group of distributors, having regards to the costs of service for the LDCs.

The following LDCs and residential rate classes would be prescribed as eligible for DRP: Hydro One Networks Inc. (low and medium density classified customers), Algoma Power Inc. (R1, residential), Atikokan Hydro Inc., InnPower Corporation, Chapleau Public Utilities Corporation, Sioux Lookout, Lakeland Power Distribution Inc.-Parry Sound Rate Zone, Northern Ontario Wires Inc.

The OEB would continue its usual rate setting activities for prescribed LDCs, as authorized under the OEBA, and prescribed LDCs would continue to collect the revenue to which they are entitled. However, eligible customers (~800,000) of prescribed LDCs would pay no more than the maximum charge determined by the OEB. The shortfall between the set maximum charge collected from customers and the approved OEB charge would be made up of provincial funds. The regulations would enable payment flows to prescribed LDCs to allow recovery from the province of DRP payments made to customers. Planned payment flows will follow the same

reimbursement process under the ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements.

If the required regulations are approved, the program would be in effect July 1, 2017.

On-Reserve First Nations Delivery Credit (FNDC)

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances related to lands affected by energy infrastructure.

The OFHPA amended the *Ontario Energy Board Act, 1998* to enable the creation of a government funded delivery credit program for on-reserve customers. The proposed regulations provide the details of the program. The program will be available to on-reserve customers serviced by licensed distributors (LDCs: Algoma, Attawapiskat, Bluewater, Cat Lake, Cornwall, Fort Albany, Kashechewan, Hydro One, Hydro One Remote Communities, PUC (Sault Ste. Marie), Thunder Bay.), would eliminate the delivery charge for all on-reserve residential customers who are First Nation members, and eliminate the monthly service charge for customers that charge a bundled rate. The ministry has been working with the Chiefs of Ontario (COO) on the implementation details and are moving forward with consensus recommendations from the implementation working group.

Eligible recipients would be automatically enrolled in the program through existing LDC processes for recognizing First Nation consumers with tax exempt status. The OEB estimates that, on average, customers would receive a monthly benefit of $85. The program will cost approximately $15M annually and be implemented by the prescribed July 1, 2017 effective date. The program would not limit any eligibility for existing rate relief programs that mitigate total bill such as the Low Income Energy Program (LEAP) or OESP. There is a risk that some eligible recipients may not be currently registered with their LDCs as tax exempt, which would mean that they would not receive the benefits under the program they are entitled to. To mitigate this risk, Energy is working with COO and LDCs on a communications approach to make sure eligible customers self-identify for tax exempt status.

The regulations will also enable payment flows to prescribed LDCs to allow recovery from the province of FNDC payments made to customers. Planned payment flows will follow the same reimbursement process under ORECA, including requirements to provide information for reimbursement purposes, duty to provide information, records, and invoicing requirements. The following LDCs would be prescribed as responsible for delivering the program:

Commented [EK1]: Should the LDCs be listed after this?

The proposed regulation relies upon definitions of key terms such as “member of a band” and “reserve” from the *Indian Act* (Canada). This approach is defensible and relatively straightforward, but may be criticised as not taking into account lands that are considered as roughly analogous to reserve land, but that do not meet the strict

definitions of the *Indian Act.* For example, many communities have lands within the federal Additions to Reserve (ATR) process that would be excluded from this program until the lands are officially recognized as reserve. This risk is mitigated by the fact that many of these parcels of land will have few if any residences on them, so the impact is expected to be minor. The legislation provides sufficient flexibility to expand application to these kinds of lands if appropriate in the future.

The ministry is also proposing amendments to O. Reg. 363/16 under the ORECA to provide clarity that FNDC should be included in the base amount used to calculate the 8% rebate. This is consistent with how other support programs have been treated for the purposes of applying the 8% rebate to customer's bills.

3. Bill Presentment

The ministry is proposing to create new regulations under the OFHPA that would:

- require electricity vendors and unit sub-meter providers (USMPs) to include messaging related to OFHP and the resultant bill impacts on invoices.
- require electricity vendors and USMPs to accompany paper invoices with a descriptive bill insert to be issued once every quarter within a specific 12-month period, beginning with the first invoice issued on or after July 1, 2017.
- require electricity vendors identified in regulation as servicing customers on-reserve to include a "First Nations Delivery Credit" as a visible line item on invoices and demonstrate the associated savings, as applicable.

The ministry is also proposing amendments to O. Reg. 275/04 that would remove invoicing requirements related to the Debt Retirement Charge (DRC) exemption message, per s. 8.2. LDCs would no longer have to include informational messaging about the DRC on or with invoices, but the requirement to include a DRC line item on electricity invoices would remain (even for charges of $00.00). The proposed amendments would also exempt Hydro One from the application of this regulation, allowing them to move forward with their planned bill redesign in Fall 2017.

In anticipation of these new OFHP invoicing requirements, the ministry has amended O. Reg. 364/16 (Minister's order) to revoke the "8% provincial rebate" messaging requirements from invoices and envelopes to free-up space on the bill and avoid confusion amongst consumers. However, the requirement to include an "8% Provincial Rebate" line item remains.

Risks

Fiscal

The social programs do not have a scheduled end date and represent an ongoing fiscal pressure, which will likely increase over time. These estimates are based on variable inputs such as program uptake, electricity market conditions, future energy consumption

of various consumer groups and future distribution rates, and are therefore subject to change.

Perception

It is expected that there will be some criticism of the OFHP messaging and bill presentment changes as being political in nature and not strictly necessary for transparency or program implementation.

Legal

In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets present only a low risk of being an unconstitutional tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets. Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax. The legislation contains provisions to mitigate the constitutional law risks, including requiring the Minister of Energy to reallocate estimated clean energy costs attributable to each reference period in a way that takes into account the need to align those costs with the estimated clean energy benefits attributable to the same period.

Under the FNDC program “non-status” Indigenous communities without reserves (e.g. certain members of the Algonquins of Ontario (AOO), Mocreebec etc.) and Métis will not be eligible as they do hold reserve lands. There is a risk that these communities could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter (equality rights). This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change. This risk is mitigated by phase in implementation provisions in the enabling legislation that allows for LDCs to provide retroactive payments to July 1, 2017 if they are, for technical reasons, unable to have the required program changes implemented by this date.

Linkages

Commented [EK2]: The Fair Hydro Plan also included changes to the Ontario Electricity Support Program (OESP). Should those changes be included in this note?

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer 2017. The LTEP identifies needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The *Ontario Rebate for Electricity for Electricity Consumers Act, 2016*, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) – Was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB program ended on December 31, 2015.

Debt Retirement Charge – On January 1, 2016, the government ended the electricity DRC on residential users earlier than planned. For all other consumers the DRC will be removed by April 2018.

Industrial Conservation Initiative (ICI) – Implemented in January 2011 to help large industrial consumers reduce electricity costs by reducing consumption in peak periods. As part of OFHP, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – Approved as part of OFHP, and under development, the Affordability Fund is intended to provide energy efficiency measures to Ontarians who are not eligible for low income conservation programs, and who are otherwise unable to make energy efficiency improvements without financial assistance.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. Funding electricity social programs through government funds rather than the rate base will also provide saving to all electricity consumers (i.e. Class A and B).

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON) - is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and,
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed that the government consult on and develop options to mitigate the impact of carbon pricing and resulting increased utility costs on residential tenants. The mitigation is proposed because tenants do not usually have the opportunity to make changes to their building envelope (e.g. windows, insulation) or major appliances that would allow them to address utility costs themselves. On April 24, 2017, the government introduced the *Rental Fairness Act, 2017* which, if passed, would remove above-guideline rent increases for utilities, to protect tenants from carbon costs and encourage landlords to make their buildings more energy efficient.

Delivery

The proposed regulations are required under the major components of the *Fair Hydro Act, 2017* in order to fully implement the initiative and clarify program details.

1. Partial Refinancing of the Global Adjustment:

The ratepayer benefit of the OFHP will be in place as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the June 1, 2017 Royal Assent of the *Fair Hydro Act, 2017*.

The act includes transition provisions in circumstances where for technical or operational reasons invoices cannot be adapted in time for the issuance of the first invoices under the program. In these cases, adaptation of invoices must be implemented by August 1, 2017, followed by a subsequent lump sum credit to the consumer once the invoice is adapted.

Using the methodology outlined in the OFHPA and the Part II regulations, the OEB will calculate the electricity rates that consumers will pay as of July 1, 2017.

2. Social Programs:

<u>DRP and RRRP</u>

The programs will take advantage of existing LDC and IESO processes. The regulatory amendments also enable payment flows to prescribed LDC to allow recovery of RRRP and DRP payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the DRP in time for the prescribed effective date. In this case, the regulation dictates the eligibility of July 1st and gives until October 1, 2017 for LDCs to get their systems in place. The LDCs would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program.

<u>On-Reserve First Nations Delivery Credit (FNDC)</u>

The ministry is consulting with affected LDCs, the OEB, the IESO and Chiefs of Ontario (COO) on implementation. FNDC will take advantage of existing LDC, IESO, and community-LDC relationships to implement the program. The regulatory amendments also enable payment flows to prescribed LDCs to allow recovery of FNDC payments made to customers.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the prescribed July 1, 2017 effective date. OFHPA includes transitional provisions that would ensure customers remain eligible for the delivery credit from the prescribed date. Once available, the rebate would appear on the eligible customer's electricity bills as a credit for their delivery line. FNDC line item, demonstrating the savings by eliminating the delivery line costs on the bill.

STAKEHOLDER AND PARTNER CONSIDERATIONS

General Public (including residential and small businesses) – Likely support a proposal that is projected to provide 25% in average rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but there has been public discussion of the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications. There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral on the rest of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to cap and trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. Funding electricity support programs through government funding rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being ineligible for the delivery charge relief.

NGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generators as part of the clean energy costs.

Solar PV sector – May react negatively to price relief as it can be seen to undercut the economics of net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price in order to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.) LDCs recover their costs through distribution rates. LDCs are licensed to serve a specific geographic area by the Ontario Energy Board (OEB). An LDC must receive Ontario Energy Board approval to charge a distribution rate.
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates for residential customers are moving to a fully-fixed charge by 2019 for most LDCs. Some LDCs, such as Hydro One and Algoma Power are transitioning over a longer period.
  - Line Loss: The costs to recover electricity that is lost when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay

for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.

- **Customer classification for Hydro One –** Customer service classes are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. Lower customer density increases the cost to serve. Residential class R1 customers are considered 'medium density' customers and residential class R2 are considered 'low density customers.' Hydro One also served urban residential customers, considered "high density" through its UR class. Hydro One also has urban and non-urban general service classes.
- **Ontario Power Generation (OPG) –** A business corporation owned by the Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to participate in quasi-judicial proceedings and formal stakeholder consultations.
- **Independent Electricity System Operator (IESO) –** An independent corporation established under the *Electricity Act, 1998* that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Affordable Housing- *Residential Tenancies Act, 2006* amendments –** To mitigate the costs of carbon pricing on tenants, who are not able to control major building features that impact energy use (like insulation and windows) or major appliances, the government has amended regulations under the Residential Tenancies Act, 2006 to remove the ability for landlords to increase rents above the guideline based on extraordinary increases in utility costs.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE: 2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining~~include~~ 44-49% ~~debt or~~ equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) ~~with OPG raising the remaining 5% from capital markets~~.
  - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.
  - ~~In addition, the Province's net debt position should remain unchanged~~
  - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified, ~~and for~~ are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. ~~The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. Commented [BA1]: Also added MoF changes for IFRS risk

~~fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a~~n~~ one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on t~~T~~he figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291~~9~~4M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of ~~Ontario n~~Nuclear ~~Funds Agreement~~asset retirement obligations-related IFRS risks, followed by an increase of $12~~1~~M in 2018-19 ~~and a decrease of $14M in 2019-20~~ versus ~~-~~the estimates in the 2016 Budget. ~~The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.~~

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4633~~6~~M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA an~~m~~d MOF adjustments, is p~~rojected~~~~lanned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

    Also, ~~I~~in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    ~~These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.~~ The first table in Appendix ~~G~~E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget

Commented [JK2]: Still being checked.

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK3]: There is a delta in the latest information used for the fiscal plan.

2016 fiscal plan.

- Key Operational Metrics:
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

    OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016~~, Unit 2~~ and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., ~~U~~upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in [month] 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per

Formatted

year

- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: ~~[…]~~OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Commented [RK4]: Could list nuclear performance, financial market risk on the performance of the nuclear funds.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

Commented [RK5]: Could contemplate removing this requirement going forward, say replacing it with a direction for the Ministry to continue to consult with the MOF and OFA on OPG's draft and approved business plans and in-year financial updates.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

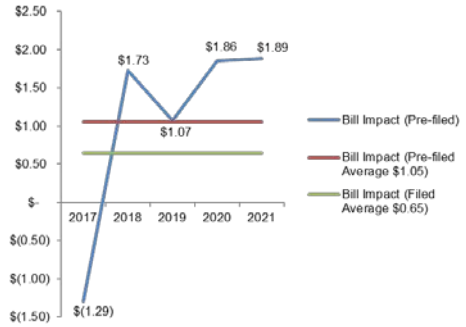
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

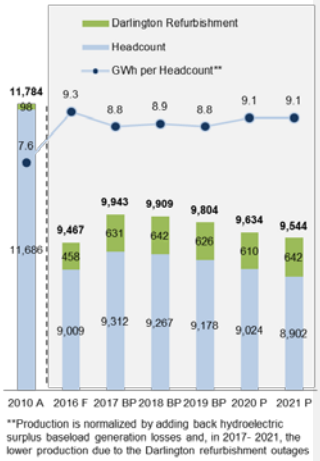
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



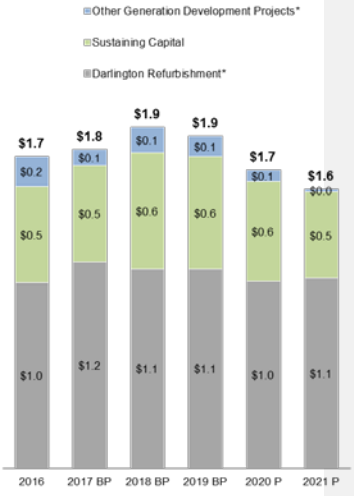
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining~~include~~ 44-49% ~~debt or~~ equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) ~~with OPG raising the remaining 5% from capital markets~~.
    - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
    - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.
    - ~~In addition, the Province's net debt position should remain unchanged~~
        - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
    - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
    - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified~~, and for~~ are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. ~~The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

Formatted: Not Highlight

Commented [BA1]: Also added MoF changes for IFRS risk

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a~~n~~ one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on t~~T~~he figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $29~~9~~4M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of ~~Ontario n~~Nuclear ~~Funds Agreement~~asset retirement obligations-related IFRS risks, followed by an increase of $12~~1~~M in 2018-19 ~~and a decrease of $14M in 2019-20~~ versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC) show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4633~~6~~M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA a~~n~~nd MOF adjustments, is p~~rojected~~lanned to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

    Also, ~~I~~in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    ~~These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.~~ The first table in Appendix ~~G~~E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget 2016 fiscal plan.

Commented [JK2]: Still being checked.

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK3]: There is a delta in the latest information used for the fiscal plan.

- Key Operational Metrics:

  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

    OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:

  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016~~, Unit 2~~ and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., ~~U~~upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:

  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in [month] 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

Formatted

- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: […]

Commented [RK4]: Could list nuclear performance, financial market risk on the performance of the nuclear funds.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

Commented [RK5]: Could contemplate removing this requirement going forward, say replacing it with a direction for the Ministry to continue to consult with the MOF and OFA on OPG's draft and approved business plans and in-year financial updates.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

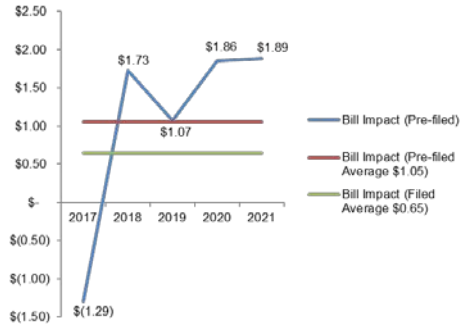
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

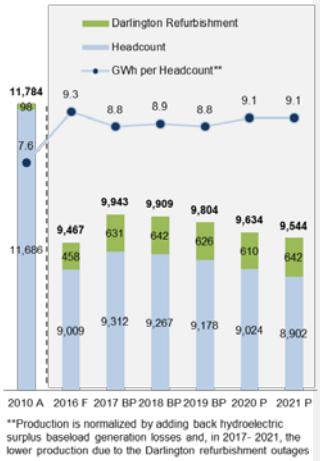
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



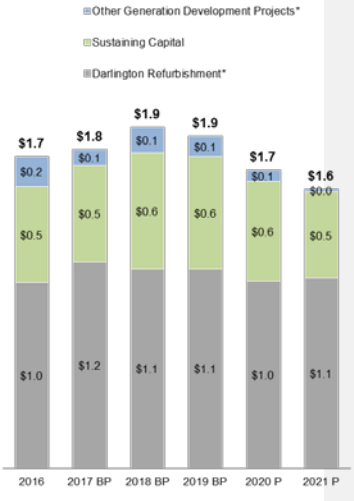
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

* 2016 Budget fiscal plan was largely based on OPG's 2015 multi-year business plan, as the 206 multi-year business plan was approved and submitted following the timeframe for locking the numbers for the early 2016 Budget.

1. OPG February 2017 ~~Financials~~Monthly Update
2. IFRS risk is related to Province's reporting of nuclear asset retirement obligations. The Ontario Auditor General recommended (2016 AG Report) that the Province include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards, versus the companies U.S. GAAP basis of reporting.
3. For public Budget reporting, projected net impacts of Province asset optimization strategy are reported under Sales and Rentals for commercial confidentiality.
4. Provincial consolidation adjustments for unrealized earnings on decommissioning and used fuel segregated funds net of Bruce variance account and change in Due to the Province on the decommissioning and used fuel segregated funds.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.
  - Provincial borrowing would be offset by an increase in an investment asset in OPG.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged
    - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. ~~Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Commented [BA1]: Also added MoF changes for IFRS risk

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan show a decrease in earnings before tax of $294M in 2016-17 and $556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase of $11M in 2018-19 and a decrease of $14M in 2019-20 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4~~63~~6M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA a~~n~~nd MOF adjustments, is p~~l~~rojected~~anned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.

  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.

  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK2]: There is a delta in the latest information used for the fiscal plan.

than 2017 levels in 2021.

OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100

trips annually, while Darlington accounts for 45% and is expected see increases.

- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

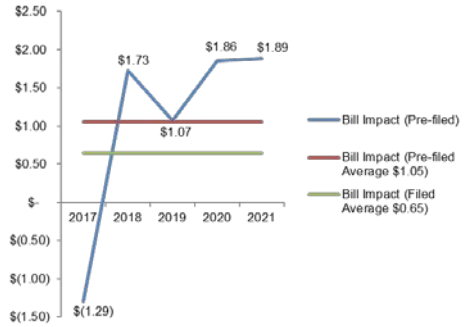
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

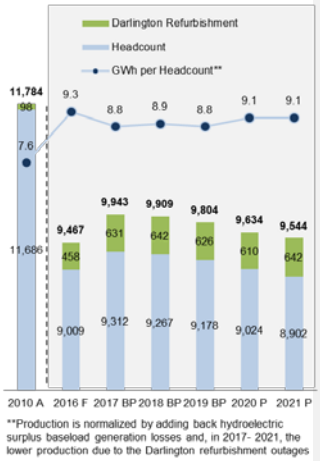
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



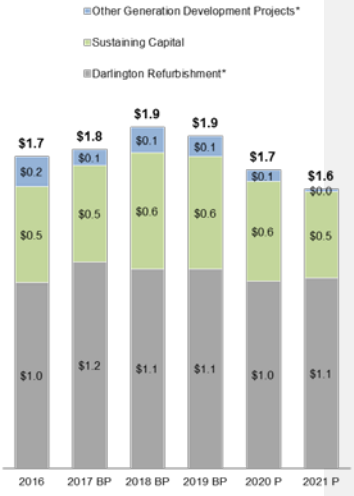
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Subject: RE: 5 2017-05-09 RAN OPG Business Plan v2 Received May2_CEFDMarkup3.doc

Hi,

A few comments, aside from the numbers.

Ron

Subject: 5 2017-05-09 RAN OPG Business Plan v2 Received May2_CEFDMarkup3.doc

Hi Ron,

Pls. see attached. We're checking a couple of delta numbers still as we checked the numbers again.

Thanks,

John

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE: 2017-2019 Business Plan for Ontario Power Generation

~~Prepared based on draft submission~~

Formatted: Left

Formatted: Font: 9 pt

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan ~~(Board-approved?)~~ to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining~~include~~ 44-49% ~~debt or~~ equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) ~~with OPG raising the remaining 5% from capital markets~~.
  - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.
  - ~~In addition, the Province's net debt position should remain unchanged~~
  - ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)~~
  - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
  - ~~In addition, the Province's net debt position should remain unchanged (Check is OFA)~~

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified, ~~and for~~ are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. ~~The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan. Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. Commented [BA1]: Also added MoF changes for IFRS risk

~~fiscal, financial and operational strategies laid out in the business plan.~~

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a~~n~~ one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province ~~may~~ make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018~~7~~.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on t~~T~~he figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291~~9~~4M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of ~~Ontario n~~Nuclear ~~Funds Agreement~~asset retirement obligations-related IFRS risks, followed by an increase of $12~~1~~M in 2018-19 ~~and a decrease of $14M in 2019-20~~ versus ~~-~~the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

  - ~~The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..~~

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $4633~~6~~M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA an~~n~~d MOF adjustments, is p~~rojected~~~~lanned~~ to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

    Also, ~~I~~in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    ~~These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.~~ The first table in Appendix ~~G~~E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget

Commented [JK2]: Still being checked.

Formatted: Indent: Left: 1", No bullets or numbering

Commented [JK3]: There is a delta in the latest information used for the fiscal plan.

2016 fiscal plan.

- Key Operational Metrics:
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

    OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

    OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016~~, Unit 2~~ and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., ~~U~~upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in [month] 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per

Formatted

year

- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing)~~,~~ and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: ~~[…]~~OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Commented [RK4]: Could list nuclear performance, financial market risk on the performance of the nuclear funds.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.~~

~~Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.~~

~~Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.~~

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

Commented [RK5]: Could contemplate removing this requirement going forward, say replacing it with a direction for the Ministry to continue to consult with the MOF and OFA on OPG's draft and approved business plans and in-year financial updates.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

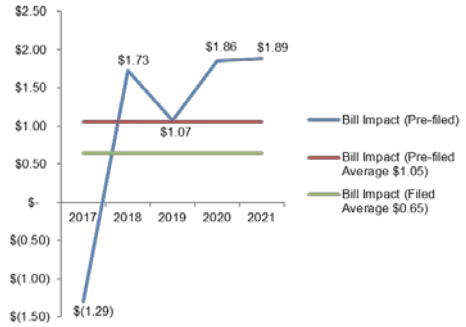
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

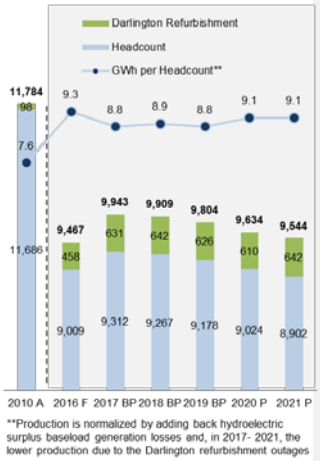
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



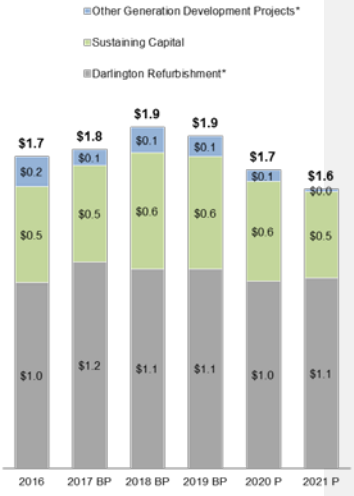
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

Formatted: Not Highlight

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

1. 2016 Budget fiscal plan was largely based on OPG's 2015 multi-year business plan, as the 2016 multi-year business plan was approved and submitted following the timeframe for locking the numbers for the early 2016 Budget.
2. OPG February 2017 Monthly Update
3. IFRS risk is related to Province's reporting of nuclear asset retirement obligations. The Ontario Auditor General recommended (2016 AG Report) that the Province include Hydro One and OPG financial information in the consolidated financial statements using the IFRS reporting framework as required by PSAB standards, versus the companies U.S. GAAP basis of reporting.
4. For public Budget reporting, projected net impacts of Province asset optimization strategy including, OPG Head Office sale, are reported under Sales and Rentals for commercial confidentiality. OPG proceeds estimate updated per 2017 Budget.
5. Provincial consolidation adjustments for unrealized earnings on decommissioning and

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2017~~6~~-2019~~8~~ business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*Direct OPG review of delegated financial authority in consultation with TBS*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**

Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to

annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment refinancing, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining 44-49% equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection).
    - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
    - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

- ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.~~
    - ~~Provincial borrowing would be offset by an increase in an investment asset in OPG.~~
    - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
    - ~~In addition, the Province's net debt position should remain unchanged~~

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.

~~Financial figures from the OPG Business Plan are included and supplemented with forecast adjustments from the Ontario Financing Authority, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget, and for risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

Commented [BA1]: Also added MoF changes for IFRS risk

~~The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.~~

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on the figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of nuclear asset retirement obligations-related IFRS risks, followed by an increase of $12M in 2018-19 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

    Commented [JK2]: Still being checked.

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $463M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA and MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

    Also, in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    The first table in Appendix E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget 2016 fiscal plan.

- Key Operational Metrics:

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016 and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides

more information):

- OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
  - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
  - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
  - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
  - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

TBS staff note that to obtain a special status, ministries are required to provide a comprehensive business case that would demonstrate how the special status would support the organization's business plan and mandate, and include details related to its annual forecast activity, internal audit controls, governance structure, and robust reporting processes that would be in place to support governance of the proposed delegated authority.

As the Ministry is interested in streamlining the approval process related to approvals for international travel, it is recommended that the Ministry explores its current delegated financial authority framework and consult with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing) and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

- Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact. ~~The figures in the OPG Board approved 2017-2019 Business Plan show a decrease in earnings before tax of $294M in 2016-17 and $556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase of $11M in 2018-19 and a decrease of $14M in 2019-20 versus the~~

Formatted: Indent: Left: 1", No bullets or numbering

Formatted

estimates in the 2016 Budget. The 2019-20 decrease largely reflects an IFRS-related consolidation risk of $200M) as described above.

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $466M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, before OFA amd MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures

unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

  TBS staff note that to obtain a special status, ministries are required to provide a comprehensive business case that would demonstrate how the special status would support the organization's business plan and mandate, and include details related to its annual forecast activity, internal audit controls, governance structure, and robust reporting processes that would be in place to support governance of the proposed delegated authority.

  As the Ministry is interested in streamlining the approval process related to approvals for international travel, it is recommended that the Ministry explores its current delegated financial authority framework and consult with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international

travel approvals for OPG.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) Direct OPG to review its current delegated financial authority framework in consultation with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

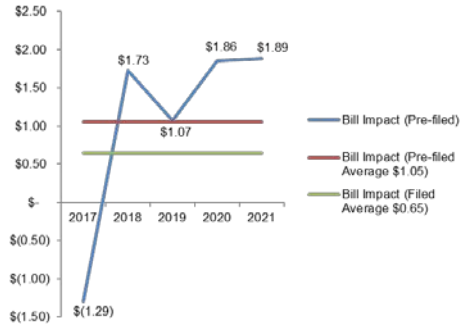
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

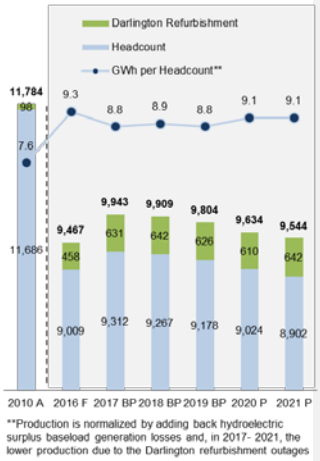
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



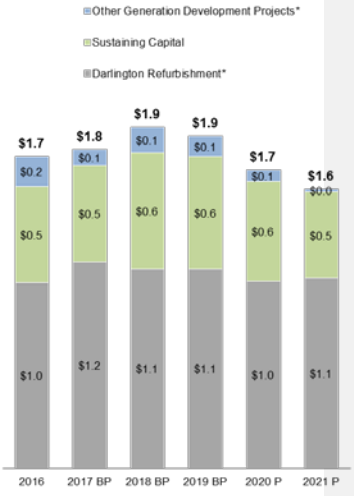
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to

annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its Board approved 2017-2019 Business Plan to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment refinancing, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would be financed by OPG raising a targeted up to 5% from capital markets, with the remaining 44-49% equity injection [and/or debt financing] from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection).
    - Provincial borrowing for an equity injection would be offset by an increase in an investment asset in OPG, so the Province's net debt position would remain unchanged.
    - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income.

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan while noting also that OFHP is not reflected in the current business plan.

- ~~As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would develop a Special Purpose Vehicle (OPG Trust) which would use 100 per cent debt financing to purchase the right to future cash flows from IESO. It is proposed that the OPG Trust would raise 51% of required funding directly from capital markets while OPG would provide 49% of the financing requirements. The latter would include 44% debt or equity financing from the Province (Estimates provides for a Ministry of Energy operating asset to make an equity injection) with OPG raising the remaining 5% from capital markets.~~
    - ~~Provincial borrowing would be offset by an increase in an investment asset in OPG.~~
    - ~~These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income~~
    - ~~In addition, the Province's net debt position should remain unchanged~~

Financial figures from the OPG Business Plan are included and supplemented with more recent forecast adjustments from the Ontario Financing Authority, MOF, for more recent OPG in-year forecast updates, and for estimated OFHP implications, as part of Province's finalized fiscal plan for the 2017 Budget. Also identified are risks related to the Auditor General recommendation that Ontario include Hydro One and OPG financial information in the consolidated financial statements using the International Financial Reporting System (IFRS) reporting framework as required by PSAB standards.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have a one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.

The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.~~

Commented [BA1]: Also added MoF changes for IFRS risk

~~The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have an one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses in the nuclear funds). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2018.~~

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - 2017 Budget projections were based on the figures in the OPG Board approved 2017-2019 Business Plan, with adjustments made by OFA/MOF, and show a decrease in earnings before tax of $291M in 2016-17 and $556M in 2017-18 compared to the 2016 Budget projections [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of nuclear asset retirement obligations-related IFRS risks, followed by an increase of $12M in 2018-19 versus the estimates in the 2016 Budget. The 2019-20 decrease also largely reflects an IFRS-related consolidation risk of $200M) as described above.

    Commented [JK2]: Still being checked.

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $463M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019, before OFA and MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially.

    Also, in early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

    The first table in Appendix E shows the OPG 2017-19 Business Plan fiscal impact changes to the Province's Budget 2016 fiscal plan.

- Key Operational Metrics:

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and, as approved by Cabinet, the execution of the Darlington refurbishment consistent with an approved budget of $12.8 billion (including assumed inflation escalation and interest), is now under way. First unit refurbishment, Unit 2, began in October 2016 and is assumed to be returned to service in February 2020, with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., upgrades at Sir Adam Beck and upgrades to DeCew II, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021, submitted in 2016. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year
- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides

more information):

- OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
  - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
  - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
  - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
  - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

TBS staff note that to obtain a special status, ministries are required to provide a comprehensive business case that would demonstrate how the special status would support the organization's business plan and mandate, and include details related to its annual forecast activity, internal audit controls, governance structure, and robust reporting processes that would be in place to support governance of the proposed delegated authority.

As the Ministry is interested in streamlining the approval process related to approvals for international travel, it is recommended that the Ministry explores its current delegated financial authority framework and consult with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

Other Key Fiscal Risks:

Regulatory risks: OPG's multi-year rate application to the Ontario Energy Board for the period starting January 1, 2017, is currently in process. Potential OEB decisions providing for lower rates, including disallowance of recovery of OPG's operating costs, current or future deferral and variance account balances (including for the proposed nuclear rate smoothing) and unfavourable future treatment of pension costs would adversely affect OPG's results, resulting in negative fiscal impacts.

Performance risks: OPG's financial performance could be subjected to nuclear reliability issues such as unplanned outages and financial market risk on the performance of the nuclear funds, for which the Province consolidates on a realized [gains or losses] basis.

Accounting risks: A change in the basis of accounting used for consolidation of OPG results from U.S. GAAP to International Financial Reporting Standards (IFRS) on the Province's financial statements is expected to result in potentially significant fiscal impacts.

- Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact. ~~The figures in the OPG Board approved 2017-2019 Business Plan show a decrease in earnings before tax of $294M in 2016-17 and $556M in 2017-18 [with $75M and $400M of the declines in 2016-17 and 2017-18 due to IFRS-related consolidation risks], primarily due to estimated impact of Ontario Nuclear Funds Agreement-related IFRS risks, followed by an increase of $11M in 2018-19 and a decrease of $14M in 2019-20 versus the~~

Formatted: Indent: Left: 1", No bullets or numbering

Formatted

estimates in the 2016 Budget. The 2019-20 decrease largely reflects an IFRS-related consolidation risk of $200M) as described above.

OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $466M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

Net income in 2018 and 2019, before OFA amd MOF adjustments, is projected to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures

unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).

- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only.
  - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) Direct OPG to review its current delegated financial authority framework in consultation with TBS Corporate Policy Agency Governance and Open Government Division to explore potential strategies related to international travel approvals for OPG.

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					**TABLE B1**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

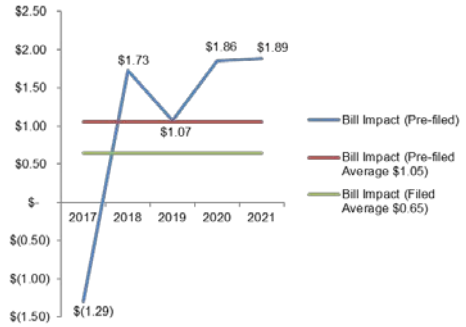
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

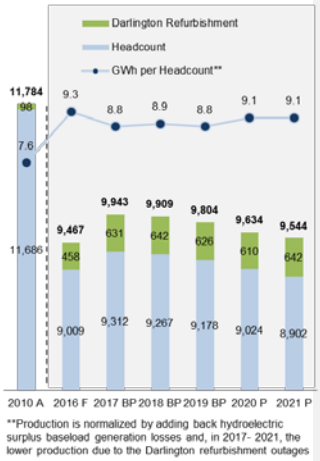
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



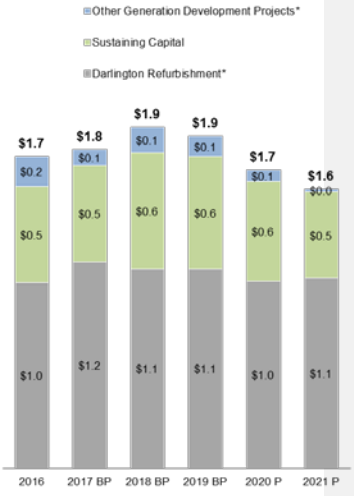
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

Hi Anna and Colleen,

Tomorrow at Fiscal Prep (1015-1145), ENERGY is presenting on their submission for the Fair Hydro Plan Act. Attached is the agenda and deck.

Could you please line up Gadi and Scott to attend with the Deputy? Please let me know if there are any issues.

Thanks!
Gwen.

Subject: FW: Benchmarking and Performance for the Trust manager

Hi John and Kaitlin
I am just starting to work with Sheen at OPG on the benchmarking rate. Attached is OPG's initial proposal and my comments highlighted back to OPG.

OPG management is recommending the following:
1.Gain and loss are capped at +/-1.5% of notional amount of incremental sub-debt issuance for each year 2.If there is a gain, OPG shall realize 80% of it; if there is a loss, OPG shall realize 20% of it 3.Loss could be carried forward to offset future gain

Can you provide comments regarding the unequal sharing arrangement proposed by OPG And also about capping any gains and losses to +/- 1.50% in any one year

Thanks
Carlos

GA Financing – Equity Injection

Briefing Note

Commented [SK81]: Some edits before mainly for clarity based on my understanding. Happy to have changes reverted back.

PURPOSE:

- Provide an overview on the timing / mechanics for equity injections by the Province to OPG to support GA financing

CONTEXT:

- IESO will effectively sell the "right to collect" deferred future revenue from ratepayers (GA Asset) to the OPG Trust in return for cash proceeds
- In order for the OPG Trust to finance the GA asset on a long-term basis, the OPG Trust will obtain financing from two sources on an ongoing basis
    - 51% from capital markets
    - 49% as subordinated debt from OPG, which OPG will finance through:
        - **44% from equity injections from the Province**
        - 5% from capital markets
- OPG will require equity injections on an ongoing basis in order to keep maintain its capital structure ~~in line~~, and will require flexibility in order to issues shares as needed to the Province.

LONG TERM APPROVALS:

Equity Injection Plan

- OPG would include forecasts of its equity requirements in its business plan each year - ~~(~~typically provided to the province in the Fall~~),~~ - though this portion of the business plan would not be subject to concurrence by the shareholder
- The Ministry of Energy would seek appropriation on an annual basis through PRRT for the amounts requested by OPG for its equity requirements.
    - The Ministry of Energy has received an appropriation for up to $1.1B in equity injections for the fiscal year 2017/18.

SHORT TERM EQUITY INJECTION PROCESS:

- IESO settles contracts with and payments from LDCs / ratepayers
- IESO identifies shortfall and notifies OPG Trust and determines amount to purchase
- OPG Trust notifies OFA of corresponding equity injection requirement and number of shares issued
- OFA and OPG Trust settle equity injection amounts
- Timing for settlement of payments
    - [Five] business day window from notice to OFA to payment and settlement with OPG

- XX business day window for final payment and settlement with IESO

- Equity injections by OFA to OPG expected to occur monthly; no Provincial involvement on approvals

OTHER CONSIDERATIONS:

- Considerations have been given to sShare issuances ~~currently environed~~ envisioned ~~to be~~ with ~~redeemable~~ options to redeem by the Province~~.~~ and ~~and~~ with OPG ~~may also~~ having~~e~~ rights to buy back the shares
  - This ~~W~~would have provided the Province with a flexible mechanism to redeem its equity investment and for OPG to return to a more suitable capital structure as GA financing program progresses.
  - Shares may or may not be valued at par (i.e., $20 per share – as at December 31, 2016, OPG had 256,300,010 common shares outstanding at $5,126 million)
  - The Province is now contemplating equity injection through the common equity structure, however through a new class of shares.

~~• Potential for ongoing valuation of shares either from financial statements or market-based valuation~~

  ~~o Book value basis could be viewed as a subsidy and [risk GBE status]~~

  ~~o Market valuation would account for premiums that are built over time~~

- May require a natural mechanism for OPG to return equity as borrowing ramps ~~up~~ down and principal is repaid
  - Consider potential for OPG to also pay interest/dividends on an regular (annual) basis
  - Regular interest/dividends ~~W~~would also ~~account~~ provide consideration for Province's costs ~~of~~ for funding OPG Trust

- Private financing by OPG Trust (51%) and OPG (5%) will initially be through short term debt (e.g., Canadian money-markets). ~~to~~ This will be subsequently rolled over to long-term debt as soon as possible.

Hi Kaitlin,

So to keep you in the loop, there have been some discussions about whether to put various features in the equity injection such as the redemption clause. But in the end, I believe it is to use the common equity injection (which I think means no redemption clauses, etc).

Let me get back to you on this with some comments.

John

Subject: RE: Benchmarking and Performance for the Trust manager

Hey john - wanted to check in with you on this. Has there been any update since our call? I think carlos was going to try and figure out some additional details?

Separate but related note - I know Clara is anxious to get some details and figure out how this is going to work moving forward - I had this note from a while back so I have updated to reflect the approval ENE received. Do you think its worth updating this note to bring forward any decision points that we need direction on so that we can get something over to OPG?

Happy to chat
Kaitlin

Hi Carlos,

I'm sure I'm not mis-representing Kaitlin's position if I say we would like you to walk me and Kaitlin through the proposals.

I have a reasonable sense of what they are brain-storming but need to understand some of the details better and at what level of OPG these proposals are coming from.

Thanks,

John

Hi John and Kaitlin
I am just starting to work with Sheen at OPG on the benchmarking rate. Attached is OPG's initial proposal and my comments highlighted back to OPG.

OPG management is recommending the following:
1.Gain and loss are capped at +/-1.5% of notional amount of incremental sub-debt issuance for each year 2.If there is a gain, OPG shall realize 80% of it; if there is a loss, OPG shall realize 20% of it 3.Loss could be carried forward to offset future gain

Can you provide comments regarding the unequal sharing arrangement proposed by OPG And also about capping any gains and losses to +/- 1.50% in any one year

Thanks
Carlos

GA Financing – Equity Injection

Briefing Note

Commented [SK81]: Some edits before mainly for clarity based on my understanding. Happy to have changes reverted back.

PURPOSE:

- Provide an overview on the timing / mechanics for equity injections by the Province to OPG to support GA financing

CONTEXT:

- IESO will effectively sell the "right to collect" deferred future revenue from ratepayers (GA Asset) to the OPG Trust in return for cash proceeds
- In order for the OPG Trust to finance the GA asset on a long-term basis, the OPG Trust will obtain financing from two sources on an ongoing basis
    - 51% from capital markets
    - 49% as subordinated debt from OPG, which OPG will finance through:
        - **44% from equity injections from the Province**
        - 5% from capital markets
- OPG will require equity injections on an ongoing basis in order to keep maintain its capital structure ~~in line~~, and will require flexibility in order to issues shares as needed to the Province.

LONG TERM APPROVALS:

Equity Injection Plan

- OPG would include forecasts of its equity requirements in its business plan each year - ~~(~~typically provided to the province in the Fall~~),~~ - though this portion of the business plan would not be subject to concurrence by the shareholder
- The Ministry of Energy would seek appropriation on an annual basis through PRRT for the amounts requested by OPG for its equity requirements.
    - The Ministry of Energy has received an appropriation for up to $1.1B in equity injections for the fiscal year 2017/18.

SHORT TERM EQUITY INJECTION PROCESS:

- IESO settles contracts with and payments from LDCs / ratepayers
- IESO identifies shortfall and notifies OPG Trust and determines amount to purchase
- OPG Trust notifies OFA of corresponding equity injection requirement and number of shares issued
- OFA and OPG Trust settle equity injection amounts
- Timing for settlement of payments
    - [Five] business day window from notice to OFA to payment and settlement with OPG

- XX business day window for final payment and settlement with IESO

- Equity injections by OFA to OPG expected to occur monthly; no Provincial involvement on approvals

OTHER CONSIDERATIONS:

- Share issuances currently ~~environed~~ envisioned to be redeemable by the Province. ~~and~~ OPG may also have rights to buy back the shares
  - This ~~W~~would provide the Province with a flexible mechanism to redeem its equity investment and for OPG to return to a more suitable capital structure as GA financing program progresses.
  - Shares may or may not be valued at par (i.e., $20 per share – as at December 31, 2016, OPG had 256,300,010 common shares outstanding at $5,126 million)
- Potential for ongoing valuation of shares either from financial statements or market-based valuation
  - Book value basis could be viewed as a subsidy and [risk GBE status]
  - Market valuation would account for premiums that are built over time
- May require a natural mechanism for OPG to return equity as borrowing ramps ~~up~~ down and principal is repaid
  - Consider potential for OPG to also pay interest/dividends on an regular (annual) basis
  - Regular interest/dividends ~~W~~would also ~~account~~ provide consideration for Province's costs ~~of~~ for funding OPG Trust
- Private financing by OPG Trust (51%) and OPG (5%) will initially be through short term debt (e.g., Canadian money-markets). ~~to~~ This will be subsequently rolled over to long-term debt as soon as possible.

Subject: FW: CBN Fact Check

Hi David,

A few comments from us:

- Suggest a mention of accounting risks in the Fiscal subsection, particularly given the AG's stated position at Committee on this. May want to seek input from OPCD/TBS.
- Suggest including on page 6, as part of the objectives of the proposed regulations:
  - Details on how the interest on the Trust debt will be managed; and
  - The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

Comments from CEFD will be relayed separately by Gavin.

Thanks, Anna

Anna/Gadi

Agree with Gadi's point re accounting risks. No need for regulations for both the guarantee and the new credit facility to IESO(confirmed with Malle). I would also suggest that the objectives of the proposed regulations spelled out on page 6 include:

- Details on how the interest on the Trust debt will be managed and
- The Clean Energy Adjustment as it relates to repayment from 2027 onwards.

Thanks

Ken k

Subject: Re: CBN Fact Check

I find it interesting that in the Risks section there is a lengthy description of the constitutional risk in the Legal subsection, but there is no mention of the accounting risks in the Fiscal subsection, in spite of the AG's stated position at Committee on this. I think that it's a gap that needs to be at least mentioned in the CBN, doesn't it?

I'm assuming, because it isn't mentioned anywhere in the CBN, that there are no regs required for the guarantees that Mike has been working on with Blakes and OPG? Also, our direction on the $2 billion line of credit for the IESO can be done independently of these regs?

Thanks,
Gadi

Hi Anna and Gavin,

Attached is the latest CBN for Energy's OESP reg. It is tracking to June 27th as part of the first of two bundles of regulations required for the implementation of the Ontario Fair Hydro Plan.

CO has a hard deadline of 2:00 today, so I'm wondering if you guys can please have your teams review and provide comments (if any) to me by 1:30?

Thanks,
Dave

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy

DRAFT Financing Global Adjustment

Commented [HT1]: Name as in EVista- Will update as item is updated.

Cabinet (info)	TB/MBC	Cabinet	Announcement	TB/MBC	Cabinet	Introduction
Feb 15, 2017	March 1, 2017	March 1, 2017	March 2, 2017	May 9, 2017	May 10, 2017	May 11, 2017

Summary of Proposal

The proposed legislation contains a variance from Cabinet direction, which is detailed in the ministry's variance memo and within this note.

Context for Decision:

This proposal follows Cabinet direction to the Ministry of Energy to take the necessary steps to implement electricity price mitigation initiatives that would provide additional rate relief to Ontario electricity ratepayers.

The proposed legislation enables approaches to fairly allocate the costs of the Global Adjustment (GA) amongst current and future electricity rate payers, and help the most vulnerable Ontarians through enhancements to electricity support programs through ~~tax base~~government funding. To fully implement the initiative, the Ministry of Energy will be seeking future approvals for regulations identified in the proposed bill, while working to maintain existing public policy objectives such as~~:~~ maintaining a reliable electricity system, Ontario's commitment to reducing the impacts of climate change and commitment to achieve greenhouse gas (GHG) reduction targets.

The proposed legislation:

1. Establishes a framework to finance a portion of the GA costs in order to reduce costs for ratepayers in the near term and spread the costs of the GA more fairly across ratepayers between July 1, 2017 and April 30, 2047:
   - July 1, 2017 to April 20, 2018, reduces after-tax electricity costs for specified consumers by 25%.
   - May, 1 2018 to April 31, 2022, electricity rates will be set by Order in Council (OIC) with the intention to keep increases in line with the Consumer Price Index (CPI) (See page 17- Fiscal Pressure)
   - May 1, 2022 to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and

Commented [RK2]: 30?

administrative costs, around 10% of total electricity costs. (See page 14- Future Impacts to Electricity Rates)

Commented [HT3]: TBC by Energy

- Through the bill and subsequent amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998, e*xpanding the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO), to provide for appropriate oversight, putting in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the deferred GA costs. (See page 19- OPG Mechanism)

2. Expands electricity support programs for the most vulnerable consumers and moves program costs from the rate base to the tax base. The bill amends the *Ontario Energy Board Act, 1998* to:
   - ~~M~~move the recently expanded Ontario Electricity Support Program (OESP) to ~~the tax base~~be government funded, transition the program to be administered by the Crown, and to enable information exchange between the Ontario Disability Support Program to potentially allow for automatic enrolment procedures to be established;
   - ~~Amends the Ontario Energy Board Act, 1998 to e~~enable a broadening of the Rural or Remote Electricity Rate Protection (RRRP), including harmonizing distribution costs for customers with the highest distribution rates and moving the program to be government funded~~the tax base~~; and,
   - ~~Amends the *Ontario Energy Board Act, 1998* to~~ require the establishment of a government funded program to provide a delivery credit to prescribed on reserve customers.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price, helping to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, fixed generation costs, such as renewables, gas and nuclear contracts, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:

  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable, per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable, per unit charge and a fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - Line Loss: The costs to recover electricity that is lost as heat when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service types are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. The more customers there are in the area, the lower the cost to serve. R1 customers are considered 'medium density' customers and R2 are considered 'low density customers.'
- **Ontario Power Generation (OPG) –** A business corporation owned by the ~~p~~Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to comment on various items.
- **Independent Electricity System Operator (IESO) –** An independent corporation and agency of the Ministry of Energy that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Class A Consumer –** Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A eligibility was lowered to 1MW for all consumer types. In April 2017, the threshold for Class A eligibility for manufacturing and certain industries, including greenhouses, was lowered to 500 kilowatts.
- **Non-RPP Class B Consumer –** Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a

volumetric rate applied to all electricity consumption. Class B consumers include those Class A eligible that choose not to become Class A.

- **Special Purpose Vehicle (SPV) –**
- **Security Interest –**

Commented [HT4]: TBS: Do you have standard language that you would recommend using?

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. There has been increased media attention and public pressure for the government to provide ratepayer relief. On March 2, 2017, the Ontario government announced its electricity rate mitigation package, Ontario's Fair Hydro Plan, which included the initiatives contained in the proposed legislation. The government has committed to implement further rate relief measures by the summer 2017.

What is the expected cost to government?

The total cost of the proposal is $4.1B [TBC] in 2017/18, $1,599M funded through the fiscal plan and $2.5B to be funded through the electricity rate base.

Commented [HT5]: TBC as this includes the equity injection.

Commented [BA6]: Is it clear here what is mean by "cost"? Fiscal cost plus higher debt.

Commented [JK7]: TBS, pls. check this figure. I believe there is an updated figure ($1,438?).

TABLE 1: Cost Impact ($M)	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	499	753	829	892
GA Financing	2,534	2,668	2,942	3,420
OPG Loan / Province's Capital Injection to OPG Share Purchase (i.e. equity injection or debt)	1,100	?	?	?
Cumulative Total	4,133	3,421	3,771	4,312

Commented [BA8]: Maybe should avoid calling this a loan

Commented [RK9]: Should this be just assumed att 44% of the GA deferral amount?

Commented [BA10]: May be confusing to total these amounts. 1st row is a fiscal impact while equity injection represents increase in debt but no fiscal impact.

Commented [JK11]: Also, 2.5bn in 2017-18 includes the Province's capital injection

Commented [HT12]: TBC

The proposed bill identifies OPG as the Financial Services Manager and would therefore take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from the IESO through OPG Trust. ~~The~~ OPG would finance these purchases through a combination of an equity investment by the Province ($1.1 B in 2017-18; See Table 1) and external private sector financing. The structure ~~has been designed to~~would increase gross debt of the Province (to finance the equity injection in OPG), ~~increase interest on debt related to that external debt,~~ increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. ~~The equity investment has been structured so that the underlying regulatory asset will offset the additional debt to not impact the province's net debt.~~

Commented [BA13]: Do we need to distinguish between OPG as financial service manager and OPG Trust which would purchase regulatory assets?

The estimate for the combined impact of the non-Global Adjustment initiatives that would begin in 2017/18 is expected to be $499M in 2017/18, growing to $753M in 2018/19 and rising. This represent~~s~~ed an additional pressure ~~on~~ that has been incorporated into the 2017 Budget's fiscal~~the~~ plan. These estimates are based on variable inputs such as program uptake and future energy consumption of various consumer groups, and are therefore subject to change.

Commented [BA14]: Additional to? As proposed this is the only pressure on the fiscal plan. The GA financing as proposed has no impact on the fiscal plan but does impact debt.

TABLE 2: Fiscal Impact ($M)	17-18	18-19	19-20	20-21
RRRP Enhancements*	344	472	484	497
OESP Enhancements	140	261	325	375
First Nations On-Reserve Delivery Credit	15	20	20	20
Total	499**	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate base.
****Note**: Value adjusted from $665 million to reflect July 2017 implementation.

There is inherent risk in the financial estimates because the calculations are highly dependent on forecasts of the total consumption and bills of customers eligible for the RPP, the cost of borrowing, electricity demand and electricity market conditions and accounting assumptions. In addition, under the proposal, electricity prices would increase around 10% above forecast residential monthly bills from 2028 to 2047.The public may expect that the government is committed to reducing or holding constant the absolute cost of electricity for consumers in the longer term. Under the proposal, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's options to address electricity rate concerns in the future. (See page 17- Fiscal Pressure)

What are the key steps to deliver this proposal?

- May 11, 2017 - introduce legislation.
- Spring- Summer 2017- Energy to work with IESO, OEB, OPG, OFA and LDCs on the implementation of the Fair Hydro Plan.
- Information postings of proposed regulations.
- June ?? 2017- Energy to bring regulations to TB/MBC.
- June ??, 2017- Energy to bring regulations to LRC/Cabinet.
- July 1st, 2017- the remaining Fair Hydro Plan reductions and programs would take effect. Programs that are not established on this day for technical implementation issues will have benefits that are retroactively applied to customers once program is operational in individual LDCs.

Commented [HT15]: Energy: Pelase refine

How will the changes be communicated?

Commented [HT16]: CO and Energy Comms to review.

On March 2, 2017, the Premier made a high profile announcement of additional relief to reduce electricity costs for Ontarians. Coinciding with this event, there was news releases with backgrounders, a technical briefing of the media, a public education campaign to raise awareness of the rebates and initiatives in place to reduce electricity bills, and an Ontario website that includes all the programs and initiatives that the government is undertaking to reduce electricity costs.

Building on the previous announcements, on May 11, 2017, the Premier is to make a high profile announcement of the plans to introduce the necessary legislation to implement Ontario's Fair Hydro Plan to provide additional relief to reduce electricity costs for Ontarians.

Given the risk identified that the GA financing may have a fiscal impact, communication will need to be clear that the proposed draft legislation meets the legal, accounting and financial requirements to not have a fiscal impact.

Notes and Recommendation from LRC

LRC item direct to Cabinet.

Cabinet Office Analysis

The proposed legislation allows for the implementation of the main elements of Ontario's Fair Hydro Plan (FHP) announced March 2 to provide further rate relief to Ontario electricity ratepayers. The FHP, including the Global Adjustment (GA) smoothing proposal, will provide residential consumers 25% in rate relief on their bills on average in aggregate (including the 8% announced in 2016) ~~for eligible consumers of the Regulated Price Plan (RPP)~~ between July 1, 2017 and April 31, 2018 ("The Fair Adjustment").~~-~~Other eligible farm and small business consumers under the Regulated Price Plan (RPP) would also receive a benefit. Electricity rates would then change by amounts prescribed in the regulations under the bill, with the intention to keep rate increases in line with Consumer Price Index (CPI) between May 1, 2018 and April 30, 2022.

Commented [AP17]: The 25% is an average or for every customer?

Commented [BA18]: Should sentence read "…25% in rate relief on average…"?

Commented [HT19]: Need to add estimate of benefits from the other programs, particularly RRRP as I think the impact, along with GA, is going to be closer to 40 or 50% for some customers

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the summer of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement, and conservation. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the Ministry has identified key priorities, and, Ontario's Fair Hydro Plan combined with new policy or program announcements in the LTEP, will provide the comprehensive future planning perspective for Ontario's energy sector.

Commented [HT20]: Confirm with PO and Energy

1. Refinancing the Global Adjustment

The proposed legislation establishes the framework to defer some of the current GA costs to future ratepayers by recognizing the longer term benefit of these assets to the electricity system ~~(similar to extending and re-financing a mortgage)~~. The methodology is based on the assumption that some generation assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts, and that future ratepayers are expected to continue to be able to utilize and benefit from these assets, and that they will also reduce the need to finance the development of new generation assets in the future.

Many of the contracted generation assets are expected to have useful lives that extend beyond the term of their current financial contracts (typically 20 years). Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives can provide benefits to the electricity system over many years.

According to a legal opinion by former Supreme Court Justice Binnie, the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations leaves the process more susceptible to constitutional challenge and could jeopardize the nature of the clean energy adjustment being a regulatory charge, and risk it being deemed an unlawful tax. The bill has been drafted to mitigate this risk and clearly articulates the desire to fairly attribute intergenerational costs and benefits. In addition the bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. (See page 16- Legal Risk)

Key elements of this component of the bill include:

Fair Adjustment

- July 1, 2017- April 30, 2018- the bill outlines an immediate 25% reduction (on average) in rates for eligible residential consumers in recognition of the investment in clean energy initiatives since 2005. Other RPP eligible consumers would also receive a benefit.
- May 1, 2018- April 30, 2022- the bill allows for rates to be set by regulation, with the intention that rates will increase in line with CPI over this time, consistent with government commitments. (See page 17- Fiscal Pressure)
- Ontario Energy Board (OEB) would calculate appropriate adjustments for "specified consumers".

Clean Energy Adjustment

- Determined by Ontario Power Generation (OPG) as the Financial Services Manager, the clean energy adjustment is the amount that will be recovered from consumers in the future to pay principlale, interest, transaction costs and administrative costs associated with the fair adjustment (regulatory/investment asset).
- Will be subject to true-up process that will reconcile actual amounts collected with expected amounts.
- May 1, 2022- April 30, 2047- to be invoiced to consumers and collected as part of the electricity bills through existing Independent Electricity System Operator (IESO) and Local Distribution Companies (LDC) processes.
- In accordance with the regulations, the OEB to set the rate at which "specified consumers" are invoiced to recover the clean energy adjustment.

Fair Allocation Amount

Commented [AP21]: OPG intends to recover interest costs every year through the Trust in order to pay the interest payments from debt sourced from the capital markets. Thus, the clean energy adjustment charge would start in 2017, not 2022.

Commented [SQ222]: I had this comment initially too but the opposite side to this is that they will simply capitalize those costs and will result in increased financing requirements over the first 4 years.

- The fair allocation amount is calculated by the Financial Services Manager consistent with the principles of the bill.
- Established for the purposes of allocating the costs of the clean energy initiative to provide inter-generational fairness to rate payers; and aligning funding obligations that may be incurred during each reference period (typically every 6 months).
- Provided to the Minister of Energy who will ensure that the information is made public in an appropriate way.
- Principles established in the bill require proper match over time between the costs of providing facilities for clean electricity generation and conservation and the consumers who benefit from these investments in the system. (Page 16- Legal Risk; See page 17- Fiscal Pressure)

Financing Plan

- Prepared by the Financial Services Manager to determine if potential funding obligations should be incurred to acquire an investment interest in accordance with the bill.
- Provided to the Minister Energy who may remove the Financial Services Manager if the Financing Plan is not consistent with the principles of the bill and the Financial Services Manager has been given the opportunity to address the Minister's concerns.
- May be amended as determined by the Financial Services Manager.
- In practical terms, the Financing Plan is intended to show how debt (with varying degrees of incurrence dates, maturities, interest rates) will be used over time.
- The OEB would review the administrative costs of the Financial Services Manager.

Regulatory Asset and Investment Asset

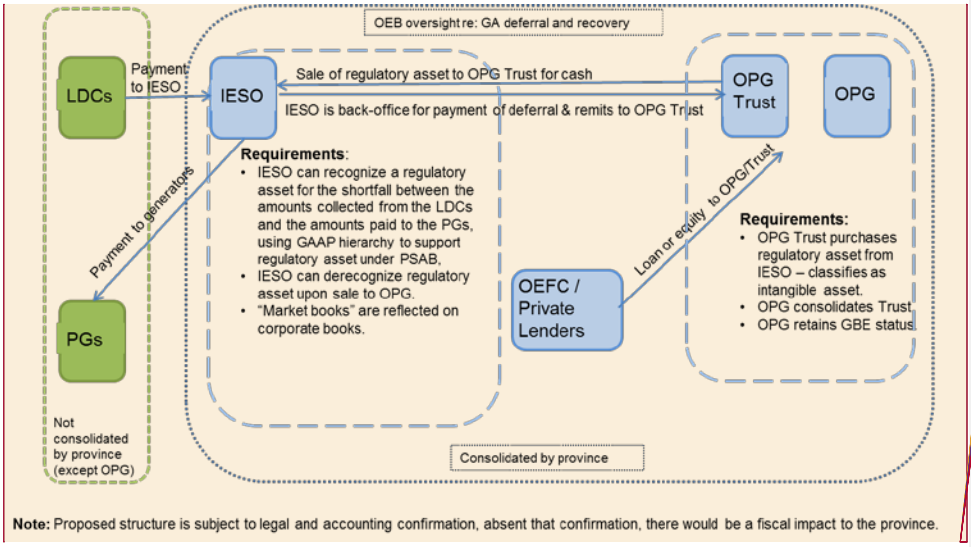
- Regulatory Asset created as IESO incurs a funding shortfall equal to the difference between the rates it receives after the implementation of the Fair Adjustment and the amounts owed under generation and conservation contracts (i.e. the comparison rate minus rates after fair adjustment).
- Subject to OEB approval, IESO would record the funding shortfall as a regulatory asset, as~~.~~ IESO would also have collection rights to recover the funding shortfall, which may be sold. Collection rights are deferred until May 1, 2022.
- The Financing Plan contemplates the Financial Services Manager establishing financing entities (OPG Trust/Special Purpose Vehicle (SPV)) to buy the regulatory asset and the associated rights in exchange for a payment to the IESO. IESO would use the payment to offset the funding shortfall.

Commented [AP23]: Is this a different point from Ernst & Young advice OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.

- This purchase and sale turns the regulatory asset into an investment asset for the investment interest owner. The transfer includes the rights to collect amounts related to the clean energy adjustment in a manner consistent with the bill.
- The investment interest owner may further sell all or a portion of its rights and interests including by dividend or undivided interest, consistent with the Financing Plan. An investment interest owner may also grant a security interest over all or a portion of its right, title and interests to secure a funding obligation.
- After 5 years (May 1, 2022) the IESO has the rights to collect its funding shortfall from ratepayers in the event that a portion of the regulatory asset is not bought and sold. If the regulatory asset is not sold, the IESO would require an alternative source of financing. IESO has requested a credit facility from the Ontario Financing Authority. (See page 17- Fiscal Pressure)
- The rights associated with the investment asset require IESO and LDCs to collect money from rate payers as agent of the investment asset owner.

Crown Undertaking (Guarantee or Backstop)

- The Crown would undertake not to do anything to adversely affect an investment asset or funding obligation, including hinder, impair, prejudice the charging, collection or remittance of the clean energy adjustment.
- The Minister of Energy, with LGIC approval, may enter into agreements for compensation with any person in respect of the bill.
- The Minister of Finance, with LGIC approval, may agree to guarantee and indemnify any debts, obligations, securities or undertakings associated with the investment interest.



The bill establishes a structure in which the IESO records the GA cost recovery deferral ~~is recorded~~ as a regulatory asset (regulated by the OEB), supported at its foundation by the fact that the refinancing of the GA is not a reduction in the GA, but rather a deferral to be collected at a future time ("The Fair Adjustment"). Eligible residential consumers would receive an average 25% reduction in electricity rates from July 1, 2017 to April 30, 2018. Eligible farms and small businesses would also receive a benefit. The IESO may then sell the regulatory asset, at which time it becomes an investment asset. The investment asset owner (OPG Trust/SPV or trust "financing entities") may then further sell or securitize all or part of the regulatory asset to other parties in exchange for a funding obligation.

Under the proposed framework, OPG, acting in its role as the "Financial Services Manager", and following the principles in the bill, would regularly calculate the "Fair Allocation Amount" to ensure a proper match of the allocation of the intergenerational costs and benefits. To recoup the costs associated with the fair adjustment, consumers, starting in May 2022 would be invoiced the "Clean Energy Adjustment" on their electricity bills through existing IESO and LDC processes. The OEB would set the rates at which the clean energy adjustment could be collected.

OPG is planning to create a SPV or Trust to finance the GA. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the SPV/Trust. The variability will likely largely result from the financing of the SPV/Trust, and therefore OPG will have the ability to direct the financing of the Trust and both benefit from its financing strategy and be at risk as a result of it.

OPG Trust/SPV will ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province (See Table 1 on page 4)

Commented [HT24]: Energy: Please provide updated chart with terminology from the legislation embedded.

Commented [JK25]: CEFD/OFA will have an updated version for this provided to Energy.

Commented [RK26R25]: To show potential OFA financing to IESO.

Also, need to show Provincial equity into OPG (not from OEFC).

Commented [HT27]: Section to be compared against the legislation's compendium when available.

Commented [SQ228]: Has this been a plan to define? Annually? Semi-annually? Monthly?

Commented [SQ229]: This should be prefaced with the fact that this risk only arises after OPG would have decided to purchase the Regulatory Asset from IESO, which it is not obligated to do so.

Commented [JK30]: In the latest legislative drafting we have seen.

and external financing through a securitization of the investment asset. The structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG (to offset the interest on debt). ~~The proposed structure is expected to result in: (1) increase in provincial gross debt offset by an equivalent in regulatory assets resulting in no change in net debt, and (2) an increase in interest on debt paid by the province offset by higher earnings from OPG resulting in no impact on annual deficit of the province.~~

The legislation commits the government to backstop the financing if the government were to ever hinder the collection of the clean energy adjustment including revoking or changing the legislation or regulations. In other words, the OPG and its debt holders would have their capital guaranteed and paid for directly by the Province if such a situation were to occur. The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time, but could be as high as $1-1.5B annually [TBC]. It should be noted that the external borrowing by the OPG Trust will be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future.

The proposed structure has been extensively reviewed by KPMG (Energy advisor and IESO auditor), and the firm has provided an accounting opinion confirming the validity of the structure under PSAB [TBC]. This opinion can be made public [TBC] to support the governments rational for the plan. In addition, MAG and Blakes are confident that the structure is constitutionally sound, but that this will depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism. Based on the current analysis there is a moderately high risk that the GA financing will have a fiscal impact on the Province before 2022.

For clarity: the following structural requirements have been met: [TBC]

- IESO requirements :
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB;
  - IESO can derecognize regulatory asset upon sale to OPG;
  - "Market books" are reflected on corporate books; and,
  - OEB to act as regulator.
- OPG requirements:
  - OPG Trust/SPV purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust/SPV; and
  - OPG retains GBE status.

Commented [SQ231]: This is focussed on accounting fiscal impact but cash flow impact is still present. Province would require cash to pay for IOD and unless those higher earnings (re: cash) is divdended back to Province to cover IOD payments, my guess would be that there is a fiscal impact in terms of IOD.

Commented [JK32]: Albeit relatively small compared to the deferred GA amounts.

Commented [HT33]: Based on commentary from implementation meetings. Don't believe this includes estimates of private lender borrowing costs. Please advise

Commented [SQ234]: Furthermore, this would likely be the "additional" impact. The Province's equity injection, which is currently offset by expected higher earnings, would cease to exists resulting in fiscal impact as well. Could result in $2-3B annually. Please confirm.

Commented [HT35]: Energy to confirm

Commented [HT36]: TBC based on receipt of professional opinions etc.

Commented [SQ237]: Currently, I don't believe this is the case for IESO. Will this be the case going forward?

However, despite the fact that the structure has satisfied the legal, fiscal, and accounting requirements outlined in the policy submission, there remain some fundamental risks that the province would need to accept:

- The structure is unique in Canada and possibly the world, which increases the risk or unknown factors impacting its performance. The use of securities mechanisms to address debt is more common in the Unites States, but officials are currently unaware of any example that would compare to the size, complexity, or fluidity of what is proposed;
- Complexity of the structure and length of deferral/recovery increases risk and decrease transparency;
- Government would have no ability to control electricity prices resulting from these changes outside of recourse to the fiscal plan;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work and will have limited control over OPG's direct operations as the Financial Services Manager. While removal of the Financial Services Manager is provided for in the bill, in practice this may prove problematic once the system is operational; and
- Private lenders and rating agencies may disagree with the assessment of the size of the Fair Allocation Amount which would increase the risk of the asset and therefore its saleability. Could decrease amount of rate reduction achievable under this mechanism.

2. Enhancing electricity supports for vulnerable Ontarians and shifting costs from rate payer funded to government funded:

Moving the Ontario Electricity Support Program (OESP) to the tax base:

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The program was launched in January 2016 and has had roughly 30% enrolment. Consistent with Cabinet direction, the program was recently expanded to increase the existing benefit scales by 50% and provide additional credits to more households.

Under the expanded program the basic OESP benefit scale increased from $30-$50 to $45-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $68-$113 a month for eligible consumers.

The proposed bill amends the *Ontario Energy Board Act, 1998* to allow for the program to transition from the rate base to the tax base, and become administered by a Ministry or other entity as may be prescribed. The cost to the fiscal plan would be $186M in 2017/18. The bill provides further amendments designed to allow information sharing between the Ontario Disability Support Program (ODSP) and the entity responsible for OESP. The intention is that this information sharing will allow for the automat enrolment of individuals that are already enrolled under the ODSP, but it is currently unknown to what extent this will significantly impact the enrolment under the program.

Commented [HT38]: ENERGY: do you have any numbers on this point? Were other programs considered other than ODSP? Can we put something in about continuing efforts to improve the enrolment?

RRRP Enhancement (Delivery Charge Relief):

Currently, RRRP is a $241.9M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial. RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province, including Hydro One R2 customers. The delivery charge includes a distribution cost, which can vary across LDCs, and distribution costs are highest for Hydro One R2 and R1 (medium density) customers.

There are also some LDCs with relatively high distribution costs that, when coupled with high consumption patterns, can result in very high bills for consumers (Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma).

In 2016 the OEB made a ruling that all LDCs need to move to fixed distribution charges. The OEB found that fixed distribution charges would establish a fairer way to recover the costs of providing distribution service, and provides greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a distribution rate protection program and the ability to cap the distribution charges of prescribed distributors. The amendments also establish that this program will be funded by the tax base.

The intention is to draft regulations permitted under this section of the bill to Harmonize the fixed distribution rates to the lowest distribution cost of the LDCs mentioned above at $38/month (which is the forecast rate for Northern Ontario Wires). If the costs of another LDC moved above these in the future, a regulation change would be required to for that LDC to receive RRRP. These enhancements are expected to benefit approximately 800,000 customers in Ontario.

Targeted RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level and cost to fiscal plan would be $344M in 2017/18, $243M of which is a transfer of existing programs to the tax base. If the legislation and required regulations are passed, the program would become active as of July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Commented [HT39]: Need new estimate of transferred program cost starting from July 1.

On-reserve First Nations Delivery Credit

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges

associated with transmission and distribution within the context of historical grievances. In this instance, historic grievances relate to lands affected by energy developments.

The proposed bill amends the *Ontario Energy Board Act, 1998* to require the creation of a tax base funded delivery credit program for on-reserve customers with the details as prescribed in the regulations. The intention is to enact regulations that would eliminate the delivery charge for all on-reserve First Nation household customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.

Eligible recipients would be automatically enrolled in the program (~21,500 customers) and receive an average monthly benefit of $85. The program will cost approximately $20M annually and, provided the legislation and regulations are passed, would become effective July 1, 2017. It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Expected Impacts of the Proposal on Electricity bills:

The impact of proposed legislation to an eligible customer's bill in July 2017 is an average 25% decrease (combined with the equivalent amount to the 8% provincial portion of the HST from ORECA effective Jan. 1, 2017) for residential consumers, followed by an increase in price over time. This includes the ~~8%~~ rebate for an equivalent amount to the 8% provincial portion of the HST that came into effect on January 1, 2017. Between May 2018 and April 2022 electricity rates will be set by regulation with the intention that rate increases would be kept in line with CPI. Customers that are eligible for the RRRP enhancements and the OESP will see further reductions in their electricity rates beyond the 25%

Commented [HT40]: ENERGY: Can you provide analysis on the impact for customers that will receive the RRRP etc?

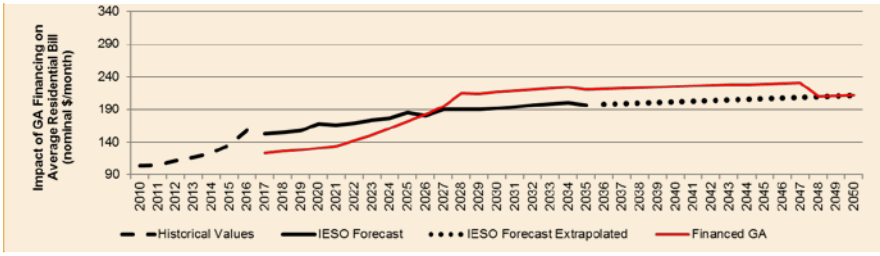
Commented [HT41]: Energy to provide updated chart

Notes: *Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.*

Risks and Considerations:

Future Impacts to Electricity Rates

Borrowing money to defer GA costs for ratepayers would lower costs in the short term but result in substantial debt and higher electricity prices in the future. Based on the GA deferral portion of the plan, electricity prices would increase to about 10% above the actual cost of electricity over the recovery period (peaking at 13%). The proposal may create the expectation that the government is committed to reducing or holding constant the absolute cost of electricity for consumers. Under the proposal, the government would not have the ability to control this portion of electricity rates in the future outside of recourse to the fiscal plan.



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at a maximum of 13% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Commented [HT42]: ENERGY to confirm if this needs to be updated.

The government may be criticized for creating a new debt structure which could be compared to the previous debt retirement charge (DRC). The previous debt retirement charge was removed from residential bills in January 2016 and is scheduled to be removed for remaining customers in April 2018.

Future repayment cost estimates are based on a static assumed interest rate of 5% (actual interest rate may differ), and forecast electricity market conditions and demand levels. Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA financing. This would increase the risk that the province would have to absorb some of the debt in the future. To mitigate against the risk that increased self-generation poses, the bill provides that the Clean Energy Adjustment may not be "set-off". In other words, it would exist as a separate and distinct component of the bill that could not be reduced by methods such as net-metering.

Not all generating assets will continue operations at the end of their contract. If the Fair Allocation Amount is not properly designed, future rate payers will be paying the cost for assets that are no longer in use, which would be unconstitutional-, unless legislatively authorised as a tax (See page 1~~6~~7- Legal Risk). High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators will shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the deferred GA and accumulated interest costs.

Accounting and Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. The structure of the GA deferral was designed to result in an (1) increase in provincial borrowing (2) no

increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on funding to OPG/ OPG Trust from the Province, an increase in interest on debt and an increase on income from OPG will result. The structure is also contingent on the size of the GA deferral that is seen as possible, which, as previously mentioned, increases the likelihood of pressures on the fiscal plan in the near future. (See page 17- Fiscal Pressure)

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust) as an obligation of the Province. Depending on the magnitude of the debt incurred, the Province's borrowing cost may be impacted.

The Ontario Auditor General (OAG) has been briefed on the proposal and has had access to the March 1, 2017 policy submission for the Fair Hydro Plan. While the auditors of OPG and IESO have provided their assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief [TBC] can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount is dependent on increased borrowing. All of the deferral is dependent on increased borrowing. The 18% referenced here is the limit based on review of the contracts and a Eurig assessment and also includes the rebate for an amount equivalent to the 8% provincial portion of the HST~~reduction~~ that was already provided.

Commented [HT43]: To be updated when Navigant prelim report and OPG analysis complete

Legal Risk – constitutionality of financing the GA

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing a portion of the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

Former Supreme Court Justice Binnie has provided legal analysis of this proposal, stating that the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations could jeopardize the nature of this being a regulatory charge.

A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. If the government fails to establish that the relevant electricity generating assets will continue to

perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities. By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

The bill has been drafted to mitigate the constitutional risk of the proposal and clearly articulates the desire to balance the costs and benefits of assets across generations. The bill includes provisions to allow for the balance of the legislation to remain in effect if any particular clause or section is struck down by a court. In addition, external consultant Navigant has provided an interim report on the costs and benefits of the long lived assets which supports the previous conclusions regarding the size of the GA deferral that would be supportable. This is further supported by the conclusions of OPG's independent analysis of the question.

Commented [HT44]: TBC

Commented [HT45]: ENERGY please confirm. Need to clearly articulate any differences that may exist between these analyses

MAG and Blakes are confident that the structure is constitutionally sound, but, as identified above, that this will highly depend on the size of the GA deferral attempted. MAG is confident that the initial fair adjustment is achievable and justifiable, but that this risk increases in the proceeding four years, and may impact the ability to fulfill the commitment to keep increase in line with CPI by this mechanism.

In addition, the structure of the GA refinancing means that the infrastructure included as part of the clean energy adjustment (i.e. amortized over 30 instead of 20 years) will need to be in service over the entire 30 year amortization period or provide benefits to the system in some way over the whole period. In practice this may mean that the government will have limited ability to alter the generation mixture included under the clean energy adjustment, including natural gas generation facilities, which may at some point be seen as inconsistent with the province's commitments to reduce greenhouse gasses. This risk has been mitigated in the bill, by allowing for prescribed natural gas generation contracts to be excluded from the clean energy benefit calculation.

Commented [HT46]: Needs ground truthing

Fiscal Pressure

Commented [HT47]: TBS please review closely

This proposal aligns with the 2017 Budget fiscal plan, but involves significant ongoing risks. The proposal does not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections in this proposal are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant.
- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government has commissioned external opinions on the legal, fiscal, and accounting requirements. Energy's advisor and IESO auditor, KPMG, has provided an accounting opinion that the principles of the structure are sound, and this opinion can be released publicly when desired. This opinion may not change the likelihood of a contrary opinion by the OAG, but does provide a tool for government to point to in justifying its decisions.

Commented [HT48]: TBC

There is also a risk that credit rating agencies and the market may take an alternate view as to the size of the GA deferral that is possible before becoming unconstitutional. If the Fair Adjustment exceeds this analysis, it may increase the perceived risk of the investment asset and therefore its financeability / saleability, which would result in reduced market uptake and reduce the amount of near term rate reduction that would be achievable under the plan. This is why the increases in electricity rates between May 2018 and April 2022 are to be set by regulation as opposed to legislating that they increase by CPI. It may not be possible to legally hold the rate reductions to increase by CPI, and if the government wanted to hold to this commitment, the difference would need to come out of the fiscal plan, which has not been forecasted. Each percentage point of reduction that the structure cannot provide would result in an approximate $150M [TBC] cost to the tax base. This has not been provided for in the bill, but it is likely that the government will receive questioning along these lines and why the previously committed CPI increases are not explicitly stated in the bill.

Commented [HT49]: Needs ground truthing

Note that if the IESO is not able to sell the regulatory asset (i.e., the OPG SPV is unable to get financing to purchase it), then the IESO would require financing from an alternative source. The IESO has requested a backstop credit facility from the Ontario Financing Authority. This would be associated with a fiscal impact risk.

There may be also some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Legislative Officers

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the announcement of this suite of initiatives. The

Commented [HT50]: Energy to update.

OAG was provided copies of the Cabinet Submission seeking policy approval for Ontario's Fair Hydro Plan and has been briefed by officials from the Ministry of Energy. The OAG will have opportunities to publicly state her views through the Public Accounts committee in the summer of 2018 and in her pre-election report.

The Financial Accountability Officer (FAO) has not been consulted on this proposal and is expected to have an opinion on how this proposal may impact the state of the province's finances.

Commented [HT51]: Energy to update from discussion with FAO

OPG Mechanism

- Accountability
  - Bill attempts to balance the independence of the OPG trust with regulatory oversight and the market's need for certainty in recovering the GA financing that it provides.
  - Accountability to the government or the public, amount of government control of the entity, including future rate increases.

Commented [HT52]: Needs to be recast given limitation on control after initiated

- New structure
  - Structure is complex, involving:
    - IESO as originator of the regulated asset and responsible for flow of funds;
    - OEB as regulator of the new mechanism;
    - OPG responsible for financing and managing the mechanism; and
    - The Province providing ongoing equity capital infusions to OPG and backstop.
  - Addition of financial agency to current operational obligations of OPG – not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, could possibly dilute OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).
  - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise would be required.
  - Connection to BPS compensation framework/lack of national comparator.
  - Unknown transaction, admin, consultant costs. OEB would review OPG's cost as the Financial Services Manager
- Debt
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.

  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates

- Public perception/reaction (could be seen as similar to the process preparing Hydro One for IPO).

Program Design and Implementation

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake)
- The OESP matrix no longer follows the Low Income Measure (LIM) which creates inconsistencies between how programs are applied and may put pressure other provincial programs to increase funding amounts.

Benefits for all Consumer Classes

The Fair Hydro Plan includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need. It is likely that the government will be criticized for providing benefits to those who may not be in need (e.g., wealthy cottage communities, etc.).

Stakeholder Considerations:

General public (including residential and small businesses) – Likely support a proposal that is projected to provide up to 25% in rate relief (including the 8% announced in 2016) and other targeted relief for vulnerable Ontarians, but likely to question the longer term implications. Some individuals and organizations will perceive the GA smoothing as unduly burdening future generations. Ability of the public to understand current and recent changes will heavily depend on government communications.

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable". Will likely respond positively to the recent changes to expand ICI eligibility to some manufacturing and greenhouse Class B customers, but may be more neutral the remainder of the initiatives.

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an

expectation government is going to take specific action to mitigate their increases due to Cap & Trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. **Note:** Funding electricity support programs through the tax-base rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Commented [HT53]: Confirm work still ongoing on this piece

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Métis, non-status, First Nations without reserve land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – May react negatively towards any price relief that is not directly tied to energy conservation. May criticize the inclusion of natural gas electricity generation as part of the "Clean Energy Adjustment."

Solar PV sector – May react negatively to price relief as it can be seen to undercut the affordability of distributed renewable generation assets such as solar PV, and undermines the economic arguments behind net metering.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Delivery:

If passed, the legislation will enable the price mitigation measures to begin to take effect on July 1, 2017. The 2017 LTEP will be released to the public in the summer2017 and would reinforce/integrate with Ontario's Fair Hydro Plan. Regulations are required under the major components of the legislation in order to fully implement the initiative and clarify program details.

Commented [HT54]: TBC

1. Refinancing Global Adjustment assets in order to defer ratepayer costs / Mechanism to defer GA costs

Consumers will see an immediate reduction of their electricity bills as of July 1, 2017. The establishment of the regulatory asset and purchase by OPG is expected to take three to six months to implement following the introduction of enabling legislation. The IESO has requested a credit facility from the OFA to provide an interim source of financing.

Commented [HT55]: This needs more elaboration and confirmation. Last discussion I was part of on this point hadn't landed exactly how long it is expected that the IESO retains the Reg Asset for before sale to OPG.

2. Enhancing Social and Conservation Programs

OESP Enhancements

New OESP program details would require TB/MBC approval.

Changes to regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modelled after processes used for the OREC (8% rebate). The amendments made in this bill allow for a transition period where the program continues to draw on the existing IESO variance account until the account can no longer maintain the program. IESO is required to notify the Ministry of Energy when it expects the variance account to be depleted (likely sometime in the fall). At this time

The proposed changes will take time to implement as they would require changes to the central system and the LDCs' billing systems. The OEB and their central service provider will need to work with LDCs, MOF, and the CRA on the changes to this program (delivery mechanism, funding source, application system, eligibility).

Commented [HT56]: Requires update

RRRP Enhancement

Regulations would be required to establish the details of the program. OEB estimates that the implementation would take at least six months after finalizing regulations. For this reason it is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st which will put an immediate pressure on the OEB and LDCs as implementation is required no later than October 1, 2017. A mechanism will need to be created to ensure that all parties are aligned in the yearly forecasting and costing of the program.

On-Reserve First Nations Delivery Credit

The OEB would need to work with the LDCs to identify the eligible on-reserve consumers. A communications plan could include public release of the OEB report and a commitment to working with the LDCs on implementation details.

It is possible that for technical reasons not all LDCs will be able to implement the changes required under the program in time for the July 1 effective date. In these cases, the bill dictates that, once the changes have been made (required by October 1, 2017 at the latest), the LDC would provide a lump sum credit to customers that would otherwise have been eligible for benefits under the program starting July 1st.

Once available, the rebate would appear on customer's electricity bills as a reduction in, or credit for, their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

Linkages:

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in summer-fall 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The Ontario Rebate for Electricity for Electricity Consumers Act, 2016, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) was a five-year legislated program put in place as a broad-based (RPP-eligible), transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB expired on December 31, 2015.

Commented [RK57]: TBC

Debt Retirement Charge – On January 1, 2016 the government ended the electricity Debt Retirement Charge (DRC) on residential users, earlier than planned, and put in place the low-income targeted OESP, effective 2016. For all other consumers, the Electricity Act was amended so that the DRC is ~~schedul~~legislated to be removed ~~by~~ April 1, 2018.

Industrial Conservation Initiative – Ministry of Energy program implemented in January 2011 to help large industrial consumers reduce their electricity costs by ~~shirfitn~~reducing electricity consumption ~~away from~~ in peak periods. As part of the Fair Hydro Plan, ICI eligibility was recently expanded to allow for the participation of the manufacturing and greenhouse sectors with an average month peak demand greater than 500 kilowatts (kW) and less than or equal to 1 megawatt (MW). ICI benefits all electricity consumers by decreasing the need for costly peaking generation over the long term.

Affordability Fund – approved as part of Ontario's Fair Hydro Plan, and under development, the Affordability Fund is intended to expand access to conservation funding to targeted consumers that do not currently qualify as low-income for the purposes of the Home Assistance Program (HAP).

Commented [HT58]: insert

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was exceeded~~met~~ by the January 2017 ~~8%~~ rebate amount equal to the 8% provincial portion of the HST.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been fully addressed, though the two recent expansions to the ICI provides for significant potential savings. **Note:** Funding electricity support programs through the tax-base rather than the rate base will also provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs. The Green Ontario Fund (GreenON)- is tasked to develop programs and services designed to:

- Reduce greenhouse gas emissions from housing from buildings and the production of goods; and
- Increase uptake and overcome market barriers of low-carbon technologies and processes.

The CCAP committed to "consider options for legislation/regulation change that lessen the impact on residential tenants of increased energy costs from cap and trade". As part of the review of the Residential Tenancies Act, the Ministry of Housing is working on a proposal that will address that commitment. The proposal is expected to come to Cabinet in spring 2017.

CABINET BRIEFING NOTE AND LRC RECOMMENDATION

Energy

DRAFT Financing Global Adjustment

Commented [HT1]: Name as in EVista- Will update as item is updated.

Cabinet (info)	TB/MBC	Cabinet	Announcement	TB/MBC	Cabinet	Introduction
Feb 15, 2017	March 1, 2017	March 1, 2017	March 2, 2017	May 9, 2017	May 10, 2017	May 11, 2017

Summary of Proposal

The proposed legislation contains a variance from Cabinet direction, which is detailed in the ministry's variance memo and within this note.

Context for Decision:

This proposal follows Cabinet direction to the Ministry of Energy to take the necessary steps to implement electricity price mitigation initiatives that would provide additional rate relief to Ontario electricity ratepayers.

The proposed legislation enables approaches to fairly allocate the costs of the Global Adjustment (GA) amongst current and future electricity rate payers, and help the most vulnerable Ontarians through enhancements to electricity support programs through ~~tax base~~government funding. To fully implement the initiative, the Ministry of Energy will be seeking future approvals for regulations identified in the proposed bill, while working to maintain existing public policy objectives such as~~:~~ maintaining a reliable electricity system, Ontario's commitment to reducing the impacts of climate change and commitment to achieve greenhouse gas (GHG) reduction targets.

The proposed legislation:

1. Establishes a framework to finance a portion of the GA costs in order to reduce costs for ratepayers in the near term and spread the costs of the GA more fairly across ratepayers between July 1, 2017 and April 30, 2047:
   - July 1, 2017 to April 20, 2018, reduces after-tax electricity costs for specified consumers by 25%.
   - May, 1 2018 to April 31, 2022, electricity rates will be set by Order in Council (OIC) with the intention to keep increases in line with the Consumer Price Index (CPI) (See page 17- Fiscal Pressure)
   - May 1, 2022 to April 30, 2047, electricity rates will increase at a pace that ensures recovery of the accumulated debt, interest costs and

Commented [RK2]: 30?

administrative costs, around 10% of total electricity costs. (See page 14- Future Impacts to Electricity Rates)

Commented [HT3]: TBC by Energy

- Through the bill and subsequent amendments to the *Electricity Act, 1998* and the *Ontario Energy Board Act, 1998, e*xpanding the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO), to provide for appropriate oversight, putting in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the deferred GA costs. (See page 19- OPG Mechanism)

2. Expands electricity support programs for the most vulnerable consumers and moves program costs from the rate base to the tax base. The bill amends the *Ontario Energy Board Act, 1998* to:
   - ~~M~~move the recently expanded Ontario Electricity Support Program (OESP) to ~~the tax base~~be government funded, transition the program to be administered by the Crown, and to enable information exchange between the Ontario Disability Support Program to potentially allow for automatic enrolment procedures to be established;
   - ~~Amends the Ontario Energy Board Act, 1998 to e~~enable a broadening of the Rural or Remote Electricity Rate Protection (RRRP), including harmonizing distribution costs for customers with the highest distribution rates and moving the program to be government funded~~the tax base~~; and,
   - ~~Amends the *Ontario Energy Board Act, 1998* to~~ require the establishment of a government funded program to provide a delivery credit to prescribed on reserve customers.

Terms you need to know

- **Global Adjustment (GA) –** The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price, helping to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, fixed generation costs, such as renewables, gas and nuclear contracts, as well as the cost of conservation and demand management programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:

  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable, per unit charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable, per unit charge and a fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - Line Loss: The costs to recover electricity that is lost as heat when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service types are determined by the kind of electricity service as well as by density – how many customers there are in the area and the number of customers per kilometre of line. The more customers there are in the area, the lower the cost to serve. R1 customers are considered 'medium density' customers and R2 are considered 'low density customers.'
- **Ontario Power Generation (OPG) –** A business corporation owned by the ~~p~~Province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to comment on various items.
- **Independent Electricity System Operator (IESO) –** An independent corporation and agency of the Ministry of Energy that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Class A Consumer –** Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A eligibility was lowered to 1MW for all consumer types. In April 2017, the threshold for Class A eligibility for manufacturing and certain industries, including greenhouses, was lowered to 500 kilowatts.
- **Non-RPP Class B Consumer –** Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a

volumetric rate applied to all electricity consumption. Class B consumers include those Class A eligible that choose not to become Class A.

- **Special Purpose Vehicle (SPV) –**
- **Security Interest –**

Commented [HT4]: TBS: Do you have standard language that you would recommend using?

Why does Ontario need these changes? Why now?

Addressing rising electricity prices is among the highest priorities for Ontarians. There has been increased media attention and public pressure for the government to provide ratepayer relief. On March 2, 2017, the Ontario government announced its electricity rate mitigation package, Ontario's Fair Hydro Plan, which included the initiatives contained in the proposed legislation. The government has committed to implement further rate relief measures by the summer 2017.

What is the expected cost to government?

The total cost of the proposal is $4.1B [TBC] in 2017/18, $1,599M funded through the fiscal plan and $2.5B to be funded through the electricity rate base.

Commented [HT5]: TBC as this includes the equity injection.

Commented [BA6]: Is it clear here what is mean by "cost"? Fiscal cost plus higher debt.

Commented [JK7]: TBS, pls. check this figure. I believe there is an updated figure ($1,438?).

TABLE 1: Cost Impact ($M)	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	499	753	829	892
GA Financing	2,534	2,668	2,942	3,420
OPG Loan / Province's Capital Injection to OPG Share Purchase (i.e. equity injection or debt)	1,100	?	?	?
Cumulative Total	4,133	3,421	3,771	4,312

Commented [BA8]: Maybe should avoid calling this a loan

Commented [RK9]: Should this be just assumed att 44% of the GA deferral amount?

Commented [BA10]: May be confusing to total these amounts. 1st row is a fiscal impact while equity injection represents increase in debt but no fiscal impact.

Commented [JK11]: Also, 2.5bn in 2017-18 includes the Province's capital injection

Commented [HT12]: TBC

The proposed bill identifies OPG as the Financial Services Manager and would therefore take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from the IESO through OPG Trust. ~~The~~ OPG would finance these purchases through a combination of an equity investment by the Province ($1.1 B in 2017-18; See Table 1) and external private sector financing. The structure ~~has been designed to~~would increase gross debt of the Province (to finance the equity injection in OPG), ~~increase interest on debt related to that external debt,~~ increase net investment in OPG (so no net debt impact), increase interest on debt related to that external debt, and increase earnings of OPG to offset the increase in interest costs. ~~The equity investment has been structured so that the underlying regulatory asset will offset the additional debt to not impact the province's net debt.~~

Commented [BA13]: Do we need to distinguish between OPG as financial service manager and OPG Trust which would purchase regulatory assets?

The estimate for the combined impact of the non-Global Adjustment initiatives that would begin in 2017/18 is expected to be $499M in 2017/18, growing to $753M in 2018/19 and rising. This represent~~s~~ed an additional pressure ~~on~~ that has been incorporated into the 2017 Budget's fiscal~~the~~ plan. These estimates are based on variable inputs such as program uptake and future energy consumption of various consumer groups, and are therefore subject to change.

Commented [BA14]: Additional to? As proposed this is the only pressure on the fiscal plan. The GA financing as proposed has no impact on the fiscal plan but does impact debt.

TABLE 2: Fiscal Impact ($M)	17-18	18-19	19-20	20-21
RRRP Enhancements*	344	472	484	497
OESP Enhancements	140	261	325	375
First Nations On-Reserve Delivery Credit	15	20	20	20
Total	499**	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate base.
****Note**: Value adjusted from $665 million to reflect July 2017 implementation.
