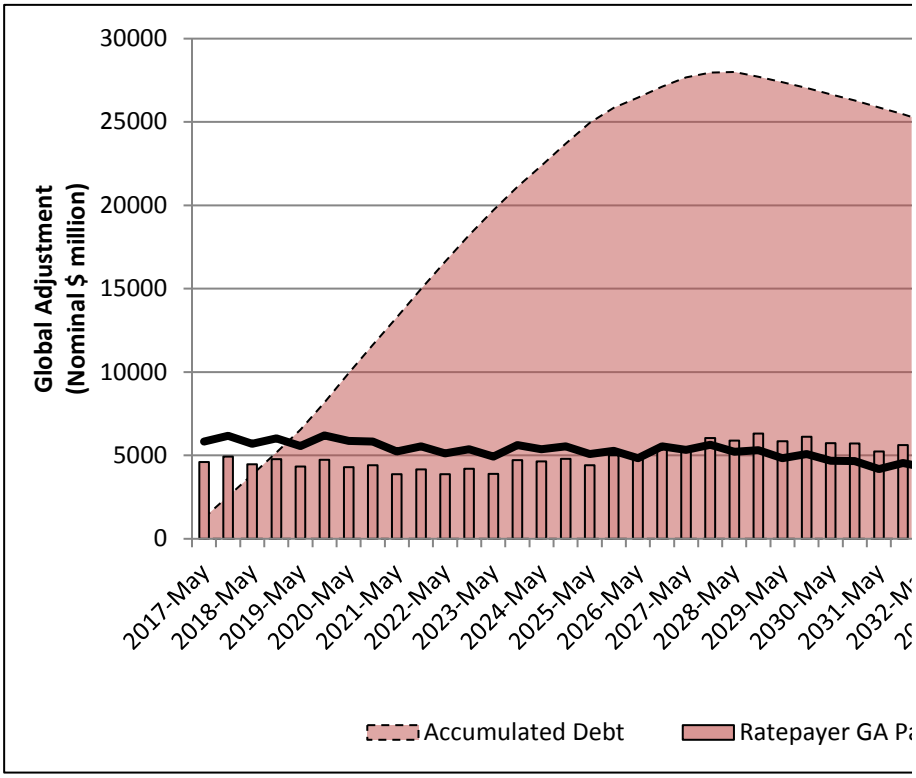
Change in bill with OFHP relative to bill without OFHP in 2017
YoY Increase in bill with OFHP 2018-2021
YoY Increase in bill with OFHP 2022+
Maximum increase in bill with OFHP above bill without OFHP in any year
Year to pay off debt
Class to which savings/costs accrue
Annual interest rate (nominal)
Amount of debt in November of final year ($ million, should be zero)
Maximum debt ($ million)
Total Interest Cost ($ million)



Global Impacts
$ nominal million
IESO GA Forecast + Extrapolation
Ratepayer GA Payment
Accumulated Debt
Interest on debt in previous period

Residential Bills (assuming 750 kWh/month)
nominal $/month
No OFHP
With 8% Rebate Only
With OFHP (GA financing, rebate, tax-basing)
Change from bill with no OFHP

Change from bill with no OFHP but with 8% rebate
Period-over-period change in bill with OFHP

I noted below less focus on explanation of models, but I think that probably is a starting point. Ultimately I think one has to talk about risk with framework of assumption embodied in the models.

Fyi, see below. I guess the focus is less on an explanation/critique of the energy/OPG models and more on program risks. So let's think about how to organize that. See below for some risks that come to mind. Let's 1) start with the filling out list, 2) think if there is a sensible way to organize the risks 3) brief description of risk and implications (quantifying sensitivities if possible)

1. Risk due to unanticipated changes in electricity demand (e.g. move to off-grid, demand lower than projected)
2. Interest rate risks
3. Risks related to delivering on FHP mandate (25% reduction, increased constrained to inflation)
4. Potential risks related to Trust purchasing/not purchasing assets per plan
5. Potential risk to Province w.r.t. recovering cost of equity
6. Potential risk if capital markets underfund
7. Fiscal risk if issues with proposed structure and provincial funding must be expensed
8. Risks associated with off ramp if program is wound down

Can you guys work together on this over the next couple of days. I'd like to meet Friday to discuss. Take a look at Didem's email to Energy as well for other possible risk factors that they may be

interested in.

I will set up a meeting with Didem for next week (probably Wednesday-Friday sometime).

Thanks
Bruno

Hi John, Hi Bruno!

So sorry for the delay in getting back to you.

Now that the direction/approach has been approved and announced, our intent is not to question the current construct or the policy decision that has been made, rather it is for us to collectively work together to identify potential financial risks and to create a risk-based outlook that would allow the government to proactively manage these risks.

I am attaching the email we sent to energy as well, as it provides a list of questions we have already shared with them. By no means an exhaustive list, these questions we were intended to initiate a dialogue and start building that risk based outlook.

Clearly lots of work ahead. Looking forward to working with you, and benefitting from your insights and advice on this journey.

Should we set up some time for next week?

Cheers,
Didem

Hi Didem,

Let's aim for a sit down session here at the OFA early next week.

If you can give us a sense of the work that you're doing and your objectives, that'd be helpful. This week, we're all hands on deck with the Document but early next week we're hoping to connect.

John

Hi John, Bruno,

Please review and work with Didem and TBS on this.

Thanks,
Ron

Hi Ron!

Long time, no see… Hope all is well with you and your family (both at home and at the OFA!)

Ron, today we received two models from Energy re: GA Smoothing. Here is:

The model from the Ministry of Energy

The model from the OPG

I am not sure if you have already received these or not (and my apologies if this is a duplicate arrival in your inbox). Having said that, we wanted to make sure that you and your team had a chance to review these as well. As you know, we have been asked to review the model and the assumptions, do some sensitivity analysis and scenario testing to create a risk based outlook. Hope your team can be partners in the process.

We hope to have a discussion amongst ourselves tomorrow to discuss our early observations and questions. Then the plan is to meet and work with Energy.

Can you please let us know who from your team we should include in these discussion?

Cheers,
Didem

Subject: Financial Model and the Risk Based Outlook
Date: Tuesday, April 18, 2017 16:55:03

Dear Tim and Justin,

First of all, let me say thank you once again for making time for our call on April 3, 2017 and for giving us a high level overview of the model that was used to develop the cost estimates that were included in the ministry's March submission. Late last week, we received a copy of the model and the one that developed by OPG. Seeing the models and details included in the spreadsheets have been very helpful. Thank you for the part you have played in getting these spreadsheets over to us.

As mentioned during our call, our desire to better understand the model, the assumptions and financial impacts is not intended to question the current construct or the policy decision that has been made, rather it is for us to collectively work together to identify potential financial risks and to create a risk-based outlook that would allow the government to proactively manage these risks.

With that in mind, we wanted to see if we can get together to talk about the models in detail. We have outlined some questions below, which can hopefully help serve as a guide for our discussions. Having said that, given you are so much closer to this file than we are, if there is anything we may have missed, please feel to let us know/add it to the list of discussion items.

1. **Understanding the Assumptions:**
    - What are the assumptions included in the base case scenario – explicitly and implicitly?
    - Would it be possible to breakdown the assumptions into categories:
        - Exogenous variables (like exchange rates and interest rates, which will the government has no control over and has to take as given)
        - Policy parameters being introduced as part of this package (like % increases allowed in any given period, etc.)
        - Endogenous variables (electricity usage patterns, natural gas-electricity substitution, etc.) which may or will change over time, but can be impacted through other measures.
    - The OPG deck had included the sensitivity analysis of a number of the key variables. Have there been any runs/scenarios testes to see how the overall impacts would change if a number of the variables change at the same time? Like best case, worst case scenarios?
    - What are variables in the previous (8% proposal) that have included this model? How could the observed variances in the previous proposal manifest within the current proposal and what actions are planned to mitigate this risk?
    - Are there elements or assumptions that have been excluded from the model (e.g. changing population demographics and associated usage patterns, etc.). Do we have a rough sense of what potential carry on risks from excluding what is out-of-scope?

2. Understanding the Impact of the Model:

- We appreciate that the model is based on the average Toronto Hydro customer, and that the rebate/impact will be 25% on the average customer (with any given customers rebate being different given their consumption, location/distributor, etc.). Has there been any analysis done on:
  i. what these differentiated impacts may be (based on different usage patterns, different geographies (urban/rural), at the sub-population level?
  ii. how the financial requirements may go up and down based on different users and their usage patterns? How will that risk/fluctuations be managed? How will these financial impacts be distributed among the government, the entity and the rate payers?
- Based on our discussion, we understand that you had made the simplifying assumption that interest is not paid through the smoothing period, and rolled into the debt balance. If our understanding of the OPG model is accurate, they are assuming that interest payments are made along the way. Given they are carrying the same debt ceiling number and a very similar trajectory, should we assume that they are deferring/smoothing the assets in slightly different way?

3. Understanding the Impact of the Baseline:

Given all the financial impacts are calculated from the black line, we would greatly appreciate having a better understanding of the base (black line) – IESO forecast (2016 actual - 2035). Our understanding is that the baseline model already includes:

i. the following cost components: distribution, transmission, regulatory charges, DRC, Commodity, HST, and the 8% rebate

ii. the following factors/considerations:

- Cancellation of LRP (large renewable procurement) II
- Cancellation of EFW (energy from waste)
- Expansion of ICI (Industrial Conservations Initiatives
- Each component changes in a non-linear manner per year over time up to 2035; assumptions/factors to inform these changes unknown

- "Commodity" and "Distribution" are the two biggest components and hence price drivers.
- Looking at the factors with the most significant changes:
  - Does it already take into account the transmission assets reaching retirement age?
  - Does it already take into account other investment decisions in conservation, generation and transmission?
- Other external factors: climate change; technology disruption; continually decreasing demand and over-supply
  - IESO forecasts Ontario's base load generation from 215-2020 to exceed demand by 42.3 million MWh
  - When we sell to other jurisdictions at loss ($32.6M in 2014; selling at loss

since 2006), how does it affect the bill?

- 2035-2050: straight line extrapolation only; any changes in the above factors would significantly impact the typical bill?

So sorry for the rather lengthy email. Hope we can meet to discuss in greater detail. We would be happy to set something up, if you are agreeable.

Thank you,
Didem

Subject: RE: Equity Financing

Hi,

Energy has agreed to record these additional purchases of OPG shares on its financials.

In terms of the appropriation for 2017-18, Energy proposes the following (subject to input from others):

- The total debt forecast for the year starting May 1 2017 ending April 30 2018 is $2.5B including interest. Taking one month off that to align with the province's fiscal year gives $2.3B; of which up to 49% is anticipated to be financed via equity injections. This results in an equity injection requirement of approximately $1.1B for this fiscal year.

- Proposed forecasting buffer:

    - OEB has only allocated 50% of the benefit until the legislation passes, which may reduce the requirement for May and June. However, given that we don't know with certainty how the OEB will reassess RPP, we propose to leave the appropriated equity amount at $1.1B.
    - OPG also plans to borrow a small percentage of the 49% from the market. This amount has not yet been finalized, but could represent up to 5% of the total financing requirement. Given this uncertainty, we would suggest maintaining the request for $1.1B.
    - Both of these elements also provide a buffer against other forecasting uncertainties.

We are working with ENE staff to develop a TB submission that will incorporate this request. In the meantime, we are happy to chat if you have questions.

Thanks,
Scott

Agreed. OPG Trust has not yet been created.

The operating asset appropriation will be for the Ministry that owns the new shares in OPG. Scott Nelms - assuming that will Energy. Can you confirm.

The amount needs to be based on 50% of the expected deferral for the 2017-18 year. IESO may need to weigh in on that.

Cindy

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

Hi, I've highlighted on page one of the attached note what I was referring during the teleconference around financing the trust (51%, 49%).

Any buffer being added to the 49% needs to be explicitly identified in the Treasury Board submission – it is a decision point for TB to include a buffer. To what degree does the $2.5B have a buffer based on the level of precision in the estimate should also be covered.

The TB submission needs to specify the rationale for the ask (explicitly identifying any buffer amounts being added), and the requested minute.

James

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV)referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

Formatted: Highlight

Commented [JK1]: Check with SIFB or CMD on the right terminology.

Commented [FC2R1]: To me this is part of the terms and conditions

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
    - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.
- Longer term debt will be issued as soon as possible, subject to market timing constraints.

Commented [JK3]: Did I get this right?

Commented [FC4]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
- The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].

- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK5]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK6]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

Commented [FC7]: Not quarterly?

Commented [JK8R7]: Monthly now.

Commented [FC9]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ210]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
    - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
    - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Fyi.

Shajee, take a look at the 50% until legislation passes comment. Not sure if it relates to what we were looking at with OEB's RPP report.

Subject: RE: Equity Financing

Hi,

Energy has agreed to record these additional purchases of OPG shares on its financials.

In terms of the appropriation for 2017-18, Energy proposes the following (subject to input from others):

- The total debt forecast for the year starting May 1 2017 ending April 30 2018 is $2.5B including interest. Taking one month off that to align with the province's fiscal year gives $2.3B; of which up to 49% is anticipated to be financed via equity injections. This results in an equity injection requirement of approximately $1.1B for this fiscal year.

- Proposed forecasting buffer:

    - OEB has only allocated 50% of the benefit until the legislation passes, which may reduce the requirement for May and June. However, given that we don't know with

certainty how the OEB will reassess RPP, we propose to leave the appropriated equity amount at $1.1B.

- OPG also plans to borrow a small percentage of the 49% from the market. This amount has not yet been finalized, but could represent up to 5% of the total financing requirement. Given this uncertainty, we would suggest maintaining the request for $1.1B.
- Both of these elements also provide a buffer against other forecasting uncertainties.

We are working with ENE staff to develop a TB submission that will incorporate this request. In the meantime, we are happy to chat if you have questions.

Thanks,
Scott

Agreed. OPG Trust has not yet been created.

The operating asset appropriation will be for the Ministry that owns the new shares in OPG. Scott Nelms - assuming that will Energy. Can you confirm.

The amount needs to be based on 50% of the expected deferral for the 2017-18 year. IESO may need to weigh in on that.

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

Hi Francisco/Darren

Attached is latest equity injection note which pulls together the various discussions to date, including the note that you had sent to us previously regarding the H1 process. If you could review, perhaps we could discuss later this afternoon as your time permits. I think next step would be to review with folks upstairs who are on the equity working group (Carlos, Mike Manning, Jim Devine).

Thanks
Bruno

GA FINANCING – EQUITY INJECTION OVERVIEW

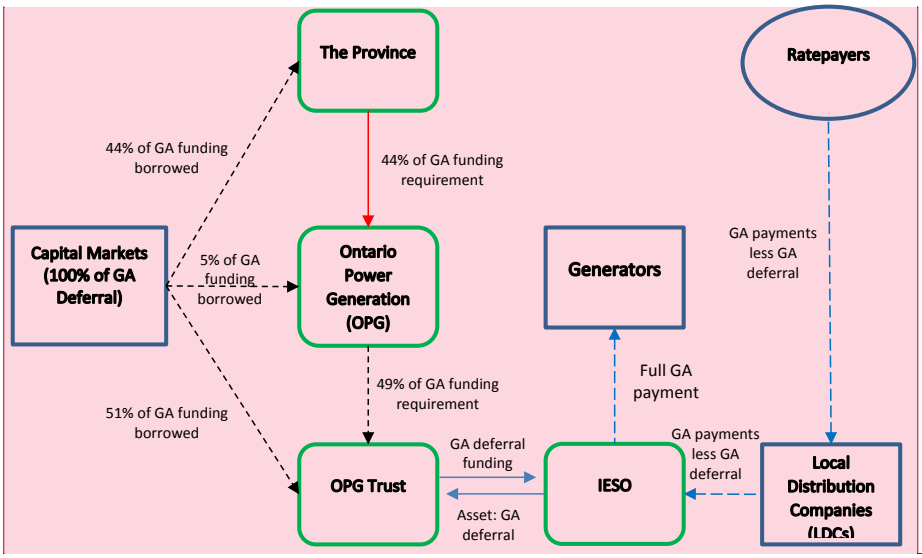
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC2]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK3]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS4]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

    - ~~Note that as with the Hydro One capital contribution, this capital contribution would be reflected on the Province's balance sheet (being and exchange of assets – cash for shares) rather than the statement of operations and would, therefore, not result in a fiscal impact to the Province~~

Commented [JK5]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC6R5]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

Commented [FC7]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing, that would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or

otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Hi John

Regarding meeting this afternoon: In our meeting with SIFB we followed up on a couple of issues but didn't go through SIFB edits individually. In 1st attachment is updated note where I accepted the SIFB edits that I thought were straightforward. 2nd attachment is with all SIFB edits/comments.

Let me know if you want to circulate this version for meeting this afternoon or other?

Subject: Equity Injection Note

Hi Francisco/Darren

Attached is latest equity injection note which pulls together the various discussions to date, including the note that you had sent to us previously regarding the H1 process. If you could review, perhaps we could discuss later this afternoon as your time permits. I think next step would be to review with folks upstairs who are on the equity working group (Carlos, Mike Manning, Jim Devine).

Thanks
Bruno

GA FINANCING – EQUITY INJECTION OVERVIEW

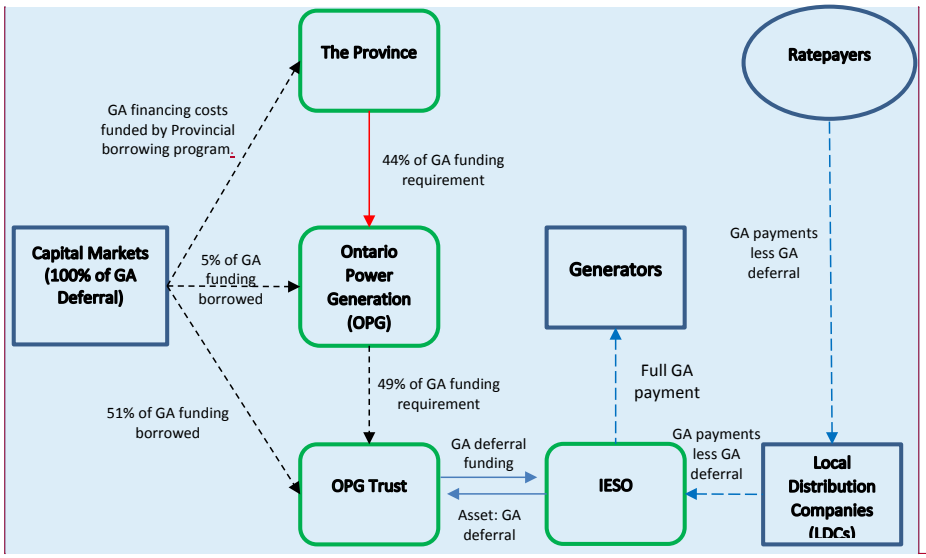
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

Commented [BA2R1]: See rewording

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC3]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK4]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS5]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by

Commented [BA6]: Wouldn't balance sheet be public as well?

Commented [JK7]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC8R7]: That is correct.

Commented [FC9]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing. That would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

GA FINANCING – EQUITY INJECTION OVERVIEW

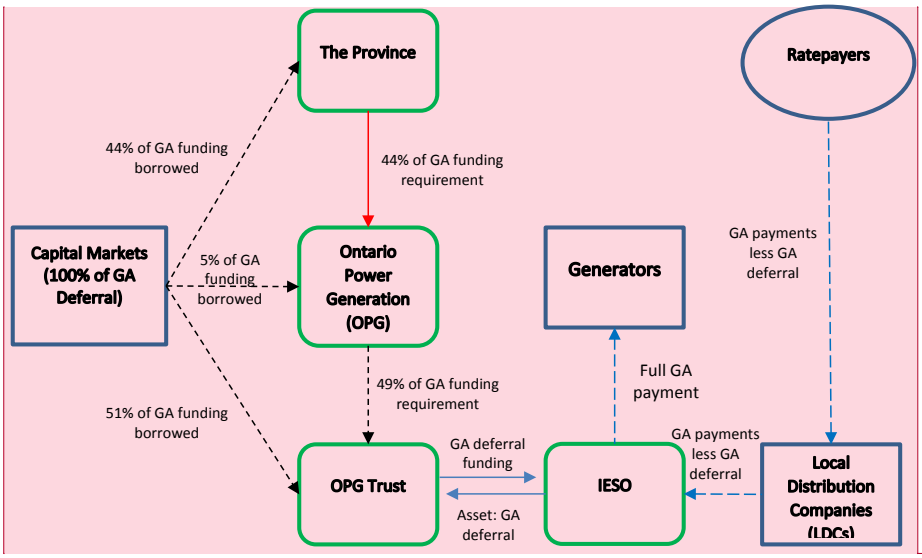
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC2]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK3]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS4]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

    - ~~Note that as with the Hydro One capital contribution, this capital contribution would be reflected on the Province's balance sheet (being and exchange of assets – cash for shares) rather than the statement of operations and would, therefore, not result in a fiscal impact to the Province~~

Commented [JK5]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC6R5]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

Commented [FC7]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing, that would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or

otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Hi John

As discussed pls include John Psinas as a member of this working group. John will ensure that all debt related accounting issues plus cash flow/cash management considerations are addressed, until there is a representative from OPCD, he can also ensure that any accounting issues that relate to the Province are communicated in a timely fashion to OPCD for resolution.

Thanks

Ken k

Hi all,

It seems that Energy won't be able to provide us with the requested data until early next week.

I know Ron mentioned that for the first request, we should try to generate that within the Division, so do we want to try for that?

Thanks,
Gavin He

Subject: Fair Energy Plan request

For our electricity narrative, we've been asked by our MO to include some language that explains the average savings for different consumers under the recently announced Fair Hydro Plan and additional businesses eligible for the expanded ICI program. Hoping you can provide some assistance with the request below.

1) Please provide examples of how much, on average, would be saved (including existing OREC, GA smoothing, first nations credit and RRRP/OESP for those applicable) by:

- Someone living in a city
- Someone living in the country
- Someone living in the north

- Someone who is low-income
- Someone who is First Nations
- A small business
- A small industrial business (new ICI participant)
- A large Industrial Business (existing ICI participant)

If possible, we've been asked to provide plain language responses to these questions with as few qualifiers as possible.

2) How many businesses would be eligible to benefit from the ICI expansion (0.5 MW threshold)[A].

- If possible and for clarity, how many are covered currently (i.e. 3 MW threshold)[B] and how many are expected to be covered by the (1MW threshold)[C]? Such that [A] + [B] + [C] is total number of businesses that will benefit from ICI.

It would be much appreciated if they could provide us with the above information by **EOD Thursday, March 16th, 2017**. Please let us know if you have any questions.

Response

Q. Please provide examples of savings for someone living in a city, someone living in the country, someone living in the north, someone who is low-income, someone who is First Nations, a small business, a small industrial business (new ICI participant) and a large industrial business (existing ICI participant).

The table below are indicative examples of the ratepayer impact under Ontario's Fair Hydro Plan compared to what electricity consumers would otherwise have paid.

The estimates are illustrative examples, not reflective of any "average" household or business.

Consumer Type	Estimated Savings	Percentage Reduction
1. Typical Residential Consumer[1]	$40 / month	25%
2. Residential Consumer (Low Density)[2]	$225 / month	40%
3. Residential Consumer (Medium Density)[3]	$200 / month	40%
4. Low-income Residential Consumer (Existing OESP Participant) [4]	$60 / month	50%
5. First Nations on reserve Residential Consumer[5]	$175 / month	60%
6. Small Business (RPP eligible consumer	$50 / MWh	25%

[1] Based on a typical residential consumer connected to Toronto Hydro consuming 750 kWh per month with the current typical 65% off-peak, 17% mid-peak and 18% on-peak consumption. The percentage reduction includes the 8%.

[2] Based on a R2 residential consumer connected to Hydro One, heating with electricity and consuming 2,500 kWh per month with the current typical 65% off-peak, 17% mid-peak and 18% on-peak consumption which is similar to Hydro One's example customer (66% off, 17% mid, 17% on-peak). The percentage reduction includes the 8%.

[3] Based on a R1 residential consumer living in the north connected to Hydro One, heating with electricity and consuming 2,500 kWh per month with the current typical 65% off-peak, 17% mid-peak and 18% on-peak consumption which is similar to Hydro One's example customer (66% off, 17% mid, 17% on-peak). The percentage reduction includes the 8%.

[4] Based on low-income residential consumer in a household of 4 with a combined income less than $28,000 connected to Alectra, consuming 750 kWh per month and currently receiving the basic OESP credit with the current typical 65% off-peak, 17% mid-peak and 18% on-peak consumption which is similar to Hydro One's example customer (66% off, 17% mid, 17% on-peak). The percentage reduction includes the 8%.

[5] Based on a First Nations residential consumer connected to Hydro One as a R2 consumer, consuming 1,300 kWh per month, with current participation in RRRP, assumes the First-Nations On-Reserve Delivery Credit would reduce the delivery line to zero. Also assumes the current typical 65% off-peak, 17% mid-peak and 18% on-peak consumption which is similar to Hydro One's example customer (66% off, 17% mid, 17% on-peak). The percentage reduction includes the 8%.

with demand < 50 kW)[6]		
7. Small Industrial (New ICI participant)[7]	$50 / MWh	30%
8. Large Industrial (Existing ICI participant)[8]	$3 / MWh	3%

Notes:

GA refinancing is expected to come into effect on May 1, 2017. OESP costs to ratepayers will be eliminated as of May 1st, while the RRRP regulatory charge will be reduced this summer. Enhanced OESP credits will be in place for May 1st, 2017, while the broadened RRRP benefits and the First Nations Delivery Credit will be in place this summer. New ICI participants are expected to see an impact on bills beginning July 2017.

Q. How many businesses are eligible for the Industrial Conservation Initiative (ICI)?

In 2011, the government introduced the Industrial Conservation Initiative (ICI), to provide a stronger incentive for large electricity consumers to reduce their electricity consumption during peak periods, thereby improving reliability and lowering total system costs.

In the 2014 Budget, Ontario committed to expanding ICI by lowering the eligibility threshold for the industrial sectors from five megawatts (MW) to three. As a result of this commitment, since July 1, 2015, the expanded ICI program has helped approximately 300 of Ontario's largest energy consumers save on their electricity bills.

In September 2016 Speech From the Throne, Ontario committed to expanding the ICI program by lowering the eligibility threshold for participation to one megawatt and expanding participation beyond existing customer types, increasing the number of eligible consumers by more than 1,000.

[6] Based on a small business eligible for the Regulated Price Plan connected to Oshawa Hydro with 34% on-peak, 47% mid-peak and 18% off-peak consumption (i.e., operates around standard business hours), and includes the impact of global adjustment (GA) financing and tax-basing of social programs. Includes the 8%.

[7] Based on a small industrial connected to Brantford Hydro benefiting from the funding of social programs from provincial revenues and opts in to the expanded ICI would see a reduction of about 30% if they reduce their consumption during Ontario's top five peaks. Assumes HOEP reflects the arithmetic average over time, and a load factor of about 30% to derive the peak demand factor (PDF).

[8] Based on a large industrial connected to ENWIN and currently participates in ICI and would benefit funding of social programs from provincial revenues. Assumes HOEP reflects the arithmetic average over time, a load profile would yield the average forecasted Class A GA and minimal impact from ICI expansion.

On March 2, 2017, a further expansion of ICI was announced as part of Ontario's Fair Hydro Plan, to specifically allow manufacturers with peak demand above 500 kW the ability to participate in ICI.*

*Pending Cabinet approval

Q. What is Market Renewal?

The current electricity market design for Ontario has been in place since 2002. Under this market design, electricity reliability has been ensured in the province by entering into long-term supply contracts with electricity generators. While this approach has helped to modernize our electricity generating infrastructure, it has proven to be inflexible to changing electricity system conditions and led to price increases.

As our electricity system continues to evolve, the Independent Electricity System Operator (IESO) is leading the Market Renewal project to develop an ambitious set of initiatives to fundamentally redesign Ontario's electricity markets and ensure future energy needs are met in a reliable, flexible and cost effective manner. Key initiatives within the Market Renewal include:

- Development of new "day-ahead" markets to improve efficiency and transparency;
- Introduction of a capacity auction to procure supply in a cost effective manner; and
- Enhancements to intertie scheduling to improve system flexibility.

The IESO has commissioned an independent expert to assess the potential benefits and costs from the Market Renewal. In a recent draft report, the expert has estimated potential net benefits of $3.4 billion from the Market Renewal over the period from 2021 to 2030. The project benefits are expected to outweigh the costs by a margin of 18:1. Further benefits are expected in the long-term as the electricity system changes in response to the Market Renewal.

Stakeholders have been engaged in Market Renewal from the outset and continue to provide important feedback as initiatives moves into the next phase. Market Renewal will also leverage best practice from similar activities in other jurisdictions to further improve the overall efficiency benefits.

Market Renewal is a critical component of Ontario's Fair Hydro Plan (OFHP). Several initiatives in the OFHP, such as GA refinancing and the expansion of support programs will deliver immediate and significant relief to consumers. Market Renewal, along with efficiency work being undertaken by the Ontario Energy Board, focusses on delivering meaningful cost savings over the long-term, while ensuring that the province has a reliable, flexible and efficient electricity system to meet future needs.

Hello everyone
I'm hoping to have a quick kick off call this week amongst ourselves to discuss developing the work plan for this portion of the plan. OPG will need some input from the Province in order to structure the equity injection process on our side.
I will send a meeting invite for later this week with a brief agenda of some of the items we will need to consider.
Hope to talk to you all then.

Regards,
Clara

Hi John

Fyi, below is my discussion with Felix so far. I'm thinking that if we do a teleconference, we could ask Darren and/or Francisco to sit in to speak about the Hydro One process. We can speak to what we understand of the mechanics of the GA financing and what would be required.

Bruno

To: Felix Fung (MOF) <Felix.Fung@ontario.ca>
Subject: RE: Fair Hydro Plan

Hi Felix

Thanks for your response. I'm not 100% sure, but we were thinking that the GA Financing, although, it does not have a fiscal impact, would require approval for the equity injection that the Province is making. I.e., it is my understanding that the Province would be purchasing and asset - OPG equity. Would this not be an operating asset expense requiring TB approval. I was speaking to colleagues who have been dealing with the Hydro One dispositions, and they noted that an operating asset approval was required for the capital contribution to Hydro Ona at the time of the IPO. I can set-up a discussion if you wish. There are folks here that may have a bit more insight than I do. Let me know.

Thanks
Bruno

Hi Bruno,

Happy to chat further – for the electricity support programs (e.g. OESP, RRRP, etc) – the appropriation for these programs would be through ENE and will be put through as part of our wrap

up / Document process. However, ENE will need to report back in the Spring on the detailed program design for these programs.

For GA – there is no appropriation required, but Ministry is to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment.

Let me know if you would like to chat further.

Thanks,
Felix

Hi Felix

I'm trying to follow the various aspects of mplementation of the Fair Hydro Plan and who is doing what. I have a few initial questions with respect to the appropriations side of the implementation of the Plan, in particular, the refinancing the GA.

Is your team now engaged with that now that pre-announcement work is done?
I assume appropriation would be through ENE of would it be MoF?
Are there timelines for when this would go to TB?

Thanks, your help is appreciated.

Further to my last email, here is a set of proposed amendments focused on the PILs issue.

Sent with BlackBerry Work (www.blackberry.com)

Version 2

202x. Section 89 of the Act would be amended by adding the following subsection:

Exception

(4) The requirement in subsection (1) to pay an amount to the Financial Corporation does not apply:

1. In respect of any income, gain or profit of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a result of or by virtue of:

(A) where a Financing Entity established is a corporation, acquiring, holding or disposing of any equity interest in the Financing Entity, including in respect of any dividends or other distributions paid or payable or otherwise accrued to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. in respect of any such equity, or

(B) where a Financing Entity is a trust, acquiring, holding or disposing of any beneficial interest in the Financing Entity, including in respect of any amounts paid or payable to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a beneficiary of such entity, or

2. To a Financing Entity that is a subsidiary of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc.

203x. Section 90 of the Act would be amended by adding the following subsection:

Exception

(4) The requirement in subsection (1) to pay an amount to the Financial Corporation does not apply:

1. In respect of any income, gain or profit of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a result of or by virtue of:

(A) where a Financing Entity established is a corporation, acquiring, holding or disposing of any equity interest in the Financing Entity, including in respect of any dividends or other distributions paid or payable or otherwise accrued to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. in respect of any such equity, or

(B) where a Financing Entity is a trust, acquiring, holding or disposing of any beneficial interest in the Financing Entity, including in respect of any amounts paid or payable to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a beneficiary of such entity, or

2. To a Financing Entity that is a subsidiary of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc.

Subject: FW: Fair Hydro Plan: preliminary items for discussion tomorrow

FYI – please see attached an early read on what the FAO team will be looking for from us at tomorrow's meeting.

I think the background technical deck and other materials Energy is bringing to the meeting will answer a lot of these questions. With respect to the second part, the data request, this is likely to be forthcoming post-meeting in the form of a letter from the FAO to the DM's of Energy and Finance. As part of tomorrow's discussions, the FAO will be looking for advice on whether this data request is: (1) available; (2) is the right data set/universe to be requesting, given the area they plan to study. We should collectively be prepared to offer our advice on that - - as once the data request is officially received, we'll need to fulfill it.

See you then.

Question for Province: Fair Hydro Plan

FAO project: FA1710

1. Confirm elements included in Fair Hydro Plan (FHP).

2. Explain how GA refinancing will work, including
    a. Specifically how bills will be lowered
    b. What will be associated cash flows between Province, OPG/Trust, IESO, LDC, and ratepayers
    c. How all entities involved will be affected (kept whole)
    d. On an annual basis how will cash flows change over the next 30 years
    e. Clarify what proportion of GA refinancing is contract renegotiation and what proportion is pure refinancing

3. Confirm shift of OESP and RRRP to Provincial funding is permanent

4. Confirm baseline from which 25% reduction in bills is calculated

5. Confirm that the definition of residential customers as relevant to FHP is synonymous with RPP customers.

Data Required by FAO

- Projected annual total cost of electricity service over the next 30 years absent of the Fair Hydro Plan broken down into:
    - Residential and non-residential ratepayers
    - Generation (separated into HOEP and Global Adjustment), delivery and wholesale market costs
- Projected annual fiscal impact of the OESP, RRRP, Affordability Fund and First Nations Delivery Credit

Date: Monday, May 01, 2017 9:58:00 AM
Attachments: image001.png

Hi John, do you have anything to add to the info below regarding Fair Hydro Plan appearing in the 2017 Budget (per the FAO request further down)?

James

Chapter VI:

Where Interim 2016-17 Expense appears, it includes $100M for the Affordability Fund. In table 6.15, it appears on the "Electricity Cost Relief Programs" line under ENERGY.

Where Plan 2017-18 Expense appears, it includes $499M for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC). In table 6.15, it appears on the "Electricity Cost Relief Programs" line under ENERGY.

Medium Term Expense Outlook table 6.12 – Interim 2016-17 includes the $100M mentioned above, Plan 2017-12018 includes $499M mentioned above. 2018-19 & 2019-20 columns includes $753MM in 2018-19 and $829M in 2019-20 under "Other Programs" for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC).

Subject: FW: Follow-Up on the 2017 Budget

Hi Everyone.

As you can see below, the FAO has reached out to make a formal request for information in follow up to yesterday's release of the Budget (BTW we are looking to set up a mtg on Tuesday from 1pm to 2pm with the FAO).

You may have already been forwarded this email from your ADMs but we've also just now received the list of specific additional questions (attached). I've attempted to identify in the attached and below which area is responsible for what, and if I have this wrong, please let me know (and sorry!).

I thought we could do a quick touch base Monday, just to check in on what we might have readily available to be in a position to provide at Tuesday's meeting and what we may need to get back to the FAO on (but pls note that we should not be doing any new analysis to provide a response). I will send out an invite/teleconf so we can discuss.

For reference I have attached an excerpt from our protocol for interaction with the FAO in case folks need a refresher on what information can/cannot be shared. We can discuss further on Monday at our call/meeting.

Thanks and pls let me know if you have any questions.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.
   - Are these detailed tables available to 2020-21? If so, then please include (☺) **– OEP Table 6.14/TBS – PEMD&CPD 6.15**

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9. **- OEP**

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.- **TBS-OPCD**

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses – **CEFD/ TBS - PEMD**
- Additional details/clarification on new health spending, including the new pharmacare plan **– TBS PEMD**
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table. **OFA CEFD, OEP**
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care) **OEP/TBS PEMD & CPD**
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense – **OEP, TBS PEMD**
- Additional details/clarification on new infrastructure spending **TBS CPD**
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%. **OFA**

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Hi John, do you have anything to add to the info below regarding Fair Hydro Plan appearing in the 2017 Budget (per the FAO request further down)?

James

Chapter VI:

Where Interim 2016-17 Expense appears, it includes $100M for the Affordability Fund, $300M for the Ontario Rebate for Electricity Consumers. In table 6.15, both appear in the "Electricity Cost Relief Programs" line under ENERGY.

Where Plan 2017-18 Expense appears, it includes $499M for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC), and $939M for the Ontario Rebate for Electricity Consumers . In table 6.15, both appear on the "Electricity Cost Relief Programs" line under ENERGY.

Medium Term Expense Outlook table 6.12 – Interim 2016-17 includes the $400M mentioned above, Plan 2017-12018 includes $1438M mentioned above. 2018-19 & 2019-20 columns include $1635M in 2018-19 and $1711M in 2019-20 under "Other Programs" for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC) and the Ontario Rebate for Electricity Consumers.

Hi James – Are you able to assist with the below related to the Fair Hydro Plan question from the

FAO?

The OFA has also offered to help out so I'm not sure if that will be of any assistance…

I'm assuming the FAO is just asking about where the Fair Hydro Plan appears in the Total Expense table? (or one of the tables in chapter 6 b of the doc?)

Selena has also set up a meeting from 4-5 today to go over draft responses with a plan to have answers to the OFA tomorrow, so I apologize for the tight timelines.

Let me know if I can help.

Chris

Hi Andrea,

Hope all's well.

On the FHP question, it identifies TBS PEMD. Could you share the draft response? We would like to keep our ADM and DM briefed on the response. If we could help out in any way, let me know as well.

Thanks,

John

Subject: FW: Follow-Up on the 2017 Budget

Hi Everyone.

As you can see below, the FAO has reached out to make a formal request for information in follow up to yesterday's release of the Budget (BTW we are looking to set up a mtg on Tuesday from 1pm to 2pm with the FAO).

You may have already been forwarded this email from your ADMs but we've also just now received the list of specific additional questions (attached). I've attempted to identify in the attached and below which area is responsible for what, and if I have this wrong, please let me know (and sorry!).

I thought we could do a quick touch base Monday, just to check in on what we might have readily available to be in a position to provide at Tuesday's meeting and what we may need to get back to the FAO on (but pls note that we should not be doing any new analysis to provide a response). I will send out an invite/teleconf so we can discuss.

For reference I have attached an excerpt from our protocol for interaction with the FAO in case folks need a refresher on what information can/cannot be shared. We can discuss further on Monday at our call/meeting.

Thanks and pls let me know if you have any questions.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15)

extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (☺) **– OEP Table 6.14/TBS – PEMD&CPD 6.15**

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9. **- OEP**

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.- **TBS-OPCD**

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses **– CEFD/ TBS - PEMD**
- Additional details/clarification on new health spending, including the new pharmacare plan **– TBS PEMD**
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table. **OFA CEFD, OEP**
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care) **OEP/TBS PEMD & CPD**
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense – **OEP, TBS PEMD**
- Additional details/clarification on new infrastructure spending **TBS CPD**
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%. **OFA**

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Funding the Ontario Fair Hydro Plan – Global Adjustment Refinancing

EXECUTIVE SUMMARY

The Ontario Fair Hydro Plan was announced in March 2017 to lower electricity rates for consumers. A large part of this plan was the refinancing of the global adjustment (GA) charge[1].

Refinancing

In the early years, a portion of the costs covered by the GA would be refinanced to reduce pressure on today's electricity ratepayers. In later years, the cost of refinancing would be recovered from ratepayers. Under current forecasts, the immediate reduction in the GA would be about $2.5 billion per year on average over the first 10 years, with annual interest costs not exceeding $1.4 billion.

The government intends to introduce legislation that would, if passed, enable the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) to work together to refinance the GA over a longer period of time. OPG and IESO will be used in a GA deferral structure for a variety of reasons, including:

- The ability of OPG to recognize regulatory assets as a government business enterprise – this allows the costs to be recovered from ratepayers and recognized under an established accounting framework to eliminate fiscal impacts.
- To reduce the borrowing pressure on the Province's credit rating, as debt from OPG is not consolidated on a line-by-line basis.
- To allow for a commercialization process in line with similar structures regarding utility assets from a historical precedent.
- To lower financing costs to ratepayers to allow gradual increases in rates.

Funding Criteria

The current proposal is to have the Province fund up to 44% of the annual GA refinancing (analogous to "GA deferral"). In determining the method of funding for the GA deferral structure, there are several interrelated issues that need to be addressed in order to achieve critical objectives. The following are some of the critical objectives considered in this document:

1. **Maintaining OPG's status as a Government Business Enterprise**
2. **Credit rating agency considerations (including capital structure)**

---

[1] The GA covers the cost of building new electricity infrastructure in the province, as well as delivering Ontario's conservation programs − ensuring that enough electricity supply will be available over the long term. The global adjustment is set monthly to reflect:

- The differences between the wholesale market price for electricity, known as Hourly Ontario Energy Price (HOEP) and:
  - Regulated rates for Ontario Power Generation's nuclear and hydroelectric generating stations;
  - Payments for building or refurbishing infrastructure such as gas-fired and renewable facilities and other nuclear, as well as the contracted rates paid to a number of generators across the province;
- The cost of delivering conservation programs.

Responding to changes in the HOEP, the global adjustment varies from month to month − generally, when the HOEP is lower, the global adjustment is higher in order to cover the costs of regulated and contracted generation.

    a. **Maintaining a good credit rating for OPG**
    b. **Maintaining a good credit rating for tranches in the SPV, particularly the senior tranche for capital markets**
    c. **Maintaining a good credit rating for the Province**
3. **Allowing for the consolidation of the SPV onto OPG's books**
4. **Enabling OPG and the Province to recover the costs of financing**
5. **Maintaining the profitability and viability of the GA deferral structure**
6. **Eliminating or mitigating the annual fiscal impact over the refinancing period**

Funding Options

A variety of funding options from the Province are being considered, in the range between debt and equity, including:

1. **Equity Injection – cash given to OPG in exchange for common shares**
2. **Equity Injection – cash given to OPG in exchange for preferred shares**
3. **Debt – cash given to OPG in exchange for debt (market level interest)**
4. **Other Mezzanine debt – cash given to OPG in exchange for some type of convertible debt**
5. **Debt into SPV – the Province buys debt securities directly from the SPV in exchange for cash**

Recommendation

Based on the available funding options and key objectives, the following risks have been identified in Figure 1:

Figure 1 – Risk Table*

	Common Equity to OPG	Preferred Shares to OPG	Debt to OPG	Other Mezzanine Debt to OPG	Debt to SPV
Maintaining GBE status	M – H	L – M	L – M	L – M	L – M
Credit Rating	L	L – M	M – H	L – M	M
Accounting Consolidation	L – MH	L – MH	L – MH	L – MH	L – MH
Cost Recovery	M – H	L – M	L – M	L - M	L
Profitability & viability	L	L – M	M	L – M	L – M
Fiscal Impact	M	L – M	L – M	L – M	L

**Level of risk of objectives not being achieved*
L = Low, M = Medium, MH = Medium High, H = High

The recommended strategy would be not to limit provincial funding to a certain type of debt or equity, but rather to implement a financing plan that benefits all parties (i.e., the Province, OPG,

IESO, security holders, LDCs, and ratepayers). Such a strategy could involve issuing more equity (e.g., a mix of common and preferred shares) in earlier years to establish the viability of the financing structure, and gradually moving to more debt-like financing options as the financing structure reaches the repayment "inflection point", and as the mechanism establishes a history of profitable operations as well as timely payments.

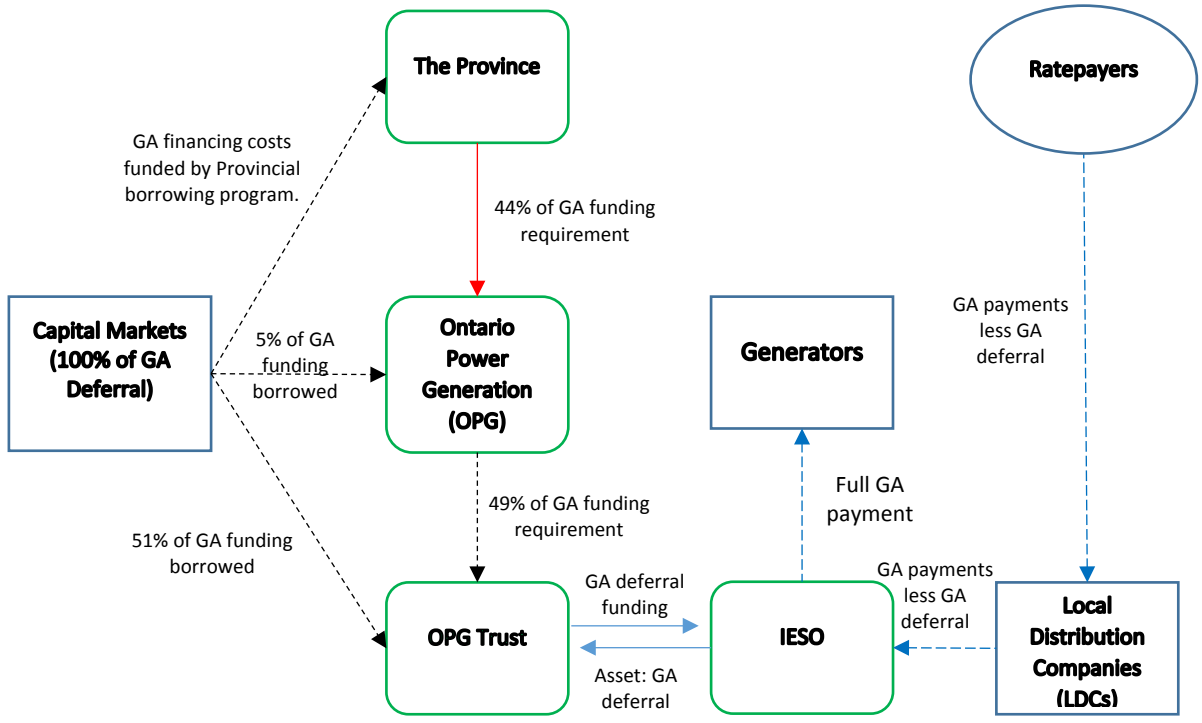
External auditors, accounting experts, and credit rating agencies need to be brought into the discussion to ensure the required objectives can be obtained.

Current Proposed Structure

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators. Figure 2 illustrates a simplified version of the GA refinancing structure.

Figure 2 – GA Refinancing Structure



Based on the OPG white paper (*Appendix B*) - a collection of proposed requirements for the structure to get the preferred accounting treatment from OPG's auditors and accounting advisors - it is important to note that:

- The 44% funding provided by the Province is the **maximum** amount that can be provided to OPG for the SPV, either indirectly (through OPG) or directly (into the SPV).
    - Can be **debt** or **equity**
    - Can be **less than 44%**
    - Nothing in the proposed requirements requires the Province to invest in OPG directly rather than directly in the SPV; **need a written confirmation from external auditors/advisors to illustrate why this is necessary**.
- The 51% of the funding directly into the SPV from the capital markets is **not a minimum** amount that must be provided, based on the language provided.
    - For example, OPG could borrow 20% of the GA deferral from capital markets and separate that into the SPV, the Province could provide 40% of the deferral directly or indirectly, and capital markets could provide the remaining 40% directly into the SPV. This would satisfy the requirements (since the capital markets are funding the OPG's 20%).
    - Rephrased, capital markets must fund the majority of the SPV, either directly or through OPG.
- OPG must own at least 5% of the total debt, and over 50% of the most junior debt in the SPV (i.e., the equity tranche).
    - This is to fulfill consolidation requirements for IFRS and US GAAP for an SPV (explained later).
    - Based on the notion that the minimal amount of the equity tranche is 10% (with OPG owning more than half of this amount).

Critical Objectives

1. Maintaining OPG's status as a Government Business Enterprise

Appendix A highlights the relevant Public Sector Accounting Standards (PSAS or "PS") issued by the Public Sector Accounting Board (PSAB). The December 2014 version is the latest available standard. PSAS is the accounting framework followed by the Province for its financial statements.

A government business enterprise is accounted for under the modified equity method – it is reported at its net asset value (i.e., total assets – total liabilities, with adjustments) on the Provincial accounts, without conforming to PSAB standards or being consolidated on a line-by-line basis. For OPG, even though the company is using US GAAP as its accounting framework, it is now accounted for under the modified equity method using IFRS as the accounting framework. This is the Auditor General's preference, as there are now interim IFRS standards (*IFRS 14 Regulated Deferral Accounts*) that allow for rate regulation. The original rationale for

OPG and Hydro One using US GAAP was because PSAB and IFRS had no standards for rate regulation.

The rationale for using the modified equity method rather than line-by-line consolidation like other government reporting entities is explained under PS 1300.33:

> *Accounting for a government business enterprise by the equity method avoids commingling the independently-managed business enterprise's budget and actual results with those of other government organizations on a line-by-line basis. It also avoids including the business enterprise's gross debt with that of other government organizations as the business enterprise is expected to repay that debt from its own revenues.*

There are four requirements to be considered a government business enterprise (GBE):

> *PS 3070.03 (and PS 1300.28) - a government business enterprise is an organization that* ***has <u>all</u> of the following characteristics****:*
> *(a) It is a separate legal entity with the power to contract in its own name and that can sue and be sued;*
> *(b) It has been delegated the financial and operational authority to carry on a business;*
> *(c) It sells goods and services to individuals and organizations outside of the government reporting entity as its principal activity; and*
> *(d) It can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity.*

If one of these conditions fails for OPG, it would lose its status as a GBE, resulting in line-by-line consolidation with the province. This will cause considerable consolidation problems because:

- OPG has rate regulated assets that would likely not be recognized under PSAB in the Provincial accounts – could result in a fiscal impact.
- OPG's nuclear liabilities and assets would be consolidated onto the public accounts, potentially impacting credit ratings.
- In the case of the GA structure, the debt in the SPV from capital markets would be recognized directly on the Province's balance sheet and the offsetting regulatory assets may be derecognized/written down – a fiscal impact.

In terms of the SPV structure, the fourth requirement from PS 3070.03 is the most at risk – if OPG can, in the normal course of its operations, maintain its operations and meets its liabilities from revenues received from sources outside of the government reporting entity. PS 1300.30 and 1300.31.b further explain this standard:

> *.30 A government business enterprise should, in the normal course of its operations, be able to maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity. These revenues include not only amounts from the sale of goods and services, but also* ***transfers received from other governments or sources outside of the government reporting entity****.*

> *.31 When determining if an organization can maintain its operations and meet its liabilities with revenues received from outside of the government reporting entity, the following factors should be considered:*
> *(a) The organization's history of maintaining its operations and meeting its liabilities;*
> *(b) Whether the organization would continue to maintain its operations and meet its liabilities without relying on* ***sales to, or subsidies in cash or kind from, the government reporting entity****;*
> *(c) Past, present and future economic conditions within which the organization operates; and*
> *(d)* ***Whether the organization has realistic and specific plans that show how it expects to be able to maintain its operations and meet its liabilities in the future****.*

There is nothing specific in PSAB about equity injections, but in terms of debt, there is the following standard:

> *PS 3230.09 If a government* ***charges little or no interest to the government business enterprise for the use of debt proceeds****, the difference between the interest cost to the government and the interest charged to the government business enterprise is in the* ***nature of a subsidy****. Such circumstances would be* ***taken into account in assessing if the organization continues to meet the financial self-sustainability requirement*** *inherent in the definition of a government business enterprise in GOVERNMENT REPORTING ENTITY, Section PS 1300.*

For an equity injection from the Province to OPG, there is a risk that it could be viewed as subsidy due to:

a) **The frequency and size of the transactions** – It has been proposed that the equity injection be monthly and over a period of ten years. Such a reliance on continually injected funds without a mandatory "cost" such as interest could be viewed as a subsidy, akin to an interest-free loan.
    a. The notion that OPG is operating as a "going concern" is also threatened by the reliance on the equity funding.

b) Ontario is already the sole shareholder – The Province already owns 100% of OPG, and is essentially dictating that OPG use equity injections for a specific mandate which threatens the idea of autonomy.

c) There needs to be a rate of return that justifies an equity injection from a commercial standpoint: the cost of equity is always higher than the cost of debt due to the lowest claim on assets that an equity holder possesses – debtholders get paid first. Thus, equity holders must be compensated for taking this risk. In order for the equity injection to not be viewed as a subsidy, the return from the GA deferral mechanism must be substantially higher than the cost of borrowing for the Province to fund these equity injections.
    - Several wholly-owned state-owned enterprises (SOEs), which are similar to GBEs in definition, were examined for the rationale behind recapitalization from their respective governments. Australia, Estonia, Hungary, New Zealand, Slovenia, and

Norway all demonstrate that wholly-owned unlisted SOEs have requirements that recapitalizations from the government are subject to minimum expected rates-of-return. This is usually at least the cost of capital or a market comparable rate. Other countries (Chile, Finland, Israel, Korea, Lithuania, Netherlands, Poland, and UK) have no specific mechanisms to ensure market-consistent equity costs, but have several other methods including:

- Recapitalization is subject to a regular feasibility study
- Both public interest and expected financial return are taken into account when deciding on recapitalization
- Considering a market consistent benchmark
- Considering the risk of the investment.

As long as the weighted average return from the SPV (i.e., the rate that is charged to ratepayers) adequately compensates the Province for the risk associated with an equity injection, it is unlikely that the equity injections will be viewed as a subsidy.

In terms of credit ratings, there is nothing in PSAB that dictates that a GBE requires certain ratios or credit ratings in order to maintain that status:

- As of April 6, 2017, OPG has a credit rating of A(low) from DBRS.
- Even if OPG was downgraded in the BBB range, this would still be investment grade.
- OPG would have a higher cost of debt, but this would passed on to consumers (higher cost of debt for the regulated activities, excluding the SPV mechanism).
- The credit rating section will further address rating agency issues.

2. Credit rating agency considerations (including capital structure)

Page 21 from the Cabinet submission PowerPoint (*Appendix C*) states a number of assumptions about the financing of the GA deferral structure, which are assessed below:

- *"Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt, OPG would be downgraded"*.
  - **Comments:**
  - The purpose of the SPV is to separate the risk from the regulatory assets from the business risk of OPG – the SPV is bankruptcy remote if setup correctly.
  - The SPV is consolidated on an accounting basis, but only the percentage of the GA deferral funded directly by OPG to the SPV would be considered as part of the normal operations structure of OPG.
    - However, as DBRS views securitization as a form of debt financing, securitized assets of non-financial companies are normally added back to debt to calculate adjusted debt ratios.

- If OPG goes bankrupt, it will not impact the SPV – OPG has no right to the assets in the SPV as a separate legal entity.
- If the SPV fails, the capital market debtholders (**expected to 51% of the GA deferral)** have the right to the regulatory assets in the SPV that were securitized, but have no recourse from OPG since the SPV is a separate legal entity.
- The tranches that make up the SPV will be given a separate credit rating assessment by rating agencies.

- "*To manage the exposure and minimize the cost of funding. The required funding would be split into 2 buckets:*

  1. 56% from capital markets; and

  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt."
  - **Comments:**
  - The remainder does not need to be financed from the Province – both OPG and the capital markets have the potential to take on more debt from the SPV.
  - The cost of funding for OPG may be minimized, but the cost of funding overall may not be due to the higher cost of equity.
  - "Exposure" is already being minimized through the SPV.
- *The use of equity to fund a portion of the GA deferral allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.*
  - **Comments:**
  - There would be an improvement in net income and the structure theoretically would have no fiscal impact.
- "*Credit rating metrics are generally maintained within established limits*":
  - **Comments:**
  - No supplementary evidence to support this.

Maintaining a strong credit rating for OPG

On April 6, 2017, DBRS confirmed the issuer rating and Unsecured Debt rating of OPG at A(low) as well as its Commercial Paper at R-1 (low). The outlook for OPG was stable, with the ratings supported by four key factors:

1) The reasonable regulatory regime in place for the Company's generation facilities
2) Continuing financial support from its shareholder, the Province of Ontario (rated AA (low) Stable, by DBRS)
3) Strong cash flow-to-debt ratios
4) Strong debt-to-capital ratios

With the GA deferral and recovery mechanism, assuming the supporting legislation is passed, the first two factors would remain strong. In terms of cash flow-to-debt and debt-to-capital ratios, there may be a difference in the total debt and total debt amounts on an accounting, legal, regulatory, and rating agency basis:

- **Accounting basis**: The entire Trust, i.e., 100% of the GA deferral and the associated regulatory assets, would be consolidated onto OPG's books, increasing total debt and total capital.
- **Legal basis**: the SPV is considered separate from OPG.
- **Regulatory basis**: From the latest draft legislation, the expectation is that the SPV would not be part of the rate-setting process. It remains to be seen how equity injections from the Province to OPG would be treated.
- **Rating agency basis**: A discussion with rating agencies needs to be conferenced to confirm how they would treat the debt in the SPV in the calculation of risk assessment ratios such as total debt-to-capital.

DBRS's primary financial risk assessment (FRA) metrics for utilities are highlighted in Figure 3 below:

Figure 3. Regulated Electric, Natural Gas, and Water Utilities – Primary DBRS FRA Metrics

Primary Metric	AA	A	BBB	BB/B
Cashflow-to-debt	> 17.5%	12.5% to 17.5%	10.0% to 12.5%	0.0% to 10.0%
Debt-to-capital	< 55%	55% to 65%	65% to 75%	75% to 90%
EBIT-to-interest	> 2.8x	1.8x to 2.8x	1.5x to 1.8x	1.0x to 1.5x

OPG's historical performance on these key ratios are illustrated below in Figure 4:

Figure 4. OPG Historical DBRS Primary FRA Metrics

(CAD millions)	2015	2014	2013	2012	2011
Cash flow/Total debt 1	33.2%	27.0%	22.9%	20.8%	28.9%
Total debt in capital structure 1, 2	35.9%	36.9%	38.9%	36.9%	36.8%
EBIT gross interest coverage (times) 3	(0.86)	0.24	(1.12)	0.66	0.02
EBITDA gross interest coverage (times) 3	2.89	2.75	2.21	3.15	2.71
(Cash flow - n.w.f.)/Total debt 4	27.5%	21.3%	16.5%	13.8%	21.1%

1 Including operating leases. 2 Adjusted for Accumulated Other Comprehensive Income. 3 Excluding earnings from nuclear fixed asset removal and nuclear waste management funds. 4 Included nuclear waste funding (n.w.f.) payments as they are not discretionary.

OPG has been outperforming two of the three key metrics for the past five years (within AA range), but has been rated at A (low) for several reasons including the negative EBIT coverage, among other factors. *Appendix E* includes additional information from DBRS's general methodology for regulated utilities.

The effect of different scenarios on capital structure, assuming that the Province uses either preferred equity or debt instead of equity injections to finance 44% of the GA deferral annually, is shown below:

Figure 5. Financing effect on Capital Structure ($20.3B total borrowing)

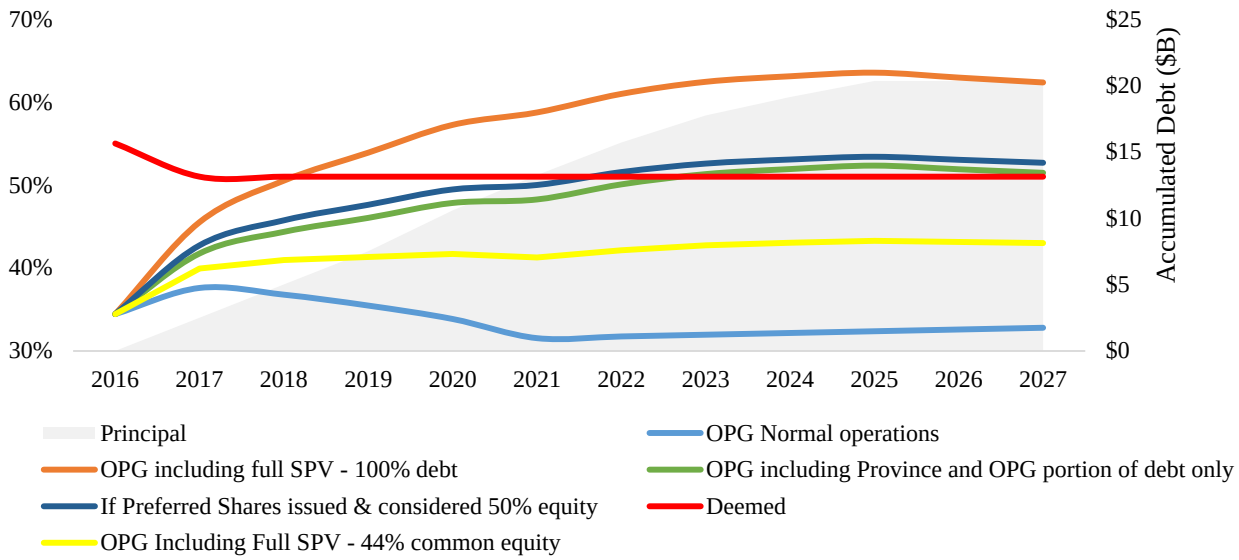


Figure 6. Financing effect on Capital Structure ($28B total borrowing)

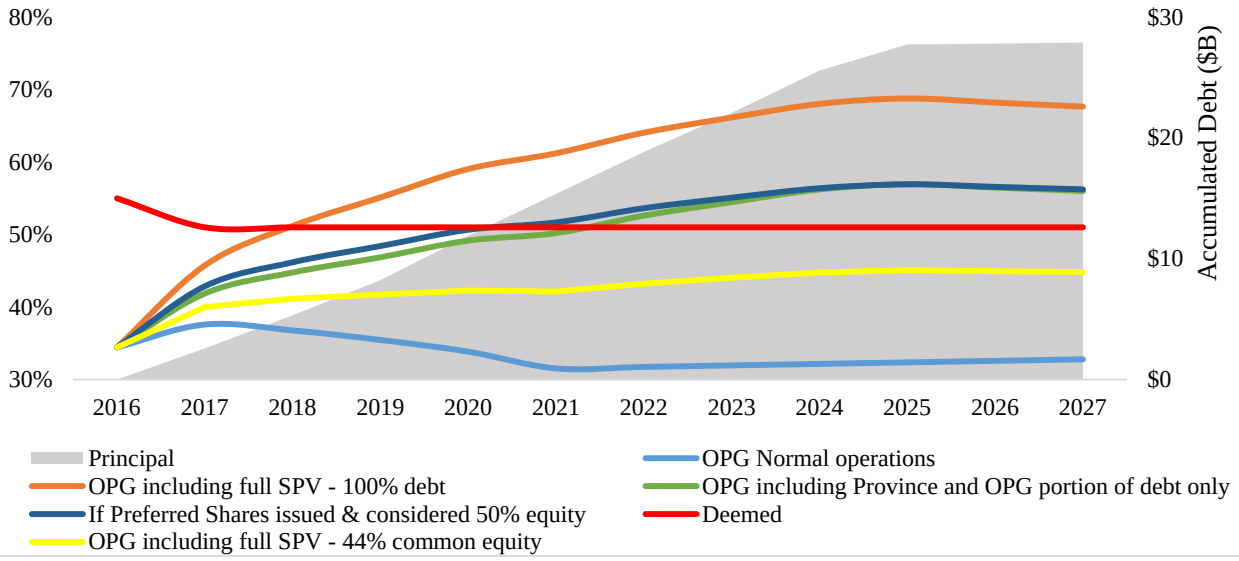


**Figures generated from model based on OPG BP forecasts, Ministry of Energy cabinet submission, and internal CEFD assumptions*.

It is recommended that OPG provide a forecast and rationale on key credit rating ratios and capital structure to justify its insistence that common equity is required to maintain a good credit rating.

Maintaining a good credit rating for the SPV

In order to understand the proposed GA financing structure, one can examine the components of the structure and similar historical undertakings.

SPV

An SPV (special purpose vehicle or special purpose entity) is a bankruptcy-remote entity established for the sole purpose of issuing debt securities. The bankruptcy remote component of the SPV is crucial to the securitization and isolates the bondholders from event risk associated with the originator and servicer. The debt securities typically issued by an SPV are asset-backed securities (ABS) which are bonds collateralized by a distinct pool of assets. The most common collateral types found in asset-backed securities are credit card receivables, auto and equipment loans or leases, home equity loans, student loans and installment sales contracts for manufactured housing units.

- The performance of the underlying collateral will largely determine the performance of the bond.
- **In recent conversations, it has been flagged that the proposed structure will not result in a securitization transaction, despite its similarities.**

US Rate Reduction Bonds

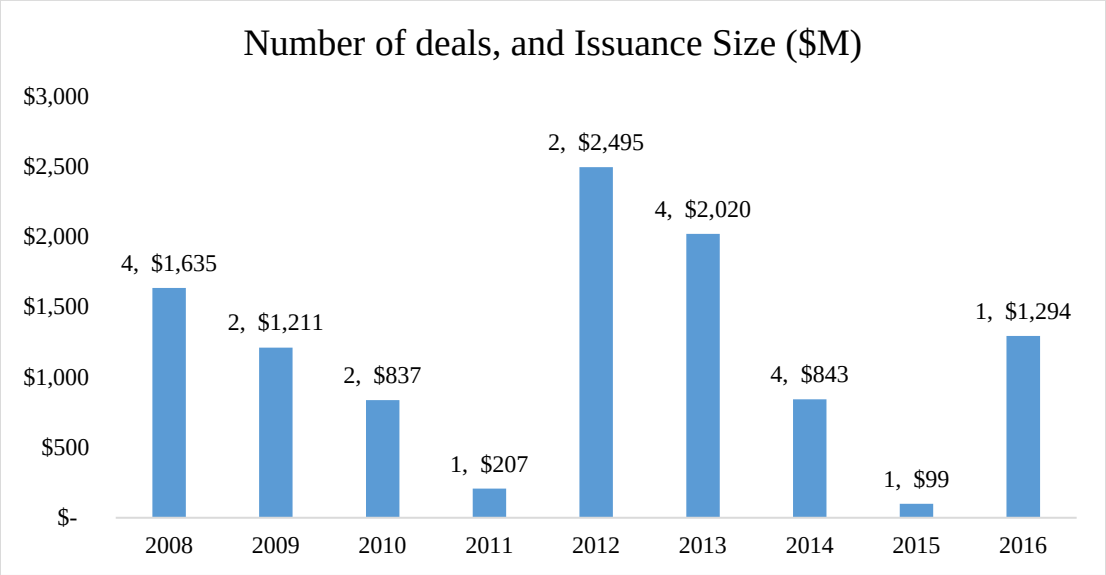
The proposed GA mechanism is most similar to rated reduction bonds (RRBs) from the United States. An RRB is the securitization of a cashflow stream generated by a fee charged to utility consumers. RRBs came into prominence in the US after the passing of the Energy Policy Act of 1992 that led to the privatization of the electricity market. Deregulation of the electric utilities was introduced to foster a competitive environment and to reduce the rates charged to customers. However, when states deregulated utilities, the resulting decrease in revenue caused many utility company assets to become uneconomic to operate. These uneconomic assets are referred to as "stranded assets". RRBs were developed to enable utilities to bridge the gap between the book value of stranded assets in the previously regulated environment and their current market value in a deregulated one. The use of RRBs allows for an extended recovery period of those costs at an AAA funding rate.

The fee or transition charge is collected by utilities over a specific period of time. Because the state legislature designates the transition charge to be a statutory property right, it can be sold by a utility to an SPV and then securitized. It is the legislative designation of the transition charge as an asset that makes RRBs different from the typical asset securitized.

Transition charges are initially calculated based on projections of utility usage and the ability to collect revenues. However, actual collection experience may differ from initial projections. Because of this, there is a “true up” mechanism in these securitizations. This mechanism permits the utility to recompute the transition charges on a periodic basis over the term of the securitization

based on actual collection experience. The advantage of the true-up mechanism to the bond classes is that it provides cash flow stability as well as a form of credit enhancement.

From 1995 to 2003, there were more than $31B issuances of RRBs (about $45B total since 2012) in over 20 states. The deal size has been between $35M and $3B in the past for the US. RRBs have traded at spreads comparable to AAA-rated credit cards in the US. Figure 7 below is a summary of RRB deals since 2008:



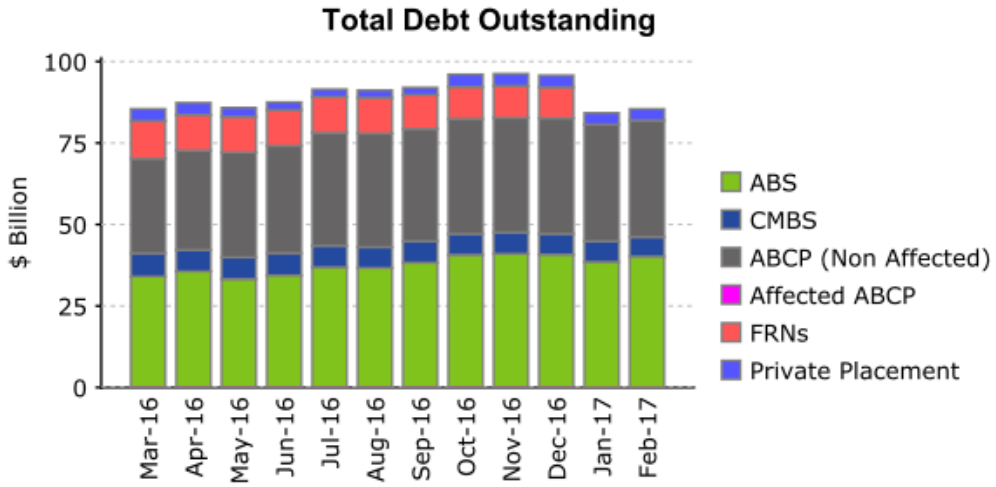
Appendix D contains details of each of the historical RRB issuances from Figure 7 above.

A key difference between RRBs and the proposed debt securities from the GA financing structure is that there is more uncertainty surrounding the GA deferral mechanism.

- RRBs book value and current market value are relatively known at the time of issuance, thus it may be easier to determine the fee that is needed to recuperate the stranded assets from the start.
- The extent of borrowing needed for the GA adjustment is not known ahead of time.
    - However, reasonable estimation and the true-up mechanism can mitigate this issue.
    - Once a history of forecast accuracy and fees collected from ratepayers has been established, there will be more certainty in the amount and timing of cashflows.

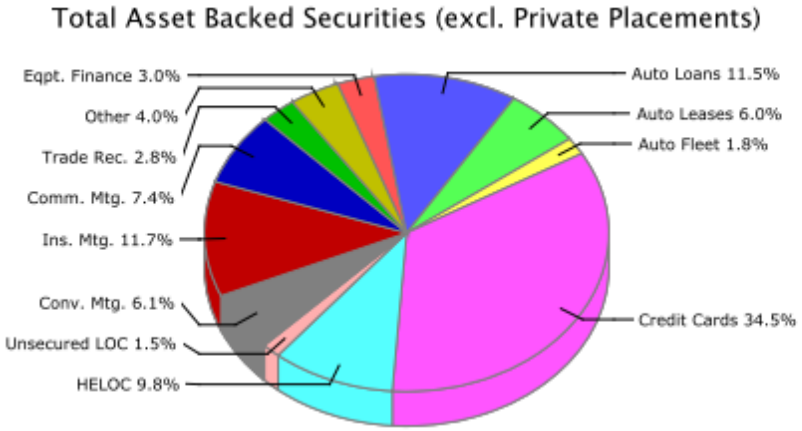
Canadian Securitization Market

The total amount outstanding in the Canadian securitization market ended February 2017 at $85.0 billion. The figures below illustrate the market composition as of February 2017.



Total Asset Backed Securities (excl. Private Placements)

Dealer/Administrator	Outstanding Amount	Market Share
TD Securities Inc.	21,108,826,721	25.8%
RBC Capital Markets Inc.	15,849,571,935	19.3%
BMO Capital Markets	14,880,241,648	18.2%
CIBC World Markets Inc.	9,648,552,341	11.8%
Scotia Capital Inc.	7,732,545,756	9.4%
Other	5,941,339,645	7.3%
National Bank Financial Inc.	4,376,185,678	5.3%
Bank of Nova Scotia (BNS)	1,551,896,531	1.9%
Merrill Lynch Canada Inc.	591,797,636	0.7%
HSBC Securities (Canada) Inc.	92,500,000	0.1%
Canadian Tire Bank	89,698,890	0.1%
National Bank of Canada (NBC)	60,910,750	0.1%
HSBC Bank Canada	4,349,881	0.0%
Total	**$81,928,417,413**	**100.0%**



Asset Classes in Other	Percent
Auto Floorplan	0.65 %
Equipment Floorplan	0.72 %
Auto Rental	0.82 %
Reverse Mtg.	0.73 %
Ins. Premium Loans	0.20 %
Fran. Loans	0.87 %

An issuance of $2.5 billion a year by the SPV (including the "private placement" to the Province) would be approximately 3% of the total Canadian market. There has also been discussion of entrance into the US market.

Credit Enhancement

There are a variety of methods for credit enhancement of securitized assets:

1) Excess spread – The difference between the utility fee cash flows brought in from the regulated asset and the costs of the securitization (financing costs, servicing fees, etc.). If ratepayers are charged 6% and bondholders have an interest at 4%, the excess spread of 2% helps cover if some ratepayers have late payments.
2) Cash reserve account: holding excess cash.
3) Overcollateralization: having the regulatory assets value higher than the issued notes.
4) Subordination
5) Letter of credit from a third party.

SPV Credit rating

Rate reduction bonds minimize costs by qualifying for triple A ratings and accordingly are issued with yields considerably lower than those based on the sponsoring utility's long-term debt rating. In order to be eligible for this level of credit quality, rate reduction bonds must possess certain common structural characteristics.

- First, the bonds must be authorized by specific state enabling legislation entitling the utility to impose and collect usage-based customer charges that are dedicated to payment of the bonds.
- The charges must be non-bypassable; that is, they cannot be eliminated by switching to alternative providers of service.
- The legislation requires the utility to seek and receive an irrevocable financing order from the state utility regulator. The financing order creates a present intangible property right to impose and collect the non-bypassable charge in amounts necessary to service the bonds.
- The legislation and financing order provide for a periodic true-up rate mechanism, by which at least annually, and more frequently in many cases, the special charges are reviewed and adjusted to correct for any under collection, to assure timely payment of the principal and interest on the bonds.
- The legislation also provides for a covenant by the state that until the bonds have been paid, the state will not impair the value of the securitization collateral or, but for the true-up process, reduce, alter or impair the special charges to the utility's customers.

Legislation

- The current draft of the legislation has similar provisions discussed above.
- A Triple AAA rating is likely with the supporting legislation and the proposed credit enhancements of subordination, excess spread, and the true-up mechanism.
    - For RRBs, the difference between market value and book value (i.e., the stranded assets) was relatively known at the time of issuance.

- In this case, the extent of the total borrowing is not known, which may put the credit rating at risk with more uncertain cash flows than the precedent from RRB.

Maintaining a good credit rating for the Province

Maintaining the Province's credit rating is critical to lowering the borrowing costs over the refinancing period. Keeping the SPV consolidated onto OPG's books and minimizing Provincial borrowing are the two critical objectives needed to reduce fiscal impacts and the probability of a rating downgrade.

3. Allowing for the consolidation of the SPV onto OPG's books

The SPV needs to be consolidated onto OPG's balance sheets in order for the rate regulated assets to be recognized under US GAAP. When OPG is consolidated onto the Province's accounts, it will be recognized under the modified equity method under PSAB. The modified equity method has the net asset value of OPG recognized as an equity investment on the province's books, with OPG able to maintain an IFRS accounting framework when calculating the net assets and not conforming to PSAB. If the Province or related government reporting entity that is not a GBE is seen as controlling the SPV, then line-by-line consolidation will occur with potential fiscal impacts from the loss of recognition of the regulatory assets that are not recognized under PSAB.

Appendix F highlights how the Province could indirectly or indirectly fund the SPV while allowing OPG to consolidate the SPV on its books. In general terms, the two main criteria to be satisfied are:

1) **OPG must be seen as controlling the Trust** – the way the legislation is being drafted is to have OPG have full control of the Trust, including controlling the economic performance of the Trust.
2) **OPG must have the majority of the equity tranche in the SPV** – this is because OPG must be exposed to either the majority of expected losses, the majority of expected residual returns, or both, under general accounting consolidation requirements. The equity tranche gets all of the residual returns but is the first to absorb losses – thus satisfying this requirement.

It is important to note that:

- There are no clear rules under PSAB for the consolidation of a special purpose vehicle or special purpose entity.
  - The OPG white paper requirements do not prohibit the Province from directly funding the SPV.
- There are no public sector accounting standards specifically related to a provincial investment in the subsidiary of a government business enterprise.
- There may be the possibility of the Province issuing debt to OPG that is then moved to the SPV, thus giving the Province access to the returns from the SPV without the Province going through OPG.

4-6. Cost Recovery, Profitability, and Fiscal impact

The options for the Province to fund the GA deferral structure are in the continuum of common equity to pure debt:

Common equity to OPG

- Gives OPG the most flexibility in managing the trust and ability to absorb temporary losses.
- Preferred method by OPG.
- Lower chance of a ratings downgrade.
- Return charged to ratepayers, on a weighted average basis, would need to justify the proportion of equity injected into OPG that is ultimately put into the SPV, otherwise could be seen as a subsidy to the Province.
- OPG would be able to, but not obliged to, flow dividends back to the Province that would be used to settle interest/principal costs.
- Issue of "double leverage" – the Province's equity stake in OPG (and ultimately the SPV) is funded by debt.
- There could be no fiscal impact with the profit to OPG from the Trust offsetting the interest on Provincial borrowing.
    - However, on a cash basis, there is no guarantee that OPG would pass the required payments to the Province to settle interest and principal payments – there are timing issues.
    - This could lead to fiscal costs eventually once the Trust is dissolved with OPG potentially hanging on to billions of dollars of cash to use for its own initiatives.

Preferred Equity to OPG

- The suggested method would have cumulative dividends that could be deferred for at least 10 years, payable with cash, and with the preferred shares redeemable after ten years from the time of issuance.
    - Under DBRS rating criteria, would likely get 50% equity treatment (*Appendix E*)
- The deferral of dividends would still give OPG flexibility in managing the trust and the ability to absorb temporary losses.
- Lower chance of a ratings downgrade than using debt.
- Lower return to be charged to ratepayers versus common equity to justify preferred equity funding.
- Allows for the Province to eventually receive payments, with the cumulative dividends compensating the Province for the interest payments on its borrowed portion.
    - The preferred share rate of return would need to be higher than the cost of debt for the Province to be compensating for capitalized interest costs.
- OPG would be obliged to pay back dividends, but could delay this outcome for ten years.
- The fiscal impact risk would be expected to be less than common equity with a reasonably guaranteed flow of cash from OPG to the Province through dividends and redemption.

Debt to OPG

- Gives OPG the least flexibility in managing the trust and ability to absorb temporary losses.
- Highest chance of a ratings downgrade.
- Provides a mechanism for the Province to get timely interest and principal payments back from the Trust.
- Fiscal impact risk is the lowest in terms of receiving principal and interest payments.

Various other options would be between the equity and debt spectrum.

Appendix A. Public Sector Accounting Standards related to Government Business Enterprises

Key sections have been highlighted.

SECTION PS 3070 – Investments in Government Business Enterprises

.03 A government business enterprise is a government organization that has all of the following characteristics:
(i) It is a separate legal entity with the power to contract in its own name and that can sue and be sued;
(ii) It has been delegated the financial and operational authority to carry on a business;
(iii) **It sells goods and services to individuals and organizations outside of the government reporting entity as its principal activity**; and
(iv) **It can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity**.

These criteria are explained in GOVERNMENT REPORTING ENTITY, paragraphs PS 1300.29-.31.

Inter-organizational transactions and balances

.29 Inter-organizational transactions and balances are not eliminated under the modified equity method.

.30 Inter-organizational gains and losses are, however, eliminated on assets remaining within the government reporting entity at the financial statement date. As a result, gains or losses related to sales and purchases of services for example, between a government business enterprise and other government organizations would not be eliminated when the government business enterprise is included in government consolidated financial statements by the modified equity method.

.31 For financial assets, such as inventories for resale, that are transferred between a governmental unit and a government business enterprise, unrealized gains or losses may occur. The existence of unrealized losses may indicate a permanent decline in the value of the relevant assets. It may be necessary to recognize this decline by writing down such assets.

.32 Transfers of assets from a governmental unit to a government business enterprise normally result in an increase to the assets and contributed surplus of the government business enterprise. When tangible capital assets are transferred, an unrealized increase in the financial position of the government reporting entity may be created. When tangible capital assets are transferred to a government business enterprise, they are recorded by the government reporting entity as an investment and reported as a financial asset in government consolidated financial statements. Any unrealized gains on tangible capital assets would be eliminated when the government business enterprise is included in government consolidated financial statements on a modified equity basis.

.33 The situation in paragraph PS 3070.32 is analogous to that which arises regarding tangible capital assets when a governmental unit changes in status to be a government business enterprise as described in ADDITIONAL AREAS OF CONSOLIDATION, paragraphs PS 2510.46-.49. The amount of the adjustment to eliminate an unrealized gain arising on the transfer of a tangible capital asset to a government business enterprise in any given period would vary depending on whether the transferred asset is depreciable and, if so, the extent of the depreciation recorded on the asset by the government business enterprise. Any impairment or other adjustment made by a government business enterprise to the recorded value of a tangible capital asset transferred from a governmental unit to the government business enterprise would also affect the amount of the elimination entry.

.34 *The transfer or sale of a tangible capital asset from a governmental unit to a government business enterprise should not improve the net operating results of the period or otherwise improve the net financial position of the government reporting entity*

Inter-organizational bond holdings

.35 From the point of view of the government reporting entity, constructive debt retirement occurs when:

(a) Another government organization purchases the bonds, notes or other debt instruments of a government business enterprise; or

(b) A government business enterprise purchases the bonds, notes or other debt instruments of another government organization, from an organization external to the government reporting entity.

The debt retirement is "constructive" because the debt remains outstanding from the viewpoint of the issuer as a separate legal entity and remains an investment from the point of view of the acquirer as a separate legal entity. As a result of such purchases, a constructive gain or loss, equal to the difference between the carrying value of the debt in the accounts of the issuer and the cost to the acquirer, is recognized in government consolidated financial statements at the date of acquisition. The gain or loss is "constructive" because it is realized and recognized at acquisition from the viewpoint of the government reporting entity, but no gain or loss is recognized at acquisition in the books of the issuing or the acquiring government organization. A constructive gain or loss arises because the acquirer has purchased the debt at a premium or discount and/or the issuer originally issued the debt at a premium or discount.

.36 Neither the carrying values of the inter-organizational bond holdings between a government business enterprise and another government organization, nor the related interest income and expense would be eliminated when the government business enterprise is included in government consolidated financial statements by the modified equity method. However, the amortization of the premium or discount on the books of the acquirer and the amortization of the premium or discount on the books of the issuer would be eliminated. The eliminations would be reflected in the government's investment in a government business enterprise and its income from an investment in a government business enterprise.

.37 Because the debt remains outstanding from the viewpoint of the acquirer and the issuer, they would continue to account for the portion of the debt deemed to be constructively retired, and any related premiums or discounts, and would, therefore, recognize the constructive gain or loss in their own accounts over the period to the maturity or sale of the debt. As the constructive gain or loss was recognized by the government reporting entity in the period the debt was constructively retired, elimination of the gain or loss being recognized by the acquirer and the issuer in each subsequent accounting period through the amortization of any premium or discount related to the debt will be required when the government business enterprise is included in government consolidated financial statements by the modified equity method. In making such eliminations, the government's proportionate ownership of the government business enterprise would need to be taken into account when the government business enterprise is the issuer of the debt.

.38 Regardless of whether the government or a government business enterprise is the acquirer in such a transaction, the government's investment in a government business enterprise and its income from an investment in a government business enterprise would be adjusted to recognize the constructive gain or loss in government consolidated financial statements in the year of the acquisition. In recognizing the gain or loss, the government's proportionate ownership of the government business enterprise would need to be taken into account when the government business enterprise is the issuer of the debt.

WHEN AN ORGANIZATION NO LONGER MEETS THE DEFINITION OF A GOVERNMENT BUSINESS ENTERPRISE

.48 The circumstances affecting a government organization may change so that it no longer meets the definition of a government business enterprise. Failure to meet any of the four characteristics of the government business enterprise definition would require such a change in status of the enterprise.

.49 **When the nature of a government organization changes such that it no longer meets the definition of a government business enterprise, the organization would become a governmental unit and would be consolidated in government financial statements in accordance with BASIC PRINCIPLES OF CONSOLIDATION, Section PS 2500 and ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510, instead of being accounted for on a modified equity basis. (i.e., line-by-line consolidation)**

.50 When the change in status of a government business enterprise to a governmental unit is the result of an observable event, a government would apply both modified equity and consolidation accounting to the organization in the period, as appropriate. The individual revenues and expenses of the former government business enterprise would be included with those of the other governmental units and recognized in the consolidated statement of operations subsequent to the date the status of the organization changes. Prior to the date of change, only income from an investment in a government business enterprise would be recorded, calculated in accordance with the modified equity method.

.51 When the change in status of a government business enterprise to a governmental unit is not a specific observable event, but occurs over time, a government would account for the organization as a governmental unit for the reporting period in which the change in status occurs.

.52 When an organization ceases to meet the definition of a government business enterprise and that organization applies accounting policies that differ from those of the government reporting entity, the accounting policies of that organization must be conformed to those of the government reporting entity for the purposes of its consolidation in government financial statements. For example, when an acquired government business enterprise changes its status to a governmental unit, any remaining unamortized purchase premium would be written off to consolidated operating results in the period the status changed in accordance with the accounting treatment for purchase premiums required by ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510.

.53 *In the period that a government organization no longer meets the definition of a government business enterprise, the effect of conforming its accounting policies to those of the government reporting entity for the purposes of consolidation should be included in the determination of consolidated operating results.* [APRIL 2000]

.54 When part of a government business enterprise, such as a division or other discrete component, is sold, but the government still retains control of the organization that remains, that organization is still considered to be part of the government reporting entity. If the part of the organization that remains does not on its own meet the definition of a government business enterprise, it would be consolidated in government financial statements. If the part of the organization that remains continues on its own to meet the definition of a government business enterprise, it would continue to be accounted for on the modified equity basis as a government business enterprise.

.55 **When the circumstances affecting a government organization change so that it no longer meets the definition of a government business enterprise, the change in accounting treatment would not be applied retroactively**. The alteration of an accounting treatment necessitated by events or transactions that reflect a difference in substance from those previously occurring is not considered to be a change in accounting policy 3 or a change in classification. 4 The financial position and results of prior periods would not be adjusted to reflect the change in status of the organization as if it had always been a governmental unit. It is important for government consolidated financial statements to show that a government business enterprise has changed its status to become a governmental unit.

.56 *When the circumstances affecting a government organization change such that it no longer meets the definition of a government business enterprise, the resulting change in accounting treatment, the underlying reasons for the change, and the financial effect of the change should be disclosed.* [APRIL 2000]

.65 Government business enterprises may enter into significant transactions with other government organizations in the government reporting entity. Since the modified equity method of accounting does not eliminate inter-organizational transactions and balances, such as loans and advances, users need supplementary information to identify amounts

owing to or receivable from, and revenues received from or paid to, other government organizations in the government reporting entity.

.66 In addition, because unrealized gains or losses on amounts that remain within the government reporting entity are eliminated, users need information on any adjustments that have been made to the reported net assets and net income of the government business enterprise. Furthermore, users need information on any contractual obligations and contingencies of government business enterprises to understand and assess the future revenue requirements of the government reporting entity.

.67 One result of accounting for a government business enterprise by the modified equity method is that the outstanding debt issued by a government business enterprise is not included in the debt reported by the government reporting entity on its consolidated statement of financial position. Disclosure in government consolidated financial statements of the nature and terms of any government guarantees relating to debt issued by a government business enterprise would serve to highlight a government's contingent exposure to and responsibility for any debt of government business enterprises arising as a result of specific guarantees.

.68 When the nature of the business of a government business enterprise is not self-explanatory, governments are also encouraged to disclose by enterprise, or category of enterprise where appropriate, the nature of the business in which the enterprise(s) are engaged

SECTION PS 1300 – Government Reporting Entity

.27 *Government financial statements should consolidate the financial statements of governmental units comprising the government reporting entity.* 2 [Former paragraph PS 1300.27 retained in Archived Pronouncements.] [JUNE 1996 *]

Defining a government business enterprise

.28 A government business enterprise is an organization that has all of the following characteristics:

(a) It is a separate legal entity with the power to contract in its own name and that can sue and be sued;

(b) It has been delegated the financial and operational authority to carry on a business;

(c) It sells goods and services to individuals and organizations outside of the government reporting entity as its principal activity; and

(d) It can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity

.29 Selling goods and services involves a direct exchange relationship between the revenues and the goods and services provided. Selling prices are related to the quantity and quality of goods or services sold, and not just to the recovery of administrative costs. Imposed fees and penalties, such

as licenses and fines, do not represent sales of goods and services. Insurance premiums charged by a government organization are a sale of a service and not an imposed fee.

.30 A government business enterprise should, in the normal course of its operations, be able to maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity. These revenues include not only amounts from the sale of goods and services, but also transfers received from other governments or sources outside of the government reporting entity.

.31 When determining if an organization can maintain its operations and meet its liabilities with revenues received from outside of the government reporting entity, the following factors should be considered:

(a) The organization's history of maintaining its operations and meeting its liabilities;

(b) Whether the organization would continue to maintain its operations and meet its liabilities without relying on sales to, or subsidies in cash or kind from, the government reporting entity;

(c) Past, present and future economic conditions within which the organization operates; and

(d) Whether the organization has realistic and specific plans that show how it expects to be able to maintain its operations and meet its liabilities in the future.

Accounting for a government business enterprise

.32 A government business enterprise differs from other government organizations in its relationship to the government, and its objectives, and operations. A government enterprise represents a financial asset of the government and given its autonomy, business-oriented objectives, and financial self-sufficiency, equity accounting is appropriate.

.33 Accounting for a government business enterprise by the equity method avoids commingling the independently-managed business enterprise's budget and actual results with those of other government organizations on a line-by-line basis. It also avoids including the business enterprise's gross debt with that of other government organizations as the business enterprise is expected to repay that debt from its own revenues.

.34 Because a government enterprise carries on a business, its financial statements should be prepared on the same basis as a private sector business. This basis is most appropriate for measuring the government's investment in the organization and the impact it has on the government's financial position and results. As such, the modified equity method is the most suitable form of equity accounting.

.35 Government business enterprises should be accounted for by the modified equity method. [JUNE 1996]

.36 Accounting for government business enterprises by the modified equity method is outlined in INVESTMENTS IN GOVERNMENT BUSINESS ENTERPRISES, Section PS 3070.

SECTION PS 3230 – Long-term Debt

.09 If a government charges little or no interest to the government business enterprise for the use of debt proceeds, the difference between the interest cost to the government and the interest charged to the government business enterprise is in the nature of a subsidy. Such circumstances would be taken into account in assessing if the organization continues to meet the financial self-sustainability requirement inherent in the definition of a government business enterprise in GOVERNMENT REPORTING ENTITY, Section PS 1300.

.10 ***When there is sufficient evidence that debt has been issued by a government specifically on behalf of a government business enterprise:***

(a) The debt issued on behalf of the government business enterprise and the related receivable from the government business enterprise should be presented on a net basis in the consolidated statement of financial position; and

(b) The interest expense on the debt issued on behalf of the government business enterprise and the related interest revenue from the government business enterprise should be presented on a net basis in the consolidated statement of operations. **[APRIL 2000]**

Appendix B – OPG Global Adjustment White Paper Conditions

A. Ability to Recognize an Asset and Record Revenue

Accounting Requirements under International Financial Reporting Standards (IFRS)

1) It is our understanding that the IESO and KPMG have concluded that the sale of this 'right to collect' future revenue (or regulatory asset) is not a financing transaction and will not be recorded as a financial liability. Based on that conclusion, the right to collect will be accounted for as an intangible asset in the SPV.

2) In order to the SPV to record this right as an intangible asset, the right must meet the following conditions:

- The intangible asset must be separable and arise from a contractual or legal right (i.e. mandated by the Legislation and SPV Indenture Agreement).
- The SPV must have the control and power to obtain future economic benefits from the intangible asset.
- The SPV must be able to demonstrate that the intangible asset is purchased at fair value.

3) In order for the SPV to recognize appropriate revenue to offset any ongoing costs, the **Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis**. **This may result in additional amounts to be deferred to achieve the desired customer impact**. Payment of revenue to the SPV is also important to service the interest expenses of the debt.

B. Ability to Consolidate the SPV into OPG under IFRS

OPG 'Control' of the SPV - Accounting Requirements

1) In order to meet the accounting definition of 'control', accounting guidance must be considered. There are no bright lines to determine whether OPG has exposure, or rights, to variable returns from its involvement with the SPV, or whether it has the ability to affect the returns of the SPV through its power over the SPV. Rather, all facts and circumstances are considered when assessing whether an entity has control over another entity. Based on the relevant accounting guidance under IFRS, OPG has proposed terms necessary to demonstrate that OPG has control over the SPV. OPG's external auditors, Ernst & Young, has provided their concurrence that based on the information provided to them to date that the following conditions should permit consolidation of the SPV by OPG.

Directive:

1. **The SPV must be undertaken by OPG as a business initiative on its merits**. A Shareholder Directive is to be limited to direct OPG to investigate the option of establishing a SPV vehicle to administer, finance and operate the Global Adjustment plan. The control, risk and rewards of that SPV will determine its consolidation into OPG as a business enterprise.

SPV:

2. **The SPV should not operate in a predetermined way such that OPG does not have decision-making authority over the SPV's ongoing activities after its formation** (i.e. should not operate on 'autopilot').

3. **OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.**

4. The Province cannot have the right to veto OPG's decisions about the relevant activities of the SPV. **OPG must have the power over the relevant activities of the SPV and be compensated**. The relevant activities of the SPV include (but are not limited to) the evaluation and decisions on financing alternatives, duration, and the strategy to minimize financing costs. **OPG must have the power to establish operating and capital budgets of the SPV.**

5. OPG must have the power to determine or change operating and financing policies of the SPV, which will affect the variability of risks and returns.

6**. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of** the following:

- **The SPV**
- **Any of OPG's investments in the most subordinated debt of the Trust**

7. OPG must own greater than 50% of the most subordinated debt and targeted to be no less than 5%[2] of the total debt of the SPV. **Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources**. A quantitative analysis should be performed at a later date to corroborate the **appropriateness of the 5% threshold to support that the 5% subordinated debt investment is sufficient to absorb most of the expected variability in the SPV.**

8. OPG must have the ability to earn variable returns by exercising its authority, which shall be accomplished as follows:

a. The cash flow from the restructured asset shall include interest determined based on a relevant benchmark that is appropriate relative to the restructured asset, plus an appropriate margin consistent with the relevant market and other risks

b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the SPV to achieve a more favourable return compared to the return from the restructured asset

c. The SPV shall establish classes of liabilities (senior, subordinated and the most subordinated). The classes would allow the SPV to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would

---

[2] *While the rest of the letter refers to a 10% investment in the most junior subordinated debt with OPG owning 5%, it should be noted that OPG should own more than 50% of the most subordinate debt. For simplicity, the degree to which OPG's ownership beyond 50% is not shown in this letter.*

limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity.

d. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the restructured asset, or any residual risk of restructured asset. The targeted return of the subordinated liability should be reflective of the underlying risks and compensate holders for active management that would be required.

e. OPG should participate in the detailed design of the above and the SPV documentation to ensure that it has substantive power and variability, which will allow OPG's Board of Directors to evaluate the opportunity as a business initiative instead of through a shareholder directive.

Notwithstanding the above, under certain Defined Forced Majeure for emergency events (e.g. unlikely credit market event or disruption where it is not possible to borrow from the market at a reasonable rate), the OEFC may provide bridge financing beyond the designated percentage for a defined period. The relevant terms should ensure that this temporary measure does not detract from the rights of OPG to direct all of the relevant activities of the SPV. Additionally, OPG should not be protected from risk of loss by the OEFC with respect to its subordinated investment, nor should it lose its right to derive the residual returns should such bridge financing be required.

Legislation

9. **The Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis, so that the SPV is able to recognize appropriate revenue to offset any ongoing costs.**

10. The Legislation must dictate the manner in which the restructured asset would be determined, collected, and the period of collection, so that the determination of the restructured asset will not be subject to the Province's decisions on an ongoing basis, but determined based on a formula. Alternatively, the Legislation may allow for an adjustment to the pre-determined deferral formula based on specific parameters that would limit the adjustment to the restructured asset. Adjustments beyond the specific parameters would require approval by the Board of Trustees.

11. The Legislation must be written to avoid legal or constitutional challenges and be irrevocable to reduce the cost of borrowing and with a specific formula which determines the deferral amount. As irrevocability would be difficult under Canadian law one mitigation would be to provide a Provincial guarantee which only applies with cancellation or amendment of the legislation.

12. The spirit of the above terms should be reflected in the SPV Indenture Agreement as well as Legislation, wherever possible.

2) The Trust is expected to be financed as follows:

- 51% senior secured debt from external markets
- 39% senior subordinated debt from OPG (via Province equity injection into OPG)
- 10% junior subordinated debt from OPG (5% from external markets and 5% from Province equity injection into OPG).

When assessing control, an investor shall consider the nature of its relationship with other parties and whether those parties are acting on the investor's behalf (i.e. they are 'de facto agents'). If OPG is assessed to be a 'de facto agent' of the Province, it will compromise the ability for OPG to consolidate the Trust. The split above is to meet the following conditions to ensure that OPG is not considered a 'de facto agent' of the Province:

- The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    - The Trust
    - Any of OPG's investments in the most subordinated debt of the Trust
- OPG must own greater than 50% of the most subordinated debt and targeted to own no less than 5% of the total debt of the Trust. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources.

3) The Province will need to conclude on whether OPG still meets the definition of a Government Business Enterprise as defined under Public Sector Accounting Board standards in order to obtain the preferred consolidation treatment after the transaction. We also recommend that the Province to undertake the analysis deemed necessary to confirm the accounting treatment in its consolidated Public Accounts, **including if the recognition of the intangible asset would result in an offsetting liability in the Public Accounts.**

Appendix C – Cabinet Submission Reference to SPV and GBE

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations.
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage the exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.

Appendix E – Key Aspects of DBRS Credit Rating Methodology

DBRS Limited (DBRS) has today confirmed the Issuer Rating and the Unsecured Debt rating of Ontario Power Generation Inc. (OPG or the Company) at A(low) as well as its Commercial Paper rating at R-1 (low). All trends are Stable. OPG's ratings continue to be supported by (1) the reasonable regulatory regime in place for the Company's generation facilities, (2) continuing financial support from its shareholder, the Province of Ontario (rated AA (low), Stable, by DBRS) and (3) strong cash flow-to-debt and debt-to-capital ratios.

http://www.dbrs.com/research/308279/dbrs-confirms-ontario-power-generation-inc-at-a-low-r-1-low-stable-trends.html

DBRS Criteria: Preferred Share and Hybrid Security Criteria for Corporate Issuers DBRS.COM 6

Hybrid Features	25%	50%	75%	100%
Subordination	Required – to ALL debt types	Required - to ALL debt types	Required - to ALL debt types	Required – to ALL debt types
Assumed Remaining Term to Maturity (as determined by DBRS)	> Five years	> Ten years	> 50 years	> 100 years
Interest Deferral	Optional; Cumulative for up to five years; Payable with cash	Optional; Cumulative for up to ten years; Payable with cash	Optional; Non-cumulative or cumulative and payable with equity	Mandatory; Non-cumulative or cumulative and payable with equity
Redemption Rights without Make-Whole and Replacement Language	Acceptable	Acceptable	Acceptable	**Not acceptable while senior debt is outstanding**
Tax- and Rating Agency Event-Based Redemption Rights with no Make-Whole	Acceptable	Acceptable	**Not Acceptable**	**Not Acceptable**

CASH FLOW-TO-DEBT = CASH FLOW FROM OPERATIONS / TOTAL DEBT

Cash flow from operations = core net income + depreciation + amortization + deferred taxes + other non-cash items from income statement (before changes in non-cash working capital items).

Total debt = short-term debt + long-term debt + hybrid debt portion + capital leases.

Gross interest expense = all interest expense + debt hybrid interest expenses + capitalized interest (excludes any International Financial Reporting Standards (IFRS) adjustments).

DEBT-TO-CAPITAL = TOTAL DEBT / TOTAL CAPITAL

Total capital = total debt + total preferred equity + total common equity + minority interest + capital leases.

EBIT-TO-INTEREST = EBIT / GROSS INTEREST EXPENSE

EBIT = revenue – cost of goods sold – selling, general and administrative expenses – depreciation – amortization.

Gross interest expense = all interest expense + debt hybrid interest expenses + capitalized interest (excludes any IFRS adjustments).

- To determine the BRA for regulation (see page 6), DBRS reviews the eight considerations found below, which assess the regulatory framework in which the utility conducts its business.
- The ranking of the factors is based on a five-point scale (excellent, good, satisfactory, below average and poor).
- The first four factors are generally of greater importance than the others when assessing regulatory risk; however, the factors are not given a specific weighting when assessing the regulatory framework.

Consideration 1: Deemed Equity Ratio

Definition

The deemed equity ratio is the percentage of equity investment in the rate base on which a utility could earn a return. In general, the higher the deemed equity ratio, the higher the earnings for a utility.

Score	Item	Definition
Excellent	50.00%+	• The deemed equity ratio represents 50.00% or more of the utility's rate base. • The treatment of the deemed equity ratio is consistent historically.
Good	45.00% to 49.99%	• The deemed equity ratio represents 45.00% to 49.99% of the utility's capital structure. • The treatment of the deemed equity ratio is consistent historically.
Satisfactory	40.00% to 44.99%	• The deemed equity ratio represents 40.00% to 44.99% of the utility's capital structure. • The treatment of the deemed equity ratio has not been consistent historically.
Below Average	35.00% to 39.99%	• The deemed equity ratio represents 35.00% to 39.99% of the utility's capital structure. • The treatment of the deemed equity ratio has not been consistent historically.
Poor	Below 34.99%	• The deemed equity ratio represents less than 34.99% of the utility's capital structure. • The treatment of the deemed equity ratio has not been consistent historically.

Consideration 2: Allowed ROE

Definition

Allowed ROE is a measurement of returns on the deemed equity portion of the rate base. The regulator assesses and sets an allowed ROE based on a utility's business risk level. These allowed ROE levels assume a current North American or Western European inflationary environment.

Score	Item	Definition
Excellent	10%+	• An allowed ROE is set at 10.00% or higher. • The regulatory treatment of allowed ROE has been consistent historically.
Good	9.00% to 10.00%	• An allowed ROE is set at 9.00% to 10.00%. • The regulatory treatment of allowed ROE has been consistent historically.
Satisfactory	8.00% to 8.99%	• An allowed ROE is set at 8.00% to 8.99%. • The regulatory treatment of allowed ROE has been consistent historically.
Below Average	7.00% to 7.99%	• An allowed ROE is set at 7.00% to 7.99%. • The regulatory treatment of allowed ROE has not been consistent historically.
Poor	Below 7.00%	• An allowed ROE is set at below 7.00%. • The regulatory treatment of allowed ROE has not been consistent historically.

Consideration 3: Energy Cost Recovery

Definition

Fuel and purchased energy cost (F&PE) recovery certainty and the timing of recovery are critical in DBRS's assessment of a regulatory system within a certain jurisdiction. DBRS looks at the following factors: (1) whether F&PE costs are fully passed through to the customers, (2) how often a utility is allowed to adjust the F&PE costs in retail rates charged to customers and (3) if there is a mechanism within a jurisdiction to allow utilities to make F&PE cost adjustments with no or minimal regulatory review. In addition, DBRS also focuses on the generation mix within a certain market. A high power cost market could have an impact on the utility's ability to recover the purchased power costs in a timely manner. DBRS notes that this factor is not applicable for water and waste-water utilities.

Score	Item	Definition
Excellent	Monthly/bimonthly	• F&PE costs are fully passed through. • Adjustment is made on a monthly basis. • There is an automatic adjustment mechanism. • The jurisdiction is in a favourable generation mix market, resulting in low power cost.
Good	Quarterly	• F&PE costs are fully passed through. • Adjustment is made on a quarterly basis. • There is an automatic adjustment mechanism. • The jurisdiction is in a favourable generation mix market, resulting in low power cost.
Satisfactory	Quarterly with regulatory review	• F&PE costs are fully passed through. • Adjustment is made on a quarterly basis. • F&PE cost deferrals are subject to some regulatory review. • The jurisdiction is in a good generation mix market.
Below Average	Annually with automatic adjustment	• F&PE costs are fully passed through or utilities have minimal exposure to energy price volatility. • Adjustment is made on an annual basis and is subject to minimal or some regulatory review. • The jurisdiction is in an above-average power cost market.
Poor	Annually with no automatic adjustment mechanism	• F&PE costs are fully passed through or utilities have minimal exposure to energy price volatility. • Adjustment is made on an annual basis. • F&PE cost deferrals are subject to regulatory review. • The jurisdiction is in an above-average power cost market.

Consideration 4: Capital and Operating Cost Recoveries

Definition

In assessing CCR and OCR, DBRS focuses on the likelihood of a utility's capex being added to its rate base, along with the timing of such an addition. In addition, DBRS focuses on cost-inflation adjustments that could affect the timing of the OCR. In particular, DBRS looks at the following factors: (1) the utilization of future test periods for rate decisions, (2) whether the spending is allowed to be added to the rate base during the construction or will only be added when the project is completed, (3) the level of upfront capital spending required without regulatory approval, (4) the degree of regulatory lag and uncertainty with respect to the CCR and (5) whether or not there is a reasonable mechanism to deal with cost overruns.

Score	Item	Definition
Excellent	Minimal CCR and OCR lag risk	• Work-in-progress costs can be added to the rate base if capex is significant. • Interim base-rate increases have been frequently authorized. • Future test periods are fully incorporated for rate-case decisions. • Rate cases are typically decided well within one year unless the rate cases are litigated or unusual circumstances occur. • There is a reasonable mechanism to deal with cost overruns.
Good	Reasonable CCR and OCR lag risk	• Capital costs are added to the rate base after completion of work. • Interim base-rate increases have been authorized from time to time. • Future test periods are at least partially incorporated for rate-case decisions. • Rate cases are typically decided within one year unless the rate cases are litigated or unusual circumstances occur. • There is a reasonable mechanism to deal with cost overruns.
Satisfactory	Modestly elevated CCR and OCR lag risk	• Capex is generally pre-approved by the regulator, but there is some modest upfront capital spending before regulatory approval. • Interim base-rate increases have been rarely authorized. • Historical test periods are commonly incorporated for rate-case decisions. • Rate cases are typically decided within one year unless the rate cases are litigated or unusual circumstances occur. • There is a reasonable mechanism to deal with cost overruns.
Below Average	Below-average CCR and OCR lag risk	• There is significant upfront capital spending before regulatory approval. • Interim base-rate increases have been rarely authorized. • Historical test periods are commonly incorporated for rate-case decisions. • Rate-case decisions typically take more than one year because of frequent court cases and other circumstances. • There are some mechanisms to deal with cost overruns.
Poor	Significant CCR and OCR lag risk	• Capex is generally not pre-approved by the regulator. • Capital costs are added to the rate base after completion of work. • Utilities face significant regulatory lag risk with respect to the CCR and the OCR. • There is no meaningful mechanism to deal with cost overruns.

Consideration 5: COS versus IRM

Definition

In general, under COS, regulated utilities are allowed to recover prudently incurred operating costs and earn a reasonable return on their investment. Under IRM, revenue requirements for the year are based on a COS base year, adjusted for inflation (using the consumer price index (CPI)) and subtracted a productivity factor, which is set by the regulator. This forces utilities to maintain their operational efficiency to achieve allowed ROE. DBRS views COS as lower risk than IRM. In addition, DBRS also considers the length of an IRM period between COS years. DBRS's scoring system gives a higher score for a shorter IRM period.

Score	Item	Definition
Excellent	COS	• The COS regime allows utilities to recover prudently and reasonably incurred operating costs.
Good	IRM (three years or shorter)	• The IRM regime is a maximum of three years between COS years. • For an IRM period of more than three years, there are reasonable mechanisms in place to mitigate unexpected capital investment and operating costs. In addition, key IRM assumptions, including CPI and productivity factors, are reasonable.
Satisfactory	IRM (four- to five-year framework)	• The IRM period is four to five years.
Below Average	IRM (six- to ten-year framework)	• The IRM period is six to ten years.
Poor	IRM (ten-plus years)	• The IRM period is over ten years.

Consideration 6: Political Interference

Definition

Political interference refers to political risk that could occur within a jurisdiction. Political interference could be in the following forms: (1) influence on the regulator's ability to independently and impartially arrive at a decision, (2) passing legislation to override a decision made by the regulator and (3) the regulator being elected instead of being appointed.

Score	Definition
Excellent	• There is no government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed.
Good	• There is a low degree of government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed.
Satisfactory	• There is a low degree of government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed or elected.
Below Average	• There is a modest degree of government influence on the regulatory decision-making process. • There has been no adverse legislation in the regulated utility sector. • The regulator is appointed or elected.
Poor	• There is a high degree of government influence on the regulatory decision-making process. • There has been some adverse legislation in the regulated utility sector. • The regulator is appointed or elected.

Consideration 7: Stranded Cost Recovery

Definition

Stranded costs occur when a utility has already incurred costs (F&PE, operating cost or capital spending) and faces uncertainty as to when it can recover these costs. In some cases, stranded costs are written off if it is certain that these costs cannot be recovered. DBRS looks at the following factors: (1) whether stranded costs exist and their magnitude, (2) the likelihood of recovering stranded costs, (3) the frequency and materiality of writedowns and (4) the time it takes to recover these costs.

Score	Item	Definition
Excellent	No stranded cost	• No stranded costs associated with legitimate or reasonable costs incurred by utilities.
Good	Full recovery	• Some stranded costs exist. • Stranded costs are fully recovered in a timely manner. • No historical stranded cost writedowns.
Satisfactory	Occasional writedowns	• Some stranded costs exist. • Stranded costs are recovered but subject to some regulatory lag. • Occasional writedowns.
Below Average	Frequent writedowns	• Some stranded costs exist. • Stranded costs are sometimes recovered. • Frequent writedowns. • Takes considerable time to recover costs.
Poor	Frequent significant writedowns	• Significant stranded costs exist. • Stranded costs are not fully recovered. • Significant writedowns occur. • Significant regulatory lag associated with the recovery.

Consideration 8: Rate Freeze

Definition

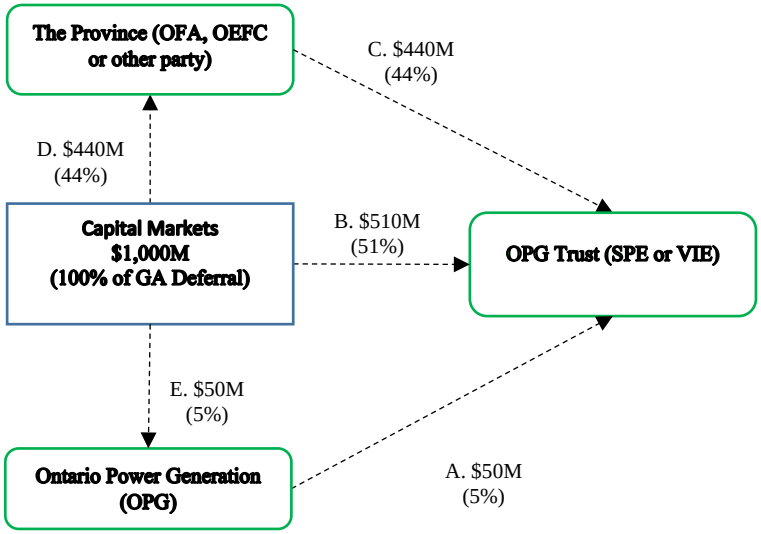
A rate freeze refers to a fixed retail rate that is charged to customers during a period of time (more than two years). During the rate-freeze period, utilities are exposed to increases in operating and energy costs. The longer the rate-freeze period or the more frequency with which a rate freeze occurs within a jurisdiction, the riskier it is for the utility.

Score	Item	Definition
Excellent	Never	• Rates are never frozen.
Good	Potential	• Rates have the potential to be frozen.
Satisfactory	Occasional	• Rates are occasionally frozen. • The frozen period is fewer than three years.
Below Average	Frequently	• Rates are frequently frozen. • The frozen period is fewer than three years.
Poor	Rate freeze	• Rates are currently frozen. • The frozen period is three years and longer.

Appendix F. GA Deferral Structure – Accounting Considerations for Consolidation of SPV

Assumptions: Year #1 – GA Deferral of $1B
Rate Charged to ratepayers – 5%
Interest Collected Year 1 - $50M*
Tranche A – 4.0%, $20.4M annually
Tranche B – 5.5%, $24.2M annually
Tranche C - 10.8%, $5.4M annually (the **residual return**)
**Assume straight interest for simplicity, 5% x $1B = $50M*

Scenario



Under US GAAP (OPG's Perspective)

- The relevant standard is FASB ASC Topic 810 [*Consolidation*]
- An SPE is an enterprise created to accommodate specific needs of the sponsoring entity.
- A SPE is classified as a VIE if
  - **Total equity at risk is insufficient to finance activities without financial support from other parties, or**
  - Equity investors lack any one of the following:
    - The ability to make decisions
    - The obligation to absorb losses
    - **The right to receive returns**
- The **primary beneficiary** of a VIE must consolidate it as its subsidiary **regardless of how much of an equity investment it has in the VIE**.
- The primary beneficiary (**usually the sponsor**, **which in this case is OPG)** is the entity that is expected to **absorb the majority of the VIE's expected losses**, receives the **majority of the VIE's residual returns,** or both.
- The primary beneficiary has the **power to direct the activities of the VIE that most significantly impact the entity's economic performance**.
- If one entity will absorb the majority of the VIE's expected losses and another unrelated entity will receive a majority of the VIE's expected residual returns, the entity absorbing a majority of the losses must consolidate the VIE.
- The SPE borrowing from the debt market acquires or constructs an asset – the asset may be acquired from the sponsoring company (i.e., OPG) or from an outside source (e.g., IESO).
- Under US GAAP, with the Province indirectly or directly financing the SPV, since OPG will absorb the majority of the **expected** losses from the equity tranche, will receive the **majority** of the **residual returns**, and will have the **power to direct activities of the VIE**, it would likely be considered the primary beneficiary and would consolidate the VIE.

Setting up the Trust (in no particular order)
A. OPG Trust, the Special Purpose Entity (SPE) under IFRS and Variable Interest Entity (VIE) under US GAAP, receives 5% of the GA Deferral to fund the purchase of the IESO's regulatory asset. This 5% represents the junior "equity" tranche ("Tranche C").
B. The SPE funds 51% **(or more)** of the GA deferral by issuing **debt securities** to the capital markets. This forms the senior tranche ("Tranche A").
C. The SPE funds 44% (**or less**) of the GA deferral by issuing **debt securities** to the Province. This could form part of Tranche A or a more subordinated debt ("Tranche B") that is higher than Tranche C. The alternative option is from Figure 1.
D. The Province uses general borrowing to finance the 44% of the GA deferral given to the SPV as **debt**. Or given to OPG → SPV.
E. OPG borrows the 5% (**minimum**) from the capital markets directly (minimum based on white paper).

Under PSAB (Province's Perspective for the SPV)

- OPG already receives all its financing from the Province through standard debt issuances, credit facilities, and non-recourse project financing.
- The white paper states that the Province cannot "indirectly or directly" fund the SPV through debt or equity.
- Arguably, the Province investing directly into the SPV (with debt not equity) rather than OPG directly is more arm's length, with the Province securing a better chance of return than with equity injections.
  - A lower interest rate can be secured due to the securitization of the regulatory asset (or intangible asset once purchased) – as the assets in a SPV are bankruptcy remote.
  - The fact that the debt, treated as an interorganizational loan under PSAB, is related to cashflows from a rate regulated asset should not impact its recognition on the balance sheet (similar to how OPG and Hydro One have debt and equity from the Province that gain a return from regulated assets).
  - There is a risk that if the SPV structure dissolves, then the rate regulated assets would be the recourse for the debt, resulting in a fiscal impact with their inability to be recognized on Provincial Accounts.
- **To be confirmed by external accountants – regardless of if the Province invest directly in the SPV or indirectly through OPG, all else being equal, there would be no line-by-line consolidation.**

Under IFRS (Province's Perspective for OPG modified equity method)

- The Province is required under PSAB to consolidate OPG in its books **under the modified equity method, but under IFRS**.
- Thus, OPG Trust must also be considered an SPE for OPG under IFRS for the preferred accounting treatment to be attained.
- The relevant standard is IFRS 10 (below taken from **2017 IFRS standards**) are similar to US GAAP:
- **Par 7** - an investor controls an investee if and only if the investor has **all the following:**
  - **power over the investee**
  - **exposure, or rights, to variable returns** from its involvement with the investee; and
  - **the ability to use its power over the investee to affect the amount of the investor's returns**.
- **Par 17** - An investor controls an investee if the investor not only has power over the investee and exposure or rights to variable returns from its involvement with the investee, but also has the ability to use its power to affect the investor's returns from its involvement with the investee.
- **Relationship with other parties: Par B73** - When assessing control, an investor shall consider the nature of its relationship with other parties and whether those other parties are acting on the investor's behalf (i.e. they are 'de facto agents'). The determination of whether other parties are acting as de facto agents requires judgement, considering not only the nature of the relationship but also how those parties interact with each other and the investor.
- **Par B74** - Such a relationship need not involve a contractual arrangement. A party is a de facto agent when the investor has, or those that direct the activities of the investor have, the ability to direct that party to act on the investor's behalf. In these circumstances, the investor shall consider its de facto agent's decision-making rights and its indirect exposure, or rights, to variable returns through the de facto agent together with its own when assessing control of an investee.
- **Par B75** - Here are examples of parties that, by the nature of their relationship, might act as de facto agents for the investor:
- (a) the investor's related parties. **Criterion is met as Province is a related party.**
- (b) a party that received its interest in the investee as a contribution or loan from the investor. **OPG's only interest in the investee is the 5% if Province funds SPV directly – 5% from capital markets. Criteria not met (TBC).**
- (c) a party that has agreed not to sell, transfer or encumber its interests in the investee without the investor's prior approval (except for situations in which the investor and the other party have the right of prior approval and the rights are based on mutually agreed terms by willing independent parties). **Criterion met based on latest legislation draft**.
- (d) a party that cannot finance operations without subordinated financial support from the investor. **OPG is self-sufficient GBE.**
- (e) an investee for which the majority of the members of its governing body or for which its key management personnel are the same as those of the investor. **Test not met – OPG governing body (Board of directors) is separate from the Province.**
- (f) a party that has a close business relationship with the investor, such as the relationship between a professional service provider and one of its significant clients**. Criterion met**.
- **CEFD interpretation**: The Province directly funding the SPV has the same consolidation effect as indirect funding through OPG.

Hi Selena, Daniel,

We have the attached deck with footers that we hope meet the protocol in sending information to FAO. Could you let us know if it does fit with the protocol.

We have sent a version of this deck up the line and assume that this had gone up to the Minister for something that had gone to Cabinet.

Thanks,

John.

Hey John,

Just following up on our conversation Friday. You had asked about the rationale for certain levels of financing – passing this note along that we just received from OPG. Let me know if you have further questions on this.

Secondly, I'm starting to pull together materials for the TB submission. The first is seeking appropriation for the equity injections, second is any PILs exemptions that the Province is comfortable with. Lastly, Scott thought you guys might also want something built into the submission about increased borrowing requirements of the IESO – would you be able to draft something for inclusion in the submission on this (if required)?

Let me know what you think.
Kaitlin

CONFIDENTAL **April 18, 2017**

Ontario Power Generation

Issue: OPG has indicated that for the Trust to be consolidated into OPG there is a need to have at least 51% of the debt financing of the Trust originate directly from the external market. This requirement is supported by specific technical guidance on the topic as set out below.

IFRS 10 – Consolidated Financial Statements requires an investor to consider whether there are other parties who are acting on behalf of the investor by virtue of their relationship with it. That is, IFRS 10 requires consideration of whether the other parties (i.e. OPG) are acting as de facto agents for the investor (i.e. Province). If OPG is considered a de facto agent, the consolidation accounting objective will **not** be met.

There are a series of references in IFRS 10 (Section B75) that support this conclusion. Each of these elements must be examined in their totality to successfully address the consolidation principal of the Trust. The importance of each element is amplified due to the fact that OPG is a related party to the Province, which increases the importance of other tests being met. These tests include:

a) a party that received its interest in the investee as a contribution or loan from the investor.
OPG will receive a 44% equity injection from the Province of Ontario, indirectly through the Ontario Financing Authority. Given that currently, the majority (currently 51%) of the Trust debt will be from External Markets and not the Province, it can be argued that OPG did not receive the majority of its interest in the investee as a contribution or loan from the Province. This criterion is not met and shows that OPG is a principal, not a de-facto agent.

b) a party that has agreed not to sell, transfer or encumber its interests in the investee without the investor's prior approval
There is a proposed clause that the Trust cannot be wound up without approval from the Minister of Energy, this criterion is met.

c) a party that cannot finance its operations without subordinated financial support from the investor.
OPG can finance its operations without subordinated financial support from the Province – criterion is not met.

d) an investee for which the majority of the members of its governing body or for which its key management personnel are the same as those of the investor.
OPG is a related party of the Province of Ontario, therefore this criterion is met.

e) a party that has a close business relationship with the investor, such as the relationship between a professional service provider and one of its significant clients.
OPG is a related party of the Province of Ontario, therefore this criterion is met.

Given the number of factors met above, there may be a view that OPG could be considered a de facto agent of the Province through its related party relationship (4 out of 6 items are met). It is of vital importance, and as concurred by EY, that the majority of the debt in the Trust is not more than 44% funded by the Province (note that the remaining 5% of debt has to be funded externally by OPG in order to show that OPG has equity that is not sourced from the Province at risk). If the debt in the Trust is seen by the External Auditors as being principally funded by the Province, OPG would fail 5 out of 6 criteria above and be considered a de facto agent. As a result, proposed consolidation accounting would fail.

Hi Ron,

Pls. see attached on the GA structure, as we understand things.

It's very complex and not sure if an average person on the street would be able to follow.

Thanks,

John.

Structure of the Global Adjustment Deferral Mechanism

Issue

The Province is working with Ontario Power Generation (OPG), the Ontario Energy Board (OEB), IESO, external accountants, and other agencies to develop a mechanism to defer the global adjustment (GA) payment as part of the recently announced Ontario Fair Hydro Plan. This note outlines current proposals for this mechanism.

Context

- Smoothing of GA costs over time would involve ratepayers paying only a portion of the GA cost in earlier years, while this shortfall would be made up by future rate payers paying more than the true cost of the GA in later years.
    - There will be a proposed cap of $2.242B on the annual additional cost over the GA to lessen the burden on ratepayers.

- The shortfall in GA payments in earlier years would represent deferred costs to ratepayers. However, the mechanism would still need to compensate power generators on an ongoing basis for the full cost of the GA and would therefore need to borrow and take on debt to make cash payments to power generators.
- Principal payments on debt would be mandatory, but there has been no clarification on whether or not interest payments will be capitalized (i.e., interest accumulates resulting in compounding) or if interest will be recovered from ratepayers on an on-going basis.
    - If interest payments are made by ratepayers on an on-going basis debt costs would be lower, however this would also have the effect of reducing ratepayer savings from the GA deferral mechanism. The commitment is for a 25% reduction on average for all residential customers, which would mean that the amount of principal needs to be larger to offset this effect.
- It has also been proposed that all administrative and other costs from the GA deferral would need to be collected from ratepayers immediately or recognized at the very least as a future benefit to the Province, adding to the costs passed on to ratepayers.

Structure (*refer to Exhibit A*)

- The deferred portion of the GA needs to be recognized as an asset – likely a regulatory asset – by the IESO, which gives the IESO the right to collect the deferred amount from ratepayers at a future date.
- This asset, in turn, would be sold to another party that would receive the revenues associated with this asset.
    - It is proposed that the IESO be required to recover the costs associated with this asset even after selling it.
    - To do this the IESO would need to sell the asset in order to settle its arrangements with generators, and ensure generators are not affected by the deferral.
        - Alternatively, the IESO could simply borrow funds (using the regulatory asset as collateral), but this poses risks for both consolidation on public accounts and credit ratings.
        - With respect to the credit rating risk, DBRS stated in a March 3, 2017 report that "*Provided the debt continues to be fully supported through the electricity rate base, DBRS will treat it as self-supported and exclude it from the calculation of tax-supported debt*".
- OPG is proposing to set up a special purpose vehicle, "OPG Trust", which would purchase the regulatory asset from the IESO.
    - The purchase would be funded by debt from the capital markets (51% of the deferred GA Cost), and OPG (49% of the deferred GA).
    - OPG would finance that 49% through debt from the capital markets (5%) and an equity injection from the Province (44%).

    - The debt would be set-up in tranches to ensure that the 51% of debt directly from the market would be senior, potentially mitigating the risk premium associated with high amounts of borrowing with an intangible, unique asset as collateral.
- There are several other considerations and requirements that would need to be attained in order for the mechanism to work, as detailed in the OPG White Paper sent to the Deputy Minister of Energy on February 27, 2017.

Equity Injection (*refer to Exhibit A & B*)

- The equity injection could lead to increasing, and then stabilizing dividend payouts in consistent with OPG's's risk profile and comparable business entities.
    - Principal and interest payments flowing from the ratepayers through the IESO and the Trust could be paid back to the Province.
    - This would increase steadily as ratepayers begin to pay back principal in about 10 years time, eventually reaching a cap of $2.242B in principal and interest per year based on Energy's March estimates (based on the capitalized interest scenario).
    - The administrative costs and return for OPG/OPG Trust would also need to be collected by ratepayers, but the dividend payments would be net of these amounts and should still allow the Province to earn a substantial return.
    - Dividend payments could also allow OPG to eventually optimize its capital structure to the targeted or deemed 55%-45% debt to equity split, as dividends allow OPG to reduce its retained earnings thereby reducing equity.
- Recapitalization from the Province is preferable as there are no associated interest expenses or large principal payments that could affect OPG's credit rating.
- If debt financing was utilized, the change in the cost of borrowing could also impact OPG's rate applications for the return recovered from ratepayers through payment amounts, potentially offsetting ratepayer benefit of the GA deferral mechanism.
- The financing structure split between equity (44%) and debt (5% borrowed by OPG and 51% borrowed by OPG Trust) is roughly equivalent to the deemed capital structure of 55% debt and 45% equity for regulated distributors in Ontario.

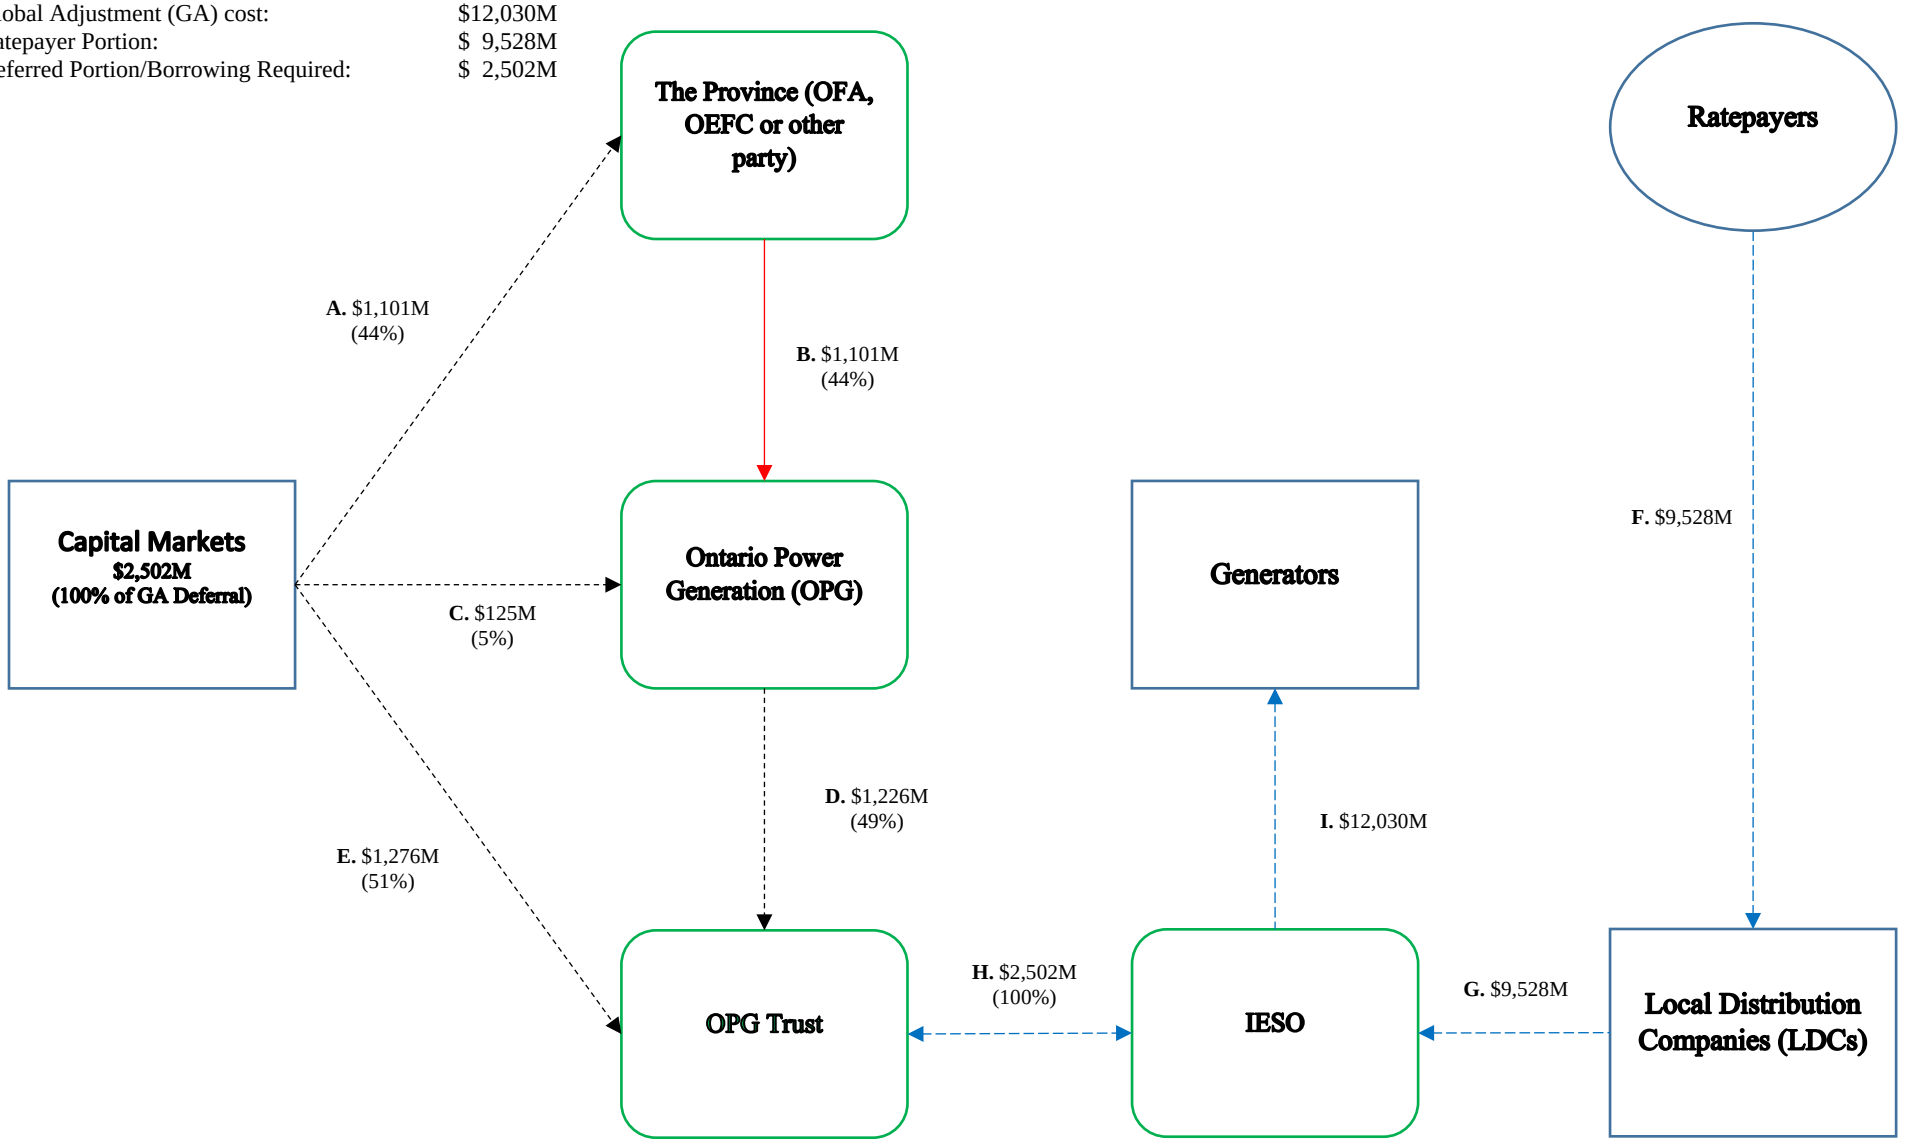
Collection of Interest Payments (*refer to Exhibit C*)

- There are different potential accounting treatments, depending on legislative and regulatory approval, that would impact the amount of borrowing and interest over the long term as well as the total fiscal impact.
    - **Option 1: Collect interest and administrative costs from ratepayers on an on-going basis:** Interest and the costs to finance/administer the GA deferral mechanism would be recovered from ratepayers along the way. This would allow cash and income to be recognized by OPG Trust equivalent to the total borrowing cost from the market (i.e., the interest on the 44% of the GA the Province borrowed from the market, the 5% of the GA OPG borrowed, and the 51% of the GA OPG Trust borrowed). Furthermore, some type of additional return for the risk premium could be made. Overall, there would be no fiscal cost, and less debt would build up over time due to the elimination of the compound effects on interest.
    - **Option 2: Collect interest costs associated with the senior debt**: There are variations on this concept which essentially proposes to only collect some of the interest costs from ratepayers, with the senior debt that OPG Trust borrows directly from the market of primary concern. This is "meeting halfway" between deferring all interest payments and collecting all interest payments from ratepayers immediately.

- Option 3: **Do not collect from ratepayers**. There is a fiscal impact equal to 100% of the interest on the total borrowings as an expense still needs to be recognized, even though cash interest has not been paid. There is also a compounding effect on interest.
- Option 4: **No collection from ratepayers but deferral of expense recognition (Same as Energy's analysis in its Cabinet Submission)**. For this option, there is no collection of interest payments from ratepayers, but OPG Trust is somehow allowed to defer the recognition of interest expense on its books and recognize as a regulatory asset, thus eliminating the fiscal impact.
    - If OPG Trust were allowed to recognize a regulatory asset, then it could defer the interest expense, instead recognizing it as an asset (similar to the idea of a prepaid expense).
    - Thus, OPG would recognize interest income from OPG Trust, but OPG Trust would not recognize an expense related to the amount owed to OPG and instead would increase the regulatory asset by the same amount.
    - The interest income earned by OPG for the 49% of the GA deferral it borrowed would offset the borrowing the Province made from the capital markets.
    - OPG Trust would also defer the recognition of the interest associated with the 51% of the GA deferral it borrowed from the market. The deferred amount would be recognized in a regulatory asset.
    - When OPG starts collecting principal and interest from ratepayers, it will recognize income, but will also amortize the regulatory asset at the same time, thus matching revenue and expenses with each other in the time period and potentially eliminating the fiscal impact.
    - Many factors, including the initial accounting treatment and the effect of consolidation, are significant barriers to the application of this approach.
    - **Alternatively, OPG Trust might be able to recognize income (with a receivable created to balance the transaction) to offset the interest expense without collecting from ratepayers**, i.e., it will be a cash transaction in the future (cash received offset by a decrease in the receivable; no effect on income statement).

Exhibit A; 2017-2018 Estimates for Balance Sheet Transactions

Global Adjustment (GA) cost:	$12,030M
Ratepayer Portion:	$ 9,528M
Deferred Portion/Borrowing Required:	$ 2,502M



Setting up the Trust

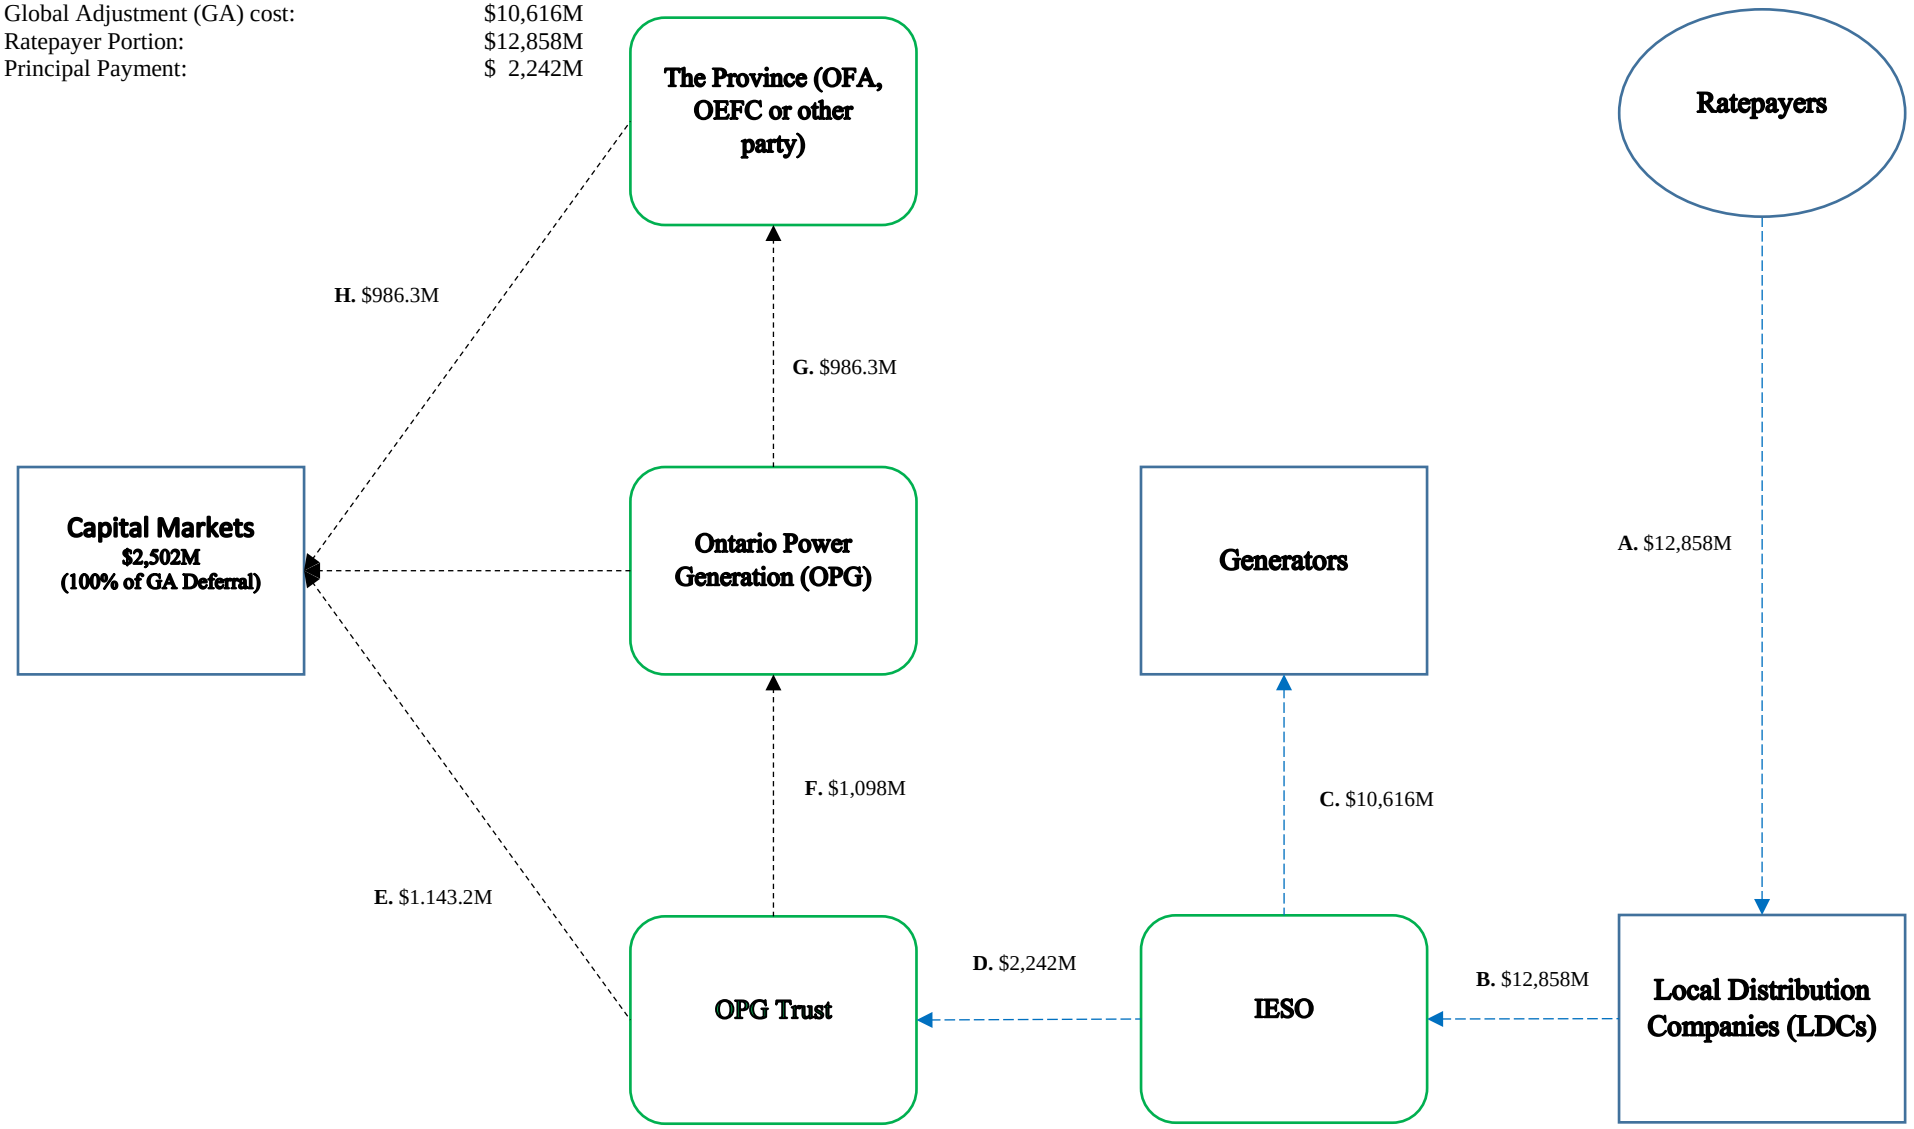
A. The Province borrows 44% of the deferred GA from the market.
B. The Province then funnels this amount to OPG through an equity injection.
C. OPG borrows 5% of the deferred GA from the market.
D. OPG lends an amount equal to the 5% and 44% from the market and the Province, respectively, to a separate legal entity called OPG Trust.
E. OPG Trust borrows 51% of the deferred GA from the market, ending up with 100% of the total $2.502M deferred GA in cash.

Deferral Mechanism

F. Ratepayers pay their portion of the GA to LDCs.
G. The LDCs remit this amount to IESO.
H. IESO, with the proper legislation and accounting treatment, is allowed to recognize a regulatory asset – the right to collect the deferred amount of $2,502M from ratepayers. It then sells this asset for cash to OPG Trust.
I. IESO uses the proceeds from the sale of the regulatory asset and the collection amount from LDCs to pay the full amount of the GA to Generators.

Exhibit B: 2028-2029 Estimates for Principal Payments

Global Adjustment (GA) cost:	$10,616M
Ratepayer Portion:	$12,858M
Principal Payment:	$ 2,242M



Collection of the GA

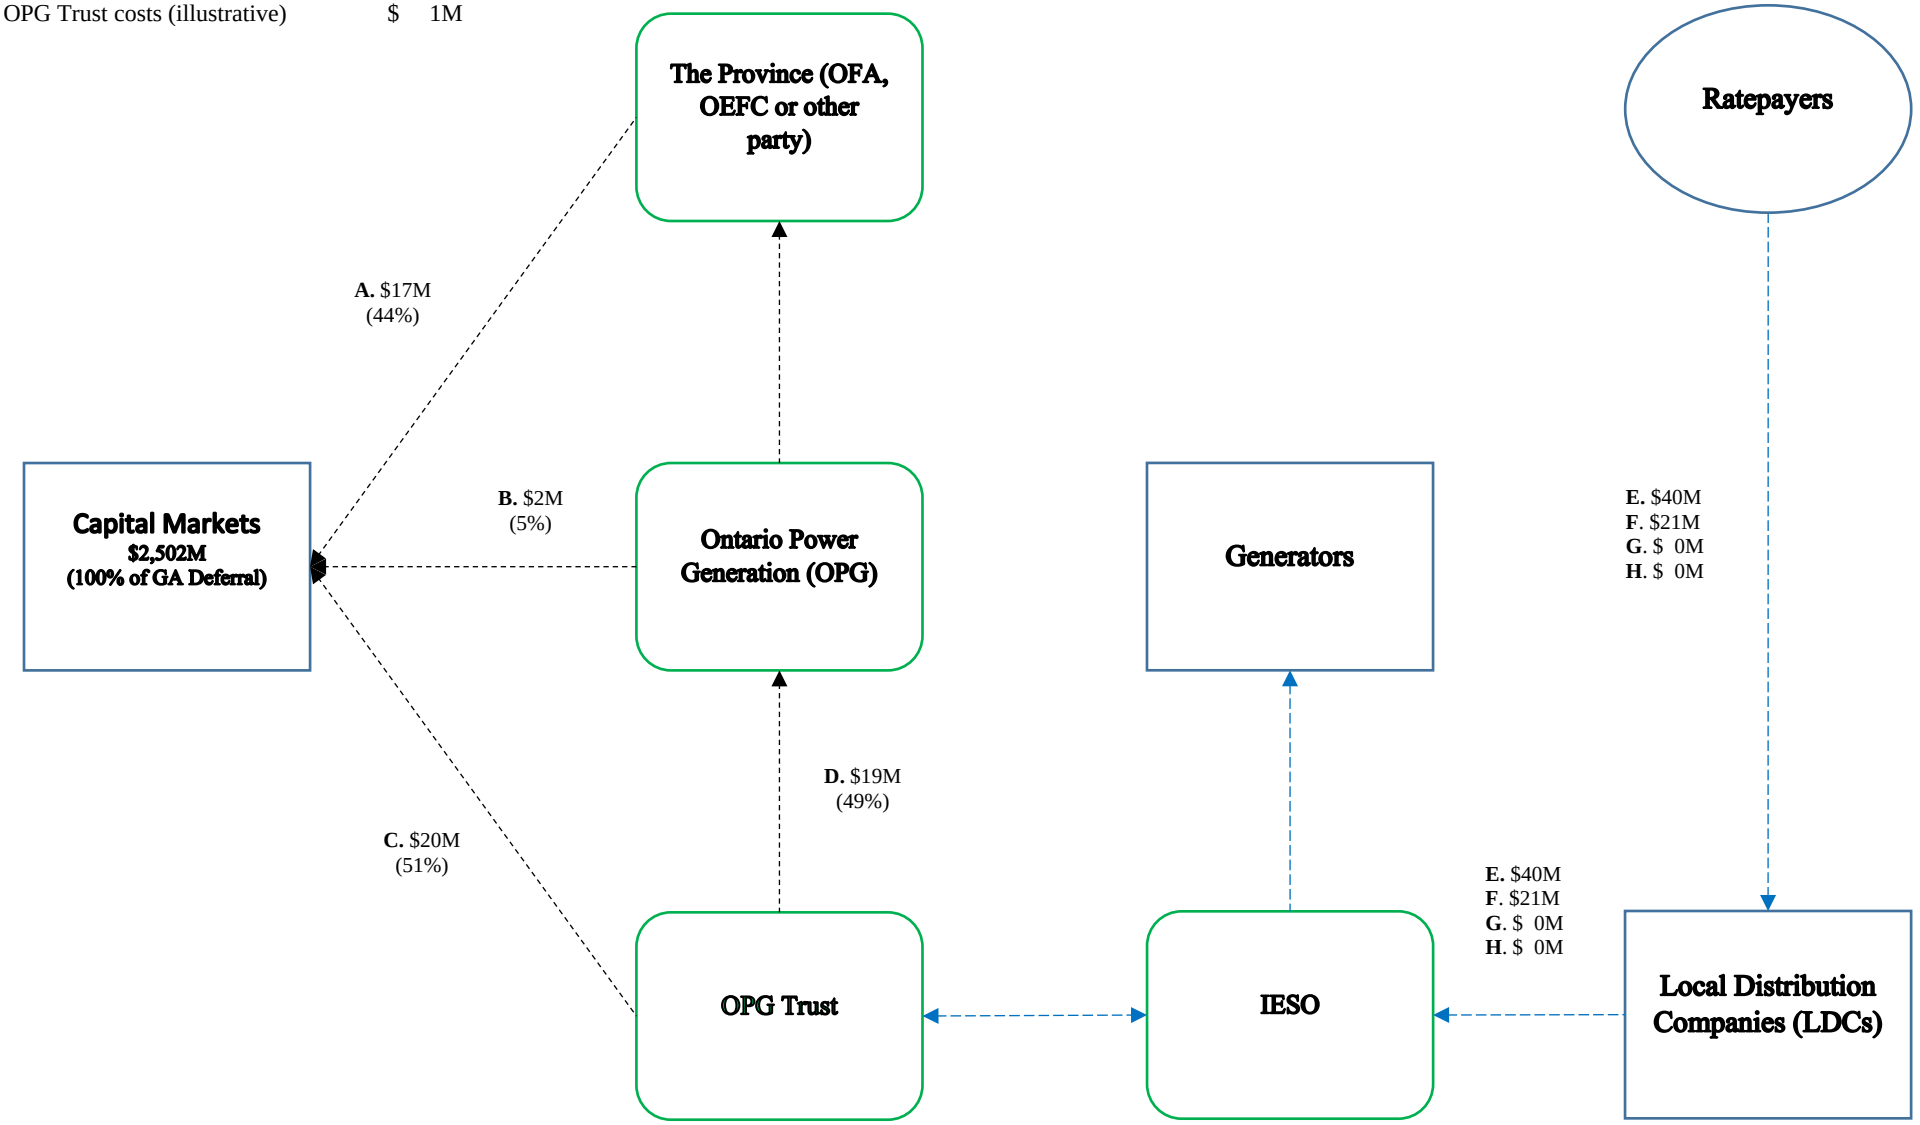
A. Ratepayers pay to LDCs the full cost of the GA plus an additional $2.242M that will be used to reduce the principal of the borrowing (or principal and interest if there is "interest on interest").
B. LDCs remit this amount to IESO.
C. IESO pays the full cost of the actual GA to generators.
D. IESO pays to OPG Trust the additional payment from the ratepayers over the actual GA cost. OPG Trust reduces the asset (for the right to collect GA deferral costs from ratepayers) by an equivalent amount.

Settlement of Principal.

E. OPG Trust pays off principal to the market. In this example, pays off 51%, but could pay more or less depending on various factors (e.g., subordinate debt, managing weighted average interest cost, etc.).
F. OPG Trust pays down principal related to the 49% of the GA Deferral it borrowed from OPG.
G. OPG could give a dividend to the Province equal in order to pay off the outstanding principal it borrowed from the market (44% of the total GA deferral cost)
H. The Province pays back principal to the market.

Exhibit C: 2017-2018 Estimates for Interest Recognition

Interest Recognized	$ 39M
OPG Trust costs (illustrative)	$ 1M



Recognition of Interest

A. The Province recognizes interest on the 44% of the deferred GA it borrowed from the market.

B. OPG recognizes interest on the 5% of the deferred GA it borrowed from the market.

C. OPG recognizes interest on the 51% of the deferred GA it borrowed from the market.

D. OPG Trust recognizes interest on the 49% of the GA it borrowed from OPG; OPG recognizes income for this transaction.

Options for Ratepayer collection

E. Option 1 – collect the entire interest amount from ratepayers plus the Trust administrative costs, thus offsetting the interest expense from total borrowing with the recognition of income. The end result is no fiscal impact.

F. Option 2 – only collect interest income for the 51% of deferred GA from the market and admin costs; OPG Trust would recognize income to offset the interest expense to the market but fiscal impact of 49% of the interest ($19M)

G. Option 3 – Do not collect from ratepayers – fiscal cost of 100% interest.

H. Option 4 – No collection from ratepayers, but OPG Trust is allowed to defer the recognition of interest expense on 100% of debt, leading to no fiscal impact.

Notes

- Assumptions based on Energy models and data, IESO forecasts, and CEFD validation models.
- Sources include Ministry of Energy decks, OPG reports and discussions, external accounting reports, and internal reports/discussions.

Hi Bruno,

Pls. share this with Felix and James with the caveat of being staff-level internal discussion note. Not reviewed by ADM.

My view is that OPCD should be keeping them in the loop but things don't always work out as should.

Thanks,

John

Hi Ron,

Pls. see attached on the GA structure, as we understand things.

It's very complex and not sure if an average person on the street would be able to follow.

Thanks,

John.

Structure of the Global Adjustment Deferral Mechanism

Issue

The Province is working with Ontario Power Generation (OPG), the Ontario Energy Board (OEB), IESO, external accountants, and other agencies to develop a mechanism to defer the global adjustment (GA) payment as part of the recently announced Ontario Fair Hydro Plan. This note outlines current proposals for this mechanism.

Context

- Smoothing of GA costs over time would involve ratepayers paying only a portion of the GA cost in earlier years, while this shortfall would be made up by future rate payers paying more than the true cost of the GA in later years.
    - There will be a proposed cap of $2.242B on the annual additional cost over the GA to lessen the burden on ratepayers.

- The shortfall in GA payments in earlier years would represent deferred costs to ratepayers. However, the mechanism would still need to compensate power generators on an ongoing basis for the full cost of the GA and would therefore need to borrow and take on debt to make cash payments to power generators.
- Principal payments on debt would be mandatory, but there has been no clarification on whether or not interest payments will be capitalized (i.e., interest accumulates resulting in compounding) or if interest will be recovered from ratepayers on an on-going basis.
    - If interest payments are made by ratepayers on an on-going basis debt costs would be lower, however this would also have the effect of reducing ratepayer savings from the GA deferral mechanism. The commitment is for a 25% reduction on average for all residential customers, which would mean that the amount of principal needs to be larger to offset this effect.
- It has also been proposed that all administrative and other costs from the GA deferral would need to be collected from ratepayers immediately or recognized at the very least as a future benefit to the Province, adding to the costs passed on to ratepayers.

Structure (*refer to Exhibit A*)

- The deferred portion of the GA needs to be recognized as an asset – likely a regulatory asset – by the IESO, which gives the IESO the right to collect the deferred amount from ratepayers at a future date.
- This asset, in turn, would be sold to another party that would receive the revenues associated with this asset.
    - It is proposed that the IESO be required to recover the costs associated with this asset even after selling it.
    - To do this the IESO would need to sell the asset in order to settle its arrangements with generators, and ensure generators are not affected by the deferral.
        - Alternatively, the IESO could simply borrow funds (using the regulatory asset as collateral), but this poses risks for both consolidation on public accounts and credit ratings.
        - With respect to the credit rating risk, DBRS stated in a March 3, 2017 report that "*Provided the debt continues to be fully supported through the electricity rate base, DBRS will treat it as self-supported and exclude it from the calculation of tax-supported debt*".
- OPG is proposing to set up a special purpose vehicle, "OPG Trust", which would purchase the regulatory asset from the IESO.
    - The purchase would be funded by debt from the capital markets (51% of the deferred GA Cost), and OPG (49% of the deferred GA).
    - OPG would finance that 49% through debt from the capital markets (5%) and an equity injection from the Province (44%).

    - The debt would be set-up in tranches to ensure that the 51% of debt directly from the market would be senior, potentially mitigating the risk premium associated with high amounts of borrowing with an intangible, unique asset as collateral.
- There are several other considerations and requirements that would need to be attained in order for the mechanism to work, as detailed in the OPG White Paper sent to the Deputy Minister of Energy on February 27, 2017.

Equity Injection (*refer to Exhibit A & B*)

- The equity injection could lead to increasing, and then stabilizing dividend payouts in consistent with OPG's's risk profile and comparable business entities.
    - Principal and interest payments flowing from the ratepayers through the IESO and the Trust could be paid back to the Province.
    - This would increase steadily as ratepayers begin to pay back principal in about 10 years time, eventually reaching a cap of $2.242B in principal and interest per year based on Energy's March estimates (based on the capitalized interest scenario).
    - The administrative costs and return for OPG/OPG Trust would also need to be collected by ratepayers, but the dividend payments would be net of these amounts and should still allow the Province to earn a substantial return.
    - Dividend payments could also allow OPG to eventually optimize its capital structure to the targeted or deemed 55%-45% debt to equity split, as dividends allow OPG to reduce its retained earnings thereby reducing equity.
- Recapitalization from the Province is preferable as there are no associated interest expenses or large principal payments that could affect OPG's credit rating.
- If debt financing was utilized, the change in the cost of borrowing could also impact OPG's rate applications for the return recovered from ratepayers through payment amounts, potentially offsetting ratepayer benefit of the GA deferral mechanism.
- The financing structure split between equity (44%) and debt (5% borrowed by OPG and 51% borrowed by OPG Trust) is roughly equivalent to the deemed capital structure of 55% debt and 45% equity for regulated distributors in Ontario.

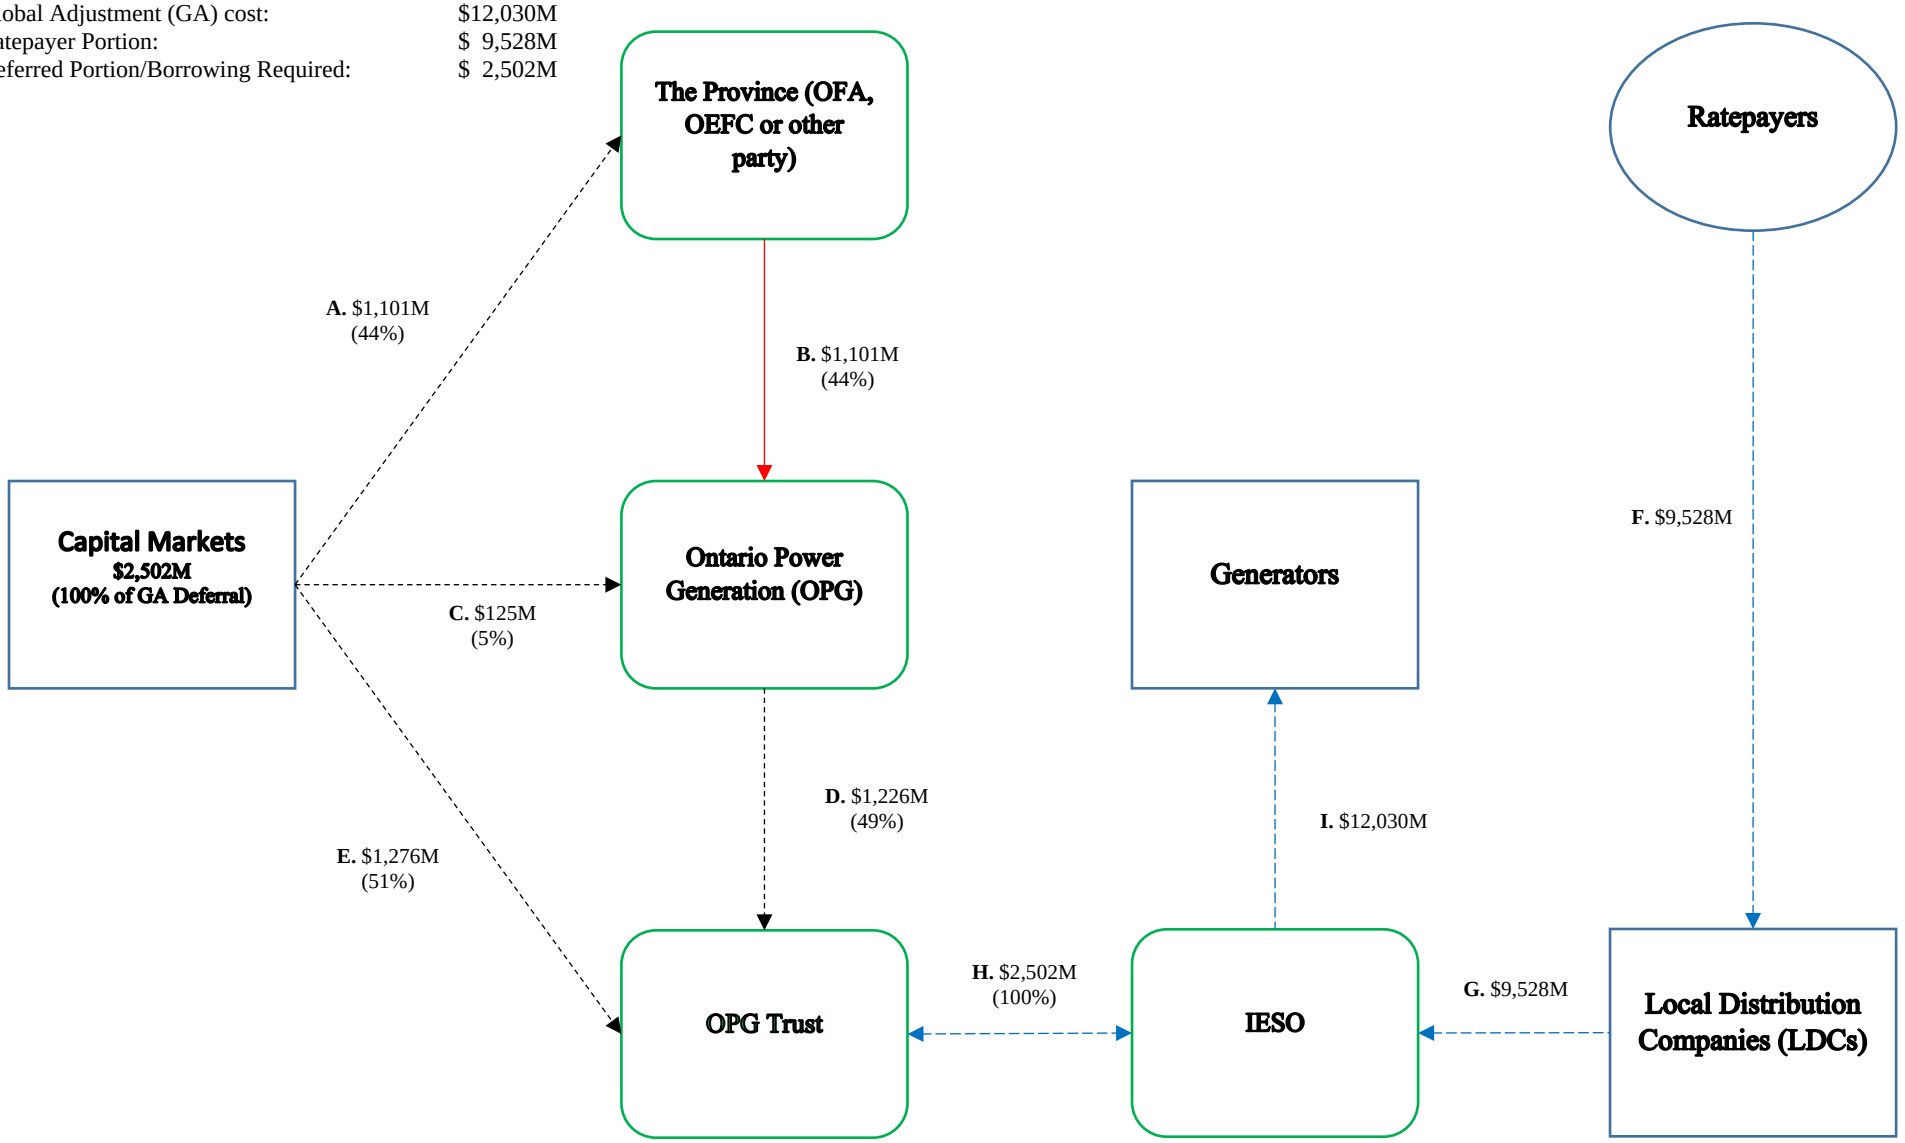
Collection of Interest Payments (*refer to Exhibit C*)

- There are different potential accounting treatments, depending on legislative and regulatory approval, that would impact the amount of borrowing and interest over the long term as well as the total fiscal impact.
    - **Option 1: Collect interest and administrative costs from ratepayers on an on-going basis:** Interest and the costs to finance/administer the GA deferral mechanism would be recovered from ratepayers along the way. This would allow cash and income to be recognized by OPG Trust equivalent to the total borrowing cost from the market (i.e., the interest on the 44% of the GA the Province borrowed from the market, the 5% of the GA OPG borrowed, and the 51% of the GA OPG Trust borrowed). Furthermore, some type of additional return for the risk premium could be made. Overall, there would be no fiscal cost, and less debt would build up over time due to the elimination of the compound effects on interest.
    - **Option 2: Collect interest costs associated with the senior debt**: There are variations on this concept which essentially proposes to only collect some of the interest costs from ratepayers, with the senior debt that OPG Trust borrows directly from the market of primary concern. This is "meeting halfway" between deferring all interest payments and collecting all interest payments from ratepayers immediately.

- Option 3: **Do not collect from ratepayers**. There is a fiscal impact equal to 100% of the interest on the total borrowings as an expense still needs to be recognized, even though cash interest has not been paid. There is also a compounding effect on interest.
- Option 4: **No collection from ratepayers but deferral of expense recognition (Same as Energy's analysis in its Cabinet Submission)**. For this option, there is no collection of interest payments from ratepayers, but OPG Trust is somehow allowed to defer the recognition of interest expense on its books and recognize as a regulatory asset, thus eliminating the fiscal impact.
    - If OPG Trust were allowed to recognize a regulatory asset, then it could defer the interest expense, instead recognizing it as an asset (similar to the idea of a prepaid expense).
    - Thus, OPG would recognize interest income from OPG Trust, but OPG Trust would not recognize an expense related to the amount owed to OPG and instead would increase the regulatory asset by the same amount.
    - The interest income earned by OPG for the 49% of the GA deferral it borrowed would offset the borrowing the Province made from the capital markets.
    - OPG Trust would also defer the recognition of the interest associated with the 51% of the GA deferral it borrowed from the market. The deferred amount would be recognized in a regulatory asset.
    - When OPG starts collecting principal and interest from ratepayers, it will recognize income, but will also amortize the regulatory asset at the same time, thus matching revenue and expenses with each other in the time period and potentially eliminating the fiscal impact.
    - Many factors, including the initial accounting treatment and the effect of consolidation, are significant barriers to the application of this approach.
    - **Alternatively, OPG Trust might be able to recognize income (with a receivable created to balance the transaction) to offset the interest expense without collecting from ratepayers**, i.e., it will be a cash transaction in the future (cash received offset by a decrease in the receivable; no effect on income statement).

Exhibit A; 2017-2018 Estimates for Balance Sheet Transactions

Global Adjustment (GA) cost:	$12,030M
Ratepayer Portion:	$ 9,528M
Deferred Portion/Borrowing Required:	$ 2,502M



Setting up the Trust

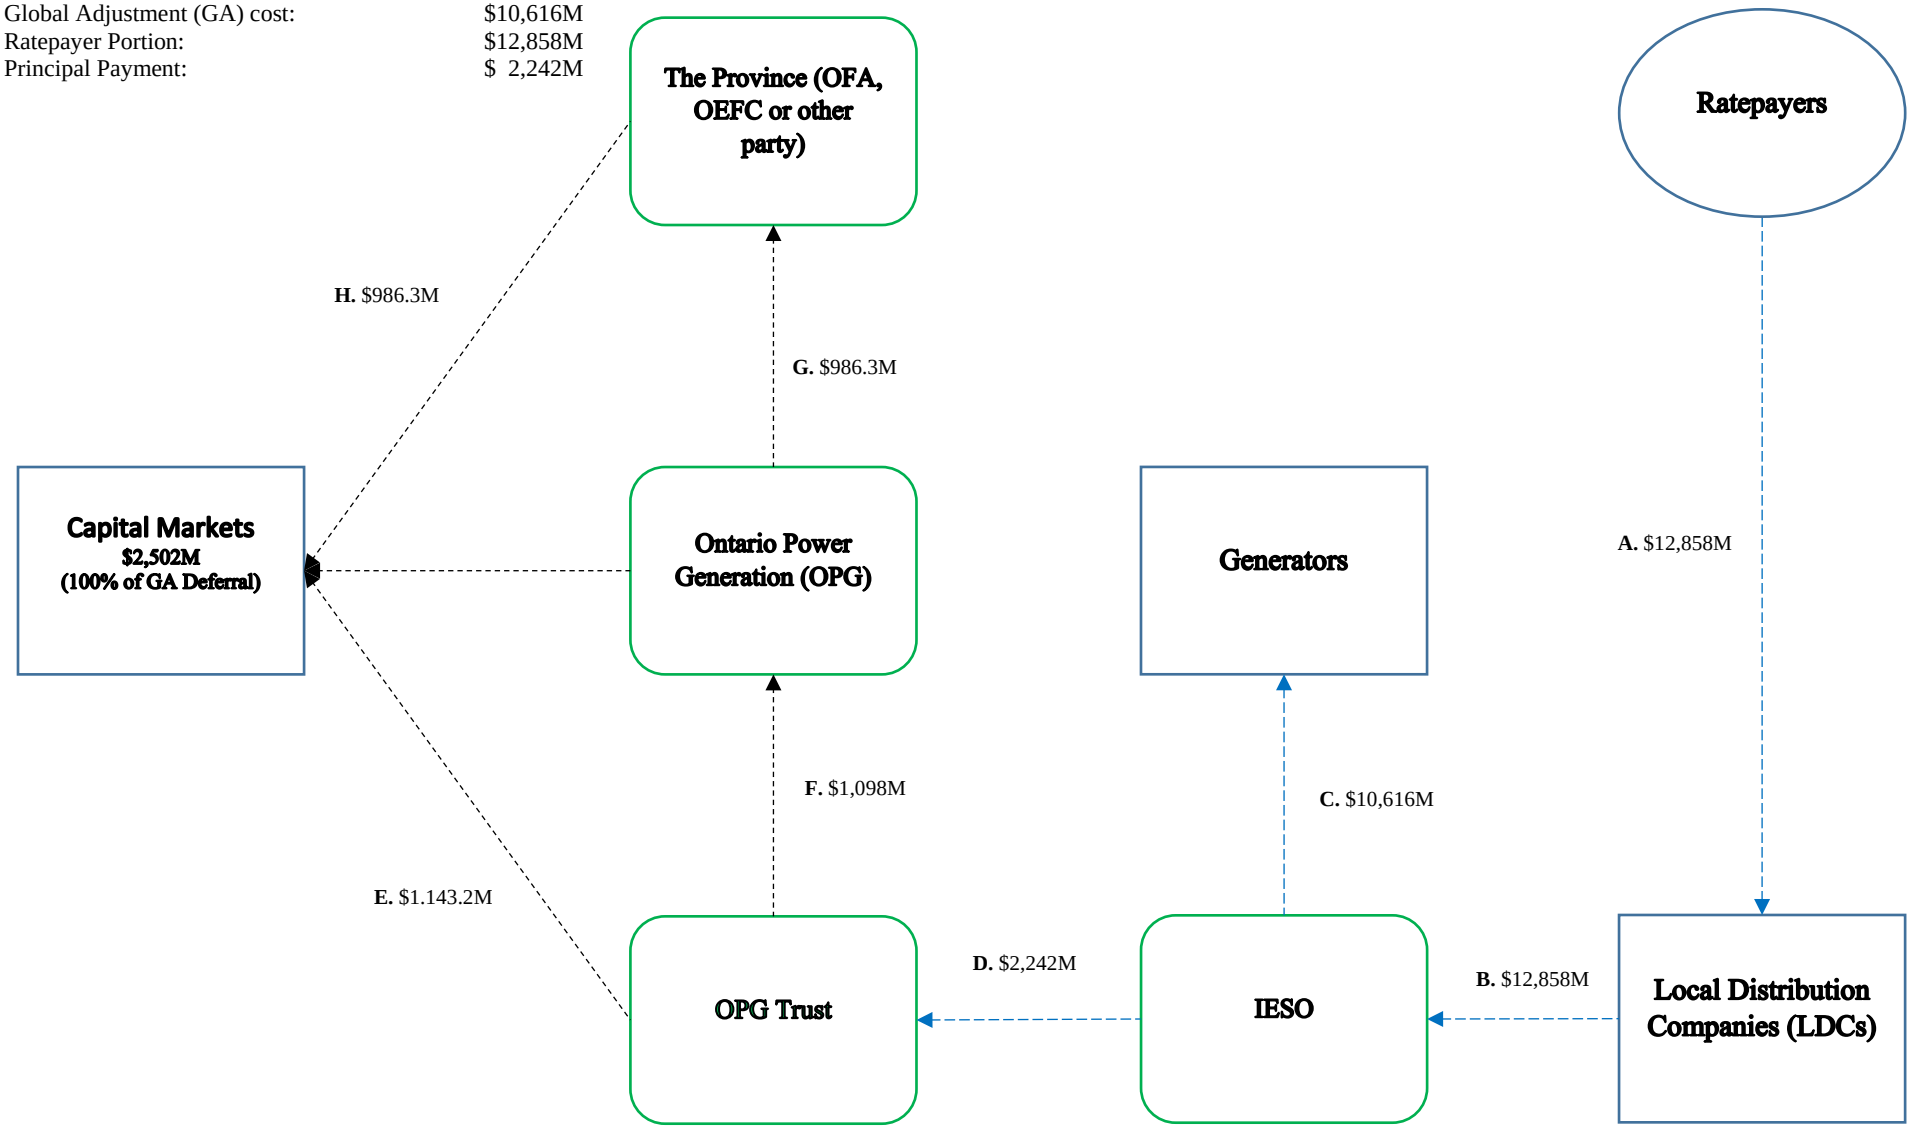
A. The Province borrows 44% of the deferred GA from the market.
B. The Province then funnels this amount to OPG through an equity injection.
C. OPG borrows 5% of the deferred GA from the market.
D. OPG lends an amount equal to the 5% and 44% from the market and the Province, respectively, to a separate legal entity called OPG Trust.
E. OPG Trust borrows 51% of the deferred GA from the market, ending up with 100% of the total $2.502M deferred GA in cash.

Deferral Mechanism

F. Ratepayers pay their portion of the GA to LDCs.
G. The LDCs remit this amount to IESO.
H. IESO, with the proper legislation and accounting treatment, is allowed to recognize a regulatory asset – the right to collect the deferred amount of $2,502M from ratepayers. It then sells this asset for cash to OPG Trust.
I. IESO uses the proceeds from the sale of the regulatory asset and the collection amount from LDCs to pay the full amount of the GA to Generators.

Exhibit B: 2028-2029 Estimates for Principal Payments

Global Adjustment (GA) cost:	$10,616M
Ratepayer Portion:	$12,858M
Principal Payment:	$ 2,242M



Collection of the GA

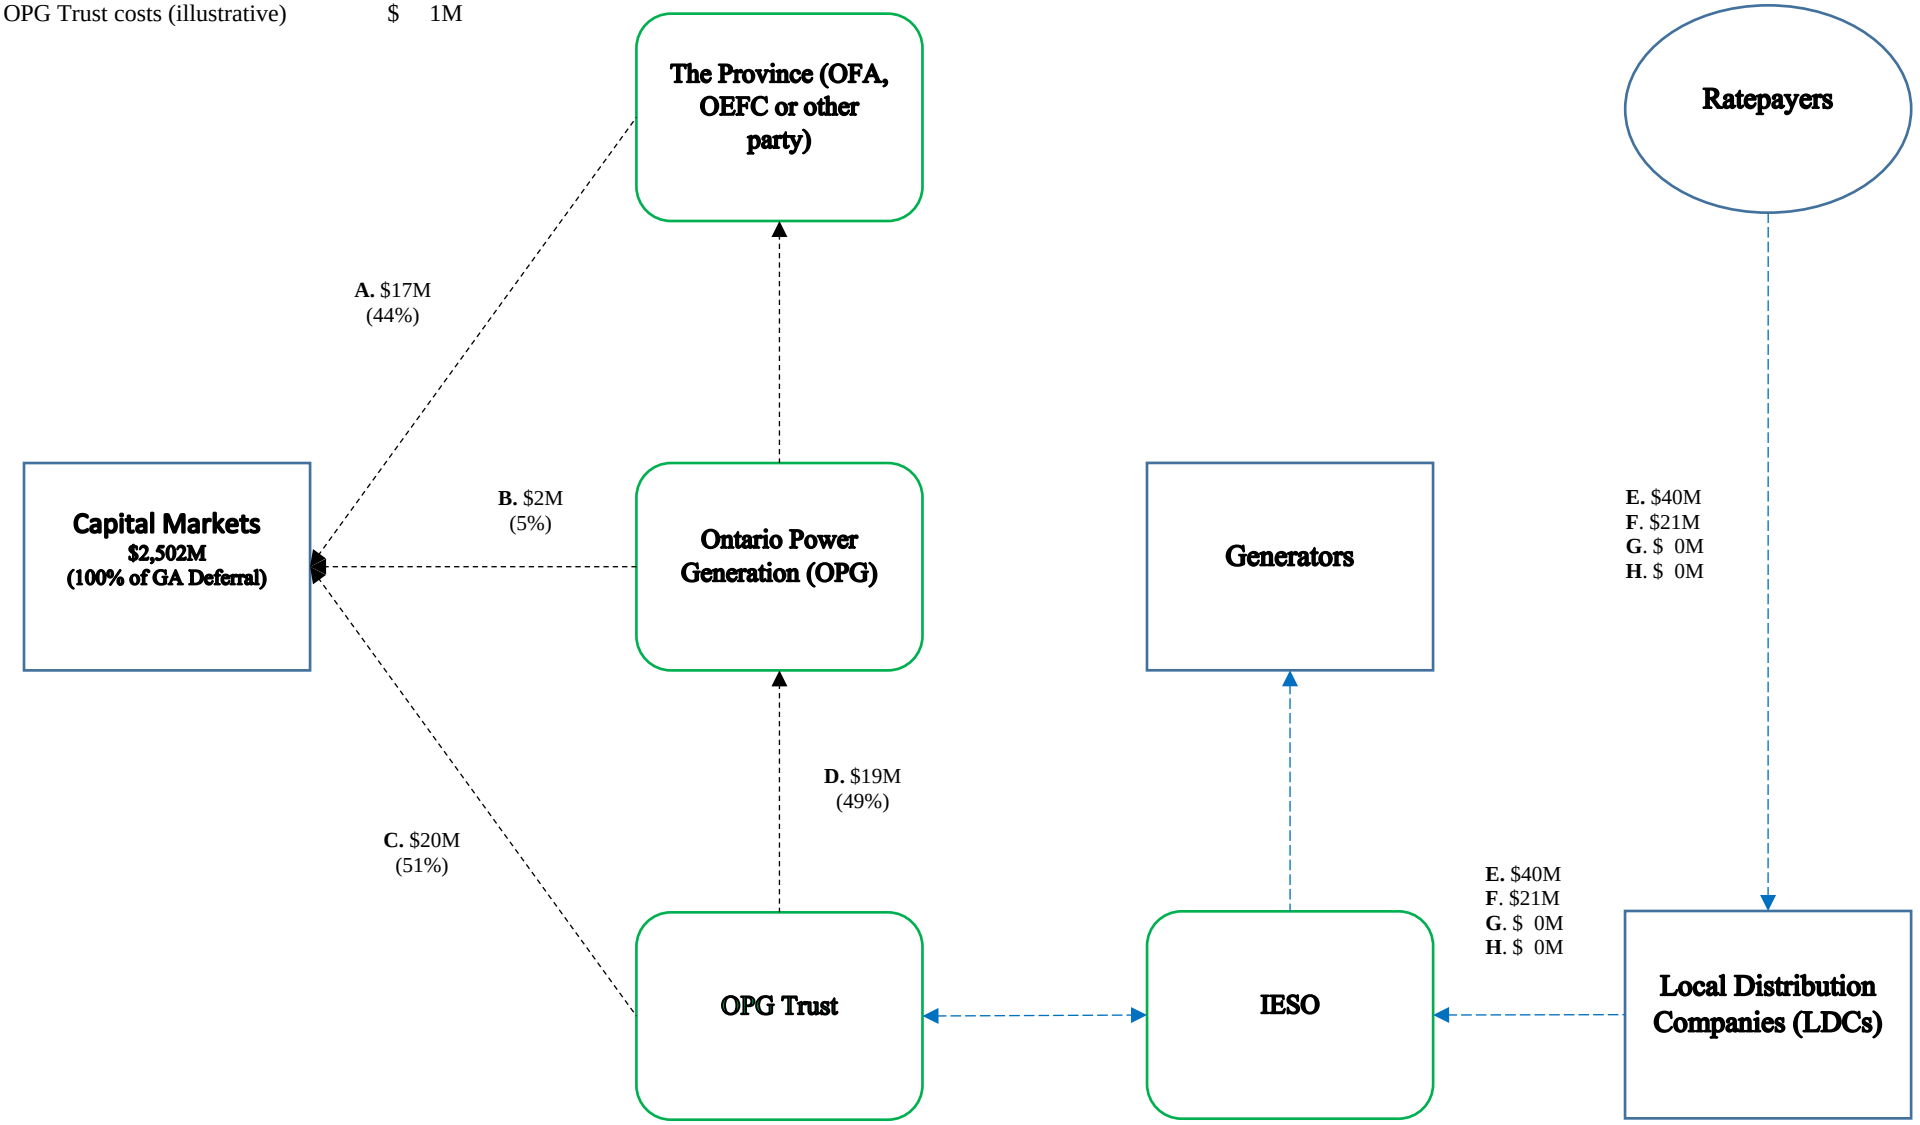
A. Ratepayers pay to LDCs the full cost of the GA plus an additional $2.242M that will be used to reduce the principal of the borrowing (or principal and interest if there is "interest on interest").
B. LDCs remit this amount to IESO.
C. IESO pays the full cost of the actual GA to generators.
D. IESO pays to OPG Trust the additional payment from the ratepayers over the actual GA cost. OPG Trust reduces the asset (for the right to collect GA deferral costs from ratepayers) by an equivalent amount.

Settlement of Principal.

E. OPG Trust pays off principal to the market. In this example, pays off 51%, but could pay more or less depending on various factors (e.g., subordinate debt, managing weighted average interest cost, etc.).
F. OPG Trust pays down principal related to the 49% of the GA Deferral it borrowed from OPG.
G. OPG could give a dividend to the Province equal in order to pay off the outstanding principal it borrowed from the market (44% of the total GA deferral cost)
H. The Province pays back principal to the market.

Exhibit C: 2017-2018 Estimates for Interest Recognition

Interest Recognized	$ 39M
OPG Trust costs (illustrative)	$ 1M



Recognition of Interest

A. The Province recognizes interest on the 44% of the deferred GA it borrowed from the market.

B. OPG recognizes interest on the 5% of the deferred GA it borrowed from the market.

C. OPG recognizes interest on the 51% of the deferred GA it borrowed from the market.

D. OPG Trust recognizes interest on the 49% of the GA it borrowed from OPG; OPG recognizes income for this transaction.

Options for Ratepayer collection

E. Option 1 – collect the entire interest amount from ratepayers plus the Trust administrative costs, thus offsetting the interest expense from total borrowing with the recognition of income. The end result is no fiscal impact.

F. Option 2 – only collect interest income for the 51% of deferred GA from the market and admin costs; OPG Trust would recognize income to offset the interest expense to the market but fiscal impact of 49% of the interest ($19M)

G. Option 3 – Do not collect from ratepayers – fiscal cost of 100% interest.

H. Option 4 – No collection from ratepayers, but OPG Trust is allowed to defer the recognition of interest expense on 100% of debt, leading to no fiscal impact.

Notes

To: Leung, Thomas (MOF)
Cc: Montgomery, Kaitlin (MOF)
Subject: RE: GA financing - equity injections

Hi Thomas,

Have you received any feedback from OFA on this document? Would love to see their comments.

Overall the approvals process looks fine.

Minor comments/question:

- PRRT is a four year planning cycle, could we requesting the authority to inject the equity for 4, instead of 3 years?
- We'll probably create an operating asset in Vote 2905 – this is where all the other rate mitigation items are. This I will need to confirm though.
- If Energy is making the equity injection, why are we working with MOF – is it just because you EIGS is under them now?
- Can I assume that the first equity injection would be 2018-19?

Controllership comment is that this is quite complicated and we may want to loop in OPCD and legal in early. They advised there may be a need for external expertise (accounting and legal), but I'll leave this part for now – it's probably too early for this.

Pratima

GA Financing – Equity Injection

Briefing Note

PURPOSE:

- Develop a timeline / mechanism to facilitate equity injections by the Province to OPG to support GA financing

CONTEXT:

- IESO will effectively sell the "right to collect" deferred future revenue from ratepayers (GA Asset) to the SPV in return for cash proceeds
- In order for the SPV to finance the GA asset on a long-term will obtain financing from two sources on an ongoing basis
    - 51% from capital markets
    - 49% as subordinated debt from OPG, which OPG will finance through:
        - **44% from equity injections from the Province**
        - 5% from capital markets
- OPG will require equity injections on an ongoing basis in order to keep its capital structure in line, and will require flexibility in order to issues shares as needed

GA FINANCING IMPLEMENTATION TIMING:

- **April:** Proposed Legislative Changes Drafted (retroactive to May 1)
- **May 1**: GA smoothing incorporated into "RRP" rates
- **Early June:** Legislation may be passed and SPV created. OPG uses short term facility to accommodate GA asset purchase [OPG TBC]. This represents the earliest possible equity injection [OPG TBC]
- **September**:
    - SPV long-term borrowing begins and would continue

POTENTIAL PROVINCIAL PROCESS FOR EQUITY INJECTIONS

<u>Required Approvals for Equity Injection in May 2017</u>

- ENERGY would seek TB/MBC approval for equity injection up to $xxM over next three years
- Seek approval to use the Operating Asset (vote xx) [ENE CORP TBC]
- Seek appropriation for $xxM in 2017-18 and Note that the out-year requests will be included in ENE's PRRT submission

<u>Ongoing Provincial Approvals Process</u>

- **Nov/Dec**: OPG includes forecasted equity injection requirements in rolling 3-year Business Plan

- **Feb/Mar**: ENERGY seeks TB/MBC approval for equity injection/OPG issuance as part of annual Business Plan concurrence process
    - ENE would seek TB/MBC approval for authority to inject up to $xx in OPG, in exchange for up to xx shares over the next 3 year term [OPG TBC: does this satisfy requirements in articles]
    - Seek approval delegating authority to Minister of Energy to work with the Ministry of Finance to execute equity injections, working with the OFA
    - Seek approval to include the 3-year equity request in ENE's PRRT submission through the operating asset in vote xx
- **Oct/Nov**: ENE would seek appropriation for out-year funding of equity injections

<u>Ongoing Implementation Process</u>

- OPG would send a letter to the Minister of Energy requesting an equity injection of $xx, in exchange for xx shares
- If Minister approves, ENE would work with OFA to flow the money [OFA TBC: Do you need something formal to do this? How much notice do you need to flow the cash? Any other mechanical requirements we should flag?]

Further Considerations

- Share Price Determination:
    - As of December 31, 2016 OPG had 256,300,010 common shares issued and outstanding at a stated value of $5,126 million ($20/share book value)
    - All new issuances would be priced at the same value as existing shares ($20/share)

Hi John - I've been working with John Kim and Carlos Yep on the equity injection structure/process. I'll be coordinating sign-off on the Energy side (including controllership). Once we've worked through what that process might look like we'll need to get sign off from decision makers (ENE and MOF). At this point nothing has been decided and we will likely be picking up discussions on the equity injection next week.

Happy to chat.
Kaitlin

Subject: RE: MOF - Energy compromise

Asokan,

I just want to confirm that the Ministry of Energy will record the equity injection payments (likely on a monthly basis (tbd)) and subsequently record the shares received from OPG going forward. From what I understand, this is line with the Hydro 1 compromise, where new equity will be recorded on Energy's books and that Energy will take the lead in all aspects?

Thanks.

John

I imagine this puts the timetable to go to Treasury Board to get an operating asset in May at risk if we can't even confirm which Ministry at this point.

Subject: RE: MOF - Energy compromise

Asokan,

I just want to confirm that the Ministry of Energy will record the equity injection payments (likely on a monthly basis (tbd)) and subsequently record the shares received from OPG going forward. From what I understand, this is line with the Hydro 1 compromise, where new equity will be recorded on Energy's books and that Energy will take the lead in all aspects?

Thanks.

John

John,

Our understanding is that this is still evolving and hence, we are not in a position to comment at this moment.

Regards,

Asokan

Hi John

I've reviewed Shajee's note and I think this will help OEP get started with their impact analysis. A couple of items added from what you may have looked at yesterday to respond to Ron's comments in his email (attached). In our initial discussion with OEP we agreed that this may be an iterative process. I think that's more efficient for us, so OEP can come back with more specific requests as needed.

Ron did ask to be kept in the loop as we respond to this request. He also suggested that we share with Energy and see if they are fine with us providing the quantitative material (fiscal impacts and GA smoothing debt schedule) or if they wish to provide directly.

Bruno

ECONOMIC IMPACTS OF ONTARIO'S FAIR HYDRO PLAN

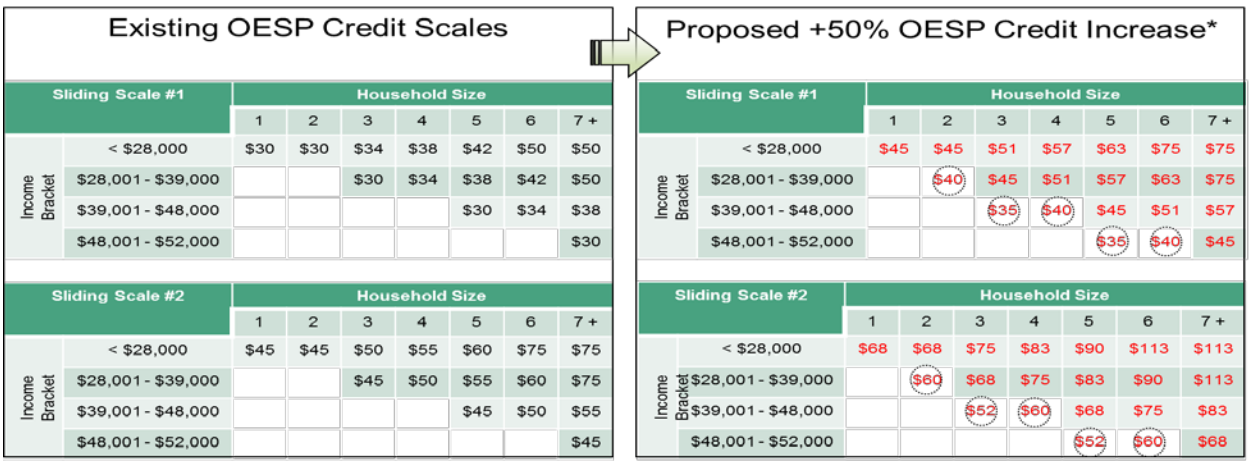
FAIR HYDRO PLAN

Customers / Residential

- **Global Adjustment Smoothing:** Consumers eligible for reductions under GA smoothing are those eligible under the Regulated Price Plan (RPP). These are primarily residential customers representing about 46% of total GA costs.
- The GA accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity. The majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through the GA while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.
- Under the GA smoothing plan the long-term benefit of these assets to the electricity system is recognized and some of current costs are deferring to the future. GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief. The result of this GA proposal is that cost to ratepayers remains lowered in the short term reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month.
- A financial structure to implement GA smoothing is proposed that would have no fiscal impact, by in effect. However, there will be an impact on provincial debt over time as various parties including the Province, will need to incur debt to cover current GA costs.

Please see last page for the Annual Debt Schedule.

- **OREC:** All residential consumers received an 8% rebate equal to the provincial portion of the HST on their hydro bills starting January 1, 2017, on their bill. (Including Businesses and Farms).
- **OESP Expansion:** Low Income customers receive additional on bill benefits which vary based on income and household size.
    - Will move current funding of the OESP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.



Source: Ministry of Energy, Ontario's Fair Hydro Plan, Technical Briefing, March 2, 2017

- **RRRP Expansion:** Rural or remote residential customers will receive additional relief on the 'Delivery' portion of their hydro bill. 800,000 customers are expected to benefit.
    - These customers are served by the following distribution companies:
        - Hydro One R1, Hydro One R2, Northern Ontario Wires Inc., Lakeland Parry Sound, Chapleau PUC, Sioux Lookout Hydro, InnPower, Atikokan Hydro and Algoma Power
    - Will move current funding of the RRRP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.
- **First Nations On-Reserve Delivery Credit:** Will eliminate the delivery charge for all on-reserve First Nations households and remove the monthly service charge for customers of licensed distributors which charge a bundled rate. Will automatically qualify on-reserve First Nations households (~21,500 customers). Estimated to provide residential customers an average monthly benefit of $85.

    Staff Comments:
    - Unclear if on-reserve First Nations households (eligible with On-Delivery Credit) will also benefit from OESP Expansion and Affordability Fund.
- **Establishing a New Affordability Fund:** Assist electricity customers who need financial assistance to undertake energy efficiency improvements.

    Staff Comments:
    - This fund aims to target those who cannot qualify for current low-income conservation programs. Local Distribution Companies would be tasked with identifying recipients. The fund helps with measures such as energy efficient lighting, appliances, and for electrically heated homes, insulation and weather stripping.
    - Assuming this will not appear in any form on the hydro bill but instead a transfer from LDCs (via the fund) to eligible customers.

Industry

- **Expand the Industrial Conservation Initiative:** Enhance competitiveness for small manufacturers and industrials. Reduce ICI eligibility to those with monthly peaks of 500 kilowatts, down from the current threshold of 1 megawatt.
    - Targeting eligibility to energy intensive industries with NAICS codes 31-33.

Other

- **Improving Electricity Sector Efficiencies:** IESO's Market Renewal Initiatives are estimated to save the electricity sector (as a total) $200 million per year starting in 2021.

FISCAL COSTS

- **Note:** In estimating economic impacts consideration should be given to the government's commitment to balance the fiscal plan. i.e., The costs of the Ontario Fair Hydro Plan may be assumed to be offset by lower expense elsewhere or higher revenues.

- **Fiscal Costs of the RRRP Program:**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136

Year-over-Year Change		-22%	2%	2%	2%	2%
Change from Forecast		**-25%**	**-25%**	**-25%**	**-28%**	**-25%**

Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%
Change from Forecast		-2%	-2%	-2%	-2%	-2%

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

Subject: RE: 25% Electricity Price Reduction....

Hi Bruno,

Let's be qualitatively responsive, with respect to whom the various proposed elements apply to. It's always good to be seen as the first channel for internal-MOF expertise on electricity-related issues.

So please explain the RPP eligible universe for the GA, and how that it is a shifting of cost recovery in time initiative, though, by targeted design, not with a fiscal impact.

The RRRP and OESP are the bigger to be government funded programs, but if the intent is still to balance, OEP will have to work out whether there is a fiscal stimulus from that, other than the redistributive impact and any associated lower savings rates by those groups.

I think that on the quantitative side, I'd be fine if we asked Energy staff if it's okay to share what we have with OEP for them to do the economic impact analysis, or if Energy wants to provide the numbers directly to OEP.

Please keep me apprised as this progresses.

Thanks,

Ron

Hi Ron,

See below the information request from OEP regarding estimating economic impacts of the Fair Hydro Plan. I'm thinking this request should be directed to Energy? But let me know if you think EFB has a role. I think OEP would likely be looking for detail on

•□□□□□□□□ $ impacts on consumer bills (which consumers)

•□□□□□□□□ $ impacts on businesses (which businesses)

•□□□□□□□□ $ fiscal impact to province

And I assume year-by-year outlook for the above.

Bruno

Subject: 25% Electricity Price Reduction....

Hi Bruno

I hope all is well at your new position.

I left you a voicemail a few minutes ago. We've been asked by Brian to run a simulation to look at the broader economic impacts of the policy to reduce electricity prices by 25%. To help us model the policy more precisely, it would be helpful if we could get a more detailed description of the policy / program so that we have a better understanding of exactly what the policy is, and which user groups will be impacted etc. Any information about this would be helpful, including cost estimates for the program.

Could you pass this email to the person in your office who might be able to provide the above information?

Thank you!

Michael

Hi Bruno,

I developed this BN to provide OEP staff with the info they'd need for the Fair Hydro Plan.

Attachments: Ontario Fair Hydro Plan Impacts to OEP v2.docx

Hi Tim

To introduce myself first, my name is Bruno Amara and have recently joined the Electricity Finance Branch, OFA.

We were contacted in early March by the Office of Economic Policy, MoF who are undertaking an economic impact analysis of the Ontario Fair Hydro Plan. At the time, we provided them with the attached information (ENE password) . The data is sourced from the ENE cabinet submission. OEP has responded asking if some additional information is available. These are mainly with respect to the "Bill Forecasts" in attached table as follows:

1. Would it be possible to provide the "Bill Forecasts – Calendar Electricity Prices" table out to 2040? In particular the Total Bill line prior to the announced changes and impact of Tax Based Social Programs?

2. Similarly would we be able to provide a long-term electricity price forecast for the large industrial segment pre-changes?

3. OEP had also asked whether the "impact of tax-basing social programs" on the table were all reductions on electricity bills rather than off-bill cash transfers.

   With respect to #3, we assume the answer is Yes. But we're not sure if the Affordability Fund would be reflected in those numbers. Based on the cabinet submission we assume the later would be off-bill assistance for energy efficiency measures.

Please let us know how you wish to respond. We can provide the appropriate contacts if you wish to respond directly to OEP.

Thanks
Bruno Amara

ECONOMIC IMPACTS OF ONTARIO'S FAIR HYDRO PLAN

The material provided below if sourced largely from the Ministry of Energy's cabinet submission.

FAIR HYDRO PLAN

Customers / Residential

OREC:

- All residential consumers received an "8%" rebate equal to the provincial portion of the HST on their hydro bills starting January 1, 2017, on their bill. (Including Businesses and Farms).

Global Adjustment Smoothing:

- Consumers eligible for reductions under GA smoothing are those eligible under the Regulated Price Plan (RPP). These are primarily residential customers representing about 46% of total GA costs. The RPP also includes farms and low volume customers (up to 50 kW demand or 250,000 kilowatt-hours annually).
- The GA accounts for the difference between contracted and regulated prices paid to generators compared to the hourly market clearing price, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity. The majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to be able to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through the GA, while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.
- Under the GA smoothing plan, the long-term benefit of these assets to the electricity system is recognized and some of the costs recovered in current rates would be deferred for recovery in future rates. GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief. The result of this GA proposal is that cost to eligible ratepayers would be lowered in the short term, reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by an estimated $26/month.
- A financial structure to implement GA smoothing is proposed that would have no fiscal impact. However, there will be an impact on provincial gross debt over time as various parties including the Province, will need to incur debt to finance the deferral of a portion of current GA costs.

Please see last page for Energy's estimated Annual Debt Schedule.

OESP Expansion:

- Low Income customers receive additional on bill benefits which vary based on income and household size.
    - Will move current funding of the OESP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

Source: Ministry of Energy, Ontario's Fair Hydro Plan, Technical Briefing, March 2, 2017

RRRP Expansion:

- Rural or remote residential customers will receive additional relief on the 'Delivery' portion of their hydro bill. 800,000 customers are expected to benefit.
    - These customers are served by the following distribution companies:
        - Hydro One R1, Hydro One R2, Northern Ontario Wires Inc., Lakeland Parry Sound, Chapleau PUC, Sioux Lookout Hydro, InnPower, Atikokan Hydro and Algoma Power
    - Will move current funding of the RRRP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

First Nations On-Reserve Delivery Credit:

- Will eliminate the delivery charge for all on-reserve First Nations households and remove the monthly service charge for customers of licensed distributors which charge a bundled rate. Will automatically qualify on-reserve First Nations households (~21,500 customers). Estimated to provide residential customers an average monthly benefit of $85.

Staff Comments:

- Unclear if on-reserve First Nations households (eligible with On-Delivery Credit) will also benefit from OESP Expansion and Affordability Fund.

Establishing a New Affordability Fund:

- Assist electricity customers who need financial assistance to undertake energy efficiency improvements. TB Approved $100 million for 2016-17 (not public).

Staff Comments:

- This fund aims to target those who cannot qualify for current low-income conservation programs. Local Distribution Companies would be tasked with identifying recipients. The fund helps with measures such as energy efficient lighting, appliances, and for electrically heated homes, insulation and weather stripping.
- Assuming this will not appear in any form on the hydro bill but instead a transfer from LDCs (via the fund) to eligible customers.

Industry

- **Expand the Industrial Conservation Initiative:** Enhance competitiveness for small manufacturers. Reduce ICI eligibility to those with monthly peaks of 500 kilowatts, down from the current threshold of 1 megawatt.
    - Targeting eligibility to energy intensive industries with NAICS codes 31-33.

Other

- **Improving Electricity Sector Efficiencies:** IESO's Market Renewal Initiatives are estimated to save the electricity sector (as a total) $200 million per year starting in 2021.

FISCAL COSTS

- **Note:** In estimating economic impacts consideration should be given to the government's commitment to balance the fiscal plan. i.e., the costs of the Ontario Fair Hydro Plan may be assumed to be offset by lower expense elsewhere or higher revenues.

- **Fiscal Costs of the RRRP Program:**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136
2016 Speech from the Throne Enhancements to R2 Customers	-	117	120	123	127
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234
TOTAL	**-**	**459**	**472**	**484**	**497**

- **Fiscal Costs of the OESP Program:** Existing OESP credit amounts assume ramp-up of take-up rates for the application-based program.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

- **Fiscal Costs of the On-Reserve First Nations Delivery Credit:**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
On-Reserve First Nation Delivery Credit	-	20	20	20	20

- **Fiscal Roll Up of the above, including Affordability Fund**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements*	-	459	472	484	497
Ontario Electricity Support Program, including the 50% Enhancement & New Matrix Categories	-	186	261	325	375
On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

NOTE: As mentioned above for Affordability Fund, TB Approved $100 million for 2016-17 (not public).

BILL FORECASTS

- **Calendar Electricity Prices:**

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**158**	**164**	**167**	**170**	**181**	**178**
Total Bill (excludes HST)	140	145	148	150	160	158
Impact of GA Financing		-26	-26	-26	-32	-28
Impact of Tax-Basing Social Programs		-2	-2	-2	-3	-3
Subtotal		117	120	122	125	127
8% rebate		-9	-10	-10	-10	-10
HST		15	16	16	16	17
Revised Bill (includes HST)	**158**	**123**	**126**	**128**	**131**	**133**
Year-over-Year Change		-22%	2%	2%	2%	2%
Change from Forecast		**-25%**	**-25%**	**-25%**	**-28%**	**-25%**

Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%
Change from Forecast		-2%	-2%	-2%	-2%	-2%

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

COST FORECASTS

Subject:	FW: OFA : IESO - Fair Hydro funding call April 28
Date:	Wednesday, April 26, 2017 11:28:37 AM

Hi John, Bruno,

FYI, and note the reference to O.Reg 280/14. We last amended that in 2015. Would you review to see if you think an amendment is recommended / required.

Thanks,
Ron

From: Anthony Martinello [mailto:Anthony.Martinello@ieso.ca]

To: Kim Marshall <Kim.Marshall@ieso.ca>; Ronald Kwan <Ronald.Kwan@ofina.on.ca>; Michael Boll <Michael.Boll@ieso.ca>; Mike Manning <Mike.Manning@ofina.on.ca>; Ken Kandeepan <Ken.Kandeepan@ofina.on.ca>; Victor Buza <Victor.Buza@ieso.ca>
Subject: OFA : IESO - Fair Hydro funding call April 28

Proposed Agenda for Friday's discussions:

1.
IESO's need to have $ commitment for funding Fair Hydro shortfalls – we can discuss the quantum during the call

Background to support the $ commitment's rationale:

- Fair Hydro plan propose to lower bills for the next 4 years – with no recovery until post 2022;
- OPG has no requirement to purchase from the IESO;
- For any purchases made, OPG may need a timing delay (liquidity, alignment for investors timing etc.) – may be one or two months after IESO settles the Fair Hydro shortfall each month;
- The monthly Fair Hydro amounts will continue to have +/- forecast variance amounts (these are expected to be funded by IESO, same as RPP today) and the OEB will consider these variances for each FH rate setting

2.
The current $975M OFA-IESO credit facility may be utilized to include the Fair Hydro funding commitment

Background:

- The current $975M includes a component for today's RPP shortfalls – so this amount can be reduced or transformed into the Fair Hydro commitment;
- Looking for more flexibility on the current minimum 28 day borrowing period,.. if OPG buys

from IESO ….would like IESO to pay down the debt as soon as possible;

- Moody's (IESO rating) will be examining if IESO has sufficient capacities to fund FH;
- Examine material adverse clause to accommodate FH

3.

IESO to examine whether O.Reg 280/14 needs to be updated for Fair Hydro – if so, will need IESO Board and Minister of Finance's approvals;

Regards.

Good afternoon John,

I am following up on the status of this MOU between the Ministry of Energy and the Ontario Financing Authority regarding the Ontario Rebate for Electricity Consumers (OREC). Has this document been signed and approved by the OFA?

If so, can you please send a scanned copy of the approved Memorandum back to the Ministry of Energy?

Thank you,

-Robert

Hello,

Please find attached the Ontario Rebate for Electricity Consumers Memorandum of Understanding between the Ontario Financing Authority and the Ministry of Energy for you signature.

After you have approved and signed this document, please send a scanned copy back to the Ministry of Energy, and keep a copy for your records.

Thank you,

Robert Hunter
Policy Advisor – Smart Grid Fund

Ministry of Energy: Distribution and Agency Policy Branch

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **January 1, 2017**

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations thereunder (the "Act"), certain consumers will be entitled to receive financial assistance (the "Ontario Rebate for Electricity Consumers" or "OREC") in respect of the cost of electricity consumed by them commencing January 1, 2017;

2. Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this Memorandum of Understanding ("MOU") pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

b) The Ministry will take all necessary steps to provide the OFA with access to the IESO Portal so that the OFA will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC Payment Recipients to the IESO, that are received by the Ministry. This includes providing electronic portal access to data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement on the forecasts.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

John Kim
Tel: (416) 212-6996
email: john.kim@ofina.on.ca

c) As of the date of this MOU the Ministry's contact person is:

Robert Burns, Chief Administrative Officer & Assitant Deputy Minister, Corporate Services Division

Tel: 416-327-3682
email: robert.burns@ontario.ca

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Toronto, ON M7A 1Y7
Attention: John Kim
email: john.kim@ofina.on.ca

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy, Corproate Services Division

4th Floor, 56 Wellesley St
Toronto, ON M7A 2E7
Attention: Robert Burns, Chief Administrative Officer & Assistant Deputy Minister
email: robert.burns@ontario.ca

10. Execution

The parties have executed this MOU, effective as of the date first above written.

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **January 1, 2017**

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations thereunder (the "Act"), certain consumers will be entitled to receive financial assistance (the "Ontario Rebate for Electricity Consumers" or "OREC") in respect of the cost of electricity consumed by them commencing January 1, 2017;

2. Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this Memorandum of Understanding ("MOU") pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

b) The Ministry will take all necessary steps to provide the OFA with access to the IESO Portal so that the OFA will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC Payment Recipients to the IESO, that are received by the Ministry. This includes providing electronic portal access to data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement on the forecasts.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

John Kim
Tel: (416) 212-6996
email: john.kim@ofina.on.ca

c) As of the date of this MOU the Ministry's contact person is:

Robert Burns, Chief Administrative Officer & Assitant Deputy Minister, Corporate Services Division

Tel: 416-327-3682
email: robert.burns@ontario.ca

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Toronto, ON M7A 1Y7
Attention: John Kim
email: john.kim@ofina.on.ca

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy, Corproate Services Division

4th Floor, 56 Wellesley St
Toronto, ON M7A 2E7
Attention: Robert Burns, Chief Administrative Officer & Assistant Deputy Minister
email: robert.burns@ontario.ca

10. Execution

The parties have executed this MOU, effective as of the date first above written.

Hi Ron,

Here are some comments/highlights from the social programs sections of the material. Also, a comment on non-bypassability.

- In the document "Policy and Legal Foundations for the Proposed Ontario Fair Hydro Plan Act", non-bypassability does have a question mark. So, I suppose it has not been determined whether consumers exiting the system would be required to make a payment. Although, it is still under consideration.

RRRP

- Requires legislation. TBD if regulations are also required.
- Since the existing RRRP framework (ratepayer funded) would remain in place for Algoma and remotes, the implementation document notes that separation of the RRRP and broader distribution rate protection into separate programs.
- Timing / next steps:
  - A report back to TB/MBC on May 1, 2017 is TBD.
  - Implementation is planned for fall 2017 (per Cabinet minute).

OESP

- Requires legislation and regulation changes.
- Energy is continuing to work with MOF, OEB, CRA on OESP wet signature. I am not familiar with the term "wet signature" but I assume this point has to do with confirming that any increased OESP benefits would not be taxable.
- OEB decision this week expected on removing OESP from bills as of May 1. Energy would like to use OESP variance (approx. $100 million) to reduce current OESP charge to zero and continue funding existing program until government funding is established.
- It is noted that Energy needs to work with IESO/OEB/MOF on technical and governance structures needed to flow government funds to OESP.
- Timing / next steps:
  - A report back to TB/MBC on May 1, 2017 is TBD.
  - LRC on April 10 (document says 2016, but I assume they mean 2017).
  - Program in place in 2017 (per Cabinet minute).

FN On-Reserve Delivery Credit

- Requires legislation. TBD if regulations are also required.
- It is noted that Energy needs to work with IESO/OEB/MOF on technical and governance structures needed to flow government funds to the program.
- Timing / next steps:
  - Report back to TB/MBC by spring 2017 with final program details.

- Program in place in 2017 (per Cabinet minute).

Affordability Fund

- Does not require legislative changes.
- Timing / next steps:
  - On March 23/24 a declaration of trust and transfer payment agreement were executed.
  - On March 30 funds were transferred to Computershare.
  - An Advisory Committee to recommend Board of Trustees by May 31, 2017. Computershare appoints full Board of Trustees.
  - June 2017: Trustees engage with IESO, OEB, others to define funding criteria and processes. Report back to TB/MBC with final program details.
  - Summer 2017: LDCs apply to Trust for funds.
  - Late 2017/early 2018: Energy may apply for additional funds through 18-19 PRRT based on performance and need. Energy was initially allocated $100 million for the fund. The initial request had been for $200 million.

Hi,

Please review and provide comments, highlights.

Emily, note the "Non-bypassability (exiting the electricity system / going off grid)" comment.

BTW, I seem to have not yet signed the letter back to Northland. Is that right? Would you get me the signing package on that.

Thanks,
Ron

Subject: OFHP Update

Hi Dave,

Please see the following update (and attached materials) from this morning's rate mitigation meeting:

GA Financing

Legal Update
Fair allocation plan (think of this as the line showing savings and costs to ratepayers associated with this program over time)
Province has set plan for deferrals for the first 4 years (25% and annual increases tied to inflation)
Need process (within pre-set parameters and input from OPG) to determine path for deferrals and recovery for subsequent years (5-30)
Originally viewed Province as taking a role in setting out this path
Feedback from market that Province should not be involved
Need to determine appropriate lead entity (e.g. OPG or IESO)
Need to be linked to life of underlying assets in order to mitigate constitutional risk
Consider 1-2 year refresh on the plan
Structure is still in flux
Treasury Plan
OPG Trust sets this plan
Limited oversight in order to ensure OPG Trust can raise $ in the market at a reasonable cost
Must fit within the limits set by fair allocation plan (but can vary under the cost curve depending on market and interest rate realities)
Once specific bonds issued, fair allocation plan cannot override
Role for OEB
Needs to be extremely limited in order to meet market requirements
However need to project consumer confidence
Options are currently under reivew
Collectability is a key point that requires a number of provisions in legislation including
Irrevocable charges
Role of LDCs, IESO in collections
Non-bypassability (exiting the electricity system / going off grid)
Provincial back-stops
Springing guarantees that arise in the event Province takes certain actions that erode value to bondholders
Need to be limited and contingent in order to meet accounting tests
Dealers considering whether this needs to be in legislation or in a side agreement
Want to make sure that it is narrowly focused in terms of triggering events to cover only material impacts and avoid unintended consequences (investors taking legal action)

- Over time as relevant policy changes are implemented, trustee may look to a 3rd party (e.g. opinion, ratings confirmation) to ensure that value of debt is not degraded

If Province takes on any of the debt, need to determine what can happen from an accounting perspective. Situations to review:

Temporary freeze on borrowing markets
Permanent impairment of OPG's ability to purchase a portion of the asset from IESO (in this case may need a guarantee from the Province)
Timeline for legislation
Pens down April 21
May 1st TB, LRC, Cab
May 4th introduction
Currently working from a Blakes document as a straw-person that would act as instructions to legislative counsel
Driving to timeline, very aggressive

OPG
Special committee of the board met last week
RBC, CIBC, Goldman included
Discussed this is much larger than past models
Imperative that this structure follows past transaction models
Also reviewed stress scenarios (interest rates are most impactful)
Shareholder letter
Providing to committee tomorrow and will share with government thereafter
Reviewing sub-debt attributes
Certain characteristics needed in order to support senior debt financing (most notably will take on longevity risk)
Characteristics of the sub-debt would drive pricing (not tied to Province's cost of funds; likely to be higher interest rate)
At minimum, want to ensure that OPG's earnings are higher to offset incremental IOD to the Province

OEB
Comfort letter from the Province is nearly ready, hopefully tomorrow
Balancing amount of information needed

IESO
Want to narrow issues to what is needed in legislation
Regulatory asset
Speaking with KPMG today
Meeting with ENE today to discuss business issues

Affordability Fund
Advisory committee established to recommend final trustees
Will start mid-month deliberations
By May 31
3 from LDCs and 2 from social services
Hydro One is providing logistical support

Social programs (OESP, FN Rate, RRRP)
Same timelines for approvals as GA

Lots of details to sort through in regulation once legislation in place
Give comfort to LDCs, IESO, Board in terms of what will be included in regulations in order for them to begin implementation
Appearance on Energy Financials:
Will have flexibility to flow funds between programs while ensuring transparncy (4 line items but not executive control on each)
ENE could move $ between programs without TBS approval
OESP: May 1 implementation of enhancements, OEB using up existing funds so no immediate draw on fiscal plan, working with social program ministries to assist with implementation, working with MoF / CRA to remove wet signature requirement
RRRP: plan to have in place by July 1 for 8 utilities; retro-active start as safety valve if needed for utilities with more limited capacity to move quickly
FN Rate: working to set up a meeting with COO to discuss options (for next week), Province does not want to be involved in choosing who is FN therefore plan to determine eligibility solely on the basis of geography

ICI
Expanded to include greenhouses
Need to meet 500kw threshold
Were already eligible at 1MW; therefore, not many that aren't already been captured
Seeking LRC regulatory approval April 10th
Working with CME, OCC on outreach campaigns on benefits of ICI and other conservation initiatives

Bill Presentment
Will not attempt to change the bill for July 1
- If try to be more aggressive on changes to the bill may jeopardize implementation

Want a larger re-work, look at all the constraints and regulations
- For example, reconsider changing name of "delivery"
- Timing: fall for re-design

In the interim, want an insert that shows %

AG
Walk through with ENE / MoF staff on April 19th
TBS will share technical materials in advance

FAO
Submitted materials last week
Will circle back to determine status

Thanks,
Scott

Subject: OFHP Update

Hi Dave,

Please see the following update from this morning's Fair Hydro Plan discussion. Gadi, please jump in if there is anything that I have missed.

- **Global Adjustment Financing updates**
  - Blakes: (see attached document)
    - Moving away from a deferral to characterizing as a program of spreading costs over multi-generations (moving away from coal)
      - This is one of the major tools to defend against a challenge (matching with asset life)
      - Ideal if can demonstrate overpayment by current and past ratepayers = deferral
      - Further bolstered by a study from Navigant to demonstrate long lived assets
      - Aiming to reduce risk

        - Requirements for the Asset:
            - Needs to be clearly defined
            - Needs an effective collection process
            - Need to deal with opting out to ensure lenders are protected
            - Cash flow mechanisms between OPG, IESO and customers are complex (challenge to draft accurately)
            - Will lenders accept next tranche paying interest for the previous tranche? OPG is working through this and believe they have a viable path
            - How to determine timing around when OPG purchases the asset from IESO?
                - Monthly or every 3 months (or when OPG goes to market)
                - Action: OPG will return with a proposal
        - Legislation
            - Recovery needs to link to consumption of energy
            - Need to see clear link between customer, IESO, OPG
            - No calculations in legislation (instead in regulation)
            - Working through American legislative equivalents
                - Goldman is doing something similar from a market perspective in US and RBC/CIBC in CDN to understand what is required
            - ENE will share a first draft of the materials for first review
            - Pens down April 17th (although may be some flexibility on that)
            - LRC on May 1st, also TB report back
            - Introduction on 4th of May
    - OPG:
        - OPG Board Committee up and running (will align with legislative timeline)
            - Draft Dec/Res underway (needed in 1/2 weeks)
            - Indemnity for Board would include in Dec/Res, will require Section 28 (include in May 1 meeting)
        - Question on doing some of 51% from OFA (still working through this, market disclosure may be required, which could erode value of the lead order)
        - Bank discussions:
            - Met yesterday
            - Lead banks considering this as a hybrid vehicle (not just securitization)
                - Can tap several markets so better pricing
            - Challenge to define capacity for the trust vehicle
                - Banks asked to define what is required as lender's protection (financing covenants, ratings etc.)
        - Building more robust financial model to support credit rating and financing discussions
        - Meet with rating agencies in next few weeks
            - Will also seek their perspective on what is required in legislation
        - Number of legal documents being developed in parallel
        - Plan to embed OFA team members with OPG as discussions progress
    - IESO:
        - Operationalizing social programs, RPP - going well

Need to talk to OFA about terms and size of line of credit in order to ensure it will be sufficient for GA refinancing
        - Board approved 2016 financials
        - KPMG will begin working through an accounting opinion for GA financing once more specifics on legislation are available
        - Question to the group: can we create a regulatory asset in legislation?
            - IESO suggests this is possible
            - Can link into RPP setting process, use existing processes rather than establishing something new
            - Blakes: amount must be collectable, no process can diminish that right, so needs to be up front if anything
            - OPCD suggests role for OEB needs to be robust
    - OEB:
        - RPP:
            - Comfort letter to take into account in RPP, not want to be prescriptive
            - In process of forecasting RPP
            - Mid-April announcement (after Easter)
            - 8 utilities involved
        - Less clarity in role for OEB in reviewing and establishing the IESO regulatory asset (per above)
            - Need to balance financing and accounting requirements
            - Further discussions are required

- **OESP**
    - Regulation posting finished April 8th, submit for LRC approval on April 10th
    - Implemented on May 1
    - Board decision removing charge from bill (stop collecting)
    - "wet" signature (physical signature requirements) considerable impediment to signing up customers
        - MoF engaged with CRA to find a way to reduce the burden of this requirement
    - ENE engaged with MoF / CRA to ensure new OESP levels remain tax exempt

- **FN rate**
    - OEB has not yet posted report because some inconsistency on how to move forward
        - Inclusion of non-First Nations living on-reserve
        - Neither Chiefs, nor Hydro One thought it would be difficult to include verification
        - ENE staff suggest there may be technical challenges to this level of micro-targeting
    - OEB will require a letter from Minister acknowledging receipt of report, and providing clarity on implementation

- **Affordability Fund**
    - Will trigger flow of funds prior to end of month to Computershare acting as Trustee
    - Administrators of the Trust will likely be relevant subject-matter experts appointed

from LDCs and Social assistance agencies
    - Report back to TB once $100M is close to exhausted to review how it is being deployed and to consider flowing of next $100M

- **Industrial Conservation Initiative**
    - Regulation posted
    - April 10 LRC for approval
    - Ontario Chamber of Commerce TPA finalized to assist with consultations
    - ENE also meeting with Canadian Manufacture Enterprise to discuss potential role in the roll out
    - Assembled ADMs (MEDG, Env, Labour, MoF) to discuss competitiveness

- **AG Meeting**
    - As part of its IT audit of IESO, the AG's Office has asked for all Cabinet submissions relating to the OFHP (Feb and March submissions, Binnie opinion, White papers etc.)
    - ENE, TB and MoF staff to meet with the AG's Office on April 19th

- **FAO Request for Information**
    - Package responding to questions will be sent out tomorrow (joint between ENE and MoF)

- **Bill presentation**
    - Strong interest from the Province in presentation of the OFHP on customer bills
    - ENE staff will begin to work something up for review

Scott

Legislative Changes – Update

The legislative team is currently working through a number of detailed issues surrounding possible transaction structures to ensure that the legislative framework provides appropriate flexibility.

What follows are some of the issues currently under consideration by the legislative team:

1. "Deferral" Characterization

- The concept of "deferral" mischaracterizes the true nature of the program
- GA Smoothing Program is intended to spread the cost of the generation assets to which the GA applies among the present and future ratepayers who will be expected to benefit from such assets (having regard to the useful life of the assets in question)
- Linking the charges to the useful life of the assets, and spreading the costs more fairly across the generations of ratepayers benefitting and expected to benefit from the assets, helps to make it clear that the program costs are intended to be a regulatory charge to ratepayers and not an indirect tax

2. Market Considerations

- Capital market requirements are becoming clearer, including the elements surrounding the definition of and rights related to the regulatory asset, and further refinement will be necessary as we obtain more specific input from financial advisors and stakeholders
- The obligation to pay must be a traceable obligation directly to the individual consumers in the applicable rate class and the legislation must provide for a pre-agreed collection mechanism
- An issue being considered is whether there will be any concern by the market that the cash flow needed to service all of the financing costs due within any period will be constrained by the policy objective regarding maximum annual rate increases for the relevant class of ratepayers. Consideration should be given to ways to provide certainty of cash flows in circumstances where payments under the financing obligations become due prior to the corresponding cash flows from the regulatory asset are available.

3. Timing and Frequency of Sales of the Regulatory Asset to the Financing Entity

- What triggers a sale of the regulatory asset from IESO to the Financing Entity?
- Until a sale occurs, IESO will need to finance the shortfall. For what duration?
- Bond issuances will not occur monthly – and the timing of long term financing in the capital markets will, in part, be linked to market conditions.
- Which entity (IESO/Financing Entity) will obtain non-market-based funding (for example, bank financing) until market-based funding is obtained (both at the outset and throughout the life of the program)?

- Would the funding of any shortfall occur no matter what the conditions are in the financial market or the electricity market?

    - Electricity market: large fluctuations (e.g. rise) in commodity price of electricity could materially impact the amounts which need to be borrowed annually

    - Financial markets: borrowing could become very expensive for any entity (IESO or OPG/Trust/SPV). Should the program be made to change, stop or adapt to these kinds of material changes?

4. Conditions to Sale of Regulatory Asset and to Market Transactions.

- The team is working to identify appropriate conditions to the sale of the regulatory asset and to new financings and the incurrence of related costs, given that the financing costs incurred will automatically get passed through to the ratepayers. The location of any such requirements (legislation, regulation, etc.) is currently being determined.

- At the most general level, consider whether there will need to be any required approvals, including approvals over financing costs to be incurred (e.g., including a determination if third party costs are reasonable) prior to any particular financing transaction?

- Should OPG be guided by any prescribed rules or principles when making decisions about financings (e.g., decisions about short term vs. long term financing)?

Subject: OFHP Update

Hi Dave,

Please see the following update (and attached materials) from this morning's rate mitigation meeting:

GA Financing

Legal Update

- Fair allocation plan (think of this as the line showing savings and costs to ratepayers associated with this program over time)
  - Province has set plan for deferrals for the first 4 years (25% and annual increases tied to inflation)
  - Need process (within pre-set parameters and input from OPG) to determine path for deferrals and recovery for subsequent years (5-30)
  - Originally viewed Province as taking a role in setting out this path
    - Feedback from market that Province should not be involved

    - Need to determine appropriate lead entity (e.g. OPG or IESO)
    - Need to be linked to life of underlying assets in order to mitigate constitutional risk
    - Consider 1-2 year refresh on the plan
    - Structure is still in flux
- Treasury Plan
    - OPG Trust sets this plan
    - Limited oversight in order to ensure OPG Trust can raise $ in the market at a reasonable cost
    - Must fit within the limits set by fair allocation plan (but can vary under the cost curve depending on market and interest rate realities)
    - Once specific bonds issued, fair allocation plan cannot override
- Role for OEB
    - Needs to be extremely limited in order to meet market requirements
    - However need to project consumer confidence
    - Options are currently under reivew
- Collectability is a key point that requires a number of provisions in legislation including
    - Irrevocable charges
    - Role of LDCs, IESO in collections
    - Non-bypassability (exiting the electricity system / going off grid)
- Provincial back-stops
    - Springing guarantees that arise in the event Province takes certain actions that erode value to bondholders
    - Need to be limited and contingent in order to meet accounting tests
    - Dealers considering whether this needs to be in legislation or in a side agreement
    - Want to make sure that it is narrowly focused in terms of triggering events to cover only material impacts and avoid unintended consequences (investors taking legal action)
        - Over time as relevant policy changes are implemented, trustee may look to a 3rd party (e.g. opinion, ratings confirmation) to ensure that value of debt is not degraded
- If Province takes on any of the debt, need to determine what can happen from an accounting perspective. Situations to review:
    - Temporary freeze on borrowing markets
    - Permanent impairment of OPG's ability to purchase a portion of the asset from IESO (in this case may need a guarantee from the Province)
- Timeline for legislation
    - Pens down April 21
    - May 1st TB, LRC, Cab
    - May 4th introduction
    - Currently working from a Blakes document as a straw-person that would act as instructions to legislative counsel
    - Driving to timeline, very aggressive

OPG

- Special committee of the board met last week
    - RBC, CIBC, Goldman included

    - Discussed this is much larger than past models
    - Imperative that this structure follows past transaction models
    - Also reviewed stress scenarios (interest rates are most impactful)
- Shareholder letter
    - Providing to committee tomorrow and will share with government thereafter
- Reviewing sub-debt attributes
    - Certain characteristics needed in order to support senior debt financing (most notably will take on longevity risk)
        - Characteristics of the sub-debt would drive pricing (not tied to Province's cost of funds; likely to be higher interest rate)
    - At minimum, want to ensure that OPG's earnings are higher to offset incremental IOD to the Province

OEB

- Comfort letter from the Province is nearly ready, hopefully tomorrow
- Balancing amount of information needed

IESO

- Want to narrow issues to what is needed in legislation
- Regulatory asset
    - Speaking with KPMG today
    - Meeting with ENE today to discuss business issues

Affordability Fund

- Advisory committee established to recommend final trustees
    - Will start mid-month deliberations
    - By May 31
    - 3 from LDCs and 2 from social services
- Hydro One is providing logistical support

Social programs (OESP, FN Rate, RRRP)

- Same timelines for approvals as GA
- Lots of details to sort through in regulation once legislation in place
- Give comfort to LDCs, IESO, Board in terms of what will be included in regulations in order for them to begin implementation
- Appearance on Energy Financials:
    - Will have flexibility to flow funds between programs while ensuring transparncy (4 line items but not executive control on each)
    - ENE could move $ between programs without TBS approval
- OESP: May 1 implementation of enhancements, OEB using up existing funds so no immediate draw on fiscal plan, working with social program ministries to assist with implementation, working with MoF / CRA to remove wet signature requirement
- RRRP: plan to have in place by July 1 for 8 utilities; retro-active start as safety valve if needed for utilities with more limited capacity to move quickly
- FN Rate: working to set up a meeting with COO to discuss options (for next week), Province

does not want to be involved in choosing who is FN therefore plan to determine eligibility solely on the basis of geography

ICI

- Expanded to include greenhouses
- Need to meet 500kw threshold
- Were already eligible at 1MW; therefore, not many that aren't already been captured
- Seeking LRC regulatory approval April 10th
- Working with CME, OCC on outreach campaigns on benefits of ICI and other conservation initiatives

Bill Presentment

- Will not attempt to change the bill for July 1
    - If try to be more aggressive on changes to the bill may jeopardize implementation
- Want a larger re-work, look at all the constraints and regulations
    - For example, reconsider changing name of "delivery"
    - Timing: fall for re-design
- In the interim, want an insert that shows %

AG

- Walk through with ENE / MoF staff on April 19th
- TBS will share technical materials in advance

FAO

- Submitted materials last week
- Will circle back to determine status

Thanks,
Scott

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
April 6, 2017

Agenda

1) GA Refinancing
    - Legislative Drafting (LSB)
    - OPG Update
    - IESO Update
    - OEB Update

2) Other OFHP Initiatives
    - Affordability Fund (CRED)
    - RRRP, OESP and FN (SNAP)
    - ICI (ESPD)

3) Bill Presentment (SNAP)

4) Update on Action Items / Policy Matrix

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of April 3, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		
• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation • Defining mitigation and recovery mechanism; and • Establishing roles for IESO, OPG and OEB • Regulation (amend O.Reg. 95/05) • Shareholder Resolution (work with OPG to determine form) • Third Party Technical Report re Long Lived Assets (TBD) • Accounting opinions from E&Y (OPG) and KPMG (IESO) • Financing: o How long will IESO hold short term liability (weeks/months); o When and how frequently will OPG purchase the asset from IESO; o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc); o OPG to confirm if it is considering more than one SPV/subsidiary; o OPG to explore tax considerations; o OPG to indicate how it would determine interest rate on sub-debt; and o OPG to provide amount/frequency of equity required and indicate trigger <u>Recent Action Items</u> **OPG:** • OPG to continue to work with lead banks / rating agencies / OFA on financing issues • OPG to confirm accounting if OFA were to act as lead order on borrowing • OPG to determine who will finance / hold the asset until it goes to the market	• IESO Board meeting on April 11, 2017 (TBD) – ESP to present on OFHP • AG briefing on April 19, 2017 (TBD) • Provide comfort level to allow OEB to include in May 2017 RPP • Approval dates: o TB/LRC on May 1 2017; and o Cabinet on May 3, 2017 • Legislation introduced May 4, 2017. o Opposition Briefing (TBD) • Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

Item	Key Deliverables / Considerations	Timing / Next Steps
	• OPG to embed OFA/Energy (as necessary) in their ongoing internal discussions • ESPD, IESO and OPG to continue discussions around refining refinancing modelling • OPG /LSB to work through requirements / help draft a shareholder resolution in a form to be determined. OPG to continue to consider requirements for enhanced indemnification for Board member **IESO:** • IESO to work through technical aspects with IT (i.e., operationalizing the back-office functions) • IESO to work with KPMG in the development of a formal opinion once first draft of legislation is available • IESO to discuss LDC issues with OEB **OEB:** • OEB to continue to work with ENERGY to finalize draft comfort letter regarding May 1 – Regulated Price Plan (RPP) and OESP • OEB to draft RPP communique to be released publicly by April 20, 2017 **Legislative Drafting:** • LSB / Blakes will continue to work through legislative drafting issues • LSB has drafted a letter for the Minister to send to LDCs re: contempt of the Legislature. • Legislative walk-through and working group meetings Monday and Tuesday • ENERGY / Blakes / IESO / OEB / OPG to meet on Tuesday to work through issues related to legislation • LSB / Blakes to brief OPCD on legislation • KPMG / E&Y to continue to be informed so that they can eventually confirm we've met all conditions • Blakes / OPG to work through financing issues related to 10% cap • Blakes / LSB to work with MAG on a second constitutional law	

Item	Key Deliverables / Considerations	Timing / Next Steps
	opinion from Peter Hogg • TD being engaged through OFA to provide financial advice • ESP to make presentation on GA financing at upcoming IESO Board meeting <u>Considerations</u> • OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers. • Ongoing legal, accounting and financing risk assessments. • Impact on Electricity Sector Dedicated Income.	
2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 23rd and March 24th • SNAP to continue to monitor rate hearings for RRRP LDCs • SNAP to collect billing implementation timeline estimates from LDCs <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC on May 1, 2017 (TBD) • Fall 2017 implementation (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Recent Action Items</u> • SNAP/LSB working on LRC package for OESP enhancements • SNAP to continue to work through OESP automatic qualification with MCSS / OEB • SNAP to continue to work with, MOF, OEB and CRA on OESP wet signature • Board decision this week on removing OESP from bill as of May 1. • SNAP to work with TBS to ensure funds flow from fiscal plan as soon as legislation passes <u>Considerations</u> • OEB has been engaged on implementation timelines for 50% + new eligibility – OEB working with LDCs to ensure systems are upgraded to reflect new credit amounts • Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to use OESP variance (approx. $100M) to reduce current OESP charge to zero and continue funding existing program until tax changes in place. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC on May 1, 2017 (TBD) • LRC on April 10, 2016 • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 24th • SNAP to move forward with including COO in FN rate implementation / work through implementation issues. SNAP working to meet with COO to have preliminary discussion of the FNDC • OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13 million to $20 million • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, Blakes, CSD, OPCD, TBS, MOF and H1 (KPMG and Osler)	• TBC/MBC Submission • Declaration of Trust ("Trust Deed") • Transfer Payment Agreement (TPA) • Administrative Services Agreement (H1-Trust) <u>Recent Action Items</u> • March 23 and 24: Trust Deed and TPA executed. • March 30: Funds transferred to Computershare. <u>Considerations</u> • Legislative changes not required.	**April 7, 2017:** • Briefing for Advisory Committee members **April to May 2017:** • Advisory Committee recommends Board of Trustees by May 31, 2017; Computershare appoints full Board of Trustees **June 2017:** • Trustees expected to engage with distributors, IESO, OEB, others, to define funding criteria and processes. **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds **Late 2017/early 2018:** • ENERGY can apply for additional funds through 2018-19 PRRT based on performance and need. Trust term can be extended with amended/new TPA if agreed by Trust

Item	Key Deliverables / Considerations	Timing / Next Steps
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Recent Action Items</u> • ESP working to finalize materials for LRC on April 10, 2017 – draft language from leg. Counsel has been shared with ESP staff • Communications finalized TPA with OCC / ESP, CRED and COMMS to consider providing support to CME (outreach with CME ongoing) • ESP to consider implications of dropping below 500kw threshold due to investments in conservation <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date as possible to impact electricity bills this year (May 31, 2017). • Ongoing outreach with LDCs being undertaken by IESO	• RR posting on the proposed amendment – posted March 9, 2017 for 30 days • LRC on April 10, 2016 • Report back to TB/MBC on May 1, 2017 • Effective April/May 2017 (TBD)
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • IESO's stakeholder engagement re Market Renewal is ongoing.	• Continue this work as part of LTEP

Item	Key Deliverables / Considerations	Timing / Next Steps
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Recent Action Items</u> • ESP to work with other ministries regarding other measures that can be considered for SMEs <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in fall 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March

Item	Key Deliverables / Considerations	Timing / Next Steps
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion • March 14, 2017: Letter received requesting additional information by March 24, 2017 • Ministry preparing responsive materials
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP	• Preliminary discussion on April 19, 2017 (TBD)
12) Bill Presentment (SNAP/LSB)		
• ENERGY	• Ministry to begin work on bill presentment	• Initial discussion on March 31, 2017

Policy and Legal Foundations for the Proposed Ontario Fair Hydro Plan Act
April 4, 2017

Creating the Regulatory Framework

- Principles will link the benefit of the "Green Generation Initiative" with the regulatory cost that future rate payers will pay
- Need to name and articulate "Green Generation Initiative"

Fair Allocation Plan

- Policy direction around intergenerational funding will be established by the Minister of Energy
- The Fair Allocation Plan has been determined for the 1st four years, as set out in the March 2nd announcement
- Should there be a process around the Fair Allocation Plan [or as necessary]?
- [Role for the OEB?]

Treasury Plan

- Created by OPG to implement the Fair Allocation Plan
- Will pass through actual costs and expenses of funding obligations incurred
- 3 components:
    - Treasury Plan must be compliant with principles and parameters of the Fair Allocation Plan;
    - The Plan must match maturities to allocations under the Fair Allocation Plan, as well as achieve funding efficiencies and cost management articulated in the Fair Allocation Plan; and
    - Implementation
- Should [Minister?] [OEB?] review [and approve?] the Treasury Plan? At what point in process?

Establishment of the Regulatory Asset

- Right to recover from rate payers, through collection by LDCs and IESO, the regulatory charge, late fees, interest established by legislation
- IESO may dispose of (by assignment, transfer, sale, etc.) its right, title and interest in the Regulatory Asset
- Legislation will create property rights and allow for security interests in the Regulatory Asset
- [Role of the OEB in establishing the Regulatory Asset?]
- Role of OPG in acquiring the asset?

Ensuring Collectability

- Clearly defined class of rate payers that receive and pay for the benefit
- Charges are irrevocable
- LDCs have duty to invoice rate payers for the charge
- IESO and LDCs have duty to collect charges as agent and pay remittances to IESO
- IESO has duty to pay remittances to the Regulatory Asset Owner
- Non-by-passability – subject rate payers who opt to go off grid to a penalty (prepayment)?
- True up mechanism to reconcile collections with incurrences
- Province shall not take steps to reduce, alter, impair or terminate the Regulatory Asset or collection

OEB Role

- [Inspect books and records?]

DRAFT

- [Approve administrative costs?]
- [Prudence review of financing costs?]
- [Consequences of OEB review?]
    - Ability to review
    - Ability to review and make recommendations (non-binding)
    - Review and approve or refer back for reconsideration (binding)

Provincial Guarantee

- Scope / Triggers / Consequences / Form

DRAFT

From: Bruno Amara
To: John Kim
Subject: FW: OPG Equity Injection
Date: Friday, March 31, 2017 4:08:13 PM
Attachments: BN - GA Equity Injection Structure v6.docx

Hi John

We sent the attached draft note and offered follow-up discussion. Should MoF Legal be invited to work group calls or is it fine to just keep them in the loop.

By the way. Sorry, not much of a day off for you.

Bruno

Subject: OPG Equity Injection

Hi Toby,

Hope you're doing well.

I understand you may have had some discussions with Bruno about the Province's role with the GA Smoothing/Financing and the OPG equity injection.

We developed the attached ***draft note*** to provide a high level overview of the Province's Equity Injection. There are still some questions we have that are yet to be answered, hence the 'TBC' and frequent comments.

Nevertheless we thought it might be helpful to provide this to you as a launching off point for further discussions.

Happy to chat further.

Thanks,
Shajee

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for OPG from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority are coordinating with Ontario Power Generation to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle henceforth referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be required to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized.

Commented [AP1]: Legislation being proposed from the White Paper suggest that IESO would collect these payments to be remitted to OPG Trust.

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
- Longer term debt will be issued as soon as possible, subject to market timing constraints..
    - OPG retains 3 dealers to advice on the long-term borrowing and financing of the GA.
    - The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].
- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province will provide monthly equity injections to OPG
- In return, OPG will issue new shares to the Province at a value of $20 per share.
- These share issuances will be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
    - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
    - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
    - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ22]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.

- Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
- Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.

- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Subject: OPG TB

Hey John – wanted to pass along drafts of the OPG BP TB materials and concurrence letter. The deck and word doc submission are the same so feel free to just comment on one version. These are currently out for review by ENE so likely will be a few more changes to be made but wanted to give you guys a chance to review/input.

Happy to chat

MINISTRY OF
ENERGY

OPG Business Plan

May 2017

Context

- As required by the Memorandum of Agreement (MOA) between Ontario Power Generation and the Minister of Energy, OPG provided its Business Plan for 2017-2019 to the Ministry of Energy on November 29, 2016 for concurrence
  - Note that while OPG is seeking concurrence for its three year 2017-19 business plan, the plan also includes financial projections for 2020 and 2021
- The Minister's concurrence requires presentation of OPG's business plan before TB/MBC
- The Ministry of Energy review and analysis of OPG's business plan is supported by the Electricity Investment and Governance Secretariat, a unit within the Ministry of Finance and the Corporate and Electricity Finance Division of the Ontario Financing Authority
- The following presentation provides an overview of OPG's business plan, including:
  1. Business Plan Overview
  2. Other Considerations

Context *(cont'd)*

- Proceeding with Provincial concurrence now will demonstrate that OPG has support from its shareholder as it implements the plan and provides clarity to the Ontario Energy Board (OEB) as it reviews OPG's current rate application covering the 2017-2021 period

- Business plan forecasts may be affected by Ontario's Fair Hydro Plan (OFHP). Given the stage of implementation of OFHP and the timing of the receipt of the business plan in November 2016, these changes are not reflected in OPG's plan

  - The Ministry anticipates that as part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed partly by capital infusions from the Province, and majority by third-party lending

  - These changes are generally expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income

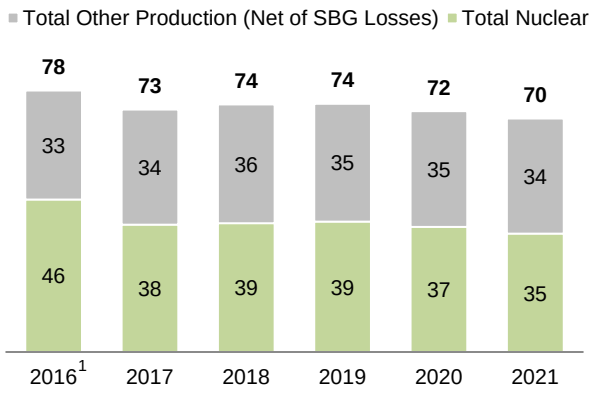
  - In addition, the Province's net debt position should remain unchanged

1. Business Plan Overview

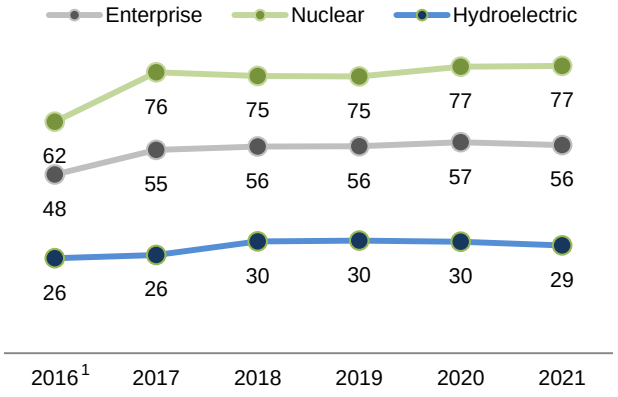
a) Production & Total Cost of Generation

- OPG's production is expected to fall to 69.8 TWh by 2021 from 78.2 TWh in 2016
  - Reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016
  - Also includes a partial overlap starting in 2021 between second and third unit refurbishments
- While Operations, Maintenance and Administration (OM&A) remains relatively stable over the planning period (see next slide), total generating cost (TGC)* shows an increasing trend over the planning period relative to 2016, reflecting:
  - Lower nuclear production due to Darlington refurbishment outages, and
  - Increased sustaining capital spending (included in TGC) on two large hydroelectric projects, the Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation

Production (TWh)



Total Generating Cost ($/MWh)



1. Actuals

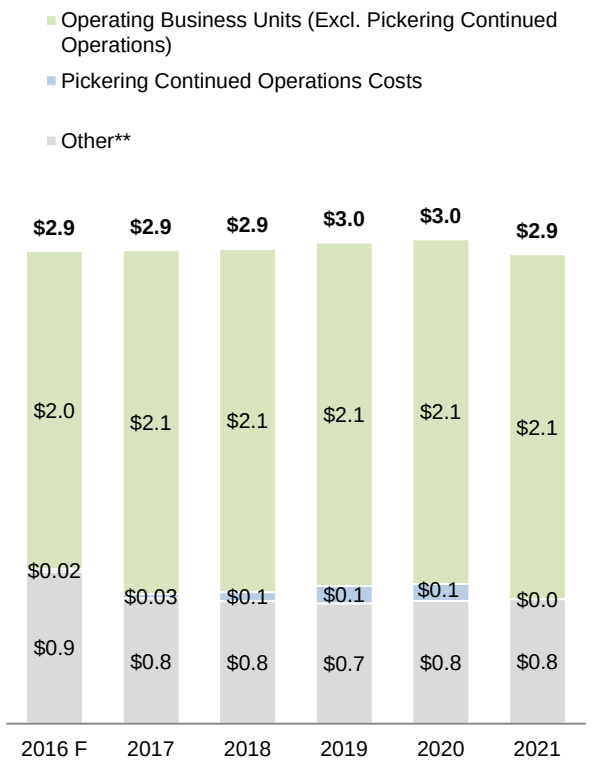
*TGC = OM&A expenses from ongoing operations + fuel and Gross Revenue Charge expenses for OPG-operated stations + sustaining capital expenditures) divided by OPG generation adjusted for surplus baseload generation losses

1. Business Plan Overview

b) Operations, Maintenance and Administration (OM&A) Expenses

- Annual OM&A expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year
- Increases over 2016 are mainly attributable to:
  - Increases in business unit expenditures, including changes in nuclear outage scope at Darlington, and planned hiring to fill staffing gaps
  - Incremental outage and other program costs to enable Pickering continued operations
  - Partially offset by declining pension and OPEB costs over the period due to projected pension asset returns, increased employee contributions, and adoption of a new method for applying discount rates to determine interest components of pension costs

OM&A from Ongoing Operations* ($B)



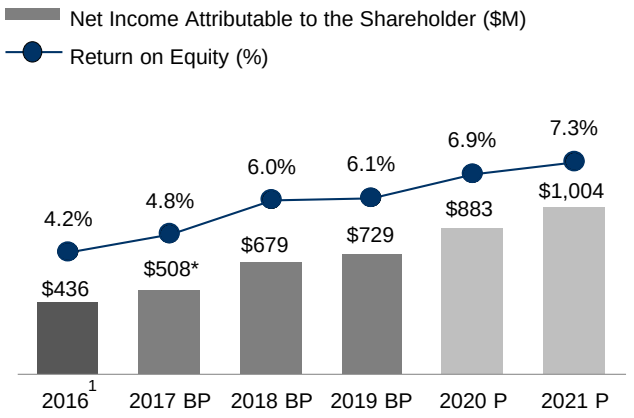
*Excludes Darlington refurbishment OM&A expenses and all OEB variance and deferral account offsets
** Includes centrally held pension /OPEB costs and support services

1. Business Plan Overview

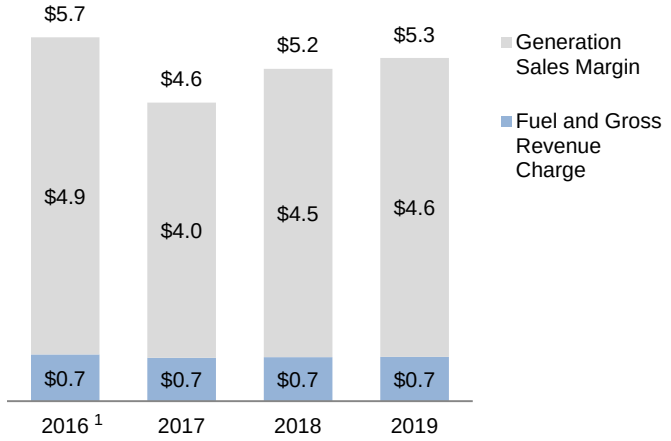
c) Financials

- OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016
  - 2017 net income is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations
  - Net income in 2018 and 2019 is planned to increase, primarily due to higher forecast production, and earnings from oncoming stations, including Nanticoke solar in 2019
- As a result, return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021
- Overall, the 2017-19 Business Plan is largely unchanged relative to last year's plan in terms of commitments for Net Income, and Total Shareholder Return

Net Income ($M) and ROE (%)



Revenue Margin ($B)



*Includes extraordinary gain associated with the sale of OPG head office

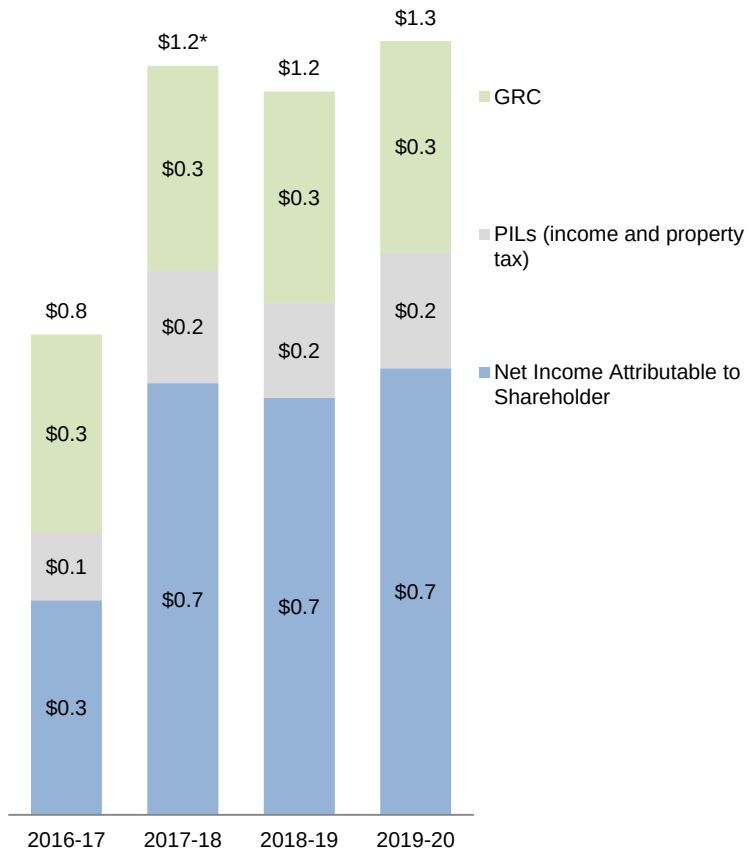
1. Actuals

1. Business Plan Overview

d) Provincial Fiscal Impacts: Shareholder Return and Payments-in-Lieu of Taxes

- Total fiscal revenue impacts to the Province, including net income return to the shareholder and payments-in-lieu of taxes, averages ~$1B over the period
  - Provincial revenues from OPG are dedicated to servicing and paying down stranded debt and the investment cost of the Province acquiring the equity in OPG.
- ~~Total r~~Return to the shareholder improves ~~over the period largely~~ due to changes in net income, which OPG attributes to:
  - Assumed OEB rate outcomes
  - Completion of the first Darlington unit refurbishment
  - Further cost efficiencies
- Net income is consolidated by the Province as Revenue from Government Business Enterprises (GBEs)
- Income tax PILs, Gross Revenue Charges (GRC) and property tax PILs paid to ~~are consolidated by~~ the Ontario Electricity Financial Corporation (OEFC) to help service and pay down stranded debt are consolidated in Public Accounts under Taxation Revenue
- OPG also pays a portion of the Gross Revenue Charge (GRC) ~~and Property Taxes to the OEFC to the Province's Consolidated Revenue Fund~~

Total Fiscal Revenues ~~Shareholder Return~~ ($B)



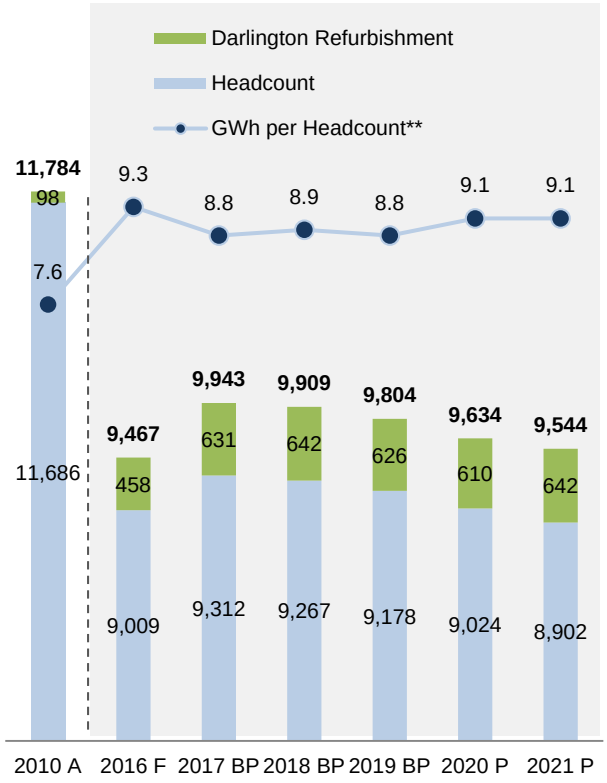
*Includes gain associated with the sale of OPG head office

1. Business Plan Overview

e) Business Transformation Initiative & Labour Costs

- As part of a company-wide business transformation, OPG has saved over $1B in costs from January 2011 to December 2016
  - Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3
- However, OPG is ramping up recruitment between 2016 and 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition from employee demographics, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
- In addition, to date OPG has hired ~60 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
  - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations

Ongoing Operations Regular Headcount and Productivity



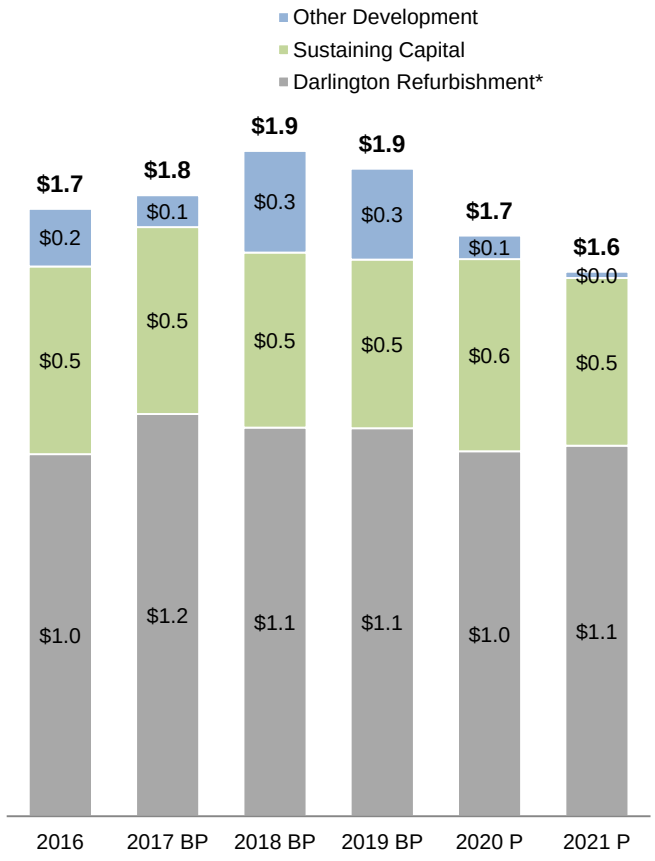
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

1. Business Plan Overview

f) Operating Highlights - Projects and Capital Expenditures

- OPG continues to focus on delivery of its major projects over the plan period, including:
  - **Darlington Refurbishment**: Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained
  - **Sustaining Capital:** Expenditures average $570M, including:
    - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
    - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew II
    - Lower Mattagami upgrades in 2018 and 2019
  - **Other Developments:** Investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

2. Other Considerations

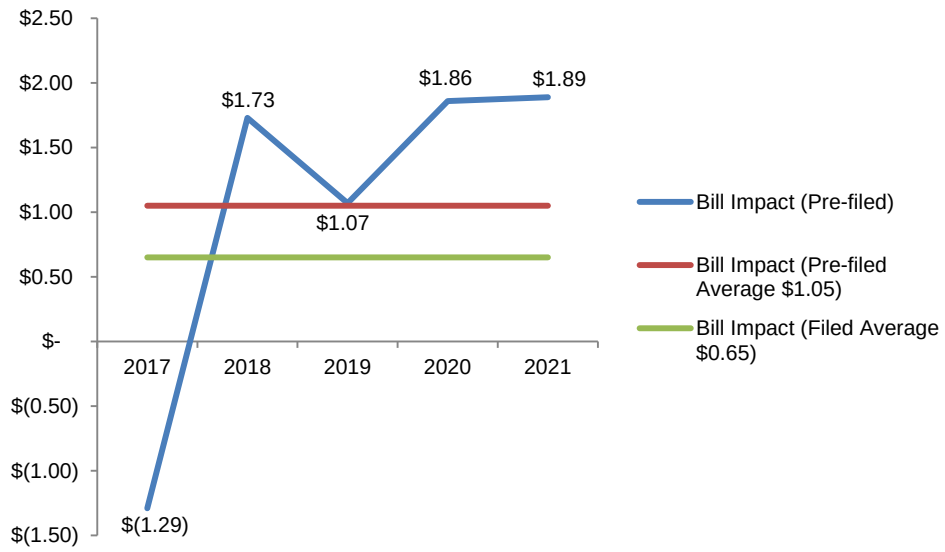
Rate Application

- OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021
- Oral hearings began February 21, 2017 with a decision expected in Q3 2017
- OPG's 2017-19 Business Plan assumes new rates are effective January 1, 2017
  - The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay*

Rate-Smoothing Proposal:

- On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only
- On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

Comparison of Annual Bill Impact ($/Month per year)



*Forecasted in May 2016

2. Other Considerations

Sales

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

2. Other Considerations

Special Status for OPG to Approve International Travel

- On January 24, 2017, OPG's President and CEO wrote to the Deputy Minister requesting authority for OPG to approve international travel for its employees
  - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business
- OPG has indicated that international travel is integral to the safe and prudent operation of its business and that special status will enable efficient decision-making while lowering travel costs
  - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds
  - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected to see increases
  - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date
  - OPG believes the inability to make timely commitments on events and meetings impacts employee engagement as well as its international relationships and reputation
- OPG has asked that this application be included with the Ministry's submission to TB/MBC seeking concurrence with OPG's 2017-19 business plan

Appendix

2016 Year-End Financials

Mr. Bernard Lord
Chair
Ontario Power Generation
1900-700 University Avenue
Toronto ON M5G 1X6

Dear Mr. Lord,

Thank you for your submission of Ontario Power Generation's (OPG) 2017-2019 Business Plan ("the Plan"). We have reviewed the Plan and find it to be consistent with our government's expectations.

I support the operational and financial targets set by OPG in its business plan. We recognize the substantial cost reductions that OPG has recently achieved and expect OPG to work closely with the Province to fully realize the additional efficiencies incorporated in the Plan in a manner that is consistent with financial targets and the continued safe and environmentally responsible operation of OPG's facilities.

We commend OPG on its successful start to the Darlington Refurbishment Project, a key objective of Ontario's 2013 Long-Term Energy Plan (2013 LTEP). As a priority project for the government, I expect that OPG will continue to focus on delivering the project as per the schedule and budget contained in the Release Quality Estimate approved by the OPG Board and by the government. I also expect OPG to continue to minimize project risks consistent with the nuclear refurbishment principles set out in the 2013 LTEP, and seek concurrence prior to commencing subsequent unit refurbishments after Unit 2 is successfully returned to service.

We continue to support the planned operation of Pickering units up to 2024 as the station's output will provide reliable, cost-effective and emission-free electricity supply during the Darlington and initial Bruce refurbishments. I expect OPG to seek concurrence to proceed with ongoing Pickering operation after the necessary regulatory approvals are complete.

I understand that the recently approved Ontario Nuclear Funds Agreement (ONFA) Reference Plan has resulted in a reduction of the estimated liabilities ~~costs to consumers~~ for future decommissioning and long-term management of waste from Ontario's nuclear fleet. ~~plants. In addition, the segregated nuclear funds set aside under ONFA have reached fully funded status.~~ With many decades of nuclear generation in the Province's future, we expect OPG to continue managing its decommissioning and waste management obligations [and related segregated funds] in a prudent manner~~, the decision to fund these costs now provides security for future generations of Ontarians~~.

I appreciate the efforts of OPG staff, management and the Board of Directors to date as we worked to develop a plan to refinance the Global Adjustment (GA). Refinancing the GA would provide significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. OPG will be instrumental to the success of this initiative and we plan to introduce legislation that would, if passed, enable OPG to work with the Independent Electricity System Operator (IESO) to implement this plan.

Commented [RK1]: Recommended not to use this wording, particularly also using the fully-funded wording that follows.

Under ONFA, for prudence, the Province required OPG to accelerate contributions to the funds, in advance of collecting the amounts from ratepayers. Even if the funds are currently estimated to be fully-funded, OPG (and the Province as Shareholder) still needs to recover its nuclear liabilities costs in rates.

Commented [RK2]: If wording is retained, should be reworded.

"As a result of the lower estimated liabilities and recent financial market performance, the segregated nuclear funds set aside under ONFA are currently estimated to be fully funded."

Commented [FC3R2]: Should be noted that the funds are fully funded today but changes in market conditions could put the funds in a temporary deficit position in a very short period.

I expect OPG to continue to keep the government informed with regard to the company's key ongoing and emerging initiatives and progress in achieving its financial and operational performance commitments. As OPG's performance directly impacts Ontario's fiscal plan, we note the importance of achieving or exceeding OPG's financial performance commitments.

This letter constitutes our concurrence with OPG's Board approved 2017-2019 Business Plan as provided for under the Memorandum of Agreement between OPG and the Shareholder dated July 17, 2015.

Sincerely,

Glenn Thibeault
Minister of Energy

c: Jeff Lyash, President and Chief Executive Officer, OPG
Ali Ghiassi, Chief of Staff, Ministry of Finance
Scott Thompson, Deputy Minister, Ministry of Finance
Serge Imbrogno, Deputy Minister, Ministry of Energy

Commented [RK4]: Only add in if Energy CoS is included.

OPG Trust Financing

Issue

The Province is working with OPG to establish a Trust to finance the global adjustment (GA) payment deferral as part of the Province's recent plan to reduce ratepayer electricity bills.

Context

- The Province and OPG seek to create a Trust to handle the GA deferrals as part of the Province's recent rate mitigation proposal.

- Ministry of Energy's (ENERGY) materials note that significant amount of debt to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would likely be downgraded.

- As a result, the capital structure of the Trust would be a combination of debt and equity.

- The equity portion of funding for the Trust is expected to come from the Province through capital contributions / equity injections into OPG, which would then be loaned to the Trust.

    - Under the terms necessary for OPG to consolidate the Trust, the Province or its agencies may not fund more than 50 per cent of the Trust.

    - ENERGY's materials suggest that about 44 per cent be funded via equity injection from the Province / Ontario Electricity Financial Corporation (OEFC).

Mechanics of Financing Equity Portion of OPG Trust

- The mechanics of a capital contribution into OPG could follow the precedent previously completed by the Province in making a capital contribution into Hydro One prior to its initial public offering.

1. The Province would need to create an "Operating Asset" line which would carry the amount of the capital contribution. The creation of this line and the appropriation would require Treasury Board approval.

    - The Operating Asset would either be categorized as a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions would be made outside of legislation. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. The creation of the Operating Asset would need to be included in the Province's tabling of Estimates in the Legislature (tabled following the release of the Provincial Budget). If the Operating Asset is not included in the Estimates, the Province would need to table Supplementary Estimates in the Legislature.

3. The Province would also need to seek approval, through Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would either require the implementing Ministry to find expense offsets, or tabling of Supplementary Estimates. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive shares in the Trust in return.

    - Note that as with the Hydro One capital contribution, this capital contribution represents a balance sheet movement and would not create an upfront fiscal impact to the Province (exchange of cash for shares – both assets).

    - However, there is likely to be on-going carrying costs for the Province associated with any borrowing that the Province will be required to undertake to fund the capital contribution. In the absence of obtaining incremental earnings on the equity invested in OPG, the carrying cost would generate a negative fiscal impact.

Staff Comments/Next Steps

- A key issue that will need to be addressed going forward is which Provincial entity or which Ministry would provide the capital contribution: OEFC, Energy, or Finance.
    - The preceding analysis assumes that a Ministry, and not OEFC, would make the contribution, given that the Province, and not OEFC, owns 100 per cent of the common shares of OPG.
    - Energy provided the capital contribution to Hydro One before the November 2015 IPO, and the Minister of Energy is the shareholder of OPG on behalf of the Province.

- Energy has indicated in the past that it would prefer Public Accounts reporting to remain consistent with historic practice, which is that OPG reports under the Ministry of Finance.
    - The Hydro One initial public offering experience revealed the historic practice is technically a mistake as the Minister of Energy is the shareholder.
    - Given there is no fiscal impact and the Province's Financial Statements show results across Ministries OPCD agreed not to reclassify the investments to Energy but also did not allow the additional equity acquired in Hydro One to be booked by Finance.
    - Staff expects OPCD to have the same view with respect to the proposed capital contribution into OPG.

- The Province would also need to decide on the timing of the capital contribution.

- Assuming that the Trust would seek to maintain the target debt to equity ratio, the Province would need to determine when to make a contribution into the Trust (i.e. monthly, quarterly, annually?)
- It should also be noted that the timing of the contribution (i.e. whether it is at the beginning, middle, or end of a fiscal year) would also have an impact on the carrying costs for the Province should it decide to borrow to finance the contribution (i.e., a contribution earlier in the fiscal year would create higher interest payments for the Province).
- From a financial perspective there are several options to address timing and carrying costs including the issuance of convertible debt in favour of the Province. Staff would need to engage in discussions with OPCD and OPG to assess the financial and reporting impact of the different options.

TD Securities

A Confidential Presentation

Capital Injection Discussion

April 25, 2017

Presented By

Introduction

- The Province of Ontario (the "Province") is considering alternatives to fund its capital injection (the "Capital Injection") into Ontario Power Generation Inc. ("OPG"), which represents 44% of the Global Adjustment deferral financing requirement
- When evaluating the Province's alternatives, TD Securities Inc. ("TD Securities") understands that the Province's objectives are:
  1. **Equity Treatment:** Ensuring that the Capital Injection is treated as equity so as to mitigate the credit rating impact to OPG associated with 100% consolidation of the Special Purpose Vehicle ("SPV")/Trust
  2. **Managing Cash Flows for Interest Payments:** Timing, size, and priority of cash flows to repay interest used to fund the Capital Injection
  3. **Managing Cash Flows for Debt Repayments**: Timing, size, and priority of cash flows to repay the maturing principal for debt used to fund the Capital Injection
- In addition, simplicity is preferred to a complex structure

Capital Injection Options

	Common Equity	Preferred Equity	Fixed-to-Floating Sub. Notes, Convertible to Preferred Equity[1]	Mandatory Convertible Preferred Equity
Characteristics				
Instrument	▪ Equity instrument with no fixed dividend	▪ Preferred equity instrument with a fixed, floating, or resettable dividend	▪ A fixed income instrument with a fixed rate, which automatically converts into floating rate preferred shares, subject to an issuer cash redemption feature	▪ A preferred equity instrument that pays fixed, floating, or resettable dividends, which automatically converts into common equity
Capital Structure Ranking	▪ Lowest priority	▪ Priority to common equity	▪ Until converted, usually ranks higher than preferred equity, but lower than other fixed income instruments	▪ Priority to common equity until converted
OPG Tax Treatment	▪ Dividends are not tax-deductible	▪ Dividends are not tax-deductible	▪ Initial interest payments tax-deductible	▪ Dividends are not tax-deductible
DBRS Equity Treatment Methodology	▪ Considered equity	▪ Allocated an equity percentage (100% to 0%) based on (1) permanence, (2) subordination, and (3) legal implications (default considerations) ▪ Any less "equity-like" features reduce equity weighting allocated to the instrument ▪ Hybrid instruments[2] can receive 100% equity treatment, but limited to a quantity proportionate to 20% of common equity ▪ 100% of preferred dividends or interest payments are subtracted from cash flow credit metrics, regardless of equity treatment ▪ Cannot have a investor cash redemption provision to be considered equity		
S&P Equity Treatment Methodology	▪ Considered equity	▪ Hybrids placed into one of three categories based on equity content for purposes of calculating credit metrics: • High: 100% equity; Intermediate: 50% equity, 50% debt; Minimal: 0% equity ▪ Key considerations are: (1) ongoing payments, (2) permanence, and (3) subordination / credit default cushion ▪ Generally, equity content treatment applies to hybrids in proportions equal to or below 15% of total capitalization ▪ Same equity treatment methodology is applied in calculating cash flow credit metrics ▪ Must have at least 20 years or more remaining to the effective maturity to be given any equity content, subject to other features		
Objectives				
1. Equity Treatment	▪ Considered equity	▪ Typically given 50% and 100% equity treatment by S&P and DBRS, respectively, subject to quantity limits	▪ Recent hybrid sub-debt offerings given intermediate equity content by S&P ▪ Quantity limited by DBRS & S&P	▪ Typically given 100% equity treatment, depending on conversion length ▪ Quantity limited by DBRS & S&P
2. Cash Flows for Interest Payments	▪ By way of dividends ▪ **Dividend Timing:** flexible (monthly, quarterly, yearly) ▪ **Dividend Size:** flexible ▪ **Dividend Priority:** can be deferred indefinitely	▪ By way of preferred dividends ▪ **Dividend Timing:** fixed ▪ **Dividend Rate:** flexible at initiation ▪ **Dividend Priority:** can be deferred indefinitely, but prioritized above common dividends • Cumulative or non-cumulative	▪ By way of fixed interest payments until converted ▪ **Interest Timing:** flexible at initiation ▪ **Interest Rate:** flexible at initiation ▪ **Interest Priority:** can be deferred indefinitely, but prioritized above common dividends	▪ By way of preferred dividends until converted ▪ **Dividend Timing:** flexible at initiation ▪ **Dividend Rate:** flexible at initiation ▪ **Dividend Priority:** can be deferred indefinitely, but prioritized above common dividends until converted
3. Cash Flows for Debt Principal Payments	▪ Special dividends can be utilized to match timing of principal repayments	▪ Little incentive for principal repayment unless other features are added	▪ Interest rate step-up incentivizes redemption by the issuer at conversion, but may affect equity treatment	▪ Once converted, special dividends can be utilized to match timing of principal repayments

(1) Also referred to as U.S. Hybrids, with recent examples including TransCanada's US$1.25B offering in February 2017 and Emera's US$1.2B offering in June 2016
(2) Instruments that have both debt-like and equity-like features

Discussion

- Common equity provides the most flexibility to OPG with respect to:
  - Greater certainty in attaining equity treatment by credit rating agencies
  - Cash flow timing in the event that SPV/Trust payments are delayed
- Hybrid instruments(1) are an alternative in satisfying the Province's Capital Injection into OPG
  - Companies usually issue hybrids for specific purposes related to access to capital markets, credit rating, equity dilution, and tax considerations
- Two considerations required for OPG to consolidate the SPV/Trust that may directly affect the timing and amount of cash available to pay the Province are:
  - **Decision Making** – OPG needs to make funding / dividend decisions independent of the Province
  - **Business Risk** – OPG needs to demonstrate that it has variability of returns
- The two above considerations may result in cash not being distributed from the SPV/Trust to OPG, such that OPG cannot pay a dividend or special dividend to the Province
- Additionally, the dividend / interest rate on the Province's Capital Injection relative to the interest rate of the debt issued by the Province and the debt issued to OPG by the SPV/Trust determines where the excess cash will accumulate

(1) Instruments that have both debt-like and equity-like features, including the preferred equity, fixed-to-floating sub. notes, convertible to preferred equity, and mandatory convertible preferred equity discussed on page 3

Discussion (cont'd)

- Hybrid instruments(1) can be used to increase the Province's certainty of cash flows to cover the interest and principal payments on the underlying debt the Province issues
  - Subordination is less of a concern as the Province owns 100% of OPG
  - Direct trade-off exists between adding debt-like features to the hybrid instruments and reducing their degree of equity treatment for OPG by credit rating agencies
  - However, the instruments have to demonstrate some degree of permanency to warrant equity treatment and the total amount that receive equity treatment is limited by credit rating agencies
- At its simplest, the Capital Injection could take the form of common shares to the Province
  - Normal dividends set by the OPG Board, which the Province has the ability to direct, to equal the interest payments on the underlying debt
  - Repayment of principal through special dividends as cash becomes available at OPG after receiving distributions from the SPV/Trust
- Investing at market value as opposed to book value is more of a concern when allocating value between new and existing shareholders, which in not applicable in this case

The Province should have a detailed discussion with OPG and its auditors, and ultimately, the credit rating agencies when evaluating its alternatives in the context of its objectives

(1) Instruments that have both debt-like and equity-like features, including the preferred equity, fixed-to-floating sub. notes, convertible to preferred equity, and mandatory convertible preferred equity discussed on page 3

Please see attached the latest draft of the legislation. My understanding is that there is only room to make small tweaks based on the timeline right now.

Please note that Energy has not removed the exemption from section 28 in this draft. I am not sure if there has been any further discussion on that subject, but I think that if we want to push back on this issue it needs to be communicated as soon as possible.

Also, there is new language around the guarantee, but it does not contemplate the current plan to have both Ministers sign the guarantee. I have let Energy Legal know that this would make sense to change.

Confidential/Solicitor & Client Privileged

April 26, 2017

Hi, Toby. I am pleased to attach the most recent version of the draft legislation pertaining to the electricity rate reductions and intergenerational cost transfer.

Thanks for your help on all of this, and note that this version does not include amendments to EA ss.89 and 90 (PILS amendments). Those discussions are ongoing between MOF policy, OPG/Tory's and ENERGY is awaiting those discussions to close before finalizing the legislation on these matters.

Best regards,

James

The notes included in this document are intended only to help facilitate a discussion of the topics to which they relate. Any potential legislation is subject to the approval of the Ontario Legislature.

A proposal to create Legislation.

An Act to provide for the fair allocation of costs of electricity over time, if enacted

Confidential Draft

A proposal to create Legislation.

An Act to provide for the fair allocation of costs of electricity over time, if enacted

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL TO ANY FINAL BILL PRIOR TO INTRODUCTION.

Confidential Draft

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects.[1] These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to consumers today. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of today's consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations of consumers.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that consumers in the future pay their fair share for the benefits that they receive from the investments already made.

PART I
GENERAL

Interpretation
Definitions

1xx. (1) In this Act,

"Board" means the Ontario Energy Board; ("French")

"clean energy adjustment" means the amount determined under section 10xx; ("French")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to the specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("French")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the estimated amounts to be paid or reflected by the IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by the IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed, or

(vi) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(b) such other estimated costs as may be prescribed; ("French")

Confidential Draft

"clean energy initiative" means the policies of the Government of Ontario related to,

(a) fostering the growth of and investment in clean and renewable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies, and

(c) promoting conservation and demand management; ("French")

"electricity vendor"[2] means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) the IESO in circumstances where the IESO directly invoices a specified consumer, or

(d) such other person as may be prescribed; ("French")

"fair allocation amount" means the amount determined in under section 15xx;

"financing entity" means an entity established or caused to be established under subsection 17xx (3); ("French")

"Financial Services Manager" means the Financial Services Manager appointed under section 13xx; ("French")

"Financing Plan" means the plan prepared under section 16xx, as amended from time to time in accordance with this Act; ("French")

"funding obligation" means,

(a) a payment obligation incurred in connection with the transfer of a regulatory asset or the refinancing of an existing funding obligation, or

(b) a payment obligation that meets such other criteria as may be prescribed; ("French")

[2] FLS - this is similar to the definition of "electricity vendor" in the Ontario Rebate for Electricity Consumers Act, 2016

Confidential Draft

"IESO" means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; ("SIERE")

"IESO funding shortfall" means the amount determined under section 20xx; ("French")

"investment asset" means the rights and interests described in section 22xx; ("French")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("French")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("French")

"invoice amount" means, in respect of an invoice period, the sum of the amounts set out in subsection (2.1) in relation to the provision of electricity in Ontario to a specified consumer; ("French")

"invoice period" means the period in respect of which an invoice amount applies, as specified on an invoice issued by an electricity vendor; ("French")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system; ("French")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("French")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

Confidential Draft

(a) the period beginning on May 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on April 30, 2047,

(i) every six-month period following the period mentioned in clause (a); or

(ii) any period shorter than six months, as may be prescribed; ("French")

"refinancing" means, subject to the regulations, a redemption, repayment or repurchase of a funding obligation; ("French")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right and interest established under section 21xx; ("French")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2); or

(b) such other person as may be prescribed; ("French")

"sub-meter customer" means a person who is supplied electricity by a specified consumer, if an invoice for the electricity is issued to the person by the specified consumer, by an agent of the specified consumer or by a unit sub-meter provider providing unit sub-metering for the specified consumer; ("French")

"transfer" means [TBD]; ("French")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("fournisseur de compteurs divisionnaires d'unité")

Specified consumers

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of 50 kilowatts or less, or such other amount as may be prescribed.

Confidential Draft

2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.

3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or the has had the obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.

4. The person's account with the electricity vendor relates to,

    i. a dwelling,

    ii. a property within the meaning of the *Condominium Act, 1998*,

    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.

5. The person satisfies such criteria as may be prescribed.

Invoice amount

(2.1) Subject to the regulations, the invoice amount for a specified consumer in respect of an invoice period includes the following amounts:

1. In circumstances where the electricity is provided by a licensed distributor or a licensed retailer, the following amounts in respect of the invoice period:

    i. The commodity price of the electricity used.

    ii. The rates and charges set out in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998* and in effect on April 30, 2017.

    iii. Any adjustment on the invoice required under section 25.33 of the *Electricity Act, 1998*.

Confidential Draft

iv. The amount of any harmonized sales tax payable by the consumer under Part IX of the *Excise Tax Act* (Canada) in respect of the amounts mentioned in subparagraphs i, ii and iii;

v. Any other amounts as may be prescribed.

2. In circumstances where the electricity is provided by the IESO or other prescribed entity, such amounts as may be prescribed in respect of the invoice period. ("French")

Same, exclusions

(2.2) Subject to the regulations, an invoice amount does not include any of the following amounts:

1. The balance of any amounts carried forward from previous invoices in respect of previous invoice periods.

2. Penalties or interest.

3. Charges that do not relate to the use of electricity.

4. Any of the following charges that may be set out in an order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998*:

   i. A fixed monthly service charge payable by a generation facility within the meaning of section 56 of the *Ontario Energy Board Act, 1998* and classified as "microFIT".

   ii. A charge labelled as a "specific service charge" or "retail service charge".

   iii. A rate rider [of the prescribed type or class].

5. Any other prescribed amounts.

Effect of invalidity, etc.[3]

2xx. (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

[3] FLS: this is from the *Climate Change Mitigation and Low-carbon Economy Act, 2016*

Confidential Draft

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred under this Act before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purpose

3xx. (1) The purposes of this Act are,[4]

(a) to ensure that clean energy costs are fairly allocated among present and future specified consumers and reflect the fair allocation; and

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province.

Crown bound

4xx. This Act binds the Crown.

Protection and assurances

Prohibition

5xx. (1) The Crown shall not do anything that would,

(a) hinder, delay, impair or prejudice the charging, collection or remittance of amounts in respect of the clean energy adjustment;

(b) except as expressly permitted by this Act, reduce the clean energy adjustment determined under this Act or lower the priority of the clean energy adjustment over other debts; or

(c) adversely affect an investment asset or a funding obligation.

Clarification with respect to regulations

(2) For greater certainty, the things prohibited under subsection (1) include the making or approving of a regulation under this Act.

Agreements for compensation

(3) The Minister may, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of IESO or electricity vendors under this Act or similar transactions.

[4] FLS: Please see the *Electricity Act, 1998* for much of the wording proposed in this section.

Confidential Draft

Guarantee, indemnification

(4) The Lieutenant Governor in Council may by order,

(a) authorize the Minister of Finance, on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions and the amount on which the guarantee or indemnity will be given;

(b) impose terms and conditions, as it considers advisable, on which the Minister of Finance may, on behalf of the Province, agree to guarantee or indemnify as described in subclause (a) (ii); and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT OF ELECTRICITY RATES

Definitions

6xx. In this Part,

"effective date" means the date determined under section 6.5xx; ("French")

"RPP rate" means the rate determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*, which rate is commonly referred to as the Regulated Price Plan"; ("French")

"specified RPP consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998* for the purposes of subsection 79.16 (1) of that Act.

2. The consumer is subject to the RPP rate. ("French")

Specified RPP consumer, first fair adjustment

6.1xx (1) The rate for electricity payable by a specified RPP consumer for the period beginning on the effective date and ending on April 30, 2018 is the rate required for a specified RPP consumer who meets the prescribed criteria to receive a monthly invoice

Confidential Draft

amount that is 25 per cent lower than the monthly invoice amount for that consumer under the comparison rate described in subsection (2).

Comparison rate

(2) The comparison rate is the rate that would be effective May 1, 2017, determined by the Board solely using the method prescribed by the regulations made under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*.

Same

(3) For the purposes of subsection (2), the applicable method is the method on the day this section comes into force.

Specified consumers (non-RPP), first fair adjustment

6.2xx The rate for electricity payable by a specified consumer who is not a specified RPP consumer for the period beginning on the effective date and ending on April 30, 2018 is the rate that would be necessary in order for [the monthly global adjustment rate] in respect of a specified consumer who is not a specified RPP consumer (RPP) and who meets the prescribed criteria to be reduced by the same amount as the difference between the comparison rate referred to in subsection 6.1xx (2) and the rate determined under subsection 6.1xx (1).

Determination by Board

6.3xx The Board shall determine the rates mentioned in sections 6.1xx and 6.2xx no later than seven business days after the day this section receives Royal Assent.

Implementation of rates

6.4xx Each electricity vendor, [specified consumer who provides electricity to a sub-meter customer and unit sub-meter provider who provides unit sub-metering for a specified consumer] shall, no later than seven business days after the day on which the Board determines the rates under section 6.3xx, adapt is billing practices and invoices to reflect the new rates.

Effective date

6.5xx The rates determined under section 6.3xx are effective on the earlier of the following days:

1. The first day of the month immediately following the last day of the seven-day period referred to in section 6.4xx.

2. July 1, 2017.

Confidential Draft

Transition

6.6xx (1) This section applies if an electricity vendor, specified consumer or unit sub-meter provider is unable to comply with section 6.4xx for one of the following reasons:

1. There are fewer than seven days between the day of the Board's determination of rates under section 6.3xx and the effective date.

2. Technical or operational reasons.

Same

(2) In the circumstances described in subsection (1), the electricity vendor, specified consumer or unit sub-meter provider shall,

(a) adapt its invoices as soon as possible and, in any event, no later than August 1, 2017; and

(b) ensure that any specified consumer or sub-meter customer invoiced at a rate higher than the applicable rate determined by the Board receives the difference between the rate shown on their invoice and the applicable rate as a lump sum credit on the first invoice issued after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Subsequent fair adjustments

7xx. The Lieutenant Governor in Council may make regulations prescribing the methodology to be applied by the Board to determine rates for electricity payable by specified consumers and sub-meter customers during the period beginning on May 1, 2018 and ending on April 30, 2022.

Sub-meter customers

7.1xx A specified consumer who provides electricity to a sub-meter customer and any unit sub-meter provider who provides unit sub-metering for the specified consumer shall ensure that the rate payable by each sub-meter customer is the applicable rate determined under this Part.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

8xx. (1) Upon receipt of an invoice that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor, as agent of the investment interest owners, in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Confidential Draft

Same

(2) For greater certainty, subsection (1) applies regardless of,

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was not in material conformity with the Financing Plan.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Recovery from sub-meter consumers

(6) A specified consumer who provides electricity to a sub-meter customer may recover amounts in respect of the clean energy adjustment payable under this section from each sub-meter customer on a pro rata basis.

Irrevocability of amount

9xx. (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or by passed.

Exception

(2) Subsection (1) does not apply to the extent that there is a clerical, typographical or calculation-related error by the electricity vendor.

Determination of clean energy adjustment
Financial Services Manager to determine

10xx. (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by adding the estimated finance amount in respect of the reference period to the true up amount in respect of the reference period.

Confidential Draft

Estimated finance amount, true up amount

(2) The estimated finance amount and the true up amount shall be determined in accordance with the regulations.

Regulations re true up amount

(3) The regulations under subsection (2) shall have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.

2. The method for determining the true up amount should take into account historical and reasonably foreseeable,

    i. differences between the estimated and actual finance amount for the immediately preceding reference period,

    ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and

    ii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(4) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment and such other information related to the determination of the clean energy adjustment as may be prescribed.

Board to determine rates

(5) The Board shall, in accordance with the regulations, determine the rate at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

11xx. (2) The IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

Account

(3) All of the following amounts received by the IESO shall, until paid to or for the benefit of the investment interest owner in accordance with subsection (5), be deposited promptly into an account established for the purposes of receiving those amounts:

Confidential Draft

1. Amounts described in subsection 11xx (2).

2. Payments made by specified consumers directly to the IESO as electricity vendor under subsection 8xx (1).

Same, held in trust

(4) All amounts received by the IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owner, be received and held in trust by the IESO for the investment interest owners or a secured party to whom a security interest in an investment interest is granted under this Act.

IESO to remit

(5) The IESO shall remit amounts received by it in respect of the clean energy adjustment to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

12xx. (1) Each electricity vendor shall issue an invoice to each of its specified consumers for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 10xx (2) and in accordance with the regulations.

Electricity vendor to report

(1.1) Each electricity vendor shall, in accordance with the regulations, promptly report to the IESO the total amount invoiced to its specified consumers in respect of the clean energy adjustment, the amount collected and such further information as may be prescribed.

Electricity vendor to collect

(2) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same period.

Confidential Draft

Held in trust

(4) Payments received by an electricity vendor from or on behalf of specified consumers shall, until paid to or for the benefit of the investment interest owner in accordance with subsection (5), be received by and held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(5) Each electricity vendor shall remit amounts described in subsection (5) to the IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

13xx. (1) Subject to subsection (2), Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Replacement

(2) The Minister may terminate an appointment of a Financial Services Manager and may, in accordance with the regulations, appoint a new person or entity as the Financial Services Manager.

Duties and powers

14xx. (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Same

(2) The administration of the investment asset may include the following:

1. Providing information, in accordance with the regulations, to the Board in respect of funding obligations and the determination of the clean energy adjustment in accordance with section 10xx.

2. Providing information to the IESO in respect of obligations under Part III.

3. Such other matters as may be prescribed.

Review of costs

(3) The Board shall review the administrative costs of the Financial Services Manager in accordance with the regulations.

Confidential Draft

FAIR ALLOCATION AMOUNT

Financial Services Manager to calculate fair allocation amount

15xx. (1) The Financial Services Manager shall calculate a fair allocation amount in respect of each reference period, having regard to the need to align that amount with the finance amount payable during the reference period, for the purpose of fairly measuring and allocating the estimated clean energy costs and estimated clean energy benefits among the specified consumers in respect of the reference period.

Timing of calculation

(1.1) The Financial Services Manager shall calculate a fair allocation amount in respect of each reference period before any funding obligation is incurred [by a financing entity during the reference period].

Amount

(1.2) The fair allocation amount in respect of a reference period is the sum of the following amounts:

1. The amount, if any, by which, if this Act had not been enacted, the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period would have exceeded the estimated amount of the adjustments provided for under section 25.33 of the *Electricity Act, 1998* and the regulations made under that provision that would have been borne by the specified consumers in respect of clean energy costs for the reference period.

2. A portion of the value of any fair adjustment that has been made under Part II in respect of any previous reference period.

Principles

(2) In calculating the estimated clean energy costs and estimated clean energy benefits to be allocated to specified consumers in respect of a reference period, the Financial Services Manager shall [comply with the regulations and] have regard to the following principles:

1. Clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the clean energy benefits attributed to the specified consumers in respect of the reference period.

2. The clean energy benefits allocated to the specified consumers in respect of a reference period should be determined in accordance with the regulations.

Confidential Draft

3. The fair allocation calculation should include reasonable assumptions regarding the following:

    i. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.

    ii. The expected number of specified consumers in respect of each reference period.

    iii. The expected electricity consumption rates in respect of each reference period.

Method

(3) The Financial Services Manager shall calculate a fair allocation amount in accordance with such methods as the Financial Services Manager considers appropriate, having regard to the requirements of this Act.

Notification to Minister

(4) The Financial Services Manager shall notify the Minister of the methods used to calculate the fair allocation amount and any changes to those methods.

Effective date

(6) The fair allocation calculation or an amendment to the fair allocation calculation takes effect on the day that is 30 days after the fair allocation calculation or the amendment, as the case may be, is provided to the Minister in writing.

Publication

(7) The Minister shall ensure that the fair allocation calculation and any amendments to it are made available to the public in a manner that the Minister considers appropriate.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

16xx. (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring an investment interest in accordance with this Act.

Plan to be provided to Minister

(1.1) The Financial Services Manager shall provide the Financing Plan to the Minister.

Confidential Draft

Principles

(2) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Any incurrence of a funding obligation should reasonably align with the estimated finance amount, as determined in accordance with the regulations, that would, subject to any refinancing, become due and payable during a reference period with the fair allocation amount determined in respect of the reference period under this Part as of the time of the incurrence, in each case after reducing the fair allocation calculation by the amount of any fair adjustment in respect of the reference period.

2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.

3. Reasonable assumptions should be made regarding such matters as may be prescribed.

Limitation, first five year period

(4) In respect of each reference period from May 1, 2017 to April 30, 2022, no funding obligation shall be incurred that would become payable during the reference period and result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

(a) no fair adjustment has been made under Part II in respect of the reference period; or

(b) if a fair adjustment has been made under Part II in respect of the reference period, the funding obligations incurred would not be payable during the reference period in an amount that exceeds the [difference between the fair allocation amount in respect of the reference period and the amount of the fair adjustment in respect of the reference period].

Other reports

(3.1) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Confidentiality

(5) The following are deemed to be records subject to clauses 18 (1) (c) and (d) of the *Freedom of Information and Protection of Privacy Act*:

Confidential Draft

1. The Financing Plan.

2. Reports referred to in subsection (3.1).

3. Any other document that would reveal information contained in the Financing Plan or the reports.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this section to the Financing Plan is deemed to be a reference to the plan as amended.

Implementation of Financing Plan

17xx. (1) The Financial Services Manager shall incur funding obligations in material conformity with the applicable Financing Plan.

Same

(2) For greater certainty, subsection 17xx (5) applies despite the failure of the Financial Services Manager to comply with subsection (1).

Financing entities

(3) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3.1) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and [the fair allocation amount].

Confidential Draft

PART V
THE REGULATORY ASSET

IESO funding shortfall

20xx. (1) The IESO funding shortfall for each month shall be determined in accordance with the regulations.

Electricity vendors to provide information

(2) Electricity vendors shall provide to IESO such information as IESO may reasonably request for the purposes of determining the IESO shortfall under subsection (1) and such further information as may be prescribed.

Same

(3) IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

20.1xx (1) The IESO shall establish and maintain a variance account for the purposes of this section.

Recording in variance account

(2) The IESO shall record the following in the variance account:

1. The amount of the IESO funding shortfall for each month.

2. All payments received by the IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.

3. Such other adjustments as may be prescribed.

Recording determinative

(3) Subject to any finding of [manifest error], a recording by the IESO in the variance account of the balance is, as of the time of the recording, determinative of the balance at the time.

Rights of investment interest owner

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights of the investment interest owner acquired under the transfer.

Confidential Draft

Regulatory asset established

21xx. (1) The IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Limitation

(2) Despite subsection (1), the IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2022.

Board to set rates

(3) The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

Same, limitations

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Transfer of regulatory asset

22xx. (1) The IESO may from time to time transfer all or a portion of the regulatory asset to any financing entity.

Same

(2) Upon receipt by IESO of payment in consideration of a transfer of all or a portion of the regulatory asset, the transfer shall be valid and enforceable against the IESO and the IESO shall retain no further right, title or interest in, or any obligations in respect of, the regulatory asset or in the investment asset created by the transfer.

Same

(3) Upon transfer, the financing entity acquires an investment interest and becomes an investment asset owner.

Validity of transfer

23xx. (1) A transfer of a regulatory asset under this Act is a valid and enforceable sale and absolute transfer to the investment interest owner of the regulatory asset.

Same

(2) Without limiting subsection (1), any transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of IESO's right to recover the IESO funding shortfall, and not merely as a security interest, and upon the absolute transfer the transferor shall retain no right, title or interest in the regulatory asset, including all rights to recover the IESO funding shortfall.

Confidential Draft

Deemed perfection, etc.

(3) At the time a transfer of a regulatory asset is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Effect of transfer

24xx. (1) The first transfer of the regulatory asset or a portion of it creates the investment asset.

Same

(2) Upon any transfer of all or a portion of the regulatory asset to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim, and the financing entity becomes an investment interest owner and acquires an investment interest**.**

Investment asset established

25xx. (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right to impose, invoice, collect, receive and recover amounts in respect of the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover amounts in respect of the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors or other prescribed parties.

3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for amounts in respect of the clean energy adjustment.

Confidential Draft

5. The right to enforce the duties and obligations under this Act of each electricity vendor to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by an electricity vendor to recover payment of amounts in respect of the clean energy adjustment.

6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest.

7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Not affected by failure to impose etc. clean energy adjustment

(1.1) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(2) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, an agent of the investment interest owner or an owner of distribution system assets in the Province;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(3) The rights of the investment asset owner to collect and enforce its rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(4) If the investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest owner collectively and in coordination with all other investment interest owners, and any agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owner as a collective in accordance with its terms.

Confidential Draft

Transfer of investment interest

26xx. An investment interest owner may transfer all or a portion of its rights and interests in an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

27xx. (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the investment asset owner a valid property right and interest in, to and under the applicable investment interest in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest, subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

28xx. (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that it is intangible personal property,

Confidential Draft

except as otherwise provided for in this section, and any granting of a security interest by the investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the applicable investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may subsequently attach to the property rights and interests in the investment interest subject to the security interest, subject to the written consent of the person to whom the security interest has been granted.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any ccount of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to the IESO.

Definition

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act*.

PART VI
MISCELLANEOUS

Appointment of agent, invoicing or collection

29xx. If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Confidential Draft

Not Crown agent

30xx. For greater certainty, no agent appointed under this Act is an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Sequestration

31xx. (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections and remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment, including defaults on any required remittance of amounts in respect of the clean energy adjustment, collections or remittances.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

32xx. The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to the transfer of an interest or right or creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section x shall be the laws of the Province.

Conflict

33xx. The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

34xx. Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required to be taken under the Financing Plan or in relation to the determination of the fair allocation amount.

Immunity

35xx. (1) No action or other proceeding for damages shall be instituted against any employee of the Province, IESO, OPG or OEB for any act done in good faith in the execution or intended execution of any duty or authority under this Act or for any alleged neglect or default in the execution in good faith of any duty or authority under this Act.

Confidential Draft

Same

(2) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act*, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.

References in marketing materials and offering documents

36xx. No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5xx unless the prescribed requirements, if any, are satisfied.

Non-application, Financial Administration Act, s. 28[5]

37xx. Section 28 of the *Financial Administration Act* does not apply with respect to any transaction or agreement or undertaking required, permitted, contemplated or authorized, directly or indirectly, under this Act.

Regulations

38xx. The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. [6]Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.

2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.

x. Prescribing types of payment obligations that constitute funding obligations;

x. governing the calculation [true-up amount] and how the amount is to be applied to the clean energy adjustment;

x. governing the inclusion of information under this Act on invoices, which may include requiring notice to be provided by electricity vendors to specified persons regarding the adjustments;

x. governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on invoices issued to specified consumers, including the form that the information must take and the form of

[5] FLS - see s. 51 of the Electricity Act, 1998

[6] FLS - see s. 78 (1) of the Climate Change Mitigation and Low-carbon Economy Act, 2016 - paras. 1 and 2.

Confidential Draft

the invoices and any notice to be provided to the specified consumer under this Act[7];

x. prescribing the time within which any action required by this Act may be required to be done;

x. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

PART VII[8]
AMENDMENTS TO OTHER ACTS

ELECTRICITY ACT, 1998

200x. (1) Subsection 6 (1) of the *Electricity Act, 1998* is amended by adding the following clauses:

(q.0.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*;

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and to engage in related settlement activities;

(iii) engaging in activities related to the creation, transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(iv) incurring liabilities in relation to the regulatory asset

(v) transferring the regulatory asset for consideration;

(vi) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

[7] FLS - see *OEBA s.79.17 and 88(1)(z.11) and (z.12)*
[8] FLS: These amendments are drawn from previous drafting contained in gov2016.146.e05 (which was drafted as amendments to the EA, 1998).

Confidential Draft

200.1xx (1) Subsection 25.33 (1) of the Act is amended by striking out "and" at the end of clause (a) and by adding the following clauses:

(c) amounts paid to or received from a [prescribed] financial services entity or [a financing entity prescribed under] the *Ontario Fair Hydro Plan Act, 2017* and any related amounts; and

(d) amounts collected from consumers who are [specified consumers within the meaning of] the *Ontario Fair Hydro Plan Act, 2017* in respect of the clean energy adjustment and any related amounts.

(1.1) Subsection 25.33 (2) of the Act is amended by striking out "and" at the end of clause (a) and by adding the following clauses:

(c) amounts paid to or received from a [prescribed] financial services entity or [a financing entity prescribed under] the *Ontario Fair Hydro Plan Act, 2017* and any related amounts; and

(d) amounts collected from consumers who are [specified consumers within the meaning of] the *Ontario Fair Hydro Plan Act, 2017* in respect of the clean energy adjustment and any related amounts.

(2) Subsection 25.33 (3) of the Act is amended by adding the following paragraph:

4. A consumer who is,

   i. a [specified consumer within the meaning of] the *Ontario Fair Hydro Plan Act, 2017*, or

   ii. prescribed by the regulations [made under the *Ontario Energy Board Act, 1998]*.

(3) Clause 25.33 (4) (b) of the Act is amended by adding "or as may be required under a regulation made under the *Ontario Fair Hydro Plan Act, 2017* or the *Ontario Energy Board Act, 1998*" at the end.

(4) Subsection 25.33 (5) of the Act is amended by adding "or under the *Ontario Fair Hydro Plan Act, 2017*" at the end

201x. Section 53.1 of the Act is amended by adding the following subsections:

Confidential Draft

Same, *Ontario Fair Hydro Plan Act, 2017*

53.1 (1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, entity

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act,

(a) the assets and liabilities of a special purpose financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of a financing entity.

Definition, financing entity

(1.4) For the purposes of this section, "financing entity" has the same meaning as in the *Fair Hydro Plan Act, 2017*.

AMENDMENTS TO ONTARIO ENERGY BOARD ACT, 1998

204x. Subsection 1 (1) of the *Ontario Energy Board Act, 1998* is amended by adding the following paragraph:

6. To facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*.

205x. Subsection 70 (2.1) of the Act is amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017*.

206x. Section 78.1 of the Act is amended by adding the following subsection:

Confidential Draft

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.

2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.

3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.

4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

Short Title - this proposal for legislation would, if approved by the Legislature, have a short title to be determined by Government.

Timing – this proposal for legislation would, if approved by the Legislature, come into force on a date to be established by Government.

Subject: RE: Ontario Fair Hydro Plan

All - Thank you for the detailed comments that you provided on Saturday and Sunday. Please find attached the next turn of the legislation. We have tried to balance the comments that we received to address the points that you have raised. This draft does not reflect the drafting points that were raised over Monday and Tuesday and we will reflect those points in our next instructions to legislative counsel. Please review and identify any significant substantive issues by 6 p.m. today. We continue to work toward pens down on Friday, meaning the draft that we have at that point in time will be proposed for introduction in the House. Thank you again for your contributions to this process.

All - Please find attached the next turn in the consultation draft (v.3) of the proposed legislation. We have been working to address the feedback that you provided earlier in the week. A number of points remain in progress. As with the earlier versions, by sharing this document, we hope to continue to advance our discussions.

Our timeline has been extended and we are now working to a pens down date of April 28th. We will not get another extension. Accordingly, we ask for your detailed, written comments on the draft, which we require no later than Sunday at noon.

We will continue to work on the bill in the interim, so earlier instructions are helpful to

us. With your input on this timeline, we expect to be able to provide one more circulation around Tuesday or Wednesday next week.

We have not had the opportunity to add notes or to update our crosswalk to the Blakes summary document.

We look forward to receiving your written comments.

Subject: Ontario Fair Hydro Plan

All - Please find attached the draft “Intergenerational Fairness in Hydro Rates Act, 2017”. A tremendous amount of work has gone into getting to this draft and much more work is required to get this ready for the House. The goal of sharing this document now is to further the process we have engaged in over the last weeks. In the attached, we have included notes to try to address where the drafting is not yet consistent with our thinking. These notes are neither comprehensive nor complete. They are intended only as flags and as colour to the draft. We have not forgotten the comments that you have already provided and we are continuing to working through the translation of the commercial terms we have been discussing into legislative language.

For ease of reference, included with the draft bill are the partially updated Blakes' summary, a chart that attempts links the articles in that document to the sections of the bill (which is imperfectly numbered at best) and excerpts from the Electricity Act and the Ontario Energy Board Act, related to the consequential amendments.

In your review, please focus on the broad stroke concepts, rather than the minutia, and keep in mind the cascade of instruments that will be required – legislation first, then regulations and finally commercial agreements. We look forward to discussing the broader concepts on Monday

Version 4

This confidential draft document is provided for discussion purposes only. It should not be construed as representing the position adopted by the Government of Ontario on any of the topics included or not included in this document. The notes included in this document are intended only to help facilitate a discussion of the topics to which they relate. Any potential legislation is subject to the approval of the Ontario Legislature.

A proposal to create Legislation.

An Act to provide for the fair allocation of costs of electricity over time, if enacted

Confidential Draft

A proposal to create Legislation.

An Act to provide for the fair allocation of costs of electricity over time, if enacted

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL TO ANY FINAL BILL PRIOR TO INTRODUCTION.

Confidential Draft

Preamble

The Government of Ontario is committed to fostering the development of a clean, modern and reliable electricity system with a diverse supply mix. The Government is also committed to removing barriers to and promoting opportunities for renewable and clean energy projects.[1] These commitments can only be achieved if costs are shared fairly among consumers, today and in the future.

Electricity rates have risen for two key reasons. First, decades of under-investment in the electricity system resulted in the need to invest more than $50 billion in generation, transmission and distribution assets to ensure the system is clean and reliable. Second, the decision to eliminate Ontario's use of coal and produce clean, renewable power has created additional costs.

The actions taken to achieve a clean, modern and reliable electricity system have resulted in significant costs to consumers today. The burden of financing these system improvements and funding key programs has unfairly fallen almost entirely on the shoulders of today's consumers.

The Government of Ontario is committed to ensuring that the costs of financing these investments and the associated charges to consumers are allocated fairly among present and future generations of consumers.

Recognizing that the electricity infrastructure that has been built and the policy decisions that have been made will create benefits for years to come, costs should be allocated fairly over time, so that consumers in the future pay their fair share for the benefits that they receive from the investments already made.

CONTENTS

PART I
GENERAL

104. Short title

PART I
GENERAL

Interpretation
Definitions

1xx. (1) In this Act,

"Board" means the Ontario Energy Board; ("French")

"clean energy adjustment" means the amount determined under section 10xx; ("French")

"clean energy benefits" means the value of the benefits determined to be derived by or accruing to the specified consumers as a result of the clean energy initiative, including as a result of clean energy costs; ("French")

"clean energy costs" means the value of the costs allocated to specified consumers as a result of the clean energy initiative, including as a result of past, present and expected costs incurred in respect of,

(a) the estimated amounts to be paid or reflected by the IESO in adjustments made under section 25.33 of the *Electricity Act, 1998* or any provision that is the successor to that provision, which relate to contracts for,

(i) renewable energy generation or capacity,

(ii) conservation and demand management,

(iii) energy storage,

(iv) energy efficiency,

(v) natural gas generation and capacity, excluding contracts relating to amounts payable by the IESO under section 78.2 of the *Ontario Energy Board Act, 1998* and excluding such other contracts as may be prescribed, or

(vi) payments made or expected to be made under section 78.5 of the *Ontario Energy Board Act, 1998*, and

(b) such other estimated costs as may be prescribed; ("French")

Confidential Draft

"clean energy initiative" means the policies of the Government of Ontario related to,

(a) fostering the growth of and investment in clean and renewable energy sources and technologies,

(b) removing barriers to and promoting opportunities for clean and renewable energy sources and technologies, and

(c) promoting conservation and demand management; ("French")

"electricity vendor"[2] means,

(a) a licensed distributor,

(b) a licensed retailer,

(c) the IESO in circumstances where the IESO directly invoices a specified consumer, or

(d) such other person as may be prescribed; ("French")

"fair allocation amount" means the amount determined in under section 15xx;

"financing entity" means an entity established or caused to be established under subsection 17xx (3); ("French")

"Financial Services Manager" means the Financial Services Manager appointed under section 13xx; ("French")

"Financing Plan" means the plan prepared under section 16xx, as amended from time to time in accordance with this Act; ("French")

"funding obligation" means,

(a) a payment obligation incurred in connection with the transfer of a regulatory asset or the refinancing of an existing funding obligation, or

(b) a payment obligation that meets such other criteria as may be prescribed; ("French")

[2] FLS - this is similar to the definition of "electricity vendor" in the Ontario Rebate for Electricity Consumers Act, 2016

Confidential Draft

"IESO" means the Independent Electricity System Operator continued under Part II of the *Electricity Act, 1998*; ("SIERE")

"IESO funding shortfall" means the amount determined under section 20xx; ("French")

"investment asset" means the rights and interests described in section 22xx; ("French")

"investment interest owner" means a financing entity that has acquired and holds an investment interest; ("French")

"investment interest" means,

(a) an ownership interest in the investment asset, and

(b) in circumstances where the ownership interest is transferred, the rights and benefits specified in the agreement under which the interest is transferred; ("French")

"invoice amount" means, in respect of an invoice period, the sum of the amounts set out in subsection (2.1) in relation to the provision of electricity in Ontario to a specified consumer; ("French")

"invoice period" means the period in respect of which an invoice amount applies, as specified on an invoice issued by an electricity vendor; ("French")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system; ("French")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("French")

"Minister" means the Minister of Energy or such other member of the Executive Council as may be assigned the administration of this Act under the *Executive Council Act*; ("ministre")

"Ontario Power Generation Inc." means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998; ("Ontario Power Generation Inc.")

"prescribed" means prescribed by the regulations; ("prescrit")

"reference period" means,

Confidential Draft

(a) the period beginning on May 1, 2017 and ending on October 31, 2017, and

(b) during the period beginning on November 1, 2017 and ending on April 30, 2047,

(i) every six-month period following the period mentioned in clause (a); or

(ii) any period shorter than six months, as may be prescribed; ("French")

"refinancing" means, subject to the regulations, a redemption, repayment or repurchase of a funding obligation; ("French")

"regulation" means a regulation made under this Act; ("règlement")

"regulatory asset" means the right and interest established under section 21xx; ("French")

"specified consumer" means,

(a) a person who has an account with an electricity vendor for the supply of electricity in Ontario and meets the criteria set out in subsection (2); or

(b) such other person as may be prescribed; ("French")

"sub-meter customer" means a person who is supplied electricity by a specified consumer, if an invoice for the electricity is issued to the person by the specified consumer, by an agent of the specified consumer or by a unit sub-meter provider providing unit sub-metering for the specified consumer; ("French")

"transfer" means [TBD]; ("French")

"unit sub-metering" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" has the same meaning as in the *Energy Consumer Protection Act, 2010*; ("fournisseur de compteurs divisionnaires d'unité")

Specified consumers

(2) For the purposes of clause (a) of the definition of "specified consumer" in subsection (1), the person must meet any one of the following criteria:

1. The person has a demand for electricity of 50 kilowatts or less, or such other amount as may be prescribed.

Confidential Draft

2. The person annually uses not more than 250,000 kilowatt hours of electricity, or such other amount as may be prescribed.

3. The person carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993* and either holds a valid registration number assigned under that Act or the has had the obligation to file a farming business registration form waived pursuant to an order made under subsection 22 (6) of that Act.

4. The person's account with the electricity vendor relates to,

    i. a dwelling,

    ii. a property within the meaning of the *Condominium Act, 1998*,

    iii. a residential complex within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

    iv. a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*.

5. The person satisfies such criteria as may be prescribed.

Invoice amount

(2.1) Subject to the regulations, the invoice amount for a specified consumer in respect of an invoice period includes the following amounts:

1. In circumstances where the electricity is provided by a licensed distributor or a licensed retailer, the following amounts in respect of the invoice period:

    i. The commodity price of the electricity used.

    ii. The rates and charges set out in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998* and in effect on April 30, 2017.

    iii. Any adjustment on the invoice required under section 25.33 of the *Electricity Act, 1998*.

Confidential Draft

iv. The amount of any harmonized sales tax payable by the consumer under Part IX of the *Excise Tax Act* (Canada) in respect of the amounts mentioned in subparagraphs i, ii and iii;

v. Any other amounts as may be prescribed.

2. In circumstances where the electricity is provided by the IESO or other prescribed entity, such amounts as may be prescribed in respect of the invoice period. ("French")

Same, exclusions

(2.2) Subject to the regulations, an invoice amount does not include any of the following amounts:

1. The balance of any amounts carried forward from previous invoices in respect of previous invoice periods.

2. Penalties or interest.

3. Charges that do not relate to the use of electricity.

4. Any of the following charges that may be set out in an order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998*:

   i. A fixed monthly service charge payable by a generation facility within the meaning of section 56 of the *Ontario Energy Board Act, 1998* and classified as "microFIT".

   ii. A charge labelled as a "specific service charge" or "retail service charge".

   iii. A rate rider [of the prescribed type or class].

5. Any other prescribed amounts.

Effect of invalidity, etc.[3]

2xx. (1) For greater certainty, all of the provisions of this Act remain in full force and effect, even if one or more provisions are held to be invalid, the intention of the Legislature being to give separate and independent effect to the extent of its powers to every provision contained in this Act.

[3] FLS: this is from the *Climate Change Mitigation and Low-carbon Economy Act, 2016*

Confidential Draft

Same, funding obligation

(2) The fact that any provision of this Act is held to be invalid or ceases to be in effect for any reason does not affect the validity or enforceability of a funding obligation incurred under this Act before the day that the provision is held to be invalid or ceases to be in effect, or any rights or obligations associated with the funding obligation.

Purpose

3xx. (1) The purposes of this Act are,[4]

(a) to ensure that clean energy costs are fairly allocated among present and future specified consumers and reflect the fair allocation; and

(b) to recognize that clean energy benefits have accrued and will accrue over time and will continue to benefit present and future electricity consumers in the Province.

Crown bound

4xx. This Act binds the Crown.

Protection and assurances

Prohibition

5xx. (1) The Crown shall not do anything that would,

(a) hinder, delay, impair or prejudice the charging, collection or remittance of amounts in respect of the clean energy adjustment;

(b) except as expressly permitted by this Act, reduce the clean energy adjustment determined under this Act or lower the priority of the clean energy adjustment over other debts; or

(c) adversely affect an investment asset or a funding obligation.

Clarification with respect to regulations

(2) For greater certainty, the things prohibited under subsection (1) include the making or approving of a regulation under this Act.

Agreements for compensation

(3) The Minister may, with the approval of the Lieutenant Governor in Council, enter into agreements on behalf of the Province of Ontario with any person in respect of this Act, including agreements regarding the performance of IESO or electricity vendors under this Act or similar transactions.

[4] FLS: Please see the *Electricity Act, 1998* for much of the wording proposed in this section.

Confidential Draft

Guarantee, indemnification

(4) The Lieutenant Governor in Council may by order,

(a) authorize the Minister of Finance, on behalf of the Province,

(i) to agree to guarantee or indemnify any debts, obligations, securities or undertakings associated with an investment interest, and

(ii) to determine terms and conditions and the amount on which the guarantee or indemnity will be given;

(b) impose terms and conditions, as it considers advisable, on which the Minister of Finance may, on behalf of the Province, agree to guarantee or indemnify as described in subclause (a) (ii); and

(c) specify a maximum liability for the guarantee or indemnity.

PART II
FAIR ADJUSTMENT OF ELECTRICITY RATES

Definitions

6xx. In this Part,

"effective date" means the date determined under section 6.5xx; ("French")

"RPP rate" means the rate determined by the Board under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*, which rate is commonly referred to as the Regulated Price Plan"; ("French")

"specified RPP consumer" means a specified consumer who meets the following criteria:

1. The consumer is a member of the class of consumers prescribed by the regulations made under the *Ontario Energy Board Act, 1998* for the purposes of subsection 79.16 (1) of that Act.

2. The consumer is subject to the RPP rate. ("French")

Specified RPP consumer, first fair adjustment

6.1xx (1) The rate for electricity payable by a specified RPP consumer for the period beginning on the effective date and ending on April 30, 2018 is the rate required for a specified RPP consumer who meets the prescribed criteria to receive a monthly invoice

Confidential Draft

amount that is 25 per cent lower than the monthly invoice amount for that consumer under the comparison rate described in subsection (2).

Comparison rate

(2) The comparison rate is the rate that would be effective May 1, 2017, determined by the Board solely using the method prescribed by the regulations made under clause 79.16 (1) (b) of the *Ontario Energy Board Act, 1998*.

Same

(3) For the purposes of subsection (2), the applicable method is the method on the day this section comes into force.

Specified consumers (non-RPP), first fair adjustment

6.2xx The rate for electricity payable by a specified consumer who is not a specified RPP consumer for the period beginning on the effective date and ending on April 30, 2018 is the rate that would be necessary in order for [the monthly global adjustment rate] in respect of a specified consumer who is not a specified RPP consumer (RPP) and who meets the prescribed criteria to be reduced by the same amount as the difference between the comparison rate referred to in subsection 6.1xx (2) and the rate determined under subsection 6.1xx (1).

Determination by Board

6.3xx The Board shall determine the rates mentioned in sections 6.1xx and 6.2xx no later than seven business days after the day this section receives Royal Assent.

Implementation of rates

6.4xx Each electricity vendor, [specified consumer who provides electricity to a sub-meter customer and unit sub-meter provider who provides unit sub-metering for a specified consumer] shall, no later than seven business days after the day on which the Board determines the rates under section 6.3xx, adapt is billing practices and invoices to reflect the new rates.

Effective date

6.5xx The rates determined under section 6.3xx are effective on the earlier of the following days:

1. The first day of the month immediately following the last day of the seven-day period referred to in section 6.4xx.

2. July 1, 2017.

Confidential Draft

Transition

6.6xx (1) This section applies if an electricity vendor, specified consumer or unit sub-meter provider is unable to comply with section 6.4xx for one of the following reasons:

1. There are fewer than seven days between the day of the Board's determination of rates under section 6.3xx and the effective date.

2. Technical or operational reasons.

Same

(2) In the circumstances described in subsection (1), the electricity vendor, specified consumer or unit sub-meter provider shall,

(a) adapt its invoices as soon as possible and, in any event, no later than August 1, 2017; and

(b) ensure that any specified consumer or sub-meter customer invoiced at a rate higher than the applicable rate determined by the Board receives the difference between the rate shown on their invoice and the applicable rate as a lump sum credit on the first invoice issued after the invoices have been adapted or by such other means as may be prescribed by the regulations.

Subsequent fair adjustments

7xx. The Lieutenant Governor in Council may make regulations prescribing the methodology to be applied by the Board to determine rates for electricity payable by specified consumers and sub-meter customers during the period beginning on May 1, 2018 and ending on April 30, 2022.

Sub-meter customers

7.1xx A specified consumer who provides electricity to a sub-meter customer and any unit sub-meter provider who provides unit sub-metering for the specified consumer shall ensure that the rate payable by each sub-meter customer is the applicable rate determined under this Part.

PART III
CLEAN ENERGY ADJUSTMENT

Specified consumers to pay

8xx. (1) Upon receipt of an invoice that includes an amount in respect of the clean energy adjustment, a specified consumer shall pay the amount to the electricity vendor, as agent of the investment interest owners, in accordance with such terms of payment as may be specified in the invoice, which may include terms relating to late payment fees and interest charges.

Confidential Draft

Same

(2) For greater certainty, subsection (1) applies regardless of,

(a) whether the clean energy adjustment was determined in a manner that was inconsistent with this Act; and

(b) whether the amount payable in respect of the clean energy adjustment relates to funding obligations that were incurred in a manner that was not in material conformity with the Financing Plan.

Indebtedness of specified consumer

(4) An unpaid amount that is required to be paid by a specified consumer under this section constitutes indebtedness of the specified consumer to each investment interest owner to the extent of each owner's respective interest in the investment asset.

Same

(5) The indebtedness mentioned in subsection (4) is a single and separate debt obligation owed by the specified consumer and may be enforced independently from any other payment obligation or indebtedness owing by the specified consumer.

Recovery from sub-meter consumers

(6) A specified consumer who provides electricity to a sub-meter customer may recover amounts in respect of the clean energy adjustment payable under this section from each sub-meter customer on a pro rata basis.

Irrevocability of amount

9xx. (1) An amount in respect of the clean energy adjustment shown on an invoice issued to a specified consumer under this Act is determinative of the amount of the consumer's indebtedness resulting from the clean energy adjustment and is irrevocable upon invoicing the consumer and may not be set off or by passed.

Exception

(2) Subsection (1) does not apply to the extent that there is a clerical, typographical or calculation-related error by the electricity vendor.

Determination of clean energy adjustment
Financial Services Manager to determine

10xx. (1) The Financial Services Manager shall determine the clean energy adjustment payable by all specified consumers in respect of each month in a reference period by adding the estimated finance amount in respect of the reference period to the true up amount in respect of the reference period.

Confidential Draft

Estimated finance amount, true up amount

(2) The estimated finance amount and the true up amount shall be determined in accordance with the regulations.

Regulations re true up amount

(3) The regulations under subsection (2) shall have regard to the following principles:

1. The true up amount should serve to ensure that the collection of the clean energy adjustment is sufficient to pay the finance amount when it is due.

2. The method for determining the true up amount should take into account historical and reasonably foreseeable,

    i. differences between the estimated and actual finance amount for the immediately preceding reference period,

    ii. differences between amounts invoiced and amounts collected due to various factors, including applicable taxes, consumer defaults and delays, billing lags and write-offs, and

    ii. variations in billings due to variations in electricity consumption.

Financial Services Manager to notify Board

(4) The Financial Services Manager shall, in accordance with the regulations, notify the Board of the clean energy adjustment and such other information related to the determination of the clean energy adjustment as may be prescribed.

Board to determine rates

(5) The Board shall, in accordance with the regulations, determine the rate at which specified consumers are invoiced to recover the clean energy adjustment in respect of the reference period.

IESO to receive amounts

11xx. (2) The IESO shall, as an agent of the investment interest owners, receive amounts in respect of the clean energy adjustment paid to it from electricity vendors in accordance with the regulations and the market rules made under section 32 of the *Electricity Act, 1998*.

Account

(3) All of the following amounts received by the IESO shall, until paid to or for the benefit of the investment interest owner in accordance with subsection (5), be deposited promptly into an account established for the purposes of receiving those amounts:

Confidential Draft

1. Amounts described in subsection 11xx (2).

2. Payments made by specified consumers directly to the IESO as electricity vendor under subsection 8xx (1).

Same, held in trust

(4) All amounts received by the IESO in respect of the clean energy adjustment shall, until paid to or for the benefit of the investment interest owner, be received and held in trust by the IESO for the investment interest owners or a secured party to whom a security interest in an investment interest is granted under this Act.

IESO to remit

(5) The IESO shall remit amounts received by it in respect of the clean energy adjustment to or for the benefit of the investment interest owners in accordance with the regulations.

Electricity vendor to invoice specified consumers

12xx. (1) Each electricity vendor shall issue an invoice to each of its specified consumers for the amount payable by the consumer in respect of the clean energy adjustment, as determined by applying the rate set by the Board under subsection 10xx (2) and in accordance with the regulations.

Electricity vendor to report

(1.1) Each electricity vendor shall, in accordance with the regulations, promptly report to the IESO the total amount invoiced to its specified consumers in respect of the clean energy adjustment, the amount collected and such further information as may be prescribed.

Electricity vendor to collect

(2) Each electricity vendor shall, as agent of the investment interest owners, collect amounts in respect of the clean energy adjustment from specified consumers in accordance with the regulations.

Pro rating of payments

(3) If an electricity vendor receives a payment made by or on behalf of a specified consumer in respect of amounts payable under one or more invoices and the amount paid is less than the total amount payable, the electricity vendor shall allocate the payment on a pro rata basis to the clean energy adjustment and other amounts payable under the relevant invoices in respect of electricity charges in respect of the same period.

Confidential Draft

Held in trust

(4) Payments received by an electricity vendor from or on behalf of specified consumers shall, until paid to or for the benefit of the investment interest owner in accordance with subsection (5), be received by and held by each electricity vendor in trust for the benefit of the investment interest owners.

Remittance to IESO

(5) Each electricity vendor shall remit amounts described in subsection (5) to the IESO for the benefit of the investment interest owners in accordance with the regulations.

PART IV
IMPLEMENTATION

FINANCIAL SERVICES MANAGER

Appointment

13xx. (1) Subject to subsection (2), Ontario Power Generation Inc. is appointed as the Financial Services Manager for the purposes of this Act.

Replacement

(2) The Minister may terminate an appointment of a Financial Services Manager and may, in accordance with the regulations, appoint a new person or entity as the Financial Services Manager.

Duties and powers

14xx. (1) The Financial Services Manager shall perform the duties assigned to it under this Act and may administer the investment asset on behalf of the investment interest owners.

Same

(2) The administration of the investment asset may include the following:

1. Providing information, in accordance with the regulations, to the Board in respect of funding obligations and the determination of the clean energy adjustment in accordance with section 10xx.

2. Providing information to the IESO in respect of obligations under Part III.

3. Such other matters as may be prescribed.

Review of costs

(3) The Board shall review the administrative costs of the Financial Services Manager in accordance with the regulations.

Confidential Draft

FAIR ALLOCATION AMOUNT

Financial Services Manager to calculate fair allocation amount

15xx. (1) The Financial Services Manager shall calculate a fair allocation amount in respect of each reference period, having regard to the need to align that amount with the finance amount payable during the reference period, for the purpose of fairly measuring and allocating the estimated clean energy costs and estimated clean energy benefits among the specified consumers in respect of the reference period.

Timing of calculation

(1.1) The Financial Services Manager shall calculate a fair allocation amount in respect of each reference period before any funding obligation is incurred [by a financing entity during the reference period].

Amount

(1.2) The fair allocation amount in respect of a reference period is the sum of the following amounts:

1. The amount, if any, by which, if this Act had not been enacted, the estimated clean energy costs and estimated clean energy benefits allocated to specified consumers in respect of the reference period would have exceeded the estimated amount of the adjustments provided for under section 25.33 of the *Electricity Act, 1998* and the regulations made under that provision that would have been borne by the specified consumers in respect of clean energy costs for the reference period.

2. A portion of the value of any fair adjustment that has been made under Part II in respect of any previous reference period.

Principles

(2) In calculating the estimated clean energy costs and estimated clean energy benefits to be allocated to specified consumers in respect of a reference period, the Financial Services Manager shall [comply with the regulations and] have regard to the following principles:

1. Clean energy costs allocated to specified consumers in respect of a reference period should be allocated in proportion to the clean energy benefits attributed to the specified consumers in respect of the reference period.

2. The clean energy benefits allocated to the specified consumers in respect of a reference period should be determined in accordance with the regulations.

Confidential Draft

3. The fair allocation calculation should include reasonable assumptions regarding the following:

    i. The time value of money or the rate of inflation, for the purpose of equating nominal amounts over time.

    ii. The expected number of specified consumers in respect of each reference period.

    iii. The expected electricity consumption rates in respect of each reference period.

Method

(3) The Financial Services Manager shall calculate a fair allocation amount in accordance with such methods as the Financial Services Manager considers appropriate, having regard to the requirements of this Act.

Notification to Minister

(4) The Financial Services Manager shall notify the Minister of the methods used to calculate the fair allocation amount and any changes to those methods.

Effective date

(6) The fair allocation calculation or an amendment to the fair allocation calculation takes effect on the day that is 30 days after the fair allocation calculation or the amendment, as the case may be, is provided to the Minister in writing.

Publication

(7) The Minister shall ensure that the fair allocation calculation and any amendments to it are made available to the public in a manner that the Minister considers appropriate.

FINANCING PLAN

Financial Services Manager to prepare Financing Plan

16xx. (1) The Financial Services Manager shall prepare a written plan entitled the Financing Plan to be used by the Financial Services Manager to evaluate whether potential funding obligations should be incurred for the purposes of acquiring an investment interest in accordance with this Act.

Plan to be provided to Minister

(1.1) The Financial Services Manager shall provide the Financing Plan to the Minister.

Confidential Draft

Principles

(2) In preparing the Financing Plan, the Financial Services Manager shall have regard to the following principles:

1. Any incurrence of a funding obligation should reasonably align with the estimated finance amount, as determined in accordance with the regulations, that would, subject to any refinancing, become due and payable during a reference period with the fair allocation amount determined in respect of the reference period under this Part as of the time of the incurrence, in each case after reducing the fair allocation calculation by the amount of any fair adjustment in respect of the reference period.

2. Incurrences should be implemented in a manner that, in the opinion of the Financial Services Manager, is reasonable, cost effective and that reflects prevailing market terms and conditions.

3. Reasonable assumptions should be made regarding such matters as may be prescribed.

Limitation, first five year period

(4) In respect of each reference period from May 1, 2017 to April 30, 2022, no funding obligation shall be incurred that would become payable during the reference period and result in amounts payable in respect of the clean energy adjustment in respect of the reference period unless,

(a) no fair adjustment has been made under Part II in respect of the reference period; or

(b) if a fair adjustment has been made under Part II in respect of the reference period, the funding obligations incurred would not be payable during the reference period in an amount that exceeds the [difference between the fair allocation amount in respect of the reference period and the amount of the fair adjustment in respect of the reference period].

Other reports

(3.1) The Financial Services Manager shall submit to the Minister such reports and information as the Minister may require from time to time and shall, if required by the Minister to do so, examine, report and advise on any question relating to the Financing Plan.

Confidentiality

(5) The following are deemed to be records subject to clauses 18 (1) (c) and (d) of the *Freedom of Information and Protection of Privacy Act*:

Confidential Draft

1. The Financing Plan.

2. Reports referred to in subsection (3.1).

3. Any other document that would reveal information contained in the Financing Plan or the reports.

Amendments to plan

(6) The Financial Services Manager may amend the Financing Plan at any time.

Same

(7) In the event that the Financing Plan is amended, any reference in this section to the Financing Plan is deemed to be a reference to the plan as amended.

Implementation of Financing Plan

17xx. (1) The Financial Services Manager shall incur funding obligations in material conformity with the applicable Financing Plan.

Same

(2) For greater certainty, subsection 17xx (5) applies despite the failure of the Financial Services Manager to comply with subsection (1).

Financing entities

(3) In accordance with the Financing Plan, the Financial Services Manager may establish or cause to be established one or more financing entities that may incur funding obligations.

Prohibition

(3.1) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, the Board, Ontario Power Generation Inc., the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation or other agreement.

Effect of amendment to fair allocation amount

(4) Each funding obligation incurred and each transfer made by a financing entity is deemed to be consistent with the Financing Plan and [the fair allocation amount].

Confidential Draft

PART V
THE REGULATORY ASSET

IESO funding shortfall

20xx. (1) The IESO funding shortfall for each month shall be determined in accordance with the regulations.

Electricity vendors to provide information

(2) Electricity vendors shall provide to IESO such information as IESO may reasonably request for the purposes of determining the IESO shortfall under subsection (1) and such further information as may be prescribed.

Same

(3) IESO may rely on information provided by electricity vendors for the purposes of the determination under subsection (1).

Variance account to be established, maintained

20.1xx (1) The IESO shall establish and maintain a variance account for the purposes of this section.

Recording in variance account

(2) The IESO shall record the following in the variance account:

1. The amount of the IESO funding shortfall for each month.

2. All payments received by the IESO resulting from the exercise of the right of recovery under section 21xx and any transfer under section 22xx.

3. Such other adjustments as may be prescribed.

Recording determinative

(3) Subject to any finding of [manifest error], a recording by the IESO in the variance account of the balance is, as of the time of the recording, determinative of the balance at the time.

Rights of investment interest owner

(4) No change made by IESO to the balance in the variance account shall, if the previous balance was relied upon by an investment interest owner in the context of a transfer under section 22x, affect the rights of the investment interest owner acquired under the transfer.

Confidential Draft

Regulatory asset established

21xx. (1) The IESO has the right, exercisable in accordance with this Act and the regulations, to recover the balance recorded in the variance account from specified consumers.

Limitation

(2) Despite subsection (1), the IESO shall not be entitled to collect all or part of the balance recorded in the variance account from specified consumers before May 1, 2022.

Board to set rates

(3) The Board shall, from time to time, determine and set rates payable by specified consumers to allow for IESO to recover the balance recorded in the variance account.

Same, limitations

(4) The Board's powers under subsection (3) shall be exercised in accordance with the regulations.

Transfer of regulatory asset

22xx. (1) The IESO may from time to time transfer all or a portion of the regulatory asset to any financing entity.

Same

(2) Upon receipt by IESO of payment in consideration of a transfer of all or a portion of the regulatory asset, the transfer shall be valid and enforceable against the IESO and the IESO shall retain no further right, title or interest in, or any obligations in respect of, the regulatory asset or in the investment asset created by the transfer.

Same

(3) Upon transfer, the financing entity acquires an investment interest and becomes an investment asset owner.

Validity of transfer

23xx. (1) A transfer of a regulatory asset under this Act is a valid and enforceable sale and absolute transfer to the investment interest owner of the regulatory asset.

Same

(2) Without limiting subsection (1), any transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of IESO's right to recover the IESO funding shortfall, and not merely as a security interest, and upon the absolute transfer the transferor shall retain no right, title or interest in the regulatory asset, including all rights to recover the IESO funding shortfall.

Confidential Draft

Deemed perfection, etc.

(3) At the time a transfer of a regulatory asset is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the transferee shall have priority over any liens in favour of those persons.

PART VI
THE INVESTMENT ASSET

Effect of transfer

24xx. (1) The first transfer of the regulatory asset or a portion of it creates the investment asset.

Same

(2) Upon any transfer of all or a portion of the regulatory asset to a financing entity, the investment asset resulting from the transfer is immediately vested in the financing entity, free and clear of any adverse claim, and the financing entity becomes an investment interest owner and acquires an investment interest**.**

Investment asset established

25xx. (1) The investment asset constitutes a current and irrevocable property right and interest consisting, collectively, of the following rights and interests of investment interest owners:

1. The right to impose, invoice, collect, receive and recover amounts in respect of the clean energy adjustment from specified consumers, including the right to determine the clean energy adjustment in accordance with this Act.

2. The right to receive, collect and recover amounts in respect of the clean energy adjustment that are imposed, invoiced and recoverable under this Act, including any amounts in respect of the clean energy adjustment that are held by electricity vendors or other prescribed parties.

3. All rights and entitlements under such accounts as may be prescribed by regulation and all amounts on deposit in such accounts.

4. The right to enforce the duties and obligations under this Act of each electricity vendor to impose, attribute, charge and invoice for amounts in respect of the clean energy adjustment.

Confidential Draft

5. The right to enforce the duties and obligations under this Act of each electricity vendor to collect, receive and remit amounts received by it in respect of the clean energy adjustment, including all collections and the proceeds of any enforcement action undertaken by an electricity vendor to recover payment of amounts in respect of the clean energy adjustment.

6. All rights of any kind related to any of the other property rights or interests that comprise the investment interest.

7. All revenue, collections, claims, payments, money and proceeds of or derived from the rights described in paragraphs 1 to 6, regardless of whether it is invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

Not affected by failure to impose etc. clean energy adjustment

(1.1) An investment interest is not affected by any failure to impose, attribute, invoice, accrue or collect amounts in respect of the clean energy adjustment.

No set off, etc.

(2) The investment asset shall not be set off,

(a) by a consumer, an electricity vendor, an agent of the investment interest owner or an owner of distribution system assets in the Province;

(b) in connection with any default of a person mentioned in clause (a); or

(c) by any affiliate or successor of a person mentioned in clause (a).

Exercise of rights

(3) The rights of the investment asset owner to collect and enforce its rights and interests in, to and in respect of the investment asset against a specified consumer shall be exercised in accordance with Part III of this Act.

Collective action required

(4) If the investment interest owner owns a right or interest in the investment asset that comprises less than the entire property right and interest constituted by the investment asset, the right or interest shall only be enforced by the investment interest owner collectively and in coordination with all other investment interest owners, and any agreement among that collective in furtherance of the collective action shall be valid and binding on the investment interest owner as a collective in accordance with its terms.

Confidential Draft

Transfer of investment interest

26xx. An investment interest owner may transfer all or a portion of its rights and interests in an investment interest to any other investment interest owner, including by way of a transfer of a divided or an undivided interest, in accordance with the Financing Plan.

Validity of transfer

27xx. (1) A transfer of an investment interest under this Act is a valid and enforceable sale and absolute transfer of the investment interest and confers upon the investment asset owner a valid property right and interest in, to and under the applicable investment interest in accordance with the terms of the transfer.

Same

(2) Without limiting subsection (1), a transfer that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as an absolute transfer of an investment interest owner's right, title and interest in, to and under an investment interest, and not merely as a security interest, and upon such absolute transfer the transferor shall retain no right, title or interest in the investment interest, subject to the transfer, including all rights to the investment interest arising after the transfer.

Deemed perfection, etc.

(3) At the time a transfer of an investment interest is made, the transfer shall be deemed to have been and shall be perfected, vested, valid and binding as against the transferor and all other persons who have claims of any kind against the transferor.

Priority of transfer, assignment, etc.

(4) Subsection (3) applies regardless of whether the persons who have claims have received notice of the transfer and the property rights and interests acquired by the investment interest owner shall have priority over any liens in favour of such other persons.

Investment interest owner may grant security interest

28xx. (1) An investment interest owner may grant a security interest over all or a specified portion of its right, title and interest in, to and under the investment interest to or in favour of any person to secure a funding obligation.

Validity

(2) A security interest granted under this Act shall be valid and enforceable in accordance with its terms.

Perfection and priority of security interests

(3) All provisions of the *Personal Property Security Act* shall apply to the investment asset and each investment interest on the basis that it is intangible personal property,

Confidential Draft

except as otherwise provided for in this section, and any granting of a security interest by the investment interest owner to secure a funding obligation shall, subject to the terms of the funding obligation, give rise to a security interest in respect of which that Act applies and may be perfected by filing a financing statement under that Act on that basis.

Proceeds

(4) All proceeds of an investment interest that are subject to the security interest and that are received by the applicable investment interest owner shall immediately be subject to the security interest and shall be perfected without any physical delivery of the proceeds, registration of any financing statement or any further act.

Perfection

(5) The security interest shall be a continuously perfected security interest and shall have priority over any other lien, created by operation of law or otherwise, that may subsequently attach to the property rights and interests in the investment interest subject to the security interest, subject to the written consent of the person to whom the security interest has been granted.

Same

(6) The person to whom the security interest has been granted shall have a perfected security interest in revenues or other proceeds that are deposited in any ccount of any electricity vendor, an agent of an electricity vendor or other person who may have commingled such revenues or other proceeds with other funds.

Notice required

(7) The secured party shall be entitled to exercise the rights of an investment interest owner only after the secured party has given notice of the enforcement of its security interest to the IESO.

Definition

(8) For the purposes of this section, a security interest is perfected when it is perfected as described in the *Personal Property Security Act*.

PART VI
MISCELLANEOUS

Appointment of agent, invoicing or collection

29xx. If a prescribed circumstance applies, the Lieutenant Governor in Council may by regulation appoint a person to carry out some or all of the obligations of an electricity vendor under this Act in the place of an electricity vendor with respect to invoicing or collection.

Confidential Draft

Not Crown agent

30xx. For greater certainty, no agent appointed under this Act is an agent of the Crown for any purpose, despite the *Crown Agency Act*.

Sequestration

31xx. (1) A court in the Province may, upon application by an investment interest owner or a secured party, order the sequestration and payment of amounts in respect of the clean energy adjustment, collections and remittances, as applicable, for the benefit of the investment interest owner or secured party by any person or entity authorized to collect amounts in respect of the clean energy adjustment, including defaults on any required remittance of amounts in respect of the clean energy adjustment, collections or remittances.

Same

(2) An order under subsection (1) does not limit any other remedies available to the applicant.

Choice of law

32xx. The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to the transfer of an interest or right or creation of a security interest in the regulatory asset, the investment asset, the clean energy adjustment or the undertaking of the Crown under section x shall be the laws of the Province.

Conflict

33xx. The provisions of this Act and the regulations apply despite any provision of any other Act regarding the attachment, assignment or perfection, or the effect of perfection or priority of any transfer or security interest.

No further approvals, etc.

34xx. Despite any requirement under any Act, no approvals, notices or authorizations other than those specified in this Act are required to be taken under the Financing Plan or in relation to the determination of the fair allocation amount.

Immunity

35xx. (1) No action or other proceeding for damages shall be instituted against any employee of the Province, IESO, OPG or OEB for any act done in good faith in the execution or intended execution of any duty or authority under this Act or for any alleged neglect or default in the execution in good faith of any duty or authority under this Act.

Confidential Draft

Same

(2) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act*, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.

References in marketing materials and offering documents

36xx. No person shall include, in marketing materials or offering documents relating to the financing of funding obligations, references to any rights, obligations, guarantees or undertakings arising under section 5xx unless the prescribed requirements, if any, are satisfied.

Non-application, Financial Administration Act, s. 28[5]

37xx. Section 28 of the *Financial Administration Act* does not apply with respect to any transaction or agreement or undertaking required, permitted, contemplated or authorized, directly or indirectly, under this Act.

Regulations

38xx. The Lieutenant Governor in Council may make regulations in respect of the following matters:

1. [6]Governing anything that is required or permitted to be prescribed or that is required or permitted to be done by, or in accordance with, the regulations or as authorized, specified or provided in the regulations.

2. Defining, for the purposes of a regulation, words and expressions used in this Act that are not defined in the Act.

x. Prescribing types of payment obligations that constitute funding obligations;

x. governing the calculation [true-up amount] and how the amount is to be applied to the clean energy adjustment;

x. governing the inclusion of information under this Act on invoices, which may include requiring notice to be provided by electricity vendors to specified persons regarding the adjustments;

x. governing the inclusion of information about the clean energy adjustment and any other matters provided for under this Act on invoices issued to specified consumers, including the form that the information must take and the form of

[5] FLS - see s. 51 of the Electricity Act, 1998

[6] FLS - see s. 78 (1) of the Climate Change Mitigation and Low-carbon Economy Act, 2016 - paras. 1 and 2.

Confidential Draft

the invoices and any notice to be provided to the specified consumer under this Act[7];

x. prescribing the time within which any action required by this Act may be required to be done;

x. Providing for such other matters as the Lieutenant Governor in Council considers advisable to carry out the purpose of this Act.

PART VII[8]
AMENDMENTS TO OTHER ACTS

ELECTRICITY ACT, 1998

200x. (1) Subsection 6 (1) of the *Electricity Act, 1998* is amended by adding the following clauses:

(q.0.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and to engage in activities to facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*, including,

(i) entering into agreements or arrangements with any person for the purposes of the *Ontario Fair Hydro Plan Act, 2017*;

(ii) engaging in activities related to making payments to and receiving payments as contemplated under the *Ontario Fair Hydro Plan Act, 2017* and to engage in related settlement activities;

(iii) engaging in activities related to the creation, transfer and administration of the regulatory asset created under the *Ontario Fair Hydro Plan Act, 2017*, which activities may include,

(iv) incurring liabilities in relation to the regulatory asset

(v) transferring the regulatory asset for consideration;

(vi) acting as a recovery agent under the *Ontario Fair Hydro Plan Act, 2017*;

[7] FLS - see *OEBA s.79.17 and 88(1)(z.11) and (z.12)*
[8] FLS: These amendments are drawn from previous drafting contained in gov2016.146.e05 (which was drafted as amendments to the EA, 1998).

Confidential Draft

200.1xx (1) Subsection 25.33 (1) of the Act is amended by striking out "and" at the end of clause (a) and by adding the following clauses:

(c) amounts paid to or received from a [prescribed] financial services entity or [a financing entity prescribed under] the *Ontario Fair Hydro Plan Act, 2017* and any related amounts; and

(d) amounts collected from consumers who are [specified consumers within the meaning of] the *Ontario Fair Hydro Plan Act, 2017* in respect of the clean energy adjustment and any related amounts.

(1.1) Subsection 25.33 (2) of the Act is amended by striking out "and" at the end of clause (a) and by adding the following clauses:

(c) amounts paid to or received from a [prescribed] financial services entity or [a financing entity prescribed under] the *Ontario Fair Hydro Plan Act, 2017* and any related amounts; and

(d) amounts collected from consumers who are [specified consumers within the meaning of] the *Ontario Fair Hydro Plan Act, 2017* in respect of the clean energy adjustment and any related amounts.

(2) Subsection 25.33 (3) of the Act is amended by adding the following paragraph:

4. A consumer who is,

   i. a [specified consumer within the meaning of] the *Ontario Fair Hydro Plan Act, 2017*, or

   ii. prescribed by the regulations [made under the *Ontario Energy Board Act, 1998]*.

(3) Clause 25.33 (4) (b) of the Act is amended by adding "or as may be required under a regulation made under the *Ontario Fair Hydro Plan Act, 2017* or the *Ontario Energy Board Act, 1998*" at the end.

(4) Subsection 25.33 (5) of the Act is amended by adding "or under the *Ontario Fair Hydro Plan Act, 2017*" at the end

201x. Section 53.1 of the Act is amended by adding the following subsections:

Confidential Draft

Same, *Ontario Fair Hydro Plan Act, 2017*

53.1 (1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include exercising the powers and rights and performing the duties and obligations assigned to it under the *Ontario Fair Hydro Plan Act, 2017* and engaging in activities to facilitate the implementation of that Act, including entering into contracts and undertakings on behalf of financing entities, subject to the right to be paid by the financing entities for those services.

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create or invest in one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, entity

(1.3) Despite any other provision of this Act, the *Business Corporations Act* or any other Act,

(a) the assets and liabilities of a special purpose financing entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries; and

(b) the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries shall not form part of the assets and liabilities of a financing entity.

Definition, financing entity

(1.4) For the purposes of this section, "financing entity" has the same meaning as in the *Fair Hydro Plan Act, 2017*.

AMENDMENTS TO ONTARIO ENERGY BOARD ACT, 1998

204x. Subsection 1 (1) of the *Ontario Energy Board Act, 1998* is amended by adding the following paragraph:

6. To facilitate the implementation of the *Ontario Fair Hydro Plan Act, 2017*.

205x. Subsection 70 (2.1) of the Act is amended by adding the following paragraph:

4. The licensee is required to comply with the *Ontario Fair Hydro Plan Act, 2017*.

206x. Section 78.1 of the Act is amended by adding the following subsection:

Confidential Draft

Same, limitation re Ontario Power Generation Inc.

(3) The determination of a payment to Ontario Power Generation Inc. under this section shall not include any consideration of amounts related to activities of Ontario Power Generation Inc. carried out in relation to the *Ontario Fair Hydro Plan Act, 2017*.

Same

(3.1) The amounts referred to in subsection (3) include, without limitation, the following:

1. Amounts related to the appointment of Ontario Power Generation Inc. as the Financial Services Manager under the *Ontario Fair Hydro Plan Act, 2017*.

2. Amounts related to the charging of fees for performing duties as the Financial Services Manager.

3. Amounts related to exercising the powers and performing the duties of the Financial Services Manager.

4. Amounts related to the consolidation of the assets and liabilities for accounting purposes of any special purpose financing entities established under and for the purposes of that Act.

Short Title - this proposal for legislation would, if approved by the Legislature, have a short title to be determined by Government.

Timing – this proposal for legislation would, if approved by the Legislature, come into force on a date to be established by Government.

Confidential Draft

Hi Ron, John,

I wanted to keep you apprised of where we are with Tax Policy on OPG's request for specific PILs exemptions as part of OFHP. See below for details – we are hoping to punt to regulations.

Thanks,
Scott

Hi Krista, John,

We shared your ask with Finance Tax Policy and they have been mulling this over for the past few days. We had a conversation this morning and I wanted to provide a synopsis of that call:

- Tax Policy is of the view that if this is structured as a Trust will be a taxable entity under the Income Tax Act. However, because OPG is the beneficiary of the Trust, it will not pay any taxes. For greater certainty, Tax Policy suggested seeking a ruling from CRA. If necessary, we could seek an exemption from CRA (there is precedent with the Nuclear Funds Trust). Please let me know whether that is consistent with your assessment.
- Since all income from the Trust will flow to OPG, all revenues would be subject to PILs (unless we take action to make specific exemptions).
- As we discussed last week, we have proposed the language that you provided with PILs exemptions for specific earning streams from the trust.
- Tax Policy has a number of questions about how to define those exempted revenue streams and the rationale for those exemptions. They want considerably more detail and more time to consider this issue.
- According to Tax Policy, existing Legislation (James I will leave it to you to describe) provides authority to set out PILs exemptions in regulations. Therefore they suggest we do not need

to add anything in to the OFHP legislation at this time. That will provide time to more fully consider the issue and discuss the need for these exemptions.

- I suggested I was generally comfortable with this approach, subject to input from OPG and Torys. I think it is better for us to have more time and the flexibility to include these provisions in regulations. Given where we are in the process, I think we are out of time to settle legislative language that will work for Tax Policy.

James, please feel free to add / modify if I missed anything. Please let us know ASAP if you have concerns.

Scott

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
April 25, 2017

Agenda

1) GA Refinancing
    - Legislative Drafting (LSB / Blakes)
    - OPG Update
    - IESO Update
    - OEB Update

2) Other OFHP Initiatives
    - RRRP, OESP and FN (SNAP)
    - Affordability Fund (CRED)
    - ICI (ESPD)

3) Update on Action Items / Policy Matrix

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of April 24, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		
• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation / Regulations • Ministry has retained Navigant to prepare a report on long lived assets and associated assessment of value, Ministry to work with OPG to ensure alignment with OPG internal report for its Board • Financing: o How long will IESO hold short term liability (weeks/months); o When and how frequently will OPG purchase the asset from IESO; o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc); o OPG to confirm if it is considering more than one SPV/subsidiary; o OPG to explore tax considerations; o OPG to indicate how it would determine interest rate on sub-debt; o OPG working with the Ministries of Energy and Finance on equity injection mechanics, approvals and valuation approach; and o Ministry of Finance and Energy are working with TD on a non-disclosure agreement <u>Recent Action Items</u> **OPG:** • OPG to continue to work with lead banks / rating agencies / OFA on financing issues • OPG to confirm accounting if OFA were to act as lead order on borrowing • OPG to determine who will finance / hold the asset until it goes to the market – IESO/OPG to work together on outstanding issues	• AG briefing on April 19, 2017 (TBD) • April 28, pens down on Legislation • KPMG and E&Y opinions to be provided by May 1 • OPG Board to meet on May 1 for approval (Note: Sub-Committee meetings will occur in advance) • Approval dates: o TB on May 9 2017; and o LRC/Cabinet on May 10, 2017 • Legislation introduced May 11, 2017: o Opposition Briefing (TBD) • Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

Item	Key Deliverables / Considerations	Timing / Next Steps
	regarding OPG cash flows • MOF (IGS) to work through equity injection mechanics and report back next week • OPG to embed OFA/Energy (as necessary) in their ongoing internal discussions • ESPD, IESO and OPG to continue discussions around refining refinancing modelling • OPG /LSB to work through requirements / help draft a shareholder letter in a form to be determined. OPG to continue to consider requirements for enhanced indemnification for Board member • OPG provided draft letter to OPG Board sub-committee on April 7, 2017 and provided to Ministry for comment. April 13, 2017, Minister of Energy sent letter to the OPG Chair • OPG to develop note on rationale for 51/49 capital structure of the Trust • OPG to confirm proposed tax status of the Special Purpose Vehicle (SPV) • OPG / OFA to comment / report on overall structure and financibility for TB report back • OPG to draft terms of guarantee to dealers (which will be presented to dealers) **IESO:** • IESO to work with KPMG in the development of a formal opinion once first draft of legislation is available • IESO to work through technical aspects with IT (i.e., operationalizing the back-office functions) • IESO to discuss LDC issues with OEB • IESO to work with KPMG on IESO recovery mechanism **OEB:** • OEB working to finalize RPP rates and release by April 20 **Legislative Drafting:** • LSB / Blakes / OPG / IESO / OEB / Key Ministries will continue to	

Item	Key Deliverables / Considerations	Timing / Next Steps
	work through legislative drafting issues including asking dealers about whether a rate class can be named as the backstop in legislation instead of individual ratepayers • LSB has drafted a letter for the Minister to send to LDCs re: contempt of the Legislature. • LSB to circulate legislation for review and comment over the weekend – comments requested by end of day Sunday April 23 • ENERGY / Blakes / IESO / OEB / OPG / Key Ministries to meet on Monday to work through issues related to legislation • Blakes / LSB to work with MAG on any constitutional law issues <u>Considerations</u> • OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers. • Ongoing legal, accounting and financing risk assessments. • Impact on Electricity Sector Dedicated Income.	
2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP to continue to monitor rate hearings for RRRP LDCs • SNAP to collect billing implementation timeline estimates from LDCs • SNAP working with CSD / TBS on allocation for each program (RRRP, OESP, FN Rate and OREC) without executive control on each • Ministry to develop briefing note on why LDCs with RRRP continue to track to OEB for rate increases <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure in place to provide to existing consumers in Algoma and	• April 28, pens down on Legislation • Report back to TB/MBC on May 9, 2017 (TBD) • Implementation of expanded program and reduction in RRRP charge is targeted for July 1 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
	Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Recent Action Items</u> • SNAP to continue to work through OESP automatic qualification with MCSS / OEB • Legislation to include provision to allow for sharing of data between MCSS and OEB • SNAP to continue to work with, MOF, OEB and CRA on OESP wet signature • OEB decision this week on removing OESP from bill as of May 1. • SNAP to work with TBS to ensure funds flow from fiscal plan as soon as legislation passes <u>Considerations</u> • Ministry is working with OEB on how the OESP enhancement will be announced as part of a communications exercise. • Positive progress with OEB on implementation: o OEB has been engaged on implementation timelines for 50% + new eligibility – OEB working with LDCs to ensure systems are upgraded to reflect new credit amounts; o Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to use OESP variance (approx. $100 million) to reduce current OESP charge to zero and continue funding	• April 28, pens down on Legislation • Report back to TB/MBC on May 9, 2017 (TBD) • Enhanced benefits and removal of OESP charge will take effect in May 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
	existing program until tax changes in place. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 24th • SNAP to move forward with including COO in FN rate implementation / work through implementation issues. SNAP working to meet with COO to have preliminary discussion of the FNDC • OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation <u>Considerations</u> • On-reserve eligibility considerations require discussion with Chiefs of Ontario • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• April 28, pens down on Legislation • Ministry to meet with COO on April 26 regarding FN Rate implementation • Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13 million to $20 million • Introduction of FNDC program targeting July 1 2017
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, Blakes, CSD, OPCD, TBS, MOF and H1 (KPMG and Osler)	• TBC/MBC Submission • Declaration of Trust (“Trust Deed”) • Transfer Payment Agreement (TPA) • Administrative Services Agreement (H1-Trust)	**April to May 2017:** • Advisory Committee recommends Board of Trustees by May 31, 2017;

Item	Key Deliverables / Considerations	Timing / Next Steps
	Recent Action Items • March 23 and 24: Trust Deed and TPA executed. • March 30: Funds transferred to Computershare. • April 7, 2017: Hydro One letter to Advisory Committee members to schedule next meeting and ask members to start thinking of qualified Trustees • Affordability Fund advisory committee met this week and reached consensus on three LDCs + two social agencies to be represented on Trust Board (Ottawa Carlton UW / Advocacy Centre for Tenants Ontario / Thunder Bay Hydro / Hydro One / Alectra) Considerations • Legislative changes not required.	Computershare appoints full Board of Trustees **June 2017:** • Trustees expected to engage with distributors, IESO, OEB, others, to define funding criteria and processes **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds **Late 2017/early 2018:** • ENERGY can apply for additional funds through 2018-19 PRRT based on performance and need. Trust term can be extended with amended/new TPA if agreed by Trust
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	Recent Action Items • Communications finalized TPA with OCC / ESP, CRED and COMMS to consider providing support to CME (outreach with CME ongoing) Considerations • Ongoing outreach with LDCs being undertaken by IESO.	• Report back to TB/MBC on May 9, 2017 • Effective April 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • IESO's stakeholder engagement re Market Renewal is ongoing.	• Continue this work as part of LTEP
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Recent Action Items</u> • ESP to work with other ministries regarding other measures that can be considered for SMEs <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs	• Report back to TBC/MBC and Cabinet in fall 2017 (Per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
	Considerations • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion • March 14, 2017: Letter received requesting additional information by March 24, 2017 • March 31, 2017: Ministry submitted responsive materials
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP Recent Action Items • Provide AG technical briefing presentation used in media lock-up on OFHP in advance of the technical briefing	• Preliminary discussion on April 19, 2017 (TBD)

Item	Key Deliverables / Considerations	Timing / Next Steps
12) Bill Presentment (SNAP/LSB)		
• ENERGY	• Ministry to begin work on bill presentment <u>Recent Action Items</u> • MO to clarify bill presentment expectations with PO (Bill inserts will be ready for July 1 with bill redesign to occur in the Fall) • Ministry to develop deck on bill presentment with high level slides on legislation	• Initial discussion on March 31, 2017

3) Update on Action Items / Policy Matrix

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of April 18, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		
• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation / Regulations • Ministry to look into retaining Navigant for report on long lived assets and associated assessment of value, Ministry to work with OPG to ensure alignment with OPG internal report for its Board • Financing: o How long will IESO hold short term liability (weeks/months); o When and how frequently will OPG purchase the asset from IESO; o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc); o OPG to confirm if it is considering more than one SPV/subsidiary; o OPG to explore tax considerations; o OPG to indicate how it would determine interest rate on sub-debt; o OPG working with the Ministries of Energy and Finance on equity injection mechanics, approvals and valuation approach; and o Ministry of Finance and Energy are working with TD on a non-disclosure agreement <u>Recent Action Items</u> **OPG:** • OPG to continue to work with lead banks / rating agencies / OFA on financing issues • OPG to confirm accounting if OFA were to act as lead order on borrowing • OPG to determine who will finance / hold the asset until it goes to the market	• AG briefing on April 19, 2017 (TBD) • April 28, pens down on Legislation • KPMG and E&Y opinions to be provided by May 1 • OPG Board to meet on May 1 for approval (Note: Sub-Committee meetings will occur in advance) • Approval dates: o TB on May 9 2017; and o LRC/Cabinet on May 10, 2017 • Legislation introduced May 11, 2017: o Opposition Briefing (TBD) • Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

Item	Key Deliverables / Considerations	Timing / Next Steps
	• OPG to embed OFA/Energy (as necessary) in their ongoing internal discussions • ESPD, IESO and OPG to continue discussions around refining refinancing modelling • OPG /LSB to work through requirements / help draft a shareholder letter in a form to be determined. OPG to continue to consider requirements for enhanced indemnification for Board member • OPG provided draft letter to OPG Board sub-committee on April 7, 2017 and provided to Ministry for comment. April 13, 2017, Minister of Energy sent letter to the OPG Chair • OPG to develop note on rationale for 51/49 capital structure of the Trust • OPG to confirm proposed tax status of the Special Purpose Vehicle (SPV) • OPG / OFA to comment / report on overall structure and financibility for TB report back **IESO:** • IESO to work with KPMG in the development of a formal opinion once first draft of legislation is available • IESO to work through technical aspects with IT (i.e., operationalizing the back-office functions) • IESO to discuss LDC issues with OEB **OEB:** • OEB working to finalize RPP rates and release by April 20 **Legislative Drafting:** • LSB / Blakes / OPG / IESO / OEB / Key Ministries will continue to work through legislative drafting issues including asking dealers about whether a rate class can be named as the backstop in legislation instead of individual ratepayers • LSB has drafted a letter for the Minister to send to LDCs re: contempt of the Legislature. • LSB to circulate legislation for review and comment over the weekend	

Item	Key Deliverables / Considerations	Timing / Next Steps
	• ENERGY / Blakes / IESO / OEB / OPG / Key Ministries to meet on Monday to work through issues related to legislation • Blakes / LSB to work with MAG on any constitutional law issues <u>Considerations</u> • OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers. • Ongoing legal, accounting and financing risk assessments. • Impact on Electricity Sector Dedicated Income.	
2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP to continue to monitor rate hearings for RRRP LDCs • SNAP to collect billing implementation timeline estimates from LDCs • SNAP working with CSD / TBS on allocation for each program (RRRP, OESP, FN Rate and OREC) without executive control on each • Ministry to develop briefing note on why LDCs with RRRP continue to track to OEB for rate increases <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC on May 9, 2017 (TBD) • Implementation of expanded program and reduction in RRRP charge is targeted for July 1 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Recent Action Items</u> • SNAP to continue to work through OESP automatic qualification with MCSS / OEB • Legislation to include provision to allow for sharing of data between MCSS and OEB • SNAP to continue to work with, MOF, OEB and CRA on OESP wet signature • OEB decision this week on removing OESP from bill as of May 1. • SNAP to work with TBS to ensure funds flow from fiscal plan as soon as legislation passes <u>Considerations</u> • Ministry is working with OEB on how the OESP enhancement will be announced as part of a communications exercise. • Positive progress with OEB on implementation: o OEB has been engaged on implementation timelines for 50% + new eligibility – OEB working with LDCs to ensure systems are upgraded to reflect new credit amounts; o Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to use OESP variance (approx. $100 million) to reduce current OESP charge to zero and continue funding existing program until tax changes in place. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC on May 9, 2017 (TBD) • Enhanced benefits and removal of OESP charge will take effect in May 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 24th • SNAP to move forward with including COO in FN rate implementation / work through implementation issues. SNAP working to meet with COO to have preliminary discussion of the FNDC • OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation <u>Considerations</u> • On-reserve eligibility considerations require discussion with Chiefs of Ontario • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Ministry to meet with COO on April 26 regarding FN Rate implementation • Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13 million to $20 million • Introduction of FNDC program targeting July 1 2017
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, Blakes, CSD, OPCD, TBS, MOF and H1 (KPMG and Osler)	• TBC/MBC Submission • Declaration of Trust (“Trust Deed”) • Transfer Payment Agreement (TPA) • Administrative Services Agreement (H1-Trust) <u>Recent Action Items</u> • March 23 and 24: Trust Deed and TPA executed. • March 30: Funds transferred to Computershare.	**April to May 2017:** • Advisory Committee recommends Board of Trustees by May 31, 2017; Computershare appoints full Board of Trustees • Second meeting of the Advisory Committee is

Item	Key Deliverables / Considerations	Timing / Next Steps
	• April 7, 2017: Hydro One letter to Advisory Committee members to schedule next meeting and ask members to start thinking of qualified Trustees <u>Considerations</u> • Legislative changes not required.	scheduled for April 18, 2017 **June 2017:** • Trustees expected to engage with distributors, IESO, OEB, others, to define funding criteria and processes **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds **Late 2017/early 2018:** • ENERGY can apply for additional funds through 2018-19 PRRT based on performance and need. Trust term can be extended with amended/new TPA if agreed by Trust
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	<u>Recent Action Items</u> • Communications finalized TPA with OCC / ESP, CRED and COMMS to consider providing support to CME (outreach with CME ongoing) <u>Considerations</u> • Ongoing outreach with LDCs being undertaken by IESO.	• Report back to TB/MBC on May 9, 2017 • Effective April 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • IESO's stakeholder engagement re Market Renewal is ongoing.	• Continue this work as part of LTEP
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Recent Action Items</u> • ESP to work with other ministries regarding other measures that can be considered for SMEs <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs	• Report back to TBC/MBC and Cabinet in fall 2017 (Per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
	Considerations • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion • March 14, 2017: Letter received requesting additional information by March 24, 2017 • March 31, 2017: Ministry submitted responsive materials
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP Recent Action Items • Provide AG technical briefing presentation used in media lock-up	• Preliminary discussion on April 19, 2017 (TBD)

Item	Key Deliverables / Considerations	Timing / Next Steps
	on OFHP in advance of the technical briefing	
12) Bill Presentment (SNAP/LSB)		
• ENERGY	• Ministry to begin work on bill presentment <u>Recent Action Items</u> • MO to clarify bill presentment expectations with PO (Bill inserts will be ready for July 1 with bill redesign to occur in the Fall) • Ministry to develop deck on bill presentment with high level slides on legislation	• Initial discussion on March 31, 2017

Subject: Rate Mitigation Implementation Meeting - April 13, 2017

Good evening,
Please find attached the material for discussion tomorrow morning.
Thanks,
Keley

Implementation of Ontario's Fair Hydro Plan
Week of April 10, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		

• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation
	• Defining mitigation and recovery mechanism
	• Establishing roles for IESO, OPG and OEB
	• Regulation (amend O.Reg. 95/05)
	• Shareholder Resolution (work with OPG to determine form)
	• Accounting opinions from E&Y (OPG) and KPMG (IESO)
	• Financing:
	  o How long will IESO hold short term liability (weeks/months);
	  o When and how frequently will OPG purchase the asset from IESO;
	  o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc);
	  o OPG to confirm if it is considering more than one SPV/subsidiary;
	  o OPG to explore tax considerations;
	  o OPG to indicate how it would determine interest rate on sub-debt; and
	  o OPG to provide amount/frequency of equity required and indicate trigger
	• Third Party Technical Report (e.g., long lived assets, associated assessment of social, health and environmental benefits)
	
	<u>Recent Action Items</u>
	
	OPG:
	• OPG to continue to work with lead banks / rating agencies / OFA on financing issues
	• OPG to confirm accounting if OFA were to act as lead order on borrowing
	• OPG to determine who will finance / hold the asset until it goes to
		• IESO Board meeting on April 12, 2017 – ESP to present on OFHP
		
		• AG briefing on April 19, 2017 (TBD)
		
		• Provide comfort letter to allow OEB to include in May 2017 RPP
		
		• April 21, 2017, "pens down" on Legislative drafting
		
		• Approval dates:
		  o TB/LRC on May 1 2017; and
		  o Cabinet on May 3, 2017
		
		• Legislation introduced May 4, 2017.
		  o Opposition Briefing (TBD)
		
		• Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

Item	Key Deliverables / Considerations	Timing / Next Steps
	the market • OPG to embed OFA/Energy (as necessary) in their ongoing internal discussions • ESPD, IESO and OPG to continue discussions around refining refinancing modelling • OPG /LSB to work through requirements / help draft a shareholder resolution in a form to be determined. OPG to continue to consider requirements for enhanced indemnification for Board member • OPG providing shareholder resolution to OPG Board committee April 7, 2017 and will be provided to Ministry following that **IESO:** • IESO to work through technical aspects with IT (i.e., operationalizing the back-office functions) • IESO to work with KPMG in the development of a formal opinion once first draft of legislation is available • IESO to discuss LDC issues with OEB **OEB:** • OEB to continue to work with ENERGY to finalize draft comfort letter regarding May 1 – Regulated Price Plan (RPP) and OESP • OEB to draft RPP communique to be released publicly by April 20, 2017 **Legislative Drafting:** • LSB / Blakes / OPG / IESO will continue to work through legislative drafting issues • LSB has drafted a letter for the Minister to send to LDCs re: contempt of the Legislature • Working group meetings Monday and Tuesday • ENERGY / Blakes / IESO / OEB / OPG to meet on Monday to work through issues related to legislation • KPMG / E&Y to continue to be informed so that they can eventually confirm we've met all conditions • Blakes / OPG to work through financing issues related to 10% cap	

Item	Key Deliverables / Considerations	Timing / Next Steps
	• Blakes / LSB to work with MAG on a second constitutional law opinion from Peter Hogg • TD engaged through OFA to provide financial advice <u>Considerations</u> • OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers. • Ongoing legal, accounting and financing risk assessments. • Impact on Electricity Sector Dedicated Income.	
2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 23rd and March 24th • SNAP to continue to monitor rate hearings for RRRP LDCs • SNAP to collect billing implementation timeline estimates from LDCs • SNAP working with CSD / TBS on allocation for each program (RRRP, OESP, FN Rate and OREC) without executive control on each <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC on May 1, 2017 (TBD) • Fall 2017 implementation (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Recent Action Items</u> • LRC package for OESP enhancements (50% increase, expanded eligibility) approved by LRC and Cabinet. o Implementation on May 1 to align with OEB decision to end OESP charge on May 1, and to finance program through variance account. • SNAP to continue to work through OESP automatic qualification with MCSS / OEB • SNAP to continue to work with, MOF, OEB and CRA on OESP wet signature • SNAP to work with TBS map out how funds will flow from fiscal plan after legislation passes <u>Considerations</u> • Ministry is working with OEB on how the OESP enhancement will be announced as part of a communications exercise. • Positive progress with OEB on implementation: o OEB has been engaged on implementation timelines for 50% + new eligibility – OEB working with LDCs to ensure systems are upgraded to reflect new credit amounts o Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to transition from OESP variance (approx. $100 million) to finance the program to financing with tax funds. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC on May 1, 2017 (TBD) • LRC on April 10, 2016 • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 24th • SNAP to move forward with including COO in FN rate implementation / work through implementation issues. SNAP working to meet with COO to have preliminary discussion of the FNDC • OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation <u>Considerations</u> • On-reserve eligibility considerations require discussion with Chiefs of Ontario • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13 million to $20 million • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, Blakes, CSD, OPCD, TBS, MOF and H1 (KPMG and Osler)	• TBC/MBC Submission • Declaration of Trust ("Trust Deed") • Transfer Payment Agreement (TPA) • Administrative Services Agreement (H1-Trust) <u>Recent Action Items</u> • March 23 and 24: Trust Deed and TPA executed. • March 30: Funds transferred to Computershare. • April 7, 2017: Briefing for Advisory Committee members <u>Considerations</u> • Legislative changes not required.	**April to May 2017:** • Advisory Committee recommends Board of Trustees by May 31, 2017; Computershare appoints full Board of Trustees **June 2017:** • Trustees expected to engage with distributors, IESO, OEB, others, to define funding criteria and processes. **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds **Late 2017/early 2018:** • ENERGY can apply for additional funds through 2018-19 PRRT based on performance and need. Trust term can be extended with amended/new TPA if agreed by Trust

Item	Key Deliverables / Considerations	Timing / Next Steps
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Recent Action Items</u> • ESP working to finalize materials for LRC on April 10, 2017 – draft language from leg. Counsel has been shared with ESP staff • Communications finalized TPA with OCC / ESP, CRED and COMMS to consider providing support to CME (outreach with CME ongoing) <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date as possible to impact electricity bills this year (May 31, 2017). • Ongoing outreach with LDCs being undertaken by IESO	• RR posting on the proposed amendment – posted March 9, 2017 for 30 days • LRC on April 10, 2016 • Report back to TB/MBC on May 1, 2017 • Effective April/May 2017 (TBD)
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • IESO's stakeholder engagement re Market Renewal is ongoing.	• Continue this work as part of LTEP

Item	Key Deliverables / Considerations	Timing / Next Steps
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Recent Action Items</u> • ESP to work with other ministries regarding other measures that can be considered for SMEs <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in fall 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March

Item	Key Deliverables / Considerations	Timing / Next Steps
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion • March 14, 2017: Letter received requesting additional information. March 31, 2017, information provided to the FAO
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP <u>Recent Action Items</u> • Provide AG technical briefing presentation used in media lock-up on OFHP in advance of the technical briefing	• March 2017: Cabinet submissions provided to AG • April 19, 2017: Preliminary discussion on (TBD)
12) Bill Presentment (SNAP/LSB)		
• ENERGY	• Ministry to begin work on bill presentment <u>Recent Action Items</u> • MO to clarify bill presentment expectations with PO (Bill inserts will be ready for July 1 with bill redesign to occur in the Fall)	• Initial discussion on March 31, 2017

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
April 13, 2017

Agenda

1) GA Refinancing
    - Legislative Drafting (LSB / Blakes)
    - OPG Update
    - IESO Update
    - OEB Update

2) OPG Letter

3) Other OFHP Initiatives
    - Affordability Fund (CRED)
    - RRRP, OESP and FN (SNAP)
    - ICI (ESPD)

4) Update on Action Items / Policy Matrix

Notes:

DRAFT: April 11, 2017

[Letterhead of Minister of Energy]

April [●], 2017

Bernard Lord
Board Chair
Ontario Power Generation Inc.
700 University Avenue, 19th Floor
Toronto, Ontario
M5G 1X6

Dear Mr. Lord:

I am writing further to the Premier's news release of March 2, 2017, in which the Province announced the Fair Hydro Plan to lower electricity bills by 25 per cent on average for certain customers starting in the summer of 2017, as part of a significant system restructuring that will address long-standing policy challenges and ensure greater fairness. Given OPG's expertise as a participant in the electricity market and its expertise in rate regulated accounting and investment stewardship over significant pension and nuclear funds, I am writing specifically to request OPG's involvement in the implementation of the Global Adjustment Refinancing component of the Fair Hydro Plan

As you will have read, the 25 percent reduction in residential electricity bills referred to in the March 2nd announcement includes the 8 per cent reduction resulting from the rebate of the provincial portion of the harmonized sales tax on electricity bills effective January 1, 2017. The Province has also committed that certain customer bills would not increase by more than the rate of inflation for the four years following the 25 per cent average reduction.

In addition, as you know, Ministry of Energy staff have been working on preparing the draft legislation and regulations to implement the Fair Hydro Plan, with input from the IESO, the OEB, OPG and their respective advisors.

The Province is requesting that OPG, working with the Ministry of Energy, the IESO, the OEB, and their respective advisors, consider and recommend a plan for financing mechanisms that could achieve the Province's objectives for the reduction in consumer bills and the limitation on bill increases outlined above and in the Fair Hydro Plan, all in accordance with the legislation and regulations designed to facilitate the Fair Hydro Plan.

In particular, the Province would like OPG's financing plan to consider, among other things, structures and methods that would permit viable refinancing of a portion of the Global

Adjustment to reduce electricity prices for certain of today's electricity ratepayers, with the costs of the refinancing to be recovered over a period of up to 30 years, all in accordance with the legislation and regulations designed to facilitate the Fair Hydro Plan. We would expect the financing plan to include:

i) potential structures for the financing, which may include, as appropriate, a special purpose vehicle created for the financing;

ii) potential financing mechanisms and instruments, including senior debt and subordinated debt; and

iii) identification of the capital markets and jurisdictions that can be accessed to finance the rate mitigation.

The Province recognizes the need to provide OPG with the necessary assurances with respect to recovery of the principal, interest, and operating and other costs of any financing and will address the specific requirements identified by OPG and its financial advisors, including in the pending legislation and regulations that will govern the mechanics and requirements of the financing entity. We would also request that your plan identify any amendments to OPG's governing legislation and constating documents needed to facilitate the implementation of the financing plan in a commercial manner.

We would further expect that the financing plan would be implemented in an effective and cost-efficient manner by OPG.

I look forward to receiving a detailed plan that has the support of the OPG Board of Directors by June 1, 2017.

Yours truly,

The Honourable Glenn Thibeault
Minister of Energy

Good evening,
Please find attached material for tomorrow's meeting.
Keley

Action Items – April 6, 2017

Global Adjustment Refinancing

- Legislation pens down April 21 for May 4 introduction
- OPG / IESO / Blakes to provide feedback on document that will provide instructions to Leg Counsel today
- MOs/PO meeting on Friday
- OPG providing shareholder resolution to OPG Board committee tomorrow and will be provided to Ministry following that
- OEB working with Ministry to finalize comfort letter

Affordability Fund

- Briefing of Advisory Committee scheduled for April 7

RRRP, OESP , FN Rate

- SNAP working with CSD / TBS on allocation for each program (RRRP, OESP, FN Rate and OREC) without executive control on each
- SNAP working with MOF / CRA on waiving wet signature

ICI

- ESP / Comms continue to work with chamber of commerce / CME on outreach campaigns to business communities

Bill Presentment

- MO to clarify bill presentment expectations with PO (Bill inserts will be ready for July 1 with bill redesign to occur in the Fall)

Other Items

- AG meeting on April 19 will walk through a technical briefing deck (OFA / ENERGY / MOF / TBS to attend)

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
April 6, 2017

Agenda

1) GA Refinancing
    - Legislative Drafting (LSB)
    - OPG Update
    - IESO Update
    - OEB Update

2) Other OFHP Initiatives
    - Affordability Fund (CRED)
    - RRRP, OESP and FN (SNAP)
    - ICI (ESPD)

3) Bill Presentment (SNAP)

4) Update on Action Items / Policy Matrix

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of April 3, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		
• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation • Defining mitigation and recovery mechanism; and • Establishing roles for IESO, OPG and OEB • Regulation (amend O.Reg. 95/05) • Shareholder Resolution (work with OPG to determine form) • Third Party Technical Report re Long Lived Assets (TBD) • Accounting opinions from E&Y (OPG) and KPMG (IESO) • Financing: o How long will IESO hold short term liability (weeks/months); o When and how frequently will OPG purchase the asset from IESO; o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc); o OPG to confirm if it is considering more than one SPV/subsidiary; o OPG to explore tax considerations; o OPG to indicate how it would determine interest rate on sub-debt; and o OPG to provide amount/frequency of equity required and indicate trigger <u>Recent Action Items</u> **OPG:** • OPG to continue to work with lead banks / rating agencies / OFA on financing issues • OPG to confirm accounting if OFA were to act as lead order on borrowing • OPG to determine who will finance / hold the asset until it goes to the market	• IESO Board meeting on April 11, 2017 (TBD) – ESP to present on OFHP • AG briefing on April 19, 2017 (TBD) • Provide comfort level to allow OEB to include in May 2017 RPP • Approval dates: o TB/LRC on May 1 2017; and o Cabinet on May 3, 2017 • Legislation introduced May 4, 2017. o Opposition Briefing (TBD) • Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

Item	Key Deliverables / Considerations	Timing / Next Steps
	• OPG to embed OFA/Energy (as necessary) in their ongoing internal discussions • ESPD, IESO and OPG to continue discussions around refining refinancing modelling • OPG /LSB to work through requirements / help draft a shareholder resolution in a form to be determined. OPG to continue to consider requirements for enhanced indemnification for Board member **IESO:** • IESO to work through technical aspects with IT (i.e., operationalizing the back-office functions) • IESO to work with KPMG in the development of a formal opinion once first draft of legislation is available • IESO to discuss LDC issues with OEB **OEB:** • OEB to continue to work with ENERGY to finalize draft comfort letter regarding May 1 – Regulated Price Plan (RPP) and OESP • OEB to draft RPP communique to be released publicly by April 20, 2017 **Legislative Drafting:** • LSB / Blakes will continue to work through legislative drafting issues • LSB has drafted a letter for the Minister to send to LDCs re: contempt of the Legislature. • Legislative walk-through and working group meetings Monday and Tuesday • ENERGY / Blakes / IESO / OEB / OPG to meet on Tuesday to work through issues related to legislation • LSB / Blakes to brief OPCD on legislation • KPMG / E&Y to continue to be informed so that they can eventually confirm we've met all conditions • Blakes / OPG to work through financing issues related to 10% cap • Blakes / LSB to work with MAG on a second constitutional law	

Item	Key Deliverables / Considerations	Timing / Next Steps
	opinion from Peter Hogg • TD being engaged through OFA to provide financial advice • ESP to make presentation on GA financing at upcoming IESO Board meeting <u>Considerations</u> • OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers. • Ongoing legal, accounting and financing risk assessments. • Impact on Electricity Sector Dedicated Income.	
2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 23rd and March 24th • SNAP to continue to monitor rate hearings for RRRP LDCs • SNAP to collect billing implementation timeline estimates from LDCs <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC on May 1, 2017 (TBD) • Fall 2017 implementation (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Recent Action Items</u> • SNAP/LSB working on LRC package for OESP enhancements • SNAP to continue to work through OESP automatic qualification with MCSS / OEB • SNAP to continue to work with, MOF, OEB and CRA on OESP wet signature • Board decision this week on removing OESP from bill as of May 1. • SNAP to work with TBS to ensure funds flow from fiscal plan as soon as legislation passes <u>Considerations</u> • OEB has been engaged on implementation timelines for 50% + new eligibility – OEB working with LDCs to ensure systems are upgraded to reflect new credit amounts • Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to use OESP variance (approx. $100M) to reduce current OESP charge to zero and continue funding existing program until tax changes in place. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC on May 1, 2017 (TBD) • LRC on April 10, 2016 • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 24th • SNAP to move forward with including COO in FN rate implementation / work through implementation issues. SNAP working to meet with COO to have preliminary discussion of the FNDC • OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13 million to $20 million • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, Blakes, CSD, OPCD, TBS, MOF and H1 (KPMG and Osler)	• TBC/MBC Submission • Declaration of Trust ("Trust Deed") • Transfer Payment Agreement (TPA) • Administrative Services Agreement (H1-Trust) <u>Recent Action Items</u> • March 23 and 24: Trust Deed and TPA executed. • March 30: Funds transferred to Computershare. <u>Considerations</u> • Legislative changes not required.	**April 7, 2017:** • Briefing for Advisory Committee members **April to May 2017:** • Advisory Committee recommends Board of Trustees by May 31, 2017; Computershare appoints full Board of Trustees **June 2017:** • Trustees expected to engage with distributors, IESO, OEB, others, to define funding criteria and processes. **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds **Late 2017/early 2018:** • ENERGY can apply for additional funds through 2018-19 PRRT based on performance and need. Trust term can be extended with amended/new TPA if agreed by Trust

Item	Key Deliverables / Considerations	Timing / Next Steps
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Recent Action Items</u> • ESP working to finalize materials for LRC on April 10, 2017 – draft language from leg. Counsel has been shared with ESP staff • Communications finalized TPA with OCC / ESP, CRED and COMMS to consider providing support to CME (outreach with CME ongoing) • ESP to consider implications of dropping below 500kw threshold due to investments in conservation <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date as possible to impact electricity bills this year (May 31, 2017). • Ongoing outreach with LDCs being undertaken by IESO	• RR posting on the proposed amendment – posted March 9, 2017 for 30 days • LRC on April 10, 2016 • Report back to TB/MBC on May 1, 2017 • Effective April/May 2017 (TBD)
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • IESO's stakeholder engagement re Market Renewal is ongoing.	• Continue this work as part of LTEP

Item	Key Deliverables / Considerations	Timing / Next Steps
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Recent Action Items</u> • ESP to work with other ministries regarding other measures that can be considered for SMEs <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in fall 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March

Item	Key Deliverables / Considerations	Timing / Next Steps
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion • March 14, 2017: Letter received requesting additional information by March 24, 2017 • Ministry preparing responsive materials
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP	• Preliminary discussion on April 19, 2017 (TBD)
12) Bill Presentment (SNAP/LSB)		
• ENERGY	• Ministry to begin work on bill presentment	• Initial discussion on March 31, 2017

Policy and Legal Foundations for the Proposed Ontario Fair Hydro Plan Act
April 4, 2017

Creating the Regulatory Framework

- Principles will link the benefit of the "Green Generation Initiative" with the regulatory cost that future rate payers will pay
- Need to name and articulate "Green Generation Initiative"

Fair Allocation Plan

- Policy direction around intergenerational funding will be established by the Minister of Energy
- The Fair Allocation Plan has been determined for the 1st four years, as set out in the March 2nd announcement
- Should there be a process around the Fair Allocation Plan [or as necessary]?
- [Role for the OEB?]

Treasury Plan

- Created by OPG to implement the Fair Allocation Plan
- Will pass through actual costs and expenses of funding obligations incurred
- 3 components:
    - Treasury Plan must be compliant with principles and parameters of the Fair Allocation Plan;
    - The Plan must match maturities to allocations under the Fair Allocation Plan, as well as achieve funding efficiencies and cost management articulated in the Fair Allocation Plan; and
    - Implementation
- Should [Minister?] [OEB?] review [and approve?] the Treasury Plan? At what point in process?

Establishment of the Regulatory Asset

- Right to recover from rate payers, through collection by LDCs and IESO, the regulatory charge, late fees, interest established by legislation
- IESO may dispose of (by assignment, transfer, sale, etc.) its right, title and interest in the Regulatory Asset
- Legislation will create property rights and allow for security interests in the Regulatory Asset
- [Role of the OEB in establishing the Regulatory Asset?]
- Role of OPG in acquiring the asset?

Ensuring Collectability

- Clearly defined class of rate payers that receive and pay for the benefit
- Charges are irrevocable
- LDCs have duty to invoice rate payers for the charge
- IESO and LDCs have duty to collect charges as agent and pay remittances to IESO
- IESO has duty to pay remittances to the Regulatory Asset Owner
- Non-by-passability – subject rate payers who opt to go off grid to a penalty (prepayment)?
- True up mechanism to reconcile collections with incurrences
- Province shall not take steps to reduce, alter, impair or terminate the Regulatory Asset or collection

OEB Role

- [Inspect books and records?]

DRAFT

- [Approve administrative costs?]
- [Prudence review of financing costs?]
- [Consequences of OEB review?]
    - Ability to review
    - Ability to review and make recommendations (non-binding)
    - Review and approve or refer back for reconsideration (binding)

Provincial Guarantee

- Scope / Triggers / Consequences / Form

DRAFT

Good afternoon,
Please find attached the material for discussion tomorrow morning.
Thanks,
Keley

Action Items – April 25, 2017

1) Global Adjustment
    - LSB / Blakes turning around comments received over the weekend; new draft of the legislation will be circulated later today or early tomorrow
    - Comments on next draft of legislation will be due Wednesday to keep on track with Friday pens down on legislation
    - E&Y opinion on track
    - OPG undertaking modelling but initial borrowing amount will come from formula in legislation
    - Ministry working with Navigant on report (interim report expected in a couple of weeks followed by a final report)
    - CoS to discuss inflation provision with PO to confirm comfort with including it in regulation vs legislation
    - IESO working with KPMG on opinion (draft tracking for later this week)
    - IESO to discuss Board assurances with Ministry later this week
    - OEB continues to work through a few issues with LSB (e.g. role in review of admin costs, timing of revised RPP, why there needs to be an OEB objective)
    - MOF and ENERGY Ministers will be signatories to springing guarantee, performance guarantee and protection to boards

2) Other OFHP Items
    - RRRP, OESP, FN
        - New turn of social legislation expected today for comment by Wednesday to meet Friday pens down timeline
        - Ministry sorting through issue with Dubreuilville to ensure the legislation is permissive enough to allow them to be eligible
        - Ministry meeting with COO tomorrow on FN rate implementation
        - Ministry to meet with MCSS re: taking over OESP administration
    - Affordability Fund
        - Hydro One to prepare letters that will go out to social service agencies
    - ICI
        - Ministry continues to work with CME / OCC on targeted outreach

3) Other Items
    - IGS continues to work with MOF / TBS on equity injection to ensure we have appropriate approvals for appropriation room this fiscal year, needs to be included in Estimates so approvals required on Thursday
    - OFA working with TD on content to be included in TB submission on financial viability
    - MO to work with MOF / TBS MOs to request their Ministers for debate on May 15th and 16th

Action Items – Thursday March 30, 2017

1) GA Refinancing
   - ENERGY / Blakes / IESO / OEB / OPG / OPCD to meet on Tuesday to work through issues related to legislation
   - LSB / Blakes to brief OPCD on legislation
   - KPMG / E&Y to continue to be informed so that they can eventually confirm we've met all conditions
   - Blakes / OPG to work through financing issues related to 10% cap
   - Blakes / LSB to work with MAG on a second constitutional law opinion from Peter Hogg
   - TD being engaged through OFA to provide financial advice
   - ESP to make presentation on GA financing at upcoming IESO Board meeting
   - OEB to continue to work with Ministry LSB on comfort letter / OEB doesn't need letter until mid-April
2) Affordability Fund
   - Briefing being scheduled for advisory committee
   - Trust will establish process for accessing funds by Summer
3) RRRP / OESP / FN Rate
   - SNAP working on LRC materials for OESP tracking to April 10 LRC
   - SNAP to work with TBS to ensure funds flow from fiscal plan as soon as legislation passes
   - SNAP meeting with OEB / MCSS on options for automatic enrolment
   - SNAP to sit down with COO next week on FN Rate
   - SNAP to review Toronto Hydro issues
4) ICI
   - ESP working on LRC approval package tracking to April 10 LRC
   - Outreach with OCC / CME ongoing
5) Other items
   - LSB to draft memo to LDCs letting them know about legislative issue related to advertising

Action Items – March 23rd, 2017

1) GA Refinancing
    - AG briefing on April 19, 2017
    - Legislative Drafting
        - Legislation to be complete by April 17 , drafting instructions are in circulation
        - OPG to undertake modelling on assets / determine whether rating agency risk to proposed structure
        - OPG / IESO to determine who will finance / hold the asset until it goes to the market
    - OPG Update
        - OPG / LSB continue to work on shareholder direction / resolution
        - OPG continues to work on indemnification of Board issue
        - OPG to embed OFA/ENERGY (as necessary) in their ongoing internal discussions
        - OPG, ENERGY and IESO to continue discussions around refining refinancing modelling
    - IESO Update
        - IESO to discuss LDC issues with OEB
        - IESO to work through legislation / accounting opinion
    - OEB Update
        - OEB decision this week on removing OESP from bill as of May 1st
        - OEB to work with ENERGY to finalize RPP comfort letter
2) Affordability Fund
    - No follow ups, except that everything is on track to be finalized for this week
3) RRRP / OESP / FN Rate
    - OESP reg to continue to track to April 10th LRC
    - MOF / OEB / ENE continues to work with CRA on "wet signature"
    - OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation
4) ICI
    - ICI to continue to track to April 10th LRC / materials being finalized
    - TPA being finalized with OCC / discussions ongoing with CME
    - ESP to continue to meet with MEDG / MOECC / MOL on broader issues for business
5) Other items
    - Ministry to begin work on bill presentment / add as agenda item for next week

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
March 30, 2017

Agenda

1) GA Refinancing
    - Legislative Drafting (LSB / Blakes)
    - OPG Update
    - IESO Update
    - OEB Update

2) Affordability Fund (CRED)

3) RRRP, OESP and FN (SNAP)
    - Mechanics and timing of moving RRPP from ratebase to taxbase

4) ICI (ESPD)

5) Update on Action Items / Policy Matrix

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of March 27, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		
• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation: o Defining mitigation and recovery mechanism; and o Establishing roles for IESO, OPG and OEB • Regulation (amend O.Reg.429/04) • Shareholder Declaration and Resolution • Third Party Technical Report re Long Lived Assets (TBD) • Accounting opinions from E&Y (OPG) and KPMG (IESO) • Financing: o How long will IESO hold short term liability (weeks/months); o When and how frequently will OPG purchase the asset from IESO; o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc); o OPG to confirm if it is considering more than one SPV/subsidiary; o OPG to explore tax considerations; o OPG to indicate how it would determine interest rate on sub-debt; and o OPG to provide amount/frequency of equity required and indicate trigger <u>Recent Action Items</u> **OPG:** • OPG to continue to work with lead banks / rating agencies / OFA on financing issues • OPG to confirm accounting if OFA were to act as lead order on borrowing • OPG to determine who will finance / hold the asset until it goes to the market • OPG to embed OFA/Energy (as necessary) in their ongoing	• AG briefing on April 19, 2017 (TBD) • Provide comfort level to allow OEB to include in May 2017 RPP • Approval dates: o TB/LRC on May 1 2017; and o Cabinet on May 3, 2017 • Legislation introduced May 4, 2017. • Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

Item	Key Deliverables / Considerations	Timing / Next Steps
	internal discussions • ESPD, IESO and OPG to continue discussions around refining refinancing modelling • OPG /LSB to work through requirements / help draft a shareholder resolution / declaration. OPG to continue to consider requirements for enhanced indemnification for Board member **IESO:** • IESO to work through technical aspects with IT (i.e., operationalizing the back-office functions) • IESO to work with KPMG in the development of a formal opinion once first draft of legislation is available • IESO to discuss LDC issues with OEB **OEB:** • OEB to continue to work with ENERGY to finalize draft comfort letter regarding May 1 – Regulated Price Plan (RPP) and OESP • OEB to draft RPP communique to be released publicly by April 20, 2017 **Legislative Drafting:** • LSB / Blakes will continue to work through legislative drafting issues • LSB to consider contempt of legislature issue • Legislation to be complete April 17, 2017, first draft to be available for review week of March 27, 2017 <u>Considerations</u> • OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers. • Ongoing legal, accounting and financing risk assessments. • Impact on Electricity Sector Dedicated Income.	

Item	Key Deliverables / Considerations	Timing / Next Steps
2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 23rd • SNAP to continue to monitor rate hearings for RRRP LDCs • SNAP to collect billing implementation timeline estimates from LDCs <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 • Fall 2017 implementation (per Cabinet Minute)
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Recent Action Items</u> • SNAP to continue to work through OESP automatic qualification with MCSS / OEB • SNAP to continue to work with, MOF, OEB and CRA on OESP wet signature • Board decision this week on removing OESP from bill as of May 1. <u>Considerations</u> • OEB has been engaged on implementation timelines for 50% +	• Report back to TB/MBC by Spring 2017 • LRC on April 10, 2016 • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
	new eligibility – Potentially early Spring. • Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to use OESP variance (approx. $100M) to reduce current OESP charge to zero and continue funding existing program until tax changes in place. Currently engaging OEB. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 24th • SNAP to move forward with including COO in FN rate implementation / work through implementation issues • OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13 million to $20 million • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, Blakes, CSD, OPCD, TBS, MOF and H1 (KPMG and Osler)	• TBC/MBC Submission • Declaration of Trust ("Trust Deed") • Transfer Payment Agreement (TPA) • Administrative Services Agreement (H1-Trust) <u>Recent Action Items</u> • March 17: ENERGY received $100M in CRED's Green Energy Initiatives TP line • March 23 and 24: Trust Deed and TPA executed. Process to transfer funds underway <u>Considerations</u> • Legislative changes not required. • Funding needs to flow to the Trust prior to March 31, 2017.	**April to May 31 2017:** • Advisory Committee recommends Board of Trustees; Computershare appoints full Board of Trustees **June 2017:** • Trustees expected to engage with distributors, IESO, OEB, others, to define funding criteria and processes. **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds **Late 2017/early 2018:** • ENERGY can apply for additional funds through 2018-19 PRRT based on performance and need. Trust term can be extended with amended/new TPA if agreed by Trust.

Item	Key Deliverables / Considerations	Timing / Next Steps
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Recent Action Items</u> • ESP working to finalize materials for LRC on April 10, 2017 – draft language from leg. Counsel has been shared with ESP staff • Communications finalized TPA with OCC / ESP to consider providing support to CME • ESP to consider implications of dropping below 500kw threshold due to investments in conservation <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date as possible to impact electricity bills this year (May 15, 2017). • Ongoing outreach with LDCs being undertaken by IESO	• RR posting on the proposed amendment – posted March 9, 2017 for 30 days • Report back to TBC/MBC by spring 2017 (per TBC/MBC Minute) • LRC on April 10, 2016 • Effective April/May 2017 (TBD)
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • IESO's stakeholder engagement re Market Renewal is ongoing.	• Continue this work as part of LTEP

Item	Key Deliverables / Considerations	Timing / Next Steps
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Recent Action Items</u> • ESP to work with other ministries regarding other measures that can be considered for SMEs <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in spring 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March

Item	Key Deliverables / Considerations	Timing / Next Steps
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion • March 14, 2017: Letter received requesting additional information by March 24, 2017 • Ministry preparing responsive materials
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP	• Preliminary discussion on April 19, 2017 (TBD)
12) Bill Presentment (SNAP/LSB)		
• ENERGY	• Ministry to begin work on bill presentment	• Initial discussion on March 31, 2017

Hi John, Emily,

FYI on the attached.

Emily, note point 8 in the legislative issues document:

- restrictions on consumer group's ability to "opt-out" or by-pass the charge (to avoid de-valuing the asset)

Likely not quite on point, but in the ballpark perhaps. Not quite sure what they mean by ''group'' in this context.

Ron

Implementation of Ontario's Fair Hydro Plan
Week of March 13, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		

• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation:
	  o Defining mitigation and recovery mechanism; and
	  o Establishing roles for IESO, OPG and OEB
	• Regulation (amend O.Reg.429/04)
	• Shareholder Declaration and Resolution
	• Third Party Technical Report re Long Lived Assets (TBD)
	• Accounting opinions from E&Y (OPG) and KPMG (IESO)
	• Financing:
	  o IESO line of credit to bridge from May-July;
	  o OEFC to OPG equity injection structure; and
	  o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)
	
	<u>Considerations</u>
	• GA refinancing legislation could also include legislative changes to enable broadening of RRRP, expanding of OESP and establishing of FN delivery credit.
	• Ongoing legal, accounting and financing risk assessments.
	• Impact on Electricity Sector Dedicated Income.
	• OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers.
		• Report back to TBC/MBC by spring 2017, prior to going to LRC with any legislation, on the approach to refinance GA (per TBC/MBC Minute)
		
		• Report to TBC/MBC, LRC and Cabinet in spring 2017 (per Cabinet Minute)
		
		• Provide comfort level to allow OEB to include in May 2017 RPP
		
		• Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure	• LDC working group kick-off March 14, 2017 • Report back to TB/MBC by Spring 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
	in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Fall 2017 implementation (per Cabinet Minute)
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Considerations</u> • OEB has been engaged on implementation timelines for 50% + new eligibility – Potentially early Spring. • Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to use OESP variance (approx. $100M) to reduce current OESP charge to zero and continue funding existing program until tax changes in place. Currently engaging OEB. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 • Program in place in 2017 (per Cabinet Minute)
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13M to $20M

Item	Key Deliverables / Considerations	Timing / Next Steps
	• Work with LDCs to consider any bill messaging.	• Program in place in 2017 (per Cabinet Minute)
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, TBS, MOF and H1	• TBC/MBC Submission • Trust Structure • Transfer Payment Agreement (multi-party) <u>Considerations</u> • Legislative changes not required. • Funding needs to flow to the Trust prior to March 31, 2017.	• Ongoing engagement with Hydro One, LSB, OPCD, CSD on development of Transfer Payment Agreement (TPA) and Trust Declaration (including sharing of drafts for comment) • Hydro One to finalize establishment of Trust by March 17, 2017 **Week of March 20, 2017:** • Execute TPA between the Ministry and the Trust by March 22nd • Initiate process to flow funds to the Trust; to be completed before March 31st **April to May 2017:** • Additional trustees to be appointment; Trust develops further details, e.g. customer eligibility criteria and processes for LDCs to apply for funds; to be developed in consultation with LDCs **June 2017:** • Report back to TB/MBC with

Item	Key Deliverables / Considerations	Timing / Next Steps
		final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date to impact electricity bills this year (May 15, 2017). • Working with the Ontario Chamber of Commerce on a targeted outreach campaign.	• RR posting on the proposed amendment – posted March 9, 2017 for 30 days • Report back to TBC/MBC by spring 2017 (per TBC/MBC Minute) • LRC on March 11, 2016 • Effective May 2017 (TBD)
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD)	• Continue this work as part of LTEP

Item	Key Deliverables / Considerations	Timing / Next Steps
	Considerations • Opportunity to highlight Market Renewal in the next LTEP. • IESO's stakeholder engagements on Market Renewal is ongoing. • Moving away from a two schedule system could impact consumer prices depending on implementation. • Most of the savings accrue from the move to a capacity auction. These savings do not materialize until the province has capacity requirements.	
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' Considerations • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs Considerations • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in spring 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and	• Early-mid March

Item	Key Deliverables / Considerations	Timing / Next Steps
	o Agencies (i.e., IESO, OPG, OEB and H1)	
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion. • Awaiting formal letter requesting additional information
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP	• Preliminary discussion in April 2017 (TBD)

Summary of Legislative Changes

What follows is a summary of five categories of legislative issues that are currently being dealt with by the legislative team. There is significant overlap between the categories (for example, some of the basic legislative changes could be categorized as changes that are designed to address market considerations).

The drafting of the legislative amendments will be a very detailed and iterative process and drafts of the legislation are currently under review by the team. We also anticipate that the provisions will be reviewed by other experts (for example, US counsel and investment banking advisor). However, we do not anticipate that the primary categories of amendment will change.

1. Basic Legislative Changes Required to Bring the Program into Existence

For example:

- explain policy intent (inter-generational funding)
- revise the general objects/purposes of the legislation to permit the program
- add new objects and rights for IESO to permit IESO's role in the program
- add obligations for IESO to make payments with respect to amounts borrowed under the securitization, the repayment of interest costs or charges, and costs related to the operation or management of the trust or other entity
- provide authority to OPG to establish trust or other entity and its right to recover interest costs, charges, and operating and management costs
    - allow for Trust/SPV to warehouse funds
- define the regulatory asset and allow it to be bought/sold between IESO and Trust/SPV
- define (generally) the group of consumers who benefit from GA refinancing and who will be required to repay it
- establishment of the IESO's obligations

2. Legislative Provisions to Establish the Regulatory Role of the OEB

For example,

- OEB role in creation of the regulatory asset
- OEB role with respect to review of calculations as to amounts to be paid by ratepayers to satisfy the debt obligations

DRAFT

- OEB role with respect to “true-up” of GA calculations (annual or semi-annual)
- OEB role regarding administrative costs of the trust or entity

3. Legislative Provisions Related to OPG

For example,

- provisions to ensure that OPG has the legal authority to implement the program
- provisions to ensure that OPG’s assets are properly ring-fenced
- provisions to ensure OPG has authority to create subsidiaries or other entities and transact with the Trust/SPV

4. Legislative Provisions to Address Market Considerations

For example, provisions to provide,

- the creation of the new trust (or other) entity and ensure that it is bankruptcy remote
- clear identification of consumer groups to whom the program applies (“RPP eligible”)
- restrictions on consumer group’s ability to “opt-out” or by-pass the charge (to avoid de-valuing the asset)
- establishment of the owner’s clear right to the regulatory asset to enable payment of principal and interest to investors
- a re-set or true-up mechanism to enable the owner of the payment stream to account for differences between anticipated and actual performance of the GA
- a system to deal with sharing/pro-rating if the ratepayer pays less than the invoiced amount
- irrevocability of the owner’s property right (or a surrogate for irrevocability)
- the establishment of a “true sale” of the regulatory asset

5. Addition of Legislative Provisions (to be considered)

- cap maximum GA refinancing in a year by dollar value
- set a maximum interest amount for GA refinancing debt after year 5

DRAFT

- cap GA refinancing based on OPG financial ratios
- fix the date until which rate payers receive a discount for GA refinancing
- fix a total amount to be borrowed as “principal”, at which point further borrowing must service the debt and does not reduce GA paid by rate payers
- determine how surpluses in collections are to be applied (e.g. reinvest in GA reduction before new debt)
- cap increases to rate payer bills at no more than ■% in a year

DRAFT

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
March 15, 2017

Agenda

1) GA Refinancing
    - OPG Update
    - IESO Update
    - OPG Update
    - Legislative Drafting (LSB / Blakes)

2) Affordability Fund (CRED)

3) RRRP, OESP and FN (SNAP)

4) ICI (ESPD)

Summary of Legislative Changes

What follows is a summary of five categories of legislative issues that are currently being dealt with by the legislative team. There is significant overlap between the categories (for example, some of the basic legislative changes could be categorized as changes that are designed to address market considerations).

The drafting of the legislative amendments will be a very detailed and iterative process and drafts of the legislation are currently under review by the team. We also anticipate that the provisions will be reviewed by other experts (for example, US counsel and investment banking advisor). However, we do not anticipate that the primary categories of amendment will change.

1. Basic Legislative Changes Required to Bring the Program into Existence

For example:

- explain policy intent (inter-generational funding)
- revise the general objects/purposes of the legislation to permit the program
- add new objects and rights for IESO to permit IESO's role in the program
- add obligations for IESO to make payments with respect to amounts borrowed under the securitization, the repayment of interest costs or charges, and costs related to the operation or management of the trust or other entity
- provide authority to OPG to establish trust or other entity and its right to recover interest costs, charges, and operating and management costs
    - allow for Trust/SPV to warehouse funds
- define the regulatory asset and allow it to be bought/sold between IESO and Trust/SPV
- define (generally) the group of consumers who benefit from GA refinancing and who will be required to repay it
- establishment of the IESO's obligations

2. Legislative Provisions to Establish the Regulatory Role of the OEB

For example,

- OEB role in creation of the regulatory asset
- OEB role with respect to review of calculations as to amounts to be paid by ratepayers to satisfy the debt obligations

DRAFT

- OEB role with respect to “true-up” of GA calculations (annual or semi-annual)
- OEB role regarding administrative costs of the trust or entity

3. Legislative Provisions Related to OPG

For example,

- provisions to ensure that OPG has the legal authority to implement the program
- provisions to ensure that OPG’s assets are properly ring-fenced
- provisions to ensure OPG has authority to create subsidiaries or other entities and transact with the Trust/SPV

4. Legislative Provisions to Address Market Considerations

For example, provisions to provide,

- the creation of the new trust (or other) entity and ensure that it is bankruptcy remote
- clear identification of consumer groups to whom the program applies (“RPP eligible”)
- restrictions on consumer group’s ability to “opt-out” or by-pass the charge (to avoid de-valuing the asset)
- establishment of the owner’s clear right to the regulatory asset to enable payment of principal and interest to investors
- a re-set or true-up mechanism to enable the owner of the payment stream to account for differences between anticipated and actual performance of the GA
- a system to deal with sharing/pro-rating if the ratepayer pays less than the invoiced amount
- irrevocability of the owner’s property right (or a surrogate for irrevocability)
- the establishment of a “true sale” of the regulatory asset

5. Addition of Legislative Provisions (to be considered)

- cap maximum GA refinancing in a year by dollar value
- set a maximum interest amount for GA refinancing debt after year 5

DRAFT

- cap GA refinancing based on OPG financial ratios
- fix the date until which rate payers receive a discount for GA refinancing

Subject: RE: Rate Mitigation Implementation

Hi David,

I thought I would share a high level summary of this morning's discussion.

The meeting started with a conversation around structures and how Energy plans to move all of the elements of the Fair Hydro Plan forward. In essence, these Thursday meetings will become a regular occurrence (next week is scheduled for Wednesday). This will act as a feeder for issue specific working groups in order to have a single window for reporting in on progress and issues that require resolution. See attached "OFHP Gov and Delivery

Structure" for details. There will also be regular DM level updates to keep respective Ministries apprised of progress.

GA Smoothing (Blakes Update)

Blakes, who has been engaged by the Ministry of Energy, provided an overview of the Long Island Power Authority securitization structure that has been referenced several times as a model (albeit smaller) for the GA Smoothing mechanism. Here are some high level details:

o Nuclear facility mothballed and facility costs needed to be repaid over time
o In part as a result of this large liability, LIPA's credit rating was weak increasing borrowing costs
o Created framework in legislation, allowed for a financing order every time the separate entity went out for financing (abbreviated hearing to review merits of case)
o Role of Financial Regulator (closer to OSC than OEB):
· Public Authority Control Board
· Abbreviated hearing
· Form over substance, to ensure calculations are correct
· Regulator needed to be sure that issuance designed to receive lower cost borrowing + meet objectives of the legislation
· If stakeholders want to challenge the validity of order, had 30 days to do so and then foreclosed, after 30 days bonds could be issued
o Asset:
· Order and charges irrevocable: right that could not be changed
· True-up mechanism: ability to adjust collections from end users to ensure cover principle and interest
· Ensure consumers cannot bypass system (pay as long as connected to the grid, whether consuming or not)
· Charge not more than 10% of bill
· Set up as a "true sale" - rights around asset protected
o Unique features (would not apply in Canada):
· State pledge: state would not introduce legislation or do anything to affect rights of assets or bondholders
§ Creates a constitutional right, if reversed is a "taking of the government" which results in a particular process
· Bankruptcy: bondholders can make an application to court to direct payment to bondholders
· While these elements cannot be replicated in the same way in Canada, Blakes suggests it will be important to enable similar protections under the Canadian legal framework to the extent possible

Blakes also walked through key elements that the market and rating agencies will seek in order to ensure this is financeable (according to Blakes there will be an expectation that mitigation measures will be in place for each):
· Size and breadth of customer base
· Non-bypassability
· Volatility of policy environment
· For more details, Blakes suggests reading the attached Moody's guide

GA Smoothing (OPG Update)

OPG walked through the attached summary workplan providing an update on key buckets of work including that included a number of touch points with the OFA and MoF focused on process for borrowing and equity infusion both at inception and ongoing approvals. Note that OPG is conceiving of each incremental debt issuance as an amendment to the borrowing agreement rather than as individual tranches in order to avoid differentiation between bondholder priority thereby minimizing long term interest costs. Note that working groups are beginning to meet to think in more detail to think through these issues.

GA Smoothing (IESO Update)

· IESO is thinking through what needs to be in legislation, regulation, market rules and in an agreement with OPG.

· IESO is also working with OPCD and KPMG to finalize its revised financials to incorporate its market books.

IESO will file its audited financial statement with the AG in May. Further thought is needed on timing and level of engagement with the AG's office.

· On a related note, the AG has reached out through OPCD for an initial briefing on the Fair Hydro Plan.

GA Smoothing (Legislative Drafting Update)

· Energy legal expects to have first drafts to share shortly for input

· Targeting mid-April for approvals

GA Smoothing (General)

· OEB was also included in the discussion and continues to have concerns about its role in the process. Further consideration is required in the context of accounting and financing imperatives

Other Updates

· Work on the RRRP, OESP and First Nations rate is progressing in parallel. There was some talk of inclusion of these elements in the Budget Bill, but no certainty on whether that would be possible from a timing perspective.

· The Affordability Fund is moving on a more expedited path. A first draft of the TPA has been shared with Hydro One for review. Hydro One is working to establish the Trust.

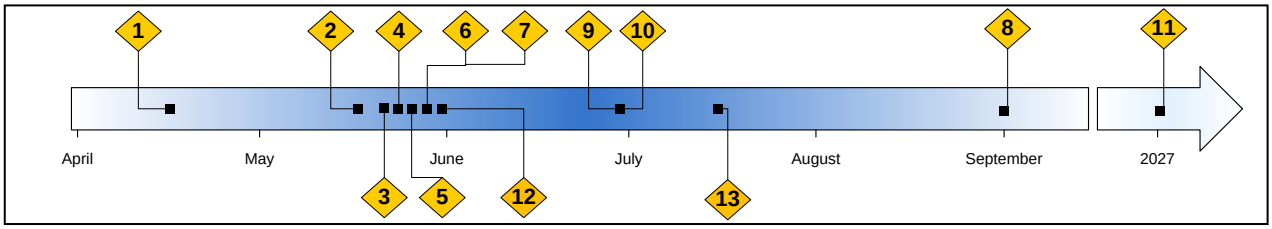
Thanks,
Scott

Summary of Work Plan

Below is an overview of the elements of the draft workplan to set up a trust special purpose financing vehicle (SPV) that would hold the claim on future customers and the debt issued to fund the payment to the IESO in accordance with Ontario's Fair Hydro Plan. All elements of the work plan will consider the key requirements of OPG with respect to elimination or mitigation of risks.

Workplan Overview

The draft workplan below is divided into major components required to set up the trust SPV as part of Ontario's Fair Hydro Plan. Each major component is divided into sub-components that provide further aspects / characteristics / requirements.



[Note deleted #13]

1. Legislative Requirements [Stakeholders: OPG, IESO, OEB, MOE]

a. Characteristics of Regulatory Asset

Key aspects will include collection rights, claim/counterclaim protection, future governmental action protection, saleability into SPV, protection from seller's creditors, OEB regulatory asset recognition, oversight of administration costs and recovery mechanism, and true-up process.

b. *Legislative amendments to implement the structure*

- Provisions in the Electricity Act (and OPG's articles) will be amended/updated to allow flexibility in OPG's corporate structure.
  1. These amendments would be similar in nature to previous amendments made to Hydro One's governing provisions in the Electricity Act.
  2. The amendments would, for example, allow OPG to create and operate through subsidiaries, and also enable OPG to raise financing through public offering of debt. (OPG may need to raise some financing to fund a portion of the subordinated debt going into the trust.)
- The electricity legislation will be amended to implement the deferral and financing of the GA, including amendments:
  1. to reflect that the IESO may defer collection of a portion of the GA;
  2. to create a "regulatory asset" consisting of the right to recover, over time, the amount GA being deferred, together with interest and other financing costs;
  3. to allow the IESO to sell that regulatory asset to a third party (the trust/financing vehicle);
  4. that authorizes the OEB to recognize the regulatory asset (which will likely comprise a deferral account) and allows the owner of the asset to recover the principal amount and financing costs for the GA deferral over time; and
  5. that also provides the OEB with no rights (or very limited rights) to review the terms on which the GA deferral is recovered (i.e. the interest rate, other financing costs and the amortization period). (This is needed to make the GA deferral financeable in the capital markets.)

2. Financing Process [Stakeholders: OPG, IESO]

a. Set up Financing Vehicle

The SPV will be established with a simplified trust indenture to facilitate flexible financing (issue short and long term debt in Canadian and US markets, ability to warehouse, ability to enter into cross currency swaps). The sole purpose of the SPV will be to acquire the

regulatory asset and raise debt. A financial service and management agreement with OPG will also be required.

b. Oversight

Appropriate oversight structure to be established independent of OPG management to review and monitor financing strategies, operating budgets and results of SPV. Reporting and monitoring requirements of Province, IESO and OEB and OPG to be determined.

c. Operations

Processes will be established for deal execution, operating cash management, regulatory reviews and credit rating agency reviews. Agreements will be established to define relationships with IESO (sales & servicing), billing payment and other administrative services, banking arrangements, subordinated debt agreement with OPG.

3. Equity Injection Process [Stakeholders: OPG, Ministry of Energy, Ministry of Finance]

The Province will require Treasury Board approval for periodic appropriations to fund equity injections into OPG. OPG Board approval will be required to issue a specified number of shares that can be periodically issued to the Province. The actual number of shares issued will be based on IESO forecast of funds required.

4. IESO and Trust Operational Process [Stakeholders: OPG, IESO]

Establish processes to facility the SPV's purchase of the IESO's regulatory asset, including timing (notice periods), frequency, fund flows, GA shortfall forecasts and true-up mechanisms.

5. Debt Issuance – General Planning [Stakeholders: OPG, MOF]

Develop debt issuance plan considering need for liquidity/working capital, debt profile (short/long term), debt composition (senior/subordinated), marketing plan (Canada and US), financing amounts and timing, credit rating agency legal opinions and required approvals.

6. Debt Issuance – Subordinated [Stakeholders: OPG]

Establish subordinated debt characteristics (risk, return, cash flows), repayment terms, issue frequency/timing and required approvals.

7. Debt Issuance – Short Term [Stakeholders: OPG]

Ability to aggregate and warehouse using short term CP / ABCP.

8. Debt Issuance – Long Term [Stakeholders: OPG]

Key steps in establishing OPG external long term debt financing include the following:

- Select bank advisor for Canadian market
- Select bank advisor for US market
- Select credit rating agency and establish high investment grade requirements
- Seek credit rating agency legal opinions (identified above in section 5)
- Ongoing financial and legal due diligence
- Credit rating agency presentation and follow-up Q&A
- Obtain preliminary or pre-sale rating
- Develop maturity profile if flexibility available
- Draft and execute offering memorandum, agency agreement and other legal documents
- Prepare marketing materials
- Marketing, road shows, investor one-on-ones
- Investor due diligence and collection of expression of interest
- USD denominated debt - ISDA contracts for swap arrangements and potential collateral requirements

9. **Recovering Interest, Administration and Other Financing Costs from IESO [Stakeholders: OPG, IESO]**

   Establish basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency.

10. **Paying Interest, Administration and Other Financing Costs to Providers [Stakeholders: OPG, IESO]**

    Establish bank accounts, basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency, required approvals and administration agreements (either with trust administrator or OPG).

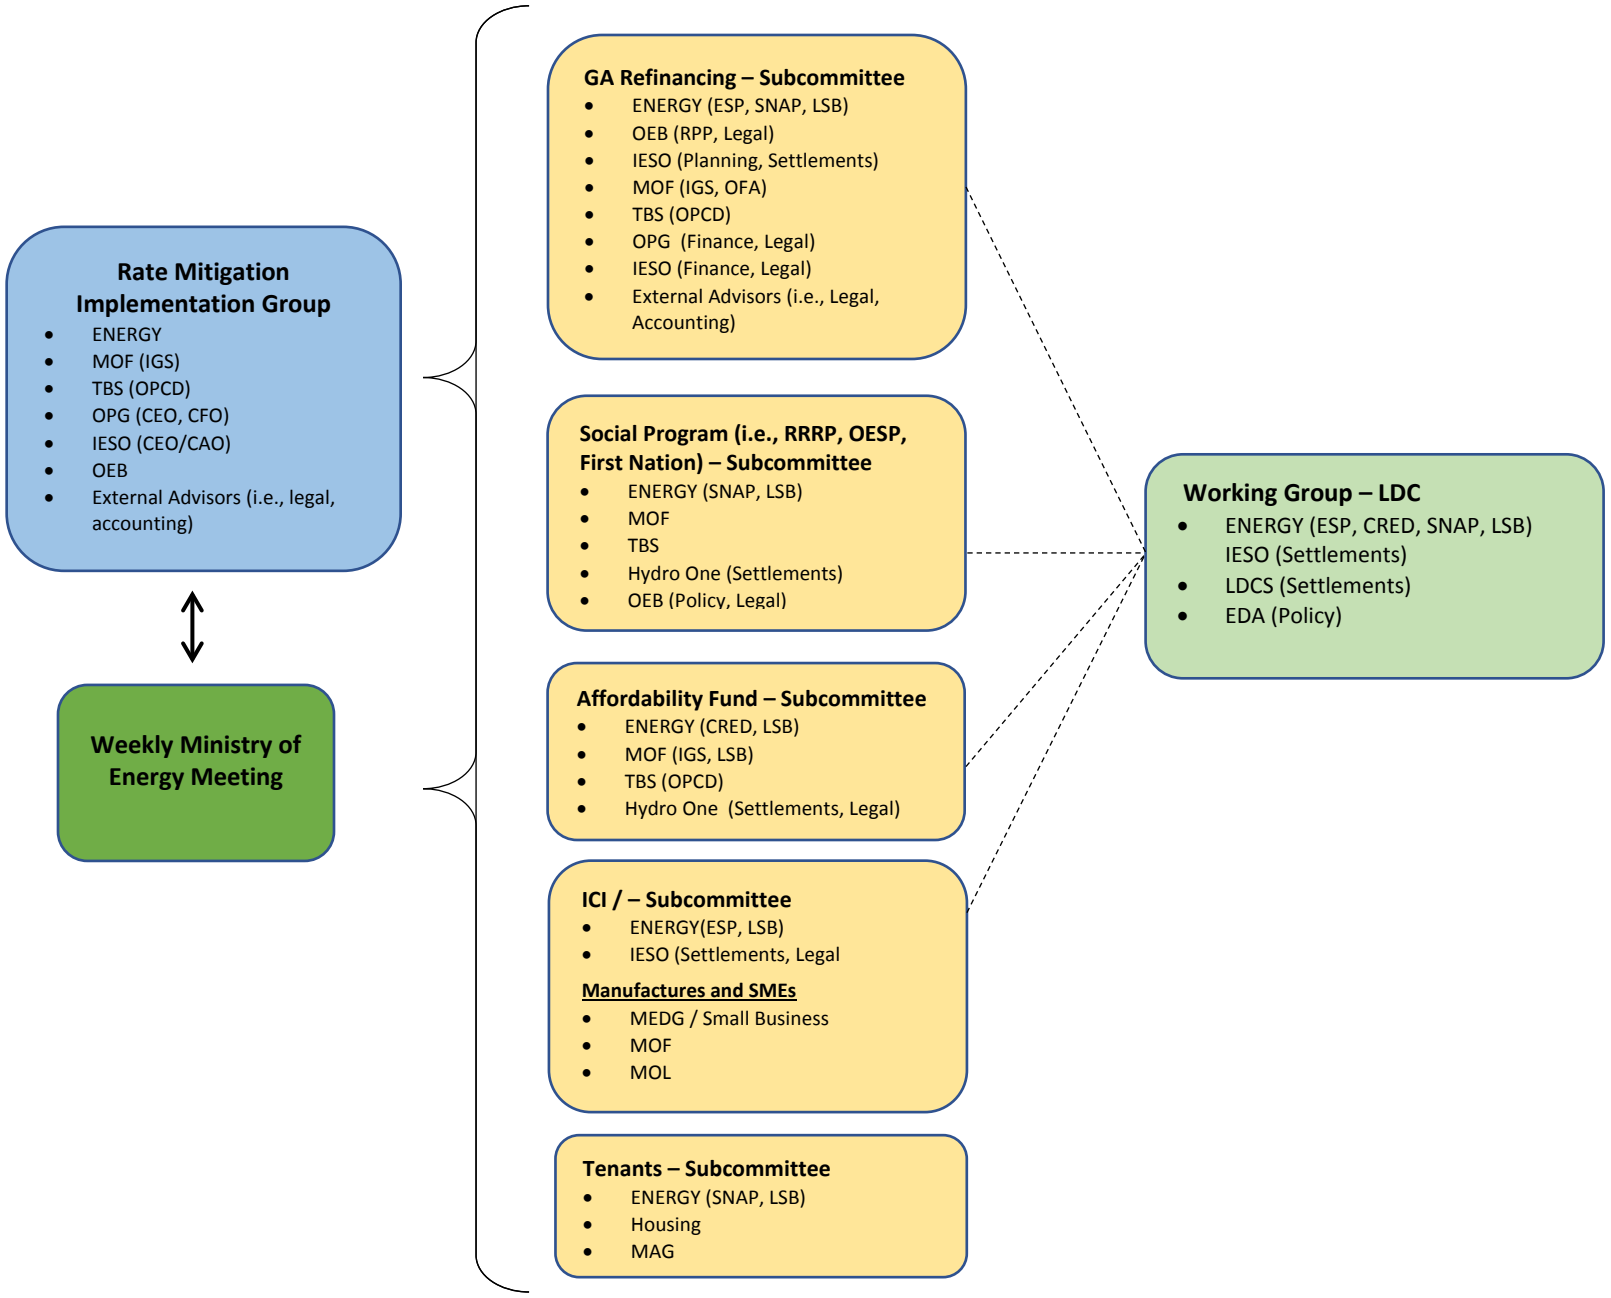
11. **Recovering Principal from IESO [Stakeholders: OPG, IESO]**

    Establish basis of recovery (regulatory asset schedule / actual financing amortization or maturity / other method), documentation requirements, approvals, timing and frequency.

12. **Accounting Requirements and Process [Stakeholders: OPG]**

    Establish overall accounting requirements for trust, regulated asset, consolidation with OPG, operational control of trust and restrictions on regulated asset. See further details in Appendix A – Terms Necessary for OPG to Consolidate the Global Adjustment Trust.

Governance and Delivery Structure for Implementation of Ontario's Fair Hydro Plan



WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
March 9, 2017

Agenda

1) Governance / Delivery Structure – Overview (ESPD)

2) GA Refinancing
    - Overview of US models (Blakes)
    - OPG Update
    - IESO Update
    - Legislative Drafting (LSB)

3) Affordability Fund (CRED)

4) RRRP, OESP and FN (SNAP)

5) ICI (ESPD)

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of March 6, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		

• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation:
	  o Defining mitigation and recovery mechanism; and
	  o Establishing roles for IESO, OPG and OEB
	• Regulation (amend O.Reg.429/04)
	• Shareholder Declaration and Resolution
	• Third Party Technical Report re Long Lived Assets (TBD)
	• Accounting opinions from E&Y (OPG) and KPMG (IESO)
	• Financing:
	  o IESO line of credit to bridge from May-July;
	  o OEFC to OPG equity injection structure; and
	  o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)
	
	<u>Considerations</u>
	• GA refinancing legislation could also include legislative changes to enable broadening of RRRP, expanding of OESP and establishing of FN delivery credit.
	• Ongoing legal, accounting and financing risk assessments.
	• Impact on Electricity Sector Dedicated Income.
	• OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers.
		• Report back to TBC/MBC by spring 2017, prior to going to LRC with any legislation, on the approach to refinance GA (per TBC/MBC Minute)
		
		• Report to TBC/MBC, LRC and Cabinet in spring 2017 (per Cabinet Minute)
		
		• Provide comfort level to allow OEB to include in May 2017 RPP
		
		• Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure	• Report back to TB/MBC by Spring 2017 • Fall 2017 implementation (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
	in place to provide to existing consumers in Algoma and Remotes. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB and OEB	• Legislation • Regulation (TBD) <u>Considerations</u> • Reach out to OEB to consider whether surplus funding of ~$100M could be used to increase OESP credits by 50%. Regulation can be updated quickly (need to consider whether posting on EBR is required). • Consider whether revised directive needed to continue having OEB administer program. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 • Program in place in 2017 (per Cabinet Minute)
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13M to $20M • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, TBS, MOF and H1	• TBC/MBC Submission • Trust Structure • Transfer Payment Agreement (multi-party) <u>Considerations</u> • Legislative changes not required. • Funding needs to flow to the Trust prior to March 31, 2017.	**Week of March 6, 2017:** • TBC/MBC approval (March 6th) • CAB approval (March 8th) • Follow up calls with several LDCs and EDA to provide updates and outline proposed principles for the Fund (Ongoing engagement with Hydro One, LSB, OPCD, CSD on principles and establishment of Trust and development of Transfer Payment Agreement (TPA) (including sharing of drafts for comment); **Week of March 13, 2017:** • Hydro One to finalize establishment of Trust by March 17th • Continue development of TPA, including circulating near to final version by March 17th **Week of March 20, 2017:** • Execute TPA between the Ministry and the Trust by March 22nd • Initiate process to flow funds to the Trust; to be completed before March 31st

Item	Key Deliverables / Considerations	Timing / Next Steps
		April to May 2017: • Additional trustees to be appointment; Trust develops further details, e.g. customer eligibility criteria and processes for LDCs to apply for funds; to be developed in consultation with LDCs **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date to impact electricity bills this year (May 15, 2017). • RR posting is typically a minimum of 45-days for all regulatory changes affecting business to allow for review/comment. **Note:** RR posting is not a legal requirement but a best practice. • Working with the Ontario Chamber of Commerce on a targeted outreach campaign.	• RR posting on the proposed amendment • Report back to TBC/MBC by spring 2017 (per TBC/MBC Minute) • LRC [DATE] • Effective May 2017 (TBD)

Item	Key Deliverables / Considerations	Timing / Next Steps
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • Opportunity to highlight Market Renewal in the next LTEP. • IESO's stakeholder engagements on Market Renewal is ongoing. • Moving away from a two schedule system could impact consumer prices depending on implementation. • Most of the savings accrue from the move to a capacity auction. These savings do not materialize until the province has capacity requirements.	• Continue this work as part of LTEP
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in spring 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March
11) FAO Engagement		
• ENERGY, MOF/OFA, FAO	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion.

1. Scope

This methodology describes our global approach to rating securities backed by utility cost recovery charges ("UCRC" bonds) that are established by special legislation and financing orders issued by utility regulatory bodies. The charges backing UCRC bonds rated by us have been established by state legislation and state utility regulatory bodies in the United States. For UCRC bonds backed by charges authorized by other jurisdictions, we will analyze the specifics of the securitization's legal framework and regulations – and their implications for the quality of the protections afforded to investors – within the general methodology described in this report.

Examples of cost recovery charges include those imposed to cover certain costs of utility companies that had been incurred in a regulated environment but could no longer be recovered because of a change to a more competitive regulatory regime (i.e., charges sometimes referred to as "stranded utility charges") and those imposed to pay for environmental cleanups, clean energy or for the replenishment of reserves established for repair of facilities damaged by natural calamities, such as hurricanes or tornados.

2. Executive Summary

A utility cost recovery charge bond is a bond typically issued by a special purpose entity of a utility, or by a special borrowing conduit, to recover specified costs as authorized by special legislation and a specific financing order issued by a public service utility regulatory body. The bonds are backed by a property right created by the legislation, which provides the right to impose and collect special charges on customers' monthly electric bills.

This credit rating methodology was republished on June 22, 2015 containing an updated monitoring section and minor other editorial updates in the body of the text and in certain footnotes. The content of this Credit Rating Methodology has not been changed.

The credit quality of the bonds depends on the legal strength of the property right, which in turn depends on the specifics of the related legislation and financing order, and on the size and economic strength and stability of the ratepayer base against which the costs will be imposed. Therefore, our credit analysis of cost recovery charge securitizations focuses on both legal and economic factors that can influence whether investors in UCRC bonds will be paid as promised.

On the legal side, we assess the extent to which the legislation that authorizes the cost recovery charges[1] provides clear procedures for insulating the transaction from claims by other parties and is likely to be able to withstand challenges to rescind or alter the legislation prior to the legal final maturity of the securities. Consequently, our analysis focuses on the extent to which the legislation clearly defines (1) a property that entitles the owner of such property – the utility, or, in some cases, a public trust or corporation – the right to charge the fee throughout the life of the security in an amount sufficient to make full and timely repayment of principal and interest on the security, (2) the process the owner of the property must follow to charge the fee, (3) the irrevocable right of the owner of the property to transfer the fee to a special purpose financing vehicle for securitization purposes, (4) the type of financing vehicle authorized to issue securities backed by the fees, and (5) the process to be followed such that the transfer would be viewed as a "true sale" of the rights to the cash flows rather than a pledge of collateral for a financing for transactions that involve the transfer of the property from the utility to the issuer. A true sale would insulate the securitization from a bankruptcy of the utility, protecting securitization investors from potential claims on the cash flows by the utility's creditors. In addition, we assess whether the legislation has a government pledge not to impair the utility's right to collect the charges and the consequences if the government nevertheless does attempt to impair the right.

We also examine the likelihood that other potential claimants, such as other creditors of the financing vehicle if it were to become bankrupt or investors in other securities that have been issued by the utility, might make a successful claim on the cash flows of the securitization. Furthermore, we consider the breadth of the market to whom the charge will be applied and the extent to which the charge might be "bypassable," that is, the extent to which current or future customers might be categorized as outside the scope of the applicability of the charge.

Our assessment of the overall legal strength of the property right involves qualitative and judgmental factors. Transactions that are strong with respect to each of such characteristics may achieve the highest rating while the impact of weakening any of the attributes would be evaluated on a case-by-case basis.

On the economic side, our analysis focuses on the likelihood that the charges established by the legislation and accompanying regulations will be sufficient to repay the securitization bonds and on whether the charges might become onerous enough to cause pressure to rescind or alter the charges through future legislative or legal actions. As part of that assessment, we evaluate (1) possible changes in the size and composition of the customer base against whom the fee is to be charged, incorporating an evaluation of the breadth and diversity of the customer base, (2) the likely per capita energy usage (in those cases in which the fee charged is based on the usage amount), and (3) the fee rate, including any mechanism built in by the legislation that enables the fee to be reset over time to offset shortfalls that might develop over the life of the securitization (i.e., the transaction's "true up" mechanism). Generally the true-up mechanism is in effect the most important credit protection for UCRC transactions, limiting the risk that the cost recovery charges will be insufficient to pay off the bonds, thereby limiting the need for traditional sources of credit enhancement such as subordination and reserve funds.[2]

In analyzing a transaction's true-up mechanism, we examine how high rates would need to be set under "stressful" future scenarios to fully pay off the bonds, to assess the risk that onerous future rates might cause pressure to overturn or change the legislation and/or regulations establishing the charges. The variables that we typically "stress" test for UCRC bonds are the base against which the charge is to be

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.

[1] Throughout this report we use the terms "cost recovery charges" and "cost recovery fees" interchangeably.

[2] The true-up mechanism also limits the need to analyze the underwriting of the customer base, since the mechanism adjusts for all shortfalls, including those caused by customer defaults.

applied (usually energy usage) and the servicing fee. To obtain a high rating, we would expect that even in a stressful environment, such as one in which energy usage declined dramatically, the charge per customer necessary to pay off the bonds would be reasonably low both in absolute terms and as a percentage of the customer's energy bill. The specific stresses that we place on the variables are issuer-specific and are determined on a case-by-case basis.

In addition, we analyze the implications of other structural features of the securitization that could affect the risk of investor loss. For example, we examine the risk implications of how the cash flows are allocated among the various classes of investors and the other participants in the transaction, and the extent to which any other sources of funds are likely to be sufficient to offset any remaining shortfalls to investors, whether the shortfalls are temporary ("liquidity") or permanent ("credit enhancement").

3. Analyzing the Risk Factors

Because of the unique characteristics of this highly regulated asset class, our credit analysis of UCRC securitizations focuses primarily on the legislation and the true-up mechanism. The degree of certainty that the fees generated through the legislation will be sufficient to pay off the securitizations in full is a complementary aspect of the analysis. .

Depending on the risks and mitigants in the relevant jurisdiction, transaction ratings will typically be positioned between the government rating and the country ceiling. Risks that could lead us to determine transaction ratings to be lower than the country ceiling include, for example, continued high levels of debt burden in a utility system. Such high levels of debt, if deemed unsustainable in the long term, may lead to political pressure to adjust the regulatory framework around the system deficit, with some potential negative impact on the related securitization transactions.

In the following sections, we describe the factors that typically lead to a high degree of certainty and thus high ratings on the bonds.

3.1 Protection against Future Impairment of the Right to Collect the Charges

Utility cost recovery charges are established by special legislation that authorizes the creation of a property right to collect future surcharges on customers' monthly electricity bills as the means to pay back the UCRC bonds. Consequently, we analyze the extent to which investors are protected against the enactment of future legislative changes that would weaken that right. For example, investor risk would be mitigated in a situation in which (1) the legislation contained a pledge by the jurisdiction not to impair the right to collect the special charges until the maturity of the bonds and (2) violation of that pledge would be a violation of law [3].

3.2 Irrevocability of the Financing Order

The legislation is typically accompanied by a financing order issued by the public service commission that authorizes the utilities to impose and collect the surcharges on the customer's monthly electric bill during the term of the bonds. Our analysis assesses whether the financing order is irrevocable, which would protect investors against future adverse changes that may reduce the charges backing the bonds.

3.3 Sufficiency of the Charges and the True-Up Mechanism

The charges are usually assessed as an amount linked to a customer's energy usage. Our analysis considers whether the financing order places any limits on charges – e.g., caps on the levels of charges or limits on the length of time that the charges can be imposed – that might cause the collections to be insufficient to provide for timely payment of the principal and interest on the UCRC bonds. In addition, we analyze whether the period over which the charges are allowed to be levied provides sufficient cushion to pay off the bonds by maturity in the event that collections come in more slowly than originally projected.

[3] Violation of the non-impairment pledge would be a violation of the Contract Clause and the Takings Clause under the Federal and State constitutions.

As part of that analysis, we evaluate the power of any true-up mechanism that is provided for in the legislation and detailed in the financing order to correct for shortfalls that may develop over the life of the securities. A true-up mechanism typically adjusts future fee rates on a scheduled periodic basis (e.g., semiannually or annually) to correct for any under- (or over-) collections in a preceding period and to ensure the full and timely payment of future scheduled debt service, based on updated usage forecasts. The greater the frequency with which the true-up adjustments are made, the less likely that investors will suffer a shortfall at the final maturity date.[4]

That is particularly important as the security approaches the final maturity date; frequent rate adjustments based on then-current projections mitigate the risk that actual collections will deviate substantially from those projections, limiting the possibility of shortfalls at the final maturity date. Consequently, our analysis assesses the conditions under which more frequent true-ups are allowed, especially near the final maturity.[5]

3.4 Non-Bypassability of the Charges

We evaluate whether the charges are "non-bypassable," that is, whether the charges must be collected from all existing and future customers of the utility or its successors or assignees within the utility's service territory, and whether the financing order provides that a severance fee be charged to customers who switch to other service providers within the territory during the life of the bonds. We evaluate any exceptions to the non-bypassabilty rule, and consider the materiality of those exemptions to the cash collections. Charges that cannot be bypassed (i.e., those that cannot be avoided by the customers in the utility's service area) ensure a continuing payer base for the charges, leading to less risk for investors. As described in the Structural Features section (Section 3.8), the power of the true-up mechanism to protect investors is dependent on the non-bypassability of the charges. As a result, non-bypassability (with limited, immaterial exemptions) has been a key factor behind the high ratings that are typically assigned to these transactions, without the need for considerable protection from traditional types of credit protection, such as reserve accounts or subordination.

3.5 Bankruptcy of the Utility

For structures in which the initial owner of the property is a utility, a bankruptcy of the utility could expose securitization investors to the risk that other creditors of the utility might make a claim on the cost recovery charges or that payments to securitization investors might be delayed as a result of an imposition of an automatic stay on payments from the utility company.[6,7] However, that risk would be limited if it were clear that a bankruptcy court would view the transfer of the rights to the charges as a "true sale" of those rights, rather than as a financing of the company. As a result, we analyze whether the legislation clearly establishes the utility's right to receive and transfer the rights to the charges and provides unambiguous procedures for transferring those rights to the financing vehicle as a true sale, and whether those procedures are followed in the financing order.

In cases where the utility is the servicer of the transaction, we analyze whether a bankruptcy of the utility could lead to a disruption in servicing, e.g., billing and collecting. However, given the essential service provided by the utility, we expect that government authorities would intervene to prevent any disruption in servicing that might result from a bankruptcy. As a result, where the servicer is a regulated utility, we view operational risk as low. Consequently, we typically would consider a transaction to be consistent with a Aaa rating even if the servicer were not investment grade, as long as the transaction were structured with some mitigants for operational risk, such as the inclusion of a backup servicer and/or provision for additional liquidity.[8]

[4] Generally, the charges collected rank senior to other charges of a utility system and represent only a small amount of the total revenues of such system .
[5] Transactions typically allow for more frequent true-ups during the "tail period" between the transaction's stated "expected" maturity (determined by the sponsor) and the "legal" final maturity. The legal final maturity is the important date from our rating perspective, the date by which all principal must be repaid.
[6] In some transactions, the property is created by law for the benefit of a public trust or corporation that also is created by the same law. In such cases, the true sale risk would be non-existent as there is no sale or transfer of the property.
[7] For a discussion of how Moody's analyzes legal risks in structured finance transactions, see Moody's Related Research section at the end of this report.
[8] The rating standard for a backup servicer likely would be lower than investment grade, but would depend on the specific facts and circumstances of the transaction and servicer.

In addition, we analyze whether the bankruptcy of the utility could cause a disruption in the remittance of payments by the utility to bondholders. Such a disruption could occur if the remittances of the charges were "commingled" with the other funds of the utility and the bankruptcy court ordered a halt to payments until proper ownership of the funds could be sorted out. Our analysis includes an assessment of the ways in which the utility separates the cost recovery charges received from its other funds and the frequency with which it transfers the funds to the trust.

3.6 Bankruptcy of the Financing Vehicle

Another potential risk to investors in UCRC securitizations is a bankruptcy of the financing vehicle. That could expose investors to the risk that other creditors of the vehicle might make a claim on the cost recovery charges or that payments to investors might be delayed by the imposition of an automatic stay. Consequently, we analyze (1) the likelihood that a third-party creditor would be able to successfully petition the owner of the assets (i.e., the financing vehicle) into an involuntary bankruptcy proceeding or (2) the likelihood that the owner of the assets would voluntarily seek the protection of the bankruptcy courts.

To analyze the likelihood of an involuntary bankruptcy, we assess the characteristics that would mitigate that risk, such as if the financing vehicle had (1) no assets other than the right to the cost recovery charges, (2) no indebtedness other that the securitization debt, (3) limited activities that could give rise to contractual or other liabilities, and (4) agreements with the sponsor and other contracting parties not to petition for the dissolution, liquidation or bankruptcy of the securitization vehicle. Similarly, factors that would mitigate the risk of a voluntary bankruptcy would include (1) charter documents of the owner of the assets that require directors who are independent of the utility and (2) a unanimous vote of directors as a condition to filing a voluntary bankruptcy.

3.7 Economic Factors

Even if the financing order is irrevocable, the charges or the law that authorizes them could be subject to challenge in the courts or to future political pressure to rescind or change them through legislation. That is more likely the higher the charges, i.e., the more the economic incentive for a challenge or in circumstances where the financial imbalances in a utility system increase. Consequently, our economic analysis focuses on the size of the cost recovery charge, both in absolute terms and as a percentage of the customer's energy bill. Typically the percentage of a residential customer's monthly bill devoted to the cost recovery charge is less than 10%.

We typically also look at stressful collection scenarios. For example, in one scenario, we assume (1) that energy usage falls short of the utility's projections[9] by a progressively increasing amount each year (typically 5% per year), (2) that forecasted collections in peak usage months do not materialize (for example, 100% of the collections in the peak month and 50% of the collections in the second highest-usage month), and (3) that the servicing fee is considerably higher than the current, "normal," servicing fee, representing the fee that would be required if the original servicer needed to be replaced in a stressful environment. In another scenario, we typically assume that energy usage is lower than projected by a set amount throughout the life of the securitization (typically 25%). For highly rated transactions, we would expect that the cost recovery charge would remain relatively low even in those highly stressful scenarios.

While the specific stresses that we place on the variables have been quite similar to date, this reflects the fact that all rated transactions to date have involved requests for the highest ratings and been supported by highly diverse, broad-based service areas. However, in general, stresses are issuer-specific and are determined on a case-by-case basis. One of the factors that we use to determine the appropriate stress level for a transaction is the variability of the base against which the charge is applied, for example, the population in the service area or the energy usage in the service area. Customer bases that are less broad-based and diversified tend to be more variable; as a result, we would apply more severe stresses in those situations.

[9] We typically assess the reasonableness of the utility's projections by analyzing (1) the historical energy usage in the utility's service region and the variances between past projections and actual outcomes, and (2) the likely growth in electricity usage in the service area of the utility, taking into account the projected economic growth in the region and the possible competitive impact of technological advances, such as those in the development of solar energy.

In particular, we evaluate the economic diversity of the utility's service region to assess the potential variability in its economic health, which tends to drive changes in population and energy usage. An area that relies on multiple industries for economic growth will likely have a more stable business climate than an area that is dependent on the fortunes of one industry. In the latter case, the area's prospects will falter if that particular industry runs into hard times.

We also consider the mix in the customer base among residential, commercial, and industrial users. A utility with a large residential base relative to commercial and industrial users will tend to have less volatility in energy consumption, since energy consumption by commercial and industrial operations is more closely tied to the business cycle. Furthermore, residential customers are less likely to quickly embrace new energy production technologies and are less likely to cut back energy consumption dramatically if the price of energy were to rise. The higher variability of a commercial and industrial base can be exacerbated further if the service area's customer usage is concentrated in a few large commercial or industrial operations, which could make the overall energy consumption vulnerable if those entities were to decline or leave the area.

3.8 Structural Features

The key structural feature of UCRC transactions is the true-up mechanism. Our rating is highly dependent on the extent to which the mechanism adjusts the charges to correct for past shortfalls or forecasted future shortfalls. The effectiveness of those rate changes in raising funds depends, in turn, on how easily customers can escape the charges and how sensitive electricity usage is to increases in the utility charges. Therefore, our analysis of the true-up mechanism goes together with our analysis of how bypassable the cost recovery charges are and how easily customers can cut back on electricity usage (through alternative sources of energy or conservation). To be consistent with a particular rating, a strong true-up mechanism combined with non-bypassable charges mitigates the need for credit enhancement in the form of alternative sources of funds.

In addition, our analysis of the credit risk of a UCRC transaction incorporates our assessment of the implications of the transaction's cash flow allocation structure (sometimes referred to as the cash flow "waterfall"). In particular, we focus on the seniority of principal and interest payments to the bond's investors *vis-à-vis* payments to other participants. In addition, we analyze the extent to which the transaction has an alternative source of liquidity to pay principal and interest in the event that there is a temporary interruption in the flow of the cost recovery charges. For example, in many transactions there is a capital or reserve account with funds sufficient to pay interest for at least 1-2 months, if needed. Furthermore, we assess the extent to which the credit enhancement that is available in the transaction is likely to be sufficient to offset any shortfalls that might develop in the period between the final true-up adjustment and the maturity of the bonds.

4. Monitoring

In monitoring UCRC transactions, we apply the key components of this methodology. More specifically, we analyze, whether bond balances are in line with the scheduled principal amortization, which indicates the extent to which payments have been in line with our original expectations.

We review the periodic information received and look at whether there has been a draw on the reserve accounts. This data point provides further clues as to the steadiness of the cash flows and accuracy of true-up adjustments.

In addition, we analyze the factors that determine the future strength of the transaction. For example, we monitor any legal or political developments that could indicate an increased risk of changes in the legislation that could impair future cash flows to the transactions. Such risk may materialise, for example, in case of continued high financial imbalances in the system that may lead the system deficit to be viewed as unsustainable over the long-term.

Depending on the jurisdiction, we also follow the rating of the utility as a proxy to assess any changes to the economic health of the service region and the potential for changes in the size and composition of the ratepayer base. Furthermore, we monitor the rating of the utility collecting the charges (as an indicator of its financial condition) to track the risk, typically quite small, that a bankruptcy could lead to disruption in billing and collections and in the remittance of payments to the bondholders.

In other instances, we may be more concerned with the behavior of the regulator of the utility system and less with individual utility companies. This could lead to a lower rating in the space between the local currency ceiling and the sovereign rating or the utility rating.

Thus changes on our expectations and other analytical components could have an impact on the rating of the securities and may result in a reassessment of the rating.

Moody's Related Research

The credit ratings assigned in this sector are primarily determined by this credit rating methodology. Certain broad methodological considerations (described in one or more secondary or cross-sector credit rating methodologies) may also be relevant to the determination of credit ratings of issuers and instruments in this sector. Potentially related secondary and cross-sector credit rating methodologies can be found here.

For data summarizing the historical robustness and predictive power of credit ratings assigned using this credit rating methodology, see link.

Please refer to Moody's Rating Symbols and Definitions, which is available here, for further information.

Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc., have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc., for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

For Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail clients. It would be dangerous for "retail clients" to make any investment decision based on MOODY'S credit rating. If in doubt you should contact your financial or other professional adviser.

For Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Subject: RE: Rate Mitigation Implementation

Hi David,

I thought I would share a high level summary of this morning's discussion.

The meeting started with a conversation around structures and how Energy plans to move all of the elements of the Fair Hydro Plan forward. In essence, these Thursday meetings will become a regular occurrence (next week is scheduled for Wednesday). This will act as a feeder for issue specific working groups in order to have a single window for reporting in on progress and issues that require resolution. See attached "OFHP Gov and Delivery

Structure" for details. There will also be regular DM level updates to keep respective Ministries apprised of progress.

GA Smoothing (Blakes Update)

Blakes, who has been engaged by the Ministry of Energy, provided an overview of the Long Island Power Authority securitization structure that has been referenced several times as a model (albeit smaller) for the GA Smoothing mechanism. Here are some high level details:

o Nuclear facility mothballed and facility costs needed to be repaid over time
o In part as a result of this large liability, LIPA's credit rating was weak increasing borrowing costs
o Created framework in legislation, allowed for a financing order every time the separate entity went out for financing (abbreviated hearing to review merits of case)
o Role of Financial Regulator (closer to OSC than OEB):
· Public Authority Control Board
· Abbreviated hearing
· Form over substance, to ensure calculations are correct
· Regulator needed to be sure that issuance designed to receive lower cost borrowing + meet objectives of the legislation
· If stakeholders want to challenge the validity of order, had 30 days to do so and then foreclosed, after 30 days bonds could be issued
o Asset:
· Order and charges irrevocable: right that could not be changed
· True-up mechanism: ability to adjust collections from end users to ensure cover principle and interest
· Ensure consumers cannot bypass system (pay as long as connected to the grid, whether consuming or not)
· Charge not more than 10% of bill
· Set up as a "true sale" - rights around asset protected
o Unique features (would not apply in Canada):
· State pledge: state would not introduce legislation or do anything to affect rights of assets or bondholders
§ Creates a constitutional right, if reversed is a "taking of the government" which results in a particular process
· Bankruptcy: bondholders can make an application to court to direct payment to bondholders
· While these elements cannot be replicated in the same way in Canada, Blakes suggests it will be important to enable similar protections under the Canadian legal framework to the extent possible

Blakes also walked through key elements that the market and rating agencies will seek in order to ensure this is financeable (according to Blakes there will be an expectation that mitigation measures will be in place for each):
· Size and breadth of customer base
· Non-bypassability
· Volatility of policy environment
· For more details, Blakes suggests reading the attached Moody's guide

GA Smoothing (OPG Update)

OPG walked through the attached summary workplan providing an update on key buckets of work including that included a number of touch points with the OFA and MoF focused on process for borrowing and equity infusion both at inception and ongoing approvals. Note that OPG is conceiving of each incremental debt issuance as an amendment to the borrowing agreement rather than as individual tranches in order to avoid differentiation between bondholder priority thereby minimizing long term interest costs. Note that working groups are beginning to meet to think in more detail to think through these issues.

GA Smoothing (IESO Update)

· IESO is thinking through what needs to be in legislation, regulation, market rules and in an agreement with OPG.

· IESO is also working with OPCD and KPMG to finalize its revised financials to incorporate its market books.

IESO will file its audited financial statement with the AG in May. Further thought is needed on timing and level of engagement with the AG's office.

· On a related note, the AG has reached out through OPCD for an initial briefing on the Fair Hydro Plan.

GA Smoothing (Legislative Drafting Update)

· Energy legal expects to have first drafts to share shortly for input

· Targeting mid-April for approvals

GA Smoothing (General)

· OEB was also included in the discussion and continues to have concerns about its role in the process. Further consideration is required in the context of accounting and financing imperatives

Other Updates

· Work on the RRRP, OESP and First Nations rate is progressing in parallel. There was some talk of inclusion of these elements in the Budget Bill, but no certainty on whether that would be possible from a timing perspective.

· The Affordability Fund is moving on a more expedited path. A first draft of the TPA has been shared with Hydro One for review. Hydro One is working to establish the Trust.

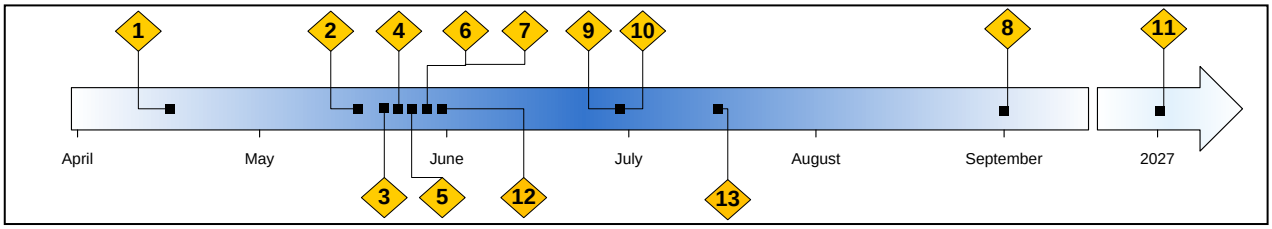
Thanks,
Scott

Summary of Work Plan

Below is an overview of the elements of the draft workplan to set up a trust special purpose financing vehicle (SPV) that would hold the claim on future customers and the debt issued to fund the payment to the IESO in accordance with Ontario's Fair Hydro Plan. All elements of the work plan will consider the key requirements of OPG with respect to elimination or mitigation of risks.

Workplan Overview

The draft workplan below is divided into major components required to set up the trust SPV as part of Ontario's Fair Hydro Plan. Each major component is divided into sub-components that provide further aspects / characteristics / requirements.



[Note deleted #13]

1. Legislative Requirements [Stakeholders: OPG, IESO, OEB, MOE]

a. Characteristics of Regulatory Asset

Key aspects will include collection rights, claim/counterclaim protection, future governmental action protection, saleability into SPV, protection from seller's creditors, OEB regulatory asset recognition, oversight of administration costs and recovery mechanism, and true-up process.

b. *Legislative amendments to implement the structure*

- Provisions in the Electricity Act (and OPG's articles) will be amended/updated to allow flexibility in OPG's corporate structure.
  1. These amendments would be similar in nature to previous amendments made to Hydro One's governing provisions in the Electricity Act.
  2. The amendments would, for example, allow OPG to create and operate through subsidiaries, and also enable OPG to raise financing through public offering of debt. (OPG may need to raise some financing to fund a portion of the subordinated debt going into the trust.)
- The electricity legislation will be amended to implement the deferral and financing of the GA, including amendments:
  1. to reflect that the IESO may defer collection of a portion of the GA;
  2. to create a "regulatory asset" consisting of the right to recover, over time, the amount GA being deferred, together with interest and other financing costs;
  3. to allow the IESO to sell that regulatory asset to a third party (the trust/financing vehicle);
  4. that authorizes the OEB to recognize the regulatory asset (which will likely comprise a deferral account) and allows the owner of the asset to recover the principal amount and financing costs for the GA deferral over time; and
  5. that also provides the OEB with no rights (or very limited rights) to review the terms on which the GA deferral is recovered (i.e. the interest rate, other financing costs and the amortization period). (This is needed to make the GA deferral financeable in the capital markets.)

2. Financing Process [Stakeholders: OPG, IESO]

a. Set up Financing Vehicle

The SPV will be established with a simplified trust indenture to facilitate flexible financing (issue short and long term debt in Canadian and US markets, ability to warehouse, ability to enter into cross currency swaps). The sole purpose of the SPV will be to acquire the

regulatory asset and raise debt. A financial service and management agreement with OPG will also be required.

b. Oversight

Appropriate oversight structure to be established independent of OPG management to review and monitor financing strategies, operating budgets and results of SPV. Reporting and monitoring requirements of Province, IESO and OEB and OPG to be determined.

c. Operations

Processes will be established for deal execution, operating cash management, regulatory reviews and credit rating agency reviews. Agreements will be established to define relationships with IESO (sales & servicing), billing payment and other administrative services, banking arrangements, subordinated debt agreement with OPG.

3. Equity Injection Process [Stakeholders: OPG, Ministry of Energy, Ministry of Finance]

The Province will require Treasury Board approval for periodic appropriations to fund equity injections into OPG. OPG Board approval will be required to issue a specified number of shares that can be periodically issued to the Province. The actual number of shares issued will be based on IESO forecast of funds required.

4. IESO and Trust Operational Process [Stakeholders: OPG, IESO]

Establish processes to facility the SPV's purchase of the IESO's regulatory asset, including timing (notice periods), frequency, fund flows, GA shortfall forecasts and true-up mechanisms.

5. Debt Issuance – General Planning [Stakeholders: OPG, MOF]

Develop debt issuance plan considering need for liquidity/working capital, debt profile (short/long term), debt composition (senior/subordinated), marketing plan (Canada and US), financing amounts and timing, credit rating agency legal opinions and required approvals.

6. Debt Issuance – Subordinated [Stakeholders: OPG]

Establish subordinated debt characteristics (risk, return, cash flows), repayment terms, issue frequency/timing and required approvals.

7. Debt Issuance – Short Term [Stakeholders: OPG]

Ability to aggregate and warehouse using short term CP / ABCP.

8. Debt Issuance – Long Term [Stakeholders: OPG]

Key steps in establishing OPG external long term debt financing include the following:

- Select bank advisor for Canadian market
- Select bank advisor for US market
- Select credit rating agency and establish high investment grade requirements
- Seek credit rating agency legal opinions (identified above in section 5)
- Ongoing financial and legal due diligence
- Credit rating agency presentation and follow-up Q&A
- Obtain preliminary or pre-sale rating
- Develop maturity profile if flexibility available
- Draft and execute offering memorandum, agency agreement and other legal documents
- Prepare marketing materials
- Marketing, road shows, investor one-on-ones
- Investor due diligence and collection of expression of interest
- USD denominated debt - ISDA contracts for swap arrangements and potential collateral requirements

9. **Recovering Interest, Administration and Other Financing Costs from IESO [Stakeholders: OPG, IESO]**

   Establish basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency.

10. **Paying Interest, Administration and Other Financing Costs to Providers [Stakeholders: OPG, IESO]**

    Establish bank accounts, basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency, required approvals and administration agreements (either with trust administrator or OPG).

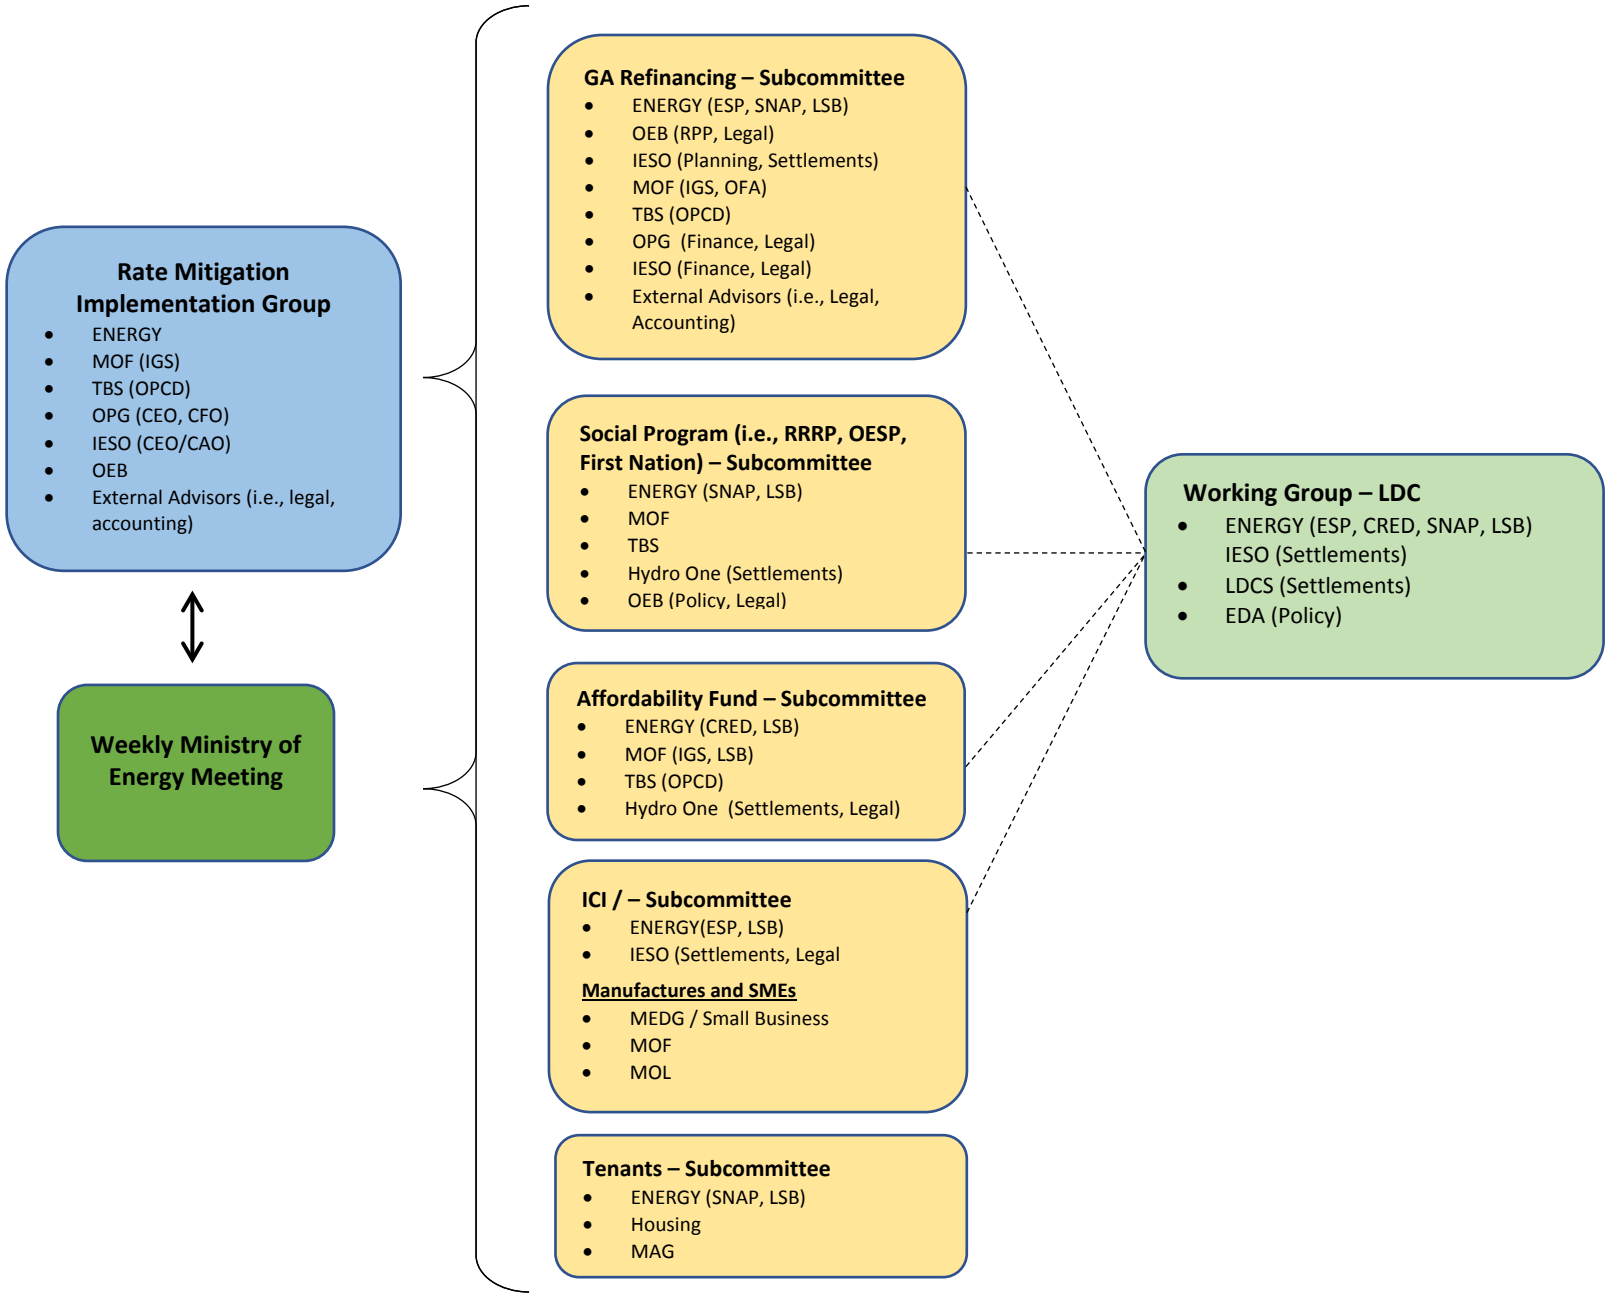
11. **Recovering Principal from IESO [Stakeholders: OPG, IESO]**

    Establish basis of recovery (regulatory asset schedule / actual financing amortization or maturity / other method), documentation requirements, approvals, timing and frequency.

12. **Accounting Requirements and Process [Stakeholders: OPG]**

    Establish overall accounting requirements for trust, regulated asset, consolidation with OPG, operational control of trust and restrictions on regulated asset. See further details in Appendix A – Terms Necessary for OPG to Consolidate the Global Adjustment Trust.

Governance and Delivery Structure for Implementation of Ontario's Fair Hydro Plan



WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
March 9, 2017

Agenda

1) Governance / Delivery Structure – Overview (ESPD)

2) GA Refinancing
    - Overview of US models (Blakes)
    - OPG Update
    - IESO Update
    - Legislative Drafting (LSB)

3) Affordability Fund (CRED)

4) RRRP, OESP and FN (SNAP)

5) ICI (ESPD)

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of March 6, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		

• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation:
	  o Defining mitigation and recovery mechanism; and
	  o Establishing roles for IESO, OPG and OEB
	• Regulation (amend O.Reg.429/04)
	• Shareholder Declaration and Resolution
	• Third Party Technical Report re Long Lived Assets (TBD)
	• Accounting opinions from E&Y (OPG) and KPMG (IESO)
	• Financing:
	  o IESO line of credit to bridge from May-July;
	  o OEFC to OPG equity injection structure; and
	  o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)
	
	<u>Considerations</u>
	• GA refinancing legislation could also include legislative changes to enable broadening of RRRP, expanding of OESP and establishing of FN delivery credit.
	• Ongoing legal, accounting and financing risk assessments.
	• Impact on Electricity Sector Dedicated Income.
	• OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers.
		• Report back to TBC/MBC by spring 2017, prior to going to LRC with any legislation, on the approach to refinance GA (per TBC/MBC Minute)
		
		• Report to TBC/MBC, LRC and Cabinet in spring 2017 (per Cabinet Minute)
		
		• Provide comfort level to allow OEB to include in May 2017 RPP
		
		• Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure	• Report back to TB/MBC by Spring 2017 • Fall 2017 implementation (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
	in place to provide to existing consumers in Algoma and Remotes. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB and OEB	• Legislation • Regulation (TBD) <u>Considerations</u> • Reach out to OEB to consider whether surplus funding of ~$100M could be used to increase OESP credits by 50%. Regulation can be updated quickly (need to consider whether posting on EBR is required). • Consider whether revised directive needed to continue having OEB administer program. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 • Program in place in 2017 (per Cabinet Minute)
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13M to $20M • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, TBS, MOF and H1	• TBC/MBC Submission • Trust Structure • Transfer Payment Agreement (multi-party) <u>Considerations</u> • Legislative changes not required. • Funding needs to flow to the Trust prior to March 31, 2017.	**Week of March 6, 2017:** • TBC/MBC approval (March 6th) • CAB approval (March 8th) • Follow up calls with several LDCs and EDA to provide updates and outline proposed principles for the Fund (Ongoing engagement with Hydro One, LSB, OPCD, CSD on principles and establishment of Trust and development of Transfer Payment Agreement (TPA) (including sharing of drafts for comment); **Week of March 13, 2017:** • Hydro One to finalize establishment of Trust by March 17th • Continue development of TPA, including circulating near to final version by March 17th **Week of March 20, 2017:** • Execute TPA between the Ministry and the Trust by March 22nd • Initiate process to flow funds to the Trust; to be completed before March 31st

Item	Key Deliverables / Considerations	Timing / Next Steps
		April to May 2017: • Additional trustees to be appointment; Trust develops further details, e.g. customer eligibility criteria and processes for LDCs to apply for funds; to be developed in consultation with LDCs **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date to impact electricity bills this year (May 15, 2017). • RR posting is typically a minimum of 45-days for all regulatory changes affecting business to allow for review/comment. **Note:** RR posting is not a legal requirement but a best practice. • Working with the Ontario Chamber of Commerce on a targeted outreach campaign.	• RR posting on the proposed amendment • Report back to TBC/MBC by spring 2017 (per TBC/MBC Minute) • LRC [DATE] • Effective May 2017 (TBD)

Item	Key Deliverables / Considerations	Timing / Next Steps
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • Opportunity to highlight Market Renewal in the next LTEP. • IESO's stakeholder engagements on Market Renewal is ongoing. • Moving away from a two schedule system could impact consumer prices depending on implementation. • Most of the savings accrue from the move to a capacity auction. These savings do not materialize until the province has capacity requirements.	• Continue this work as part of LTEP
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in spring 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March
11) FAO Engagement		
• ENERGY, MOF/OFA, FAO	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion.

1. Scope

This methodology describes our global approach to rating securities backed by utility cost recovery charges ("UCRC" bonds) that are established by special legislation and financing orders issued by utility regulatory bodies. The charges backing UCRC bonds rated by us have been established by state legislation and state utility regulatory bodies in the United States. For UCRC bonds backed by charges authorized by other jurisdictions, we will analyze the specifics of the securitization's legal framework and regulations – and their implications for the quality of the protections afforded to investors – within the general methodology described in this report.

Examples of cost recovery charges include those imposed to cover certain costs of utility companies that had been incurred in a regulated environment but could no longer be recovered because of a change to a more competitive regulatory regime (i.e., charges sometimes referred to as "stranded utility charges") and those imposed to pay for environmental cleanups, clean energy or for the replenishment of reserves established for repair of facilities damaged by natural calamities, such as hurricanes or tornados.

2. Executive Summary

A utility cost recovery charge bond is a bond typically issued by a special purpose entity of a utility, or by a special borrowing conduit, to recover specified costs as authorized by special legislation and a specific financing order issued by a public service utility regulatory body. The bonds are backed by a property right created by the legislation, which provides the right to impose and collect special charges on customers' monthly electric bills.

This credit rating methodology was republished on June 22, 2015 containing an updated monitoring section and minor other editorial updates in the body of the text and in certain footnotes. The content of this Credit Rating Methodology has not been changed.

The credit quality of the bonds depends on the legal strength of the property right, which in turn depends on the specifics of the related legislation and financing order, and on the size and economic strength and stability of the ratepayer base against which the costs will be imposed. Therefore, our credit analysis of cost recovery charge securitizations focuses on both legal and economic factors that can influence whether investors in UCRC bonds will be paid as promised.

On the legal side, we assess the extent to which the legislation that authorizes the cost recovery charges[1] provides clear procedures for insulating the transaction from claims by other parties and is likely to be able to withstand challenges to rescind or alter the legislation prior to the legal final maturity of the securities. Consequently, our analysis focuses on the extent to which the legislation clearly defines (1) a property that entitles the owner of such property – the utility, or, in some cases, a public trust or corporation – the right to charge the fee throughout the life of the security in an amount sufficient to make full and timely repayment of principal and interest on the security, (2) the process the owner of the property must follow to charge the fee, (3) the irrevocable right of the owner of the property to transfer the fee to a special purpose financing vehicle for securitization purposes, (4) the type of financing vehicle authorized to issue securities backed by the fees, and (5) the process to be followed such that the transfer would be viewed as a "true sale" of the rights to the cash flows rather than a pledge of collateral for a financing for transactions that involve the transfer of the property from the utility to the issuer. A true sale would insulate the securitization from a bankruptcy of the utility, protecting securitization investors from potential claims on the cash flows by the utility's creditors. In addition, we assess whether the legislation has a government pledge not to impair the utility's right to collect the charges and the consequences if the government nevertheless does attempt to impair the right.

We also examine the likelihood that other potential claimants, such as other creditors of the financing vehicle if it were to become bankrupt or investors in other securities that have been issued by the utility, might make a successful claim on the cash flows of the securitization. Furthermore, we consider the breadth of the market to whom the charge will be applied and the extent to which the charge might be "bypassable," that is, the extent to which current or future customers might be categorized as outside the scope of the applicability of the charge.

Our assessment of the overall legal strength of the property right involves qualitative and judgmental factors. Transactions that are strong with respect to each of such characteristics may achieve the highest rating while the impact of weakening any of the attributes would be evaluated on a case-by-case basis.

On the economic side, our analysis focuses on the likelihood that the charges established by the legislation and accompanying regulations will be sufficient to repay the securitization bonds and on whether the charges might become onerous enough to cause pressure to rescind or alter the charges through future legislative or legal actions. As part of that assessment, we evaluate (1) possible changes in the size and composition of the customer base against whom the fee is to be charged, incorporating an evaluation of the breadth and diversity of the customer base, (2) the likely per capita energy usage (in those cases in which the fee charged is based on the usage amount), and (3) the fee rate, including any mechanism built in by the legislation that enables the fee to be reset over time to offset shortfalls that might develop over the life of the securitization (i.e., the transaction's "true up" mechanism). Generally the true-up mechanism is in effect the most important credit protection for UCRC transactions, limiting the risk that the cost recovery charges will be insufficient to pay off the bonds, thereby limiting the need for traditional sources of credit enhancement such as subordination and reserve funds.[2]

In analyzing a transaction's true-up mechanism, we examine how high rates would need to be set under "stressful" future scenarios to fully pay off the bonds, to assess the risk that onerous future rates might cause pressure to overturn or change the legislation and/or regulations establishing the charges. The variables that we typically "stress" test for UCRC bonds are the base against which the charge is to be

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.

[1] Throughout this report we use the terms "cost recovery charges" and "cost recovery fees" interchangeably.

[2] The true-up mechanism also limits the need to analyze the underwriting of the customer base, since the mechanism adjusts for all shortfalls, including those caused by customer defaults.

applied (usually energy usage) and the servicing fee. To obtain a high rating, we would expect that even in a stressful environment, such as one in which energy usage declined dramatically, the charge per customer necessary to pay off the bonds would be reasonably low both in absolute terms and as a percentage of the customer's energy bill. The specific stresses that we place on the variables are issuer-specific and are determined on a case-by-case basis.

In addition, we analyze the implications of other structural features of the securitization that could affect the risk of investor loss. For example, we examine the risk implications of how the cash flows are allocated among the various classes of investors and the other participants in the transaction, and the extent to which any other sources of funds are likely to be sufficient to offset any remaining shortfalls to investors, whether the shortfalls are temporary ("liquidity") or permanent ("credit enhancement").

3. Analyzing the Risk Factors

Because of the unique characteristics of this highly regulated asset class, our credit analysis of UCRC securitizations focuses primarily on the legislation and the true-up mechanism. The degree of certainty that the fees generated through the legislation will be sufficient to pay off the securitizations in full is a complementary aspect of the analysis. .

Depending on the risks and mitigants in the relevant jurisdiction, transaction ratings will typically be positioned between the government rating and the country ceiling. Risks that could lead us to determine transaction ratings to be lower than the country ceiling include, for example, continued high levels of debt burden in a utility system. Such high levels of debt, if deemed unsustainable in the long term, may lead to political pressure to adjust the regulatory framework around the system deficit, with some potential negative impact on the related securitization transactions.

In the following sections, we describe the factors that typically lead to a high degree of certainty and thus high ratings on the bonds.

3.1 Protection against Future Impairment of the Right to Collect the Charges

Utility cost recovery charges are established by special legislation that authorizes the creation of a property right to collect future surcharges on customers' monthly electricity bills as the means to pay back the UCRC bonds. Consequently, we analyze the extent to which investors are protected against the enactment of future legislative changes that would weaken that right. For example, investor risk would be mitigated in a situation in which (1) the legislation contained a pledge by the jurisdiction not to impair the right to collect the special charges until the maturity of the bonds and (2) violation of that pledge would be a violation of law [3].

3.2 Irrevocability of the Financing Order

The legislation is typically accompanied by a financing order issued by the public service commission that authorizes the utilities to impose and collect the surcharges on the customer's monthly electric bill during the term of the bonds. Our analysis assesses whether the financing order is irrevocable, which would protect investors against future adverse changes that may reduce the charges backing the bonds.

3.3 Sufficiency of the Charges and the True-Up Mechanism

The charges are usually assessed as an amount linked to a customer's energy usage. Our analysis considers whether the financing order places any limits on charges – e.g., caps on the levels of charges or limits on the length of time that the charges can be imposed – that might cause the collections to be insufficient to provide for timely payment of the principal and interest on the UCRC bonds. In addition, we analyze whether the period over which the charges are allowed to be levied provides sufficient cushion to pay off the bonds by maturity in the event that collections come in more slowly than originally projected.

[3] Violation of the non-impairment pledge would be a violation of the Contract Clause and the Takings Clause under the Federal and State constitutions.

As part of that analysis, we evaluate the power of any true-up mechanism that is provided for in the legislation and detailed in the financing order to correct for shortfalls that may develop over the life of the securities. A true-up mechanism typically adjusts future fee rates on a scheduled periodic basis (e.g., semiannually or annually) to correct for any under- (or over-) collections in a preceding period and to ensure the full and timely payment of future scheduled debt service, based on updated usage forecasts. The greater the frequency with which the true-up adjustments are made, the less likely that investors will suffer a shortfall at the final maturity date.[4]

That is particularly important as the security approaches the final maturity date; frequent rate adjustments based on then-current projections mitigate the risk that actual collections will deviate substantially from those projections, limiting the possibility of shortfalls at the final maturity date. Consequently, our analysis assesses the conditions under which more frequent true-ups are allowed, especially near the final maturity.[5]

3.4 Non-Bypassability of the Charges

We evaluate whether the charges are "non-bypassable," that is, whether the charges must be collected from all existing and future customers of the utility or its successors or assignees within the utility's service territory, and whether the financing order provides that a severance fee be charged to customers who switch to other service providers within the territory during the life of the bonds. We evaluate any exceptions to the non-bypassabilty rule, and consider the materiality of those exemptions to the cash collections. Charges that cannot be bypassed (i.e., those that cannot be avoided by the customers in the utility's service area) ensure a continuing payer base for the charges, leading to less risk for investors. As described in the Structural Features section (Section 3.8), the power of the true-up mechanism to protect investors is dependent on the non-bypassability of the charges. As a result, non-bypassability (with limited, immaterial exemptions) has been a key factor behind the high ratings that are typically assigned to these transactions, without the need for considerable protection from traditional types of credit protection, such as reserve accounts or subordination.

3.5 Bankruptcy of the Utility

For structures in which the initial owner of the property is a utility, a bankruptcy of the utility could expose securitization investors to the risk that other creditors of the utility might make a claim on the cost recovery charges or that payments to securitization investors might be delayed as a result of an imposition of an automatic stay on payments from the utility company.[6,7] However, that risk would be limited if it were clear that a bankruptcy court would view the transfer of the rights to the charges as a "true sale" of those rights, rather than as a financing of the company. As a result, we analyze whether the legislation clearly establishes the utility's right to receive and transfer the rights to the charges and provides unambiguous procedures for transferring those rights to the financing vehicle as a true sale, and whether those procedures are followed in the financing order.

In cases where the utility is the servicer of the transaction, we analyze whether a bankruptcy of the utility could lead to a disruption in servicing, e.g., billing and collecting. However, given the essential service provided by the utility, we expect that government authorities would intervene to prevent any disruption in servicing that might result from a bankruptcy. As a result, where the servicer is a regulated utility, we view operational risk as low. Consequently, we typically would consider a transaction to be consistent with a Aaa rating even if the servicer were not investment grade, as long as the transaction were structured with some mitigants for operational risk, such as the inclusion of a backup servicer and/or provision for additional liquidity.[8]

[4] Generally, the charges collected rank senior to other charges of a utility system and represent only a small amount of the total revenues of such system .
[5] Transactions typically allow for more frequent true-ups during the "tail period" between the transaction's stated "expected" maturity (determined by the sponsor) and the "legal" final maturity. The legal final maturity is the important date from our rating perspective, the date by which all principal must be repaid.
[6] In some transactions, the property is created by law for the benefit of a public trust or corporation that also is created by the same law. In such cases, the true sale risk would be non-existent as there is no sale or transfer of the property.
[7] For a discussion of how Moody's analyzes legal risks in structured finance transactions, see Moody's Related Research section at the end of this report.
[8] The rating standard for a backup servicer likely would be lower than investment grade, but would depend on the specific facts and circumstances of the transaction and servicer.

In addition, we analyze whether the bankruptcy of the utility could cause a disruption in the remittance of payments by the utility to bondholders. Such a disruption could occur if the remittances of the charges were "commingled" with the other funds of the utility and the bankruptcy court ordered a halt to payments until proper ownership of the funds could be sorted out. Our analysis includes an assessment of the ways in which the utility separates the cost recovery charges received from its other funds and the frequency with which it transfers the funds to the trust.

3.6 Bankruptcy of the Financing Vehicle

Another potential risk to investors in UCRC securitizations is a bankruptcy of the financing vehicle. That could expose investors to the risk that other creditors of the vehicle might make a claim on the cost recovery charges or that payments to investors might be delayed by the imposition of an automatic stay. Consequently, we analyze (1) the likelihood that a third-party creditor would be able to successfully petition the owner of the assets (i.e., the financing vehicle) into an involuntary bankruptcy proceeding or (2) the likelihood that the owner of the assets would voluntarily seek the protection of the bankruptcy courts.

To analyze the likelihood of an involuntary bankruptcy, we assess the characteristics that would mitigate that risk, such as if the financing vehicle had (1) no assets other than the right to the cost recovery charges, (2) no indebtedness other that the securitization debt, (3) limited activities that could give rise to contractual or other liabilities, and (4) agreements with the sponsor and other contracting parties not to petition for the dissolution, liquidation or bankruptcy of the securitization vehicle. Similarly, factors that would mitigate the risk of a voluntary bankruptcy would include (1) charter documents of the owner of the assets that require directors who are independent of the utility and (2) a unanimous vote of directors as a condition to filing a voluntary bankruptcy.

3.7 Economic Factors

Even if the financing order is irrevocable, the charges or the law that authorizes them could be subject to challenge in the courts or to future political pressure to rescind or change them through legislation. That is more likely the higher the charges, i.e., the more the economic incentive for a challenge or in circumstances where the financial imbalances in a utility system increase. Consequently, our economic analysis focuses on the size of the cost recovery charge, both in absolute terms and as a percentage of the customer's energy bill. Typically the percentage of a residential customer's monthly bill devoted to the cost recovery charge is less than 10%.

We typically also look at stressful collection scenarios. For example, in one scenario, we assume (1) that energy usage falls short of the utility's projections[9] by a progressively increasing amount each year (typically 5% per year), (2) that forecasted collections in peak usage months do not materialize (for example, 100% of the collections in the peak month and 50% of the collections in the second highest-usage month), and (3) that the servicing fee is considerably higher than the current, "normal," servicing fee, representing the fee that would be required if the original servicer needed to be replaced in a stressful environment. In another scenario, we typically assume that energy usage is lower than projected by a set amount throughout the life of the securitization (typically 25%). For highly rated transactions, we would expect that the cost recovery charge would remain relatively low even in those highly stressful scenarios.

While the specific stresses that we place on the variables have been quite similar to date, this reflects the fact that all rated transactions to date have involved requests for the highest ratings and been supported by highly diverse, broad-based service areas. However, in general, stresses are issuer-specific and are determined on a case-by-case basis. One of the factors that we use to determine the appropriate stress level for a transaction is the variability of the base against which the charge is applied, for example, the population in the service area or the energy usage in the service area. Customer bases that are less broad-based and diversified tend to be more variable; as a result, we would apply more severe stresses in those situations.

[9] We typically assess the reasonableness of the utility's projections by analyzing (1) the historical energy usage in the utility's service region and the variances between past projections and actual outcomes, and (2) the likely growth in electricity usage in the service area of the utility, taking into account the projected economic growth in the region and the possible competitive impact of technological advances, such as those in the development of solar energy.

In particular, we evaluate the economic diversity of the utility's service region to assess the potential variability in its economic health, which tends to drive changes in population and energy usage. An area that relies on multiple industries for economic growth will likely have a more stable business climate than an area that is dependent on the fortunes of one industry. In the latter case, the area's prospects will falter if that particular industry runs into hard times.

We also consider the mix in the customer base among residential, commercial, and industrial users. A utility with a large residential base relative to commercial and industrial users will tend to have less volatility in energy consumption, since energy consumption by commercial and industrial operations is more closely tied to the business cycle. Furthermore, residential customers are less likely to quickly embrace new energy production technologies and are less likely to cut back energy consumption dramatically if the price of energy were to rise. The higher variability of a commercial and industrial base can be exacerbated further if the service area's customer usage is concentrated in a few large commercial or industrial operations, which could make the overall energy consumption vulnerable if those entities were to decline or leave the area.

3.8 Structural Features

The key structural feature of UCRC transactions is the true-up mechanism. Our rating is highly dependent on the extent to which the mechanism adjusts the charges to correct for past shortfalls or forecasted future shortfalls. The effectiveness of those rate changes in raising funds depends, in turn, on how easily customers can escape the charges and how sensitive electricity usage is to increases in the utility charges. Therefore, our analysis of the true-up mechanism goes together with our analysis of how bypassable the cost recovery charges are and how easily customers can cut back on electricity usage (through alternative sources of energy or conservation). To be consistent with a particular rating, a strong true-up mechanism combined with non-bypassable charges mitigates the need for credit enhancement in the form of alternative sources of funds.

In addition, our analysis of the credit risk of a UCRC transaction incorporates our assessment of the implications of the transaction's cash flow allocation structure (sometimes referred to as the cash flow "waterfall"). In particular, we focus on the seniority of principal and interest payments to the bond's investors *vis-à-vis* payments to other participants. In addition, we analyze the extent to which the transaction has an alternative source of liquidity to pay principal and interest in the event that there is a temporary interruption in the flow of the cost recovery charges. For example, in many transactions there is a capital or reserve account with funds sufficient to pay interest for at least 1-2 months, if needed. Furthermore, we assess the extent to which the credit enhancement that is available in the transaction is likely to be sufficient to offset any shortfalls that might develop in the period between the final true-up adjustment and the maturity of the bonds.

4. Monitoring

In monitoring UCRC transactions, we apply the key components of this methodology. More specifically, we analyze, whether bond balances are in line with the scheduled principal amortization, which indicates the extent to which payments have been in line with our original expectations.

We review the periodic information received and look at whether there has been a draw on the reserve accounts. This data point provides further clues as to the steadiness of the cash flows and accuracy of true-up adjustments.

In addition, we analyze the factors that determine the future strength of the transaction. For example, we monitor any legal or political developments that could indicate an increased risk of changes in the legislation that could impair future cash flows to the transactions. Such risk may materialise, for example, in case of continued high financial imbalances in the system that may lead the system deficit to be viewed as unsustainable over the long-term.

Depending on the jurisdiction, we also follow the rating of the utility as a proxy to assess any changes to the economic health of the service region and the potential for changes in the size and composition of the ratepayer base. Furthermore, we monitor the rating of the utility collecting the charges (as an indicator of its financial condition) to track the risk, typically quite small, that a bankruptcy could lead to disruption in billing and collections and in the remittance of payments to the bondholders.

In other instances, we may be more concerned with the behavior of the regulator of the utility system and less with individual utility companies. This could lead to a lower rating in the space between the local currency ceiling and the sovereign rating or the utility rating.

Thus changes on our expectations and other analytical components could have an impact on the rating of the securities and may result in a reassessment of the rating.

Moody's Related Research

The credit ratings assigned in this sector are primarily determined by this credit rating methodology. Certain broad methodological considerations (described in one or more secondary or cross-sector credit rating methodologies) may also be relevant to the determination of credit ratings of issuers and instruments in this sector. Potentially related secondary and cross-sector credit rating methodologies can be found here.

For data summarizing the historical robustness and predictive power of credit ratings assigned using this credit rating methodology, see link.

Please refer to Moody's Rating Symbols and Definitions, which is available here, for further information.

Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc., have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc., for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

For Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail clients. It would be dangerous for "retail clients" to make any investment decision based on MOODY'S credit rating. If in doubt you should contact your financial or other professional adviser.

For Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Subject: RE: Rate Mitigation Implementation

Hi David,

I thought I would share a high level summary of this morning’s discussion.

The meeting started with a conversation around structures and how Energy plans to move all of the elements of the Fair Hydro Plan forward. In essence, these Thursday meetings will become a regular occurrence (next week is scheduled for Wednesday). This will act as a feeder for issue specific working groups in order to have a single window for reporting in on progress and issues that require resolution. See attached “OFHP Gov and Delivery

Structure" for details. There will also be regular DM level updates to keep respective Ministries apprised of progress.

GA Smoothing (Blakes Update)

Blakes, who has been engaged by the Ministry of Energy, provided an overview of the Long Island Power Authority securitization structure that has been referenced several times as a model (albeit smaller) for the GA Smoothing mechanism. Here are some high level details:

o Nuclear facility mothballed and facility costs needed to be repaid over time
o In part as a result of this large liability, LIPA's credit rating was weak increasing borrowing costs
o Created framework in legislation, allowed for a financing order every time the separate entity went out for financing (abbreviated hearing to review merits of case)
o Role of Financial Regulator (closer to OSC than OEB):
· Public Authority Control Board
· Abbreviated hearing
· Form over substance, to ensure calculations are correct
· Regulator needed to be sure that issuance designed to receive lower cost borrowing + meet objectives of the legislation
· If stakeholders want to challenge the validity of order, had 30 days to do so and then foreclosed, after 30 days bonds could be issued
o Asset:
· Order and charges irrevocable: right that could not be changed
· True-up mechanism: ability to adjust collections from end users to ensure cover principle and interest
· Ensure consumers cannot bypass system (pay as long as connected to the grid, whether consuming or not)
· Charge not more than 10% of bill
· Set up as a "true sale" - rights around asset protected
o Unique features (would not apply in Canada):
· State pledge: state would not introduce legislation or do anything to affect rights of assets or bondholders
§ Creates a constitutional right, if reversed is a "taking of the government" which results in a particular process
· Bankruptcy: bondholders can make an application to court to direct payment to bondholders
· While these elements cannot be replicated in the same way in Canada, Blakes suggests it will be important to enable similar protections under the Canadian legal framework to the extent possible

Blakes also walked through key elements that the market and rating agencies will seek in order to ensure this is financeable (according to Blakes there will be an expectation that mitigation measures will be in place for each):
· Size and breadth of customer base
· Non-bypassability
· Volatility of policy environment
· For more details, Blakes suggests reading the attached Moody's guide

GA Smoothing (OPG Update)

OPG walked through the attached summary workplan providing an update on key buckets of work including that included a number of touch points with the OFA and MoF focused on process for borrowing and equity infusion both at inception and ongoing approvals. Note that OPG is conceiving of each incremental debt issuance as an amendment to the borrowing agreement rather than as individual tranches in order to avoid differentiation between bondholder priority thereby minimizing long term interest costs. Note that working groups are beginning to meet to think in more detail to think through these issues.

GA Smoothing (IESO Update)

· IESO is thinking through what needs to be in legislation, regulation, market rules and in an agreement with OPG.

· IESO is also working with OPCD and KPMG to finalize its revised financials to incorporate its market books.

IESO will file its audited financial statement with the AG in May. Further thought is needed on timing and level of engagement with the AG's office.

· On a related note, the AG has reached out through OPCD for an initial briefing on the Fair Hydro Plan.

GA Smoothing (Legislative Drafting Update)

· Energy legal expects to have first drafts to share shortly for input

· Targeting mid-April for approvals

GA Smoothing (General)

· OEB was also included in the discussion and continues to have concerns about its role in the process. Further consideration is required in the context of accounting and financing imperatives

Other Updates

· Work on the RRRP, OESP and First Nations rate is progressing in parallel. There was some talk of inclusion of these elements in the Budget Bill, but no certainty on whether that would be possible from a timing perspective.

· The Affordability Fund is moving on a more expedited path. A first draft of the TPA has been shared with Hydro One for review. Hydro One is working to establish the Trust.

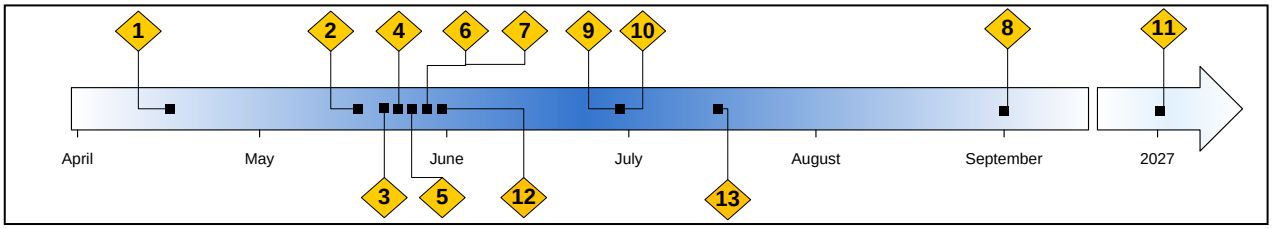
Thanks,
Scott

Summary of Work Plan

Below is an overview of the elements of the draft workplan to set up a trust special purpose financing vehicle (SPV) that would hold the claim on future customers and the debt issued to fund the payment to the IESO in accordance with Ontario's Fair Hydro Plan. All elements of the work plan will consider the key requirements of OPG with respect to elimination or mitigation of risks.

Workplan Overview

The draft workplan below is divided into major components required to set up the trust SPV as part of Ontario's Fair Hydro Plan. Each major component is divided into sub-components that provide further aspects / characteristics / requirements.



[Note deleted #13]

1. Legislative Requirements [Stakeholders: OPG, IESO, OEB, MOE]

a. Characteristics of Regulatory Asset

Key aspects will include collection rights, claim/counterclaim protection, future governmental action protection, saleability into SPV, protection from seller's creditors, OEB regulatory asset recognition, oversight of administration costs and recovery mechanism, and true-up process.

b. *Legislative amendments to implement the structure*

- Provisions in the Electricity Act (and OPG's articles) will be amended/updated to allow flexibility in OPG's corporate structure.
  1. These amendments would be similar in nature to previous amendments made to Hydro One's governing provisions in the Electricity Act.
  2. The amendments would, for example, allow OPG to create and operate through subsidiaries, and also enable OPG to raise financing through public offering of debt. (OPG may need to raise some financing to fund a portion of the subordinated debt going into the trust.)
- The electricity legislation will be amended to implement the deferral and financing of the GA, including amendments:
  1. to reflect that the IESO may defer collection of a portion of the GA;
  2. to create a "regulatory asset" consisting of the right to recover, over time, the amount GA being deferred, together with interest and other financing costs;
  3. to allow the IESO to sell that regulatory asset to a third party (the trust/financing vehicle);
  4. that authorizes the OEB to recognize the regulatory asset (which will likely comprise a deferral account) and allows the owner of the asset to recover the principal amount and financing costs for the GA deferral over time; and
  5. that also provides the OEB with no rights (or very limited rights) to review the terms on which the GA deferral is recovered (i.e. the interest rate, other financing costs and the amortization period). (This is needed to make the GA deferral financeable in the capital markets.)

2. Financing Process [Stakeholders: OPG, IESO]

a. Set up Financing Vehicle

The SPV will be established with a simplified trust indenture to facilitate flexible financing (issue short and long term debt in Canadian and US markets, ability to warehouse, ability to enter into cross currency swaps). The sole purpose of the SPV will be to acquire the

regulatory asset and raise debt. A financial service and management agreement with OPG will also be required.

b. Oversight

Appropriate oversight structure to be established independent of OPG management to review and monitor financing strategies, operating budgets and results of SPV. Reporting and monitoring requirements of Province, IESO and OEB and OPG to be determined.

c. Operations

Processes will be established for deal execution, operating cash management, regulatory reviews and credit rating agency reviews. Agreements will be established to define relationships with IESO (sales & servicing), billing payment and other administrative services, banking arrangements, subordinated debt agreement with OPG.

3. Equity Injection Process [Stakeholders: OPG, Ministry of Energy, Ministry of Finance]

The Province will require Treasury Board approval for periodic appropriations to fund equity injections into OPG. OPG Board approval will be required to issue a specified number of shares that can be periodically issued to the Province. The actual number of shares issued will be based on IESO forecast of funds required.

4. IESO and Trust Operational Process [Stakeholders: OPG, IESO]

Establish processes to facility the SPV's purchase of the IESO's regulatory asset, including timing (notice periods), frequency, fund flows, GA shortfall forecasts and true-up mechanisms.

5. Debt Issuance – General Planning [Stakeholders: OPG, MOF]

Develop debt issuance plan considering need for liquidity/working capital, debt profile (short/long term), debt composition (senior/subordinated), marketing plan (Canada and US), financing amounts and timing, credit rating agency legal opinions and required approvals.

6. Debt Issuance – Subordinated [Stakeholders: OPG]

Establish subordinated debt characteristics (risk, return, cash flows), repayment terms, issue frequency/timing and required approvals.

7. Debt Issuance – Short Term [Stakeholders: OPG]

Ability to aggregate and warehouse using short term CP / ABCP.

8. Debt Issuance – Long Term [Stakeholders: OPG]

Key steps in establishing OPG external long term debt financing include the following:

- Select bank advisor for Canadian market
- Select bank advisor for US market
- Select credit rating agency and establish high investment grade requirements
- Seek credit rating agency legal opinions (identified above in section 5)
- Ongoing financial and legal due diligence
- Credit rating agency presentation and follow-up Q&A
- Obtain preliminary or pre-sale rating
- Develop maturity profile if flexibility available
- Draft and execute offering memorandum, agency agreement and other legal documents
- Prepare marketing materials
- Marketing, road shows, investor one-on-ones
- Investor due diligence and collection of expression of interest
- USD denominated debt - ISDA contracts for swap arrangements and potential collateral requirements

9. **Recovering Interest, Administration and Other Financing Costs from IESO [Stakeholders: OPG, IESO]**

   Establish basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency.

10. **Paying Interest, Administration and Other Financing Costs to Providers [Stakeholders: OPG, IESO]**

    Establish bank accounts, basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency, required approvals and administration agreements (either with trust administrator or OPG).

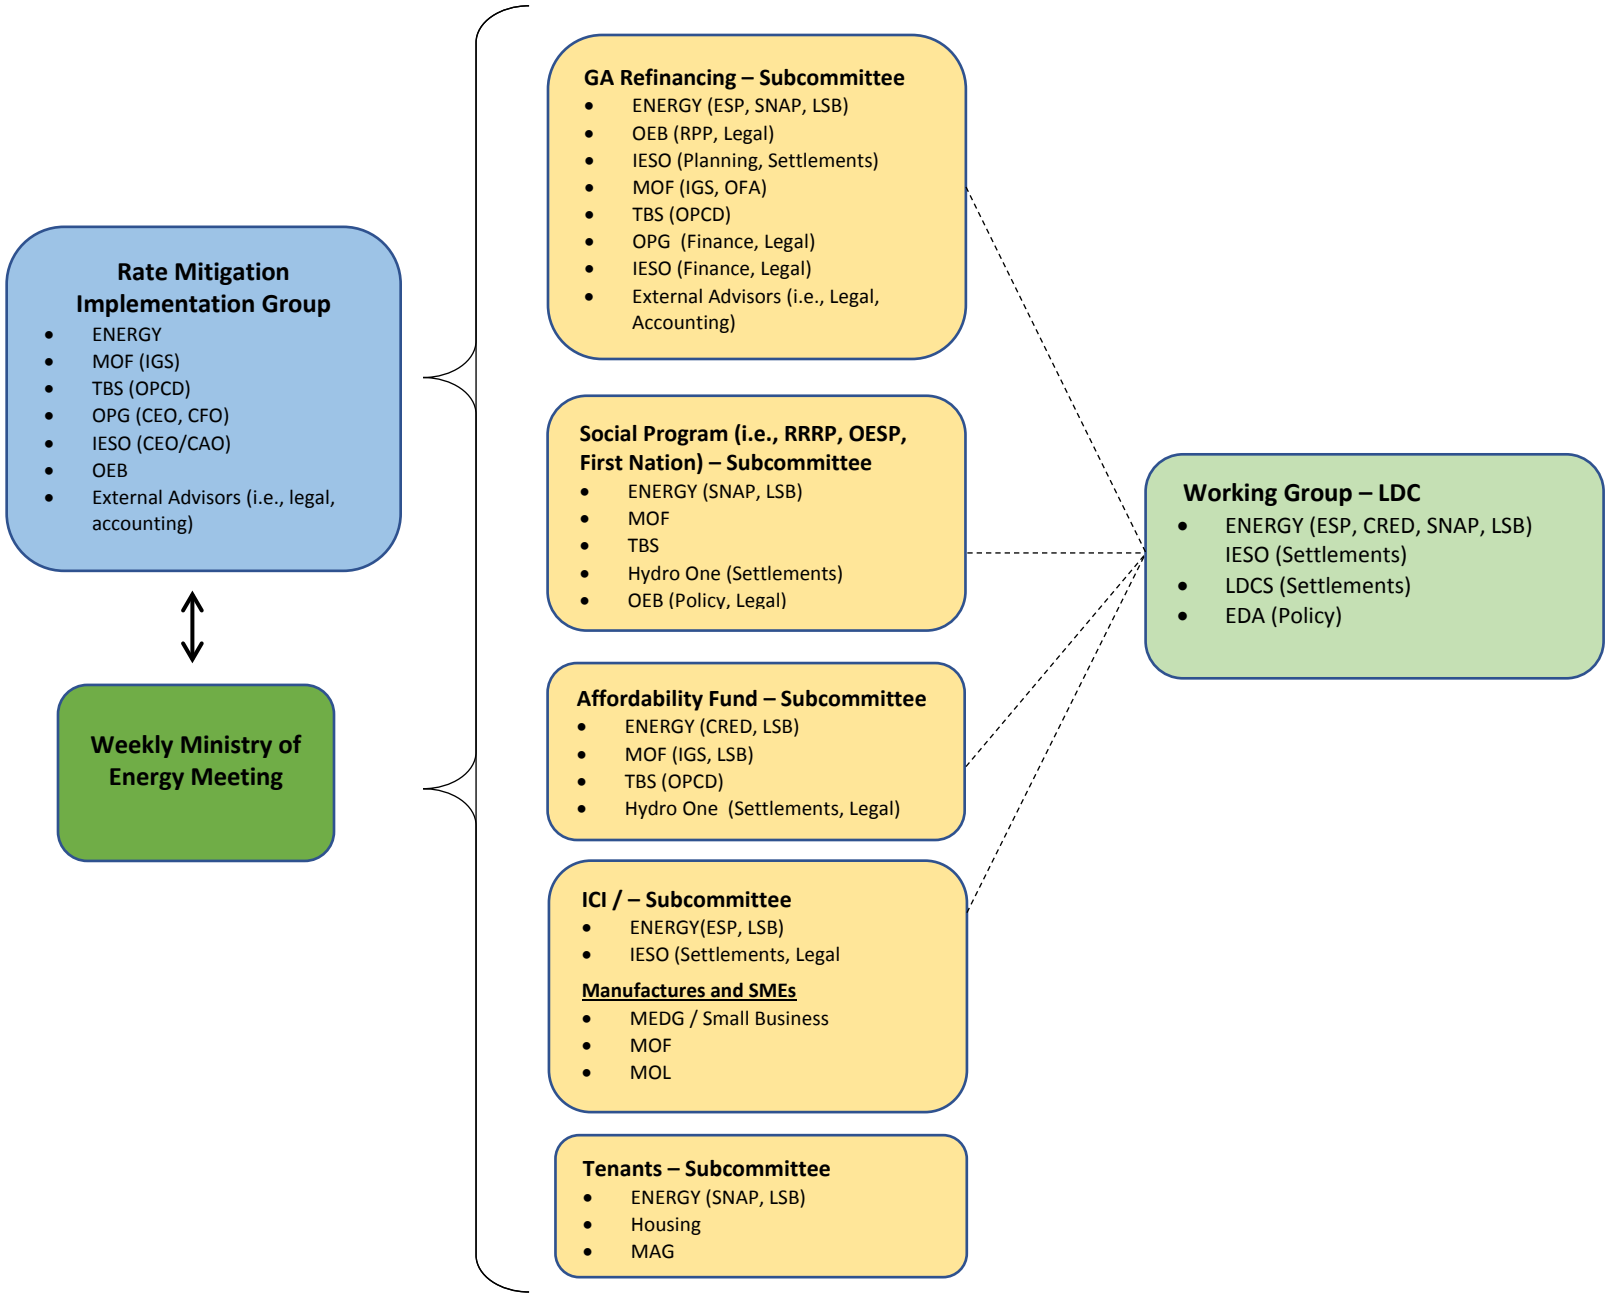
11. **Recovering Principal from IESO [Stakeholders: OPG, IESO]**

    Establish basis of recovery (regulatory asset schedule / actual financing amortization or maturity / other method), documentation requirements, approvals, timing and frequency.

12. **Accounting Requirements and Process [Stakeholders: OPG]**

    Establish overall accounting requirements for trust, regulated asset, consolidation with OPG, operational control of trust and restrictions on regulated asset. See further details in Appendix A – Terms Necessary for OPG to Consolidate the Global Adjustment Trust.

Governance and Delivery Structure for Implementation of Ontario's Fair Hydro Plan



WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
March 9, 2017

Agenda

1) Governance / Delivery Structure – Overview (ESPD)

2) GA Refinancing
    - Overview of US models (Blakes)
    - OPG Update
    - IESO Update
    - Legislative Drafting (LSB)

3) Affordability Fund (CRED)

4) RRRP, OESP and FN (SNAP)

5) ICI (ESPD)

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of March 6, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		

• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation:
	  o Defining mitigation and recovery mechanism; and
	  o Establishing roles for IESO, OPG and OEB
	• Regulation (amend O.Reg.429/04)
	• Shareholder Declaration and Resolution
	• Third Party Technical Report re Long Lived Assets (TBD)
	• Accounting opinions from E&Y (OPG) and KPMG (IESO)
	• Financing:
	  o IESO line of credit to bridge from May-July;
	  o OEFC to OPG equity injection structure; and
	  o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)
	
	<u>Considerations</u>
	• GA refinancing legislation could also include legislative changes to enable broadening of RRRP, expanding of OESP and establishing of FN delivery credit.
	• Ongoing legal, accounting and financing risk assessments.
	• Impact on Electricity Sector Dedicated Income.
	• OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers.
		• Report back to TBC/MBC by spring 2017, prior to going to LRC with any legislation, on the approach to refinance GA (per TBC/MBC Minute)
		
		• Report to TBC/MBC, LRC and Cabinet in spring 2017 (per Cabinet Minute)
		
		• Provide comfort level to allow OEB to include in May 2017 RPP
		
		• Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure	• Report back to TB/MBC by Spring 2017 • Fall 2017 implementation (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
	in place to provide to existing consumers in Algoma and Remotes. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB and OEB	• Legislation • Regulation (TBD) <u>Considerations</u> • Reach out to OEB to consider whether surplus funding of ~$100M could be used to increase OESP credits by 50%. Regulation can be updated quickly (need to consider whether posting on EBR is required). • Consider whether revised directive needed to continue having OEB administer program. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 • Program in place in 2017 (per Cabinet Minute)
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13M to $20M • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, TBS, MOF and H1	• TBC/MBC Submission • Trust Structure • Transfer Payment Agreement (multi-party) <u>Considerations</u> • Legislative changes not required. • Funding needs to flow to the Trust prior to March 31, 2017.	**Week of March 6, 2017:** • TBC/MBC approval (March 6th) • CAB approval (March 8th) • Follow up calls with several LDCs and EDA to provide updates and outline proposed principles for the Fund (Ongoing engagement with Hydro One, LSB, OPCD, CSD on principles and establishment of Trust and development of Transfer Payment Agreement (TPA) (including sharing of drafts for comment); **Week of March 13, 2017:** • Hydro One to finalize establishment of Trust by March 17th • Continue development of TPA, including circulating near to final version by March 17th **Week of March 20, 2017:** • Execute TPA between the Ministry and the Trust by March 22nd • Initiate process to flow funds to the Trust; to be completed before March 31st

Item	Key Deliverables / Considerations	Timing / Next Steps
		April to May 2017: • Additional trustees to be appointment; Trust develops further details, e.g. customer eligibility criteria and processes for LDCs to apply for funds; to be developed in consultation with LDCs **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date to impact electricity bills this year (May 15, 2017). • RR posting is typically a minimum of 45-days for all regulatory changes affecting business to allow for review/comment. **Note:** RR posting is not a legal requirement but a best practice. • Working with the Ontario Chamber of Commerce on a targeted outreach campaign.	• RR posting on the proposed amendment • Report back to TBC/MBC by spring 2017 (per TBC/MBC Minute) • LRC [DATE] • Effective May 2017 (TBD)

Item	Key Deliverables / Considerations	Timing / Next Steps
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • Opportunity to highlight Market Renewal in the next LTEP. • IESO's stakeholder engagements on Market Renewal is ongoing. • Moving away from a two schedule system could impact consumer prices depending on implementation. • Most of the savings accrue from the move to a capacity auction. These savings do not materialize until the province has capacity requirements.	• Continue this work as part of LTEP
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in spring 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March
11) FAO Engagement		
• ENERGY, MOF/OFA, FAO	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion.

1. Scope

This methodology describes our global approach to rating securities backed by utility cost recovery charges ("UCRC" bonds) that are established by special legislation and financing orders issued by utility regulatory bodies. The charges backing UCRC bonds rated by us have been established by state legislation and state utility regulatory bodies in the United States. For UCRC bonds backed by charges authorized by other jurisdictions, we will analyze the specifics of the securitization's legal framework and regulations – and their implications for the quality of the protections afforded to investors – within the general methodology described in this report.

Examples of cost recovery charges include those imposed to cover certain costs of utility companies that had been incurred in a regulated environment but could no longer be recovered because of a change to a more competitive regulatory regime (i.e., charges sometimes referred to as "stranded utility charges") and those imposed to pay for environmental cleanups, clean energy or for the replenishment of reserves established for repair of facilities damaged by natural calamities, such as hurricanes or tornados.

2. Executive Summary

A utility cost recovery charge bond is a bond typically issued by a special purpose entity of a utility, or by a special borrowing conduit, to recover specified costs as authorized by special legislation and a specific financing order issued by a public service utility regulatory body. The bonds are backed by a property right created by the legislation, which provides the right to impose and collect special charges on customers' monthly electric bills.

This credit rating methodology was republished on June 22, 2015 containing an updated monitoring section and minor other editorial updates in the body of the text and in certain footnotes. The content of this Credit Rating Methodology has not been changed.

The credit quality of the bonds depends on the legal strength of the property right, which in turn depends on the specifics of the related legislation and financing order, and on the size and economic strength and stability of the ratepayer base against which the costs will be imposed. Therefore, our credit analysis of cost recovery charge securitizations focuses on both legal and economic factors that can influence whether investors in UCRC bonds will be paid as promised.

On the legal side, we assess the extent to which the legislation that authorizes the cost recovery charges[1] provides clear procedures for insulating the transaction from claims by other parties and is likely to be able to withstand challenges to rescind or alter the legislation prior to the legal final maturity of the securities. Consequently, our analysis focuses on the extent to which the legislation clearly defines (1) a property that entitles the owner of such property – the utility, or, in some cases, a public trust or corporation – the right to charge the fee throughout the life of the security in an amount sufficient to make full and timely repayment of principal and interest on the security, (2) the process the owner of the property must follow to charge the fee, (3) the irrevocable right of the owner of the property to transfer the fee to a special purpose financing vehicle for securitization purposes, (4) the type of financing vehicle authorized to issue securities backed by the fees, and (5) the process to be followed such that the transfer would be viewed as a "true sale" of the rights to the cash flows rather than a pledge of collateral for a financing for transactions that involve the transfer of the property from the utility to the issuer. A true sale would insulate the securitization from a bankruptcy of the utility, protecting securitization investors from potential claims on the cash flows by the utility's creditors. In addition, we assess whether the legislation has a government pledge not to impair the utility's right to collect the charges and the consequences if the government nevertheless does attempt to impair the right.

We also examine the likelihood that other potential claimants, such as other creditors of the financing vehicle if it were to become bankrupt or investors in other securities that have been issued by the utility, might make a successful claim on the cash flows of the securitization. Furthermore, we consider the breadth of the market to whom the charge will be applied and the extent to which the charge might be "bypassable," that is, the extent to which current or future customers might be categorized as outside the scope of the applicability of the charge.

Our assessment of the overall legal strength of the property right involves qualitative and judgmental factors. Transactions that are strong with respect to each of such characteristics may achieve the highest rating while the impact of weakening any of the attributes would be evaluated on a case-by-case basis.

On the economic side, our analysis focuses on the likelihood that the charges established by the legislation and accompanying regulations will be sufficient to repay the securitization bonds and on whether the charges might become onerous enough to cause pressure to rescind or alter the charges through future legislative or legal actions. As part of that assessment, we evaluate (1) possible changes in the size and composition of the customer base against whom the fee is to be charged, incorporating an evaluation of the breadth and diversity of the customer base, (2) the likely per capita energy usage (in those cases in which the fee charged is based on the usage amount), and (3) the fee rate, including any mechanism built in by the legislation that enables the fee to be reset over time to offset shortfalls that might develop over the life of the securitization (i.e., the transaction's "true up" mechanism). Generally the true-up mechanism is in effect the most important credit protection for UCRC transactions, limiting the risk that the cost recovery charges will be insufficient to pay off the bonds, thereby limiting the need for traditional sources of credit enhancement such as subordination and reserve funds.[2]

In analyzing a transaction's true-up mechanism, we examine how high rates would need to be set under "stressful" future scenarios to fully pay off the bonds, to assess the risk that onerous future rates might cause pressure to overturn or change the legislation and/or regulations establishing the charges. The variables that we typically "stress" test for UCRC bonds are the base against which the charge is to be

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.

[1] Throughout this report we use the terms "cost recovery charges" and "cost recovery fees" interchangeably.

[2] The true-up mechanism also limits the need to analyze the underwriting of the customer base, since the mechanism adjusts for all shortfalls, including those caused by customer defaults.

applied (usually energy usage) and the servicing fee. To obtain a high rating, we would expect that even in a stressful environment, such as one in which energy usage declined dramatically, the charge per customer necessary to pay off the bonds would be reasonably low both in absolute terms and as a percentage of the customer's energy bill. The specific stresses that we place on the variables are issuer-specific and are determined on a case-by-case basis.

In addition, we analyze the implications of other structural features of the securitization that could affect the risk of investor loss. For example, we examine the risk implications of how the cash flows are allocated among the various classes of investors and the other participants in the transaction, and the extent to which any other sources of funds are likely to be sufficient to offset any remaining shortfalls to investors, whether the shortfalls are temporary ("liquidity") or permanent ("credit enhancement").

3. Analyzing the Risk Factors

Because of the unique characteristics of this highly regulated asset class, our credit analysis of UCRC securitizations focuses primarily on the legislation and the true-up mechanism. The degree of certainty that the fees generated through the legislation will be sufficient to pay off the securitizations in full is a complementary aspect of the analysis. .

Depending on the risks and mitigants in the relevant jurisdiction, transaction ratings will typically be positioned between the government rating and the country ceiling. Risks that could lead us to determine transaction ratings to be lower than the country ceiling include, for example, continued high levels of debt burden in a utility system. Such high levels of debt, if deemed unsustainable in the long term, may lead to political pressure to adjust the regulatory framework around the system deficit, with some potential negative impact on the related securitization transactions.

In the following sections, we describe the factors that typically lead to a high degree of certainty and thus high ratings on the bonds.

3.1 Protection against Future Impairment of the Right to Collect the Charges

Utility cost recovery charges are established by special legislation that authorizes the creation of a property right to collect future surcharges on customers' monthly electricity bills as the means to pay back the UCRC bonds. Consequently, we analyze the extent to which investors are protected against the enactment of future legislative changes that would weaken that right. For example, investor risk would be mitigated in a situation in which (1) the legislation contained a pledge by the jurisdiction not to impair the right to collect the special charges until the maturity of the bonds and (2) violation of that pledge would be a violation of law [3].

3.2 Irrevocability of the Financing Order

The legislation is typically accompanied by a financing order issued by the public service commission that authorizes the utilities to impose and collect the surcharges on the customer's monthly electric bill during the term of the bonds. Our analysis assesses whether the financing order is irrevocable, which would protect investors against future adverse changes that may reduce the charges backing the bonds.

3.3 Sufficiency of the Charges and the True-Up Mechanism

The charges are usually assessed as an amount linked to a customer's energy usage. Our analysis considers whether the financing order places any limits on charges – e.g., caps on the levels of charges or limits on the length of time that the charges can be imposed – that might cause the collections to be insufficient to provide for timely payment of the principal and interest on the UCRC bonds. In addition, we analyze whether the period over which the charges are allowed to be levied provides sufficient cushion to pay off the bonds by maturity in the event that collections come in more slowly than originally projected.

[3] Violation of the non-impairment pledge would be a violation of the Contract Clause and the Takings Clause under the Federal and State constitutions.

As part of that analysis, we evaluate the power of any true-up mechanism that is provided for in the legislation and detailed in the financing order to correct for shortfalls that may develop over the life of the securities. A true-up mechanism typically adjusts future fee rates on a scheduled periodic basis (e.g., semiannually or annually) to correct for any under- (or over-) collections in a preceding period and to ensure the full and timely payment of future scheduled debt service, based on updated usage forecasts. The greater the frequency with which the true-up adjustments are made, the less likely that investors will suffer a shortfall at the final maturity date.[4]

That is particularly important as the security approaches the final maturity date; frequent rate adjustments based on then-current projections mitigate the risk that actual collections will deviate substantially from those projections, limiting the possibility of shortfalls at the final maturity date. Consequently, our analysis assesses the conditions under which more frequent true-ups are allowed, especially near the final maturity.[5]

3.4 Non-Bypassability of the Charges

We evaluate whether the charges are "non-bypassable," that is, whether the charges must be collected from all existing and future customers of the utility or its successors or assignees within the utility's service territory, and whether the financing order provides that a severance fee be charged to customers who switch to other service providers within the territory during the life of the bonds. We evaluate any exceptions to the non-bypassabilty rule, and consider the materiality of those exemptions to the cash collections. Charges that cannot be bypassed (i.e., those that cannot be avoided by the customers in the utility's service area) ensure a continuing payer base for the charges, leading to less risk for investors. As described in the Structural Features section (Section 3.8), the power of the true-up mechanism to protect investors is dependent on the non-bypassability of the charges. As a result, non-bypassability (with limited, immaterial exemptions) has been a key factor behind the high ratings that are typically assigned to these transactions, without the need for considerable protection from traditional types of credit protection, such as reserve accounts or subordination.

3.5 Bankruptcy of the Utility

For structures in which the initial owner of the property is a utility, a bankruptcy of the utility could expose securitization investors to the risk that other creditors of the utility might make a claim on the cost recovery charges or that payments to securitization investors might be delayed as a result of an imposition of an automatic stay on payments from the utility company.[6,7] However, that risk would be limited if it were clear that a bankruptcy court would view the transfer of the rights to the charges as a "true sale" of those rights, rather than as a financing of the company. As a result, we analyze whether the legislation clearly establishes the utility's right to receive and transfer the rights to the charges and provides unambiguous procedures for transferring those rights to the financing vehicle as a true sale, and whether those procedures are followed in the financing order.

In cases where the utility is the servicer of the transaction, we analyze whether a bankruptcy of the utility could lead to a disruption in servicing, e.g., billing and collecting. However, given the essential service provided by the utility, we expect that government authorities would intervene to prevent any disruption in servicing that might result from a bankruptcy. As a result, where the servicer is a regulated utility, we view operational risk as low. Consequently, we typically would consider a transaction to be consistent with a Aaa rating even if the servicer were not investment grade, as long as the transaction were structured with some mitigants for operational risk, such as the inclusion of a backup servicer and/or provision for additional liquidity.[8]

[4] Generally, the charges collected rank senior to other charges of a utility system and represent only a small amount of the total revenues of such system .
[5] Transactions typically allow for more frequent true-ups during the "tail period" between the transaction's stated "expected" maturity (determined by the sponsor) and the "legal" final maturity. The legal final maturity is the important date from our rating perspective, the date by which all principal must be repaid.
[6] In some transactions, the property is created by law for the benefit of a public trust or corporation that also is created by the same law. In such cases, the true sale risk would be non-existent as there is no sale or transfer of the property.
[7] For a discussion of how Moody's analyzes legal risks in structured finance transactions, see Moody's Related Research section at the end of this report.
[8] The rating standard for a backup servicer likely would be lower than investment grade, but would depend on the specific facts and circumstances of the transaction and servicer.

In addition, we analyze whether the bankruptcy of the utility could cause a disruption in the remittance of payments by the utility to bondholders. Such a disruption could occur if the remittances of the charges were "commingled" with the other funds of the utility and the bankruptcy court ordered a halt to payments until proper ownership of the funds could be sorted out. Our analysis includes an assessment of the ways in which the utility separates the cost recovery charges received from its other funds and the frequency with which it transfers the funds to the trust.

3.6 Bankruptcy of the Financing Vehicle

Another potential risk to investors in UCRC securitizations is a bankruptcy of the financing vehicle. That could expose investors to the risk that other creditors of the vehicle might make a claim on the cost recovery charges or that payments to investors might be delayed by the imposition of an automatic stay. Consequently, we analyze (1) the likelihood that a third-party creditor would be able to successfully petition the owner of the assets (i.e., the financing vehicle) into an involuntary bankruptcy proceeding or (2) the likelihood that the owner of the assets would voluntarily seek the protection of the bankruptcy courts.

To analyze the likelihood of an involuntary bankruptcy, we assess the characteristics that would mitigate that risk, such as if the financing vehicle had (1) no assets other than the right to the cost recovery charges, (2) no indebtedness other that the securitization debt, (3) limited activities that could give rise to contractual or other liabilities, and (4) agreements with the sponsor and other contracting parties not to petition for the dissolution, liquidation or bankruptcy of the securitization vehicle. Similarly, factors that would mitigate the risk of a voluntary bankruptcy would include (1) charter documents of the owner of the assets that require directors who are independent of the utility and (2) a unanimous vote of directors as a condition to filing a voluntary bankruptcy.

3.7 Economic Factors

Even if the financing order is irrevocable, the charges or the law that authorizes them could be subject to challenge in the courts or to future political pressure to rescind or change them through legislation. That is more likely the higher the charges, i.e., the more the economic incentive for a challenge or in circumstances where the financial imbalances in a utility system increase. Consequently, our economic analysis focuses on the size of the cost recovery charge, both in absolute terms and as a percentage of the customer's energy bill. Typically the percentage of a residential customer's monthly bill devoted to the cost recovery charge is less than 10%.

We typically also look at stressful collection scenarios. For example, in one scenario, we assume (1) that energy usage falls short of the utility's projections[9] by a progressively increasing amount each year (typically 5% per year), (2) that forecasted collections in peak usage months do not materialize (for example, 100% of the collections in the peak month and 50% of the collections in the second highest-usage month), and (3) that the servicing fee is considerably higher than the current, "normal," servicing fee, representing the fee that would be required if the original servicer needed to be replaced in a stressful environment. In another scenario, we typically assume that energy usage is lower than projected by a set amount throughout the life of the securitization (typically 25%). For highly rated transactions, we would expect that the cost recovery charge would remain relatively low even in those highly stressful scenarios.

While the specific stresses that we place on the variables have been quite similar to date, this reflects the fact that all rated transactions to date have involved requests for the highest ratings and been supported by highly diverse, broad-based service areas. However, in general, stresses are issuer-specific and are determined on a case-by-case basis. One of the factors that we use to determine the appropriate stress level for a transaction is the variability of the base against which the charge is applied, for example, the population in the service area or the energy usage in the service area. Customer bases that are less broad-based and diversified tend to be more variable; as a result, we would apply more severe stresses in those situations.

[9] We typically assess the reasonableness of the utility's projections by analyzing (1) the historical energy usage in the utility's service region and the variances between past projections and actual outcomes, and (2) the likely growth in electricity usage in the service area of the utility, taking into account the projected economic growth in the region and the possible competitive impact of technological advances, such as those in the development of solar energy.

In particular, we evaluate the economic diversity of the utility's service region to assess the potential variability in its economic health, which tends to drive changes in population and energy usage. An area that relies on multiple industries for economic growth will likely have a more stable business climate than an area that is dependent on the fortunes of one industry. In the latter case, the area's prospects will falter if that particular industry runs into hard times.

We also consider the mix in the customer base among residential, commercial, and industrial users. A utility with a large residential base relative to commercial and industrial users will tend to have less volatility in energy consumption, since energy consumption by commercial and industrial operations is more closely tied to the business cycle. Furthermore, residential customers are less likely to quickly embrace new energy production technologies and are less likely to cut back energy consumption dramatically if the price of energy were to rise. The higher variability of a commercial and industrial base can be exacerbated further if the service area's customer usage is concentrated in a few large commercial or industrial operations, which could make the overall energy consumption vulnerable if those entities were to decline or leave the area.

3.8 Structural Features

The key structural feature of UCRC transactions is the true-up mechanism. Our rating is highly dependent on the extent to which the mechanism adjusts the charges to correct for past shortfalls or forecasted future shortfalls. The effectiveness of those rate changes in raising funds depends, in turn, on how easily customers can escape the charges and how sensitive electricity usage is to increases in the utility charges. Therefore, our analysis of the true-up mechanism goes together with our analysis of how bypassable the cost recovery charges are and how easily customers can cut back on electricity usage (through alternative sources of energy or conservation). To be consistent with a particular rating, a strong true-up mechanism combined with non-bypassable charges mitigates the need for credit enhancement in the form of alternative sources of funds.

In addition, our analysis of the credit risk of a UCRC transaction incorporates our assessment of the implications of the transaction's cash flow allocation structure (sometimes referred to as the cash flow "waterfall"). In particular, we focus on the seniority of principal and interest payments to the bond's investors *vis-à-vis* payments to other participants. In addition, we analyze the extent to which the transaction has an alternative source of liquidity to pay principal and interest in the event that there is a temporary interruption in the flow of the cost recovery charges. For example, in many transactions there is a capital or reserve account with funds sufficient to pay interest for at least 1-2 months, if needed. Furthermore, we assess the extent to which the credit enhancement that is available in the transaction is likely to be sufficient to offset any shortfalls that might develop in the period between the final true-up adjustment and the maturity of the bonds.

4. Monitoring

In monitoring UCRC transactions, we apply the key components of this methodology. More specifically, we analyze, whether bond balances are in line with the scheduled principal amortization, which indicates the extent to which payments have been in line with our original expectations.

We review the periodic information received and look at whether there has been a draw on the reserve accounts. This data point provides further clues as to the steadiness of the cash flows and accuracy of true-up adjustments.

In addition, we analyze the factors that determine the future strength of the transaction. For example, we monitor any legal or political developments that could indicate an increased risk of changes in the legislation that could impair future cash flows to the transactions. Such risk may materialise, for example, in case of continued high financial imbalances in the system that may lead the system deficit to be viewed as unsustainable over the long-term.

Depending on the jurisdiction, we also follow the rating of the utility as a proxy to assess any changes to the economic health of the service region and the potential for changes in the size and composition of the ratepayer base. Furthermore, we monitor the rating of the utility collecting the charges (as an indicator of its financial condition) to track the risk, typically quite small, that a bankruptcy could lead to disruption in billing and collections and in the remittance of payments to the bondholders.

In other instances, we may be more concerned with the behavior of the regulator of the utility system and less with individual utility companies. This could lead to a lower rating in the space between the local currency ceiling and the sovereign rating or the utility rating.

Thus changes on our expectations and other analytical components could have an impact on the rating of the securities and may result in a reassessment of the rating.

Moody's Related Research

The credit ratings assigned in this sector are primarily determined by this credit rating methodology. Certain broad methodological considerations (described in one or more secondary or cross-sector credit rating methodologies) may also be relevant to the determination of credit ratings of issuers and instruments in this sector. Potentially related secondary and cross-sector credit rating methodologies can be found here.

For data summarizing the historical robustness and predictive power of credit ratings assigned using this credit rating methodology, see link.

Please refer to Moody's Rating Symbols and Definitions, which is available here, for further information.

However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc., have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc., for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

For Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail clients. It would be dangerous for "retail clients" to make any investment decision based on MOODY'S credit rating. If in doubt you should contact your financial or other professional adviser.

For Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Subject: RE: Rate Mitigation Implementation

Hi David,

I thought I would share a high level summary of this morning's discussion.

The meeting started with a conversation around structures and how Energy plans to move all of the elements of the Fair Hydro Plan forward. In essence, these Thursday meetings will become a regular occurrence (next week is scheduled for Wednesday). This will act as a feeder for issue specific working groups in order to have a single window for reporting in on progress and issues that require resolution. See attached "OFHP Gov and Delivery Structure" for details. There will also be regular DM level updates to keep respective Ministries apprised of progress.

GA Smoothing (Blakes Update)

Blakes, who has been engaged by the Ministry of Energy, provided an overview of the Long Island Power Authority securitization structure that has been referenced several times as a model (albeit smaller) for the GA Smoothing mechanism. Here are some high level details:

o Nuclear facility mothballed and facility costs needed to be repaid over time
o In part as a result of this large liability, LIPA's credit rating was weak increasing borrowing costs
o Created framework in legislation, allowed for a financing order every time the separate entity went out for financing (abbreviated hearing to review merits of case)
o Role of Financial Regulator (closer to OSC than OEB):
· Public Authority Control Board
· Abbreviated hearing
· Form over substance, to ensure calculations are correct
· Regulator needed to be sure that issuance designed to receive lower cost borrowing + meet objectives of the legislation
· If stakeholders want to challenge the validity of order, had 30 days to do so and then foreclosed, after 30 days bonds could be issued
o Asset:
· Order and charges irrevocable: right that could not be changed
· True-up mechanism: ability to adjust collections from end users to ensure cover principle and interest
· Ensure consumers cannot bypass system (pay as long as connected to the grid, whether consuming or not)
· Charge not more than 10% of bill
· Set up as a "true sale" - rights around asset protected
o Unique features (would not apply in Canada):
· State pledge: state would not introduce legislation or do anything to affect rights of assets or bondholders
§ Creates a constitutional right, if reversed is a "taking of the government" which results in a particular process
· Bankruptcy: bondholders can make an application to court to direct payment to bondholders
· While these elements cannot be replicated in the same way in Canada, Blakes suggests it will be important to enable similar protections under the Canadian legal framework to the extent possible

Blakes also walked through key elements that the market and rating agencies will seek in order to ensure this is financeable (according to Blakes there will be an expectation that mitigation measures will be in place for each):
· Size and breadth of customer base
· Non-bypassability
· Volatility of policy environment
· For more details, Blakes suggests reading the attached Moody's guide

GA Smoothing (OPG Update)

OPG walked through the attached summary workplan providing an update on key buckets of work including that included a number of touch points with the OFA and MoF focused on process for borrowing and equity infusion both at inception and ongoing approvals. Note that OPG is conceiving of each incremental debt issuance as an amendment to the borrowing agreement rather than as individual tranches in order to avoid differentiation between bondholder priority thereby minimizing long term interest costs. Note that working groups are beginning to meet to think in more detail to think through these issues.

GA Smoothing (IESO Update)

· IESO is thinking through what needs to be in legislation, regulation, market rules and in an agreement with OPG.

· IESO is also working with OPCD and KPMG to finalize its revised financials to incorporate its market books. IESO will file its audited financial statement with the AG in May. Further thought is needed on timing and level of engagement with the AG's office.

· On a related note, the AG has reached out through OPCD for an initial briefing on the Fair Hydro Plan.

GA Smoothing (Legislative Drafting Update)

· Energy legal expects to have first drafts to share shortly for input

· Targeting mid-April for approvals

GA Smoothing (General)

· OEB was also included in the discussion and continues to have concerns about its role in the process. Further consideration is required in the context of accounting and financing imperatives

Other Updates

· Work on the RRRP, OESP and First Nations rate is progressing in parallel. There was some talk of inclusion of these elements in the Budget Bill, but no certainty on whether that would be possible from a timing perspective.

· The Affordability Fund is moving on a more expedited path. A first draft of the TPA has been shared with Hydro One for review. Hydro One is working to establish the Trust.

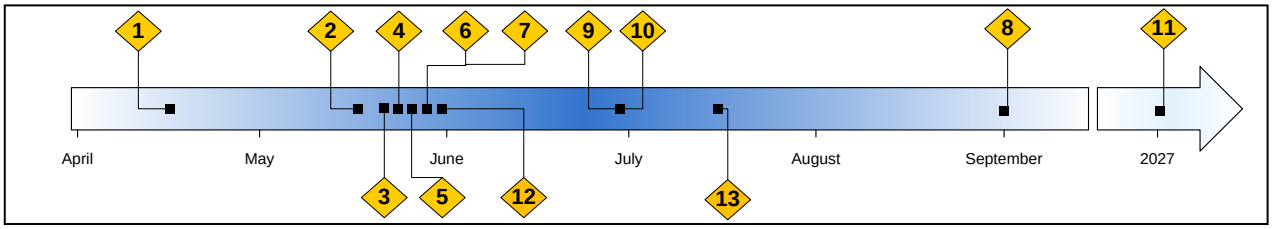
Thanks,
Scott

Summary of Work Plan

Below is an overview of the elements of the draft workplan to set up a trust special purpose financing vehicle (SPV) that would hold the claim on future customers and the debt issued to fund the payment to the IESO in accordance with Ontario's Fair Hydro Plan. All elements of the work plan will consider the key requirements of OPG with respect to elimination or mitigation of risks.

Workplan Overview

The draft workplan below is divided into major components required to set up the trust SPV as part of Ontario's Fair Hydro Plan. Each major component is divided into sub-components that provide further aspects / characteristics / requirements.



[Note deleted #13]

1. Legislative Requirements [Stakeholders: OPG, IESO, OEB, MOE]

a. Characteristics of Regulatory Asset

Key aspects will include collection rights, claim/counterclaim protection, future governmental action protection, saleability into SPV, protection from seller's creditors, OEB regulatory asset recognition, oversight of administration costs and recovery mechanism, and true-up process.

b. *Legislative amendments to implement the structure*

- Provisions in the Electricity Act (and OPG's articles) will be amended/updated to allow flexibility in OPG's corporate structure.
  1. These amendments would be similar in nature to previous amendments made to Hydro One's governing provisions in the Electricity Act.
  2. The amendments would, for example, allow OPG to create and operate through subsidiaries, and also enable OPG to raise financing through public offering of debt. (OPG may need to raise some financing to fund a portion of the subordinated debt going into the trust.)
- The electricity legislation will be amended to implement the deferral and financing of the GA, including amendments:
  1. to reflect that the IESO may defer collection of a portion of the GA;
  2. to create a "regulatory asset" consisting of the right to recover, over time, the amount GA being deferred, together with interest and other financing costs;
  3. to allow the IESO to sell that regulatory asset to a third party (the trust/financing vehicle);
  4. that authorizes the OEB to recognize the regulatory asset (which will likely comprise a deferral account) and allows the owner of the asset to recover the principal amount and financing costs for the GA deferral over time; and
  5. that also provides the OEB with no rights (or very limited rights) to review the terms on which the GA deferral is recovered (i.e. the interest rate, other financing costs and the amortization period). (This is needed to make the GA deferral financeable in the capital markets.)

2. Financing Process [Stakeholders: OPG, IESO]

a. Set up Financing Vehicle

The SPV will be established with a simplified trust indenture to facilitate flexible financing (issue short and long term debt in Canadian and US markets, ability to warehouse, ability to enter into cross currency swaps). The sole purpose of the SPV will be to acquire the

regulatory asset and raise debt. A financial service and management agreement with OPG will also be required.

b. Oversight

Appropriate oversight structure to be established independent of OPG management to review and monitor financing strategies, operating budgets and results of SPV. Reporting and monitoring requirements of Province, IESO and OEB and OPG to be determined.

c. Operations

Processes will be established for deal execution, operating cash management, regulatory reviews and credit rating agency reviews. Agreements will be established to define relationships with IESO (sales & servicing), billing payment and other administrative services, banking arrangements, subordinated debt agreement with OPG.

3. Equity Injection Process [Stakeholders: OPG, Ministry of Energy, Ministry of Finance]

The Province will require Treasury Board approval for periodic appropriations to fund equity injections into OPG. OPG Board approval will be required to issue a specified number of shares that can be periodically issued to the Province. The actual number of shares issued will be based on IESO forecast of funds required.

4. IESO and Trust Operational Process [Stakeholders: OPG, IESO]

Establish processes to facility the SPV's purchase of the IESO's regulatory asset, including timing (notice periods), frequency, fund flows, GA shortfall forecasts and true-up mechanisms.

5. Debt Issuance – General Planning [Stakeholders: OPG, MOF]

Develop debt issuance plan considering need for liquidity/working capital, debt profile (short/long term), debt composition (senior/subordinated), marketing plan (Canada and US), financing amounts and timing, credit rating agency legal opinions and required approvals.

6. Debt Issuance – Subordinated [Stakeholders: OPG]

Establish subordinated debt characteristics (risk, return, cash flows), repayment terms, issue frequency/timing and required approvals.

7. Debt Issuance – Short Term [Stakeholders: OPG]

Ability to aggregate and warehouse using short term CP / ABCP.

8. Debt Issuance – Long Term [Stakeholders: OPG]

Key steps in establishing OPG external long term debt financing include the following:

- Select bank advisor for Canadian market
- Select bank advisor for US market
- Select credit rating agency and establish high investment grade requirements
- Seek credit rating agency legal opinions (identified above in section 5)
- Ongoing financial and legal due diligence
- Credit rating agency presentation and follow-up Q&A
- Obtain preliminary or pre-sale rating
- Develop maturity profile if flexibility available
- Draft and execute offering memorandum, agency agreement and other legal documents
- Prepare marketing materials
- Marketing, road shows, investor one-on-ones
- Investor due diligence and collection of expression of interest
- USD denominated debt - ISDA contracts for swap arrangements and potential collateral requirements

9. **Recovering Interest, Administration and Other Financing Costs from IESO [Stakeholders: OPG, IESO]**

   Establish basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency.

10. **Paying Interest, Administration and Other Financing Costs to Providers [Stakeholders: OPG, IESO]**

    Establish bank accounts, basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency, required approvals and administration agreements (either with trust administrator or OPG).

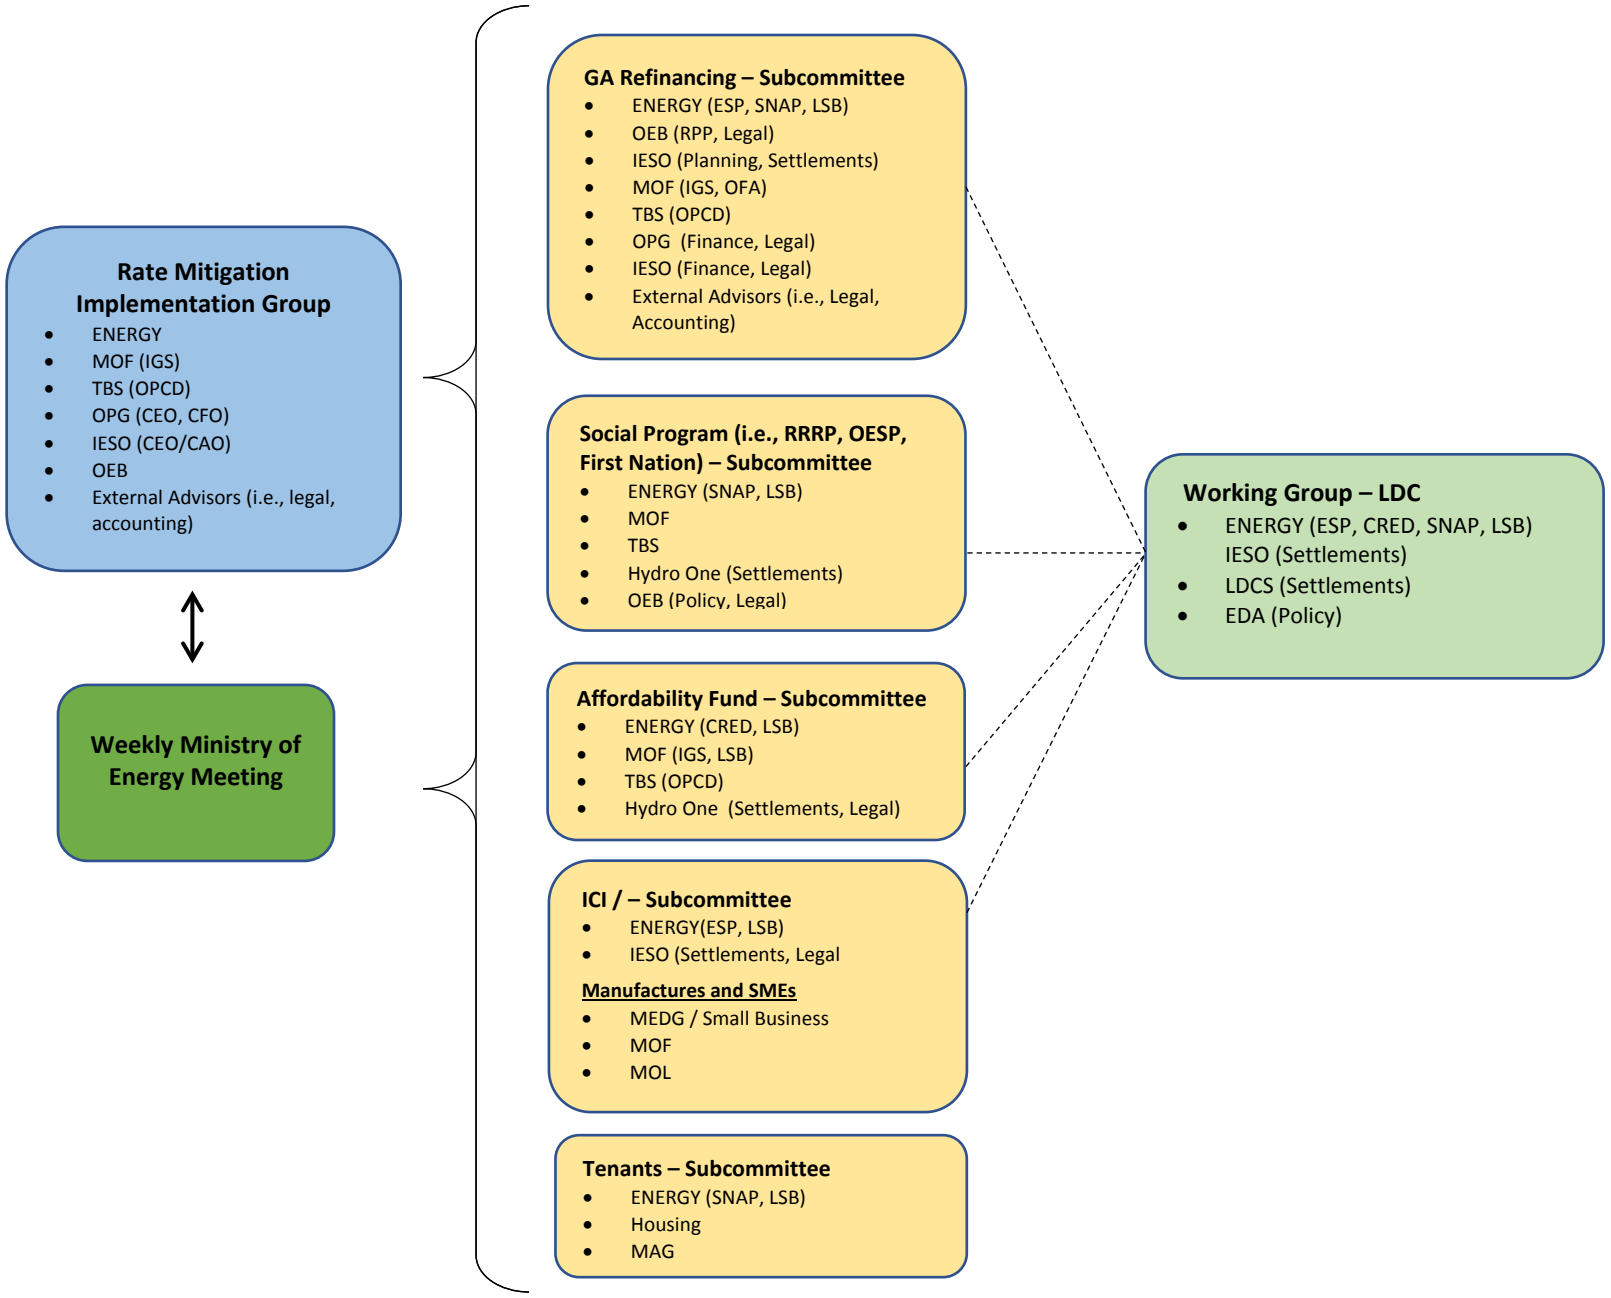
11. **Recovering Principal from IESO [Stakeholders: OPG, IESO]**

    Establish basis of recovery (regulatory asset schedule / actual financing amortization or maturity / other method), documentation requirements, approvals, timing and frequency.

12. **Accounting Requirements and Process [Stakeholders: OPG]**

    Establish overall accounting requirements for trust, regulated asset, consolidation with OPG, operational control of trust and restrictions on regulated asset. See further details in Appendix A – Terms Necessary for OPG to Consolidate the Global Adjustment Trust.

Governance and Delivery Structure for Implementation of Ontario's Fair Hydro Plan



WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
March 9, 2017

Agenda

1) Governance / Delivery Structure – Overview (ESPD)

2) GA Refinancing
    - Overview of US models (Blakes)
    - OPG Update
    - IESO Update
    - Legislative Drafting (LSB)

3) Affordability Fund (CRED)

4) RRRP, OESP and FN (SNAP)

5) ICI (ESPD)

Notes:

Implementation of Ontario's Fair Hydro Plan
Week of March 6, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		

• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation:
	  o Defining mitigation and recovery mechanism; and
	  o Establishing roles for IESO, OPG and OEB
	• Regulation (amend O.Reg.429/04)
	• Shareholder Declaration and Resolution
	• Third Party Technical Report re Long Lived Assets (TBD)
	• Accounting opinions from E&Y (OPG) and KPMG (IESO)
	• Financing:
	  o IESO line of credit to bridge from May-July;
	  o OEFC to OPG equity injection structure; and
	  o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)
	
	<u>Considerations</u>
	• GA refinancing legislation could also include legislative changes to enable broadening of RRRP, expanding of OESP and establishing of FN delivery credit.
	• Ongoing legal, accounting and financing risk assessments.
	• Impact on Electricity Sector Dedicated Income.
	• OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers.
		• Report back to TBC/MBC by spring 2017, prior to going to LRC with any legislation, on the approach to refinance GA (per TBC/MBC Minute)
		
		• Report to TBC/MBC, LRC and Cabinet in spring 2017 (per Cabinet Minute)
		
		• Provide comfort level to allow OEB to include in May 2017 RPP
		
		• Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure	• Report back to TB/MBC by Spring 2017 • Fall 2017 implementation (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
	in place to provide to existing consumers in Algoma and Remotes. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB and OEB	• Legislation • Regulation (TBD) <u>Considerations</u> • Reach out to OEB to consider whether surplus funding of ~$100M could be used to increase OESP credits by 50%. Regulation can be updated quickly (need to consider whether posting on EBR is required). • Consider whether revised directive needed to continue having OEB administer program. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 • Program in place in 2017 (per Cabinet Minute)
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13M to $20M • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, TBS, MOF and H1	• TBC/MBC Submission • Trust Structure • Transfer Payment Agreement (multi-party) <u>Considerations</u> • Legislative changes not required. • Funding needs to flow to the Trust prior to March 31, 2017.	**Week of March 6, 2017:** • TBC/MBC approval (March 6th) • CAB approval (March 8th) • Follow up calls with several LDCs and EDA to provide updates and outline proposed principles for the Fund (Ongoing engagement with Hydro One, LSB, OPCD, CSD on principles and establishment of Trust and development of Transfer Payment Agreement (TPA) (including sharing of drafts for comment); **Week of March 13, 2017:** • Hydro One to finalize establishment of Trust by March 17th • Continue development of TPA, including circulating near to final version by March 17th **Week of March 20, 2017:** • Execute TPA between the Ministry and the Trust by March 22nd • Initiate process to flow funds to the Trust; to be completed before March 31st

Item	Key Deliverables / Considerations	Timing / Next Steps
		April to May 2017: • Additional trustees to be appointment; Trust develops further details, e.g. customer eligibility criteria and processes for LDCs to apply for funds; to be developed in consultation with LDCs **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date to impact electricity bills this year (May 15, 2017). • RR posting is typically a minimum of 45-days for all regulatory changes affecting business to allow for review/comment. **Note:** RR posting is not a legal requirement but a best practice. • Working with the Ontario Chamber of Commerce on a targeted outreach campaign.	• RR posting on the proposed amendment • Report back to TBC/MBC by spring 2017 (per TBC/MBC Minute) • LRC [DATE] • Effective May 2017 (TBD)

Item	Key Deliverables / Considerations	Timing / Next Steps
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • Opportunity to highlight Market Renewal in the next LTEP. • IESO's stakeholder engagements on Market Renewal is ongoing. • Moving away from a two schedule system could impact consumer prices depending on implementation. • Most of the savings accrue from the move to a capacity auction. These savings do not materialize until the province has capacity requirements.	• Continue this work as part of LTEP
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' <u>Considerations</u> • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs <u>Considerations</u> • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in spring 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March
11) FAO Engagement		
• ENERGY, MOF/OFA, FAO	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion.

1. Scope

This methodology describes our global approach to rating securities backed by utility cost recovery charges ("UCRC" bonds) that are established by special legislation and financing orders issued by utility regulatory bodies. The charges backing UCRC bonds rated by us have been established by state legislation and state utility regulatory bodies in the United States. For UCRC bonds backed by charges authorized by other jurisdictions, we will analyze the specifics of the securitization's legal framework and regulations – and their implications for the quality of the protections afforded to investors – within the general methodology described in this report.

Examples of cost recovery charges include those imposed to cover certain costs of utility companies that had been incurred in a regulated environment but could no longer be recovered because of a change to a more competitive regulatory regime (i.e., charges sometimes referred to as "stranded utility charges") and those imposed to pay for environmental cleanups, clean energy or for the replenishment of reserves established for repair of facilities damaged by natural calamities, such as hurricanes or tornados.

2. Executive Summary

A utility cost recovery charge bond is a bond typically issued by a special purpose entity of a utility, or by a special borrowing conduit, to recover specified costs as authorized by special legislation and a specific financing order issued by a public service utility regulatory body. The bonds are backed by a property right created by the legislation, which provides the right to impose and collect special charges on customers' monthly electric bills.

This credit rating methodology was republished on June 22, 2015 containing an updated monitoring section and minor other editorial updates in the body of the text and in certain footnotes. The content of this Credit Rating Methodology has not been changed.

The credit quality of the bonds depends on the legal strength of the property right, which in turn depends on the specifics of the related legislation and financing order, and on the size and economic strength and stability of the ratepayer base against which the costs will be imposed. Therefore, our credit analysis of cost recovery charge securitizations focuses on both legal and economic factors that can influence whether investors in UCRC bonds will be paid as promised.

On the legal side, we assess the extent to which the legislation that authorizes the cost recovery charges[1] provides clear procedures for insulating the transaction from claims by other parties and is likely to be able to withstand challenges to rescind or alter the legislation prior to the legal final maturity of the securities. Consequently, our analysis focuses on the extent to which the legislation clearly defines (1) a property that entitles the owner of such property – the utility, or, in some cases, a public trust or corporation – the right to charge the fee throughout the life of the security in an amount sufficient to make full and timely repayment of principal and interest on the security, (2) the process the owner of the property must follow to charge the fee, (3) the irrevocable right of the owner of the property to transfer the fee to a special purpose financing vehicle for securitization purposes, (4) the type of financing vehicle authorized to issue securities backed by the fees, and (5) the process to be followed such that the transfer would be viewed as a "true sale" of the rights to the cash flows rather than a pledge of collateral for a financing for transactions that involve the transfer of the property from the utility to the issuer. A true sale would insulate the securitization from a bankruptcy of the utility, protecting securitization investors from potential claims on the cash flows by the utility's creditors. In addition, we assess whether the legislation has a government pledge not to impair the utility's right to collect the charges and the consequences if the government nevertheless does attempt to impair the right.

We also examine the likelihood that other potential claimants, such as other creditors of the financing vehicle if it were to become bankrupt or investors in other securities that have been issued by the utility, might make a successful claim on the cash flows of the securitization. Furthermore, we consider the breadth of the market to whom the charge will be applied and the extent to which the charge might be "bypassable," that is, the extent to which current or future customers might be categorized as outside the scope of the applicability of the charge.

Our assessment of the overall legal strength of the property right involves qualitative and judgmental factors. Transactions that are strong with respect to each of such characteristics may achieve the highest rating while the impact of weakening any of the attributes would be evaluated on a case-by-case basis.

On the economic side, our analysis focuses on the likelihood that the charges established by the legislation and accompanying regulations will be sufficient to repay the securitization bonds and on whether the charges might become onerous enough to cause pressure to rescind or alter the charges through future legislative or legal actions. As part of that assessment, we evaluate (1) possible changes in the size and composition of the customer base against whom the fee is to be charged, incorporating an evaluation of the breadth and diversity of the customer base, (2) the likely per capita energy usage (in those cases in which the fee charged is based on the usage amount), and (3) the fee rate, including any mechanism built in by the legislation that enables the fee to be reset over time to offset shortfalls that might develop over the life of the securitization (i.e., the transaction's "true up" mechanism). Generally the true-up mechanism is in effect the most important credit protection for UCRC transactions, limiting the risk that the cost recovery charges will be insufficient to pay off the bonds, thereby limiting the need for traditional sources of credit enhancement such as subordination and reserve funds.[2]

In analyzing a transaction's true-up mechanism, we examine how high rates would need to be set under "stressful" future scenarios to fully pay off the bonds, to assess the risk that onerous future rates might cause pressure to overturn or change the legislation and/or regulations establishing the charges. The variables that we typically "stress" test for UCRC bonds are the base against which the charge is to be

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.

[1] Throughout this report we use the terms "cost recovery charges" and "cost recovery fees" interchangeably.

[2] The true-up mechanism also limits the need to analyze the underwriting of the customer base, since the mechanism adjusts for all shortfalls, including those caused by customer defaults.

applied (usually energy usage) and the servicing fee. To obtain a high rating, we would expect that even in a stressful environment, such as one in which energy usage declined dramatically, the charge per customer necessary to pay off the bonds would be reasonably low both in absolute terms and as a percentage of the customer's energy bill. The specific stresses that we place on the variables are issuer-specific and are determined on a case-by-case basis.

In addition, we analyze the implications of other structural features of the securitization that could affect the risk of investor loss. For example, we examine the risk implications of how the cash flows are allocated among the various classes of investors and the other participants in the transaction, and the extent to which any other sources of funds are likely to be sufficient to offset any remaining shortfalls to investors, whether the shortfalls are temporary ("liquidity") or permanent ("credit enhancement").

3. Analyzing the Risk Factors

Because of the unique characteristics of this highly regulated asset class, our credit analysis of UCRC securitizations focuses primarily on the legislation and the true-up mechanism. The degree of certainty that the fees generated through the legislation will be sufficient to pay off the securitizations in full is a complementary aspect of the analysis. .

Depending on the risks and mitigants in the relevant jurisdiction, transaction ratings will typically be positioned between the government rating and the country ceiling. Risks that could lead us to determine transaction ratings to be lower than the country ceiling include, for example, continued high levels of debt burden in a utility system. Such high levels of debt, if deemed unsustainable in the long term, may lead to political pressure to adjust the regulatory framework around the system deficit, with some potential negative impact on the related securitization transactions.

In the following sections, we describe the factors that typically lead to a high degree of certainty and thus high ratings on the bonds.

3.1 Protection against Future Impairment of the Right to Collect the Charges

Utility cost recovery charges are established by special legislation that authorizes the creation of a property right to collect future surcharges on customers' monthly electricity bills as the means to pay back the UCRC bonds. Consequently, we analyze the extent to which investors are protected against the enactment of future legislative changes that would weaken that right. For example, investor risk would be mitigated in a situation in which (1) the legislation contained a pledge by the jurisdiction not to impair the right to collect the special charges until the maturity of the bonds and (2) violation of that pledge would be a violation of law [3].

3.2 Irrevocability of the Financing Order

The legislation is typically accompanied by a financing order issued by the public service commission that authorizes the utilities to impose and collect the surcharges on the customer's monthly electric bill during the term of the bonds. Our analysis assesses whether the financing order is irrevocable, which would protect investors against future adverse changes that may reduce the charges backing the bonds.

3.3 Sufficiency of the Charges and the True-Up Mechanism

The charges are usually assessed as an amount linked to a customer's energy usage. Our analysis considers whether the financing order places any limits on charges – e.g., caps on the levels of charges or limits on the length of time that the charges can be imposed – that might cause the collections to be insufficient to provide for timely payment of the principal and interest on the UCRC bonds. In addition, we analyze whether the period over which the charges are allowed to be levied provides sufficient cushion to pay off the bonds by maturity in the event that collections come in more slowly than originally projected.

[3] Violation of the non-impairment pledge would be a violation of the Contract Clause and the Takings Clause under the Federal and State constitutions.

As part of that analysis, we evaluate the power of any true-up mechanism that is provided for in the legislation and detailed in the financing order to correct for shortfalls that may develop over the life of the securities. A true-up mechanism typically adjusts future fee rates on a scheduled periodic basis (e.g., semiannually or annually) to correct for any under- (or over-) collections in a preceding period and to ensure the full and timely payment of future scheduled debt service, based on updated usage forecasts. The greater the frequency with which the true-up adjustments are made, the less likely that investors will suffer a shortfall at the final maturity date.[4]

That is particularly important as the security approaches the final maturity date; frequent rate adjustments based on then-current projections mitigate the risk that actual collections will deviate substantially from those projections, limiting the possibility of shortfalls at the final maturity date. Consequently, our analysis assesses the conditions under which more frequent true-ups are allowed, especially near the final maturity.[5]

3.4 Non-Bypassability of the Charges

We evaluate whether the charges are "non-bypassable," that is, whether the charges must be collected from all existing and future customers of the utility or its successors or assignees within the utility's service territory, and whether the financing order provides that a severance fee be charged to customers who switch to other service providers within the territory during the life of the bonds. We evaluate any exceptions to the non-bypassabilty rule, and consider the materiality of those exemptions to the cash collections. Charges that cannot be bypassed (i.e., those that cannot be avoided by the customers in the utility's service area) ensure a continuing payer base for the charges, leading to less risk for investors. As described in the Structural Features section (Section 3.8), the power of the true-up mechanism to protect investors is dependent on the non-bypassability of the charges. As a result, non-bypassability (with limited, immaterial exemptions) has been a key factor behind the high ratings that are typically assigned to these transactions, without the need for considerable protection from traditional types of credit protection, such as reserve accounts or subordination.

3.5 Bankruptcy of the Utility

For structures in which the initial owner of the property is a utility, a bankruptcy of the utility could expose securitization investors to the risk that other creditors of the utility might make a claim on the cost recovery charges or that payments to securitization investors might be delayed as a result of an imposition of an automatic stay on payments from the utility company.[6,7] However, that risk would be limited if it were clear that a bankruptcy court would view the transfer of the rights to the charges as a "true sale" of those rights, rather than as a financing of the company. As a result, we analyze whether the legislation clearly establishes the utility's right to receive and transfer the rights to the charges and provides unambiguous procedures for transferring those rights to the financing vehicle as a true sale, and whether those procedures are followed in the financing order.

In cases where the utility is the servicer of the transaction, we analyze whether a bankruptcy of the utility could lead to a disruption in servicing, e.g., billing and collecting. However, given the essential service provided by the utility, we expect that government authorities would intervene to prevent any disruption in servicing that might result from a bankruptcy. As a result, where the servicer is a regulated utility, we view operational risk as low. Consequently, we typically would consider a transaction to be consistent with a Aaa rating even if the servicer were not investment grade, as long as the transaction were structured with some mitigants for operational risk, such as the inclusion of a backup servicer and/or provision for additional liquidity.[8]

[4] Generally, the charges collected rank senior to other charges of a utility system and represent only a small amount of the total revenues of such system .
[5] Transactions typically allow for more frequent true-ups during the "tail period" between the transaction's stated "expected" maturity (determined by the sponsor) and the "legal" final maturity. The legal final maturity is the important date from our rating perspective, the date by which all principal must be repaid.
[6] In some transactions, the property is created by law for the benefit of a public trust or corporation that also is created by the same law. In such cases, the true sale risk would be non-existent as there is no sale or transfer of the property.
[7] For a discussion of how Moody's analyzes legal risks in structured finance transactions, see Moody's Related Research section at the end of this report.
[8] The rating standard for a backup servicer likely would be lower than investment grade, but would depend on the specific facts and circumstances of the transaction and servicer.

In addition, we analyze whether the bankruptcy of the utility could cause a disruption in the remittance of payments by the utility to bondholders. Such a disruption could occur if the remittances of the charges were "commingled" with the other funds of the utility and the bankruptcy court ordered a halt to payments until proper ownership of the funds could be sorted out. Our analysis includes an assessment of the ways in which the utility separates the cost recovery charges received from its other funds and the frequency with which it transfers the funds to the trust.

3.6 Bankruptcy of the Financing Vehicle

Another potential risk to investors in UCRC securitizations is a bankruptcy of the financing vehicle. That could expose investors to the risk that other creditors of the vehicle might make a claim on the cost recovery charges or that payments to investors might be delayed by the imposition of an automatic stay. Consequently, we analyze (1) the likelihood that a third-party creditor would be able to successfully petition the owner of the assets (i.e., the financing vehicle) into an involuntary bankruptcy proceeding or (2) the likelihood that the owner of the assets would voluntarily seek the protection of the bankruptcy courts.

To analyze the likelihood of an involuntary bankruptcy, we assess the characteristics that would mitigate that risk, such as if the financing vehicle had (1) no assets other than the right to the cost recovery charges, (2) no indebtedness other that the securitization debt, (3) limited activities that could give rise to contractual or other liabilities, and (4) agreements with the sponsor and other contracting parties not to petition for the dissolution, liquidation or bankruptcy of the securitization vehicle. Similarly, factors that would mitigate the risk of a voluntary bankruptcy would include (1) charter documents of the owner of the assets that require directors who are independent of the utility and (2) a unanimous vote of directors as a condition to filing a voluntary bankruptcy.

3.7 Economic Factors

Even if the financing order is irrevocable, the charges or the law that authorizes them could be subject to challenge in the courts or to future political pressure to rescind or change them through legislation. That is more likely the higher the charges, i.e., the more the economic incentive for a challenge or in circumstances where the financial imbalances in a utility system increase. Consequently, our economic analysis focuses on the size of the cost recovery charge, both in absolute terms and as a percentage of the customer's energy bill. Typically the percentage of a residential customer's monthly bill devoted to the cost recovery charge is less than 10%.

We typically also look at stressful collection scenarios. For example, in one scenario, we assume (1) that energy usage falls short of the utility's projections[9] by a progressively increasing amount each year (typically 5% per year), (2) that forecasted collections in peak usage months do not materialize (for example, 100% of the collections in the peak month and 50% of the collections in the second highest-usage month), and (3) that the servicing fee is considerably higher than the current, "normal," servicing fee, representing the fee that would be required if the original servicer needed to be replaced in a stressful environment. In another scenario, we typically assume that energy usage is lower than projected by a set amount throughout the life of the securitization (typically 25%). For highly rated transactions, we would expect that the cost recovery charge would remain relatively low even in those highly stressful scenarios.

While the specific stresses that we place on the variables have been quite similar to date, this reflects the fact that all rated transactions to date have involved requests for the highest ratings and been supported by highly diverse, broad-based service areas. However, in general, stresses are issuer-specific and are determined on a case-by-case basis. One of the factors that we use to determine the appropriate stress level for a transaction is the variability of the base against which the charge is applied, for example, the population in the service area or the energy usage in the service area. Customer bases that are less broad-based and diversified tend to be more variable; as a result, we would apply more severe stresses in those situations.

[9] We typically assess the reasonableness of the utility's projections by analyzing (1) the historical energy usage in the utility's service region and the variances between past projections and actual outcomes, and (2) the likely growth in electricity usage in the service area of the utility, taking into account the projected economic growth in the region and the possible competitive impact of technological advances, such as those in the development of solar energy.

In particular, we evaluate the economic diversity of the utility's service region to assess the potential variability in its economic health, which tends to drive changes in population and energy usage. An area that relies on multiple industries for economic growth will likely have a more stable business climate than an area that is dependent on the fortunes of one industry. In the latter case, the area's prospects will falter if that particular industry runs into hard times.

We also consider the mix in the customer base among residential, commercial, and industrial users. A utility with a large residential base relative to commercial and industrial users will tend to have less volatility in energy consumption, since energy consumption by commercial and industrial operations is more closely tied to the business cycle. Furthermore, residential customers are less likely to quickly embrace new energy production technologies and are less likely to cut back energy consumption dramatically if the price of energy were to rise. The higher variability of a commercial and industrial base can be exacerbated further if the service area's customer usage is concentrated in a few large commercial or industrial operations, which could make the overall energy consumption vulnerable if those entities were to decline or leave the area.

3.8 Structural Features

The key structural feature of UCRC transactions is the true-up mechanism. Our rating is highly dependent on the extent to which the mechanism adjusts the charges to correct for past shortfalls or forecasted future shortfalls. The effectiveness of those rate changes in raising funds depends, in turn, on how easily customers can escape the charges and how sensitive electricity usage is to increases in the utility charges. Therefore, our analysis of the true-up mechanism goes together with our analysis of how bypassable the cost recovery charges are and how easily customers can cut back on electricity usage (through alternative sources of energy or conservation). To be consistent with a particular rating, a strong true-up mechanism combined with non-bypassable charges mitigates the need for credit enhancement in the form of alternative sources of funds.

In addition, our analysis of the credit risk of a UCRC transaction incorporates our assessment of the implications of the transaction's cash flow allocation structure (sometimes referred to as the cash flow "waterfall"). In particular, we focus on the seniority of principal and interest payments to the bond's investors *vis-à-vis* payments to other participants. In addition, we analyze the extent to which the transaction has an alternative source of liquidity to pay principal and interest in the event that there is a temporary interruption in the flow of the cost recovery charges. For example, in many transactions there is a capital or reserve account with funds sufficient to pay interest for at least 1-2 months, if needed. Furthermore, we assess the extent to which the credit enhancement that is available in the transaction is likely to be sufficient to offset any shortfalls that might develop in the period between the final true-up adjustment and the maturity of the bonds.

4. Monitoring

In monitoring UCRC transactions, we apply the key components of this methodology. More specifically, we analyze, whether bond balances are in line with the scheduled principal amortization, which indicates the extent to which payments have been in line with our original expectations.

We review the periodic information received and look at whether there has been a draw on the reserve accounts. This data point provides further clues as to the steadiness of the cash flows and accuracy of true-up adjustments.

In addition, we analyze the factors that determine the future strength of the transaction. For example, we monitor any legal or political developments that could indicate an increased risk of changes in the legislation that could impair future cash flows to the transactions. Such risk may materialise, for example, in case of continued high financial imbalances in the system that may lead the system deficit to be viewed as unsustainable over the long-term.

Depending on the jurisdiction, we also follow the rating of the utility as a proxy to assess any changes to the economic health of the service region and the potential for changes in the size and composition of the ratepayer base. Furthermore, we monitor the rating of the utility collecting the charges (as an indicator of its financial condition) to track the risk, typically quite small, that a bankruptcy could lead to disruption in billing and collections and in the remittance of payments to the bondholders.

In other instances, we may be more concerned with the behavior of the regulator of the utility system and less with individual utility companies. This could lead to a lower rating in the space between the local currency ceiling and the sovereign rating or the utility rating.

Thus changes on our expectations and other analytical components could have an impact on the rating of the securities and may result in a reassessment of the rating.

Moody's Related Research

The credit ratings assigned in this sector are primarily determined by this credit rating methodology. Certain broad methodological considerations (described in one or more secondary or cross-sector credit rating methodologies) may also be relevant to the determination of credit ratings of issuers and instruments in this sector. Potentially related secondary and cross-sector credit rating methodologies can be found here.

For data summarizing the historical robustness and predictive power of credit ratings assigned using this credit rating methodology, see link.

Please refer to Moody's Rating Symbols and Definitions, which is available here, for further information.

CREDIT RATINGS AND MOODY'S PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. NEITHER CREDIT RATINGS NOR MOODY'S PUBLICATIONS COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS AND PUBLISHES MOODY'S PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS FOR RETAIL INVESTORS TO CONSIDER MOODY'S CREDIT RATINGS OR MOODY'S PUBLICATIONS IN MAKING ANY INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER.

ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc., have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc., for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

For Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail clients. It would be dangerous for "retail clients" to make any investment decision based on MOODY'S credit rating. If in doubt you should contact your financial or other professional adviser.

For Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Hi John, Emily,

FYI on the attached.

Emily, note point 8 in the legislative issues document:

- restrictions on consumer group's ability to "opt-out" or by-pass the charge (to avoid de-valuing the asset)

Likely not quite on point, but in the ballpark perhaps. Not quite sure what they mean by ''group'' in this context.

Implementation of Ontario's Fair Hydro Plan
Week of March 13, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		

• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation:
	  o Defining mitigation and recovery mechanism; and
	  o Establishing roles for IESO, OPG and OEB
	• Regulation (amend O.Reg.429/04)
	• Shareholder Declaration and Resolution
	• Third Party Technical Report re Long Lived Assets (TBD)
	• Accounting opinions from E&Y (OPG) and KPMG (IESO)
	• Financing:
	  o IESO line of credit to bridge from May-July;
	  o OEFC to OPG equity injection structure; and
	  o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)
	
	<u>Considerations</u>
	• GA refinancing legislation could also include legislative changes to enable broadening of RRRP, expanding of OESP and establishing of FN delivery credit.
	• Ongoing legal, accounting and financing risk assessments.
	• Impact on Electricity Sector Dedicated Income.
	• OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers.
		• Report back to TBC/MBC by spring 2017, prior to going to LRC with any legislation, on the approach to refinance GA (per TBC/MBC Minute)
		
		• Report to TBC/MBC, LRC and Cabinet in spring 2017 (per Cabinet Minute)
		
		• Provide comfort level to allow OEB to include in May 2017 RPP
		
		• Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) <u>Considerations</u> • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure	• LDC working group kick-off March 14, 2017 • Report back to TB/MBC by Spring 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
	in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Fall 2017 implementation (per Cabinet Minute)
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Considerations</u> • OEB has been engaged on implementation timelines for 50% + new eligibility – Potentially early Spring. • Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to use OESP variance (approx. $100M) to reduce current OESP charge to zero and continue funding existing program until tax changes in place. Currently engaging OEB. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 • Program in place in 2017 (per Cabinet Minute)
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Considerations</u> • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13M to $20M

Item	Key Deliverables / Considerations	Timing / Next Steps
	• Work with LDCs to consider any bill messaging.	• Program in place in 2017 (per Cabinet Minute)
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, TBS, MOF and H1	• TBC/MBC Submission • Trust Structure • Transfer Payment Agreement (multi-party) <u>Considerations</u> • Legislative changes not required. • Funding needs to flow to the Trust prior to March 31, 2017.	• Ongoing engagement with Hydro One, LSB, OPCD, CSD on development of Transfer Payment Agreement (TPA) and Trust Declaration (including sharing of drafts for comment) • Hydro One to finalize establishment of Trust by March 17, 2017 **Week of March 20, 2017:** • Execute TPA between the Ministry and the Trust by March 22nd • Initiate process to flow funds to the Trust; to be completed before March 31st **April to May 2017:** • Additional trustees to be appointment; Trust develops further details, e.g. customer eligibility criteria and processes for LDCs to apply for funds; to be developed in consultation with LDCs **June 2017:** • Report back to TB/MBC with

Item	Key Deliverables / Considerations	Timing / Next Steps
		final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date to impact electricity bills this year (May 15, 2017). • Working with the Ontario Chamber of Commerce on a targeted outreach campaign.	• RR posting on the proposed amendment – posted March 9, 2017 for 30 days • Report back to TBC/MBC by spring 2017 (per TBC/MBC Minute) • LRC on March 11, 2016 • Effective May 2017 (TBD)
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD)	• Continue this work as part of LTEP

Item	Key Deliverables / Considerations	Timing / Next Steps
	Considerations • Opportunity to highlight Market Renewal in the next LTEP. • IESO's stakeholder engagements on Market Renewal is ongoing. • Moving away from a two schedule system could impact consumer prices depending on implementation. • Most of the savings accrue from the move to a capacity auction. These savings do not materialize until the province has capacity requirements.	
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' Considerations • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs Considerations • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in spring 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and	• Early-mid March

Item	Key Deliverables / Considerations	Timing / Next Steps
	o Agencies (i.e., IESO, OPG, OEB and H1)	
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion. • Awaiting formal letter requesting additional information
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP	• Preliminary discussion in April 2017 (TBD)

Summary of Legislative Changes

What follows is a summary of five categories of legislative issues that are currently being dealt with by the legislative team. There is significant overlap between the categories (for example, some of the basic legislative changes could be categorized as changes that are designed to address market considerations).

The drafting of the legislative amendments will be a very detailed and iterative process and drafts of the legislation are currently under review by the team. We also anticipate that the provisions will be reviewed by other experts (for example, US counsel and investment banking advisor). However, we do not anticipate that the primary categories of amendment will change.

1. Basic Legislative Changes Required to Bring the Program into Existence

For example:

- explain policy intent (inter-generational funding)
- revise the general objects/purposes of the legislation to permit the program
- add new objects and rights for IESO to permit IESO's role in the program
- add obligations for IESO to make payments with respect to amounts borrowed under the securitization, the repayment of interest costs or charges, and costs related to the operation or management of the trust or other entity
- provide authority to OPG to establish trust or other entity and its right to recover interest costs, charges, and operating and management costs
    - allow for Trust/SPV to warehouse funds
- define the regulatory asset and allow it to be bought/sold between IESO and Trust/SPV
- define (generally) the group of consumers who benefit from GA refinancing and who will be required to repay it
- establishment of the IESO's obligations

2. Legislative Provisions to Establish the Regulatory Role of the OEB

For example,

- OEB role in creation of the regulatory asset
- OEB role with respect to review of calculations as to amounts to be paid by ratepayers to satisfy the debt obligations

DRAFT

- OEB role with respect to “true-up” of GA calculations (annual or semi-annual)
- OEB role regarding administrative costs of the trust or entity

3. Legislative Provisions Related to OPG

For example,

- provisions to ensure that OPG has the legal authority to implement the program
- provisions to ensure that OPG’s assets are properly ring-fenced
- provisions to ensure OPG has authority to create subsidiaries or other entities and transact with the Trust/SPV

4. Legislative Provisions to Address Market Considerations

For example, provisions to provide,

- the creation of the new trust (or other) entity and ensure that it is bankruptcy remote
- clear identification of consumer groups to whom the program applies (“RPP eligible”)
- restrictions on consumer group’s ability to “opt-out” or by-pass the charge (to avoid de-valuing the asset)
- establishment of the owner’s clear right to the regulatory asset to enable payment of principal and interest to investors
- a re-set or true-up mechanism to enable the owner of the payment stream to account for differences between anticipated and actual performance of the GA
- a system to deal with sharing/pro-rating if the ratepayer pays less than the invoiced amount
- irrevocability of the owner’s property right (or a surrogate for irrevocability)
- the establishment of a “true sale” of the regulatory asset

5. Addition of Legislative Provisions (to be considered)

- cap maximum GA refinancing in a year by dollar value
- set a maximum interest amount for GA refinancing debt after year 5

DRAFT

- cap GA refinancing based on OPG financial ratios
- fix the date until which rate payers receive a discount for GA refinancing
- fix a total amount to be borrowed as “principal”, at which point further borrowing must service the debt and does not reduce GA paid by rate payers
- determine how surpluses in collections are to be applied (e.g. reinvest in GA reduction before new debt)
- cap increases to rate payer bills at no more than ■% in a year

DRAFT

WEEKLY RATE MITIGATION IMPLEMENTATION GROUP
March 15, 2017

Agenda

1) GA Refinancing
    - OPG Update
    - IESO Update
    - OPG Update
    - Legislative Drafting (LSB / Blakes)

2) Affordability Fund (CRED)

3) RRRP, OESP and FN (SNAP)

4) ICI (ESPD)

Notes:

Subject: FW: Rate Mitigation for small and medium size business.
Date: Tuesday, March 07, 2017 6:21:44 PM

Hi,

Would one of you reach out to Daniel Cayley on the kinds of options the working group would be looking at, and if "tax base" means specific tax measures only, or more broadly to mean "government-funded".

Thanks,
Ron

Subject: RE: Rate Mitigation for small and medium size business.

Hi,

Energy was charged with exploring different rate mitigation for small and medium businesses. But the last draft Minute that I saw did not specify what kind of measures to explore, tax or otherwise.

And when they say "tax base", that wording sometimes just means an option that is government funded, not a specific tax measure.

Has the DMO been looped in, as the Deputy was in the room for the Cabinet discussion, and there may have been specific ideas raised. I was not in the room.

Gadi was in the room too, so looping him in.

Ron

Subject: FW: Rate Mitigation for small and medium size business.

Ministry of Energy is tasked with developing additional rate mitigation for small and medium size business and are starting a working group. Under consideration is using the tax base and they would like our participation. They've

reached out to Rob.

Is this something we are interested in participating in?

Subject: Rate Mitigation for small and medium size business.

Ann,

I received a call from Daniel Cayley from MoE. Energy is tasked with developing additional rate mitigation for small and medium size business and are starting a working group.

Under consideration is using the tax base and they would like our participation.

Would you like tax design to accept the assignment?

Regards,

Rob

Subject: Rate Mitigation

Hi Dave,

Please see the following summary of this week's rate mitigation update discussion:

GA Financing

OPG

- RBC, CIBC, Goldman have been approached to act as leads for securitization (both for Canada and US). Terms have not yet been finalized
- Sub-committee meetings are starting up, including facilitating the required equity injections from the Province
- Bankers have suggested timelines are aggressive
- OPG likely to establish the financing in the Fall but will have bridge facilities in place in order to accommodate financing in the interim period.
- The idea is not to go to market each month, but potentially on a quarterly basis. Short term debt would accumulate monthly (the bridge facilities mentioned above would help

accommodate this) and then move to longer term borrowing financed via the quarterly offerings.

- Each time OPG goes to market the asset would be re-sized and associated debt would all be considered a single tranche.
- At this point the thinking is that all three credit agencies would rate the debt (Moody's, S&P, Fitch)
- OPG highlighted some of the information that they'll require over the coming weeks/months:
    - Customer data: Rating agencies will have a particular focus on 10% of customer bill and will require information to assess this
    - Equity injection: Might require a second class of shares, redeemable because cash coming back on paydown
    - Mechanism: Seeking clarity on what the process beyond year 4 will be with respect to determining the asset / liability
    - OFA Involvement: OPG suggested that it may be difficult for OFA to purchase large parts of the 51% outside financing, as it may not meet accounting tests for independence. However, OPG is investigating whether OFA could act as a lead order in order to drive interest costs down.
- OPG Board has chartered a special committee of the Board to advise on the structure. For now OPG is comfortable devoting time and resources on the basis of the Premier's announcement. The company may require a Shareholder Declaration / Resolution in order to advance the discussion (likely in April)
    - OPG will work with the Province to carefully worded the Dec./Res. to ensure the Board maintains authority to proceed. Ultimately the Board needs to ensure the proposal they make is in the best interest of OPG based on its credit rating, governance and business interests
    - The board may need enhanced indemnification for this initiative which the Province is considering

IESO

- Conversations on technical process are underway (Ministry, OPG etc.)
- KPMG requires draft legislation before it can provide an opinion on the regulatory construct but this is still in the early stages. IESO will discuss the process and timelines for this opinion.

OEB

- Require a letter from Minister to allow incorporation of GA Smoothing into May 1 RPP. OEB is developing a first draft.
- A news release is planned for the Thursday following Easter announcing new RPP rates.

Blakes

- Blakes provided a summary of legislative changes (see document attached)
- One item in particular that they are thinking through is the impact of consumers exiting the system which would put pressure on the value of the asset. Consideration could be given to a true-up mechanism to ensure the cost is covered or potentially an exit charge

Affordability Fund:

- This initiative is moving quickly with documents to be finalized and executed next week and flow of funds shortly thereafter
- Computershare will act as the initial trustee and the trust documents will set out a process for selecting experts to act as Trustees and guide the flow of funds. Considering Trustees from areas including LDCs, social service agencies, staff level etc.

RRRP, OESP, First Nations Rate:

- Work is proceeding with three separate sub-committees but there is a lot of cross over on all three workstreams
- LDC working groups kicked off last week where they focused on bill presentation and implementation
- OESP:
    - The posting is up for comment (comment period ends April 8th)
    - OESP be removed from the bill at the same time GA financing is implemented (May 1st) pending regulation amendment process
    - Move toward 100% via automatic enrollment is more complex so may not be implemented for May 1st. ENE is working with MCSS to deploy a process similar to ODSP and other low income programs but a Federal exemption is required which conversation with the CRA are ongoing
- RRRP:
    - RRRP cannot be removed from the bill until the legislation is passed
    - Conversations have started but the main work for LDCs will be implementing billing system changes and OEB can help identify who may require IT assistance
- FN Rate:
    - Chiefs of Ontario are interested in participating in a working group
    - Eligibility will be geographically based (all on reserve residents). This may capture some non-First Nations residents. However this should be limited, and would be extremely complicated to avoid.

ICI:

- LRC on April 11th with a May implementation date
- Will begin outreach to Chamber of Commerce (OCC) and consider others (CME for example)
- ENE will begin to sit down with other Ministries to discuss broader measures for small and medium businesses
- ENE has met with LDCs to ensure they are aware of changes and EDA has flagged that clarity is needed for some small manufactures to ensure conservation incentive remains

Thanks,
Scott

Summary of Legislative Changes

What follows is a summary of five categories of legislative issues that are currently being dealt with by the legislative team. There is significant overlap between the categories (for example, some of the basic legislative changes could be categorized as changes that are designed to address market considerations).

The drafting of the legislative amendments will be a very detailed and iterative process and drafts of the legislation are currently under review by the team. We also anticipate that the provisions will be reviewed by other experts (for example, US counsel and investment banking advisor). However, we do not anticipate that the primary categories of amendment will change.

1. Basic Legislative Changes Required to Bring the Program into Existence

For example:

- explain policy intent (inter-generational funding)
- revise the general objects/purposes of the legislation to permit the program
- add new objects and rights for IESO to permit IESO's role in the program
- add obligations for IESO to make payments with respect to amounts borrowed under the securitization, the repayment of interest costs or charges, and costs related to the operation or management of the trust or other entity
- provide authority to OPG to establish trust or other entity and its right to recover interest costs, charges, and operating and management costs
    - allow for Trust/SPV to warehouse funds
- define the regulatory asset and allow it to be bought/sold between IESO and Trust/SPV
- define (generally) the group of consumers who benefit from GA refinancing and who will be required to repay it
- establishment of the IESO's obligations

2. Legislative Provisions to Establish the Regulatory Role of the OEB

For example,

- OEB role in creation of the regulatory asset
- OEB role with respect to review of calculations as to amounts to be paid by ratepayers to satisfy the debt obligations

DRAFT

- OEB role with respect to “true-up” of GA calculations (annual or semi-annual)
- OEB role regarding administrative costs of the trust or entity

3. Legislative Provisions Related to OPG

For example,

- provisions to ensure that OPG has the legal authority to implement the program
- provisions to ensure that OPG’s assets are properly ring-fenced
- provisions to ensure OPG has authority to create subsidiaries or other entities and transact with the Trust/SPV

4. Legislative Provisions to Address Market Considerations

For example, provisions to provide,

- the creation of the new trust (or other) entity and ensure that it is bankruptcy remote
- clear identification of consumer groups to whom the program applies (“RPP eligible”)
- restrictions on consumer group’s ability to “opt-out” or by-pass the charge (to avoid de-valuing the asset)
- establishment of the owner’s clear right to the regulatory asset to enable payment of principal and interest to investors
- a re-set or true-up mechanism to enable the owner of the payment stream to account for differences between anticipated and actual performance of the GA
- a system to deal with sharing/pro-rating if the ratepayer pays less than the invoiced amount
- irrevocability of the owner’s property right (or a surrogate for irrevocability)
- the establishment of a “true sale” of the regulatory asset

5. Addition of Legislative Provisions (to be considered)

- cap maximum GA refinancing in a year by dollar value
- set a maximum interest amount for GA refinancing debt after year 5

DRAFT

- cap GA refinancing based on OPG financial ratios
- fix the date until which rate payers receive a discount for GA refinancing
- fix a total amount to be borrowed as “principal”, at which point further borrowing must service the debt and does not reduce GA paid by rate payers
- determine how surpluses in collections are to be applied (e.g. reinvest in GA reduction before new debt)
- cap increases to rate payer bills at no more than ■% in a year

DRAFT

Scott

Summary of Legislative Changes

What follows is a summary of five categories of legislative issues that are currently being dealt with by the legislative team. There is significant overlap between the categories (for example, some of the basic legislative changes could be categorized as changes that are designed to address market considerations).

The drafting of the legislative amendments will be a very detailed and iterative process and drafts of the legislation are currently under review by the team. We also anticipate that the provisions will be reviewed by other experts (for example, US counsel and investment banking advisor). However, we do not anticipate that the primary categories of amendment will change.

1. Basic Legislative Changes Required to Bring the Program into Existence

For example:

- explain policy intent (inter-generational funding)
- revise the general objects/purposes of the legislation to permit the program
- add new objects and rights for IESO to permit IESO's role in the program
- add obligations for IESO to make payments with respect to amounts borrowed under the securitization, the repayment of interest costs or charges, and costs related to the operation or management of the trust or other entity
- provide authority to OPG to establish trust or other entity and its right to recover interest costs, charges, and operating and management costs
    - allow for Trust/SPV to warehouse funds
- define the regulatory asset and allow it to be bought/sold between IESO and Trust/SPV
- define (generally) the group of consumers who benefit from GA refinancing and who will be required to repay it
- establishment of the IESO's obligations

2. Legislative Provisions to Establish the Regulatory Role of the OEB

For example,

- OEB role in creation of the regulatory asset
- OEB role with respect to review of calculations as to amounts to be paid by ratepayers to satisfy the debt obligations

DRAFT

- OEB role with respect to “true-up” of GA calculations (annual or semi-annual)
- OEB role regarding administrative costs of the trust or entity

3. Legislative Provisions Related to OPG

For example,

- provisions to ensure that OPG has the legal authority to implement the program
- provisions to ensure that OPG’s assets are properly ring-fenced
- provisions to ensure OPG has authority to create subsidiaries or other entities and transact with the Trust/SPV

4. Legislative Provisions to Address Market Considerations

For example, provisions to provide,

- the creation of the new trust (or other) entity and ensure that it is bankruptcy remote
- clear identification of consumer groups to whom the program applies (“RPP eligible”)
- restrictions on consumer group’s ability to “opt-out” or by-pass the charge (to avoid de-valuing the asset)
- establishment of the owner’s clear right to the regulatory asset to enable payment of principal and interest to investors
- a re-set or true-up mechanism to enable the owner of the payment stream to account for differences between anticipated and actual performance of the GA
- a system to deal with sharing/pro-rating if the ratepayer pays less than the invoiced amount
- irrevocability of the owner’s property right (or a surrogate for irrevocability)
- the establishment of a “true sale” of the regulatory asset

5. Addition of Legislative Provisions (to be considered)

- cap maximum GA refinancing in a year by dollar value
- set a maximum interest amount for GA refinancing debt after year 5

DRAFT

- cap GA refinancing based on OPG financial ratios
- fix the date until which rate payers receive a discount for GA refinancing
- fix a total amount to be borrowed as “principal”, at which point further borrowing must service the debt and does not reduce GA paid by rate payers
- determine how surpluses in collections are to be applied (e.g. reinvest in GA reduction before new debt)
- cap increases to rate payer bills at no more than ■% in a year

adam.prokop@ofina.on.ca

Understanding Rate Regulation Accounting

Background

In many jurisdictions, utilities (mainly electricity and natural gas utilities) have a natural monopoly for the service they provide. In order to keep the rates fair and prevent undue hardship on ratepayers, a third-party regulator controls the rates that utilities charge based on their individual operations. In Ontario, this regulator is the Ontario Energy Board (OEB). Generally, utilities try to recover the costs of running their business, plus an economic return based on the cost of capital. The OEB sets the rate for the return on equity, as well as the weighting of capital structure, with the standard deemed capital structure being between 40-50% equity and 50%-60% debt. The cost of debt is usually determined by each utility's actual and forecasted borrowing costs.

Utilities apply to the regulator (OEB) for the approval of their rates with a **rate application** for a given time period (e.g., 5 years). The OEB and other third-party "intervenors" question the utility about the accuracy of its projected and current costs, and how exactly and future investments will provide a benefit to ratepayers. After a technical and oral hearing process, the OEB sets the rates for the application period, with these rates being charged to customers.

One added complication is that some utilities companies have other operations that fall outside of rate regulation, e.g., a utility company could also have a telecommunications business that is not regulated or regulated by the OEB. Thus, the associated assets, revenues, liabilities, and expenses for non-regulated activities have to be separated from those involved with rate-regulation activities so that rates charged to customers only reflect the recovery of costs associated with the services provided to ratepayers.

An illustrative example will be used throughout this document using the following assumptions:

Balance Sheet Items - 2017 Estimate		**Income Statement - 2017 Estimate**		**Other**	
Beginning Net PP&E	$19,000M	OM&A	$2,000M	Deemed ROE	10%
Ending Net PP&E	$21,000M	Cost of Power	$1,000M	Cost of debt	5%
Beg & End PP&E for non-regulated business	$2,000M	Depreciation	$600M		
Supplies & Inventory	$20M	Income Tax	$120M	Deemed equity	40%
Total Assets	$30,000M			Deemed debt	60%
Equity	$15,000M			2017 demand	100 tWh
Debt	$15,000M	**All items provided except for the non-regulated PP&E are associated with rate regulation activities*			
% Equity	50%				
% Debt	50%				

Part 1: Determine the components for the revenue requirement.

The basic formula in Ontario is:

*Revenue requirement = (rate base*WACC) + OM&A + cost of power + depreciation + income tax*

Step 1A - Determine the rate base

The rate base is essentially the assets that a utility uses to provide a service to ratepayers.

A simplified formula for the rate base is:

Rate Base = Average net PP&E for regulated assets + supplies & inventory + 7.5% x (OM&A + Cost of Power)

The last term represents an estimation of the working capital required by the utility over the year.

Using the assumptions about our utility above, we can determine the rate base.

Average PP&E for regulated assets

Average Net PP&E	$20,000M	*This is the average PP&E for the year, taking the average of $19B and $21B net PP&E*
Less: Non-regulated PP&E	-$2,000M	*Cannot include non-rate regulated assets in the rate base.*
Mid-year net PP&E	$18,000M	
Supplies & Inventory	$20M	
Working Capital	$225M	*7.5% of ($2B in OM&A + $1B of Cost of Power)*
Rate Base	**$18,245M**	

Step 1B - Determine the cost of capital (WACC)

When determining the cost of capital, one must use the deemed weightings, not the actual capital structure of the utility.

WACC = weight of deemed equity*deemed cost of equity + weight of deemed debt*utility cost of debt

= 40%(10%) + (60%)*5%

= 7.00%

Step C - Plug in the calculated numbers into the Revenue Requirement Form

*Revenue requirement = (rate base*WACC) + OM&A + cost of power + depreciation + income tax*

= $18,425M x 7% + $2,000M + $1,000M + $600M + $120M

= $4,997M **This is the revenue requirement for 2017**

Note:
OM&A stands for operating, maintenance & administrative expenses. These are the operational costs of running the utility.
The recovery of depreciation allows the utility to essentially collect cash, over time, that equates capital expenditures, ensuring that revenue provides enough cash to fund the investments in PP&E and the cost of using the assets.
The recovery of income tax (or payment in lieu of taxes if not a privately run utility) ensures that cash is collected to pay taxes over time.

Part 2: Determine the Amount of Electricity Utilized by Customers (power demand)

Utilities must forecast the demand, using historical data and other information, to predict how much power customers will use over time.
The revenue requirement divided by the estimated power demand results in the standard rate that is applied for a specific energy unit.
This would be the distribution or transmission rate that the utility would charge customers.

From above, the revenue requirement was determined as	$4,997M
The estimated power usage from above is	100 tWh
Divide the revenue requirement by the "power base":	$49.97M per tWh
This translates to a standard rate charged to customers of	$49.97 per mWh

Part 3: Determining regulatory asset balances

Example 1 - Regulatory Asset
It is now the end of 2018.

Let's assume that all variables there were estimated are the same except that OM&A was $100M higher in 2017 than expected ($2,100M instead of $2,000M). The rates that the utility charged have only led to the recovery of $2,000M. Let's also assume that in 2018, the utility increases its revenue requirement to collect the $100M in OM&A for the prior year. The impact on the statements, without regulatory accounting, would be:

		2017		2018	
Statement	Item	Dr.	Cr.	Dr.	Cr.
Income Statement	Additional OM&A	100			
Income Statement	Additional Revenue				100
Balance Sheet	Cash (assume cash collection)		100	100	

Income is thus lower in 2017 and higher in 2018; revenues and expenses do not match each other by occurring in the same period.

Under regulatory accounting, the utility would be allowed to defer the recognition of the expense until a later period when the cost is recovered from ratepayers. Thus, in the utility's books under regulatory accounting, it could reverse the expense and instead recognize a regulatory asset - the future right to collect this amount from ratepayers. The impact on the statements, in this example, would be:

		2017		2018	
Statement	Item	Dr.	Cr.	Dr.	Cr.
Balance Sheet	Regulatory Asset	100			100
Income Statement	Amortization of regulatory Asset			100	
Income Statement	Additional Revenue				100
Balance Sheet	Cash		100	100	

This essentially allows the expense to be deferred to the balance sheet, with the expense (now as amortization) hitting the income statement in 2018, matching with the revenue collected from customers. This has a "smoothing" effect on net income. **Think "prepaid asset".**

Let's examine another example.

Example 2 - Regulatory Liability

It is now the end of 2018.

Let's assume that all variables there were estimated are the same except that actual customer power usage was 1 tWh higher. This means that customers paid more for the fixed costs associated with the rates (e.g., depreciation, OM&A), as the cost of power is passed on to customers. Let's assume this amount is $20M. This amount would have to be refunded (assume 2018 refund) to customers (aka ratepayers).

Without regulatory accounting, the result would be, focusing on the income statement:

		2017		2018	
Statement	Item	Dr.	Cr.	Dr.	Cr.
Income Statement	Reduction in revenue			20	
Income Statement	Additional Revenue		20		

In 2018, the revenue requirement would be reduced by $20M; revenues and "expenses" (in this case refunds) do not occur in matching periods.

With regulatory accounting:

		2017		2018	
Statement	Item	Dr.	Cr.	Dr.	Cr.
Income Statement	Reduction in revenue			20	
Income Statement	Additional Revenue				20
Balance Sheet	Regulatory Liability		20	20	

The recognition of the revenue has been deferred to 2018 so it matches the period when the refund is given to customers; thus revenues and expenses match in the same period. **Think unearned revenue.**

Variance and Deferral Accounts

Variance and deferral accounts are approved by the OEB to record the difference between actual costs and the costs estimated within rates. Future rate applications then ask for these assets to be disposed of through a rate rider - an additional charge (or refund) provided to customers to settle the variance between actual and estimated costs.

Fyi, and a note is requested on how the equity injection would work.

Maybe we can combine the discussion with Adam but the following are the considerations:

Given the equity injection need of 44% to OPG, we kind of need to figure out how to do this. Likely, a TB submission for the injection would be required. Given the settlement at IESO would be on a monthly basis, how to facilitate the proportionate 44% equity injection would need to be figured out. What would be the framework and or delegated authority.

It'd need to issue shares to the Province.

Any tax implications?

Given the monthly injection (potentially), do we contribute cash in advance or as needed? (Do we care about borrowing frequently – CMD's concern, in my view)

What other areas do we need to work with? TBS OPCD?

Could we utilize convertible loan of some sort?

This injection would need to be classified as an operating asset.

Do we have OPG pay dividends during the period of capitalizing interest?

The 2% or rate of inflation increase, how does this play into the whole project?

Options for Equity Injection from TD Securities

When developing options for structuring the equity injection from the Province to OPG amounting to 44% of the debt incurred by the OPG Trust set up to purchase the regulatory asset from IESO the following underlying principles need to be addressed.

- The equity injection will be provided on a monthly/quarterly basis to OPG by the Province.
- The equity injection results in the Province, the sole shareholder of OPG receiving shares from OPG whose valuation is based on a determined and agreed upon methodology.
- This methodology can be as simple as book value or can be based on some kind of a DCF.
- Given the time limited nature of the equity injection the Province anticipates repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder, as well as having vested legislative authority, can require OPG to issue dividends annually.
- The shares issues by OPG can include some kind of optionality to be exercised by the Province as and when repayment is required. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, given the potentiality of a new government's different policies subsequent to future elections.
    - OPG can issue preference shares again with some kind of optionality for repayment. Preference shares, especially those with a specified annual dividend will ensure that the Province remains whole in terms of the incremental interest costs it incurs on the equity injection.
- Other factors to be considered for repayment:
    - Should the senior and subordinated debt be ranked as the same and if so does this impact market access
    - Should the senior debt be repaid first or should repayment be on a pari-passu basis
    - OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.

Hi Keley,

We were on a teleconference with Karen and she mentioned there's a revised forecast for OREC as a result of the approval of the electricity mitigation package from earlier this week. Do you have the updated forecast that you can share with us, to ensure we are tracking the right numbers as part of the planning process?

Thanks
Felix

Q&A Response

Q. What is the revised cost forecast for the 8% rebate as result of the measures announced in Ontario's Fair Hydro Plan?

Key measures announced in Ontario's Fair Hydro Plan (OFHP) are expected to reduce the cost of the 8% rebate for the Province. The cost to the Province is expected to decrease as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced.

ENERGY has updated the cost forecast for the 8% rebate based upon the following:

- Independent Electricity System Operator updated its Ontario Planning Outlook (OPO) with respect to a typical bill for a residential consumer as outlined in the March 1, 2017 Cabinet Submission. This revised OPO price outlook is inclusive of all the recently announced measures including cancellation of LRP II and EFW and expansion of ICI.

- ENERGY's estimates of the reduction to a typical bill for a residential consumer as a result of the Global Adjustment (GA) refinancing and funding electricity support programs through provincial revenues as announced in the OFHP.

- ENERGY's estimates of the reduction in costs for consumers that benefit from electricity support programs as announced in the OFHP (i.e., expanded Rural or Remote Rate Protection, enhanced Ontario Electricity Support Program and the First Nations Delivery Rebate). For Fiscal Year 2017-2018 this includes a 50% adjustment to the cost given that implementation of the expanded programs is expected to be deferred to September 2017.

	2017-2018	**2018-2019**	**2019-2020**
ENERGY Estimate **(August 26, 2016)** ($ million)	1,006	1,004	944
ENERGY's Revised Cost Estimate **(September 8, 2016)** ($ million)	1,119	1,086	1,171
ENERGY Revised Estimate **(March 15, 2017)** ($ million)	939	882	882
Change: **March 15, 2017** vs **August 26, 2016**	-7%	-12%	-7%
Change: **March 15, 2017** vs **September 8, 2016**	-16%	-19%	-25%

NOTE: The above estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

Estimate Assumptions:

	2017	2018	2019	2020
Annual Average Electricity Price, Pre-tax, after Mitigation Programs ($ per month)	127*	120	122	125

***Note:** Value adjusted from $117 to account for deferral of implementation to May 2017 (GA refinancing) and July 2017 (tax-basing electricity support programs).
Source: OPO February 2017 and ENERGY estimates / Cabinet Submission March 1, 2017

	2017-2018	2018-2019	2019-2020	2020-2021
Cost of Expanded Electricity Support Programs in OFHP ($m)	499**	753	829	892

****Note:** Value adjusted from $665 million to account for deferral of implementation to July 2017.
Source: ENERGY estimates / Cabinet Submission March 1, 2017

	Base year
Total volume eligible for rebate (TWh)	71
Residential sector total eligible for rebate (TWh)	42
Portion of residential sector on retail contract (%)	10
Retail Premium: Residential ($/kWh)	0.03
Multi-unit sector total eligible for rebate (TWh)	7
Portion of multi-unit sector on retail contract (%)	10
Retail Premium: multi-unit ($/kWh)	0.02
Commercial sector total eligible for rebate (TWh)	20
Portion of commercial sector on retail contract (%)	26
Retail Premium: Commercial ($/kWh)	0.02
Agricultural sector total eligible for rebate (TWh)	1.9
Residential demand growth (2016-2023)	-0.6%
Commercial demand growth (2016-2023)	0.3%

Stephen,
This version does not reflect the top issues raised by the Dealers. We are sitting down with the Dealers now working on a comprehensive mark-up that we will send later today, but it will not be ready by 2 PM. We would like to use tomorrow's meeting to discuss the mark-up we are preparing rather than a further revised version that will not reflect our feedback.

CONFIDENTIAL AND PRIVILEGED

Preliminary Draft for Discussion Purposes Only

"Fair Hydro Act"

Article 1 – Purpose

The Province has and continues to encourage the construction and development of facilities for the long-term operation and generation of electricity in the Province using sustainable, lower carbon-based technologies such as new gas-fired generation, renewable facilities, energy from waste and biomass, including under the Province's various procurement, standard offer, feed in tariff and other similar programs (the "Green Generation Initiative"). The long-term benefits of the Green Generation Initiative accrue over time and have benefited and will benefit present and future electricity consumers in the Province.

The imputed costs of the Green Generation Initiative are currently passed through to electricity consumers by way of a monthly adjustment amount (the "Green Costs Adjustment"), which in turn forms part of the overall adjustment calculated by the Independent Electricity System Operator ("IESO") pursuant to section 25.33 of, and O.Reg. 429/4 under, the *Electricity Act* (the "Global Adjustment"). The Global Adjustment is included as a charge billed to electricity consumers in their monthly electricity invoices.

The Green Costs Adjustment is currently determined each month by reference to the amounts paid by IESO to the generators of electricity in the Province under the Green Generation Initiative, which may be higher than prevailing market price for electricity. These differences arise because IESO has entered into long-term procurement contracts with such generators in order to provide them with long-term price certainty for electricity, and in turn to encourage the generators to develop technologies and to construct and develop facilities consistent with the Green Generation Initiative. In general, whenever amounts payable under these procurement contracts exceed the market price for electricity, the Green Costs Adjustment passes through the amount of such differences as part of the monthly charge to electricity consumers. Such amount then becomes available to IESO to meet its obligations under the procurement contracts. It has been determined that the useful lives of many of the assets encouraged by the Green Generation Initiative will be well in excess of the respective terms of the related procurement contracts, and in many cases may extend over more than one generation of electricity consumers.

Since the benefits to past, present and future electricity consumers from the Green Generation Initiative will not necessarily coincide with the costs currently attributed through the Green Costs Adjustment, based on the respective durations of the procurement contracts, it has been determined that the rate at which the costs associated with the Green Generation Initiative should be passed through to Retail Consumers (as defined in Article 2) should be more closely aligned with the benefits that such Retail Consumers have derived and are expected to derive from the Green Generation Initiative over time. This realignment will be based on principles and parameters that establish a reasonable basis for measuring and allocating the relative costs and benefits of the Green Generation Initiative equitably across present and future Retail Consumers (the "Fair Allocation Plan").

If the Fair Allocation Plan determines that the equitable allocation of the costs associated with the Green Generation Initiative to the Retail Consumers of a particular time period should be reduced below the amount that currently would be charged based on the Green Costs

Adjustment, then the amount payable by such Retail Consumers and in turn available to IESO will, in the aggregate, be less than the amount payable by the IESO to the generators in respect of such period. In this case IESO will need to obtain funding from another source to cover such a shortfall. If a funding obligation is incurred by IESO to cover such a shortfall during one period, the repayment of such funding obligation will be required in a future period, and any related repayments, finance costs, hedging costs and other transaction costs incurred will become payable in one or more future periods. In order for IESO to obtain a reliable and committed source of cash flows to enable IESO to repay such funding amounts when they become due and payable, this Act imposes irrevocable and non-bypassable financial obligations on Retail Consumers to pay amounts incurred in respect of such funding obligations when they become due and payable and establishes a right to invoice and collect such amounts. The right and interest in and to collect such financial obligations will take the form of the Regulatory Asset contemplated in this Act, which will constitute property rights and interests. Interests in the Regulatory Asset may be sold and absolutely assigned by IESO to one or more financing entities, which in turn will finance their acquired interests by incurring funding obligations. The incurrence and payment of such funding obligations will be administered on behalf such financing entities by a financial services agent under the Financing Plan contemplated in this Act. The Financing Plan will seek to reasonably match the payment obligations arising under such funding obligations, to be borne by the future Retail Consumers of the period in which such payment obligations become due, with the benefits of the Green Generation Initiative allocated to such future Retail Consumers under the Fair Allocation Plan.

The purpose of this Act is to establish the basis upon which intergenerational fairness can be achieved by charging the costs and benefits of the Green Generation Initiative to present and future Retail Consumers on an equitable and cost effective basis.

Article 2 - Definitions

In this Act:

> “Absolute Assignee” means a person to whom a Regulatory Asset Owner effects a Disposition.
>
> “Actual” means, in relation to costs, expenses or payments in respect of Funding Obligations during a Reference Period, the actual amount of such costs, expenses or payments paid or made (net of any Finance Reserve Withdrawals applied to pay such amounts), which amounts shall be recorded by the Financial Services Agent whose records shall be determinative for the purposes of this Act except to the extent of a manifest calculation error.
>
> “Additional Funding Charges” means, for a Reference Period in respect of an Absolute Assignee, the fees, charges, expenses, costs, indemnities, reimbursements and other amounts (including any applicable tax amounts) that are or become payable by or on behalf of the Absolute Assignee during the Reference Period and that were incurred or committed to directly or indirectly by the Absolute Assignee in connection with the incurrence of Funding Obligations under the Financing Plan (whether at the time of such incurrence or over the term of the Funding Obligation and whether directly or indirectly), including (without duplication and without limitation): (a) any payment required under an ancillary agreement entered into by, or by the Financial Services Agent on behalf of, the Absolute Assignee under the Financing Plan; (b) any federal, provincial or local taxes, payments in lieu of taxes, franchise fees or license fees imposed on the Absolute

Assignee or incurred by on behalf of the Absolute Assignee under any obligation to pay tax gross-up amounts to counterparties under Funding Obligations; (c) any amounts payable to the Financial Services Agent, including amounts payable to its advisors and outside counsel; (d) any amounts incurred to prepare, confirm, amend and implement the Financing Plan; (e) any amounts payable to any Alternative Collection Agent or Alternative Servicer, including amounts payable to each's advisors and outside counsel; (f) any amounts incurred to make the calculations, determinations or confirmations to be made by or on behalf of the Absolute Assignee; (g) any servicing fees and expenses; (h) any trustee fees and expenses; (i) any legal fees, expenses and disbursements; (j) any accounting fees and expenses; (k) any administrative fees and expenses; (l) any manager or director fees of a Financing Entity; (m) any registration fees and expenses; (n) any placement fees, underwriting fees, fees and related issuing expenses; (o) any rating agency fees; and (p) any other related fees, charges, expenses, costs, indemnities, reimbursements and other amounts that are approved in good faith by the Financial Services Agent for recovery and payment under the Financing Plan.

"Allocation Factor" means, in respect of a Retail Consumer for a Reference Period, the number (expressed as a percentage) determined in respect of the Retail Consumer by the OEB based on the application of the Attribution Methodology in respect of the Reference Period.[1]

"Alternative Collection Agent" means a person appointed under Section 5(11) and in compliance with the requirements set out in Schedule 2 to assume the collection activities and activities of any Electricity Distributor or IESO under Article 5, as agent for and on behalf of the Regulatory Asset Owners.

"Alternative Servicer" means a person appointed under Section 4(8) to assume the obligations of the Servicer under Article 4, as agent for and on behalf of the Regulatory Asset Owners.

"Assessed Past Green Transition Costs" means, in respect of a Measurement Date, the aggregate of the imputed costs of the Green Generation Initiative (expressed as an equivalent to current dollars), as reflected in the calculation of the Green Costs Adjustment, which have been charged to Retail Customers through the Global Adjustment on or prior to the Measurement Date.

"Attribution Methodology"[2] means the methodology specified in the Fair Allocation Plan for allocating the Period Transition Charges for a Reference Period to individual Retail Consumers of the applicable Retail Consumer Group based on its Allocation Factor.

"Collected Amount Adjustment" means, in respect of a True-Up Period, the amount (which may be a negative amount) calculated by the Servicer or the Financial Services

---

[1] Confirm that this will be based on forecast volumes of demand (like RPP). To the extent amounts do not get recovered due to differences between forecast and actual, those may be identified and caught by the True-Up.

[2] This allocation may be volumetric or some combination of a flat amount and a volumetric charge. Further discussion is required. H&W has raised a concern regarding possible adverse changes after the fact and rating agency considerations. Consider whether hard-coding in the legislation makes sense.

Agent, as applicable, equal to (a) the Estimate of the Finance Amount for the True-Up Period, minus (b) the sum of all Transition Charge Collections for the True-Up Period.[3]

"Collective Rights Agreement" means an agreement among all of the Regulatory Asset Owners (including each Absolute Assignee) and each Pledgee that governs the enforcement of their respective rights and interests in, to and under the Regulatory Asset on a coordinated and collective basis.[4]

"Delegate" means the person or persons designated in writing from time to time by the Minister of Energy to undertake the actions and perform the responsibilities ascribed to the "Delegate" under this Act.

"Disposition" means an assignment, transfer, conveyance, sale, contribution, set-over, exchange or other disposition of an Investment Interest to an Absolute Assignee pursuant to a Disposition Document.

"Disposition Document" means the agreement, deed, conveyance, instrument or other document under which a Regulatory Asset Owner effects a Disposition to an Absolute Assignee.

"Electricity Distributor" means, in respect of a Service Area, the rate regulated distributor licensed under Part V of the *Ontario Energy Board Act, 1998* in respect of such Service Area, together with and its successors.

"Electricity Distributor Remittances" means, for an Electricity Distributor on a Remittance Date, all Transition Charge Collections received or deemed to be received by the Electricity Distributor prior to the Remittance Date and that have not otherwise been remitted to IESO or if applicable the Alternative Collection Agent in accordance with Section 5(3), including the proceeds of any enforcement action undertaken by the Electricity Distributor or if applicable the Alternative Collection Agent to recover payment of Transition Charges in accordance with Article 5.

"Electricity Invoice" means an invoice issued by any of a Electricity Distributor (or in its stead, by an Alternative Servicer), by the Servicer or by a Retailer, in each case to a Retail Consumer that is served by the Electricity Distributor's distribution system in respect of electricity charges, including the cost of electricity, delivery and regulatory charges and related services and amounts incurred, assessed or charged in respect of connectivity to a distribution network in the Electricity Distributor's designated Service Area and in respect of applicable Transition Charges to be charged to the Retail Consumer under this Act.

"Estimate" means (a) in relation to costs, expenses or payments in respect of Funding Obligations or any Finance Amount for a Reference Period, the estimated amount of such costs, expenses or payments determined by the Financial Services Agent; and (b) in relation to an assessment of the benefits of the Green Generation Initiative to any

---

[3] This would pick up adjustments based on actual collection experience, changes in the retail consumer base, changes in the actual costs (versus earlier estimates) included in the Transition Charge calculation, etc.

[4] Consider adding the Financial Services Agent and the Servicer as parties.

Retail Consumer Group, the estimated value (in current dollars) of such benefits determined by the Delegate, in each case having regard to the applicable principles and parameters set out in Schedule 1, which estimated amounts shall be determinative as the applicable estimate for the purposes of this Act except to the extent of a manifest calculation error.

"Estimated Future Green Transition Benefits" means, in respect of a Measurement Date, the Estimate set forth in the Fair Allocation Plan prepared in accordance with Article 7 of the aggregate value (measured in current dollars) of the benefits that are expected to accrue to Retail Consumers from the establishment and implementation of the Green Generation Initiative during the period from the Measurement Date to the Program-End Date.

"Estimated Past Green Transition Benefits" means, in respect of a Measurement Date, the Estimate set forth in the Fair Allocation Plan prepared in accordance with Article 7 of the aggregate value (measured in current dollars) of the benefits that have accrued to Retail Consumers from the establishment and implementation of the Green Generation Initiative up to and including the Measurement Date.

"Fair Allocation Plan" has the meaning given in Article 1.

"Finance Amount" means, for a Reference Period in respect of an Absolute Assignee, the sum (without duplication) of the following amounts that are or become payable during the Reference Period in respect of the Absolute Assignee: (a) Repayments; (b) Funding Costs; (c) Redemption Amounts; (d) Finance Reserve Deposits; and (e) Additional Funding Charges.

"Finance Reserve Deposits" means, for a Reference Period, the amount by which (a) deposits made or to be made during the Reference Period in order to pre-fund, collateralize, over-collateralize or establish reserves for the ultimate payment of Funding Obligations or for related contingencies specified in the Financing Plan, exceed (b) any Finance Reserve Withdrawals.

"Finance Reserve Withdrawals" means, for a Reference Period, the amount withdrawn during the Reference Period from deposits previously made to pre-fund, collateralize, over-collateralize or establish reserves for the payment of Funding Obligations or to pay amounts in respect of related contingencies that had been specified in the Financing Plan.

"Financial Services Agent" means OPG or, following any Replacement Event, such other person or persons who may be appointed as the Financial Services Agent of the Absolute Assignees under the Financing Plan in compliance with the requirements set out in Schedule 2.[5]

[5] Discuss whether to accommodate multiple Financial Services Agents. MOE to consider.

"Financing Entity" means an entity established in accordance with the Financing Plan to acquire all or an interest in the Regulatory Asset as an Absolute Assignee and to enter into Funding Obligations to finance such acquisition under the Financing Plan.[6]

"Financing Plan" means the written plan prepared by the Financial Services Agent on behalf of each Absolute Assignee in compliance with Article 9 to set forth the basis upon which, among other things: (a) any Disposition may be made to, financed by or effected by an Absolute Assignee; (b) any Funding Obligations may be incurred by an Absolute Assignee, including any Refinancing; (c) any Pledge may be given or effected; (d) any Funding Obligations may be redeemed, prepaid, repurchased, amended or otherwise effected; (e) any obligations for Additional Funding Charges may be incurred and paid; (f) any Repayments, Funding Costs and Redemption Amounts may be paid or provided for; (g) any Finance Reserve Deposits may be made; (h) any Finance Reserve Withdrawals may be made; (i) the establishment and operation of any Financing Entity may be effected; and (j) the cash flows arising from time to time or otherwise derived from an Investment Interest may otherwise be applied, as the same may be amended, amended and restated or terminated by the Financial Services Agent in compliance with Article 9 from time to time.

"Funding Costs" means, for a Reference Period in respect of an Absolute Assignee, the amount by which (a) the aggregate of all interest and other periodic finance charges accruing due and becoming payable or paid by or on behalf of the Absolute Assignee during the Reference Period in respect of its Funding Obligations, including any standby commitment fees or charges paid to any lender, credit enhancement fees or charges paid to any credit enhancer, liquidity fees or charges paid to any liquidity provider, amounts (including any termination payments) paid under derivatives and any deposit amount made or required to fund or replenish a debt service reserve account or other account established under any indenture, ancillary agreement or other financing document relating to its Funding Obligations, exceeds (b) the aggregate of all amounts received by or on behalf of the Absolute Assignee during the Reference Period in respect of a Funding Obligation, including from any reimbursement of standby commitment fees or charges paid by a lender, any reimbursement of credit enhancement fees or charges paid by any credit enhancer, any reimbursement of liquidity fees or charges paid by any liquidity provider, any amounts (including any termination payments) paid to the Absolute Assignee under derivatives and any Finance Reserve Withdrawal made or required to be made from a debt service reserve account or other account established under any indenture, ancillary agreement or other financing document relating to the payment of the Funding Costs payable in respect of a Funding Obligation for the Reference Period.

"Funding Obligation" means, in respect of an Absolute Assignee, each payment obligation (including each obligation to pay: principal, interest, premiums and other

---

[6] MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the *Electricity Act* (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the *Income Tax Act* (Canada) or the *Taxation Act, 2007* Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

financing charge payments; pass-through payments; payment obligations arising under or in respect of derivatives; payment obligations owing to service providers, Financial Services Agents, finance entity intermediaries, capital markets intermediaries, advisors, lenders, credit enhancement providers, liquidity providers, disbursement counterparties, regulatory agencies and rating agencies; and all Additional Funding Charges incurred by or on behalf of the Absolute Assignee under the Financing Plan, including any Refinancing of another such payment obligation incurred by or on behalf of such Absolute Assignee.

"Future Fair Share of Green Transition Benefits" means, in respect of a Measurement Date, the sum of (a) the Over-Assessed Amount; and (b) the Estimated Future Green Transition Benefits, in each case as of the Measurement Date.

"Generator" means a generator of electricity that is subject to the *Electricity Act, 1998*.

"Global Adjustment" has the meaning given in Article 1.

"Green Costs Adjustment" has the meaning given in Article 1.

"Green Generation Initiative" has the meaning given in Article 1.

"IESO" means the Independent Electricity System Operator created pursuant to Part II of the *Electricity Act, 1998*.

"IESO Available Amount" means, for a Reference Period, the lesser of (a) the amount (if any) by which (i) the Maximum Transition Charge Amount for the Reference Period, exceeds (ii) Period Finance Amount for the Reference Period, and (b) the IESO Retained Interest Amount as of the [35th] day prior to the first day of a Reference Period plus any IESO Financing Costs that are due and payable and remain unpaid as of the [35th] day prior to the first day of a Reference Period.

"IESO Electricity Distribution Receipts" means, for a month, the sum of all amounts payable by Electricity Distributors to IESO during the month pursuant to section • of the *Electricity Act*.

"IESO Financing Costs" means, for a Reference Period, the financing costs (if any) incurred by IESO pursuant to Section 8(4) in order to finance its ownership of the IESO Retained Interest during the Reference Period.

"IESO Funding Shortfall" means, for a month, the amount, if any, by which (a) the IESO Electricity Distribution Receipts that would be payable to IESO for the month if determined without regard to this Act and without regard to the changes made to section 25.33 of, and O.Reg. 429/4 under, the *Electricity Act* with respect to the Global Adjustment concurrently with this Act, exceeds (b) the IESO Electricity Distribution Receipts payable to IESO for the month[7]; provided that if the amount of any such shortfall is determined to have been based on incomplete information, variances or

[7] This has been recast to recognize that the shortfall in the first 4.5 years could exceed the entire GA amount. A more refined approach to describing the concept may be considered.

estimates that were inaccurate, an adjustment shall be made in determining the amount of any subsequent shortfall for the month in which the inaccuracy is identified.

"IESO Recovery" means each amount remitted to IESO (including by IESO retaining such amount) in respect of the IESO Retained Interest pursuant to Section 5(6)(b), and "IESO Recoveries" means, collectively, all such amounts received by IESO.

"IESO Remittances" means, for a Settlement Date, all Electricity Distributor Remittances received by IESO or if applicable the Alternative Collection Agent prior to the Settlement Date and that have not otherwise been remitted to the Regulatory Asset Owners (each with respect to its Regulatory Asset) in accordance with Section 5(6), including the proceeds of any enforcement action undertaken by IESO or if applicable the Alternative Collection Agent to recover payment of amounts payable by Electricity Distributors to IESO in accordance with Article 5.

"IESO Retained Interest" means IESO's right, title and ownership interest (if any) in, to and under the Regulatory Asset, which shall exclude each Investment Interest.

"IESO Retained Interest Amount" means, on a day, (a) the sum of all IESO Funding Shortfalls incurred prior to the day, plus (b) the sum of all IESO Funding Costs incurred prior to the day in accordance with Section 8(4), minus (c) the net proceeds received by IESO from or on behalf of each Absolute Assignee as consideration for the Disposition of each Investment Interest paid to IESO by or on behalf of such Absolute Assignee prior to the day, and minus (d) the IESO Recoveries received by IESO prior to the day.

"IESO Successor" means the entity appointed by the Province to succeed to the rights and obligations of IESO as the entity responsible for managing the Province's electricity system.

"Investment Interest" means an ownership interest in, to or under the Regulatory Asset that is acquired by an Absolute Assignee pursuant to a Disposition, which ownership interest may include (without limitation) ownership of a specified portion on a divided basis of the assets comprising the Regulatory Asset and ownership of an undivided ownership interest in the Regulatory Asset, in each case as may be described in the applicable Disposition Document.

"Investment Remittance" means, for a month, the lesser of (a) the aggregate amount of all IESO Remittances for the month, and (b) the sum of the Finance Amounts due and payable by all Absolute Assignees in respect of the month.

"Maximum IESO Recovery" means, for a month, the amount (if any) by which (a) the IESO Remittances for the month, exceed (b) the sum of all Finance Amounts that are due and payable by Absolute Assignees in respect of the month.

"Maximum Transition Charge Amount" means, for a Reference Period, (a) the aggregate amount of Future Fair Share of Green Transition Benefits that are allocable to the applicable Retail Consumer Group in accordance with the Fair Allocation Plan, divided by (b) the applicable Reference Period Length.

"Measurement Date" means [Insert relevant date around the Legislation Implementation Date] and any other date specified as such under the Fair Allocation Plan.

"OEB" means the Ontario Energy Board, together with its successors.

"OPG" means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998, together with its successors.

"Over-Assessed Amount" means, in respect of a Measurement Date, the amount (if any) by which (a) the Assessed Past Green Transition Costs, exceeds (b) the Estimated Past Green Transition Benefits, each as determined as of the Measurement Date.

"Period Finance Charges" means, for a Reference Period, the sum of (a) the Estimate of the Finance Amount and (b) the True-Up Amount in respect of the immediately preceding Reference Period.

"Period Transition Charges" means, for a Reference Period, the sum of (a) the Period Finance Charges for the Reference Period and (b) the IESO Available Amount for the Reference Period.

"Pledge" means, in respect of an Investment Interest of an Absolute Assignee, a lien, mortgage, charge or security interest granted to or in favour of a Pledgee by the Absolute Assignee in, to and over all or a specified portion (including a specified portion on a divided basis or by way of an undivided interest) of the Investment Interest.

"Pledgee" means a person to whom an Absolute Assignee grants a Pledge.

"Program End Date" means •, [2047].

"Province" means the Province of Ontario.

"Redemption Amount" means the amount payable by or on behalf of an Absolute Assignee to redeem, prepay or repurchase a Funding Obligation incurred by or on behalf of the Absolute Assignee, including any premium, make-whole or other additional amount becoming payable under the Funding Obligation to give effect to such redemption, prepayment or repurchase.

"Reference Period" means (a) the period from (and including) the Measurement Date to (and including) June 30, 2017, (b) each six month period commencing [May 1st and November 1st] thereafter and (c) any other period specified as such in the Fair Allocation Plan.

"Reference Period Length" means, for a Reference Period, the number of months in the Reference Period.

"Refinancing" means, in respect of a Funding Obligation incurred by or on behalf of an Absolute Assignee, that the Funding Obligation is repaid or repurchased for cancellation by or on behalf of the Absolute Assignee by applying the net proceeds obtained by the Absolute Assignee incurring one or more other Funding Obligations.

"Regulatory Asset" means the property rights and interests described in Section 6(1), which collectively is comprised of the IESO Retained Interest and each Investment Interest.

"Regulatory Asset Account" means (a) for an Electricity Distributor, any bank account into which the Electricity Distributor deposits or receives Transition Charge Collections; (b) for the Servicer, any bank account into which IESO deposits or receives Transition Charges, Electricity Distributor Remittances or IESO Remittances; and (c) if applicable, for the Alternative Collection Agent, any bank account into which the Alternative Collection Agent deposits or receives Transition Charge Collections, Electricity Distributor Remittances or IESO Remittances.

"Regulatory Asset Owner" means each of (a) IESO, as owner of (and to the extent of) the IESO Retained Interest and (b) each Absolute Assignee, as owner of its Investment Interest or Investment Interests, and "Regulatory Asset Owners" means collectively IESO and each such Absolute Assignee, who together own the entirety of the Regulatory Asset and are required to exercise their individual rights of ownership in accordance with Section 6(7).

"Related Rights" means all rights of any kind (whether in tort, contract or otherwise) that attach or are attendant or incidental to any of the other property rights or interests that comprise such Regulatory Asset.

"Remittance Date" means, in respect of an Electricity Distributor, each day on which it is required to remit Electricity Distribution Remittances to IESO or if applicable the Alternative Collection Agent as specified in accordance with any Funding Obligation or, if no such day is specified in accordance with any Funding Obligation, then the Business Day preceding each Settlement Date.

"Repayment Obligation" means an obligation to repay, redeem or repurchase, or to provide for the repayment, redemption or repurchase (including by making a related Finance Reserve Deposit) of, all or a portion of the amount advanced to the Absolute Assignee under a Funding Obligation.

"Repayment" means a payment by an Absolute Assignee made to satisfy a Repayment Obligation, other than to the extent that the payment is made by applying the proceeds of a Refinancing or from Finance Reserve Withdrawals.

"Replacement Event" means any event specified as such in a Funding Obligation.

"Retail Consumer" means:

(a) present and future consumers of electricity in the Province who are (i) consumers designated under section 79.16 of[, and O.Reg 95/05 under,] the *Ontario Energy Board Act, 1998*, or (ii) hold or are deemed to hold an "eligible account" under the *Ontario Rebate for Electricity Consumers Act, 2016*, other than any such consumer who has a contract with a Retailer who uses Retailer Consolidated Billing; and

(b) present and future Retailers who use Retailer Consolidated Billing,

and each case includes all such consumers and Retailers who are connected, directly or indirectly and whether a customer of an Electricity Distributor or not, to the transmission and distribution system assets located in the Province and who are taking electric delivery service within the Province, whether or not such retail consumers produce their

own electricity or purchase electric generation services from a provider of electric generation services other than the owner of the Province's transmission and distribution system assets and whether or not the transmission and distribution system assets continue to be owned or operated by Electricity Distributors or operated by IESO.

"Retail Consumer Group" means, in relation to a Reference Period, the Retail Consumers who receive Electricity Invoices during the Reference Period.

"Retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity.

"Retailer Consolidated Billing" has the same meaning as in the *Retail Settlement Code* issued by the Ontario Energy Board.

"Service Area" means, in respect of an Electricity Distributor, the geographic area or region in which it is licensed to distribute electricity in accordance with the *Electricity Act, 1998*.

"Servicer" means IESO or IESO Successor, as agent for and on behalf of the Regulatory Asset Owners, for the purposes set forth in Article 4.

"Settlement Date" means the [last Business Day of any month].

"Transition Charge" means, for a Retail Consumer in respect of a Reference Period, (a) the Period Transition Charge, (b) multiplied by its Allocation Factor in respect of the Reference Period, divided by (c) the applicable Reference Period Length.

"Transition Charge Collection" means any amount received or deemed by this Act to have been received upon the collection of a Transition Charge paid by or on behalf of a Retail Consumer, including any proceeds arising from the exercise and enforcement of any related rights and interests under or in respect of the Regulatory Asset.

"True-Up Amount" means, in respect of a Reference Period, the amount (which may be a negative amount) calculated by the Financial Services Agent equal to (a) the Estimate of the Finance Amount for the related True-Up Period, minus (b) the Actual Finance Amount for such related True-Up Period, plus (c) the Collected Amount Adjustment for such related True-Up Period.

"True-Up Period" means, in relation to a Reference Period, the period from and including the [30th] day immediately preceding the first day of the Reference Period, to but excluding the [30th] day immediately preceding the last day of the Reference Period.

"Undertaking of the Lieutenant Governor in Council" means the undertaking of the Lieutenant Governor in Council given under Section 11(2).

Article 3 – Transition Charges

(1) Retail Consumer Obligation to Pay a Transition Charge – Each Retail Consumer shall pay each Transition Charge charged to it in any Electricity Invoice issued to such Retail Consumer by its Electricity Distributor or by an Alternative Servicer under Section 4(1), in each case on the terms of payment specified in the related Electricity Invoice.

(2) **Indebtedness of Retail Consumers** – Until paid, a Transition Charge charged to a Retail Consumer in an Electricity Invoice shall, together with any applicable late payment fees and finance charges arising under the terms of the Electricity Invoice with respect to such Transition Charge, constitute non-bypassable indebtedness of the Retail Consumer to the Regulatory Asset Owners, each with respect to its respective interest in the Regulatory Asset. Such indebtedness shall constitute a single and separate[8] debt obligation owing by the Retail Consumer, which subject to Article 5 may be enforced independently from any other payment obligation or indebtedness owing by the Retail Consumer under the Electricity Invoice or otherwise.[9]

(3) **No Set-Off or Reduction** – A Retail Consumer may not set-off or reduce (by counterclaim, defense or otherwise) the amount payable by it in respect of any Transition Charge, including any set-off against or in respect of any amount owing or becoming payable to such Retail Consumer by its Electricity Distributor, any Regulatory Asset Owner or any other person.

(4) **Allocation of Retail Consumer Payments** – If an Electricity Distributor receives a payment made by or on behalf of a Retail Consumer in respect of amounts due and payable under one or more Electricity Invoices that is less than the total amount payable thereunder, such payment shall be allocated on a *pro rata* basis to the payment of related Transition Charges and other invoiced amounts and the amount so allocated as a payment of related Transition Charges shall be deemed to constitute a Transition Charge Collection.

(5) **Transition Charges are Irrevocable** – The Transition Charges arising under or in respect of Funding Obligations incurred under the Financing Plan (including any adjustments based on modifications to such Funding Obligations made in compliance with the Financing Plan or as a result of amendments to the Financing Plan made in accordance with Section 9(3)) are deemed to be irrevocable, final and effective without any further action, except to the extent of manifest calculation error. For greater certainty, a Transition Charge may include Finance Amounts for a Reference Period whether or not the payment of such Finance Amounts are inconsistent with the Fair Allocation Plan applicable at the time such payments are due and payable, whether or not the related Funding Obligation was properly incurred under the Financing Plan. In no case shall a Funding Obligation incurred under the Financing Plan be affected by a subsequent amendment to the Fair Allocation Plan.

Article 4 – Invoicing of Transition Charges

(1) **Inclusion of Transition Charges in Electricity Invoices** – Each Electricity Distributor and if applicable any Alternative Servicer shall, as an agent of the Regulatory Asset Owners, specify the Transition Charge to be charged to a Retail Consumer pursuant to Section 4(4) in respect of a related Reference Period in each Electricity Invoice issued

---

[8] Determine if this is critical for rating and markets. Logistics under consideration.

[9] Torys has also suggested that deemed conditions of licenses for distributors, retailers and unit sub-metering providers, could be included as conditions, to require them to collect and remit amounts in accordance with this legislation. Consider if it is helpful to integrate the existing regulatory scheme for invoicing and collections (regarding RPP) in the legislation.

by the Electricity Distributor or if applicable by the Alternative Servicer to the Retail Consumer in respect of such Reference Period. Upon the inclusion of a Transition Charge in an Electricity Invoice, the obligation to pay such amount shall be binding on the applicable Retail Consumer.

(2) **Calculation of the Period Transition Charge** – Not later than [35] days prior to the first day of a Reference Period, each Absolute Assignee (or the Financial Services Agent on its behalf) shall provide the OEB with written notice of each Estimate of a Finance Amount payable by it or on its behalf in respect of the Reference Period. [35] days prior to the first day of a Reference Period, IESO or Successor IESO if applicable shall specify the IESO Retained Interest Amount and any IESO Financing Costs that are due and payable and remain unpaid on such day. Not later than one month prior to the first day of a Reference Period, the OEB shall calculate the Period Transition Charge applicable to the Reference Period based on the calculations and information set forth in such written notices received from the Absolute Assignees and based on such amounts specified by IESO or Successor IESO, which calculations, information and amounts shall be determinative, except to the extent of manifest calculation error or misstatement.

(3) **Calculation and Attribution of Transition Charges** – Not later than 25 days prior to the first day of a Reference Period, the OEB shall apply the Attribution Methodology to determine the Allocation Factor for each Retail Consumer of the applicable Retail Consumer Group.

(4) **Notice of Transition Charges** – Not later than 20 days prior to the first day of a Reference Period, the OEB shall inform each Electricity Distributor and if applicable any Alternative Servicer of the Transition Charges to be specified in the Electricity Invoices to be issued to each Retail Consumer of the applicable Retail Consumer Group who has a billing address in the Electricity Distributor's Service Area.

(5) **Adjustments** – The amount of any Transition Charge charged to a Retail Consumer and specified as such in an Electricity Invoice shall be determinative of the amount of indebtedness created thereby and owing in respect of such Transition Charge, except to the extent of any manifest calculation error.

(6) **Successors of Electricity Distributors** – Any successor of an Electricity Distributor shall be bound by the requirements of Article 4 and shall perform and satisfy all duties and obligations of such Electricity Distributor under Article 4 in the same manner and to the same extent as such Electricity Distributor, including the obligation under Article 4 to impose, attribute, charge, bill and invoice the Transition Charges.

(7) **IESO Successor** – Any IESO Successor shall be bound by the requirements of Article 4 and shall perform and satisfy all duties and obligations of IESO under Article 4 in the same manner and to the same extent as IESO, including the obligation to calculate and provide notice of Transition Charges.

(8) **Appointment of an Alternative Servicer** – If a Replacement Event occurs in respect of any Electricity Distributor, the Absolute Assignees shall, in accordance with the Collective Rights Agreement, be permitted, by an instrument in writing, to appoint an Alternative Servicer to perform some or all of the obligations and duties required to be undertaken by such Electricity Distributor under this Article 4, as and to the extent specified in such appointment. Upon acceptance of such appointment, the Alternative

Servicer shall become obligated to perform such assumed obligations in replacement of such Electricity Distributor. Any Electricity Distributor that is replaced under this Section 4(8) shall promptly transfer all rights, powers, privileges and property interests in its possession or within its control in the performance of such obligations and duties to the Alternative Servicer and shall take such further actions, including the execution of instruments, necessary to give full and final effect to such transfer and to permit the Alternative Servicer to perform such obligations and duties on behalf of the Regulatory Asset Owners.

(9) **Absolute Assignees have Standing** – The Absolute Assignees, acting together in accordance with the Collective Action Agreement, may bring actions against any Electricity Distributor, IESO, the Servicer, Alternative Servicer or any other person who may be authorized to issue Electricity Invoices to Retail Consumers for a failure to impose, attribute, charge, bill or invoice Transition Charges. Any court of the Province shall have jurisdiction over any actions brought before it by the Absolute Assignees in relation to any such failure.

(10) **No Set-Off or Reduction –** No Servicer or Electricity Distributor may set off or reduce (by counterclaim, defence or otherwise) the amount payable by it pursuant to this Article 4.

(11) **Regulations** – Regulations may be enacted for the purpose of specifying further rights, powers, privileges, duties and obligations that shall apply to IESO, any Electricity Distributor or any Alternative Servicer to ensure that Transition Charges are properly charged to Retail Consumers and specified as such in Electricity Invoices.

Article 5 – Collections and Remittances

(1) **Duty to Collect as Agent** – Electricity Distributors or if applicable any Alternative Collection Agent shall, as an agent of the Regulatory Asset Owners, undertake [diligent][reasonable][10] efforts to collect amounts owing by Retail Consumers in respect of Transition Charges charged to such Retail Consumers in Electricity Invoices issued by the Electricity Distributor or if applicable such Alternative Collection Agent.

(2) **Segregation of Transition Charge Collections** – An Electricity Distributor or if applicable any Alternative Collection Agent shall promptly segregate Transition Charge Collections from other payments received by it from Retail Consumers and deposit such Transition Charge Collections into its Regulatory Asset Account.[11] Prior to and following a deposit of Transition Charge Collections having been made into its Regulatory Asset Account, the Electricity Distributor or if applicable any Alternative Collection Agent shall hold such amounts in trust for the Regulatory Asset Owners.

(3) **Electricity Distributor Remittances** – On each applicable Remittance Date, an Electricity Distributor shall remit all Transition Charge Collections received by it from Retail Consumers in respect of the related Reference Period to or to the account of IESO or if applicable the Alternative Collection Agent.

---

[10] Mirror collection “standard of care” under applicable legislation.

[11] Consider trying to attach to existing LDC credit enhancements and provide parallel coverage for customer losses.

(4) **Duty to Collect Electricity Distributor Remittances** – IESO or if applicable any Alternative Collection Agent shall, as an agent of the Regulatory Asset Owners, undertake [diligent][reasonable] efforts to accept and collect Electricity Distributor Remittances from Electricity Distributors and Transition Charge Collections from Retail Consumers that pay their Electricity Invoices directly to IESO.[12]

(5) **Segregation of Electricity Distributor Remittances** – IESO and if applicable the Alternative Collection Agent shall promptly segregate Electricity Distributor Remittances from other payments received or held by it and deposit such Electricity Distributor Remittances into its Regulatory Asset Account. Prior to and following a deposit of Electricity Distributor Remittances having been made into its Regulatory Asset Account, IESO or if applicable any Alternative Collection Agent shall hold such amounts in trust for the Regulatory Asset Owners.

(6) **IESO Remittances** – On each Settlement Date[13], IESO and if applicable the Alternative Collection Agent shall remit all amounts on deposit in its Regulatory Asset Account (a) first, to or to the account of the Absolute Assignees an amount equal to the Investment Remittance for the related month and (b) second, to IESO (including by IESO retaining such amount) an amount equal to the lesser of (i) the Maximum IESO Recovery for the related month and (ii) the IESO Retained Interest Amount as of the Settlement Date.

(7) **Successors of Electricity Distributors** – Any successor of an Electricity Distributor shall be bound by the requirements of Article 5 and shall perform and satisfy all duties and obligations of such Electricity Distributor under Article 5 in the same manner and to the same extent as such Electricity Distributor, including the obligation under Article 5 to collect Transition Charges and make remittances of Electricity Distributor Remittances.

(8) **IESO Successor** – IESO Successor shall be bound by the requirements of Article 5 and shall perform and satisfy all duties and obligations of IESO under Article 5 in the same manner and to the same extent as IESO, including the obligation to collect Transition Charge Collections, Electricity Distributor Remittances and to remit IESO Remittances.

(9) **Owners of Distribution Assets** - If any person other than an Electricity Distributor acquires distribution system assets in the Province or invoices or collects electricity distribution rates in the Province[14], then such person shall, if requested by the Absolute Assignees, be obligated to act diligently to (a) facilitate the invoicing and collection of any Transition Charges applicable to Retail Consumers in its applicable service area, including all consumers connected to the electricity distribution system assets and taking electric delivery service located within such service area; (b) allocate partial payments by Retail Consumers as provided in this Act; (c) exercise all enforcement rights of the Absolute Assignees for the benefit of an Absolute Assignee; and (d) remit any Transition Charge Collections to the Absolute Assignees or Pledgees, as applicable, each in accordance with its Investment Interest.

---

[12] Consider building this obligation into a deemed condition of licence for the IESO.

[13] Consider frequency of remittances in light of rating requirements. US rating agencies favour daily remittances.

[14] This is in anticipation of a possible future restructuring of the distribution system.

(10) **Absolute Assignees have Standing** – The Absolute Assignees, acting together in accordance with the Collective Action Agreement, may bring actions against any Electricity Distributor, IESO, the Alternative Collection Agent, any owner of electricity distribution system assets in the Province or any other person who may be authorized to collect electricity distribution and use charges from Retail Consumers for a failure to collect Transition Charges, remit or collect Electricity Distributor Remittances or remit IESO Remittances, as and to the extent applicable under Article 5. Any court of the Province shall have jurisdiction over any actions brought before it by the Absolute Assignees in relation to any such failure.

(11) **Appointment of an Alternative Collection Agent** – If a Replacement Event occurs in respect of any Electricity Distributor or IESO, the Absolute Assignees shall, in accordance with the Collective Rights Agreement, be permitted, by an instrument in writing, to appoint an Alternative Collection Agent to perform some or all of the collection, segregation and remittance obligations otherwise required to be undertaken by such Electricity Distributor or IESO, as applicable, under Article 5, as and to the extent specified in such appointment. Upon acceptance of such appointment, the Alternative Collection Agent shall become obligated to perform such assumed obligations in replacement of such Electricity Distributor or IESO, as applicable. Any Electricity Distributor or IESO, as applicable, that is replaced under this Section 5(11) shall promptly transfer all rights, powers, privileges and property interests in its possession or within its control in, to and over the Regulatory Asset, including its Regulatory Asset Account, to the Alternative Collection Agent and shall take such further actions, including the execution of instruments, necessary to give full and final effect to such transfer and to permit the Alternative Collection Agent to enforce the Regulatory Asset on behalf of the Absolute Assignees.

(12) **No Set-off, etc.** - The Regulatory Asset, including rights in Transition Charges, Transition Charge Collections, and the interests of a Regulatory Asset Owner, an Absolute Assignee and a Pledgee therein, may not be setoff or reduced (including by counterclaim, surcharge or defense) by any Retail Consumer, any Electricity Distributor, IESO, Alternative Collection Agent or any owner of distribution system assets in the Province or any other person or in connection with any default, bankruptcy, reorganization or other insolvency proceeding of any Electricity Distributor, IESO, Alternative Collection Agent or any owner of distribution system assets in the Province, any affiliate or successor thereof or any other entity or otherwise.[15]

(13) **Sequestration** – If any Electricity Distributor, IESO, the Alternative Collection Agent or any owner of distribution system assets in the Province or any other person or entity authorized to collect Transition Charges, defaults on any required remittance of Transition Charge Collections, Electricity Distribution Remittances or IESO Remittances under Article 5, any court in the Province, upon application by and of the Absolute Assignees acting collectively under the Collective Action Agreement and without limiting any other remedies otherwise available to the Absolute Assignees or Pledgees, shall order the sequestration and payment of the Transition Charge Collections, Electricity

[15] Consider whether it makes sense to create a "deemed collection" payment obligation on Electricity Distributors to the extent a Retail Consumer reduces its payment of Transition Charges, despite this language. Same for Electricity Distributor Remittances and IESO Remittances.

Distribution Remittances and IESO Remittances, as applicable, for the benefit of the Absolute Assignees, each with respect to its Investment Interest, and the Pledgees as applicable.[16]

(14) **Regulations** – Regulations may be enacted for the purpose of specifying further rights, powers, privileges, duties and obligations that shall apply to IESO, any Electricity Distributor or any Alternative Collection Agent to ensure that rights, interests, entitlements, benefits and proceeds in, to, under and from the Regulatory Asset are of fully realized by some or all of the Absolute Assignees and Pledgees.

Article 6 – The Regulatory Asset

(1) **Composition** – The Regulatory Asset shall constitute a current and irrevocable property right and interest consisting, collectively, of the following rights and interests (without duplication):

a. the right of IESO (i) to record its IESO Retained Interest in its accounts in accordance with Section 8(1), having a stated amount from time to time equal to the IESO Retained Interest Amount; and (ii) to receive IESO Recoveries from time to time in accordance with Section 5(6)(b);

b. the right to impose, bill, invoice, collect and receive Transition Charges from Retail Consumers, including the right to determine the amount of Transition Charges in accordance with this Act;

c. the right to enforce the obligations and indebtedness of each Retail Consumer to pay the Transition Charges charged to the Retail Consumer from time to time in accordance with Article 3, together with all related late payment fees or interest charges arising in respect thereof under the related Electricity Invoices;

d. the right to enforce the duties and obligations of each Electricity Distributor and if applicable the Alternative Servicer to impose, attribute, charge, bill and invoice the Transition Charges in accordance with Article 4;

e. the right to enforce the duties and obligations of each Electricity Distributor and if applicable the Alternative Collection Agent to collect, receive and remit amounts received by it in respect of Transition Charges as Electricity Distributor Remittances to or to the account of IESO or if applicable the Alternative Collection Agent in accordance with Article 5, including all collections and the proceeds of any enforcement action undertaken by the Electricity Distributor or if applicable the Alternative Collection Agent to recover payment of Transition Charges in accordance with Article 5;

f. the right to enforce the duties and obligations of IESO and if applicable the Alternative Collection Agent to collect and receive Electricity Distributor Remittances and to remit IESO Remittances to or to the accounts of the

[16] Consider adding or substituting this provision for a right to appoint a receiver.

Regulatory Asset Owners, each with respect to its respective interest in the Regulatory Asset, in each case in accordance with Article 5, including all collections and the proceeds of any enforcement action undertaken by it to recover payment of Electricity Distributor Remittances in accordance with Article 5;

g. the right to receive and collect all Transition Charge Collections, all Electricity Distributor Remittances and all IESO Remittances in accordance with Article 5;

h. all rights and entitlements under each Regulatory Asset Account and all amounts on deposit in any such Regulatory Asset Account;

i. all Related Rights; and

j. all revenue, collections, claims, payments, money and proceeds of or derived from the rights described in (a) through (i), regardless of whether such revenue, collections, claims, payments and proceeds are imposed, invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

A Regulatory Asset and the property rights and interests therein shall exist whether or not Transition Charges have been imposed, charged, invoiced, accrued or collected and notwithstanding that the imposition, attribution, invoicing and collection of Transition Charges will depend on further actions that may not have occurred.

(2) **Validity of Dispositions** – Despite any limitations or restrictions on a Disposition that may arise by contract or by operation of any applicable law of the Province or any consent requirement applicable to a Disposition that may arise by operation of any applicable law of the Province, a Disposition by IESO to an Absolute Assignee made under the Financing Plan, or by one Absolute Assignee to another Absolute Assignee made under the Financing Plan, shall be permitted and when made shall be valid and enforceable in accordance with the terms of the related Disposition Document and shall be effective to confer upon the Absolute Assignee thereof a valid property right and interest in, to and under the applicable Investment Interest (or relevant portion thereof) in accordance with the terms of such Disposition, provided that the parties to the applicable Disposition Document have expressly stated therein that such Disposition is a sale or other absolute transfer. Without limiting the foregoing, any Disposition that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as a true sale and absolute transfer of the Regulatory Asset Owner's applicable right, title, and interest in, to and under the Regulatory Asset (or relevant portion thereof), and not merely as a Pledge thereof, and upon such Disposition the assigner or seller under the applicable Disposition Document shall retain no right, title or interest in the Investment Interest subject to the Disposition, including all rights under the Investment Interest arising after such Disposition.

(3) **Perfection and Priority of Dispositions** – Any Disposition of an interest in a Regulatory Asset shall be vested, valid, binding and perfected from the time when such Disposition is made. Such Disposition shall be perfected, vested, valid and binding as against the transferring Regulatory Asset Owner and all other persons who have claims of any kind (whether in tort, contract or otherwise) against the transferring Regulatory Asset Owner, irrespective of whether such persons have notice of the Disposition and

the property rights and interests acquired by the Absolute Assignee under such Disposition shall be free and clear of any liens in favour of such other persons.

(4) **Validity of Pledges** – Despite any limitations or restriction on a Pledge that may arise by contract or by operation of any applicable law of the Province or any consent requirement applicable to a Pledge that may arise by operation of any applicable law of the Province, a Pledge by an Absolute Assignee may be made to secure any related Funding Obligation and when made shall be valid and enforceable in accordance with its terms and shall be effective to confer upon the Pledgee a valid security interest in, to and in respect of the related Investment Interest in accordance with the terms of the Pledge. Other than as required by the Financing Plan, no consent of any person shall be required to give effect to a Pledge made to secure any Funding Obligation.

(5) **Perfection and Priority of Pledges** - For purposes of the *Personal Property Security Act* (the "PPSA"), the Regulatory Asset shall be intangible personal property and any Pledge made by an Absolute Assignee in respect of a Funding Obligation may be perfected by filing a financing statement under the PPSA on that basis. All proceeds of a related Investment Interest that are subject to such a Pledge that are received by the Absolute Assignee shall immediately be subject to the such Pledge, and the security interest in such proceeds shall be perfected pursuant to the PPSA.[17] A Pledge perfected under the PPSA shall be a continuously perfected security interest and shall have priority over any other lien or security interest, created by operation of law or otherwise, that may attach to the property rights and interests in the Investment Interest subject to the Pledge unless the Pledgee has otherwise agreed in writing. Subject to the terms of the Collective Action Agreement, a Pledgee shall have a perfected security interest in a related Investment Interest, including the Absolute Assignee's rights and interests in and to Transition Charge Collections or other related proceeds in respect of the Investment Interest and that are deposited in any Regulatory Asset Account or other account of any Electricity Distributor, IESO, Alternative Collection Agent or other person who may have commingled such Transition Charge Collections or such other proceeds with other funds. All provisions of the PPSA shall apply to the Regulatory Asset on the basis that it is intangible personal property, except to the extent otherwise provided in this Section 6(5).

(6) **Enforcement of Property Rights** – The rights of any Regulatory Asset Owner to collect and enforce its rights and interests in, to or in respect of the Regulatory Asset shall be exercised in the manner set forth in Article 5.

(7) **Owners of a Specified Portion of the Regulatory Asset** – A Regulatory Asset Owner may effect a Disposition to an Absolute Assignee of a specified portion of its rights and interests in the Regulatory Asset, including by way of a Disposition of a divided or an undivided interest therein as specified in a related Disposition Document, in each case under the Financing Plan. In no circumstance may the specified portions of the rights and interests in the Regulatory Asset owned by all Regulatory Asset Owners be greater than all of the rights and interests that comprise the Regulatory Asset in the aggregate.

---

[17] Consider whether to simply leave this and have a financing statement be filed under the PPSA. This would normalize the security interest and reduce any adverse suggestion that security would not otherwise arise.

(8) **Collective Action Required** – If a Regulatory Asset Owner's rights and interests in the Regulatory Asset comprises less than the entire property right and interest constituted by the Regulatory Asset, such Regulatory Asset Owner shall only enforce such right and interest on a collective and coordinated basis with each other Regulatory Asset Owner in accordance with the Collective Rights Agreement.

Article 7 – Establishment of the Fair Allocation Plan[18]

(1) Adoption of the Fair Allocation Plan – The Delegate may, [by written declaration,] designate and adopt a Fair Allocation Plan in compliance with Article 7. The Fair Allocation Plan so designated and adopted shall be the Fair Allocation Plan for all purposes of this Act, except if amended, amended and restated or terminated by a further written declaration made by the Delegate in compliance with Section 7(4).

(2) Principles and Parameters – A Fair Allocation Plan shall seek to allocate Future Fair Share of Green Transition Benefits across present and future Retail Consumer Groups on a basis that the Delegate, in its sole and absolute discretion, determines to be equitable, having regard to the following principles and parameters:

1. Future Fair Share of Green Transition Benefits should be allocated over the period ending on the Program End Date.

2. The Fair Allocation Plan should specify the Reference Periods for the purpose of identifying applicable Retail Consumer Groups and allocating Future Fair Share of Green Transition Benefits among them on a relative basis over time.

3. The share of Future Fair Share of Green Transition Benefits allocable to a particular Retail Consumer Group in respect of a Reference Period should be proportionate to a reasonable assessment of the benefits of the Green Generation Initiative to the Retail Consumer Group over such Reference Period.

4. The share of Future Fair Share of Green Transition Benefits to be allocated to a Retail Consumer Group and any future Retail Consumer Group at a particular time should not exceed the Estimated Future Green Transition Benefits, measured in respect of the Reference Periods following such particular time and to the Program End Date.

5. No future Retail Consumer Group should be allocated an unreasonably disproportionate share of Estimated Future Green Transition Benefits. Except in exceptional circumstances or in the case of any reallocation of an Over-Assessed Amount as contemplated in 7, below, the Future Fair Share of Green Transition Benefits to be allocated under a Fair Allocation Plan to any future

18 The idea is that the Fair Allocation Plan will be set once at the outset based on the principles and parameters described here, all as applied based on information available and the reasonable expectations and discretion of the delegate at such time. If the expectations are not fulfilled (e.g., generators may choose to retire their facilities at the end of their current procurement contracts and not invest in extending service lives to secure further procurement contracts), the Fair Allocation Plan will be unaffected, unless it is specifically amended (assuming amendments will be permitted by the legislation).

Retail Consumer Group should have regard to *[Insert formula if a year-over-year maximum amount is determined to be appropriate]*.

6. The time value of money should be reflected in the Fair Allocation Plan, in order to equate the relative values of the nominal allocations of Future Fair Share of Green Transition Benefits, calculated in current dollars, to future Retail Consumer Groups over time.

7. To the extent there has been an Over-Assessed Amount, the Fair Allocation Plan may determine that an adjustment should fairly be made to rebate Retail Consumers for such an amount, by reducing the costs otherwise attributable under the Act to such Retail Consumers. The relative costs of the Green Generation Initiative are reflected under the Act by the attribution of Transition Charges to such Consumer Groups, based on the Financing Plan seeking to track the allocations of benefits under the Fair Allocation Plan. Accordingly, the Maximum Transition Charge Amount determined for one or more Retail Consumer Groups having regard to the Fair Allocation Plan otherwise applicable may be appropriately reduced to recognize the effect of the Over-Assessed Amount. In such a case, a determination to reduce the Maximum Transition Charge Amount applicable for certain related Reference Periods should have regard to the principle that the corresponding rebate should be extended to benefit the Consumer Group or Consumer Groups in closest proximity to the Legislative Implementation Date.

(3) **Attribution Methodology** – The Fair Allocation Plan shall specify the Attribution Methodology for the purposes of allocating the Period Transition Charges across the Retail Consumers of a particular Retail Consumer Group. The Attribution Methodology shall result in an attribution of such Transition Charges that is considered by the Delegate to be equitable, and may have regard to such principles and parameters as may be further set forth in a Regulation.

(4) **Amendments of the Fair Allocation Plan** – The Fair Allocation Plan may be amended, amended and restated or terminated by the Delegate, provided that such amendment, amendment and restatement or termination shall (a) not be inconsistent with the principles and parameters set forth in (2) or (3), above, or the Regulation and (b) comply with any restrictions or limitations specified with respect thereto in any Funding Obligation.

Article 8 – The IESO Retained Interest

(1) **Maintain Books of Account** – IESO may maintain books of account to record the IESO Retained Interest Amount and all adjustments thereto from time to time. Such books of account shall be determinative with respect to the amount of IESO's related regulatory asset.

(2) **Limitation on Additions** – IESO shall not record additions to the IESO Retained Interest Amount in respect of IESO Funding Shortfalls (a) if such additions are restricted by the terms of any Disposition Document or the Collective Action Agreement, or (b) on or after •, 2017.

(3) **Dispositions** – IESO may effect a Disposition to an Absolute Assignee if (a) the Absolute Assignee has or will concurrently become bound by the Collective Rights Agreement; (b) the Disposition is effected pursuant to a Disposition Agreement duly executed by IESO; (c) the Financial Services Agent confirms in writing that the Disposition is permitted under the Financing Plan; and (d) the net proceeds payable to IESO from the sale of the related Investment Interest would not exceed the IESO Retained Interest Amount immediately before the time of such Disposition.

(4) **No Continuing Interest in any Investment Interest** – IESO shall have no continuing right or interest in any Investment Interest subject to a Disposition effected by IESO under a Disposition Document to which IESO is a party and IESO shall not assert any such right or interest or take or omit to take any action to exercise or enforce its rights or interests under the IESO Retained Interest if such action or omission would impede or obstruct the rights of any Absolute Assignee or a Pledgee to enforce its rights and interests in any Investment Interest, except if IESO is expressly permitted to take or omit to take such action, respectively, under the related Disposition Document or the Collective Rights Agreement.

(5) **IESO Financing Costs** – IESO shall be entitled in good faith to incur reasonable financing costs (including interest and other reasonable financing charges) reflecting market terms and conditions and which are payable in arrears, in order to finance its ownership of the IESO Retained Interest from time to time.

(6) **IESO Recoveries** – IESO shall, in respect of a month, be entitled to receive from IESO Remittances on a related Settlement Date the amount (if any) available to IESO under Section 5(6)(b).

Article 9 – The Financing Plan

(1) **Power to Prepare, Implement and Amend the Financing Plan** – The Financial Services Agent shall be authorized to prepare, implement and amend the Financing Plan. If the Financial Services Agent is unwilling or unable to prepare and propose the adoption of the Financing Plan, the Delegate may by written declaration designate one or more other persons who shall be authorized to prepare, implement and amend the Financing Plan.

(2) **Terms and Conditions of the Financing Plan** – The Financing Plan shall establish the basis for each Absolute Assignee's funding decisions. The Financing Plan shall have regard to the principles and parameters set forth in Schedule 3 and such other conditions and requirements as may be specified in a written declaration of the Delegate or in accordance with the Regulation.

(3) **OEB Approval** – Any Additional Funding Charge payable to or for the benefit of the Financial Services Agent shall be subject to review and approval by the OEB.

(4) **OEB Review** – The OEB [shall] undertake an annual review of the records maintained by the Financial Services Agent for the purpose of confirming that the Funding Obligations incurred and the Finance Amounts paid by or on behalf of the Absolute Assignees were incurred and paid, respectively, in material conformity with the Financing Plan.

(5) Replacement of the Administrative Agent – If the OEB identifies deficiencies or makes recommendations in its review under Section 9(4), the Administrative Agent shall take reasonable measures to remedy such deficiencies if remediable, and shall in any event have regard to the recommendations of the OEB in relation to further actions undertaken by the Financial Services Agent under the Financing Plan. If the Financial Services Agent is unwilling or unable to reflect such recommendations in relation to such further actions, the Delegate may by written declaration designate one or more other persons who shall thereafter become the Financial Services.

(6) Obligation to Apply IESO Remittances – The Financial Services Agent shall ensure that amounts transferred to it under Article 5, as agent for and on behalf of the Absolute Assignees, or otherwise in respect of or as proceeds from an applicable Investment Interest shall only be applied or used to pay related Finance Amounts when they are due and payable and for no other purpose.

(7) Non-Recourse – The Financing Plan shall be implemented so that Funding Obligations incurred shall be without recourse to or to any assets of the Electricity Distributors, IESO, any Alternative Servicer, any Alternative Collection Agent, the Financial Services Agent, the OEB, the Province or the Lieutenant Governor in Council, other than if and to the extent that such persons or entities are liable for the performance of obligations or duties arising under this Act or expressly agree to become liable pursuant to any Funding Obligation or obligation in relation to a Finance Amount. [All Funding Obligations shall contain a statement to the following effect: "Neither the full faith and credit nor the taxing power of the Province of Ontario is pledged to the payment of the principal of, or interest on, this [obligation].]

(8) Incurrences are Binding – Notwithstanding anything to the contrary in this Act, each Disposition made to or by an Absolute Assignee and all amounts payable or becoming due and payable by or on behalf of an Absolute Assignee under or in connection with any obligation purporting to be a Funding Obligation, shall be binding for the purposes of this Act, including in determining the amount of related Transition Charges, despite any impairment or defect resulting from such failure.

[Article 10 – Compliance Matters[19]

(1) Right of the [OEB] to Inspect Books and Records - For the purpose of investigating compliance with the provisions of this Act, the OEB shall have the right, jurisdiction, power and authority to examine the books and records of *[Insert names if any]*.

(2) [OPG's Rate Settings – When setting other rates for or in respect of OPG, the OEB shall not take into account (a) the administrative or servicing fees charged by OPG as Financial Services Agent [in excess of the actual incremental costs incurred by such person of providing administrative or servicing services]; (b) the cost consequences to OPG of being the Financial Services Agent; or (c) the consequence of OPG

[19] As noted above, the outcome of any regulatory action undertaken by the OEB will not affect Funding Obligations that have been incurred under the Financing Plan. This Article and any potential role for the Auditor General is still under consideration.

consolidating the assets and liabilities of any Financing Entity for OPG's accounting purposes, in each case in setting any regulated payment amounts for OPG.][20]

Article 11 – Undertaking of the Lieutenant Governor in Council[21]

(1) **No Action to limit, alter, or impair or terminate Transition Charges, the Regulatory Asset or Collections** – The [Lieutenant Governor in Council] shall not in any way take or permit any action to reduce, impair, postpone or terminate the obligation of Retail Consumers to pay Transition Charges or to impair the Regulatory Asset or the collection or recovery of Transition Charge Collections, Electricity Distributor Remittances or IESO Remittances, either directly or indirectly, including through the introduction of any bill or the passing of any legislation or regulation having such effect. The amount of Transition Charges determined under this Act shall not be subject in any way to reduction, impairment, postponement or termination as a result of any action taken or failure by the Lieutenant Governor in Council, including through the introduction of any bill or the passing of any legislation or regulation having such effect.

(2) **Undertaking and Agreement** – The [Lieutenant Governor in Council] shall not:

(a) in any way take or permit any action that limits, alters or impairs the value of any Investment Interest;

(b) except as required by the estimates and adjustments made in determining the True-up Amount, reduce, alter or impair Transition Charges that are imposed, billed, invoiced, collected and remitted for the benefit of the Absolute Assignees or any Pledgee from time to time;

(c) permit the amendment, amendment and restatement or termination of the Fair Allocation Plan if such amendment , amendment and restatement or termination would adversely affect the validity or enforceability of any Funding Obligation or the rights of an Absolute Assignee or Pledgee thereunder,

in each case including through the introduction of any bill or the passing of any legislation or regulation having such effect.

(3) **Successor IESO** – If IESO is restructured, dissolved or becomes insolvent or is otherwise incapable of performing its obligations under this Act, Successor IESO shall be established to perform such obligations.

---

[20] As an alternative to this provision, consider clarifying under s. 78.1(4) of the OEB Act (which currently gives the OEB discretion in setting payment amounts subject to O. Reg. 53/05) that the OEB in setting OPG payment amounts for prescribed generation shall not consider OPG's role as Administrative Agent of any Financing Entities associated with the Fair Hydro initiative, perhaps with the exception of any operating fees that may be received by OPG for performing that role.

[21] Under consideration, including the dealers' request for a "servicer guarantee" and a "contractual guarantee" to address a "Change of Law" or if all or a portion of the legislation is *ultra vires*, requiring (at the lenders option), the Province to pay principal and interest on the outstanding debt until maturity or payout the entire debt including any make-wholes.

(4) **Compensation for Failure** – Absolute Assignees shall be compensated for any losses suffered by them as a result of any failure by the Lieutenant Governor in Council to comply with its undertakings and agreements in this Article 11.[22]

(5) **No Wind-up of Financing Entity**. No Financing Entity may be voluntarily wound up, liquidated or dissolved until one year after all of its Funding Obligations are repaid.

(6) **References to the Undertaking and Agreement** – Any non-confidential reference to the Undertaking of the Lieutenant Governor in Council, including in marketing materials and other documentation authorized for use by the Administrative in connection with any Funding Obligation, may be made provided that [*Add conditions to protect the Province*].

Article 12 – Regulations

Regulations may be made under this Act for the purposes described in Sections •,•,• and • and may be promulgated for any of the following purposes:

(a) to set standards and measures regarding the commercially reasonable requirements of the Province associated with an Absolute Assignee incurring Funding Obligations or becoming obligated to pay any Finance Amount, including to establish guidelines regarding all-in funding costs; permitted Additional Funding Charges; required maturities and redemption and termination rights of Funding Obligations; liquidity requirements, in each case to a Financing Plan that is consistent in its effect with the Fair Allocation Plan;

(b) to establish and empower one or more regulated entities to undertake decision-making activities with respect to this Act;

(c) to set out reasonable requirements regarding the appointment or retention of advisors, agents, service providers, contract counterparties, including in relation to 'market terms and conditions' parameters;

(d) to provide for audit and compliance standards applicable to those persons who are or may become obligated or have duties that arise under this Act [or under any Funding Obligation];

(e) to provide for any pre-vetting and approval requirements in relation to any incurrence by an Absolute Assignee of any Funding Obligation or obligation to pay any Finance Amount; and

(f) to provide for appeal and due process considerations in connection with the establishment, adoption, implementation and review of the Fair Allocation Plan or the Financing Plan.

Article 13- Miscellaneous[23]

---

[22] Requested by Torys. For discussion.

[23] OPG would like the specific amendments related to OPG to be included in the Bill.]

(1) **Choice of law** – The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to the transfer of an interest or right or creation of a security interest in the Regulatory Asset, any Transition Charge or the Undertaking of the Province shall be the laws of the Province.

(2) **Conflict of law** – In the event of conflict between this Act and any other law of the Province regarding the attachment, assignment or perfection, or the effect of perfection, or priority of any Disposition or Pledge, this Act shall govern to the extent of the conflict.

(3) **No further acts or approvals required** - Notwithstanding any provisions of any law of the Province to the contrary, no approvals, notices or authorizations other than those specified in this Act shall be required with respect to the actions to be taken in compliance with this Act, including under the Financing Plan or in relation to the establishment of the Fair Allocation Plan, and the transactions and contracts authorized in or contemplated by this Act or the Financing Plan, including the incurrence of any Funding Obligation, any Disposition, any Pledge or in the payment and performance of any attendant or incidental contract and any related expenses incurred to facilitate the preparation and implementation of the Financing Plan.

(4) **Effect of invalidity after the Incurrence of any Funding Obligation** - Effective on the date that a Funding Obligation is incurred under this Act, if any provision of this Act is held to be invalid or is invalidated, superseded, replaced, repealed or expires for any reason, that occurrence shall not affect any action allowed under this Act that is taken by any person who is or may become obligated or have duties that arise under this Act and any such action shall remain in full force and effect.

(5) **Severability** - If any Article, Section, paragraph or subparagraph of this Act or the application thereof to any person, circumstance or transaction is held by a court of competent jurisdiction to be unconstitutional or invalid, the unconstitutionality or invalidity shall not affect the constitutionality or validity of any other Article, Section, paragraph or subparagraph of this act or its application or validity to any person, circumstance or transaction, including the irrevocability of Transition Charges, the validity of the Regulatory Asset, the incurrence of any Funding Obligation, any Disposition, any Pledge, or the collection and recovery of Transition Charge Collections. To these ends, the Legislature hereby declares that the provisions of this Act are intended to be severable and that the Legislature would have enacted this Act even if any Article, Section, paragraph or subparagraph of this Act held to be unconstitutional or invalid had not been included in this Act.

Schedule 1

Guidelines for Estimates

[To be considered.]

Schedule 2

Requirements Applicable to Alternative Invoicing Agent/ Alternative Collection Agent

[To be considered.]

Schedule 3[24]

Principles and Parameters for Establishing the Financing Plan

The following principles and parameters provide a guideline as to what a Financing Plan should address:

(1) in respect of each Reference Period, make reference to the allocations of Future Fair Share of Green Transition Benefits to each Reference Group contemplated by the Fair Allocation Plan;

(2) estimate IESO Funding Shortfalls for each Reference Period;

(3) consider alternative funding arrangements suitable to fund the estimated IESO Funding Shortfalls, including short term and/or long term Funding Obligations;

(9) consider quantities, maturities, payment obligations, prepayment or redemption rights and such other features of Funding Obligations so that payments made for a Reference Period reasonably correspond to the allocations of Future Fair Share of Green Transition Benefits to the applicable Reference Group under the Fair Allocation Plan;

(4) if the anticipated amount of any Repayment (together with payments of other Finance Amounts) to be made in respect of a Reference Period would materially exceed the allocation of the costs and benefits of the Green Generation Initiative to the applicable Retail Consumer Group under the then current Fair Allocation Plan, diligent efforts should be made to determine whether a Refinancing or deferral of such Repayment may be reasonably and cost-effectively effected based on then prevailing market terms, conditions an circumstances;

(5) reflect the assumptions and requirements specified in any contemplated Funding Obligation (e.g., any limit on the maximum amount of Transition Charges charged to a hypothetical Retail Consumer relative to his or her monthly electricity bill, as prescribed by any rating agency that ascribes its credit rating to or in respect of the Funding Obligation having regard to the application of the Allocation Methodology);

(6) incur Funding Obligations from time to time on the best terms available at such time for a financing transaction of the size and type contemplated, and having regarding to the following parameters:

a. whether the Absolute Assignees will require committed access to short term liquidity to cover estimated IESO Funding Shortfalls prior to incurring fixed term Funding Obligations, and the amount and repayment terms of any such required liquidity; provided that any Repayment required to be made under the terms of such short-term liquidity would not obligate an Absolute Assignee to repay an amount in relation to a Reference Period that would have the effect of the Financing Plan permitting incurrences of Funding Obligations payable in such Reference Period that would exceed the allocations of Future Fair Share of

[24] Awaiting input from Torys based on OPG mark-up of Financing Plan sections.

Green Transition Benefits to the applicable Reference Group under the Fair Allocation Plan;

b. the basis upon which the Financial Services Agent will select the term to maturity of any other Funding Obligations; provided that any Repayments required to be made under the terms of such Funding Obligations should not obligate an Absolute Assignee to repay an amount in relation to a Reference Period that would have the effect of the Financing Plan permitting incurrences of Funding Obligations payable in such Reference Period that would exceed the allocations of Future Fair Share of Green Transition Benefits to the applicable Reference Group under the Fair Allocation Plan;

c. the basis upon which the interest rates applicable to such Funding Obligations would be determined;

d. the reference capital or finance market in which such Funding Obligation would be incurred, including markets outside of Canada if considered by the Financial Services Agent to be appropriate in the circumstances;

e. the currency of payments under such Funding Obligations and, if the Funding Obligations are denominated in a currency other than Canadian dollars, the basis upon which the Financial Services Agent shall cause the applicable Absolute Assignee to enter into hedging transactions to mitigate currency risk, including acceptable minimum and maximum coverage levels, having regard to the availability of related derivatives having notional amounts corresponding to the repayment and maturity profile of such Funding Obligations;

f. the basis upon which the Financial Services Agent will select counterparties under any transaction to be entered into by an Absolute Assignee, including any paying agent, servicer, cash manager, liquidity provider, hedge counterparty, account bank, lender, note trustee, security trustee, paying agent, registrar/transfer agent, financial services agent, arranger or manager;

g. the basis upon which the Financial Services Agent will manage counterparty risk, including by providing for maximum counterparty exposure limits having regard to concentration, credit and other identified risks with respect to individual counterparties or countries;

h. the basis upon which the Financial Services Agent will negotiate and settle Finance Amounts, including the amount of any Redemption Amounts, Finance Reserve Deposits and Additional Funding Charges;

(7) the basis upon which Funding Obligations may be redeemed, prepaid, repurchased or otherwise affected, having regard for the need to minimize debt service charges and other Funding Costs, and the need to maintain a stable funding platform to finance the IESO Funding Shortfalls from time to time on a basis that is consistent with the allocations of Future Fair Share of Green Transition Benefits to applicable Reference Groups under the Fair Allocation Plan;

(8) the basis upon which any Repayments, Funding Costs and Redemption Amounts will be paid, including any defeasance, sinking fund or through other reserves or liquidity facilities;

(9) the basis upon which fees, charges, expenses, costs, indemnities, reimbursements and other amounts payable to or for the benefit of the Financial Services Agent and other agents and service providers to the Absolute Assignees may be determined, allocated and paid;

(10) the timing and basis upon which Finance Reserve Deposits and Finance Reserve Withdrawals may be made;

(11) the basis upon which any obligations for any other Additional Funding Charges may be incurred and paid;

(12) the basis upon which the cash flows arising from time to time or otherwise derived from the Regulatory Asset may otherwise be applied, including in relation to any counterparty enforcement and realization scenario;

(13) the transmittal to [the IESO] of information related to the amounts to be included in the determination of the Period Transition Charge for a Reference Period;

(14) the basis upon which any Disposition may be made or effected by an Absolute Assignee, including parameters for determining the purchase price for the interest in the Regulatory Asset that is the subject matter of such Disposition, and any consents and releases that may be usefully obtained in connection with such Disposition;

(15) describe the requirements applicable to any special purchase entity that will purchase an Investment Interest, including proposed capitalization, governance, and restrictions on their powers and activities; and

(16) the basis on which any Pledge may be given or effected.

CONFIDENTIAL AND PRIVILEGED

Preliminary Draft for Discussion Purposes Only

"Fair Hydro Act" ~~– Part V.2~~

Article 1 – Purpose[1]

~~IESO has entered into Power Contracts with Generators. The agreed-upon reference prices and quantities set out therein were determined based on commitments made by IESO to provide Generators with long-term price certainty, so as~~The Province has and continues to encourage the construction and development of facilities for the ~~purpose of~~ long-term operation and generation of electricity in the Province using sustainable, lower carbon-based technologies such as new gas-fired generation, renewable facilities, energy from waste and biomass, including under the Province's various procurement, standard offer ~~and~~, feed in tariff and other similar programs (the "Green Generation Initiative"). ~~[The terms of the Power Contracts were intended to approximate the anticipated useful life of the related generation assets]; however, it has been determined that the useful life of many of these assets will be well in excess of the actual term of the related Power Contracts and will extend over more than one generation of ratepayers.~~ The long-term benefits of the Green Generation Initiative accrue over time and have benefited and will benefit present and future ~~ratepayers of the Province. Currently, market prices for electricity are less than the reference prices set out in the Power Contracts, leaving a gap in funding which is funded by charging consumers a "Global Adjustment" (part of which is available to IESO to pay this shortfall).~~electricity consumers in the Province.

The imputed costs of the Green Generation Initiative are currently passed through to electricity consumers by way of a monthly adjustment amount (the "Green Costs Adjustment"), which in turn forms part of the overall adjustment calculated by the Independent Electricity System Operator ("IESO") pursuant to section 25.33 of, and O.Reg. 429/4 under, the *Electricity Act* (the "Global Adjustment"). The Global Adjustment is included as a charge billed to electricity consumers in their monthly electricity invoices.

~~Each month, the IESO determines the Global Adjustment payable by consumers for the consumption~~The Green Costs Adjustment is currently determined each month by reference to the amounts paid by IESO to the generators of electricity in the Province~~. A component of the Global Adjustment is the amount by which the reference prices in the Power Contracts~~ under the Green Generation Initiative, which may be higher than prevailing market price for electricity. These differences arise because IESO has entered into long-term procurement contracts with such generators in order to provide them with long-term price certainty for electricity, and in turn to encourage the generators to develop technologies and to construct and develop facilities consistent with the Green Generation Initiative. In general, whenever amounts payable under these procurement contracts exceed the market price for electricity~~ for the quantities of electricity specified under the Power Contracts for the relevant period[2]. The relationship between the past, present and future benefits to Ratepayers from~~, the Green Costs Adjustment passes through the amount of such differences as part of the monthly charge to electricity consumers. Such amount then becomes available to IESO to meet its obligations under the procurement contracts. It has been determined that the useful lives of many of the assets encouraged by the Green Generation Initiative~~, on the one hand, and the costs of~~ will be well in

[1] ~~Consider the scope and breadth of the Purpose section. This text is considered to be useful to establish the legislative basis for the statute, which text will be useful in the event of a challenge.~~

[2] ~~Consider modifying this to also refer to gas contracts and hydroelectric contracts, which provide for mechanics that are not based on contracts for differences.~~

excess of the respective terms of the related procurement contracts, and in many cases may extend over more than one generation of electricity consumers.

Since the benefits to past, present and future electricity consumers from the Green Generation Initiative ~~borne by past, present and future Ratepayers through their respective allocations of the Global Adjustment, on the other hand, do not necessarily reflect an equitable allocation of such benefits and costs over time, with the result that an adjustment may be appropriate to address inter-generational fairness considerations. Such an adjustment should reflect~~will not necessarily coincide with the costs currently attributed through the Green Costs Adjustment, based on the respective durations of the procurement contracts, it has been determined that the rate at which the costs associated with the Green Generation Initiative should be passed through to Retail Consumers (as defined in Article 2) should be more closely aligned with the benefits that such Retail Consumers have derived and are expected to derive from the Green Generation Initiative over time. This realignment will be based on principles and parameters that ~~can be applied from time to time in order to~~ establish a reasonable basis for measuring and allocating the relative costs and benefits of the Green Generation Initiative ~~across present and future Ratepayers. A plan to allocate such costs and benefits~~ equitably across present and future ~~Ratepayers may be developed based on those principles and parameters (a~~Retail Consumers (the "Fair Allocation Plan").

If ~~a~~the Fair Allocation Plan determines that the equitable allocation of the ~~Global Adjustment to the Ratepayers~~costs associated with the Green Generation Initiative to the Retail Consumers of a particular time period ~~in respect of the Power Contracts~~ should be reduced below the amount ~~otherwise determined,~~that currently would be charged based on the Green Costs Adjustment, then the amount payable by such ~~Ratepayers to Electricity Distributors in respect of such period,~~Retail Consumers and in turn ~~by the Electricity Distributors to the~~available to IESO~~, would~~ will, in the aggregate, be less than the amount payable by the IESO to the ~~Generators under the Power Contracts~~generators in respect of such period. ~~If the difference is greater than any net Power Contract surpluses available to IESO from earlier periods, IESO will have a funding shortfall.[3] In order for IESO to cover such a funding shortfall for a period,~~In this case IESO will need to obtain funding from another source~~, which could include funding from third party sources operating in public and private capital markets~~ to cover such a shortfall. If a funding obligation is incurred ~~in order to enable the~~by IESO to cover such a ~~funding~~ shortfall during one period, the repayment of such funding obligation will be required in a future period, and any related repayments, finance costs, hedging costs and other transaction costs ~~will be~~ incurred ~~and may~~will become payable in one or more ~~other~~future periods. ~~It will be necessary to provide~~In order for IESO to obtain a reliable and committed source of cash flows to enable IESO to repay such funding ~~obligations and to pay related funding costs with certainty when the funding obligations~~amounts when they become due and payable~~. This Part~~, this Act imposes irrevocable and non-bypassable financial obligations ~~of Ratepayers~~on Retail Consumers to pay amounts incurred in respect of such funding obligations when they become due and payable and establishes a right to invoice and collect such amounts . The right and interest in and to collect such financial obligations~~, which~~ will take the form of the Regulatory Asset contemplated in this ~~Part and~~Act, which will constitute property rights and interests. ~~The~~Interests in the Regulatory Asset ~~will~~may be sold and absolutely assigned ~~and will belong~~by IESO to one or more~~ newly created~~ financing entities, which in turn will finance their ~~purchase of such Regulatory Asset~~acquired interests by incurring funding obligations. The incurrence and payment of such funding obligations will be administered on behalf ~~the~~such financing entities by ~~an administrative~~a financial services agent~~ (initially OPG),~~ under the Financing Plan

~~[3] Confirm whether any RPP forecasting variance is to be included in (i) a funding shortfall; and (ii) related IESO financing costs to be included in Transition Charges.]~~

contemplated in this ~~Part~~Act. The Financing Plan will seek to reasonably match the payment obligations arising under such funding obligations ~~and~~, to be borne by the future ~~Ratepayers~~Retail Consumers of the period in which such payment obligations become due, with the ~~costs and~~ benefits of the Green Generation Initiative ~~charged~~allocated to such future ~~Ratepayers~~Retail Consumers under the Fair Allocation Plan.

The purpose of this ~~Part~~Act is to establish the basis upon which intergenerational fairness can be achieved by charging the costs and benefits of the Green Generation Initiative to present and future ~~Ratepayers~~Retail Consumers on an equitable and cost effective basis.

Article 2 - Definitions

In this ~~Part~~Act:

> "Absolute Assignee" means a person to whom a Regulatory Asset Owner effects a Disposition.
>
> "Actual" means, in relation to costs, expenses or payments in respect of Funding Obligations during a Reference Period, the actual amount of such costs, expenses or payments paid or made (net of any Finance Reserve Withdrawals applied to pay such amounts), which amounts shall be recorded by the ~~Administrative~~Financial Services Agent whose records shall be determinative for the purposes of this ~~Part in~~Act except to the ~~absence~~extent of a manifest calculation error.
>
> "Additional Funding Charges" means, for a Reference Period in respect of an Absolute Assignee, the fees, charges, expenses, costs, indemnities, reimbursements and other amounts (including any applicable tax amounts) that are or become payable by ~~the Regulatory Asset Owners~~or on behalf of the Absolute Assignee during the Reference Period and that were incurred or committed to directly or indirectly by the Absolute Assignee in connection with the incurrence of Funding Obligations under the Financing Plan (whether at the time of such incurrence or over the term of the Funding Obligation and whether directly or indirectly), including (without duplication and without limitation): (a) any payment required under an ancillary agreement entered into by, or by the ~~Administrative~~Financial Services Agent on behalf of, ~~a Regulatory Asset Owner~~the Absolute Assignee under the Financing Plan; (b) any federal, provincial or local taxes, payments in lieu of taxes, franchise fees or license fees imposed on ~~a Regulatory Asset Owner~~the Absolute Assignee or incurred by on behalf of ~~a Regulatory Asset Owner~~the Absolute Assignee under any obligation to pay tax gross-up amounts to counterparties under Funding Obligations; (c) any amounts payable to the ~~Administrative~~Financial Services Agent, including amounts payable to its advisors and outside counsel; (d) any amounts incurred to prepare, confirm, amend and implement the Financing Plan; (e) any amounts payable to any Alternative Collection Agent or Alternative Servicer, including amounts payable to each's advisors and outside counsel; (f) any amounts incurred to make the calculations, determinations or confirmations to be made by or on behalf of ~~a Regulatory Asset Owner~~the Absolute Assignee; (g) any servicing fees and expenses; (h) any trustee fees and expenses; (i) any legal fees, expenses and disbursements; (j) any accounting fees and expenses; (k) any administrative fees and expenses; (l) any manager ~~of~~or director fees of a Financing Entity; (m) any registration fees and expenses; (n) any placement fees, underwriting fees, fees and related issuing expenses; (o) any rating agency fees; and (p) any other related fees, charges, expenses, costs, indemnities, reimbursements and other amounts that are approved in

good faith by the Financial Services Agent for recovery and payment under the Financing Plan.

~~"Administrative Agent" means [OPG] or, following any Replacement Event, such other person or persons who may be appointed as the administrative agent of the Regulatory Asset Owner under the Financing Plan in compliance with the requirements set out in Schedule 2.~~

"Allocation Factor" means, in respect of a ~~Ratepayer~~Retail Consumer for a Reference Period, the number (expressed as a percentage) determined in respect of the ~~Ratepayer~~Retail Consumer by ~~[IESO]~~the OEB based on the application of the Attribution Methodology in respect of the Reference Period.[4][1]

"Alternative Collection Agent" means a person appointed under Section 5(11) and in compliance with the requirements set out in Schedule 2 to assume the collection activities and activities of any Electricity Distributor or IESO under Article 5, as agent for and on behalf of the Regulatory Asset Owners.

"Alternative Servicer" means a person appointed under Section 4(8) to assume the obligations of the Servicer under Article 4, as agent for and on behalf of the Regulatory Asset Owners.

"Assessed Past Green Transition Costs" means, in respect of a Measurement Date, the aggregate of the imputed costs of the Green Generation Initiative (expressed as an equivalent to current dollars), as reflected in the calculation of the Green Costs Adjustment, which have been charged to Retail Customers through the Global Adjustment on or prior to the Measurement Date.

"Attribution Methodology"[5][2] means the methodology specified in the Fair Allocation Plan for allocating the Period Transition Charges for a Reference Period to ~~the~~ individual ~~Ratepayers~~Retail Consumers of the applicable ~~Ratepayer~~Retail Consumer Group based on its Allocation Factor.

~~"Bypass Charge" means [To be developed].~~[6]

"Collected Amount Adjustment" means, in respect of a ~~Reference~~True-Up Period, the amount (which may be a negative amount) calculated by the Servicer or the ~~Administrative~~Financial Services Agent, as applicable, equal to (a) the Estimate of the

[4] ~~Consider basing~~[1] Confirm that this will be based on forecast volumes of demand (like RPP). To the extent amounts do not get recovered due to differences between forecast and actual, those ~~would~~may be identified and ~~rolled into~~caught by the True-Up.

[5] ~~A key question will be how the overall costs will be spread across the rate base. For example, the~~[2] This allocation may be volumetric ~~or not,~~ or some combination of a flat amount and a volumetric charge. ~~This will also impact any discussion regarding any bypass (e.g., grid exit) charge in connection with the bypass discussion~~Further discussion is required. H&W has raised a concern regarding possible adverse changes after the fact and rating agency considerations. Consider whether hard-coding in the legislation makes sense.

[6] ~~Consideration needs to be given to any amount that will be charged to a ratepayer who successfully bypasses (e.g., leaves the grid). In allocating Transition Charges, considerations would include whether to reserve Bypass Charges and spread them over the life of the program, and correspondingly how to factor those into the calculation of Transition Charges.~~

Finance Amount for the True-Up Period, minus (b) the sum of all Transition Charge Collections for the True-Up Period.~~7~~[3]

"Collective Rights Agreement" means an agreement among all of the Regulatory Asset Owners (including each Absolute Assignee) and each Pledgee that governs the enforcement of their respective rights and interests in, to and under the Regulatory Asset on a coordinated and collective basis.[4]

"Delegate" means the person or persons designated in writing from time to time by the Minister of Energy to undertake the actions and perform the responsibilities ascribed to the "Delegate" under this Act.

"Disposition" means an assignment, transfer, conveyance, sale, contribution, set-over, exchange or other disposition of ~~all or a specified portion (including a specified portion on a divided basis or by way of an undivided interest) of a Regulatory Asset Owner's right, title and interest in, to and under the Regulatory Asset~~an Investment Interest to an Absolute Assignee pursuant to a Disposition Document.

"Disposition Document" means the agreement, deed, conveyance, instrument or other document under which a Regulatory Asset Owner effects a Disposition to an Absolute Assignee.

"Electricity Distributor" means, in respect of a Service Area, the rate regulated distributor licensed ~~by the OEB~~under Part V of the *Ontario Energy Board Act, 1998* in respect of such Service Area, together with and its successors.

"Electricity Distributor Remittances" means, for an Electricity Distributor on a Remittance Date, all Transition Charge Collections received or deemed to be received by the Electricity Distributor prior to the Remittance Date and that have not otherwise been remitted to IESO or if applicable the Alternative Collection Agent in accordance with Section 5(3) , including the proceeds of any enforcement action undertaken by the Electricity Distributor or if applicable the Alternative Collection Agent to recover payment of Transition Charges in accordance with Article 5.

"Electricity Invoice" means an invoice issued by ~~an~~any of a Electricity Distributor (or in its stead, by an Alternative Servicer)~~ or~~, by the Servicer or by a Retailer, in each case to a Retail Consumer that is served by the Electricity Distributor's distribution system in respect of electricity charges, including the cost of electricity, delivery and regulatory charges and related services and amounts incurred, assessed or charged in respect of connectivity to a distribution network in the Electricity Distributor's designated Service Area and in respect of applicable Transition Charges to be charged to the Retail Consumer under this Act.

"Estimate" means~~,~~ (a) in relation to costs, expenses or payments in respect of Funding Obligations or any Finance Amount for a Reference Period, the estimated amount of such costs, expenses or payments determined by the ~~Administrative Agent~~Financial Services Agent; and (b) in relation to an assessment of the benefits of the Green Generation Initiative to any Retail Consumer Group, the estimated value (in current

[3] This would pick up adjustments based on actual collection experience, changes in the ~~Consumer Base~~retail consumer base, changes in the actual costs (versus earlier estimates) included in the Transition Charge calculation, etc.

[4] Consider adding the Financial Services Agent and the Servicer as parties.

dollars) of such benefits determined by the Delegate, in each case having regard to the applicable principles and parameters set out in Schedule 1, which estimated amounts shall be determinative as the applicable estimate for the purposes of this ~~Part in~~Act except to the ~~absence~~extent of a manifest calculation error.

"~~Fair Allocation Plan" [has the meaning given in Article 1].~~Estimated Future Green Transition Benefits" means, in respect of a Measurement Date, the Estimate set forth in the Fair Allocation Plan prepared in accordance with Article 7 of the aggregate value (measured in current dollars) of the benefits that are expected to accrue to Retail Consumers from the establishment and implementation of the Green Generation Initiative during the period from the Measurement Date to the Program-End Date.

"Estimated Past Green Transition Benefits" means, in respect of a Measurement Date, the Estimate set forth in the Fair Allocation Plan prepared in accordance with Article 7 of the aggregate value (measured in current dollars) of the benefits that have accrued to Retail Consumers from the establishment and implementation of the Green Generation Initiative up to and including the Measurement Date.

"Fair Allocation Plan" has the meaning given in Article 1.

"Finance Amount" means, ~~in respect of~~for a Reference Period in respect of an Absolute Assignee, the sum (without duplication) of the following amounts ~~for~~that are or become payable during the Reference Period in respect of the Absolute Assignee: (a) Repayments; (b) Funding Costs; (c) Redemption Amounts; (d) Finance Reserve Deposits; and (e) Additional Funding Charges.~~"Finance Receipts" means, for a Reference Period, all amounts received by or on behalf of the Regulatory Asset Owners during the Reference Period in respect of a Funding Obligation, including from any reimbursement of standby commitment fees or charges paid by a lender, any reimbursement of credit enhancement fees or charges paid by any credit enhancer, any reimbursement of liquidity fees or charges paid by any liquidity provider, any amounts (including any termination payments) paid to the Regulatory Asset Owners under derivatives and any withdrawal made or required to be made from a debt service reserve account or other account established under any indenture, ancillary agreement or other financing document relating to a Funding Obligation.~~

"Finance Reserve Deposits" means, for a Reference Period, the amount by which (a) deposits made or to be made during the Reference Period in order to pre-fund, collateralize, over-collateralize or establish reserves for the ultimate payment of Funding Obligations or for related contingencies specified in the Financing Plan, exceed (b) any Finance Reserve Withdrawals.

"Finance Reserve Withdrawals" means, for a Reference Period, the amount withdrawn during the Reference Period from deposits previously made to pre-fund, collateralize, over-collateralize or establish reserves for the payment of Funding Obligations or to pay amounts in respect of related contingencies that had been specified in the Financing Plan.

"Financial Services Agent" means OPG or, following any Replacement Event, such other person or persons who may be appointed as the Financial Services Agent of the

Absolute Assignees under the Financing Plan in compliance with the requirements set out in Schedule 2.[5]

"Financing Entity" means an entity established in accordance with the Financing Plan to acquire all or an interest in the Regulatory Asset as an Absolute Assignee and to enter into Funding Obligations to finance such acquisition.[8] under the Financing Plan.[6]

"Financing Plan" means the written plan [prepared by the Administrative Agent]Financial Services Agent on behalf of each Absolute Assignee in compliance with Article 89 to set forth the basis upon which, among other things: (a) any Disposition may be made to, financed by or effected by an Absolute Assignee; (b) any Funding Obligations may be incurred in order to fund a Funding Shortfallby an Absolute Assignee, including any Refinancing; (c) any Pledge may be given or effected; (d) any Funding Obligations may be redeemed, prepaid, repurchased, amended or otherwise effected; (e) any obligations for Additional Funding Charges may be incurred and paid; (f) any Repayments, Funding Costs and Redemption Amounts may be paid or provided for; (g) any Finance Reserve Deposits may be made; (h) any Finance Reserve Withdrawals may be made; (i) the establishment and operation of any Financing Entity may be effected; and (ij) the cash flows arising from time to time or otherwise derived from the Regulatory Assetan Investment Interest may otherwise be applied, as the same may be amended, amended and restated or terminated by the Financial Services Agent in compliance with Article 9 from time to time.

"Funding Costs" means, for a Reference Period in respect of an Absolute Assignee, the amount by which (a) the aggregate of all interest and other periodic finance charges accruing due and becoming payable or paid by or on behalf of the Regulatory Asset OwnerAbsolute Assignee during the Reference Period in respect of allits Funding Obligations, including any standby commitment fees or charges paid to any lender, credit enhancement fees or charges paid to any credit enhancer, liquidity fees or charges paid to any liquidity provider, amounts (including any termination payments) paid under derivatives and any deposit amount made or required to fund or replenish a debt service reserve account or other account established under any indenture, ancillary agreement or other financing document relating to aits Funding ObligationObligations, exceeds (b) the aggregate of all Finance Receiptsamounts received by or on behalf of the Absolute Assignee during the Reference Period in respect of a Funding Obligation, including from any reimbursement of standby commitment fees or charges paid by a lender, any reimbursement of credit enhancement fees or charges paid by any credit enhancer, any reimbursement of liquidity fees or charges paid by any liquidity provider, any amounts (including any termination payments) paid to the Absolute Assignee under derivatives and any Finance Reserve Withdrawal made or required to be made from a debt service reserve account or other account established under any indenture, ancillary agreement or other financing document relating to the payment of the Funding Costs payable in respect of a Funding Obligation for the Reference Period.

[5] Discuss whether to accommodate multiple Financial Services Agents. MOE to consider.

[8] OPG has suggested[6] MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the *Electricity Act* (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the *Income Tax Act* (Canada) or the *Taxation Act, 2007* Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act. These raise issues for consideration by the stakeholders.

"Funding Obligation" means, in respect of an Absolute Assignee, each payment obligation (including each obligation to pay: principal, interest, premiums and other financing ~~charges, indebtedness,~~charge payments; pass-through payments; payment obligations arising under or in respect of derivatives~~,~~; payment obligations owing to service providers, ~~administrative agents~~Financial Services Agents, finance entity intermediaries, capital markets intermediaries, advisors, lenders, credit enhancement providers, liquidity providers, disbursement counterparties, regulatory agencies and rating agencies; and all ~~taxes payable in connection with the foregoing)~~Additional Funding Charges incurred by or on behalf of ~~a Regulatory Asset Owner~~the Absolute Assignee under the Financing Plan ~~in order to fund a Funding Shortfall for a Reference Period~~, including any Refinancing of another such payment obligation incurred by or on behalf of such Absolute Assignee.[9]

~~"Funding Shortfall" means, for a Reference Period, (a) the amount, if any, by which (i) the IESO Power Contract Net Payment for the Reference Periods, exceeds (ii) the GA Power Contract Contribution for Reference Period, minus (b) the IESO Applied Surplus for the Reference Period.~~[10]Future Fair Share of Green Transition Benefits" means, in respect of a Measurement Date, the sum of (a) the Over-Assessed Amount; and (b) the Estimated Future Green Transition Benefits, in each case as of the Measurement Date.

~~"GA Power Contract Contribution" means, for a Reference Period, the aggregate of the payments to be made by the applicable Ratepayer Group in respect of the portion of the Global Adjustment [attributable to the Power Contracts] in accordance with the Fair Allocation Plan.~~[11]

"Generator" means a generator of electricity that is subject to ~~[this~~the *Electricity Act*~~]~~[12]~~.~~, *1998*.

"Global Adjustment" ~~means the amount calculated from time to time under [Section • of the *Electricity Act*], which includes among other things an amount determined in respect of the costs associated with the Green Generation Initiative, including amounts attributable to the Power Contracts.~~[13]has the meaning given in Article 1.

"Green Costs Adjustment" has the meaning given in Article 1.

"Green Generation Initiative" ~~[~~has the meaning given in Article ~~1]~~.1.

~~[9] OPG has asked whether this should include IESO finance arrangements.~~

~~[10] Consider whether to simplify by referring to the calculations of GA, with vs. without Fair. The issue would be that Fair is then linked into the GA calculation specifically, rather than to the specific assets that are subject to revised amortization under Fair. The constitutional position requires a clear nexus to the assets. Also, confirm whether RPP forecasting variances are to be included.~~

~~[11] IESO to confirm its ability to allocate a shortfall in a given month between what it receives and what it owes under the GA, in order to calculate (a) existing volume-based variances which are rolled into subsequent month GA and trued-up every 6 months under RPP, (b) existing variances attributable to OREC which are funded by the Province, and (c) new variances attributable to Fair Hydro program.]~~

~~[12] Revise once determine whether this will be a standalone Act or remain part of the *Electricity Act*. "Generator is a defined term in other legislation (OEB Act, Electricity Act) so this should ultimately be a distinct term such as "FH Generator" to avoid confusion.~~

~~[13] Note that if adjustments for Fair Hydro program are to be applied after existing GA adjustments, then this may need a new name (such as "FH Adjustment").~~

"IESO" means the Independent Electricity System Operator created pursuant to ~~[insert].~~Part II of the *Electricity Act, 1998*.

"IESO ~~Applied Surplus~~Available Amount" means, for a Reference Period, the lesser of (a) the amount~~,~~ (if any~~,~~) by which (i) the ~~IESO Power Contract Net Payment~~Maximum Transition Charge Amount for the Reference Period, exceeds (ii) ~~the GA Power Contract Contribution~~Period Finance Amount for the Reference Period, and (b) the IESO ~~Unapplied Surplus on the last day of the immediately preceding Reference Period.~~ Retained Interest Amount as of the [35th] day prior to the first day of a Reference Period plus any IESO Financing Costs that are due and payable and remain unpaid as of the [35th] day prior to the first day of a Reference Period.

"IESO Electricity Distribution Receipts" means, for a month, the sum of all amounts payable by Electricity Distributors to IESO during the month pursuant to section • of the *Electricity Act*.

"IESO Financing Costs" means, for a Reference Period, the financing costs (if any) incurred by IESO pursuant to Section 8(4) in order to finance its ownership of the IESO Retained Interest during the Reference Period.

"IESO Funding Shortfall" means, for a month, the amount, if any, by which (a) the IESO Electricity Distribution Receipts that would be payable to IESO for the month if determined without regard to this Act and without regard to the changes made to section 25.33 of, and O.Reg. 429/4 under, the *Electricity Act* with respect to the Global Adjustment concurrently with this Act, exceeds (b) the IESO Electricity Distribution Receipts payable to IESO for the month[7]; provided that if the amount of any such shortfall is determined to have been based on incomplete information, variances or estimates that were inaccurate, an adjustment shall be made in determining the amount of any subsequent shortfall for the month in which the inaccuracy is identified.

"IESO ~~Power Contract Net Payment" means, for a Reference Period, the amount by which (a) the sum of amounts payable by IESO to the Generators under all Power Contracts for the Reference Period, exceeds (b) the sum of amounts payable by the Generators to IESO under all Power Contracts for the Reference Period.~~Recovery" means each amount remitted to IESO (including by IESO retaining such amount) in respect of the IESO Retained Interest pursuant to Section 5(6)(b), and "IESO Recoveries" means, collectively, all such amounts received by IESO.

~~"IESO Power Contract Net Receipt" means, for a Reference Period, the amount by which (a) the sum of amounts payable by the Generators to IESO under all Power Contracts for the Reference Period, exceeds (b) the sum of amounts payable by IESO to the Generators under all Power Contracts for the Reference Period.~~

"IESO Remittances" means, for a Settlement Date, all Electricity Distributor Remittances received by IESO or if applicable the Alternative Collection Agent prior to the Settlement Date and that have not otherwise been remitted to the Regulatory Asset Owners (each with respect to its Regulatory Asset) in accordance with Section 5(6), including the proceeds of any enforcement action undertaken by IESO or if applicable the Alternative

[7] This has been recast to recognize that the shortfall in the first 4.5 years could exceed the entire GA amount. A more refined approach to describing the concept may be considered.

Collection Agent to recover payment of amounts payable by Electricity Distributors to IESO in accordance with Article 5.

"IESO ~~Successor" means the entity appointed by the Province to succeed to the rights and obligations of IESO as the entity responsible for [managing the Province's power system].~~Retained Interest" means IESO's right, title and ownership interest (if any) in, to and under the Regulatory Asset, which shall exclude each Investment Interest.

"IESO Retained Interest Amount" means, on a day, (a) the sum of all IESO Funding Shortfalls incurred prior to the day, plus (b) the sum of all IESO Funding Costs incurred prior to the day in accordance with Section 8(4), minus (c) the net proceeds received by IESO from or on behalf of each Absolute Assignee as consideration for the Disposition of each Investment Interest paid to IESO by or on behalf of such Absolute Assignee prior to the day, and minus (d) the IESO Recoveries received by IESO prior to the day.

"IESO Successor" means the entity appointed by the Province to succeed to the rights and obligations of IESO as the entity responsible for managing the Province's electricity system.

"Investment Interest" means an ownership interest in, to or under the Regulatory Asset that is acquired by an Absolute Assignee pursuant to a Disposition, which ownership interest may include (without limitation) ownership of a specified portion on a divided basis of the assets comprising the Regulatory Asset and ownership of an undivided ownership interest in the Regulatory Asset, in each case as may be described in the applicable Disposition Document.

"Investment Remittance" means, for a month, the lesser of (a) the aggregate amount of all IESO Remittances for the month, and (b) the sum of the Finance Amounts due and payable by all Absolute Assignees in respect of the month.

"Maximum IESO Recovery" means, for a month, the amount (if any) by which (a) the IESO Remittances for the month, exceed (b) the sum of all Finance Amounts that are due and payable by Absolute Assignees in respect of the month.

"Maximum Transition Charge Amount" means, for a Reference Period, (a) the aggregate amount of Future Fair Share of Green Transition Benefits that are allocable to the applicable Retail Consumer Group in accordance with the Fair Allocation Plan, divided by (b) the applicable Reference Period Length.

"Measurement Date" means [Insert relevant date around the Legislation Implementation Date] and any other date specified as such under the Fair Allocation Plan.

"OEB" means the Ontario Energy Board, together with its successors.

"OPG" means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998, together with its successors.

"~~IESO Unapplied Surplus" means, at a particular time, the amount, if any, by which (a) the sum of (i) all IESO Power Contract Net Receipts for Reference Periods occurring prior to the time, and (ii) all GA Power Contract Contributions for Reference Periods occurring prior to the time, exceeds (b) the sum of (i) all IESO Power Contract Net~~

~~Payments for Reference Periods occurring prior to the time, and (ii) all IESO Applied Surpluses for Reference Periods occurring prior to the time.~~ Over-Assessed Amount" means, in respect of a Measurement Date, the amount (if any) by which (a) the Assessed Past Green Transition Costs, exceeds (b) the Estimated Past Green Transition Benefits, each as determined as of the Measurement Date.

"Period ~~Transition Charge~~Finance Charges" means, for a Reference Period, the sum of (a) the Estimate of the Finance Amount and (b) the True-Up Amount in respect of the immediately preceding Reference Period.

"Period Transition Charges" means, for a Reference Period, the sum of (a) the Period Finance Charges for the Reference Period and (b) the IESO Available Amount for the Reference Period.

"Pledge" means, in respect of an Investment Interest of an Absolute Assignee, a lien, mortgage, charge or security interest granted to or in favour of a Pledgee by ~~a Regulatory Asset Owner~~the Absolute Assignee in, to and over all or a specified portion (including a specified portion on a divided basis or by way of an undivided interest) of the ~~Regulatory Asset~~Investment Interest.

"Pledgee" means a person to whom ~~a Regulatory Asset Owner~~an Absolute Assignee grants a Pledge.

"~~Power Contracts" means long-term power contracts entered into by IESO with certain Generators, under which IESO has agreed to pay such Generators amounts, determined in respect of quantities of electricity over specified periods, to the extent that applicable market prices for such quantities of electricity during a specified period are less than specified reference prices for such quantities of electricity, and, correspondingly, Generators have agreed to pay IESO amounts if the market prices for such quantities exceed the applicable reference prices for such quantities.~~[14]Program End Date" means •, [2047].

"Province" means the Province of Ontario.

~~"Ratepayer" means present and future [retail] consumers of electricity [in the Province] who are [RPP][or OREC-eligible] consumers, which shall include all such retail consumers who are connected, directly or indirectly and whether a customer of an Electricity Distributor or not, to the transmission and distribution system assets located in the Province and who are taking electric delivery service within the Province, whether or not such retail consumers produce their own electricity or purchase electric generation services from a provider of electric generation services other than the owner of the Province's transmission and distribution system assets and whether or not the transmission and distribution system assets continue to be owned or operated by Electricity Distributors or operated by IESO.~~[15]

[14] ~~Consider expanding to include PPAs that are not contracts for differences. Should this contemplate the possibility of additional or amended power contracts?~~

[15] ~~Need to describe consumers in a fashion that is broad and not weakened by a bypass risk. Consider terminology to align with the description of the eligible customer class provided by the Ministry, e.g., same as OREC-eligible consumers except for consumers served by Independent Power Authorities (who do not pay GA). Also, consider use of the word "retail", to avoid limiting to customers of retailers and confirm removal of reference to transmission-connected customers.~~

"Ratepayer Group" means, in relation to a Reference Period, the Ratepayers who receive Electricity Invoices[16] during the Reference Period.

"Redemption Amount" means the amount payable by or on behalf of a Regulatory Asset Owneran Absolute Assignee to redeem, prepay or repurchase a Funding Obligation incurred by or on behalf of the Absolute Assignee, including any premium, make-whole or other additional amount becoming payable under the Funding Obligation to give effect to such redemption, prepayment or repurchase.

"Reference Period" means (a) the period from (and including) the [Legislation ImplementationMeasurement Date] to (and including) June 30, 2017, (b) each six month period commencing [May 1st and November 1st] thereafter and (c) any other period specified as such in the Fair Allocation Plan.

"Reference Period Length" means, for a Reference Period, the number of months in the Reference Period.

"Refinancing" means that a, in respect of a Funding Obligation incurred by or on behalf of an Absolute Assignee, that the Funding Obligation is repaid or repurchased for cancellation by or on behalf of a Regulatory Asset Ownerthe Absolute Assignee by applying the net proceeds obtained by the Regulatory Asset OwnerAbsolute Assignee incurring one or more other Funding Obligations.

"Regulatory Asset" means the property rightrights and interestinterests described in Section 6(1), or if the context requires, a specified portion or undivided interest in such property right and interest that is described in the applicable Disposition Documentwhich collectively is comprised of the IESO Retained Interest and each Investment Interest.

"Regulatory Asset Account" means (a) for an Electricity Distributor, any bank account into which the Electricity Distributor deposits or receives Transition Charge Collections; (b) for the Servicer, any bank account into which the ServicerIESO deposits or receives Transition Charges, Electricity Distributor Remittances or IESO Remittances; and (c) if applicable, for the Alternative Collection Agent, any bank account into which the Alternative Collection Agent deposits or receives Transition Charge Collections, Electricity Distributor Remittances or IESO Remittances.

"Regulatory Asset Owner" means each of (a) IESO, as owner of (and to the extent that it has retained any ownership interest in, to or under the Regulatory Assetof) the IESO Retained Interest and (b) each Absolute Assignee, to the extent that it has acquired and owns any ownership interest (including a specified portion on a divided basis or by way of an undivided interest) in, to or under the Regulatory Assetas owner of its Investment Interest or Investment Interests, and "Regulatory Asset Owners" means collectively all of the Regulatory Asset OwnersIESO and each such Absolute Assignee, who together own the entirety of the Regulatory Asset and are required to exercise their individual rights of ownership in accordance with Section 6(7). For greater certainty, where one Regulatory Asset Owner owns the entirety of the Regulatory Asset, "Regulatory Asset Owners" refers to this Regulatory Asset Owner.

[16] Expand to include eligible consumers who are not customers of Electricity Distributors (e.g., suite-metered customers).

~~"Related Generation Assets" means the [facilities, plants and equipment] constructed, acquired or developed in connection with the Green Generation Initiative.~~

"Related Rights" means~~, with respect to a Regulatory Asset Owner's Regulatory Asset,~~ all rights of any kind (whether in tort, contract or otherwise) that attach or are attendant or incidental to any of the other property rights or interests that comprise such Regulatory Asset.

"Remittance Date" means, in respect of an Electricity Distributor, each day on which it is required to remit Electricity Distribution Remittances to IESO or if applicable the Alternative Collection Agent as specified in accordance with any Funding Obligation or, if no such day is specified in ~~relation to~~accordance with any Funding Obligation, then the Business Day preceding each Settlement Date.

"Repayment Obligation" means an obligation to repay, redeem or repurchase, or to provide for the repayment, redemption or repurchase (including by making a related Finance Reserve Deposit) of, all or a portion of the amount advanced to the ~~Regulatory Asset Owner~~Absolute Assignee under a Funding Obligation.

"Repayment" means a payment by ~~a Regulatory Asset Owner~~an Absolute Assignee made to satisfy a Repayment Obligation, other than to the extent that the payment is made by applying the proceeds of a Refinancing or from Finance Reserve Withdrawals.

"Replacement Event" means any event specified as such in a Funding Obligation.

"Retail Consumer" means:

(a) present and future consumers of electricity in the Province who are (i) consumers designated under section 79.16 of[, and O.Reg 95/05 under,] the *Ontario Energy Board Act, 1998*, or (ii) hold or are deemed to hold an "eligible account" under the *Ontario Rebate for Electricity Consumers Act, 2016*, other than any such consumer who has a contract with a Retailer who uses Retailer Consolidated Billing; and

(b) present and future Retailers who use Retailer Consolidated Billing,

and each case includes all such consumers and Retailers who are connected, directly or indirectly and whether a customer of an Electricity Distributor or not, to the transmission and distribution system assets located in the Province and who are taking electric delivery service within the Province, whether or not such retail consumers produce their own electricity or purchase electric generation services from a provider of electric generation services other than the owner of the Province's transmission and distribution system assets and whether or not the transmission and distribution system assets continue to be owned or operated by Electricity Distributors or operated by IESO.

"Retail Consumer Group" means, in relation to a Reference Period, the Retail Consumers who receive Electricity Invoices during the Reference Period.

"Retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity.

"Retailer Consolidated Billing" has the same meaning as in the *Retail Settlement Code* issued by the Ontario Energy Board.

"Service Area" means, in respect of an Electricity Distributor, the geographic area or region in which it is licensed to distribute electricity in accordance with ~~[this~~the *Electricity Act*[17]~~]~~, *1998*.

"Servicer" means ~~[To be determined]~~IESO or IESO Successor, as agent for and on behalf of the Regulatory Asset ~~Owner [To be determined – collective invoicing agent, and consider expanding].~~Owners, for the purposes set forth in Article 4.

"Settlement Date" means the [last Business Day of any month].

"Transition Charge" means, for a ~~Ratepayer~~Retail Consumer in respect of a Reference Period, ~~the sum of~~ (a) ~~[one sixth] of~~ the Period Transition Charge, (b) multiplied by its Allocation Factor ~~and (b) any Bypass Charge charged to the Ratepayer~~ in respect of the Reference Period, divided by (c) the applicable Reference Period Length.

"Transition Charge Collection" means any amount received or deemed by this ~~Part~~Act to have been received upon the collection of a Transition Charge paid by or on behalf of a ~~Ratepayer~~Retail Consumer, including any proceeds arising from the exercise and enforcement of any related rights and interests under or in respect of the Regulatory Asset.

"True-Up Amount" means, in respect of a Reference Period, the amount (which may be a negative amount) calculated by the ~~Administrative~~Financial Services Agent equal to (a) the Estimate of the Finance Amount for the related True-Up Period, minus (b) the Actual Finance Amount for such related True-Up Period, plus (c) the Collected Amount Adjustment for such related True-Up Period.

"True-Up Period" means, in relation to a Reference Period, the period from and including the [30th] day immediately preceding the first day of the Reference Period, to but excluding the [30th] day immediately preceding the last day of the Reference Period.

"Undertaking of the Lieutenant Governor in Council" means the undertaking of the Lieutenant Governor in Council given under Section ~~10~~11(2).

~~"Unrecovered Transition Costs" means the [unrecovered][unamortized] costs incurred in connection with the creation, adoption and implementation of the Green Generation Initiative, including any negative value of the Power Contracts and [other].~~[18]

Article 3 – Transition Charges

(1) **~~Ratepayer~~Retail Consumer Obligation to Pay a Transition Charge** – Each ~~Ratepayer~~Retail Consumer shall pay each Transition Charge charged to it in any Electricity Invoice issued to such ~~Ratepayer~~Retail Consumer by its Electricity Distributor or by an Alternative Servicer under Section 4(1), in each case on the terms of payment specified in the related Electricity Invoice.

[17] ~~Revise once determine whether this will be a standalone Act or remain part of the *Electricity Act*.~~
[18] ~~Note that this is the term that describes the "asset" that we are amortizing over a longer period of time.~~

(2) **Indebtedness of ~~Ratepayers~~Retail Consumers** – Until paid, a Transition Charge charged to a ~~Ratepayer~~Retail Consumer in an Electricity Invoice shall, together with any applicable late payment fees and finance charges arising under the terms of the Electricity Invoice with respect to such Transition Charge, constitute non-bypassable indebtedness of the ~~Ratepayer~~Retail Consumer to the Regulatory Asset Owners, ~~(~~each with respect to its respective interest in the Regulatory Asset~~)~~. Such indebtedness shall constitute a single and separate[8] debt obligation owing by the ~~Ratepayer~~Retail Consumer, which subject to Article 5 may be enforced independently from any other payment obligation or indebtedness owing by the ~~Ratepayer~~Retail Consumer under the Electricity Invoice or otherwise.~~[19]~~[9]

(3) **No Set-Off or Reduction** – A ~~Ratepayer~~Retail Consumer may not set-off or reduce (by counterclaim, defense or otherwise) the amount payable by it in respect of any Transition Charge, including any set-off against or in respect of any amount owing or becoming payable to such ~~Ratepayer~~Retail Consumer by its Electricity Distributor, any Regulatory Asset Owner or any other person.

(4) **Allocation of ~~Ratepayer~~Retail Consumer Payments** – If an Electricity Distributor receives a payment made by or on behalf of a ~~Ratepayer~~Retail Consumer in respect of amounts due and payable under one or more Electricity Invoices that is less than the total amount payable thereunder, such payment shall be allocated on a *pro rata* basis to the payment of related Transition Charges and other invoiced amounts and the amount so allocated as a payment of related Transition Charges shall be deemed to constitute a Transition Charge Collection.

(5) **Transition Charges are Irrevocable** – The Transition Charges arising under or in respect of Funding Obligations incurred under the Financing Plan (including any adjustments based on modifications to such Funding Obligations made in compliance with the Financing Plan or as a result of amendments to the Financing Plan made in accordance with Section ~~8~~9(3)) are deemed to be irrevocable, final and effective without any further action, ~~in~~except to the ~~absence~~extent of manifest calculation error. For greater certainty, a Transition Charge may include Finance Amounts for a Reference Period whether or not the payment of such Finance Amounts are inconsistent with the Fair Allocation Plan applicable at the time such payments are due and payable, whether or not the related Funding Obligation was properly incurred under the Financing Plan. In no case shall a Funding Obligation incurred under the Financing Plan be affected by a subsequent amendment to the Fair Allocation Plan.

[8] Determine if this is critical for rating and markets. Logistics under consideration.

~~[19] Torys suggests that we not create a debtor/creditor relationship between ratepayers and regulatory asset owners. Instead, ratepayers would only have relationships with electricity distributors and the Fair program would rely on consumers paying distributors and distributors to collecting those amounts and remitting them to IESO. The current draft goes further to bridge the investors more directly with ratepayers. There are differences in the approaches, including reliance from a credit perspective on the LDCs (rather than an ability to replace the individual LDCs with the investors choice). This depends on the credit analysis, and comfort that a later requirement will not be accommodated without a change in the legislation.~~[9] Torys has also suggested that deemed conditions of licenses for distributors, retailers and unit sub-metering providers, could be included as conditions, to require them to collect and remit amounts in accordance with this legislation. ~~Consideration should be given to whether that achieves the same direct relationship and whether the effectiveness of the current regulatory licensing regime should be suggested as the basis~~Consider if it is helpful to integrate the existing regulatory scheme for ~~a market based credit decision.~~invoicing and collections (regarding RPP) in the legislation.

~~(6) [Anti-avoidance; No-by-pass – Transition Charges charged to a Ratepayer in respect of any Finance Amount incurred under with the Financing Plan applicable at the time the related Funding Obligation was incurred may not be avoided and shall be [non-by-passable].]~~

Article 4 – Invoicing of Transition Charges[20]

(1) **Inclusion of Transition Charges in Electricity Invoices** – Each Electricity Distributor and if applicable any Alternative Servicer shall, as an agent of the Regulatory Asset Owners, specify the Transition Charge to be charged to a ~~Ratepayer~~Retail Consumer pursuant to Section 4(4) in respect of a related Reference Period in each Electricity Invoice issued by the Electricity Distributor or if applicable by the Alternative Servicer to the ~~Ratepayer~~Retail Consumer in respect of such Reference Period. Upon the inclusion of a Transition Charge in an Electricity Invoice, the obligation to pay such amount shall be binding on the applicable ~~Ratepayer~~Retail Consumer.

(2) **Calculation of the Period Transition Charge** – Not later than [35] days prior to the first day of a Reference Period, each ~~Regulatory Asset Owner~~Absolute Assignee (or the ~~Administrative~~Financial Services Agent on its behalf) shall provide the ~~Servicer~~OEB with written notice of each Estimate of a Finance Amount payable by it or on its behalf in respect of the Reference Period. [35] days prior to the first day of a Reference Period, IESO or Successor IESO if applicable shall specify the IESO Retained Interest Amount and any IESO Financing Costs that are due and payable and remain unpaid on such day. Not later than one month prior to the first day of a Reference Period, the ~~Servicer or if applicable the Alternative Servicer~~[21]OEB shall calculate the Period Transition Charge applicable to the Reference Period based on the calculations and information set forth in such written notices received from the ~~Regulatory Asset Owners, which~~Absolute Assignees and based on such amounts specified by IESO or Successor IESO, which calculations, information and amounts shall be determinative ~~in~~, except to the ~~absence~~extent of manifest calculation error or misstatement.

(3) **Calculation and Attribution of Transition Charges** – Not later than 25 days prior to the first day of a Reference Period, the ~~Servicer or if applicable the Alternative Servicer~~OEB shall apply the Attribution Methodology to determine the Allocation Factor for each ~~Ratepayer~~Retail Consumer of the applicable ~~Ratepayer~~Retail Consumer Group.

(4) **Notice of Transition Charges** – Not later than 20 days prior to the first day of a Reference Period, the ~~Servicer or if applicable the Alternative Servicer~~OEB shall inform each Electricity Distributor and if applicable any Alternative Servicer of the Transition Charges to be specified in the Electricity Invoices to be issued to each ~~Ratepayer~~Retail Consumer of the applicable ~~Ratepayer~~Retail Consumer Group who has a billing address in the Electricity Distributor's Service Area.

(5) **Adjustments** – The amount of any Transition Charge charged to a ~~Ratepayer by the Servicer~~Retail Consumer and specified as such in an Electricity Invoice shall be

[20] ~~Details concerning Invoicing of Transition Charges (Article 4) and Collections and Remittances (Article 5) are complex. Consider how much of this can be addressed through regulations, or if acceptable based on existing OEB license conditions/codes, IESO market rules/manuals, etc.~~

[21] ~~Should this be a designated government official, rather than an agent appointed by investors?~~

determinative of the amount of indebtedness created thereby and owing in respect of such Transition Charge, ~~in~~except to the ~~absence~~extent of any manifest calculation error.

(6) **Successors of Electricity Distributors** – Any successor of an Electricity Distributor shall be bound by the requirements of Article 4 and shall perform and satisfy all duties and obligations of such Electricity Distributor under Article 4 in the same manner and to the same extent as such Electricity Distributor, including the obligation under Article 4 to impose, attribute, charge, bill and invoice the Transition Charges.

(7) **IESO Successor** – Any IESO Successor shall be bound by the requirements of Article 4 and shall perform and satisfy all duties and obligations of IESO under Article 4 in the same manner and to the same extent as IESO, including the obligation to calculate and provide notice of Transition Charges.

(8) **Appointment of an Alternative Servicer** – If a Replacement Event occurs in respect of any Electricity Distributor, the ~~Regulatory Asset Owners~~Absolute Assignees shall, in accordance with the Collective Rights Agreement, be permitted, by an instrument in writing, to appoint an Alternative Servicer to perform some or all of the obligations and duties required to be undertaken by such Electricity Distributor under this Article 4, as and to the extent specified in such appointment. Upon acceptance of such appointment, the Alternative Servicer shall become obligated to perform such assumed obligations in replacement of such Electricity Distributor. Any Electricity Distributor that is replaced under this Section 4(8) shall promptly transfer all rights, powers, privileges and property interests in its possession or within its control in the performance of such obligations and duties to the Alternative Servicer and shall take such further actions, including the execution of instruments, necessary to give full and final effect to such transfer and to permit the Alternative Servicer to perform such obligations and duties on behalf of the Regulatory Asset Owners.

(9) **~~Regulatory Asset Owners~~Absolute Assignees have Standing** – The ~~Regulatory Asset Owners~~Absolute Assignees, acting together in accordance with the Collective Action Agreement, may bring actions against any Electricity Distributor, IESO, the Servicer, Alternative Servicer or any other person who may be authorized to issue Electricity Invoices to ~~Ratepayers~~Retail Consumers for a failure to impose, attribute, charge, bill or invoice Transition Charges. Any court of the Province ~~[and the OEB]~~ shall have jurisdiction over any actions brought before it by the ~~Regulatory Asset Owners~~Absolute Assignees in relation to any such failure.[22]

(10) **No Set-Off or Reduction –** No Servicer or Electricity Distributor may set off or reduce (by counterclaim, defence or otherwise) the amount payable by it pursuant to this Article 4.

(11) **Regulations** – Regulations may be enacted for the purpose of specifying further rights, powers, privileges, duties and obligations that shall apply to IESO, any Electricity Distributor~~,~~ or any Alternative Servicer ~~or any [Alternative Collection Agent]~~ to ensure that Transition Charges are properly charged to ~~Ratepayers~~Retail Consumers and specified as such in Electricity Invoices.

[22] ~~Consider having such matters first go through the OEB, particularly if the obligation to bill, collect or remit is deemed to be a condition of license for distributors, IESO, retailers and unit sub-metering providers, which would be enforceable provisions under the OEB Act and within OEB jurisdiction to enforce.~~

Article 5 – Collections and Remittances

(1) **Duty to Collect as Agent** – Electricity Distributors or if applicable any Alternative Collection Agent shall, as an agent of the Regulatory Asset Owners, undertake [diligent][reasonable][10] efforts~~]~~ to collect amounts owing by ~~Ratepayers~~Retail Consumers in respect of Transition Charges charged to such ~~Ratepayers~~Retail Consumers in Electricity Invoices issued by the Electricity Distributor or if applicable such Alternative Collection Agent.

(2) **Segregation of Transition Charge Collections** – An Electricity Distributor or if applicable any Alternative Collection Agent shall promptly segregate Transition Charge Collections from other payments received by it from ~~Ratepayers~~Retail Consumers and deposit such Transition Charge Collections into its Regulatory Asset Account.[11] Prior to and following a deposit of Transition Charge Collections having been made into its Regulatory Asset Account, the Electricity Distributor or if applicable any Alternative Collection Agent shall hold such amounts in trust for ~~each~~the Regulatory Asset ~~Owner~~Owners.

(3) **Electricity Distributor Remittances** – On each ~~[~~applicable Remittance Date~~]~~, an Electricity Distributor shall remit all Transition Charge Collections received by it from ~~Ratepayers~~Retail Consumers in respect of the related Reference Period to or to the account of IESO or if applicable the Alternative Collection Agent.

(4) **Duty to Collect Electricity Distributor Remittances** – IESO or if applicable any Alternative Collection Agent shall, as an agent of the Regulatory Asset Owners, undertake [diligent][reasonable] efforts to accept and collect Electricity Distributor Remittances from Electricity Distributors and Transition Charge Collections from ~~Ratepayers~~Retail Consumers that pay their Electricity Invoices directly to ~~the Servicer.~~[23]IESO.[12]

(5) **Segregation of Electricity Distributor Remittances** – IESO and if applicable the Alternative Collection Agent shall ~~[~~promptly~~]~~ segregate Electricity Distributor Remittances from other payments received or held by it and deposit such Electricity Distributor Remittances into its Regulatory Asset Account. Prior to and following a deposit of Electricity Distributor Remittances having been made into its Regulatory Asset Account, IESO or if applicable any Alternative Collection Agent shall hold such amounts in trust for ~~each~~the Regulatory Asset ~~Owner~~Owners.

(6) **IESO Remittances** – On each ~~[~~Settlement Date~~]~~[24][13], IESO and if applicable the Alternative Collection Agent shall remit all amounts on deposit in its Regulatory Asset Account (a) first, to or to the account of the ~~Regulatory Asset Owner~~Absolute Assignees an amount equal to the Investment Remittance for the related month and (b) second, to IESO (including by IESO retaining such amount) an amount equal to the lesser of (i) the Maximum IESO Recovery for the related month and (ii) the IESO Retained Interest Amount as of the Settlement Date.

[10] Mirror collection "standard of care" under applicable legislation.
[11] Consider trying to attach to existing LDC credit enhancements and provide parallel coverage for customer losses.
~~[23]~~[12] Consider building this obligation into a deemed condition of licence for the IESO.
~~[24]~~[13] Consider frequency of remittances in light of rating requirements. US rating agencies favour daily remittances.

(7) **Successors of Electricity Distributors** – Any successor of an Electricity Distributor shall be bound by the requirements of Article 5 and shall perform and satisfy all duties and obligations of such Electricity Distributor under Article 5 in the same manner and to the same extent as such Electricity Distributor, including the obligation under Article 5 to collect Transition Charges and make remittances of Electricity Distributor Remittances.

(8) **~~Successors of~~ IESO Successor** – ~~Any successor of~~ IESO Successor shall be bound by the requirements of Article 5 and shall perform and satisfy all duties and obligations of IESO under Article 5 in the same manner and to the same extent as IESO, including the obligation to collect Transition Charge Collections, Electricity Distributor Remittances and to remit IESO Remittances.

(9) **Owners of Distribution Assets** - If any person other than an Electricity Distributor acquires distribution system assets in the Province or invoices or collects electricity distribution rates in the Province~~25~~14, then such person shall, if requested by the ~~Regulatory Asset Owners~~Absolute Assignees, be obligated to act diligently to (a) facilitate the invoicing and collection of any Transition Charges applicable to ~~Ratepayers~~Retail Consumers in its applicable service area, including all consumers connected to the electricity distribution system assets and taking electric delivery service located within such service area; (b) allocate partial payments by ~~Ratepayers~~Retail Consumers as provided in this ~~Part; (c) terminate service to non-paying Ratepayers on the same basis as termination of service is permitted for non-payment of electricity transmission and distribution rates; (d~~Act; (c) exercise all enforcement rights of the ~~Regulatory Asset Owners or Pledgee~~Absolute Assignees for the benefit of ~~a Regulatory Asset Owner or Pledgee~~an Absolute Assignee; and (~~e~~d) remit any Transition Charge Collections to the ~~Regulatory Asset Owner or Pledgee~~Absolute Assignees or Pledgees, as applicable, each in accordance with its ~~Regulatory Asset~~Investment Interest.

(10) **~~Regulatory Asset Owners~~Absolute Assignees have Standing** – The ~~Regulatory Asset Owners and any Pledgee~~Absolute Assignees, acting together in accordance with the Collective Action Agreement, may bring actions against any Electricity Distributor, IESO, the Alternative ~~Servicer~~Collection Agent, any owner of electricity distribution system assets in the Province or any other person who may be authorized to collect electricity distribution and use charges from ~~Ratepayers~~Retail Consumers for a failure to collect Transition Charges, remit or collect Electricity Distributor Remittances or remit IESO Remittances, as and to the extent applicable under Article 5. Any court of the Province ~~[and the OEB]~~ shall have jurisdiction over any actions brought before it by the ~~Regulatory Asset Owners~~Absolute Assignees in relation to any such failure. ~~26~~

(11) **Appointment of an Alternative Collection Agent** – If a Replacement Event occurs in respect of any Electricity Distributor or IESO, the ~~Regulatory Asset Owners~~Absolute Assignees shall, in accordance with the Collective Rights Agreement, be permitted, by an instrument in writing, to appoint an Alternative Collection Agent to perform some or all of the collection, segregation and remittance obligations otherwise required to be undertaken by such Electricity Distributor or IESO, as applicable, under Article 5, as and to the extent specified in such appointment. Upon acceptance of such appointment, the

~~25~~14 This is in anticipation of a possible future restructuring of the distribution system. ~~Also, this would cover any OREC-eligible customer (market participant) of IESO.~~

~~26 Consider having such matters first go through the OEB, particularly if the obligation to bill, collect or remit is deemed to be a condition of license for distributors, IESO, retailers and unit sub-metering providers, which would be enforceable provisions under the OEB Act and within OEB jurisdiction to enforce.~~

Alternative Collection Agent shall become obligated to perform such assumed obligations in replacement of such Electricity Distributor or IESO, as applicable. Any Electricity Distributor or IESO, as applicable, that is replaced under this Section 5(11) shall promptly transfer all rights, powers, privileges and property interests in its possession or within its control in, to and over the Regulatory Asset, including its Regulatory Asset Account, to the Alternative Collection Agent and shall take such further actions, including the execution of instruments, necessary to give full and final effect to such transfer and to permit the Alternative Collection Agent to enforce the Regulatory Asset on behalf of the ~~Regulatory Asset Owners~~Absolute Assignees.

(12) **No Set-off, etc.** - The Regulatory Asset, including rights in Transition Charges, Transition Charge Collections, and the interests of a Regulatory Asset Owner, an Absolute Assignee and a Pledgee therein, may not be setoff or reduced (including by counterclaim, surcharge or defense) by any ~~Ratepayer~~Retail Consumer, any Electricity Distributor, IESO, Alternative Collection Agent or any owner of distribution system assets in the Province or any other person or in connection with any default, bankruptcy, reorganization or other insolvency proceeding of any Electricity Distributor, IESO, Alternative Collection Agent or any owner of distribution system assets in the Province, any affiliate or successor thereof or any other entity or otherwise.~~27~~15

(13) **Sequestration** – If any Electricity Distributor, IESO, the Alternative Collection Agent or any owner of distribution system assets in the Province or any other person or entity authorized to collect Transition Charges, defaults on any required remittance of Transition Charge Collections, Electricity Distribution Remittances or IESO Remittances under Article 5, any court in the Province, upon application by ~~the Regulatory Asset Owners or Pledgee~~and of the Absolute Assignees acting collectively under the Collective Action Agreement and without limiting any other remedies otherwise available to the ~~applying party~~Absolute Assignees or Pledgees, shall order the sequestration and payment of the Transition Charge Collections, Electricity Distribution Remittances and IESO Remittances, as applicable, for the benefit of the ~~Regulatory Asset Owners or Pledgee~~Absolute Assignees, each with respect to its ~~Regulatory Asset.~~ Investment Interest, and the Pledgees as applicable.[16]

(14) Regulations – Regulations may be enacted for the purpose of specifying further rights, powers, privileges, duties and obligations that shall apply to IESO, any Electricity Distributor or any Alternative Collection Agent to ensure that rights, interests, entitlements, benefits and proceeds in, to, under and from the Regulatory Asset are of fully realized by ~~the Regulatory Asset Owner~~some or all of the Absolute Assignees and Pledgees.

Article 6 – The Regulatory Asset

(1) **Composition** – The Regulatory Asset shall constitute ~~an existing, present~~a current and irrevocable property right and interest consisting, collectively, of the following rights and interests ~~of a Regulatory Asset Owner in the following~~ (without duplication):

~~27~~15 Consider whether it makes sense to create a "deemed collection" payment obligation on Electricity Distributors to the extent a ~~Ratepayer~~Retail Consumer reduces its payment of Transition Charges, despite this language~~, and same~~. Same for Electricity Distributor Remittances and IESO Remittances.

[16] Consider adding or substituting this provision for a right to appoint a receiver.

a. the right of ~~a Regulatory Asset Owner to record its portion of the Regulatory Asset in its accounts~~IESO (i) to record its IESO Retained Interest in its accounts in accordance with Section 8(1), having a stated amount from time to time equal to the IESO Retained Interest Amount; and (ii) to receive IESO Recoveries from time to time in accordance with Section 5(6)(b);

b. the right to impose, bill, invoice, collect and receive Transition Charges from ~~Ratepayers~~Retail Consumers, including the right to determine the amount of Transition Charges in accordance with this ~~Part~~Act;

c. the right to enforce the obligations and indebtedness of each ~~Ratepayer~~Retail Consumer to pay the Transition Charges charged to the ~~Ratepayer~~Retail Consumer from time to time in accordance with Article ~~2~~,3, together with all related late payment fees or interest charges arising in respect thereof under the related Electricity Invoices;

d. the right to enforce the duties and obligations of each Electricity Distributor and if applicable the Alternative Servicer to impose, attribute, charge, bill and invoice the Transition Charges in accordance with Article 4;

e. the right to enforce the duties and obligations of each Electricity Distributor and if applicable the Alternative Collection Agent to collect, receive and remit amounts received by it in respect of Transition Charges as Electricity Distributor Remittances to or to the account of IESO or if applicable the Alternative Collection Agent in accordance with Article 5, including all collections and the proceeds of any enforcement action undertaken by the Electricity Distributor or if applicable the Alternative Collection Agent to recover payment of Transition Charges in accordance with Article ~~4~~5;

f. the right to enforce the duties and obligations of IESO and if applicable the Alternative Collection Agent to collect and receive Electricity Distributor Remittances and to remit IESO Remittances to or to the accounts of the Regulatory Asset Owners, each with respect to its respective interest in the Regulatory Asset, in each case in accordance with Article 5, including all collections and the proceeds of any enforcement action undertaken by it to recover payment of Electricity Distributor Remittances in accordance with Article ~~4~~5;

g. the right to receive and collect all Transition Charge Collections, all Electricity Distributor Remittances and all IESO Remittances in accordance with Article 5;

h. all rights and entitlements under each Regulatory Asset Account and all amounts on deposit in any such Regulatory Asset Account;

i. all Related Rights; and

j. all revenue, collections, claims, payments, money and proceeds of or derived from the rights described in (a) through (i), regardless of whether such revenue, collections, claims, payments and proceeds are imposed, invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

A Regulatory Asset and the property rights and interests therein shall exist whether or not Transition Charges have been imposed, charged, invoiced, accrued or collected and notwithstanding that the imposition, attribution, invoicing and collection of Transition Charges will depend on further actions that may not have occurred.

(2) **Validity of Dispositions** – Despite any limitations or restrictions on a Disposition that may arise by contract or by operation of any applicable law of the Province ~~[~~or any consent requirement applicable to a Disposition that may arise by ~~contract or by~~ operation of any applicable law of the Province~~]~~, a Disposition by ~~a Regulatory Asset Owner~~IESO to an Absolute Assignee made under the Financing Plan ~~pursuant to a Disposition Document~~, or by one Absolute Assignee to another Absolute Assignee made under the Financing Plan, shall be permitted and when made shall be valid and enforceable in accordance with ~~its~~the terms of the related Disposition Document and shall be effective to confer upon the Absolute Assignee thereof a valid property right and interest in, to and under the ~~Regulatory Asset~~applicable Investment Interest (or relevant portion thereof) in accordance with the terms of such Disposition, provided that the parties to the applicable Disposition Document have expressly stated therein that such Disposition is a sale or other absolute transfer. Without limiting the foregoing, any Disposition that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as a true sale and absolute transfer of the Regulatory Asset Owner's applicable right, title, and interest in, to and under the Regulatory Asset (or relevant portion thereof), and not merely as a Pledge thereof~~. [A Disposition shall not be subject to recharacterization or challenge on any other basis and the validity of a Disposition shall not be affected or impaired by: (a) the commingling of Transition Charge Collections or other proceeds from Transition Charges with other amounts; (b) the retention of any interest (including any partial, residual or subordinated interest, whether direct or indirect) in the Regulatory Asset by the transferring Regulatory Asset Owner; (c) any right to repurchase the Regulatory Asset in favour of the transferring Regulatory Asset Owner; (d) any recourse that an Absolute Assignee may have against the transferring Regulatory Asset Owner; (e) any indemnification rights or obligations provided by the transferring Regulatory Asset Owner; (f) any obligation of the transferring Regulatory Asset Owner to collect and remit Transition Charge Collections on behalf of an Absolute Assignee, including but not limited to, any retention by the transferring Regulatory Asset Owner to bare legal title for the purpose of collecting Transition Charges; or (g) the ascribed or intended treatment of the Disposition by the transferring Regulatory Asset Owner or the Absolute Assignee on any different basis including for tax, financial reporting or other purposes.]~~[28], and upon such Disposition the assigner or seller under the applicable Disposition Document shall retain no right, title or interest in the Investment Interest subject to the Disposition, including all rights under the Investment Interest arising after such Disposition.

(3) **Perfection and Priority of Dispositions** – Any Disposition of an interest in a Regulatory Asset shall be vested, valid, binding and perfected from the time when such Disposition is made. Such Disposition shall be perfected, vested, valid and binding as against the transferring Regulatory Asset Owner and all other persons who have claims of any kind (whether in tort, contract or otherwise) against the transferring Regulatory Asset Owner, irrespective of whether such persons have notice of the Disposition and the property rights and interests acquired by the Absolute Assignee under such Disposition shall be free and clear of any liens in favour of such other persons.

~~[28] Consider if helpful to investors, or delete.~~

(4) **Validity of Pledges** – Despite any limitations or restriction on a Pledge that may arise by contract or by operation of any applicable law of the Province ~~[~~or any consent requirement applicable to a Pledge that may arise by ~~contract or by~~ operation of any applicable law of the Province~~]~~, a Pledge by ~~a Regulatory Asset Owner~~an Absolute Assignee may be made to secure any related Funding Obligation and when made shall be valid and enforceable in accordance with its terms and shall be effective to confer upon the Pledgee a valid security interest in, to and in respect of the ~~Regulatory Asset~~related Investment Interest in accordance with the terms of the Pledge. Other than as required by the Financing Plan, no consent of any person shall be required to give effect to a Pledge made to secure any Funding Obligation.

(5) **Perfection and Priority of Pledges** - ~~Any Pledge made by a~~For purposes of the *Personal Property Security Act* (the "PPSA"), the Regulatory Asset ~~Owner~~shall be intangible personal property and any Pledge made by an Absolute Assignee in respect of a Funding Obligation ~~incurred under the Financing Plan shall be perfected, valid and binding from the time when the Pledge is made and shall be valid and binding as against the Regulatory Asset, the Regulatory Asset Owner making the Pledge and all other persons who have claims of any kind (whether in tort, contract or otherwise) against the Regulatory Asset or the pledging Regulatory Asset Owner, irrespective of whether such persons have notice of the Pledge and the security interests of the Pledgee under such Pledge shall have priority over any liens in favour of such other persons. All proceeds of the Regulatory Asset~~may be perfected by filing a financing statement under the PPSA on that basis. All proceeds of a related Investment Interest that are subject to such a Pledge that are received by the ~~Regulatory Asset Owner~~Absolute Assignee shall immediately be subject to the such Pledge, and the security interest in such proceeds shall be perfected~~, without any physical delivery thereof, registration of any financing statement with respect thereto~~ pursuant to the ~~[~~PPSA~~]~~ ~~or any other further act.~~[29].[17] A Pledge perfected under the PPSA shall be a continuously perfected security interest and shall have priority over any other lien or security interest, created by operation of law or otherwise, that may ~~subsequently~~ attach to the property rights and interests in the ~~Regulatory Asset~~Investment Interest subject to the Pledge unless the Pledgee has otherwise agreed in writing. ~~Any~~Subject to the terms of the Collective Action Agreement, a Pledgee shall have a perfected security interest in a related Investment Interest, including the Absolute Assignee's rights and interests in and to Transition Charge Collections or other related proceeds in respect of the Investment Interest and that are deposited in any Regulatory Asset Account or other account of any Electricity Distributor, IESO, Alternative Collection Agent or other person who may have commingled such Transition Charge Collections or such other proceeds with other funds. ~~[A Pledgee~~All provisions of the PPSA shall ~~cause a financing statement to be filed in respect of a Pledge on the basis that~~apply to the Regulatory Asset on the basis that it is ~~"~~intangible~~"~~ personal property, ~~for informational purposes only under the [PPSA].~~except to the extent otherwise provided in this Section 6(5).

(6) **Enforcement of Property Rights** – The rights of any Regulatory Asset Owner to collect and enforce its rights and interests in, to or in respect of the Regulatory Asset shall be exercised in the manner set forth in Article 5.

(7) **Owners of a Specified Portion of the Regulatory Asset** – A Regulatory Asset Owner may effect a Disposition to an Absolute Assignee of a specified portion of its rights and

~~[29]~~[17] Consider whether to simply leave this and have a financing statement be filed under the PPSA. This would normalize the security interest and reduce any adverse suggestion that security would not otherwise arise.

interests in the Regulatory Asset, including by way of a Disposition of a divided or an undivided interest therein as specified in a related Disposition Document, in each case under the Financing Plan. In no circumstance may the specified portions of the rights and interests in the Regulatory Asset owned by all Regulatory Asset Owners be greater than all of the rights and interests that comprise the Regulatory Asset in the aggregate.

(8) **Collective Action Required** – If a Regulatory Asset Owner's ~~right~~rights and ~~interest~~interests in the Regulatory Asset comprises less than the entire property right and interest constituted by the Regulatory Asset, such Regulatory Asset Owner shall only enforce such right and interest on a collective ~~[~~and ~~joint]~~coordinated basis with each other Regulatory Asset Owner in accordance with the Collective Rights Agreement.[30]

Article 7 – Establishment of the Fair Allocation Plan[31][18]

(1) Adoption of the Fair Allocation Plan – The ~~[Minister of Energy]~~[32]Delegate may , [by written ~~order~~declaration,] designate and adopt a Fair Allocation Plan in compliance with Article 7. The Fair Allocation Plan so designated and adopted shall be the Fair Allocation Plan for all purposes of this ~~Part~~Act, ~~[~~except if amended, amended and restated or terminated by a further written ~~order issued~~declaration made by the ~~Minister of Energy~~Delegate in compliance with Section ~~•~~]7(4).

(2) Principles and Parameters[33] – A Fair Allocation Plan shall seek to allocate ~~Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits across present and future ~~Ratepayer~~Retail Consumer Groups on a basis that the ~~Minister of Energy~~Delegate, in its sole and absolute discretion, determines to be equitable, having regard to the following principles and parameters[34]:

1. ~~Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits should be allocated over ~~a period not to exceed the later of (a) the estimated remaining useful life of the Related Generating Assets and (b) the remaining term of IESO's commitments under the Power Contracts~~the period ending on the Program End Date.

2. The Fair Allocation Plan should specify the Reference Periods ~~(e.g., 6 month periods),~~ for the purpose of identifying applicable ~~Ratepayer~~Retail Consumer Groups and allocating ~~among them responsibility to bear the Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits among them on a relative basis over time.

[30] ~~This is necessary to ensure that if there are multiple regulatory asset owners and pledgees, they will be coordinated in the application of their rights of enforcement, etc.~~

[31][18] The idea is that the Fair Allocation Plan will be set once at the outset based on the principles and parameters described here, all as applied based on information available and the reasonable expectations and discretion of the delegate at such time. If the expectations are not fulfilled (e.g., generators may choose to retire their facilities at the end of their current ~~Power Contracts~~procurement contracts and not invest in extending service lives to secure further ~~power~~procurement contracts), the Fair Allocation Plan will be unaffected, unless it is specifically amended (assuming amendments will be permitted by the legislation).

[32] ~~Input required. If the MOE is given this power, conform to applicable authorities (e.g., plans and directives).~~

[33] ~~Consideration will be given as to whether these details should be included in the Regulation.~~

[34] ~~We have provided a few examples of what could be the basic principles. These will depend on market considerations, the Province's decision on the required amount of detail and the ability to sustain the legal basis for the program. These examples are not meant to suggest the appropriate balance – just illustrative to advance a discussion among the stakeholders.~~

3. The share of ~~Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits allocable to a particular ~~Ratepayer~~Retail Consumer Group in respect of a Reference Period should be proportionate to a reasonable assessment of the benefits of the Green Generation Initiative to the ~~Ratepayer~~Retail Consumer Group over such Reference Period.

4. The ~~estimated Unrecovered~~share of Future Fair Share of Green Transition ~~Costs~~Benefits to be allocated to a ~~Ratepayer~~Retail Consumer Group and any future ~~Ratepayer~~Retail Consumer Group at a particular time should not exceed the ~~estimated value of the Related Generating Assets based on their remaining useful lives or terms~~Estimated Future Green Transition Benefits, measured in respect of the ~~period~~Reference Periods following such particular time and to the Program End Date.

5. No future ~~Ratepayer~~Retail Consumer Group should ~~bear~~be allocated an unreasonably disproportionate share of ~~the Unrecovered~~Estimated Future Green Transition ~~Costs~~Benefits. Except in exceptional circumstances or in the case of any ~~backward-looking adjustment made~~reallocation of an Over-Assessed Amount as contemplated in 7, below, the ~~share of the Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits to be allocated under a Fair Allocation Plan to any future ~~Ratepayer~~Retail Consumer Group should have regard to *[Insert formula if a year-over-year maximum amount is determined to be appropriate]*[35].

6. ~~A reasonable estimate of the rate of inflation~~The time value of money should be ~~applied~~reflected in the Fair Allocation Plan, in order to equate the relative values of the nominal ~~amount of Unrecovered Transition Costs to be allocable to Ratepayer~~allocations of Future Fair Share of Green Transition Benefits, calculated in current dollars, to future Retail Consumer Groups over time.

7. ~~Backward-looking adjustments to a~~To the extent there has been an Over-Assessed Amount, the Fair Allocation Plan may ~~be made to achieve a fair distribution among Ratepayers of the benefits of the Green Generation Initiative.~~determine that an adjustment should fairly be made to rebate Retail Consumers for such an amount, by reducing the costs otherwise attributable under the Act to such Retail Consumers. The relative costs of the Green Generation Initiative are reflected under the Act by the attribution of Transition Charges to such Consumer Groups, based on the Financing Plan seeking to track the allocations of benefits under the Fair Allocation Plan. Accordingly, the Maximum Transition Charge Amount determined for one or more Retail Consumer Groups having regard to the Fair Allocation Plan otherwise applicable may be appropriately reduced to recognize the effect of the Over-Assessed Amount. In such a case, a determination to reduce the Maximum Transition Charge Amount applicable for certain related Reference Periods should have regard to the principle that the corresponding rebate should be extended to benefit the Consumer Group or Consumer Groups in closest proximity to the Legislative Implementation Date.

(3) Attribution Methodology – The Fair Allocation Plan ~~[~~shall~~]~~ specify ~~an objective methodology (~~the "~~Attribution Methodology~~")~~ for the purposes of allocating the Period

~~[35] Consider if a quantitative limit needs to be included in the legislation.~~

Transition Charges across ~~all of~~ the ~~Ratepayers~~Retail Consumers of a particular ~~Ratepayer~~Retail Consumer Group. The Attribution Methodology shall result in an attribution of such Transition Charges that ~~are~~is considered by the ~~Minister of Energy~~Delegate to be equitable, and may have regard to such principles and parameters as may be further set forth in a Regulation.

(4) ~~**[Confirmation][Review] of the Fair Allocation Plan** – [OEB?][36]~~**Amendments of the Fair Allocation Plan** – The Fair Allocation Plan may be amended, amended and restated or terminated by the Delegate, provided that such amendment, amendment and restatement or termination shall (a) not be inconsistent with the principles and parameters set forth in (2) or (3), above, or the Regulation and (b) comply with any restrictions or limitations specified with respect thereto in any Funding Obligation.

Article 8 – The ~~Financing Plan~~[37]IESO Retained Interest

(1) **Maintain Books of Account** – IESO may maintain books of account to record the IESO Retained Interest Amount and all adjustments thereto from time to time. Such books of account shall be determinative with respect to the amount of IESO's related regulatory asset.

(2) **Limitation on Additions** – IESO shall not record additions to the IESO Retained Interest Amount in respect of IESO Funding Shortfalls (a) if such additions are restricted by the terms of any Disposition Document or the Collective Action Agreement, or (b) on or after •, 2017.

(3) **Dispositions** – IESO may effect a Disposition to an Absolute Assignee if (a) the Absolute Assignee has or will concurrently become bound by the Collective Rights Agreement; (b) the Disposition is effected pursuant to a Disposition Agreement duly executed by IESO; (c) the Financial Services Agent confirms in writing that the Disposition is permitted under the Financing Plan; and (d) the net proceeds payable to IESO from the sale of the related Investment Interest would not exceed the IESO Retained Interest Amount immediately before the time of such Disposition.

(4) **No Continuing Interest in any Investment Interest** – IESO shall have no continuing right or interest in any Investment Interest subject to a Disposition effected by IESO under a Disposition Document to which IESO is a party and IESO shall not assert any such right or interest or take or omit to take any action to exercise or enforce its rights or interests under the IESO Retained Interest if such action or omission would impede or obstruct the rights of any Absolute Assignee or a Pledgee to enforce its rights and interests in any Investment Interest, except if IESO is expressly permitted to take or omit to take such action, respectively, under the related Disposition Document or the Collective Rights Agreement.

(5) **IESO Financing Costs** – IESO shall be entitled in good faith to incur reasonable financing costs (including interest and other reasonable financing charges) reflecting

~~[36] Any approvals or consents by the OEB will be obtained before any Funding Obligation that is dependent on such approval or consent is incurred. Any such approval or consent will be irrevocable and non-appealable. Any regulatory action occurring after any incurrence will not affect the related Funding Obligation or underlying rights in the Regulatory Asset.~~

~~[37] Consideration will be given as to whether these details should be included in the Regulation.~~

market terms and conditions and which are payable in arrears, in order to finance its ownership of the IESO Retained Interest from time to time.

(6) **IESO Recoveries** – IESO shall, in respect of a month, be entitled to receive from IESO Remittances on a related Settlement Date the amount (if any) available to IESO under Section 5(6)(b).

Article 9 – The Financing Plan

(1) **Power to Prepare ~~and~~, Implement and Amend the Financing Plan** – ~~In compliance with a [written order][***MOE to confirm process.***] of the Minister of Energy, the Administrative Agent shall~~The Financial Services Agent shall be authorized to prepare, implement and ~~propose~~amend the~~ adoption of a~~ Financing Plan. If the ~~Administrative~~Financial Services Agent is unwilling or unable to prepare and propose the adoption of ~~a~~the Financing Plan, the ~~Minister of Energy~~Delegate may by written ~~order~~declaration designate one or more other persons who shall be authorized to prepare ~~and~~, implement ~~such a~~and amend the Financing Plan.

(2) ~~**Required**~~ **Terms and Conditions of the Financing Plan** – The Financing Plan shall establish the basis for each Absolute Assignee's funding decisions ~~that have the effect of allocating the Unrecovered Transition Costs across present and future Ratepayer Groups on a basis that is consistent with the Fair Allocation Plan~~. The Financing Plan shall ~~be consistent with~~have regard to the principles~~,~~ and parameters~~, requirements and conditions~~ set forth in Schedule 3 and such other conditions and requirements as may be specified in a written ~~order~~declaration of the ~~Minister of Energy [~~Delegate or in accordance with the Regulation~~]~~.

(3) ~~**Power to Review and Approve the Financing Plan** – The Minister of Energy may, by written order, designate one or more persons to review the Financing Plan and to review and assess the consistency of the Funding Obligations incurred with such Financing Plan, and the Minister of Energy may specify requirements in respect of such review in such written order. The Administrative Agent, or such other person(s) as may be designated by written order of the Minister of Energy made pursuant to Section 8(1), shall make any such amendments to the Financing Plan, and submit a revised Financing Plan to the designated reviewer for approval within [the time period specified in such written order]/[[●] days of such written order].[***Consider periodic amendments to the Financing Plan following an annual review; provided that amendments cannot affect the existing Funding Obligations. Consider the level of oversight the MoE/OEB will have over this process?***]~~**OEB Approval** – Any Additional Funding Charge payable to or for the benefit of the Financial Services Agent shall be subject to review and approval by the OEB.

(4) ~~**Approval of Financing Plan –** The **[OEB]** shall have the power to and shall approve or disapprove of the Financing Plan based solely on whether the Financing Plan is consistent with (i) the principles, parameters, requirements and conditions set forth in Schedule 3, (ii) such other conditions and requirements as may be specified in a written order of the Minister of Energy [or in accordance with the Regulation] [and (iii) the Fair Allocation Plan]. If the **[OEB]** approves the Financing Plan, then such Financing Plan shall be implemented by the Administrative Agent. If the OEB disapproves of the Financing Plan or otherwise fails to approve the Financing Plan, then the Administrative Agent shall re-submit the Financing Plan with such amendments as the Administrative~~

Agent shall consider necessary for the Financing Plan to be approved by the OEB.[38] **OEB Review** – The OEB [shall] undertake an annual review of the records maintained by the Financial Services Agent for the purpose of confirming that the Funding Obligations incurred and the Finance Amounts paid by or on behalf of the Absolute Assignees were incurred and paid, respectively, in material conformity with the Financing Plan.

(5) **Consistency with the Fair Allocation Plan** – Funding Obligations should only be incurred if Repayments and Funding Costs would be borne by present and future Designated Ratepayers on a basis that is [generally] consistent with their respective allocations of the costs and benefits of the Green Generation Initiative contemplated in the Fair Allocation Plan. In that regard, at the time of setting the Fair Allocation Plan for any particular period, the aggregate amount payable during future Reference Periods on account of Funding Obligations incurred on or before the date on which a new Funding Obligation is incurred should not exceed the allocation of the costs and benefits of the Green Generation Initiative to the applicable Ratepayer Group contemplated in the Fair Allocation Plan. If, despite the foregoing, the Administrative Agent determines that the anticipated amount of any Repayment (together with payments of other Finance Amounts) to be made in respect of a Reference Period would materially exceed the allocation of the costs and benefits of the Green Generation Initiative to the applicable Ratepayer Group under the then current Fair Allocation Plan, the Financing Plan shall require the Administrative Agent to make diligent efforts to determine whether a Refinancing or deferral of such Repayment may be reasonably and cost-effectively effected based on then prevailing market terms, conditions an circumstances, if such a Refinancing or deferral is determined to be available the Financing Plan shall require the Administrative Agent to make diligent efforts to implement such Refinancing or deferral on a basis that is consistent with the Fair Allocation Plan.

(5) **(6) Establishment of Special Purpose Entities** – If the implementation of the Financing Plan contemplates the establishment of one or more special purpose finance entities to incur Funding Obligations as a Financing Entity under the Financing Plan, as an Absolute Assignee and on a basis that limits the recourse for the payment of such Funding Obligations to such Absolute Assignee's interest in, to and under the Regulatory Asset, the Administrative Agent shall have regard to the characteristics specified in Schedule 4 in establishing such special purpose entity.]**Replacement of the Administrative Agent** – If the OEB identifies deficiencies or makes recommendations in its review under Section 9(4), the Administrative Agent shall take reasonable measures to remedy such deficiencies if remediable, and shall in any event have regard to the recommendations of the OEB in relation to further actions undertaken by the Financial Services Agent under the Financing Plan. If the Financial Services Agent is unwilling or unable to reflect such recommendations in relation to such further actions, the Delegate may by written declaration designate one or more other persons who shall thereafter become the Financial Services.

(6) **(7) Obligation to Apply IESO Remittances** – The AdministrativeFinancial Services Agent shall ensure that amounts transferred to it under Article 5, as agent for and on behalf of the Regulatory Asset OwnersAbsolute Assignees, or otherwise in respect of or

[38] Once the Financing Plan is reviewed and approved there would be no further OEB review. If there is opportunity for further review, such review will have no impact on prior issued debt. Any further financings would be put on hold until such review is completed (during which time the IESO would again need to fund the shortfall on an interim basis and obtain necessary funding).

as proceeds from ~~the Regulatory Asset~~an applicable Investment Interest shall only be applied or used to pay related Finance Amounts when they are due and payable and for no other purpose.[39]

(7) ~~(8)~~ **Non-Recourse** – The Financing Plan shall be implemented so that Funding Obligations incurred shall be without recourse to or to any assets of the Electricity Distributors, IESO, any Alternative Servicer, ~~and~~any Alternative Collection Agent, the ~~Administrative~~Financial Services Agent, the OEB, the Province or the Lieutenant Governor in Council, other than if and to the extent that such persons or entities are liable for the performance of obligations or duties arising under this ~~Part~~Act or expressly agree to become liable pursuant to any Funding Obligation or obligation in relation to a Finance Amount. [All Funding Obligations shall contain a statement to the following effect: "Neither the full faith and credit nor the taxing power of the Province of Ontario is pledged to the payment of the principal of, or interest on, this [obligation].]

(8) ~~(9)~~ **Incurrences are Binding** – ~~Despite any failure to adhere to the Financing Plan or to comply with any requirement of this Part,~~Notwithstanding anything to the contrary in this Act, each Disposition made to or by an Absolute Assignee and all amounts payable or becoming due and payable by or on behalf of ~~a Regulatory Asset Owner~~an Absolute Assignee under or in connection with any obligation purporting to be a Funding Obligation, shall be binding for the purposes of this ~~Part~~Act, including in determining the amount of related Transition Charges, despite any impairment or defect resulting from such failure.

[Article ~~9~~10 – Compliance Matters[40~~19~~]

(1) **Right of the [OEB] to Inspect Books and Records** - For the purpose of investigating compliance with the provisions of this ~~Part~~Act, the ~~[~~OEB~~]~~ shall have the right, jurisdiction, power and authority to examine the books and records of ~~any person who is or may become obligated or have duties that arise under this Part or any Funding Obligation~~*~~[Insert names if any]~~*.

~~(2) **Power to Investigate Compliance and Impose Regulatory Sanctions** - Subject to the limitations set forth regarding the irrevocability of Transition Charges and the Undertaking of the Lieutenant Governor in Council, nothing in this Part shall (a) prevent or preclude the [OEB] from investigating the compliance of any person who is or may become obligated or have duties that arise under this Part [or any Funding Obligation] with the terms and conditions of this Part and requiring compliance by such person therewith; or (b) prevent or preclude the [OEB] or any successor regulator from imposing regulatory sanctions against any person who is or may become obligated or have duties that arise under this Part for its failure to comply with the terms and conditions of this Part[41].~~

(2) ~~(3) [Other Rating~~**OPG's Rate Settings** – When setting other rates for or in respect of ~~any person who is or may become obligated or have duties that arise under this Part,~~

[39] ~~We need to work in the idea that there may be Finance Reserve Deposits or other amounts that remain after paying Finance Amounts. Those surplus amounts should be credited back to Ratepayers.~~

[40~~19~~] As noted above, the outcome of any regulatory action undertaken by the OEB will not affect Funding Obligations that have been incurred under the Financing Plan. This Article ~~is~~and any potential role for the Auditor General is still under consideration.

[41] ~~Consider scope of OEB regulation and whether a Financing Entity should be subject to this sort of provision in any event.~~

~~including any Electricity Distributor, IESO, Generator or the Administrative Agent, nothing in this Part shall prevent the [OEB] or any successor regulator from taking~~OPG, the OEB shall not take into account (a) the ~~collection by or attribution to such person of~~ administrative or servicing fees charged by OPG as Financial Services Agent [in excess of the actual incremental costs incurred by such person of providing administrative or servicing services.~~]~~[42]; (b) the cost consequences to OPG of being the Financial Services Agent; or (c) the consequence of OPG consolidating the assets and liabilities of any Financing Entity for OPG's accounting purposes, in each case in setting any regulated payment amounts for OPG.][20]

Article ~~10~~11 – Undertaking of the Lieutenant Governor in Council[43][21]

(1) **No Action to limit, alter, or impair or terminate Transition Charges, the Regulatory Asset or Collections** – The [Lieutenant Governor in Council] shall not in any way take or permit any action to reduce, impair, postpone or terminate the obligation of ~~Ratepayers~~Retail Consumers to pay Transition Charges or to impair the Regulatory Asset or the collection or recovery of Transition Charge Collections, Electricity Distributor Remittances or IESO Remittances, either directly or indirectly~~[~~, including through the introduction of any bill or the passing of any legislation or regulation~~]~~ having such effect. The amount of Transition Charges determined ~~hereunder~~under this Act shall not be subject in any way to reduction, impairment, postponement or termination as a result of any action taken or failure by the Lieutenant Governor in Council~~[~~, including through the introduction of any bill or the passing of any legislation or regulation~~]~~ having such effect.

(2) **Undertaking and Agreement** – The [Lieutenant Governor in Council] shall not:

(a) in any way take or permit any action that limits, alters or impairs the value of any Investment Interest;

(b) ~~**(2) Undertaking and Agreement** – The Lieutenant Governor in Council shall not in any way take or permit any action that limits, alters or impairs the value of the Regulatory Asset or,~~ except as required by the estimates and adjustments made in determining the True-up Amount, reduce, alter or impair Transition Charges that are imposed, billed, invoiced, collected and remitted for the benefit of the ~~Regulatory Asset Owners, including any~~ Absolute ~~Assignee from time to time, and~~Assignees or any Pledgee from time to time~~[~~,~~including through the introduction of any bill or the passing of any legislation or regulation~~]~~.;

(c) permit the amendment, amendment and restatement or termination of the Fair Allocation Plan if such amendment , amendment and restatement or termination

[42] ~~OPG has indicated that the risks and cost consequences to OPG of being an~~[20] As an alternative to this provision, consider clarifying under s. 78.1(4) of the OEB Act (which currently gives the OEB discretion in setting payment amounts subject to O. Reg. 53/05) that the OEB in setting OPG payment amounts for prescribed generation shall not consider OPG's role as Administrative Agent ~~or of consolidating a Financing Entity for accounting purposes should not be considered by the OEB in setting the regulated payment amounts for~~of any Financing Entities associated with the Fair Hydro initiative, perhaps with the exception of any operating fees that may be received by OPG for performing that role. ~~To be discussed.]~~

[43] ~~Under consideration~~[21] Under consideration, including the dealers' request for a "servicer guarantee" and a "contractual guarantee" to address a "Change of Law" or if all or a portion of the legislation is *ultra vires*, requiring (at the lenders option), the Province to pay principal and interest on the outstanding debt until maturity or payout the entire debt including any make-wholes.

would adversely affect the validity or enforceability of any Funding Obligation or the rights of an Absolute Assignee or Pledgee thereunder,

in each case including through the introduction of any bill or the passing of any legislation or regulation having such effect.

(3) **Successor IESO** – If IESO is restructured, dissolved or becomes insolvent or is otherwise incapable of performing its obligations under this Act, Successor IESO shall be established to perform such obligations.

(4) ~~[If IESO becomes insolvent or otherwise incapable of performing its obligations under this Part, an IESO Successor will be established that is capable of performing such obligations in order that the Regulatory Asset Owners may appoint the IESO Successor as an Alternative Servicer or Alternative Collection Agent. Regulatory Asset Owners shall be fully~~**Compensation for Failure** – Absolute Assignees shall be compensated for any losses suffered by them as a result of any failure by the Lieutenant Governor in Council to comply with its undertakings and agreements in this Article ~~10(2) for any loss suffered by the Regulatory Asset Owner as a result of such failure.~~[44]11.[22]~~]~~

(5) **No Wind-up of Financing Entity**. No Financing Entity may be voluntarily wound up, liquidated or dissolved until one year after all of its Funding Obligations are repaid.

(6) ~~**(3)**~~ **References to the Undertaking and Agreement** – Any non-confidential reference to the Undertaking of the Lieutenant Governor in Council, including in marketing materials and other documentation authorized for use by the Administrative in connection with any Funding Obligation, may be made provided that [*Add conditions to protect the Province*].

Article ~~11~~12 – Regulations

Regulations may be made under this ~~Part~~Act for the purposes described in Sections •,•,• and • and may be promulgated for any of the following purposes:

(a) to set standards and measures regarding the commercially reasonable requirements of the Province associated with ~~a Regulatory Asset Owner~~an Absolute Assignee incurring Funding Obligations or becoming obligated to pay any Finance Amount, including to establish guidelines regarding all-in funding costs; permitted Additional Funding ~~Costs~~Charges; required maturities and redemption and termination rights of Funding Obligations; liquidity requirements, in each case to a Financing Plan that is consistent in its effect with the Fair Allocation Plan;

(b) to establish and empower one or more regulated entities to undertake decision-making activities with respect to this ~~Part~~Act;

(c) to set out reasonable requirements regarding the appointment or retention of advisors, agents, service providers, contract counterparties, including in relation to 'market terms and conditions' parameters;

[44][22] Requested by Torys. For discussion.

(d) to provide for audit and compliance standards applicable to those persons who are or may become obligated or have duties that arise under this ~~Part~~Act [or under any Funding Obligation];

(e) to provide for any pre-vetting and approval requirements in relation to any incurrence by ~~a Regulatory Asset Owner~~an Absolute Assignee of any Funding Obligation or obligation to pay any Finance Amount; and

(f) to provide for appeal and due process considerations in connection with the establishment, adoption, implementation and review of the Fair Allocation Plan or the Financing Plan.

Article ~~12~~13- Miscellaneous[~~45~~23]

(1) **Choice of law** – The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to the transfer of an interest or right or creation of a security interest in the Regulatory Asset, any Transition Charge or the Undertaking of the Province shall be the laws of the Province.

(2) **Conflict of law** – In the event of conflict between this ~~Part~~Act and any other law of the Province regarding the attachment, assignment or perfection, or the effect of perfection, or priority of any Disposition or Pledge, this ~~Part~~Act shall govern to the extent of the conflict.

(3) **No further acts or approvals required** - Notwithstanding any provisions of any law of the Province to the contrary, no approvals, notices or authorizations other than those specified in this ~~Part~~Act shall be required with respect to the actions to be taken in compliance with this ~~Part~~Act, including under the Financing Plan or in relation to the establishment of the Fair Allocation Plan, and the transactions and contracts authorized in or contemplated by this ~~Part~~Act or the Financing Plan, including the incurrence of any Funding Obligation, any Disposition, any Pledge or in the payment and performance of any attendant or incidental contract and any related expenses incurred to facilitate the preparation and implementation of the Financing Plan.

(4) **Effect of invalidity after the Incurrence of any Funding Obligation** - Effective on the date that a Funding Obligation is incurred under this ~~Part~~Act, if any provision of this ~~Part~~Act is held to be invalid or is invalidated, superseded, replaced, repealed or expires for any reason, that occurrence shall not affect any action allowed under this ~~Part~~Act that is taken by any person who is or may become obligated or have duties that arise under this ~~Part~~Act and any such action shall remain in full force and effect.

(5) **Severability** - If any Article, Section, paragraph or subparagraph of this ~~Part~~Act or the application thereof to any person, circumstance or transaction is held by a court of competent jurisdiction to be unconstitutional or invalid, the unconstitutionality or invalidity shall not affect the constitutionality or validity of any other Article, Section, paragraph or subparagraph of this act or its application or validity to any person, circumstance or transaction, including the irrevocability of Transition Charges, the validity of the Regulatory Asset, the incurrence of any Funding Obligation, any Disposition, any Pledge, or the collection and recovery of Transition Charge Collections. To these ends, the Legislature hereby declares that the provisions of this ~~Part~~Act are intended to be

[~~45~~23] OPG would like the specific amendments related to OPG to be included in the Bill.]

severable and that the Legislature would have enacted this ~~Part~~Act even if any Article, Section, paragraph or subparagraph of this ~~Part~~Act held to be unconstitutional or invalid had not been included in this ~~Part~~Act.

Schedule 1

Guidelines for Estimates

[To be considered.]

Schedule 2

Requirements Applicable to Alternative Invoicing Agent/ Alternative Collection Agent

[To be considered.]

Schedule 3[24]

Principles, and Parameters, Requirements and Conditions for Establishing the Financing Plan

The Financing Plan shall have regard to the following principles, and parameters, requirements and conditions:[***Consider others.***] provide a guideline as to what a Financing Plan should address:

(1) the Financing Plan shall, in respect of each Reference Period, describemake reference to the allocations of UnrecoveredFuture Fair Share of Green Transition CostsBenefits to each Reference Group as contemplated by the Fair Allocation Plan;

(2) the Administrative Agent shall make a good faith estimate of theIESO Funding Shortfalls for each Reference Period, based on the terms of the Power Contracts and assumptions considered to be reasonable respecting forward market prices for electricity;

(3) the Administrative Agent shall describeconsider alternative funding arrangements considered to be suitable for the purpose of fundingto fund the estimated IESO Funding Shortfalls, including by reference to short term and/or long term Funding Obligations that could reasonably be incurred by the Regulatory Asset Owners for such purpose;

(9) **(4)** such Funding Obligations shall reflectconsider quantities, maturities, payment obligations, prepayment or redemption rights and such other features of Funding Obligations so that the effect of incurring such Funding Obligations would be that the payments made thereunder in respect of eachfor a Reference Period (including the anticipated Finance Amounts becoming payable in relation to such Funding Obligations) would reasonably correspond to the allocations of UnrecoveredFuture Fair Share of Green Transition CostsBenefits to the applicable Reference Group under the Fair Allocation Plan;

(4) if the anticipated amount of any Repayment (together with payments of other Finance Amounts) to be made in respect of a Reference Period would materially exceed the allocation of the costs and benefits of the Green Generation Initiative to the applicable Retail Consumer Group under the then current Fair Allocation Plan, diligent efforts should be made to determine whether a Refinancing or deferral of such Repayment may be reasonably and cost-effectively effected based on then prevailing market terms, conditions an circumstances;

(5) the Financing Plan shall reflect the outcome of a financial model that incorporatesreflect the assumptions and requirements specified in any contemplated Funding Obligation (e.g., any limit on the maximum amount of Transition Charges charged to a hypothetical RatepayerRetail Consumer relative to his or her monthly electricity bill, as prescribed by any rating agency that ascribes its credit rating to or in respect of the Funding Obligation having regard to the application of the Allocation Methodology); [***Consider what outputs from OPG will be tested by the OEB and when. The modelling in the Financing Plan may permit the OEB to check progress against the model from***

[24] Awaiting input from Torys based on OPG mark-up of Financing Plan sections.

~~***time to time, which may provide a basis for the MoE/OEB to require a review/amendment to the Financing Plan if the ongoing operation of the program results in significant deviation from the model. Consider whether this flexibility is desirable.***~~]

(6) ~~the Administrative Agent, for and on behalf of each Regulatory Asset Owner, shall seek to~~ incur Funding Obligations from time to time on the best terms available at such time for a financing transaction of the size and type contemplated, and having regarding to the following parameters:

a. whether the ~~Regulatory Asset Owners~~Absolute Assignees will require committed access to short term liquidity to cover estimated IESO Funding Shortfalls prior to incurring fixed term Funding Obligations, and the amount and repayment terms of any such required liquidity; provided that any Repayment required to be made under the terms of such short-term liquidity would not obligate ~~a Regulatory Asset Owner~~an Absolute Assignee to repay an amount in relation to a Reference Period that would have the effect of the Financing Plan permitting incurrences of Funding Obligations payable in such Reference Period that would exceed the allocations of ~~Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits to the applicable Reference Group under the Fair Allocation Plan;

b. the basis upon which the ~~Administrative~~Financial Services Agent will select the term to maturity of any other Funding Obligations; provided that any Repayments required to be made under the terms of such Funding Obligations ~~shall~~should not obligate ~~a Regulatory Asset Owner~~an Absolute Assignee to repay an amount in relation to a Reference Period that would have the effect of the Financing Plan permitting incurrences of Funding Obligations payable in such Reference Period that would exceed the allocations of ~~Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits to the applicable Reference Group under the Fair Allocation Plan;

c. the basis upon which the interest rates applicable to such Funding Obligations would be determined;

d. the reference capital or finance market in which such Funding Obligation would be incurred, including markets outside of Canada if considered by the ~~Administrative~~Financial Services Agent to be appropriate in the circumstances;

e. the currency of payments under such Funding Obligations and, if the Funding Obligations are denominated in a currency other than Canadian dollars, the basis upon which the ~~Administrative~~Financial Services Agent shall cause the applicable ~~Regulatory Asset Owner~~Absolute Assignee to enter into hedging transactions to mitigate currency risk, including acceptable minimum and maximum coverage levels, having regard to the availability of related derivatives having notional amounts corresponding to the repayment and maturity profile of such Funding Obligations;

f. the basis upon which the ~~Administrative~~Financial Services Agent will select counterparties under any transaction to be entered into by ~~a Regulatory Asset Owner~~an Absolute Assignee, including any paying agent, servicer, cash manager, liquidity provider, hedge counterparty, account bank, lender, note

trustee, security trustee, paying agent, registrar/transfer agent, financial services agent, arranger or manager;

g. the basis upon which the ~~Administrative~~Financial Services Agent will manage counterparty risk, including by providing for maximum counterparty exposure limits having regard to concentration, credit and other identified risks with respect to individual counterparties or countries;

h. the basis upon which the ~~Administrative~~Financial Services Agent will negotiate and settle Finance Amounts, including the amount of any Redemption Amounts, Finance Reserve Deposits and Additional Funding Charges;

(7) the basis upon which Funding Obligations may be redeemed, prepaid, repurchased or otherwise affected, having regard for the need to minimize debt service charges and other Funding Costs, and the need to maintain a stable funding platform to finance the IESO Funding ~~Shortfall~~Shortfalls from time to time on a basis that is consistent with the allocations of ~~Unrecovered~~Future Fair Share of Green Transition ~~Costs~~Benefits to applicable Reference Groups under the Fair Allocation Plan;

(8) the basis upon which any Repayments, Funding Costs and Redemption Amounts will be paid, including any defeasance, sinking fund or through other reserves or liquidity facilities;

(9) the basis upon which fees, charges, expenses, costs, indemnities, reimbursements and other amounts payable to or for the benefit of the ~~Administrative~~Financial Services Agent and other agents and service providers to the ~~Regulatory Asset Owners~~Absolute Assignees may be determined, allocated and paid;

(10) the timing and basis upon which Finance Reserve Deposits and Finance Reserve Withdrawals may be made;

(11) the basis upon which any obligations for any other Additional Funding Charges may be incurred and paid;

(12) the basis upon which the cash flows arising from time to time or otherwise derived from the Regulatory Asset may otherwise be applied, including in relation to any counterparty enforcement and realization scenario;

(13) the transmittal to [the IESO] of information related to the amounts to be included in the determination of the Period Transition Charge for a Reference Period;

(14) the basis upon which any Disposition may be made or effected by ~~a Regulatory Asset Owner~~an Absolute Assignee, including parameters for determining the purchase price for the interest in the Regulatory Asset that is the subject matter of such Disposition, and any consents and releases that may be usefully obtained in connection with such Disposition;

(15) ~~a description of each~~describe the requirements applicable to any special purchase entity that will purchase ~~the Regulatory Asset from the IESO~~an Investment Interest, including proposed capitalization, governance, and restrictions on their powers and activities ~~having regard to the parameters in Schedule 4~~; and

(16) the basis on which any Pledge may be given or effected.

~~**Schedule 4**~~

~~**Creation of any Special Purpose Entity to become a Regulatory Asset Owner]**~~

~~**(1) Powers and Abilities**:~~

~~a. No part of the revenue or assets of a Regulatory Asset Owner shall enure to the benefit or be distributable to its trustees, officers or directors, as the case may be, or any other private persons, except as may be provided for actual services rendered;~~

~~b. Each Regulatory Asset Owner shall be authorized to:~~

~~i. incur the Funding Obligations contemplated by a Financing Plan and use the proceeds thereof to purchase or acquire, and to own, hold and use the Regulatory Asset;~~

~~ii. contract for servicing of the Restructuring Asset and any bonds contemplated by a Financing Plan and for administrative services; and~~

~~iii. pledge the Regulatory Asset to secure the Funding Obligations incurred by the Regulatory Asset Owner;~~

~~c. So long as any Funding Obligations contemplated under a Financing Plan are outstanding, a Regulatory Asset Owner shall not be authorized to merge or consolidate, directly or indirectly, with any person or entity;~~

~~d. a Regulatory Asset Owner shall not have the power or authority to incur or guarantee or otherwise become obligated to pay any debt or obligations other than what is contemplated under a Financing Plan;~~

~~e. a Regulatory Asset Owner shall cause the proceeds obtained by incurring any Funding Obligation to be placed in one or more separate accounts and used only to purchase the Regulatory Asset and pay any costs as provided for in a Financing Plan; and~~

~~f. so long as the Regulatory Asset is pledged to secure Funding Obligations, the Regulatory Asset Owner must apply revenues from the collection of Transition Charges only to repay such Funding Obligations and other costs as provided for in a Financing Plan.~~

~~**(2) Governance of Regulatory Asset Owner –** A Regulatory Asset Owner shall be created having regard to the following principles:[***OPG to confirm if SPE will be a trust or another type of entity.***]~~

~~a. [Number of trustees]~~

~~b. [Replacement of trustees; vacancies; appointment of successors]~~

~~c. [Removal of trustees for neglect of duty or misconduct]~~

~~d. [Quorum and meetings]~~

~~e. [Fiduciary duty]~~

~~f. [Isolation, separateness and other "non-consolidation" and "bankruptcy remoteness" criteria]~~

~~g. [Delegation of powers and duties to administrative agents]~~

~~h. [Delegation of powers and duties to administrative agents]~~

Importance: High

All - please find attached a revised draft of the summary legislation circulated by Blakes on April 10 which reflects consolidated comments from OPG and the dealers (and their respective counsel). Please note that the attached remains subject to the continuing review of OPG and the dealers. We will have printed copies of the blackline available at today's meeting.

Best Regards,

Nina

Subject: RE: "Fair Hydro Act" Legislative Summary (Discussion Draft)

Steve,

We have been corresponding with Torys today and are in the process of preparing a consolidated mark-up reflecting comments from the Dealers and OPG, which will also incorporate some of the comments received this evening from the IESO/Stikemans. We will circulate the consolidated mark-up before tomorrow's meeting.

Stephen,

This version does not reflect the top issues raised by the Dealers. We are sitting down with the Dealers now working on a comprehensive mark-up that we will send later today, but it will not be ready by 2 PM. We would like to use tomorrow's meeting to discuss the mark-up we are preparing rather than a further revised version that will not reflect our feedback.

CONFIDENTIAL AND PRIVILEGED

Preliminary Draft for Discussion Purposes Only

"Fair Hydro Act"

Article 1 – Purpose

The Province has and continues to encourage the construction and development of facilities for the long-term operation and generation of electricity in the Province using sustainable, lower carbon-based technologies such as new gas-fired generation, renewable facilities, energy from waste and biomass, including under the Province's various procurement, standard offer, feed in tariff and other similar programs (the "Green Generation Initiative"). The long-term benefits of the Green Generation Initiative accrue over time and have benefited and will **continue to** benefit present and future electricity consumers in the Province.

The ~~imputed~~**out-of-market** costs of the Green Generation Initiative are currently passed through to electricity consumers by way of a monthly adjustment amount (the "Green Costs Adjustment"), which in turn forms part of the overall adjustment calculated by the Independent Electricity System Operator ("IESO") pursuant to section 25.33 of, and O.Reg. 429/4 under, the *Electricity Act* (the "Global Adjustment"). ~~The Global Adjustment is included as a charge billed to electricity consumers in their monthly electricity invoices.~~

The Green Costs Adjustment is currently determined each month by reference to the amounts paid by IESO to the generators of electricity in the Province under the Green Generation Initiative~~, which may be higher than prevailing market price for electricity. These differences~~**. These amounts paid by the IESO** arise because IESO has entered into long-term procurement contracts with such generators in order to provide them with ~~long-term price~~**revenue** certainty ~~for electricity~~, and in turn to encourage the generators to develop technologies and to construct and develop facilities consistent with the Green Generation Initiative. ~~In general, whenever amounts payable under these procurement contracts exceed the market price for electricity, the Green Costs Adjustment passes through the amount of such differences as part of the monthly charge to electricity consumers. Such amount then becomes available to IESO to meet its obligations under the~~ **[NTD: This statement is not correct in respect of all IESO procurement contracts.]** It has been determined that the useful lives of many of the assets ~~encouraged by~~**developed under** the Green Generation Initiative will be ~~well~~ in excess of the respective terms of ~~the related~~**their respective** procurement contracts~~, and in many cases may extend over more than one generation of electricity consumers~~.

Since the benefits to past, present and future electricity consumers from the Green Generation Initiative will not necessarily coincide with the costs currently attributed through the Green Costs Adjustment, based on the respective ~~durations~~**terms** of the **applicable** procurement contracts, it has been determined that the rate at which the costs associated with the Green Generation Initiative should be passed through to ~~Retail~~**Regulated** Consumers (as defined in Article 2) should be more closely aligned with the benefits that such ~~Retail~~**Regulated** Consumers have derived and are expected to derive from the Green Generation Initiative over time. This realignment will be based on **general** principles and parameters that establish a reasonable basis for measuring and allocating the relative costs and benefits of the Green Generation Initiative equitably across present and future ~~Retail~~**Regulated** Consumers (the "Fair Allocation

Plan"). **[NTD: There is no explanation as to why realignment is limited to Regulated Consumers.]**

If the Fair Allocation Plan determines that the equitable allocation of the costs associated with the Green Generation Initiative to the ~~Retail~~**Regulated** Consumers of a particular time period should be reduced below the amount that currently would be charged based on the Green Costs Adjustment, then the amount payable by such ~~Retail~~**Regulated** Consumers and in turn available to IESO will, in the aggregate, be less than the amount payable by the IESO to the generators in respect of such period. In this case**,** IESO will need to obtain funding from another source to cover such a shortfall. If a funding obligation is incurred ~~by IESO~~ to cover such a shortfall during ~~one~~**any** period, the repayment of such funding obligation will be required in a future period, and any related repayments, finance costs, hedging costs and other transaction costs incurred will become payable in ~~one or more~~ future periods. In order for IESO to obtain a reliable and committed source of cash flows to enable IESO to repay such funding amounts when they become due and payable, this Act imposes irrevocable and non-bypassable financial obligations on ~~Retail~~**Regulated** Consumers to pay amounts incurred in respect of such funding obligations when they become due and payable and establishes a right to invoice and collect such amounts. The right and interest in and to collect such financial obligations will take the form of the Regulatory Asset contemplated in this Act, which will constitute property rights and interests. Interests in the Regulatory Asset may be sold and absolutely assigned by IESO to one or more financing entities, which in turn will finance their acquired interests by incurring funding obligations. The incurrence and payment of such funding obligations will be administered on behalf **of** such financing entities by a financial services ~~agent~~**manager** under the Financing Plan contemplated in this Act. ~~The Financing Plan will seek to reasonably match the payment obligations arising under such funding obligations, to be borne by the future Retail Consumers of the period in which such payment obligations become due, with the benefits of the Green Generation Initiative allocated to such future Retail Consumers under the Fair Allocation Plan.~~

[NTD: Our strong preference is to limit the introduction to the next paragraph and move defined terms from the previous paragraphs to Article 2]

The purpose of this Act is to establish the basis upon which intergenerational fairness can be achieved by charging the costs and benefits of the Green Generation Initiative to present and future ~~Retail~~**Regulated** Consumers on an equitable and cost effective basis.

Article 2 ~~–~~ Definitions

In this Act: **[NTD: It would be preferable to use plain language definitions in the legislation and leave the more detailed definitions to either the regulations or the agreements contemplated hereunder.]**

> "Absolute Assignee" means a person to whom a Regulatory Asset Owner effects a Disposition **other than as security**.
>
> "Actual" means, in relation to costs, expenses or payments in respect of Funding Obligations during a Reference Period, the actual amount of such costs, expenses or payments paid or made (net of any Finance Reserve Withdrawals applied to pay such amounts), which amounts shall be recorded by the Financial Services ~~Agent~~**Manager**

whose records shall be determinative for the purposes of this Act except to the extent of a manifest calculation error.

"Additional Funding Charges" means, for a Reference Period in respect of an Absolute Assignee, the fees, charges, expenses, costs, indemnities, reimbursements and other amounts (including any applicable tax amounts) that are or become payable by or on behalf of the Absolute Assignee during the Reference Period and that were incurred or committed to directly or indirectly by the Absolute Assignee in connection with the incurrence of Funding Obligations under the Financing Plan (whether at the time of such incurrence or over the term of the Funding Obligation and whether directly or indirectly), including (without duplication and without limitation): (a) any payment required under an ancillary agreement entered into by, or by the Financial Services Agent on behalf of, the Absolute Assignee under the Financing Plan; (b) any federal, provincial or local taxes, payments in lieu of taxes, franchise fees or license fees imposed on the Absolute Assignee or incurred by on behalf of the Absolute Assignee under any obligation to pay tax gross-up amounts to counterparties under Funding Obligations; (c) any amounts payable to the Financial Services Agent, including amounts payable to its advisors and outside counsel; (d) any amounts incurred to prepare, confirm, amend and implement the Financing Plan; (e) any amounts payable to any Alternative Collection Agent or Alternative Servicer, including amounts payable to each's advisors and outside counsel; (f) any amounts incurred to make the calculations, determinations or confirmations to be made by or on behalf of the Absolute Assignee; (g) any servicing fees and expenses; (h) any trustee fees and expenses; (i) any legal fees, expenses and disbursements; (j) any accounting fees and expenses; (k) any administrative fees and expenses; (l) any manager or director fees of a Financing Entity; (m) any registration fees and expenses; (n) any placement fees, underwriting fees, fees and related issuing expenses; (o) any rating agency fees; and (p) any other related fees, charges, expenses, costs, indemnities, reimbursements and other amounts that are approved in good faith by the Financial Services Agent for recovery and payment under the Financing Plan**without limitation such amounts as may be prescribed**.

"Allocation Factor" means, in respect of a Retail Consumer for a Reference Period, the number (expressed as a percentage) determined in respect of the Retail Consumer by the OEB based on the application of< *the Attribution Methodology* >in respect of the Reference Period.[1]

"Alternative Collection Agent" means a person appointed under Section 5(11) and in compliance with the requirements set out in Schedule 2 to assume the collection activities and activities of any Electricity Distributor or IESO under Article 5, as agent for and on behalf of the Regulatory Asset Owners. **[NTD: See section 5(11). Remove this concept globally.]**

"Alternative Servicer" means a person appointed under Section 4(8) to assume the obligations of the Servicer under Article 4, as agent for and on behalf of the Regulatory Asset Owners. **[NTD: We see this, in effect, as the same thing as the IESO Successor; that is, replacement of the master Servicer.]**

[1] Confirm that this will be based on forecast volumes of demand (like RPP). To the extent amounts do not get recovered due to differences between forecast and actual, those may be identified and caught by the True-Up.

"Assessed Past Green Transition Costs" means, in respect of a Measurement Date, the aggregate of the imputed costs of the Green Generation Initiative (expressed as an equivalent to current dollars), as reflected in the calculation of the Green Costs Adjustment, which have been charged to Retail Customers through the Global Adjustment on or prior to the Measurement Date.

"Attribution Methodology"[21] means the methodology specified in the Fair Allocation Plan for allocating the Period ~~Transition~~**Finance** Charges for a Reference Period to ~~individual Retail Consumers of the applicable Retail Consumer Group based on its Allocation Factor.~~**Regulated Consumers. [NTD: We understood that the Ministry accepted that the transition charge would be a volumetric rate.][NTD: Can be moved to Regulations.]**

"Collected Amount Adjustment" means, in respect of a True-Up Period, the amount (which may be a negative amount) calculated by the Servicer or the Financial Services ~~Agent~~**Manager**, as applicable, equal to (a) the Estimate of the Finance Amount for the True-Up Period, minus (b) the sum of all Transition Charge Collections for the True-Up Period.[32]

"Collective Rights Agreement" means an agreement among all of the Regulatory Asset Owners (including each Absolute Assignee) ~~and~~**,** each Pledgee**, and the Financial Services Manager** that governs the enforcement of their respective rights and interests in, to and under the Regulatory Asset on a coordinated and collective basis.[4] **[NTD: Move to Regulations.]**

"Delegate" means **any of** the **following** person or persons designated in writing from time to time by the Minister of Energy to undertake the actions and perform the responsibilities ascribed to the "Delegate" under this Act~~.~~**: ●. [NTD: Why is this delegation of authority necessary? This requires further discussion and clarity as to which entity or entities that the Province can select as the Delegate; for example, it would not be acceptable for the Province to select the OEB to be the Delegate. If this is required, an acceptable delegate would be a stakeholder committee comprised of representatives from the Ministry of Energy, the OEB, the IESO, and OPG. In addition, the regulation should prescribe how the stakeholder committee would operate.]**

"Disposition" means an assignment, transfer, conveyance, sale, contribution, set-over, exchange or other disposition of **(a) IESO's right to recover all or any portion of an IESO Funding Shortfall or (b)** an Investment Interest to an Absolute Assignee**, in each case** pursuant to a Disposition Document.

"Disposition Document" means the agreement, deed, conveyance, instrument or other document under which ~~a Regulatory Asset Owner~~**IESO or an Absolute Assignee** effects a Disposition to an Absolute Assignee.

[21] This allocation may be volumetric or some combination of a flat amount and a volumetric charge. Further discussion is required. H&W has raised a concern regarding possible adverse changes after the fact and rating agency considerations. Consider whether hard-coding in the legislation makes sense.

[32] This would pick up adjustments based on actual collection experience, changes in the ~~retail consumer~~**Regulated Consumer** base, changes in the actual costs (versus earlier estimates) included in the Transition Charge calculation, etc.

[4] ~~Consider adding the Financial Services Agent and the Servicer as parties.~~

"Electricity Distributor" means~~, in respect of a Service Area, the~~ **a** rate regulated distributor licensed under Part V of the *Ontario Energy Board Act, ~~1998~~* ~~in respect of such Service Area,~~***1998,*** together with and its successors.

"Electricity Distributor Remittances" means, for an Electricity Distributor on a Remittance Date, all Transition Charge Collections received or deemed to be received **[NTD: estimated to be received? will each Electricity Distributor know?]** by the Electricity Distributor prior to the Remittance Date and that have not otherwise been remitted to ~~IESO~~**Servicer** or if applicable the Alternative Collection Agent in accordance with Section 5(3), including the proceeds of any enforcement action undertaken by the Electricity Distributor or if applicable the Alternative Collection Agent to recover payment of Transition Charges in accordance with Article 5.

"Electricity Invoice" means an invoice issued by ~~any of a~~**an** Electricity Distributor (or in its stead, by an Alternative ~~Servicer~~**Collection Agent**), by the Servicer or by a Retailer, in each case to a ~~Retail~~**Regulated** Consumer that is served by the Electricity Distributor's distribution system in respect of electricity charges, including the cost of electricity, delivery and regulatory charges and related services and amounts incurred, assessed or charged in respect of connectivity to ~~a distribution network in the~~**such** Electricity Distributor's ~~designated Service Area~~**distribution system** and in respect of applicable Transition Charges to be charged to the ~~Retail~~**Regulated** Consumer under this Act. **[NTD: The Alternative Servicer should only invoice for Transition Charges, not the entire invoice. Also, to avoid confusion, we suggest using the word "invoice" in reference to what the IESO sends out to distributors, and "bills" in reference to what distributors send out to consumers.]**

"Estimate" means (a) in relation to costs, expenses or payments in respect of Funding Obligations or any Finance Amount for a Reference Period, the estimated amount of such costs, expenses or payments determined by the Financial Services ~~Agent~~**Manager**; and (b) in relation to an assessment of the benefits of the Green Generation Initiative to ~~any Retail Consumer Group~~**Regulated Consumers**, the estimated value (in current dollars) of such benefits determined by the Delegate, in each case having regard to the applicable principles and parameters set out in Schedule 1, which estimated amounts shall be determinative as the applicable estimate for the purposes of this Act except to the extent of a manifest calculation error.

"Estimated Future Green Transition Benefits" means, in respect of a Measurement Date, the Estimate set forth in the Fair Allocation Plan prepared in accordance with Article 7 of the aggregate value (measured in current dollars) of the benefits that are expected to accrue to ~~Retail~~**Regulated** Consumers from the establishment and implementation of the Green Generation Initiative during the period from the Measurement Date to the Program-End Date.

"Estimated Past Green Transition Benefits" means, in respect of a Measurement Date, the Estimate set forth in the Fair Allocation Plan prepared in accordance with Article 7 of the aggregate value (measured in current dollars) of the benefits that have accrued to ~~Retail~~**Regulated** Consumers from the establishment and implementation of the Green Generation Initiative up to and including the Measurement Date.

"Fair Allocation Plan" has the meaning given in Article 1.

"Finance Amount" means, for a Reference Period ~~in respect of an Absolute Assignee~~, the sum (without duplication) of the following amounts that are or become payable during the Reference Period in respect of ~~the~~**all** Absolute ~~Assignee~~**Assignees**: (a) Repayments; (b) **Net** Funding Costs; (c) Redemption Amounts; (d) Finance Reserve Deposits; and (e) Additional Funding Charges.

"Finance Reserve Deposits" means, for a Reference Period, the amount by which (a) deposits made or to be made during the Reference Period in order to pre-fund, collateralize, over-collateralize or establish reserves for the ultimate payment of Funding Obligations or for related contingencies specified in the Financing Plan, exceed (b) any Finance Reserve Withdrawals. **[NTD: Move this to regulation.]**

"Finance Reserve Withdrawals" means, for a Reference Period, the amount withdrawn during the Reference Period from deposits previously made to pre-fund, collateralize, over-collateralize or establish reserves for the payment of Funding Obligations or to pay amounts in respect of related contingencies that had been specified in the Financing Plan. **[NTD: Move this to regulation.]**

"Financial Services ~~Agent~~**Manager**" means OPG or, following any Replacement Event **involving OPG**, such other person ~~or persons~~ who may be appointed as the ~~Financial Services Agent~~**financial services manager** of the Absolute Assignees under the Financing Plan in compliance with the requirements set out in Schedule 2.[5]~~3~~

"Financing Entity" means ~~an entity established in accordance with the Financing Plan to acquire all or an interest in the Regulatory Asset as an Absolute Assignee and to enter into Funding Obligations to finance such acquisition under the Financing Plan.~~[6]**any entity established at the initiative of and managed by the Financial Services Manager to support the Financing Plan.**[4]

"Financing Plan" means the written plan prepared by the Financial Services ~~Agent on behalf of each Absolute Assignee in compliance with Article 9 to set forth the basis upon which, among other things: (a) any Disposition may be made to, financed by or effected by an Absolute Assignee; (b) any Funding Obligations may be incurred by an Absolute Assignee, including any Refinancing; (c) any Pledge may be given or effected; (d) any Funding Obligations may be redeemed, prepaid, repurchased, amended or otherwise effected; (e) any obligations for Additional Funding Charges may be incurred and paid; (f) any Repayments, Funding Costs and Redemption Amounts may be paid or provided for; (g) any Finance Reserve Deposits may be made; (h) any Finance Reserve Withdrawals may be made; (i) the establishment and operation of any Financing Entity may be effected; and (j) the cash flows arising from time to time or otherwise derived from an Investment Interest may otherwise be applied,~~**Manager in accordance with Article 9,** as the same may be amended, amended and restated or terminated by the

[5] ~~Discuss whether to accommodate multiple~~[3] **There must only be one** Financial Services ~~Agents. MOE to consider~~**Manager**.

[6]4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the *Electricity Act* (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the *Income Tax Act* (Canada) or the *Taxation Act, 2007* Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Financial Services ~~Agent~~**Manager** in ~~compliance~~**accordance** with Article 9 from time to time.

~~"Funding Costs" means, for a Reference Period in respect of an Absolute Assignee, the amount by which (a) the aggregate of all interest< *and other periodic finance charges accruing due and becoming payable or paid by or on behalf of the Absolute Assignee during the Reference Period in respect of its Funding Obligations, including* >any standby commitment fees or charges paid to any lender, credit enhancement fees or charges paid to any credit enhancer, liquidity fees or charges paid to any liquidity provider, amounts (including any termination payments) paid under derivatives and any deposit amount made or required to fund or replenish a debt service reserve account or other account established under any indenture, ancillary agreement or other financing document relating to its Funding Obligations, exceeds (b) the aggregate of all amounts received by or on behalf of the Absolute Assignee during the Reference Period in respect of a Funding Obligation, including from any reimbursement of standby commitment fees or charges paid by a lender, any reimbursement of credit enhancement fees or charges paid by any credit enhancer, any reimbursement of liquidity fees or charges paid by any liquidity provider, any amounts (including any termination payments) paid to the Absolute Assignee under derivatives and any Finance Reserve Withdrawal made or required to be made from a debt service reserve account or other account established under any indenture, ancillary agreement or other financing document relating to the payment of the Funding Costs payable in respect of a Funding Obligation for the Reference Period.~~

"Funding Obligation" means, in respect of an Absolute Assignee, each payment obligation (including**, without limitation,** each obligation to pay: principal, interest, premiums and other financing charge payments; pass-through payments; payment obligations arising under or in respect of derivatives; payment obligations owing to service providers, Financial Services ~~Agents~~**Managers**, finance entity intermediaries, capital markets intermediaries, advisors, lenders, credit enhancement providers, liquidity providers, disbursement counterparties, regulatory agencies and rating agencies; and all Additional Funding Charges**)** incurred by or on behalf of the Absolute Assignee under the Financing Plan, including any Refinancing of another such payment obligation incurred by or on behalf of such Absolute Assignee.

"Future Fair Share of Green Transition Benefits" means, in respect of a Measurement Date, the sum of (a) the Over-Assessed Amount; and (b) the Estimated Future Green Transition Benefits, in each case as of the Measurement Date.

~~"Generator" means a generator of electricity that is subject to the *Electricity Act, 1998*.~~

"Global Adjustment" has the meaning given in Article 1.

"Green Costs Adjustment" has the meaning given in Article 1.

"Green Generation Initiative" has the meaning given in Article 1.

"IESO" means the Independent Electricity System Operator created pursuant to Part II of the *Electricity Act, 1998*.

~~"IESO Available Amount" means, for a Reference Period, the lesser of (a) the amount (if any) by which (i) the Maximum Transition Charge Amount for the Reference Period, exceeds (ii) Period Finance Amount for the Reference Period, and (b) the IESO Retained Interest Amount as of the [35th] day prior to the first day of a Reference Period plus any IESO Financing Costs that are due and payable and remain unpaid as of the [35th] day prior to the first day of a Reference Period.~~

"IESO Electricity Distribution Receipts" means, for a month, the sum of all amounts payable by Electricity Distributors to IESO **,** during the month pursuant to section • of the *Electricity Act*~~.~~ **in respect of Regulated Consumers. [NTD: IESO indicates that it likely does not work to express in regards to "amounts payable by the LDCs" because settlement between the IESO and LDCs entails payments by LDCs to the IESO and then credits/debits by the IESO to LDCs to reflect RPP shortfalls/overages.]**

~~"IESO Financing Costs" means, for a Reference Period, the financing costs (if any) incurred by IESO pursuant to Section 8(4) in order to finance its ownership of the IESO Retained Interest during the Reference Period.~~

"IESO Funding Shortfall" means, for a month, the amount, if any, by which (a) the IESO Electricity Distribution Receipts that would be payable to IESO for the month if determined without regard to this Act and without regard to the changes made to section 25.33 of, and O.Reg. 429/4 under, the *Electricity Act* with respect to the Global Adjustment concurrently with this Act, exceeds (b) the IESO Electricity Distribution Receipts payable to IESO for the month[~~7~~**5**]~~; provided that if the amount of any such shortfall is determined to have been based on incomplete information, variances or estimates that were inaccurate, an adjustment shall be made in determining the amount of any subsequent shortfall for the month in which the inaccuracy is identified.~~ **.To the extent reasonably necessary to give effect to this Act, or any transaction contemplated hereby, IESO shall calculate the IESO Funding Shortfall for any month taking into account information provided by the Electricity Distributors and (i) such calculation shall be binding for all purposes; and (ii) any demonstrated inaccuracy in the calculation for any month (including any such resulting from inaccuracies in the information provided by Electricity Distributors) shall be accounted for by adjusting the IESO Funding Shortfall for a subsequent month. [NTD: Need to add the mechanism for IESO to record this shortfall because without that there is no Regulatory Asset. This IESO Funding Shortfall is the regulatory asset owned by IESO.]**

~~"IESO Recovery" means each amount remitted to IESO (including by IESO retaining such amount) in respect of the IESO Retained Interest pursuant to Section 5(6)(b), and "IESO Recoveries" means, collectively, all such amounts received by IESO.~~

"IESO Remittances" means, for a Settlement Date, all Electricity Distributor Remittances received by IESO or if applicable the Alternative Collection Agent prior to the Settlement Date and that have not otherwise been remitted to the Regulatory Asset Owners (each with respect to its Regulatory Asset) in accordance with Section 5(6), including the proceeds of any enforcement action undertaken by IESO or if applicable the Alternative

[~~7~~**5**] This has been recast to recognize that the shortfall in the first 4.5 years could exceed the entire GA amount. A more refined approach to describing the concept may be considered.

Collection Agent to recover payment of amounts payable by Electricity Distributors to IESO in accordance with Article 5.

~~"IESO Retained Interest" means IESO's right, title and ownership interest (if any) in, to and under the Regulatory Asset, which shall exclude each Investment Interest.~~

~~"IESO Retained Interest Amount" means, on a day, (a) the sum of all IESO Funding Shortfalls incurred prior to the day, plus (b) the sum of all IESO Funding Costs incurred prior to the day in accordance with Section 8(4), minus (c) the net proceeds received by IESO from or on behalf of each Absolute Assignee as consideration for the Disposition of each Investment Interest paid to IESO by or on behalf of such Absolute Assignee prior to the day, and minus (d) the IESO Recoveries received by IESO prior to the day.~~

"IESO Successor" means the entity appointed by the Province to succeed to the rights and obligations of IESO as the entity responsible for managing the Province's electricity system.

"Investment Interest" means an ownership interest in, to or under the Regulatory Asset that is acquired by an Absolute Assignee pursuant to a Disposition~~, which ownership interest may include (without limitation) ownership of a specified portion on a divided basis of the assets comprising the Regulatory Asset and ownership of an undivided ownership interest in the Regulatory Asset, in each case as may be described in the applicable Disposition Document~~.

"Investment Remittance" means, for a month, the lesser of (a) the aggregate amount of all IESO Remittances for the month, and (b) the sum of the ~~Finance Amounts~~**Funding Obligations** due and payable by all Absolute Assignees in respect of the month.

~~"Maximum IESO Recovery" means, for a month, the amount (if any) by which (a) the IESO Remittances for the month, exceed (b) the sum of all Finance Amounts that are due and payable by Absolute Assignees in respect of the month.~~

~~"Maximum Transition Charge Amount" means, for a Reference Period, (a) the aggregate amount of Future Fair Share of Green Transition Benefits that are allocable to the applicable Retail Consumer Group in accordance with the Fair Allocation Plan, divided by (b) the applicable Reference Period Length.~~

"Measurement Date" means [Insert relevant date around the Legislation Implementation Date] and any other date specified as such under the Fair Allocation Plan.

"Net Funding Costs" means, for a Reference Period in respect of a Financing Entity, the amount by which (a) the aggregate of all interest, scheduled principal> *and other periodic finance charges accruing due and becoming payable or paid by or on behalf of the Absolute Assignee during the Reference Period in respect of its Funding Obligations, including* <**such amounts as may be prescribed, exceeds (b) the aggregate of all amounts received by or on behalf of the Absolute Assignee during the Reference Period in respect of the Funding Obligations referred to in (a), including such amounts as may be prescribed.**

"OEB" means the Ontario Energy Board, together with its successors.

"OPG" means the corporation incorporated as Ontario Power Generation Inc. under the *Business Corporations Act* on December 1, 1998, together with its successors.

"Over-Assessed Amount" means, in respect of a Measurement Date, the amount (if any) by which (a) the Assessed Past Green Transition Costs, exceeds (b) the Estimated Past Green Transition Benefits, each as determined as of the Measurement Date.

"Period Finance Charges" means, for a Reference Period, the sum of (a) the Estimate of the Finance Amount ~~and~~ (b) the True-Up Amount in respect of the ~~immediately preceding Reference Period. "Period Transition Charges" means, for a Reference Period, the sum of (a) the Period Finance Charges for the Reference Period and (b) the IESO Available Amount for the Reference Period.~~ **applicable True-Up Period and (c) an adjustment amount as may be prescribed to account for estimated collection shortfalls and collection delays in respect of amounts under (a) and (b).**

"Pledge" means, in respect of an Investment Interest of an Absolute Assignee, a lien, mortgage, charge or security interest granted to or in favour of a Pledgee by the Absolute Assignee in, to and over all or a specified portion (including a specified portion on a divided basis or by way of an undivided interest) of the Investment Interest.

"Pledgee" means a person to whom an Absolute Assignee grants a Pledge.

"Program End Date" means •, [2047].

"Province" means the Province of Ontario.

"Redemption Amount" means the amount payable by or on behalf of an Absolute Assignee to redeem, prepay or repurchase a Funding Obligation incurred by or on behalf of the Absolute Assignee, including any premium, make-whole or other additional amount becoming payable under the Funding Obligation to give effect to such redemption, prepayment or repurchase.

"Reference Period" means (a) the period from (and including) the Measurement Date to (and including) ~~June~~**October** 30, 2017, (b) each six month period commencing [May 1st and November 1st] thereafter and (c) any other period specified as such in the Fair Allocation Plan.

~~"Reference Period Length" means, for a Reference Period, the number of months in the Reference Period.~~

"Refinancing" means, in respect of a Funding Obligation incurred by or on behalf of an Absolute Assignee, that the Funding Obligation is repaid or repurchased for cancellation by or on behalf of the Absolute Assignee by applying the net proceeds obtained by the Absolute Assignee incurring one or more other Funding Obligations.

"Regulated Consumer" means consumers of electricity in the Province as prescribed.

[NTD: There are a number of issues with this definition. First, the word "Retail" is a source of confusion as it implies customers of licensed retailers. Really, the purpose of the term is to define the group of consumers that are eligible to receive the benefit of the Fair Hydro program and who will bear the cost of the program over the long term. We have proposed "Regulated Consumer" but you could also use the term "Eligible Consumer" or "Fair Hydro Eligible Consumer" and for purposes of the legislation to say that it is a member of a class of consumers prescribed by the regulations for purposes of the relevant section of the legislation. The regulation would then describe who is in the class. Second, it may not be appropriate to rely on the class of consumers prescribed for the purposes of s. 79.16 or under the OREC Act. Section 79.16 is the section that defines the class of RPP consumers. We understand that the "Fair Hydro Eligible Consumers" are not an identical class to that which is eligible for the RPP or for> *the Ontario Rebate for Electricity Consumers*<. For example, we have heard that Fair Hydro Eligible Consumers will (a) exclude consumers served by independent power authorities (certain remote communities not served by Hydro One Remotes), and (b) include consumers served by licensed unit sub-metering providers, licensed retailers and certain consumers served directly by the IESO (which may or may not be captured by the classes under 79.16 or OREC). Third, it is not clear why consumers with contracts with retailers who use retailer consolidated billing are removed from the first part of the definition but then added back into the second part of the definition. Fourth, Retailers do not necessarily have physical electricity assets that would be connected to the grid. Some just sell or offer contracts for electricity. As such, the first few lines after (b) are problematic. Fifth, the phrase "purchase electric generation services from a provider of electric generation services other than the owner of the Province's transmission and distribution system assets" does not make sense. A consumer does not purchase generation services from a transmitter or distributor. Rather, a consumer receives distribution services from a distributor. In addition to charging for its distribution services, the distributor also charges the associated transmission costs and commodity costs associated with the volumes delivered. Those commodity costs are the price of the electricity itself and are almost entirely made up of the amounts determined under the global adjustment. Sixth, the phrase "> *whether or not the transmission and distribution system assets continue to be owned or operated by Electricity Distributors or operated by IESO*<" does not make sense. Transmission assets are owned and operated by transmitters. Distribution assets are owned and operated by distributors. The IESO does not own but does administer and direct the operation of the transmission system.]

"Regulatory Asset" means the property rights and interests described in Section 6(1), which collectively is comprised of ~~the IESO Retained Interest and~~ each Investment Interest.

"Regulatory Asset Account" means (a) for an Electricity Distributor, any bank account into which the Electricity Distributor deposits or receives Transition Charge Collections; and (b) for the Servicer, any bank account into which ~~IESO~~Servicer deposits or receives Transition Charges~~, Electricity Distributor Remittances or IESO Remittances; and (c) if applicable, for the Alternative Collection Agent, any bank account into which~~

the Alternative Collection Agent deposits or receives Transition Charge Collections, Electricity Distributor Remittances or IESO Remittances.

"Regulatory Asset Owner" means each of (a) IESO, as owner of (and to the extent of) the IESO Retained Interest and (b) each Absolute Assignee, as owner of its Investment Interest or Investment Interests, and "Regulatory Asset Owners" means collectively IESO and each such Absolute Assignee, who together own the entirety of the Regulatory Asset and are required to exercise their individual rights of ownership in accordance with Section 6(7).

"Related Rights" means**, with respect to a Regulatory Asset Owner's Investment Interest,** all rights of any kind (whether in tort, contract or otherwise) that attach or are attendant or incidental to any of the other property rights or interests that comprise such Regulatory Asset**Investment Interest**.

"Remittance Date" means, in respect of an Electricity Distributor, each day on which it is required to remit Electricity Distribution Remittances to IESO**Servicer** or if applicable the Alternative Collection Agent as specified in accordance with any Funding Obligation or, if no such day is specified in accordance with any Funding Obligation, then the Business Day **[NTD: Not defined.]** preceding each Settlement Date. **[NTD: Move to Regulations. Remittances will be in accordance with the current rules.]**

"Repayment Obligation" means an obligation to repay, redeem or repurchase, or to provide for the repayment, redemption or repurchase (including by making a related Finance Reserve Deposit) of, all or a portion of the amount advanced to the Absolute Assignee under a Funding Obligation.

"Repayment" means a payment by an Absolute Assignee made to satisfy a Repayment Obligation, other than to the extent that the payment is made by applying the proceeds of a Refinancing or from Finance Reserve Withdrawals.

"Replacement Event" means any event specified as such in a Funding Obligation.

"Retail Consumer" means:

(a) present and future consumers of electricity in the Province who are (i) consumers designated under section 79.16 of[, and O.Reg 95/05 under,] the *Ontario Energy Board Act, 1998*, or (ii) hold or are deemed to hold an "eligible account" under< *the Ontario Rebate for Electricity Consumers*> *Act, 2016*, other than any such consumer who has a contract with a Retailer who uses Retailer Consolidated Billing; and

(b) present and future Retailers who use Retailer Consolidated Billing,

and each case includes all such consumers and Retailers who are connected, directly or indirectly and whether a customer of an Electricity Distributor or not, to the transmission and distribution system assets located in the Province and who are taking electric delivery service within the Province, whether or not such retail consumers produce their own electricity or purchase electric generation services from a provider of electric generation services other than the owner of the Province's transmission and distribution

system assets and <*whether or not the transmission and distribution system assets continue to be owned or operated by Electricity Distributors or operated by IESO*>.

"Retail Consumer Group" means, in relation to a Reference Period, the Retail Consumers who receive Electricity Invoices during the Reference Period.

"Retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity.

"Retailer Consolidated Billing" has the same meaning as in the *Retail Settlement Code* issued by the Ontario Energy Board.

"Service Area" means, in respect of an Electricity Distributor, the geographic area or region in which it is licensed to distribute electricity in accordance with the *Electricity Act, 1998*.

"Servicer" means IESO or IESO Successor, as agent for and on behalf of the Regulatory Asset Owners, for the purposes set forth in Article 4.

"Settlement Date" means the [last Business Day of any month].

"Transition Charge" means, for a Retail**the amount recoverable from a Regulated** Consumer in respect of a Reference Period, (a) the Period Transition Charge, (b) multiplied by its Allocation Factor in respect of the Reference Period, divided by (c) the applicable Reference Period Length. **being the Period Finance Charge as allocated to such Regulated Consumer in accordance with Article 4(3) on a monthly basis. [NTD: This needs to be grossed up to account for variability associated with expected uncollectables and remittance delays.] [NTD: Do not need to create parallel process. The definition should be linked to the OEB process for determining the volumetric rate as part of the RPP process (see s. 4(2)). The OEB will determine volumetric rate based on forecast consumption, number of consumers, etc. to recover the Period Finance Charges.]**

"Transition Charge Collection" means any amount received **[or deemed by this Act to have been received] by the Absolute Assignees** upon the collection of a Transition Charge paid by or on behalf of a Retail**Regulated** Consumer, including any proceeds arising from the exercise and enforcement of any related rights and interests under or in respect of the Regulatory Asset.

"True-Up Amount" means, in respect of a Reference Period, the amount (which may be a negative amount) calculated by the Financial Services Agent**Manager** equal to (a) the >*Actual Finance Amount for such related True-Up Period*<**, minus (b) the** Estimate of the Finance Amount for the related True-Up Period, minus (b) the <*Actual Finance Amount for such related True-Up Period*>, plus (c) the Collected Amount Adjustment for such related True-Up Period. **[NTD: need to discuss how this will work for our true-up. What about prior period shortages? An example of how this works needs to be provided.]**

"True-Up Period" means, in relation to a Reference Period, the~~ period from and including the [30th] day~~ immediately preceding~~ the first day of the Reference Period, to but excluding the [30th] day immediately preceding the last day of the~~ Reference Period.

"Undertaking of ~~the Lieutenant Governor in Council~~**Her Majesty in right of Ontario**" means the undertaking of ~~the Lieutenant Governor in Council~~**Her Majesty in right of Ontario** given under Section 11(2).

Article 3 – Transition Charges

(1) ~~Retail~~**Regulated** **Consumer Obligation to Pay a Transition Charge** – Each ~~Retail~~**Regulated** Consumer shall pay each Transition Charge charged to it in any Electricity Invoice issued to such ~~Retail~~**Regulated** Consumer by its Electricity Distributor or by an Alternative Servicer under Section 4(1), in each case on the terms of payment specified in the related Electricity Invoice.

(2) **Indebtedness of ~~Retail~~Regulated Consumers** – Until paid, a Transition Charge charged to a ~~Retail~~**Regulated** Consumer in an Electricity Invoice shall, together with any applicable late payment fees and finance charges arising under the terms of the Electricity Invoice with respect to such Transition Charge, constitute non-bypassable indebtedness of the ~~Retail~~**Regulated** Consumer to the Regulatory Asset Owners, each with respect to its respective interest in the Regulatory Asset. Such indebtedness shall constitute a single and separate[~~8~~6] debt obligation owing by the ~~Retail~~**Regulated** Consumer, which subject to Article 5 may be enforced independently from any other payment obligation or indebtedness owing by the ~~Retail~~**Regulated** Consumer under the Electricity Invoice or otherwise.[~~9~~7]

(3) **No Set-Off or Reduction** – A ~~Retail~~**Regulated** Consumer may not set-off or reduce (by counterclaim, defense or otherwise) the amount payable by it in respect of any Transition Charge, including any set-off against or in respect of any amount owing or becoming payable to such ~~Retail~~**Regulated** Consumer by its Electricity Distributor, any Regulatory Asset Owner or any other person.

(4) **Allocation of ~~Retail~~Regulated Consumer Payments** – If an Electricity Distributor receives a payment made by or on behalf of a ~~Retail~~**Regulated** Consumer in respect of amounts due and payable under one or more Electricity Invoices that is less than the total amount payable thereunder, such payment shall be ~~allocated on a *pro rata* basis to the payment of related Transition Charges and other invoiced amounts and the amount so allocated as a payment of related Transition Charges shall be deemed to constitute a Transition Charge Collection~~**subject to rights and benefits that are no less favourable than the treatment accorded to other amounts payable to the IESO by the Electricity Distributor**.

(5) **Transition Charges are Irrevocable** – The Transition Charges arising under or in respect of Funding Obligations~~ incurred under the Financing Plan~~ (including any

[~~8~~6] Determine if this is critical for rating and markets. Logistics under consideration.

[~~9~~7] Torys has also suggested that deemed conditions of licenses for distributors, retailers and unit sub-metering providers, could be included as conditions, to require them to collect and remit amounts in accordance with this legislation. Consider if it is helpful to integrate the existing regulatory scheme for invoicing and collections (regarding RPP) in the legislation.

adjustments based on modifications to such Funding Obligations made in compliance with the Financing Plan or as a result of amendments to the Financing Plan made in accordance with Section 9(3)) are deemed to be irrevocable, final and effective without any further action, except to the extent of manifest calculation error. For greater certainty, a Transition Charge may include Finance Amounts for a Reference Period **regardless of** whether ~~or not~~ the payment of such Finance Amounts are inconsistent with the Fair Allocation Plan applicable at the time such payments are due and payable, **and regardless of** whether ~~or not~~ the related Funding Obligation was properly incurred under the Financing Plan. In no case shall a Funding Obligation incurred under the Financing Plan be affected by a subsequent amendment to the Fair Allocation Plan.

(6) True-Up of Transition Charges? – [NTD: Include specifics regarding the true-up of the charges and the process for the true-up, but move to Regulations. The True-Up Mechanism should require the Transition Charges to be reviewed and adjusted semi-annually to ensure the expected recovery of amounts sufficient to timely provide all payments in respect of Funding Obligations, provided that in some cases it may need to be adjusted more frequently than semi-annually, e.g., as part of a refinancing.]

(7) Commencement of Invoicing and Collection of Transition Charges – [NTD: Please confirm that as drafted, Transition Charges will begin on the Measurement Date.]

Article 4 – Invoicing of Transition Charges [NTD: Move Article 4 sections (1) to (4) to Regulations. Also note, these sections remain subject to further due diligence by the Dealers.]

(1) Inclusion of Transition Charges in Electricity Invoices – Each Electricity Distributor and if applicable any Alternative Servicer shall, as an agent of the Regulatory Asset Owners, specify the Transition Charge to be charged to a ~~Retail~~**Regulated** Consumer pursuant to Section 4(4) in respect of a related Reference Period in each Electricity Invoice issued by the Electricity Distributor or if applicable by the Alternative Servicer to the ~~Retail~~**Regulated** Consumer in respect of such Reference Period. Upon the inclusion of a Transition Charge in an Electricity Invoice, the obligation to pay such amount shall be binding on the applicable ~~Retail Consumer.~~**Regulated Consumer. [NTD: Must capture bills issued to eligible consumers served by unit sub-metering providers, retailers and the IESO – not just distributors][NTD: This provision also needs to address the inclusion of Transition Charges in invoices from the IESO to the LDC, consistent with the current process of how the IESO bills LDCs.]**

(2) Calculation of the Period ~~Transition~~Finance Charge – Not later than [35] days prior to the first day of a Reference Period, each Absolute Assignee (or the Financial Services ~~Agent~~**Manager** on its behalf) shall provide the OEB with written notice of each Estimate of a Finance Amount payable by it or on its behalf in respect of the Reference Period. ~~[35] days prior to the first day of a Reference Period, IESO or Successor IESO if applicable shall specify the IESO Retained Interest Amount and any IESO Financing Costs that are due and payable and remain unpaid on such day.~~ Not later than one month prior to the first day of a Reference Period, ~~the OEB~~**each Absolute Assignee (or the Financial Services Manager on its behalf)** shall calculate the Period ~~Transition~~**Finance** Charge applicable to the Reference Period ~~based on the calculations and information set forth in such written notices received from the Absolute Assignees~~

~~and based on~~**having regard to** such amounts specified by ~~IESO or Successor IESO~~**the Servicer**, which calculations, information and amounts shall be **accepted by the OEB and shall be** determinative, except to the extent of manifest calculation error or misstatement.

(3) **Calculation and Attribution of Transition Charges** – Not later than 25 days prior to the first day of a Reference Period, the OEB shall apply the Attribution Methodology to determine the ~~Allocation Factor~~**allocation of the Transition Charge** for each ~~Retail~~**Regulated** Consumer ~~of the applicable Retail Consumer Group~~. **[NTD: We think the OEB would be determining the Fair Hydro recovery rate (on a volumetric basis) that distributors would then be required to charge to consumers]**

(4) **Notice of Transition Charges** – Not later than 20 days prior to the first day of a Reference Period, the OEB shall inform each Electricity Distributor and if applicable any Alternative Servicer of the Transition Charges to be specified in the Electricity Invoices to be issued to each ~~Retail~~**Regulated** Consumer ~~of the applicable Retail Consumer Group who has a billing address in~~**who is served by** the Electricity Distributor~~'s Service Area~~.

(5) **Adjustments** – The amount of any Transition Charge charged to a ~~Retail~~**Regulated** Consumer and specified as such in an Electricity Invoice shall be determinative of the amount of indebtedness created thereby and owing in respect of such Transition Charge, except to the extent of any manifest calculation error.

(6) **Successors of Electricity Distributors** – Any successor of an Electricity Distributor shall be bound by the requirements of Article 4 and shall perform and satisfy all duties and obligations of such Electricity Distributor under Article 4 in the same manner and to the same extent as such Electricity Distributor, including the obligation under Article 4 to impose, attribute, charge, bill and invoice the Transition Charges.

(7) **IESO Successor** – Any IESO Successor shall be bound by the requirements of Article 4 and shall perform and satisfy all duties and obligations of IESO under Article 4 in the same manner and to the same extent as IESO, including the obligation to calculate and provide notice of Transition Charges.

(8) **Appointment of an Alternative Servicer** – If a Replacement Event occurs in respect of any Electricity Distributor, the Absolute Assignees shall, in accordance with the Collective Rights Agreement, be permitted, by an instrument in writing, to appoint an Alternative Servicer to perform some or all of the obligations and duties required to be undertaken by such Electricity Distributor under this Article 4, as and to the extent specified in such appointment. Upon acceptance of such appointment, the Alternative Servicer shall become obligated to perform such assumed obligations in replacement of such Electricity Distributor. Any Electricity Distributor that is replaced under this Section 4(8) shall promptly transfer all rights, powers, privileges and property interests in its possession or within its control in the performance of such obligations and duties to the Alternative Servicer and shall take such further actions, including the execution of instruments, necessary to give full and final effect to such transfer and to permit the Alternative Servicer to perform such obligations and duties on behalf of the Regulatory Asset Owners. **[NTD: We would expect the IESO to manage this in accordance with its normal business practices.]**

(9) Absolute Assignees have Standing – The Absolute Assignees, acting together in accordance with the Collective Action Agreement, may bring actions against any Electricity Distributor, IESO, the Servicer, Alternative Servicer or any other person who may be authorized to issue Electricity Invoices to ~~Retail~~**Regulated** Consumers for a failure to impose, attribute, charge, bill or invoice Transition Charges **or to otherwise comply with this Act**. Any court of the Province shall have jurisdiction over any actions brought before it by the Absolute Assignees in relation to any such failure~~.~~ **and may make any interim or final order it thinks fit in this regard. [NTD: We would like to see the sections on "Standing" to bring an action to remain in the legislation (as opposed to being moved to the regulations as we believe we previously suggested) as we see those provisions as part of ensuring a rigorous enforcement scheme for the Financing Entity (and so something that should be difficult for the Province to change going forward).]**

(10) No Set-Off or Reduction – No Servicer or Electricity Distributor may set off or reduce (by counterclaim, defence or otherwise) the amount payable by it pursuant to this Article 4.

(11) Regulations – Regulations may be enacted for the purpose of specifying further rights, powers, privileges, duties and obligations that shall apply to IESO, any Electricity Distributor or any Alternative Servicer to ensure that Transition Charges are properly charged to ~~Retail~~**Regulated** Consumers and specified as such in Electricity Invoices.

Article 5 – Collections and Remittances [NTD: Move Article 5 sections (3), (6), (9), (12), (13) and (14) to Regulations.]

(1) **Duty to Collect as Agent** – Electricity Distributors or if applicable any Alternative Collection Agent shall, as an agent of the ~~Regulatory Asset Owners, undertake [diligent][reasonable][10] efforts to~~**Servicer,** collect amounts owing by ~~Retail~~**Regulated** Consumers in respect of Transition Charges charged to such ~~Retail~~**Regulated** Consumers in Electricity Invoices issued by the Electricity Distributor or if applicable such Alternative Collection Agent~~.~~ **all in accordance with the Regulations. [NTD: The obligation to collect and remit the Transition Charge should be included as a deemed condition of license for electricity distributors (and retailers and unit sub-metering providers).]**

(2) **Segregation of Transition Charge Collections** – An Electricity Distributor or if applicable any Alternative Collection Agent shall promptly segregate Transition Charge Collections from other payments received by it from ~~Retail~~**Regulated** Consumers and deposit such Transition Charge Collections into its Regulatory Asset Account.[11]~~8~~ **[NTD: Determine if this is critical for rating and markets or if segregation can occur in the hands of the IESO]** Prior to and following a deposit of Transition Charge Collections having been made into its Regulatory Asset Account, the Electricity Distributor or if applicable any Alternative Collection Agent shall hold such amounts in trust for the Regulatory Asset Owners **or its Pledgee**.

(3) **Electricity Distributor Remittances** – On each applicable Remittance Date, an Electricity Distributor shall remit all **amounts invoiced by the IESO on account of the**

[10] ~~Mirror collection "standard of care" under applicable legislation.~~

[11]~~8~~ Consider trying to attach to existing LDC credit enhancements and provide parallel coverage for customer losses.

Transition Charge ~~Collections received by it from Retail Consumers~~ in respect of the related Reference Period to or to the account of ~~IESO~~**Servicer** or if applicable the Alternative Collection Agent. **[NTD: It is the Dealers expectation that the Transition Charge will be paid on the same basis as other amounts invoiced by the IESO, failing which, they will need to be remitted daily.]**

(4) **Duty to Collect Electricity Distributor Remittances** – ~~IESO~~**Servicer** or if applicable any Alternative ~~Collection Agent~~**Servicer** shall, as an agent of the Regulatory Asset Owners, ~~undertake [diligent][reasonable] efforts to~~ accept and collect Electricity Distributor Remittances from Electricity Distributors and Transition Charge Collections from ~~Retail~~**Regulated** Consumers that pay their Electricity Invoices directly to IESO~~.~~[12] **on the same basis as it accepts and collects other charges from such Regulated Consumers.**[9]

(5) **Segregation of Electricity Distributor Remittances** – ~~IESO~~**Servicer** and if applicable the Alternative Collection Agent shall promptly segregate Electricity Distributor Remittances from other payments received or held by it and deposit such Electricity Distributor Remittances into its Regulatory Asset Account. Prior to and following a deposit of Electricity Distributor Remittances having been made into its Regulatory Asset Account, ~~IESO~~**Servicer** or if applicable any Alternative Collection Agent shall hold such amounts in trust for the Regulatory Asset Owners **or Pledgee**.

(6) ~~**IESO**~~**Servicer Remittances** – On each Settlement Date[13]**10**, ~~IESO and if applicable the Alternative Collection Agent~~**Servicer** shall remit all amounts on deposit in its Regulatory Asset Account ~~(a) first,~~ to or to the account of the Absolute Assignees an amount equal to the Investment Remittance for the related month ~~and (b) second, to IESO (including by IESO retaining such amount) an amount equal to the lesser of (i) the Maximum IESO Recovery for the related month and (ii) the IESO Retained Interest Amount as of the Settlement Date~~.

(7) **Successors of Electricity Distributors** – Any successor of an Electricity Distributor shall be bound by the requirements of Article 5 and shall perform and satisfy all duties and obligations of such Electricity Distributor under Article 5 in the same manner and to the same extent as such Electricity Distributor, including the obligation under Article 5 to collect Transition Charges and make remittances of Electricity Distributor Remittances.

(8) **IESO** ~~**Successor**~~**Successors** – IESO ~~Successor~~**Successors** shall be bound by the requirements of Article 5 and shall perform and satisfy all duties and obligations of IESO under Article 5 in the same manner and to the same extent as IESO, including the obligation to collect Transition Charge Collections, Electricity Distributor Remittances and to remit IESO Remittances.

(9) **Owners of Distribution Assets** - If any person other than an Electricity Distributor acquires distribution system assets in the Province or invoices or collects electricity distribution rates in the Province[14]**11**, then such person shall, if requested by the Absolute Assignees, be obligated to act diligently to (a) facilitate the invoicing and collection of any Transition Charges applicable to ~~Retail~~**Regulated** Consumers ~~in its~~

[12]**9** Consider building this obligation into a deemed condition of licence for the IESO.
[13]**10** Consider frequency of remittances in light of rating requirements. US rating agencies favour daily remittances.
[14]**11** This is in anticipation of a possible future restructuring of the distribution system.

applicable service area, including all consumers connected to the electricity**such person's** distribution system assets and taking electric delivery service located within such service area; (b) allocate partial payments by Retail**Regulated** Consumers as provided in this Act; (c) exercise all enforcement rights of the Absolute Assignees for the benefit of an Absolute Assignee; and (d) remit any Transition Charge Collections to the Absolute Assignees or Pledgees, as applicable, each in accordance with its Investment Interest. **[NTD: Such acquisition of a distribution system would require the person to be an electricity distributor; consider deleting since this is covered off by Section 5(7).]**

(10) **Absolute Assignees have Standing** – The Absolute Assignees, acting together in accordance with the Collective Action Agreement, may bring actions against any Electricity Distributor, IESO**Servicer**, the Alternative Collection Agent, any owner of electricity distribution system assets in the Province or any other person who may be authorized to collect electricity distribution and use charges from Retail**Regulated** Consumers for a failure to collect Transition Charges, remit or collect Electricity Distributor Remittances or remit IESO Remittances, as and to the extent applicable under Article 5.**5, or to otherwise comply with this Act.** Any court of the Province shall have jurisdiction over any actions brought before it by the Absolute Assignees in relation to any such failure **and may make any interim or final order it thinks fit in this regard**.

(11) **Appointment of an Alternative Collection Agent –** If a Replacement Event occurs in respect of any Electricity Distributor or IESO, the Absolute Assignees shall, in accordance with the Collective Rights Agreement, be permitted, by an instrument in writing, to appoint an Alternative Collection Agent to perform some or all of the collection, segregation and remittance obligations otherwise required to be undertaken by such Electricity Distributor or IESO, as applicable, under Article 5, as and to the extent specified in such appointment. Upon acceptance of such appointment, the Alternative Collection Agent shall become obligated to perform such assumed obligations in replacement of such Electricity Distributor or IESO, as applicable. Any Electricity Distributor or IESO, as applicable, that is replaced under this Section 5(11) shall promptly transfer all rights, powers, privileges and property interests in its possession or within its control in, to and over the Regulatory Asset, including its Regulatory Asset Account, to the Alternative Collection Agent and shall take such further actions, including the execution of instruments, necessary to give full and final effect to such transfer and to permit the Alternative Collection Agent to enforce the Regulatory Asset on behalf of the Absolute Assignees.**Not Used. [NTD: The Servicer should manage this process.]**

(12) **No Set-off, etc.** - The Regulatory Asset, including rights in Transition Charges, Transition Charge Collections, and the interests of a Regulatory Asset Owner, an Absolute Assignee and a Pledgee therein, may not be setoff or reduced (including by counterclaim, surcharge or defense) by any Retail**Regulated** Consumer, any Electricity Distributor, IESO**Servicer**, Alternative Collection Agent or any owner of distribution system assets in the Province or any other person or in connection with any default, bankruptcy, reorganization or other insolvency proceeding of any Electricity Distributor,

~~IESO~~**Servicer**, Alternative Collection Agent or any owner of distribution system assets in the Province, any affiliate or successor thereof or any other entity or otherwise.~~15~~12

(13) **Sequestration** – If any Electricity Distributor, ~~IESO~~**Servicer**, the Alternative Collection Agent or any owner of distribution system assets in the Province or any other person or entity authorized to collect Transition Charges, defaults on any required remittance of Transition Charge Collections, Electricity Distribution Remittances or IESO Remittances under Article 5, any court in the Province, upon application by and of the Absolute Assignees acting collectively under the Collective Action Agreement and without limiting any other remedies otherwise available to the Absolute Assignees or Pledgees, shall order the sequestration and payment of the Transition Charge Collections, Electricity Distribution Remittances and IESO Remittances, as applicable, for the benefit of the Absolute Assignees, each with respect to its Investment Interest, and the Pledgees as applicable.~~16~~13

[NTD: Suggest considering a more typical remedy such as the ability to appoint a receiver. Concept should be moved to Regulations.]

(14) Regulations – Regulations may be enacted for the purpose of specifying further rights, powers, privileges, duties and obligations that shall apply to ~~IESO~~**Servicer**, any Electricity Distributor or any Alternative Collection Agent to ensure that rights, interests, entitlements, benefits and proceeds in, to, under and from the Regulatory Asset are of fully realized by some or all of the Absolute Assignees and Pledgees.

Article 6 – The Regulatory Asset

[NTD: We believe that the statute should impose a time limit on the ability of IESO to create additional Regulatory Assets under this Act. It is our expectation that this will be no later than 10 years after the commencement of the program.]

[NTD: In addition, additional language is required to address the acquisition of the Regulatory Asset by the Financing Entity, including reference to the consideration being provided for it, funding upfront costs.]

[NTD: The sale of Regulatory Assets must be restricted to Financing Entities controlled by a single entity (initially, OPG).]

[NTD: For greater certainty, a Financing Entity will not be required to purchase Regulatory Assets from IESO.]

(1) **Composition** – The Regulatory Asset shall constitute a current and irrevocable property right and interest consisting, collectively, of the following rights and interests (without duplication):

~~15~~12 Consider whether it makes sense to create a "deemed collection" payment obligation on Electricity Distributors to the extent a ~~Retail~~**Regulated** Consumer reduces its payment of Transition Charges, despite this language. Same for Electricity Distributor Remittances and IESO Remittances.

~~16~~13 Consider adding or substituting this provision for a right to appoint a receiver.

a. the right of ~~IESO (i)~~**a Regulatory Asset Owner** to record its ~~IESO Retained Interest in its accounts in accordance with Section 8(1), having a stated amount from time to time equal to the IESO Retained Interest Amount; and (ii) to receive IESO Recoveries from time to time in accordance with Section 5(6)(b)~~**portion of the Regulatory Asset in its accounts**;

b. the right to impose, bill, invoice, collect and receive Transition Charges from ~~Retail~~**Regulated** Consumers, including the right to determine the amount of Transition Charges in accordance with this Act;

c. the right to enforce the obligations and indebtedness of each ~~Retail~~**Regulated** Consumer to pay the Transition Charges charged to the ~~Retail~~**Regulated** Consumer from time to time in accordance with Article 3, together with all related late payment fees or interest charges arising in respect thereof under the related Electricity Invoices; **[NTD: Do we really want and need the ability for the Financing Entities to chase after individual consumers?] [NTD: This should be the right to provide notices to the OEB of the amounts required for recovery, which the OEB would then be required to accept for purposes of determining the amount of Transition Charges to be charged to consumers]**

d. the right to enforce the duties and obligations of each Electricity Distributor and if applicable the Alternative Servicer to impose, attribute, charge, bill and invoice the Transition Charges in accordance with Article 4;

e. the right to enforce the duties and obligations of each Electricity Distributor and if applicable the Alternative Collection Agent to collect, receive and remit amounts received by it in respect of Transition Charges as Electricity Distributor Remittances to or to the account of ~~IESO~~**Servicer** or if applicable the Alternative Collection Agent in accordance with Article 5, including all collections and the proceeds of any enforcement action undertaken by the Electricity Distributor or if applicable the Alternative Collection Agent to recover payment of Transition Charges in accordance with Article 5;

f. the right to enforce the duties and obligations of ~~IESO~~**Servicer** and if applicable the Alternative Collection Agent to collect and receive Electricity Distributor Remittances and to remit IESO Remittances to or to the accounts of the Regulatory Asset Owners, each with respect to its respective interest in the Regulatory Asset, in each case in accordance with Article 5, including all collections and the proceeds of any enforcement action undertaken by it to recover payment of Electricity Distributor Remittances in accordance with Article 5;

g. the right to receive and collect all Transition Charge Collections, all Electricity Distributor Remittances and all IESO Remittances in accordance with Article 5;

h. all rights and entitlements under each Regulatory Asset Account and all amounts on deposit in any such Regulatory Asset Account;

i. all Related Rights; and

j. all revenue, collections, claims, payments, money and proceeds of or derived from the rights described in (a) through (i), regardless of whether such revenue, collections, claims, payments and proceeds are imposed, invoiced, collected and maintained together with or commingled with other revenue, collections, claims, payments, money and proceeds.

A Regulatory Asset and the property rights and interests therein shall exist whether or not Transition Charges have been imposed, charged, invoiced, accrued or collected and notwithstanding that the imposition, attribution, invoicing and collection of Transition Charges will depend on further actions that may not have occurred. **The Regulatory Asset shall continue to exist until all Funding Obligations and Additional Funding Charges have been paid in full.**

(2) **Validity of Dispositions** – ~~Despite any limitations or restrictions on a Disposition that may arise by contract or by operation of any applicable law of the Province or any consent requirement applicable to a Disposition that may arise by operation of any applicable law of the Province, a~~**A** Disposition by IESO **of all or any part of the IESO Funding Shortfall** to an Absolute Assignee ~~made under the Financing Plan~~, or **a Disposition of all or any part of an Investment Interest** by one Absolute Assignee to another Absolute Assignee made under the Financing Plan, shall be permitted and when made shall be valid and enforceable in accordance with the terms of the related Disposition Document and shall be effective to confer upon the Absolute Assignee thereof a valid property right and interest in, to and under the ~~applicable~~**IESO Funding Shortfall or** Investment Interest**, as applicable** (or relevant portion thereof) in accordance with the terms of such Disposition, provided that the parties to the applicable Disposition Document have expressly stated therein that such Disposition is a sale or other absolute transfer. Without limiting the foregoing, any Disposition that by its terms is intended to constitute a sale or absolute transfer shall be treated for all purposes as a true sale and absolute transfer of the ~~Regulatory Asset Owner's applicable~~**IESO Funding Shortfall or an Absolute Assignee's** right, title~~,~~ and interest in, to and under ~~the Regulatory Asset~~**an Investment Interest, as applicable** (or relevant portion thereof), and not merely as a Pledge thereof, and upon such Disposition the assigner or seller under the applicable Disposition Document shall retain no right, title or interest in the **IESO Funding Shortfall or** Investment Interest **(or relevant portion thereof)** subject to the Disposition, including all rights under the **IESO Funding Shortfall or** Investment Interest arising after such Disposition. **[NTD: Subject to review by Osler/dealers.]**

(3) **Perfection and Priority of Dispositions** – Any Disposition of an interest in a Regulatory Asset shall be vested, valid, binding and perfected from the time when such Disposition is made. Such Disposition shall be perfected, vested, valid and binding as against the **IESO or** transferring Regulatory Asset Owner**, as applicable,** and all other persons who have claims of any kind (whether in tort, contract or otherwise) against **IESO or** the transferring Regulatory Asset Owner, **as the case may be,** irrespective of whether such persons have notice of the Disposition and the property rights and interests acquired by the Absolute Assignee under such Disposition shall be free and clear of any liens in favour of such other persons.

(4) **Validity of Pledges** – ~~Despite any limitations or restriction on a Pledge that may arise by contract or by operation of any applicable law of the Province or any consent~~

~~requirement applicable to a Pledge that may arise by operation of any applicable law of the Province, a~~**A** Pledge by an Absolute Assignee may be made to secure any ~~related~~ Funding Obligation and when made shall be valid and enforceable in accordance with its terms and shall be effective to confer upon the Pledgee a valid security interest in, to and in respect of the related Investment Interest in accordance with the terms of the Pledge. ~~Other than as required by the Financing Plan, no~~**No** consent of**, or notice to,** any person shall be required to give effect to a Pledge made to secure any Funding Obligation.

(5) **Perfection and Priority of Pledges** - For purposes of the *Personal Property Security Act* (the "PPSA"), the Regulatory Asset shall be intangible personal property and any Pledge made by an Absolute Assignee in respect of a Funding Obligation **shall, subject to the terms thereof, give rise to a security interest of which the PPSA applies, and** may be perfected by filing a financing statement under the PPSA on that basis. All proceeds of a related Investment Interest that are subject to such a Pledge that are received by the Absolute Assignee shall immediately be subject to the such Pledge, and the security interest in such proceeds shall be perfected pursuant to the PPSA.~~17~~**14** A Pledge perfected under the PPSA shall be a continuously perfected security interest and shall have priority over any other lien or security interest, created by operation of law or otherwise, that may attach to the property rights and interests in the Investment Interest subject to the Pledge unless the Pledgee has otherwise agreed in writing. ~~Subject to the terms of the Collective Action Agreement, a~~**A** Pledgee shall have a perfected security interest in a related Investment Interest, including the Absolute Assignee's rights and interests in and to Transition Charge Collections or other related proceeds in respect of the Investment Interest and that are deposited in any Regulatory Asset Account or other account of any Electricity Distributor, IESO, Alternative Collection Agent or other person who may have commingled such Transition Charge Collections or such other proceeds with other funds. All provisions of the PPSA shall apply to the Regulatory Asset on the basis that it is intangible personal property, except to the extent otherwise provided in this Section 6(5).

(6) **Enforcement of Property Rights** – The rights of any Regulatory Asset Owner to collect and enforce its rights and interests in, to or in respect of the Regulatory Asset shall be exercised in the manner set forth in Article 5.

(7) **Owners of a Specified Portion of the Regulatory Asset** – A Regulatory Asset Owner may effect a Disposition to an Absolute Assignee of a specified portion of its rights and interests in the Regulatory Asset, including by way of a Disposition of a divided or an undivided interest therein as specified in a related Disposition Document~~, in each case under the Financing Plan~~. In no circumstance may the specified portions of the rights and interests in the Regulatory Asset owned by all Regulatory Asset Owners be greater than all of the rights and interests that comprise the Regulatory Asset in the aggregate.

(8) **Collective Action Required** – If a Regulatory Asset Owner's rights and interests in the Regulatory Asset comprises less than the entire property right and interest constituted by the Regulatory Asset, such Regulatory Asset Owner shall only enforce such right and interest on a collective and coordinated basis with each other Regulatory Asset Owner in accordance with the Collective Rights Agreement. **[NTD: Move to Regulations.]**

~~17~~**14** Consider whether to simply leave this and have a financing statement be filed under the PPSA. This would normalize the security interest and reduce any adverse suggestion that security would not otherwise arise.

Article 7 – Establishment of the Fair Allocation Plan[1815] **[NTD: Move entire Article 7 to Regulations, other than 7(1) and 7(2).]**

(1) **Adoption of the Fair Allocation Plan** – The Delegate may, [by written declaration,] designate and adopt a Fair Allocation Plan in compliance with Article 7. The Fair Allocation Plan so designated and adopted shall be the Fair Allocation Plan for all purposes of this Act, except if amended, amended and restated or terminated by a further written declaration made by the Delegate in compliance with Section 7(4).**[the Regulations]**

(2) **Principles and Parameters** – A Fair Allocation Plan shall seek to allocate Future Fair Share of Green Transition Benefits across present and future Retail Consumer Groups**Regulated Consumers** on a basis that the Delegate, in its sole and absolute discretion, determines to be equitable, having regard to the following principles and parameters:

[NTD: E&Y will need to see the guidelines of the Fair Allocation Plan set in reference to parameters that will allow it to establish a modeling curve]

- **[Inflation period: (between November 2017 – and April 2022) bill increases need to be capped at inflation (assumed at 2% for modeling purposes)]**
- **[Transition Period: (May 2022- April 2027) bills increased at a consistent rate which is set so that the borrowing will not exceed the Trust's capacity, which is determined by the Finance Service Manager]**
- **[Amortization Period: (May 2027-April 2047) equitable distribution of Finance Amount among Regulated Consumers]**

1. Future Fair Share of Green Transition Benefits should be allocated over the period ending on the Program End Date.

2. <*The Fair Allocation Plan should specify the Reference Periods for the purpose of* >identifying applicable Retail Consumer Groups and <*allocating Future Fair Share of Green Transition Benefits among* >them< *on a relative basis over time.* >

2. 3. The share of Future Fair Share of Green Transition Benefits allocable to a particular Retail**Regulated** Consumer Group in respect of a Reference Period should be proportionate to a reasonable assessment of the benefits of the Green Generation Initiative to the Retail**such Regulated** Consumer Group over such Reference Period., **other than**> *in exceptional circumstances*<**.**

[1815] The idea is that the Fair Allocation Plan will be set once at the outset based on the principles and parameters described here, all as applied based on information available and the reasonable expectations and discretion of the delegate at such time. If the expectations are not fulfilled (e.g., generators may choose to retire their facilities at the end of their current procurement contracts and not invest in extending service lives to secure further procurement contracts), the Fair Allocation Plan will be unaffected, unless it is specifically amended (assuming amendments will be permitted by the legislation).

4. The share of Future Fair Share of Green Transition Benefits to be allocated to a Retail Consumer Group and any future Retail Consumer Group at a particular time should not exceed the Estimated Future Green Transition Benefits, measured in respect of the Reference Periods following such particular time and to the Program End Date.

5. No future Retail Consumer Group should be allocated an unreasonably disproportionate share of Estimated Future Green Transition Benefits. Except<- *in exceptional circumstances*> or in the case of any reallocation of an Over-Assessed Amount as contemplated in 7, below, the Future Fair Share of Green Transition Benefits to be allocated under a Fair Allocation Plan to any future Retail Consumer Group should have regard to *[Insert formula if a year-over-year maximum amount is determined to be appropriate].*

3. 6. The time value of money should be reflected in the Fair Allocation Plan, in order to equate the relative values of the nominal allocations of Future Fair Share of Green Transition Benefits, calculated in current dollars, to future Retail Consumer Groups over time.>*The Fair Allocation Plan should specify the Reference Periods for the purpose of* <>*allocating Future Fair Share of Green Transition Benefits among* <**Regulated Consumers**> *on a relative basis over time.* <

7. To the extent there has been an Over-Assessed Amount, the Fair Allocation Plan may determine that an adjustment should fairly be made to rebate Retail Consumers for such an amount, by reducing the costs otherwise attributable under the Act to such Retail Consumers. The relative costs of the Green Generation Initiative are reflected under the Act by the attribution of Transition Charges to such Consumer Groups, based on the Financing Plan seeking to track the allocations of benefits under the Fair Allocation Plan. Accordingly, the Maximum Transition Charge Amount determined for one or more Retail Consumer Groups having regard to the Fair Allocation Plan otherwise applicable may be appropriately reduced to recognize the effect of the Over-Assessed Amount. In such a case, a determination to reduce the Maximum Transition Charge Amount applicable for certain related Reference Periods should have regard to the principle that the corresponding rebate should be extended to benefit the Consumer Group or Consumer Groups in closest proximity to the Legislative Implementation Date.

(3) Attribution Methodology – The Fair Allocation Plan shall specify the Attribution Methodology for the purposes of allocating the Period Transition**Finance** Charges across the Retail**Regulated** Consumers of a particular Retail Consumer Group. The Attribution Methodology shall result in an attribution of such Transition Charges that is considered by the Delegate to be equitable, and may have regard to such principles and parameters as may be further set forth in a Regulation.; **provided that**> *the Attribution Methodology* <**shall not be used to limit the recovery of Transition Charges. [NTD: Can the methodology be adjusted outside an amendment? If so, the rating agencies need to understand the limits of any adjustment.]**

(4) Amendments of the Fair Allocation Plan – The Fair Allocation Plan may be amended, amended and restated or terminated by the Delegate, provided that such amendment, amendment and restatement or termination shall (a) not be inconsistent with the principles and parameters set forth in (2) or (3), above, or the Regulation ~~and~~, (b) comply with any restrictions or limitations specified with respect thereto in any Funding Obligation~~.~~**, and (c) not impair any Regulatory Asset, outstanding Funding Obligation or any Transition Charges. [NTD: If the Fair Allocation Plan is amended, there should be no further Regulatory Assets until the revised Fair Allocation Plan and corresponding Financing Plan have been approved.]**

Article 8 – The IESO ~~Retained Interest~~Funding Shortfall

(1) ~~Maintain Books of Account~~ ~~– IESO may maintain books of account to record the IESO Retained Interest Amount and all adjustments thereto from time to time. Such books of account shall be determinative with respect to the amount of IESO's related regulatory asset.~~**Recording of IESO Funding Shortfall -- IESO will record any IESO Funding Shortfall in its books.**

~~**(2) Limitation on Additions** – IESO shall not record additions to the IESO Retained Interest Amount in respect of IESO Funding Shortfalls (a) if such additions are restricted by the terms of any Disposition Document or the Collective Action Agreement, or (b) on or after •, 2017.~~

(2) ~~**(3)**~~ **Dispositions** – IESO may effect a Disposition **of all or any part of the IESO Funding Shortfall** to an Absolute Assignee if (a) the ~~Absolute Assignee has or will concurrently become bound by the Collective Rights Agreement; (b) the~~ Disposition is effected pursuant to a Disposition Agreement duly executed by IESO; **and** (~~c~~**b**) the Financial Services ~~Agent~~**Manager** confirms in writing that the Disposition **complies with any restrictions or limitations specified with respect thereto in any documents evidencing the Funding Obligations and** is permitted under the Financing Plan~~; and (d) the net proceeds payable to IESO from the sale of the related Investment Interest would not exceed the IESO Retained Interest Amount immediately before the time of such Disposition~~.

(3) ~~**(4)**~~ **No Continuing Interest in any Investment Interest** – IESO shall have no continuing right or interest in any ~~Investment Interest~~**IESO Funding Shortfall** subject to a Disposition effected by IESO under a Disposition Document to which IESO is a party~~and IESO shall not assert any such right or interest or take or omit to take any action to exercise or enforce its rights or interests under the IESO Retained Interest if such action or omission would impede or obstruct the rights of any Absolute Assignee or a Pledgee to enforce its rights and interests in any Investment Interest, except if IESO is expressly permitted to take or omit to take such action, respectively, under the related Disposition Document or the Collective Rights Agreement.~~

~~**(5) IESO Financing Costs** – IESO shall be entitled in good faith to incur reasonable financing costs (including interest and other reasonable financing charges) reflecting market terms and conditions and which are payable in arrears, in order to finance its ownership of the IESO Retained Interest from time to time. **(6) IESO Recoveries** –~~

IESO shall, in respect of a month, be entitled to receive from IESO Remittances on a related Settlement Date the amount (if any) available to IESO under Section 5(6)(b).

Article 9 – The Financing Plan [NTD: Move all of Article 9 to Regulations other than 9(1).]

(1) Power to Prepare, Implement and Amend the Financing Plan – The Financial Services AgentManager shall be authorized to prepare, implement and amend a financing plan for the Financing Entities> *and propose the adoption*< of such financing plan as the Financing Plan. If the Financial Services Agent is unwilling or unable to prepare< *and propose the adoption*> of the Financing Plan, the Delegate may by written declaration designate one or more other persons who shall be authorized to prepare, implement and amend the Financing Plan for the purposes of this Act. The Financial Services Manager shall have the right to withdraw its financing plan as the Financing Plan at any time if it determines that implementing the Financing Plan in such manner would not be in the best interests of a Financing Entity.

(2) TermsPrinciples and ConditionsParameters of the Financing Plan – The Financing Plan shall establish the basis for each Absolute Assignee's funding decisions. The Financing Plan shall have having regard to the principles and parameters set forth in Schedule 3 and such other conditions and requirements as may be specified in a written declaration of the Delegate or in accordance with the Regulation.3.

(3) OEB Approval – Any Additional Funding Charge payable to or for the benefit of the Financial Services AgentManager in respect of services provided by the Financial Services Manager (other than third party costs) shall be subject to review and approval by the OEB.

(4) OEB Review of Financing Plan – The [OEB] [shall] undertake an annual review of the records maintained by the Financial Services AgentManager for the purpose of confirming that the Funding Obligations incurred and the Finance Amounts paid by or on behalf of the Absolute Assignees were incurred and paid, respectively, in material conformity with the Financing Plan. [NTD: We would prefer that this be dealt with by an attestation prepared by an officer of the Financial Services Manager.]

(5) Replacement of the Administrative AgentFinancial Services Manager – If the OEB identifies deficiencies or makes recommendations in its review under Section 9(4), the Administrative AgentFinancial Services Manager shall take reasonable measures to remedy such deficiencies if remediable, and shall in any event have regard to the recommendations of the OEB in relation to further actions undertaken by the Financial Services AgentManager under the Financing Plan. If the Financial Services AgentManager is unwilling or unable to reflect such recommendations in relation to such further actions, the Delegate may by written declaration designate one or more other persons who shall thereafter become the Financial Services. Manager. Any replacement must comply with the restrictions and limitations specified in the documents evidencing the Funding Obligations.

(6) Obligation to Apply IESO Remittances – The Financial Services AgentManager shall ensure that amounts transferred to it under Article 5, as agent for and on behalf of the Absolute Assignees, or otherwise in respect of or as proceeds from an applicable Investment Interest shall only be applied or used to pay related Finance Amounts when

they are due and payable and for no other purpose. **[NTD: This can be dealt with by contract.]**

(7) Non-Recourse – The Financing Plan shall be implemented so that Funding Obligations incurred shall be without recourse to or to any assets of the Electricity Distributors, IESO, any Alternative Servicer, any Alternative Collection Agent, the Financial Services Agent**Manager**, the OEB, the Province or the Lieutenant Governor in Council **or Her Majesty in right of Ontario**, other than if and to the extent that such persons or entities are liable for the performance of obligations or duties arising under this Act or expressly agree to become liable pursuant to any Funding Obligation or obligation in relation to a Finance Amount. [All Funding Obligations shall contain a statement to the following effect: "Neither the full faith and credit nor the taxing power of the Province of Ontario is pledged to the payment of the principal of, or interest on, this [obligation].]

(8) Incurrences are Binding – Notwithstanding anything to the contrary in this Act, each**Each** Disposition made to or by an Absolute Assignee and**,** all amounts payable or becoming due and payable by or on behalf of an Absolute Assignee under or in connection with any obligation purporting to be a Funding Obligation **and each Pledge entered into by an Absolute Assignee**, shall be **valid and** binding for the purposes of this Act, including in determining the amount of related Transition Charges, despite**notwithstanding** any impairment or defect resulting from such failure**defect in the manner in incurrence or any inconsistency with the Fair Allocation Plan or the Financing Plan**.

[Article 10 – Compliance Matters[19][16]

(1) Right of the [OEB] to Inspect Books and Records - For the purpose of investigating compliance with the provisions of this Act, the OEB shall have the right, jurisdiction, power and authority to examine the books and records of *[Insert names if any]*.

(2) [OPG's Rate Settings – When setting other rates for or in respect of OPG, the OEB shall not take into account (a) the administrative or servicing fees charged by OPG as Financial Services Agent**Manager** [in excess of the actual incremental costs incurred by such person of providing administrative or servicing services]; (b) the cost consequences to OPG of being the Financial Services Agent**Manager**; or (c) the consequence of OPG consolidating the assets and liabilities of any Financing Entity for OPG's accounting purposes, in each case in setting any regulated payment amounts for OPG.][20][17]

[19][16] As noted above, the outcome of any regulatory action undertaken by the OEB will not affect Funding Obligations that have been incurred under the Financing Plan. This Article and any potential role for the Auditor General is still under consideration.

[20][17] As an alternative to this provision, consider clarifying under s. 78.1(4) of the OEB Act (which currently gives the OEB discretion in setting payment amounts subject to O. Reg. 53/05) that the OEB in setting OPG payment amounts for prescribed generation shall not consider OPG's role as Administrative Agent**Financial Services Manager** of any Financing Entities associated with the Fair Hydro initiative, perhaps with the exception of any operating fees that may be received by OPG for performing that role.

Article 11 – Undertaking of the ~~Lieutenant Governor in Council~~[21]Her Majesty in right of Ontario[18]

(1) **No Action to limit, alter, or impair or terminate Transition Charges, the Regulatory Asset or Collections** – ~~The [Lieutenant Governor in Council]~~**Her Majesty in right of Ontario** shall not in any way take or permit **(including by any agency or administrative body)** any action to reduce, impair, postpone or terminate the obligation of ~~Retail~~**Regulated** Consumers to pay Transition Charges or to impair the Regulatory Asset or the collection or recovery of Transition Charge Collections, Electricity Distributor Remittances or IESO Remittances, either directly or indirectly, including through the introduction of any bill or the passing of any legislation or regulation having such effect. The amount of Transition Charges determined under this Act shall not be subject in any way to reduction, impairment, postponement or termination as a result of any action taken or failure by ~~the Lieutenant Governor in Council~~**Her Majesty in right of Ontario (including by any agency or administrative body)**, including through the introduction of any bill or the passing of any legislation or regulation having such effect.

(2) **Undertaking and Agreement** – ~~The [Lieutenant Governor in Council]~~**Her Majesty in right of Ontario** shall not:

(a) in any way take or permit any action that limits, alters or impairs the value of any Investment Interest;

(b) except as required by the estimates and adjustments made in determining the True-up Amount, reduce, alter or impair Transition Charges that are imposed, billed, invoiced, collected and remitted for the benefit of the Absolute Assignees or any Pledgee from time to time;

(c) permit the amendment, amendment and restatement or termination of the Fair Allocation Plan if such amendment , amendment and restatement or termination would adversely affect the validity or enforceability of any Funding Obligation or the rights of an Absolute Assignee or Pledgee thereunder, **or would not otherwise comply with the restrictions and limitations specified in the documents evidencing the Funding Obligations,**

in each case including through the introduction of any bill or the passing of any legislation or regulation having such effect.

(3) **Successor IESO** – If IESO is restructured, dissolved or becomes insolvent or is otherwise incapable of performing its obligations under this Act, **an IESO** Successor ~~IESO~~ shall **immediately** be established **by Her Majesty in right of Ontario** to perform such obligations.

~~21~~[18] Under consideration, including the dealers' request for a "servicer guarantee" and a "contractual guarantee" to address a "Change of Law" or if all or a portion of the legislation is *ultra vires*, requiring (at the lenders option), the Province to pay principal and interest on the outstanding debt until maturity or payout the entire debt including any make-wholes. ⊥
In the event of a market disruption that renders it impossible to refinance debt when required (or where financing of amounts required to service the debt is not available because of a market disruption where the Financing Entity was relying on such further issuance of debt until the recovery is set to begin to fund interest), either the Province must step in and payout the debt or there must be the right to recover the debt from ratepayers as it becomes due, notwithstanding the intended rate cut.

(4) Compensation for Failure – Absolute Assignees shall be compensated **by Her Majesty in right of Ontario** for any losses suffered by them as a result of any failure by ~~the Lieutenant Governor in Council~~**Her Majesty in right of Ontario** to comply with its undertakings and agreements in this Article 11.~~22~~19

(5) No Wind-up of Financing Entity. No Financing Entity may be voluntarily wound up, liquidated or dissolved until one year after all of its Funding Obligations are repaid. **[NTD: This concept can be contained in the Regulations.]**

(6) References to the Undertaking and Agreement – Any non-confidential reference to the Undertaking of the ~~Lieutenant Governor in Council~~**Her Majesty in right of Ontario**, including in marketing materials and other documentation authorized for use by the Administrative in connection with any Funding Obligation, may be made provided that [*Add conditions to protect the Province*].

Article 12 – Regulations

Regulations may be made under this Act for the purposes described in Sections •,•,• and • and may be promulgated for any of the following purposes:

(a) to set standards and measures regarding the commercially reasonable requirements of the Province associated with an Absolute Assignee incurring Funding Obligations or becoming obligated to pay any Finance Amount, including to establish guidelines regarding all-in funding costs; permitted Additional Funding Charges; required maturities and redemption and termination rights of Funding Obligations; liquidity requirements, in each case to a Financing Plan that is consistent in its effect with the Fair Allocation Plan;

(b) to establish and empower one or more regulated entities to undertake decision-making activities with respect to this Act;

(c) to set out reasonable requirements regarding the appointment or retention of advisors, agents, service providers, contract counterparties, including in relation to 'market terms and conditions' parameters;

(d) to provide for audit and compliance standards applicable to those persons who are or may become obligated or have duties that arise under this Act [or under any Funding Obligation];

(e) to provide for any pre-vetting and approval requirements in relation to any incurrence by an Absolute Assignee of any Funding Obligation or obligation to pay any Finance Amount; and

(f) to provide for appeal and due process considerations in connection with the establishment, adoption, implementation and review of the Fair Allocation Plan or the Financing Plan.

Article 13- Miscellaneous~~23~~20

~~22~~19 Requested by ~~Torys~~**Dealers**. For discussion.

~~23~~20 OPG would like the specific amendments related to OPG to be included in the Bill.]

(1) **Choice of law** – The law governing, as applicable, the validity, enforceability, attachment, perfection, priority and exercise of remedies with respect to the transfer of an interest or right or creation of a security interest in the Regulatory Asset, any Transition Charge or the Undertaking of the Province shall be the laws of the Province.

(2) **Conflict of law** – In the event of conflict between this Act and any other law of the Province regarding the attachment, assignment or perfection, or the effect of perfection, or priority of any Disposition or Pledge, this Act shall govern to the extent of the conflict.

(3) **No further acts or approvals required** - Notwithstanding any provisions of any law of the Province to the contrary, no approvals, notices or authorizations other than those specified in this Act shall be required with respect to the actions to be taken in compliance with this Act, including under the Financing Plan or in relation to the establishment of the Fair Allocation Plan, and the transactions and contracts authorized in or contemplated by this Act or the Financing Plan, including the incurrence of any Funding Obligation, any Disposition, any Pledge or in the payment and performance of any attendant or incidental contract and any related expenses incurred to facilitate the preparation and implementation of the Financing Plan.

(4) **Effect of invalidity after the Incurrence of any Funding Obligation** - Effective on the date that a Funding Obligation is incurred under this Act, if any provision of this Act is held to be invalid or is invalidated, superseded, replaced, repealed or expires for any reason, that occurrence shall not affect any action allowed under this Act that is taken by any person who is or may become obligated or have duties that arise under this Act and any such action shall remain in full force and effect.

(5) **Severability** - If any Article, Section, paragraph or subparagraph of this Act or the application thereof to any person, circumstance or transaction is held by a court of competent jurisdiction to be unconstitutional or invalid, the unconstitutionality or invalidity shall not affect the constitutionality or validity of any other Article, Section, paragraph or subparagraph of this act or its application or validity to any person, circumstance or transaction, including the irrevocability of Transition Charges, the validity of the Regulatory Asset, the incurrence of any Funding Obligation, any Disposition, any Pledge, or the collection and recovery of Transition Charge Collections. To these ends, the Legislature hereby declares that the provisions of this Act are intended to be severable and that the Legislature would have enacted this Act even if any Article, Section, paragraph or subparagraph of this Act held to be unconstitutional or invalid had not been included in this Act.

Schedule 1

Guidelines for Estimates

[To be considered.]

Schedule 2

Requirements Applicable to Alternative Invoicing Agent/ Alternative Collection Agent

[To be considered.]

Schedule 3[24]

Principles and Parameters for Establishing the Financing Plan

The following principles and parameters provide a guideline as to what a Financing Plan should address:

~~(1)~~ ~~in respect of each Reference Period, make reference to the allocations of Future Fair Share of Green Transition Benefits to each Reference Group contemplated by the Fair Allocation Plan;~~

~~(2)~~ ~~estimate IESO Funding Shortfalls for each Reference Period;~~

~~(3)~~ ~~consider alternative funding arrangements suitable to fund the estimated IESO Funding Shortfalls, including short term and/or long term Funding Obligations;~~

(1) ~~(9)~~ consider quantities, maturities, payment obligations, prepayment or redemption rights and such other features of Funding Obligations so that payments made for a Reference Period reasonably correspond to the allocations of Future Fair Share of Green Transition Benefits to the applicable Reference Group under the Fair Allocation Plan;

(2) ~~(4)~~ if the anticipated amount of any Repayment (together with payments of other Finance Amounts) to be made in respect of a Reference Period would materially exceed the allocation of the costs and benefits of the Green Generation Initiative to the applicable ~~Retail Consumer Group~~**Regulated Consumers** under the then current Fair Allocation Plan, diligent efforts should be made to determine whether a Refinancing or deferral of such Repayment may be reasonably and cost-effectively effected based on then prevailing market terms, conditions an circumstances;

(3) ~~(5)~~ reflect the assumptions and requirements specified in any contemplated Funding Obligation (e.g., any limit on the maximum amount of Transition Charges charged to a hypothetical ~~Retail~~**Regulated** Consumer relative to his or her monthly electricity bill, as prescribed by any rating agency that ascribes its credit rating to or in respect of the Funding Obligation **[having regard to the application of the** ~~Allocation~~**Attribution Methodology][NTD: Are the words in square brackets necessary?]**);

(4) require the Financial Services Manager, for and on behalf of each Regulatory Asset Owner, to use diligent efforts to manage Finance Amounts to be borne by Ratepayers;

(5) include a proposal regarding the compensation of the Financial Services Manager that reflects market terms and conditions; and

(6) ~~incur Funding Obligations from time to time on the best terms available at such time for a financing transaction of the size and type contemplated, and having regarding to the following parameters:~~**require that the Financial Services Manager report annually to**

[24] ~~Awaiting input from Torys based on OPG mark-up of Financing Plan sections.~~

the Ministry of Energy on the operation of the Financing Plan including, in particular, with respect to the amount and terms of the Funding Obligations incurred and the sufficiency of such Funding Obligations for the purpose of funding the estimated Funding Shortfalls in accordance with the Fair Allocation Plan.

~~a. whether the Absolute Assignees will require committed access to short term liquidity to cover estimated IESO Funding Shortfalls prior to incurring fixed term Funding Obligations, and the amount and repayment terms of any such required liquidity; provided that any Repayment required to be made under the terms of such short term liquidity would not obligate an Absolute Assignee to repay an amount in relation to a Reference Period that would have the effect of the Financing Plan permitting incurrences of Funding Obligations payable in such Reference Period that would exceed the allocations of Future Fair Share of Green Transition Benefits to the applicable Reference Group under the Fair Allocation Plan;~~

~~b. the basis upon which the Financial Services Agent will select the term to maturity of any other Funding Obligations; provided that any Repayments required to be made under the terms of such Funding Obligations should not obligate an Absolute Assignee to repay an amount in relation to a Reference Period that would have the effect of the Financing Plan permitting incurrences of Funding Obligations payable in such Reference Period that would exceed the allocations of Future Fair Share of Green Transition Benefits to the applicable Reference Group under the Fair Allocation Plan;~~

~~c. the basis upon which the interest rates applicable to such Funding Obligations would be determined;~~

~~d. the reference capital or finance market in which such Funding Obligation would be incurred, including markets outside of Canada if considered by the Financial Services Agent to be appropriate in the circumstances;~~

~~e. the currency of payments under such Funding Obligations and, if the Funding Obligations are denominated in a currency other than Canadian dollars, the basis upon which the Financial Services Agent shall cause the applicable Absolute Assignee to enter into hedging transactions to mitigate currency risk, including acceptable minimum and maximum coverage levels, having regard to the availability of related derivatives having notional amounts corresponding to the repayment and maturity profile of such Funding Obligations;~~

~~f. the basis upon which the Financial Services Agent will select counterparties under any transaction to be entered into by an Absolute Assignee, including any paying agent, servicer, cash manager, liquidity provider, hedge counterparty, account bank, lender, note trustee, security trustee, paying agent, registrar/transfer agent, financial services agent, arranger or manager;~~

~~g. the basis upon which the Financial Services Agent will manage counterparty risk, including by providing for maximum counterparty exposure limits having regard~~

to concentration, credit and other identified risks with respect to individual counterparties or countries;

h. the basis upon which the Financial Services Agent will negotiate and settle Finance Amounts, including the amount of any Redemption Amounts, Finance Reserve Deposits and Additional Funding Charges;

(7) the basis upon which Funding Obligations may be redeemed, prepaid, repurchased or otherwise affected, having regard for the need to minimize debt service charges and other Funding Costs, and the need to maintain a stable funding platform to finance the IESO Funding Shortfalls from time to time on a basis that is consistent with the allocations of Future Fair Share of Green Transition Benefits to applicable Reference Groups under the Fair Allocation Plan;

(8) the basis upon which any Repayments, Funding Costs and Redemption Amounts will be paid, including any defeasance, sinking fund or through other reserves or liquidity facilities;

(9) the basis upon which fees, charges, expenses, costs, indemnities, reimbursements and other amounts payable to or for the benefit of the Financial Services Agent and other agents and service providers to the Absolute Assignees may be determined, allocated and paid;

(10) the timing and basis upon which Finance Reserve Deposits and Finance Reserve Withdrawals may be made;

(11) the basis upon which any obligations for any other Additional Funding Charges may be incurred and paid;

(12) the basis upon which the cash flows arising from time to time or otherwise derived from the Regulatory Asset may otherwise be applied, including in relation to any counterparty enforcement and realization scenario;

(13) the transmittal to [the IESO] of information related to the amounts to be included in the determination of the Period Transition Charge for a Reference Period;

(14) the basis upon which any Disposition may be made or effected by an Absolute Assignee, including parameters for determining the purchase price for the interest in the Regulatory Asset that is the subject matter of such Disposition, and any consents and releases that may be usefully obtained in connection with such Disposition;

(15) describe the requirements applicable to any special purchase entity that will purchase an Investment Interest, including proposed capitalization, governance, and restrictions on their powers and activities; and

(16) the basis on which any Pledge may be given or effected.
