"Funding Obligation" means, in respect of an Absolute Assignee, each payment obligation (including, without limitation, each obligation to pay: principal, interest, premiums and other financing charge payments; pass-through payments; payment obligations arising under or in respect of derivatives; payment obligations owing to service providers, Financial Services Managers, finance entity intermediaries, capital markets intermediaries, advisors, lenders, credit enhancement providers, liquidity providers, disbursement counterparties, regulatory agencies and rating agencies; and all Additional Funding Charges) incurred by or on behalf of the Absolute Assignee under the Financing Plan, including any Refinancing of another such payment obligation incurred by or on behalf of such Absolute Assignee.

"Transition Charge" means, the amount recoverable from a Regulated Consumer in respect of a Reference Period, being the Period Finance Charge as allocated to such Regulated Consumer in accordance with

[1] As an alternative to this provision, consider clarifying under s. 78.1(4) of the OEB Act (which currently gives the OEB discretion in setting payment amounts subject to O. Reg. 53/05) that the OEB in setting OPG payment amounts for prescribed generation shall not consider OPG's role as Financial Services Manager of any Financing Entities associated with the Fair Hydro initiative, perhaps with the exception of any operating fees that may be received by OPG for performing that role.

Article 4(3) on a monthly basis. **[NTD: This needs to be grossed up to account for variability associated with expected uncollectables and remittance delays.]** **[NTD: Do not need to create parallel process. The definition should be linked to the OEB process for determining the volumetric rate as part of the RPP process (see s. 4(2)). The OEB will determine volumetric rate based on forecast consumption, number of consumers, etc. to recover the Period Finance Charges.]**

Attachments:	Annotated Agenda MO Mar 20 2017_CEFD_v2.docx

Hi all,

The next MO bi-weekly meeting will be on Monday, April 3rd, 2017. To prepare for the meeting, could you please provide me with your annotated agenda by **EOD Thursday, March 30th, 2017** for Ron to review?

I have attached the previous agenda for your reference.

Please let me know if you have any questions.

Thanks,
Gavin He

ANNOTATED AGENDA
MO UPDATE: March 20, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Trillium Trust:

Ministry of Finance / TBS are finalizing changes to the Ministry's PRRT submission for the Trillium Trust that would set the level of the appropriations for projected funding for infrastructure to come from the Trillium Trust in 2017-18.

- There has been a change in the projected amount since the MOF PRRT submission was originally drafted. The change relates to the GO RER project.
- MOF / TBS are now proposing to fund $60 M of GO RER costs through the Trillium Trust, which would mean projected total Trillium Trust drawdowns for 2017-18 of about $400 M.
    - The project is currently tracking to receive contributions from the Trillium Trust, the federal government, Green Bonds, and the Greenhouse Gas Reduction Account (GGRA).
    - Contributions from the federal government, GGRA, and Green Bonds are inflexible, which leaves the Trillium Trust as the vehicle for reduced funding towards GO RER.
    - That would altogether exceed its forecast expenditure.

2. Ontario Fair Hydro Plan – Equity Injection:

Staff from CEFD, OFA capital markets, Ministry of Finance, and OPG held a teleconference to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The CEFD and EIGS staff will be to establish clarity and steps required on the Provincial approvals for the equity injection; however, additional questions were raised during the discussion:
    - How/What the approval process will be for OPG, OFA, TBS, and Province?
    - What would be the source of interim financing if there are time lags?
    - OPG commented that interim financing might be required for OPG Trust, particularly for the portion of the GA to be funded through capital markets.
    - Would likely need a multi-year plan (requiring annual approval), with a description of the aggregate shares to be issued from time-to-time drafted in official documentation.
    - Timing is an issue; there may be a shortfall between funds received from the Province/Market and funds needed to purchase assets from IESO.

3. Hydro One – Financial Benefit to OEFC (s. 50.3 of the Electricity Act):

Ministry of Finance is drafting a Treasury Board submission for April to provide a financial benefit to the Ontario Electricity Financial Corporation (OEFC) in accordance with s. 50.3 of the Electricity Act.

- Under the Electricity Act, the Ministry of Finance is to provide OEFC with a financial benefit when the Province sells Hydro One shares.
- The financial benefit is being paid as a result of the secondary offering of Hydro One shares.
- The payment is fiscally neutral as the expense to the Ministry of Finance is fully offset against the receipt of revenue of OEFC on consolidation of OEFC in the Public Accounts.
- The benefit would accrue to OEFC in 2016-17 but would be administered in 2017-18 by remitting debt owed by OEFC to the Province.

4. Global Adjustment Lawsuit Follow-ups

- OEFC has determined adjustments for the years prior to 2016 for Standstill NUGs.
    - There are several NUGs not involved in the lawsuit which have PPAs that contain similar terms and price provisions as those that were under consideration by the courts. These NUGs entered into Standstill Agreements with OEFC (Standstill NUGs).
    - As OEFC's application for leave to appeal was unsuccessful, OEFC would also have to make retroactive payments to Standstill NUGs.
    - As all Standstill NUGs have either expired or been terminated early, no additional go-forward payment adjustments would be required.

- OEFC had already made retroactive payments to Standstill NUGs for 2016 through the normal rate adjustment process under the contracts.
    - *OEFC will only be making retroactive payments to standstill NUGs for generation which occurred within the two year limitations period.*
    - NUGs may hold the view that they should be given retroactive payments for the period beyond two years.

- As OEFC recovers the full cost of contracts through the Global Adjustment, including legal costs, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the IESO.

5. ALGP: Coral Rapids Conditional Offer Package

- Coral Rapids Power Corporation ("CRP"), wholly-owned by Taykwa Tagamou Nation ("TTN"), is seeking a loan guarantee under the ALGP. This loan would allow CRP to finance its investment in a partnership which was formed to own and operate the 28 MW Peter Sutherland Sr. Generating Station at a lower interest rate than the alternative (a loan from its partner).

- The conditional offer letter was approved and an OIC was obtained at the December 13, 2016 LRC meeting.
    - This application involves the interests of a Schedule 1 bank.

- Due diligence and legal/loan documents are close to being finalized, with the expectation being the briefing package will be sent to DMO early in the week of March 20. Closing is ideally targeted the same week, so the timeline is tight and assistance coordinating with TBS is appreciated. Staff request an approval to meet the closing date and execute the final loan guarantee agreement. Staff are available for a briefing if requested.

6. OEFC Lending to IESO

- The OEFC provides IESO two current credit agreements:
    (1) Loan Agreement, originally dated April 1, 1999; and
    (2) Revolving Line of Credit ("Revolving Credit") Agreement originally dated April 23, 2010.

- The IESO has requested that the OEFC provide up to four-year extensions [TBD] and increases to the credit agreements:

- The current Agreements are set to expire on April 30, 2017.
    - The OEFC would seek Directives from the Minister of Finance to extend the loan and credit facility. The Directives would be required before April 10, 2017 so that the OEFC and IESO can proceed to finalize and execute the respective agreements.

- A detailed briefing package is under development and will be provided shortly.

OTHER ISSUES

1. FAA Section 28 Modernization

- An OFA/MOF/TBS working group has developed options for modernizing s.28 of the FAA.

2. College Class Exemption

- Proposed regulation as well as terms and conditions for the draft Binding Policy Directive for Colleges has been drafted and is currently being reviewed by college sector reps.

- MAESD and OFA currently reviewing the s.28 approval process including timing and information requirements with a view to further streamlining the process.

3. Metrolinx Fuel Hedging

- Metrolinx is planning to hedge its fuel costs by entering into financial derivatives contracts with Canada's six largest banks. In order to do so, Metrolinx must obtain Minister of Finance approval of its amended investments by-law and a new borrowing by-law as well as s. 28 approval.

- A formal request from the Minister of Transportation to the Minister of Finance is forthcoming.

ANNOTATED AGENDA
MO UPDATE: April 3, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. OPG Head Office building sale

On April 4 MOF will be reporting back to TB on the expected results of the sale process prior to closing of the transaction. The TB Minute, if approved, is proposed to be fast-tracked for Cabinet ratification on April 5th.

- On January 9, 2017, OPG announced it had reached an agreement to sell the properties to KingSett Canadian Real Estate Income Fund LP.
- OPG's 2016 Financial Statements indicate that the transaction is expected to close in the second quarter of calendar 2017 (early April) and that, pursuant to the 2015 Shareholder Declaration and Resolution, OPG will be required to transfer the net, after-tax gain to the Province to credit the Trillium Trust.
- OFA staff have begun assessing preliminary information provided by OPG to determine the amount that would be eligible to credit the Trillium Trust.
- OPG's rate 2016/17 rate application submission is currently being assessed by the Ontario Energy Board (OEB) including an ongoing oral hearing.
- It is possible that any public communication with respect to the sale raises questions among intervenors and the OEB on if ratepayers should benefit in any way from this transaction.

2. Hydro One – Financial Benefit to OEFC (s. 50.3 of the *Electricity Act, 1998*)

Ministry of Finance is drafting a Treasury Board submission for the May 9 Treasury Board meeting to provide a financial benefit to the Ontario Electricity Financial Corporation (OEFC) in accordance with s. 50.3 of the *Electricity Act, 1998*. The submission will require the Minister's signed approval by April 18.

- Under the *Electricity Act*, the Ministry of Finance is to provide OEFC with a financial benefit when the Province sells Hydro One shares.
- This financial benefit is being paid as a result of the secondary offering of Hydro One shares in April 2016.
- The payment is fiscally neutral as the expense to the Ministry of Finance is fully offset against the receipt of revenue of OEFC on consolidation of OEFC in the Public Accounts.
- The benefit would accrue to OEFC in 2016-17 but would be administered in 2017-18 by remitting debt owed by OEFC to the Province.

3. Hydro One – Financial Benefit to OEFC (s. 91.2 of the *Electricity Act, 1998*)

The Ministry of Finance is drafting a Treasury Board submission requesting a fiscally-neutral Ministry of Finance increase in 2016-17 to the statutory appropriation "Hydro One Inc., Provincial Corporate Tax Provision, the *Electricity Act, 1998*".

- As per section 91.2 of the *Electricity Act, 1998*, the Minister of Finance is to pay the OEFC an amount equal to tax payable under the *Taxation Act, 2007* (i.e., the provincial corporate income tax -- CIT) by HOI and its subsidiaries, to continue to help service and pay down the electricity sector stranded debt.
- The payment is fiscally neutral as the expense is fully offset against the receipt of revenue of OEFC on consolidation in Public Accounts.

4. Hydro One – Paydown of Debt

The Province has now paid to OEFC the proceeds related to the book value of shares sold in the April 2016 secondary offering.

- The book value of proceeds, totalling about $1.3 billion, have been paid to OEFC to pay down the Province's debt and other payables with OEFC.
- This payment is part of the government's commitment to using proceeds from broadening Hydro One ownership to pay down a targeted $5 billion in debt.
- This follows from the Province's payment to OEFC earlier in 2016-17 of about $1.1 billion in proceeds related to the book value of shares sold in November 2015.
- These amounts are also in addition to the $800 million special dividend received by the Province prior to the Hydro One IPO that was used to pay down debt and other payables with OEFC in 2015-16.

5. Ontario Fair Hydro Plan – Equity Injection

Staff from CEFD, OFA capital markets, Ministry of Finance, and OPG continue to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The CEFD and EIGS staff are working to establish clarity and steps required on the Provincial approvals for the equity injection; however, additional questions were raised during the discussion.

6. Ontario Northland Transportation Commission – Request for Line of Credit

On March 13, 2017, the OFA was contacted by the Ministry of Northern Development and Mines (MNDM) with a request to discuss re-establishing a line of credit for ONTC.

- This request appears to be driven, at least in part, by the depletion of a self-insurance reserve fund for to train derailments. ONTC had been using this fund for working capital management, and without that money is facing pressure in financing its normal operations.

- ONTC is also going to Treasury Board in the next few months for a mandate review and approval of its three-year business plan. OFA staff conveyed to MNDM staff that approval for a line of credit would need to be provided alongside or after TB has approved these items.

7. ALGP: Coral Rapids Conditional Offer Package

- Coral Rapids Power Corporation ("CRP"), wholly-owned by Taykwa Tagamou Nation ("TTN"), is seeking a loan guarantee under the ALGP. This loan would allow CRP to finance its investment in a partnership which was formed to own and operate the 28 MW Peter Sutherland Sr. Generating Station at a lower interest rate than the alternative (a loan from its partner).
- The conditional offer letter was approved and an OIC was obtained at the December 13, 2016 LRC meeting.
    - This application involves the interests of a Schedule 1 bank.

- The briefing package was sent to DMO the week of March 20 with an update the week of March 27 to address a proposed revision in the pledge agreement. Approval of this revision as soon as possible would allow for legal documentation to be finalized.
    - Sign off for execution of the loan guarantee within the next few business days would be ideal to ensure sufficient time for conditions precedent to be satisfied. Financial close is planned for April 10 so that the borrower can meet its equity contribution deadline.
    - If staff can facilitate an earlier closing it would likely be appreciated by the borrower. Staff are available for a briefing, if requested.

8. Global Adjustment Lawsuit Follow-ups

- Energy DM will likely make a request to OEFC that the costs to be recovered through the GA relating to the Standstill NUGs be recovered over three months to spread out costs for customers.

OTHER ISSUES

9. FAA Section 28 Modernization

- An OFA/MOF/TBS working group has developed options for modernizing s.28 of the FAA.
- Proposed amendments to FAA s.28 have been drafted to:
    (i) give the Minister of Finance or the President of Treasury Board the authority to prescribe in regulation public entities or classes of public entities that would be subject to s. 28; and

(ii) give the LGIC the authority to make regulations to define terms used in section 28 that are not already defined in the Act.

10. Metrolinx Fuel Hedging

- Metrolinx is planning to hedge its fuel costs by entering into financial derivatives contracts with Canada's six largest banks. In order to do so, Metrolinx must obtain Minister of Finance approval of its amended investments by-law and a new borrowing by-law as well as s. 28 approval.
- A formal request from the Minister of Transportation to the Minister of Finance is forthcoming.

11. FSCO – Stelco Pension Issue

- As part of a transaction that will allow Stelco to come out of bankruptcy, the parent of Stelco, US Steel, has proposed a sale to Bedrock Industries. This sale limits Bedrock's exposure to the pension plan liabilities.
- The Superintendent of FSCO will temporarily be the nominal administrator of Stelco's 5 pension plans and will be responsible for the related 46 administrative contracts. As the Superintendent is also the regulator, he will subcontract this responsibility in a sole source contract to an administrator.
- The assumption of these contracts by FSCO will require Treasury Board and Minister of Finance s.28 approval.

Subject:	MOF - Energy compromise
Date:	Tuesday, April 18, 2017 4:24:29 PM

Nadine,

Regarding the equity injection, it is my understanding, based on what happened with Hydro 1, that MOF and Energy eventually compromised. MOF will keep the historical $5 + $3 B on their books for OPG and H1 Investment in GBE, but for new Hydro 1 issues, the equity will be on Energy's books. In terms of the equity injection GA issue, will the shares received from OPG be on Energy's books, as that constitutes new issues similar to the H1 compromise? This has important connotations given that someone has to go to Treasury Board and ask for an operating asset in the next couple of weeks to be set up and someone has to track for the next 15 years the number of shares received from OPG.

Can OPCD confirm that Energy will have these new issues on their books?

Thanks.

John

Hi John

I just got a call from MOF Legal (Toby Whitfield – works for Malle Hanslep). They have been contacted by OFA (Opal Kandelas, Kelly Listoe) about engaging a financial advisor for the Province on the Equity injection. MoF legal is looking for more background and context. My plan will be to get them a draft today of the meeting note we are pulling together. I will also contact Carlos to see if he has more context around the request. It sounds like a different issue from the plan to get advice from a dealer on the borrowing structure for the IOPG Trust that was discussed.

Let me know if this sounds OK.

Thanks Bruno, we can certainly chat more about that. Energy is required to report back to TB/MBC in Spring 2017 on an approach to refinance Global Adjustment – so the way I see it is any TB/MBC approval that's needed for the operating asset (and whatever requirements that are needed to implement GA), be approved at that time. Having said that, I don't know if Energy has reached out to the OFA to discuss the various requirements that are needed for the GA. I'm not as close to this aspect of the file as my OPCD colleagues are, but happy to sit down with everyone to talk about any support we can provide to Energy.

Thanks,
Felix

Hi Felix

Thanks for your response. I'm not 100% sure, but we were thinking that the GA Financing, although, it does not have a fiscal impact, would require approval for the equity injection that the Province is making. I.e., it is my understanding that the Province would be purchasing and asset - OPG equity. Would this not be an operating asset expense requiring TB approval. I was speaking to colleagues who have been dealing with the Hydro One dispositions, and they noted that an operating asset approval was required for the capital contribution to Hydro Ona at the time of the IPO. I can set-up a discussion if you wish. There are folks here that may have a bit more insight than I do. Let me know.

Thanks

Bruno

Hi Bruno,

Happy to chat further – for the electricity support programs (e.g. OESP, RRRP, etc) – the appropriation for these programs would be through ENE and will be put through as part of our wrap up / Document process. However, ENE will need to report back in the Spring on the detailed program design for these programs.

For GA – there is no appropriation required, but Ministry is to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment.

Let me know if you would like to chat further.

Thanks,
Felix

Hi Felix

I'm trying to follow the various aspects of mplementation of the Fair Hydro Plan and who is doing what. I have a few initial questions with respect to the appropriations side of the implementation of the Plan, in particular, the refinancing the GA.

Is your team now engaged with that now that pre-announcement work is done?
I assume appropriation would be through ENE of would it be MoF?
Are there timelines for when this would go to TB?

Thanks, your help is appreciated.

Subject:	OEP Request - Fair Hydro Plan Details for impact analysis
Date:	Thursday, March 16, 2017 11:58:58 AM
Attachments:	BN - Ontario Fair Hydro Plan Impacts v2.docx

Hi Ron

We had a preliminary discussion with OEP on information they would require for their impact analysis and have pulled together the attached. This provides some background information on programs and also some of the quantitative information. The quantitative information, in particular, is from Energy's cab sub. We include a paragraph reminding OEP to consider the government's commitment to balance in estimating economic. We agreed with OEP that this process might be iterative.

Can you advise on whether we should first run this by Energy with the context of the request. And any comments on the attached are welcome.

Thanks
Bruno

ECONOMIC IMPACTS OF ONTARIO'S FAIR HYDRO PLAN

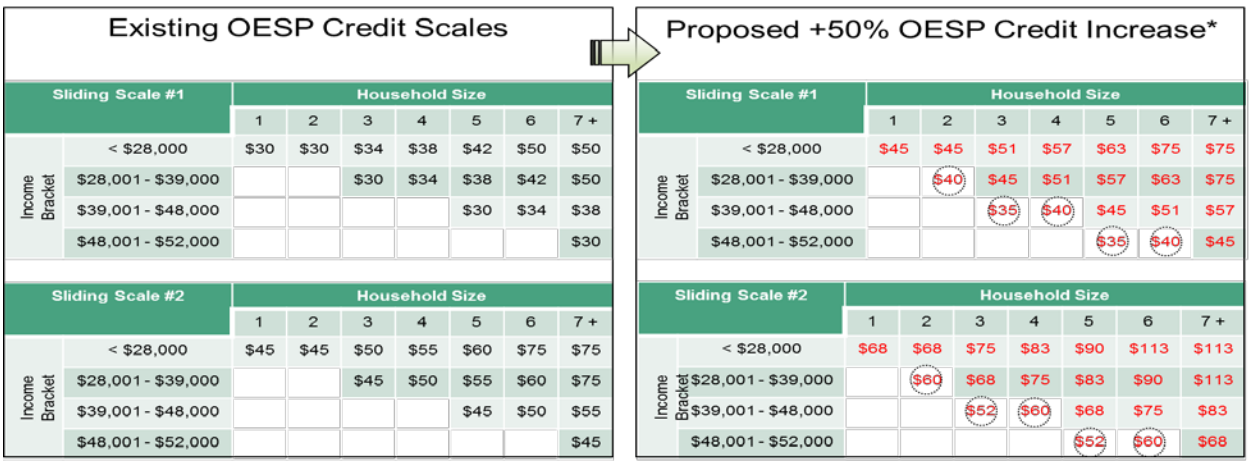
FAIR HYDRO PLAN

Customers / Residential

- **Global Adjustment Smoothing:** Consumers eligible for reductions under GA smoothing are those eligible under the Regulated Price Plan (RPP). These are primarily residential customers representing about 46% of total GA costs.
- The GA accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity. The majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through the GA while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.
- Under the GA smoothing plan the long-term benefit of these assets to the electricity system is recognized and some of current costs are deferring to the future. GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief. The result of this GA proposal is that cost to ratepayers remains lowered in the short term reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month.
- A financial structure to implement GA smoothing is proposed that would have no fiscal impact, by in effect. However, there will be an impact on provincial debt over time as various parties including the Province, will need to incur debt to cover current GA costs.

Please see last page for the Annual Debt Schedule.

- **OREC:** All residential consumers received an 8% rebate equal to the provincial portion of the HST on their hydro bills starting January 1, 2017, on their bill. (Including Businesses and Farms).
- **OESP Expansion:** Low Income customers receive additional on bill benefits which vary based on income and household size.
    - Will move current funding of the OESP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.



Source: Ministry of Energy, Ontario's Fair Hydro Plan, Technical Briefing, March 2, 2017

- **RRRP Expansion:** Rural or remote residential customers will receive additional relief on the 'Delivery' portion of their hydro bill. 800,000 customers are expected to benefit.
    - These customers are served by the following distribution companies:
        - Hydro One R1, Hydro One R2, Northern Ontario Wires Inc., Lakeland Parry Sound, Chapleau PUC, Sioux Lookout Hydro, InnPower, Atikokan Hydro and Algoma Power
    - Will move current funding of the RRRP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.
- **First Nations On-Reserve Delivery Credit:** Will eliminate the delivery charge for all on-reserve First Nations households and remove the monthly service charge for customers of licensed distributors which charge a bundled rate. Will automatically qualify on-reserve First Nations households (~21,500 customers). Estimated to provide residential customers an average monthly benefit of $85.

    Staff Comments:
    - Unclear if on-reserve First Nations households (eligible with On-Delivery Credit) will also benefit from OESP Expansion and Affordability Fund.
- **Establishing a New Affordability Fund:** Assist electricity customers who need financial assistance to undertake energy efficiency improvements.

    Staff Comments:
    - This fund aims to target those who cannot qualify for current low-income conservation programs. Local Distribution Companies would be tasked with identifying recipients. The fund helps with measures such as energy efficient lighting, appliances, and for electrically heated homes, insulation and weather stripping.
    - Assuming this will not appear in any form on the hydro bill but instead a transfer from LDCs (via the fund) to eligible customers.

Industry

- **Expand the Industrial Conservation Initiative:** Enhance competitiveness for small manufacturers and industrials. Reduce ICI eligibility to those with monthly peaks of 500 kilowatts, down from the current threshold of 1 megawatt.
    - Targeting eligibility to energy intensive industries with NAICS codes 31-33.

Other

- **Improving Electricity Sector Efficiencies:** IESO's Market Renewal Initiatives are estimated to save the electricity sector (as a total) $200 million per year starting in 2021.

FISCAL COSTS

- **Note:** In estimating economic impacts consideration should be given to the government's commitment to balance the fiscal plan. i.e., The costs of the Ontario Fair Hydro Plan may be assumed to be offset by lower expense elsewhere or higher revenues.

- **Fiscal Costs of the RRRP Program:**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

Corporate and Electricity Finance Division

March 14, 2017

From: Bruno Amara
To: John Kim
Subject: OEP impact analysis
Date: Thursday, March 23, 2017 11:58:28 AM
Attachments: Ontario Fair Hydro Plan Impacts_to OEP_v2.docx

Hi John

OEP has some follow-up requests for their impact analysis exercise. The answer would, for the most part, need to come from ENE. Below is a draft email to Tim Christie (ENE). Let me know if you have any comments. Also let me know whom you prefer it to be sent by i.e, you, Dir. to Dir., or me, or EA to EA etc. As you may recall Ron had OK'd the initial sharing of information and noted that we could offer to facilitate discussions with ENE.

Thanks
Bruno

Hi..

We were contacted in early March by the Office of Economic Policy, MoF who are undertaking an economic impact analysis of the Ontario Fair Hydro Plan. At the time, we provided them with the attached information (ENE password). The data is sourced from the ENE cabinet submission. OEP has responded asking if some additional information is available. These are mainly with respect to the "Bill Forecasts" table as follows:

Would it be possible to provide the "Bill Forecasts – Calendar Electricity Prices" table out to 2040? In particular the Total Bill line prior to the announced changes and impact of Tax Based Social Programs?

Similarly would we be able to provide a long-term electricity price forecast for the large industrial segment pre-changes?

OEP had also asked whether the "impact of tax-basing social programs" on the table were all reductions on electricity bills rather than off-bill cash transfers. We assume the answer is Yes. But we're not sure if the Affordability Fund would be reflected in those numbers. Based on the cabinet submission we assume the later would be off-bill assistance for energy efficiency measures.

Please let us know how you wish to respond. We can provide the appropriate contacts if you wish to respond directly to OEP.

Thanks
Bruno Amara

ECONOMIC IMPACTS OF ONTARIO'S FAIR HYDRO PLAN

The material provided below if sourced largely from the Ministry of Energy's cabinet submission.

FAIR HYDRO PLAN

Customers / Residential

OREC:

- All residential consumers received an "8%" rebate equal to the provincial portion of the HST on their hydro bills starting January 1, 2017, on their bill. (Including Businesses and Farms).

Global Adjustment Smoothing:

- Consumers eligible for reductions under GA smoothing are those eligible under the Regulated Price Plan (RPP). These are primarily residential customers representing about 46% of total GA costs. The RPP also includes farms and low volume customers (up to 50 kW demand or 250,000 kilowatt-hours annually).
- The GA accounts for the difference between contracted and regulated prices paid to generators compared to the hourly market clearing price, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity. The majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to be able to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through the GA, while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.
- Under the GA smoothing plan, the long-term benefit of these assets to the electricity system is recognized and some of the costs recovered in current rates would be deferred for recovery in future rates. GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief. The result of this GA proposal is that cost to eligible ratepayers would be lowered in the short term, reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by an estimated $26/month.
- A financial structure to implement GA smoothing is proposed that would have no fiscal impact. However, there will be an impact on provincial gross debt over time as various parties including the Province, will need to incur debt to finance the deferral of a portion of current GA costs.

Please see last page for Energy's estimated Annual Debt Schedule.

OESP Expansion:

- Low Income customers receive additional on bill benefits which vary based on income and household size.
    - Will move current funding of the OESP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

Source: Ministry of Energy, Ontario's Fair Hydro Plan, Technical Briefing, March 2, 2017

RRRP Expansion:

- Rural or remote residential customers will receive additional relief on the 'Delivery' portion of their hydro bill. 800,000 customers are expected to benefit.
    - These customers are served by the following distribution companies:
        - Hydro One R1, Hydro One R2, Northern Ontario Wires Inc., Lakeland Parry Sound, Chapleau PUC, Sioux Lookout Hydro, InnPower, Atikokan Hydro and Algoma Power
    - Will move current funding of the RRRP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

First Nations On-Reserve Delivery Credit:

- Will eliminate the delivery charge for all on-reserve First Nations households and remove the monthly service charge for customers of licensed distributors which charge a bundled rate. Will automatically qualify on-reserve First Nations households (~21,500 customers). Estimated to provide residential customers an average monthly benefit of $85.

Staff Comments:

- Unclear if on-reserve First Nations households (eligible with On-Delivery Credit) will also benefit from OESP Expansion and Affordability Fund.

Establishing a New Affordability Fund:

- Assist electricity customers who need financial assistance to undertake energy efficiency improvements. TB Approved $100 million for 2016-17 (not public).

Staff Comments:

- This fund aims to target those who cannot qualify for current low-income conservation programs. Local Distribution Companies would be tasked with identifying recipients. The fund helps with measures such as energy efficient lighting, appliances, and for electrically heated homes, insulation and weather stripping.
- Assuming this will not appear in any form on the hydro bill but instead a transfer from LDCs (via the fund) to eligible customers.

Industry

- **Expand the Industrial Conservation Initiative:** Enhance competitiveness for small manufacturers. Reduce ICI eligibility to those with monthly peaks of 500 kilowatts, down from the current threshold of 1 megawatt.
    - Targeting eligibility to energy intensive industries with NAICS codes 31-33.

Other

- **Improving Electricity Sector Efficiencies:** IESO's Market Renewal Initiatives are estimated to save the electricity sector (as a total) $200 million per year starting in 2021.

FISCAL COSTS

- **Note:** In estimating economic impacts consideration should be given to the government's commitment to balance the fiscal plan. i.e., the costs of the Ontario Fair Hydro Plan may be assumed to be offset by lower expense elsewhere or higher revenues.

- **Fiscal Costs of the RRRP Program:**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136

---

John,

Attached is the note for the OPG Business Plan item going to TB/MBC same time as OFHP May 9, 2017. Please review and provide comments, and clarification regarding what's in the OPG #s in the 2017 Budget numbers (There are references in the note and the tables on the last two pages need updating to be complete).

Sec Briefing is tomorrow afternoon, would it be possible to get the updated tables in the morning tomorrow? Fair Hydro Plan is also scheduled, but not sure if it or both will be bumped to a separate briefing cycle in advance of May 9, 2017.

Laurie (for Judy) – I've included a description of the international travel aspect (around slide 11, deck in the attached email) and a placeholder for a minute (Judy was aware of the item).

James

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	May 9, 2017
Agenda Class:	Discussion (In Camera)
Last reviewed by: TB/MBC March 24, 2015	**Tracking to: Fast Track** Cabinet (May 10, 2017)

SUBMISSION TITLE:	2017-2019 Business Plan for Ontario Power Generation

Prepared based on draft submission

I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2017-2019 Business Plan

II. RECOMMENDATIONS:

• Receive the 2016-2018 business plan for Ontario Power Generation	*Receive*
• Note Minister of Energy will provide concurrence with OPG's Business Plan	*Note*
• Approval giving special status to OPG under Section 5.3 of the MBC Travel, Meal and Hospitality Expenses Directive, giving it the authority to approve international travel for its employees.	*tbd*

III. FINANCIAL SUMMARY

$ Millions	**2014-15**	**2015-16**	**2016-17**
Initiative cost requested	0.0	0.0	0.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended (Specify Ministry/Program)	0.0	0.0	0.0
Total Fiscal Impact	0.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.

It is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan,

how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.

In November 2016, OPG submitted its 2017-2019 Business Plan (Board-approved?) to the Ministry.

Ontario's Fair Hydro Plan (OFHP) is not reflected in OPG's latest Business Plan. The Ministry notes the following OFHP implications for OPG:

- As part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed by capital infusions from the Province (Equity injection via an operating asset, raised from higher debt, with additional shares to the Province as sole shareholder), and by third-party lending (check with OFA – currently 256.3M common shares increasing to….needed? Perhaps explain why there are shares given province is sole shareholder, linked to value of OPG assets/equity)
  - These changes are expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
  - In addition, the Province's net debt position should remain unchanged (Check is OFA)

Financial figures from the OPG Business Plan are included and supplemented with forecast changes for the Ontario Financing Authriy, MOF for OFHP implications as part of Province's finalized fiscal plan for the 2017 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have one-for-one impact on the Province's surplus/deficit position, excluding adjustments that the Province may make upon consolidation of OPG's financials (e.g., unrealized gains or losses). OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2017.

Overview of Current Business Plan

OPG's 2017-19 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2017-2019 Business Plan, along with OFA forecast updates for OFHP (TBC), show a decrease in earnings before tax of $84M in 2017-18 and $89M in 2017-18, followed by increases of $59M in 2018-19 and $120M in 2019-20 over the estimates in the 2016 Budget..

    OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016. Net income in 2017 is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations

    Net income in 2018 and 2019 is planned to increase, primarily due to higher production, and earnings from oncoming stations including Nanticoke solar in 2019. Return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021.

    In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be

$285M and will be distributed to the Trillium Trust.

These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.

- Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year.
- The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
- Headcount Efficiencies – Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.

  OPG continues ramping up recruitment in 2017 to fill key vacancies in certain areas (particularly in the nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020. OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021.

  OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015. OPG intends to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations.

- Key Projects:
  - The plan assumes ongoing operations at Pickering for about four years beyond 2020, and as approved by Cabinet, the execution of the Darlington refurbishment consistent with approved budget of $12.8 billion (including escalation and interest), is now under way. First unit refurbishment began in October 2016, Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained.
  - Sustaining capital expenditures average $570M per year include nuclear expenditures unrelated to Darlington refurbishment and costs for continued operation of Pickering (e.g., Upgrades at Sir Adam Beck and upgrades to DeCewII, and investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility).
- Rate Application to the OEB:
  - OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021. Oral hearings began February 2017, decision expected in Q3 2017.
    - OPG 2017-2019 BP assumes new rates effective January 1, 2017. The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay.
  - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear

rates only.

- On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

- OPG Request – Special Stats for OPG to Approve International Travel (Appendix F provides more information):
  - OPG has placed a request with the Ministry for authority to approve international travel for its employees. OPG has asked that this application be included with its BP submission to TB/MBC.
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business.
    - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds.
    - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected see increases.
    - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date.

Other Key Fiscal Risks:

Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

APPENDIX A: PROPOSED MINUTE (UNDER DEVELOPMENT)

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan.

ii.) …..request for special status…international travel

iii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

Total Fiscal Impact (draw from c-funds)		**0.0000**	**0.0000**	**0.0000**	**0.0000**

APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

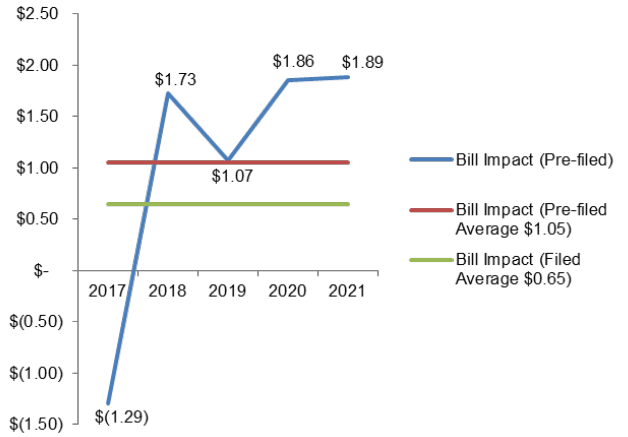
APPENDIX D: SUMMARY OF KEY HIGHLIGHTS FROM OPG BUSINESS PLAN

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in September 2016.

This is in part because 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations.

Also, actions taken by the Province and OPG in early 2017 to enable OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only. OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year.

Comparison of Annual Bill Impact ($/Month per year)



Production and Total Cost of Generation

OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016. This reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016 and overlaps between unit refurbishments, as well as, the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage.

Total generating cost shows an increasing trend over the planning period relative to 2016, reflecting Lower nuclear production due to Darlington refurbishment outages, increased sustaining capital spending on two large hydroelectric projects (The Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation).

Operations, Maintenance and Administration (OM&A) Expenses

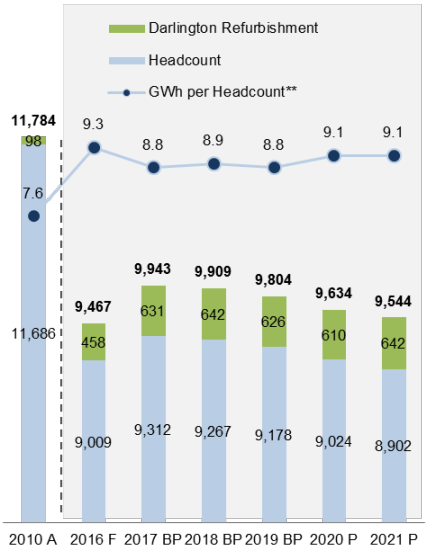
Annual OM&A expenses (excluding Darlington refurbishment OM&A) from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year. Increases related to changes in nuclear outage scope at Darlington and planned hiring to fill staffing gaps, and enabling Pickering continued operations, offset by declining pension related costs, due to projected pension asset returns, increases employee contributions, and new method for dermining interest components of pension costs.

Business Transformation and Labour Costs

As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016:

- Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3.
- OPG continues recruitment in 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
  - To date in 2017, OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
    - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity



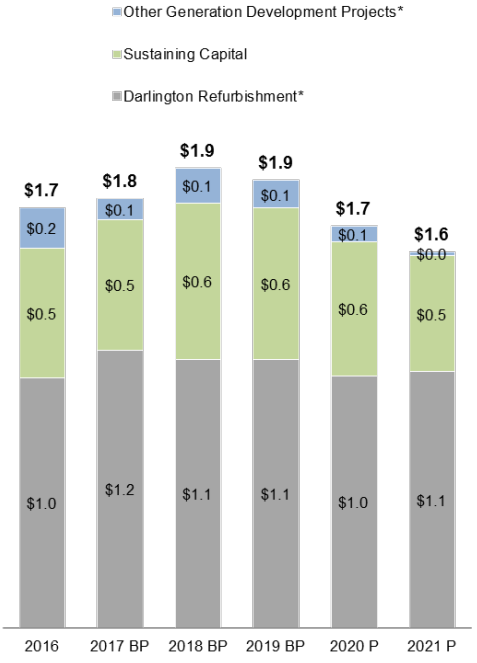
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

Projects and Capital Expenditures

OPG continues delivery of major projects over the plan period, including:

- Darlington Refurbishment – Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, requiring concurrence from the Province prior to commencement
- Sustaining Capital – Expenditures average $570M, including:
  - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
  - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
  - Lower Mattagami upgrades in 2018 and 2019
- Other Generation Development Projects – Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

Sales

The following table summarizes sales recently completed and currently underway (as of April 2017). The fiscal plan implications of the completed OPG Head Office sale is reflected in the 2017 Budget. (TBC).

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

APPENDIX E: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING – (UNDER DEVELOPMENT)

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

Revenue ($millions)	**2016-17**	**2017-18**	**2018-19**	**2019-20**

MINISTRY OF ENERGY

TREASURY BOARD / MANAGEMENT BOARD of CABINET SUBMISSION

ONTARIO POWER GENERATION (OPG) 2017-19 BUSINESS PLAN AND SPECIAL STATUS APPLICATION

May 2017

CONFIDENTIAL

MINISTRY OF ENERGY

ONTARIO POWER GENERATION (OPG)
2017-19 BUSINESS PLAN AND SPECIAL STATUS APPLICATION

MINISTRY REQUEST

The Ministry of ENERGY is requesting that Treasury Board/Management Board of Cabinet (TB/MBC):

1. NOTE the receipt of OPG's 2017-2019 Business Plan.
2. NOTE that the Minister of Energy will provide concurrence with OPG's Business Plan.
3. APPROVE OPG's application for Special Status to Approve International Travel under Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive dated January 1, 2017.

CONTEXT

- As required by the Memorandum of Agreement (MOA) between Ontario Power Generation and the Minister of Energy, OPG provided its Business Plan for 2017-2019 to the Ministry of Energy on November 29, 2016 for concurrence
    - Note that while OPG is seeking concurrence for its three year 2017-19 business plan, the plan also includes financial projections for 2020 and 2021
- With this Business Plan OPG is also making an application for Special Status under the Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive, which allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business
- The Minister's concurrence requires presentation of OPG's business plan before TB/MBC
- The Ministry of Energy review and analysis of OPG's business plan is supported by the Electricity Investment and Governance Secretariat, a unit within the Ministry of Finance and the Corporate and Electricity Finance Division of the Ontario Financing Authority (OFA)
- The following provides an overview of OPG's business plan, including:
    1. Business Plan Overview
    2. Other Considerations
- Proceeding with Provincial concurrence now will demonstrate that OPG has support from its shareholder as it implements the plan and provides clarity to

the Ontario Energy Board (OEB) as it reviews OPG's current rate application covering the 2017-2021 period

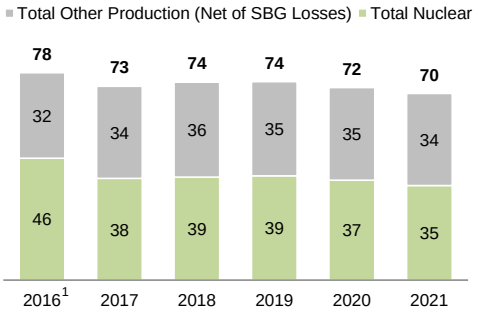
- Business plan forecasts may be affected by Ontario's Fair Hydro Plan (OFHP). Given the stage of implementation of OFHP and the timing of the receipt of the business plan in November 2016, these changes are not reflected in OPG's plan
    - The Ministry anticipates that as part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed partly by capital infusions from the Province, and majority by third-party lending
    - These changes are generally expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income
    - In addition, the Province's net debt position would remain unchanged

1. BUSINESS PLAN OVERVIEW

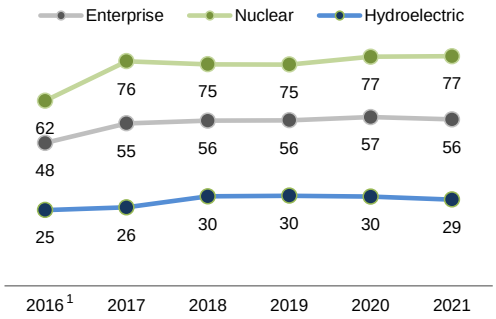
a) Production & Total Cost of Generation

- OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016
    - Reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016
    - Includes a partial overlap starting in 2021 between second and third unit refurbishments, and
    - Includes the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage
- While OM&A remains relatively stable over the planning period (see next slide), total generating cost (TGC)* shows an increasing trend over the planning period relative to 2016, reflecting:
    - Lower nuclear production due to Darlington refurbishment outages, and
    - Increased sustaining capital spending (included in TGC) on two large hydroelectric projects, the Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation

Production (TWh)



Total Generating Cost ($/MWh)



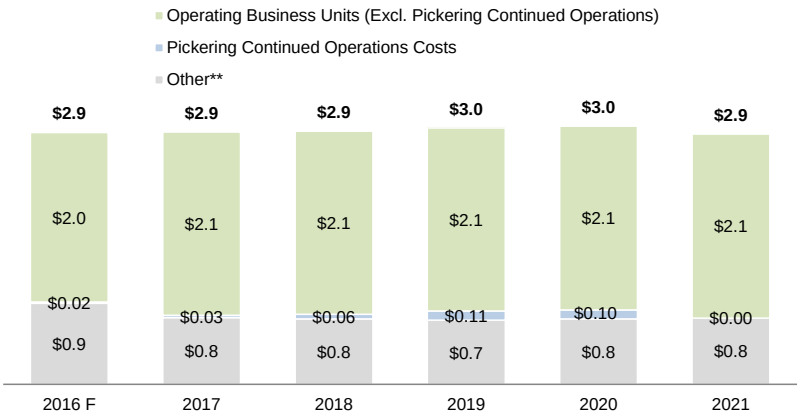
1. Actuals

*TGC = operations, maintenance and administration (OM&A) expenses from ongoing operations + fuel and Gross Revenue Charge expenses for OPG-operated stations + sustaining capital expenditures) divided by OPG generation adjusted for surplus baseload generation losses

b) Operations, Maintenance and Administration (OM&A) Expenses

- Annual OM&A expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year
- Increases over 2016 are mainly attributable to:
    - Increases in business unit expenditures, including changes in nuclear outage scope at Darlington, and planned hiring to fill staffing gaps
    - Incremental outage and other program costs to enable Pickering continued operations
- These increases are partially offset by declining pension and Other Post-Employment Benefits (OPEB) costs over the period due to projected pension asset returns, increased employee contributions, and adoption of a new method for applying discount rates to determine interest components of pension costs

OM&A from Ongoing Operations* ($B)



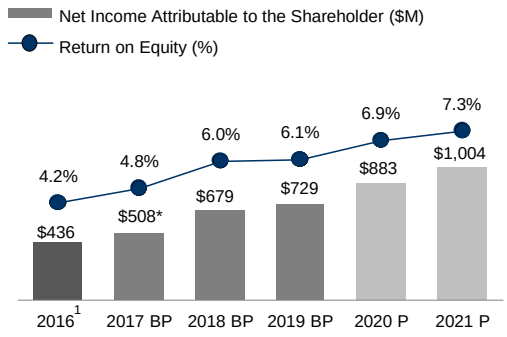
*Excludes Darlington refurbishment OM&A expenses and all OEB variance and deferral account offsets

** Includes centrally held pension /OPEB costs and support services

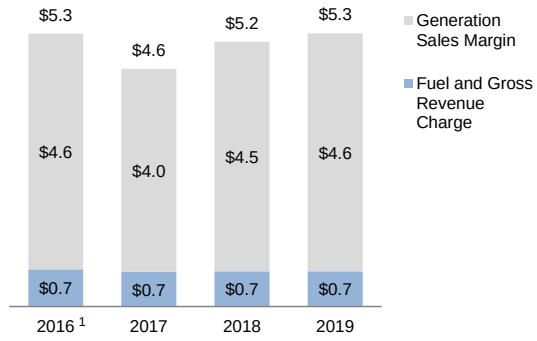
c) Financials

- OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016
    - 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations
    - Net income in 2018 and 2019 is planned to increase, primarily due to higher forecast production, and earnings from Peter Sutherland Sr. GS starting in 2017 and Nanticoke solar facility starting in 2019
- As a result, return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021
- Overall, the 2017-19 Business Plan is largely unchanged relative to last year's plan in terms of commitments for Net Income, and Total Shareholder Return
- In early January 2017, subsequent to the OPG Board's approval of the 2017-2019 Business Plan, OPG reached an agreement with KingSett Canadian Real Estate Income Fund LP for the purchase of OPG's head office property. The net gain is estimated to be $285M and will be distributed to the Trillium Trust.

Net Income ($M) and ROE (%)



Revenue Margin ($B)



1. Actuals

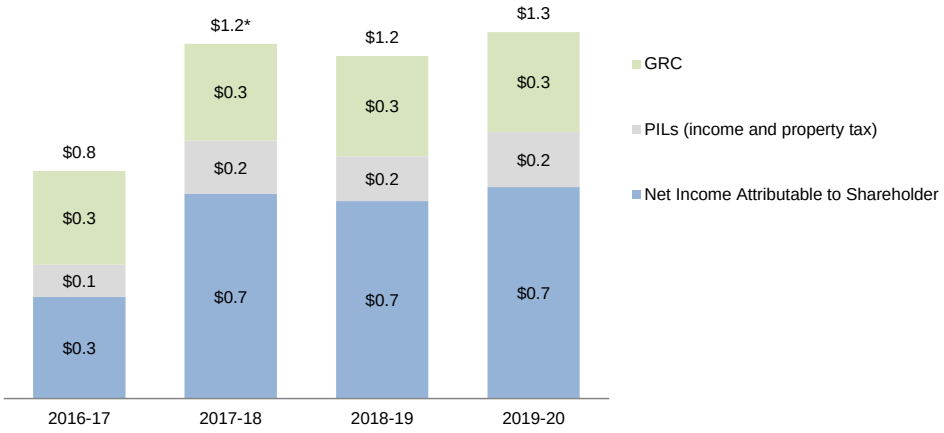
*Includes extraordinary gain associated with the sale of OPG head office

d) Provincial Fiscal Impacts: Shareholder Return and Payments-in-Lieu of Taxes

- Total fiscal revenue impacts to the Province, including net income return to the shareholder and payments-in-lieu of taxes, averages ~$1B over the period
    - Provincial revenues from OPG are dedicated to servicing and paying down stranded debt and the investment cost of the Province acquiring the equity in OPG[1]

- Return to the shareholder improves due to changes in net income, which OPG attributes to:
    - Assumed OEB rate outcomes
    - Completion of the first Darlington unit refurbishment
    - Further cost efficiencies
- Net income is consolidated by the Province as Revenue from Government Business Enterprises (GBEs)
- Income tax PILs, Gross Revenue Charges (GRC) and property tax PILs paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down stranded debt are consolidated in Public Accounts under Taxation Revenue
- OPG also pays a portion of the GRC to the Province's Consolidated Revenue Fund (CRF)

Total Fiscal Revenues ($B)



1. Aside from the water power rental portion of the GRC, paid to the CRF.

*Includes gain associated with the sale of OPG head office

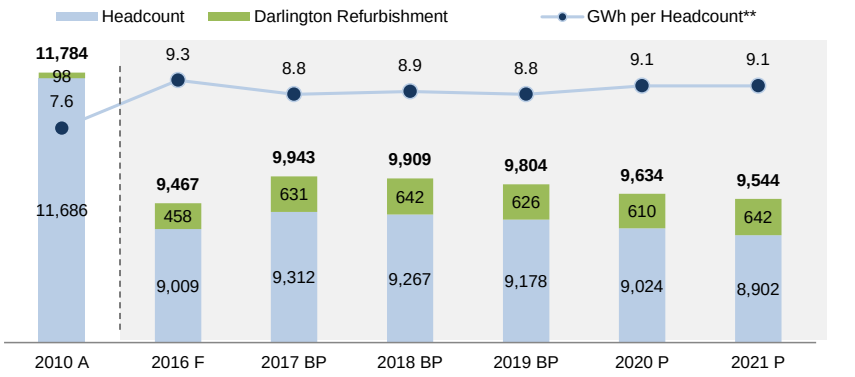
e) Business Transformation Initiative & Labour Costs

- As part of a company-wide business transformation, OPG saved over $1B in costs from January 2011 to December 2016
    - Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3
- However, OPG is ramping up recruitment between 2016 and 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition from employee demographics, as well as continued Pickering operations beyond 2020

- OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021

- In addition, to date OPG has hired ~95 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
  - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations, per the terms of the collective agreement

Ongoing Operations Regular Headcount and Productivity

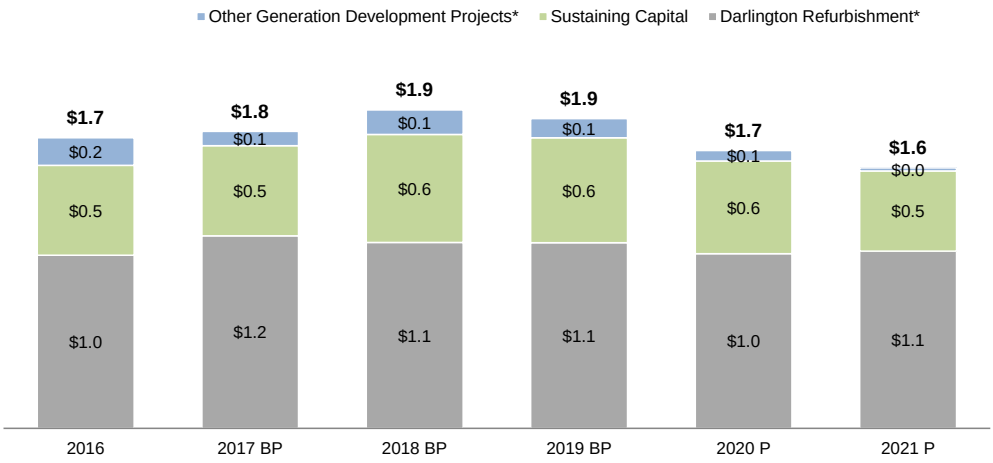


**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

f) Operating Highlights - Projects and Capital Expenditures

- OPG continues to focus on delivery of its major projects over the plan period, including:
  - **Darlington Refurbishment**: Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained
  - **Sustaining Capital:** Expenditures average $570M, including:
    - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
    - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew ll
    - Lower Mattagami upgrades in 2018 and 2019
  - **Other Generation Development Projects:** Investments in current (e.g., hydroelectric) and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility by 2019

Capital Expenditure Estimates ($B)



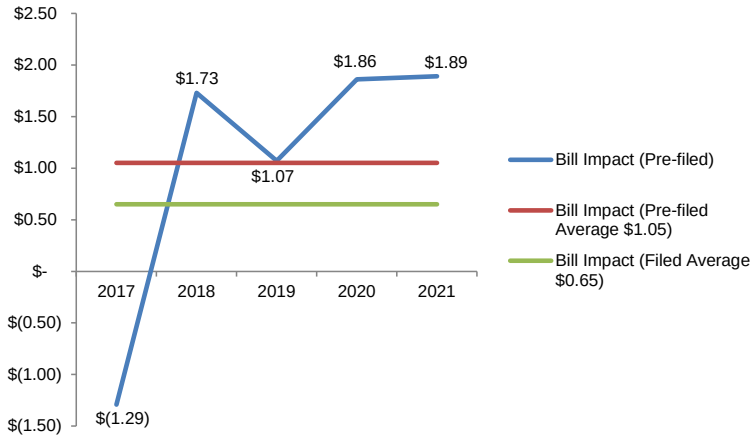
*Includes expenditures budgeted by Support Services

2. OTHER CONSIDERATIONS

Rate Application

- OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021
- Oral hearings began February 21, 2017 with a decision expected in Q4 2017
- OPG's 2017-19 Business Plan assumes new rates are effective January 1, 2017
    - The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay*
- Rate-Smoothing Proposal:
    - On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's weighted average hydroelectric and nuclear all-in rates (which approximates total bill impact), rather than on the basis of nuclear base rates only
        - Rate smoothing is expected to be fiscally neutral due to rate regulated accounting
    - On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average year-over-year annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

Comparison of Annual Bill Impact ($/Month per year)



*Forecasted in May 2016

Sales

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

Special Status for OPG to Approve International Travel

- On January 24, 2017, OPG's President and CEO wrote to the Deputy Minister to provide a business case and request authority for OPG to approve international travel for its employees. In summary:
    - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business

- OPG believes that international travel is integral to the safe and prudent operation of its business and having OPG's CEO approve international travel will enable more efficient decision-making while significantly lowering travel costs
- OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for over $30 billion in pension fund and nuclear funds
- OPG requires a high level of international business travel at approximately 90-100 trips annually, while the Darlington Refurbishment Project accounts for 45% of OPG's international travel and is expected see increases over the 10 year life of the project
- OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date
- OPG believes the inability to make timely commitments on events and meetings impacts employee engagement as well as its international relationships and reputation

- OPG is seeking Special Status as part of concurrence with its business plan. OPG has committed to providing semi-annual reports to the Ministry on international travel taken, and continue to be accountable for compliance with all applicable OPS directives, policies and procedures

RECOMMENDATION

The Ministry of ENERGY is requesting that Treasury Board/Management Board of Cabinet (TB/MBC):

1. NOTE the receipt of OPG's 2017-2019 Business Plan.
2. NOTE that the Minister of Energy will provide concurrence with OPG's Business Plan.
3. APPROVE OPG's application for Special Status to Approve International Travel under Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive dated January 1, 2017.

MINISTRY OF
ENERGY

Ontario Power Generation (OPG) 2017-19 Business Plan and Special Status Application

May 2017

Context

- As required by the Memorandum of Agreement (MOA) between Ontario Power Generation and the Minister of Energy, OPG provided its Business Plan for 2017-2019 to the Ministry of Energy on November 29, 2016 for concurrence
  - Note that while OPG is seeking concurrence for its three year 2017-19 business plan, the plan also includes financial projections for 2020 and 2021
- With this Business Plan OPG is also making an application for Special Status under the Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive, which allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business
- The Minister's concurrence requires presentation of OPG's business plan before TB/MBC
- The Ministry of Energy review and analysis of OPG's business plan is supported by the Electricity Investment and Governance Secretariat, a unit within the Ministry of Finance and the Corporate and Electricity Finance Division of the Ontario Financing Authority (OFA)
- The following presentation provides an overview of OPG's business plan, including:
  1. Business Plan Overview
  2. Other Considerations

Context *(cont'd)*

- Proceeding with Provincial concurrence now will demonstrate that OPG has support from its shareholder as it implements the plan and provides clarity to the Ontario Energy Board (OEB) as it reviews OPG's current rate application covering the 2017-2021 period

- Business plan forecasts may be affected by Ontario's Fair Hydro Plan (OFHP). Given the stage of implementation of OFHP and the timing of the receipt of the business plan in November 2016, these changes are not reflected in OPG's plan

  - The Ministry anticipates that as part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed partly by capital infusions from the Province, and majority by third-party lending

  - These changes are generally expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income

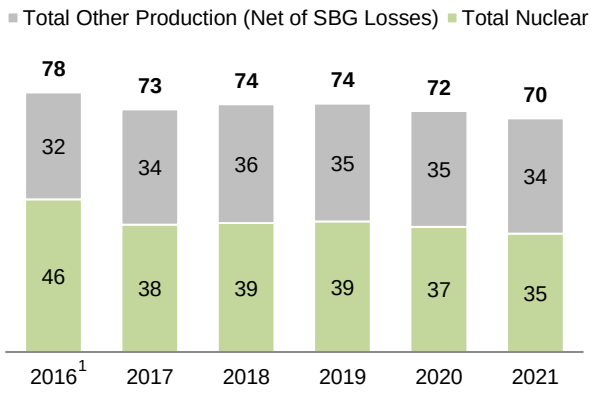
  - In addition, the Province's net debt position would remain unchanged

1. Business Plan Overview

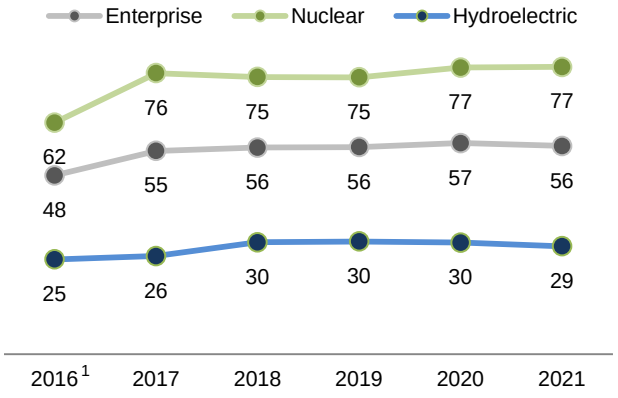
a) Production & Total Cost of Generation

- OPG's production is expected to fall to 69.8 TWh by 2021 from 77.6 TWh in 2016
  - Reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016
  - Includes a partial overlap starting in 2021 between second and third unit refurbishments, and
  - Includes the Pickering Vacuum Building Outage (VBO) in 2021 requiring the shutdown of all units for the duration of the outage
- While Operations, Maintenance and Administration (OM&A) remains relatively stable over the planning period (see next slide), total generating cost (TGC)* shows an increasing trend over the planning period relative to 2016, reflecting:
  - Lower nuclear production due to Darlington refurbishment outages, and
  - Increased sustaining capital spending (included in TGC) on two large hydroelectric projects, the Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation

Production (TWh)



Total Generating Cost ($/MWh)



1. Actuals

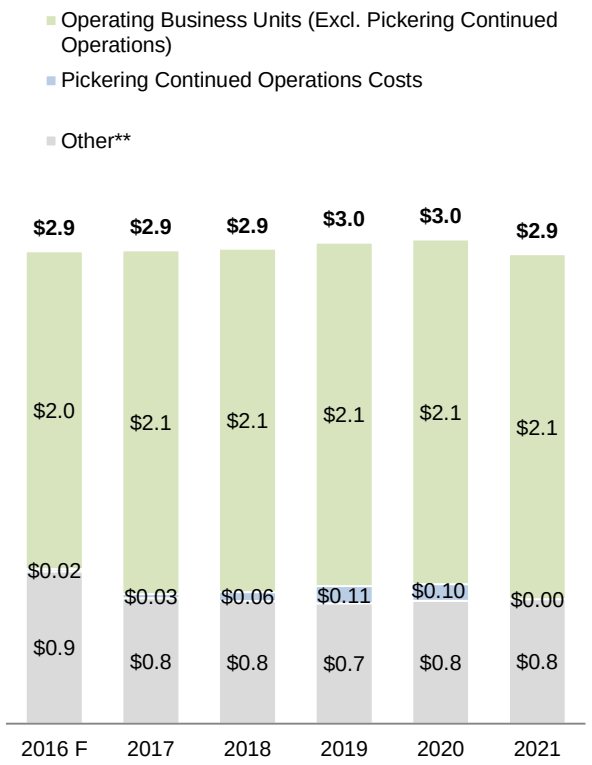
*TGC = OM&A expenses from ongoing operations + fuel and Gross Revenue Charge expenses for OPG-operated stations + sustaining capital expenditures) divided by OPG generation adjusted for surplus baseload generation losses

1. Business Plan Overview

b) Operations, Maintenance and Administration (OM&A) Expenses

- Annual OM&A expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year
- Increases over 2016 are mainly attributable to:
  - Increases in business unit expenditures, including changes in nuclear outage scope at Darlington, and planned hiring to fill staffing gaps
  - Incremental outage and other program costs to enable Pickering continued operations
- These increases are partially offset by declining pension and Other Post Employment Benefits (OPEB) costs over the period due to projected pension asset returns, increased employee contributions, and adoption of a new method for applying discount rates to determine interest components of pension costs

OM&A from Ongoing Operations* ($B)



*Excludes Darlington refurbishment OM&A expenses and all OEB variance and deferral account offsets
** Includes centrally held pension /OPEB costs and support services

1. Business Plan Overview

c) Financials

- OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016
  - 2017 net income is forecast to increase as a result of new regulated rates, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations
  - Net income in 2018 and 2019 is planned to increase, primarily due to higher forecast production, and earnings from Peter Sutherland Sr. GS starting in 2017 and Nanticoke solar facility starting in 2019
- As a result, return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021

Subject:	OPG Equity Injection Summary
Date:	Thursday, March 16, 2017 2:10:53 PM

Hey Bruno,

Just a quick recap of the meeting today.

OPG Comments

- Suggesting that equity injection would take place after the legislation and trust structure in place.
- First introduction to legislation in April.
- May timeline for completion of all requirements, with a target of the reduction occurring on June or July bills.
- Ministry of Energy is focusing on the legislation.
- The OFA side will be working on the Provincial approvals for equity injection.
- Interim financing might be required for OPG Trust, particularly for the 51% of the GA funded through capital markets.
- Equity injection is meant to be as simple as possible – quarterly injections is being tabled with annual shareholder and board approval.
- Would likely need a ten-year plan (requiring annual approval), with a description of the aggregate shares to be issued from time-to-time drafted in official documentation.
- Thus, seeking a type of "blanket approval" mechanism.
- Timing is an issue; there may be a shortfall between funds received from the Province/Market and funds needed to purchase assets from IESO.
- Special board meetings from OPG are likely to meet the May target.
- Recognizes that the scheduled timeline is a moving target.

Discussion Questions

- Is May a realistic timeline?
- How will the approval process work with OPG and Province; will it be timed with other annual approvals?
- The source of interim financing has not yet been determined.
- OFA needs to open discussion with TBS to determine what approvals are needed and what process should be implemented.
- There may be a conflict between the targeted irrevocability of the future revenues from ratepayers and the aspect of share redemption – a Provincial guarantee may be required.
- OFA would act as support to TBS.
- There are accounting considerations with the equity injections for the par value, additional paid-in capital, and number of shares in the subscription.
- What funding does OPG have available now, and what could be used for interim financing for OPG Trust? (They have $700M line of credit for Darlington refurbishment and general corporate purposes, and $1B revolving bank credit facility, both which have been untapped

as of Dec 31, 2016. Short term credit of $460M only has $74M in availability.)

Overall, the meeting was very high level. A placeholder meeting will be scheduled for next week.

Kind regards,

Adam Prokop

Hi Ron, John,

Arie and Wentao put together a note that explains what we need to do and the challenges/questions we will probably face. Is intended to map the road, we can expand as we have more clarity.

All comments are welcome.

OPG Trust Financing

Issue

The Province is working with OPG to establish a Trust to finance the global adjustment (GA) payment deferral as part of the Province's recent plan to reduce ratepayer electricity bills.

Context

- The Province and OPG seek to create a Trust to handle the GA deferrals as part of the Province's recent rate mitigation proposal.

- Ministry of Energy's (ENERGY) materials note that significant amount of debt to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would likely be downgraded.

- As a result, the capital structure of the Trust would be a combination of debt and equity.

- The equity portion of funding for the Trust is expected to come from the Province through capital contributions / equity injections into OPG, which would then be loaned to the Trust.

    - Under the terms necessary for OPG to consolidate the Trust, the Province or its agencies may not fund more than 50 per cent of the Trust.

    - ENERGY's materials suggest that about 44 per cent be funded via equity injection from the Province / Ontario Electricity Financial Corporation (OEFC).

Mechanics of Financing Equity Portion of OPG Trust

- The mechanics of a capital contribution into OPG could follow the precedent previously completed by the Province in making a capital contribution into Hydro One prior to its initial public offering.

1. The Province would need to create an "Operating Asset" line which would carry the amount of the capital contribution. The creation of this line and the appropriation would require Treasury Board approval.

    - The Operating Asset would either be categorized as a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions would be made outside of legislation. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. The creation of the Operating Asset would need to be included in the Province's tabling of Estimates in the Legislature (tabled following the release of the Provincial Budget). If the Operating Asset is not included in the Estimates, the Province would need to table Supplementary Estimates in the Legislature.

3. The Province would also need to seek approval, through Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would either require the implementing Ministry to find expense offsets, or tabling of Supplementary Estimates. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive shares in the Trust in return.

    - Note that as with the Hydro One capital contribution, this capital contribution represents a balance sheet movement and would not create an upfront fiscal impact to the Province (exchange of cash for shares – both assets).

    - However, there is likely to be on-going carrying costs for the Province associated with any borrowing that the Province will be required to undertake to fund the capital contribution. In the absence of obtaining incremental earnings on the equity invested in OPG, the carrying cost would generate a negative fiscal impact.

Staff Comments/Next Steps

- A key issue that will need to be addressed going forward is which Provincial entity or which Ministry would provide the capital contribution: OEFC, Energy, or Finance.
    - The preceding analysis assumes that a Ministry, and not OEFC, would make the contribution, given that the Province, and not OEFC, owns 100 per cent of the common shares of OPG.
    - Energy provided the capital contribution to Hydro One before the November 2015 IPO, and the Minister of Energy is the shareholder of OPG on behalf of the Province.

- Energy has indicated in the past that it would prefer Public Accounts reporting to remain consistent with historic practice, which is that OPG reports under the Ministry of Finance.
    - The Hydro One initial public offering experience revealed the historic practice is technically a mistake as the Minister of Energy is the shareholder.
    - Given there is no fiscal impact and the Province's Financial Statements show results across Ministries OPCD agreed not to reclassify the investments to Energy but also did not allow the additional equity acquired in Hydro One to be booked by Finance.
    - Staff expects OPCD to have the same view with respect to the proposed capital contribution into OPG.

- The Province would also need to decide on the timing of the capital contribution.

- Assuming that the Trust would seek to maintain the target debt to equity ratio, the Province would need to determine when to make a contribution into the Trust (i.e. monthly, quarterly, annually?)
- It should also be noted that the timing of the contribution (i.e. whether it is at the beginning, middle, or end of a fiscal year) would also have an impact on the carrying costs for the Province should it decide to borrow to finance the contribution (i.e., a contribution earlier in the fiscal year would create higher interest payments for the Province).
- From a financial perspective there are several options to address timing and carrying costs including the issuance of convertible debt in favour of the Province. Staff would need to engage in discussions with OPCD and OPG to assess the financial and reporting impact of the different options.

Hi Malle,

I understand that your office was involved in assisting with aspects of the Hydro One IPO transaction. Electricity Finance Branch is participating on a working group (with OPG) looking into the province's equity injection around the Global Adjustment Financing component of the Ontario Fair Hydro Plan. I'm not sure of your involvement at this stage, or with whom, but we're happy to keep you, or appropriate contact, looped in to the discussions that we are having on this issue, or provide background

Thanks
Bruno

Subject: RE: Comments

Hi Krista, John,

We shared your ask with Finance Tax Policy and they have been mulling this over for the past few days. We had a conversation this morning and I wanted to provide a synopsis of that call:

- Tax Policy is of the view that if this is structured as a Trust will be a taxable entity under the Income Tax Act. However, because OPG is the beneficiary of the Trust, it will not pay any taxes. For greater certainty, Tax Policy suggested seeking a ruling from CRA. If necessary, we could seek an exemption from CRA (there is precedent with the Nuclear Funds Trust). Please let me know whether that is consistent with your assessment.
- Since all income from the Trust will flow to OPG, all revenues would be subject to PILs (unless we take action to make specific exemptions).
- As we discussed last week, we have proposed the language that you provided with PILs exemptions for specific earning streams from the trust.
- Tax Policy has a number of questions about how to define those exempted revenue streams and the rationale for those exemptions. They want considerably more detail and more time to consider this issue.
- According to Tax Policy, existing Legislation (James I will leave it to you to describe) provides authority to set out PILs exemptions in regulations. Therefore they suggest we do not need to add anything in to the OFHP legislation at this time. That will provide time to more fully consider the issue and discuss the need for these exemptions.
- I suggested I was generally comfortable with this approach, subject to input from OPG and Torys. I think it is better for us to have more time and the flexibility to include these provisions in regulations. Given where we are in the process, I think we are out of time to settle legislative language that will work for Tax Policy.

James, please feel free to add / modify if I missed anything. Please let us know ASAP if you have concerns.

Subject: PSAB Regulatory Asset Recognition
Date: Thursday, April 20, 2017 12:47:18 PM
Attachments: PSAB Regulatory Assets.docx

Hello John,

Attached is my research on regulatory assets and PSAB. My main conclusions are that

- Government reporting entities other than GBEs, such as IESO, may be allowed to recognize regulatory assets by effectively applying IFRS – this is what IESO is doing now as it is a non-GBE that recognizes regulatory assets.
- However, upon consolidation with the government, it seems that PSAB must be followed exclusively, with an adjustment to de-recognize the regulatory assets.
    - Is there someone from IESO or another area we could contact to confirm this has happened in the past?

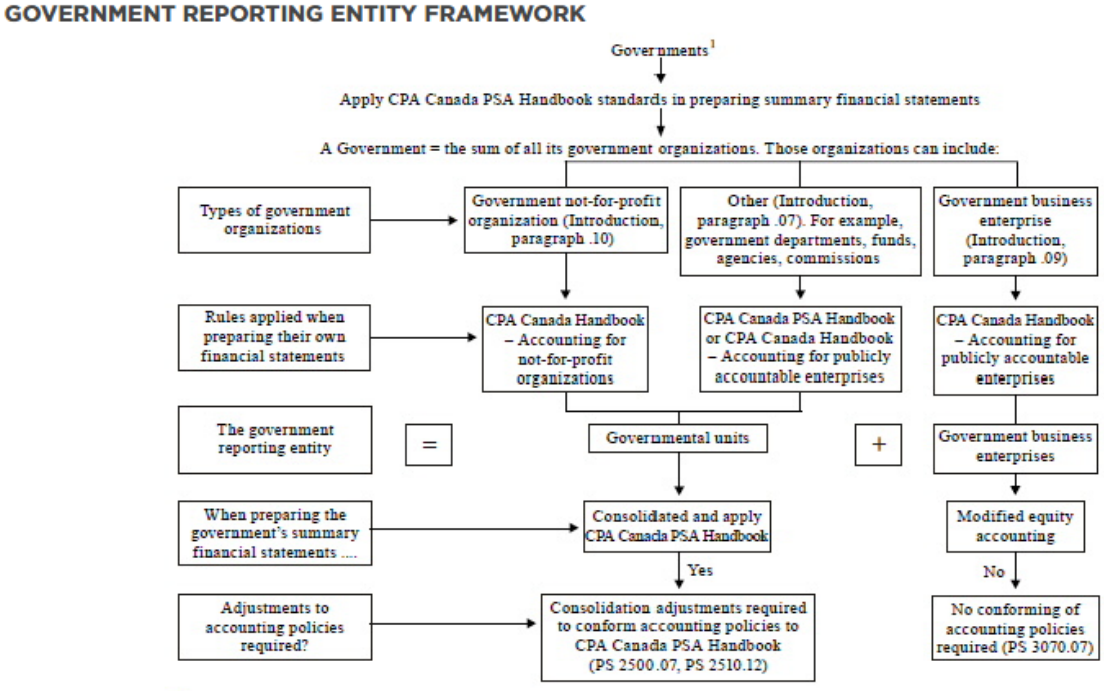
The diagram attached in the word file illustrates the consolidation process.

Kind regards,

Adam Prokop
Economic Specialist
Office: 416-315-6462
adam.prokop@ofina.on.ca

PSAB Regulatory Asset Recognition

- IESO, which follows Canadian Public Sector Accounting Standards (PSAB), has two regulatory asset accounts in its financial statements of approximately $65.1M ($88.2M in 2015).
    - One asset account is for unrecovered smart metre expenses, while the other is for uncovered costs from readjustments to accounting statements in prior years due to IESO adopting PSAB in the beginning of 2011.
        - The majority of the unrecovered PSAB costs deal with changes in pension and other post-employment benefits that led to previously unrecognized losses.
- PSAB (The latest December 2014 version) has no standards for regulatory assets.
- PSAB states that other government reporting entities (this includes IESO, as not a GBE) could consider the CPA Handbook – Part I for standard setting if PSAB does not meet financial statement user needs.
    - CPA Handbook – Part I is Canadian GAAP which is essentially International Financial Reporting Standards that have been adopted by the Accounting Standards Board after an approval process.
    - *The policy of the Accounting Standards Board is to adopt International Financial Reporting Standards without modification* (From CPA Handbook Part I, Introduction, 2017 Edition)
- Governmental units are included in a government's financial statements after their accounting policies have been conformed to those of the government.
    - Need to confirm if IESO, on consolidation in Provincial accounts, has the regulatory assets recognized.
- Even if IESO is allowed to recognize regulatory assets, unlikely that the Province can recognize this upon consolidation:



Supporting Evidence – from PSAB standards and IESO 2016 Financial statement

IESO

- IESO's financial statements are prepared on a going concern basis and in accordance with Canadian public sector accounting standards (PSAB) and reflect the following significant accounting policies.
- IESO, which is consolidated line-by-line with the Province, has two regulated assets recognised
    - **Unrecovered smart metering expenses:** The smart metering expenses result from the IESO's role as the Smart Metering Entity. As such, the IESO funds its SME operating costs and capital investment in the meter data management/repository (MDM/R) through fees from users of smart meters in Ontario. The OEB approves the Smart Metering Entity charge and the charge is intended to cover the costs of developing and operating the MDM/R.
    - **Unrecovered PSAB transition items**: The unrecovered PSAB transition items result from the IESO's adoption of Canadian public sector accounting standards effective January 1, 2011. The adoption of PSAB was accounted for by retroactive application with restatement of prior periods subject to the requirements in Section PS 2125, First-time Adoption by Government Organizations.

Regulated assets consist of the following:

As of December 31 (in thousands of Canadian dollars)	2016	2015
	$	$
Unrecovered smart metering expenses	21,623	40,849
Unrecovered PSAB transition items	43,441	47,353
Closing balance	**65,064**	**88,202**

- As of January 1, 2016, the IESO changed its accounting policy regarding the recognition of assets and liabilities subject to rate regulation. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.
- IESO also has an OEB approved regulatory deferral account:
    - Historically, the IESO's approved regulatory deferral account balance has been maintained at a maximum of $10.0 million ($5.0 million each of the former IESO and OPA for a combined $10.0 million).

Introduction to PSAB

.19 For purposes of preparing general purpose financial statements, other government organizations would normally apply the standards for governments in the PSA Handbook. When these standards do not meet their financial statement users' needs, the standards applicable to publicly accountable enterprises in Part I of the CPA Canada Handbook – Accounting should be considered. The standards determined to be most appropriate should be disclosed and consistently applied.

.20 Determining the most appropriate standards for other government organizations requires the application of professional judgment. Factors to consider in assessing users' needs, in addition to those outlined in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, include, but are not limited to, whether an organization:

(a) has issued, or is in the process of issuing, debt or equity instruments that are, or will be, outstanding and traded in a public market (for example, a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets);

(b) holds assets in a fiduciary capacity for a broad group of outsiders as one of its primary businesses;

(c) has commercial-type operations and substantially derives its revenue from these activities; and

(d) receives limited government assistance on an ongoing basis.

The degree of importance of these factors further depends on the particular circumstances in each case, including the nature of an organization's mandate and considering its purpose, objectives and limitations. In some situations, a particular factor may provide a high degree of evidence of the appropriateness of a particular set of standards whereas, in other situations, the importance of the same factor may not be as significant. Positive responses to one or a combination of these factors would indicate standards applicable to publicly accountable enterprises in Part I of the CPA Canada Handbook – Accounting may be more appropriate.

PS 1000 - CONTEXT OF GOVERNMENT FINANCIAL STATEMENTS

.07 *A government financial report should present information that is useful in evaluating the government's financial condition at the end of the accounting period and its financial performance during the accounting period. Government financial statements are a fundamental component of a government financial report.* [APRIL 2005]

.35 **Assets** are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

.36 Assets have three essential characteristics:

(a) they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows;

(b) the public sector entity can control the economic resource and access to the future economic benefits; and

(c) the transaction or event giving rise to the public sector entity's control has already occurred.

.37 An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph. Thus, for example, an item does not qualify as an asset of a government if the item involves:

(a) no future economic benefit;

(b) future economic benefit, but the government cannot obtain it; or

(c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred.

A proposal to create Legislation.

Fair Hydro Plan Act, 2017, if enacted

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL TO ANY FINAL BILL PRIOR TO INTRODUCTION.

[Insert explanatory note.]

ELECTRICITY ACT, 1998

1. (1) Section 1 of the *Electricity Act, 1998* would be amended by adding the following clause:

[Note: GGRA provisions have been removed for now. Please confirm if they should be re-inserted.]

(2) Clause 1 (f) of the Act would be struck out and the following substituted:

(f) to protect the interests of consumers with respect to the adequacy, reliability and quality of electricity service;

(f.1) to protect the interests of consumers with respect to the prices they pay for electricity, including protection of those interests through the Hydro financing initiative;

[Note: Since the Hydro financing initiative is a defined term and is clearly required to be implemented under the new substantive provisions of the Act, I'm still not sure why this needs to be addressed in the purpose clause. However, I have included a purpose provision as per your instructions.]

Article 1 – Purpose

The proposed new legislation will likely include a large number of provisions intended to support the "financeability" of the structure. As a result, it may make sense for (LSB is exploring the potential) the Bill to create a new stand-alone energy statute, much like the *Green Energy and Green Economy Act, 2009* created the *Green Energy Act, 2009*.

The new legislation would have a purpose clause that explains the objective of intergenerational fairness. This would be useful for the markets to see, and may

Confidential Draft

help support the validity of the legislation from a constitutional law perspective (charge vs. tax)

x. Subsection 2 (1) of the Act would be amended by adding the following definitions:

"Financing Entity" means the trust established by Ontario Power Generation Inc. under clause XX (a) or the entity prescribed for the purposes of clause XX (b); ("French")

"hydro financing initiative" means those policies of the Government of Ontario related to its decision to ensure costs to Ontario electricity consumers are allocated fairly over time, taking into account the useful life of new sources of and technologies for electricity; ("French")

[Note: I have applied the precedent of the "smart metering initiative" as per your instructions. Just want to reiterate my concern that the reference to government policies is really vague (which initiative/ policies? At which point in time?) and I think this could cause lots of confusion, particularly if the policies evolve over time. It could also have unintended consequences.]

[Note: To consider -- by describing the initiative as we have in the above definition, we are potentially linking the deferred amount to amounts that would otherwise be paid for by consumers as part of the GA. If the deferred amounts are not all about "the useful life of new sources and technologies" then the description of the initiative should likely be broadened. (For example, if some of the deferred amount may be used to cover high wholesale prices, one could argue that the initiative is NOT about allocating costs fairly over time… it's just about pushing the cost increase to future consumers without considering what is "fair" across the generations.]

Article 2 - Definitions

The new legislation will include many new defined terms. One important term will be "Funding Shortfall" (or equivalent wording). This will be the net reduction in cash flows to IESO as a result of the reallocation of a portion of the Global Adjustment to later periods of time. Currently, the "Funding Shortfall" would be limited to the Global Adjustment attributable to the procurement contracts, but this is a question that still has to be settled.

Another important defined term that is worth noting is "Replacement Event". This is an event under which the market would want to replace a person who has responsibility to take essential actions under the program (including LDCs, IESO and OPG), like invoicing and collecting amounts.

Confidential Draft

The triggering events are likely to include insolvency and breach of duty/obligation.

Another key defined term is "Transition Charge". This is the amount that will be calculated and applied to the "deferral consumers", based on the amounts of payments due under funding obligations incurred to cover the funding shortfall (i.e., what we have until now been calling "deferral repayments").

Another important defined term will be "Treasury Plan". This will be the written plan prepared by OPG relating to the sale of the "regulatory asset(s)" to the OPG Financing Entity (sometimes previously referred to as the "Financing Trust") and the debt issued by the OPG Financing Entity to the markets.

Another defined term will be "True-up Amount". This is a key provision for the market. It allows for a catch-up for estimate/actual adjustments and to address consumer non-payment credit losses.

A further defined term will be "Undertaking of the Province". This will be a promise by the Government not to impair the program. This will be expected by the market, even though it will be understood that there may be issues for investors to enforce the promise, or get damages if there is a breach.

x. (1) Subsection 6 (1) of the Act would be amended by adding the following clauses:

(q.1) to enter into agreements or arrangements with the Financing Entity;

(q.2) to engage in activities related to making payments to and receiving payments from the Financing Entity under Part V.2, as required under this Act, and to engage in related settlement activities;

Note: Is some of this covered already by clause (i)? Could we address this by expanding upon clause (i)? Trying to understand whether there is any potential overlap.]

(q.3) to engage in activities related to the [sale/disposition/conveyance/assignment] of the [right/regulatory asset] created under section XX, which activities may include,

[Note: As discussed, please confirm terminology.]

(i) incurring liabilities in relation to the [right/asset];

Confidential Draft

(ii) [selling/assigning/disposing of?] the [right/asset] to the Financing Entity;

(iii) assigning [the right/asset] to third parties;

[Note: I don't understand (iii) -- I thought the rights to the asset were being assigned to the trust and nobody else?]

(q.4) acting as a recovery agent for the Financing Entity in relation to [the right/asset];

x. (1) Subsections 25.33 (1) and (2) of the Act would be repealed and the following substituted [TBD].

[Note: As per our telephone discussion today (March 27), there seems to be ongoing debate about the policy direction:

1. Do you want to amend the GAM so that the money received from the FE and the money recovered by the FE are part of the initial GA calculation?

2. Do you want to leave the GAM section as is and add a requirement (in a new section) for the IESO to conduct additional adjustments for a subset of the payments referred to in s. 25.33? This second adjustment would be engaged in after the existing GAM is calculated. So it would be a further adjustment of what has already been adjusted under the GAM.

Until this fundamental question is answered, we would be removing the proposed amendments to s. 25.33.]

OPTION 2:

Deferral adjustments, 25.33 amounts.

25.33.2 (0.1) For the purposes of this section and sections 25.34 and 25.35,

(a) "authorized entity" means **[the hydro financing trust established by Ontario Power Generation Inc. for the sole purpose of financing the recovery of the balance in the deferral account, or]** such **[other]** entity as may be prescribed by regulation;

(b) "deferral account" means the deferral account established under section 25.34;

(c) "deferral amount" means the amount recorded in the deferral account for each month during the deferral and recovery period;

(d) "deferral and recovery period" means the period from May 1, 2017 to April 30, 2047;

(e) "deferral consumer" means a consumer who is a member of a class of consumers prescribed by the regulations for the purposes of sections 25.34 and 25.35;

Confidential Draft

[NTD: This will be set out in a new subection 4(3) of O. Reg. 95/05 and will reflect OREC-eligible consumers other than non-grid connected customers of IPAs (who would not pay a GA charge anyway). Note that this is not quite the same as "RPP-eligible" consumers.]

(f) "electricity supply cost" means the amount calculated according to the formula:

(A + B + C + D) - E

where,

A is the amounts paid by the IESO to generators, the Financial Corporation and distributors, whether the amounts are determined under the market rules or under section 78.1, 78.2 or 78.5 of the *Ontario Energy Board Act, 1998,*

B is the amounts paid by the IESO to entities with whom the IESO has a procurement contract, as determined under the procurement contract,

[NTD: A and B use exactly the same wording as is set out in (a) and (b) of the existing ss. 25.33(1).]

C is

[NTD: C is the "net new" costs associated with the GA deferral. These are costs that the IESO will record in the GA deferral account established under s. 25.34, and that the IESO (or its assignee) will subsequently recover. These costs consist of the interest and financing-related admin costs associated with the GA deferral (which costs will be flowed through from the hydro financing trust to the IESO). These costs do not include the principal amount deferred and recovered, since that is already captured as part of A and B.

The "net new" costs in C will be recoverable solely from a newly prescribed class of consumers - deferral consumers (i.e. those consumers who will benefit from the GA deferral). The rules for the recovery of these costs will be part of a new subsection 4(3) of the RPP Regulation.]

D is any other amounts that may be prescribed by regulation,

[NTD: Paragraph D would give us flexibility to add new cost categories by reg. if/as needed now or later.]

[GGRA-related amendments are removed for the time-being]

and

E is any other amounts that may be prescribed by regulation;

[NTD: Paragraph E would give us flexibility to add new cost categories by reg.

Question for leg counsel: If in the future HOEP were to exceed contract prices and/or regulated rates, presumably the formula would still work (i.e. in such case the amounts for A and B would simply be negative amounts)?] ***[ntd-LSB: IESO appears to agree with that idea, based on our shared appreciation of how EA s.25.33 works today.]***

(f) "reduction period" means the period commencing May 1, 2017 and ending April 30, 2018;

(g) "RPP Regulation" means Ontario Regulation 95/05 (Classes of Consumers and Determination of Rates).

Electricity pricing adjustments

Adjustments by IESO

(1) The IESO shall, through its billing and settlement systems, make adjustments in accordance with the regulations that ensure that, over time, payments by such classes of market participants in Ontario as are prescribed by regulation, reflect the electricity supply cost.

Adjustments by distributors and retailers

(2) Distributors and retailers shall, through their billing systems, make adjustments in accordance with the regulations that ensure that, over time, payments by such classes of consumers in Ontario as are prescribed by regulation, reflect the electricity supply cost.

[NTD: There will be two "classes of consumers in Ontario that are prescribed" for the purposes of RPP-"plus" deferral – the EA regulation that "prescribes" these two classes will refer to (or be aligned with) the two classes as described in the RPP Regulation. 1) The first class are the deferral consumers (see definition above), and 2) the second class (or defined base consumer) will be the "proxy" Toronto Hydro consumer whose bill will only be allowed to increase year-over-year according to rules prescribed in a new s. 6.1 of the RPP Regulation.]

Variance accounts

(3) The IESO shall, in accordance with the regulations, establish and maintain such variance accounts as may be necessary to record all amounts payable or receivable by it under this section and under sections 25.34 and 25.35, in accordance with such rules and requirements as may be prescribed by regulation. *[ntd-DAN: I left "this section"*

even though this provision is part of a new s.25.33.2 – did you want "this section" to refer to "section 25.33"? If so, then we'd add this to the list we've started referencing proposed new s.25.34 and s.25.35. Consider.]

[Drafting note: We can prescribe the different variance accounts that must be maintained, and the different amounts that must be tracked and accounted for, by the IESO. Among other things, the IESO will presumably need to establish variance accounts related to the GA deferral and payback, to take into account timing and other differences. Any financing costs associated with these variance accounts (over and above the financing costs passed through to the IESO by the authorized entity (the hydro financing trust) would be subject to Board scrutiny.]

Same, distributors and retailers

(4) Distributors and retailers shall, in accordance with the regulations, establish and maintain such variance accounts as may be necessary to record all amounts payable or receivable by them under this section and under sections 25.34 and 25.35, in accordance with such rules and requirements as may be prescribed by regulation.

x. The Act would be amended by adding the following sections:

Deferral account

25.34 (1) The IESO shall establish a deferral account to record, for each month during the reduction period and the deferral and recovery period, the difference between,

(a) the amounts that would be payable by deferral consumers in respect of the electricity supply cost for the month under section 6.1 of the RPP Regulation; and

(b) the amounts payable by deferral consumers in respect of the electricity supply cost for the month under section 6.2 of the RPP Regulation.

[NTD: IESO to confirm whether the differences between (a) and (b) would be recorded monthly.

Explanatory note: The Board will determine a rate under a new s. 6.1 of the RPP Regulation that will essentially follow the same process the Board uses to establish the RPP rate, except that it will establish a rate for the deferral consumers (which is a slightly broader class than RPP consumers). The Board will also determine a "proxy" rate for the deferral consumers, calculated according to a different set of rules set out in a new s. 6.2 of the RPP Regulation. The rules in s. 6.2 will establish the "proxy" rate for a "proxy" Toronto Hydro customer consuming an average of 750 kWh/mth, to achieve an all-in tax-included total bill amount reduction of approximately 17% (the bill reduction for GA deferral + 8% OREC will result in an all-in bill reduction for May 1, 2017 – April 30, 2018 of 25% over the May 1, 2016 – April 30, 2017 period). There will be

additional rules dealing with bill increases and full repayment of the GA deferral by April 30, 2047.]

Note that because we refer to the new provisions in the RPP Regulation, we will need to amend that regulation *before* the introduction of the proposed legislative amendments. Drafting of the proposed RPP Regulation amendments is underway.

Do we need to create a parallel provision requiring distributors and retailers to establish deferral accounts as well?]

(2) The IESO shall record interest on the balance of the deferral account at a rate or rates reflecting the costs incurred by the IESO, or by any assignee under section 25.35, to finance the amounts recorded in the deferral account.

(3) The IESO shall also record in the deferral account the costs incurred by the IESO to finance the amounts recorded in the deferral account.

[NTD: This is a placeholder for what we will need here. The concept is that ss. (2) and (3) will ultimately apply to the interest and admin costs incurred by the hydro financing trust (assignee of the right of recovery under s. 25.35) in providing funds to the IESO to finance the GA deferral. Those interest costs and admin costs will be fully recoverable through section 25.35, subject to Board scrutiny presumably limited to verifying the calculations. This is not intended to address interest and costs incurred by the IESO and recorded in the variance accounts established under ss. 25.33(5).]

Recovery of GA deferral amounts

25.35 (1) The IESO shall have the right to fully recover the balance recorded in the deferral account. **[The Board shall authorize?]** recovery of the balance from the deferral consumers over the deferral recovery period in accordance with the prescribed rules.

[NTD: What role should the Board play in determining the amounts recovered each year (within the smoothing parameters that are prescribed)? For e.g., could the Board set rates such that the year-over-year increase in the proxy Toronto Hydro customer's all-in bill was less than the maximum permitted under the prescribed rules?

The prescribed rules will be set out in the new s. 6.2 of the RPP Regulation, which will determine how much the "proxy" Toronto Hydro customer's monthly average bill can increase year-over-year (after the reduction period). Basically, for the first four years after the reduction period, the increase will be limited to CPI. For the balance of the deferral and recovery period, the increases will be limited to 10%, with an overarching requirement that the deferral amounts be fully repaid by April 30, 2047.]

Assignment of right of recovery

(2) The IESO shall have the right to assign**[, in whole or in part?,]** to **[one or more?]** authorized entities, the IESO's rights under subsection (1).

[NTD: This is largely a placeholder for what needs to be addressed here. We will need to determine how to characterize this transaction. For e.g., will it be an outright assignment? Will it be a series of assignments? Should it be characterized as a "sale"? How will this transaction be implemented – e.g. by way of a contract between the IESO and the Trust? We will need the input of external counsel and others to ensure that it adequately supports the contemplated financings.]

Payments to assignee

(3) In the event of an assignment to an authorized entity under subsection (2), the IESO shall, through its billing and settlement systems, make payments to the authorized entity of the full amounts paid to the IESO in respect of the rights assigned.

[NTD: This is largely a placeholder for what needs to be addressed here. Iin addition to requiring IESO to make payments to the authorized entity, do we need to include explicit provisions giving the assignee the right to recover the amounts in the deferral account that are covered by the assignment?

We will need provisions dealing with billing and payment as between the authorized entity and IESO. We will also have to decide whether the interest and admin costs incurred by the authorized entity will simply be passed through to IESO, or whether the authorized entity (or OPG) will have an opportunity to keep any profits made on financing activities (swaps, etc.) by establishing some sort of "reference rate" that IESO would have to pay (and that might be different than the rate(s) the authorized entity would have to pay). A middle ground that could be considered would be to cap the amount of profits the authorized entity (or OPG) could make.

Along similar lines, the amounts charged by OPG to the authorized entity to provide admin services should be subject to Board review (e.g. for reasonableness). This would not jeopardize the ability of the authorized entity to recover all of its costs (since it would affect the amounts OPG could recover from the authorized entity).

We also need to contemplate a provision that if there is a change of law by the Government of Ontario that materially adversely affects the ability of the authorized entity to fully recover the assigned deferral account amounts, then repayment of those amounts will be accelerated and become immediately due and payable.]

x. The Act would be amended by adding the following provisions after s.29:

Transition Charges -- Ratepayer Obligation to Pay a Transition Charge

s.29.0.1 (1) Each consumer in the class of ratepayers to which this program applies (previously referred to as the "deferral consumers") will have a direct statutory obligation to the OPG Financing Entity to pay its share of the deferral repayments (principal, interest, financing costs).

Indebtedness of Ratepayers –
(2) This will be a debt owed by the consumer directly to the OPG Financing Entity. If it is not paid, the OPG Financing Entity can sue the consumer directly through the agreed procedures. This is identifying an explicit and identifiable revenue stream for the comfort of investors.

Separate tracking - distributors,
(3) This debt is separate from the debt owed by the consumer to its LDC, although the LDC will be the collection agent.

No set-off, etc. ***[see similar provision at EA s.29.0.3(2)]***
(4) This debt cannot be netted out against any amount owed by the LDC to the consumer (e.g. year-end credit to consumer on equal monthly billing).

Allocation of Ratepayer Payments
(5) If a consumer pays less than its total invoiced amount, the payment will be allocated pro rata between the deferral repayment and the amounts owing to the LDC.

Transition Charges are Irrevocable

(6). This is intended to prohibit any reversal of amounts that must be paid to meet the terms and conditions of the funding obligations to be incurred under the program.

> **The deferral repayments are due regardless of whether a financing obligation incurred under the treasury plan is consistent with government policy at the time a related payment obligation arises.**
>
> **If the Fair Allocation Plan is amended after a funding obligation is properly incurred, any inconsistency in the payment profile will not impair the existing funding obligation or the pass-through of related payment amounts as Transition Charges.**

Anti-avoidance; No-by-pass

Confidential Draft

(7) The idea here tracks the U.S. transactions, which say that the obligation of a consumer to pay Transition Charges cannot be "by-passed". If a consumer leaves the grid, he or she will still be obligated. See the highlighted text in the definition of "Ratepayer" for a sense of how this may be accomplished.

> **This concept is a key to a rated market financing and will need to be developed further.**
>
> **For example, self-generating customers could be charged a flat fee (for example, equal to the amount that would be payable by the "representative" Toronto Hydro customer that underpins the current government policy on the 25% or some other basis.)**

Distributor, agent for Financing Entity,
s.29.0.2(1) LDC is agent for the OPG Financing Entity. LDC must invoice the deferral consumer the deferral repayment amount - referable to the items described in "Finance Amount" (i.e., an amount already borrowed).

IESO - Calculation of the Period Transition Charge

(2) IESO will calculate the total amount of deferral financing that will be repayable in an applicable [e.g. 6 month] period.

(3) IESO will then determine the deferral repayments due from deferral consumers based on a prescribed methodology for allocating payments to individual deferral consumers.

Notice of Transition Charges, IESO to distributors

(4) IESO will then inform each LDC of the amount of the deferral repayments to be included in the invoices issued to each deferral consumer in the LDC's service territory.

Adjustments *[ntd: Consider – Deferral repayment amount final]*

(5) Deferral consumers cannot challenge the amount of the deferral repayment showing on their invoice unless there is a substantial calculation error.

Successors of Electricity Distributors –
(6) Any successor of an LDC will be bound by the same obligations as the original LDC re: billing and collecting deferral repayments.

Confidential Draft

Successors of IESO –

(7) Any successor of the IESO will be bound by the same obligations as the original IES re: billing and collecting deferral repayments from distributors *[ntd-LSB: what about from consumers?]*.

Appointment of an Alternative Invoicing Agent *[NTD – this provision may be moved closer to the powers/authorities of the OPG financing entity.]*

(8) If a "replacement event" (as defined in any payment obligation incurred to fund a deferral) occurs in respect of an LDC, the OPG Financing Entity can appoint someone else as the OPG Financing Entity's agent to collect deferral repayments. The LDC must sign whatever agreements and assignments are needed to enable the replacement agent to collect the deferral repayments from the LDC's deferral consumers.

Regulatory Asset Owner has Standing

(9) The OPG Financing Entity (or investors through their security) will be able to sue LDCs for failing to properly calculate or invoice the financing repayments.

29.0.3 Collections and Remittances [Collecting and Remitting Deferral Repayments]

(1) If a "replacement event" (as defined in any payment obligation incurred to fund a deferral) occurs in respect of an LDC or the IESO, the OPG Financing Entity can appoint someone else as the OPG Financing Entity's agent to collect and remit deferral repayments. The LDC (or IESO, as applicable) must sign whatever agreements and assignments are needed to enable the replacement agent to collect and remit the deferral repayments. "Replacement Events" are necessary to investors to safeguard against a person holding money in a distressed circumstance.

No Set-off, etc. *[see similar provision at EA s.29.0.1(3)]*

(2) The deferral repayments cannot be netted out against any amounts owed by the party responsible for collecting those repayments.

Sequestration,

(3) If any LDC or the IESO fails to remit deferral repayments, the OPG Financing Entity can get a court to order the LDC (or IESO, as applicable) to require them do so.

Confidential Draft

x. Subsection 53.1 (1) of the Act would be repealed and the following substituted:

Objects of Ontario Power Generation Inc.

53.1 (1) The objects of Ontario Power Generation Inc. include, in addition to any other objects, the following:

[Note: I know that the words "in addition to any other objects" appears in the current provision, but it seems very odd. This suggests that the objects are unlimited, which doesn't seem to be the intention but I could be wrong.]

1. Owning and operating generation facilities.

2. Establishing, operating and supervising the activities of entities for the purposes of supporting and promoting the government's hydro financing initiative.

3. Providing financial and other support to the IESO in its activities in relation to the hydro financing initiative.

4. Engaging in such financing, borrowing, lending and related activities and transactions to support the IESO with short-term or long-term financing.

5. Providing equity, not exceeding the prescribed amount, to support the financing capacity of the Financing Entity.

Subsidiaries

(1.1) Ontario Power Generation Inc. may create one or more subsidiaries in order to more efficiently conduct its activities or achieve its objects.

x. Section 53.2 of the Act would be repealed and the following substituted:

Rights of the Minister[1]

53.2 (1) The Minister, on behalf of Her Majesty in right of Ontario, may acquire, hold, dispose of and otherwise deal with securities or debt obligations of, or any other interest in, Ontario Power Generation Inc. or any of its subsidiaries.

Confidential Draft

[1] FLS - this provision is based on s. 49 of the Act

Agreements

(2) The Minister, on behalf of Her Majesty in right of Ontario, may enter into any agreement or arrangement that the Minister considers necessary or incidental to the exercise of a power under subsection (1).

x. The Act would be amended by adding the following Part:

PART V.2
HYDRO FINANCING INITIATIVE

FAIR HYDRO FINANCING PLAN

Establishment and adoption of the Fair Allocation Plan

A. 1 (1) The Minister of Energy [may/shall] establish a "fair allocation plan"

(a) The purpose of the plan is generally to try and reallocate the portion of GA attributable to the procurement contracts over the anticipated useful life of the generation assets under those contracts.

- **This is the intergenerational funding of the Green Generation Initiaitves.**
- **One policy question is whether the amounts deferred and the period over which the deferred amounts are repaid are to be limited to the portion of GA attributable to the procurement contracts and to the anticipated useful life of the [renewable] generation assets under those contracts.**

- From a constitutional validity perspective (and hence a financeability perspective) these limits are very important.

-Financial/economic modelling to verify this link is required.

Principles and Parameters,

(2) Based on this initial description (which is only illustrative to advance the initial stakeholder discussion), the Minister would determine the details of the "fair allocation plan", but must take into consideration the following principles:

- **The deferred GA costs should be spread over a period not exceeding the anticipated remaining useful life of the generation assets under the procurement contracts**
- **The plan should specify the length of the "reference periods", to identify which deferral consumers are responsible for which deferral repayments**

Confidential Draft

- **The share of the deferral repayments to be allocated to deferral consumers in each "reference period" should reflect a reasonable assessment of the remaining anticipated useful life of the generation assets under procurement contracts and perhaps to the benefits received by those deferral consumers from the procurement contracts (e.g. transition off coal)]**

- **No deferral consumer group should bear an unreasonably disproportionate share of the deferral repayments. That could be limited to a maximum amount, determined on a formula basis, if it makes sense tot he stakeholders**

- **In making the allocations, real (i.e. inflation-adjusted) dollars should be usedThe fair allocation plan is made using forward-looking information and projections.**

- **If, after the fact, the Minister determines that a Ratepayer Group paid more than would otherwise would have been the case had the projections for such period been accurate or other considerations come to light, adjustments to the plan could be made.**

Attribution Methodology

(3) The program will need to define how deferral consumers will be allocated an appropriate share of aggregate adjustment amount.

Confirmation][Review] of the Fair Allocation Plan – [OEB?]

Confirmation][Review] of the Fair Allocation Plan – [OEB?]

(4) Consideration will be needed regarding the level of review and confirmation of the plan is needed or appropriate. For example, should the scope of review be limited to calculations only? If there is a need for review, then consideration will be needed as to who will be the reviewer and under what authority, etc.

THE TREASURY PLAN

Power to Prepare and Implement the Treasury Plan –

A.2 (1) The "Treasury Plan" will be prepared by OPG. It must follow the requirements set out in this Part. Accounting considerations will need to be factored into this delegation, as well as the degree of province input initially and on an on-

Confidential Draft

going basis. [Note for leg counsel: We will need to create the necessary sub-delegation authority]

Required Terms and Conditions of the Treasury Plan

(2) The Treasury Plan will establish the basis for OPG making funding decisions, which will need to align with the Fair Allocation Plan.

Power to Review and Approve the Treasury Plan

(3) The Minister may designate one or more persons to review, and require changes to the Treasury Plan. (This review could also be given to the Minister.) *[NTD-: Assumin no role for OEB – confirm. Any role for MOF/OFA here?]*

Obligation to Apply IESO Remittances,

(4) OPG will need to ensure that pass-through amounts, transferred to it as agent for the OPG Financing Entity, are only used to repay the debt and related costs.

Non-Recourse,

(5) The Treasury Plan will provide that the investors and other contracting parties will not have recourse to the IESO, LDCs, agents, the OEB or the Province, except where such parties fail to comply with applicable law. This may be modified in the contracts under which a financing arises.

> **NOTE: The documentation creating the Funding Obligations must expressly state that such obligations are not guaranteed by the Province.**
>
> **NOTE: See IESO/Stikeman's language for "Regulatory Asset" above.**

Incurrences are Binding,

(6) A failure to implement the Treasury Plan will not impair the pass-through of the deferral amounts or the validity of an otherwise valid funding obligation.

- **NOTE: Separate from the legislative provisions, we will also be preparing a very rough sketch of some of the items that might be included in the Treasury Plan direction.**
- **The sketch will be for illustration purposes only and will be for use in discussions with stakeholders including OPG and IESO.**

Crown bound, actions prohibited,

A.3 (1) No Action to limit, alter, or impair or terminate Transition Charges, the Regulatory Asset or Collections – *[NTD: alternative* - Crown bound, prohibition against discriminatory action.

Confidential Draft

(2) The Province will be prohibited from taking or permitting any action to limit, alter, or impair or terminate Transition Charges, the Regulatory Asset or collections.

Undertaking and Agreement

(3) Under this Undertaking, the Province will agree for the benefit the OPG Financing Entity that it will not impair the value of the Regulatory Asset or the Transition Charges imposed under this Part. This "pledge" is in line with market expectations. Enforcement issues arise in this sort of undertaking, which will be assessed by the market and rating agencies based on the likelihood that a failure by the Province would lead to a successful damages claim. Unlike in the U.S., the law regarding such a claim is uncertain. Nevertheless, we expect that this sort of Undertaking will be requested in the legislation itself (i.e., requiring an act of the legislature to disavow – which is a higher bar than simply walking away from a contractual undertaking.

[Note: TBD where to place this Part within the Act and how to structure this Part. Temporary number (e.g. A1, A2, A3 etc.) has been used for now.]

FINANCING ENTITY

Financing Entity, established or prescribed

A1. (1) For the purpose of accomplishing the hydro financing initiative, the Minister may,

(a) direct Ontario Power Generation Inc. to establish and operate a trust; or

(b) direct Ontario Power Generation Inc. to [oversee? Administer?] an entity prescribed by the regulations.

[Note: Would the direction of the Minister include any additional instructions re timing etc.?]

Duty of Ontario Power Generation Inc.

(2) Ontario Power Generation Inc. shall comply with the direction of the Minister.

[Note: Once OPG takes action under A1 in accordance with the Minister's direction, what happens if at some point in the future, the Minister wants a different entity to take over the role of the FE? Is this a concern that needs to be addressed?]

Confidential Draft

Object of Financing Entity

A2. (1) The object of the Financing Entity is to finance the amounts required to accomplish the hydro financing initiative.

[Note: We are imposing several obligations on the Financing Entity (FE). As a practical matter, how will these obligations be enforced? Who will be responsible for meeting these obligations? (e.g. would there be directors or officers of the trust?). Or will the OPG be responsible for meeting these obligations as the body that establishes/manages the trust or oversees the designated entity?]

Activities

(2) To achieve the object, the Financing Entity shall engage in the following activities:

[Note: Just want to confirm that this should be "shall" and not "may".]

1. Borrowing funds from the Financial Corporation or from such other persons or entities [as may be prescribed?].

2. Investing funds.

3. Making payments and loans to the IESO or such other entity as may be prescribed in accordance with the regulations [or an order of the Board].

[Note: I think it would be best to specify whether the rules would be set out in a reg or in a Board order to avoid confusion.]

[Note: Should the "loans" language be removed, since you noted that the IESO is not "borrowing" from the FE?]

4. Receiving payments from the IESO or such other person or entity as may be prescribed in accordance with the regulations.

5. Issuing securities or debt ***[in the manner prescribed?].***

6. Engaging in any activities, including entering into such transactions, agreements or arrangements as may be prescribed and in accordance with the regulations.

Board review of expenditures, etc.

A3. (1) The Financing Entity shall, at least 60 days after the end of each fiscal year, submit its expenditures relating to its operations for the fiscal year including the expenses it has charged to Ontario Power Generation Inc. or the IESO, or that it has been charged by the Financial Corporation, in relation to those operations, to the Board for review.

Confidential Draft

[Note: The list of items that have to be reported on could be more prescriptive (e.g. specifying specific amounts to be set out) or it could also allow for the Board to specify what it wants to see in the report. Let me know if you'd like to adjust the wording of the requirement.]

Board recommendations, etc.

(2) The Board may review the expenditures and charges referred to in subsection (1) and make recommendations to the Financing Entity as are appropriate in order to ensure the most efficient operation and management of the Financing Entity in order to protect consumers.

[Note: Rather than saying "in order to protect consumers", should this say "in order to achieve the object of the FE"? Or perhaps this could just be deleted altogether with no need for replacement language.]

Deemed assets, entity,

A4. Despite any other provision of this Act or the *Business Corporations Act*, the assets and liabilities which are resident in and form part of the property of the Financing Entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries for any purpose.

[Note: You posed a question about excluding an OPG subsidiary from this rule. Please instruct.]

OBTAINING FINANCING

[Note: It will be important to read all of the provisions that follow against the provisions in the existing Act, to ensure there is no overlap/confusion being created due to potential interactions between existing authority and new authority. The drafting focus so far has just been to get the relevant substantive provisions into the draft without evaluating how they fit into the broader scheme of the Act.]

Ontario Power Generation Inc. to obtain financing

A5. (1) The IESO may direct Ontario Power Generation Inc. to cause the Financing Entity to engage in any of the following activities in order to accomplish the hydro financing initiative:

[Note: As a practical matter, how would OPG "cause the FE" to do these things? How is this different from "directing"?]

1. Financing, borrowing or lending to provide the IESO with short-term or long-term financing.

2. [Purchasing/receiving/obtaining the right created under section XX] and making any payments to the IESO that relate to the IESO's activities in support of the hydro financing initiative.

Confidential Draft

[Note: Not sure if the regulated assets would always be "purchased" or if other terminology might be needed. Please advise.]

3. Collecting from the IESO amounts that the IESO is required to pay in relation to its activities in support of the hydro financing initiative.

4. Assigning its [the IESO's?] rights to all or part of the regulatory assets established under section XXXX.

[Note: What is para. 4 about? If this is about forcing OPG to make the FE do things, then does this belong in the list? I thought that it was only the IESO that would be assigning the rights to the FE]

5. Such other activities as may be prescribed.

Same

(2) Ontario Power Generation Inc. shall comply with a direction under subsection (1) within the time specified in the direction [and any prescribed rules?].

IESO to enter into transactions

A6. (1) The IESO shall, in order to support the achievement of the hydro financing initiative, enter into transactions with the Financing Entity or any other entity for such amounts as are necessary to support the hydro financing initiative.

[Note: My understanding is that the need for "or any other entity" stems from the need to allow for the IESO to obtain temporary financing in the immediate term, before it is able to access the FE. Do you want to narrow this so that the IESO is only authorized to do this before the FE is up and running? Or do you want to keep it available on an ongoing basis?]

Same

(2) In entering into transactions under subsection (1), the IESO shall comply with the regulations.

RIGHT OF RECOVERY [CREATION OF REGULATORY ASSET]

[Note re the following provisions:
I found a provision dealing with the concept of "regulatory asset" in Bill 210 from 2002 (see s. 79.13 of the OEBA). It deems certain things to be regulatory assets but does not say much more. On the phone, you noted that the term "regulatory asset" does not have any legal meaning on its own but is just an accounting term that has been used to describe the statutorily created right of recovery. However, you also said that there may be a need to use this term in order to convey the intended meaning from an accounting perspective.

Confidential Draft

In order to ensure that the drafting captures the policy intent, please answer/address the following questions:

1. Should we be creating a statutory right of recovery or deeming certain amounts to be a regulatory asset? [NTD-LSB: Yes. The term "Regulatory Asset" has currency in commercial law (parliance) and since much of what we're doing is to support a securitization model, the term should remain for now. Further, the term "regulatory asset" was consistently referred to in the documents provided to ENERGY LSB by Blakes. Further, IESO/Stikemans offered up alternative language for the creation of a "regulatory asset" (as an intangible asset of sorts). You said you'd consult on whether the regulatory asset terminology is important to flag in the Bill.

2. You said you're not sure whether or not the Act will require the IESO to sell/assign the right. Please instruct. If it is optional for the IESO to sell/assign, then it seems that the right could in theory remain with the IESO (unless you are saying that the statute can just create the right of the FE to recover without any need for the right to be assigned/sold by the IESO… in which case please explain why we need to deal with the sale/assignment at all). Please clarify.

3. I'm assuming that if we are creating a right, then the right must be held by someone (e.g. the IESO) before it can be assigned/sold? So should the right be created in the Act for the IESO (e.g. the IESO has a right to recover the amounts from distributors and prescribed consumers) since the IESO would then sell/assign/transfer the right to the FE? The FE must also have the right to recover from the IESO itself, so that creates an extra complication.

4. Should there be some indication of when the right of recovery/regulatory assets will no longer continue to exist (e.g. once all of the amounts have been paid?). I notice that your instructions below about the debt indicate that the debt is no longer owing once the amounts are paid, but do we need to indicate that the regulatory asset also ceases to exist at that point?

Right of recovery created

A7. A right to recover the following amounts in full from the IESO, distributors and prescribed consumers is created.

1. The [deferred amount].

2. The amounts of costs relating to the operation or management of the Financing Entity, as are approved by the Board.

[Note: How will the Board be approving these costs? Is this related to the expenditure report submitted to the Board? That provision dealing with Board expenditures doesn't refer to any approval taking place… just a review and recommendations.]

Confidential Draft

[Note: Need to mention expenditures?]

3. Other amounts as may be prescribed or as may be approved by the Board.

Note: Are you going to be saying anything about how the interest will be calculated?

Sale [and/or?] assignment of [right? Regulatory assets?]

A8. (1) The IESO [may? Shall?], in accordance with the regulations, sell [and/or?] convey to the Financing Entity the right to recovery created established under section A7 on such terms and conditions as are provided for by the Financing Entity.

[Note: Your instructions include the terms "sell", "assign" and "convey" -- which are correct?]

[Note: Your instructions suggested that something other than the "regulatory assets" may need to be assigned to the FE. Are you referring to the "warehousing" liabilities assumed by the IESO in the early days? What else would need to be assigned? Could these items be listed above in A7 or is there a reason why they need to be kept separate?]

Sale deemed final

(2) The sale and conveyance referred to in subsection (1) is deemed to be final for all purposes.

[Note: What is this intended to achieve? Is this based on precedent language that has been interpreted to have the desired effect?]

Debts

(3) For greater certainty, the [amounts to which the FE has a right of recovery] are debts owing by the IESO, distributors and prescribed consumers to the Financial Entity until the amounts have been fully paid and fully discharged.

[Note: Why is subs. (3) necessary? Isn't it inherent in the sale of the regulatory assets that the FE would have acquired the future right to collect these amounts? Perhaps it is unclear that the amount can be collected from not just the IESO but from others down the chain. But isn't that what the "right of recovery" section above is meant to cover?]

[Note: I haven't checked to see how other similar provisions dealing with debts are drafted. Not sure we need the "for greater certainty" and also not sure what the distinction is between "fully paid" and "fully discharged". This provision will need further consideration. You also noted that you may want to specify who determines when all obligations have been satisfied.]

IESO to recover amounts

A9. The IESO shall recover the amounts set out in section A7 from distributors and prescribed consumers, in accordance with […]:

Note: how are the requirements that would determine recovery for this subsection meant to interact with the GAM reg?

Confidential Draft

[Note: The following two subsections are placeholders. You noted that *the provision is going to have to evolve to deal with consumers who exit the grid (disconnect) completely either because they leave the province or they decide to generate their own electricity and completely disconnect. You also want to be able to prescribe* methods of ensuring that the amounts required cannot be "by-passed". I'll need to understand what is meant by "by-passed".]

Distributors liable

(x) The IESO and distributors are entitled to compensation for any shortfall in relation to the amounts the IESO must pay to generators, the Financial Corporation or other persons including prescribed persons, under section 25.33 resulting from the IESO's activities under the hydro financing initiative.

Consumers liable

(X) Prescribed consumers are required to contribute towards the amount of any compensation referred to in subsection (4) in accordance with the amounts and methods prescribed by the regulations and such amounts shall not be by-passed.

USE OF FUNDS TO REDUCE ELECTRICITY BILLS

[Note: Depending on how things land with s. 25.33, this might be a place to explain how the transactions between the IESO and the FE translate into reduction in the electricity bills of RPP consumers. Regulations could specify how the IESO would ensure that the short-term rate reductions that flow from the FE amounts are only received by the targeted class of consumers and that this same class of consumers is the only class responsible for the repayment of FE funds in the long-term.]

ALTERNATIVE LANGUAGE – REGULATORY ASSET -- PROPOSED BY IESO (STIKEMANS)

Regulatory Asset Created

A7. (1) There is hereby created and conferred upon the IESO a "Regulatory Asset" consisting of the right to recover, in addition to the amounts otherwise recoverable, in accordance with the Regulations, the aggregate of the following amounts [from distributors and] prescribed consumers. **[Quare: do we regard the Regulatory Asset as a single asset in a variable amount or as different assets arising on each deferral]:**

1. The [deferred amount, including interest accrued thereon].
2. The amounts of costs relating to the operation or management of the Financing Entity, as are approved by the Board.
3. Other amounts as may be prescribed or as may be approved by the Board.

Confidential Draft

(2) The Regulatory Asset created by (1), shall constitute, for all purposes, a property right, shall be transferable by the IESO in accordance with Section A8, and shall constitute an intangible in which a security interest can be created for purposes of the *Personal Property Security Act*.

Election to Transfer Regulatory Asset

A8. (1) The IESO shall, from time to time, in accordance with the Regulations, elect to transfer to the Financing Entity all or any portion of the Regulatory Asset, on such terms and conditions as IESO may determine.

(2) Upon any election by the IESO pursuant to (1), the Financing Entity shall pay to the IESO in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, an amount, not less than the Deferred Amount, determined in accordance with the Regulations.

(3) Upon any election by the IESO pursuant to (1), the Financing Entity shall become the person entitled to the benefit of the Regulatory Asset, or the portion thereof in respect of which the election was made, free and clear of any adverse claim (other than any such claim created by the Financing Entity) and shall be entitled to exercise all of the rights and remedies conferred by or arising in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, and the IESO shall cease to have any rights (except as provided in Section A9) to or in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, all as if the Regulatory Asset, or the portion thereof in respect of which the election was made, had originally been conferred upon the Financing Entity and not the IESO.

(4) Upon any election by the IESO pursuant to (1), the IESO shall have no further rights or obligations in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, and the Regulatory Asset, or the portion thereof in respect of which the election was made, shall not form part of the assets and liabilities of IESO for any purpose.

(5) The LG in Council may adopt regulations providing for the circumstances in which IESO shall make the election or elections provided for in (1).

Financing Entity may Grant Security Interest

A9. (1) The Financing Entity may, at any time after an election referred to in Section A8(1), create a security interest in favour of any person in all or any portion of the Regulatory Asset subject to such election, all on such terms and conditions as the Financing Entity may determine.

(2) Except as provided for in Regulations adopted pursuant to (3), *The Personal Property Security Act* shall apply to any security interest created pursuant to (1), except that the rights of the secured party on default shall be limited to receiving the amounts collected in respect of the Regulatory Asset, or the portion thereof subject to the security interest, as and when collected by the IESO in accordance with A10.

Confidential Draft

(3) The LG in Council may adopt regulations providing for the terms on which the security interest provided for in (1) can be created and perfected and for the priority of any such security interest.

IESO to Collect Amounts in Respect of the Regulatory Asset

A10. Subsequent to any election pursuant to Section A8, the IESO shall, as agent on behalf of the Financing Entity and any secured party, use reasonable efforts to collect the amounts owing in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, and shall promptly pay over to the Financing Entity or the secured party the amounts collected.

--------*END OF IESO/BLAKES ALTERNATIVE LANGUAGE FOR REG. ASSET ---*

------- ***BLAKES VERSION OF LANGUAGE FOR REGULATORY ASSET***

The Regulatory Asset, Composition,

A7(1) The "regulatory asset" consists of the following:

- **present and future statutory obligation of:**
  - **deferral consumers - to make all deferral repayments (including interest and late payment fees)**
  - **LDCs - to invoice the deferral consumers for the deferral repayments and to remit the amounts collected to the IESO**
  - **IESO - to receive and remit the deferral repayments from LDCs to the OPG Financing Entity**
- **All deferral repayment amounts collected**
- **All amounts in LDC or IESO deferral payment bank accounts**

Validity of Dispositions

(2) This section is reinforcing by statute the "sale" of the asset to the Financing Entity. This has been an important feature of the legislation in other jurisdictions in similar circumstances. Specifically, it says that "Dispositions" of the Regulatory Asset are "true sales", and not subject to challenge. This is an essential requirement for a securitization transaction. This provision identifies possible grounds for a challenge that a sale took place and indicates that those events do not affect the validity of the sale.

Deemed Perfection and Priority of Dispositions

Confidential Draft

(3) This is reinforcing the automatic nature of the "sale" of the asset. It Provides for a clean sale to the OPG Financing Entity, free and clear of encumbrances (i.e., no specific need to "perfect" the sale.

Validity of Pledges,
(4) Statutory override permitting the OPG Financing Entity to give a security interest in the "regulatory asset" to investors.

> **This would give the investors (through an indenture) the right to enforce collection of the deferral repayments to pay off amounts owed by the OPG Financing Entity to the investors upon certain defaults by the OPG Financing Entity under an indenture.**

Deemed Perfection and Priority of Pledges
(5) This is reinforcing that a commercial pledge given by OPG Financing Entity is valid and will have priority without specific "perfection". The result is that a pledge of the Regulatory Asset as security in accordance with the Treasury Plan will be given priority to other claims. The Pledge includes proceeds from the Regulatory Asset and is not affected by comingling or the ordinary requirement to file a financing statement under the PPSA.

Enforcement of Property Rights –

(6) The rights of any Regulatory Asset Owner to collect and enforce its rights and interests in, to or in respect of the Regulatory Asset shall be exercised in the manner set forth in Article 5. *[ntd-: NOT an annotation – pulled directly from Blakes' document.]*

Collective Action Required –
(7) This anticipates that the Regulatory Asset will be structured as a variable interest that can be divided between IESO (until it sells) and one or more OPG Financing Entitys. The likely format will be a co-ownership agreement, that will allow for different owners to have a fractional undivided ownership interest in the Regulatory Asset. Those will entitle the owners to a specified share of the cash flows, which will correspond to their finance payment obligations. This will allow for future financing flexibility.

MISCELLANEOUS

Fair Hydro Financing Plan, miscellaneous,

A.8 (1) Consideration will be given to whether any additional 'miscellaneous' provisions are needed (and expected by the market) to support the financing of this

Confidential Draft

structure. Some of these provisions are not typical in legislation, and so will need further consideration (in consultation with leg counsel).

Regulations

114(1.5) The LGIC may make regulations to implement the Fair Hydro Financing Initiative

-(a) The power to implement the program (and to set out some of the details of the program) through regulations is important. Decisions remain to be made (once the drafting is a little further advanced) about what provisions/details need to appear in the proposed legislation, and what provisions/details can be set out in regulations.

Confidential Draft

ONTARIO ENERGY BOARD ACT, 1998

x. Subsection 1 (1) of the *Ontario Energy Board Act, 1998* would be amended by adding the following paragraph:

6. To facilitate the implementation of the [hydro financing initiative].

[Note: Would need to link with definition in the EA or else spell out the definition here - TBD.]

x. Section 27.1 of the Act would be amended by adding the following paragraph:

Hearings

(1.1) A directive may specify whether the Board is to hold a hearing, the circumstances under which a hearing may or may not be held and, if a hearing is to be held, the type of hearing to be held and the time within which it must be held.

The underlined is what makes this different from the other provisions in the Act that basically have the same wording. There are already a number of places in the Act where you have this type of hearings provision re directives (e.g., s. 27.2 (7)). If you basically want the same authority in each instance, then the wording should be consistent in each case. There are already some discrepancies between the current provisions (e.g., s. 27.2

(7) talks about types of hearings, whereas s. 28 (2) doesn't). Differences in wording will typically be presumed to be differences in meaning. So, the question is what you're intending to authorize in each case, and whether differences are intended. If you want the same thing everywhere, it should all be worded the same. Let me know.

[Note: Waiting for confirmation whether amendments to s. 78.7 are needed. Please advise.]

x. Section 78 of the Act would be amended by adding the following subsection after subsection (3.0.5):

Rates, fair hydro financing initiative activities -IESO, OPG, distributors, etc.
(3.0.6) The OEB would not be precluded from taking into account the performance of duties under this Part by any entity regulated by the OEB, including fees received by such entity in excess of the incremental costs of the provision of such services.

x. Section 79.16 (3) of the Act would be repealed and the following substituted:

Adjustment to eliminate variances

(3) In determining rates under clause (1) (b), the Board shall take into account balances in variance accounts established under section 25.33 of the *Electricity Act, 1998* and, subject to section X of that Act, make adjustments with a view to eliminating those balances within 12 months or such shorter time periods as the Minister may direct.

[Note: Please let me know what section the highlighted portion is supposed to refer to… is it the provision that says the IESO has the 30 year period to pay off the amount in the variance account for the hydro financing initiative? I wonder if this is confusing and whether the amendment to subs. (3) above works… it almost seems unnecessary to say that the Board has to "take into account" this balance, given that we are setting up a bunch of very specific rules about what has to be done by various entities in order to eliminate this amount. What would the Board be expected to do with information about this variance account? For consideration.]

PART VII.3

COMPLIANCE – FAIR HYDRO FINANCING INITIATIVE

Right of the [OEB] to Inspect Books and Records,
113 (1) OEB may be given the power to investigate compliance with the legislation and the power to examine books and records, etc.

Power to Investigate Compliance and Impose Regulatory Sanctions

Confidential Draft

(2) This legislation will not limit the OEB's power to investigate compliance or prevent or preclude the OEB's power to impose sanctions. The OEB can investigate compliance with this part and to impose regulatory sanctions for non-compliance.

Limitation, Board,

(2.1) The OEB cannot, however, take any action to affect the irrevocability of the Transition Charges or the Undertaking of the Province.

Timing – this proposal for legislation would, if approved by the Legislature, come into force on a date to be established by Government.

A proposal to create Legislation.

Fair Hydro Plan Act, 2017, if enacted

EXPLANATORY NOTE TO BE ADDED BY LEGISLATIVE COUNSEL TO ANY FINAL BILL PRIOR TO INTRODUCTION.

[Insert explanatory note.]

ELECTRICITY ACT, 1998

1. (1) Section 1 of the *Electricity Act, 1998* would be amended by adding the following clause:

[Note: GGRA provisions have been removed for now. Please confirm if they should be re-inserted.]

(2) Clause 1 (f) of the Act would be struck out and the following substituted:

(f) to protect the interests of consumers with respect to the adequacy, reliability and quality of electricity service;

(f.1) to protect the interests of consumers with respect to the prices they pay for electricity, including protection of those interests through the Hydro financing initiative;

[Note: Since the Hydro financing initiative is a defined term and is clearly required to be implemented under the new substantive provisions of the Act, I'm still not sure why this needs to be addressed in the purpose clause. However, I have included a purpose provision as per your instructions.]

Article 1 – Purpose

The proposed new legislation will likely include a large number of provisions intended to support the "financeability" of the structure. As a result, it may make sense for (LSB is exploring the potential) the Bill to create a new stand-alone energy statute, much like the *Green Energy and Green Economy Act, 2009* created the *Green Energy Act, 2009*.

The new legislation would have a purpose clause that explains the objective of intergenerational fairness. This would be useful for the markets to see, and may

Confidential Draft

help support the validity of the legislation from a constitutional law perspective (charge vs. tax)

x. Subsection 2 (1) of the Act would be amended by adding the following definitions:

"Financing Entity" means the trust established by Ontario Power Generation Inc. under clause XX (a) or the entity prescribed for the purposes of clause XX (b); ("French")

"hydro financing initiative" means those policies of the Government of Ontario related to its decision to ensure costs to Ontario electricity consumers are allocated fairly over time, taking into account the useful life of new sources of and technologies for electricity; ("French")

[Note: I have applied the precedent of the "smart metering initiative" as per your instructions. Just want to reiterate my concern that the reference to government policies is really vague (which initiative/ policies? At which point in time?) and I think this could cause lots of confusion, particularly if the policies evolve over time. It could also have unintended consequences.]

[Note: To consider -- by describing the initiative as we have in the above definition, we are potentially linking the deferred amount to amounts that would otherwise be paid for by consumers as part of the GA. If the deferred amounts are not all about "the useful life of new sources and technologies" then the description of the initiative should likely be broadened. (For example, if some of the deferred amount may be used to cover high wholesale prices, one could argue that the initiative is NOT about allocating costs fairly over time… it's just about pushing the cost increase to future consumers without considering what is "fair" across the generations.]

Article 2 - Definitions

The new legislation will include many new defined terms. One important term will be "Funding Shortfall" (or equivalent wording). This will be the net reduction in cash flows to IESO as a result of the reallocation of a portion of the Global Adjustment to later periods of time. Currently, the "Funding Shortfall" would be limited to the Global Adjustment attributable to the procurement contracts, but this is a question that still has to be settled.

Another important defined term that is worth noting is "Replacement Event". This is an event under which the market would want to replace a person who has responsibility to take essential actions under the program (including LDCs, IESO and OPG), like invoicing and collecting amounts.

Confidential Draft

The triggering events are likely to include insolvency and breach of duty/obligation.

Another key defined term is "Transition Charge". This is the amount that will be calculated and applied to the "deferral consumers", based on the amounts of payments due under funding obligations incurred to cover the funding shortfall (i.e., what we have until now been calling "deferral repayments").

Another important defined term will be "Treasury Plan". This will be the written plan prepared by OPG relating to the sale of the "regulatory asset(s)" to the OPG Financing Entity (sometimes previously referred to as the "Financing Trust") and the debt issued by the OPG Financing Entity to the markets.

Another defined term will be "True-up Amount". This is a key provision for the market. It allows for a catch-up for estimate/actual adjustments and to address consumer non-payment credit losses.

A further defined term will be "Undertaking of the Province". This will be a promise by the Government not to impair the program. This will be expected by the market, even though it will be understood that there may be issues for investors to enforce the promise, or get damages if there is a breach.

x. (1) Subsection 6 (1) of the Act would be amended by adding the following clauses:

(q.1) to enter into agreements or arrangements with the Financing Entity;

(q.2) to engage in activities related to making payments to and receiving payments from the Financing Entity under Part V.2, as required under this Act, and to engage in related settlement activities;

Note: Is some of this covered already by clause (i)? Could we address this by expanding upon clause (i)? Trying to understand whether there is any potential overlap.]

(q.3) to engage in activities related to the [sale/disposition/conveyance/assignment] of the [right/regulatory asset] created under section XX, which activities may include,

[Note: As discussed, please confirm terminology.]

(i) incurring liabilities in relation to the [right/asset];

Confidential Draft

(ii) [selling/assigning/disposing of?] the [right/asset] to the Financing Entity;

(iii) assigning [the right/asset] to third parties;

[Note: I don't understand (iii) -- I thought the rights to the asset were being assigned to the trust and nobody else?]

(q.4) acting as a recovery agent for the Financing Entity in relation to [the right/asset];

x. (1) Subsections 25.33 (1) and (2) of the Act would be repealed and the following substituted [TBD].

[Note: As per our telephone discussion today (March 27), there seems to be ongoing debate about the policy direction:

1. Do you want to amend the GAM so that the money received from the FE and the money recovered by the FE are part of the initial GA calculation?

2. Do you want to leave the GAM section as is and add a requirement (in a new section) for the IESO to conduct additional adjustments for a subset of the payments referred to in s. 25.33? This second adjustment would be engaged in after the existing GAM is calculated. So it would be a further adjustment of what has already been adjusted under the GAM.

Until this fundamental question is answered, we would be removing the proposed amendments to s. 25.33.]

OPTION 2:

Deferral adjustments, 25.33 amounts.

25.33.2 (0.1) For the purposes of this section and sections 25.34 and 25.35,

(a) "authorized entity" means **[the hydro financing trust established by Ontario Power Generation Inc. for the sole purpose of financing the recovery of the balance in the deferral account, or]** such **[other]** entity as may be prescribed by regulation;

(b) "deferral account" means the deferral account established under section 25.34;

(c) "deferral amount" means the amount recorded in the deferral account for each month during the deferral and recovery period;

(d) "deferral and recovery period" means the period from May 1, 2017 to April 30, 2047;

(e) "deferral consumer" means a consumer who is a member of a class of consumers prescribed by the regulations for the purposes of sections 25.34 and 25.35;

Confidential Draft

[NTD: This will be set out in a new subection 4(3) of O. Reg. 95/05 and will reflect OREC-eligible consumers other than non-grid connected customers of IPAs (who would not pay a GA charge anyway). Note that this is not quite the same as "RPP-eligible" consumers.]

(f) "electricity supply cost" means the amount calculated according to the formula:

(A + B + C + D) - E

where,

A is the amounts paid by the IESO to generators, the Financial Corporation and distributors, whether the amounts are determined under the market rules or under section 78.1, 78.2 or 78.5 of the *Ontario Energy Board Act, 1998,*

B is the amounts paid by the IESO to entities with whom the IESO has a procurement contract, as determined under the procurement contract,

[NTD: A and B use exactly the same wording as is set out in (a) and (b) of the existing ss. 25.33(1).]

C is

[NTD: C is the "net new" costs associated with the GA deferral. These are costs that the IESO will record in the GA deferral account established under s. 25.34, and that the IESO (or its assignee) will subsequently recover. These costs consist of the interest and financing-related admin costs associated with the GA deferral (which costs will be flowed through from the hydro financing trust to the IESO). These costs do not include the principal amount deferred and recovered, since that is already captured as part of A and B.

The "net new" costs in C will be recoverable solely from a newly prescribed class of consumers - deferral consumers (i.e. those consumers who will benefit from the GA deferral). The rules for the recovery of these costs will be part of a new subsection 4(3) of the RPP Regulation.]

D is any other amounts that may be prescribed by regulation,

[NTD: Paragraph D would give us flexibility to add new cost categories by reg. if/as needed now or later.]

[GGRA-related amendments are removed for the time-being]

and

E is any other amounts that may be prescribed by regulation;

[NTD: Paragraph E would give us flexibility to add new cost categories by reg.

Question for leg counsel: If in the future HOEP were to exceed contract prices and/or regulated rates, presumably the formula would still work (i.e. in such case the amounts for A and B would simply be negative amounts)?] ***[ntd-LSB: IESO appears to agree with that idea, based on our shared appreciation of how EA s.25.33 works today.]***

(f) "reduction period" means the period commencing May 1, 2017 and ending April 30, 2018;

(g) "RPP Regulation" means Ontario Regulation 95/05 (Classes of Consumers and Determination of Rates).

Electricity pricing adjustments

Adjustments by IESO

(1) The IESO shall, through its billing and settlement systems, make adjustments in accordance with the regulations that ensure that, over time, payments by such classes of market participants in Ontario as are prescribed by regulation, reflect the electricity supply cost.

Adjustments by distributors and retailers

(2) Distributors and retailers shall, through their billing systems, make adjustments in accordance with the regulations that ensure that, over time, payments by such classes of consumers in Ontario as are prescribed by regulation, reflect the electricity supply cost.

[NTD: There will be two "classes of consumers in Ontario that are prescribed" for the purposes of RPP-"plus" deferral – the EA regulation that "prescribes" these two classes will refer to (or be aligned with) the two classes as described in the RPP Regulation. 1) The first class are the deferral consumers (see definition above), and 2) the second class (or defined base consumer) will be the "proxy" Toronto Hydro consumer whose bill will only be allowed to increase year-over-year according to rules prescribed in a new s. 6.1 of the RPP Regulation.]

Variance accounts

(3) The IESO shall, in accordance with the regulations, establish and maintain such variance accounts as may be necessary to record all amounts payable or receivable by it under this section and under sections 25.34 and 25.35, in accordance with such rules and requirements as may be prescribed by regulation. *[ntd-DAN: I left "this section"*

even though this provision is part of a new s.25.33.2 – did you want "this section" to refer to "section 25.33"? If so, then we'd add this to the list we've started referencing proposed new s.25.34 and s.25.35. Consider.]

[Drafting note: We can prescribe the different variance accounts that must be maintained, and the different amounts that must be tracked and accounted for, by the IESO. Among other things, the IESO will presumably need to establish variance accounts related to the GA deferral and payback, to take into account timing and other differences. Any financing costs associated with these variance accounts (over and above the financing costs passed through to the IESO by the authorized entity (the hydro financing trust) would be subject to Board scrutiny.]

Same, distributors and retailers

(4) Distributors and retailers shall, in accordance with the regulations, establish and maintain such variance accounts as may be necessary to record all amounts payable or receivable by them under this section and under sections 25.34 and 25.35, in accordance with such rules and requirements as may be prescribed by regulation.

x. The Act would be amended by adding the following sections:

Deferral account

25.34 (1) The IESO shall establish a deferral account to record, for each month during the reduction period and the deferral and recovery period, the difference between,

(a) the amounts that would be payable by deferral consumers in respect of the electricity supply cost for the month under section 6.1 of the RPP Regulation; and

(b) the amounts payable by deferral consumers in respect of the electricity supply cost for the month under section 6.2 of the RPP Regulation.

[NTD: IESO to confirm whether the differences between (a) and (b) would be recorded monthly.

Explanatory note: The Board will determine a rate under a new s. 6.1 of the RPP Regulation that will essentially follow the same process the Board uses to establish the RPP rate, except that it will establish a rate for the deferral consumers (which is a slightly broader class than RPP consumers). The Board will also determine a "proxy" rate for the deferral consumers, calculated according to a different set of rules set out in a new s. 6.2 of the RPP Regulation. The rules in s. 6.2 will establish the "proxy" rate for a "proxy" Toronto Hydro customer consuming an average of 750 kWh/mth, to achieve an all-in tax-included total bill amount reduction of approximately 17% (the bill reduction for GA deferral + 8% OREC will result in an all-in bill reduction for May 1, 2017 – April 30, 2018 of 25% over the May 1, 2016 – April 30, 2017 period). There will be

additional rules dealing with bill increases and full repayment of the GA deferral by April 30, 2047.]

Note that because we refer to the new provisions in the RPP Regulation, we will need to amend that regulation *before* the introduction of the proposed legislative amendments. Drafting of the proposed RPP Regulation amendments is underway.

Do we need to create a parallel provision requiring distributors and retailers to establish deferral accounts as well?]

(2) The IESO shall record interest on the balance of the deferral account at a rate or rates reflecting the costs incurred by the IESO, or by any assignee under section 25.35, to finance the amounts recorded in the deferral account.

(3) The IESO shall also record in the deferral account the costs incurred by the IESO to finance the amounts recorded in the deferral account.

[NTD: This is a placeholder for what we will need here. The concept is that ss. (2) and (3) will ultimately apply to the interest and admin costs incurred by the hydro financing trust (assignee of the right of recovery under s. 25.35) in providing funds to the IESO to finance the GA deferral. Those interest costs and admin costs will be fully recoverable through section 25.35, subject to Board scrutiny presumably limited to verifying the calculations. This is not intended to address interest and costs incurred by the IESO and recorded in the variance accounts established under ss. 25.33(5).]

Recovery of GA deferral amounts

25.35 (1) The IESO shall have the right to fully recover the balance recorded in the deferral account. **[The Board shall authorize?]** recovery of the balance from the deferral consumers over the deferral recovery period in accordance with the prescribed rules.

[NTD: What role should the Board play in determining the amounts recovered each year (within the smoothing parameters that are prescribed)? For e.g., could the Board set rates such that the year-over-year increase in the proxy Toronto Hydro customer's all-in bill was less than the maximum permitted under the prescribed rules?

The prescribed rules will be set out in the new s. 6.2 of the RPP Regulation, which will determine how much the "proxy" Toronto Hydro customer's monthly average bill can increase year-over-year (after the reduction period). Basically, for the first four years after the reduction period, the increase will be limited to CPI. For the balance of the deferral and recovery period, the increases will be limited to 10%, with an overarching requirement that the deferral amounts be fully repaid by April 30, 2047.]

Assignment of right of recovery

(2) The IESO shall have the right to assign**[, in whole or in part?,]** to **[one or more?]** authorized entities, the IESO's rights under subsection (1).

[NTD: This is largely a placeholder for what needs to be addressed here. We will need to determine how to characterize this transaction. For e.g., will it be an outright assignment? Will it be a series of assignments? Should it be characterized as a "sale"? How will this transaction be implemented – e.g. by way of a contract between the IESO and the Trust? We will need the input of external counsel and others to ensure that it adequately supports the contemplated financings.]

Payments to assignee

(3) In the event of an assignment to an authorized entity under subsection (2), the IESO shall, through its billing and settlement systems, make payments to the authorized entity of the full amounts paid to the IESO in respect of the rights assigned.

[NTD: This is largely a placeholder for what needs to be addressed here. Iin addition to requiring IESO to make payments to the authorized entity, do we need to include explicit provisions giving the assignee the right to recover the amounts in the deferral account that are covered by the assignment?

We will need provisions dealing with billing and payment as between the authorized entity and IESO. We will also have to decide whether the interest and admin costs incurred by the authorized entity will simply be passed through to IESO, or whether the authorized entity (or OPG) will have an opportunity to keep any profits made on financing activities (swaps, etc.) by establishing some sort of "reference rate" that IESO would have to pay (and that might be different than the rate(s) the authorized entity would have to pay). A middle ground that could be considered would be to cap the amount of profits the authorized entity (or OPG) could make.

Along similar lines, the amounts charged by OPG to the authorized entity to provide admin services should be subject to Board review (e.g. for reasonableness). This would not jeopardize the ability of the authorized entity to recover all of its costs (since it would affect the amounts OPG could recover from the authorized entity).

We also need to contemplate a provision that if there is a change of law by the Government of Ontario that materially adversely affects the ability of the authorized entity to fully recover the assigned deferral account amounts, then repayment of those amounts will be accelerated and become immediately due and payable.]

x. The Act would be amended by adding the following provisions after s.29:

Transition Charges -- Ratepayer Obligation to Pay a Transition Charge

s.29.0.1 (1) Each consumer in the class of ratepayers to which this program applies (previously referred to as the "deferral consumers") will have a direct statutory obligation to the OPG Financing Entity to pay its share of the deferral repayments (principal, interest, financing costs).

Indebtedness of Ratepayers –
(2) This will be a debt owed by the consumer directly to the OPG Financing Entity. If it is not paid, the OPG Financing Entity can sue the consumer directly through the agreed procedures. This is identifying an explicit and identifiable revenue stream for the comfort of investors.

Separate tracking - distributors,
(3) This debt is separate from the debt owed by the consumer to its LDC, although the LDC will be the collection agent.

No set-off, etc. ***[see similar provision at EA s.29.0.3(2)]***
(4) This debt cannot be netted out against any amount owed by the LDC to the consumer (e.g. year-end credit to consumer on equal monthly billing).

Allocation of Ratepayer Payments
(5) If a consumer pays less than its total invoiced amount, the payment will be allocated pro rata between the deferral repayment and the amounts owing to the LDC.

Transition Charges are Irrevocable

(6). This is intended to prohibit any reversal of amounts that must be paid to meet the terms and conditions of the funding obligations to be incurred under the program.

> **The deferral repayments are due regardless of whether a financing obligation incurred under the treasury plan is consistent with government policy at the time a related payment obligation arises.**
>
> **If the Fair Allocation Plan is amended after a funding obligation is properly incurred, any inconsistency in the payment profile will not impair the existing funding obligation or the pass-through of related payment amounts as Transition Charges.**

Anti-avoidance; No-by-pass

Confidential Draft

(7) The idea here tracks the U.S. transactions, which say that the obligation of a consumer to pay Transition Charges cannot be "by-passed". If a consumer leaves the grid, he or she will still be obligated. See the highlighted text in the definition of "Ratepayer" for a sense of how this may be accomplished.

> **This concept is a key to a rated market financing and will need to be developed further.**
>
> **For example, self-generating customers could be charged a flat fee (for example, equal to the amount that would be payable by the "representative" Toronto Hydro customer that underpins the current government policy on the 25% or some other basis.)**

Distributor, agent for Financing Entity,
s.29.0.2(1) LDC is agent for the OPG Financing Entity. LDC must invoice the deferral consumer the deferral repayment amount - referable to the items described in "Finance Amount" (i.e., an amount already borrowed).

IESO - Calculation of the Period Transition Charge

(2) IESO will calculate the total amount of deferral financing that will be repayable in an applicable [e.g. 6 month] period.

(3) IESO will then determine the deferral repayments due from deferral consumers based on a prescribed methodology for allocating payments to individual deferral consumers.

Notice of Transition Charges, IESO to distributors

(4) IESO will then inform each LDC of the amount of the deferral repayments to be included in the invoices issued to each deferral consumer in the LDC's service territory.

Adjustments *[ntd: Consider – Deferral repayment amount final]*

(5) Deferral consumers cannot challenge the amount of the deferral repayment showing on their invoice unless there is a substantial calculation error.

Successors of Electricity Distributors –
(6) Any successor of an LDC will be bound by the same obligations as the original LDC re: billing and collecting deferral repayments.

Confidential Draft

Successors of IESO –

(7) Any successor of the IESO will be bound by the same obligations as the original IES re: billing and collecting deferral repayments from distributors *[ntd-LSB: what about from consumers?]*.

Appointment of an Alternative Invoicing Agent *[NTD – this provision may be moved closer to the powers/authorities of the OPG financing entity.]*

(8) If a "replacement event" (as defined in any payment obligation incurred to fund a deferral) occurs in respect of an LDC, the OPG Financing Entity can appoint someone else as the OPG Financing Entity's agent to collect deferral repayments. The LDC must sign whatever agreements and assignments are needed to enable the replacement agent to collect the deferral repayments from the LDC's deferral consumers.

Regulatory Asset Owner has Standing

(9) The OPG Financing Entity (or investors through their security) will be able to sue LDCs for failing to properly calculate or invoice the financing repayments.

29.0.3 Collections and Remittances [Collecting and Remitting Deferral Repayments]

(1) If a "replacement event" (as defined in any payment obligation incurred to fund a deferral) occurs in respect of an LDC or the IESO, the OPG Financing Entity can appoint someone else as the OPG Financing Entity's agent to collect and remit deferral repayments. The LDC (or IESO, as applicable) must sign whatever agreements and assignments are needed to enable the replacement agent to collect and remit the deferral repayments. "Replacement Events" are necessary to investors to safeguard against a person holding money in a distressed circumstance.

No Set-off, etc. *[see similar provision at EA s.29.0.1(3)]*

(2) The deferral repayments cannot be netted out against any amounts owed by the party responsible for collecting those repayments.

Sequestration,

(3) If any LDC or the IESO fails to remit deferral repayments, the OPG Financing Entity can get a court to order the LDC (or IESO, as applicable) to require them do so.

Confidential Draft

x. Subsection 53.1 (1) of the Act would be repealed and the following substituted:

Objects of Ontario Power Generation Inc.

53.1 (1) The objects of Ontario Power Generation Inc. include, in addition to any other objects, the following:

[Note: I know that the words "in addition to any other objects" appears in the current provision, but it seems very odd. This suggests that the objects are unlimited, which doesn't seem to be the intention but I could be wrong.]

1. Owning and operating generation facilities.

2. Establishing, operating and supervising the activities of entities for the purposes of supporting and promoting the government's hydro financing initiative.

3. Providing financial and other support to the IESO in its activities in relation to the hydro financing initiative.

4. Engaging in such financing, borrowing, lending and related activities and transactions to support the IESO with short-term or long-term financing.

5. Providing equity, not exceeding the prescribed amount, to support the financing capacity of the Financing Entity.

Subsidiaries

(1.1) Ontario Power Generation Inc. may create one or more subsidiaries in order to more efficiently conduct its activities or achieve its objects.

x. Section 53.2 of the Act would be repealed and the following substituted:

Rights of the Minister[1]

53.2 (1) The Minister, on behalf of Her Majesty in right of Ontario, may acquire, hold, dispose of and otherwise deal with securities or debt obligations of, or any other interest in, Ontario Power Generation Inc. or any of its subsidiaries.

Confidential Draft

[1] FLS - this provision is based on s. 49 of the Act

Agreements

(2) The Minister, on behalf of Her Majesty in right of Ontario, may enter into any agreement or arrangement that the Minister considers necessary or incidental to the exercise of a power under subsection (1).

x. The Act would be amended by adding the following Part:

PART V.2
HYDRO FINANCING INITIATIVE

FAIR HYDRO FINANCING PLAN

Establishment and adoption of the Fair Allocation Plan

A. 1 (1) The Minister of Energy [may/shall] establish a "fair allocation plan"

(a) The purpose of the plan is generally to try and reallocate the portion of GA attributable to the procurement contracts over the anticipated useful life of the generation assets under those contracts.

- **This is the intergenerational funding of the Green Generation Initiaitves.**
- **One policy question is whether the amounts deferred and the period over which the deferred amounts are repaid are to be limited to the portion of GA attributable to the procurement contracts and to the anticipated useful life of the [renewable] generation assets under those contracts.**

- From a constitutional validity perspective (and hence a financeability perspective) these limits are very important.

-Financial/economic modelling to verify this link is required.

Principles and Parameters,

(2) Based on this initial description (which is only illustrative to advance the initial stakeholder discussion), the Minister would determine the details of the "fair allocation plan", but must take into consideration the following principles:

- **The deferred GA costs should be spread over a period not exceeding the anticipated remaining useful life of the generation assets under the procurement contracts**
- **The plan should specify the length of the "reference periods", to identify which deferral consumers are responsible for which deferral repayments**

Confidential Draft

- **The share of the deferral repayments to be allocated to deferral consumers in each "reference period" should reflect a reasonable assessment of the remaining anticipated useful life of the generation assets under procurement contracts and perhaps to the benefits received by those deferral consumers from the procurement contracts (e.g. transition off coal)]**

- **No deferral consumer group should bear an unreasonably disproportionate share of the deferral repayments. That could be limited to a maximum amount, determined on a formula basis, if it makes sense tot he stakeholders**

- **In making the allocations, real (i.e. inflation-adjusted) dollars should be usedThe fair allocation plan is made using forward-looking information and projections.**

- **If, after the fact, the Minister determines that a Ratepayer Group paid more than would otherwise would have been the case had the projections for such period been accurate or other considerations come to light, adjustments to the plan could be made.**

Attribution Methodology

(3) The program will need to define how deferral consumers will be allocated an appropriate share of aggregate adjustment amount.

Confirmation][Review] of the Fair Allocation Plan – [OEB?]

Confirmation][Review] of the Fair Allocation Plan – [OEB?]

(4) Consideration will be needed regarding the level of review and confirmation of the plan is needed or appropriate. For example, should the scope of review be limited to calculations only? If there is a need for review, then consideration will be needed as to who will be the reviewer and under what authority, etc.

THE TREASURY PLAN

Power to Prepare and Implement the Treasury Plan –

A.2 (1) The "Treasury Plan" will be prepared by OPG. It must follow the requirements set out in this Part. Accounting considerations will need to be factored into this delegation, as well as the degree of province input initially and on an on-

Confidential Draft

going basis. [Note for leg counsel: We will need to create the necessary sub-delegation authority]

Required Terms and Conditions of the Treasury Plan

(2) The Treasury Plan will establish the basis for OPG making funding decisions, which will need to align with the Fair Allocation Plan.

Power to Review and Approve the Treasury Plan

(3) The Minister may designate one or more persons to review, and require changes to the Treasury Plan. (This review could also be given to the Minister.) *[NTD-: Assumin no role for OEB – confirm. Any role for MOF/OFA here?]*

Obligation to Apply IESO Remittances,

(4) OPG will need to ensure that pass-through amounts, transferred to it as agent for the OPG Financing Entity, are only used to repay the debt and related costs.

Non-Recourse,

(5) The Treasury Plan will provide that the investors and other contracting parties will not have recourse to the IESO, LDCs, agents, the OEB or the Province, except where such parties fail to comply with applicable law. This may be modified in the contracts under which a financing arises.

> **NOTE: The documentation creating the Funding Obligations must expressly state that such obligations are not guaranteed by the Province.**
>
> **NOTE: See IESO/Stikeman's language for "Regulatory Asset" above.**

Incurrences are Binding,

(6) A failure to implement the Treasury Plan will not impair the pass-through of the deferral amounts or the validity of an otherwise valid funding obligation.

- **NOTE: Separate from the legislative provisions, we will also be preparing a very rough sketch of some of the items that might be included in the Treasury Plan direction.**
- **The sketch will be for illustration purposes only and will be for use in discussions with stakeholders including OPG and IESO.**

Crown bound, actions prohibited,

A.3 (1) No Action to limit, alter, or impair or terminate Transition Charges, the Regulatory Asset or Collections – *[NTD: alternative* - Crown bound, prohibition against discriminatory action.

Confidential Draft

(2) The Province will be prohibited from taking or permitting any action to limit, alter, or impair or terminate Transition Charges, the Regulatory Asset or collections.

Undertaking and Agreement

(3) Under this Undertaking, the Province will agree for the benefit the OPG Financing Entity that it will not impair the value of the Regulatory Asset or the Transition Charges imposed under this Part. This "pledge" is in line with market expectations. Enforcement issues arise in this sort of undertaking, which will be assessed by the market and rating agencies based on the likelihood that a failure by the Province would lead to a successful damages claim. Unlike in the U.S., the law regarding such a claim is uncertain. Nevertheless, we expect that this sort of Undertaking will be requested in the legislation itself (i.e., requiring an act of the legislature to disavow – which is a higher bar than simply walking away from a contractual undertaking.

[Note: TBD where to place this Part within the Act and how to structure this Part. Temporary number (e.g. A1, A2, A3 etc.) has been used for now.]

FINANCING ENTITY

Financing Entity, established or prescribed

A1. (1) For the purpose of accomplishing the hydro financing initiative, the Minister may,

(a) direct Ontario Power Generation Inc. to establish and operate a trust; or

(b) direct Ontario Power Generation Inc. to [oversee? Administer?] an entity prescribed by the regulations.

[Note: Would the direction of the Minister include any additional instructions re timing etc.?]

Duty of Ontario Power Generation Inc.

(2) Ontario Power Generation Inc. shall comply with the direction of the Minister.

[Note: Once OPG takes action under A1 in accordance with the Minister's direction, what happens if at some point in the future, the Minister wants a different entity to take over the role of the FE? Is this a concern that needs to be addressed?]

Confidential Draft

Object of Financing Entity

A2. (1) The object of the Financing Entity is to finance the amounts required to accomplish the hydro financing initiative.

[Note: We are imposing several obligations on the Financing Entity (FE). As a practical matter, how will these obligations be enforced? Who will be responsible for meeting these obligations? (e.g. would there be directors or officers of the trust?). Or will the OPG be responsible for meeting these obligations as the body that establishes/manages the trust or oversees the designated entity?]

Activities

(2) To achieve the object, the Financing Entity shall engage in the following activities:

[Note: Just want to confirm that this should be "shall" and not "may".]

1. Borrowing funds from the Financial Corporation or from such other persons or entities [as may be prescribed?].

2. Investing funds.

3. Making payments and loans to the IESO or such other entity as may be prescribed in accordance with the regulations [or an order of the Board].

[Note: I think it would be best to specify whether the rules would be set out in a reg or in a Board order to avoid confusion.]

[Note: Should the "loans" language be removed, since you noted that the IESO is not "borrowing" from the FE?]

4. Receiving payments from the IESO or such other person or entity as may be prescribed in accordance with the regulations.

5. Issuing securities or debt ***[in the manner prescribed?].***

6. Engaging in any activities, including entering into such transactions, agreements or arrangements as may be prescribed and in accordance with the regulations.

Board review of expenditures, etc.

A3. (1) The Financing Entity shall, at least 60 days after the end of each fiscal year, submit its expenditures relating to its operations for the fiscal year including the expenses it has charged to Ontario Power Generation Inc. or the IESO, or that it has been charged by the Financial Corporation, in relation to those operations, to the Board for review.

Confidential Draft

[Note: The list of items that have to be reported on could be more prescriptive (e.g. specifying specific amounts to be set out) or it could also allow for the Board to specify what it wants to see in the report. Let me know if you'd like to adjust the wording of the requirement.]

Board recommendations, etc.

(2) The Board may review the expenditures and charges referred to in subsection (1) and make recommendations to the Financing Entity as are appropriate in order to ensure the most efficient operation and management of the Financing Entity in order to protect consumers.

[Note: Rather than saying "in order to protect consumers", should this say "in order to achieve the object of the FE"? Or perhaps this could just be deleted altogether with no need for replacement language.]

Deemed assets, entity,

A4. Despite any other provision of this Act or the *Business Corporations Act*, the assets and liabilities which are resident in and form part of the property of the Financing Entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries for any purpose.

[Note: You posed a question about excluding an OPG subsidiary from this rule. Please instruct.]

OBTAINING FINANCING

[Note: It will be important to read all of the provisions that follow against the provisions in the existing Act, to ensure there is no overlap/confusion being created due to potential interactions between existing authority and new authority. The drafting focus so far has just been to get the relevant substantive provisions into the draft without evaluating how they fit into the broader scheme of the Act.]

Ontario Power Generation Inc. to obtain financing

A5. (1) The IESO may direct Ontario Power Generation Inc. to cause the Financing Entity to engage in any of the following activities in order to accomplish the hydro financing initiative:

[Note: As a practical matter, how would OPG "cause the FE" to do these things? How is this different from "directing"?]

1. Financing, borrowing or lending to provide the IESO with short-term or long-term financing.

2. [Purchasing/receiving/obtaining the right created under section XX] and making any payments to the IESO that relate to the IESO's activities in support of the hydro financing initiative.

Confidential Draft

[Note: Not sure if the regulated assets would always be "purchased" or if other terminology might be needed. Please advise.]

3. Collecting from the IESO amounts that the IESO is required to pay in relation to its activities in support of the hydro financing initiative.

4. Assigning its [the IESO's?] rights to all or part of the regulatory assets established under section XXXX.

[Note: What is para. 4 about? If this is about forcing OPG to make the FE do things, then does this belong in the list? I thought that it was only the IESO that would be assigning the rights to the FE]

5. Such other activities as may be prescribed.

Same

(2) Ontario Power Generation Inc. shall comply with a direction under subsection (1) within the time specified in the direction [and any prescribed rules?].

IESO to enter into transactions

A6. (1) The IESO shall, in order to support the achievement of the hydro financing initiative, enter into transactions with the Financing Entity or any other entity for such amounts as are necessary to support the hydro financing initiative.

[Note: My understanding is that the need for "or any other entity" stems from the need to allow for the IESO to obtain temporary financing in the immediate term, before it is able to access the FE. Do you want to narrow this so that the IESO is only authorized to do this before the FE is up and running? Or do you want to keep it available on an ongoing basis?]

Same

(2) In entering into transactions under subsection (1), the IESO shall comply with the regulations.

RIGHT OF RECOVERY [CREATION OF REGULATORY ASSET]

[Note re the following provisions:
I found a provision dealing with the concept of "regulatory asset" in Bill 210 from 2002 (see s. 79.13 of the OEBA). It deems certain things to be regulatory assets but does not say much more. On the phone, you noted that the term "regulatory asset" does not have any legal meaning on its own but is just an accounting term that has been used to describe the statutorily created right of recovery. However, you also said that there may be a need to use this term in order to convey the intended meaning from an accounting perspective.

Confidential Draft

In order to ensure that the drafting captures the policy intent, please answer/address the following questions:

1. Should we be creating a statutory right of recovery or deeming certain amounts to be a regulatory asset? [NTD-LSB: Yes. The term "Regulatory Asset" has currency in commercial law (parliance) and since much of what we're doing is to support a securitization model, the term should remain for now. Further, the term "regulatory asset" was consistently referred to in the documents provided to ENERGY LSB by Blakes. Further, IESO/Stikemans offered up alternative language for the creation of a "regulatory asset" (as an intangible asset of sorts). You said you'd consult on whether the regulatory asset terminology is important to flag in the Bill.

2. You said you're not sure whether or not the Act will require the IESO to sell/assign the right. Please instruct. If it is optional for the IESO to sell/assign, then it seems that the right could in theory remain with the IESO (unless you are saying that the statute can just create the right of the FE to recover without any need for the right to be assigned/sold by the IESO… in which case please explain why we need to deal with the sale/assignment at all). Please clarify.

3. I'm assuming that if we are creating a right, then the right must be held by someone (e.g. the IESO) before it can be assigned/sold? So should the right be created in the Act for the IESO (e.g. the IESO has a right to recover the amounts from distributors and prescribed consumers) since the IESO would then sell/assign/transfer the right to the FE? The FE must also have the right to recover from the IESO itself, so that creates an extra complication.

4. Should there be some indication of when the right of recovery/regulatory assets will no longer continue to exist (e.g. once all of the amounts have been paid?). I notice that your instructions below about the debt indicate that the debt is no longer owing once the amounts are paid, but do we need to indicate that the regulatory asset also ceases to exist at that point?

Right of recovery created

A7. A right to recover the following amounts in full from the IESO, distributors and prescribed consumers is created.

1. The [deferred amount].

2. The amounts of costs relating to the operation or management of the Financing Entity, as are approved by the Board.

[Note: How will the Board be approving these costs? Is this related to the expenditure report submitted to the Board? That provision dealing with Board expenditures doesn't refer to any approval taking place… just a review and recommendations.]

Confidential Draft

[Note: Need to mention expenditures?]

3. Other amounts as may be prescribed or as may be approved by the Board.

Note: Are you going to be saying anything about how the interest will be calculated?

Sale [and/or?] assignment of [right? Regulatory assets?]

A8. (1) The IESO [may? Shall?], in accordance with the regulations, sell [and/or?] convey to the Financing Entity the right to recovery created established under section A7 on such terms and conditions as are provided for by the Financing Entity.

[Note: Your instructions include the terms "sell", "assign" and "convey" -- which are correct?]

[Note: Your instructions suggested that something other than the "regulatory assets" may need to be assigned to the FE. Are you referring to the "warehousing" liabilities assumed by the IESO in the early days? What else would need to be assigned? Could these items be listed above in A7 or is there a reason why they need to be kept separate?]

Sale deemed final

(2) The sale and conveyance referred to in subsection (1) is deemed to be final for all purposes.

[Note: What is this intended to achieve? Is this based on precedent language that has been interpreted to have the desired effect?]

Debts

(3) For greater certainty, the [amounts to which the FE has a right of recovery] are debts owing by the IESO, distributors and prescribed consumers to the Financial Entity until the amounts have been fully paid and fully discharged.

[Note: Why is subs. (3) necessary? Isn't it inherent in the sale of the regulatory assets that the FE would have acquired the future right to collect these amounts? Perhaps it is unclear that the amount can be collected from not just the IESO but from others down the chain. But isn't that what the "right of recovery" section above is meant to cover?]

[Note: I haven't checked to see how other similar provisions dealing with debts are drafted. Not sure we need the "for greater certainty" and also not sure what the distinction is between "fully paid" and "fully discharged". This provision will need further consideration. You also noted that you may want to specify who determines when all obligations have been satisfied.]

IESO to recover amounts

A9. The IESO shall recover the amounts set out in section A7 from distributors and prescribed consumers, in accordance with […]:

Note: how are the requirements that would determine recovery for this subsection meant to interact with the GAM reg?

Confidential Draft

[Note: The following two subsections are placeholders. You noted that *the provision is going to have to evolve to deal with consumers who exit the grid (disconnect) completely either because they leave the province or they decide to generate their own electricity and completely disconnect. You also want to be able to prescribe* methods of ensuring that the amounts required cannot be "by-passed". I'll need to understand what is meant by "by-passed".]

Distributors liable

(x) The IESO and distributors are entitled to compensation for any shortfall in relation to the amounts the IESO must pay to generators, the Financial Corporation or other persons including prescribed persons, under section 25.33 resulting from the IESO's activities under the hydro financing initiative.

Consumers liable

(X) Prescribed consumers are required to contribute towards the amount of any compensation referred to in subsection (4) in accordance with the amounts and methods prescribed by the regulations and such amounts shall not be by-passed.

USE OF FUNDS TO REDUCE ELECTRICITY BILLS

[Note: Depending on how things land with s. 25.33, this might be a place to explain how the transactions between the IESO and the FE translate into reduction in the electricity bills of RPP consumers. Regulations could specify how the IESO would ensure that the short-term rate reductions that flow from the FE amounts are only received by the targeted class of consumers and that this same class of consumers is the only class responsible for the repayment of FE funds in the long-term.]

ALTERNATIVE LANGUAGE – REGULATORY ASSET -- PROPOSED BY IESO (STIKEMANS)

Regulatory Asset Created

A7. (1) There is hereby created and conferred upon the IESO a "Regulatory Asset" consisting of the right to recover, in addition to the amounts otherwise recoverable, in accordance with the Regulations, the aggregate of the following amounts [from distributors and] prescribed consumers. **[Quare: do we regard the Regulatory Asset as a single asset in a variable amount or as different assets arising on each deferral]:**

1. The [deferred amount, including interest accrued thereon].
2. The amounts of costs relating to the operation or management of the Financing Entity, as are approved by the Board.
3. Other amounts as may be prescribed or as may be approved by the Board.

Confidential Draft

(2) The Regulatory Asset created by (1), shall constitute, for all purposes, a property right, shall be transferable by the IESO in accordance with Section A8, and shall constitute an intangible in which a security interest can be created for purposes of the *Personal Property Security Act*.

Election to Transfer Regulatory Asset

A8. (1) The IESO shall, from time to time, in accordance with the Regulations, elect to transfer to the Financing Entity all or any portion of the Regulatory Asset, on such terms and conditions as IESO may determine.

(2) Upon any election by the IESO pursuant to (1), the Financing Entity shall pay to the IESO in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, an amount, not less than the Deferred Amount, determined in accordance with the Regulations.

(3) Upon any election by the IESO pursuant to (1), the Financing Entity shall become the person entitled to the benefit of the Regulatory Asset, or the portion thereof in respect of which the election was made, free and clear of any adverse claim (other than any such claim created by the Financing Entity) and shall be entitled to exercise all of the rights and remedies conferred by or arising in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, and the IESO shall cease to have any rights (except as provided in Section A9) to or in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, all as if the Regulatory Asset, or the portion thereof in respect of which the election was made, had originally been conferred upon the Financing Entity and not the IESO.

(4) Upon any election by the IESO pursuant to (1), the IESO shall have no further rights or obligations in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, and the Regulatory Asset, or the portion thereof in respect of which the election was made, shall not form part of the assets and liabilities of IESO for any purpose.

(5) The LG in Council may adopt regulations providing for the circumstances in which IESO shall make the election or elections provided for in (1).

Financing Entity may Grant Security Interest

A9. (1) The Financing Entity may, at any time after an election referred to in Section A8(1), create a security interest in favour of any person in all or any portion of the Regulatory Asset subject to such election, all on such terms and conditions as the Financing Entity may determine.

(2) Except as provided for in Regulations adopted pursuant to (3), *The Personal Property Security Act* shall apply to any security interest created pursuant to (1), except that the rights of the secured party on default shall be limited to receiving the amounts collected in respect of the Regulatory Asset, or the portion thereof subject to the security interest, as and when collected by the IESO in accordance with A10.

Confidential Draft

(3) The LG in Council may adopt regulations providing for the terms on which the security interest provided for in (1) can be created and perfected and for the priority of any such security interest.

IESO to Collect Amounts in Respect of the Regulatory Asset

A10. Subsequent to any election pursuant to Section A8, the IESO shall, as agent on behalf of the Financing Entity and any secured party, use reasonable efforts to collect the amounts owing in respect of the Regulatory Asset, or the portion thereof in respect of which the election was made, and shall promptly pay over to the Financing Entity or the secured party the amounts collected.

--------*END OF IESO/BLAKES ALTERNATIVE LANGUAGE FOR REG. ASSET ---*

------- ***BLAKES VERSION OF LANGUAGE FOR REGULATORY ASSET***

The Regulatory Asset, Composition,

A7(1) The "regulatory asset" consists of the following:

- **present and future statutory obligation of:**
  - **deferral consumers - to make all deferral repayments (including interest and late payment fees)**
  - **LDCs - to invoice the deferral consumers for the deferral repayments and to remit the amounts collected to the IESO**
  - **IESO - to receive and remit the deferral repayments from LDCs to the OPG Financing Entity**
- **All deferral repayment amounts collected**
- **All amounts in LDC or IESO deferral payment bank accounts**

Validity of Dispositions

(2) This section is reinforcing by statute the "sale" of the asset to the Financing Entity. This has been an important feature of the legislation in other jurisdictions in similar circumstances. Specifically, it says that "Dispositions" of the Regulatory Asset are "true sales", and not subject to challenge. This is an essential requirement for a securitization transaction. This provision identifies possible grounds for a challenge that a sale took place and indicates that those events do not affect the validity of the sale.

Deemed Perfection and Priority of Dispositions

Confidential Draft

(3) This is reinforcing the automatic nature of the "sale" of the asset. It Provides for a clean sale to the OPG Financing Entity, free and clear of encumbrances (i.e., no specific need to "perfect" the sale.

Validity of Pledges,
(4) Statutory override permitting the OPG Financing Entity to give a security interest in the "regulatory asset" to investors.

> **This would give the investors (through an indenture) the right to enforce collection of the deferral repayments to pay off amounts owed by the OPG Financing Entity to the investors upon certain defaults by the OPG Financing Entity under an indenture.**

Deemed Perfection and Priority of Pledges
(5) This is reinforcing that a commercial pledge given by OPG Financing Entity is valid and will have priority without specific "perfection". The result is that a pledge of the Regulatory Asset as security in accordance with the Treasury Plan will be given priority to other claims. The Pledge includes proceeds from the Regulatory Asset and is not affected by comingling or the ordinary requirement to file a financing statement under the PPSA.

Enforcement of Property Rights –

(6) The rights of any Regulatory Asset Owner to collect and enforce its rights and interests in, to or in respect of the Regulatory Asset shall be exercised in the manner set forth in Article 5. *[ntd-: NOT an annotation – pulled directly from Blakes' document.]*

Collective Action Required –
(7) This anticipates that the Regulatory Asset will be structured as a variable interest that can be divided between IESO (until it sells) and one or more OPG Financing Entitys. The likely format will be a co-ownership agreement, that will allow for different owners to have a fractional undivided ownership interest in the Regulatory Asset. Those will entitle the owners to a specified share of the cash flows, which will correspond to their finance payment obligations. This will allow for future financing flexibility.

MISCELLANEOUS

Fair Hydro Financing Plan, miscellaneous,

A.8 (1) Consideration will be given to whether any additional 'miscellaneous' provisions are needed (and expected by the market) to support the financing of this

Confidential Draft

structure. Some of these provisions are not typical in legislation, and so will need further consideration (in consultation with leg counsel).

Regulations

114(1.5) The LGIC may make regulations to implement the Fair Hydro Financing Initiative

-(a) The power to implement the program (and to set out some of the details of the program) through regulations is important. Decisions remain to be made (once the drafting is a little further advanced) about what provisions/details need to appear in the proposed legislation, and what provisions/details can be set out in regulations.

Confidential Draft

ONTARIO ENERGY BOARD ACT, 1998

x. Subsection 1 (1) of the *Ontario Energy Board Act, 1998* would be amended by adding the following paragraph:

6. To facilitate the implementation of the [hydro financing initiative].

[Note: Would need to link with definition in the EA or else spell out the definition here - TBD.]

x. Section 27.1 of the Act would be amended by adding the following paragraph:

Hearings

(1.1) A directive may specify whether the Board is to hold a hearing, the circumstances under which a hearing may or may not be held and, if a hearing is to be held, the type of hearing to be held and the time within which it must be held.

The underlined is what makes this different from the other provisions in the Act that basically have the same wording. There are already a number of places in the Act where you have this type of hearings provision re directives (e.g., s. 27.2 (7)). If you basically want the same authority in each instance, then the wording should be consistent in each case. There are already some discrepancies between the current provisions (e.g., s. 27.2

(7) talks about types of hearings, whereas s. 28 (2) doesn't). Differences in wording will typically be presumed to be differences in meaning. So, the question is what you're intending to authorize in each case, and whether differences are intended. If you want the same thing everywhere, it should all be worded the same. Let me know.

[Note: Waiting for confirmation whether amendments to s. 78.7 are needed. Please advise.]

x. Section 78 of the Act would be amended by adding the following subsection after subsection (3.0.5):

Rates, fair hydro financing initiative activities -IESO, OPG, distributors, etc.
(3.0.6) The OEB would not be precluded from taking into account the performance of duties under this Part by any entity regulated by the OEB, including fees received by such entity in excess of the incremental costs of the provision of such services.

x. Section 79.16 (3) of the Act would be repealed and the following substituted:

Adjustment to eliminate variances

(3) In determining rates under clause (1) (b), the Board shall take into account balances in variance accounts established under section 25.33 of the *Electricity Act, 1998* and, subject to section X of that Act, make adjustments with a view to eliminating those balances within 12 months or such shorter time periods as the Minister may direct.

[Note: Please let me know what section the highlighted portion is supposed to refer to… is it the provision that says the IESO has the 30 year period to pay off the amount in the variance account for the hydro financing initiative? I wonder if this is confusing and whether the amendment to subs. (3) above works… it almost seems unnecessary to say that the Board has to "take into account" this balance, given that we are setting up a bunch of very specific rules about what has to be done by various entities in order to eliminate this amount. What would the Board be expected to do with information about this variance account? For consideration.]

PART VII.3

COMPLIANCE – FAIR HYDRO FINANCING INITIATIVE

Right of the [OEB] to Inspect Books and Records,
113 (1) OEB may be given the power to investigate compliance with the legislation and the power to examine books and records, etc.

Power to Investigate Compliance and Impose Regulatory Sanctions

Confidential Draft

(2) This legislation will not limit the OEB's power to investigate compliance or prevent or preclude the OEB's power to impose sanctions. The OEB can investigate compliance with this part and to impose regulatory sanctions for non-compliance.

Limitation, Board,

(2.1) The OEB cannot, however, take any action to affect the irrevocability of the Transition Charges or the Undertaking of the Province.

Timing – this proposal for legislation would, if approved by the Legislature, come into force on a date to be established by Government.

Confidential Draft

Subject: RE: 25% Electricity Price Reduction....

Hi Bruno,

Let's be qualitatively responsive, with respect to whom the various proposed elements apply to. It's always good to be seen as the first channel for internal-MOF expertise on electricity-related issues.

So please explain the RPP eligible universe for the GA, and how that it is a shifting of cost recovery in time initiative, though, by targeted design, not with a fiscal impact.

The RRRP and OESP are the bigger to be government funded programs, but if the intent is still to balance, OEP will have to work out whether there is a fiscal stimulus from that, other than the redistributive impact and any associated lower savings rates by those groups.

I think that on the quantitative side, I'd be fine if we asked Energy staff if it's okay to share what we have with OEP for them to do the economic impact analysis, or if Energy wants to provide the numbers directly to OEP.

Please keep me apprised as this progresses.

Thanks,
Ron

Hi Ron,

See below the information request from OEP regarding estimating economic impacts of the Fair

Hydro Plan. I'm thinking this request should be directed to Energy? But let me know if you think EFB has a role. I think OEP would likely be looking for detail on

- $ impacts on consumer bills (which consumers)
- $ impacts on businesses (which businesses)
- $ fiscal impact to province

And I assume year-by-year outlook for the above.

Hi Bruno

I hope all is well at your new position.

I left you a voicemail a few minutes ago. We've been asked by Brian to run a simulation to look at the broader economic impacts of the policy to reduce electricity prices by 25%. To help us model the policy more precisely, it would be helpful if we could get a more detailed description of the policy / program so that we have a better understanding of exactly what the policy is, and which user groups will be impacted etc. Any information about this would be helpful, including cost estimates for the program.

Could you pass this email to the person in your office who might be able to provide the above information?

Thank you!

My guess would be that there might be something in the legislation that ties the GA smoothing to the other components of the bill.

But it's really tricky especially since different distributors increase bills at different rates, and in the news release they state:
"As part of this plan, rate increases over the next four years would be held to the rate of inflation ***for everyone***."

Subject: RE: Additional Energy Request

Isn't the key issue that we might want a thought out response to someone asking something like the following

Premier, I understand your plans to limit cost increases to the Global Adjustment portion of electricity bills through GA smoothing, but there are also the delivery and regulatory components of electricity bills. You haven't outlined how you are controlling those costs, so how can you promise to limit the entire bill increase to inflation? I know Joe Smith's delivery charge was 80% of his bill over the last three months etc. etc.

Hi,

On the first question, I though the CabSub and draft Minute were quite clear that it was on the entire bill. Are you reading in some ambiguity? The ability to target precisely, is, of course an implementation issue, but I don't think we need that for the narrative.

Fine to ask at a staff-level on the other two.

Ron

Subject: Additional Energy Request

Hi Ron,

EFB would like to reach out to Energy for some additional requests. EFB has drafted below covering email and questions, could you please review and let us know if you are good with below messaging and request?

Hi,

With respect to Ontario's Fair Hydro Plan, there are 3 statements (see below) in news releases that we have not been able to fact check or that we are unable to confirm based on our understanding of the proposed measures. Would the Ministry of Energy be able to provide these fact check and explanations? Alternately, to ensure that we are on the same page, could Energy share questions and answers on these issues?

We appreciate your help.

1. *"After the 25% decrease in bills, rates are rising at the rate of inflation"*
    - Please confirm if this refers to only the commodity cost of electricity or entire bills.
        - Cabinet Submission seemed to refer to ***only*** electricity/commodity costs. Furthermore, unclear how this inflation goal can be reached when GA smoothing appear to be the only lever we have to adjust future rates dynamically.
        - Premier's statement seems to imply total bills: *"After we bring bills down by 25% we will hold them there with rates rising only with inflation -- or roughly 2% -- for at least four years."*
        - The Fair Hydro Plan website is more explicit in referring to total bills: *"And bills won't increase beyond the rate of inflation for at least four years."*

2. *"Decades of under-investment in the electricity system by governments..." (from March 2 Backgrounder, Refinancing the Global Adjustment)*
    - Please provide any backup or supporting information for this claim, ie 'decades of under-investment'.

3. *"these changes will deliver the single-largest reduction to electricity rates in Ontario's history.." (from March 2 News Release, Ontario Cutting Electricity Bills by 25 Per Cent)*
    - Please provide any backup or supporting information for this claim, ie 'single-largest reduction'.

Thanks,
Gavin He

Hi,

On the first question, I though the CabSub and draft Minute were quite clear that it was on the entire bill. Are you reading in some ambiguity? The ability to target precisely, is, of course an implementation issue, but I don't think we need that for the narrative.

Fine to ask at a staff-level on the other two.

Ron

Subject: Additional Energy Request

Hi Ron,

EFB would like to reach out to Energy for some additional requests. EFB has drafted below covering email and questions, could you please review and let us know if you are good with below messaging and request?

Hi,

With respect to Ontario's Fair Hydro Plan, there are 3 statements (see below) in news releases that we have not been able to fact check or that we are unable to confirm based on our understanding of the proposed measures. Would the Ministry of Energy be able to provide these fact check and explanations? Alternately, to ensure that we are on the same page, could Energy share questions and answers on these issues?

We appreciate your help.

1. *"After the 25% decrease in bills, rates are rising at the rate of inflation"*
    - Please confirm if this refers to only the commodity cost of electricity or entire bills.
        - Cabinet Submission seemed to refer to ***only*** electricity/commodity costs. Furthermore, unclear how this inflation goal can be reached when GA smoothing appear to be the only lever we have to adjust future rates

dynamically.

- Premier's statement seems to imply total bills: *"After we bring bills down by 25% we will hold them there with rates rising only with inflation -- or roughly 2% -- for at least four years."*
- The Fair Hydro Plan website is more explicit in referring to total bills: *"And bills won't increase beyond the rate of inflation for at least four years."*

2. *"Decades of under-investment in the electricity system by governments..." (from March 2 Backgrounder, Refinancing the Global Adjustment)*
    - Please provide any backup or supporting information for this claim, ie 'decades of under-investment'.

3. *"these changes will deliver the single-largest reduction to electricity rates in Ontario's history.." (from March 2 News Release, Ontario Cutting Electricity Bills by 25 Per Cent)*
    - Please provide any backup or supporting information for this claim, ie 'single-largest reduction'.

Thanks,
Gavin He

Subject: Additional Energy Request

Hi,

There are 3 statements in the narrative that we're having trouble finding backup/fact check for. Can we make these asks to Energy or at least make them aware. Particularly in light of Ron questioning #3 during narrative reviews:

1. *"After the 25% decrease in bills, rates are rising at the rate of inflation"*
    - Please confirm if this refers to only the commodity cost of electricity or entire bills.
        - Cabinet Submission seemed to refer to ***only*** electricity/commodity costs. Furthermore, unclear how this inflation goal can be reached when GA smoothing appear to be the only lever we have to adjust future dynamically.
        - Premier's statement seems to imply total bills: *"After we bring bills down by 25% we will hold them there with rates rising only with inflation -- or roughly 2% -- for at least four years."*
        - The Fair Hydro Plan website is more explicit in referring to total bills: *"And bills won't increase beyond the rate of inflation for at least four years."*

2. *"Decades of under-investment in the electricity system by governments..." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'decades of under-investment'.

3. *"these changes will deliver the single-largest reduction to electricity rates in Ontario's history.." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'single-largest reduction'.

John, Bruno, if these look ok to you, can we run them by Ron and then go to Energy via DMO-to-DMO?

Happy to chat further about this at Monday's branch meeting.

Thanks,
Shajee

        - The Fair Hydro Plan website is more explicit in referring to total bills: *"And bills won't increase beyond the rate of inflation for at least four years."*

2. *"Decades of under-investment in the electricity system by governments..." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'decades of under-investment'.

3. *"these changes will deliver the single-largest reduction to electricity rates in Ontario's history.." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'single-largest reduction'.

John, Bruno, if these look ok to you, can we run them by Ron and then go to Energy via DMO-to-DMO?

Happy to chat further about this at Monday's branch meeting.

Thanks,
Shajee

Subject: RE: Additional Energy Request
Date: Monday, March 20, 2017 11:13:18 AM

Hi John, per Shajee's email and discussion this morning. Are you OK with running those question by Ron to send to Energy. I have drafted below our request to Energy.

Shajee, I think we would need to, for 2 and 3, cite the source, instead of hyperlinks?

Bruno

With respect to Ontario's fair Hydro Plan, there are a 3 statements (see below) in the document narrative and in news releases that have not been able to fact check or that we are unable to confirm based on our understanding of the proposed measures. Would the Ministry of Energy be able to provide these fact check and explanations. Alternately, to ensure that we are on the same page, could Energy share questions and answers on these issues.

We appreciate your help.

1. *"After the 25% decrease in bills, rates are rising at the rate of inflation"*
    - Please confirm if this refers to only the commodity cost of electricity or entire bills.
        - Cabinet Submission seemed to refer to ***only*** electricity/commodity costs. Furthermore, unclear how this inflation goal can be reached when GA smoothing appear to be the only lever we have to adjust future dynamically.
        - Premier's statement seems to imply total bills: *"After we bring bills down by 25% we will hold them there with rates rising only with inflation -- or roughly 2% -- for at least four years."*
        - The Fair Hydro Plan website is more explicit in referring to total bills: *"And bills won't increase beyond the rate of inflation for at least four years."*

2. *"Decades of under-investment in the electricity system by governments..." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'decades of under-investment'.

3. *"these changes will deliver the single-largest reduction to electricity rates in Ontario's history.." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'single-largest reduction'.

Subject: Additional Energy Request

Hi,

There are 3 statements in the narrative that we're having trouble finding backup/fact check for. Can we make these asks to Energy or at least make them aware. Particularly in light of Ron questioning #3 during narrative reviews:

1. *"After the 25% decrease in bills, rates are rising at the rate of inflation"*
    - Please confirm if this refers to only the commodity cost of electricity or entire bills.
        - Cabinet Submission seemed to refer to ***only*** electricity/commodity costs. Furthermore, unclear how this inflation goal can be reached when GA smoothing appear to be the only lever we have to adjust future dynamically.
        - Premier's statement seems to imply total bills: *"After we bring bills down by 25% we will hold them there with rates rising only with inflation -- or roughly 2% -- for at least four years."*
        - The Fair Hydro Plan website is more explicit in referring to total bills: *"And bills won't increase beyond the rate of inflation for at least four years."*

2. *"Decades of under-investment in the electricity system by governments..." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'decades of under-investment'.

3. *"these changes will deliver the single-largest reduction to electricity rates in Ontario's history.." (from here)*
    - Please provide any backup or supporting information for this claim, ie 'single-largest reduction'.

John, Bruno, if these look ok to you, can we run them by Ron and then go to Energy via DMO-to-DMO?

Happy to chat further about this at Monday's branch meeting.

Thanks,
Shajee

Thanks. Taking a look through the CabSub, they do have reference to CPI, but in previous CabSubs it was tied to the electricity component (or seemed that way with GA deferral). So sorry about that, I take back my earlier statement when I mentioned they didn't explicitly state the inflation targeting.

However the implementation is really curious which Ron seems to agree with….But if Ron wants us to ignore that for now, happy to as well.

When he says we don't need that for the narrative, does he mean to take it out or leave in and use the public messaging for the backup?
I think he means how will the government target and ensure the inflation increases 'for everyone' occur, even though the delivery components of the bill may increase at different rates. We'll leave it in the narrative for now (use public sources), and don't worry about targeting.

I guess we'll take implementation as a black box now and just go with public language.

Subject: RE: Additional Energy Request

Ok, I think maybe I mis-read his original question. I don't think there is any ambiguity what the narrative or the NR says. We just don't think that's what was in the CabSub.

When he says we don't need that for the narrative, does he mean to take it out or leave in and use the public messaging for the backup?

Subject: RE: Additional Energy Request

My guess would be that there might be something in the legislation that ties the GA smoothing to

the other components of the bill.

But it's really tricky especially since different distributors increase bills at different rates, and in the news release they state:
"As part of this plan, rate increases over the next four years would be held to the rate of inflation ***for everyone***."

Subject: RE: Additional Energy Request

Isn't the key issue that we might want a thought out response to someone asking something like the following

Premier, I understand your plans to limit cost increases to the Global Adjustment portion of electricity bills through GA smoothing, but there are also the delivery and regulatory components of electricity bills. You haven't outlined how you are controlling those costs, so how can you promise to limit the entire bill increase to inflation? I know Joe Smith's delivery charge was 80% of his bill over the last three months etc. etc.

Correct it's the inflation which I think Ron is also referring to…. Ron seems to imply the implementation/targeting is questionable, so I'm ok with that.

Will respond to that effect.

Subject: RE: Additional Energy Request

Hi,

On the first question, I though the CabSub and draft Minute were quite clear that it was on the entire bill. Are you reading in some ambiguity? The ability to target precisely, is, of course an implementation issue, but I don't think we need that for the narrative.

Fine to ask at a staff-level on the other two.

Ron

---

Hi Ron,

Please find attached some comments on the Affordability Fund note.

Most of the comments – at least on my end – stem from Hydro One's involvement. Any idea why Hydro One is in charge with setting up the Trust? It wasn't clear on the note.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	March 6, 2017
Agenda Class:	Discussion
Last reviewed by: TB/MBC (March 1, 2017)	**Tracking to:** Fast Track Cabinet (March 8, 2017)

SUBMISSION TITLE:	Affordability Fund

I. DECISION BEFORE THE BOARD

- Approve funding in 2016-17 to support the Affordability Fund.

II. RECOMMENDATIONS:

• Approve $100,000,000 in 2016-17 offset from the Treasury Board Contingency Fund to support the Affordability Fund.	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	200.0	0.0	0.0
Initiative cost recommended	100.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended	0.0	0.0	0.0
Total Fiscal Impact (C-fund)	100.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

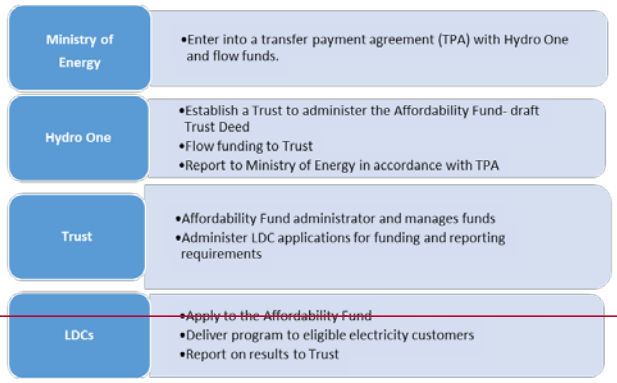
This item was part of the suite of initiatives before TB/MBC on March 1, 2017 related to electricity price mitigation. The Affordability Fund was minuted as follows:

> Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.
>
> a) Approved a commitment to provide up to $200,000,000 on a multi-year basis.
>
> b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

The Ministry's current request is for $200,000,000 in 2016-17 offset from the Treasury Board Contingency Fund. The Affordability Fund would be available to LDCs only and would target those electricity customers who do not qualify for low-income conservation programs (e.g. The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework) and who have difficulty paying their electricity bills.

- Ministry indicates that, based on LDC-reported data, 60,000 Ontarians at risk of disconnection from their electricity service each year. (TBS staff note a profile description or details of these consumers is not provided by the Ministry, and the Ministry has clarified this profile data has not been reported by LDCs to the OEB).
- Eligible customers will be identified by LDCs and could include those in frequent arrears or facing disconnection. Priority would be given to homes primarily heated by electricity. Appendix C outlines the Ministry's eligibility principles for the Fund.

To establish the Fund, the Ministry of Energy intends to enter into a Transfer Payment Agreement (TPA) with Hydro One. The TPA would include terms for Hydro One to establish a non-controlled Trust to administer and distribute funds to LDCs across the province on the basis of principles established by the Province and implemented at the discretion of the Trustees. The Trust would distribute funds to LDCs across the province, including Hydro One, at the direction of the Trustees.



- The Trust's governing principles will be outlined in the Trust Deed and the Trust will be managed by a Board of Trustees.
  - The Trust Deed will be drafted by Hydro One with input from the province and others in the LDC sector. The goals and principles of the Fund will be outlined in the Trust Deed and be consistent with the TPA, but the Trustees will have the discretion as to how to achieve the goals in alignment with the principles.
- The Trust would include Trustees possibly from the government, from other LDCs across the province and other independent Trustees, but not be controlled by the Province.
- The Trustees will have the discretion to hire Hydro One or other entities as service providers to assist with administering the Fund.
- The Trust would distribute funds to LDCs across the province (including Hydro One) at the discretion of the Trustees.
- LDCs would identify their respective eligible electricity customers and deliver the funding in accordance with the program.
  To protect public interest, it is expected that the Trust Deed will reflect an expectation that accountability provisions be included in funding provided to the LDCs which are consistent with those required under the TPAD.

Since the submission was received centrally, the Ministry has been working with the Office of the Provincial Controller Division (OPCD) on appropriate funding arrangements (Providing the funding to the Trust directly versus providing funding to Hydro One, who would provide it to the Trust) to ensure that the Province's and the Auditor General's respective abilities to audit the use of the funds is maintained under the Province's Transfer Payment and Accountability Directive and the Auditor General Act. The Ministry is currently working with H1 and its external advisors on this topic, and further details will be available shortly. At this time, it is not anticipated that such changes would impair ability to complete the transfer by March 31st.

Commented [SK81]: What is the rationale for Hydro One to administer trust and distribute funds? Is this related to the transmission system in any way?

Commented [SK82]: Why Hydro One?

Commented [BA3]: TPAD? Transfer Payment Acct Dir. Does this need to be spelled out?

Commented [SK84]: As H1 is outside the authority of the Auditor General, there can be a view that using H1 as a mechanism to deliver these services is to avoid scrutiny.

The Ministry indicates the measures funded through the Fund would be similar, or build on those available through the Home Assistance Program, and would specifically target customers who are otherwise not eligible for existing programs but could benefit from conservation programs.

- The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills. Program eligibility is aligned with other low-income support programs such as the OESP.

Affordability Fund recipients could receive measures (e.g. energy-saving light bulbs, programmable thermostats, cold climate air source heat pumps) ranging from $3,000 to $5,000 per customer, at no or minimal cost. As an illustration, with $200M, the Ministry indicates the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake. The large range takes into account the potential take-up of more expensive measures such as cold climate air source heat pumps which can range in cost from $7-$13K, and which can achieve significant electricity savings.

Performance Measurement:

The submission indicates that Hydro One would provide support to the Province in exercising its oversight of the program by collecting reports from the LDCs on behalf of the Province and/or submitting regular progress reports on program participation. The TPA with Hydro One will include details on reporting requirements. There is currently no mention of outcome measures in the submission but such details are expected to follow as planning progresses. The Ministry notes the government can outline broader principles and intended outcomes but specific outcome targets (like helped X homes result in Y savings) would be seen as prescriptive and in conflict with the Trust model.

The Ministry will create a grant agreement (i.e., A Transfer Payment Agreement) consistent with OPCD's guidance on one-time transfers and TPAD.

Risks:
Appendix C is the risk table submitted by the Ministry. Many of the Ministry's cited risk focus on the quick timing to put the program in place in 2016-17, oversubscription of funds, and underspending.

The Ministry also notes moderate risk with a high impact from flowing the funds into an independent trust account also for limited accountability, oversight, and transparency provisions. TBS staff note the list of accountability provisions provided by the Ministry above does not explicitly mention (nor does the submission elsewhere) the Transfer Payment Accountability Directive (TPAD) principle – Value for money is expected in the expenditure of government funds. TBS staff noted OPCD's one-time guidance is implicitly aligned with TPAD including value for money expectation.

TBS staff notes moderate risk around geographical representation of members in the Trust, lack of program design details (e.g., LDC and customer eligibility criteria) and lack of articulation of what success looks like for the program to ensure accountability. With the non-application based program structure, eligibility and selection criteria needs to be clearly established to pass the equity test.

Financials:
The Ministry is proposing that the Fund be provided through a one-time payment of $200M in 2016-17 offset from the Treasury Board Contingency Fund.

- The Ministry indicates providing the $200M immediately provides LDCs with the required upfront commitment to apply for funding and initiate planning and implementation activities.

- Administration expenses will be in accordance with the Transfer Payment Directive.

Commented [KJ5]: Slide 57-58 of Cabinet Deck. This is the stated logic for the creation of the Affordability Fund.

Commented [SK86]: Does it include installation of these measures?

- The Ministry expects that the funds through the Affordability Fund will be deployed within a year (funds are expected to be exhausted by March 31, 2018). The TPA will include the option to extend the original funding amount into future years in the event of under spending. The TPA will also include the option to incorporate potential future funding from the tax base. The Ministry intends to seek an exemption from the Cash Management Directive from the Ontario Financing Authority, MOF.

TBS staff note the March 1, 2017 minute was a commitment of up to $200M on a multi-year basis with direction to the Ministry Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

Commented [SK87]: Not sure what's being mentioned here.

Given the high-level nature of the current submission without specific details from a pending TPA, nor a performance management framework in place to gather evidence to support evidence-based decision-making, it is recommended that only $100M in funding in 2016-17 be provided now (Of the multi-year $200M commitment) as it still demonstrates an upfront commitment. It also provides time to finalize program details and performance reporting framework and report back to TB/MBC on them by Q1 2017-18. For the 2018-19 PRRT, the Ministry can report back on Affordability Fund results achieved to date, and provide a value for money assessment, so that both can also act as evidence-based support for a future funding request.

APPENDIX A: PROPOSED MINUTE

Approve providing $100,000,000 in 2016-17 for the government funded Affordability Fund.

In this regard,

i) Approve a Treasury Board Order, under the authority of the Financial Administration Act, in the amount of $100,000,000 in Green Energy Initiatives Transfer Payment, under Energy Development and Management (Vote/item 2902-1), offset by the Treasury Board Contingency Fund, to establish the Affordability Fund.

ii) Direct the Ministry to

a) Report back to TB/MBC by Q1 2017-18 with final program details, and a performance management framework including intended outcomes.

b) Report back to TB/MBC through the 2018-19 PRRT with spending to date, results achieved to date, a value for money assessment, and if needed at that time a multi-year funding request along with impacts to the Province's fiscal plan.

c) Provide regular updates to TB/MBC through regular reporting process including quarterly reports.

d) Work with Cabinet Office and the Office of the Premier to develop a communications strategy.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

Operating item – Green Initiatives TP	Oper	100.0000	0.0000	0.0000	100.0000
Total Fiscal Impact (draw from c-funds)		**100.000**	**0.0000**	**0.0000**	**100.0000**

APPENDIX C: AFFORDABILITY FUND PRINCIPLES

The Ministry has developed high-level principles by which the Affordability Fund will operate and will continue to refine these principles through discussion with all LDCs. LDCs are best positioned to provide further guidance on principles as they are closest to the customer and will be responsible for identifying the customers in need and delivering assistance to them. All LDCs will be able to apply to access to the Affordability Fund so they may address the needs of their customer base. Principles include:

- The purpose of the Affordability Fund is to assist electricity customers who do not qualify for low-income conservation programs, are struggling to pay their electricity bills, and are unable to make energy efficiency improvements to their homes without financial assistance. The Fund would offer these customers energy efficiency measures at no or minimal cost, providing LDCs with an additional tool to help customers in need to reduce their future electricity bills and avoid future disconnections.
- Trust and Trustees - The Fund is to be administered by an independent Trust. Trustees are to be representative and have relevant sector expertise.
- Allocation of funding to LDCs - Fund to be accessible to all LDCs on application basis, subject to consistent funding application and evaluation criteria.

Eligibility Principles:

- Customers who do not qualify for low-income conservation programs (i.e. are above Statistics Canada's Low-Income Measure).
- LDC has reasonable evidence to indicate that the customer requires financial assistance to pay for energy efficiency measures.
    - The Trust will be expected to consider the appropriate indicators for determining whether customers are reasonably in need. The Ministry does not expect that a new income threshold would be established, due to the administrative costs and timelines required to implement income-eligibility tests. The Ministry believes that other indicators available to LDCs would be sufficient.
- Customers may have triggered action by an LDC collection department (e.g., customers are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.).
    - Arrears are defined by the OEB as accounts that are 30 or more days past the 16-day minimum payment period.
    - LDCs have communicated that their customer care departments keep track of their customers who are in "frequent arrears" or "chronic arrears."
    - These terms are qualitative (i.e. do not refer to a set length of time or number of times customers are in arrears); however, generally ENERGY understands the bounds of these terms to be, on one end, customers who are in arrears for more than one billing period, and on the upper end, customers that have several thousand dollars in payments owing, accumulated from a number of missed or partially missed billing periods.
    - While arrears are an important indicator of need to LDCs, LDCs have also indicated that there may be customers who are keeping up with their bills, but at the expense of paying for food or other basic needs. LDCs have asked for discretion to also offer energy efficiency measures to these customers.
- Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances.
- Other factors as agreed by the Trustees.

Commented [SK88]: Would LDCs need to know who their eligible customers are prior to application?

Commented [SK89]: Are these other conservation programs equal to or better than those offered through this fund?

What's the difference in how those programs operate versus this fund?

Hydro One is expected to use the principles developed by the Ministry (with input from LDCs) to establish the Trust Deed. It is critical that there be fair and appropriate eligibility criteria for LDCs to consistently apply across the province to ensure that support is provided to those customers in need and to prevent any potential gaming.

The Trustees must be given some flexibility to determine this criteria. Flexibility is also desirable as it is expected that the Trustees will have knowledge of the LDC sector, customer needs and/or low-income and conservation programs to further refine appropriate customer eligibility criteria. It is also expected that Trustees will engage with other LDCs and industry experts as needed to inform eligibility criteria.

Commented [SK810]: Unclear why Hydro One is selected for this role?

APPENDIX D: MINISTRY'S RISK ASSESSMENT AND MITIGATION STRATEGY

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
It is proposed that the funding for the Fund be expensed in 2016-17, while the programs would be delivered in future fiscal years. The Auditor General may ask for the funding to be expensed in future fiscal years.	M	L	ENERGY is continuing to engage with Hydro One and the Ontario Provincial Controller (OPCD) early to develop the funding mechanism and Trust. ENERGY is working to flow the funds to the Trust in advance of March 31, 2017.
The Auditor General may question the rush nature of this program in addition to the need for a Trust Account and why the Ministry is unable to deliver the program itself.	H	M	Explain that the Fund is part of the government's rate mitigation strategy, and intended to address an immediate need (getting customers on a more sustainable path with bills). ENERGY lacks the capacity to deliver the program itself. ENERGY will develop issues management materials to address these concerns.
Flowing the funds into an independent trust account allows for limited accountability, oversight and transparency provisions.	M	H	ENERGY has engaged with the Ontario Provincial Controller to seek their guidance on how to incorporate accountability, oversight and transparency provisions in the TPA. ENERGY will develop a TPA in-line with OPCD guidelines on accounting considerations for using government funded Trust Accounts.
Oversubscription of funds	M	M	Need for additional funding in future years can be evaluated based on customer needs.
Underspending of allocated funds	L	M	TPA will include the option to extend the original funding amount into future years. The Trust will also have the ability to extend funding as needed. To increase uptake for customers in need, LDCs will undertake targeted outreach.
Some entities, including LDCs who are not selected as parties to the TPA, may feel left out of the funding program or perceive the funding as inadequate.	M	L	Undertake consultations with LDCs and other stakeholders to provide input on allocation methodology. Prepare a robust communication plan to emphasize the scope and purpose of the Fund

Please see attached merged with Karim's one comment.

John – if you hear anything about why Hydro One is involved with this would you mind letting me know. I really don't know why they are involved in setting up this trust or the rationale. The lack of explanation is also curious. Am I missing something

Subject: Affordability Fund Note

Hi John:

Comments attached.

Bruno

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	March 6, 2017
Agenda Class:	Discussion
Last reviewed by: TB/MBC (March 1, 2017)	**Tracking to:** Fast Track Cabinet (March 8, 2017)

SUBMISSION TITLE:	Affordability Fund

I. DECISION BEFORE THE BOARD

- Approve funding in 2016-17 to support the Affordability Fund.

II. RECOMMENDATIONS:

• Approve $100,000,000 in 2016-17 offset from the Treasury Board Contingency Fund to support the Affordability Fund.	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	200.0	0.0	0.0
Initiative cost recommended	100.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended	0.0	0.0	0.0
Total Fiscal Impact (C-fund)	100.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

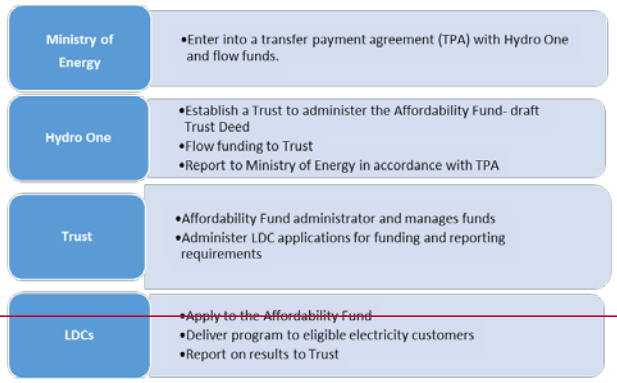
This item was part of the suite of initiatives before TB/MBC on March 1, 2017 related to electricity price mitigation. The Affordability Fund was minuted as follows:

> Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.
>
> a) Approved a commitment to provide up to $200,000,000 on a multi-year basis.
>
> b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

The Ministry's current request is for $200,000,000 in 2016-17 offset from the Treasury Board Contingency Fund. The Affordability Fund would be available to LDCs only and would target those electricity customers who do not qualify for low-income conservation programs (e.g. The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework) and who have difficulty paying their electricity bills.

- Ministry indicates that, based on LDC-reported data, 60,000 Ontarians at risk of disconnection from their electricity service each year. (TBS staff note a profile description or details of these consumers is not provided by the Ministry, and the Ministry has clarified this profile data has not been reported by LDCs to the OEB).
- Eligible customers will be identified by LDCs and could include those in frequent arrears or facing disconnection. Priority would be given to homes primarily heated by electricity. Appendix C outlines the Ministry's eligibility principles for the Fund.

To establish the Fund, the Ministry of Energy intends to enter into a Transfer Payment Agreement (TPA) with Hydro One. The TPA would include terms for Hydro One to establish a non-controlled Trust to administer and distribute funds to LDCs across the province on the basis of principles established by the Province and implemented at the discretion of the Trustees. The Trust would distribute funds to LDCs across the province, including Hydro One, at the direction of the Trustees.



- The Trust's governing principles will be outlined in the Trust Deed and the Trust will be managed by a Board of Trustees.
  - The Trust Deed will be drafted by Hydro One with input from the province and others in the LDC sector. The goals and principles of the Fund will be outlined in the Trust Deed and be consistent with the TPA, but the Trustees will have the discretion as to how to achieve the goals in alignment with the principles.
- The Trust would include Trustees possibly from the government, from other LDCs across the province and other independent Trustees, but not be controlled by the Province.
- The Trustees will have the discretion to hire Hydro One or other entities as service providers to assist with administering the Fund.
- The Trust would distribute funds to LDCs across the province (including Hydro One) at the discretion of the Trustees.
- LDCs would identify their respective eligible electricity customers and deliver the funding in accordance with the program.
  To protect public interest, it is expected that the Trust Deed will reflect an expectation that accountability provisions be included in funding provided to the LDCs which are consistent with those required under the TPAD.

Since the submission was received centrally, the Ministry has been working with the Office of the Provincial Controller Division (OPCD) on appropriate funding arrangements (Providing the funding to the Trust directly versus providing funding to Hydro One, who would provide it to the Trust) to ensure that the Province's and the Auditor General's respective abilities to audit the use of the funds is maintained under the Province's Transfer Payment and Accountability Directive and the Auditor General Act. The Ministry is currently working with H1 and its external advisors on this topic, and further details will be available shortly. At this time, it is not anticipated that such changes would impair ability to complete the transfer by March 31st.

Commented [SK81]: What is the rationale for Hydro One to administer trust and distribute funds? Is this related to the transmission system in any way?

Commented [SK82]: Why Hydro One?

Commented [BA3]: TPAD? Transfer Payment Acct Dir. Does this need to be spelled out?

Commented [SK84]: As H1 is outside the authority of the Auditor General, there can be a view that using H1 as a mechanism to deliver these services is to avoid scrutiny.

The Ministry indicates the measures funded through the Fund would be similar, or build on those available through the Home Assistance Program, and would specifically target customers who are otherwise not eligible for existing programs but could benefit from conservation programs.

- The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills. Program eligibility is aligned with other low-income support programs such as the OESP.

Affordability Fund recipients could receive measures (e.g. energy-saving light bulbs, programmable thermostats, cold climate air source heat pumps) ranging from $3,000 to $5,000 per customer, at no or minimal cost. As an illustration, with $200M, the Ministry indicates the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake. The large range takes into account the potential take-up of more expensive measures such as cold climate air source heat pumps which can range in cost from $7-$13K, and which can achieve significant electricity savings.

Performance Measurement:

The submission indicates that Hydro One would provide support to the Province in exercising its oversight of the program by collecting reports from the LDCs on behalf of the Province and/or submitting regular progress reports on program participation. The TPA with Hydro One will include details on reporting requirements. There is currently no mention of outcome measures in the submission but such details are expected to follow as planning progresses. The Ministry notes the government can outline broader principles and intended outcomes but specific outcome targets (like helped X homes result in Y savings) would be seen as prescriptive and in conflict with the Trust model.

The Ministry will create a grant agreement (i.e., A Transfer Payment Agreement) consistent with OPCD's guidance on one-time transfers and TPAD.

Risks:
Appendix C is the risk table submitted by the Ministry. Many of the Ministry's cited risk focus on the quick timing to put the program in place in 2016-17, oversubscription of funds, and underspending.

The Ministry also notes moderate risk with a high impact from flowing the funds into an independent trust account also for limited accountability, oversight, and transparency provisions. TBS staff note the list of accountability provisions provided by the Ministry above does not explicitly mention (nor does the submission elsewhere) the Transfer Payment Accountability Directive (TPAD) principle – Value for money is expected in the expenditure of government funds. TBS staff noted OPCD's one-time guidance is implicitly aligned with TPAD including value for money expectation.

TBS staff notes moderate risk around geographical representation of members in the Trust, lack of program design details (e.g., LDC and customer eligibility criteria) and lack of articulation of what success looks like for the program to ensure accountability. With the non-application based program structure, eligibility and selection criteria needs to be clearly established to pass the equity test.

Financials:
The Ministry is proposing that the Fund be provided through a one-time payment of $200M in 2016-17 offset from the Treasury Board Contingency Fund.

- The Ministry indicates providing the $200M immediately provides LDCs with the required upfront commitment to apply for funding and initiate planning and implementation activities.

- Administration expenses will be in accordance with the Transfer Payment Directive.

Commented [KJ5]: Slide 57-58 of Cabinet Deck. This is the stated logic for the creation of the Affordability Fund.

Commented [SK86]: Does it include installation of these measures?

- The Ministry expects that the funds through the Affordability Fund will be deployed within a year (funds are expected to be exhausted by March 31, 2018). The TPA will include the option to extend the original funding amount into future years in the event of under spending. The TPA will also include the option to incorporate potential future funding from the tax base. The Ministry intends to seek an exemption from the Cash Management Directive from the Ontario Financing Authority, MOF.

TBS staff note the March 1, 2017 minute was a commitment of up to $200M on a multi-year basis with direction to the Ministry Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

Commented [SK87]: Not sure what's being mentioned here.

Given the high-level nature of the current submission without specific details from a pending TPA, nor a performance management framework in place to gather evidence to support evidence-based decision-making, it is recommended that only $100M in funding in 2016-17 be provided now (Of the multi-year $200M commitment) as it still demonstrates an upfront commitment. It also provides time to finalize program details and performance reporting framework and report back to TB/MBC on them by Q1 2017-18. For the 2018-19 PRRT, the Ministry can report back on Affordability Fund results achieved to date, and provide a value for money assessment, so that both can also act as evidence-based support for a future funding request.

APPENDIX A: PROPOSED MINUTE

Approve providing $100,000,000 in 2016-17 for the government funded Affordability Fund.

In this regard,

i) Approve a Treasury Board Order, under the authority of the Financial Administration Act, in the amount of $100,000,000 in Green Energy Initiatives Transfer Payment, under Energy Development and Management (Vote/item 2902-1), offset by the Treasury Board Contingency Fund, to establish the Affordability Fund.

ii) Direct the Ministry to

a) Report back to TB/MBC by Q1 2017-18 with final program details, and a performance management framework including intended outcomes.

b) Report back to TB/MBC through the 2018-19 PRRT with spending to date, results achieved to date, a value for money assessment, and if needed at that time a multi-year funding request along with impacts to the Province's fiscal plan.

c) Provide regular updates to TB/MBC through regular reporting process including quarterly reports.

d) Work with Cabinet Office and the Office of the Premier to develop a communications strategy.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**20116-17**	**2017-18**	**2018-19**	**2016-17**
Initiative cost recommended		100.000	0.0000	0.0000	
Expense changes:					
Operating item – Green Initiatives TP	Oper	100.0000	0.0000	0.0000	100.0000
Total Fiscal Impact (draw from c-funds)		**100.000**	**0.0000**	**0.0000**	**100.0000**

APPENDIX C: AFFORDABILITY FUND PRINCIPLES

The Ministry has developed high-level principles by which the Affordability Fund will operate and will continue to refine these principles through discussion with all LDCs. LDCs are best positioned to provide further guidance on principles as they are closest to the customer and will be responsible for identifying the customers in need and delivering assistance to them. All LDCs will be able to apply to access to the Affordability Fund so they may address the needs of their customer base. Principles include:

- The purpose of the Affordability Fund is to assist electricity customers who do not qualify for low-income conservation programs, are struggling to pay their electricity bills, and are unable to make energy efficiency improvements to their homes without financial assistance. The Fund would offer these customers energy efficiency measures at no or minimal cost, providing LDCs with an additional tool to help customers in need to reduce their future electricity bills and avoid future disconnections.
- Trust and Trustees - The Fund is to be administered by an independent Trust. Trustees are to be representative and have relevant sector expertise.
- Allocation of funding to LDCs - Fund to be accessible to all LDCs on application basis, subject to consistent funding application and evaluation criteria.

Eligibility Principles:

- Customers who do not qualify for low-income conservation programs (i.e. are above Statistics Canada's Low-Income Measure).
- LDC has reasonable evidence to indicate that the customer requires financial assistance to pay for energy efficiency measures.
    - The Trust will be expected to consider the appropriate indicators for determining whether customers are reasonably in need. The Ministry does not expect that a new income threshold would be established, due to the administrative costs and timelines required to implement income-eligibility tests. The Ministry believes that other indicators available to LDCs would be sufficient.
- Customers may have triggered action by an LDC collection department (e.g., customers are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.).
    - Arrears are defined by the OEB as accounts that are 30 or more days past the 16-day minimum payment period.
    - LDCs have communicated that their customer care departments keep track of their customers who are in "frequent arrears" or "chronic arrears."
    - These terms are qualitative (i.e. do not refer to a set length of time or number of times customers are in arrears); however, generally ENERGY understands the bounds of these terms to be, on one end, customers who are in arrears for more than one billing period, and on the upper end, customers that have several thousand dollars in payments owing, accumulated from a number of missed or partially missed billing periods.
    - While arrears are an important indicator of need to LDCs, LDCs have also indicated that there may be customers who are keeping up with their bills, but at the expense of paying for food or other basic needs. LDCs have asked for discretion to also offer energy efficiency measures to these customers.
- Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances.
- Other factors as agreed by the Trustees.

Commented [SK88]: Would LDCs need to know who their eligible customers are prior to application?

Commented [SK89]: Are these other conservation programs equal to or better than those offered through this fund?

What's the difference in how those programs operate versus this fund?

Hydro One is expected to use the principles developed by the Ministry (with input from LDCs) to establish the Trust Deed. It is critical that there be fair and appropriate eligibility criteria for LDCs to consistently apply across the province to ensure that support is provided to those customers in need and to prevent any potential gaming.

The Trustees must be given some flexibility to determine this criteria. Flexibility is also desirable as it is expected that the Trustees will have knowledge of the LDC sector, customer needs and/or low-income and conservation programs to further refine appropriate customer eligibility criteria. It is also expected that Trustees will engage with other LDCs and industry experts as needed to inform eligibility criteria.

Commented [SK810]: Unclear why Hydro One is selected for this role?

APPENDIX D: MINISTRY'S RISK ASSESSMENT AND MITIGATION STRATEGY

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
It is proposed that the funding for the Fund be expensed in 2016-17, while the programs would be delivered in future fiscal years. The Auditor General may ask for the funding to be expensed in future fiscal years.	M	L	ENERGY is continuing to engage with Hydro One and the Ontario Provincial Controller (OPCD) early to develop the funding mechanism and Trust. ENERGY is working to flow the funds to the Trust in advance of March 31, 2017.
The Auditor General may question the rush nature of this program in addition to the need for a Trust Account and why the Ministry is unable to deliver the program itself.	H	M	Explain that the Fund is part of the government's rate mitigation strategy, and intended to address an immediate need (getting customers on a more sustainable path with bills). ENERGY lacks the capacity to deliver the program itself. ENERGY will develop issues management materials to address these concerns.
Flowing the funds into an independent trust account allows for limited accountability, oversight and transparency provisions.	M	H	ENERGY has engaged with the Ontario Provincial Controller to seek their guidance on how to incorporate accountability, oversight and transparency provisions in the TPA. ENERGY will develop a TPA in-line with OPCD guidelines on accounting considerations for using government funded Trust Accounts.
Oversubscription of funds	M	M	Need for additional funding in future years can be evaluated based on customer needs.
Underspending of allocated funds	L	M	TPA will include the option to extend the original funding amount into future years. The Trust will also have the ability to extend funding as needed. To increase uptake for customers in need, LDCs will undertake targeted outreach.
Some entities, including LDCs who are not selected as parties to the TPA, may feel left out of the funding program or perceive the funding as inadequate.	M	L	Undertake consultations with LDCs and other stakeholders to provide input on allocation methodology. Prepare a robust communication plan to emphasize the scope and purpose of the Fund

These look good to me. In terms of the TBS process, ENE report back and what we kind of have to help stick handle in terms of the TB approval for the operating asset. Not sure if it needs discussing in detail other than to indicate that we're making progress?

Good draft note. A couple of comments in attached. And one general comment. I think it's all pretty reader-friendly until the last section CONSIDEARSTIONS/POTENTIAL RISKS. Mainly about being able to read through and be able to understand fairly easily if there are a number of considerations/risks discussed. Or are all bullets related to one consideration/risk. But I didn't have any particular suggestion just now.

I know Bruno and Shajee are tied up on the narrative so took a quick look. Are my edits fair description of the interactions with OPG? Also, could you take a look at the comment?

COMMERCIALLY SENSITIVE AND CONFIDENTIAL

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds. IESO will use the cash proceeds to make up the shortfall in GA payments from ratepayers.
- OPG Trust will be structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
    - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.

Commented [BA1]: May be good to make 2nd part clear upfront. Redraft if I didn't get language right.

Commented [BA2]: Confused here. Are we referring to interest received or OPG annual payments to Trust.

Commented [BA3]: Also confused about comment: Should that be ".....received by OPG Trust"

Commented [JK4]: Check with SIFB or CMD on the right terminology.

Commented [FC5]: To me this is part of the terms and conditions

Commented [JK6]: Did I get this right?

Commented [FC7]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- Longer term debt will be issued as soon as possible, subject to market timing constraints.
  - OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
  - The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].
- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK8]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK9]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently ~~environed~~ envisioned to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).
  - [TBC] OPG staff have indicated that the current plan is to pay no interest or dividends for the 44% equity injection. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in or would potentially entail risks described under the Consideration section below.

Commented [FC10]: Not quarterly?

Commented [JK11]: Monthly now.

Commented [BA12R11]: For clarity, should we start with the broader statement that IESO will require monthly payments from the Trust, which in turn requires the Province to make monthly equity injections to OPG?

Commented [FC13]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [AP14]: OPG TB has mentioned a 10% premium on buyback, but this could still be construed as a benefit as the 10% return over a 10 year period does not reflect the risk premium. Threatens the GBE status of OPG, which could lead to full consolidation in Public Accounts.

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.

- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ215]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.

[TBC] TBS would provide an annual allocation, with a three-year program review cycle.

-

~~ADDITIONAL CONCERNS~~CONSIDERATIONS / POTENTIAL RISKS TO THE SPV ARRANGEMENT

- OPG staff have signaled to CEFD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the ~~proposed lock-up period ends~~'inflection' point where the ratepayers start to pay down the deferred GA.
- Under the current plan, only the 56% funded through capital markets, directly by OPG Trust or by OPG, would be paid interest over time.
- While the implementation of the~~is~~ proposed structure is ~~hypothetically~~currently viewed as fiscally neutral on an accounting basis, there is some concern over the cash flow-through of this structure with no flow through of interest or dividends over time.
- The Province would~~ill have~~incurrincur interest associated with the debt it borrows to finance the 44% equity injection. OPG should have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments.

Commented [BA16]: I'll stand to be corrected by you CFA types, but in economics an inflection point is the point where a curve changes from concave to convex or vice versa. Here we are talking about two lines are crossing. Just want to make sure we have correct terminology so that we don't get called us out later by some (other) smarty pants.

~~The interest cost will continue to build during the lock-up period as more principal is borrowed, resulting in potentially billions of aggregate interest owed by the Province to the capital markets.~~

- It may be necessary to establish a flow-through of cash from OPG to the province through some type of return, such as a dividend ~~or the SPV arrangement could be viewed as receiving an interest free loan or subsidy from the Province~~

- In order to reasonably guarantee ~~this~~a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield ~~related~~associated with ~~to~~ the interest cost of the Province's ~~related debt~~borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g. through a form of dividend reinvestment plan.

- A preferred equity structure~~This~~ could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity.

Commented [AP17]: This is not necessarily true as an acceptable premium associated with the buyback feature would mitigate this concern. Maybe keep the subsidy issue separate as mentioned above? The main risk is that the Province will be paying several hundred millions to billions of interest over time with no cash flow from OPG. OPG in turn would have the same amount of cash on its books – either idle or used for their own initiatives.

Commented [JK18]: Explain. Is this risk to OPG Trust, OPG or the Province.

Commented [AP19R18]: Risk is to OPG Trust/OPG because, if preferred equity is issued, then it could be viewed as debt.

Subject: BN - GA Equity Injection Structure v7._Markup.docx

I know Bruno and Shajee are tied up on the narrative so took a quick look. Are my edits fair description of the interactions with OPG? Also, could you take a look at the comment?

Assumptions	
Interest rate	4%
2017-18	In millions
Province borrows (44% of GA)	$1,100
Equity Injection to OPG	$1,100
Price per share (in dollars)	$20.00
Number of shares (millions)	55
Interest cost to Province (annual)	$44

**Interest is less in first year as borrowing assumed to take place in June*

Assume that lock-up period ends in 8 years, **that there is no compounded interest**, and full payment of principal and accumulated interest by end of year 8.

Potential Options

Option 1 - Premium associated with the deferred interest repayments (common share redemption price)

	0	1	2	3	4	5	6	7	8	**Total**
Interest		$22	$44	$44	$44	$44	$44	$44	$44	$330
Principal										$1,100
Total repayment										$1,430
Number of shares (millions)										55
Price per share (redemption price)										**$26.00**
Redemption Premium										30.00%

Option 2 - Preferred Shares with a return equal to the 4% interest rate

	0	1	2	3	4	5	6	7	8	**Total**
Interest		$22	$44	$44	$44	$44	$44	$44	$44	$330
Dividends		($22)	($44)	($44)	($44)	($44)	($44)	($44)	($44)	($330)
Principal										$1,100
Total repayment										$1,100
Number of shares (millions)										55
Price per share (redemption price)										**$20.00**
Redemption Premium										0.00%

Option 3 - Dividends reinvested into shares

	0	1	2	3	4	5	6	7	8	**Total**
Interest		$22	$44	$44	$44	$44	$44	$44	$44	$330
Dividends										
Principal										$1,100
Total repayment										$1,430
Number of shares (millions)	55	1.1	2.2	2.2	2.2	2.2	2.2	2.2	2.2	71.5
Price per share (redemption price)										**$20.00**
Redemption Premium										0.00%

GBE Comparable - Hydro One

Hydro One has Series I and Series II preferred shares that redemption prices are equal to their par value of $25.
However, each has a set return (3.53% + five-year Government Canada bond reset every 5 years for Series I; 3.53% + 3-month T-bill reset quarterly for Series II).
The dividends are quarterly and cumulative.
The shares are redeemable by Hydro One Limited every fifth year for $25 for Series I and II, with Series II shares being redeemable at $25.50 after 5 years.

Additional Considerations

- The Province may have to borrow to finance its interest expense obligations from capital markets if it does not receive the cash interest payments from OPG; potential for the recovered amount from ratepayers (interest and principal) to be lower than the total principal, administrative, and interest costs from the GA structure.
- OPG could use the cash interest payments related to the Province's borrowing to reduce its borrowing requirements (or equity injections required from the Province).

- Main concern is the justification of the equity injection and what appropriate return can be quantified, including its form (e.g., dividend, premium, reinvestment), in order to prevent the existence of a benefit from the Province to OPG that could threaten OPG's GBE status.
- The Hydro One recapitalization used the potential loss of IPO value (if the PILS payment was funded through debt) for justification of the equity injection.

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

Commented [JK1]: Check with SIFB or CMD on the right terminology.

Commented [FC2]: To me this is part of the terms and conditions

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
    - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.
- Longer term debt will be issued as soon as possible, subject to market timing constraints.

Commented [JK3]: Did I get this right?

Commented [FC4]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
- The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].

- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK5]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK6]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently ~~environed~~ envisioned to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).
  - [TBC] OPG staff have indicated that the current plan is to pay no interest or dividends for the 44% equity injection. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in or would potentially entail risks described under the Consideration section below.

Commented [FC7]: Not quarterly?

Commented [JK8]: Monthly now.

Commented [FC9]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [AP10]: OPG TB has mentioned a 10% premium on buyback, but this could still be construed as a benefit as the 10% return over a 10 year period does not reflect the risk premium. Threatens the GBE status of OPG, which could lead to full consolidation in Public Accounts.

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.

- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ211]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.

[TBC] TBS would provide an annual allocation, with a three-year program review cycle.

-

~~ADDITIONAL CONCERNS~~CONSIDERATIONS / POTENTIAL RISKS TO THE SPV ARRANGEMENT

- OPG staff have signaled to CEFD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the ~~proposed lock-up period ends~~'inflection' point where the ratepayers start to pay down the deferred GA.
- Under the current plan, only the 56% funded through capital markets, directly by OPG Trust or by OPG, would be paid interest over time.
- While the implementation of the~~is~~ proposed structure is ~~hypothetically~~currently viewed as fiscally neutral on an accounting basis, there is some concern over the cash flow-through of this structure with no flow through of interest or dividends over time.
- The Province would~~ill have~~incur~~r~~incur interest associated with the debt it borrows to finance the 44% equity injection. OPG should have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments.

~~The interest cost will continue to build during the lock-up period as more principal is borrowed, resulting in potentially billions of aggregate interest owed by the Province to the capital markets.~~

- It may be necessary to establish a flow-through of cash from OPG to the province through some type of return, such as a dividend ~~or the SPV arrangement could be viewed as receiving an interest free loan or subsidy from the Province~~

- In order to reasonably guarantee ~~this~~a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield ~~related~~associated with ~~to~~ the interest cost of the Province's ~~related debt~~borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g. through a form of dividend reinvestment plan.

- A preferred equity structure~~This~~ could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity.

Commented [AP12]: This is not necessarily true as an acceptable premium associated with the buyback feature would mitigate this concern. Maybe keep the subsidy issue separate as mentioned above? The main risk is that the Province will be paying several hundred millions to billions of interest over time with no cash flow from OPG. OPG in turn would have the same amount of cash on its books – either idle or used for their own initiatives.

Commented [JK13]: Explain. Is this risk to OPG Trust, OPG or the Province.

Commented [AP14R13]: Risk is to OPG Trust/OPG because, if preferred equity is issued, then it could be viewed as debt.

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

Commented [JK1]: Check with SIFB or CMD on the right terminology.

Commented [FC2]: To me this is part of the terms and conditions

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
    - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.
- Longer term debt will be issued as soon as possible, subject to market timing constraints.

Commented [JK3]: Did I get this right?

Commented [FC4]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
- The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].

- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK5]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK6]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

Commented [FC7]: Not quarterly?

Commented [JK8]: Monthly now.

Commented [FC9]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [AP10]: OPG TB has mentioned a 10% premium on buyback, but this could still be construed as a benefit as the 10% return over a 10 year period does not reflect the risk premium. Threatens the GBE status of OPG, which could lead to full consolidation in Public Accounts.

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ211]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.

[TBC] TBS would provide an annual allocation, with a three-year program review cycle.

-

~~ADDITIONAL CONCERNS~~CONSIDERATIONS / POTENTIAL RISKS TO THE SPV ARRANGEMENT

- OPG staff have signaled to CEFD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the equity injection for the 44% equity injection until the proposed lock-up period ends.
- Under the current plan, only the 56% funded through capital markets, directly by OPG Trust or by OPG, would be paid interest over time.
- While the implementation of the~~is~~ proposed structure is ~~hypothetically~~currently viewed as fiscally neutral on an accounting basis, there is some concern over the cash flow-through of this structure with no flow through of interest or dividends over time.
- The Province would~~ill~~ ~~have~~~~incurr~~incur interest associated with the debt it borrows to finance the 44% equity injection. OPG should have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments.
- The interest cost will continue to build during the lock-up period as more principal is borrowed, resulting in potentially billions of aggregate interest owed by the Province to the capital markets.
- It may be necessary to establish a flow-through of cash from OPG to the province through some type of return, such as a dividend ~~or the SPV arrangement could be viewed as receiving an interest free loan or subsidy from the Province~~

Commented [AP12]: This is not necessarily true as an acceptable premium associated with the buyback feature would mitigate this concern. Maybe keep the subsidy issue separate as mentioned above? The main risk is that the Province will be paying several hundred millions to billions of interest over time with no cash flow from OPG. OPG in turn would have the same amount of cash on its books – either idle or used for their own initiatives.

- In order to reasonably guarantee ~~this~~a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield ~~related~~associated with ~~to~~ the interest cost of the Province's ~~related debt~~borrowing costs.

- This could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity.

Commented [JK13]: Explain. Is this risk to OPG Trust, OPG or the Province.

Commented [AP14R13]: Risk is to OPG Trust/OPG because, if preferred equity is issued, then it could be viewed as debt.

> Good draft note. A couple of comments in attached. And one general comment. I think it's all pretty reader-friendly until the last section CONSIDEARSTIONS/POTENTIAL RISKS. Mainly about being able to read through and be able to understand fairly easily if there are a number of considerations/risks discussed. Or are all bullets related to one consideration/risk. But I didn't have any particular suggestion just now.

Hi all,

This is a bi-weekly meeting invite for CEFD/DMO/MO. CEFD will provide an agenda prior to the meeting.

Regards,
Gavin He

ANNOTATED AGENDA
MO UPDATE: April 18, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Ontario Fair Hydro Plan – Equity Injection

Staff from CEFD, OFA capital markets, Ministry of Finance, and OPG continue to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The CEFD and EIGS staff are working to establish clarity and steps required on the Provincial approvals for the equity injection~~; however, additional questions were raised during the discussion~~.
  - ~~Currently, parties are all hands on deck on the legislation drafting and the equity injection is expected to pick up soon after.~~

2. IESO Credit Facility – $975M for Market

~~At a senior level implementation working group looking at various aspects of the Global Adjustment deferral, the possibility of IESO relying on the $975M credit facility provided by the OFA to fund the short and the longer term financing until third party financing is obtained~~.

- IESO raised the potential requirements for ~~a) fund~~financing the Fair Hydro forecast variances ~~(short term), and b) funding the Fair Hydro amounts not purchased by the OPG SPV (long term)~~.
  - The possibility was raised of the IESO relying on the existing $975M credit facility provided by the OFA to provide short term financing until the OPG SPV purchases the IESO regulatory asset.
  - One of the main uses of the $975M credit facility is to provide liquidity into the electricity market to support various initiatives including the Regulated Price Plan (RPP), the Rural or Remote Electricity Rate Protection (RRRP), the new Ontario Electricity Support Program (OESP), the various conservation programs and overall market liquidity.
  - The $975M facility was not intended to provide long-term financing.
- If IESO required longer-term financing, ~~this would become an on-going, and potentially not just short-term, CEFD would be inclined to engage in~~ additional due diligence and considerations on term and rate, ~~certainty of recovery and~~ accounting treatment, and appropriate approvals would be required. ~~(given the conditions required by OPG's audit firm)~~
  - ~~, and~~ OEFC or OFA~~'s~~ involvement (other than managing the Provincial borrowing plan, including for any ~~the~~capital contribution / equity injection into OPG) in providing short or longer-term financing would potentially require government policy approval and a revised Minister's Directive~~, as this would potentially for a~~

Commented [RK1]: We should have a very brief item on the expected OPG BP TB submission and concurrence.

Formatted: Indent: Left: 0.25", No bullets or numbering

Formatted: List Paragraph,Indented Paragraph,Lettre d'introduction,List Paragraph1,Bullet List 1, Space Before: 6 pt, Don't keep with next

Commented [RK2]: Rather leave this to a verbal discussion.

Formatted: Indent: Left: 0.25"

Commented [RK3]: OFA finances all kinds of government activities, but the injection itself would be presumably done by the shareholding ministry, not the OFA – isn't that right? (Even if the mechanics are done through and by the OFA?)

Commented [JK4R3]: I'd agree but understand that during H1, there were some back and forth on this.

Commented [RK5]: I would be particularly concerned on the accounting – if this is in effect the flip side of financing a fiscal impact on consolidation of the IESO.

Commented [JK6R5]: Agreed.

purpose not discussed at the time the facility was provided (even if the facility does not explicitly restrict its use).

- In the Minister's Directive signed November 28, 2016, facilitates the lending agreement between the OFA and IESO until the end of 2019 and has the term restriction of 28 to 95 days, essentially providing short-term liquidity for the IESO.

3.1. IESO FOI Request

- The Independent Electricity System Operator (IESO) is processing a Freedom of Information request which includes requests for
  - A breakdown of generation costs by energy sources for the years 2007 to 2013, inclusively and 2015.
  - A breakdown of gas/oil generation costs for the years 2007-2015 between costs for energy purchased and cost of capacity.
- Staff have previously provided the following OEFC information to IESO which is used in the draft response to this request.
  - NUG cost information organized by fuel type and broken down into amounts recovered through the market and Global Adjustment.
  - Amounts paid under a Contingency Support Agreement between OEFC and OPG.
- None of the OEFC information that would be used in the response to the FOI request is commercially sensitive.
  - The NUG generation costs are aggregated by fuel type and combined with costs for other generators.
  - The Contingency Support Agreement payments are aggregated in an "other" category. These costs were also published in OPG's financial statements.

4.3. Alderville Insurance Claim

- Alderville Community Development Corporation (Alderville), a holder of a guarantee under the Aboriginal Loan Guarantee Program, has settled an insurance claim without the consent of the Province. Consent, which is required under the guarantee.
- The Project experienced a prolonged equipment failure from July 22, 2015 to December 5, 2015, with no electricity generation during this time (136 days).
- Alderville accepted a settlement of $597,099.74 less a $250K deductible or a net amount of $347,099.74, without seeking the consent of the Province.
- Internal estimates valued loss revenues from the business interruption to be closer to $400,000, which is not inconsistent with the amount on which the Borrower settled the claim.

- Staff, on learning of the settlement, ~~plan on~~ responding via email providing a gentle warning about the missed obligation under the guarantee.

~~5.~~4. ALGP: Coral Rapids

- Coral Rapids Power Corporation ("CRP"), wholly-owned by Taykwa Tagamou Nation ("TTN"), ~~is seeking~~has been provided a loan guarantee under the ALGP on April 18, as conditions precedent were fulfilled.
  - Th~~is~~e guaranteed loan ~~would~~ allows CRP to finance its investment in a partnership, which was formed to own and operate the 28 MW Peter Sutherland Sr. Generating Station, at a lower interest rate than the alternative (a loan from its partner).
  - The briefing package was sent at the end of March and sign off for execution of the loan guarantee was received April 4th.
  - MoF Legal ~~is h~~oldingheld Minister Sandals' signatures in escrow until the conditions precedent are satisfied.
  - Financial close ~~i~~was planned for April 18 so that the borrower c~~an~~ould meet its equity contribution deadline.

Formatted: Indent: Left: 0.25"

5. IESO FOI Request

- The Independent Electricity System Operator (IESO) is processing a Freedom of Information request which includes requests for
  - A breakdown of generation costs by energy sources for the years 2007 to 2013, inclusively and 2015.
  - A breakdown of gas/oil generation costs for the years 2007-2015 between costs for energy purchased and cost of capacity.
- Staff have previously provided the following OEFC information to IESO which is used in the draft response to this request.
  - NUG cost information organized by fuel type and broken down into amounts recovered through the market and Global Adjustment.
  - Amounts paid under a Contingency Support Agreement between OEFC and OPG.
- None of the OEFC information that would be used in the response to the FOI request is commercially sensitive.
  - The NUG generation costs are aggregated by fuel type and combined with costs for other generators.
  - The Contingency Support Agreement payments are aggregated in an "other" category. These costs were also published in OPG's financial statements.

OTHER ISSUES

6. FAA Section 28 Modernization

- An OFA/MOF/TBS working group has developed options for modernizing s.28 of the FAA.
- Proposed amendments to FAA s.28 have been drafted to:
  - (i) give the Minister of Finance or the President of Treasury Board the authority to prescribe in regulation public entities or classes of public entities that would be subject to s. 28; and
  - (ii) give the LGIC the authority to make regulations to define terms used in section 28 that are not already defined in the Act.

7. Metrolinx Fuel Hedging

- Metrolinx is planning to hedge its fuel costs by entering into financial derivatives contracts with Canada's six largest banks. In order to do so, Metrolinx must obtain Minister of Finance approval of its amended investments by-law and a new borrowing by-law as well as s. 28 approval.
- A formal request from the Minister of Transportation to the Minister of Finance has been made.

8. FSCO – Stelco Pension Issue

- As part of a transaction that will allow Stelco to come out of bankruptcy, the parent of Stelco, US Steel, has proposed a sale to Bedrock Industries. This sale limits Bedrock's exposure to the pension plan liabilities.
- The Superintendent of FSCO will temporarily be the nominal administrator of Stelco's 5 pension plans and will be responsible for the related administrative contracts. As the Superintendent is also the regulator, he will subcontract this responsibility in a sole source contract to an administrator.
- The assumption of these contracts by FSCO will require Treasury Board and Minister of Finance s.28 approval.

Bi-weekly meetings of CEFD/DMO/MO.

CEFD to set agenda and circulate in advance.

ANNOTATED AGENDA
MO UPDATE: March 07, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Trillium Trust:

Ministry of Finance is requesting a regulation be made under the Trillium Trust Act, 2014 to designate proceeds related to the Hydro One secondary offering in April 2016. The designated proceeds amount in the regulation does not include the shares purchased by OPG.

- The gains related to the shares purchased by OPG are not included at this time, as the gain is expected to be recorded in Public Accounts as deferred revenue in 2016-17.
- The submission is going forward to Treasury Board on March 21, 2017 and LRC on March 27, 2017. The regulation is targeted to be filed on March 31, 2017, so that the Trillium Trust balance in Public Accounts would reflect this amount.
- Work on regulations related to the PWU/SEP share sale and the shares purchased by OPG is on-going.

2. Trillium Trust drawdown:

TBS staff has communicated that given the level of spending expected for the GO RER in 2017/18 there may be overfunding between the federal contributions, green bonds, GGRA and Trillium Trust.

- Trillium Trust funding is the last to be called on, as overfunding would put federal contributions at risk and green bonds and GGRA are legal commitments.
- OFA staff will continue working with TBS as well as updating the drawdown profile as necessary.

3. Hydro One Brampton

- On February 28, 2017, the Province completed the sale of Hydro One Brampton to Alectra Utilities, a newly a newly merged local distribution company consisting of Enersource, Horizon Utilities, and PowerStream**.**

- OFA staff is working with OPCD to finalize transaction amounts to determine the final net revenue gains generated from the transaction to be dedicated to the Trillium Trust.

4. Global Adjustment Lawsuit Follow-ups

- There are several NUGs not involved in the lawsuit which have PPAs that contain similar terms and price provisions as those that were under consideration by the

courts. These NUGs entered into Standstill Agreements with OEFC (Standstill NUGs).
    - As OEFC's application for leave to appeal was unsuccessful, OEFC would also have to make retroactive payments to Standstill NUGs.
    - As all Standstill NUGs have either expired or been terminated early no additional go-forward payment adjustments would be required.

- OEFC has made retroactive payments to Standstill NUGs for 2016 through the normal rate adjustment process under the contracts.
    - OEFC is in the process of determining adjustments for the years prior to 2016.
    - OEFC will only be making retroactive payments to standstill NUGs for generation which occurred within the two year limitations period.

- As OEFC recovers the full cost of contracts through the Global Adjustment, including legal costs, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the IESO.

5. ALGP: Coral Rapids Conditional Offer Package

- Coral Rapids Power Corporation ("CRP"), wholly-owned by Taykwa Tagamou Nation ("TTN"), is seeking a loan guarantee under the ALGP. This loan would allow CRP to finance its investment in a partnership which was formed to own and operate the 28 MW Peter Sutherland Sr. Generating Station at a lower interest rate than the alternative (a loan from its partner).
- The conditional offer letter was approved and an OIC was obtained at the December 13, 2016 LRC meeting.
    - This application involves the interests of a Schedule 1 bank.

- Due diligence and negotiation of legal/loan documents are ongoing. Key documents are expected to be finalized soon, with a target of March 8. Closing is expected shortly thereafter, although the exact date is to be determined. Staff request an approval to meet the closing date and execute the final loan guarantee agreement. Staff are available for a briefing if requested.

6. OEFC Lending to IESO

- The OEFC provides IESO ~~has requested that the Ontario Electricity Financial Corporation (OEFC) provide up to five-year extensions and increases of its~~ two current ~~outstanding~~ credit agreements:
    (1) Loan Agreement, originally dated April 1, 1999; and
    (2) Revolving Line of Credit ("Revolving Credit") Agreement originally dated April 23, 2010.

- The IESO has requested that the OEFC provide up to ~~five~~four-year extensions [TBD] and increases to the credit agreements:
    - ~~—~~A loan principal amount of $135 million (increase from the current $90 million loan), which will meet IESO's forecast of funding needs for capital

Commented [JK1]: Updated to match the written request.

expenditures to… maintain and upgrade market system and applications and infrastructure.

- A revolving credit facility of up to $145 million (increase from the current $95 million credit limit), ~~that ensures that the~~to provide IESO ~~will have~~ flexibility to meet its changing funding needs of ~~…~~short-term operating and working capital needs over the term of the agreement and provides additional borrowing room if required.
- Maintaining the 50 basis point spread on both agreements, as the spread is a cost the OEFC incurs on any outstanding debt and pays annually to the Minister of Finance.

- The current Agreements are set to expire on April 30, 2017.
  - The OEFC would seek~~requires~~ Directives from the Minister of Finance to extend the loan and credit facility. The Directives ~~are~~would be required before April 10, 2017 so that the OEFC and IESO can proceed to finalize and execute the respective agreements.

~~Staff recommend providing a Loan agreement and a Revolving Credit agreement for the 3-year term as requested. Staff also recommend:~~

- A detailed briefing package is ~~in the works~~under development and will be provided shortly.

Commented [RK2]: And explicitly excluding the GA deferral financing

Commented [JK3R2]: True, excluding GA.

Commented [RK4]: Why does it say 3 here vs 5 above?

Commented [JK5R4]: We're recommending 3 yrs. In the request, it says up to 4 yrs but in staff level discussions, 5 yrs has come up, I believe.

Commented [RK6]: And includes an assessment on the ability to repay?

ANNOTATED AGENDA
MO UPDATE: March 07, 2017

OTHER ISSUES

~~6.~~7. FAA Section 28 Modernization

- An OFA/MOF/TBS working group has developed options for modernizing s.28 of the FAA. Options may not require legislative amendments via Spring Bill.

~~7.~~8. College Class Exemption

- Proposed regulation as well as terms and conditions for the draft Binding Policy Directive for Colleges has been drafted and is currently being reviewed by college sector reps.

- MAESD and OFA to meet next week to review the s.28 approval process including timing and information requirements with a view to further streamlining the process.

~~8.~~9. Metrolinx Fuel Hedging

- Metrolinx is planning to hedge its fuel costs by entering into financial derivatives contracts with Canada's six largest banks. In order to do so, Metrolinx must obtain Minister of Finance approval of its amended investments by-law and a new borrowing by-law as well as s. 28 approval.

- A formal request from the Minister of Transportation to the Minister of Finance is forthcoming.

ANNOTATED AGENDA
MO UPDATE: April 18, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Ontario Fair Hydro Plan – Equity Injection

Staff from CEFD, OFA capital markets, Ministry of Finance, and OPG continue to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The CEFD and EIGS staff are working to establish clarity and steps required on the Provincial approvals for the equity injection.

2. IESO Credit Facility – $975M for Market

- IESO raised the potential requirements for financing the Fair Hydro forecast variances.
  - The possibility was raised of the IESO relying on the existing $975M credit facility provided by the OFA to provide short term financing until the OPG SPV purchases the IESO regulatory asset.
  - One of the main uses of the $975M credit facility is to provide liquidity into the electricity market to support various initiatives including the Regulated Price Plan (RPP), the Rural or Remote Electricity Rate Protection (RRRP), the new Ontario Electricity Support Program (OESP), the various conservation programs and overall market liquidity.
  - The $975M facility was not intended to provide long-term financing.
- If IESO required longer-term financing, additional due diligence and considerations on term and rate, accounting treatment, and appropriate approvals would be required.
  - OEFC or OFA involvement (other than managing the Provincial borrowing plan, including for any capital contribution / equity injection into OPG) in providing short or longer-term financing would potentially require government policy approval and a revised Minister's Directive.
- In the Minister's Directive signed November 28, 2016, facilitates the lending agreement between the OFA and IESO until the end of 2019 and has the term restriction of 28 to 95 days, essentially providing short-term liquidity for the IESO.

3. Alderville Insurance Claim

- Alderville Community Development Corporation (Alderville), a holder of a guarantee under the Aboriginal Loan Guarantee Program, has settled an insurance claim without the consent of the Province. Consent is required under the guarantee.
- The Project experienced a prolonged equipment failure from July 22, 2015 to December 5, 2015, with no electricity generation during this time (136 days).

Commented [RK1]: We should have a very brief item on the expected OPG BP TB submission and concurrence.

Commented [GH2R1]: Updated.

Commented [RK3]: OFA finances all kinds of government activities, but the injection itself would be presumably done by the shareholding ministry, not the OFA – isn't that right? (Even if the mechanics are done through and by the OFA?)

Commented [JK4R3]: I'd agree but understand that during H1, there were some back and forth on this.

Commented [RK5]: I would be particularly concerned on the accounting – if this is in effect the flip side of financing a fiscal impact on consolidation of the IESO.

Commented [JK6R5]: Agreed.

- Alderville accepted a settlement of $597,099.74 less a $250K deductible or a net amount of $347,099.74, without seeking the consent of the Province.
- Internal estimates valued loss revenues from the business interruption to be closer to $400,000, which is not inconsistent with the amount on which the Borrower settled the claim.
- Staff, on learning of the settlement, responding via email providing a gentle warning about the missed obligation under the guarantee.

4. ALGP: Coral Rapids

- Coral Rapids Power Corporation ("CRP"), wholly-owned by Taykwa Tagamou Nation ("TTN"), has been provided a loan guarantee under the ALGP on April 18, as conditions precedent were fulfilled.
    - The guaranteed loan allows CRP to finance its investment in a partnership, which was formed to own and operate the 28 MW Peter Sutherland Sr. Generating Station, at a lower interest rate than the alternative (a loan from its partner).
    - The briefing package was sent at the end of March and sign off for execution of the loan guarantee was received April 4th.
    - MoF Legal hheld Minister Sandals' signatures in escrow until the conditions precedent are satisfied.
    - Financial close was planned for April 18 so that the borrower could meet its equity contribution deadline.

5. IESO FOI Request

- The Independent Electricity System Operator (IESO) is processing a Freedom of Information request which includes requests for
    - A breakdown of generation costs by energy sources for the years 2007 to 2013, inclusively and 2015.
    - A breakdown of gas/oil generation costs for the years 2007-2015 between costs for energy purchased and cost of capacity.
- Staff have previously provided the following OEFC information to IESO which is used in the draft response to this request.
    - NUG cost information organized by fuel type and broken down into amounts recovered through the market and Global Adjustment.
    - Amounts paid under a Contingency Support Agreement between OEFC and OPG.
- None of the OEFC information that would be used in the response to the FOI request is commercially sensitive.

- The NUG generation costs are aggregated by fuel type and combined with costs for other generators.
- The Contingency Support Agreement payments are aggregated in an "other" category. These costs were also published in OPG's financial statements.

6. OPG 2017-19 Business Plan

- OPG has submitted its 2017-19 Business Plan to the Ministry of Energy for concurrence, and the Plan will be submitted to the Treasury Board for approval in May.
- CEFD is currently reviewing the TB submission materials and will work with TBS on the assessment note.

OTHER ISSUES

~~6.~~7. FAA Section 28 Modernization

- An OFA/MOF/TBS working group has developed options for modernizing s.28 of the FAA.
- Proposed amendments to FAA s.28 have been drafted to:
  - (i) give the Minister of Finance or the President of Treasury Board the authority to prescribe in regulation public entities or classes of public entities that would be subject to s. 28; and
  - (ii) give the LGIC the authority to make regulations to define terms used in section 28 that are not already defined in the Act.

~~7.~~8. Metrolinx Fuel Hedging

- Metrolinx is planning to hedge its fuel costs by entering into financial derivatives contracts with Canada's six largest banks. In order to do so, Metrolinx must obtain Minister of Finance approval of its amended investments by-law and a new borrowing by-law as well as s. 28 approval.
- A formal request from the Minister of Transportation to the Minister of Finance has been made.

~~8.~~9. FSCO – Stelco Pension Issue

- As part of a transaction that will allow Stelco to come out of bankruptcy, the parent of Stelco, US Steel, has proposed a sale to Bedrock Industries. This sale limits Bedrock's exposure to the pension plan liabilities.
- The Superintendent of FSCO will temporarily be the nominal administrator of Stelco's 5 pension plans and will be responsible for the related administrative

contracts. As the Superintendent is also the regulator, he will subcontract this responsibility in a sole source contract to an administrator.

- The assumption of these contracts by FSCO will require Treasury Board and Minister of Finance s.28 approval.

I'm looking at it now. I think we will. I want to meet with Adam/Shajee early tomorrow to clarify a few things.

Could you get a sense from Shajee and Adam on the equity injection drafting? Mainly hoping to get a sense of if we have enough materials for a boardroom chat with SIFB tomorrow.

FYI, I might go visit the legal huddle at Blake tomorrow between 10am to long enough to get a free lunch. :)

Attachments: CBN - Electricity Price Mitigation.pdf

Pages 3 and 4 of the pink note from the March 1 Cabinet submission (attached) have the following definitions. (I added material in bold for the class A definition to note the proposed lowering of the threshold to 500 kW.)

Regulated Price Plan (RPP) – Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.

Class A Consumer – Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A was lowered to 1MW for all consumer types. **[The March 1, 2017, Cabinet submission from Energy proposed to expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts. The expansion would be targeted to manufacturers.]**

Non-RPP Class B Consumer – Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a volumetric rate applied to all electricity consumption. Class B consumers include those that choose not to become Class A.

CABINET BRIEFING NOTE

Energy

Electricity Price Mitigation

Cabinet (info) Feb 15, 2017	TB/MBC Mar 1, 2017	Cabinet Mar 1, 2017	Announcement Mar 2017	LRC / Cabinet Spring 2017	Introduction Spring 2017	Effective Date July 1, 2017

This government's commitment	"We're going to come out with what we can do [on hydro bills] before the budget," – Premier Wynne, Jan 18, 2017 "And that's why … I've committed to finding more ways to lower rates, to reduce the burden on consumers, and we're going to be working on that in the weeks and the months ahead. And, in fact, that work is well underway. I'm listening to the people of the province. I'm listening to the people who run our system. And I am going to make changes because it's the right thing to do." – Premier Wynne, speech at Economic Club of Canada, Jan 19, 2017

SUMMARY OF PROPOSAL

Note: this note is based on a draft submission

The Ministry of Energy is seeking approval to implement electricity price mitigation initiatives that would provide additional rate relief to Ontario electricity ratepayers. While the actual benefits would be variable based on consumer class and consumption, the proposal is projected to provide about 25% in rate relief (including the 8% announced in 2016) for a typical residential consumer (i.e., based on a Toronto Hydro customer consuming 750kWh per month in 2017).

The proposal aims to smooth the impacts of the Global Adjustment (GA), help the most vulnerable Ontarians through enhancements to electricity support programs through tax-base funding and work to bend the future cost curve of electricity. Initiatives for approval include:

1. Subject to legal, accounting and financial risk assessments, financing a portion of the GA costs in order to reduce costs for ratepayers in the near term and spread the impacts of the GA across ratepayers over a longer period of time, specifically by:

- subsidizing rates in the short term, i.e. by reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month
- bill increases will be kept in line with the Consumer Price Index (CPI) until the end of 2021
- from 2022 onwards, bills will increase at a rate that ensures recovery of the accumulated debt, interest costs and administrative costs by 2048 without exceeding around 10% of total electricity costs.

2. Subject to legal, accounting and financial risk assessment, expanding the powers of Ontario Power Generation (OPG), the Ontario Energy Board (OEB), and the Independent Electricity System Operator (IESO), and using other mechanisms, including putting in place appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the deferred GA costs.

3. Lowering the Industrial Conservation Initiative (ICI) threshold to provide additional rate mitigation targeted at specific Class B electricity consumers groups (e.g. manufacturing), in particular manufacturing companies, with additional flexibility to encourage take-up, and explore additional rate mitigation residential tenants that are not sub-metered and report back to Cabinet and TB/MBC with options in winter 2017.
4. Enhancing electricity support and conservation programs and shifting the costs of those programs from rate payer funded to government funded:
   - Broadening the Rural or Remote Electricity Rate Protection (RRRP), including harmonizing distribution cost for customers with the highest distribution rates;
   - Expanding the Ontario Electricity Support Program (OESP);
   - Establishing a new one-time Affordability Fund in 2016/17; and
   - Eliminating the delivery charge for First Nations customers on reserve.
5. Ongoing activities to bend the future cost curve of electricity:
   - Ontario Energy Board (OEB) – Identify opportunities for OEB red-tape reduction and future LDC efficiencies and rates.
   - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.
   - Explore additional cost savings to future electricity rates as part of the 2017 Long-Term Energy Plan to help offset the impact of GA recoveries.

The proposal will require a number of legislative, regulatory and policy changes, while working to maintain existing public policy objectives such as: maintaining a reliable electricity system, Ontario's commitment to reducing the impacts of climate change and commitment to achieve greenhouse gas (GHG) reduction targets.

The GA refinancing proposal includes policy approval to amend the legislated authority of OPG and IESO to enable appropriate cost recovery and settlement mechanisms, and of the OEB to ensure appropriate regulatory oversight.

In order to avoid the cost of GA refinancing impacting the province's fiscal plan, the proposed mechanism to partially defer the GA costs must meet legal, accounting, and financing requirements. This analysis will not be completed until the proposed legislation is finalized. If these requirements cannot be met, the cost of the GA refinancing would come onto the province's fiscal plan, creating a fiscal exposure of about $2.5 billion in 2017/18 and increasing in subsequent years (see table on p. 4). If GA refinancing is included in an announcement prior to confirmation of these requirements, the government would not be able to comment on the impact on the fiscal plan. Rather, the government could explain its intention to draft legislation to ensure legal, accounting and financial requirements are met so not to have a fiscal impact.

Terms you need to know

- **Global Adjustment (GA) –** Amount that accounts for differences between the market price of electricity and rates paid to regulated and contracted generators and for conservation programs. The GA is collected from all electricity ratepayers in Ontario.
- **Local Distribution Companies (LDCs) –** Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Delivery charge –** The costs of getting electricity from generating stations to homes and businesses. Appears as one line on electricity bills, includes three components:
  - Transmission: The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - Distribution: The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line. This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - Line Loss: The costs to recover electricity that is lost as heat when it is delivered over a power line.
- **Regulated Price Plan (RPP) –** Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Customer classification for Hydro One –** Customer service types are determined by the kind of electricity service as well as by density – how many customers there

are in the area and the number of customers per kilometre of line. The more customers there are in the area, the lower the cost to serve. R1 customers are considered 'medium density' customers and R2 are considered 'low density customers'.

- **Ontario Power Generation (OPG) –** A business corporation owned by the province that owns and operates generation assets, including nuclear and hydro, and generates almost half of Ontario's electricity.
- **Ontario Energy Board (OEB) –** A Crown Agency that independently regulates Ontario's electricity and natural gas sectors in the public interest. Implements an open and transparent process to allow for stakeholders to comment on various items.
- **Independent Electricity System Operator (IESO) –** An independent corporation and agency of the Ministry of Energy that operates the electricity market in Ontario. Balances the supply of and demand for electricity in Ontario and then directs its flow across the province's transmission lines, including interties with other jurisdictions.
- **Class A Consumer –** Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A was lowered to 1MW for all consumer types.
- **Non-RPP Class B Consumer –** Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a volumetric rate applied to all electricity consumption. Class B consumers include those that choose not to become Class A.

What is the expected cost to government[1]?

The total cost of the proposal is $2.7B in 2017/18, $665M funded through the fiscal plan and $2.5B to be funded through the electricity rate base subject to confirmation legal, accounting and financial requirements.

Cost Impact ($M)	2016-17	2017-18	2018-19	2019-20	2020-21
Moving Social Programs to Government-Funded (details provided in the chart below)	200	665	753	829	892
GA Financing[2]		2,534	2,668	2,942	3,420
Cumulative total - Bills Lowered by 25%, RPP-Eligible Only*		3,199	3,421	3,771	4,312

For the social programs, the current estimate for the proposal is $200M in 2016/17 for the Affordability Fund (a one-time cost). The current estimate for the combined impact of the non-Global Adjustment initiatives that would begin in 2017/18 is expected to be $738M in

[1] Assumes the required legal, accounting and financial requirements can be met to avoid a fiscal cost to the government.
[2] Assumes the necessary legal, accounting and financial requirements are not met.

2017/18, growing to $828M in 2018/19 and rising. This represents an additional pressure on the plan. These estimates are based on variable inputs such as future energy consumption of various consumer groups.

Fiscacl Impact ($M)	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements*	-	459	472	484	497
Ontario Electricity Support Program, including the 50% Enhancement & New Matrix Categories	-	186	261	325	375
On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate base.

The impact of moving program funding from rate payer funded to government funded would result in approximately $2 savings/month for a typical residential consumer.

If the proposed legal and accounting treatment of the GA refinancing proposal is not implemented, there would be an immediate, negative impact on the province's fiscal plan. In this case, the ministry is directed to report back with options for achieving a comparable level of electricity rate mitigation in the most cost effective way in order to minimize the impact on the province's fiscal plan. The table below shows the projected fiscal impact based on bills being lowered, in combination with the existing 8% Ontario Rebate for Electricity Consumers and shifting existing OESP and RRRP costs to the government, by an estimated 25% for a typical, average household consuming 750 kWh per month.

The exact impact of refinancing the GA is unknown at this time. The intent is to establish a structure in which the GA cost recovery deferral is recorded as a regulatory asset by the IESO (which is sold to the OPG Trust), supported at its foundation by the fact that the legislation to defer the GA cost recovery is not a reduction in the GA, but rather a deferral of the GA to be collected at a future time. OPG Trust would ultimately take on the risk and responsibility of financing the deferral through debt financed from OPG and external sources. OPG's debt would be funded through a combination of an equity investment by the Province and external financing. Such a structure would result in increased gross debt of the Province (to finance the equity injection in OPG), increased interest on debt related to that Provincial debt, increased net investment in OPG (to offset the Provincial borrowing for no net debt impact), and increased earnings of OPG. Until the structure has been fully developed, which includes development of the legislation and assessing its fiscal impact which is dependent on the accounting analyses, it cannot be confirmed that the amounts deferred would not increase the government's annual deficit (or reduce its surplus) and/or

net debt. It should be noted that one of the requirements of the structure is that the government would backstop the financing if a future government were to ever revoke or change the legislation. In other words, the OPG and its debt holders would have their capital guaranteed and paid for directly by the Province if such a situation were to happen. The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time and could increase the risk to the fiscal plan. However, it is likely that external borrowing by the OPG Trust would be at a higher interest cost than Provincial borrowing costs, which would affect the carrying costs that would need to be recovered from ratepayers in the future. Based on the current stage of analysis of the accounting, legal and financing risks, there is a high risk that the GA financing will have a fiscal impact on the Province.

There is inherent risk in the financial estimates because the calculations are highly dependent on forecasts of the total consumption and bills of customers eligible for the RPP, the cost of borrowing, electricity demand and electricity market conditions and accounting assumptions. In addition, under the proposal, electricity prices would increase around 10% above forecast residential monthly bills from 2028 to 2047.The public may expect that the government is committed to reducing or holding constant the absolute cost of electricity for consumers in the longer term. Under the proposal, the government would not have the ability to direct further changes to the rate of repayment for GA refinancing, which would limit the government's ability to address electricity rate concerns in the future.

How will the changes be communicated?

On March 2, 2017, the Premier is scheduled make a high profile announcement of additional relief to reduce electricity costs for Ontarians. To coincide with this event, there will be a news release with backgrounders, a technical briefing of the media, a public education campaign to raise awareness of the rebates and initiatives in place to reduce electricity bills, and an Ontario website that includes all the programs and initiatives that the government is undertaking to reduce electricity costs.

Given the continued high risk that the GA financing may have a fiscal impact, the communication will need to be clear that the government's intent is to draft legislation to ensure legal, accounting and financial requirements are met so not to have a fiscal impact.

CABINET OFFICE ANALYSIS

The proposal aims to provide further rate relief to Ontario electricity ratepayers. The proposal builds on earlier electricity rate mitigation initiatives, including the ending of the Debt Retirement Charge (DRC) for residential consumers, the 8% rebate on all RPP-eligible electricity bills, the enhancement of RRRP and the expansion of ICI for industrial consumers (all announced in September 2016). The proposal is projected to provide about 25% in rate relief in aggregate (including the 8% announced in 2016) for a typical residential consumer (i.e., based on a Toronto Hydro customer consuming 750kWh per month in 2017).

Since 2010, electricity prices have risen considerably in Ontario, particularly for families and small businesses. Ontario's electricity prices are among the highest of any Canadian jurisdictions, but are comparable to many neighbouring US jurisdictions. Primary contributors to the price increase in Ontario are new investments in generation, transmission and distribution. Addressing the price of electricity is among the highest priorities for Ontarians. Prices are forecast to continue to increase as additional renewable energy generation is brought online and nuclear units are refurbished. Ontario currently provides rate mitigation to various electricity consumers through a combination of tax-based and rate-based programs. Rate-based programs are funded by shifting costs from one electricity consumer group to another. However, smaller manufacturing firms in Class B do not benefit from the current ICI program or financial relief to Households.

Electricity bills contain several line items. The electricity consumption line for consumers on the Regulated Price Plan breaks down usage into the different periods by price (off peak, peak, mid peak). The delivery line covers the cost of getting electricity from generating stations to homes and businesses. There are three components to the delivery line: transmission (i.e., moving electricity from generating stations to the distribution system), distribution (i.e., moving electricity from the transmission system to homes and businesses) and line loss (i.e., costs to recover electricity that is lost as heat when it is delivered over a power line). The distribution charge is currently the largest component (60% to 80%) and is recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over the next 5 years (8 years for Hydro One). The efficiency and performance of individual LDCs also impact the delivery costs for consumers.

Ontario produces and publishes a Long-Term Energy Plan (LTEP) every three to four years, with the next LTEP scheduled for release in the spring of 2017. LTEP principles that will guide decision-making are affordability, reliability, clean energy, community and Indigenous engagement and conservation and demand management. Through extensive consultation with the public, stakeholders and Indigenous partners through the fall of 2016, the Ministry has identified key priorities, and this submission combined with new policy or program announcements in the LTEP will provide the comprehensive future planning perspective for Ontario's energy sector.

Under the proposal, all electricity consumers would benefit from one or more of the proposed electricity price mitigation initiatives by July 1, 2017. Additional supports for Class B consumers would be provided under an expanded ICI program and consideration will be given to providing support to residential tenants that currently don't benefit directly from rate mitigation measures.

1. Refinancing Global Adjustment in order to defer ratepayer costs

The GA accounts for the difference between generation costs (contracted and rate-regulated) and the wholesale market price, helping to recover fixed costs, including capital costs, of putting in place and operating Ontario's generation fleet, fixed generation costs, such as nuclear contracts, as well as the cost of conservation programs. The GA is

instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available. The GA has risen over the past decade as the province has invested in greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, and wholesale market prices have been low due to low demand and natural gas prices.

Many of the contracted generation assets are expected to have useful lives that extend beyond the term of their current financial contracts (typically 20 years). Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives can provide benefits to the electricity system over many years.

The proposal defers some of the current costs to ratepayers by recognizing the longer term benefit of these assets to the electricity system (similar to extending and re-financing a mortgage). The proposal is based on the assumption that some generation assets are expected to continue to provide benefit to future ratepayers beyond the term of current contracts, and that future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets in the future.

According to a legal opinion by former Supreme Court Justice Binnie, the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations could jeopardize the nature of this being a regulatory charge and it being deemed a tax.

The result of the 25% reduction proposal is that costs for typical residential consumers would be lowered by $26/month with total bill increases kept in line with inflation for approximately 4 years, by borrowing money. Costs would increase to above the true cost of GA until the borrowed money, interest accumulated on the debt and the cost of administering the program is repaid fully in 2048 (see chart on page 19).

The projected residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month. Actual ratepayer savings would vary due to differences in consumption patterns and LDCs.

Accounting, financial and legal analyses are ongoing and will inform an assessment of the feasibility of this proposal. If these analyses do not support the use of the non-fiscal model described in this submission, and the government proceeds to make the announcement later this week, the government is at risk that the proposed mechanism would impact the provincial deficit by up to $2.5 billion a year. Should this be the case, the ministry will report back to Cabinet with options for achieving a comparable level of electricity rate mitigation in the most cost effective way in order to minimize the impact on the province's fiscal plan.

Those ineligible to receive the GA rate relief can benefit from one or more of the other initiatives under this proposal (e.g., OESP, RRRP proposals).

2. Mechanism to Defer GA costs

The intent is to establish a structure in which the GA deferral is recorded as a regulatory asset by the IESO, supported at its foundation by the fact that the legislation to defer the GA is not a reduction in the GA, but rather a deferral of the GA to be collected at a future time. OPG would ultimately take on the risk and responsibility of financing the deferral by purchasing monthly regulatory assets from the IESO. The OPG would finance these purchases through a combination of an equity investment by the Province and external private sector financing. Such a structure would result in increased gross debt of the

Province (to finance the equity injection in OPG), increased interest on debt related to that external debt, increased net investment in OPG, and increased earnings of OPG. If structured properly, the underlying regulatory asset would offset the additional debt to not impact the province's net debt.

Until the structure has been fully developed, which includes development of the legislation and assessing its impact on the accounting analyses, it cannot be confirmed that the amounts deferred for ratepayers would not increase the government's annual deficit. It should be noted that one of the requirements of the structure is that the legislation be written to avoid the possibility of being revoked with wording to ensure OPG and its debt holders would have their capital guaranteed and paid for directly by the Province if such a situation were to happen. The potential cost to government associated with providing this type of guarantee and the cost of borrowing from private lenders is unknown at this time. Based on the current stage of analysis of the accounting, legal and financing risks, there is a high risk that the GA financing will have a fiscal impact on the Province.

OPG is currently exploring creating a Special Purpose Vehicle (SPV) or Trust ("OPG Trust") to finance the GA. The SPV/Trust will be consolidated by OPG, giving OPG the appropriate powers to impact its exposure to variability of the income in the trust. The variability will likely largely result from the financing of the Trust, and therefore OPG will have the ability to direct the financing of the Trust and both benefit from its financing strategy and be at risk as a result of it.

Assuming that all legal, accounting and financial requirements can be met, the proposed structure is expected to result in: (1) increase in provincial gross debt offset by an equivalent in regulatory assets resulting in no change in net debt, and (2) an increase in interest on debt paid by the province offset by higher earnings from OPG resulting in no impact on annual deficit of the province.

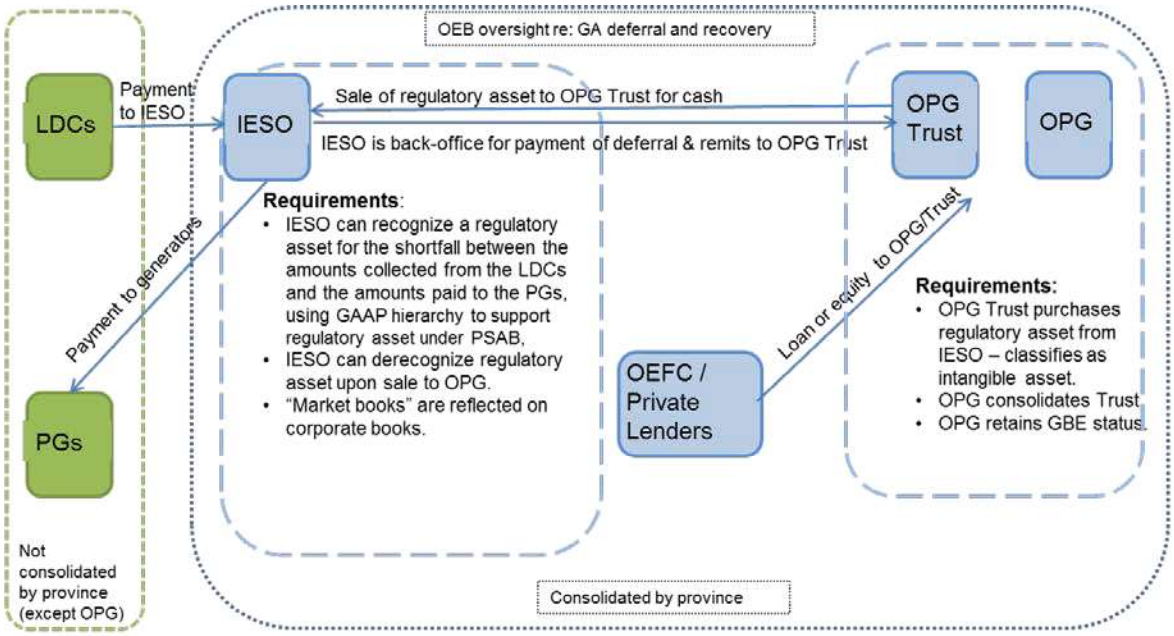
The analysis of the structure with respect to accounting, legal and financial risk is not complete; several key requirements remain outstanding:

- Complexity of the structure and length of deferral/recovery increase risk and decrease transparency
- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
    - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
    - IESO can derecognize regulatory asset upon sale to OPG; and
    - "Market books" are reflected on corporate books.
    - In addition to these requirements, it will also be necessary to establish who will act as the regulator as in order to have a regulatory asset, a regulator is required. The ministry is working with the OEB about their potential regulatory role.

- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.

If a mechanism can be structured that satisfies these requirements, there remain some fundamental risks that the province would need to accept:

- Government would have no ability to control electricity prices resulting from these changes;
- Government would not know the price of private borrowing that would be required for the OPG Trust to work; and
- Private lenders would likely require a guarantee, break fee or other backstop because government cannot commit to the legislation being irrevocable.



Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

The ministry continues to work with TBS, MOF, the IESO, the OPG and their external auditors for IESO and OPG on an appropriate structure and will report back to Cabinet with the proposed structure for approval in winter 2017.

3. Support for Class B electricity consumers and Residential Tenants

Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers, large commercial buildings and broader public sector facilities. There are several energy efficiency programs for Class B consumers; however, these consumers are too large for the RPP and so do not qualify for the 8% rebate or too small for other support programs such as the Industrial Conservation Initiative (ICI).

The Ministry of Energy is proposing to expand the eligibility threshold for ICI that will provide Class B consumers the opportunity for electricity costs savings. The expanded ICI would include:

- Extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts;
- Targeting eligibility to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing); and
- Providing small manufacturers with greater flexibility in meeting ICI requirements.

Under the expanded ICI, larger Class B consumers whose electricity demand is currently too low to qualify for ICI, would now be eligible for the expanded ICI if they wish to participate. In addition, the Ministry will assist Class B participation in ICI through a targeted outreach campaign.

Currently, residential tenants generally either pay for their own electricity use through suite meters (i.e., sub-meters or direct arrangements with hydro providers) or pay for electricity indirectly as a service included in their rent. Tenants who pay for their own electricity will receive electricity costs savings directly through their bills. Low-income tenants who pay their own electricity bills can access existing energy support programs, such as the Ontario Electricity Support Program, administered by the Ontario Energy Board. The Ministry of Housing has identified that it may have limited tools to address rate mitigation for all tenants who are not suite metered. The ministry will explore options for providing energy rebates directly to tenants who are not sub-metered and whose rent includes electricity.

4. Enhancing electricity support and conservation programs and shifting cost from rate payer funded to government funded:

RRRP Enhancement (Delivery Charge Relief):

Currently, RRRP is a $241.9M program paid for by the ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial. RRRP helps to offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province, including Hydro One R2 customers. The delivery charge includes a distribution cost, which can vary across LDCs, and distribution costs are highest for Hydro One R2 and R1 (medium density) customers.

There are also some LDCs with relatively high distribution costs that, when coupled with high consumption patterns, can result in very high bills for consumers (Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma).

In 2016 the OEB made a ruling that all LDCs need to move to fixed distribution charges. The OEB found that fixed distribution charges would establish a fairer way to recover the costs of providing distribution service, and provides greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning. The ministry proposes to provide support on the delivery portion to those most in-need by:

- Moving the RRRP from rate payer funded to a government funded program; and
- Harmonizing the fixed distribution rates to the lowest distribution cost of the LDCs mentioned above at $38/month (which is the forecast rate for Northern Ontario Wires). If the costs of another LDC moved above these in the future, a regulation change would be required to for that LDC to receive RRRP.
- These enhancements are expected to benefit approximately 800,000 customers in Ontario.

For this portion of the proposal, targeted RRRP consumers would see additional savings on their monthly bill that would vary based on their consumption level and cost to fiscal plan would be $459M in 2017/18, $243M of which is a transfer of existing programs to the tax base.

Ontario Electricity Support Program (OESP) Expansion:

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by providing a rebate directly on electricity bills. The program was launched in January 2016 and has had roughly 30% enrolment. There are two benefit scales; the basic program credits by income and household size (credits range from $30/month to $50/month); the enhanced benefit credits for Indigenous, electric heat consumers and certain medical devices (credit ranges from $45/month to $75/month).

The ministry is proposing to:

- Move the OESP from rate payer funded to government funded; and
- Increase the existing benefit scales by 50% and provide additional credits to more households.

For this portion of the proposal, the basic OESP benefit scale would increase from $30-$50 to $45-$75 a month and the enhanced OESP benefit scale would increase from $45-$75 to $68-$113 a month for eligible consumers and the cost to fiscal plan would be $186M in 2017/18.

New Affordability Fund

The existing Home Assistance Program provides eligible low-income customers with energy efficiency upgrades (such as new energy efficient appliances, energy-saving light bulbs (LEDs), power bars, and other energy efficiency measures) and education, at no cost, to help improve the energy efficiency and comfort of their homes. Program eligibility

is aligned with other low-income support programs such as the OESP and the program is delivered by LDCs.

The low income household definition is derived from Statistics Canada's income measures. The most commonly used measure is the after tax Low Income Measure (LIM), which takes into account household size. Some electricity customers who struggle to pay their electricity bills do not meet the definition of a low-income household and therefore are not eligible for the Home Assistance Program.

The ministry is proposing to:

- Establish an Affordability Fund in 2016/17 that would help struggling customers who do not qualify for low income conservation programs and cannot undertake energy efficiency measures without financial assistance. The Fund would be paid for by the government with a one-year fiscal impact of $200M in 2016/17 and be administered by an independent trust.
- Over time the Fund could help targeted customers, based on standardized eligibility criteria get back on track with their bills and also avoid disconnection costs by assisting them to lower their bills through energy conservation.

Measures available in the Home Assistance Program could include:

- Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating);
- Programmable thermostats, weather stripping, insulation (in homes with electric heating); and
- Cold climate air source heat pumps would also be an eligible measure under the Affordability Fund. Heat pumps can range in cost from $7,000 to $13,000.

The government has created a new climate change agency as committed through the Climate Change Action Plan, which will serve as a one-window for the delivery of climate change-related programs (e.g., conservation programs), including those delivered by LDCs. ENERGY and MOECC will work together to avoid consumer confusion with respect to the support this Fund will provide alongside the newly established Climate Change agency.

<u>On-reserve First Nations Delivery Credit</u>

First Nation and Political-Territorial Organization leaders have advocated for the need for electricity rate relief for on-reserve customers and the review of delivery charges associated with transmission and distribution within the context of historical grievances. In this instance, historic grievances relate to lands affected by energy developments (e.g. transmission infrastructure built on reserve lands where the First Nation may not have been consulted, or in some cases transmission infrastructure may cut reserve lands in half, thereby limiting the use of the land base).

A Grievance Table process was established at the request of the Chiefs of Ontario as a part of the process of broadening the ownership of Hydro One. The cost of electricity and delivery charges were identified as the main priority at this table. At the request of the Minister of Energy, the OEB worked with the Chiefs of Ontario to develop options to address these issues. The ministry is proposing to implement the recommendations of the OEB's report.

The ministry is proposing to:

- Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.
- Automatically qualify on-reserve First Nations residential customers (~21,500 customers)
- Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers in 2017.

This proposal would be funded by the government ($20M annually) and provide on-reserve First Nation customers an average monthly benefit of $85.

5. Ongoing activities to bend the future cost curve of electricity:

<u>OEB – opportunities for OEB red-tape reduction and future LDC efficiencies</u>

The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates. The OEB has been working to move the distribution sector towards a performance/outcomes-based regulatory framework.

Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities. In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities over the first ten years after consolidation.

Opportunities:

- ENERGY could ask the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- The OEB could be instructed to review business cases behind its own regulatory requirements to reduce "red tape" and eliminate costs that LDCs indicate are creating pressures on operating expenses.

This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the Ontario Energy Board Act, 1998, and/or the 2017 Mandate Letter and other agency business planning processes.

IESO – Modernize Ontario's electricity market through electricity Market Renewal initiatives

Current IESO Market Renewal initiatives include:

- Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
- Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.

Changes related to IESO's Market Renewal initiatives, reflected in the wholesale electricity price and uplifts, are estimated to save at least $200 million per year, starting in 2021.

Expected Impacts of the Proposal on Electricity bills:

The projected impact of this proposal to an average residential customer bill in July 2017 is up to a 25% decrease, followed by an increase in price over time. This includes the 8% rebate that came into effect on January 1, 2017.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**158**	**164**	**167**	**170**	**181**	**178**
Total Bill (excludes HST)	140	145	148	150	160	158
Impact of GA Financing		-26	-26	-26	-32	-28
Impact of Tax-Basing Social Programs		-2	-2	-2	-3	-3
Subtotal		117	120	122	125	127
8% rebate		-9	-10	-10	-10	-10
HST		15	16	16	16	17
Revised Bill (includes HST)	**158**	**123**	**126**	**128**	**131**	**133**
Year-over-Year Change		-22%	2%	2%	2%	2%
Change from Forecast		**-25%**	**-25%**	**-25%**	**-28%**	**-25%**

Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%

Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: *Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to*

existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

Stakeholder Considerations:

General public (including residential and small businesses) – Likely support a proposal that is projected to provide up to 25% in rate relief (including the 8% announced in 2016) for a typical residential consumer to, but likely to question the longer term implications. Ability of the public to understand current and recent changes will heavily depend on government communications.

Large Industrial and Commercial Consumers – Will continue to be concerned with the impact of cap and trade on electricity prices and the commitment in the Climate Change Action Plan to use GGRA funds to "keep electricity rate affordable".

The impact of cap and trade has been added to electricity bills as of January 2017. Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness. Although Class A electricity consumers have access to ICI, they are also concerned about the impact of cap and trade on their electricity costs. They are expecting that GGRA funds will be used to mitigate their costs. There is an expectation government is going to take specific action to mitigate their increases due to Cap & Trade, and given the initiatives proposed in this submission, there is no plan to provide further relief through the Greenhouse Gas Reduction Account. **Note:** Funding electricity support programs through the tax-base rather than the rate base will provide some saving to both Class A and B consumers.

Tenants – Likely to support any future price mitigation measures that directly benefit them; likely to react negatively if no mitigation measures target them.

Northern communities – Likely to support the targeted RRRP delivery relief.

Indigenous communities – First Nation members who live on reserves are likely to support the proposal because of the targeted delivery relief. Other Indigenous communities (i.e., Metis, non-status, First Nations without land bases) are likely to react negatively at being excluded from the delivery charge relief.

eNGOs – Likely to support any targeted conservation efforts, may react negatively towards any price relief that is not directly tied to energy conservation.

LDCs – Have expressed the need for an additional tool to provide assistance to their customers who are having difficulty with their electricity bills.

Delivery:

The initiatives in this proposal would be announced in March 2017, with price mitigation measures beginning to take effect July 1, 2017. The 2017 LTEP will be released to the public in May 2017 and would reinforce/integrate with this proposal.

1. Refinancing Global Adjustment assets in order to defer ratepayer costs / Mechanism to defer GA costs

The ministry will report back to Cabinet and TB/MBC in March 2017 on the recommended implementation approach and mechanism for refinancing Global Adjustment assets in order to defer ratepayer costs and for Class B supports.

This initiative is expected to take three to six months to implement following the introduction of enabling legislation.

2. Enhancing Social and Conservation Programs

RRRP Enhancement

New legislation and regulations would be required to establish this program. OEB estimates that the implementation would take at least six months after finalizing regulations. A mechanism will need to be created to ensure that all parties are aligned in the yearly forecasting and costing of the program.

OESP Enhancements

New OESP program details would require TB/MBC approval.

Changes to legislation/regulation will be required to establish and define the parameters for the proposed changes. The financial flow-through mechanism would likely be modeled after processes used for the OREC (8% rebate).

The proposed changes will take time to implement as they would require changes to the central system and the LDCs' billing systems. The OEB and their central service provider will need to work with LDCs, MOF, and the CRA on the proposed changes to this program (delivery mechanism, funding source, application system, eligibility).

New Affordability Fund

This is a new program that would require TB/MBC approval.

ENERGY proposes to work with Hydro One to set up an independent Trust to serve as the Fund Administrator. The Fund Administrator would manage the flow of funds to LDCs based on principles set by the province in consultation with other LDCs and key stakeholders. The Fund Administrator will also be responsible for establishing processes, administration, and criteria for funding applications, thereby ensuring the program would be managed on a consistent basis across the province.

LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers in their service territories that meet the targeted eligibility criteria.

LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers. Individual LDCs would then be best positioned to identify and target their customers who are most in need.

On-Reserve First Nations Delivery Credit

Legislation and regulations would be required to implement this program. The OEB would need to work with the LDCs to identify the on-reserve consumers. A communications plan could include public release of the OEB report and a commitment to working with the LDCs on implementation details.

The rebate would appear on customer's electricity bills as a reduction in their delivery line.

There is a risk that either non-status Indigenous communities without reserves or Metis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a section 15 challenge if it serves or advances the ameliorative goal.

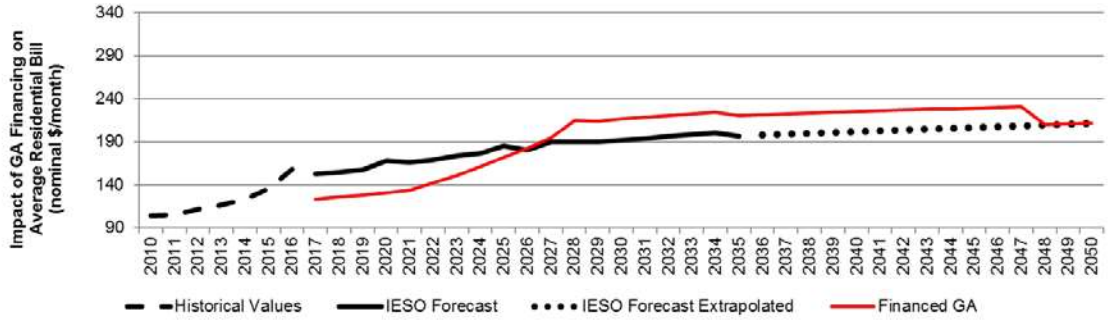
5. Ongoing Efforts to bend the cost curve of electricity

These initiatives could be directed through the Minister's letter, the LTEP Implementation Directive, s. 35 of the Ontario Energy Board Act, 1998, and/or the 2017 Mandate Letter and other agency business planning processes.

Risks and Considerations:

Future Impacts to Electricity Rates

Borrowing money to defer GA costs for ratepayers would lower costs in the short term but result in substantial debt and higher electricity prices in the future. Based on this portion of the proposal, electricity prices would increase to about 10% above the actual cost of electricity over the recovery period (peaking at 13%). The proposal may create the expectation that the government is committed to reducing or holding constant the absolute cost of electricity for consumers. Under the proposal, the government would not have the ability to control this portion of electricity rates in the future.



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at a maximum of 13% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

The government may be criticized for creating a new debt structure which could be compared to the previous debt retirement charge (DRC). The previous debt retirement charge was removed from residential bills in January 2016 and is scheduled to be removed for remaining customers in April 2018.

Future repayment cost estimates are based on a static interest rate of 5%, and forecast electricity market conditions and demand levels. Declining demand levels due to conservation, technology adoption, and self-generation would increase the costs borne by remaining customers to decease the debt associated with GA financing. This would increase the risk that the province would have to absorb some of the debt in the future.

Not all generating assets will continue operations at the end of their contract, in that case, future rate payers will be paying the cost for assets that are no longer in use. High capital costs, equipment obsolescence or surplus capacity / low demand conditions mean that some generators will shut down at the end of their contract. Future ratepayers would be paying for these assets that no longer produce power in paying down the deferred GA and accumulated interest costs.

Accounting and Provincial Credit Rating and Borrowing

The significant amount of additional provincial borrowing needed to refinance the GA and associated risks and fiscal costs (interest rates, repayment timelines) could put pressure on the Province's credit rating and overall borrowing capacity.

The complexity of the structure and length of deferral (i.e., recovery of debt) increase the overall risk of the proposal and decrease transparency to the public. If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit. However, depending on funding to OPG/ OPG Trust from the Province, an increase in interest on debt and an increase on income from OPG will result.

Rating agencies and investors in the Province's debt may view all of the borrowing (whether by the Province directly or the OPG Trust) as an obligation of the Province. Depending on the magnitude of the debt incurred, the Province's borrowing cost may be impacted.

To date, the Ontario Auditor General (OAG) opinion on the proposal has not been sought. While the auditors of OPG and IESO are providing their preliminary assessments and the Office of the Provincial Controller Division (OPCD) has been engaged, the OAG has historically raised concern with "rate regulated accounting" and may take this into account when the provincial books are audited (i.e., it may impact whether the OAG qualifies the provincial books).

Based on early assessments, only a maximum of 18% rate relief can be justified by amortizing contracts over the useful life of the underlying assets. Reducing electricity rates up to or beyond this amount is dependent on increased borrowing. All of the deferral is dependent on increased borrowing. The 18% referenced here is the limit based on review of the contracts and a Eurig assessment and also includes the 8% reduction that was already provided.

The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation. In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

However, a proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax. Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

Retired Supreme Court of Canada Judge Ian Binnie has provided further legal analysis of this proposal, stating that the amount that could be financed would need to reflect the true value of the underlying assets being amortized over a longer period of time. Shifting too much of the current GA costs to future generations could jeopardize the nature of this being a regulatory charge.

Fiscal Pressure

This proposal does not align with the 2016 Budget fiscal plan and there are no proposed offsets identified. The proposal does not include a scheduled review period or an end date, resulting in an ongoing fiscal pressure, which may increase in the out years, and could only be removed by a legislative amendment.

The cost projections in this proposal are highly sensitive to interest rates and other assumptions:

- The proposal assumes GA refinancing does not have a fiscal impact because the associated legal authority and accounting treatment requirements are met. If the costs of GA refinancing were accounted for as an expense to the fiscal plan, the fiscal impact would be significant.

- The term and timing of the GA refinancing are highly dependent on the IESO's forecast of GA costs and actual interest rates.

The extent of fiscal pressures is also dependent on other factors (i.e., OAG could qualify Ontario's books or issue an adverse opinion). Due to the complexity and size of the proposal, the government (i.e., OPC) and agencies of the government (OPG and IESO) have various external advisors providing preliminary assessments and recommendations on a model that would support the desired outcome.

There may be some criticism that additional fiscal pressure and risk is being taken to benefit some customers that are not in as much need of rate relief as others (i.e., those that own second homes or cottages).

Legislative Officers

The Ontario Auditor General (OAG) has expressed views on rate regulated accounting, which will likely be raised again upon the announcement of this suite of initiatives. The OAG has not been consulted on this proposal and will have opportunities to publicly state her views through the Public Accounts committee in the summer of 2018 and in her pre-election report.

The Financial Accountability Officer (FAO) has not been consulted on this proposal and is expected to have an opinion on how this proposal may impact the state of the province's finances.

Mechanism or Plan for OPG

- Accountability
    - Need to balance independence of the OPG trust with regulatory oversight and the market's need for certainty in recovering the GA financing that it provides.
    - Accountability to the government or the public, amount of government control of the entity, including future rate increases.
- New structure
    - Structure is complex, involving:
        - IESO as originator of the regulated asset and responsible for flow of funds;
        - OEB as regulator of the new mechanism;
        - OPG responsible for financing and managing the mechanism; and
        - The Province providing ongoing equity capital infusions to OPG.
    - Addition of financial agency to current operational obligations of OPG – not the current expertise of OPG. However, OPG has experience managing large financial assets and liabilities through the jointly managed Ontario Nuclear Funds as well as its own pension fund. In addition, could possibly dilute

OPG's focus on current high priority responsibilities (i.e., electricity generation and nuclear refurbishment).

  - This financing structure would be unique to Canada – uniqueness reduces likelihood of all risks being known/mitigated. Highly specialized expertise would be required.
  - Connection to BPS compensation framework/lack of national comparator.
  - Unknown transaction, admin, consultant costs.
- Debt
  - Opportunity for significant shifting of the Ontario's electricity sector over the lifespan of the repayment (30 years). Through sector/policy/government position shifting, possibility of new entity/structure abandoning debt and Ontario having to take a write down.
  - Risk transfer / portion of debt that Ontario would be responsible for would be the higher risk portion.
  - Repayment plan and impact on rate payers highly dependent on interest rates
- Public perception/reaction (could be seen as similar to the process preparing Hydro One for IPO).

<u>Legal Risk – constitutionality of financing the GA</u>

Former Supreme Court Justice Ian Binnie has provided a legal opinion which concludes that the current proposal is at a moderately high risk of being a tax. The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.

If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).

By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers. In short, the bigger the reduction in charges to current consumers, the greater the constitutional risk.

The risk identified by Mr. Binnie could be eliminated, either up front or retroactively, by the imposition of a valid tax.

<u>Program Design and Implementation</u>

The proposal relies heavily on LDCs as a partner for implementation. Many of these changes will need to take place simultaneously and amongst the 70 LDCs in Ontario there is variety in size, efficiency and ability to implement change.

- Program design will require an evaluation of whether the existing programs are effective and achieving their outcomes (e.g. the OESP has a current uptake of 30% and program changes are proposed in advance of an increased effort to reach 100% uptake, also it is unclear whether the existing HAP program could be expanded – or modified before creating a new LDC Affordability program)
- Implementation of new Affordability Fund - it is expected that Hydro One would be one of the participating LDCs involved in setting up the Trust to administer the Fund. As such, the ministry is working to ensure that funding flows before year-end 2016/17 to the Trust as any monies that are sitting in Hydro One at year-end would be consolidated with the province and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers. Details about the establishment of the Trust are still being determined by the ministry, in consultation with the OPCD and Hydro One.
- The OESP matrix would no longer follow the Low Income Measure (LIM) which would flag inconsistencies between how programs are applied or put pressure other provincial programs to increase funding amounts

Benefits for all Consumer Classes

The proposal includes some benefits for all consumer classes as well as targeted benefits to those with the greatest need. It is likely that the government will be criticized for providing benefits to those who may not be in need (e.g., wealthy cottage communities, etc.).

Alternative Options Considered:

1) Status quo – in the absence of this proposal electricity rates are forecasted to increase by 10% from 2017 to 2020. To date, the province has implemented an 8% rebate on all residential bills, in addition to expanding RRRP and broadening of ICI. Could include additional public communications about existing electricity price mitigation initiatives (e.g., the DRC will be removed from industrial consumers in 2018).
2) Provide up to 25% rate relief across all consumer classes (residential, small business, commercial and industrial funded from the fiscal plan). The projected cost would be $4B/year above the existing cost of the 8% rebate.
3) Provide a total of 20% or 18% rate relief (versus 25%) through a combination of deferral of GA costs, social programs and the existing 8% rebate.
4) Capping the amount an LDC can bill consumers for distribution service at a specific cost, with distribution costs that exceed this cap covered by the support from the fiscal plan. This would have been temporary until the completion of the OEB-mandated move to completely fixed distribution costs (scheduled for 2019, 2020-2022 for Hydro One), or having LDCs take on some of the GA deferral cost with long term repayment terms.
5) Achieving lower GA costs through renegotiating the existing contracts with the power generators.

6) Investing in targeted social programs that could be application based in the short term, providing a more targeted benefit to those in greatest need.
7) Procuring additional hydroelectricity from Quebec, would require upgrades to transmission infrastructure and would be more costly than domestic alternatives.
8) Using IESO and/or creating a new special purpose entity, independent from the Province that would be dedicated to GA refinancing.
9) Capping electricity rates at 1.7% for 3-to-4years and capping the salaries of electricity sector executives.
10) Expanding access to natural gas for home heating by increasing funding to the natural gas expansion program by $100 million. This could also include additional support to address conversion costs (i.e., switching away from electric heating to natural gas).

Linkages:

Long-Term Energy Plan (LTEP) – Ontario is preparing to release a new LTEP in April 2017. These plans identify needs for investments over the shorter term, while broadly mapping out the direction of the sector over a 20 year timeframe. The LTEP will balance the principles of affordability, reliability, clean energy, community and Indigenous engagement, as well as conservation and demand management.

Electricity Rate Mitigation Initiatives – The Ontario Rebate for Electricity for Electricity Consumers Act, 2016, (ORECA) put in place an 8% rebate for residential, small business customers and farms beginning January 1, 2017.

The Ontario Clean Energy Benefit (OCEB) was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. OCEB expired on December 31, 2015.

Debt Retirement Charge – The government also recently ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and put in place the low-income targeted Ontario Electricity Support Program (OESP), effective 2016. For all other consumers the DRC is scheduled to be removed by April 2018.

Ontario's Climate Change Action Plan (CCAP) – The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers. This commitment to residential consumers was met by the January 2017 8% rebate.

The commitment to mitigate the cap and trade impact on electricity costs for commercial and industrial consumers (i.e., Class A and B) has not been addressed. **Note:** Funding electricity

support programs through the tax-base rather than the rate base will provide saving to Class A and B consumers.

The CCAP committed to a new Climate Change agency that would act as one window for the delivery of climate change-related programs (e.g., energy management programs).

The CCAP committed to "consider options for legislation/regulation change that lessen the impact on residential tenants of increased energy costs from cap and trade". As part of the review of the Residential Tenancies Act, the Ministry of Housing is working on a proposal that will address that commitment. The proposal is expected to come to Cabinet in spring 2017.

PROPOSED CABINET MINUTE

Cabinet agreed that:

ENERGY develop electricity rate mitigation actions that, in total, support a 25% electricity bill reduction (including the 8% reduction announced in 2016) in 2017 for a typical household by undertaking the following actions:

1. For consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, ENERGY:

    A. Subject to completed legal, accounting and financing risk assessments, finance a portion of the Global Adjustment (GA) costs in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by about 16% (i.e., $26 per month). Total projected bill increases will be kept in line with Consumer Price Index (CPI) until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt and associated financing costs by 2048, with escalation in subsequent years set above CPI in order to ensure that bill increases due to repayments are capped at around 10% of the total bill. To this end:

        i. Explore expanding the powers of Ontario Energy Board (OEB), Independent Electricity System Operator (IESO), and Ontario Power Generation (OPG), and using other mechanisms, including the putting in place of appropriate payment, settlement and cost-recovery authorities for and through the IESO (including accommodating payments to and from any appropriate entity) to manage the deferred GA costs.

2. ENERGY develop and implement, subject to appropriate Treasury Board/Management Board of Cabinet approvals, rate mitigation initiatives targeted at specific populations, including:

    A. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

        i. Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout

Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by an average consumer in this group by fall 2017.

B. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up;

C. Establishing a new one-time government funded Affordability Fund in 2016/17 to provide relief to electricity customers who do not qualify for existing low income programs and cannot purchase energy efficiency measures without financial assistance;

D. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve; and

E. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500 kW for consumers under North American Industry Classification System (NAICS) codes 31-33 (i.e., manufacturing) to enhance competitiveness for Class B electricity consumers beginning July 2017. Newly eligible consumers would be required to opt-in to the program if they wish to participate.

3. ENERGY report back to TB/MBC, prior to announcement, on:

   A. A feasible mechanism for refinancing the Global Adjustment, per minute 1A, including completed legal, accounting, and financing risk assessments.

   B. If a non-fiscal mechanism cannot be established for refinancing the Global Adjustment, options for achieving a comparable level of electricity rate mitigation in the most cost effective way in order to minimize the impact on the province's fiscal plan.

   C. Additional proposed rate mitigation initiatives targeted at specific populations, per minute 2, including a proposal to move the RRRP and OESP from ratepayer funded programs to government funded programs.

4. ENERGY, through the Long-Term Energy Plan, take steps to further reduce electricity rates across the system by:

   A. Ontario Energy Board (OEB) – Identify opportunities for OEB red-tape reduction and future LDC efficiencies and rates;

B. Directing Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

5. ENERGY to explore additional rate mitigation initiatives targeted at specific populations, including:

   A. Working with the ministries of Economic Development and Growth (MEDG), Finance (MOF), Environment and Climate Change (MOECC), Labor (MOL) and Small Business to identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' and report back to Treasury Board/Management Board of Cabinet and Cabinet in winter 2017.

   B. Working with the Ministry of Housing to explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs and report back to Treasury Board/Management Board of Cabinet and Cabinet in winter 2017.

6. ENERGY seek any further Treasury Board / Management Board of Cabinet approvals of these initiatives prior to implementation.

7. ENERGY report back to Treasury Board / Management Board of Cabinet by 2021 with a review of the Rural or Remote Rate Protection (RRRP) program changes, including the efficiency and effectiveness of the program.

8. ENERGY report to LRC and Cabinet in winter 2017 with legislative amendments to implement the above initiatives, as necessary.

9. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations and complementary regulatory amendments in winter 2017.

10. ENERGY and MOF work with the Premier's Office and the Cabinet Office on the development and implementation of an integrated communications strategy.

APPENDIX A: Multi-Year Action Plan

Below is an extract taken from the MYAP which demonstrates the overall strategic plan for the initiative that this policy submission supports. This excerpt represents the approved plan to date, and may not reflect the specific policy and delivery timelines identified in the Cabinet Minute above.

Subject: RE: Class B

Pages 3 and 4 of the pink note from the March 1 Cabinet submission (attached) have the following definitions. (I added material in bold for the class A definition to note the proposed lowering of the threshold to 500 kW.)

Regulated Price Plan (RPP) – Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.

Class A Consumer – Large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year. On January 1, 2017 the threshold for Class A was lowered to 1MW for all consumer types. **[The March 1, 2017, Cabinet submission from Energy proposed to expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts. The expansion would be targeted to manufacturers.]**

Non-RPP Class B Consumer – Commercial, institutional and small industrial consumers, typically with load size under 3 MW. Class B consumers pay GA as a volumetric rate

applied to all electricity consumption. Class B consumers include those that choose not to become Class A.

Hi John,

Our MO is wondering if we have a chart or short bullets that define RPP, Class A, and Class B consumers. Do we have one handy?

Thanks,
Gavin He

Cc: John Kim <John.Kim@ofina.on.ca>
Subject: RE: EXTERNAL - Interest Recovery

Here is a more exact calculation:

	2017-18	2018-19	2019-20	2020-21	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28
GA (interest deferred)	2,501	5,009	7,509	10,584	13,244	15,698	17,736	19,121	20,332	20,332	20,332
GA (higher principal but interest immediately paid)	2,540	5,178	7,924	11,384	14,554	17,654	20,464	22,734	24,924	24,924	24,924

Essentially, there will be more principal at the beginning but less interest costs over time (and faster payment of principal) in the current method proposed by OPG; if interest costs are deferred, the principal is lower but there are higher interest costs. The higher principal amount is ~ $5B before repayments start to be made. The long-term costs are very similar, but OPG's method allows the Trust to collect cash and recognize income immediately.

Kind regards,

Adam Prokop

Subject: RE: EXTERNAL - Interest Recovery

I did this a while ago but the caveat is that the 25% savings is really only for the first year. So Energy can play around with the model and lower the overall costs substantially by collecting interest right away rather than if there was a compounding effect. The attached model assumes 25% across many years which is just to illustrate that both methods get the same amount of borrowing if the savings rate is held consistent.

Kind regards,

Adam Prokop

See Ron's question. Is there a short answer to this using our model. I think it's the point we were discussing. Interest rate costs are recovered on an ongoing basis, but then 25% is not met so how much more deferral?

Hi John,

What would be the equivalent change in GA deferral to achieve the same overall bill impact, so the revised cumulative deferral "principal" amount vs cumulative interest?

Ron

Attachments: image001.png

Hello Ron,

The cumulative interest will be less by a similar amount over the period. The principal can be paid off faster, thus lowering the interest costs. In the end, the total borrowing across the 30-year period is quite similar in both scenarios if assuming the % of GA reduction or principal repayments are the same.

Kind regards,

Adam Prokop

Thanks. And the cumulative interest would be down by a similar amount over that period? How about over the full 30 year period?

Ron

From: Bruno Amara
Sent: March 20, 2017 4:18 PM
To: Ronald Kwan
Cc: John Kim; Adam Prokop
Subject: FW: EXTERNAL - Interest Recovery

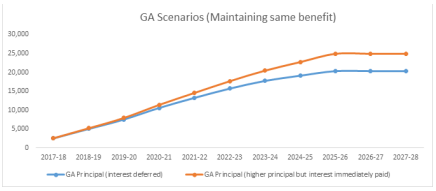
Hi Ron

See Adam's response below to your question. If interest is recovered from ratepayers then GA deferral will be need to be higher to provide same 25% benefit.

Bruno

From: Adam Prokop
Sent: Monday, March 20, 2017 3:44 PM
To: Bruno Amara <Bruno.Amara@ofina.on.ca>; Salman Qadir <Salman.Qadir@ofina.on.ca>
Cc: John Kim <John.Kim@ofina.on.ca>
Subject: RE: EXTERNAL - Interest Recovery

Here is a more exact calculation:



$ Millions

	2017-18	2018-19	2019-20	2020-21	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28
GA (interest deferred)	2,501	5,009	7,509	10,584	13,244	15,698	17,736	19,121	20,332	20,332	20,332
GA (higher principal but interest immediately paid)	2,540	5,178	7,924	11,384	14,554	17,654	20,464	22,734	24,924	24,924	24,924
Difference	39	169	415	800	1,310	1,956	2,728	3,613	4,592	4,592	4,592

Essentially, there will be more principal at the beginning but less interest costs over time (and faster payment of principal) under the method proposed by OPG. The higher principal amount is ~ $5B before repayments start to be made. If interest costs are deferred, the principal is lower but there are higher interest costs. The long-term costs are very similar, but OPG's method allows the Trust to collect cash and recognize income immediately.

Kind regards,

Adam Prokop

Subject: RE: EXTERNAL - OPG - 44% of GA Deferral from the Province.

Hi Adam
After a very brief discussion with our Treasury folks it looks like they are thinking about a premium for the redemption right, and the initial thinking is that we would use 10%, ie $22. But I will confirm this Monday, as well as give you some feedback on the interest issue.
Thanks
Clara

Hello Clara,

It is Adam again. Wanted to know of you were free to discuss the equity injection from the Province from the perspective of OPG? Especially on the treatment of the equity (preferred vs common).

Kind regards,

Adam Prokop

John,

We do not have a draft as yet.

I understand that not all of the design features of the asset have been finalized.

Our considerations will be limited to those concerning a PII exemption for the income from the SPV.

Regards,

Rob

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Hi Gadi, Scott,

I'd think we'd need to loop in TPD on this as well, to get the drafting right, and see about any such policy concerns.

Ron
On Apr 16, 2017, at 5:01 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca<mailto:Gadi.Mayman@ofina.on.ca>> wrote:

Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

On Apr 16, 2017, at 4:25 PM, Nelms, Scott (MOF) <Scott.Nelms@ontario.ca<mailto:Scott.Nelms@ontario.ca>> wrote:

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

>
> Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
>
> Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

Will do.

Just a question, is there a particular reason we are not engaging MOF legal on this? Its draft legislation and we want to make sure we interpret the changes accurately.

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
>
> Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

> The *Electricity Act, 1998* applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

> Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
>
> Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

Will do.

Just a question, is there a particular reason we are not engaging MOF legal on this? Its draft legislation and we want to make sure we interpret the changes accurately.

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The *Electricity Act, 1998* applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice,
Scott

Thanks Sriram. We still working with OPG and Torys to understand what exactly they are requesting and why. Based on conversations so far, I think the risk of creating a loophole should be limited, as net revenues from the Trust would be subject to PILs once they flow up from the sub into to OPG corporate entity.

Will do.

Just a question, is there a particular reason we are not engaging MOF legal on this? Its draft legislation and we want to make sure we interpret the changes accurately.

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

John,

We do not have a draft as yet.

I understand that not all of the design features of the asset have been finalized.

Our considerations will be limited to those concerning a PIl exemption for the income from the SPV.

Regards,

Rob

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax

consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice,
Scott

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

> > 4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.
> >
> > Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Version 2

Section 12(3) of the Version 2 Draft Legislation needs to be amended as follows:

Prohibition

(3) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, Ontario Power Generation Inc., the Ontario Energy Board, the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation.

Part VII[1]
amendments to other Acts

ELECTRICITY ACT, 1998

200x. (1) Subsection 6 (1) of the *Electricity Act, 1998* would be amended by adding the following clauses:

(q.0.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the [Fair Hydro Act];

(q.1) to enter into agreements or arrangements with for the purposes of the FHA;

(q.2) to engage in activities related to making payments to and receiving payments as contemplated under the FHA and to engage in related settlement activities;

(q.3) to engage in activities related to the creation, transfer and administration of the regulatory asset created under the FHA, which activities may include,

(i) incurring liabilities in relation to the regulatory asset

(ii) transferring the regulatory asset for consideration;

(q.4) acting as a recovery agent under the FHA;

201x. Section 53.1 of the Act would be amended by adding the following subsections:

[1] FLS: These amendments are drawn from previous drafting contained in gov2016.146.e05 (which was drafted as amendments to the EA, 1998).

Same, [FHA]

53.1 (1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include the following, in addition to any other objects, relating to the FHA:

1. Exercising the powers and rights and performing the duties and obligations assigned to it under that Act.

2. Providing services on behalf of a [**Financing Entity**][2], subject to the right to be paid by the Financing Entity for services, including the following services **[NTD: see further changes to OEB Act below regarding review of OPG costs]**:

   (i) the purchase and administration of investment assets on behalf of a Financing Entity and the negotiation, execution and delivery of any related agreements;

   (ii) the negotiation, execution and delivery on behalf of a Financing Entity of constating documents, financial services agreements, administrative services agreements, purchase and sale agreements, trust indentures, hedging agreements, credit enhancement agreements, servicing agreements, loan agreements, subordinated loan agreements, security agreements, underwriting agreements, agency agreements and any similar agreements;

   (iii) the negotiation, execution and delivery of any documents relating to a sale or offering of securities by a Financing Entity;

   (iv) the implementation and administration of any agreements to which a Financing Entity is a party;

   (v) the acquisition, administration and sale of any other investments that may from time to time be made by a Financing Entity;

   (vi) the borrowing of money by a Financing Entity;

   (vi) administering the activities of a Financing Entity and preparing reports on behalf of a Financing Entity;

   (vii) enforcing the rights of a Financing Entity;

[2] Note – we have used the term "Financing Entity" throughout. The final term chosen for the legislation will need to be used throughout.

(vii) engaging or employing any persons to assist it in providing services to a Financing Entity and delegating its powers and duties to such persons; and

(vii) performing any activities incidental to the foregoing.

3. Exercising the powers and performing the duties of the Financial Services Manager under that Act.

4. Providing equity contributions and loans to a Financing Entity.

[NTD: Given the detailed list of objects in Section 53.1(1.1), OPG is considering whether the objects listed in Section 53.1(1) need to be similarly expanded.]

Subsidiaries, etc.

(1.2) Ontario Power Generation Inc. may create one or more subsidiaries, trusts, partnerships or special purpose entities in order to more efficiently conduct its activities or achieve its objects.

Deemed assets, entity

(1.3) Despite any other provision of this Act or the *Business Corporations Act* or any other laws, the assets and liabilities of a Financing Entity shall not form part of the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries (other than, if applicable, the Financing Entity) in any proceeding and the assets and liabilities of Ontario Power Generation Inc. or any of its subsidiaries (other than, if applicable, a Financing Entity) shall not form part of the assets and liabilities of a Financing Entity in any proceeding.

202x. Section 89 of the Act would be amended by adding the following subsection:

Exception

(4) The requirement in subsection (1) to pay an amount to the Financial Corporation does not apply:

1. In respect of any income, gain or profit of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a result of or by virtue of:

(A) where a Financing Entity established is a corporation, acquiring, holding or disposing of any equity interest in the Financing Entity, including in respect of any dividends or other distributions paid or payable or otherwise accrued to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. in respect of any such equity, or

(B) where a Financing Entity is a trust, acquiring, holding or disposing of any beneficial interest in the Financing Entity, including in respect of any amounts paid or payable to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a beneficiary of such entity, or

2. To a Financing Entity that is a subsidiary of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc.

203x. Section 90 of the Act would be amended by adding the following subsection:

Exception

(4) The requirement in subsection (1) to pay an amount to the Financial Corporation does not apply:

1. In respect of any income, gain or profit of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a result of or by virtue of:

(A) where a Financing Entity established is a corporation, acquiring, holding or disposing of any equity interest in the Financing Entity, including in respect of any dividends or other distributions paid or payable or otherwise accrued to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. in respect of any such equity, or

(B) where a Financing Entity is a trust, acquiring, holding or disposing of any beneficial interest in the Financing Entity, including in respect of any amounts paid or payable to Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc. as a beneficiary of such entity, or

2. To a Financing Entity that is a subsidiary of Ontario Power Generation Inc. or a subsidiary of Ontario Power Generation Inc.

[Note: Drafting still to be added to the EA consequential amendments: ***All fees charged by OPG as the FSM shall be approved by the OEB before they are included in the calculation of clean energy adjustments.]***

Add new consequential amendments to Ontario Energy Board Act, 1998 as follows:

Subsection 78.1(4) of the *Ontario Energy Board Act, 1998* would be amended as follows:

Board orders

(4) Subject to subsection (4.1), the Board shall make an order under this section in accordance with the rules prescribed by the regulations and may include in the order conditions, classifications or practices, including rules respecting the calculation of the amount of the payment.

Section 78.1 of the *Ontario Energy Board Act, 1998* would be amended by adding the following subsection:

(4.1) In making an order under this section in respect of Ontario Power Generation Inc., any activities, roles or circumstances whatsoever relating to Ontario Power Generation Inc. under or in relation to the *Intergenerational Fairness in Hydro Rates Act, 2017*, including, without limitation, its appointment as the Financial Services Manager under that Act, any fees charged for performing its duties as the Financial Services Manager under that Act, any cost consequences of being the Financial Services Manager under that Act, and any consequences of consolidating the assets and liabilities for accounting purposes of any special purpose financing entities established under and for purposes established under that Act are not related to a prescribed generation facility or the output therefrom and the Board shall not consider the aforementioned when making an order under this section.

Version 2

Section 12(3) of the Version 2 Draft Legislation needs to be amended as follows:

Prohibition

(3) The Financial Services Manager shall not provide for funding obligations to be incurred with any recourse to any assets of an electricity vendor, **Ontario Power Generation Inc.,** the Ontario Energy Board, the Province or the Lieutenant Governor in Council, except to the extent that any of these persons or entities may be liable to perform obligations or duties arising under this Act or under the express terms of a funding obligation.

Part VII[1]
amendments to other Acts

ELECTRICITY ACT, 1998

200x. (1) Subsection 6 (1) of the *Electricity Act, 1998* would be amended by adding the following clauses:

(q.0.1) to exercise the powers and rights and to perform the duties and obligations assigned to it under the [Fair Hydro Act];

(q.1) to enter into agreements or arrangements with for the purposes of the FHA;

(q.2) to engage in activities related to making payments to and receiving payments as contemplated under the FHA and to engage in related settlement activities;

(q.3) to engage in activities related to the creation, transfer and administration of the regulatory asset created under the FHA, which activities may include,

(i) incurring liabilities in relation to the regulatory asset

(ii) transferring the regulatory asset for consideration;

(q.4) acting as a recovery agent under the FHA;

201x. Section 53.1 of the Act would be amended by adding the following subsections:

[1] FLS: These amendments are drawn from previous drafting contained in gov2016.146.e05 (which was drafted as amendments to the EA, 1998).

Same, [FHA]

53.1 (1.1) In addition to the objects mentioned in subsection (1), the objects of Ontario Power Generation Inc. include the following, in addition to any other objects, relating to the FHA:

1. Exercising the powers and rights and performing the duties and obligations assigned to it under that Act.

2. ~~Entering into contracts and undertakings on behalf of special purpose financing entities, including pre-formation contracts and undertakings and as principal in relation to matters permitted by that Act subject to the right of reimbursement from amounts available to the financing entity.~~**Providing services on behalf of a [Financing Entity][2], subject to the right to be paid by the Financing Entity for services, including the following services [NTD: see further changes to OEB Act below regarding review of OPG costs]:**

   (i) the purchase and administration of investment assets on behalf of a Financing Entity and the negotiation, execution and delivery of any related agreements;

Hi Rob,

I understand you were able to connect with John today. Let us know if you have any further questions.

Just wanted to reiterate Scotts message below. Our timing is quite tight so we'd appreciate any comments you could provide tomorrow. Please also let us know if anyone else should be looped in.

Thanks in advance,
Kaitlin

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly.

I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Thanks Sriram. We still working with OPG and Torys to understand what exactly they are requesting and why. Based on conversations so far, I think the risk of creating a loophole should be limited, as net revenues from the Trust would be subject to PILs once they flow up from the sub into to OPG corporate entity.

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Subject: Re: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Gadi, Scott,

I'd think we'd need to loop in TPD on this as well, to get the drafting right, and see about any such policy concerns.

Ron

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

It was fine but it'd be up to Rob to put something down on paper. Both Kaitlin and I have offered to help if he had further questions.

We're too jammed today to try to help Rob by actually starting to draft something….

Hi,

How did your call go? Does Rob better understand the context, structure and planned nature of the Trust (e.g., non-contributory and not intended as a tax avoidance vehicle)?

Is a discussion with OPG tax folks needed?

Ron

I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
> >
> > Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Thanks Sriram. We still working with OPG and Torys to understand what exactly they are requesting and why. Based on conversations so far, I think the risk of creating a loophole should be limited, as net revenues from the Trust would be subject to PILs once they flow up from the sub into to OPG corporate entity.

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

>> Hi Rob, John Bruno,
>>
>> Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences

arising from potentially large, unrealized gains associated with swaps etc.
>>
>> Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

>> Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

>>
>> Scott,
>>

>> I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):
>>
>> 4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.
>>
>> Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.
>>
>> Hope this helps.
>> Thanks,
>> Ken

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

On Apr 16, 2017, at 5:01 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca<mailto:Gadi.Mayman@ofina.on.ca>> wrote:

Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

On Apr 16, 2017, at 4:25 PM, Nelms, Scott (MOF) <Scott.Nelms@ontario.ca<mailto:Scott.Nelms@ontario.ca>> wrote:

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Hi Gadi, Scott,

I'd think we'd need to loop in TPD on this as well, to get the drafting right, and see about any such policy concerns.

Ron
On Apr 16, 2017, at 5:01 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca<mailto:Gadi.Mayman@ofina.on.ca>> wrote:

Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

On Apr 16, 2017, at 4:25 PM, Nelms, Scott (MOF) <Scott.Nelms@ontario.ca<mailto:Scott.Nelms@ontario.ca>> wrote:

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

John,

We do not have a draft as yet.

I understand that not all of the design features of the asset have been finalized.

Our considerations will be limited to those concerning a PII exemption for the income from the SPV.

Regards,

Rob

Subject: Re: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Gadi, Scott,

I'd think we'd need to loop in TPD on this as well, to get the drafting right, and see about any such policy concerns.

Ron
On Apr 16, 2017, at 5:01 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca<mailto:Gadi.Mayman@ofina.on.ca>> wrote:

Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

On Apr 16, 2017, at 4:25 PM, Nelms, Scott (MOF) <Scott.Nelms@ontario.ca<mailto:Scott.Nelms@ontario.ca>> wrote:

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Subject:	RE: EXTERNAL – Provincial Guarantee for Fair Hydro Program
Date:	Tuesday, April 18, 2017 11:33:22 AM

Hello John,

In terms of the triple AAA rating, the fact that the market portion will be 51% of the total trust and senior debt may help get the ratings higher than the Provincial rating initially before any default/trigger.

Kind regards,

Adam Prokop

Thanks. Has TD seen this, or commented on it? The make whole provision, rather than just moving the outstanding bonds up to being provincial debt could be extremely expensive if the guarantee is triggered and exercised.

I assume the challenge to the rating is that we're not AAA, so the debt would be downgraded to our level, but this shows the flaw in the ratings methodology, because why would you want a guarantee from someone who is supposedly less credit worthy? This is definitely, in my mind, worth pushing back on.

Regards,
Gadi

Subject: EXTERNAL – Provincial Guarantee for Fair Hydro Program

*** Exercise caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. *** _____

Hey John, Ken,

Further to our discussion earlier today, please see the note below which outlines our collective views on the Provincial guarantee that would be required for the Fair Hydro Program. Happy to discuss further.

There are two types of "guarantees" that we are looking for from the Province in relation to this program on the basis that any debt issued under the Fair Hydro Program will be AAA-rated. In addition, the following is based on the understanding that the transition charges collected from prescribed consumers will begin upon the commencement of the program and will not be subject to any cap or restrictions.

The legislation must include a specific reference to the Province being required to provide a guarantee on debt repayment and servicing in certain circumstances.

The first is "Springing Guarantee", which would be via a legal agreement put in place when establishing the program and would require the Province to step in and assume responsibility for paying all amounts that are or become due in respect of (i) any of the outstanding funding obligations; (ii) the operation and maintenance of the financing entity; and (iii) any other amounts due in relation to the program that have not yet been paid (collectively, the "Fair Hydro Program Costs"). This Springing Guarantee would kick in should any of the following happen:

(1) There is any change in the legislation or regulations that is, or could be, adverse to finance entity noteholders or the legislation is determined to be ultra vires. In this situation, the Springing Guarantee would require the immediate repayment of all Fair Hydro Program Costs (including any makewhole prepayment obligations).

(2) There is a market disruption (i.e. there is a period of time when capital markets term funding is not available to take out the warehouse facilities (bank facility or ABCP)). In this situation, either (i) we start to charge ratepayers for principal recovery via transition charges; or (ii) the Province must be responsible for the immediate repayment of those warehouse facilities.

The period of time that must lapse before this Springing Guarantee becomes applicable with respect to the warehouse facilities can be set to accommodate a short term dislocation in the term funding market (6-18 months). We would note that depending on the size of the warehouse facility, if there is no term takeout for an extended period of time, it is likely that the warehouse facilities will also quickly reach their credit limits and the province would likely have to fund any future shortfalls if they wished to continue the program.

To the extent that the Springing Guarantee does not require the Province to make the repayment contemplated under scenario (1), but simply requires the Province to repay the debt in accordance with its original repayment terms, this

may adversely impact the rating of the Fair Hydro Program.

The second type of guarantee we are looking for from the province is a performance guarantee. This is not a credit guarantee. The performance guarantee would require the Province to stand behind certain obligations of the Servicer (initially IESO) in the program. This performance guarantee would be included as part of the Securitization documents for the program. It would, amongst other things, require the province to stand behind (including taking responsibility for helping remedy any breaches in) the representations, warranties, or covenants made by the servicer. It would also require the province to ensure that the servicer performs its servicing activities as set out in the securitization documents and if it does not, put in place an alternative servicer who would perform those servicing activities. The performance guarantee would also include standing behind any indemnities that may be owing by the servicer.

Hi Ron

I only recall seeing the "$2.5b per year on average" Below is news release language. I also checked ENE's cab sub. I don't recall seeing the alternate "$25b over ten years". I'll let you know if I come across anything else.

Under current forecasts, the immediate reduction in the GA would be about $2.5 billion per year on average over the first 10 years, with annual interest costs not exceeding $1.4 billion.

1 - On page 5 of Chapter 2 for the Fair Hydro Plan:

It currently reads: the reduction in the GA charge would be about 2.5B per year on average over the first ten years.

This is factually true but is not how we are presenting this (and I realise it is not as written about costs) as it might imply the cost is an additional 25B for the first and the following ten years which is not true for example. So we use 25B as total cost over x years. Or something like that. We had aproved language.

2 - On pg 16 of CH2- attached to charts of new osap examples

Can the osap calculator url be added

3 - A question related to Section B - Finances and Econ outlook, page 3 - Ontario's level of Accumulated Deficit as per cent of gdp.

Are there other jurisdictions, national or subnational (of a certain size) that use this measure as their overall deficit? Ie do not have to include capital debt expense. Top subnational etc, which we need (and already have) a full response to.

(this one is anticipating what the primary critique will be of our fiscal plan and trying to proactively defend our record...if we don't have time to incorporate it, we can look to include info into our comms materials).

Sent from my BlackBerry 10 smartphone on the Rogers network.

Hi John,

As discussed, please track down and confirm the coordination question with SIFB on H1 and Brampton/Alectra MEU PILs. On the latter, I wonder if they too will have a large tax shield, so we might not be getting the 5 in out years – and it might be a negative variance for a number of years.

Also, I started a footnote on the GA impact on OPG. Should have added too, for clarity, that all the offset impact is shown in net income, but likely would be split between net income and PILs.

We need to generate GA financing / equity returns risks on to the revenue risks tab.

Thanks,
Ron

Subject: RE: Electricity Outlook

Hi John,

But what has changed on the Hydro One side and SIFB`s AO numbers?

I was thinking the two branches had been coordinating on an on-going basis --- so if the EFB numbers were using 84% as the baseline, the AO numbers would be net of more forgone

net income. And if the EFB file is at 70%, then the SIFB AO forgone revenue numbers would be net of less forgone revenue.

Is that the case as each branch has been sending up files, this month versus last?

Ron

Subject: RE: Electricity Outlook

Hi Ron,

Yes, we're now working on the 70% baseline. The numbers are generally the same.

NUG numbers changed somewhat.

The Bampton PILs is there.

Unpacked the PILs impact of the office sale.

So, generally the information has not changed significantly. I'd characterize as the 70% baseline and house-keeping.

John.

Subject: RE: Electricity Outlook

One more modification….I added the GA interest cost impact in the OPG tab. Also, highlighted in yellow. I'm sure there's a more elegant way of modelling due to my lack of skills at this.

I used FTD's forecast for 2017-18 to 2019-20 and then used our conservative interest income for 2020-21 of 135 (based on 3.5% interest) as a placeholder until FTD does their number.

John.

Subject: RE: Electricity Outlook

Hi John,

As discussed, please track down and confirm the coordination question with SIFB on H1 and Brampton/Alectra MEU PILs. On the latter, I wonder if they too will have a large tax shield, so we might not be getting the 5 in out years – and it might be a negative variance for a number of years.

Also, I started a footnote on the GA impact on OPG. Should have added too, for clarity, that all the offset impact is shown in net income, but likely would be split between net income and PILs.

We need to generate GA financing / equity returns risks on to the revenue risks tab.

Thanks,
Ron

Hi John,

But what has changed on the Hydro One side and SIFB`s AO numbers?

I was thinking the two branches had been coordinating on an on-going basis --- so if the EFB numbers were using 84% as the baseline, the AO numbers would be net of more forgone net income. And if the EFB file is at 70%, then the SIFB AO forgone revenue numbers would be net of less forgone revenue.

Is that the case as each branch has been sending up files, this month versus last?

Ron

Subject: RE: Electricity Outlook

Hi Ron,

Yes, we're now working on the 70% baseline. The numbers are generally the same.

NUG numbers changed somewhat.

The Bampton PILs is there.

Unpacked the PILs impact of the office sale.

So, generally the information has not changed significantly. I'd characterize as the 70% baseline and house-keeping.

John.

John,

I think Francisco's suggestion would be useful. OEP and OB will want to see that at some point. The main objective is to get TBS/OEP to pick up the current outlook numbers. We could then address the 84% to 70% pivot. I don't think it's crucial to do this at the same time i.e., if it holds up the outlook distribution.

Subject: RE: Energy Models
Date: Wednesday, April 19, 2017 6:42:16 PM
Sensitivity: Confidential

Hi John,

We should also work on a briefing deck for the Minister on the IESO financing ask, and we may as well include the equity injection process too.

The deck should likely include an upfront section to remind the Minister of the proposed structure of the IESO reg asset and OPG purchase of the asset and OPG's planned sources of funds, and the accounting treatment of the IESO and OPG.

That would be context for the potential short term needs and long-term financing ask of the IESO.

The deck should outline considerations and options.

And should the ST and /or LT facilities be better from the OFA or OEFC?

Doesn't need to be long, but the key points should be there.

Thanks,
Ron

Hi Ron,

We have looked at the models but we haven't focused on this request yet as we're working to get the Document-related items done today and tomorrow. We will look to focus on this, I'm expecting, starting tomorrow when the BNs, Qs and As and the doc materials are done. This is not to say we haven't looked at the models. We're familiar with Energy's modelling with some added materials. OPG's file, we will need to spend more time on. I'd expect sometime next week we would try to sit down with these guys.

My understanding is that this is related to the report back for the May 9th timeline? I understood that the report back was originally for May 1st but it's been moved to the 9th. Felix wasn't sure if this would be ready in time.

Hi Ron!

Long time, no see… Hope all is well with you and your family (both at home and at the OFA!)

Ron, today we received two models from Energy re: GA Smoothing. Here is:

The model from the Ministry of Energy

The model from the OPG

I am not sure if you have already received these or not (and my apologies if this is a duplicate arrival in your inbox). Having said that, we wanted to make sure that you and your team had a chance to review these as well. As you know, we have been asked to review the model and the assumptions, do some sensitivity analysis and scenario testing to create a risk based outlook. Hope your team can be partners in the process.

We hope to have a discussion amongst ourselves tomorrow to discuss our early observations and questions. Then the plan is to meet and work with Energy.

Can you please let us know who from your team we should include in these discussion?

Cheers,
Didem

Hi John, Bruno,

Please review and work with Didem and TBS on this.

Thanks,
Ron

Hi Ron!

Long time, no see… Hope all is well with you and your family (both at home and at the OFA!)

Ron, today we received two models from Energy re: GA Smoothing. Here is:

The model from the Ministry of Energy

The model from the OPG

I am not sure if you have already received these or not (and my apologies if this is a duplicate arrival in your inbox). Having said that, we wanted to make sure that you and your team had a chance to review these as well. As you know, we have been asked to review the model and the assumptions, do some sensitivity analysis and scenario testing to create a risk based outlook. Hope your team can be partners in the process.

We hope to have a discussion amongst ourselves tomorrow to discuss our early observations and questions. Then the plan is to meet and work with Energy.

Can you please let us know who from your team we should include in these discussion?

Cheers,
Didem

Hi,

We received something similar to the second attachment during the fair hydro plan work; but the first attachment looks like it's from OPG directly and is brand new from my perspective.

Thanks

Hi John, Hi Bruno!

So sorry for the delay in getting back to you.

Now that the direction/approach has been approved and announced, our intent is not to question the current construct or the policy decision that has been made, rather it is for us to collectively work together to identify potential financial risks and to create a risk-based outlook that would allow the government to proactively manage these risks.

I am attaching the email we sent to energy as well, as it provides a list of questions we have already shared with them. By no means an exhaustive list, these questions we were intended to initiate a dialogue and start building that risk based outlook.

Clearly lots of work ahead. Looking forward to working with you, and benefitting from your insights and advice on this journey.

Should we set up some time for next week?

Cheers,
Didem

Hi Didem,

Let's aim for a sit down session here at the OFA early next week.

If you can give us a sense of the work that you're doing and your objectives, that'd be helpful. This week, we're all hands on deck with the Document but early next week we're hoping to connect.

John

Subject: Financial Model and the Risk Based Outlook
Date: Tuesday, April 18, 2017 16:55:03

Dear Tim and Justin,

First of all, let me say thank you once again for making time for our call on April 3, 2017 and for giving us a high level overview of the model that was used to develop the cost estimates that were included in the ministry's March submission. Late last week, we received a copy of the model and the one that developed by OPG. Seeing the models and details included in the spreadsheets have been very helpful. Thank you for the part you have played in getting these spreadsheets over to us.

As mentioned during our call, our desire to better understand the model, the assumptions and financial impacts is not intended to question the current construct or the policy decision that has been made, rather it is for us to collectively work together to identify potential financial risks and to create a risk-based outlook that would allow the government to proactively manage these risks.

With that in mind, we wanted to see if we can get together to talk about the models in detail. We have outlined some questions below, which can hopefully help serve as a guide for our discussions. Having said that, given you are so much closer to this file than we are, if there is anything we may have missed, please feel to let us know/add it to the list of discussion items.

1. Understanding the Assumptions:

o What are the assumptions included in the base case scenario – explicitly and implicitly?

o Would it be possible to breakdown the assumptions into categories:

▪ Exogenous variables (like exchange rates and interest rates, which will the government has no control over and has to take as given)

▪· Policy parameters being introduced as part of this package (like % increases allowed in any given period, etc.)

▪· Endogenous variables (electricity usage patterns, natural gas-electricity substitution, etc.) which may or will change over time, but can be impacted through other measures.

o The OPG deck had included the sensitivity analysis of a number of the key variables. Have there been any runs/scenarios testes to see how the overall impacts would change if a number of the variables change at the same time? Like best case, worst case scenarios?

o What are variables in the previous (8% proposal) that have included this model? How could the observed variances in the previous proposal manifest within the current proposal and what actions are planned to mitigate this risk?

o Are there elements or assumptions that have been excluded from the model (e.g. changing population demographics and associated usage patterns, etc.). Do we have a rough sense of what potential carry on risks from excluding what is out-of-scope?

2. Understanding the Impact of the Model:

•□□□□□□□ We appreciate that the model is based on the average Toronto Hydro customer, and that the rebate/impact will be 25% on the average customer (with any given customers rebate being different given their consumption, location/distributor, etc.). Has there been any analysis done on:

i. what these differentiated impacts may be (based on different usage patterns, different geographies (urban/rural), at the sub-population level?

ii. how the financial requirements may go up and down based on different users and their usage patterns? How will that risk/fluctuations be managed? How will these financial impacts be distributed among the government, the entity and the rate payers?

•□□□□□□□ Based on our discussion, we understand that you had made the simplifying assumption that interest is not paid through the smoothing period, and rolled into the debt balance. If our understanding of the OPG model is accurate, they are assuming that interest payments are made along the way. Given they are carrying the same debt ceiling number and a very similar trajectory, should we assume that they are deferring/smoothing the assets in slightly different way?

3. Understanding the Impact of the Baseline:

Given all the financial impacts are calculated from the black line, we would greatly appreciate having a better understanding of the base (black line) – IESO forecast (2016 actual - 2035). Our understanding is that the baseline model already includes:

i. the following cost components: distribution, transmission, regulatory charges, DRC, Commodity, HST, and the 8% rebate

ii. the following factors/considerations:

- Cancellation of LRP (large renewable procurement) II
- Cancellation of EFW (energy from waste)
- Expansion of ICI (Industrial Conservations Initiatives
- Each component changes in a non-linear manner per year over time up to 2035; assumptions/factors to inform these changes unknown
- "Commodity" and "Distribution" are the two biggest components and hence price drivers.
- Looking at the factors with the most significant changes:
  - Does it already take into account the transmission assets reaching retirement age?
  - Does it already take into account other investment decisions in conservation, generation and transmission?
- Other external factors: climate change; technology disruption; continually decreasing demand and over-supply
  - IESO forecasts Ontario's base load generation from 215-2020 to exceed demand by 42.3 million MWh
  - When we sell to other jurisdictions at loss ($32.6M in 2014; selling at loss since 2006), how does it affect the bill?
  - 2035-2050: straight line extrapolation only; any changes in the above factors would significantly impact the typical bill?

So sorry for the rather lengthy email. Hope we can meet to discuss in greater detail. We would be happy to set something up, if you are agreeable.

Thank you,

Didem

Subject: RE: Equity Financing

Hi,

Energy has agreed to record these additional purchases of OPG shares on its financials.

In terms of the appropriation for 2017-18, Energy proposes the following (subject to input from others):

- The total debt forecast for the year starting May 1 2017 ending April 30 2018 is $2.5B including interest. Taking one month off that to align with the province's fiscal year gives $2.3B; of which up to 49% is anticipated to be financed via equity injections. This results in an equity injection requirement of approximately $1.1B for this fiscal year.

- Proposed forecasting buffer:

    - OEB has only allocated 50% of the benefit until the legislation passes, which may reduce the requirement for May and June. However, given that we don't know with certainty how the OEB will reassess RPP, we propose to leave the appropriated equity amount at $1.1B.
    - OPG also plans to borrow a small percentage of the 49% from the market. This amount has not yet been finalized, but could represent up to 5% of the total financing requirement. Given this uncertainty, we would suggest maintaining the request for $1.1B.
    - Both of these elements also provide a buffer against other forecasting uncertainties.

We are working with ENE staff to develop a TB submission that will incorporate this request. In the meantime, we are happy to chat if you have questions.

Thanks,
Scott

Agreed. OPG Trust has not yet been created.

The operating asset appropriation will be for the Ministry that owns the new shares in OPG. Scott Nelms - assuming that will Energy. Can you confirm.

The amount needs to be based on 50% of the expected deferral for the 2017-18 year. IESO may

need to weigh in on that.

Cindy

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

Yes. We have linked in with Energy Corporate, so they are aware and working through the issue.

Subject: RE: Equity Financing

Hi,

Energy has agreed to record these additional purchases of OPG shares on its financials.

In terms of the appropriation for 2017-18, Energy proposes the following (subject to input from others):

- The total debt forecast for the year starting May 1 2017 ending April 30 2018 is $2.5B including interest. Taking one month off that to align with the province's fiscal year gives $2.3B; of which up to 49% is anticipated to be financed via equity injections. This results in an equity injection requirement of approximately $1.1B for this fiscal year.

- Proposed forecasting buffer:

    - OEB has only allocated 50% of the benefit until the legislation passes, which may reduce the requirement for May and June. However, given that we don't know with certainty how the OEB will reassess RPP, we propose to leave the appropriated equity amount at $1.1B.
    - OPG also plans to borrow a small percentage of the 49% from the market. This

amount has not yet been finalized, but could represent up to 5% of the total financing requirement. Given this uncertainty, we would suggest maintaining the request for $1.1B.

- Both of these elements also provide a buffer against other forecasting uncertainties.

We are working with ENE staff to develop a TB submission that will incorporate this request. In the meantime, we are happy to chat if you have questions.

Thanks,
Scott

Agreed. OPG Trust has not yet been created.

The operating asset appropriation will be for the Ministry that owns the new shares in OPG. Scott Nelms - assuming that will Energy. Can you confirm.

The amount needs to be based on 50% of the expected deferral for the 2017-18 year. IESO may need to weigh in on that.

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

Subject:	RE: Equity Financing
Date:	Monday, April 24, 2017 12:43:53 PM

Hi,

Energy has agreed to record these additional purchases of OPG shares on its financials.

In terms of the appropriation for 2017-18, Energy proposes the following (subject to input from others):

- The total debt forecast for the year starting May 1 2017 ending April 30 2018 is $2.5B including interest. Taking one month off that to align with the province's fiscal year gives $2.3B; of which up to 49% is anticipated to be financed via equity injections. This results in an equity injection requirement of approximately $1.1B for this fiscal year.

- Proposed forecasting buffer:

    - OEB has only allocated 50% of the benefit until the legislation passes, which may reduce the requirement for May and June. However, given that we don't know with certainty how the OEB will reassess RPP, we propose to leave the appropriated equity amount at $1.1B.
    - OPG also plans to borrow a small percentage of the 49% from the market. This amount has not yet been finalized, but could represent up to 5% of the total financing requirement. Given this uncertainty, we would suggest maintaining the request for $1.1B.
    - Both of these elements also provide a buffer against other forecasting uncertainties.

We are working with ENE staff to develop a TB submission that will incorporate this request. In the meantime, we are happy to chat if you have questions.

Thanks,
Scott

Agreed. OPG Trust has not yet been created.

The operating asset appropriation will be for the Ministry that owns the new shares in OPG. Scott Nelms - assuming that will Energy. Can you confirm.

The amount needs to be based on 50% of the expected deferral for the 2017-18 year. IESO may need to weigh in on that.

Cindy

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

Hi All

There seems to be considerable confusion on this issue and hopefully I can clear that up with this email.

- The Trust has nothing to do with the Province, it will be created by OPG and will be consolidated with OPG, not with the Province and is essentially not an issue with regard to the estimates process.
- The objective of this estimates exercise is to allow the Province, or more specifically the Ministry of Energy to invest a certain amount of funds in OPG. In other words the Province's equity investment in OPG will increase.
- The Province provides cash to OPG, reducing its cash assets and its Investment in OPG, an asset account will increase, in effect one asset is exchanged for another.
- As such an operating asset needs to be set up hopefully in Energy's estimates that allows the Province to make the payment to OPG.
- The amount will be around $1.2 billion, however, Scott should able to provide a more precise number.

Thanks and I am available for a discussion tomorrow, if anyone wishes further clarification, pls call me on my cell at 647-202-4373.

Sorry, 1 more question on this that I hope MOF/ENE and the OFA can help me answer. Scott/Katilin, your finance corporate shop may be able to help with this question too.

I believe the Trust will be held by OPG. Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

Thanks - happy to chat further.

Subject: RE: Equity Financing

Hi everyone, further to James' email below, in order to have the possibility of including the operating asset in Printed Estimates (which is our preferred/recommended option), we need the following information from Energy/MOF by Monday:

1) the exact value of the operating asset that is required (note our comments below regarding any buffers that are to be added)
2) confirmation of the location of where this operating asset will show up (Ministry, admin data info)
3) a business case rationale explaining the purpose and why this is needed

As per our conversation, we are currently in the midst of preparing for Printed Estimates - as such, we have an extremely short runway for this item to be included (we have until possibly Tuesday).

Once we have the necessary information from you, we will then need to send it up to senior officials here, and also ensure that DMs of both Finance and Energy have an opportunity to review/sign off.

Thanks - happy to chat further should you have any questions.

Hi, I've highlighted on page one of the attached note what I was referring during the teleconference around financing the trust (51%, 49%).

Any buffer being added to the 49% needs to be explicitly identified in the Treasury Board submission – it is a decision point for TB to include a buffer. To what degree does the $2.5B have a buffer based on the level of precision in the estimate should also be covered.

The TB submission needs to specify the rationale for the ask (explicitly identifying any buffer amounts being added), and the requested minute.

Adam,

Attached are some minor edits, I have shortened a couple of bullets in order to maintain that the Province has the most flexibility

-The OFA and Energy will retain a dealer to provide independent advice to the Province

-The long term debt issued by OPG Trust may be callable

Re: advisor to be hired by OFA+Energy and call feature of the bond

Regards

Carlos

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV)referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

Commented [JK1]: Check with SIFB or CMD on the right terminology.

Commented [FC2R1]: To me this is part of the terms and conditions

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
    - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.

Commented [JK3]: Did I get this right?

Commented [FC4]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- Longer term debt will be issued as soon as possible, subject to market timing constraints.

- OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
- The OFA and Energy will ~~is also expected to~~ retain a dealer to provide ~~due diligence and~~ independent advice to ~~for~~ the Province~~'s equity injection [TBC] into OPG and long-term borrowing by OPG Trust~~ [TBC].

- The long term debt issued by OPG Trust may ~~also~~ be callable ~~to buy back the bonds once the financed GA starts to be repaid~~. [TBC]

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [CY5]: Advice may be mostly for financing long term issuance by the trust

Formatted: Strikethrough

Formatted: Strikethrough

Commented [JK6]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [CY7]: Call option is to add flexibility

Commented [JK8]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

Formatted: Strikethrough

Formatted: Not Strikethrough

Formatted: Not Strikethrough

Formatted: Strikethrough

Commented [FC9]: Not quarterly?

Commented [JK10R9]: Monthly now.

Commented [FC11]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [SQ212]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
    - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
    - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Thanks Scott. This is helpful. We have reached out to Pratima Gounden in Energy's corporate shop on this. We understand that the Ministry will provide more information on this request as part of the May 9 TB/MBC submission - however, as discussed previously, in order for us to include this operating asset in Printed Estimates, we need written documentation - requesting operating asset asap. This could be in the form of a CAO memo from Rob to Karen Hughes requesting that this operating asset be included as part of Energy's Printed Estimates.

We need this memo asap (i.e., tomorrow at the latest so that it can be considered as part of Document Day), so that we can address the technical elements for Printed Estimates.

Please let us know if you have any questions.

Thanks,
Felix

Subject: RE: Equity Financing

Hi,

Energy has agreed to record these additional purchases of OPG shares on its financials.

In terms of the appropriation for 2017-18, Energy proposes the following (subject to input from others):

- The total debt forecast for the year starting May 1 2017 ending April 30 2018 is $2.5B including interest. Taking one month off that to align with the province's fiscal year gives $2.3B; of which up to 49% is anticipated to be financed via equity injections. This results in an equity injection requirement of approximately $1.1B for this fiscal year.

- Proposed forecasting buffer:

    - OEB has only allocated 50% of the benefit until the legislation passes, which may reduce the requirement for May and June. However, given that we don't know with certainty how the OEB will reassess RPP, we propose to leave the appropriated equity amount at $1.1B.
    - OPG also plans to borrow a small percentage of the 49% from the market. This amount has not yet been finalized, but could represent up to 5% of the total financing requirement. Given this uncertainty, we would suggest maintaining the request for $1.1B.
    - Both of these elements also provide a buffer against other forecasting uncertainties.

We are working with ENE staff to develop a TB submission that will incorporate this request. In the meantime, we are happy to chat if you have questions.

Thanks,
Scott

Agreed. OPG Trust has not yet been created.

The operating asset appropriation will be for the Ministry that owns the new shares in OPG. Scott Nelms - assuming that will Energy. Can you confirm.

The amount needs to be based on 50% of the expected deferral for the 2017-18 year. IESO may need to weigh in on that.

Cindy

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

> I believe the Trust will be held by OPG. Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

A share price is the reference point…maybe I'm thinking too simplistically, but if we are getting equity in return, we know the dollar value of that and we know how many shares we received in return… the $/share is just the calculation or vice versa… I would assume you need that.

To Francisco's point, is it that it is irrelevant in the note's context and that we can just say that it will be at book value…probably.

I believe it is also consistent with the Province's original equity contribution when OPG was first set up. I guess the question is if any changes in share structure happens in the future (i.e. OPG goes private and does an IPO), will the share price the accountant's and the documentation records it at, be relevant?

Subject: RE: Equity Injection Note

I have two main questions. 1) Do we need the par value of the shares to be issued and 2) Should the Province (Finance) insist on consideration throughout the period of equity injection.

On 1), I really don't know why we need one (I think also echo'ed by Francisco) but FTD and CMD staff have consistently insisted on it so far. I would like to get our position firmed up before widening the discussion with FTD and CMD.

I have two main questions. 1) Do we need the par value of the shares to be issued and 2) Should the Province (Finance) insist on consideration throughout the period of equity injection.

On 1), I really don't know why we need one (I think also echo'ed by Francisco) but FTD and CMD staff have consistently insisted on it so far. I would like to get our position firmed up before widening the discussion with FTD and CMD.

GA FINANCING – EQUITY INJECTION OVERVIEW

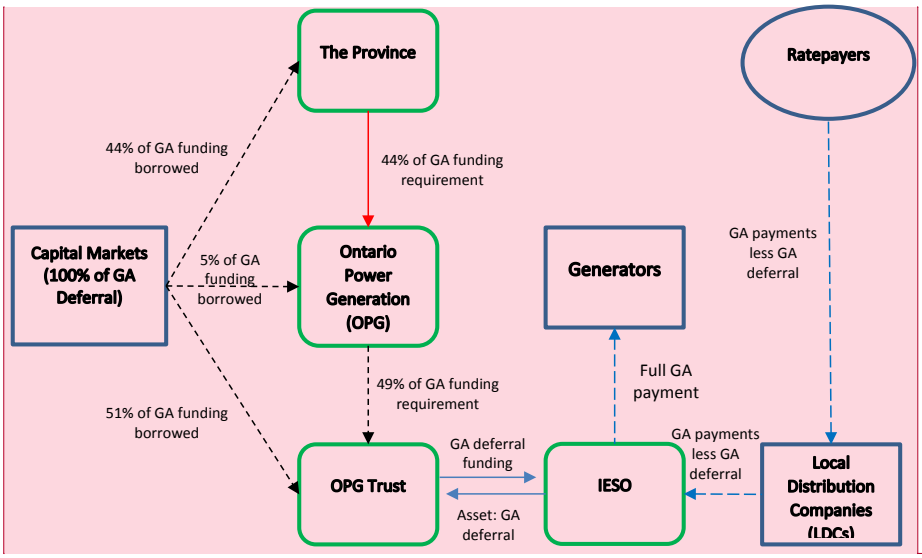
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC2]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK3]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS4]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

    - ~~Note that as with the Hydro One capital contribution, this capital contribution would be reflected on the Province's balance sheet (being and exchange of assets – cash for shares) rather than the statement of operations and would, therefore, not result in a fiscal impact to the Province~~

Commented [JK5]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC6R5]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

Commented [FC7]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing, that would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or

otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Hi John

Regarding meeting this afternoon: In our meeting with SIFB we followed up on a couple of issues but didn't go through SIFB edits individually. In 1st attachment is updated note where I accepted the SIFB edits that I thought were straightforward. 2nd attachment is with all SIFB edits/comments.

Let me know if you want to circulate this version for meeting this afternoon or other?

Hi Francisco/Darren

Attached is latest equity injection note which pulls together the various discussions to date, including the note that you had sent to us previously regarding the H1 process. If you could review, perhaps we could discuss later this afternoon as your time permits. I think next step would be to review with folks upstairs who are on the equity working group (Carlos, Mike Manning, Jim Devine).

Thanks
Bruno

Hi John

As discussed pls include John Psinas as a member of this working group. John will ensure that all debt related accounting issues plus cash flow/cash management considerations are addressed, until there is a representative from OPCD, he can also ensure that any accounting issues that relate to the Province are communicated in a timely fashion to OPCD for resolution.

Thanks

Thanks, this looks great. With some minor wording additions. Could we clean up the change-track, maybe other than the comments, and share with SIFB? I've given Francisco the heads-up that this was our intent.

As discuss, wouldn't mind a strategy on either a meeting with SIFB first separately, or jointly with FTD and CMD. Might be beneficial to have that meeting with SIFB first to hammer out the equity return ideas but that can be weighed with the time delay.

John

GA FINANCING – EQUITY INJECTION OVERVIEW

Formatted: Font: 12 pt, Bold

Formatted: Font: Bold

Formatted: Font: 12 pt, Bold

Thie Province ~~would be required to~~is moving ahead with its support for the Global Adjustment (GA) ~~f~~smoothing mechanism~~inancing plan~~. ~~by~~Under the mechanism, ~~-~~the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), ~~that would~~ representing 44% of total GA financing requirements. This document ~~serves to~~ provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the P~~p~~rovince to implement the equity injections. ~~implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.~~

Formatted: 2. Heading 1, No bullets or numbering

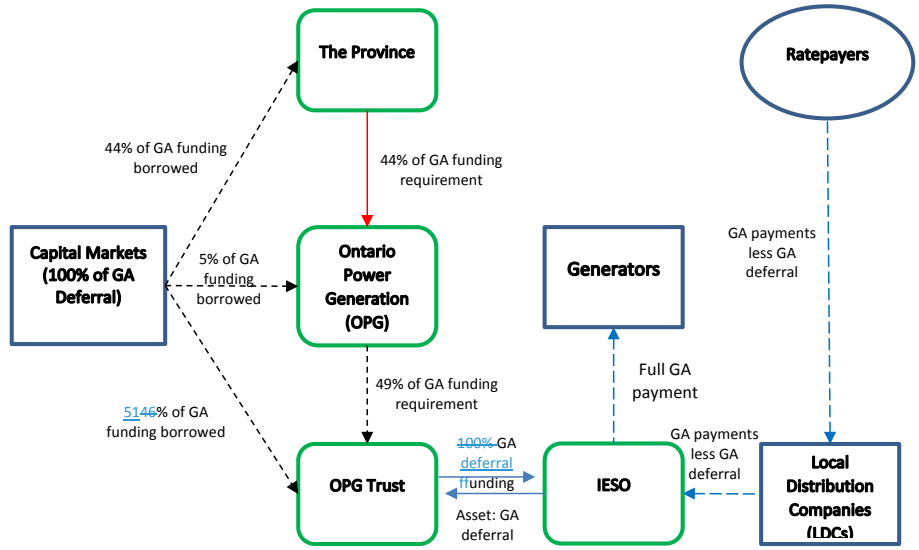
GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG ~~will~~ would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years.~~the "right to collect" assets from the IESO in return for cash proceeds.~~ IESO would use the cash from the OPG Trust~~,~~ to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process

Formatted: Font: Bold



~~OP~~OPG Trust w~~ould ill be structured to~~ finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. ~~OPG would contribute the remaining 49% as subordinated debt.~~

The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

~~Annual payments will be received by~~ OPG Trust would recover ~~for~~ financing and~~&~~ administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection.]

~~STAFF COMMENTS: UNCLEAR IF THESE FINANCING COSTS/ANNUAL PAYMENTS WILL BE RECEIVED BY OPG TRUST [TBC: FROM IESO OR RATEPAYERS DIRECTLY]?~~

~~THE MECHANISM BY WHICH THE FINANCING IS CONDUCTED IS YET TO BE FINALIZED. BOTH OPG ON BEHALF OF OPG TRUST AND THE OFA ON BEHALF OF THE PROVINCE ARE SEPARATELY LOOKING TO ENGAGE 'FINANCIAL ADVISORS' FOR THE PURPOSE OF~~

Formatted: 2. Heading 1

Commented [AP1]: From IESO according to white paper who would collect the payments and remit to OPG.

Commented [BA2]: Also confused about comment: Should that be "…..received by OPG Trust"

Commented [AP3R2]: Yes, you are right. Corrected.

~~DETERMINING OPTIMAL FINANCING STRUCTURES, E.G. DEBT COVENANTS, TERMS AND CONDITIONS SUCH AS IF TO BE CALLABLE, REDEEMABLE, ETC. [ALSO SEE BELOW.]~~

Commented [JK4]: Check with SIFB or CMD on the right terminology.

Commented [FC5]: To me this is part of the terms and conditions

Formatted: 2. Heading 1, Indent: Left: 0"

~~BORROWING~~

Formatted: 2. Heading 1

- ~~THE 51% FINANCING CONDUCTED BY OPG TRUST AND THE 5% FINANCING VIA OPG WILL INITIALLY BE FINANCED THROUGH A SHORT TERM CREDIT FACILITY WHICH WILL BE OBTAINED BY OPG. OPG HAS COMMUNICATED THAT THIS MAY BE THROUGH SHORT TERM DEBT, RAISED FROM THE CANADIAN MONEY MARKETS.~~

  - ~~OPG STAFF FURTHER CLARIFIED THAT THIS WOULD BE FACILITATED THROUGH A NEW FACILITY AND TO BE PUT IN PLACE BY OPG TRUST AND NOT ANY OF THE EXISTING FACILITIES OPG CURRENTLY HAS IN PLACE.~~

Commented [JK6]: Did I get this right?

Commented [FC7]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- ~~LONGER TERM DEBT WILL BE ISSUED AS SOON AS POSSIBLE, SUBJECT TO MARKET TIMING CONSTRAINTS.~~

  - ~~OPG TO RETAIN 3 DEALERS TO ADVICE ON THE LONG-TERM BORROWING AND FINANCING OF THE GA.~~

  - ~~THE OFA IS ALSO EXPECTED TO RETAIN A DEALER TO PROVIDE DUE DILIGENCE AND INDEPENDENT ADVICE FOR THE PROVINCE'S EQUITY INJECTION [TBC] INTO OPG AND LONG-TERM BORROWING BY OPG TRUST [TBC].~~

Commented [JK8]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

- ~~THE LONG TERM DEBT ISSUED BY OPG TRUST MAY ALSO BE CALLABLE TO BUY BACK THE BONDS ONCE THE FINANCED GA STARTS TO BE REPAID. [TBC]~~

Commented [JK9]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

Formatted: 2. Heading 1, Indent: Left: 0"

EQUITY INJECTION PROCESS OVERVIEW ~~MECHANISM~~

~~OVERVIEW~~

Formatted: 2. Heading 1

- IESO proposes that OPG Trust would purchase the GA~~E~~ deferral asset on a monthly basis. The ~~The~~ Province would, therefore, be required to ~~is expected to~~ provide monthly equity injections to OPG.

Formatted: Space After: 0 pt, No bullets or numbering

- In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of ~~at a value of~~ $20 per share. [for discussion]

Formatted: 7. Bullet 2

The proposed process would be as follows:

- ~~These share issuances currently environed envisioned to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].~~

  - ~~This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the `GA financing program has subsided.~~

  - ~~Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.~~

  ~~[TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).~~

  - ~~[TBC] OPG staff have indicated that the current plan is to pay no interest or dividends for the 44% equity injection. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in or would potentially entail risks described under the Consideration section below.~~

  ~~Process~~

- OPG Trust would receive ~~the~~ notice from the IESO to purchase the asset from IESO.

- The Province~~OFA~~ in turn would ~~A notice would be~~ received notice from OPG for~~by~~ the OFA ~~for~~ to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

- Separately, OPG and OPG Trust would ~~take out~~raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.`

~~**[let's make this as general as necessary]**~~

Decisions and Approvals Required for Province's Equity Financing

Commented [FC10]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [AP11]: OPG TB has mentioned a 10% premium on buyback, but this could still be construed as a benefit as the 10% return over a 10 year period does not reflect the risk premium. Threatens the GBE status of OPG, which could lead to full consolidation in Public Accounts.

Formatted: 7. Bullet 1

Commented [JK12]: I think this is because the financing and administrative costs would be recovered through ratepayers?

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

    - The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares return.

    - Note that as with the Hydro One capital contribution, this capital contribution would be reflected on the Province's balance sheet (being and exchange of assets – cash for shares) rather than the statement of operations and would, therefore, not result in a fiscal impact to the Province

~~[HOW PROVINCE WILL RECEIVE RETURNS]~~MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Commented [JK13]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [JK14]: "in" missing in front?

Formatted: 2. Heading 1

...Under the mechanism, the Province will be providing an equity injection into OPG whothat would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection. The following methods couldan be utilized to ensureallow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG shwould expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity.

~~Cumulative Dividend~~

~~The Province and OPG could~~

~~1.~~ Redemption of Shares at a Premium

Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financings. Under such a scenario, an appropriate pricing or premium on

buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

3.

~~Other Considerations:~~

~~OPG will use the Province's equity injection to purchase subordinated debt from OPG Trust. The Province should be requesting the same return on its equity contribution as to the rate OPG receives from OPG Trust. This return could be higher than the Province's cost of funds.~~

~~Scenarios:~~

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.

[TBC] TBS would provide an annual allocation, with a three-year program review cycle.

•

~~***END OF MAIN SECTION***~~

THE TEXT BELOW IS EQUITY INJECTION DISCUSSION GATHERED FROM A COUPLE OF NOTES. LET'S REVIEW WITH EYE TO DETERMINING WHICH, IF ANY POINTS BELONG IN MAIN SECTION ABOVE AND ORGANIZING REMAINING POINTS.

OTHER PROVINCIAL EQUITY INJECTION ADDITIONAL CONCERNSCONSIDERATIONS AND RISKS / POTENTIAL RISKS TO THE SPV ARRANGEMENT

these share issuances currently envisioned to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].

- This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
- Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
- [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).
- [TBC] OPG staff have indicated that the current plan is to pay no interest or dividends for the 44% equity injection. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in or would potentially entail risks described under the Consideration section below. OPG staff have signaled to CEFD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection'inflection' point where the ratepayers start to pay down the deferred GA.
- Under the current plan, only the 56% funded through capital markets, directly by OPG Trust or by OPG, would be paid interest over time.
- While the implementation of theis proposed currently viewed as with no flow through of interest or dividends over timecouldincurr
  - or the SPV arrangement could be viewed as receiving an interest free loan or subsidy from the Provinceassociated withborrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g. through a form of dividend reinvestment planA preferred equity structure

2) EQUITY INJECTIONS

KEY POINTS:

Commented [FC15]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [AP16]: OPG TB has mentioned a 10% premium on buyback, but this could still be construed as a benefit as the 10% return over a 10 year period does not reflect the risk premium. Threatens the GBE status of OPG, which could lead to full consolidation in Public Accounts.

Commented [BA17]: I'll stand to be corrected by you CFA types, but in economics an inflection point is the point where a curve changes from concave to convex or vice versa. Here we are talking about two lines are crossing. Just want to make sure we have correct terminology so that we don't get called us out later by some (other) smarty pants.

Commented [SQ218]: How?

The pro-rata that occurs is on the IESO asset being purchased.
-The Province keeps its interest costs outside the Trust as its an equity injection.
-Assume OPG flows through its interest costs through operations?
-How does OPGT pay for debt-servicing cost of the debt it is raising?

Commented [AP19]: This is not necessarily true as an acceptable premium associated with the buyback feature would mitigate this concern. Maybe keep the subsidy issue separate as mentioned above? The main risk is that the Province will be paying several hundred millions to billions of interest over time with no cash flow from OPG. OPG in turn would have the same amount of cash on its books – either idle or used for their own initiatives.

Commented [JK20]: Explain. Is this risk to OPG Trust, OPG or the Province.

- The [legislation, corporate rules, corporate structure, by-laws etc.] that allow for equity injections should have consideration that it is in the Province's ***economic/financial interests*** to proceed with monthly equity injections in order to finance the trust, with appropriate return on risk.

- Equity injections can be viewed as a subsidy if the province is not compensated for its risks.
    - This may be mitigated with a redeemable feature for the equity at a properly valued premium.
- Consideration is also required for the Province's cash needs in order to finance the borrowing for equity injections.
    - This may be mitigated with ongoing dividend payments and/or a redeemable feature for the equity.
    - Issuance of preferred equity may allow for frequent, stable dividend payments, but may be viewed as OPG debt by credit rating agencies.
    - A redeemable feature would provide for sufficient cash for the province to pay back bondholders.

Details

- The monthly equity injections from the Province to OPG may be considered a subsidy due to the frequency and large outstanding balance.
    - A GBE receiving subsidies frequently for a long period of time (in this case monthly and for several years) may threaten the GBE status since the GBE could be portrayed as being reliant on government funding.
    - This risk is mitigated as only 44% of the GA structure is funded through equity injections and that OPG Trust is a SPV.
- It may be necessary to quantify the overall return from the GA financing structure to the Province to ensure that the Province is "made whole".
    - There is a cost of borrowing associated with the 44% equity injection.
    - If the return from the GA Financing structure is below this amount, the economic rationale behind the equity injection may be lacking.
    - The risk attached to the equity injection (and its eventual composition of the subordinate debt of OPG Trust) may also have to be quantified as a return when considering the feasibility of the initiative.

Commented [SK821]: Or maybe to put it another way, nothing here should preclude the Province's right to return a sufficient return on its equity investment given the risk premium.

Commented [SK822]: Where is this written? Can i have the source?

Commented [AP23R22]: IPSAS 1 defines a GBE as an entity that has all the following characteristics:
(a) Is an entity with the power to contract in its own name;
(b) Has been assigned the financial and operational authority to carry on a business;
(c) Sells goods and services, in the normal course of its business, to other entities at a profit or full cost recovery;
(d) Is not reliant on continuing government funding to be a going concern; and
(e) Is controlled by a public sector entity.

Commented [AP24R22]: From PSAB PS 3070
06 A **government business enterprise** is a government organization that has all of the following characteristics:
(d) It can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity.
.30 A government business enterprise should, in the normal course of its operations, be able to maintain its operations and meet its liabilities from revenues received from sources outside of the government reporting entity. These revenues include not only amounts from the sale of goods and services, but also transfers 3 received from other governments or sources outside of the government reporting entity.
.32 A government business enterprise differs from other government organizations in its relationship to the government, and its objectives, and operations. A government enterprise represents a financial asset of the government and given its autonomy, business-oriented objectives, and financial self-sufficiency, equity accounting is appropriate.

- [For example, the economic rationale behind the Hydro One one-time equity injection was that it would help maintain Hydro One's valuation for the IPO. If Hydro One had borrowed debt instead, its value could potentially be lower, leading to lower proceeds to the Province. Taking valuation multiples into consideration, every dollar in equity injected likely resulted in a significantly higher return than a dollar].

- If the Province is not being seen as compensated for its risk behind the equity injections, then the equity injections could be viewed as a subsidy.

- Having a redeemable feature on the equity injection for the Province, with a properly valued premium, could allow the Province to be made whole.

  - Would also allow the return of capital to the Province to help settle its external debt obligations related to the equity injection.

- If the equity injections were in the form of preferred shares with a cumulative dividend, it could allow for frequent cash flows from OPG to the Province.

  - The shares could be redeemable at par after a certain lock-up period (similar to Hydro One Series 1 and 2 preferred shares).

  - However, credit rating agencies may consider this as a form of debt which could affect OPG's credit ratings or the Trust's ratings.

  - The dividend yield would have to reflect, to a certain extent, the risk or cost of the Province.

Bruno,

Some comments. Following up with OPCD to see if Energy will take the lead. Also, will be working with Carlos and TD consultants on the value of the shares.

Thanks.

Hopefully, we can regroup on the equity injection following a busy short week. Hoping to regroup with a sit-down to discuss the path forward.

Thanks,

John

GA FINANCING – EQUITY INJECTION OVERVIEW

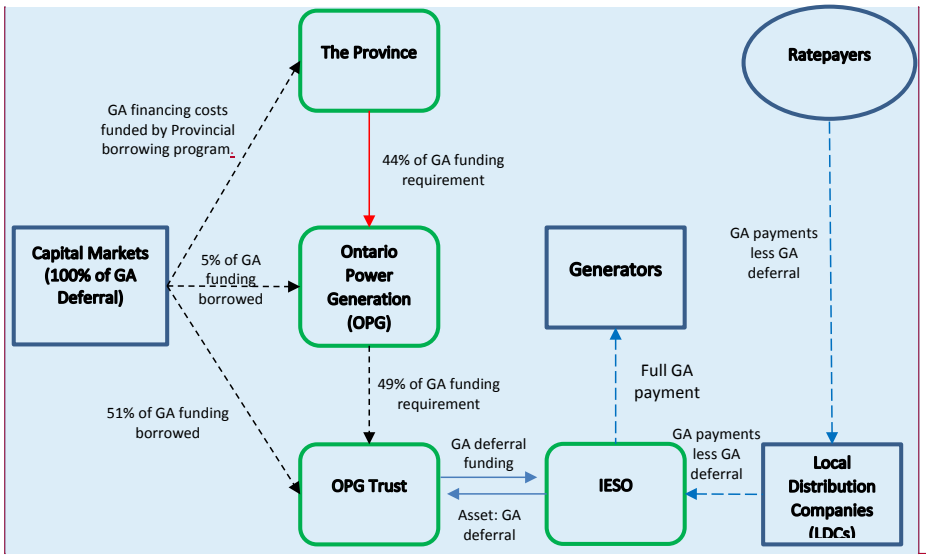
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

Commented [BA2R1]: See rewording

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC3]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

Commented [JP4]: Book value or some other valuation needs to be worked out. Not clear it is $20

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]
- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own ~~or through the OEFC~~ as it currently does?]
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [JK5]: I think this is because the financing and administrative costs would be recovered through ratepayers?

Commented [JP6]: The financing costs still need to be worked. To be determined.

Commented [DS7]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

Commented [JP8]: Confirming with OPCD to see if Energy will take the lead.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

Commented [JK9]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC10R9]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by

Commented [FC11]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing. That would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

Commented [JP12]: There should be no carrying costs nor return on investment on a consolidated basis. My understanding is there is no dividends.

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

GA FINANCING – EQUITY INJECTION OVERVIEW

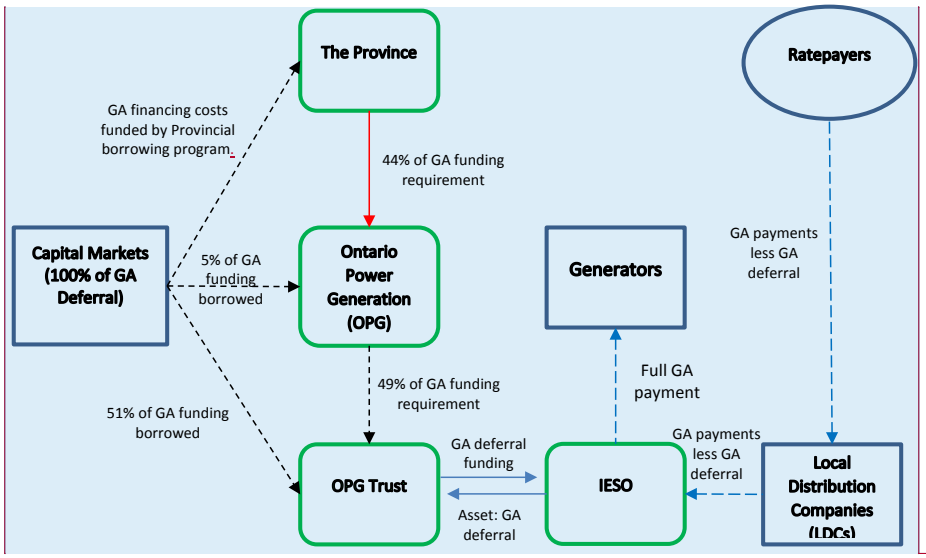
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

Commented [BA2R1]: See rewording

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC3]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK4]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS5]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

Commented [JK6]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC7R6]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by

Commented [FC8]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing. Hi Ron,

I have essentially conveyed that to Toby.

I was thinking more from the perspective of enhanced role for the division than any concerns about the limited or narrow approach CMD may be taking.

Hi John,

This procurement path idea comes from Gadi and Mike.

I would suggest that if MOF Legal wants to express considerations on the process that they convey them to CMD directly.

Do you have concerns that if this path is chosen that it could ultimately delay or limit the advice available to the Province, compared to the tight timelines and the advice other entities can access in the interim?

Ron

GA FINANCING – TD'S ADVICE SOUGHT ON CAPITAL CONTRIBUTION MECHANISM

The Capital Markets Division of the Ontario Financing Authority require TD advisors' recommendations and detailed descriptions of options vis-à-vis the proposal to provide capital ~~equity injection~~ to the Global Adjustment (GA) deferral proposal as part of the larger Ontario's Fair Hydro Plan, as announced on March 2, 2017.

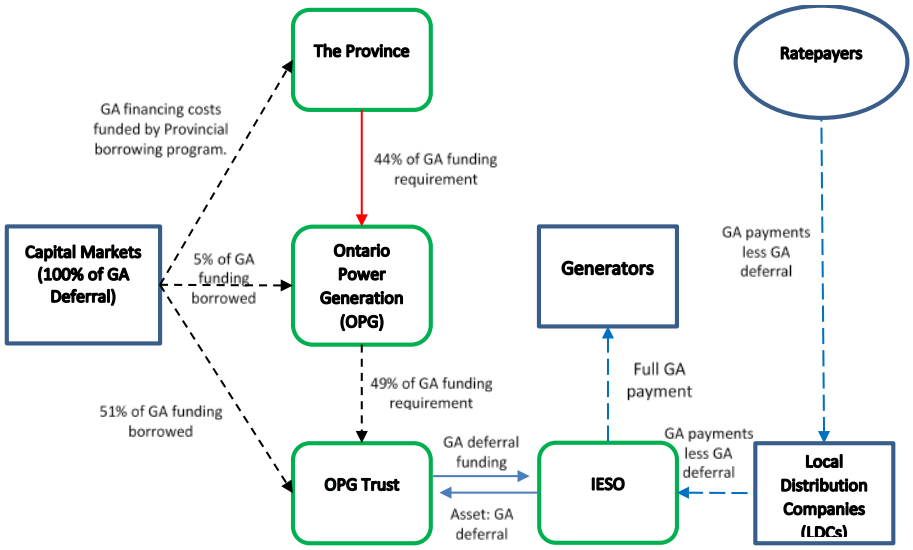
Formatted: Font: 12 pt

Context

Formatted: Font: 12 pt

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its capital

contributions ~~equity injection~~ through its annual borrowing program - from issuing debt into the capital markets.

Options for Equity Injection from TD Securities

The advice sought from TD could be summarized as follows:

When developing options for structuring the capital contributions ~~equity injection~~ from the Province to OPG for the~~amounting to~~ 44% of the ~~debt incurred~~financing requirement ~~-~~by the OPG Trust ~~set up~~ to purchase the regulatory asset from IESO, a number of ~~the following~~ underlying principles need to be addressed.

- While the Province is a sole shareholder of OPG, advice is sought to address potentially higher degrees of complexity of shareholder structure.
    - For example, options should include options for mechanism to create a level of certainty for recovering the capital ~~money~~ provided to OPG ~~no matter if~~whether this is done as common equity or through other mechanisms, including the potential used of preferred shares.~~as 'equity injection' for the purpose of the GA deferral proposal~~.
- Under the current state of discussion, t~~T~~he capital contribution ~~equity injection~~ w~~ould~~~~ill~~ be provided on a monthly/quarterly basis to OPG by the Province.
- The capital contribution ~~equity injection~~ results in the Province, the sole shareholder of OPG receiving common shares, or another type of security, from OPG whose valuation is based on a determined and agreed upon methodology. The Province will require an internal discussion before proceeding with a dialogue with OPG on the details.
- This methodology can be as simple as book value or can be based on some ~~kind~~ form of a discounted cash flow (DCF) mechanism but TD's expertise in structuring deals is sought in this request [keeping in mind the first bullet above].
- Given the time limited nature of the capital contribution ~~equity injection~~ the Province would anticipate~~s~~ repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder, as well as having vested legislative authority, can require OPG to issue dividends annually.
- The shares issues by OPG can include some ~~kind~~ form of optionality to be exercised by the Province as and when repayment is ~~required~~due under the GA deferral plan. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, ~~given the potentiality of a new government's different policies subsequent to future elections~~with any number of possible causes, e.g. changes in government policy.
    - ~~OPG c~~Could~~an~~ the structure involve issuing~~e preference~~ preferred shares ~~again~~ with some ~~kind~~ form of optionality for repayment. Preferred~~ence~~ shares, especially those with a specified annual dividend schedule could potentially~~will~~ ensure that the Province remain~~s~~ whole in terms of the incremental interest costs it would incur~~s~~ on the ~~equity injection~~capital contribution.
- Other factors to be considered for repayment:

Formatted

Commented [JK1]: I suggest we delete this and have TD opine on options.

- Should the senior and subordinated debt be ranked as the same and if so does this impact market access
- Should the senior debt be repaid first or should repayment be on a pari-passu basis
- OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.
- Eventually, the Province would need to have a discussion with OPG on the path forward.

Commented [JK2]: Not sure if this is needed here.

Summarizing Issues to Work Around [Pls. Add More CMD and FTD]

- The Province will need to consider various levels of options for certainty in being able to recover its capital ~~getting the money back,~~ as stipulated in the GA deferral plan.
- The Province needs to be kept whole with respect to any financial cost that may arise from making and carrying forward the capital contributions.
- For regulatory purposes, there may be an interest in insuring that the capital contributions ~~equity injection is~~are considered a true equity in OPG's capital structure [TBD but still require consideration].
- The plan require that OPG operates on a commercial basis for the SPV with its Board needing to make independent decisions[, thus the need to have a discussion].

COMMERCIALLY SENSITIVE AND CONFIDENTIAL

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with ~~O~~ntario ~~P~~ower ~~G~~eneration to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV)~~henceforth~~ referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be ~~required~~ structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
  - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
  - Annual payments will be received by OPG Trust for financing costs.
    - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions~~, specialized features~~ such as if to be callable, redeemable, etc. [Also see below.]

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
  - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.

Commented [JK1]: Not sure if we want to keep conveying that we're doing something to goal seek, regardless of original intent

Commented [AP2]: Legislation being proposed from the White Paper suggest that IESO would collect these payments to be remitted to OPG Trust.

Commented [JK3R2]: Also, confirmed through OPG staff.

Commented [JK4]: Check with SIFB or CMD on the right terminology.

Commented [FC5R4]: To me this is part of the terms and conditions

Commented [JK6]: Did I get this right?

Commented [FC7]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- Longer term debt will be issued as soon as possible, subject to market timing constraints.~~-~~
  - OPG to retain~~s~~ 3 dealers to advice on the long-term borrowing and financing of the GA.
  - The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].
- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK8]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK9]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province ~~will~~ is expected to provide monthly equity injections to OPG
- In return, OPG ~~will~~ would issue new shares to the Province at a value of $20 per share.
- These share issuances ~~will~~ currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

Commented [FC10]: Not quarterly?

Commented [FC11]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ212]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
    - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
    - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Hi John/Bruno,

I have reached out to TPD on the OESP question, but this item hasn't been routed to them yet and they are not sure when this will get to them. They suggest us to reach out to Tax and Benefits Administration (TBA) for more information since this item is sitting with them at the moment.

Please let me know if you want me to reach out to TBA.

Thanks,
Gavin He

Subject: Expanding the Ontario Electricity Support Program

Hi Lesley,

Hope you are doing well! As part of the Fair Hydro Plan announcement, it says that Ontario is exploring automatic qualification for customers who are enrolled in other provincial low-income social programs under the OESP program. Do you know who we can reach out to the further check on this statement?

Here's the news release that we are referring to:

https://news.ontario.ca/mei/en/2017/03/enhancing-electricity-support-and-conservation-programs.html[news.ontario.ca]

Subject: RE: FHP - questions on taxation
Date: Thursday, April 20, 2017 9:57:51 AM

Hi Adam,

Nothing to add.

Regards,
Salman

From: Adam Prokop
Sent: Thursday, April 20, 2017 9:50 AM
To: Salman Qadir <Salman.Qadir@ofina.on.ca>
Cc: Bruno Amara <Bruno.Amara@ofina.on.ca>; John Kim <John.Kim@ofina.on.ca>
Subject: FHP - questions on taxation

Questions so far

Three things to know

1. The legislation amendments are to ensure that the profits from the Trust are not taxed or part of the OEB rate-setting process.
2. The Financing Entity (OPG Trust) is intended to be excluded from deemed assets and liabilities (i.e., the rate base)
3. OPG will essentially be acting on behalf of the Financing Entity (no mention of how the Financing Entity will operate, e.g. with an independent board).

Questions

1. Section 53.1(1.) would have the assets and liabilities of the Financing Entity (OPG Trust) excluded from deemed assets for the OEB hearing. The equity injection from the Province (common or preferred) would not form part of the Trust – even if the cash received is given to the Trust, the equity remains on OPG's books until redemption. Will there be some reference to exclusion of these equity injections from the deemed debt/equity ratio?
2. The Financing Entity term has not been defined yet, but will the definition be a) flexible enough to incorporate another FE in case of a replacement event and b) narrow enough to prevent OPG from establishing another FE unrelated to the Fair Hydro Plan in order to avoid payments to OEFC?
    a. Section 53.1(1.2) is amended to state that OPG can create one or more subs/trusts/SPEs to **more efficiently conduct its activities** which could be outside scope of the FHP.
3. The amendment to Section 78.1 (4.1) would exclude all profits from the Financing Entity to OPG from OEB rate decisions – will there be a cap on this amount for reasonableness, or will the OEB ensure that profits earned are reasonable at another checkpoint (since it has been contemplated that an attestation for the financing plan from an officer of the Financial

Service Manager could be used rather than an OEB review)?

   a. It looks like they are going the OEB route (**all fees charged by OPG as the FSM shall be approved by the OEB**) but just want to confirm if this is now the intended direction.

4. Should Section 89 of the Act also explicably state that losses from the FE could not be applied as a reduction to amounts owing to the OEFC?

Anything else Salman?

Kind regards,

Subject:	RE: Fair Hydro Plan - Provincial Support Agreement - Term Sheet <comments from TD>
Date:	Friday, April 28, 2017 11:26:13 AM

From the conversations that I've been involved with Blakes, Energy, TBS, OPG, etc., one of the challenges that they're trying to overcome is the perception of the banks providing advice to OPG that this is a securitization transaction, which, while it has many similarities, it is not. It seems that TD is also falling into this trap in their analysis, so it would be worthwhile to try to move them off of this perspective for their next round of advice on this, which will have to be in advance of next Tuesday morning when we'll be meeting with the Deputy and the Minister's office in advance of this item going to Fiscal Prep on Wednesday.

I understand where Susan and the TD team are going on this, but TD needs to take the Province's perspective on this, not come at it from the angle of how to structure this to make the financing as easy as possible. We will not, as many of you are aware from our previous discussions, provide anything except the skinniest possible guarantee that would make this financeable, while still ensuring that the appropriate accounting treatment is possible to be achieved.

Thanks,
Gadi

Subject: Fair Hydro Plan - Provincial Support Agreement - Term Sheet

Mike, Jim, Carlos

Please see below for our comments on the draft term sheet for the Provincial Support Agreement. Let us know when you would like to discuss further. Also, please note that we have not sent the comments or the term sheet to Steve Ashbourne at Blakes. Please let us know if you would like us to do so.

Attached is a sample servicing guarantee for a general securitization transaction to provide examples of common features. Note that the sample guarantee is formatted for a corporate transaction and would have to be adjusted accordingly. Also attached is a brief description of the servicing obligations typically covered by a servicing guarantee.

In reviewing the term sheet, we believe that the Servicing Guarantee is narrow in scope.

- Not a conventional servicing guarantee for securitization transactions
- It may not be acceptable for the rating agencies, particularly if monthly remittances of collections from the LCDs are necessary.

As drafted, it solely allows for the appointment of a replacement servicer by the Guarantor upon the occurrence of a Servicer Default (due to breach of servicing performance).

- It does not cover any losses arising from a breach of the electricity vendors' servicing obligations (typical servicing obligations described in attachment)
- It would preclude the monthly remittance of collections by the LDS to IESO for deposit into the Trust's collection account.

Other Items of Consideration:

- Not typical for the Indenture Trustee to be obligated to provide any reporting to the Guarantor
- Confidentiality would be difficult to maintain for a public issuance. The guarantee is a material component of the transaction and will have to be disclosed in detail in the IM, and possibly posted as a material contract
- Consistent with other "AAA" transactions, performance under the guarantee is expected to occur promptly, typically within 2 business days for payment obligations
- Guarantee does not cover a market disruption and the inability to refinance existing due and maturing issuances (including ABCP)

Hello everyone
I'm hoping to have a quick kick off call this week amongst ourselves to discuss developing the work plan for this portion of the plan. OPG will need some input from the Province in order to structure the equity injection process on our side.
I will send a meeting invite for later this week with a brief agenda of some of the items we will need to consider.
Hope to talk to you all then.

Regards,
Clara

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

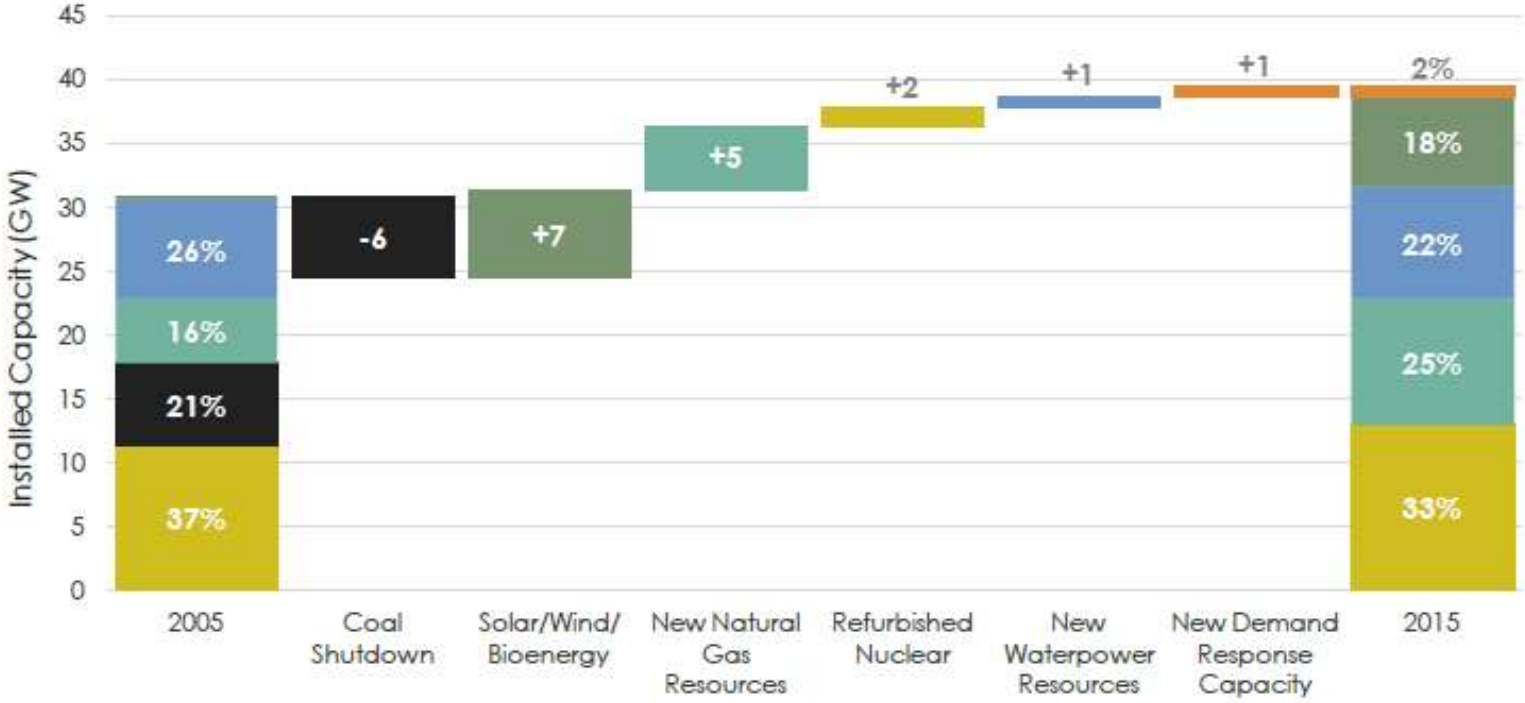
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



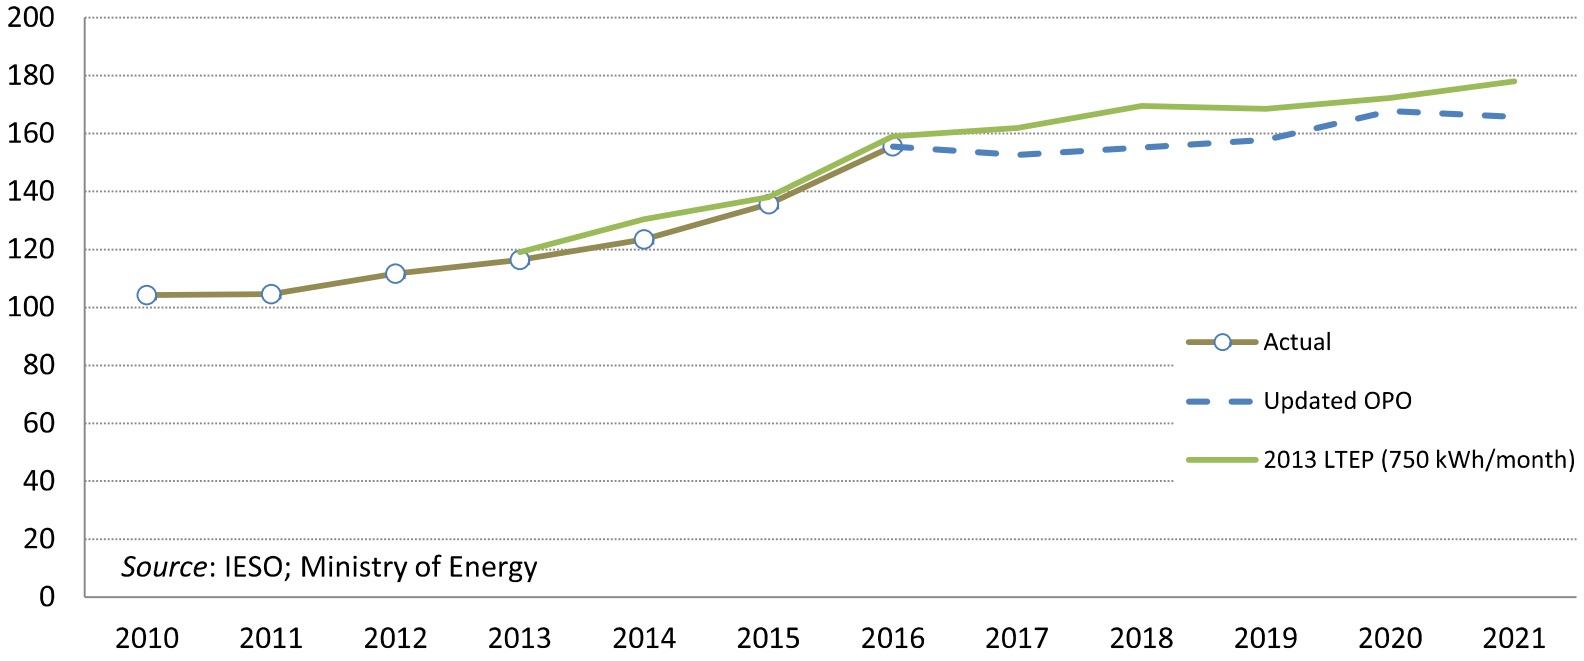
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



CONFIDENTIAL CABINET DOCUMENT

Context – Recent and Existing Government Funded Electricity Cost Mitigations

($Millions)	14-15	15-16	16-17[1]	17-18[1]	18-19[1]	19-20[1]	20-21[1]	Who Benefits
Ontario Clean Energy Benefit (OCEB) [2]	1,078	860	***OCEB ended on December 31, 2015***					• Residential customers, farms, small business (i.e., 10% off, on up to 3,000 kWh/month)
Ontario Rebate for Electricity Consumers (OREC or 8% rebate)*	-	-	300	1,100	1,200	1,200	1,200	• Residential customers, farms, small business (i.e., amount equal to the 8% Provincial portion of HST)
Ending Debt Retirement Charge (DRC) for Residential[3]	-	85	330	330	--	--	--	• Residential customers (i.e., saves about $70 per year for a typical residential consumer)
Northern Ontario Energy Credit (NOEC) [4]	24	26	25	25	25	25	25	• For eligible northern Ontario residents (i.e., for 2017, single people can receive up to $148,and families up to $227, depending on adjusted family income)
Ontario Energy and Property Tax Credit (OEPTC) (Energy component only)[4]	429	444	450	460	470	481	481	• For eligible low-to moderate-income individuals and families, & qualifying seniors (i.e., for 2017, up to $227, depending on adjusted family income)
Northern Industrial Electricity Rate Program (NIERP)	108	120	120	120	120	120	120	• Qualifying northern Ontario large industrial electricity consumers (i.e., rebate of 2cents/kilowatt-hour)
TOTAL	**1,639**	**1,535**	**1,225**	**2,035**	**1,815**	**1,826**	**1,826**	

Notes:

1. 2016-17 to 2020-21 based on forecasted numbers
2. OCEB ended December 31, 2015
3. 2015-16 estimated for 3 months of reduced DRC revenue. Estimated impact up to March 31, 2018.
4. Part of the Ontario Trillium Benefit. While related to energy generally, key policy driver for OEPTC when introduced in 2010 was electricity, as prices were forecast to rise, while fossil fuel prices, particularly natural gas, were low and falling.

CONFIDENTIAL CABINET DOCUMENT

Context – Recent Actions Taken To Mitigate Electricity Rates

- Following the 2016 Throne Speech, the several actions were announced to further reduce electricity costs.

1. As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8%.

2. Expanded support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.

3. Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

4. Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

5. Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – an average annual savings of $15 million.

Rate Mitigation Proposal

- The following approaches are proposed:

1) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
   - Smoothing Mechanism (i.e., 25% reduction); and
   - Implementation Model.

2) Enhancing competitiveness for Class B electricity consumers (i.e. manufacturing) by lowering the eligibility threshold for Industrial Conservation Initiative (ICI).

3) Helping vulnerable electricity consumers by enhancing electricity support and conservation programs and shifting cost onto the tax-base:
   - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
   - Ontario Electricity Support Program (OESP) Expansion;
   - New Affordability Fund; and
   - On-Reserve First Nations Delivery Credit.

4) Ongoing activities to bend the future cost curve of electricity:
   - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
   - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing option under consideration is illustrative and show potential rate mitigation measures to meet a targeted 25% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to Regulated Price Plan (RPP) -eligible;
  - Rate increases would be capped at Consumer Price Index (CPI) for the first four years. Subsequent years would be set above CPI in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

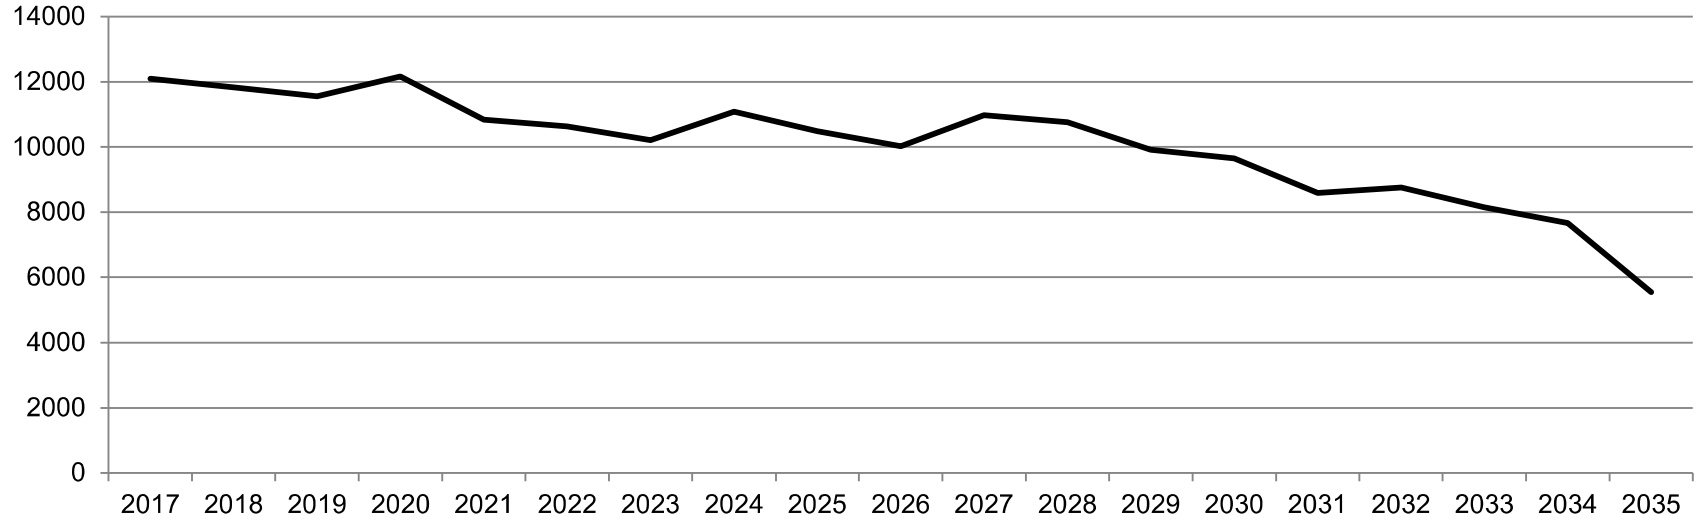
CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators**.**
**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

GA Smoothing – Global Adjustment Forecast

- The amount of Global Adjustment (GA) is forecast to decrease through the forecast period. Several factors contribute to the decline of GA, including:
  - Expiry of electricity generation contracts;
  - Cost of existing contracts reduced due to Inflation; and
  - Higher wholesale electricity prices due to higher natural gas/carbon prices, higher demand and reduced nuclear generating capacity.

Forecast Global Adjustment Cost (nominal $ million)



CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Expected Life of Electricity Generating Assets

- Gas, wind and solar generators are typically contracted for a 20-year period (e.g., with the Ontario Electricity System Operator (IESO), etc).
  - Nuclear and hydroelectric generators are contracted for a much longer period or regulated by the Ontario Energy Board (OEB) on a cost-of-service basis.
- While it is likely that gas, wind and solar generators will be able to operate beyond their current contracts, IESO advises that generators will need to decide what level of capital investment is appropriate for ongoing operations (i.e., by replacing and/or refurbishing major facility components).
  - In IESO's 2016 Ontario Planning Outlook (OPO), it was assumed that the service lives of generators could be extended beyond their contract term based on additional investments and ongoing costs. **Note:** This was not an assessment of the cost/benefits or a prediction of what the generators would actually do at the end of their contracts.
- The table below outlines IESO's current estimates for service lives of gas, wind and solar facilities. The ongoing service lives of these facilities depend on: initial facility design & build, operating activities (e.g., hours of operation, etc.) and level of facility maintenance (i.e., ongoing component repair and replacement).

Technology	Contract Life (yrs)	Expected Life (yrs)	Expected Cost Post-Contract Life
Gas	20	Up to 30	Life varies with initial design, how it is operated and maintained.
Wind	20	Up to 30	Older technologies may deteriorate faster. Elements such as foundations and electrical integration can last longer.
Solar	20	Up to 30	Performance deteriorates to about 80% by end of contract. Some facilities built in the initial contract periods may deteriorate more; however, technology is improving rapidly. Components need to replaced 5 to 30 years depending on design.

Change from Forecast		**-25%**	**-25%**	**-25%**	**-28%**	**-25%**

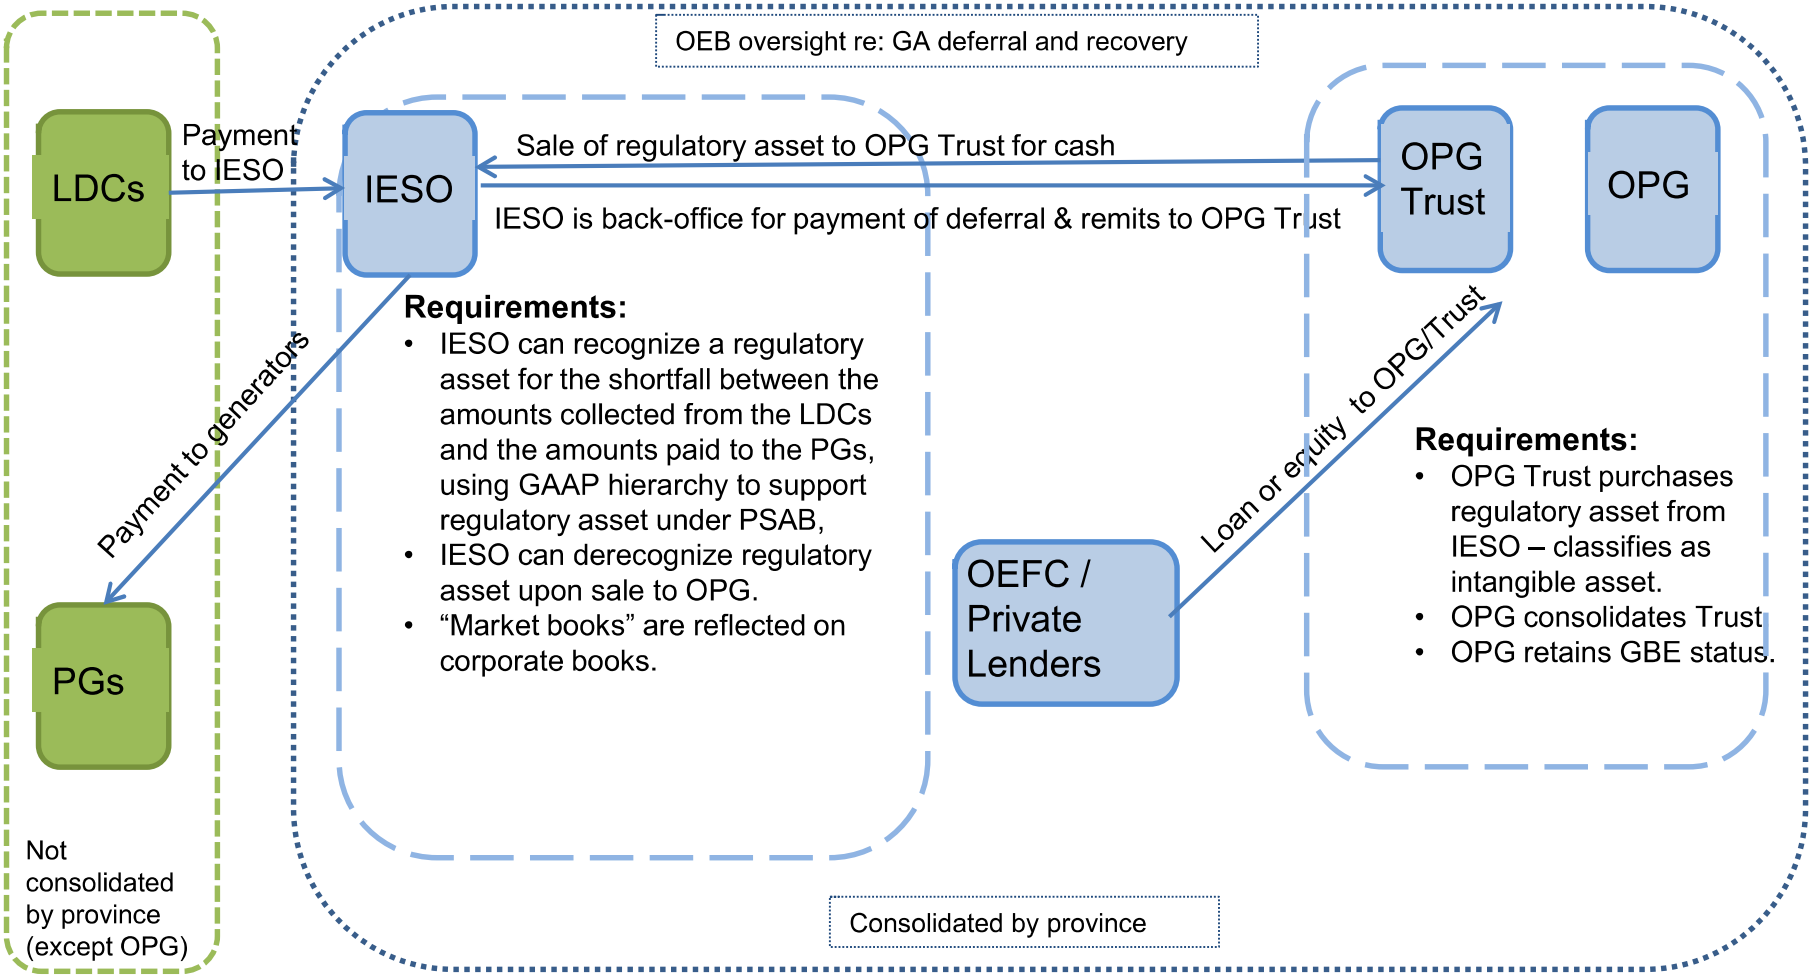
Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%
Change from Forecast		-2%	-2%	-2%	-2%	-2%

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

B. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



CONFIDENTIAL CABINET DOCUMENT

Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

B. GA Smoothing – Accounting Considerations

- OPCD advises that analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure and length of deferral/recovery increase risk and decrease transparency
- If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG will result.
- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

B. GA Smoothing – IESO Considerations

- The Electricity Act enables the Independent Electricity System Operator (IESO) to recover from ratepayers the amounts paid to generators, distributors or other contracted entities.
- The accounting advice received by IESO is that reflecting market balances and regulated assets is a more appropriate presentation for its financial statements going forward.
- IESO is characterized as an "Other Government Organization" (OGO) and consolidated on a line-by-line basis into the Provincial books.

Issue	Response
1. Can IESO adopt regulatory accounting?	• Public sector accounting does not address regulated assets. • Guidance can be drawn from other accounting bodies. • US Federal Accounting Standards Advisory Board (FASB), US Governmental Accounting Standards Board (GASB) and International Accounting Standards Board (IASB) do provide guidance. • FASB accounting standard 980 and IASB have specific references that support the adoption of regulatory accounting. **Conclusion:** There is a hierarchy of accounting principles that support this approach.

B. GA Smoothing – IESO Considerations

Issue	Response
2. Can IESO recognize the GA deferral as a regulatory variance account?	Criteria for recognition are: • Rates are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers. • Rates are designed to recover the specific costs of regulated business-type activities. • In view of demand, it is reasonable to assume that rates will be set to recover the regulated business-type and can be collected from customers. **Conclusion:** Legislation creates the right to collection, currently and in the future. With either OEB or IESO board involvement a regulatory asset can be recognized.
3. Can IESO sell the variance account related to the deferral of the annual Global Adjustment account?	• The sale of the variance account to OPG Trust must be structured as an absolute assignment of future economic benefits of the Asset with no obligations, rights or benefits remaining of IESO. • In that case, this would represent a sale of the future right to collect these amounts from the ratepayer. **Conclusion:** Based upon proposed terms of the sale agreement, there would be no future economic benefit for IESO. Risk and rewards are entirely transferred to OPG Trust.

B. GA Smoothing – OPG Accounting Considerations

- OPG's Special Purpose Vehicle (SPV)/Trust is a stand-alone entity able to conduct business separately under a Trust agreement. **Note:** The conditions required for OPG to consolidate the SPV/Trust are outlined in the following table:

Issue	Response
1. Decision Making	• OPG must have decision making authority on the operation of the SPV/Trust (without a veto right by the Province), including naming of trustees, establishing operating plans and budgets, setting or changing financing policies. • The SPV/Trust while operating within the legislation, must be controlled by OPG to operate freely and to alter terms and conditions not specified in the legislation to ensure recovery of the deferred amounts.
2. Business Risk	• The SPV/Trust must have variability of returns as a normal business enterprise would, including such things as interest charged on deferred amounts, decisions on how to finance these deferred amounts, the ability to make / lose and keep any spread from financing.
3. Funding	• The Province cannot directly or indirectly fund more than 50% of SPV/Trust or any investment in the SPV/Trust. • OPG must own at least 50% of the most exposed equity /sub-debt in the SPV/Trust.
4. Directive	• Directive that is issued should not be prescriptive or direct OPG to set up this business. The directive should only be "guiding" i.e. to allow OPG to evaluate options and put forward to the OPG Board a recommended plan for Shareholder approval.

B. GA Smoothing – OPG Accounting Considerations (cont'd)

Issue	Response
5. Other required Attributes	• The legislation that supports the formation of the SPV/Trust must have the following attributes: – Must require interest, carrying and administrative costs be paid to the Trust to allow for Revenue recognition; – The amount to be deferred must either be specified or be calculated based on a specific formula that is not subject to ongoing decision making by the Province. **The Province cannot have the ability to override this formula;** – SPV/Trust and its debt holders will require their capital guaranteed and paid for directly by the Province if the Province revokes the legislation; and – The spirit of the legislation should be reflected in the Trust Indenture Agreement.

B. GA Smoothing – OPG's Financing Structure Requirements

KEY ELEMENTS REQUIRED TO ENSURE THE DEFERRAL OF GA CHARGES CAN BE FINANCED:

Creating the Right to Recover Deferred GA

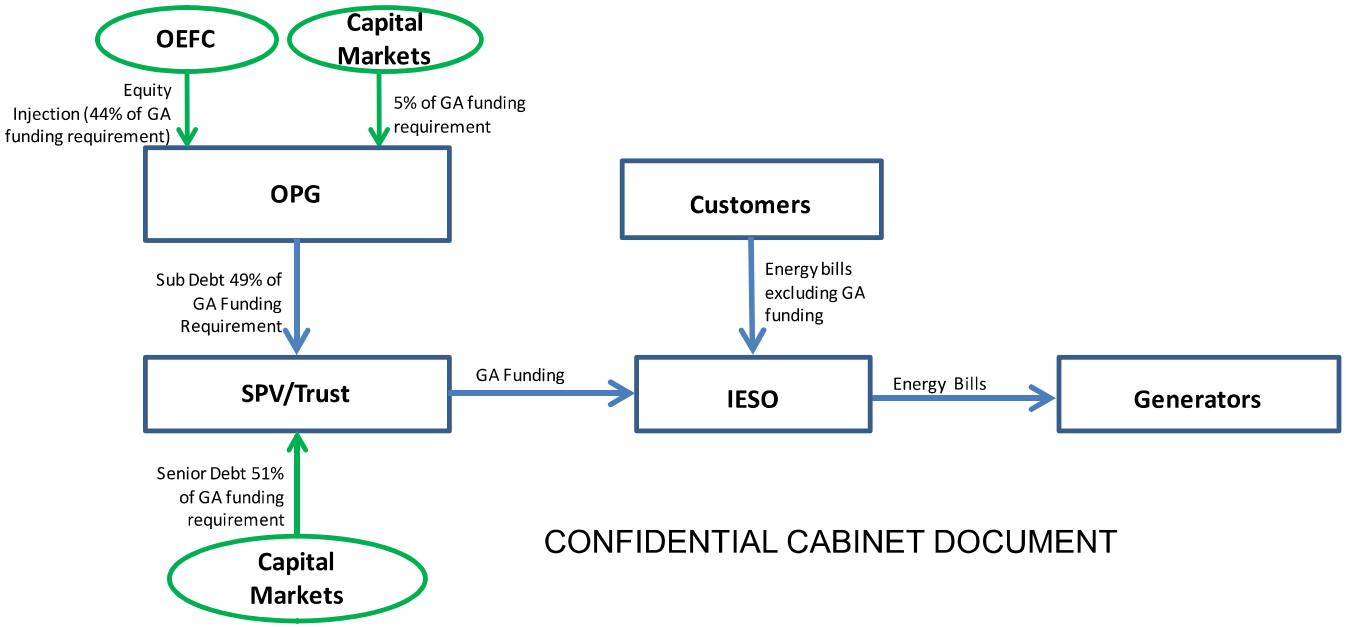
- Legislation enshrines the ability of the IESO to create a Right to charge customers in the future for the Global Adjustment (GA) deferred today including principal amount deferred, interest and other financing costs on the amount deferred and fees, expenses and other administrative costs.
- The Right can be sold to an appropriate Trust or Special Purpose Vehicle (SPV) to obtain funds to pay amounts due to generators under contracts or regulation. These SPVs are generally single purpose entities with no other operations that could add risk to the entity, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings.
- Right must be irrevocable and if the Right is amended by future governments the debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment.
- Right must specify the recovery period or the mechanism for setting the recovery rate including true up of the rate to ensure all amounts are recovered.

Economic Factors

- Limits on the recovery amount (principal, interest, fees and expenses) charged to customers in future periods must have compensating elements such as longer recovery period to ensure the full amount deferred plus interest, financing and other administration costs is recovered from customers.
- Need to balance customer relief with debt holder risk. Longer recovery periods and larger deferred balances increase risk to the debt holder of future government intervention.
- The amount required by the SPV to purchase and service the Right will be funded 51% from debt holders, 5% from OPG through capital markets and 44% from OPG via equity injection to OPG from the Province. The funding from OPG will be loaned to the SPV as subordinated debt.

B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.



CONFIDENTIAL CABINET DOCUMENT

Ontario

GA Smoothing – OEB Considerations

- Ontario Energy Board (OEB) oversight may be required as part of creating a regulatory asset.
- Subject to final confirmation, there are several other spheres for possible OEB oversight:
  - The rate payer impact of IESO deferral account and eventual repayment of the deferred Global Adjustment (GA), within pre-defined legislative parameters;
  - The administrative costs of the OPG's Special Purpose Vehicle (SPV) /Trust (e.g., as the OEB reviews and approves IESO's expenditure and revenue requirements and makes orders fixing just and reasonable rates for the Smart Metering Entity);
  - The SPV/Trust's returns (e.g., as the OEB does with OPG's regulated assets) and whether any income to OPG can be used for the benefit of rate payers;
  - The review of the final structure of the debt issuance for the limited purpose of ensuring requirements of law have been met; and
  - In out years, review of the collection of charges to ensure that collection is sufficient, and not greater than necessary, to pay debt service.
- The scope of OEB oversight will ultimately need to balance the interests and needs of rate payers, the market, OPG and the Province.

B. GA Smoothing – Ontario Financing Authority (OFA) Considerations

- Under the proposed structure, the financing of the deferred Global Adjustment (GA) costs would be effectively done in part by each of the OPG Special Purpose Vehicle (SPV)/Trust, the Province and OPG: the OPG SPV/Trust would borrow 51%, the Province 44% and OPG 5% of the required GA amounts needed to be financed.
  - In the alternative, the Province (through the OFA/OEFC) could borrow the required amounts each year, likely at a lower cost. However, the target for an arms-length trust and potential risk transfer would not be achieved.

	OPG Structured Financing	OFA/OEFC/Provincial Financing
Financing Considerations	• As the OPG SPV/Trust would be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • This would increase the cost of GA smoothing and the ultimate rate impact on future consumers. • The Trust would be exposed to interest rate changes. • Availability of debt financing may also be limited, depending on the overall amount of deferral, and the subsequent rate impact during the recovery period. OPG has cited examples of a 10% threshold on overall rate impacts of the deferral recovery amounts. • With a potential guarantee from the Province for the borrowing of the OPG SPV/Trust, OPG could see borrowing costs closer to the Province. However, this would redirect the risk back to the Province, removing the intended benefits of using this particular structure, and could add risk to the targeted accounting treatment. • With, or potentially even without a provincial guarantee, OPG SPV/Trust's borrowing could be seen as debt effectively supported by the Province by credit rating agencies and included in their analysis and determination of the Province's ratings. • If a Provincial guarantee endangers the targeted accounting treatment, it may be hard to justify the higher cost borrowing by OPG SPV/Trust to be passed through to ratepayers.	• Province's borrowing from the public markets would add to the borrowing program and the Province's gross debt. • The Province would expect to be able to finance the GA deferral at a lower financing cost than the OPG SPV/Trust, but would likely not achieve the targeted accounting treatment based on OPG's analysis. • Net debt would not increase, to the extent supported by increased equity in OPG under that model, and/or if the accounting treatment can be achieved as backed by a GA-related asset (OPG does not consider that the accounting can be achieved if the SPV/Trust is financed by the Province). • The Province's interest on debt (IOD)cost would need to be effectively recovered through the GA. – E.g., an OPG equity return to cover the cost of borrowing for the equity injection. – Or more directly if the Province is providing financing directly to the GA entity. • The cost of borrowing for the Province could change: 1. The Province's credit rating could be at risk of being re-evaluated by Rating Agencies, which may negatively impact the cost at which the Province borrows and 2. An increase in the Province`s borrowing rates, as a result of increased borrowing. The market may not have adequate demand for the Province to carry-out these borrowings without increasing the interest rate on the debt issues for GA financing and for all of the Province's borrowings. • The interest cost of GA deferral would be exposed to changes in the interest rate environment generally.

GA Smoothing – Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
  - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
  - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
  - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
  - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- Although Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA smoothing (i.e., because it is only targeted to RPP consumers), the Ministry has a proposal later in the submission to address competitiveness for Class B consumers (i.e., targeted lowering of the Industrial Conservation Initiative (ICI) eligibility thresholder from 1 MW to 500 kW).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - **Note:** Although Class B and Class A consumers will not receive the rate relief benefits of GA smoothing, both consumers will benefit from tax-basing the electricity social programs.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

- The GA smoothing proposal will accrue total interest of $25 billion based on the proposed option. This amount of interest is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.
  - An increase in the borrowing rate from 5% to 6% would increase the total interest costs by almost $9 billion and would require an extension of the financing term beyond 30 years.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there would be a negative impact on the province's fiscal plan, as shown below.

Fiscal Impact ($M)	2017-18	2018-19	2019-20	2020-21	2021-22
Bills Lowered by 25%, RPP-Eligible Only*	2,534	2,668	2,942	3,420	3,232

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

ENHANCING COMPETITIVENESS FOR CLASS B ELECTRICITY CONSUMERS

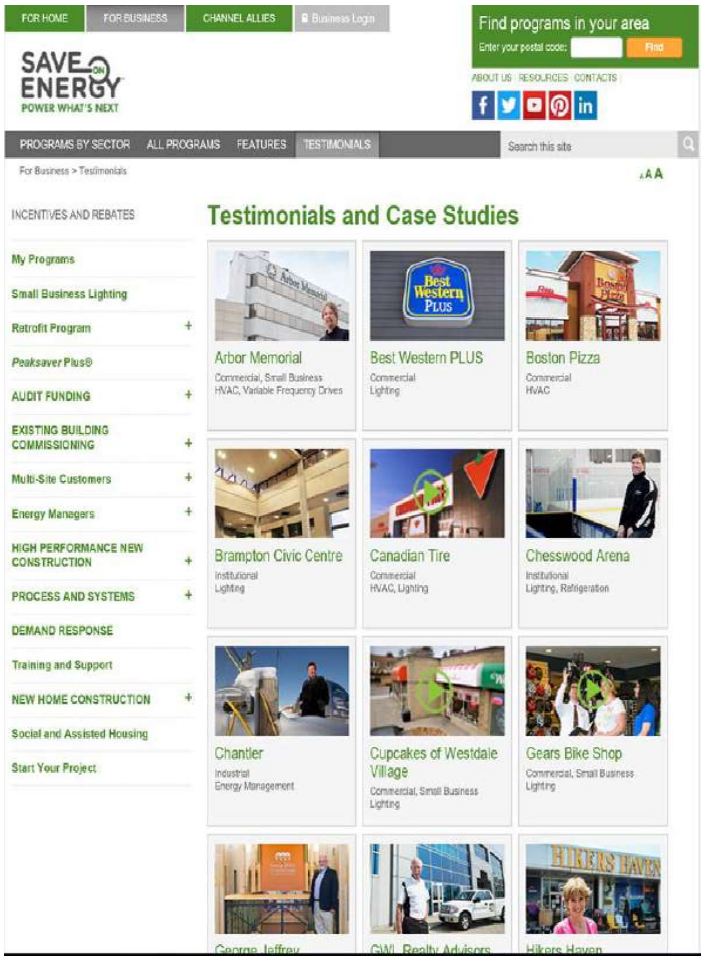
Support for Class B Consumers

- Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

- Through saveONenergy, many Class B consumers have already taken advantage of energy efficiency programs.

  - Although saveONenergy programs like Process and Systems Upgrade Incentive exist, these programs generally require significant investment on behalf of the customer in addition to the incentives and therefore may be difficult to take advantage of.

  - For Class B manufacturers whose electricity consumption is primarily based on process activities (e.g., injection moulding, welding, etc), traditional conservation measures like lighting and ventilation upgrades have limited benefit.



Support for Class B Consumers (cont'd)

- Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers).

- Price mitigation initiatives could be provided to Class B to address stakeholders' concerns (e.g., Coalition of Concerned Manufacturers of Ontario, etc).

- The chart below highlights that the cost of electricity for Class B consumers has risen faster than CPI.

Illustrative Electricity Prices
in $/MWh

CONFIDENTIAL CABINET DOCUMENT

Lower ICI Threshold Below 1 MW for Energy Intensive Industry

- The Industrial Conservation Initiative's (ICI) eligibility threshold for participation was recently lowered to 1 MW. The lowering of the ICI eligibility threshold provides an opportunity for additional Class B consumers to save on their electricity costs if they choose to opt-in to ICI (i.e., and become new Class A consumers):
  - Beginning in July 2017, new participants will be billed Global Adjustment (GA) on the basis of their contribution to province-wide peak demand.
  - Prior to lowering the ICI eligibility threshold, electricity consumers with peak demand between 3 and 5 MW could only participate in ICI if they belonged to the following sectors: manufacturing, mining, data processing, refrigerated warehousing and greenhouses. **Note:** To achieve the benefits of ICI, participants must reduce their electricity demand during the five system peak hours.

- To enhance the competitiveness of larger Class B consumers whose electricity demand are too low to currently qualify for ICI, the Ministry proposed to:
  1. Expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts; and
  2. Target the expansion to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing).

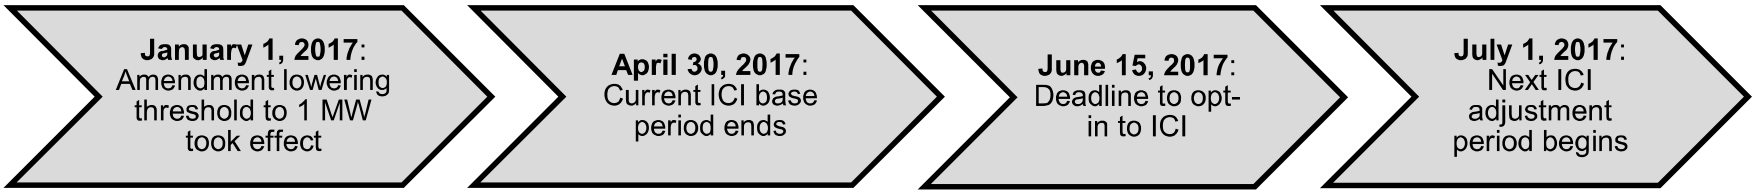
- In addition, the Ministry will assist Class B participation in ICI through a targeted outreach campaign delivered by the Ontario Chamber of Commerce (OCC).

Lower ICI Threshold Below 1 MW – Considerations

- A targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW provides benefit to larger Class B consumers (i.e., manufacturing) while limiting the cost shift to other electricity consumers.
  - **Note:** A Class B consumer that run only a day shift, resulting in fairly peaky load profiles would need to adjusted its behaviour to maximize the benefits of ICI.

- Preliminary analysis by ENERGY staff show that the estimated impact of a targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW would increase a typical residential bill by up to 0.66% or just over $1/month based on a 2016 bill of about $158.
  - The actual impact would vary depending on uptake and consumer responsiveness.
  - With the recent lowering of the ICI eligibility threshold to 1 MW, there is no information available regarding the actual impact on new participants and the electricity system.

- In order for any changes to ICI eligibility to take effect before the next 12-month billing period beginning July 1, 2017, regulatory amendments would have to be made before the end of April 2017.



Lower ICI Threshold Below 1 MW – Legal Considerations

- The quantum of a regulatory charge may be set at different rates within a regulatory structure where the differential prices are intended to serve other regulatory goals including an intention to modify the behavior of persons within the scheme.

- Expanding access to the Class A pricing regime is intended to serve regulatory goals by encouraging consumers to shift their electricity use away from peak hours, which benefits the electricity system as a whole. While Class B consumers will have to pay more of the GA cost in order to finance the reduction for Class A consumers, this is generally permissible since Class B consumers are not modifying their behaviour and the total amount recovered for the GA does not exceed its cost. CLB has previously advised that the differential pricing structure generally only attracts a **moderately low risk** of being a tax, and this risk level does not change if the option of Class A pricing is extended to a broader class of consumers.

- It is more difficult to justify a differential regulatory charge on the basis of behavioral modification when the lower charge is not available to some participants in the regulatory scheme whose conduct could equally serve the same goals. To the extent that there is not a regulatory rationale for extending the new class A option only to certain sectors, risk increases. The amount of risk in this scenario will vary depending on the quantum of the premium that Class B consumers pay to create the behavior modification incentive for Class A and the degree to which the excluded sectors can credibly claim to be able to achieve the same outcome were they permitted to participate in this aspect of the program.

ELECTRICITY SUPPORT AND CONSERVATION PROGRAMS TO HELP VULNERABLE ELECTRICITY CONSUMERS

Electricity Support and Conservation Programs to Help Vulnerable Electricity Consumers

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to deliver electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  A. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  B. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  C. **Establish a new Affordability Fund**, providing energy efficiency measures at no or minimal cost to those who are ineligible for low-income conservation programs, have difficulty paying their electricity bills and who cannot make energy efficiency upgrades without financial assistance.

  D. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

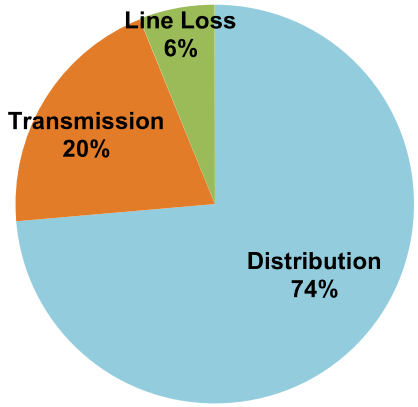
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario and funded through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - Roughly 800,000 customers would receive benefits from the current RRRP program and from these additional enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.

Note: *Rates are for 2017 (either approved or proposed)*
Distribution is one component of Delivery line charge.
Transmission and line loss charges not shown.

CONFIDENTIAL CABINET DOCUMENT

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

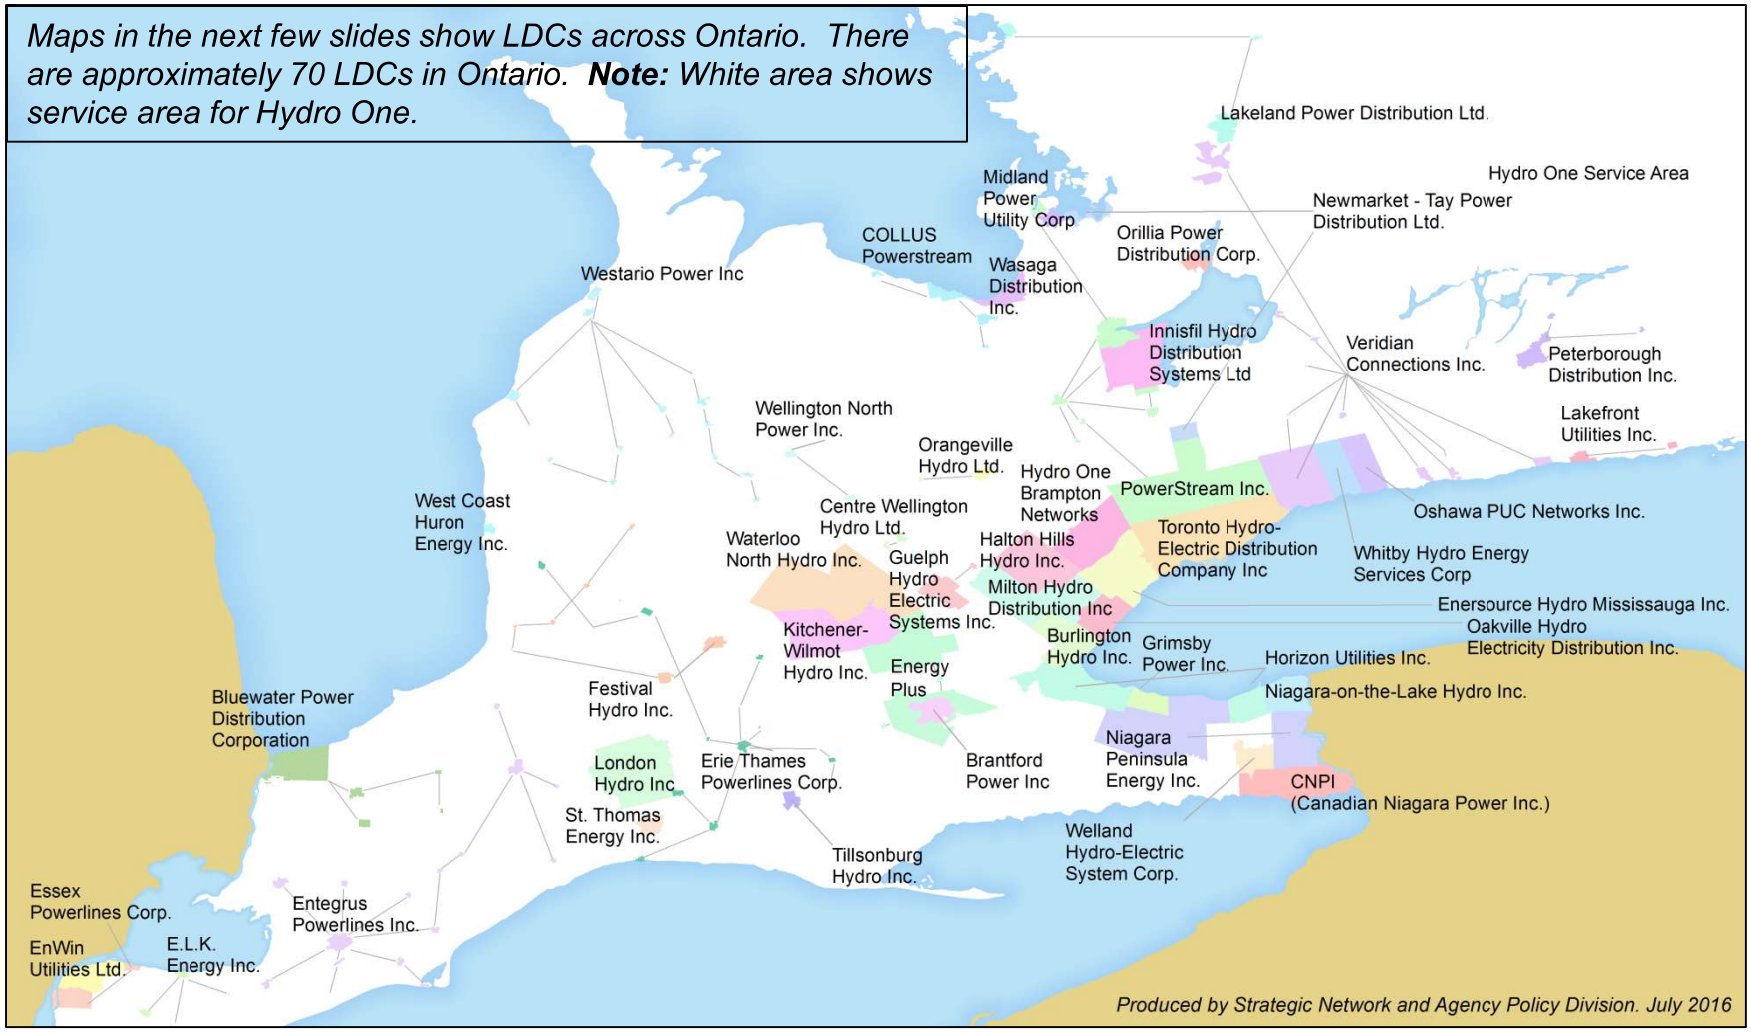
- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board (OEB).

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136
2016 Speech from the Throne Enhancements to R2 Customers	-	117	120	123	127
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234
TOTAL	-	**459**	**472**	**484**	**497**

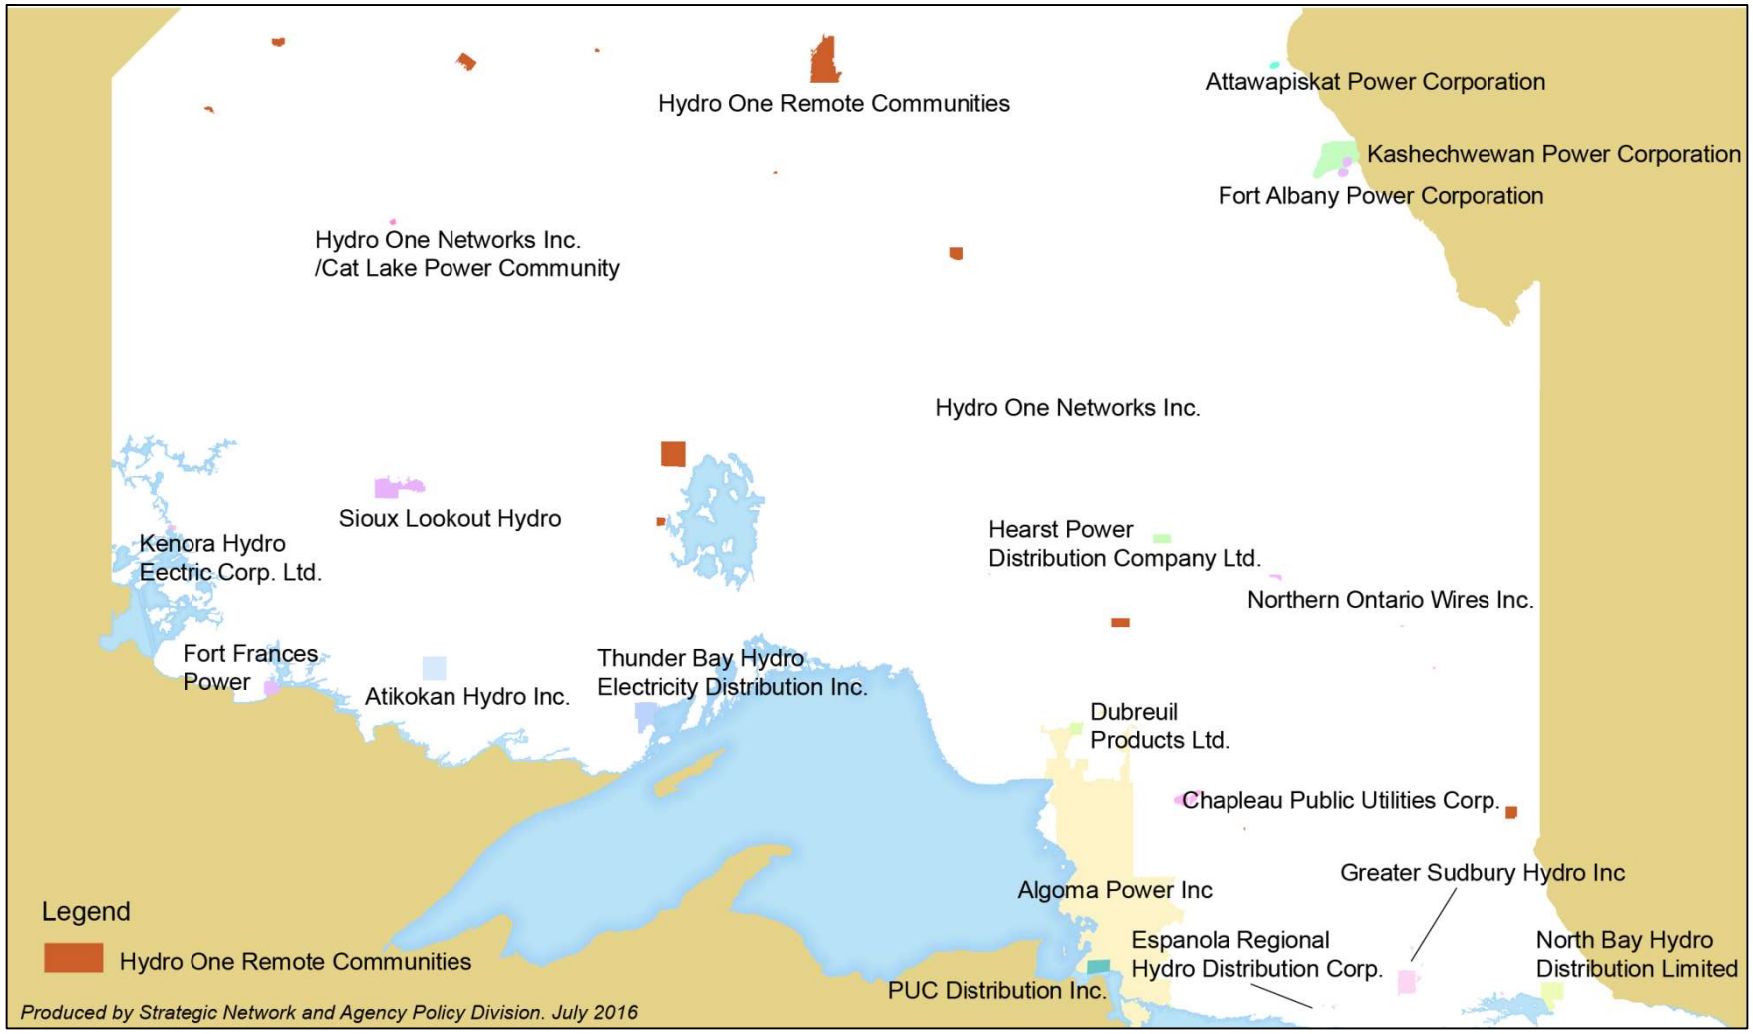
Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.

A. RRRP Enhancement – LDC Service Territory (Southwestern Ontario)

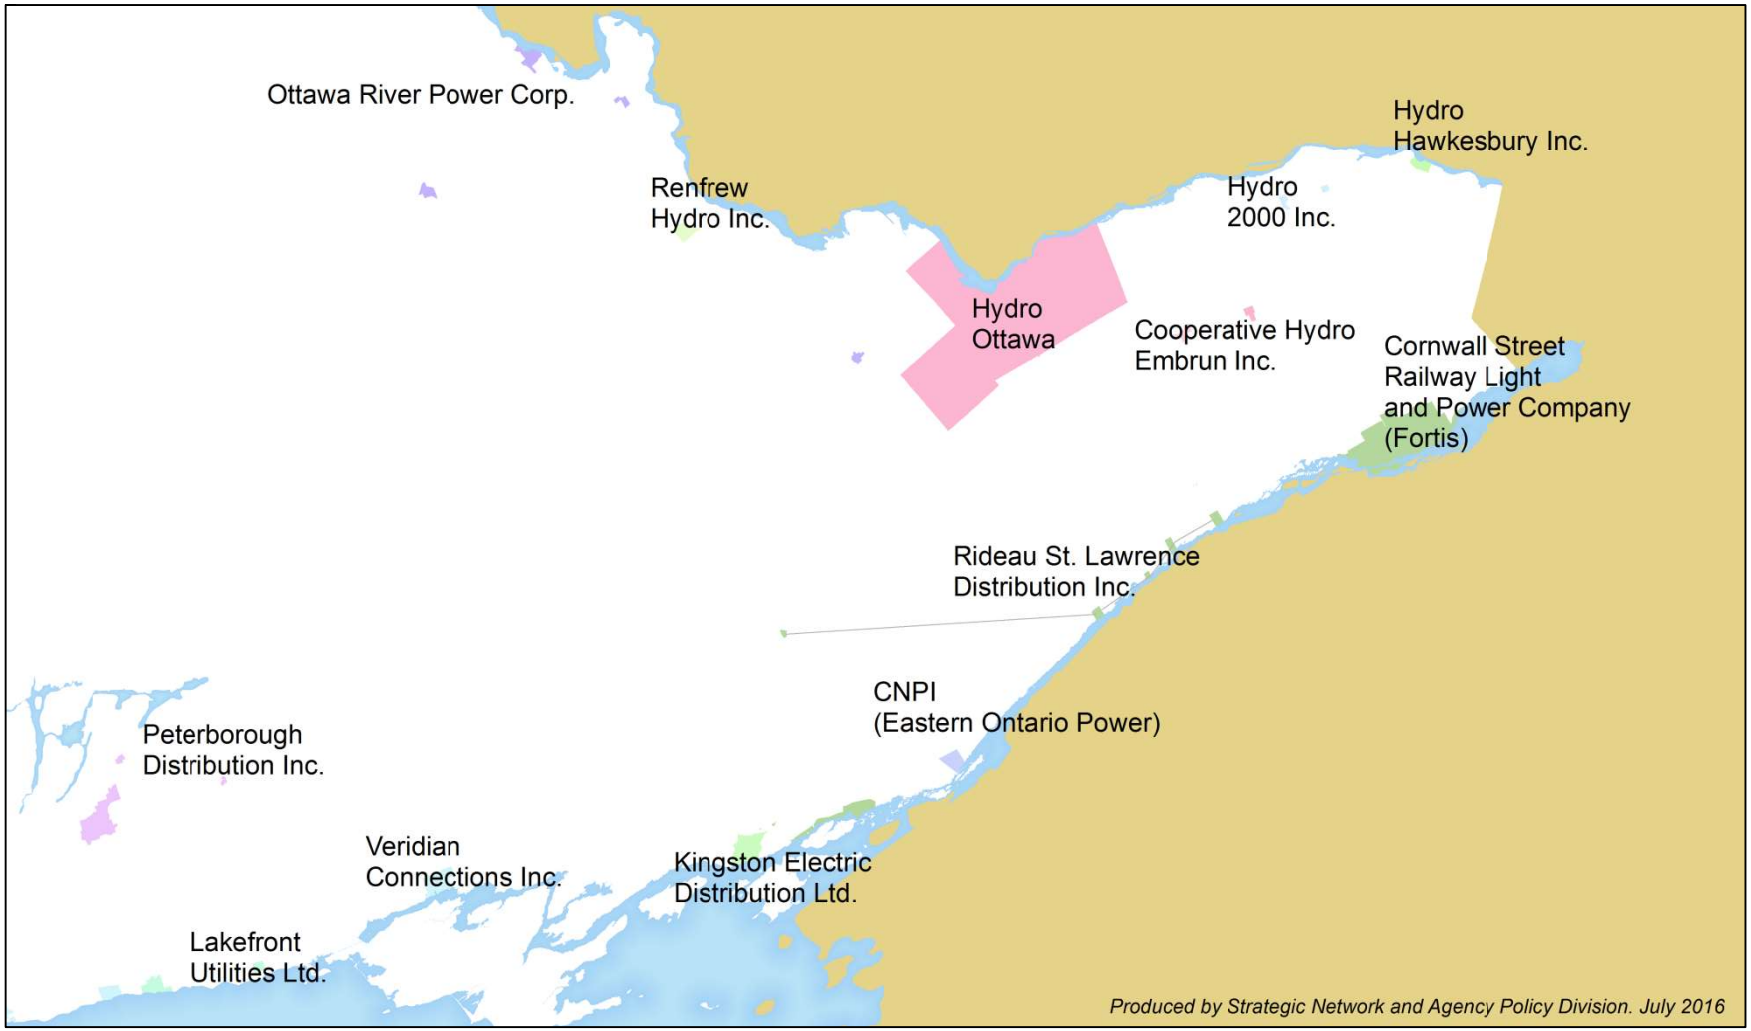
Maps in the next few slides show LDCs across Ontario. There are approximately 70 LDCs in Ontario. ***Note:*** *White area shows service area for Hydro One.*



A. RRRP Enhancement – LDC Service Territory (Northern Ontario)



A. RRRP Enhancement – LDC Service Territory (Eastern Ontario)



B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP credits vary by income level and family size, and there are two credit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in credits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced:
  - Streamline the OESP process to drive participation toward 100%:
    - ENERGY and the Ministry of Community and Social Services (MCSS) have been working on automatic OESP qualification for Ontario Works (OW) and Ontario's Disability Support Program (ODSP) recipients who pay electricity bills.
      - MCSS estimates some 110,000 OW and ODSP recipients pay electricity bills;
      - This process could follow the "deemed eligibility" model used for the Healthy Smiles program. Using an existing model should simplify the implementation process.
      - The qualification process may have to be done manually at first, with a more automated IT solution in the longer-term.
    - Working with the CRA to make the application process easier / quicker to get through by finding an alternative to the requirement to mail-in signed consent forms;
    - Putting in place a more aggressive communications strategy and application intake clinics across the Province to increase awareness of/enrollment in the OESP.
  - Increasing the existing OESP credit scales by an additional 50%; and
  - Expanding the categories of OESP credits.

- It is also recommended that the OESP be supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes):

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

C. Establishing a New Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as “low-income” but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000* residential electricity accounts in arrears; of these about 19,900** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.

* **Note:** Unverified numbers reported by LDCs to the OEB
** **Note:** Low-income customers identified through participation in LEAP

Ontario

C. Establishing a New Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who cannot qualify for low-income conservation programs and are in need, such as those who are facing disconnection.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the principles of the Fund and is working with Hydro One to set up an independent Trust to serve as the Fund Administrator.
  - The Fund Administrator would manage the flow of funds to LDCs based on principles set by the province, and be responsible for establishing processes, administration, and criteria for funding applications, thereby ensuring the program is managed on a consistent basis across the province.
  - LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers in their service territories that meet the targeted eligibility criteria.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

C. Establishing a New Affordability Fund (cont'd)

<u>Implementation</u> (cont'd)

- Recipients could receive measures ranging from an average of $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
  - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
  - Programmable thermostats, weather stripping, insulation (in homes with electric heating).

- Cold climate air source heat pumps would also be an eligible measure under the Affordability Fund. Heat pumps range in cost from $7,000 to $13,000.

- As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New Affordability Fund – Considerations

Considerations

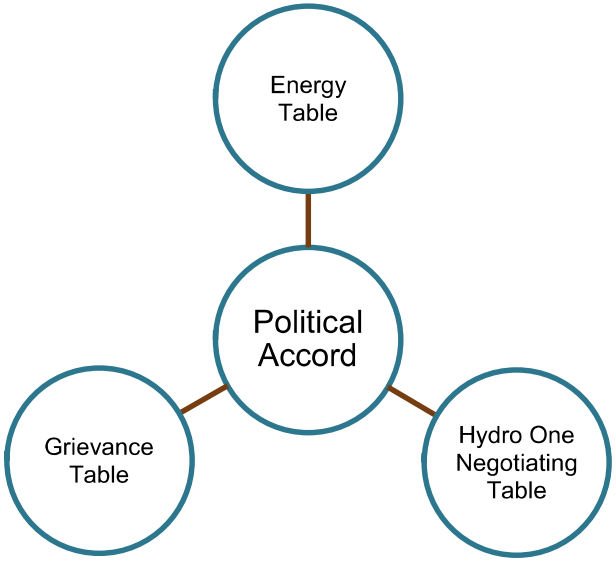
- The Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to seek input from the OEB, LDCs and potentially low income organizations to help develop funding allocation and eligibility principles for the Trust.
- While eligibility principles will be established, LDCs will need a degree of flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with Hydro One and transfer money before end of fiscal year to ensure Hydro One can establish the Trust and the Trust can begin operation as the Fund Administrator.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal. The proposal has an ameliorative purpose as it targets First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities, that affect electricity affordability.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Fiscal Roll-Up

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements*	-	459	472	484	497
Ontario Electricity Support Program, including the 50% Enhancement & New Matrix Categories	-	186	261	325	375
On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.
****Note:** Funding for the Affordability Fund is one-time in 2016/17.

BENDING THE FUTURE COST CURVE OF ELECTRICITY

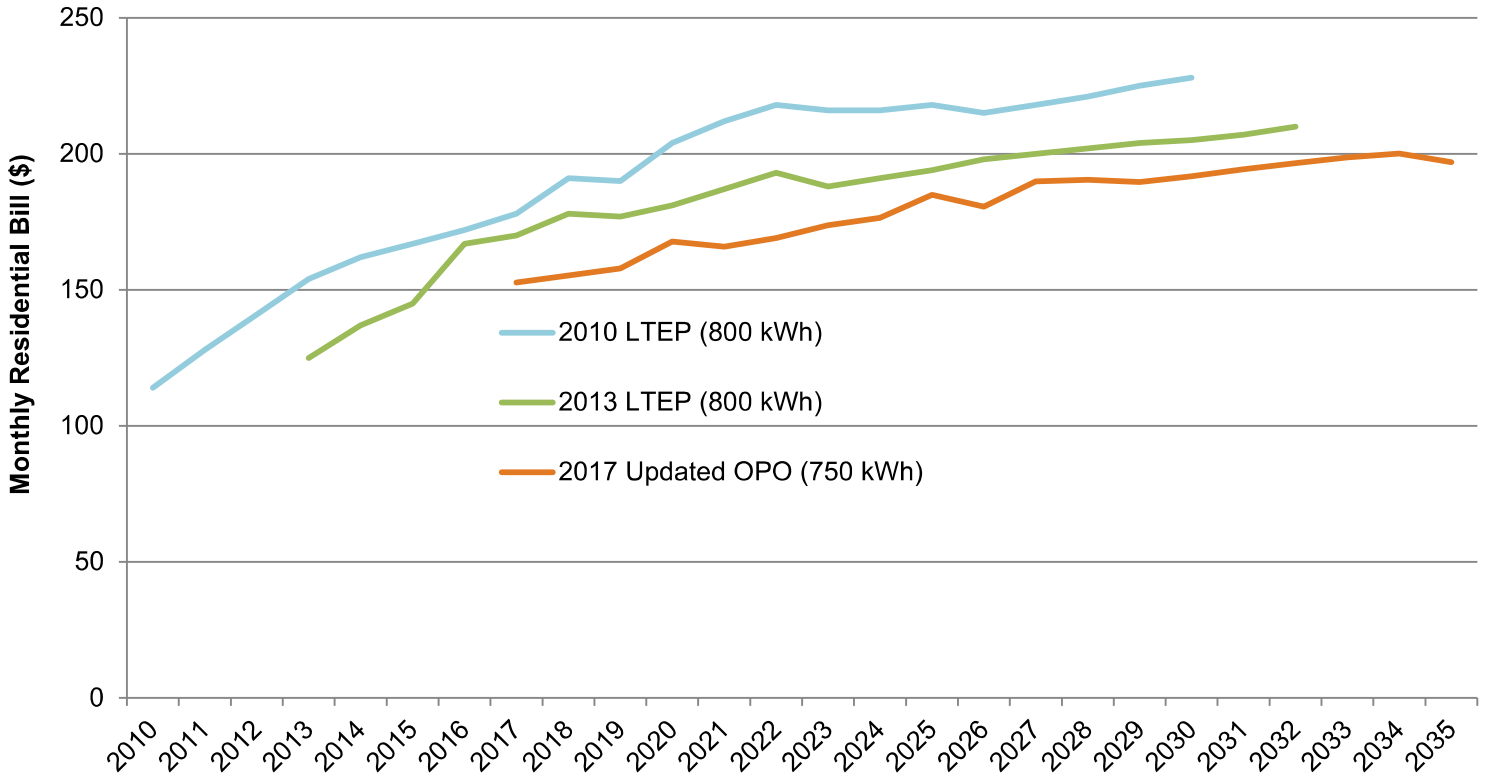
Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.
  - Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – up to [$xx] cost savings.

CONFIDENTIAL CABINET DOCUMENT

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of February 2017) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

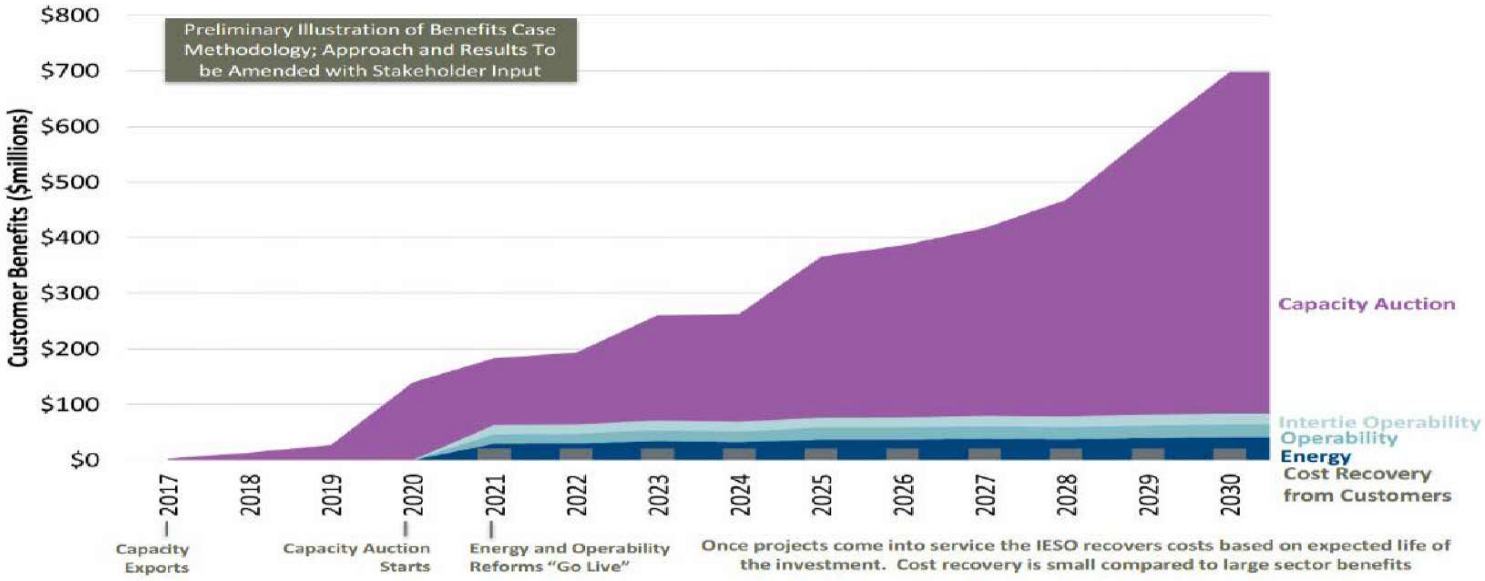
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



CONFIDENTIAL CABINET DOCUMENT

SUPPORT FOR TENANTS

Support for Tenants – Context

- The government is considering measures to provide relief from high electricity prices, and is interested in ensuring that tenants also receive electricity cost reductions and/or relief.

- Currently, tenants generally either pay for their own electricity use through suite meters (i.e., sub-meters or direct arrangements with hydro providers) or pay for electricity indirectly as a service included in their rent:
  - Tenants who pay for their own electricity will receive electricity costs savings directly through their bills; and
  - Low-income tenants who pay own electricity bills can access energy support programs such as the Ontario Electricity Support Program administered by the Ontario Energy Board (OEB).

- Any potential initiatives could focus on the following options:

For tenants who pay own electricity bills

1. Expand OESP to increase relief or raise income thresholds.

For tenants whose electricity is included in rent

2. Require that landlords pass savings on to tenants (could be addressed by MHO through RTA amendments).
   - Options could include requiring landlords to automatically reduce rents, or allow tenants to apply the Landlord and Tenant Board for relief.
3. Provide energy rebates directly to tenants whose rent includes electricity.

Support for Tenants – Potential RTA Hydro Relief Measures / Considerations

- RTA amendments with respect to tenant relief, remedies, and enforcement would be complex, and unable to provide immediate, direct and transparent cost remedies to tenants:
  - Impact of hydro relief measures and electricity cost savings for landlords may vary depending on size of rental building and location (urban/rural):
    - One size fits all approaches would not match actual landlord savings to direct tenant relief; and
    - More targeted approaches would add extreme complexity, leading to greater confusion for landlords and tenants, and difficulty administering enforcement.
  - Passing on actual savings could likely only be done after landlords have experienced decreased costs for a period of time (i.e. one year).
  - Difficulty in informing landlords of their responsibilities and enforcing reductions; would likely have significant resource implications for the Landlord & Tenant Board/Ministry of Attorney General.
  - Difficult for tenants to understand, with the most vulnerable tenants potentially less able to pursue remedies through the LTB.
- The kinds of potential RTA remedies would depend on various specifics regarding the way in which relief was being provided to landlords including whether:
  - The actual electricity cost savings for landlords are transparent to facilitate easy calculation of rent reductions or relief;
  - Hydro relief measures are permanent or temporary; and
  - All relief should be passed on to tenants, or just a portion of the relief (e.g., global adjustment fund, 8% rebate, any other relief).

Support for Tenants – Potential RTA Hydro Relief Measures / Other Considerations (cont'd)

- As part of Climate Change Action Plan, MHO has been directed to mitigate the impact of carbon costs on tenants, and is proposing to prevent landlords from charging above-guideline rent increases for extraordinary utility costs increases.
  - May seem unfair that landlords are required to reduce rents or provide relief when utility costs decrease but cannot increase rents when utility costs increase.
- Relief would be limited to certain segments of tenant population:
  - Post-1991 buildings are exempt from the Rent Increase Guideline and landlords could negate any savings to tenants in these buildings through a higher subsequent rent increase.
    - Over 19% of tenant households are estimated to live in post-1991 private rental units including individually rented condos; a high proportion may already pay for electricity separately.
  - Relief may not be required for social housing tenants:
    - Most social housing tenants (80%) pay as per utility scales, which covers electricity usage other than electric heat; and
    - Utility scales were last updated in 2000 and are reflective electricity prices at that time.
- MHO, working with ENERGY and MAG will report back in Spring 2017 with options for electricity rate mitigation for tenants.

Legislative Authority – Considerations

GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The OPG Trust will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the OPG's SPV/Trust and settle accounts with the OPG Trust as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the SPV/Trust to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the SPV/Trust (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Class B

- **Targeted Lowering ICI Threshold Below 1 MW (to 500kW):** Regulatory amendments (O.Reg. 429/04) will be required to address program details.

Legislative Authority – Considerations (cont'd)

Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **Affordability Fund:** In order to implement new affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement and Technical Briefing
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	March 1, 2017
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet – March 1, 2017

SUBMISSION TITLE: Electricity Price Mitigation

Based on Draft Cabinet Submission

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): o ~~Moving~~Enhance ~~existing~~ Electricity Support and move existing programs to government funding: – ~~Enhance~~Broaden Rural or Remote Electricity Rate Program (RRRP) – Expand the Ontario Electricity Support Program (OESP) – Create an LDC Affordability Fund – Provide On-Reserve First Nations Delivery Credit o On-going activities to bend the costs curve of electricity (Ontario Energy Board, Independent Electricity System Operators) o Providing significant and immediate rate relief through cost deferral of the Global Adjustment (Smoothing the Global Adjustment)	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested – Social Programs	200.0	665~~738~~.0	753~~828~~.0
– Global Adjustment Smoothing*	0.0	2,534.0	2,668.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base (Ontario Rebate for Electricity Consumers)	300.0	1006.0	1004.0
Offset Recommended	0.0	0.0	0.0
Total Fiscal Impact	200.0	3,199~~272~~.0	3,421~~96~~.0

*Assumes Global Adjustment smoothing impacts the deficit

IV. KEY COMMENTS AND CONSIDERATIONS

Since 2010, electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase

as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

Ontario currently provides rate mitigation to various electricity consumers through a combination of government funded and rate-based programs. Rate-based programs are funded by shifting costs from one electricity consumer group to another.

The government has committed to providing electricity cost relief to consumers. Since the 2016 Throne Speech, the government has taken a number of actions to further reduce electricity costs, including:

- Providing an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST, effective January 1, 2017.
- Expanding support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.
- Expanding Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to additional commercial, institutional and small industrial consumers.

The Ministry of Energy is proposing additional electricity price mitigation initiatives that will provide additional rate relief across all residential and small business electricity consumers, providing up to 25% rate relief in aggregate, by helping the most vulnerable Ontarians through enhancements to existing support programs, smoothing the impacts of the global adjustment and working to bend the future cost curve of electricity.

1) Helping the most vulnerable Ontarians (Customers who are disproportionately affected by increased electricity costs) by enhancing electricity support programs and shifting cost onto the tax-base:
    a) Enhance the Rural or Remote Electricity Rate Protection (RRRP including harmonizing distribution cost for customers with the highest distribution rates)
    b) Expand the Ontario Electricity Support Program (OESP)
    c) Establish a new one-time Local Distribution Company (LDC) Affordability Fund in 2016-17
    d) Delivery charge relief for on-reserve First Nations customers

2) Ongoing activities to bend the future cost curve of electricity:
    a) Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
    b) Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.
    c) Explore additional cost savings to future electricity rates as part of the 2017 Long-Term Energy Plan to help offset the impact of GA recoveries.

3) Refinancing Global Adjustment assets in order to smooth the impacts of the Global Adjustment across ratepayers over a longer period of time.

4) Support for tenants & Supports for smaller Class B – conservation efforts (Under Development) – the Ministry is exploring options to extend electricity support programs to those who do not qualify for existing programs, either because they do not pay for their own electricity bills or because they are too large for the RPP (and associated support programs) but too small to qualify for the ICI for large consumers.

<u>1) Enhancing electricity support programs and shifting cost onto the tax-base</u>

To date, a number of electricity support programs are funded through the electricity rate-based. The

Ministry is proposing to shift these costs to ~~the~~ government funding and to enhance these programs to provide additional support to a subset of customers who are disproportionately affected by increased electricity costs.

The Ministry estimates that proceeding with the enhancement of the electricity support programs and shifting cost onto government funding would cost $200M in 2016-17 and increasing to $892~~972~~M by 2020-21. Moving existing program costs to the tax base would result in a small cost reduction for other ratepayers (approximately $2 for the average residential consumer), but represents more than half of the fiscal impact associated with these proposals.The following table shows the fiscal impact of the proposals (Note: 2017-18 figures are full year, however programs would require implementation period estimated 3-6 months):

SUPPORT PROGRAMS TARGETTING MOST VULNERABLE USERS:

($M)		2016-17	2017-18	2018-19	2019-20	2020-21
1A. RRRP	Status Quo[1,2]	-	24~~394~~	250~~302~~	256~~309~~	263~~318~~
	Enhancement[2]	-	216~~38~~	222~~45~~	228~~52~~	234~~59~~
	TOTAL[2]	-	**459~~532~~**	**472~~547~~**	**484~~561~~**	**497~~577~~**
1B. OESP	Status Quo[1,2]	-	118	159	193	222
	Enhancement[2]	-	67	102	132	153
	TOTAL	-	**186**	**261**	**325**	**375**
1C. Establishing a New LDC Affordability Fund		200	-	-	-	-
1D. On-Reserve First Nations Delivery Credit		-	20	20	20	20
TOTAL FISCAL IMPACT:		**200**	**665~~738~~**	**753~~828~~**	**829~~906~~**	**892~~972~~**

1. Previously funded by the Rate Base.
2. Status Quo and Enhancement amounts are sourced from previous Ministry decks; Totals from the Cabinet Submission.

Appendix D provides details on each of the programs and their enhancement.

2) Ongoing activities to bend the future cost curve of electricity

The Ministry is proposing a number of ongoing activities to bend the future cost of electricity. This includes leveraging the Ontario Energy Board (OEB) to identify opportunities for red-tape reduction and future LDC efficiencies. In addition, the Ministry will continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives.

Details of these activities can be found in Appendix E.

3) Global Adjustment Smoothing

The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.

The Ministry indicates the majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to provide value to the electricity system beyond their

contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through the GA while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.

The Ministry is proposing to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. Through GA Smoothing, these costs would be spread over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). The result of this GA proposal is that cost to ratepayers remains lowered in the short term reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month. Bill increases will be kept in line with the Consumer Price Index (CPI) until the end of 2021, and from 2022 onwards, bills will increase at a rate that ensures recovery of the accumulated debt, interest costs and administrative costs by 2048 without exceeding 10% of total electricity costs.

The Ministry continues efforts to identify an effective business structure to support:

- Required increase in provincial borrowing
- No increase in net debt,
- No impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG.

Based on the current stage of the analysis of the accounting, legal and financing risks, it is possible that the deferral of the GA will be recognized as an expense in the fiscal plan. The table below shows the projected fiscal impact based:

($M)	2017-18	2018-19	2019-20	2020-21
GA Smoothing for RPP Eligible Only – Residential Bills Lowered 25% (with Government Funded 8% Rebate and Social Programs, 2% increase)	2,534	2,668	2,942	3,420
Interest Portion	*32*	*162*	*298*	*449*

Note: Potential to avoid fiscal impact would depend heavily on decision on finalization of the accounting, legal and financing analysis. Based on an annual interest rate of 5% compounded monthly.

Analysis conducted by the Ontario Financing Authority, MOF indicates that over the 30-year GA smoothing period, estimated total accumulated interest costs exceed the estimated total cumulative savings produced under each option. Interest costs are also highly sensitive to interest rate assumptions and actual borrowing costs.

- In an effort to smooth out the GA, ratepayers will incur interest costs that over a 30-year period, will be added to the GA payments ratepayers make. Under the options above, interest costs exceed the amount being financed (i.e. benefit being provided) over the 30-year periods.

$ millions	Total Cumulative Savings	Total Accumulated Interest Costs
Option 1	$24,977	$35,542

Assumes an interest rate of 5% (compounded monthly).

The Ministry will report back to TB/MBC in Spring 2017 on a recommended approach, with an objective of addressing legal, financing and accounting challenges while minimizing fiscal risks. If unsuccessful in identifying an effective transaction design which avoids significant fiscal impacts, it is reasonable to require the Ministry to return with results of further analysis of alternative approaches to mitigate fiscal impacts versus adding GA smoothing directly to the deficit.

More details can be found in Appendix F.

4) Support for tenants & Supports for Class B – conservation efforts (Under Development)

The Ministry submission discusses various options and considerations, including support to renters/tenants and to Class B consumers, but it not making recommendations at this time. The Ministry will report back in 2017-18 on these options. Appendix G provides more information.

Monthly Electricity Bill Impact

Appendix H illustrates expected impacts) of the above proposals on electricity bills. An average residential customer bill in July 2017 is expected to see a 25% decrease. This includes the 8% rebate that came into effect on January 1 2017.
Enhanced RRRP initiative and expanded OESP will provide additional bill savings for certain consumers:

- Enhanced RRRP – An estimated 700,00ustomers would benefit seeing additional savings in the range of $12-$75 on their monthly bill.
- Expanded OESP – OESP consumers would see savings of approximately $40 – $113 on their monthly bill (up from the current $30 - $75).

The LDC Affordability Fund will produce bill savings once installation of energy efficiency measures is completed for targeted consumers.

The On-reserve First Nations Delivery Credit could result in an $85 monthly savings if Ontario Energy Board's recommendations are implemented.

Key Risks and Considerations

Electricity Support Programs - Cost Projection, Program Effectiveness and Fiscal Impact

The Ministry of Energy is bringing forward a suite of initiatives to address the impact of rising electricity prices. The sector is complex and a number of key assumptions used as inputs into the model are variables/forecasts themselves. As such, there is an inherent risk in the cost estimates that are provided. Hence, it is important to ensure the models and assumptions are stress tested. Sensitivity analysis, which would allow the government to develop a risk based outlook to manage potential fluctuations in the cost of these initiatives, would support better decision making and support meeting the government's fiscal targets.

Cost projections may also need to be refined as program details are finalized. This is similar to the initial projections for the cost of the 8% rebate in September 2016. At the time of the briefings in advance of the initial approval, the cost projection for the 8% rebate was $1B for the first year. The projections were refined, resulting in a revised estimate of $1.1B for the first year, rising to $1.2 B in the out years.

Program costs are also highly dependent on uptake and electricity usage and as such, can fluctuate from year to year. For example, the OESP currently has an uptake rate of 30%, the Ministry's cost estimates assume ramping up to 100% over four years (i.e., moving to 100% participation), there is potential for significant underspending if participation rate is between 30% and 100%. It is also important to understand how these enhanced electricity programs may impact the behaviour of various key stakeholders going forward with regard to program uptake and electricity usage and hence the assumptions built into the models and the financial estimates.

As there is no sunset date for the proposals, it is important to understand the full cost of the initiatives for the longer term, beyond the year 2021-22 as outlined in the submission. Furthermore, electricity prices are projected to increase above inflation for the foreseeable future. It is unclear if the initiatives proposed in the submission would be sufficient to bring the cost increases to be at or below inflation. Otherwise, the gap could continue to increase/widen and may necessitate further action and supports by the

government.

It is also important to note that the effectiveness of the existing suite of electricity support programs (e.g. OESP, Home Assistance Program, RRRP) could also be evaluated to ensure that they are meeting program objectives and outcomes prior to enhancement and expansion. Key risks to highlight with individual program proposals:

- RRRP - the proposal is likely to create disincentives from the eligible LDCs towards productivity and performance improvements to drive down delivery costs/changes. In addition, the proposal may create an incentive for LDCs that fall just outside the cut-off to drive up their distribution costs to gain eligibility into the program. It is also important to note that the fiscal impact of this initiative is projected to increase beyond 2023 due to regular rate increases. It is recommended that the Ministry provide a long term forecast along with underlying assumptions, with risk bands that account for variability of distribution costs and the proposed distribution charge cap, to show the full expected financial impact of this initiative on the long term fiscal plan.

- OESP - the OESP currently has low uptake, consideration could be given to focussing efforts on increasing the take-up of the existing program, and seeing the effectiveness of the supports, before benefits are further enhanced. This approach may not only lower the fiscal impact in the short-term, but ensure that the effectiveness of the program can be assessed before it is scaled up.

- Affordability Fund – as program development continues to be finalized, the Ministry should continue to work with Treasury Board Secretariat and the Ministry of Finance on considerations around eligibility, relief amounts, fiscal impacts under different administration/delivery options (eg program delivery by outside entities through a trust structure vs ministry delivery), and key implementation risks.

  Considerations should be given to the development of performance metrics, including methods to evaluate whether the program is meeting its objectives and outcomes, to ensure the program is responding to the right elements and doesn't inadvertently incent adverse behaviour regardless of the capacity to pay.

  To be accounted for as a non-controlled trust, several elements must be addressed including who really controls the trust, who are the beneficiaries and whether unused funds are to be returned to the Province in the event of a windup.

As such, it is recommended that the Ministry of Energy work with Treasury Board Secretariat (Centre of Excellence for Evidence-Based Decision Making) and the Ministry of Finance as program development is finalized in order to better assess program costs projections, forecasting models, program effectiveness and performance metrics and outcomes and report back to TB/MBC.

Global Adjustment - Accounting Implications and Fiscal Impacts

There remains continued uncertainty around effective transaction design and related accounting treatment for a number of the initiatives (the Global Adjustment (GA) Smoothing and the New Affordability Fund). The risk exists that the fiscal impact of the proposals may be significantly higher than currently contemplated and estimated. The cost projections in this proposal are highly sensitive to interest rates, and Energy's and IESO's 30-year forecast of GA costs.

The intent is to establish a structure where the entity that takes on the GA and the debt required to smooth rates over a period of time would be a trust consolidated by Ontario Power Generation and thus reflected on the Province's books through modified equity consolidation.

If all the requirements can be met, an accounting analysis is expected to support: 1) increase in provincial borrowing; 2) no increase in net debt; 3) no impact on reported annual surplus/deficit, but depending on funding to OPG/Trust from the province, an increase in interest on debt and an increase in offsetting income reported for from the province's investment in OPG.

To date, the Ontario Auditor General (OAG) opinion on the proposal has not been sought. TBS will work with AG on the transaction. The auditors of OPG and IESO are providing their preliminary assessments and the Office of the Provincial Controller (OPCD) has been engaged.

The Ministry's submission assumes that the proposed GA smoothing will receive a favourable accounting treatment; hence it will not impact the provincial net debt and fiscal plan (For prudence, until there is legal, financing and accounting risk assessment, GA smoothing is shown as impacting the deficit). Should the favourable accounting treatment not be received, the impacts would be significant and variable depending on market changes (interest rates and cost of generation). In addition to having a significant fiscal impact, the proposed plan would also introduce significant volatility to the medium- to long-term fiscal plan as interest rates, energy prices, and consumer behaviour change.

The current cost estimates assume that the program is provided to RPP Eligible participants. Given the new incentives to be in the RPP in the initial years, and opt out later, applying the GA smoothing impact to RPP eligible is appropriate; otherwise, consumers would have an incentive to opt out of the RPP costs again when costs begin to increase and it would be challenging to fully recover the debt, or charge non-opted out consumers proportionately more.

<u>Implementation/Legal/Other Considerations</u>

- Legal advice on the constitutional risk posed by the proposal to defer the current costs to consumers of the global adjustment, to be paid for by consumers in future years, noted a moderately high constitutional risk of resulting in an unconstitutional tax. It creates a refinancing structure which results in future consumers paying disproportionately more of the GA cost and therefore cross-subsidizing near-term consumers.
    - This advice was based on a review of the proposal from February 9, 2017. The Ministry's draft Cabinet submission indicates this risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

APPENDIX A: PROPOSED MINUTE (DRAFT)

Should TB/MBC wish to proceed with the Ministry's request, the following minute could be considered:

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

   a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to 15%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048.

   b) Direct the Ministry to, if a non-fiscal mechanism cannot be established, report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.

   c) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

      - Formal accounting opinions from OPG and IESO auditors.
      - Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
      - Report on the multi-year profile of GA smoothing, identifying specific assumptions.
      - Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
      - Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

   d) Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and on-going.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc) at the cost paid by the average consumer of the LDCs noted by fall 2017.

Commented [EK1]: Energy`s slide deck states that the distribution rate woud be set at "the lowest distribution rate paid by an average consumer in this group"

b) Note costs estimated at up to $532,000,000 in 2017-18, $547,000,000 in 2018-19, $561,000,000 in 2019-20, and $577,000,000 in 2020-21 and on-going as part of the 2017-19 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

f) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-19 PRRT planning process.

g) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

h) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

i) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

j) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

k) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-19 PRRT planning process.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B electricity consumers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2016-17**	**2017-18**	**2018-19**	**2016-17**
Initiative cost		200.00	3,272.000	3,496.0000	
Expense changes:					
Social Programs	Oper	0.0000	738.0000	828.0000	200.0000
Global Adjustment Smoothing (Contributing towards up to 25% bill reduction)(Assumes it impacts the deficit)	Oper	0.0000	2,534.0000	2,668.0000	0.0000
Total Fiscal Impact		**200.0000**	**3,272.0000**	**3,496.0000**	**200.0000**

APPENDIX C: ELECTRICITY SECTOR BACKGROUND

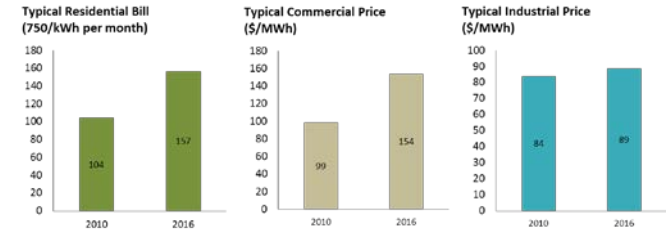
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.

- The Rural or Remote Rate Protection (RRRP) program is provided to rural or remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Currently, electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

The existing program costs are summarized in the table below:

($M)	2014-15	2015-16	2016-17[1]	2017-18[1]	2018-19[1]	2019-20[1]	2020-21[1]
OCEB	1,078	860	-	-	-	-	-
OREC	-	-	300	1,100*	1,200	1,200	1,200
Ending DRC[2]	-	85	330	330

APPENDIX D: DETAILED INFORMATION SUPPORTING PROPOSED INITIATIVES

The Ministry is proposing the following to further mitigate electricity prices for consumers:

1. Targeted initiatives helping the most vulnerable Ontarians (Customers who are disproportionately affected by increased electricity costs) by enhancing electricity support programs and shifting cost onto the tax-base:

    - Targeted customers:
        - High Delivery Cost Customers – Some customers in rural areas where the cost to delivery electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
        - Low-Income Customers: Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
        - First Nation On-Reserve Customers: On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

    - Initiatives providing targeted assistance to ease the electricity cost burden:
      1a. Enhance the Rural or Remote Electricity Rate Protection (RRRP);
      1b. Expand the Ontario Electricity Support Program (OESP);
      1c. Establish a Local Distribution Company (LDC) Affordability Fund; and
      1d. Delivery charge relief for on-reserve First Nations customers.

2. Ongoing activities to bend the future cost curve of electricity:
    - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
    - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

3. Refinancing Global Adjustment assets in order to smooth the impacts of the Global Adjustment across ratepayers over a longer period of time.

4. Support for tenants & Supports for Class B – conservation efforts

1) Enhancing electricity support programs and shifting cost onto the tax-base

1a) Rural or Remote Rate Protection (RRRP) Enhancement

The Rural or Remote Rate Protection (RRRP) program mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.

The program, which costs approximately $242M/year is currently funded by ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial.

Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest delivery costs in the Province.

- From 2001-2016 the program provided $125.4M annually to help defray these costs.

- In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
- As of Jan 2017, R2 customers receive $60.50/month off their distribution costs.

While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (e.g. Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma) and Hydro One R1 customers (medium density).

The Ministry is proposing to enhance RRRP by:

- harmonizing the fixed distribution rates at $38/month for R2, R1 and the next seven highest cost LDCs (enhanced benefits for ~280k consumers and new cost decreases for ~420,000 consumers)
- funding its costs through the tax base from the rate base;

For this proposal, targeted RRRP consumers (an estimated 700,000 customers would benefit from this enhancement) would see additional savings in the range of $12-$75 on their monthly bill. The fiscal impact of this program is approximately $454M in 2017-18.

Implementation considerations:

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

Fiscal considerations:

- Distribution costs vary year to year.
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
TOTAL	-	454	450	446	444

1b) Ontario Electricity Support Program (OESP) Expansion

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base. OESP credits vary by income level and family size, and there are two credit scales that include:

- The basic program credit ranges from $30/month to $50/month.
- An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.

The OESP was launched on January 1, 2016, and in just over a year:

- Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
- Almost $50 million in credits have been provided to vulnerable consumers.
- Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.

The Ministry is proposing to enhance OESP and fund its costs through the tax base by:

- increasing the existing benefit scales by an additional 50%;
- expanding the categories of OESP credits

The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes – greater access to OESP credits at smaller family sizes at different income levels)::

Existing OESP Credit Scales

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$30	$30	$34	$38	$42	$50	$50
$28,001 - $39,000			$30	$34	$38	$42	$50
$39,001 - $48,000					$30	$34	$38
$48,001 - $52,000							$30

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$45	$45	$50	$55	$60	$75	$75
$28,001 - $39,000			$45	$50	$55	$60	$75
$39,001 - $48,000					$45	$50	$55
$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$45	$45	$51	$57	$63	$75	$75
$28,001 - $39,000		$40	$45	$51	$57	$63	$75
$39,001 - $48,000			$35	$40	$45	$51	$57
$48,001 - $52,000					$35	$40	$45

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$68	$68	$75	$83	$90	$113	$113
$28,001 - $39,000		$60	$68	$75	$83	$90	$113
$39,001 - $48,000			$52	$60	$68	$75	$83
$48,001 - $52,000					$52	$60	$68

For this proposal, OESP consu savings of approxima their monthly bill (up from the current $30 - $75). This proposal would have a fiscal impact of approximately $186M in 2017-18 increasing to $375M by 2020-21.

Implementation and fiscal considerations:

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.

- o If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- o Adding additional categories to the OESP matrix require will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

Note: OESP participation ramps up to 100% year 4

1c) LDC Affordability Fund

The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills. Program eligibility is aligned with other low-income support programs such as the OESP.

The Ministry is proposing to establish an Affordability Fund which would be available to LDCs only to provide similar energy efficiency measures as provided under HAP to targeted customers (i.e., those who are most in need, such as those who are facing disconnection and who cannot qualify for the low-income programs).

To establish the Fund, the government would enter into a TPA with Hydro One. The TPA would include terms for Hydro One to establish a non-controlled Trust to administer and distribute funds to LDCs across the province on the basis of principles established by the Province and implemented at the discretion of the Trustees. The Trust would distribute funds to LDCs across the province including, Hydro One, at the direction of the Trustees.

The Ministry indicates the Affordability Fund would not be used to provide grants or financial assistance to customers to forgive all or a portion of their arrears or electricity bill. It is not clear how the non-controlled independent entity (the AF Trust) would be blocked from a decision to cover arrears.

LDCs would apply for funding to the Fund administrator (Hydro One) to offer energy efficiency measures to its customers that meet the targeted eligibility criteria. Determination of eligibility could involve a number of factors and metrics:

- Do not meet the definition of "low-income";
- May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
- Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
- Require financial assistance to pay for energy efficiency measures.

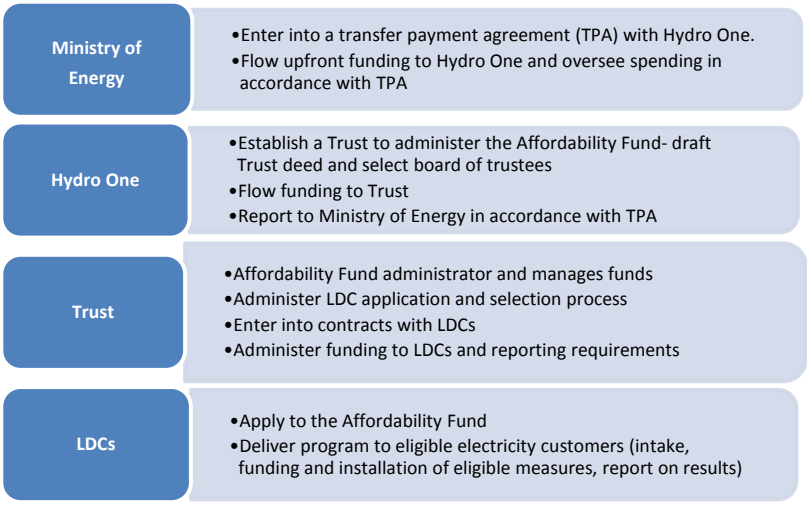
Recipients could receive measures (e.g. energy-saving light bulbs, programmable thermostats, cold climate air source heat pumps) ranging from $3,000 to $5,000 per customer, at no or minimal cost. As an illustration, with $200M, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

The Ministry is proposing that the Fund be provided through a one-time payment of $200M in 2016-17. Administration expense estimated to be 10% of the fund $20M, including expenses related to the Trust, Hydro One and LDCs. It is expected that the funds through the Affordability Fund will be

deployed within a year (funds are expected to be exhausted by March 31, 2018). The TPA will include the option to extend the original funding amount into future years in the event of under spending. The TPA will also include the option to incorporate potential future funding from the tax base.

The Ministry indicates providing the $200M immediately provides LDCs with the required upfront commitment to apply for funding and initiate planning and implementation activities.

Figure 1: Summary of Roles and Responsibilities



Implementation and fiscal considerations:

- An illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households (having met targeted eligibility criteria), depending on measures and uptake.
- Administration expense estimated to be 10% of the fund $20M, including expenses related to the Trust, Hydro One and LDCs.
- The LDC Affordability Fund would be a fiscal impact of $200 million in fiscal year 2016-17.
- The TPA will include the option to extend the original funding amount into future years in the event of under spending. The TPA will also include the option to incorporate potential future funding from the tax base.

1d) On-reserve First Nations Delivery Credit

On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve, average income is considerably lower, lower employment rates, historical grievances related to energy development on reserve lands and traditional territories, and impacts of energy infrastructure either present or due to connection delays. These challenges result in significantly higher electricity consumption levels and costs.

At the request of the Minister of Energy, the OEB worked with the Chiefs of Ontario to develop options to address these issues.

The ministry is proposing to implement the recommendations of the OEB's report:

- Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.
- Automatically qualify on-reserve First Nations residential customers (~21,500 customers)
- Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
- Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.

The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out. The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of up to $20 million (21,494 total customers across 9 distributors). OEB notes total annual costs could range between $13M to $20M.

Implementation and fiscal considerations:

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan
- Rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Appendix E: Ongoing Activities to Bend the Future Cost Curve of Electricity

Ontario Energy Board (OEB)

The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.

The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework. While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance. Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.

In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

The Ministry is proposing to help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation. In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses. This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

Independent Electricity System Operator (IESO)

The Ministry will continue to move forward with Independent Electricity System Operator’s (IESO) Market Renewal initiatives:

- Moving to “technology-agnostic” procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
- Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.

Changes related to IESO’s Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:

- About $1/month or less than 1% at current retail prices for a typical residential bill; and
- About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.

Appendix F: Refinancing Global Adjustment Assets To Smooth the Global Adjustment Across Ratepayers Over a Longer Time Period

At this time, the Ministry continues to work towards finalizing a structure for this initiative and plans to return to TB/MBC in Spring 2017.

The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized. The majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.

To enable this transition, generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs. he majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).

The Ministry indicates there is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. In 2016, GA costs were $12.3 billion.

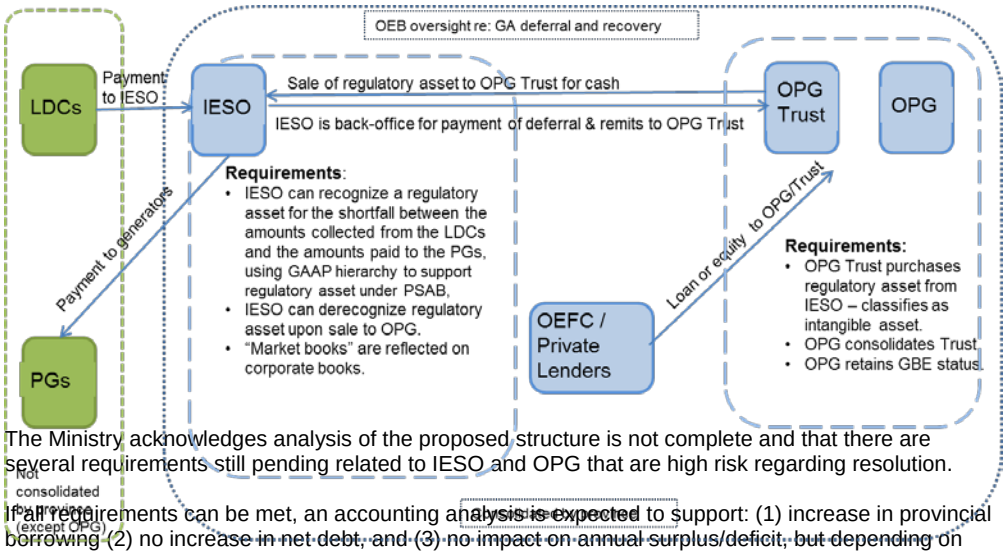
GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.

The Ministry is proposing to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. Through GA Smoothing, these costs would be spread over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). The result of this GA proposal is that cost to ratepayers remains lowered in the short term reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month. Bill increases will be kept in line with the Consumer Price Index (CPI) until the end of 2021, and from 2022 onwards, bills will increase at a rate that ensures recovery of the accumulated debt, interest costs and administrative costs by 2048 without exceeding 10% of total electricity costs.

The GA Smoothing options under consideration are illustrative, the Ministry notes, targeted to RPP eligible participants, and show potential rate mitigation measures to meet a total bill savings of 25%, 20% and 18% reduction from the projected residential bill in 2017 requires a significant GA subsidy. These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month. Actual ratepayer savings would vary due to differences in consumption patterns. Graphics for 25% and 18% appear at the end of this section.

The Ministry is working through different implementation options so as to mitigate negative fiscal plan implications GA smoothing. The following table shows the projected fiscal costs related to GA smoothing without legal and accounting treatments.

The Ministry has put forward a potential GA smoothing structure, as well as interactions between the sector entities and elements required to meet accounting objectives. The Proposed structure is still subject to legal, financing and accounting confirmation, and absent confirmation there would be a fiscal impact to the province.



The Ministry acknowledges analysis of the proposed structure is not complete and that there are several requirements still pending related to IESO and OPG that are high risk regarding resolution.

If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase on income from OPG.

- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.

Policy, Legal, Fiscal, Accounting considerations:

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices. A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs

- If Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA Smoothing (i.e., because it is only targeted to RPP consumers) – consideration could be given to provide tax-based measures to off-set electricity costs (e.g., tax-credits, programs, etc).

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

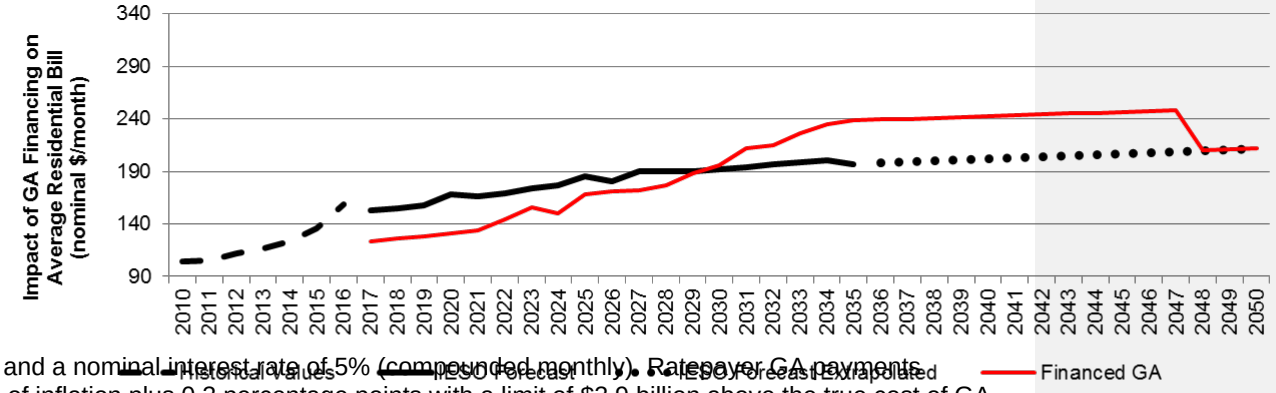
- The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation.

    - A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax.

      Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

- There is risk for any potential no fiscal impact implementation structure for GA smoothing given that the Ontario Auditor General has raised concerns about recognizing rate regulated assets and liabilities in previous Annual Reports.

GA Smoothing for RPP-Eligible Only (Borrow $2.5 billion in 2017, Residential Bills Lowered 25%) Original Option



Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 at the rate of inflation plus 0.3 percentage points with a limit of $3.9 billion above the true cost of GA in any given year. IESO forecast is [illegible] and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Appendix G: Support for Tenants & Supports for Class B – Conservation Efforts

Support for Tenants:

The Ministry of Energy and the Ministry of Housing have explored whether it is possible to extend these programs to tenants who do not pay their own electricity bills.

The Residential Tenancies Act (RTA) governs the relationship between landlords and tenants. While it may be possible to use the RTA to direct landlords to pass on savings such as the 8% Rebate to tenants, there would be significant complexities with such an approach (E.g., different metering configurations including bulk metering, individual, both combined in a building; enforcement to ensure rebates based on; and to distinction if it only applies to pre-1991 buildings that are covered by rent controls)

The Ministry of Energy and the Ministry of Housing have concluded that the most vulnerable consumers in the province in social housing do benefit indirectly from the existing mitigation measures such as the 8% Rebate. Social housing providers do receive the 8% Rebate, which allows them to offset some of their electricity costs, and can use these savings for other issues related to the building.

Support for Class B electricity consumers

Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers). The Ministry notes, the cost of electricity for Class B consumers has risen faster than CPI.

- Further lower the threshold for participation in the Industrial Conservation Initiatives (ICI) below the current 1MW, which was recently approved – takes effect July 2017. Sector restrictions would be included. It could be narrowed to a specific sector – allow only manufacturers below 1 MW to participate.
    - Cost would be covered by other ratepayers. Ministry's preliminary analysis notes an increase of just over $1/month increase for a typical residential bill.
    - Regulatory amendments need to be made before end of April 2017 (due to putting it in place before next 12 month billing period beginning Jul 1 ,2017)
- Eliminate DRC earlier than scheduled April 2018 for all non-RPP Class B consumers (Saves $7/MWh)
    - Shift Class B DRC to Class A consumers
    - Partially reduce Class B DRC (A $148M fiscal impact if lowered by 50% to $3.50/MWh)
    - Remove DRC completely for Class B (fiscal impact estimated at $295M in 2017-18)

- DRC Benefit Voucher – Class B customers would receive a voucher equivalent to all or a portion of their DRC charges on their electricity bills. The customer would use this voucher to increase or 'top-up' incentive amounts available through the Ontario Climate Change Solutions Deployment Corporation (OCCSDC). Vouchers could incent higher participation towards OCCSDC programs, helping these customers transition to a low-carbon economy.
    - Vouchers could be funded either through the GGRA if the voucher can be linked to GHG reductions, or the tax base. It is estimated that the outstanding balance for DRC relating to Class B customers from April 1, 2017 to March 31, 2018 is approximately $295M.
    - Not all Class B customers may be able to benefit from the vouchers (e.g. a facility with limited ability to implement new energy efficiency measures).
    - LDCs may need to make changes to their administrative processes and billing systems in order to confirm value of voucher.

APPENDIX H: ILLUSTRATIVE BILL IMPACT

The follow table show electricity bill impact of 25% reduction..

GA Smoothing for <u>RPP Eligible Only</u> – Residential Bills Lowered 25% (with Government Funded 8% Rebate and Social Programs, 2% increase)

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**158**	**164**	**167**	**170**	**181**	**178**

One comment I have is that I believe the affordability fund ultimately only received $100 M in funding, as per the attached note.

Hi Bruno,

I think this is the right one….could Emily take a look in the next few minutes? I just want to have another look to see if latest.

Thanks,

John

Subject: Fair Hydro Plan

Hi team,

I'm writing a one pager on the FHP. Is there a handy table somewhere of the fiscal impact, broken down by the different elements? I know that was in one of the decks we used to brief the Minister towards the end of February, but I want to ensure I have the most up to date one.

I would really appreciate if you could help me track this down ASAP.

Thanks,

Marianne Nguyen

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	March 6, 2017
Agenda Class:	Discussion
Last reviewed by: TB/MBC (March 1, 2017)	**Tracking to:** Fast Track Cabinet (March 8, 2017)

SUBMISSION TITLE:	Affordability Fund

I. DECISION BEFORE THE BOARD

- Approve funding in 2016-17 to support the Affordability Fund.

II. RECOMMENDATIONS:

• Approve $100,000,000 in 2016-17 offset from the Treasury Board Contingency Fund to support the Affordability Fund.	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	200.0	0.0	0.0
Initiative cost recommended	100.0	0.0	0.0
Recommended program base	0.0	0.0	0.0
Offset Recommended	0.0	0.0	0.0
Total Fiscal Impact (C-fund)	100.0	0.0	0.0

IV. KEY COMMENTS AND CONSIDERATIONS

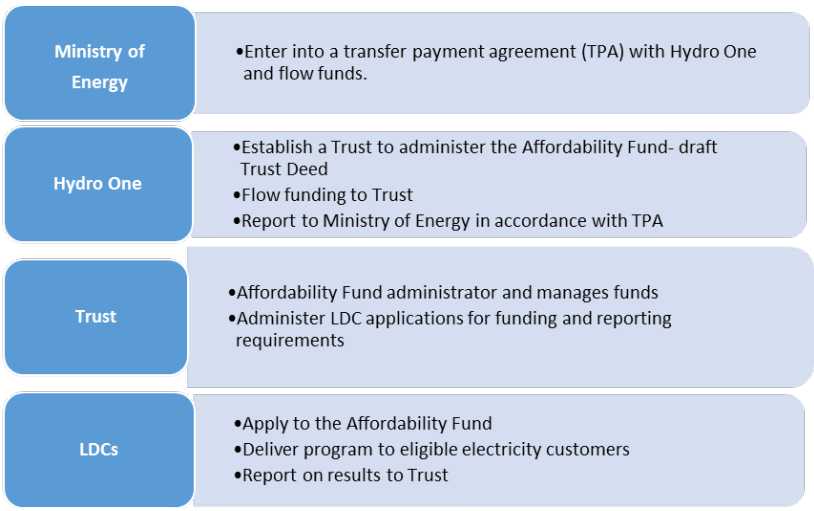
This item was part of the suite of initiatives before TB/MBC on March 1, 2017 related to electricity price mitigation. The Affordability Fund was minuted as follows:

> Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.
>
> a) Approved a commitment to provide up to $200,000,000 on a multi-year basis.
>
> b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

The Ministry's current request is for $200,000,000 in 2016-17 offset from the Treasury Board Contingency Fund. The Affordability Fund would be available to LDCs only and would target those electricity customers who do not qualify for low-income conservation programs (e.g. The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework) and who have difficulty paying their electricity bills.

- Ministry indicates that, based on LDC-reported data, 60,000 Ontarians at risk of disconnection from their electricity service each year. (TBS staff note a profile description or details of these consumers is not provided by the Ministry, and the Ministry has clarified this profile data has not been reported by LDCs to the OEB).
- Eligible customers will be identified by LDCs and could include those in frequent arrears or facing disconnection. Priority would be given to homes primarily heated by electricity. Appendix C outlines the Ministry's eligibility principles for the Fund.

To establish the Fund, the Ministry of Energy intends to enter into a Transfer Payment Agreement (TPA) with Hydro One. The TPA would include terms for Hydro One to establish a non-controlled Trust to administer and distribute funds to LDCs across the province on the basis of principles established by the Province and implemented at the discretion of the Trustees. The Trust would distribute funds to LDCs across the province, including Hydro One, at the direction of the Trustees.



- The Trust's governing principles will be outlined in the Trust Deed and the Trust will be managed by a Board of Trustees.
    - The Trust Deed will be drafted by Hydro One with input from the province and others in the LDC sector. The goals and principles of the Fund will be outlined in the Trust Deed and be consistent with the TPA, but the Trustees will have the discretion as to how to achieve the goals in alignment with the principles.
- The Trust would include Trustees possibly from the government, from other LDCs across the province and other independent Trustees, but not be controlled by the Province.
- The Trustees will have the discretion to hire Hydro One or other entities as service providers to assist with administering the Fund.
- The Trust would distribute funds to LDCs across the province (including Hydro One) at the discretion of the Trustees.
- LDCs would identify their respective eligible electricity customers and deliver the funding in accordance with the program.
  To protect public interest, it is expected that the Trust Deed will reflect an expectation that accountability provisions be included in funding provided to the LDCs which are consistent with those required under the TPAD.

Since the submission was received centrally, the Ministry has been working with the Office of the Provincial Controller Division (OPCD) on appropriate funding arrangements (Providing the funding to the Trust directly versus providing funding to Hydro One, who would provide it to the Trust) to ensure that the Province's and the Auditor General's respective abilities to audit the use of the funds is maintained under the Province's Transfer Payment and Accountability Directive and the Auditor General Act. The Ministry is currently working with H1 and its external advisors on this topic, and further details will be available shortly. At this time, it is not anticipated that such changes would impair ability to complete the transfer by March 31st.

The Ministry indicates the measures funded through the Fund would be similar, or build on those available through the Home Assistance Program.

- The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills. Program eligibility is aligned with other low-income support programs such as the OESP.

Affordability Fund recipients could receive measures (e.g. energy-saving light bulbs, programmable thermostats, cold climate air source heat pumps) ranging from $3,000 to $5,000 per customer, at no or minimal cost. As an illustration, with $200M, the Ministry indicates the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake. The large range takes into account the potential take-up of more expensive measures such as cold climate air source heat pumps which can range in cost from $7-$13K, and which can achieve significant electricity savings.

Performance Measurement:

The submission indicates that Hydro One would provide support to the Province in exercising its oversight of the program by collecting reports from the LDCs on behalf of the Province and/or submitting regular progress reports on program participation. The TPA with Hydro One will include details on reporting requirements. There is currently no mention of outcome measures in the submission but such details are expected to follow as planning progresses. The Ministry notes the government can outline broader principles and intended outcomes but specific outcome targets (like helped X homes result in Y savings) would be seen as prescriptive and in conflict with the Trust model.

The Ministry will create a grant agreement (i.e., A Transfer Payment Agreement) consistent with OPCD's guidance on one-time transfers and TPAD.

Risks:
Appendix C is the risk table submitted by the Ministry. Many of the Ministry's cited risk focus on the quick timing to put the program in place in 2016-17, oversubscription of funds, and underspending.

The Ministry also notes moderate risk with a high impact from flowing the funds into an independent trust account also for limited accountability, oversight, and transparency provisions. TBS staff note the list of accountability provisions provided by the Ministry above does not explicitly mention (nor does the submission elsewhere) the Transfer Payment Accountability Directive (TPAD) principle – Value for money is expected in the expenditure of government funds. TBS staff noted OPCD's one-time guidance is implicitly aligned with TPAD including value for money expectation.

TBS staff notes moderate risk around geographical representation of members in the Trust, lack of program design details (e.g., LDC and customer eligibility criteria) and lack of articulation of what success looks like for the program to ensure accountability. With the non-application based program structure, eligibility and selection criteria needs to be clearly established to pass the equity test.

Financials:
The Ministry is proposing that the Fund be provided through a one-time payment of $200M in 2016-17 offset from the Treasury Board Contingency Fund.

- The Ministry indicates providing the $200M immediately provides LDCs with the required upfront commitment to apply for funding and initiate planning and implementation activities.

- Administration expenses will be in accordance with the Transfer Payment Directive.

- The Ministry expects that the funds through the Affordability Fund will be deployed within a year (funds are expected to be exhausted by March 31, 2018). The TPA will include the option to extend the original funding amount into future years in the event of under spending. The TPA will also include the option to incorporate potential future funding from the tax base. The Ministry intends to seek an exemption from the Cash Management Directive from the Ontario Financing Authority, MOF.

TBS staff note the March 1, 2017 minute was a commitment of up to $200M on a multi-year basis with direction to the Ministry Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

Given the high-level nature of the current submission without specific details from a pending TPA, nor a performance management framework in place to gather evidence to support evidence-based decision-making, it is recommended that only $100M in funding in 2016-17 be provided now (Of the multi-year $200M commitment) as it still demonstrates an upfront commitment. It also provides time to finalize program details and performance reporting framework and report back to TB/MBC on them by Q1 2017-18. For the 2018-19 PRRT, the Ministry can report back on Affordability Fund results achieved to date, and provide a value for money assessment, so that both can also act as evidence-based support for a future funding request.

Branch / Division:	General Government, Planning and Resources Branch, PEMD, TBS		

APPENDIX A: PROPOSED MINUTE

Approve providing $100,000,000 in 2016-17 for the government funded Affordability Fund.

In this regard,

i) Approve a Treasury Board Order, under the authority of the Financial Administration Act, in the amount of $100,000,000 in Green Energy Initiatives Transfer Payment, under Energy Development and Management (Vote/item 2902-1), offset by the Treasury Board Contingency Fund, to establish the Affordability Fund.

ii) Direct the Ministry to

a) Report back to TB/MBC by Q1 2017-18 with final program details, and a performance management framework including intended outcomes.

b) Report back to TB/MBC through the 2018-19 PRRT with spending to date, results achieved to date, a value for money assessment, and if needed at that time a multi-year funding request along with impacts to the Province's fiscal plan.

c) Provide regular updates to TB/MBC through regular reporting process including quarterly reports.

d) Work with Cabinet Office and the Office of the Premier to develop a communications strategy.

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1

Total Fiscal Impact (draw from c-funds)		**100.000**	**0.0000**	**0.0000**	**100.0000**

APPENDIX C: AFFORDABILITY FUND PRINCIPLES

The Ministry has developed high-level principles by which the Affordability Fund will operate and will continue to refine these principles through discussion with all LDCs. LDCs are best positioned to provide further guidance on principles as they are closest to the customer and will be responsible for identifying the customers in need and delivering assistance to them. All LDCs will be able to apply to access to the Affordability Fund so they may address the needs of their customer base. Principles include:

- The purpose of the Affordability Fund is to assist electricity customers who do not qualify for low-income conservation programs, are struggling to pay their electricity bills, and are unable to make energy efficiency improvements to their homes without financial assistance. The Fund would offer these customers energy efficiency measures at no or minimal cost, providing LDCs with an additional tool to help customers in need to reduce their future electricity bills and avoid future disconnections.
- Trust and Trustees - The Fund is to be administered by an independent Trust. Trustees are to be representative and have relevant sector expertise.
- Allocation of funding to LDCs - Fund to be accessible to all LDCs on application basis, subject to consistent funding application and evaluation criteria.

Eligibility Principles:

- Customers who do not qualify for low-income conservation programs (i.e. are above Statistics Canada's Low-Income Measure).
- LDC has reasonable evidence to indicate that the customer requires financial assistance to pay for energy efficiency measures.
    - The Trust will be expected to consider the appropriate indicators for determining whether customers are reasonably in need. The Ministry does not expect that a new income threshold would be established, due to the administrative costs and timelines required to implement income-eligibility tests. The Ministry believes that other indicators available to LDCs would be sufficient.
- Customers may have triggered action by an LDC collection department (e.g., customers are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.).
    - Arrears are defined by the OEB as accounts that are 30 or more days past the 16-day minimum payment period.
    - LDCs have communicated that their customer care departments keep track of their customers who are in "frequent arrears" or "chronic arrears."
    - These terms are qualitative (i.e. do not refer to a set length of time or number of times customers are in arrears); however, generally ENERGY understands the bounds of these terms to be, on one end, customers who are in arrears for more than one billing period, and on the upper end, customers that have several thousand dollars in payments owing, accumulated from a number of missed or partially missed billing periods.
    - While arrears are an important indicator of need to LDCs, LDCs have also indicated that there may be customers who are keeping up with their bills, but at the expense of paying for food or other basic needs. LDCs have asked for discretion to also offer energy efficiency measures to these customers.
- Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances.
- Other factors as agreed by the Trustees.

Hydro One is expected to use the principles developed by the Ministry (with input from LDCs) to establish the Trust Deed. It is critical that there be fair and appropriate eligibility criteria for LDCs to consistently apply across the province to ensure that support is provided to those customers in need and to prevent any potential gaming.

The Trustees must be given some flexibility to determine this criteria. Flexibility is also desirable as it is expected that the Trustees will have knowledge of the LDC sector, customer needs and/or low-income and conservation programs to further refine appropriate customer eligibility criteria. It is also expected that Trustees will engage with other LDCs and industry experts as needed to inform eligibility criteria.

APPENDIX D: MINISTRY'S RISK ASSESSMENT AND MITIGATION STRATEGY

Risk	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation Strategy
It is proposed that the funding for the Fund be expensed in 2016-17, while the programs would be delivered in future fiscal years. The Auditor General may ask for the funding to be expensed in future fiscal years.	M	L	ENERGY is continuing to engage with Hydro One and the Ontario Provincial Controller (OPCD) early to develop the funding mechanism and Trust. ENERGY is working to flow the funds to the Trust in advance of March 31, 2017.
The Auditor General may question the rush nature of this program in addition to the need for a Trust Account and why the Ministry is unable to deliver the program itself.	H	M	Explain that the Fund is part of the government's rate mitigation strategy, and intended to address an immediate need (getting customers on a more sustainable path with bills). ENERGY lacks the capacity to deliver the program itself. ENERGY will develop issues management materials to address these concerns.
Flowing the funds into an independent trust account allows for limited accountability, oversight and transparency provisions.	M	H	ENERGY has engaged with the Ontario Provincial Controller to seek their guidance on how to incorporate accountability, oversight and transparency provisions in the TPA. ENERGY will develop a TPA in-line with OPCD guidelines on accounting considerations for using government funded Trust Accounts.
Oversubscription of funds	M	M	Need for additional funding in future years can be evaluated based on customer needs.
Underspending of allocated funds	L	M	TPA will include the option to extend the original funding amount into future years. The Trust will also have the ability to extend funding as needed. To increase uptake for customers in need, LDCs will undertake targeted outreach.
Some entities, including LDCs who are not selected as parties to the TPA, may feel left out of the funding program or perceive the funding as inadequate.	M	L	Undertake consultations with LDCs and other stakeholders to provide input on allocation methodology. Prepare a robust communication plan to emphasize the scope and purpose of the Fund

Hi team,

I'm writing a one pager on the FHP. Is there a handy table somewhere of the fiscal impact, broken down by the different elements? I know that was in one of the decks we used to brief the Minister towards the end of February, but I want to ensure I have the most up to date one.

I would really appreciate if you could help me track this down ASAP.

Thanks,

Ron

The table sent previously I believe has more up-to-date figures than the placemat provided by Scott. The RRRP numbers were revised in the March 1 cab-sub. And as just noted $100m was approved for Affordability Fund.

Hi John, do you have anything to add to the info below regarding Fair Hydro Plan appearing in the 2017 Budget (per the FAO request further down)?

James

Chapter VI:

Where Interim 2016-17 Expense appears, it includes $100M for the Affordability Fund, $300M for the Ontario Rebate for Electricity Consumers. In table 6.15, both appear in the “Electricity Cost Relief Programs” line under ENERGY.

Where Plan 2017-18 Expense appears, it includes $499M for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC), and $939M for the Ontario Rebate for Electricity Consumers . In table 6.15, both appear on the “Electricity Cost Relief Programs” line under ENERGY.

Medium Term Expense Outlook table 6.12 – Interim 2016-17 includes the $400M mentioned above, Plan 2017-12018 includes $1438M mentioned above. 2018-19 & 2019-20 columns include $1635M in 2018-19 and $1711M in 2019-20 under "Other Programs" for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC) and the Ontario Rebate for Electricity Consumers.

Hi James – Are you able to assist with the below related to the Fair Hydro Plan question from the FAO?

The OFA has also offered to help out so I'm not sure if that will be of any assistance…

I'm assuming the FAO is just asking about where the Fair Hydro Plan appears in the Total Expense table? (or one of the tables in chapter 6 b of the doc?)

Selena has also set up a meeting from 4-5 today to go over draft responses with a plan to have answers to the OFA tomorrow, so I apologize for the tight timelines.

Let me know if I can help.

Subject: FW: Follow-Up on the 2017 Budget

Hi Everyone.

As you can see below, the FAO has reached out to make a formal request for information in follow up to yesterday's release of the Budget (BTW we are looking to set up a mtg on Tuesday from 1pm to 2pm with the FAO).

You may have already been forwarded this email from your ADMs but we've also just now received the list of specific additional questions (attached). I've attempted to identify in the attached and below which area is responsible for what, and if I have this wrong, please let me know (and sorry!).

I thought we could do a quick touch base Monday, just to check in on what we might have readily available to be in a position to provide at Tuesday's meeting and what we may need to get back to the FAO on (but pls note that we should not be doing any new analysis to provide a response). I will send out an invite/teleconf so we can discuss.

For reference I have attached an excerpt from our protocol for interaction with the FAO in case folks need a refresher on what information can/cannot be shared. We can discuss further on Monday at our call/meeting.

Thanks and pls let me know if you have any questions.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.
   - Are these detailed tables available to 2020-21? If so, then please include (☺) **– OEP Table 6.14/TBS – PEMD&CPD 6.15**

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9. **- OEP**

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.- **TBS-OPCD**

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses **– CEFD/ TBS - PEMD**
- Additional details/clarification on new health spending, including the new pharmacare plan **– TBS PEMD**
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table. **OFA CEFD, OEP**
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care) **OEP/TBS PEMD & CPD**
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense – **OEP, TBS PEMD**
- Additional details/clarification on new infrastructure spending **TBS CPD**

- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%. **OFA**

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Chapter VI:

Where Interim 2016-17 Expense appears, it includes $100M for the Affordability Fund, $300M for the Ontario Rebate for Electricity Consumers. In table 6.15, both appear in the "Electricity Cost Relief Programs" line under ENERGY.

Where Plan 2017-18 Expense appears, it includes $499M for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC), and $939M for the Ontario Rebate for Electricity Consumers . In table 6.15, both appear on the "Electricity Cost Relief Programs" line under ENERGY.

Medium Term Expense Outlook table 6.12 – Interim 2016-17 includes the $400M mentioned above, Plan 2017-12018 includes $1438M mentioned above. 2018-19 & 2019-20 columns include $1635M in 2018-19 and $1711M in 2019-20 under "Other Programs" for Social Programs moving to Government Funding (OESP, RRRP, ORFNDC) and the Ontario Rebate for Electricity Consumers.

Subject: FW: Follow-Up on the 2017 Budget

Hi James – Are you able to assist with the below related to the Fair Hydro Plan question from the FAO?

The OFA has also offered to help out so I'm not sure if that will be of any assistance…

I'm assuming the FAO is just asking about where the Fair Hydro Plan appears in the Total Expense table? (or one of the tables in chapter 6 b of the doc?)

Selena has also set up a meeting from 4-5 today to go over draft responses with a plan to have answers to the OFA tomorrow, so I apologize for the tight timelines.

Let me know if I can help.

Chris

Hi Andrea,

Hope all's well.

On the FHP question, it identifies TBS PEMD. Could you share the draft response? We would like to keep our ADM and DM briefed on the response. If we could help out in any way, let me know as well.

Thanks,

John

Subject: FW: Follow-Up on the 2017 Budget

Hi Everyone.

As you can see below, the FAO has reached out to make a formal request for information in follow up to yesterday's release of the Budget (BTW we are looking to set up a mtg on Tuesday from 1pm to 2pm with the FAO).

You may have already been forwarded this email from your ADMs but we've also just now received the list of specific additional questions (attached). I've attempted to identify in the attached and below which area is responsible for what, and if I have this wrong, please let me know (and sorry!).

I thought we could do a quick touch base Monday, just to check in on what we might have readily available to be in a position to provide at Tuesday's meeting and what we may need to get back to the FAO on (but pls note that we should not be doing any new analysis to provide a response). I will send out an invite/teleconf so we can discuss.

For reference I have attached an excerpt from our protocol for interaction with the FAO in case folks need a refresher on what information can/cannot be shared. We can discuss further on Monday at our call/meeting.

Thanks and pls let me know if you have any questions.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.
   - Are these detailed tables available to 2020-21? If so, then please include (☺) **– OEP Table 6.14/TBS – PEMD&CPD 6.15**

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the

forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9. **- OEP**

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.- **TBS-OPCD**

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses **– CEFD/ TBS - PEMD**
- Additional details/clarification on new health spending, including the new pharmacare plan **– TBS PEMD**
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table. **OFA CEFD, OEP**
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care) **OEP/TBS PEMD & CPD**
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense – **OEP, TBS PEMD**
- Additional details/clarification on new infrastructure spending **TBS CPD**
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%. **OFA**

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Ontario

Electricity Price Mitigation

Ministry of Energy

March 1, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

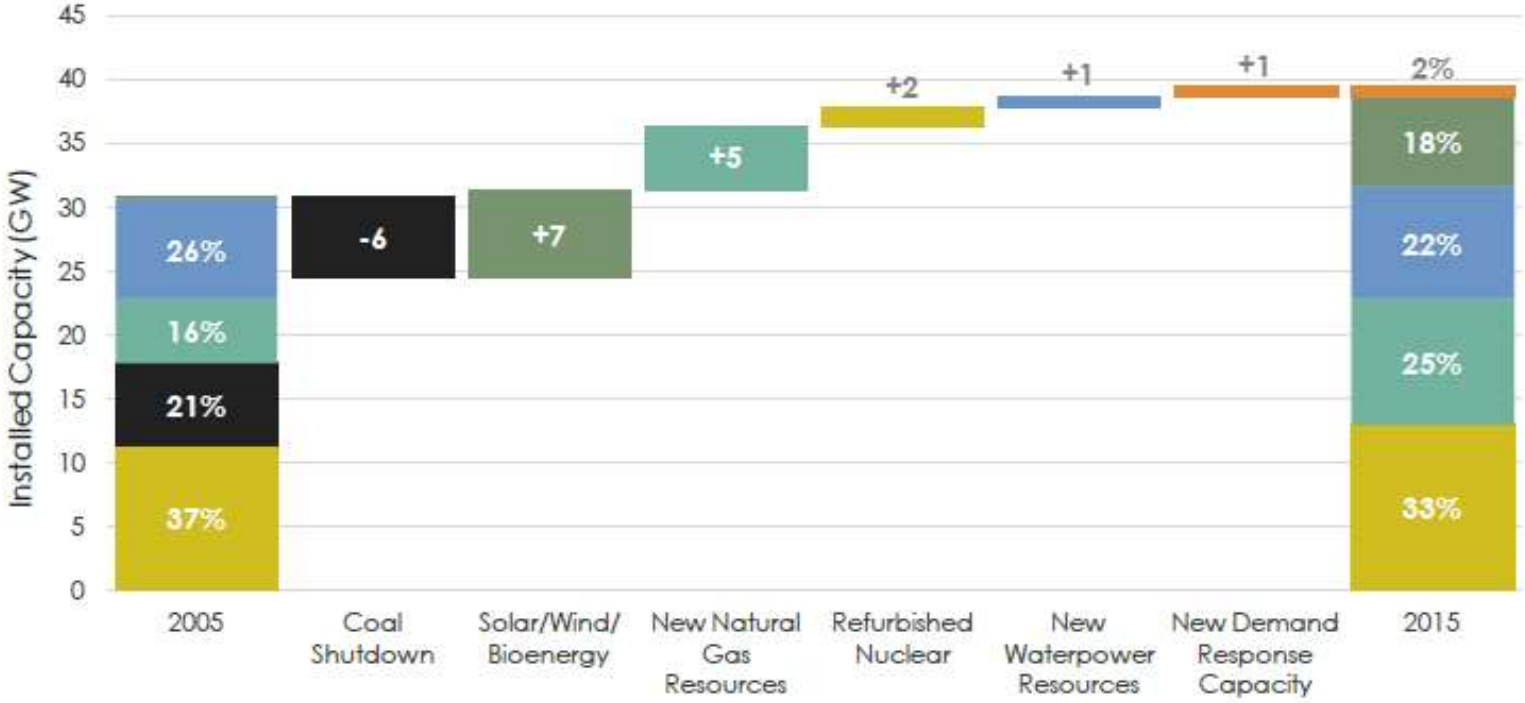
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



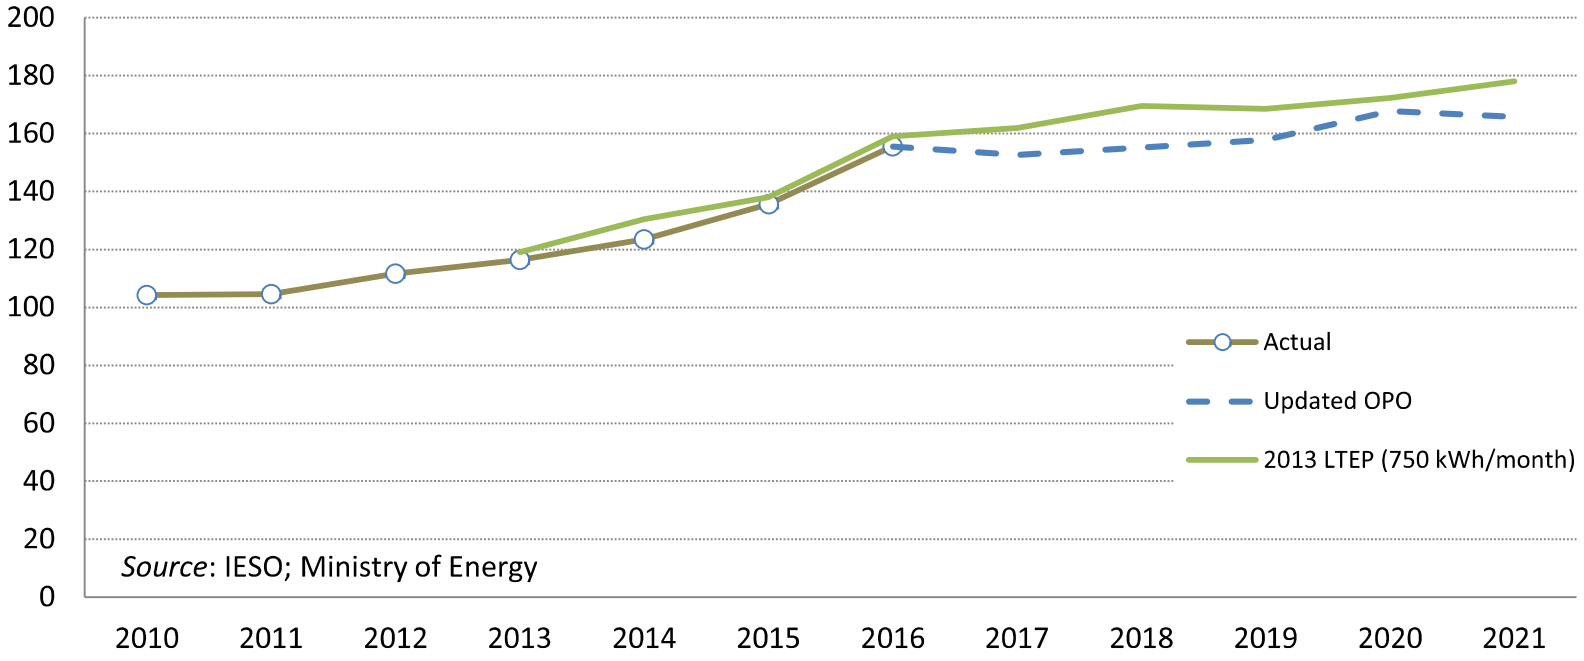
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



CONFIDENTIAL CABINET DOCUMENT

Context – Recent and Existing Government Funded Electricity Cost Mitigations

($Millions)	14-15	15-16	16-17[1]	17-18[1]	18-19[1]	19-20[1]	20-21[1]	Who Benefits
Ontario Clean Energy Benefit (OCEB) [2]	1,078	860	***OCEB ended on December 31, 2015***					• Residential customers, farms, small business (i.e., 10% off, on up to 3,000 kWh/month)
Ontario Rebate for Electricity Consumers (OREC or 8% rebate)*	-	-	300	1,100	1,200	1,200	1,200	• Residential customers, farms, small business (i.e., amount equal to the 8% Provincial portion of HST)
Ending Debt Retirement Charge (DRC) for Residential[3]	-	85	330	330	--	--	--	• Residential customers (i.e., saves about $70 per year for a typical residential consumer)
Northern Ontario Energy Credit (NOEC) [4]	24	26	25	25	25	25	25	• For eligible northern Ontario residents (i.e., for 2017, single people can receive up to $148,and families up to $227, depending on adjusted family income)
Ontario Energy and Property Tax Credit (OEPTC) (Energy component only)[4]	429	444	450	460	470	481	481	• For eligible low-to moderate-income individuals and families, & qualifying seniors (i.e., for 2017, up to $227, depending on adjusted family income)
Northern Industrial Electricity Rate Program (NIERP)	108	120	120	120	120	120	120	• Qualifying northern Ontario large industrial electricity consumers (i.e., rebate of 2cents/kilowatt-hour)
TOTAL	**1,639**	**1,535**	**1,225**	**2,035**	**1,815**	**1,826**	**1,826**	

Notes:

1. 2016-17 to 2020-21 based on forecasted numbers
2. OCEB ended December 31, 2015
3. 2015-16 estimated for 3 months of reduced DRC revenue. Estimated impact up to March 31, 2018.
4. Part of the Ontario Trillium Benefit. While related to energy generally, key policy driver for OEPTC when introduced in 2010 was electricity, as prices were forecast to rise, while fossil fuel prices, particularly natural gas, were low and falling.

CONFIDENTIAL CABINET DOCUMENT

Context – Recent Actions Taken To Mitigate Electricity Rates

- Following the 2016 Throne Speech, the several actions were announced to further reduce electricity costs.

1. As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8%.

2. Expanded support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.

3. Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

4. Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

5. Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – an average annual savings of $15 million.

Rate Mitigation Proposal

- The following approaches are proposed:

1) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
   - Smoothing Mechanism (i.e., 25% reduction); and
   - Implementation Model.

2) Enhancing competitiveness for Class B electricity consumers (i.e. manufacturing) by lowering the eligibility threshold for Industrial Conservation Initiative (ICI).

3) Helping vulnerable electricity consumers by enhancing electricity support and conservation programs and shifting cost onto the tax-base:
   - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
   - Ontario Electricity Support Program (OESP) Expansion;
   - New Affordability Fund; and
   - On-Reserve First Nations Delivery Credit.

4) Ongoing activities to bend the future cost curve of electricity:
   - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
   - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing option under consideration is illustrative and show potential rate mitigation measures to meet a targeted 25% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to Regulated Price Plan (RPP) -eligible;
  - Rate increases would be capped at Consumer Price Index (CPI) for the first four years. Subsequent years would be set above CPI in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

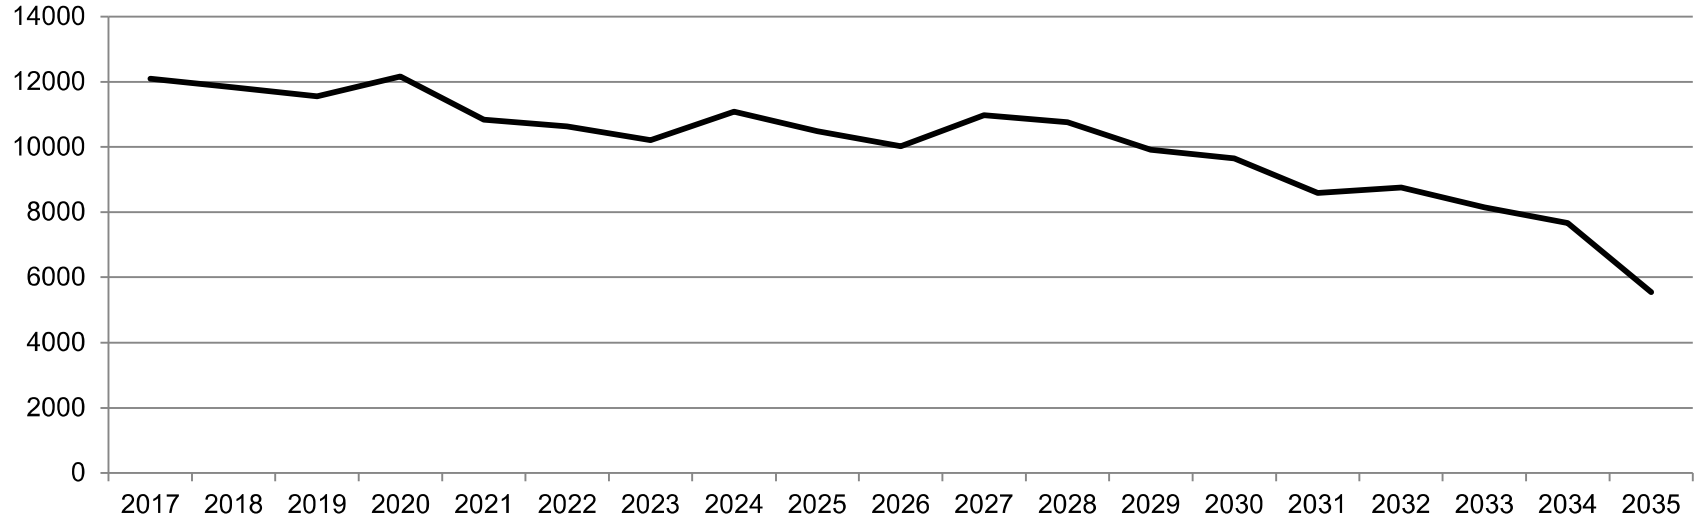
CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators**.**
**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

GA Smoothing – Global Adjustment Forecast

- The amount of Global Adjustment (GA) is forecast to decrease through the forecast period. Several factors contribute to the decline of GA, including:
  - Expiry of electricity generation contracts;
  - Cost of existing contracts reduced due to Inflation; and
  - Higher wholesale electricity prices due to higher natural gas/carbon prices, higher demand and reduced nuclear generating capacity.

Forecast Global Adjustment Cost (nominal $ million)



CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Expected Life of Electricity Generating Assets

- Gas, wind and solar generators are typically contracted for a 20-year period (e.g., with the Ontario Electricity System Operator (IESO), etc).
  - Nuclear and hydroelectric generators are contracted for a much longer period or regulated by the Ontario Energy Board (OEB) on a cost-of-service basis.
- While it is likely that gas, wind and solar generators will be able to operate beyond their current contracts, IESO advises that generators will need to decide what level of capital investment is appropriate for ongoing operations (i.e., by replacing and/or refurbishing major facility components).
  - In IESO's 2016 Ontario Planning Outlook (OPO), it was assumed that the service lives of generators could be extended beyond their contract term based on additional investments and ongoing costs. **Note:** This was not an assessment of the cost/benefits or a prediction of what the generators would actually do at the end of their contracts.
- The table below outlines IESO's current estimates for service lives of gas, wind and solar facilities. The ongoing service lives of these facilities depend on: initial facility design & build, operating activities (e.g., hours of operation, etc.) and level of facility maintenance (i.e., ongoing component repair and replacement).

Technology	Contract Life (yrs)	Expected Life (yrs)	Expected Cost Post-Contract Life
Gas	20	Up to 30	Life varies with initial design, how it is operated and maintained.
Wind	20	Up to 30	Older technologies may deteriorate faster. Elements such as foundations and electrical integration can last longer.
Solar	20	Up to 30	Performance deteriorates to about 80% by end of contract. Some facilities built in the initial contract periods may deteriorate more; however, technology is improving rapidly. Components need to replaced 5 to 30 years depending on design.

Source: IESO consultant reports (2014 and 2015)

A. GA Smoothing for RPP-Eligible Only (Borrow $2.5 billion in 2017, Residential Bills Lowered 25%, Lower Total Debt)

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048

Revised Bill (includes HST)	**158**	**123**	**126**	**128**	**131**	**133**
Year-over-Year Change		-22%	2%	2%	2%	2%
Change from Forecast		**-25%**	**-25%**	**-25%**	**-28%**	**-25%**

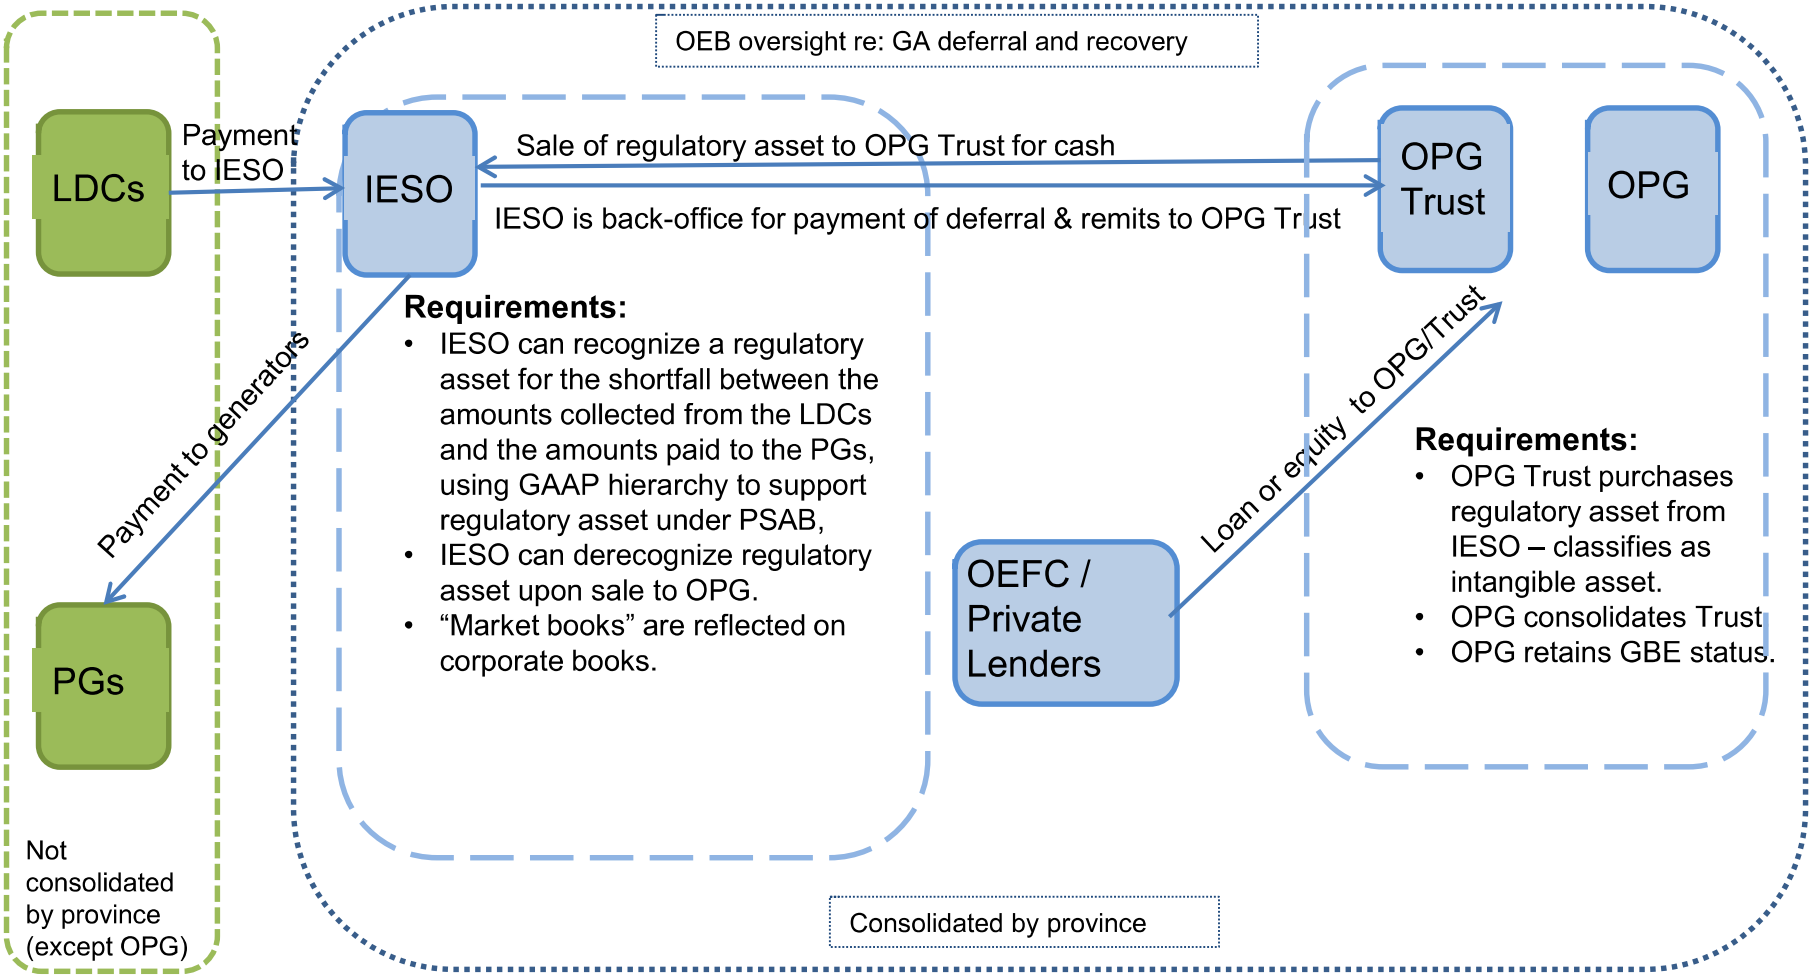
Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%
Change from Forecast		-2%	-2%	-2%	-2%	-2%

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

B. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



CONFIDENTIAL CABINET DOCUMENT

Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

B. GA Smoothing – Accounting Considerations

- OPCD advises that analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure and length of deferral/recovery increase risk and decrease transparency
- If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG will result.
- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

B. GA Smoothing – IESO Considerations

- The Electricity Act enables the Independent Electricity System Operator (IESO) to recover from ratepayers the amounts paid to generators, distributors or other contracted entities.
- The accounting advice received by IESO is that reflecting market balances and regulated assets is a more appropriate presentation for its financial statements going forward.
- IESO is characterized as an "Other Government Organization" (OGO) and consolidated on a line-by-line basis into the Provincial books.

Issue	Response
1. Can IESO adopt regulatory accounting?	• Public sector accounting does not address regulated assets. • Guidance can be drawn from other accounting bodies. • US Federal Accounting Standards Advisory Board (FASB), US Governmental Accounting Standards Board (GASB) and International Accounting Standards Board (IASB) do provide guidance. • FASB accounting standard 980 and IASB have specific references that support the adoption of regulatory accounting. **Conclusion:** There is a hierarchy of accounting principles that support this approach.

B. GA Smoothing – IESO Considerations

Issue	Response
2. Can IESO recognize the GA deferral as a regulatory variance account?	Criteria for recognition are: • Rates are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers. • Rates are designed to recover the specific costs of regulated business-type activities. • In view of demand, it is reasonable to assume that rates will be set to recover the regulated business-type and can be collected from customers. **Conclusion:** Legislation creates the right to collection, currently and in the future. With either OEB or IESO board involvement a regulatory asset can be recognized.
3. Can IESO sell the variance account related to the deferral of the annual Global Adjustment account?	• The sale of the variance account to OPG Trust must be structured as an absolute assignment of future economic benefits of the Asset with no obligations, rights or benefits remaining of IESO. • In that case, this would represent a sale of the future right to collect these amounts from the ratepayer. **Conclusion:** Based upon proposed terms of the sale agreement, there would be no future economic benefit for IESO. Risk and rewards are entirely transferred to OPG Trust.

B. GA Smoothing – OPG Accounting Considerations

- OPG's Special Purpose Vehicle (SPV)/Trust is a stand-alone entity able to conduct business separately under a Trust agreement. **Note:** The conditions required for OPG to consolidate the SPV/Trust are outlined in the following table:

Issue	Response
1. Decision Making	• OPG must have decision making authority on the operation of the SPV/Trust (without a veto right by the Province), including naming of trustees, establishing operating plans and budgets, setting or changing financing policies. • The SPV/Trust while operating within the legislation, must be controlled by OPG to operate freely and to alter terms and conditions not specified in the legislation to ensure recovery of the deferred amounts.
2. Business Risk	• The SPV/Trust must have variability of returns as a normal business enterprise would, including such things as interest charged on deferred amounts, decisions on how to finance these deferred amounts, the ability to make / lose and keep any spread from financing.
3. Funding	• The Province cannot directly or indirectly fund more than 50% of SPV/Trust or any investment in the SPV/Trust. • OPG must own at least 50% of the most exposed equity /sub-debt in the SPV/Trust.
4. Directive	• Directive that is issued should not be prescriptive or direct OPG to set up this business. The directive should only be "guiding" i.e. to allow OPG to evaluate options and put forward to the OPG Board a recommended plan for Shareholder approval.

B. GA Smoothing – OPG Accounting Considerations (cont'd)

Issue	Response
5. Other required Attributes	• The legislation that supports the formation of the SPV/Trust must have the following attributes: – Must require interest, carrying and administrative costs be paid to the Trust to allow for Revenue recognition; – The amount to be deferred must either be specified or be calculated based on a specific formula that is not subject to ongoing decision making by the Province. **The Province cannot have the ability to override this formula;** – SPV/Trust and its debt holders will require their capital guaranteed and paid for directly by the Province if the Province revokes the legislation; and – The spirit of the legislation should be reflected in the Trust Indenture Agreement.

B. GA Smoothing – OPG's Financing Structure Requirements

KEY ELEMENTS REQUIRED TO ENSURE THE DEFERRAL OF GA CHARGES CAN BE FINANCED:

Creating the Right to Recover Deferred GA

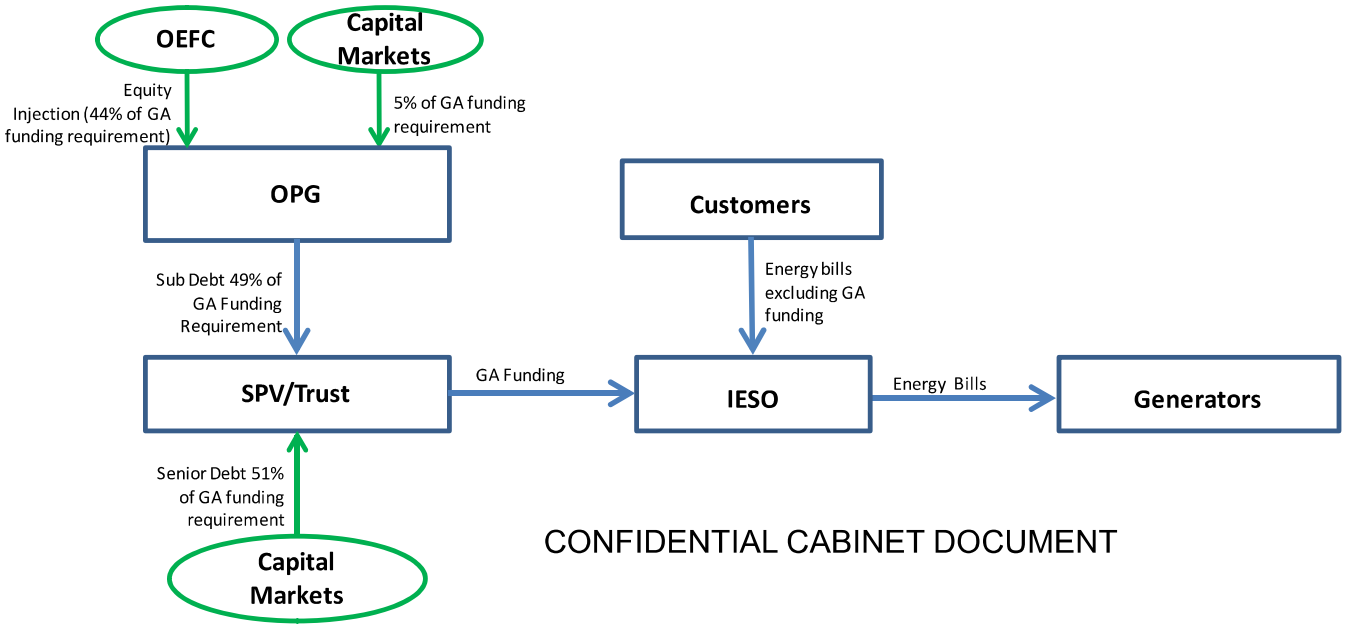
- Legislation enshrines the ability of the IESO to create a Right to charge customers in the future for the Global Adjustment (GA) deferred today including principal amount deferred, interest and other financing costs on the amount deferred and fees, expenses and other administrative costs.
- The Right can be sold to an appropriate Trust or Special Purpose Vehicle (SPV) to obtain funds to pay amounts due to generators under contracts or regulation. These SPVs are generally single purpose entities with no other operations that could add risk to the entity, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings.
- Right must be irrevocable and if the Right is amended by future governments the debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment.
- Right must specify the recovery period or the mechanism for setting the recovery rate including true up of the rate to ensure all amounts are recovered.

Economic Factors

- Limits on the recovery amount (principal, interest, fees and expenses) charged to customers in future periods must have compensating elements such as longer recovery period to ensure the full amount deferred plus interest, financing and other administration costs is recovered from customers.
- Need to balance customer relief with debt holder risk. Longer recovery periods and larger deferred balances increase risk to the debt holder of future government intervention.
- The amount required by the SPV to purchase and service the Right will be funded 51% from debt holders, 5% from OPG through capital markets and 44% from OPG via equity injection to OPG from the Province. The funding from OPG will be loaned to the SPV as subordinated debt.

B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.



CONFIDENTIAL CABINET DOCUMENT

Ontario

GA Smoothing – OEB Considerations

- Ontario Energy Board (OEB) oversight may be required as part of creating a regulatory asset.
- Subject to final confirmation, there are several other spheres for possible OEB oversight:
  - The rate payer impact of IESO deferral account and eventual repayment of the deferred Global Adjustment (GA), within pre-defined legislative parameters;
  - The administrative costs of the OPG's Special Purpose Vehicle (SPV) /Trust (e.g., as the OEB reviews and approves IESO's expenditure and revenue requirements and makes orders fixing just and reasonable rates for the Smart Metering Entity);
  - The SPV/Trust's returns (e.g., as the OEB does with OPG's regulated assets) and whether any income to OPG can be used for the benefit of rate payers;
  - The review of the final structure of the debt issuance for the limited purpose of ensuring requirements of law have been met; and
  - In out years, review of the collection of charges to ensure that collection is sufficient, and not greater than necessary, to pay debt service.
- The scope of OEB oversight will ultimately need to balance the interests and needs of rate payers, the market, OPG and the Province.

B. GA Smoothing – Ontario Financing Authority (OFA) Considerations

- Under the proposed structure, the financing of the deferred Global Adjustment (GA) costs would be effectively done in part by each of the OPG Special Purpose Vehicle (SPV)/Trust, the Province and OPG: the OPG SPV/Trust would borrow 51%, the Province 44% and OPG 5% of the required GA amounts needed to be financed.
  - In the alternative, the Province (through the OFA/OEFC) could borrow the required amounts each year, likely at a lower cost. However, the target for an arms-length trust and potential risk transfer would not be achieved.

	OPG Structured Financing	OFA/OEFC/Provincial Financing
Financing Considerations	• As the OPG SPV/Trust would be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • This would increase the cost of GA smoothing and the ultimate rate impact on future consumers. • The Trust would be exposed to interest rate changes. • Availability of debt financing may also be limited, depending on the overall amount of deferral, and the subsequent rate impact during the recovery period. OPG has cited examples of a 10% threshold on overall rate impacts of the deferral recovery amounts. • With a potential guarantee from the Province for the borrowing of the OPG SPV/Trust, OPG could see borrowing costs closer to the Province. However, this would redirect the risk back to the Province, removing the intended benefits of using this particular structure, and could add risk to the targeted accounting treatment. • With, or potentially even without a provincial guarantee, OPG SPV/Trust's borrowing could be seen as debt effectively supported by the Province by credit rating agencies and included in their analysis and determination of the Province's ratings. • If a Provincial guarantee endangers the targeted accounting treatment, it may be hard to justify the higher cost borrowing by OPG SPV/Trust to be passed through to ratepayers.	• Province's borrowing from the public markets would add to the borrowing program and the Province's gross debt. • The Province would expect to be able to finance the GA deferral at a lower financing cost than the OPG SPV/Trust, but would likely not achieve the targeted accounting treatment based on OPG's analysis. • Net debt would not increase, to the extent supported by increased equity in OPG under that model, and/or if the accounting treatment can be achieved as backed by a GA-related asset (OPG does not consider that the accounting can be achieved if the SPV/Trust is financed by the Province). • The Province's interest on debt (IOD)cost would need to be effectively recovered through the GA. – E.g., an OPG equity return to cover the cost of borrowing for the equity injection. – Or more directly if the Province is providing financing directly to the GA entity. • The cost of borrowing for the Province could change: 1. The Province's credit rating could be at risk of being re-evaluated by Rating Agencies, which may negatively impact the cost at which the Province borrows and 2. An increase in the Province`s borrowing rates, as a result of increased borrowing. The market may not have adequate demand for the Province to carry-out these borrowings without increasing the interest rate on the debt issues for GA financing and for all of the Province's borrowings. • The interest cost of GA deferral would be exposed to changes in the interest rate environment generally.

GA Smoothing – Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
  - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
  - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
  - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
  - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- Although Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA smoothing (i.e., because it is only targeted to RPP consumers), the Ministry has a proposal later in the submission to address competitiveness for Class B consumers (i.e., targeted lowering of the Industrial Conservation Initiative (ICI) eligibility thresholder from 1 MW to 500 kW).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - **Note:** Although Class B and Class A consumers will not receive the rate relief benefits of GA smoothing, both consumers will benefit from tax-basing the electricity social programs.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

- The GA smoothing proposal will accrue total interest of $25 billion based on the proposed option. This amount of interest is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.
  - An increase in the borrowing rate from 5% to 6% would increase the total interest costs by almost $9 billion and would require an extension of the financing term beyond 30 years.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there would be a negative impact on the province's fiscal plan, as shown below.

Fiscal Impact ($M)	2017-18	2018-19	2019-20	2020-21	2021-22
Bills Lowered by 25%, RPP-Eligible Only*	2,534	2,668	2,942	3,420	3,232

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

ENHANCING COMPETITIVENESS FOR CLASS B ELECTRICITY CONSUMERS

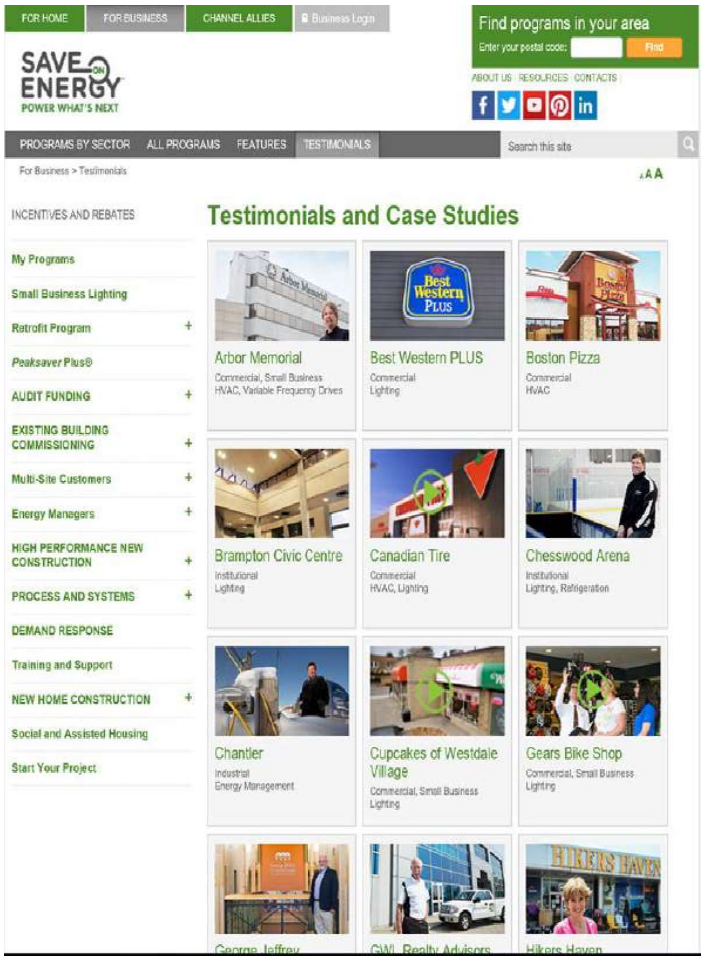
Support for Class B Consumers

- Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

- Through saveONenergy, many Class B consumers have already taken advantage of energy efficiency programs.

  - Although saveONenergy programs like Process and Systems Upgrade Incentive exist, these programs generally require significant investment on behalf of the customer in addition to the incentives and therefore may be difficult to take advantage of.

  - For Class B manufacturers whose electricity consumption is primarily based on process activities (e.g., injection moulding, welding, etc), traditional conservation measures like lighting and ventilation upgrades have limited benefit.



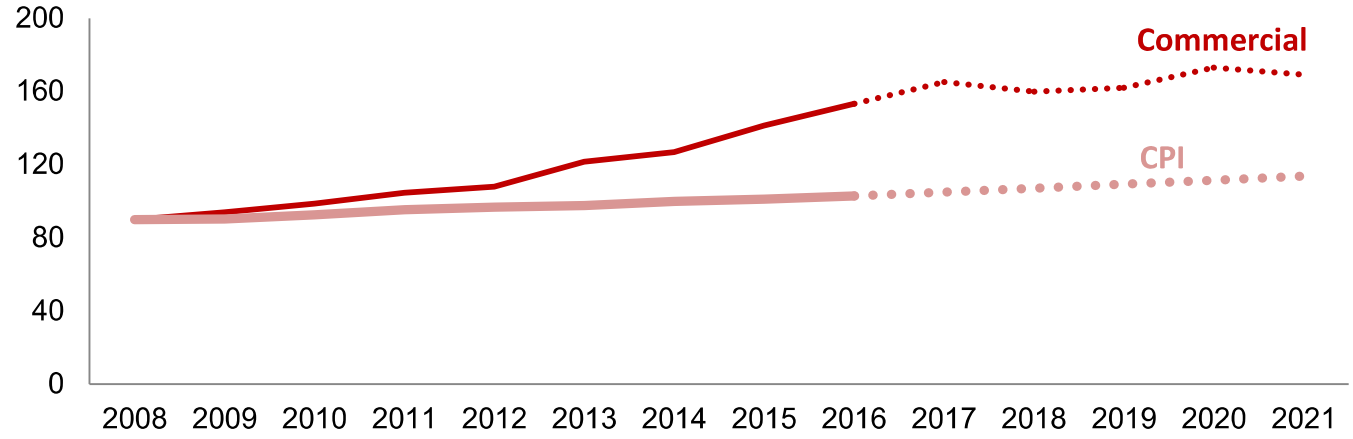
Support for Class B Consumers (cont'd)

- Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers).

- Price mitigation initiatives could be provided to Class B to address stakeholders' concerns (e.g., Coalition of Concerned Manufacturers of Ontario, etc).

- The chart below highlights that the cost of electricity for Class B consumers has risen faster than CPI.

Illustrative Electricity Prices
in $/MWh



***Source*:** IESO; OEB; Ministry of Energy

CONFIDENTIAL CABINET DOCUMENT

Lower ICI Threshold Below 1 MW for Energy Intensive Industry

- The Industrial Conservation Initiative's (ICI) eligibility threshold for participation was recently lowered to 1 MW. The lowering of the ICI eligibility threshold provides an opportunity for additional Class B consumers to save on their electricity costs if they choose to opt-in to ICI (i.e., and become new Class A consumers):
  - Beginning in July 2017, new participants will be billed Global Adjustment (GA) on the basis of their contribution to province-wide peak demand.
  - Prior to lowering the ICI eligibility threshold, electricity consumers with peak demand between 3 and 5 MW could only participate in ICI if they belonged to the following sectors: manufacturing, mining, data processing, refrigerated warehousing and greenhouses. **Note:** To achieve the benefits of ICI, participants must reduce their electricity demand during the five system peak hours.

- To enhance the competitiveness of larger Class B consumers whose electricity demand are too low to currently qualify for ICI, the Ministry proposed to:
  1. Expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts; and
  2. Target the expansion to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing).

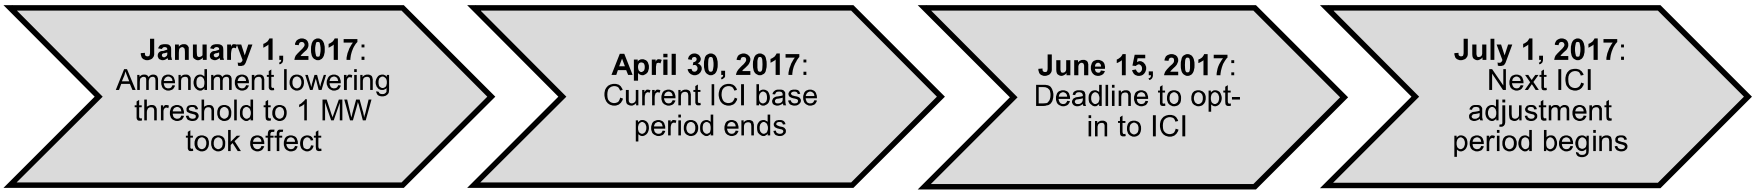
- In addition, the Ministry will assist Class B participation in ICI through a targeted outreach campaign delivered by the Ontario Chamber of Commerce (OCC).

Lower ICI Threshold Below 1 MW – Considerations

- A targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW provides benefit to larger Class B consumers (i.e., manufacturing) while limiting the cost shift to other electricity consumers.
  - **Note:** A Class B consumer that run only a day shift, resulting in fairly peaky load profiles would need to adjusted its behaviour to maximize the benefits of ICI.

- Preliminary analysis by ENERGY staff show that the estimated impact of a targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW would increase a typical residential bill by up to 0.66% or just over $1/month based on a 2016 bill of about $158.
  - The actual impact would vary depending on uptake and consumer responsiveness.
  - With the recent lowering of the ICI eligibility threshold to 1 MW, there is no information available regarding the actual impact on new participants and the electricity system.

- In order for any changes to ICI eligibility to take effect before the next 12-month billing period beginning July 1, 2017, regulatory amendments would have to be made before the end of April 2017.



Lower ICI Threshold Below 1 MW – Legal Considerations

- The quantum of a regulatory charge may be set at different rates within a regulatory structure where the differential prices are intended to serve other regulatory goals including an intention to modify the behavior of persons within the scheme.

- Expanding access to the Class A pricing regime is intended to serve regulatory goals by encouraging consumers to shift their electricity use away from peak hours, which benefits the electricity system as a whole. While Class B consumers will have to pay more of the GA cost in order to finance the reduction for Class A consumers, this is generally permissible since Class B consumers are not modifying their behaviour and the total amount recovered for the GA does not exceed its cost. CLB has previously advised that the differential pricing structure generally only attracts a **moderately low risk** of being a tax, and this risk level does not change if the option of Class A pricing is extended to a broader class of consumers.

- It is more difficult to justify a differential regulatory charge on the basis of behavioral modification when the lower charge is not available to some participants in the regulatory scheme whose conduct could equally serve the same goals. To the extent that there is not a regulatory rationale for extending the new class A option only to certain sectors, risk increases. The amount of risk in this scenario will vary depending on the quantum of the premium that Class B consumers pay to create the behavior modification incentive for Class A and the degree to which the excluded sectors can credibly claim to be able to achieve the same outcome were they permitted to participate in this aspect of the program.

ELECTRICITY SUPPORT AND CONSERVATION PROGRAMS TO HELP VULNERABLE ELECTRICITY CONSUMERS

Electricity Support and Conservation Programs to Help Vulnerable Electricity Consumers

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to deliver electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  A. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  B. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  C. **Establish a new Affordability Fund**, providing energy efficiency measures at no or minimal cost to those who are ineligible for low-income conservation programs, have difficulty paying their electricity bills and who cannot make energy efficiency upgrades without financial assistance.

  D. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

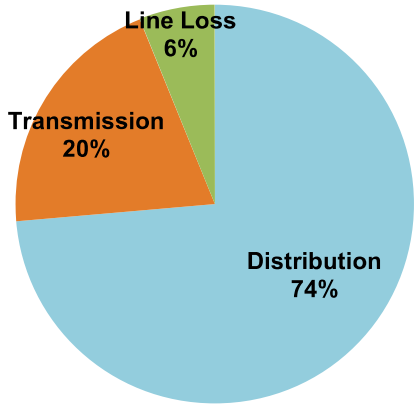
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

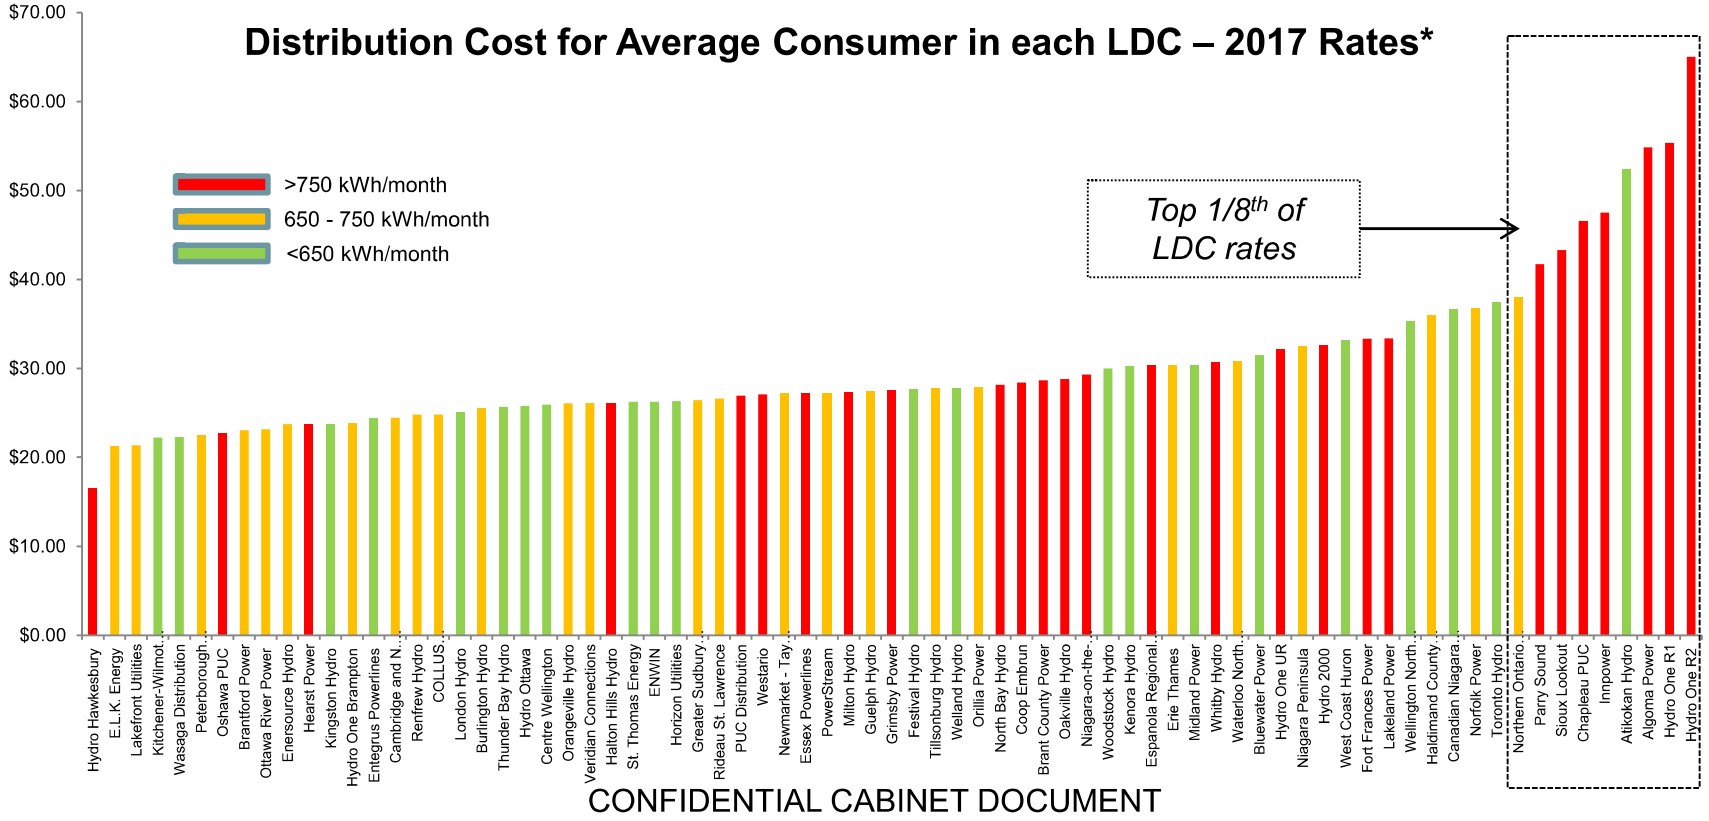
- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario and funded through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - Roughly 800,000 customers would receive benefits from the current RRRP program and from these additional enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.



CONFIDENTIAL CABINET DOCUMENT

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

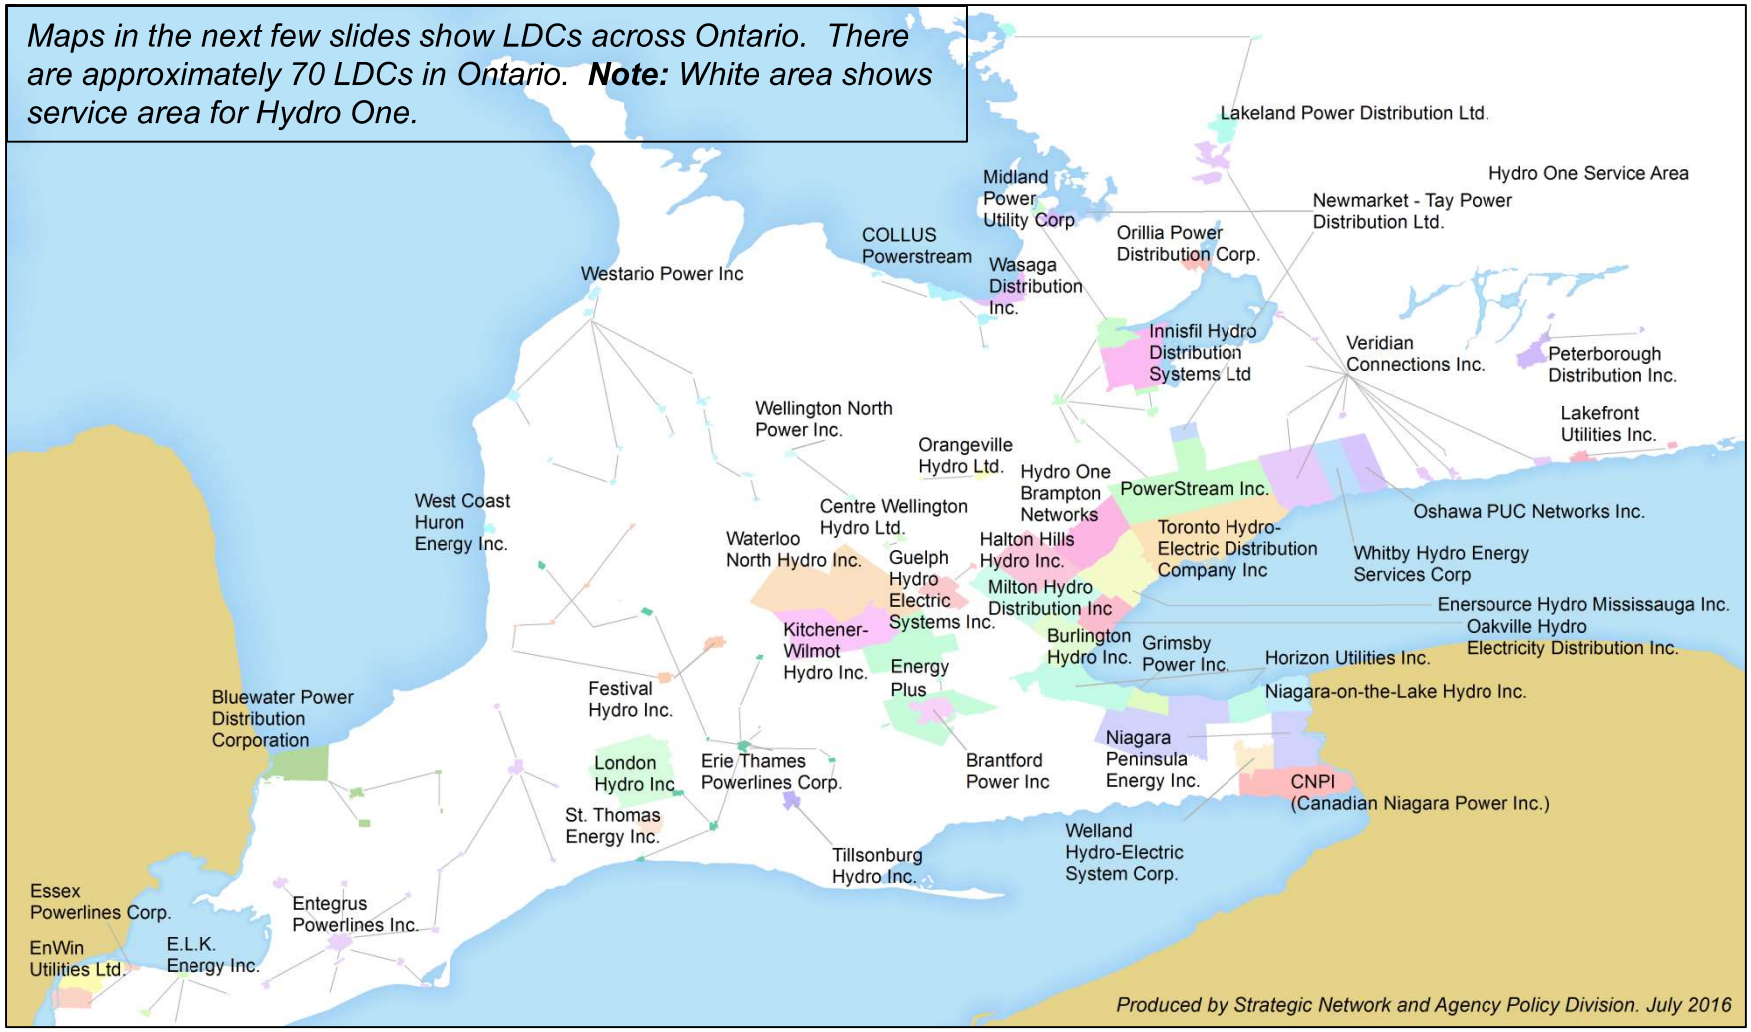
- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board (OEB).

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136
2016 Speech from the Throne Enhancements to R2 Customers	-	117	120	123	127
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234
TOTAL	-	**459**	**472**	**484**	**497**

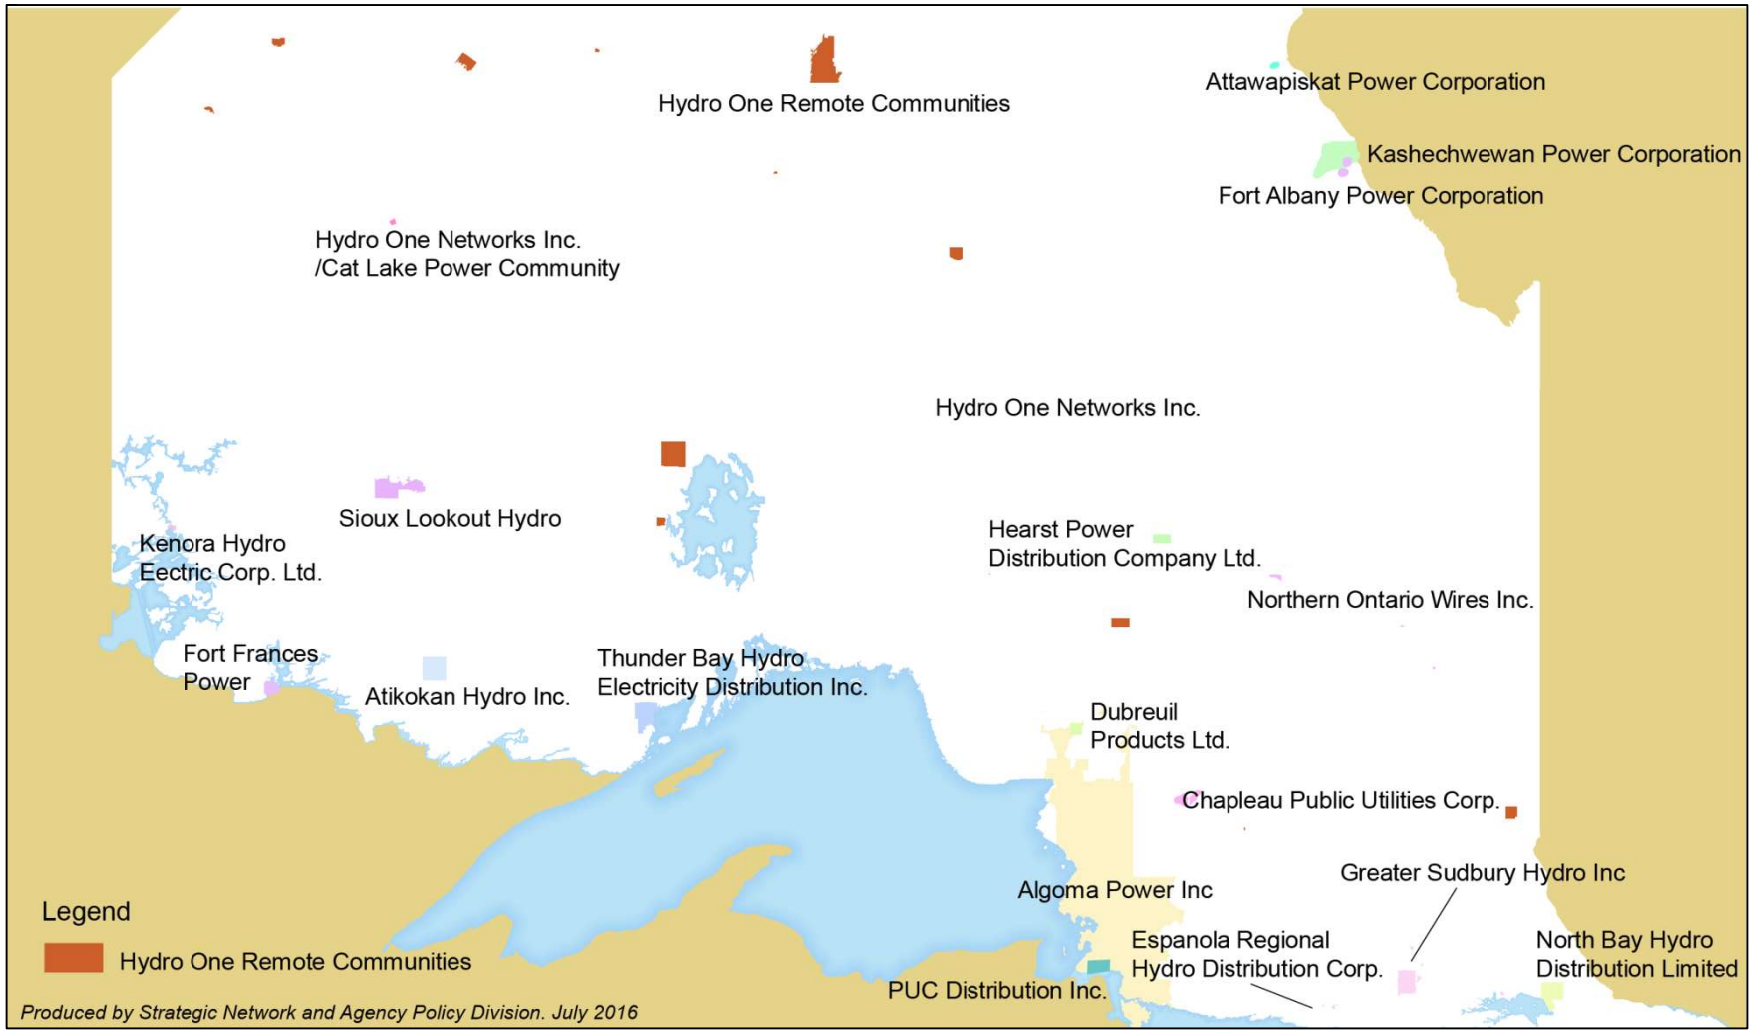
Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.

A. RRRP Enhancement – LDC Service Territory (Southwestern Ontario)

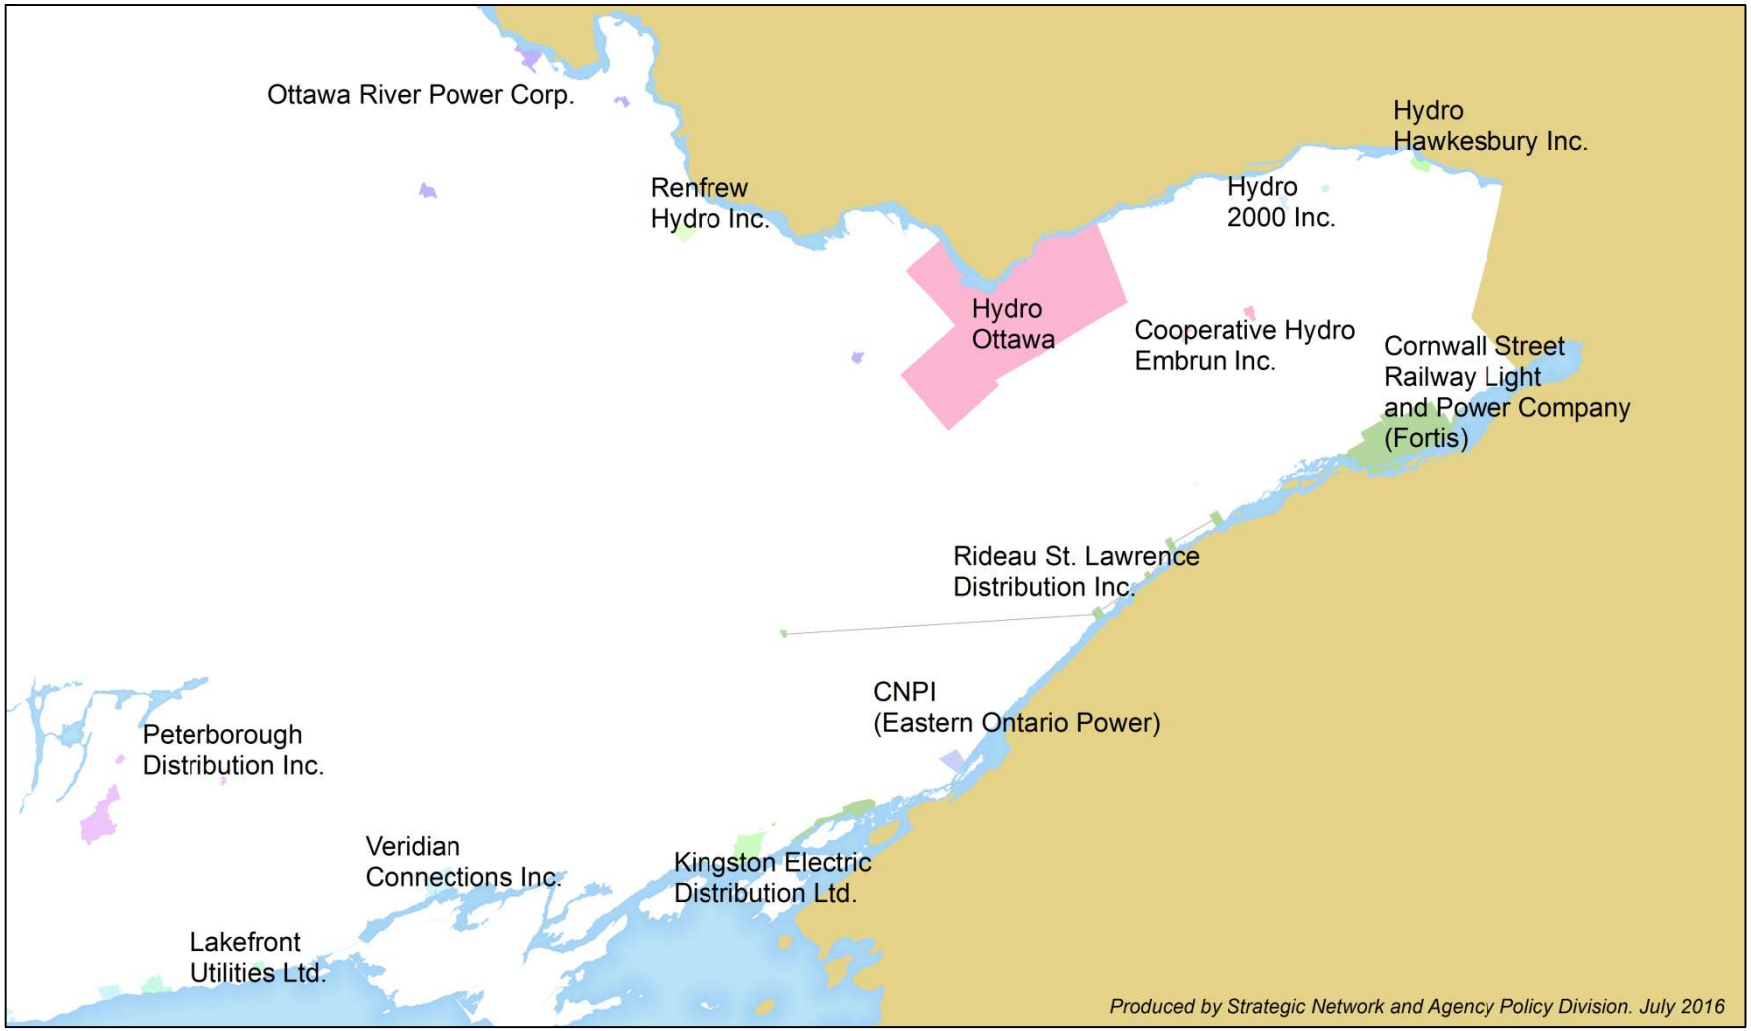
Maps in the next few slides show LDCs across Ontario. There are approximately 70 LDCs in Ontario. ***Note:*** *White area shows service area for Hydro One.*



A. RRRP Enhancement – LDC Service Territory (Northern Ontario)



A. RRRP Enhancement – LDC Service Territory (Eastern Ontario)



B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP credits vary by income level and family size, and there are two credit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in credits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced:
  - Streamline the OESP process to drive participation toward 100%:
    - ENERGY and the Ministry of Community and Social Services (MCSS) have been working on automatic OESP qualification for Ontario Works (OW) and Ontario's Disability Support Program (ODSP) recipients who pay electricity bills.
      - MCSS estimates some 110,000 OW and ODSP recipients pay electricity bills;
      - This process could follow the "deemed eligibility" model used for the Healthy Smiles program. Using an existing model should simplify the implementation process.
      - The qualification process may have to be done manually at first, with a more automated IT solution in the longer-term.
    - Working with the CRA to make the application process easier / quicker to get through by finding an alternative to the requirement to mail-in signed consent forms;
    - Putting in place a more aggressive communications strategy and application intake clinics across the Province to increase awareness of/enrollment in the OESP.
  - Increasing the existing OESP credit scales by an additional 50%; and
  - Expanding the categories of OESP credits.

- It is also recommended that the OESP be supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes):

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

C. Establishing a New Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as “low-income” but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000* residential electricity accounts in arrears; of these about 19,900** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.

* **Note:** Unverified numbers reported by LDCs to the OEB
** **Note:** Low-income customers identified through participation in LEAP

Ontario

C. Establishing a New Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who cannot qualify for low-income conservation programs and are in need, such as those who are facing disconnection.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the principles of the Fund and is working with Hydro One to set up an independent Trust to serve as the Fund Administrator.
  - The Fund Administrator would manage the flow of funds to LDCs based on principles set by the province, and be responsible for establishing processes, administration, and criteria for funding applications, thereby ensuring the program is managed on a consistent basis across the province.
  - LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers in their service territories that meet the targeted eligibility criteria.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

C. Establishing a New Affordability Fund (cont'd)

<u>Implementation</u> (cont'd)

- Recipients could receive measures ranging from an average of $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
  - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
  - Programmable thermostats, weather stripping, insulation (in homes with electric heating).

- Cold climate air source heat pumps would also be an eligible measure under the Affordability Fund. Heat pumps range in cost from $7,000 to $13,000.

- As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New Affordability Fund – Considerations

Considerations

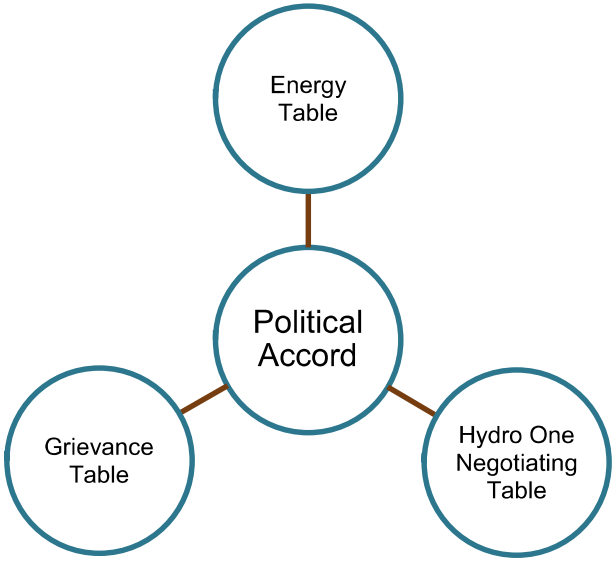
- The Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to seek input from the OEB, LDCs and potentially low income organizations to help develop funding allocation and eligibility principles for the Trust.
- While eligibility principles will be established, LDCs will need a degree of flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with Hydro One and transfer money before end of fiscal year to ensure Hydro One can establish the Trust and the Trust can begin operation as the Fund Administrator.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal. The proposal has an ameliorative purpose as it targets First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities, that affect electricity affordability.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Fiscal Roll-Up

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements*	-	459	472	484	497
Ontario Electricity Support Program, including the 50% Enhancement & New Matrix Categories	-	186	261	325	375
On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.
****Note:** Funding for the Affordability Fund is one-time in 2016/17.

BENDING THE FUTURE COST CURVE OF ELECTRICITY

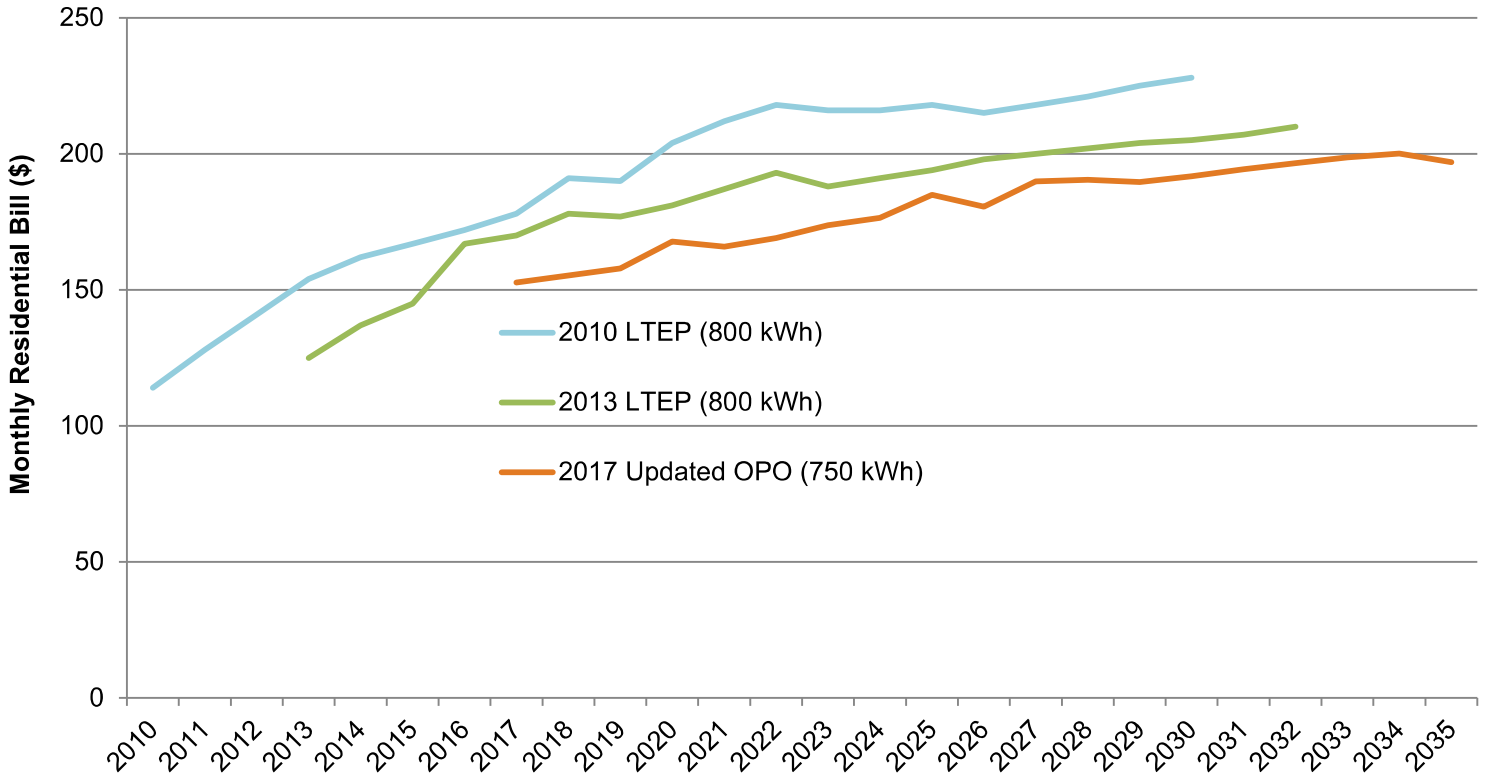
Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.
  - Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – up to [$xx] cost savings.

CONFIDENTIAL CABINET DOCUMENT

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of February 2017) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

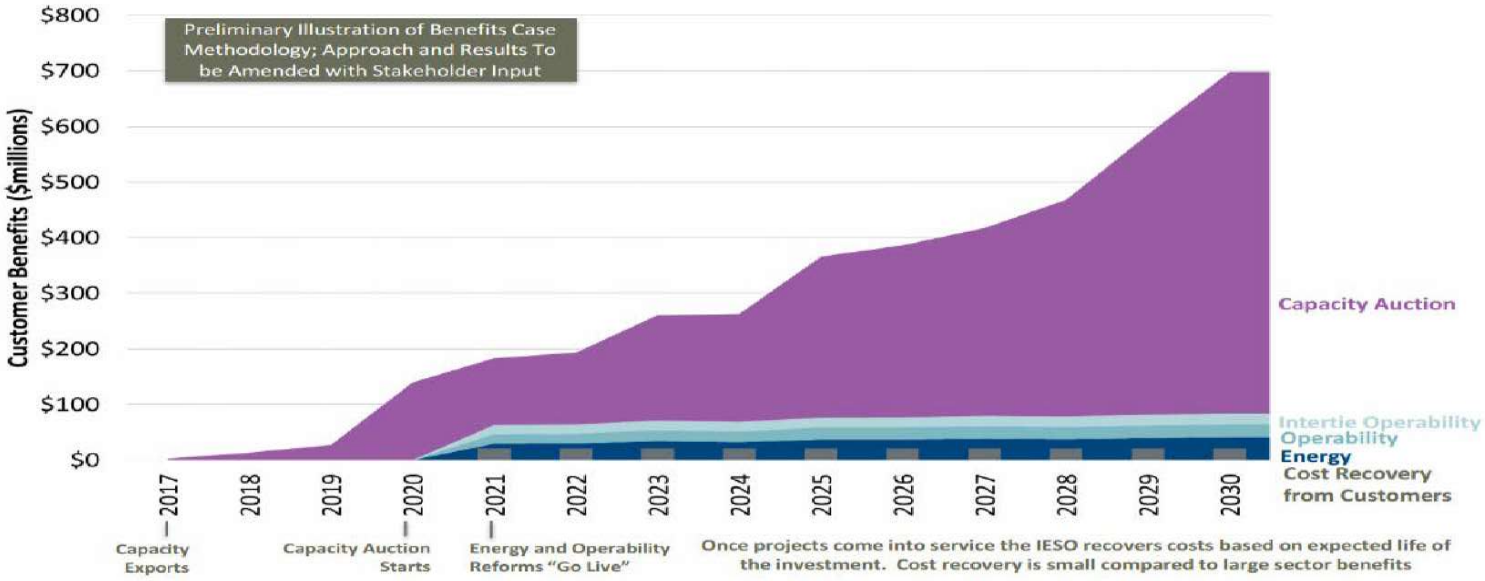
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



CONFIDENTIAL CABINET DOCUMENT

SUPPORT FOR TENANTS

Support for Tenants – Context

- The government is considering measures to provide relief from high electricity prices, and is interested in ensuring that tenants also receive electricity cost reductions and/or relief.

- Currently, tenants generally either pay for their own electricity use through suite meters (i.e., sub-meters or direct arrangements with hydro providers) or pay for electricity indirectly as a service included in their rent:
  - Tenants who pay for their own electricity will receive electricity costs savings directly through their bills; and
  - Low-income tenants who pay own electricity bills can access energy support programs such as the Ontario Electricity Support Program administered by the Ontario Energy Board (OEB).

- Any potential initiatives could focus on the following options:

For tenants who pay own electricity bills

1. Expand OESP to increase relief or raise income thresholds.

For tenants whose electricity is included in rent

2. Require that landlords pass savings on to tenants (could be addressed by MHO through RTA amendments).
   - Options could include requiring landlords to automatically reduce rents, or allow tenants to apply the Landlord and Tenant Board for relief.
3. Provide energy rebates directly to tenants whose rent includes electricity.

Support for Tenants – Potential RTA Hydro Relief Measures / Considerations

- RTA amendments with respect to tenant relief, remedies, and enforcement would be complex, and unable to provide immediate, direct and transparent cost remedies to tenants:
  - Impact of hydro relief measures and electricity cost savings for landlords may vary depending on size of rental building and location (urban/rural):
    - One size fits all approaches would not match actual landlord savings to direct tenant relief; and
    - More targeted approaches would add extreme complexity, leading to greater confusion for landlords and tenants, and difficulty administering enforcement.
  - Passing on actual savings could likely only be done after landlords have experienced decreased costs for a period of time (i.e. one year).
  - Difficulty in informing landlords of their responsibilities and enforcing reductions; would likely have significant resource implications for the Landlord & Tenant Board/Ministry of Attorney General.
  - Difficult for tenants to understand, with the most vulnerable tenants potentially less able to pursue remedies through the LTB.
- The kinds of potential RTA remedies would depend on various specifics regarding the way in which relief was being provided to landlords including whether:
  - The actual electricity cost savings for landlords are transparent to facilitate easy calculation of rent reductions or relief;
  - Hydro relief measures are permanent or temporary; and
  - All relief should be passed on to tenants, or just a portion of the relief (e.g., global adjustment fund, 8% rebate, any other relief).

Support for Tenants – Potential RTA Hydro Relief Measures / Other Considerations (cont'd)

- As part of Climate Change Action Plan, MHO has been directed to mitigate the impact of carbon costs on tenants, and is proposing to prevent landlords from charging above-guideline rent increases for extraordinary utility costs increases.
  - May seem unfair that landlords are required to reduce rents or provide relief when utility costs decrease but cannot increase rents when utility costs increase.
- Relief would be limited to certain segments of tenant population:
  - Post-1991 buildings are exempt from the Rent Increase Guideline and landlords could negate any savings to tenants in these buildings through a higher subsequent rent increase.
    - Over 19% of tenant households are estimated to live in post-1991 private rental units including individually rented condos; a high proportion may already pay for electricity separately.
  - Relief may not be required for social housing tenants:
    - Most social housing tenants (80%) pay as per utility scales, which covers electricity usage other than electric heat; and
    - Utility scales were last updated in 2000 and are reflective electricity prices at that time.
- MHO, working with ENERGY and MAG will report back in Spring 2017 with options for electricity rate mitigation for tenants.

Legislative Authority – Considerations

GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The OPG Trust will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the OPG's SPV/Trust and settle accounts with the OPG Trust as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the SPV/Trust to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the SPV/Trust (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Class B

- **Targeted Lowering ICI Threshold Below 1 MW (to 500kW):** Regulatory amendments (O.Reg. 429/04) will be required to address program details.

Legislative Authority – Considerations (cont'd)

Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **Affordability Fund:** In order to implement new affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement and Technical Briefing
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

Thanks Bruno,

A few small suggestions.

Also, would you check with Daniel in OB on whether and whom in MOF Legal or the FOI office might be helpful to loop in to ensure we are responding properly.

Ron/John

Thinking of using this 2-pager, just to have something to speak to an put in front of Deputy. It is the high level summary. Let me know if you are OK with this approach.

Thanks
Bruno

Financial Accountability Office of Ontario

Question on The Financial Impact of Ontario's Fair Hydro Plan

- FAO questions are largely seeking background data and information on ~~which~~the Ontario's Fair Hydro Plan (OFHP) ~~is based~~. This includes~~,~~
  - Projected costs of electricity over 2017 – 2048 period – Status Qu~~e~~o vs. OFHP
  - Projected Global adjustment deferral and repayment schedule 2017-20~~1~~48
  - Costs projections for other OFHP programs 2017-18 to 20~~1~~47-48
    - Details on customers affected
  - Information on IESO Market Renewal Initiative and OEB efficiency initiatives
  - Explanation of financial impact of using OPG to conduct financing operations rather than OEFC
    - ~~o~~ This last question is an "options" question, so the response is limited

- Ministry of Energy and Ministry of Finance are largely responsive to FAO questions
  - ENE provides supporting data, where available, including IESO electricity costs forecast, market data from OEB (including Local Distribution Company summary data) and Hydro One market data.
  - Much of the data was included in or underlay Energy's cabinet submission

Formatted: Top: 0.75", Bottom: 0.88"

Formatted

Financial Accountability Office of Ontario
Question on The Financial Impact of Ontario's Fair Hydro Plan

- Main areas where ENE/MOF do not provide response to FAO questions:
  - Request for long term cost estimates to 2047 for OFHP programs. ENE provides cost estimates to 2020-21 for these, per information provided in cabinet submission
  - Two questions had limited responses as responsive records are not authorized to be released under records OC 1412/2016
    - Information requested on Affordability Fund cash payments. ENE identifies a TB/MBC cabinet submission as Affordability Fund as unauthorized for release
    - FAO question 6 asks for explanation of financial impact of using OPG rather than OEFC to conduct financing operations. MoF (CEFD) does not provide an OPG vs~~the~~ OEFC comparison as OC 1412/2016 prohibits sharing of policy or costing options or recommendations, with FAO, unless the option or recommendation was selected by Cabinet or one of its committees. FAO is provided with a GA financing table and interest rate sensitivity analysis done by OFA/CEFD staff (only record being provided by MOF).

Hi Bruno,

No issues with the changes.

One point we should make is the uncertainty, if at all, around IESO having the regulatory asset and whether upon consolidation with the Province, if it will get derecognized. It is TBC, so may not need to be the slide then but just making sure its not overlooked (unless Ron has confirmation to say otherwise…).

"*Potential for Fiscal Impact of de-recognition of Regulatory Asset held by IESO upon consolidation – TBC*"

The other point might be around the proposed Guarantee Agreement and risks around how that plays out – or just saying it is being contemplated. At the moment, I don't know if Energy's deck speaks to any guarantee being provided.

Hi Bruno,

I had been thinking, to make it easier for Energy, to simply work with their version of the flow chart

from the March CabSub.

That said, their version may have been updated since then anyways, but they could take out suggestions in.

I also added reworked some parts of the text slide, and dropped some detail, as it was rather dense – may still be!

Thanks,
Ron

DRAFT

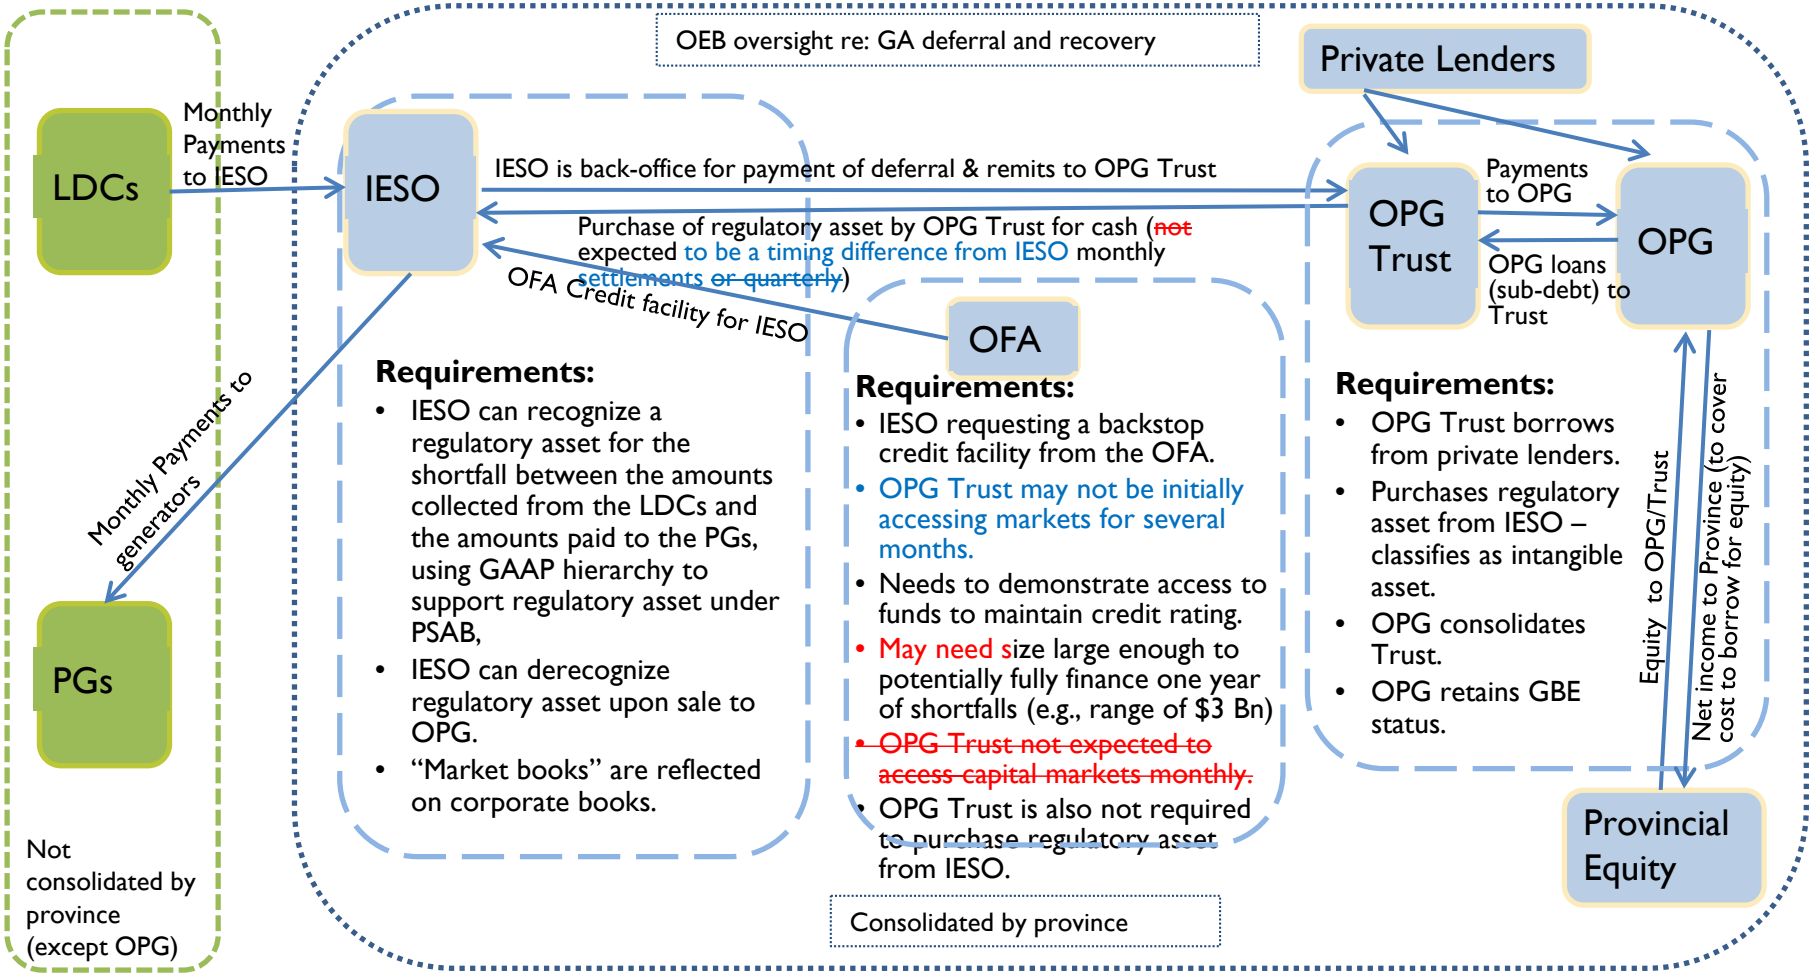
GA Financing Plan: Role of IESO

Corporate and Electricity Finance Division
April 28, 2017

DRAFT

GA Smoothing – Proposed Structure

- The following diagram provides an overview of the proposed GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

DRAFT

IESO Financing Requirements

- IESO will need to ensure that it continues to have the funds available to provide payments to generators on a monthly basis as part of the IESO settlements process, while recoveries from LDCs for Regulated Price Plan (RPP) / Fair Hydro Plan eligible customers will be lower.
- IESO has an existing credit facility from the OFA; however, a new or expanded facility is being requested.
- IESO would require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset beyond each monthly settlement period.
  - OPG Trust is not expected to access public capital markets for several months after the start of the FHP, and may be purchasing the asset with a lag vs monthly settlements. Also, nor is it required to purchase the regulatory asset.
  - IESO will need a credit facility for interim financing.
  - IESO may require longer-term financing to maintain the deferral financing plan, should the OPG Trust not be able to access debt markets on a timely basis for purchase of some or all of the regulatory asset.
- Based on Ministry of Energy's GA deferral plan, it is estimated that approximately $2.5-3.0 billion need to be deferred per year for over first 10 years, equal to approximately $200-250 million per month, on average.[1]
  - The size of the credit facility required to backstop IESO could be $2.5 to $3.0 billion ~~per year~~. [TBC]
- The monthly and annual amount being deferred and the resulting monthly amounts can be substantially different than forecast based on various factors, such as seasonality or electricity usage, as well as potential changes to electricity costs from OEB rate decisions, with IESO estimating deferral amounts as high as $400 million per month.
- Other factors that may increase IESO's financing requirements:
  - IESO will also incur financing charges that will need to be refinanced.
  - The financing and administration costs that OPG Trust incurs will need to be paid.
- There is an accounting risk on how OFA financing of the IESO requirements would be treated.
  - Even if IESO is allowed to recognized the Regulatory Asset, there is a risk as to whether this recognition will be permitted under the accounting standards (PSAS) upon consolidation with the Province.

[1] Based on Ministry of Energy's annual GA deferral amounts, assuming the monthly deferral is equally-weighted.

Subject: GA Equity Injection

Hello John,

I would agree that as long as the return from the Trust is above/at the cost of capital, there is a low risk of the GBE status being threatened if the Province does an equity injection. If the return is just the financing costs, there may be some additional risk from the GBE status.

An important element for retaining the GBE status is if the GBE can continue to operate free of government funding or assistance as a going concern. For example, a GBE may need a one-time subsidy to get itself out of a tough pickle, but is projected to return to long-term profitability afterwards. In this case, it is unlikely that the GBE status would be threatened by the subsidy. What needs to be considered for this Trust is that these equity injections are monthly and over a long period of time of several years. At what point, if at all, would this continued reliance on government funding be considered as a form of a subsidy? If OPG (or the Trust) were to get this equity from a third-party, what would be the expected return to make this structure feasible (i.e., the market consistent equity costs)?

With a common equity injection, there is no guarantee that OPG will return the principal payments or give dividends. The proposed legislation also states that the Province cannot interfere with the Trust, which gives OPG an additional advantage.

The way I am viewing the problem is like buying a house with a 100% mortgage – I (the buyer) represent the Province. The house represents the 44% equity injection of OPG Trust, and the bank providing the mortgage represents the capital markets. Let's say the bank charges me an interest rate of 5% and the capital appreciation of the house is 10% annually.

I am putting my equity into the house, so I expect my return to at least be at the interest rate the bank is giving me (5%). My house will grow in value by 10% and my interest cost will be 5%, so I am getting a return. However, I am owing that cash in interest payments every year while getting no cash return from the house even though it's going up in value.

So on paper, I am growing in value, but my cash flows are actually negative. Eventually, I would need to exit the investment as it is unsustainable. In terms of the Province, this means that if not enough of the investment is returned as a cash inflow, the risk of loss and credit rating downgrades arise. What further complicates things is the fact that OPG is 100% owned by the Province

This is where the considerations of redeemable preferred equity (with a return and a redemption feature but no premium for the Province) or a redemption feature on common equity (redeemable by the Province and at a significant premium to par value after a lock-up period) could protect the cash flow concerns.

I have looked at several wholly-owned state-owned enterprises (SOEs) and their recapitalizations. Australia, Estonia, Hungary, New Zealand, Slovenia, and Norway all demonstrate that wholly-owned unlisted SOEs have requirements that recapitalizations from the public are subject to minimum expected rates-of-return. This is usually at least the cost of capital or market comparable rate. However, other countries (Chile, Finland, Israel, Korea, Lithuania, Netherlands, Poland, and UK) have no specific mechanisms to ensure market-consistent equity costs, but have several other methods including

- Subject to a regular feasibility study
- Takes both public interest and expected financial return into account.
- Considering a market consistent benchmark
- Considering the risk of the investment.

What it boils down to is the main point of the entire structure in the first place – to have 56% of the debt related to the GA financing structure off of the Province's books (on consolidation) to maintain the current credit rating as well as other political reasons regarding the Province's debt levels and balancing the budget. If the structure just involved the Province borrowing from the capital markets and getting payments from the ratepayers, it would be considerably less complicated. Since it is going through OPG, a separate commercial entity expected to be profitable, the rationale for this decision and the feasibility needs to be justifiable. The Hydro One equity injection was justified for protecting Hydro One's valuation; will the Province be compensate for the risk?

Just my continued mulling, will keep working on this.

Hello John and Bruno,

Here is the flow diagram model based on the recent information from Energy, OPG, and the latest model from . I believe the current proposition accounting wise is for the OPG Trust to actually start collecting the interest cost from ratepayers (or recognize it in income only with a receivable as an offsetting entry).

Kind regards,

Hi John

Re Kaitlin's note and our balancing act, how about attached if we want to provide some feedback.

We update the chart we used based on the chart that Adam pulled together, and add some language to reflect our discussion this morning with TBS. I think this is minimal based on comments we already provided on the chart and our TBS discussion, but it does add some value. If that makes sense I could get Adam to review chart. I relabelled some of the arrows to make it more generic.

We could also provide this to TBS as follow-up to this morning's conversation. We said we would provide more details. It is mainly the chart that I think would help them. Maybe it's too early to get into the GA Financing model and all the issues we have been discussion e.g., interest recovered/capitalized etc.

Hi there,

Just wanted to confirm, you did mention that the numbers, if being provided in an Excel, for example, we need to show the calculations behind the numbers?

Did we hear that right?

John

Hi Selena, Daniel,

We have the attached deck with footers that we hope meet the protocol in sending information to FAO. Could you let us know if it does fit with the protocol.

We have sent a version of this deck up the line and assume that this had gone up to the Minister for something that had gone to Cabinet.

Thanks,

John.

Hi,

I think the facility will need to be enhanced. I heard that the IESO wants a facility size to be able to potentially finance one full year, which could then be in excess of $3 Bn.

We should also discuss with TB staff the ask.

We can discuss in the morning too.

Hi,

I think the submission should note that the IESO is seeking a financing facility from the OFA to provide bridge financing and a backstop.

It may not be an approval item, but TB should be made aware.

And in my mind, Energy should add it in, as IESO is an Energy agency, which says it needs this to perform under the GA part of the FHP.

We can offer to review and support what energy writes.

I don't think our Minister should be doing this without being certain that it is understood by TB and Energy, including the risk that this could be long-term financing, which could result in a fiscal risk.

Just following up on our conversation Friday. You had asked about the rationale for certain levels of financing – passing this note along that we just received from OPG. Let me know if you have further questions on this.

Secondly, I'm starting to pull together materials for the TB submission. The first is seeking appropriation for the equity injections, second is any PILs exemptions that the Province is comfortable with. Lastly, Scott thought you guys might also want something built into the submission about increased borrowing requirements of the IESO – would you be able to draft something for inclusion in the submission on this (if required)?

Let me know what you think.

Hi Kaitlin,

Just some early thoughts. Sorry, the preparations for the Document day has kept us very busy.

Our thinking is that the TB submission should note that the IESO is potentially seeking a financing facility from the OFA to provide bridge financing and a backstop. Not sure if the existing facility is to be used or not but the GA-related purpose may be fundamentally different in its intent that the submission should cover it. While it may not be an approval item but TB should be made aware of the potential intent. We had that call, if you recall, where the IESO is saying that the purchase of the regulatory asset is not mandated in the draft legislation.

Given that IESO is an agency of the Ministry of Energy, Energy's submission should have it in there, indicating that it needs this to perform under the GA deferral proposal of the FHP.

I might have more comments later on but some early thoughts for now. We'd be happy to review or help out with anything that's needed.

Thanks,

John

That OPG note referenced 6 criteria re not being a defacto agent, I only counted 5 and moreover counted 3 of 5 conditions met rather than 4 of 6.

We can draft something re: potential increase IESO borrowing requirements per Salman's deck. I'll take a look at emails from TPD. I don't recall them being comfortable about committing to PiLs exemptions.

Thanks John.

It looks like what you guys have seen before:

"It is of vital importance, and as concurred by EY, that the majority of the debt in the Trust is not more than 44% funded by the Province".

Don't think it was the intention of this note, but nothing really speaks to OPG not being funded by the Province as debt vs equity.

I'd give her the heads up that we're looking into equity injection as a working group involving OPG….and that our understanding is that she's familiar with the process from the H1 IPO.

Could you also reach out to Kaitlin, tomorrow, and ask her to the extent to which ENE is in the loop on the equity injection? We're sort of assuming she's the area keeping them informed.

Subject: GA Structure v12Clean.docx

Hi Ron,

Pls. see attached on the GA structure, as we understand things.

It’s very complex and not sure if an average person on the street would be able to follow.

Thanks,

John.

Hi John, I had not reached out to Malle Hanslep yet but am about to do so. Would our GA Financing note be something we could share as draft with her if conversation goes that way, I.e. if she asks if there is any info we can share?

I'd give her the heads up that we're looking into equity injection as a working group involving OPG….and that our understanding is that she's familiar with the process from the H1 IPO.

Could you also reach out to Kaitlin, tomorrow, and ask her to the extent to which ENE is in the loop on the equity injection? We're sort of assuming she's the area keeping them informed.

Hi Bruno,

Pls. share this with Felix and James with the caveat of being staff-level internal discussion note. Not reviewed by ADM.

My view is that OPCD should be keeping them in the loop but things don't always work out as should.

Thanks,

John

Hi Bruno,

I have updated the IOD numbers. It seems that OPG's net income formula already been adjusted to include the IOD, so it should be fine.

In addition, I have updated the GRC numbers based on the response from OPG, as I think it hasn't been done yet. I saved my edits in v14.

Regards,
Gavin He

Subject: FW: GA financing Ont IOD

Hi Gavin

Could you please update the outlook based on the attached. It has the IOD figure related to province's GA financing role. This is to be offset by increased OPG net income (highlighted row 17).

I see the current v13 outlook has a placeholder on OPG worksheet line 43 which can be updated. But also need to add this to the OPG net inc. line.

I think this should be it for the outlook, unless OPG's monthly shows up?

Thanks
Bruno

Hello John & Bruno;

Please find attached the revised projected IOD numbers for 2017-18 to 2020-21. We used the numbers from the worksheet "Model" and estimated the IOD impact on worksheet "RPA IOD Impact". As you may see from the highlighted row 14 (which we will use for our own IOD update), the revised IOD numbers are marginally lower. We will extend the IOD impact to 2070 over the next couple of days.

Please let us know in case you have any questions.

Best regards

Alex

Hello Gavin,

The GRC numbers should remain the same as before as the new information from OPG did not split the GRC between OEFC and MOF.

Kind regards,

Adam Prokop

GA Financing Data for Cabinet Submission March 1.xlsx

Hi John,

Just want to confirm, we're free to share the attached excel file we received from Tim Christie's area. (Email also attached).

Karim was asking about these GA forecasts. If ok, will send it on to him.

Thanks,
Shajee

Hi Tim/Justin,

Hope you are doing well! It seems that the GA smoothing numbers for 25% reduction have been updated. Could you please provide the latest underlying numbers used for the GA numbers included in the deck tomorrow morning? I have attached the excel you provided previously but I think there's an updated version?

Thanks,

Thanks for the comments and addition. V10 can be found here: \\ofina.on.ca\ofadfs\Users\CEF\Hydro 2017\Electricity Prices\Mitigation Proposals\Debt Financing the GA\GA Structure

I have responded to the comments. Good point John about how debt would be slightly higher under the immediate interest payment collection option if they remain committed to achieving the same savings as the interest deferral option.

Kind regards,

Hi,

I added some more edits to the note. Hopefully I edited the previous version 8. It's mostly wordsmithing, but a some comments/questions as well.

Thanks, the note has helped me grasp this much better but check my edits as some may reflect my not fully understanding.

Thanks
Bruno

Structure of the Global Adjustment Deferral Mechanism

Issue

The Province is working with Ontario Power Generation (OPG), the Ontario Energy Board (OEB), IESO, external accountants, and other agencies to develop a mechanism to defer the global adjustment (GA) payment as part of the recently announced Ontario Fair Hydro Plan. This note outlines current proposals for this mechanism.

Context

- Smoothing of GA costs over time would involve ratepayers paying only a portion of the GA cost in earlier years, while this shortfall would be made up by future rate payers paying more than the true cost of the GA in later years.
    - There will be a proposed cap of $2.242B on the annual additional cost over the GA to lessen the burden on ratepayers.
- The shortfall in GA payments in earlier years would represent deferred costs to ratepayers. However, the ~~Province~~ mechanism would still need to compensate power generators on an ongoing basis for the full cost of the GA and would therefore need to borrow and take on debt to make cash payments to power generators.
- Principal payments on debt would be mandatory, but there has been no clarification on whether or not interest payments will be capitalized (i.e., interest accumulates resulting in ~~interest on interest costs~~compounding) or if interest will be recovered from ratepayers on an ~~frequent~~ on-going basis.
    - If interest costs are capitalized, ~~Having "interest on interest" (i.e., compounding effect) with deferrals on interest payments increases~~ peak debt would increase by approximately $5B and ~~leads additional~~ accumulated interest costs would increase by an estimated $xxx~~, based on preliminary estimates~~.
    - Alternatively, if ~~However, if~~ interest payments are made by ratepayers on an ~~frequent~~ on-going basis~~,~~ debt costs would be lower, however this ~~it lessens the relief provided by the GA deferral mechanism and~~ would also have the effect of reducing ratepayer savings from the GA deferral mechanism. The commitment is for a 25% reduction on average for all residential customers, which would mean that the amount of ~~borrowing~~principal simply needs to be larger to offset this effect.
- ~~Furthermore, i~~It has also been proposed that all administrative and other costs from the GA deferral would need to be collected from ratepayers immediately or recognized at the very least as a future benefit to the Province, adding to the costs passed on to ratepayers.

Structure (*refer to Exhibit A*)

- The deferred portion of the GA needs to be recognized as an asset – likely a regulatory asset – by the IESO, ~~likely as a regulatory asset that~~ which gives the IESO the right to collect the deferred amount from ratepayers at a future date.
- This asset, in turn, would be sold to another party that would receive the revenues associated with this asset.
    - It is proposed that ~~The proposal states that~~ the IESO ~~would~~ be required to recover ~~collect~~ the costs associated with this asset even after selling it.
    - To do this t~~T~~he IESO would need~~s~~ to sell the asset in order to secure cash to settle its arrangements with generators, thus ensuring ~~that~~ generators are not affected by the deferral.
        - Alternatively, IESO could simply borrow funds (using the regulatory asset as collateral), but poses risks ~~this has implications~~ for both consolidation on public accounts and ~~including the impact on~~ credit ratings.
        - With respect to the credit rating risk, ~~On the other hand,~~ DBRS stated in a March 3, 2017 report that "*Provided the debt continues to be fully supported through the electricity rate*

Commented [JK1]: A cap of $ amount?

Commented [AP2R1]: The cap on the current plan is $2.242B. It has been added.

Commented [BA3]: Can we put in a figure?

Commented [BA4]: ? borrowing would be less if ratepayers pay interest on an ongoing basis.. No?

Commented [AP5R4]: Yes the borrowing would be less if there is no firm savings target. But if interest rates are being paid immediately, this eats into the savings commitment of 25%. So one has to borrow a larger amount for the principal so that the total reduction in the GA less the interest costs is equal to 25%. I changed borrowing to principal to make this more understandable. Overall, the total borrowing in both situations are similar. See attached excel sheet for example.

GA interest vs no deferral.xlsx

Commented [BA6]: Recognized as expense with fiscal impact (or does this also get passed on to ratepayers?

Commented [AP7R6]: There could or could not be a fiscal impact, depending on the four options below. It could also be collected from ratepayers immediately, or recognized as an expense (with or without fiscal impact depending on offsetting entries) that would not be collected in cash from ratepayers until a later date.

base, DBRS will treat it as self-supported and exclude it from the calculation of tax-supported debt".

- OPG is proposing to set up a special purpose vehicle, "OPG Trust~~" that~~", which would purchase the regulatory asset from IESO.
    - The purchase would be funded by the capital markets (51% of the deferred GA Cost), and OPG (49% of the deferred GA).
    - OPG would finance that 49% through a loan from the capital markets (5%) and an equity injection from the P~~p~~rovince (44%).
    - The debt would be set-up in tranches to ensure that the 51% of debt directly from the market would be senior, potentially mitigating the risk premium associated with high amounts of borrowing with an intangible, unique asset as collateral.
- There are several other considerations and requirements that would need to be attained in order for the mechanism to work, as detailed in the OPG White Paper released on February 27, 2017.

Equity Injection (*refer to Exhibit A & B*)

- The ~~rationale behind an~~ equity injection ~~is that it~~ could lead to increasing, and then stabilizing, dividend payouts in ~~commensurate~~ consistent with ~~the~~ O~~ntario~~ PG'~~sower Generation~~'s risk profile and comparable business entities.
    - Principal ~~payments~~ and interest pay~~e~~ments flowing from the ratepayers through the IESO and the Trust could be ~~relayed~~ paid back to the Province.
    - This would increase steadily as ratepayers begin to pay back principal in about~~n estimated ten~~ 10 years~~'~~ time, eventually reaching a cap of ~~an estimated~~ $2.242B in principal and interest per year based on Energy's March estimates (based on the capitalized ~~with the interest on~~ interest scenario).
    - The administrative costs and return for OPG/OPG Trust would also need to be collected by ratepayers, but the dividend payments would be net of these amounts and should still allow the Province to earn a substantial return.
    - Dividend payments could also allow OPG to eventually optimize its capital structure to the targeted or deemed 55%-45% debt to equity split, as dividends allow OPG to reduce its retained earnings thereby reducing equity.~~.~~
- Recapitalization from the Province is preferable as there are no associated interest expenses or large principal payments that could affect OPG's credit rating.
- If debt financing was utilized, the change in the cost of borrowing could also impact OPG's rate applications for the return recovered from ratepayers through payment amounts, potentially offsetting ratepayer benefit of the GA deferral mechanism.
- The financing structure split between equity (44%) and debt (~~56% –~~ 5% borrowed by OPG and 51% borrowed by OPG Trust) is roughly equivalent to the deemed capital structure of 55% debt and 45% equity for regulated distributors in Ontario.

Collection of Interest Payments (*refer to Exhibit C*)

- There are different potential accounting treatments ~~that can be undertaken~~, depending on legislative and regulatory approval, that would~~ill~~ impact the amount of borrowing and interest over the long term as well as the total fiscal impact.
    - **Option 1: Collect interest and administrative costs from ratepayers ~~immediately~~on an on-going basis:** Interest and the costs to finance/administer the GA deferral mechanism would be recovered from ratepayers ~~immediately~~along the way. This would allow cash and income to be recognized by OPG Trust equivalent to the total borrowing cost from the market (i.e., the interest

Commented [JK8]: Released? Is this in reference to the 14 conditions?

Commented [AP9R8]: Reference to the 14 conditions as well as a multitude of other requirements (e.g., accounting treatment, risks) that need to fall in place in order for the proposition to be a success.

Commented [SK810]: Please confirm if this is Feb 17.

Commented [AP11R10]: This is from a report OPG sent on February 27, 2017 to the DM of MOE.

Commented [BA12]: I am unsure of what the key message of this section is? My lack of understanding.

Is this mainly about how the Province gets repaid for its equity injection?
Is the optimizing capital structure a key message and is this capital structure something the market is looking for, or the Auditor General?

Commented [JK13]: Might want to clarify as what you're saying here is to lower equity in the immediate sense to get to 55-45 right away before starting to inject equity.

Commented [JK14]: Not sure what this means. Does this mean that it is preferable to OPG doing its own borrowing?

Commented [AP15R14]: Yes, it is basically saying that an equity injection (recapitalization) is preferable to OPG taking on that 44% every year in debt, from OPG;s perspective and possibly the Province's.

on the 44% of the GA the Province borrowed from the market, the 5% of the GA OPG borrowed, and the 51% of the GA OPG Trust borrowed). Furthermore, some type of additional return for the risk premium could be ~~collected as well~~made. Overall, there would be no fiscal cost, and less debt w~~ould~~~~ill~~ build up over time due to the elimination of the compound effects on interest. ~~However, the relief provided to ratepayers from the principal payments on deferred costs would be~~ lowered ~~mitigated by the amount of these~~is interest payments~~,~~ ~~although~~ this would be ~~fairly moderate~~it ~~is quite low for the initial 4 5 years.~~

- **Option 2: Collect interest costs associated with the senior debt**: There are variations on this concept which ~~is~~ essentially propose~~s~~s~~ing~~ to only collect some of the interest costs from ratepayers, with the senior debt that OPG Trust borrows directly from the market of primary concern. This is "meeting halfway" between deferring all interest payments and collecting all interest payments from ratepayers immediately.
- Option 3: **Do not collect from ratepayers**. There is a fiscal impact equal to 100% of the interest on the total borrowings as an expense still needs to be recognized, even though cash interest has not been paid. There is also a compounding effect on interest. ~~There is a fiscal impact equal to 100% of the interest on the total borrowings. There is also a compounding effect on interest as even though cash interest has not been paid, an expense still needs to be recognized,. even though cash interest has not been paid.~~
- Option 4: **No collection from ratepayers but deferral of expense recognition (Same as Energy's analysis in its Cabinet Submission)**. For this option, there is no collection of interest payments from ratepayers, but OPG Trust is somehow allowed to defer the recognition of interest expense on its books and recognize as a regulatory asset, thus eliminating the fiscal impact.
  - If OPG Trust were allowed to recognize a regulatory asset, then it could defer the interest expense, instead recognizing it as an asset (similar to the idea of a prepaid expense).
  - Thus, OPG would recognize interest income from OPG Trust, but OPG Trust would not recognize an expense related to the amount owed to OPG and instead would increase the regulatory asset by the same amount.
  - The interest income earned by OPG for the 49% of the GA deferral it borrowed would offset the borrowing the Province made from the capital markets.
  - OPG Trust would also defer the recognition of the interest associated with the 51% of the GA deferral it borrowed from the market. The deferred amount would be recognized in a regulatory asset.
  - When OPG starts collecting principal and interest from ratepayers, it will recognize income, but will also amortize the regulatory asset at the same time, thus matching revenue and expenses with each other in the time period and potentially eliminating the fiscal impact.
  - Many factors, including the initial accounting treatment and the effect of consolidation, are significant barriers to the application of this approach.
  - **Alternatively, OPG Trust might be able to recognize income (with a receivable created to balance the transaction) to offset the interest expense without collecting from ratepayers**, i.e., it will be a cash transaction in the future (cash received offset by a decrease in the receivable; no effect on income statement).

Commented [JK16]: I'd suggest delete as in the end the 25% commitment would lead to more GA deferral over time.

Commented [AP17R16]: Yes, if the 25% commitment is retained then it would result in slightly higher total borrowings. It has been deleted .

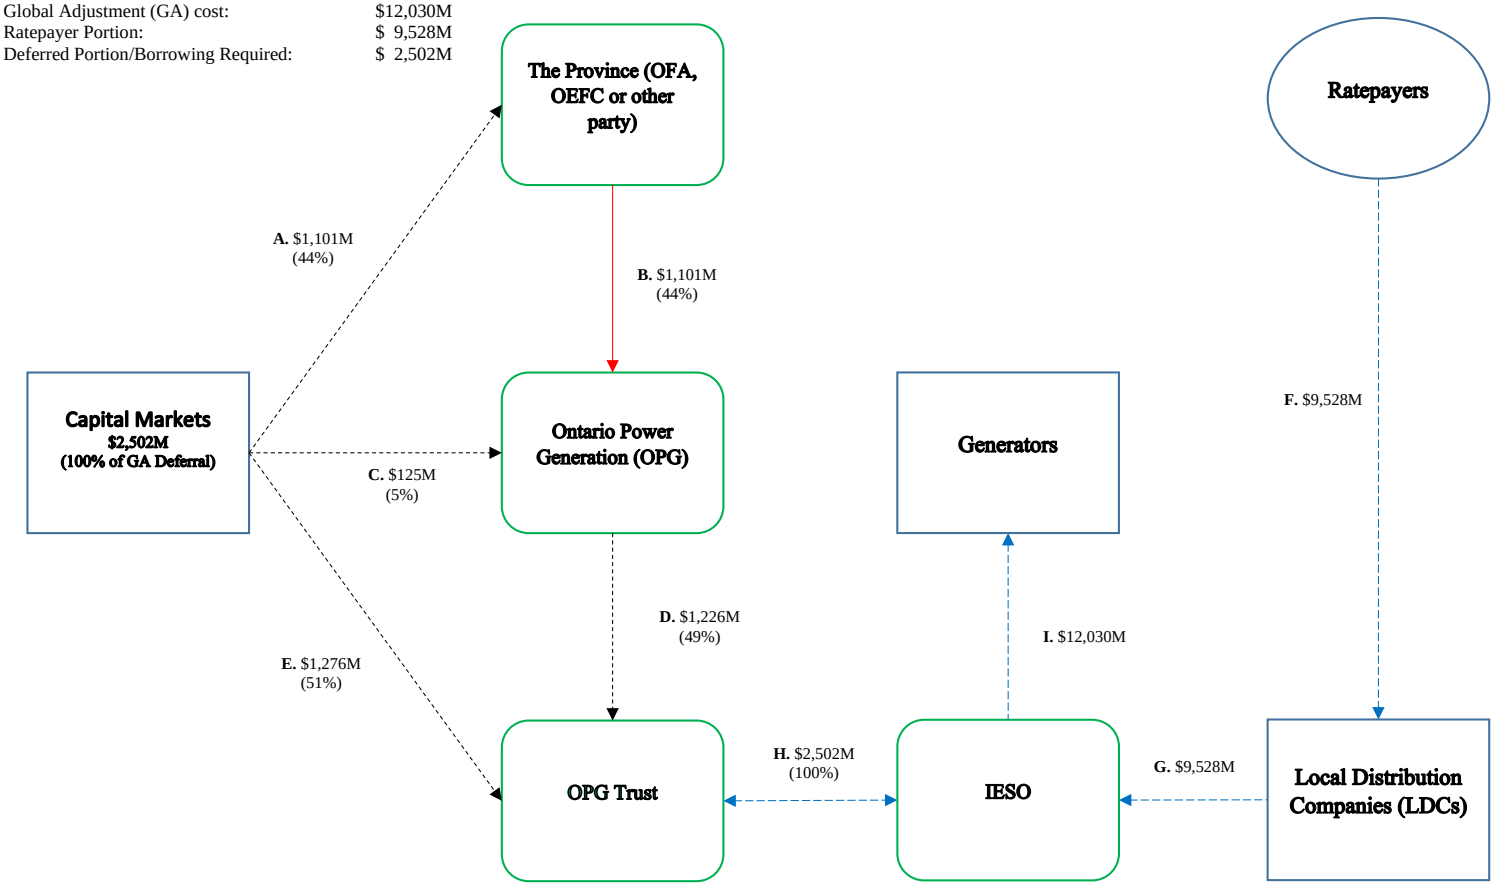
Commented [BA18]: Not sure I fully understand but does the last part of the 2nd sentence need to be moved up per the following:.

There is a fiscal impact equal to 100% of the interest on the total borrowings as an expense still needs to be recognized, even though cash interest has not been paid. There is also a compounding effect on interest.

Commented [AP19R18]: Thanks, your rewording works much better.

Exhibit A; 2017-2018 Estimates for Balance Sheet Transactions

Global Adjustment (GA) cost:	$12,030M
Ratepayer Portion:	$ 9,528M
Deferred Portion/Borrowing Required:	$ 2,502M

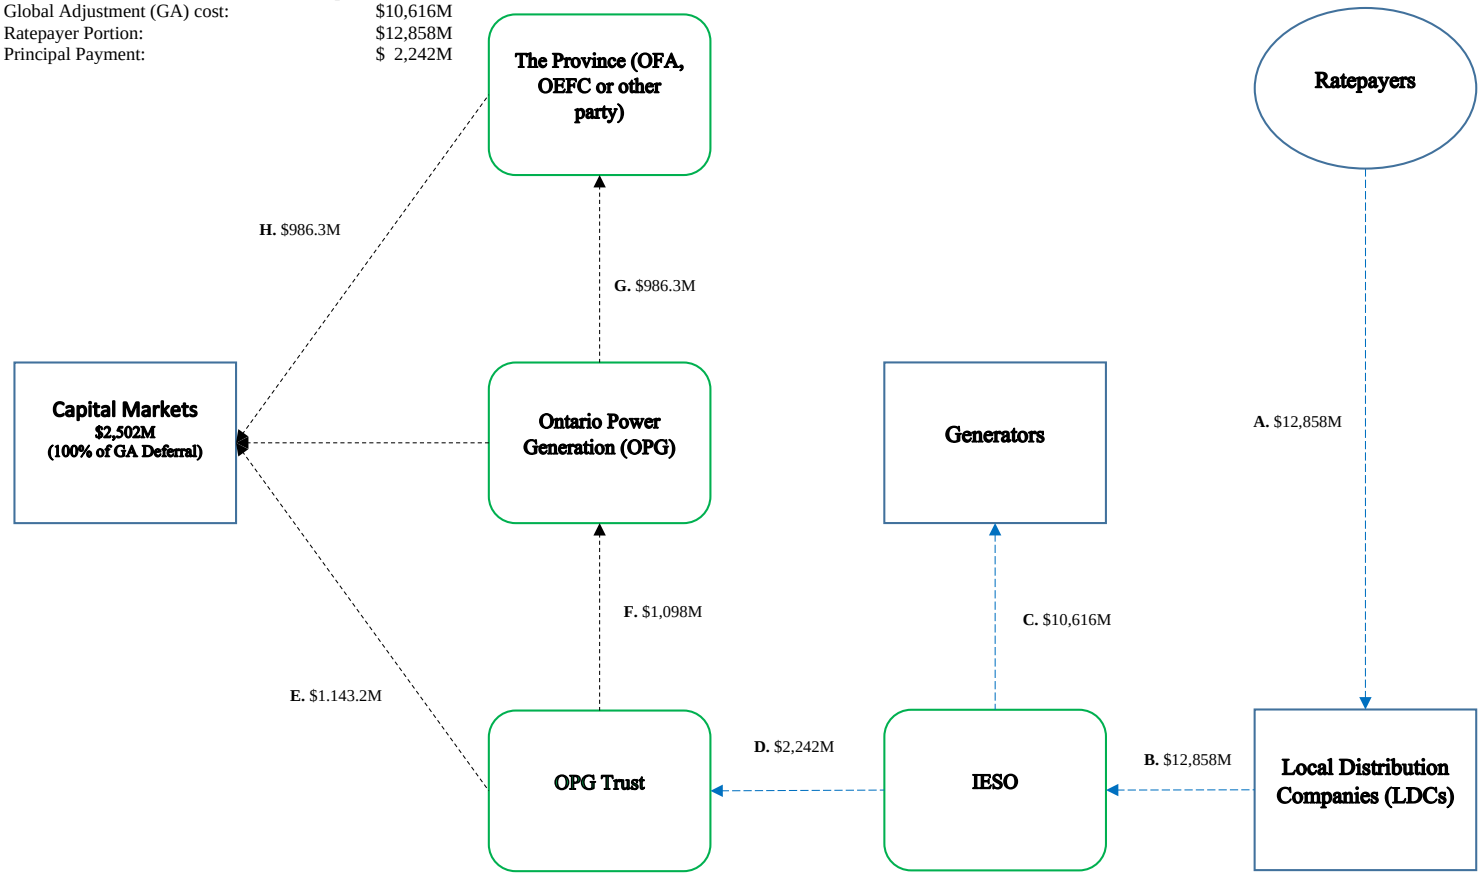


Setting up the Trust
A. The Province borrows 44% of the deferred GA from the market.
B. The Province then funnels this amount to OPG through an equity injection.
C. OPG borrows 5% of the deferred GA from the market.
D. OPG lends an amount equal to the 5% and 44% from the market and the Province, respectively, to a separate legal entity called OPG Trust.
E. OPG Trust borrows 51% of the deferred GA from the market, ending up with 100% of the total $2.502M deferred GA in cash.

Deferral Mechanism
F. Ratepayers pay their portion of the GA to LDCs.
G. The LDCs remit this amount to IESO.
H. IESO, with the proper legislation and accounting treatment, is allowed to recognize a regulatory asset – the right to collect the deferred amount of $2,502M from ratepayers. It then sells this asset for cash to OPG Trust.
I. IESO uses the proceeds from the sale of the regulatory asset and the collection amount from LDCs to pay the full amount of the GA to Generators.

Exhibit B: 2028-2029 Estimates for Principal Payments

Global Adjustment (GA) cost:	$10,616M
Ratepayer Portion:	$12,858M
Principal Payment:	$ 2,242M



Collection of the GA

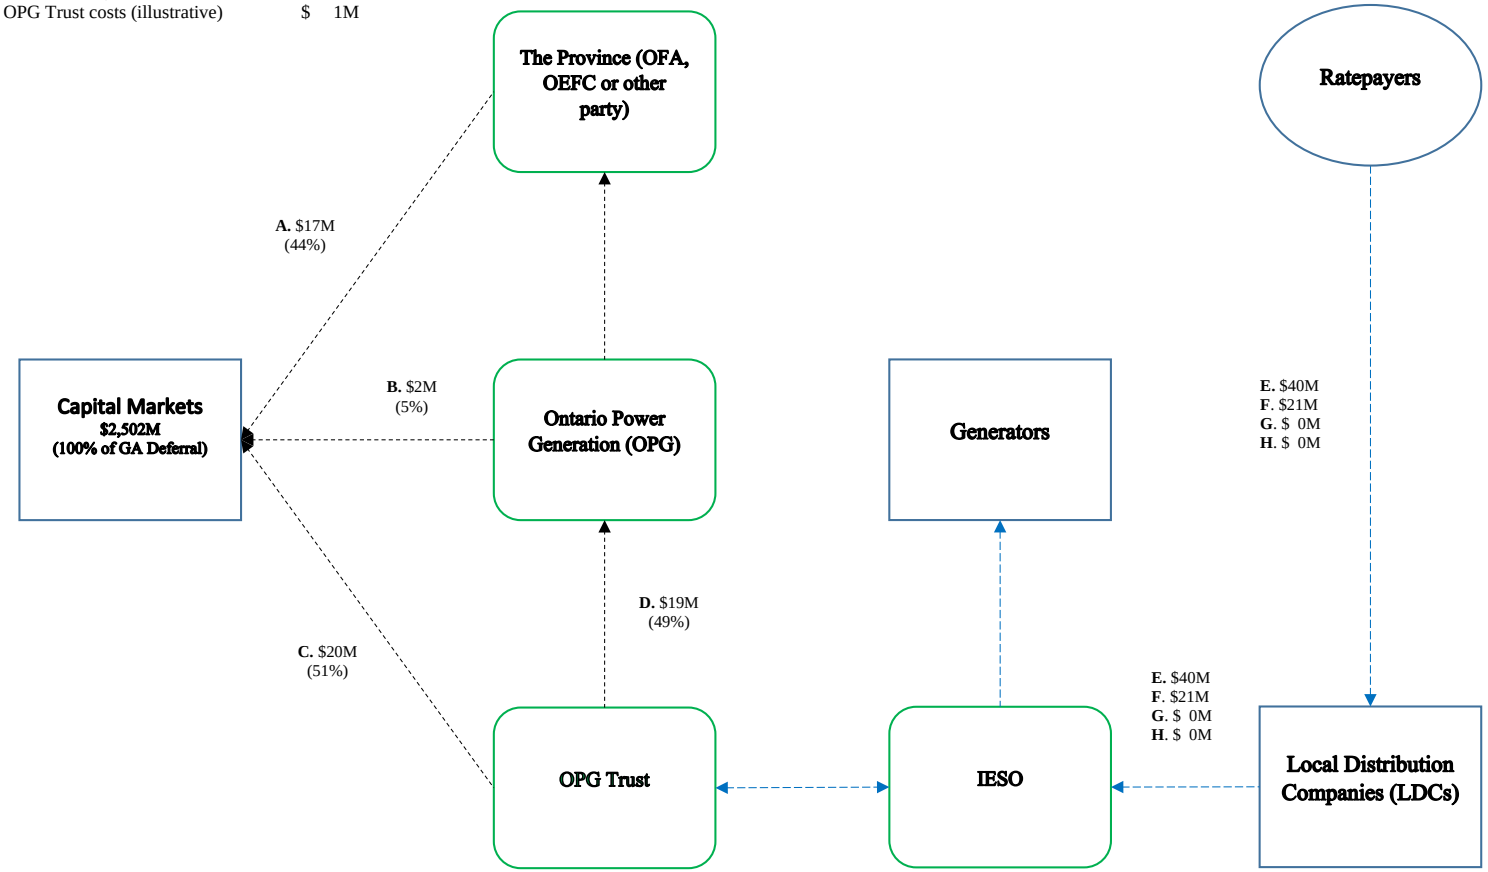
A. Ratepayers pay to LDCs the full cost of the GA plus an additional $2.242M that will be used to reduce the principal of the borrowing (or principal and interest if there is "interest on interest").
B. LDCs remit this amount to IESO.
C. IESO pays the full cost of the actual GA to generators.
D. IESO pays to OPG Trust the additional payment from the ratepayers over the actual GA cost. OPG Trust reduces the asset (for the right to collect GA deferral costs from ratepayers) by an equivalent amount.

Settlement of Principal.

E. OPG Trust pays off principal to the market. In this example, pays off 51%, but could pay more or less depending on various factors (e.g., subordinate debt, managing weighted average interest cost, etc.).
F. OPG Trust pays down principal related to the 49% of the GA Deferral it borrowed from OPG.
G. OPG could give a dividend to the Province equal in order to pay off the outstanding principal it borrowed from the market (44% of the total GA deferral cost)
H. The Province pays back principal to the market.

Exhibit C: 2017-2018 Estimates for Interest Recognition

Interest Recognized	$ 39M
OPG Trust costs (illustrative)	$ 1M



Recognition of Interest

A. The Province recognizes interest on the 44% of the deferred GA it borrowed from the market.

B. OPG recognizes interest on the 5% of the deferred GA it borrowed from the market.

C. OPG recognizes interest on the 51% of the deferred GA it borrowed from the market.

D. OPG Trust recognizes interest on the 49% of the GA it borrowed from OPG; OPG recognizes income for this transaction.

Options for Ratepayer collection

E. Option 1 – collect the entire interest amount from ratepayers plus the Trust administrative costs, thus offsetting the interest expense from total borrowing with the recognition of income. The end result is no fiscal impact.

F. Option 2 – only collect interest income for the 51% of deferred GA from the market and admin costs; OPG Trust would recognize income to offset the interest expense to the market but fiscal impact of 49% of the interest ($19M)

G. Option 3 – Do not collect from ratepayers – fiscal cost of 100% interest.

H. Option 4 – No collection from ratepayers, but OPG Trust is allowed to defer the recognition of interest expense on 100% of debt, leading to no fiscal impact.

Notes

- Assumptions based on Energy models and data, IESO forecasts, and CEFD validation models.
- Sources include Ministry of Energy decks, OPG reports and discussions, external accounting reports, and internal reports/discussions.

I think you are correct. I checked the media deck it has the 2.5b over 10 years. See slide 10

Subject: RE: Globe story

The 25 bn was the interest cost over the 30 yr period. Which coincides with the 2.5bn over 10 yrs. I never liked 2.5bn over 10 yrs as it was just not consisten in the modelling scenario provided for the CabSub. It was less than 10 yrs and the average over 10 yrs was like 2bn. Which by the way is old news…as we have that news release.

Ron's reference to the media presentation simply seems to reinforce 2.5bn over 10 yrs as is in the narrative right now.

I'm happy to push back if that's the conclusion we're leading to.

Hi John/Bruno,

For the $25 billion number, we used it to say over 30 years. Not sure if that was what Kelsey referred to.

Regards,
Gavin He

I see that they now have the $25 billion interest cost in their story.

Ontario's Fair Hydro Plan:
Providing Relief for Consumers

Technical Briefing
Ontario Ministry of Energy

March 2, 2017

Outline of Technical Briefing

1. Overview of Ontario's Electricity Market

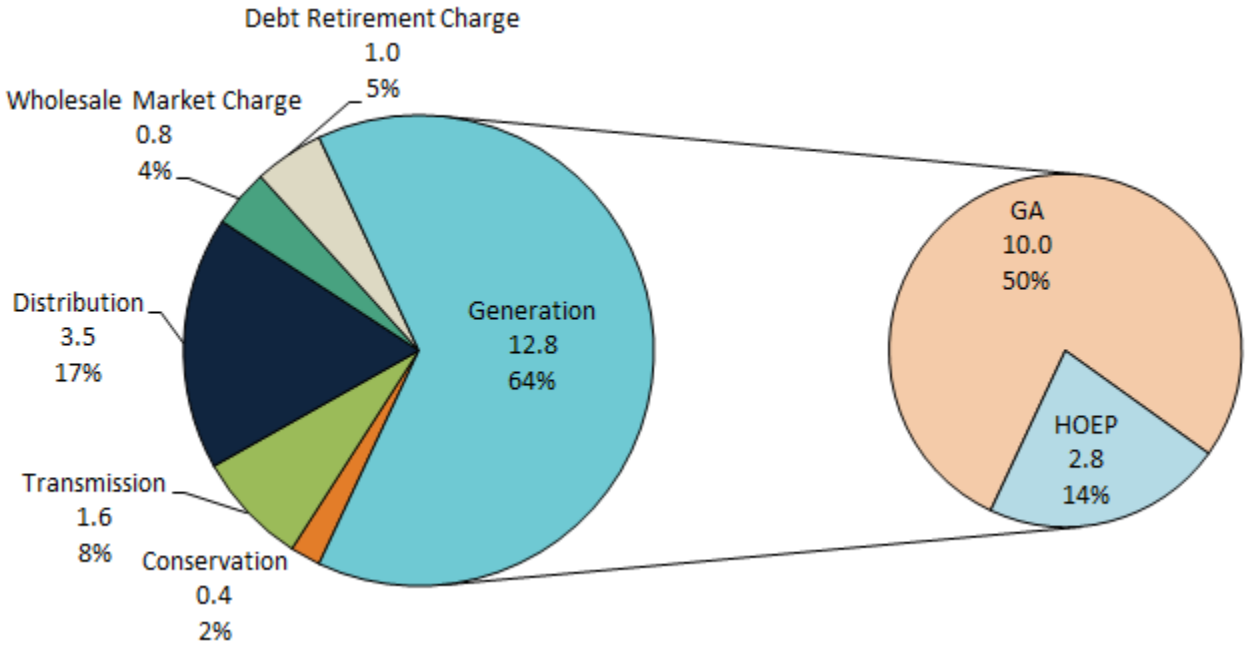
2. Ontario's Fair Hydro Plan – Providing Relief for Consumers

3. Questions

Ontario's Electricity Market

- In 2015, generation accounted for 64% of total electricity system costs. Total system costs in 2015 were $20 billion.

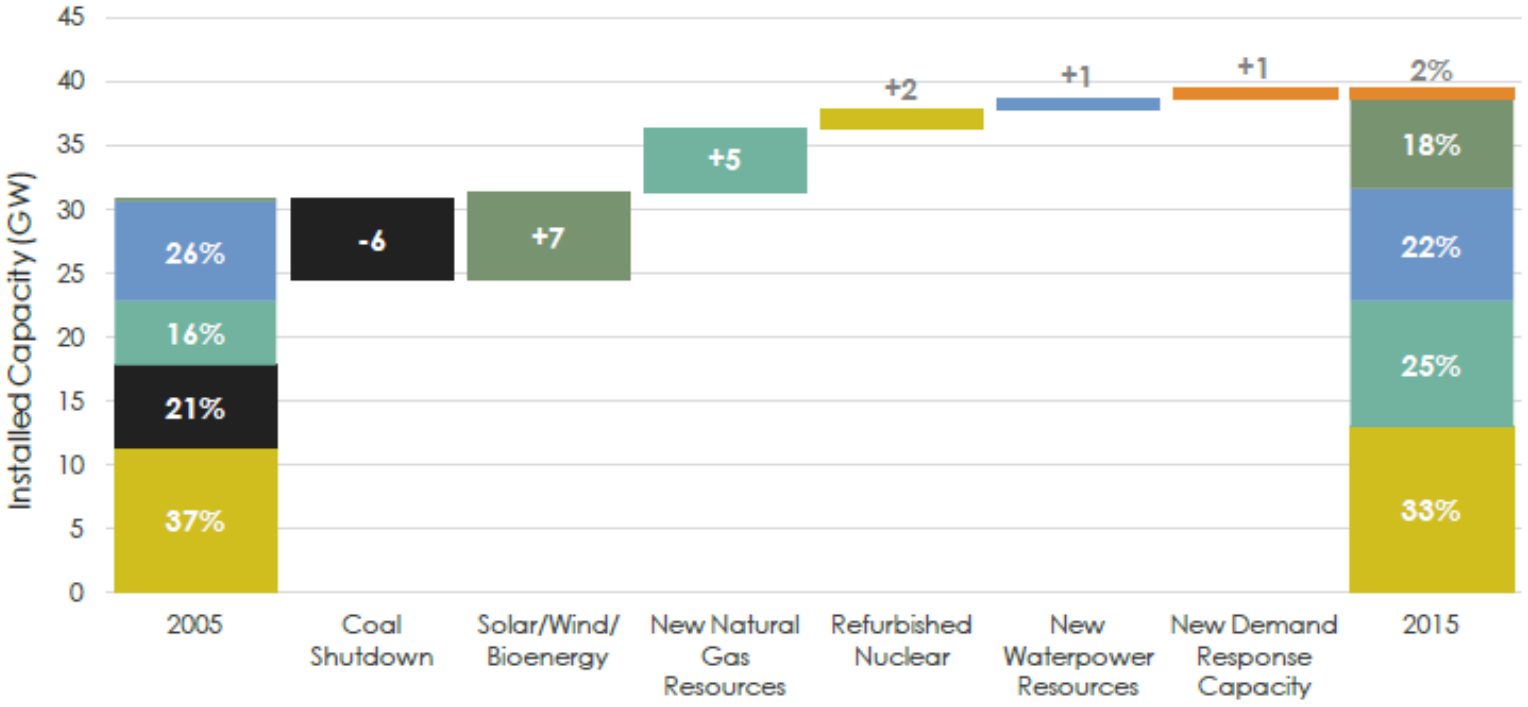
2015 Electricity System Cost
$ billion



Source: IESO

Significant Change in Supply Mix

- Between 2005 and 2015, government invested more than $50 billion in the electricity system, including $35 billion in electricity generation to restore reliability, replace coal and meet environmental objectives.
  - Electricity costs are increasing as necessary investments are made to decarbonize and modernize the province's electricity infrastructure.



Source: *IESO*

Electricity Prices Have Increased

- Since 2010, electricity prices have increased at a rate higher than the Consumer Price Index (CPI).

Typical Residential Electricity Bills
in $ per month, 750 kWh consumption

Source: *Ministry of Energy*

Recent Actions To Mitigate Electricity Rates

- Following the 2016 Throne Speech, several actions were announced to further reduce electricity costs.
  - As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8%.
  - Expanded support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.
  - Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.
  - Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.
  - Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – up to $129 million in cost savings.

Ontario’s Fair Hydro Plan

Ontario's Fair Hydro Plan

- Ontario is lowering electricity bills by 25 per cent for the typical residential customer and holding rate increases to the rate of inflation for four years. Small businesses and farms would also benefit from this initiative.

- People with low incomes, those served by local distribution companies (LDCs) with the highest distribution costs, OESP recipients and On-Reserve First Nation households would benefit from even greater reductions to their electricity bills.

- These new measures will cost the government up to $2.5 billion over the next three years.

- Government intends to introduce legislation to enable Ontario's Fair Hydro Plan.

1. Refinancing Global Adjustment

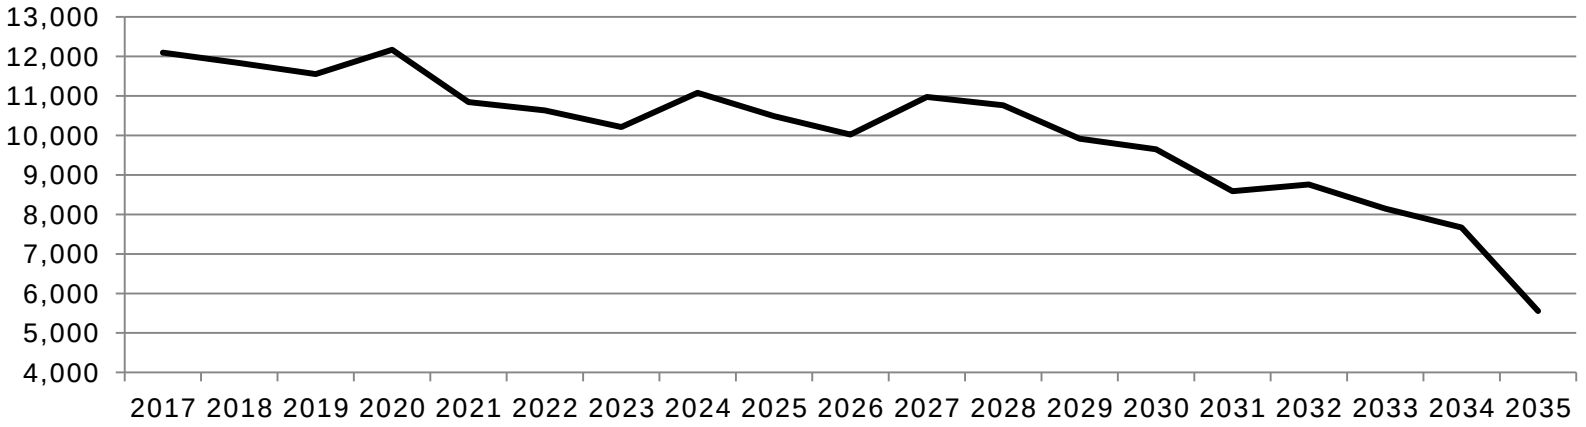
Refinancing the Global Adjustment

- Refinancing the Global Adjustment (GA) would provide significant and immediate rate relief by spreading the cost of electricity investments over a longer period of time.
  - 25% reduction on average for the typical residential customer and rates would follow inflation for the next 4 years.

- Under current forecasts, the immediate reduction (i.e., the financed portion) in the GA would be about $2.5 billion per year on average over the first ten years, with a maximum annual interest cost of $1.4 billion.

- This measure would share the associated costs more fairly. The chart below shows how Global Adjustment (GA) cost is front-end loaded and forecast to decline over time.

Forecast Global Adjustment Cost (nominal $ million)



Source: IESO

Policy Rationale

- The majority of the province's electricity generators are under 20-year contracts. Many of these generators will be able to operate past their contract term.

- By recognizing that generation assets are expected to continue to provide benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.

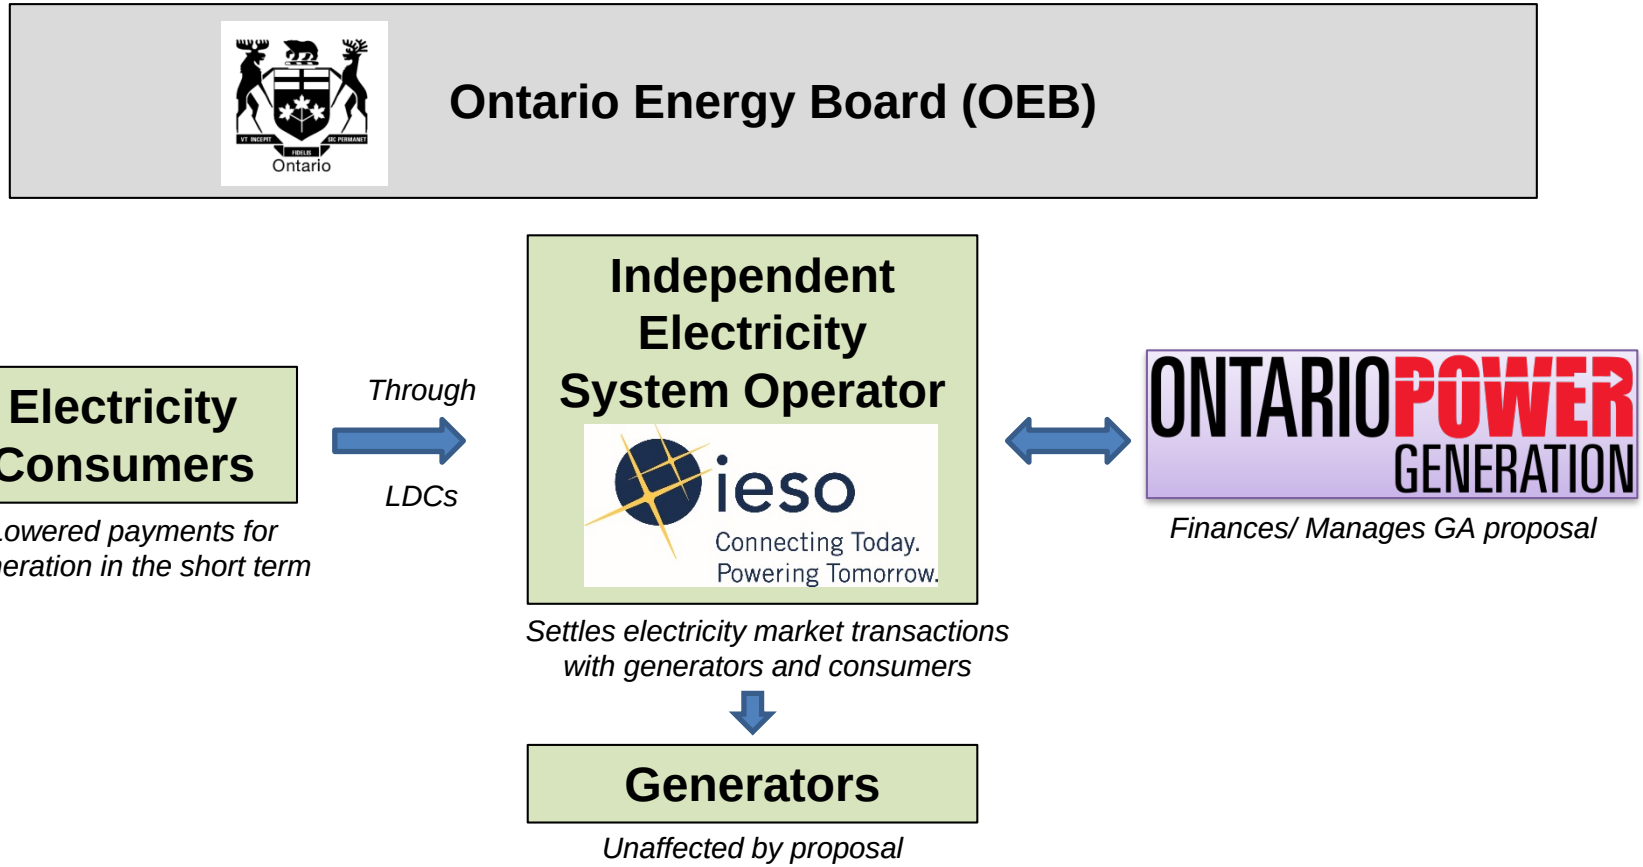
- In the early years, a portion of the costs covered by the GA would be financed to reduce pressure on electricity ratepayers.

- In the later years, when some system costs are expected to be reduced due to continued operation of existing assets under 20-year contracts, the cost of financing would be recovered from ratepayers.

"The amount consumers pay today could be reduced by stretching capital amortization periods to match the expected productive lives of the assets. In this way, the costs of generation charged to households would more closely reflect the true economic costs of the assets."
Globe and Mail Op-Ed (February 28, 2017) – Ivey Business School

Implementation

- The following entities would implement the proposed Global Adjustment (GA) refinancing mechanism.
  - The government intends to introduce legislation that would, if passed, enable IESO and OPG to work together to refinance the GA over a longer period of time. The legislation would also outline the role for the OEB, as it relates to the financing proposal.



2. Helping Vulnerable Consumers

Helping Vulnerable Electricity Consumers

- Fair Hydro Plan initiatives to help vulnerable consumers include:
  - Broadening Rural or Remote Rate Protection (RRRP) program to provide distribution charge relief for the customers of the costliest local distribution companies (LDCs).
  - Enhancing the Ontario Electricity Support Program (OESP) and working to ensure the program uptake is as close as possible to 100%.
  - Establishing a new First Nations On-Reserve Delivery Credit.
  - Establishing a new Affordability Fund which would support Ontarians who have difficulty paying their electricity bills to be able to access energy efficiency improvements.

- All of these initiatives would provide benefits to eligible consumers on top of the benefits they would receive from Global Adjustment (GA) refinancing.

- As part of the Fair Hydro Plan, these programs would be funded by provincial revenues, reducing regulatory charges for all Ontario ratepayers.
  - These programs would be funded by provincial revenues because they all provide targeted benefits to vulnerable consumers.

Broadening Rural or Remote Electricity Rate Protection (RRRP)

- Rural or Remote Rate Protection (RRRP) provides a rate subsidy to rural or remote residential customers who are faced with higher distribution costs compared to urban areas.
  - The RRRP is currently provided to approximately 350,000 Hydro One R2 residential customers in Ontario.

- The Province would expand the RRRP to provide distribution charge relief to additional hydro customers served by local distribution companies (LDCs) with the highest distribution rates, including: Hydro One R1, Northern Ontario Wires Inc., Lakeland Parry Sound, Chapleau PUC, Sioux Lookout Hydro, InnPower, Atikokan Hydro and Algoma Power. This would extend RRRP availability to about 800,000 customers.

- The new benefits would vary from LDC to LDC. For example:
  - A Hydro One R2 customer consuming 2,500kWh a month would see distribution cost reductions of around $75 a month.
  - A Hydro One R1 customer consuming 1,000kWh a month would see distribution cost reductions of around $18 a month.
  - An InnPower customer consuming 1,000kWh a month would see distribution cost reductions of around $12 a month.

- The government intends to introduce legislation to broaden the RRRP and to move forward in having RRRP costs be funded by provincial revenues, reducing regulatory charges for all Ontario ratepayers.

Enhancing the Ontario Electricity Support Program (OESP)

- The OESP would be enhanced by increasing its monthly credits by 50%, expanded to cover more low-income Ontarians, and increasing uptake to as close to 100% as possible.
  - Sliding Scale #1 outlines basic program benefits, and Sliding Scale #2 outlines enhanced benefits for Indigenous households, electrically heated households, and households with certain medically intensive medical equipment.
- The government intends to introduce legislation to enhance the OESP and to move forward in having OESP costs be funded by provincial revenues, reducing regulatory charges for all Ontario ratepayers.

Existing OESP Credit Scales

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$30	$30	$34	$38	$42	$50	$50
$28,001 - $39,000			$30	$34	$38	$42	$50
$39,001 - $48,000					$30	$34	$38
$48,001 - $52,000							$30

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$45	$45	$50	$55	$60	$75	$75
$28,001 - $39,000			$45	$50	$55	$60	$75
$39,001 - $48,000					$45	$50	$55
$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$45	$45	$51	$57	$63	$75	$75
$28,001 - $39,000		$40	$45	$51	$57	$63	$75
$39,001 - $48,000			$35	$40	$45	$51	$57
$48,001 - $52,000					$35	$40	$45

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$68	$68	$75	$83	$90	$113	$113
$28,001 - $39,000		$60	$68	$75	$83	$90	$113
$39,001 - $48,000			$52	$60	$68	$75	$83
$48,001 - $52,000					$52	$60	$68

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

First Nations On-Reserve Delivery Credit

- In 2016, the Minister of Energy asked the Ontario Energy Board (OEB) to develop options for a First Nation delivery credit for households.

- The OEB, engaging with First Nations, including remote communities, the distributors serving them, and consumer groups, developed the following recommendations:
  - Eliminating the delivery charge for all on-reserve First Nations households and removing the monthly service charge for customers of licensed distributors which charge a bundled rate. The OEB estimates this would provide residential customers an average monthly benefit of $85.
  - Automatically qualify on-reserve First Nations households (~21,500 customers).

- The government intends to introduce legislation to create the First Nations On-Reserve Delivery Credit and to move forward in having its costs be funded by provincial revenues, reducing regulatory charges for all Ontario ratepayers.

Establishing a New Affordability Fund

- The Affordability Fund would assist electricity customers who cannot qualify for low-income conservation programs and need financial assistance to undertake energy efficiency improvements.

- The Affordability Fund would provide LDCs with an additional tool to help customers in need. LDCs would use the Fund to provide support to customers for energy efficiency improvements to help reduce their future electricity bills.

- Measures supported by the Fund are expected to be similar to those available under the existing low-income conservation program, such as energy efficient lighting and appliances and, for electrically heated homes, insulation and weather stripping. Cold climate air source heat pumps would also be an eligible measure.

- The Province intends to work with Hydro One, in consultation with all other LDCs, to establish an independent Trust to serve as the administrator of the Affordability Fund.

- The Province would pay for the Fund through provincial revenues.

3. Enhancing Competitiveness for Small Manufacturers and Industrials

Enhancing Competitiveness for Small Manufacturers and Industrials

- The Industrial Conservation Initiative (ICI) provides a strong incentive for participating consumers to reduce their consumption during peak hours to reduce their costs.

- Expanding the eligibility threshold for the ICI would provide small manufacturers and industrials the opportunity to save on their electricity costs, while reducing the province's peak demand. The expanded ICI would include
  - Extending eligibility to small manufacturers and industrials with average monthly peak demand over 500 kilowatts; and
  - Targeting eligibility to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing).

- Under the expanded ICI, small manufacturers and industrials whose electricity demand is currently too low to qualify for ICI, would now be eligible for the expanded ICI if they wish to participate.

- Small manufacturers would also benefit from funding social programs through provincial revenues.

- In addition, the Ministry would assist small manufacturers and industrials' participation in ICI through a targeted outreach campaign delivered by the Ontario Chamber of Commerce (OCC).

4. Market Efficiencies / Bending the Cost Curve

Ongoing Efforts To Bend The Cost Curve of Ontario's Electricity System

- Since 2010, the government has taken a number of important actions to reduce electricity system costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.

Improving Electricity Sector Efficiency

The Ontario Energy Board (OEB)

- The Ontario Energy Board (OEB) regulates and licences more than 70 Local Distribution Companies (LDCs) in the province. The OEB would identify opportunities for cost efficiencies by:
  - Encouraging shared partnerships on services between utilities, which will help reduce costs and encourage further innovation for small to medium sized utilities;
  - Reviewing regulatory requirements to reduce “red tape” and eliminate unnecessary costs on LDCs; and
  - Looking at opportunities to further drive transmitter and LDC efficiencies and productivity improvements, including the use of innovative technologies and business processes.

Independent Electricity System Operator

- The IESO plans for the province’s electricity needs, balances the supply and demand for electricity in Ontario in real time and administers conservation programs.

- The IESO’s Market Renewal includes such initiatives as developing a capacity auction process, introducing a day-ahead energy market, etc.

- Changes related to IESO’s Market Renewal initiatives are estimated to save at least $200 million per year, starting in 2021.

2017 Long-Term Energy Plan

- The Ministry of Energy is developing the next Long-Term Energy Plan (LTEP) after receiving feedback from the public, stakeholders and indigenous communities during the engagement process that took place from October to January 2017.

- The LTEP process is designed to be iterative and flexible and only commit resources as demand needs become clearer.

- The Ministry of Energy anticipates that the next LTEP will be published in spring 2017.

Along with the adjustment I suggested….is there a way of representing treatment of regulatory asset? i.e. In GBE, the regulatory asset works without a fiscal impact but PSAB may not allow for regulatory assets, for IESO's consolidation.

Hi John/Bruno,

Here is first draft. I think there are 2-3 more points to add to the financing requirements and risks (just need to double check), but thought I'd send this your way in the meantime. I have meeting on the IESO directives/facilities with Lisa/Documentation, so will continue on this afterwards.

Early comments welcome.

This is a stand-alone request….give it a shot

I'm thinking two slides because one with the diagram and the other with some commentaries about the IESO facility being as big as the whole of the deferral program over the deferral years, which I think is higher than 3bn at its high.

Hi Salman,

I have a fairly urgent request (hoping for end of day)….in the attached (SpringBreak17 and p. 15 of 80), we have slide 14 that shows the GA diagram. I want to insert the potential IESO funding requirement that we have summarized in our deck of yesterday. I'm open to an updated look but want to have it sent to Energy soon.

Looking for maybe 2 slides to potentially suggest Energy put in their TB submission.

<2017-03-01 - Cabinet Submission - Electricity Price Mitigation.pdf>

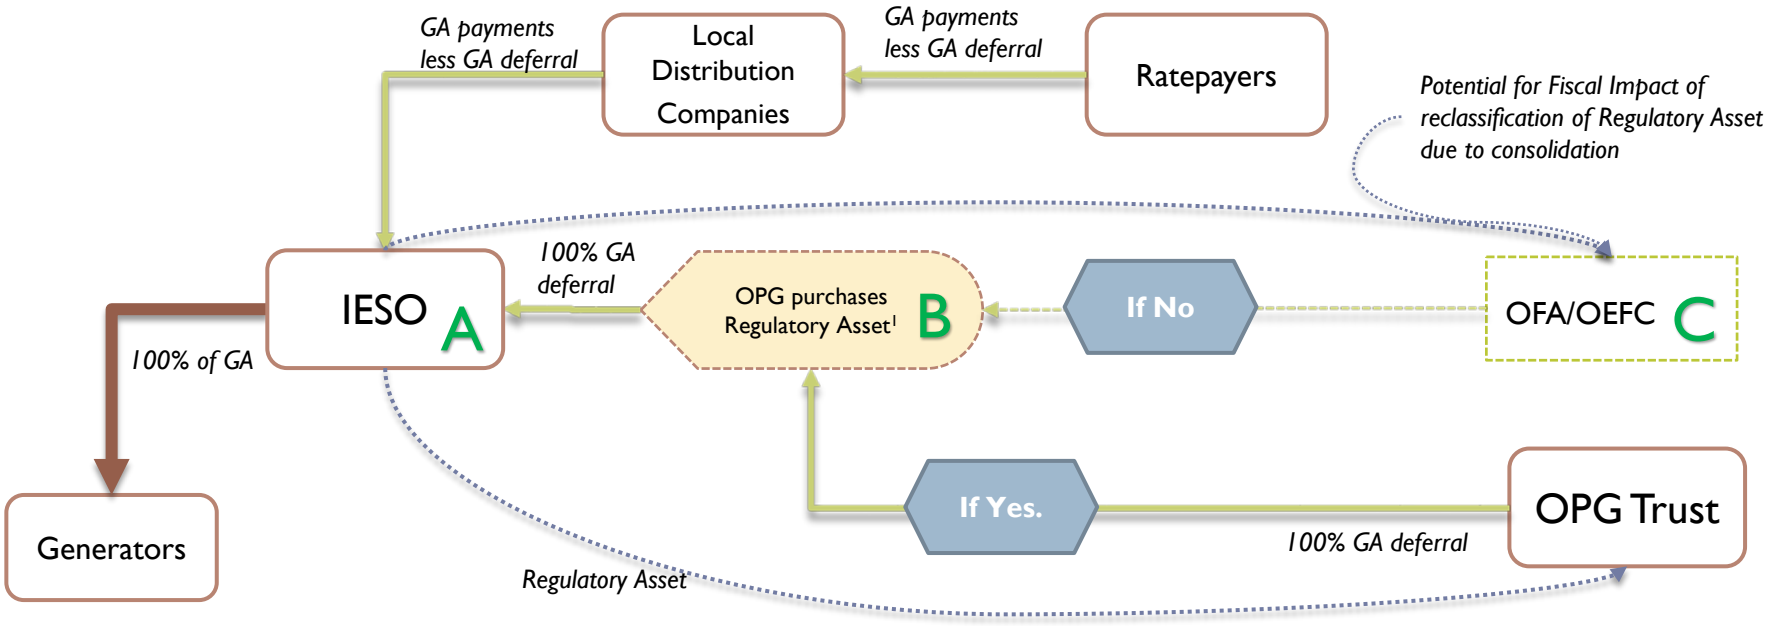
DRAFT

GA Financing Plan: Role of IESO

Corporate and Electricity Finance Division
April 25, 2017

Proposed GA Deferral Structure

- As ratepayers will be paying a reduced GA amount, IESO will have a shortfall in its payment to the generators. OPG, through a Trust, would purchase the Regulatory Asset (i.e. shortfall).



- OPG, as the Financial Services Manager of OPG Trust, will implement a financing plan. Although it may be expected that OPG Trust will purchase (B) the Regulatory Asset created by IESO every month, OPG is not obligated to do so. This presents a risk for IESO (A) to be able to have sufficient financing available to ensure its generators are paid.
- Current draft legislation does not appear to mandate that OPG Trust must purchase the 100 per cent of the Regulatory Asset every month from IESO, which results in IESO requiring a revolving credit facility from the Province/OEFC/OFA(C).
  - The use of a credit facility would likely represent a fiscal impact to the Province [TBC – Accounting]

1 Under the proposed Fair Hydro Act, OPG will act as the Financial Services Manager to the OPG Trust to ensure the Financing Plan (i.e. plan to finance the purchase of the Regulatory Assets from IESO) is implemented.

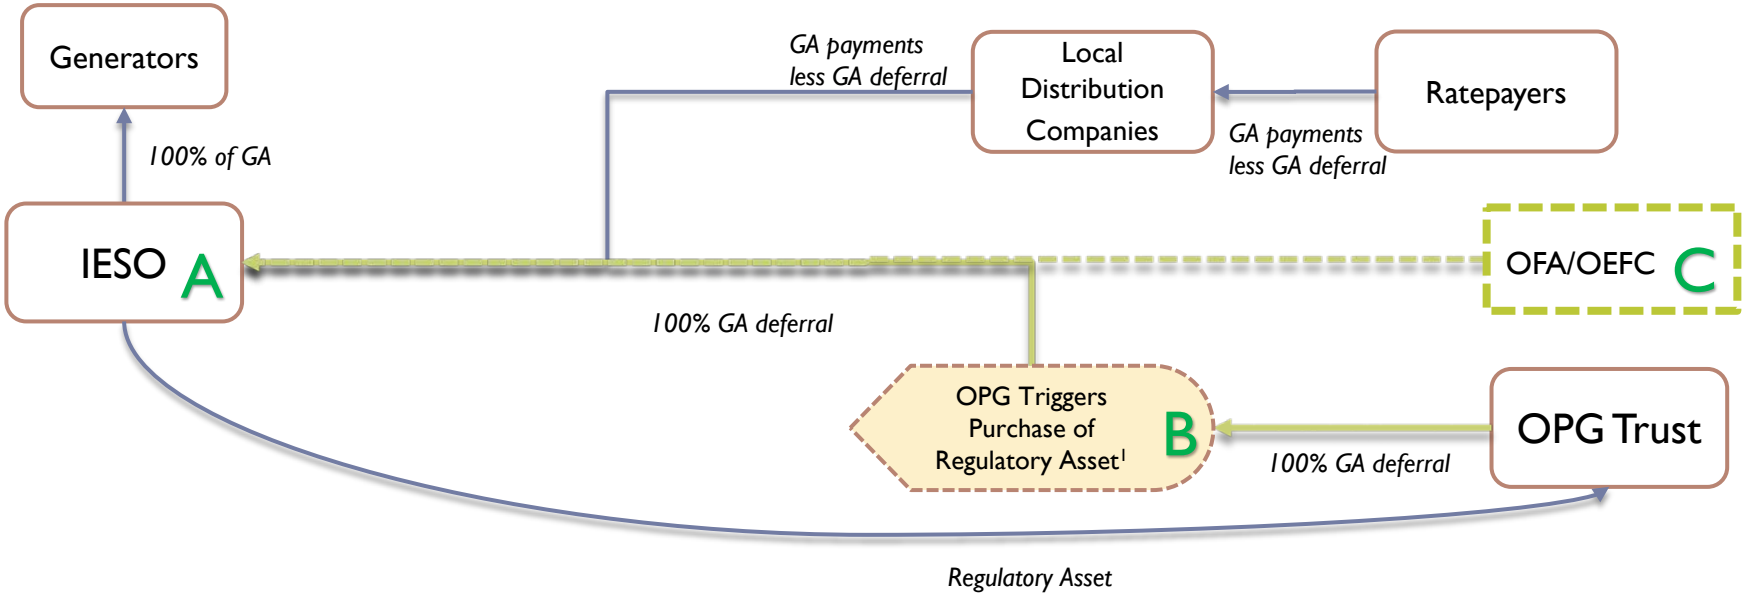
IESO Financing Requirements & Risks

- IESO will need to ensure that it continues to have the funds available to compensate generators on a monthly basis.
- As a result, IESO would potentially require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset.
    - Even if IESO is allowed to recognized the Regulatory Asset, there is a risk as to whether this recognition will be permitted under the Accounting standards upon consolidation with the Province.
- Based on Ministry of Energy's GA deferral plan, it is estimated that approximately $2.5-3.0 billion will need to be deferred per year for over first 10 years, equal to approximately $200-250 million per month.[1]
- However, the annual amount being deferred and the resulting monthly amounts can be substantially different based on various factors, such as seasonality or electricity usage, with IESO estimating deferral amounts as high as $400 million per month.
- Other factors that may increase the monthly GA deferral amounts:
    - IESO will also incur financing charges that will need to be refinanced.
    - The financing and administration costs that OPG Trust incurs will need to be paid for each month and will not be deferred. The GA amounts Ministry of Energy modelled to be deferred did not include the financing and administration costs. If the ratepayer is paying these costs every month, the GA deferral will need to increase to ensure that the related electricity bill decreases (as a result of the deferral) can reflect the government's proposed 25% electricity rate cut and the increase in bills at the rate of inflation.
- Should OPG not purchase the Regulatory Asset, IESO may require long-term financing to either 1) help unwind the asset or 2) maintain the deferral financing plan.
- If the IESO borrowing requirements increase, the Province will be obligated to provide increased support, which would have implications for the overall GA deferral plan. This increased support from the Province would be repaid by ratepayers.
    - Recent documents show that the Province may be asked to provide a guarantee in which if the GA deferral plan is cancelled, the Province would be responsible for making the investors of the Trust whole. This would mean that the taxpayers could be liable and result in a significant fiscal impact.

1 Based on Ministry of Energy's annual GA deferral amounts, assuming the monthly deferral is equally-weighted.

Proposed GA Deferral Structure

- As ratepayers will be paying a reduced GA amount, IESO will have a shortfall in its payment to the generators. OPG, through a Trust, would purchase the Regulatory Asset (i.e. shortfall).



- OPG, as the Financial Services Manager of OPG Trust, will implement a financing plan. Although it may be expected that OPG Trust will purchase (B) the Regulatory Asset created by IESO every month, OPG is not obligated to do so. This presents a risk for IESO (A) to be able to have sufficient financing available to ensure its generators are paid.
- Current draft legislation does not appear to mandate that OPG Trust must purchase the 100 per cent of the Regulatory Asset every month from IESO, which results in IESO requiring a revolving credit facility from the Province/OEFC/OFA(C).
    - The use of a credit facility would likely represent a fiscal impact to the Province [TBC – Accounting]

1 Under the proposed Fair Hydro Act, OPG will act as the Financial Services Manager to the OPG Trust to ensure the Financing Plan (i.e. plan to finance the purchase of the Regulatory Assets from IESO) is implemented.

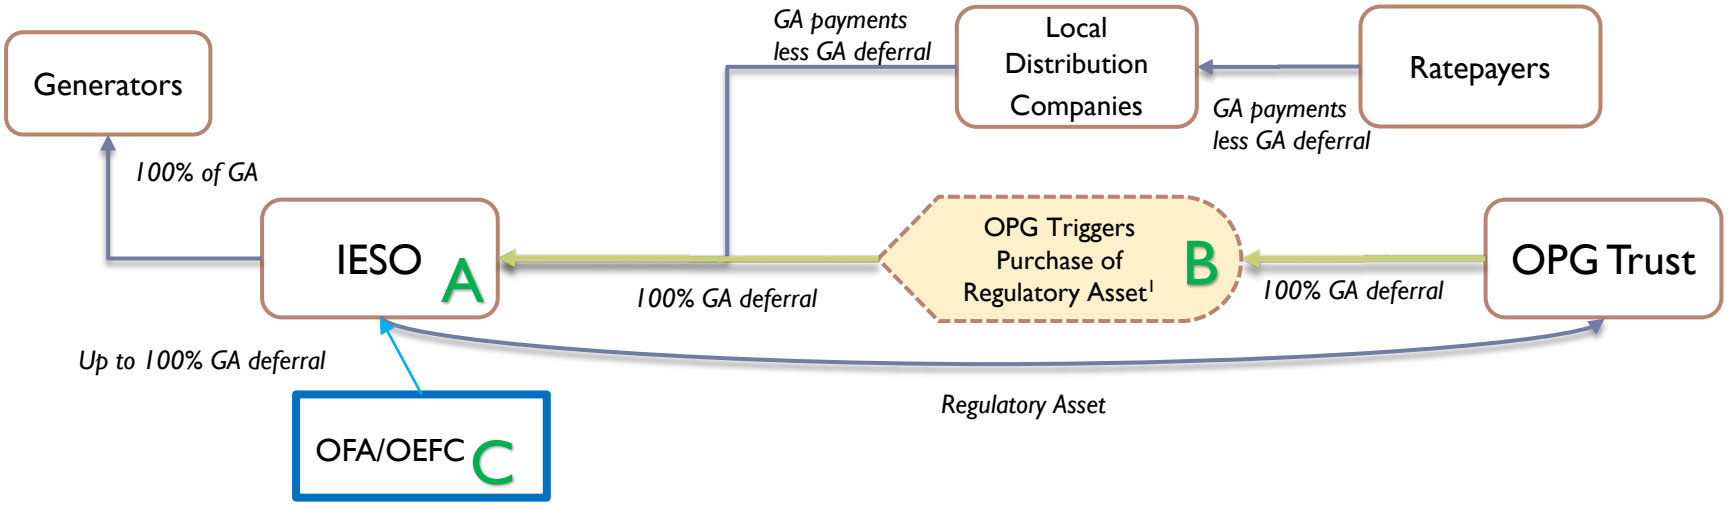
DRAFT

GA Financing Plan: Role of IESO

Corporate and Electricity Finance Division
April 25, 2017

Proposed GA Deferral Structure

- As ratepayers will be paying a reduced GA amount, IESO will have a shortfall in its payment to the generators. OPG, through a Trust, would purchase the Regulatory Asset (i.e. shortfall).



- OPG, as the Financial Services Manager of OPG Trust, will implement a financing plan. Although it may be expected that OPG Trust will purchase (B) the Regulatory Asset created by IESO every month, OPG is not obligated to do so. This presents a risk for IESO (A) to be able to have sufficient financing available to ensure its generators are paid.
- Current draft legislation does not appear to mandate that OPG Trust must purchase the 100 per cent of the Regulatory Asset every month from IESO, which results in IESO requiring a revolving credit facility from the Province/OEFC/OFA(C).
    - The use of a credit facility would likely represent a fiscal impact to the Province [TBC – Accounting]

1 Under the proposed Fair Hydro Act, OPG will act as the Financial Services Manager to the OPG Trust to ensure the Financing Plan (i.e. plan to finance the purchase of the Regulatory Assets from IESO) is implemented.

IESO Financing Requirements & Risks

- IESO will need to ensure that it continues to have the funds available to compensate generators on a monthly basis.
- As a result, IESO would potentially require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset.
    - Even if IESO is allowed to recognized the Regulatory Asset, there is a risk as to whether this recognition will be permitted under the Accounting standards upon consolidation with the Province.
- Based on Ministry of Energy's GA deferral plan, it is estimated that approximately $2.5-3.0 billion will need to be deferred per year for over first 10 years, equal to approximately $200-250 million per month.[1]
- However, the annual amount being deferred and the resulting monthly amounts can be substantially different based on various factors, such as seasonality or electricity usage, with IESO estimating deferral amounts as high as $400 million per month.
- Other factors that may increase the monthly GA deferral amounts:
    - IESO will also incur financing charges that will need to be refinanced.
    - The financing and administration costs that OPG Trust incurs will need to be paid for each month and will not be deferred. The GA amounts Ministry of Energy modelled to be deferred did not include the financing and administration costs. If the ratepayer is paying these costs every month, the GA deferral will need to increase to ensure that the related electricity bill decreases (as a result of the deferral) can reflect the government's proposed 25% electricity rate cut and the increase in bills at the rate of inflation.
- Should OPG not purchase the Regulatory Asset, IESO may require long-term financing to either 1) help unwind the asset or 2) maintain the deferral financing plan.
- If the IESO borrowing requirements increase, the Province will be obligated to provide increased support, which would have implications for the overall GA deferral plan. This increased support from the Province would be repaid by ratepayers.
    - Recent documents show that the Province may be asked to provide a guarantee in which if the GA deferral plan is cancelled, the Province would be responsible for making the investors of the Trust whole. This would mean that the taxpayers could be liable and result in a significant fiscal impact.

1 Based on Ministry of Energy's annual GA deferral amounts, assuming the monthly deferral is equally-weighted.

Hi John/Bruno,

Here is first draft. I think there are 2-3 more points to add to the financing requirements and risks (just need to double check), but thought I'd send this your way in the meantime. I have meeting on the IESO directives/facilities with Lisa/Documentation, so will continue on this afterwards.

Early comments welcome.

This is a stand-alone request….give it a shot

I'm thinking two slides because one with the diagram and the other with some commentaries about the IESO facility being as big as the whole of the deferral program over the deferral years, which I think is higher than 3bn at its high.

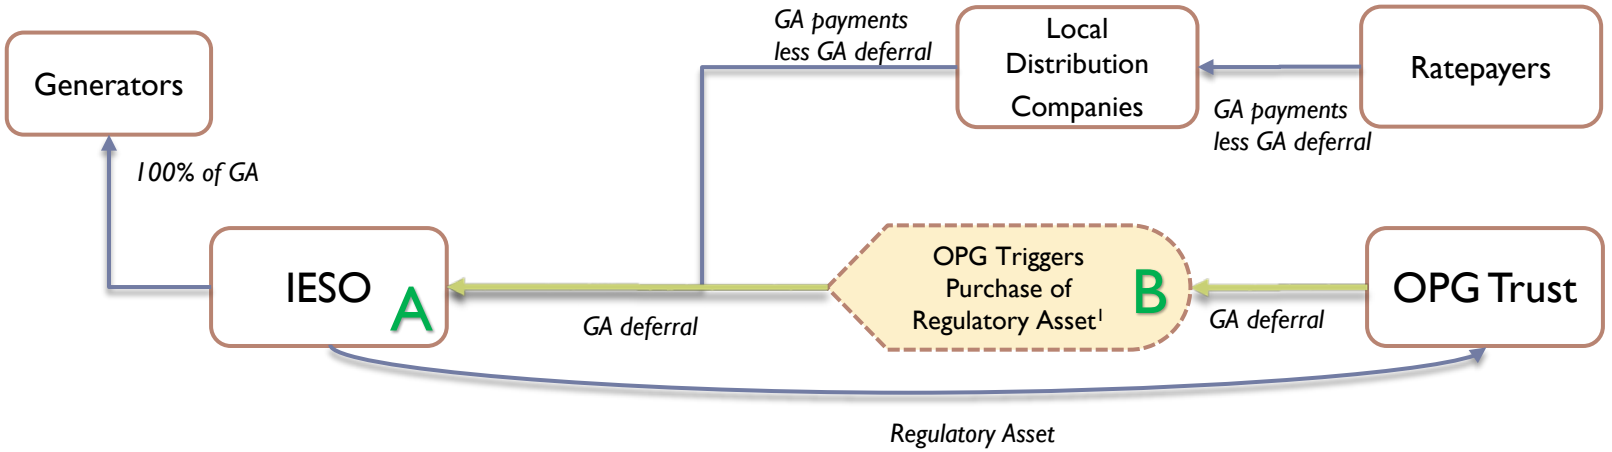
DRAFT

GA Financing Plan: Role of IESO

Corporate and Electricity Finance Division
April 25, 2017

Proposed GA Deferral Structure

- ~~It is understood that the Ontario Energy Board would set the RPP rates lower based on the GA amount being deferred.~~ As ratepayers will be paying a reduced GA amount, IESO will have a shortfall in its payment to the generators. OPG, through a Trust, would purchase the Regulatory Asset (i.e. shortfall).



- OPG, as the Financial Services Manager of OPG Trust, will implement a financing plan. Although it may be expected that OPG Trust will purchase (B) the Regulatory Asset created by IESO every month, OPG is not obligated to do so. This presents a risk for IESO (A) to be able to have sufficient financing available to ensure its generators are paid.
- Current draft legislation does not appear to mandate that OPG Trust must purchase the 100 per cent of the Regulatory Asset every month from IESO, which results in IESO requiring a revolving credit facility from the Province/OEFC/OFA.
    - The use of a credit facility likely would represent a fiscal impact to the Province [TBC – Accounting]

1 Under the proposed Fair Hydro Act, OPG will act as the Financial Services Manager to the OPG Trust to ensure the Financing Plan (i.e. plan to finance the purchase of the Regulatory Assets from IESO) is implemented.

IESO Financing Requirements & Risks

- IESO will need to ensure that it continues to have the funds available to compensate generators on a monthly basis.
- As a result, IESO would potentially require financing to compensate generators should it be required to hold any portion of the unpurchased Regulatory Asset.
    - Even if IESO is allowed to recognized the Regulatory Asset, there is a risk as to whether this recognition will be permitted under the Accounting standards upon consolidation with the Province.
- Based on Ministry of Energy's GA deferral plan, it is estimated that approximately $2.5-3.0 billion will need to be deferred per year for over first 10 years, equal to approximately $200-250 million per month.[1]
- However, the annual amount being deferred and the resulting monthly amounts can be substantially different based on various factors, such as seasonality or electricity usage, with IESO estimating deferral amounts as high as $400 million per month.
- Other factors that may increase the monthly GA deferral amounts:
    - IESO will also incur financing charges that will need to be refinanced.
    - The financing and administration costs that OPG Trust incurs will need to be paid for each month and will not be deferred. The GA amounts Ministry of Energy modelled to be deferred did not include the financing and administration costs. If the ratepayer is paying these costs every month, the GA deferral will need to increase to ensure that the related electricity bill decreases (as a result of the deferral) can reflect the government's proposed 25% electricity rate cut and the increase in bills at the rate of inflation.
- Should OPG not purchase the Regulatory Asset, IESO may require long-term financing to either 1) help unwind the asset or 2) maintain the deferral financing plan.
- If the IESO borrowing requirements increase, the Province will be obligated to provide increased support, which would have implications for the overall GA deferral plan. This increased support from the Province would be repaid by ratepayers.
    - Recent documents show that the Province may be asked to provide a guarantee in which if the GA deferral plan is cancelled, the Province would be responsible for making the investors of the Trust whole. This would mean that the taxpayers could be liable and result in a significant fiscal impact.

1 Based on Ministry of Energy's annual GA deferral amounts, assuming the monthly deferral is equally-weighted.

Hi John/Bruno,

I was speaking with Adam about the "potential of fiscal impact upon consolidation" if IESO holds the regulatory asset. The assumption is that upon consolidation, the asset would be decognized as a Regulatory Asset and would be a fiscal impact due to a write down of the asset.

IESO currently has two smaller regulatory assets on its books. What we would like to do is ask OPCD what happens to those assets upon consolidation, whether it remains a regulatory asset or not. Adam can look up the appropriate line items to ask OPCD about.

Along with the adjustment I suggested….is there a way of representing treatment of regulatory asset? i.e. In GBE, the regulatory asset works without a fiscal impact but PSAB may not allow for regulatory assets, for IESO's consolidation.

Hi John,

A draft covering email.

Ron

Hi David, Chris,

Attached is a response to the request from the MO (see the email chain). MO had asked for a response ASAP (now (EOD). (Doc internal PW)

I'd note that our analysis is a refinement from the Energy analysis. And that our modelling has not been shared with or reviewed by Energy.

Energy said in its CabSub that it was using a 5% interest rate, compounded monthly, but it's actual calculations were done using a proxy annual 5.12%, with interest costs assumed to occur in the following year. That means that the tables from the Energy decks have zero in-year interest costs in 2017, which would be awkward to show, and interest cost in each year calculated based on the beginning of the year debt balance only, not financing the in-year deferrals.

Staff have taken Energy's GA deferral amounts and calculated in-year interest costs based on even monthly GA deferral amounts (a simplification) to generate a table with interest costs starting in 2017. However, since interest costs in the proposed plan are deferred and capitalised, that changes the annual and accumulated debt amounts a bit for what Energy had estimated.

In both the revised and Energy cases, on a rounded basis, the cumulative interest cost is $25 bn, with an annual peak of $1.4 bn in the 5% interest rate scenario. The peak cumulative debt rounds in both cases to $28 bn, but is a little lower in Energy's table, and a little higher in the detailed modelling with interest compounding monthly.

Communications have also talked about implementation in the summer. As such, staff did some sensitivity modelling on a July 1, 2017, implementation date, effectively assuming only half the estimated deferral amount in 2017. The impact on estimated life-cycle cumulative interest costs is significant.

Also included are some interest rate sensitivities, which are have significant impacts.

Subject: Interest cost deck

Hi Ron,

Pls. see attached. It'd be good to emphasize that the tables are illustrative estimates.

Thanks,

John.

Hi Ron,

EFB is good with the edits. Attached is the clean copy.

Please let me know if you are good with the attached version going to DMO and MO.

Thanks,
Gavin He

DRAFT

GA Financing:
Interest Rate Base Scenario & Sensitivities
March 1, 2017, Energy Deck Case

Corporate and Electricity Finance Division
March 6, 2017

DRAFT

GA Financing *(Calendar Year Basis) – (**Effective January 1, 2017**)* March 1 Deck

- The interest cost estimates are based on Ministry of Energy estimates of the Global Adjustment cost amounts to be deferred, per its March 1 Cabinet submission.
  - GA deferral estimates are subject to updates from the Ministry of Energy.
  - Actual annual and cumulative interest costs are very sensitive to actual borrowing rates. Table below is illustrative.
  - Sensitivities shown on lower interest rates assume faster debt pay down. Alternatively, pay down could be stretched out, but would result in relatively higher cumulative interest costs than shown for that interest rate.
- Interest cost estimates are slightly adjusted from Ministry of Energy amounts, to reflect in-year interest costs. Energy's base case interest costs shown were an assumed 5%, compounded monthly, calculated in the following year, with a term of 30-years (2047).

Interest Rate	Peak Annual Interest Cost	Total Life-cycle Accumulated Interest Costs	Term (Approximate)
3.5%	$0.879 billion in 2027	$12.6 billion	2042 (25-year term)
4.2%	$1.1 billion in 2027	$17.4 billion	2044 (27-year term)
5.0%	$1.4 billion in 2028	$25.1 billion	2047 (30-year term)

Total GA deferral amount being financed is approximately $20.3 billion (plus deferred, capitalised interest, that can increase peak debt to about $28 bn under the 5% scenario.

Base Scenario – *5% Interest Rate* with GA draw downs occurring on an equal monthly basis.

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	Total
Total Debt, Beginning of Year	23,622	22,537	21,397	20,198	18,937	17,613	16,220	14,756	13,218	11,600	9,900	8,113	6,234	4,260	2,184	
Annual Interest Cost	1,156	1,101	1,043	981	917	849	778	703	624	541	454	363	267	166	60	**25,137**
Additional GA Debt Drawdown Required	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	
Accumulated debt in present year	22,537	21,397	20,198	18,937	17,613	16,220	14,756	13,218	11,600	9,900	8,113	6,234	4,260	2,184	2	

Actuals are subject to actual prices and actual interest rates.
1 Based on an interest rate of 5%. Interest Cost in 2017 adjusted to represent implementation in July 2017.
2 Higher interest rates results in extended the term of the financing. It is assumed that a cap of $2.242 bn above the true cost of GA in any given year is continued to be applied to repay any remaining debt. Thus, every year a maximum of $2.242 bn is recovered by ratepayers until the debt is paid down, with interest still accumulating over this period. In this Scenario, the term would be extended to Year 2056.

DRAFT

GA Financing *(Calendar Year Basis) – (**Effective July 1, 2017**)* *March 1 Deck*

- Ministry of Energy modelling estimates provided have been based on a full-year of GA deferral in 2017. Annual and cumulative interest and debt estimates would be sensitive to an in-year start date of, e.g., July 1, 2017, as below.
  - Otherwise, as before, modelling is based on Ministry of Energy estimates of the Global Adjustment cost amounts to be deferred in its March 1, 2017, Cabinet Submission.
  - GA deferral cost estimates are subject to updates from the Ministry of Energy.
  - Actual annual and cumulative interest costs are very sensitive to actual borrowing rates. Table below is illustrative.
  - Sensitivities shown on lower interest rates assume faster debt pay down. Alternatively, pay down could be stretched out, but would result in relatively higher cumulative interest costs than shown for that interest rate.
- Interest cost estimates are adjusted from Ministry of Energy amounts, to reflect in-year interest costs and an assumed July 1, 2017 implementation date. Half-a-year of reduced deferred GA significantly reduces estimated cumulative interest costs.

Interest Rate	Peak Annual Interest Cost	Total Life-cycle Accumulated Interest Costs	Term (Approximate)
3.5%	$0.817 billion in 2027	$11 billion	2041 (24-year term)
4.2%	$1.0 billion in 2027	$14.9 billion	2042 (25-year term)
5.0%	$1.3 billion in 2028	$21.0 billion	2045 (28-year term)

Total GA deferral amount being financed is approximately $19.1 billion (plus deferred, capitalised interest, that can increase peak debt to about $26 bn under the 5% scenario.

Base Scenario – *5% Interest Rate* with GA draw downs occurring on an equal monthly basis.

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

DRAFT

GA Financing:
Interest Rate Base Scenario & Sensitivities
March 1, 2017, Energy Deck Case

Corporate and Electricity Finance Division
March 6, 2017

DRAFT

GA Financing *(Calendar Year Basis) – (**Effective January 1, 2017**)* March 1 Deck

- The interest cost estimates are based on Ministry of Energy estimates of the Global Adjustment cost amounts to be deferred, per its March 1 Cabinet submission.
  - GA deferral estimates are subject to updates from the Ministry of Energy.
  - Actual annual and cumulative interest costs are very sensitive to actual borrowing rates. Table below is illustrative.
  - Sensitivities shown on lower interest rates assume faster debt pay down. Alternatively, pay down could be stretched out, but would result in relatively higher cumulative interest costs than shown for that interest rate.
- Interest cost estimates are slightly adjusted from Ministry of Energy amounts, to reflect in-year interest costs. Energy's base case interest costs shown were an assumed 5%, compounded monthly, calculated in the following year, with a term of 30-years (2047).

Interest Rate	Peak Annual Interest Cost	Total Life-cycle Accumulated Interest Costs	Term (Approximate)
3.5%	$0.879 billion in 2027	$12.6 billion	2042 (25-year term)
4.2%	$1.1 billion in 2027	$17.4 billion	2044 (27-year term)
5.0%	$1.4 billion in 2028	$25.1 billion	2047 (30-year term)

Total GA deferral amount being financed is approximately $20.3 billion (plus deferred, capitalised interest, that can increase peak debt to about $28 bn under the 5% scenario.

Base Scenario – *5% Interest Rate* with GA draw downs occurring on an equal monthly basis.

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

Total Debt, Beginning of Year	23,622	22,537	21,397	20,198	18,937	17,613	16,220	14,756	13,218	11,600	9,900	8,113	6,234	4,260	2,184	
Annual Interest Cost	1,156	1,101	1,043	981	917	849	778	703	624	541	454	363	267	166	60	**25,137**
Additional GA Debt Drawdown Required	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	-2,242	
Accumulated debt in present year	22,537	21,397	20,198	18,937	17,613	16,220	14,756	13,218	11,600	9,900	8,113	6,234	4,260	2,184	2	

Actuals are subject to actual prices and actual interest rates.
1 Based on an interest rate of 5%. Interest Cost in 2017 adjusted to represent implementation in July 2017.
2 Higher interest rates results in extended the term of the financing. It is assumed that a cap of $2.242 bn above the true cost of GA in any given year is continued to be applied to repay any remaining debt. Thus, every year a maximum of $2.242 bn is recovered by ratepayers until the debt is paid down, with interest still accumulating over this period. In this Scenario, the term would be extended to Year 2056.

DRAFT

GA Financing *(Calendar Year Basis) – (**Effective July 1, 2017**)* *March 1 Deck*

- Ministry of Energy modelling estimates provided have been based on a full-year of GA deferral in 2017. Annual and cumulative interest and debt estimates would be sensitive to an in-year start date of, e.g., July 1, 2017, as below.
  - Otherwise, as before, modelling is based on Ministry of Energy estimates of the Global Adjustment cost amounts to be deferred in its March 1, 2017, Cabinet Submission.
  - GA deferral cost estimates are subject to updates from the Ministry of Energy.
  - Actual annual and cumulative interest costs are very sensitive to actual borrowing rates. Table below is illustrative.
  - Sensitivities shown on lower interest rates assume faster debt pay down. Alternatively, pay down could be stretched out, but would result in relatively higher cumulative interest costs than shown for that interest rate.
- Interest cost estimates are adjusted from Ministry of Energy amounts, to reflect in-year interest costs and an assumed July 1, 2017 implementation date. Half-a-year of reduced deferred GA significantly reduces estimated cumulative interest costs.

Interest Rate	Peak Annual Interest Cost	Total Life-cycle Accumulated Interest Costs	Term (Approximate)
3.5%	$0.817 billion in 2027	$11 billion	2041 (24-year term)
4.2%	$1.0 billion in 2027	$14.9 billion	2042 (25-year term)
5.0%	$1.3 billion in 2028	$21.0 billion	2045 (28-year term)

Total GA deferral amount being financed is approximately $19.1 billion (plus deferred, capitalised interest, that can increase peak debt to about $26 bn under the 5% scenario.

Base Scenario – *5% Interest Rate* with GA draw downs occurring on an equal monthly basis.

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

DRAFT

GA Financing:
Interest Rate Base Scenario & Sensitivities
March 1, 2017, Energy Deck Case

Corporate and Electricity Finance Division
March 6, 2017

DRAFT

GA Financing *(Calendar Year Basis) – (**Effective January 1, 2017**) March 1 Deck*

- The interest cost estimates are based on Ministry of Energy estimates of the Global Adjustment cost amounts to be deferred, per its March 1 Cabinet submission.
  - GA deferral estimates are subject to updates from the Ministry of Energy.
  - Actual annual and cumulative interest costs are very sensitive to actual borrowing rates. Table below is illustrative.
  - Sensitivities shown on lower interest rates assume faster debt pay down. Alternatively, pay down could be stretched out, but would result in relatively higher cumulative interest costs than shown for that interest rate.
- Interest cost estimates are slightly adjusted from Ministry of Energy amounts, to reflect in-year interest costs. Energy's base case interest costs shown were an assumed 5%, compounded monthly, calculated in the following year, with a term of 30-years (2047).

Interest Rate	Peak Annual Interest Cost	Total Life-cycle Accumulated Interest Costs	Term (Approximate)
3.5%	$0.879 billion in 2027	$12.6 billion	2042 (25-year term)
4.2%	$1.1 billion in 2027	$17.4 billion	2044 (27-year term)
5.0%	$1.4 billion in 2028	$25.1 billion	2047 (30-year term)

Total GA deferral amount being financed is approximately $20.3 billion (plus deferred, capitalised interest, that can increase peak debt to about $28 bn under the 5% scenario.

Base Scenario – *5% Interest Rate* with GA draw downs occurring on an equal monthly basis.

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

Accumulated debt in present year	22,537	21,397	20,198	18,937	17,613	16,220	14,756	13,218	11,600	9,900	8,113	6,234	4,260	2,184	2	

Actuals are subject to actual prices and actual interest rates.
1 Based on an interest rate of 5%. Interest Cost in 2017 adjusted to represent implementation in July 2017.
2 Higher interest rates results in extended the term of the financing. It is assumed that a cap of $2.242 bn above the true cost of GA in any given year is continued to be applied to repay any remaining debt. Thus, every year a maximum of $2.242 bn is recovered by ratepayers until the debt is paid down, with interest still accumulating over this period. In this Scenario, the term would be extended to Year 2056.

DRAFT

GA Financing *(Calendar Year Basis) – (**Effective July 1, 2017**)* *March 1 Deck*

- Ministry of Energy modelling estimated provided have been based on a full-year of GA deferral in 2017. Annual and cumulative interest and debt estimates would be sensitive to an in-year start date of, e.g., July 1, 2017, as below.
  - Otherwise, as before, modelling is based on Ministry of Energy estimates of the Global Adjustment cost amounts to be deferred in its March 1, 2017, Cabinet Submission.
  - GA deferral cost estimates are subject to updates from the Ministry of Energy.
  - Actual annual and cumulative interest costs are very sensitive to actual borrowing rates. Table below is illustrative.
  - Sensitivities shown on lower interest rates assume faster debt pay down. Alternatively, pay down could be stretched out, but would result in relatively higher cumulative interest costs than shown for that interest rate.
- Interest cost estimates are adjusted from Ministry of Energy amounts, to reflect in-year interest costs and an assumed July 1, 2017 implementation date. Half-a-year of reduced deferred GA significantly reduces estimated cumulative interest costs.

Interest Rate	Peak Annual Interest Cost	Total Life-cycle Accumulated Interest Costs	Term (Approximate)
3.5%	$0.817 billion in 2027	$11 billion	2041 (24-year term)
4.2%	$1.0 billion in 2027	$14.9 billion	2042 (25-year term)
5.0%	$1.3 billion in 2028	$21.0 billion	2045 (28-year term)

Total GA deferral amount being financed is approximately $19.1 billion (plus deferred, capitalised interest, that can increase peak debt to about $26 bn under the 5% scenario.

Base Scenario – *5% Interest Rate* with GA draw downs occurring on an equal monthly basis.

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

I cleaned up some typos.

Hi David, Chris,

Attached is a response to the request from the MO (see the email chain). MO had asked for a response ASAP (now EOD). (Doc internal PW)

I'd note that our analysis is a refinement from the Energy analysis. And that our modelling has not been shared with or reviewed by Energy.

Energy said in its CabSub that it was using a 5% interest rate, compounded monthly, but it's actual calculations were done using a proxy annual 5.12%, with interest costs assumed to occur in the following year. That means that the tables from the Energy decks have zero in-year interest costs in 2017, which would be awkward to show, and interest cost in each year calculated based on the beginning of the year debt balance only, not financing the in-year deferrals.

Staff have taken Energy's GA deferral amounts and calculated in-year interest costs based on even monthly GA deferral amounts (a simplification) to generate a table with interest costs starting in 2017. However, since interest costs in the proposed plan are deferred and capitalised, that changes the annual and accumulated debt amounts a bit from what Energy had estimated.

In both the revised and Energy cases, on a rounded basis, the cumulative interest cost is $25 bn, with an annual peak of $1.4 bn in the 5% interest rate scenario. The peak cumulative debt rounds in both cases to $28 bn, but is a little lower in Energy's table, and a little higher in the detailed modelling with interest compounding monthly.

Communications have also talked about implementation in the summer. As such, staff did some sensitivity modelling on a July 1, 2017, implementation date, effectively assuming only half the estimated deferral amount in 2017. The impact on estimated life-cycle cumulative interest costs is significant.

Also included are some interest rate sensitivities, which have significant impacts.

Hi Felix,

Hope all went reasonable well. Just looking for next steps…..we also have a couple of comments though may have missed the window.

On the table on p.4, Ron did point out that the column title the use of “savings” could be changed to the cumulative amount deferred as the initiative is more about deferring and financing. (But sorry that we are late on providing that comment.)

Another one, which is more of a question than a comment. It’s regarding the funding the deferred amount and 44% is to come from equity injection. Should the Minute, the current one, or a future Minute note that Energy gets approval for an operating asset and the amount? Would that be handled as part of the PRRT Minute at Document time or after legislation (if passed)? Not sure if this is clear, we can chat further another time but wanted to throw it out there.

John.

Thanks David.

Note that TBS has not fully aligned the note to the rapidly changing numbers in the Energy deck.

One example is on page 4. The total "savings" (really more "deferred GA cost recovery") and interest table (relabelled, numbers changed) on page 4 needs to be either revised or dropped, as option 1 has changed materially.

ANNOTATED AGENDA
MO UPDATE: April 3, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Hydro One – Financial Benefit to OEFC (s. 50.3 of the *Electricity Act, 1998*):

Ministry of Finance is drafting a Treasury Board submission for the May 9 Treasury Board meeting to provide a financial benefit to the Ontario Electricity Financial Corporation (OEFC) in accordance with s. 50.3 of the *Electricity Act, 1998*. The submission will require the Minister's signed approval by April 18.

- Under the *Electricity Act*, the Ministry of Finance is to provide OEFC with a financial benefit when the Province sells Hydro One shares.
- This financial benefit is being paid as a result of the secondary offering of Hydro One shares in April 2016.
- The financial benefit payable to the OEFC is determined to be approximately $411M.
- The payment is fiscally neutral as the expense to the Ministry of Finance is fully offset against the receipt of revenue of OEFC on consolidation of OEFC in the Public Accounts.
- The benefit would accrue to OEFC in 2016-17 but would be administered in 2017-18 by remitting debt owed by OEFC to the Province.

2. Hydro One – Financial Benefit to OEFC (s. 91.2 of the *Electricity Act, 1998*):

The Ministry of Finance is drafting a Treasury Board submission requesting a fiscally-neutral Ministry of Finance increase of $24.8 million in 2016-17 to the statutory appropriation "Hydro One Inc., Provincial Corporate Tax Provision, the *Electricity Act, 1998*".

- As per section 91.2 of the *Electricity Act, 1998*, he Minister of Finance will pay the Ontario Electricity Financial Corporation (OEFC) an amount equal to tax payable under the *Taxation Act, 2007* (i.e., the provincial corporate income tax -- CIT) by HOI and its subsidiaries, to continue to help service and pay down the electricity sector stranded debt.
- The payment is fiscally neutral as the expense is fully offset against the receipt of revenue of OEFC on consolidation in the Public Accounts.

3. Hydro One – Paydown of Debt:

The Province has now paid to OEFC the proceeds related to the book value of shares sold in the April 2016 secondary offering.

- The proceeds, totalling about $1.3 billion, have been paid to OEFC to pay down the Province's debt and other payables with OEFC.

- This payment is part of the government's commitment to using proceeds from broadening Hydro One ownership to pay down a targeted $5 billion in debt.
- This follows from the Province's payment to OEFC earlier in 2016-17 of about $1.1 billion in proceeds related to the book value of shares sold in November 2015.
- These amounts are also in addition to the $800 million special dividend received by the Province prior to the Hydro One IPO that was used to pay down debt and other payables with OEFC in 2015-16.

4. Ontario Fair Hydro Plan – Equity Injection:

Staff from CEFD, OFA capital markets, Ministry of Finance, and OPG continue to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The CEFD and EIGS staff will be to establish clarity and steps required on the Provincial approvals for the equity injection; however, additional questions were raised during the discussion:
    - How long will IESO hold short term liability (weeks/months)?
    - When and how frequently will OPG purchase the asset from IESO?
    - OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)?
- A few action items came out from the working group meeting:
    - OPG to continue to work with lead banks / rating agencies / OFA on financing issues
    - OPG to confirm accounting if OFA were to act as lead order on borrowing
    - OPG to determine who will finance / hold the asset until it goes to the market
    - ESPD, IESO and OPG to continue discussions around refining refinancing modelling

5. Ontario Northland Transportation Commission – Request for Line of Credit

On March 13, 2017, the OFA was contacted by the Ministry of Northern Development and Mines (MNDM) with a request to discuss re-establishing a line of credit for ONTC.

- This request appears to be driven, at least in part, by the depletion of a self-insurance reserve fund due to train derailments in 2016/17. ONTC had been using this fund for working capital management, and without that money is facing pressure in financing its normal operations.
- On March 27, OFA staff spoke with staff from MNDM on the issue. MNDM explained that ONTC needed the line of credit to manage differences in timing between the incurring of expenses and receipt of its subsidies from MNDM.
- OFA staff explained that given the financial risks of ONTC's operations, including that ONTC is not self-sufficient on a cash basis, the OFA could only consider

offering a line of credit if MNDM were to guarantee payment, possibly through an intercept mechanism.

- MNDM committed to brief internally on the matter and report back to OFA on the discussions.
- ONTC is also going to Treasury Board in the next few months for a mandate review and approval of its three-year business plan. OFA staff conveyed to MNDM staff that approval for a line of credit would need to be provided alongside or after TB has approved these items.

6. Algonquin Treaty Negotiations

- Ministry of Indigenous Relations and Reconciliation (MIRR) staff have contacted CEFD to request water rental charge information for hydro facilities located on Algonquin lands.
    - MIRR is planning on going to Cabinet including to seek authority to,
        - Negotiate a treaty to settle the Algonquin Land Claim between Canada, Ontario and the Algonquins of Ontario.
        - Discuss Resource Revenue Sharing (RRS) in the mining, forestry, and waterpower sectors.
    - MIRR staff have indicated that RRS would be used as a negotiation tool for the purposes of finalizing a treaty.
- Staff are reviewing and will share information that can help inform MIRR's Cabinet submission, subject to MOF legal approval of sharing of water rental charge data (summarized as totals for the relevant facilities).
- Any water rental charges shared with Indigenous communities could have a fiscal impact if it is not accounted for in the fiscal plan.
    - Sharing water rentals may result in further requests to share these charges for other hydro stations. MIRR staff have suggested that any precedent would be limited since the proposed sharing of resource revenues in this case would be in the context of a treaty negotiation.

7. ALGP: Coral Rapids Conditional Offer Package

- Coral Rapids Power Corporation ("CRP"), wholly-owned by Taykwa Tagamou Nation ("TTN"), is seeking a loan guarantee under the ALGP. This loan would allow CRP to finance its investment in a partnership which was formed to own and operate the 28 MW Peter Sutherland Sr. Generating Station at a lower interest rate than the alternative (a loan from its partner).
- The conditional offer letter was approved and an OIC was obtained at the December 13, 2016 LRC meeting.
    - This application involves the interests of a Schedule 1 bank.

- The briefing package was sent to DMO the week of March 20 with an update the week of March 27 to address a proposed revision in the pledge agreement. Approval of this revision as soon as possible would allow for legal documentation to be finalized.
    - Sign off for execution of the loan guarantee within the next few business days would be ideal to ensure sufficient time for conditions precedent to be satisfied. Financial close is planned for April 10 so that the borrower can meet its equity contribution deadline.
    - If staff can facilitate an earlier closing it would likely be appreciated by the borrower. Staff are available for a briefing, if requested.

OTHER ISSUES

8. FAA Section 28 Modernization

- An OFA/MOF/TBS working group has developed options for modernizing s.28 of the FAA.
- Proposed amendments to FAA s.28 have been drafted to:
    (i) give the Minister of Finance or the President of Treasury Board the authority to prescribe in regulation public entities or classes of public entities that would be subject to s. 28; and
    (ii) give the LGIC the authority to make regulations to define terms used in section 28 that are not already defined in the Act.

9. College Class Exemption

- Proposed regulation as well as terms and conditions for the draft Binding Policy Directive for Colleges have been drafted.
- MAESD and OFA currently reviewing the s.28 approval process for financing transactions with a view to further streamlining the process.

10. Metrolinx Fuel Hedging

- Metrolinx is planning to hedge its fuel costs by entering into financial derivatives contracts with Canada's six largest banks. In order to do so, Metrolinx must obtain Minister of Finance approval of its amended investments by-law and a new borrowing by-law as well as s. 28 approval.
- A formal request from the Minister of Transportation to the Minister of Finance is forthcoming.

11. FSCO – Stelco Pension Issue

- As part of a transaction that will allow Stelco to come out of bankruptcy, the parent of Stelco, US Steel, has proposed a sale to Bedrock Industries. This sale limits Bedrock's exposure to the pension plan liabilities.
- The Superintendent of FSCO will temporarily be the nominal administrator of Stelco's 5 pension plans and will be responsible for the related 46 administrative contracts. As the Superintendent is also the regulator, he will subcontract this responsibility in a sole source contract to an administrator.
- The assumption of these contracts by FSCO will require Treasury Board and Minister of Finance s.28 approval.

ANNOTATED AGENDA
MO UPDATE: April 3, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Hydro One – Financial Benefit to OEFC (s. 50.3 of the *Electricity Act, 1998*):

Ministry of Finance is drafting a Treasury Board submission for the May 9 Treasury Board meeting to provide a financial benefit to the Ontario Electricity Financial Corporation (OEFC) in accordance with s. 50.3 of the *Electricity Act, 1998*. The submission will require the Minister's signed approval by April 18.

- Under the *Electricity Act*, the Ministry of Finance is to provide OEFC with a financial benefit when the Province sells Hydro One shares.
- This financial benefit is being paid as a result of the secondary offering of Hydro One shares in April 2016.
- The financial benefit payable to the OEFC is determined to be approximately $411M.
- The payment is fiscally neutral as the expense to the Ministry of Finance is fully offset against the receipt of revenue of OEFC on consolidation of OEFC in the Public Accounts.
- The benefit would accrue to OEFC in 2016-17 but would be administered in 2017-18 by remitting debt owed by OEFC to the Province.

2. Hydro One – Financial Benefit to OEFC (s. 91.2 of the *Electricity Act, 1998*):

The Ministry of Finance is drafting a Treasury Board submission requesting a fiscally-neutral Ministry of Finance increase of $24.8 million in 2016-17 to the statutory appropriation "Hydro One Inc., Provincial Corporate Tax Provision, the *Electricity Act, 1998*".

- As per section 91.2 of the *Electricity Act, 1998*, he Minister of Finance ~~will~~ is to pay the Ontario Electricity Financial Corporation (OEFC) an amount equal to tax payable under the *Taxation Act, 2007* (i.e., the provincial corporate income tax -- CIT) by HOI and its subsidiaries, to continue to help service and pay down the electricity sector stranded debt.
- The payment is fiscally neutral as the expense is fully offset against the receipt of revenue of OEFC on consolidation in the Public Accounts.

3. Hydro One – Paydown of Debt:

The Province has now paid to OEFC the proceeds related to the book value of shares sold in the April 2016 secondary offering.

- The proceeds, totalling about $1.3 billion, have been paid to OEFC to pay down the Province's debt and other payables with OEFC.

- This payment is part of the government's commitment to using proceeds from broadening Hydro One ownership to pay down a targeted $5 billion in debt.
- This follows from the Province's payment to OEFC earlier in 2016-17 of about $1.1 billion in proceeds related to the book value of shares sold in November 2015.
- These amounts are also in addition to the $800 million special dividend received by the Province prior to the Hydro One IPO that was used to pay down debt and other payables with OEFC in 2015-16.

4. Ontario Fair Hydro Plan – Equity Injection:

Staff from CEFD, OFA capital markets, Ministry of Finance, and OPG continue to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The CEFD and EIGS staff ~~will~~ are working~~be~~ to establish clarity and steps required on the Provincial approvals for the equity injection; however, additional questions were raised during the discussion:
    - How long will IESO/OPG hold short term liability (weeks/months)?
    - When and how frequently will OPG purchase the asset from IESO? Currently, a monthly frequency is expected vs. the earlier quarterly expectation.
    - OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc)?
- A few action items ~~came out~~continue to be worked on by ~~from~~ the working group meeting:
    - OPG to continue to work with lead banks / rating agencies / OFA on financing issues.
    - OFA's CMD is also separately procuring a financial advisor.
    - ~~OPG to confirm accounting if OFA were to act as lead order on borrowing~~
    - OPG ~~to determine who~~is expected to set up a short-term facility for OPG Trust to ~~will~~ finance / hold the asset until it goes to the market
    - ESPD, IESO and OPG to continue discussions around refining refinancing modelling.

5. Ontario Northland Transportation Commission – Request for Line of Credit

On March 13, 2017, the OFA was contacted by the Ministry of Northern Development and Mines (MNDM) with a request to discuss re-establishing a line of credit for ONTC.

- This request appears to be driven, at least in part, by the depletion of a self-insurance reserve fund due to train derailments in 2016/17. ONTC had been using this fund for working capital management, and without that money is facing pressure in financing its normal operations.

- On March 27, OFA staff spoke with staff from MNDM on the issue. MNDM explained that ONTC needed the line of credit to manage differences in timing between the incurring of expenses and receipt of its subsidies from MNDM.
- OFA staff explained that given the financial risks of ONTC's operations, including that ONTC is not self-sufficient on a cash basis, the OFA could only consider offering a line of credit if MNDM were to guarantee payment, possibly through an intercept mechanism.
- MNDM committed to brief internally on the matter and report back to OFA on the discussions.
- ONTC is also going to Treasury Board in the next few months for a mandate review and approval of its three-year business plan. OFA staff conveyed to MNDM staff that approval for a line of credit would need to be provided alongside or after TB has approved these items.

6. Algonquin Treaty Negotiations

- Ministry of Indigenous Relations and Reconciliation (MIRR) staff have contacted CEFD to request water rental charge information for hydro facilities located on Algonquin lands.
    - MIRR is planning on going to Cabinet including to seek authority to,
        - Negotiate a treaty to settle the Algonquin Land Claim between Canada, Ontario and the Algonquins of Ontario.
        - Discuss Resource Revenue Sharing (RRS) in the mining, forestry, and waterpower sectors.
    - MIRR staff have indicated that RRS would be used as a negotiation tool for the purposes of finalizing a treaty.
- Staff are reviewing and will share information that can help inform MIRR's Cabinet submission, subject to MOF legal approval of sharing of water rental charge data (summarized as totals for the relevant facilities).
- Any water rental charges shared with Indigenous communities could have a fiscal impact if it is not accounted for in the fiscal plan.
    - Sharing water rentals may result in further requests to share these charges for other hydro stations. MIRR staff have suggested that any precedent would be limited since the proposed sharing of resource revenues in this case would be in the context of a treaty negotiation.

7. ALGP: Coral Rapids Conditional Offer Package

- Coral Rapids Power Corporation ("CRP"), wholly-owned by Taykwa Tagamou Nation ("TTN"), is seeking a loan guarantee under the ALGP. This loan would allow CRP to finance its investment in a partnership which was formed to own and operate the 28 MW Peter Sutherland Sr. Generating Station at a lower interest rate than the alternative (a loan from its partner).

- The conditional offer letter was approved and an OIC was obtained at the December 13, 2016 LRC meeting.
    - This application involves the interests of a Schedule 1 bank.

- The briefing package was sent to DMO the week of March 20 with an update the week of March 27 to address a proposed revision in the pledge agreement. Approval of this revision as soon as possible would allow for legal documentation to be finalized.
    - Sign off for execution of the loan guarantee within the next few business days would be ideal to ensure sufficient time for conditions precedent to be satisfied. Financial close is planned for April 10 so that the borrower can meet its equity contribution deadline.
    - If staff can facilitate an earlier closing it would likely be appreciated by the borrower. Staff are available for a briefing, if requested.

OTHER ISSUES

8. FAA Section 28 Modernization

- An OFA/MOF/TBS working group has developed options for modernizing s.28 of the FAA.
- Proposed amendments to FAA s.28 have been drafted to:
    (i) give the Minister of Finance or the President of Treasury Board the authority to prescribe in regulation public entities or classes of public entities that would be subject to s. 28; and
    (ii) give the LGIC the authority to make regulations to define terms used in section 28 that are not already defined in the Act.

9. College Class Exemption

- Proposed regulation as well as terms and conditions for the draft Binding Policy Directive for Colleges have been drafted.
- MAESD and OFA currently reviewing the s.28 approval process for financing transactions with a view to further streamlining the process.

10. Metrolinx Fuel Hedging

- Metrolinx is planning to hedge its fuel costs by entering into financial derivatives contracts with Canada's six largest banks. In order to do so, Metrolinx must obtain Minister of Finance approval of its amended investments by-law and a new borrowing by-law as well as s. 28 approval.
- A formal request from the Minister of Transportation to the Minister of Finance is forthcoming.

11. FSCO – Stelco Pension Issue

- As part of a transaction that will allow Stelco to come out of bankruptcy, the parent of Stelco, US Steel, has proposed a sale to Bedrock Industries. This sale limits Bedrock's exposure to the pension plan liabilities.
- The Superintendent of FSCO will temporarily be the nominal administrator of Stelco's 5 pension plans and will be responsible for the related 46 administrative contracts. As the Superintendent is also the regulator, he will subcontract this responsibility in a sole source contract to an administrator.
- The assumption of these contracts by FSCO will require Treasury Board and Minister of Finance s.28 approval.

Asokan,

I just want to confirm that the Ministry of Energy will record the equity injection payments (likely on a monthly basis (tbd)) and subsequently record the shares received from OPG going forward. From what I understand, this is line with the Hydro 1 compromise, where new equity will be recorded on Energy's books and that Energy will take the lead in all aspects?

Thanks.

John

Subject: MOF Legal

Hi John

I just got a call from MOF Legal (Toby Whitfield – works for Malle Hanslep). They have been contacted by OFA (Opal Kandelas, Kelly Listoe) about engaging a financial advisor for the Province on the Equity injection. MoF legal is looking for more background and context. My plan will be to get them a draft today of the meeting note we are pulling together. I will also contact Carlos to see if he has more context around the request. It sounds like a different issue from the plan to get advice from a dealer on the borrowing structure for the IOPG Trust that was discussed.

Let me know if this sounds OK.

Subject: RE: Materials for Review draft OFHP legislation

Hey John,

The only real reference is on page 15:

THE TREASURY PLAN

Power to Prepare and Implement the Treasury Plan –

A.2 (1) The "Treasury Plan" will be prepared by OPG. It must follow the requirements set out in this Part. Accounting considerations will need to be factored into this delegation, as well as the degree of province input initially and on an on-going basis.

This is vague but could refer to the equity injection.

Other key points related to the province:

- Legislation is explicitly seeking no Provincial Guarantee.
- Seeking minimal interference from Province in affairs of the Trust or regulation (e.g., impairing the value of the regulatory asset or transition charges).

I have read through the whole document but will keep reviewing the legal concepts in detail.

Kind regards,

Adam Prokop

FAIR HYDRO PLAN LEGISLATION DRAFT REVIEW

Overview

A draft of the legislation proposed for the *Fair Hydro Plan Act, 2017* has been shared with OFA.

Legislation Proposals:

Electricity Act

- Suggests amending the *Electricity Act, 1998,* or create a new stand-alone energy statute.
- States that "currently, the "Funding Shortfall" would be limited to the Global Adjustment attributable to the procurement contracts, but this is a question that still has to be settled".
    - *Staff comment*: Unclear what the term "procurement contracts" is specifically referring to, e.g., is it just solar, wind, and/or other alternative energy contracts.
    - *Staff comment:* If this funding shortfall is limited to what is attributed to the procurement contracts, it may put a cap on the GA reduction below the savings targets.
- Key terms include
    - *Financing Entity* – which is the legislation term for OPG Trust
    - *Replacement Event* – the event under which the market would want to replace an entity that has responsibility to take essential actions under the program; trigger event likely to be a breach of duty or insolvency.
    - *Transition Charge* – refers to the deferral repayments from ratepayers.
    - *Treasury Plan* – written plan prepared by OPG for the regulatory asset purchase and related financing.
    - *True-up Amount* – A provisions that allows for a catch-up for estimate-actual adjustments and to address consumer non-payment credit losses.
- Suggests to draft into legislation a promise by the Government not to impair the program.
- Have proposed defining a "*deferral customer*" who will be subject to the prescribed regulations; the deferral customer will be slightly different than RPP-eligible customers – a broader scope potentially.
    - There will be a "proxy" Toronto Hydro consumer whose bill will only be allowed to increase year-over-year according to rules prescribed in the new regulation.
    - *Staff comment:* seems that this class of consumer is being used as a benchmark.
- IESO would have the right to recover amounts from ratepayers.
    - Unclear if the Trust Board will be allowed to affect the recovery rates below the maximum limit, i.e., to have rates increase less than the maximum permitted under the act's smoothing parameters.
    - IESO would calculate the total amount of deferral financing that would be repayable for an applicable period.
    - IESO would next determine the repayments due from consumers.
    - IESO would inform each LDC of the amount of the deferral repayments for each consumer in the LDC's service territory to be included in the invoice.

- Legislation has not yet determined how the right of recovery from IESO will be assigned to another party (i.e., the sale of the regulatory asset to the *Financing Entity* and the related rights under it).
    - The legislation is drafted to have IESO collect from ratepayers the deferral and related financing/admin costs but have those be remitted to the *Financing Entity*.
    - There is still discussion on to whether or not IESO would be required to sell/assign the right, and when this right expires.
    - IESO has proposed legislation for the "regulatory asset" that would give IESO the ability to sell the right to collect deferral payments to the Financing Entity, with IESO collecting these payments on behalf of the Financing Entity.
- It has not been decided if the interest and administrative costs will be:
    - Simply the interest and financing costs passed from the ratepayers through IESO to ultimately OPG.
    - A reference rate that IESO would have to pay and may be different than the rates the authorized entity would have to pay; thus, giving OPG the ability to earn a profit.
    - A cap on the amount of profits the *Financing Entity* or OPG could make from the GA mechanisms.
- IESO would have to maintain several variance accounts, including separate accounts for the interest and administrative costs.
    - May be similar provisions requiring distributors and retailers to establish deferral accounts as well.
- Suggest having a provisions where that "if there is a change of law by the Government of Ontario that materially adversely affects the ability of the authorized entity to fully recover the assigned deferral account amounts, then repayment of those amounts will be accelerated and become immediately due and payable."
    - *Staff comment:* If enacted, could lead to massive rate increases depending on the timing of the change in law as the full deferred amounts collected to that point would be immediately due.
- The legislation states that deferral consumers will have a statutory obligation to the *Financing Entity* to pay its share of the deferral repayments (i.e., principal, interest and other financing costs), with OPG having the ability to sue consumers who do not pay.
    - The transition charges will be irrevocable.
- Further legislation proposes anti-avoidance:
    - Even if a consumer "leaves the grid" they would still be obligated to pay this amount.
    - Suggested that the proxy rate discussed above for a "representative" Toronto Hydro customer could be charged to a self-generating customer as a flat fee.
    - *Staff comment*: brings up the discussion on whether or not the obligations under this legislation should be considered akin to a tax.
- The *Financing Entity* will have the ability to sue LDCs for failing to properly calculate or invoice the financing repayments.

Electricity Act – OPG-related Amendments

- The act will be amended to include the purpose of the *Financing Entity*, its obligations and duties, and the financing requirements.
- Legislation would ensure that the pass-through amounts from the Financing Entity to OPG are only used to repay the debt and related costs.
- The Treasury plan will establish the basis for OPG making funding decisions – unclear if the OEB of MOF/OFA will play a role in reviewing the Treasury Plan, and the extent of its role.
- Refers to a Fair Allocation Plan which considers how the deferred GA costs should be collected from ratepayers.
    - Potential for there to be refunds to ratepayers who are considered to have paid more than their main share, at the Minister's discretion.

Ontario Energy Board Act Amendments

- The Ontario Energy Board act, 1998 may to be amended to ensure that the deferral and variance accounts from the Fair Hydro Plan are recognized in rate proceedings.
- Would also have to give the OEB the power to investing OPG and the Financing Entity for compliance with the legislation, including sanctions for non-compliance.
    - However, OEB would not be able to affect the irrevocability of the transition charges or the inability of the Province to interfere.

Electricity Finance Branch, Ontario Financing Authority

Hey John,

The only real reference is on page 15:

THE TREASURY PLAN

Power to Prepare and Implement the Treasury Plan –

A.2 (1) The "Treasury Plan" will be prepared by OPG. It must follow the requirements set out in this Part. Accounting considerations will need to be factored into this delegation, as well as the degree of province input initially and on an on-going basis.

This is vague but could refer to the equity injection.

Other key points related to the province:

- Legislation is explicitly seeking no Provincial Guarantee.
- Seeking minimal interference from Province in affairs of the Trust or regulation (e.g., impairing the value of the regulatory asset or transition charges).

I have read through the whole document but will keep reviewing the legal concepts in detail.

Kind regards,

Adam Prokop

FAIR HYDRO PLAN LEGISLATION DRAFT REVIEW

Overview

A draft of the legislation proposed for the *Fair Hydro Plan Act, 2017* has been shared with OFA.

Legislation Proposals:

Electricity Act

- Suggests amending the *Electricity Act, 1998,* or create a new stand-alone energy statute. (p. 1)
- States that "currently, the "Funding Shortfall" would be limited to the Global Adjustment (p. 2) attributable to the procurement contracts, but this is a question that still has to be settled".
    - *Staff comment*: Unclear what the term "procurement contracts" is specifically referring to, e.g., is it just solar, wind, and/or other alternative energy contracts.
    - *Staff comment:* If this funding shortfall is limited to what is attributed to the procurement contracts, it may put a cap on the GA reduction below the savings targets.
- Key terms include (p. 2-3):
    - *Financing Entity* – which is the legislation term for OPG Trust
    - *Replacement Event* – the event under which the market would want to replace an entity that has responsibility to take essential actions under the program; trigger event likely to be a breach of duty or insolvency.
    - *Transition Charge* – refers to the deferral repayments from ratepayers.
    - *Treasury Plan* – written plan prepared by OPG for the regulatory asset purchase and related financing.
    - *True-up Amount* – A provisions that allows for a catch-up for estimate-actual adjustments and to address consumer non-payment credit losses.
- Suggests to draft into legislation a promise by the Government not to impair the program (p. 16).
- Have proposed defining a "*deferral customer*" who will be subject to the prescribed regulations; the deferral customer will be slightly different than RPP-eligible customers – a broader scope potentially (p. 4).
    - There will be a "proxy" Toronto Hydro consumer whose bill will only be allowed to increase year-over-year according to rules prescribed in the new regulation.
    - *Staff comment:* seems that this class of consumer is being used as a benchmark (p. 6).
- IESO would have the right to recover amounts from ratepayers (p. 11).
    - Unclear if the Trust Board will be allowed to affect the recovery rates below the maximum limit, i.e., to have rates increase less than the maximum permitted under the act's smoothing parameters.
    - IESO would calculate the total amount of deferral financing that would be repayable for an applicable period.
    - IESO would next determine the repayments due from consumers.
    - IESO would inform each LDC of the amount of the deferral repayments for each consumer in the LDC's service territory to be included in the invoice.

- Legislation has not yet determined how the right of recovery from IESO will be assigned to another party (i.e., the sale of the regulatory asset to the *Financing Entity* and the related rights under it).
    - The legislation is drafted to have IESO collect from ratepayers the deferral and related financing/admin costs but have those be remitted to the *Financing Entity*.
    - There is still discussion on to whether or not IESO would be required to sell/assign the right, and when this right expires. (p. 21)
    - IESO has proposed legislation for the "regulatory asset" that would give IESO the ability to sell the right to collect deferral payments to the Financing Entity, with IESO collecting these payments on behalf of the Financing Entity (p. 25).
- It has not been decided if the interest and administrative costs will be (p. 9):
    - Simply the interest and financing costs passed from the ratepayers through IESO to ultimately OPG.
    - A reference rate that IESO would have to pay and may be different than the rates the authorized entity would have to pay; thus, giving OPG the ability to earn a profit.
    - A cap on the amount of profits the *Financing Entity* or OPG could make from the GA mechanisms.
- IESO would have to maintain several variance accounts, including separate accounts for the interest and administrative costs.
    - May be similar provisions requiring distributors and retailers to establish deferral accounts as well. (p. 8)
- Suggest having a provisions where that "if there is a change of law by the Government of Ontario that materially adversely affects the ability of the authorized entity to fully recover the assigned deferral account amounts, then repayment of those amounts will be accelerated and become immediately due and payable" (p. 9).
    - *Staff comment:* If enacted, could lead to massive rate increases depending on the timing of the change in law as the full deferred amounts collected to that point would be immediately due.
- The legislation states that deferral consumers will have a statutory obligation to the *Financing Entity* to pay its share of the deferral repayments (i.e., principal, interest and other financing costs), with OPG having the ability to sue consumers who do not pay. (p. 10)
    - The transition charges will be irrevocable.
- Further legislation proposes anti-avoidance (p. 11):
    - Even if a consumer "leaves the grid" they would still be obligated to pay this amount.
    - Suggested that the proxy rate discussed above for a "representative" Toronto Hydro customer could be charged to a self-generating customer as a flat fee.
    - *Staff comment*: brings up the discussion on whether or not the obligations under this legislation should be considered akin to a tax.
- The *Financing Entity* will have the ability to sue LDCs for failing to properly calculate or invoice the financing repayments. (p. 12)

Electricity Act – OPG-related Amendments

- The act will be amended to include the purpose of the *Financing Entity*, its obligations and duties, and the financing requirements (p. 17).
- Legislation would ensure that the pass-through amounts from the Financing Entity to OPG are only used to repay the debt and related costs (p. 16).
- The Treasury plan will establish the basis for OPG making funding decisions – unclear if the OEB of MOF/OFA will play a role in reviewing the Treasury Plan, and the extent of its role.
- Refers to a Fair Allocation Plan which considers how the deferred GA costs should be collected from ratepayers.
    - Potential for there to be refunds to ratepayers who are considered to have paid more than their main share, at the Minister's discretion (p. 15).

Ontario Energy Board Act Amendments

- The Ontario Energy Board act, 1998 may to be amended to ensure that the deferral and variance accounts from the Fair Hydro Plan are recognized in rate proceedings. (p. 28)
- Would also have to give the OEB the power to investing OPG and the Financing Entity for compliance with the legislation, including sanctions for non-compliance. (p. 29)
    - However, OEB would not be able to affect the irrevocability of the transition charges or the inability of the Province to interfere.

---

Thanks Bruno.

Just a few suggestions.

I don't think it needs to be run by Energy. It should be noted to OEP that it is sourced from Energy. I think it would be fair to note to OEP that EFB would be happy to facilitate discussions with Energy staff.

Ron

Subject: OEP Request - Fair Hydro Plan Details for impact analysis

Hi Ron

We had a preliminary discussion with OEP on information they would require for their impact analysis and have pulled together the attached. This provides some background information on programs and also some of the quantitative information. The quantitative information, in particular, is from Energy's cab sub. We include a paragraph reminding OEP to consider the government's commitment to balance in estimating economic. We agreed with OEP that this process might be iterative.

Can you advise on whether we should first run this by Energy with the context of the request. And any comments on the attached are welcome.

Thanks
Bruno

ECONOMIC IMPACTS OF ONTARIO'S FAIR HYDRO PLAN

FAIR HYDRO PLAN

Customers / Residential

OREC:

- All residential consumers received an "8%" rebate equal to the provincial portion of the HST on their hydro bills starting January 1, 2017, on their bill. (Including Businesses and Farms).

Global Adjustment Smoothing:

- Consumers eligible for reductions under GA smoothing are those eligible under the Regulated Price Plan (RPP). These are primarily residential customers representing about 46% of total GA costs. The RPP also includes farms and low volume customers (up to 50 kW demand or 250,000 kilowatt-hours annually).
- The GA accounts for the ~~fixed costs, including capital costs, of running Ontario's generation fleet~~difference between contracted and regulated prices paid to generators compared to the hourly market clearing price, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity. The majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to be able to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through the GA, while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.
- Under the GA smoothing plan, the long-term benefit of these assets to the electricity system is recognized and some of the ~~current~~ costs recovered in current rates would be~~are~~ deferred for recovery ~~ing to the~~in future rates. GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief. The result of this GA proposal is that cost to eligible ratepayers ~~remains~~would be lowered in the short term, reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month.
- A financial structure to implement GA smoothing is proposed that would have no fiscal impact, by in effect. However, there will be an impact on provincial gross debt over time as various parties including the Province, will need to incur debt to finance the deferral of a portion ~~cover~~of current GA costs.

Please see last page for Energy's estimated ~~the~~ Annual Debt Schedule.

Commented [RK1]: An estimated?

OESP Expansion:

- Low Income customers receive additional on bill benefits which vary based on income and household size.
    - Will move current funding of the OESP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

Existing OESP Credit Scales

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$30	$30	$34	$38	$42	$50	$50
$28,001 - $39,000			$30	$34	$38	$42	$50
$39,001 - $48,000					$30	$34	$38
$48,001 - $52,000							$30

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$45	$45	$50	$55	$60	$75	$75
$28,001 - $39,000			$45	$50	$55	$60	$75
$39,001 - $48,000					$45	$50	$55
$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$45	$45	$51	$57	$63	$75	$75
$28,001 - $39,000		$40	$45	$51	$57	$63	$75
$39,001 - $48,000			$38	$40	$45	$51	$57
$48,001 - $52,000					$35	$40	$45

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7 +
< $28,000	$68	$68	$75	$83	$90	$113	$113
$28,001 - $39,000		$60	$68	$75	$83	$90	$113
$39,001 - $48,000			$52	$60	$68	$75	$83
$48,001 - $52,000					$52	$60	$68

Source: Ministry of Energy, Ontario's Fair Hydro Plan, Technical Briefing, March 2, 2017

RRRP Expansion:

- Rural or remote residential customers will receive additional relief on the 'Delivery' portion of their hydro bill. 800,000 customers are expected to benefit.
    - These customers are served by the following distribution companies:
        - Hydro One R1, Hydro One R2, Northern Ontario Wires Inc., Lakeland Parry Sound, Chapleau PUC, Sioux Lookout Hydro, InnPower, Atikokan Hydro and Algoma Power
    - Will move current funding of the RRRP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

First Nations On-Reserve Delivery Credit:

- Will eliminate the delivery charge for all on-reserve First Nations households and remove the monthly service charge for customers of licensed distributors which charge a bundled rate. Will automatically qualify on-reserve First Nations households (~21,500 customers). Estimated to provide residential customers an average monthly benefit of $85.

Staff Comments:

- Unclear if on-reserve First Nations households (eligible with On-Delivery Credit) will also benefit from OESP Expansion and Affordability Fund.

Establishing a New Affordability Fund:

- Assist electricity customers who need financial assistance to undertake energy efficiency improvements. TB Approved $100 million for 2016-17 (not public).

Staff Comments:

- This fund aims to target those who cannot qualify for current low-income conservation programs. Local Distribution Companies would be tasked with identifying recipients. The fund helps with measures such as energy efficient lighting, appliances, and for electrically heated homes, insulation and weather stripping.
- Assuming this will not appear in any form on the hydro bill but instead a transfer from LDCs (via the fund) to eligible customers.

Industry

- **Expand the Industrial Conservation Initiative:** Enhance competitiveness for small manufacturers ~~and industrials~~. Reduce ICI eligibility to those with monthly peaks of 500 kilowatts, down from the current threshold of 1 megawatt.
  - Targeting eligibility to energy intensive industries with NAICS codes 31-33.

Other

- **Improving Electricity Sector Efficiencies:** IESO's Market Renewal Initiatives are estimated to save the electricity sector (as a total) $200 million per year starting in 2021.

FISCAL COSTS

- **Note:** In estimating economic impacts consideration should be given to the government's commitment to balance the fiscal plan. i.e., t~~T~~he costs of the Ontario Fair Hydro Plan may be assumed to be offset by lower expense elsewhere or higher revenues.

- **Fiscal Costs of the RRRP Program:**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136

Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

Thanks Bruno.

Just a few suggestions.

I don't think it needs to be run by Energy. It should be noted to OEP that it is sourced from Energy. I think it would be fair to note to OEP that EFB would be happy to facilitate discussions with Energy staff.

Subject: OEP Request - Fair Hydro Plan Details for impact analysis

Hi Ron

We had a preliminary discussion with OEP on information they would require for their impact analysis and have pulled together the attached. This provides some background information on programs and also some of the quantitative information. The quantitative information, in particular, is from Energy's cab sub. We include a paragraph reminding OEP to consider the government's commitment to balance in estimating economic. We agreed with OEP that this process might be iterative.

Can you advise on whether we should first run this by Energy with the context of the request. And any comments on the attached are welcome.

Thanks
Bruno

OK Thanks, it's mainly whether or not we need to check with ENE that I'm concerned about. Would it be Tim Christie that we would run this by?

Sorry about the delay. I had forgotten and then reminded.

Looks good. I will leave to you how you want to proceed. His emails does indicate to keep him in the loop but otherwise seem to keep moving.

Thanks,

John.

Subject: FW: OEP Request - Fair Hydro Plan Details

Hi John

I've reviewed Shajee's note and I think this will help OEP get started with their impact analysis. A couple of items added from what you may have looked at yesterday to respond to Ron's comments in his email (attached). In our initial discussion with OEP we agreed that this may be an iterative process. I think that's more efficient for us, so OEP can come back with more specific requests as needed.

Ron did ask to be kept in the loop as we respond to this request. He also suggested that we share with Energy and see if they are fine with us providing the quantitative material (fiscal impacts and GA smoothing debt schedule) or if they wish to provide directly.

Bruno

Hi Bruno, a few answers.

1) Everything in that table with the exception of Social Programs is provided in the Cab Sub (the slide with the chart and tables below). I don't believe that the social programs have been forecasted beyond fiscal year 21-22 (they are handled out of a different division), but they are a fairly minor component of the plan.
2) We don't have a corresponding industrial rate forecast at the moment. The IESO is starting work on a revised forecast that would likely become the basis for the LTEP, but it is probably some weeks away.
3) You are correct, the tax basing of social programs all represent reduction on the regulatory line item on electricity bills.

If OEP has further questions you can forward them to us or they can contact us directly.

Subject: FW: OEP impact analysis

Hi Tim

To introduce myself first, my name is Bruno Amara and have recently joined the Electricity Finance Branch, OFA.

We were contacted in early March by the Office of Economic Policy, MoF who are undertaking an economic impact analysis of the Ontario Fair Hydro Plan. At the time, we provided them with the attached information (ENE password) . The data is sourced from the ENE cabinet submission. OEP has responded asking if some additional information is available. These are mainly with respect to the "Bill Forecasts" in attached table as follows:

1. Would it be possible to provide the "Bill Forecasts – Calendar Electricity Prices" table out to 2040? In particular the Total Bill line prior to the announced changes and impact of Tax Based Social Programs?

2. Similarly would we be able to provide a long-term electricity price forecast for the large industrial segment pre-changes?

3. OEP had also asked whether the "impact of tax-basing social programs" on the table were all reductions on electricity bills rather than off-bill cash transfers.

   With respect to #3, we assume the answer is Yes. But we're not sure if the Affordability Fund would be reflected in those numbers. Based on the cabinet submission we assume the later would be off-bill assistance for energy efficiency measures.

Please let us know how you wish to respond. We can provide the appropriate contacts if you wish to respond directly to OEP.

Thanks
Bruno Amara

Subject: OEP impact analysis

Hi John

OEP has some follow-up requests for their impact analysis exercise. The answer would, for the most part, need to come from ENE. Below is a draft email to Tim Christie (ENE). Let me know if you have any comments. Also let me know whom you prefer it to be sent by i.e, you, Dir. to Dir., or me, or EA to EA etc. As you may recall Ron had OK'd the initial sharing of information and noted that we could offer to facilitate discussions with ENE.

Thanks
Bruno

Could Shajee let Robert know it's in the works? If Gavin does, it's ADMO so I'd rather avoid that.

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: ~~, 2016~~January 1, 2017

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations thereunder (the "Act"), certain consumers will be entitled to receive financial assistance~~, in this Memorandum of Understanding ("MOU") called~~ (the "Ontario Rebate for Electricity Consumers" or "OREC")~~,~~ in respect of the cost of electricity consumed by them commencing January 1, 2017;

2. Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this Memorandum of Understanding ("MOU") pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

b) The Ministry will take all necessary steps to provide the OFA with access to the IESO Portal so that the OFA will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC ~~transfer~~ Ppayment Rrecipients ~~(e.g. Local Distribution Companies, retailers, and unit sub-metering providers)~~ to the IESO, that are received by the Ministry. This includes providing electronic portal access to data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement on the forecasts.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

John Kim
Tel: (416) 212-6996
email: john.kim@ofina.on.ca

c) As of the date of this MOU the Ministry's contact person is:

Robert Burns, Chief Administrative Officer & Assistant Deputy Minister, Corporate Services Division
Tel: 416-327-3682
email: robert.burns@ontario.ca

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Toronto, ON M7A 1Y7
Attention: John Kim
email: john.kim@ofina.on.ca

c) In the case of the Ministry, the addresses for notice are:

Hand Delivery:
Ministry of Energy, Corporate Services Division
4th Floor, ~~77 Grenville~~56 Wellesley St.
~~7th Floor~~
Toronto, ON M7A 2E7~~C1~~
Attention: Robert Burns, Chief Administrative Officer & Assistant Deputy Minister
email: Robert.burns@ontario.ca

10. Execution

The parties have executed this MOU, effective as of the date first above written.

Her Majesty the Queen in right of Ontario

From: Emily Kerr
To: John Kim
Subject: RE: OFHP Update
Date: Thursday, April 06, 2017 4:23:37 PM

Hi John,

Here are some comments/highlights from the OESP/RRRP/FN rate/Affordability Fund sections of the material. Also, a comment on Ron's note about non-bypassability.

- The comment on non-bypassability does have a question mark. So, I suppose it has not been determined whether consumers exiting the system would be required to make a payment. Although, it is still under consideration.

RRRP

- Requires legislation. TBD if regulations are also required.
- Since the existing RRRP framework (ratepayer funded) would remain in place for Algoma and remotes, the implementation document notes that separation of the RRRP and broader distribution rate protection into separate programs.
- Timing / next steps:
  - A report back to TB/MBC on May 1, 2017 is TBD.
  - Implementation is planned for fall 2017 (per Cabinet minute).

OESP

- Requires legislation and regulation changes.
- Energy is continuing to work with MOF, OEB, CRA on OESP wet signature. I am not familiar with the term "wet signature" but I assume this point has to do with confirming that any increased OESP benefits would not be taxable.
- OEB decision this week expected on removing OESP from bills as of May 1. Energy would like to use OESP variance (approx. $100 million) to reduce current OESP charge to zero and continue funding existing program until government funding is established.
- It is noted that Energy needs to work with IESO/OEB/MOF on technical and governance structures needed to flow government funds to OESP.
- Timing / next steps:
  - A report back to TB/MBC on May 1, 2017 is TBD.
  - LRC on April 10 (document says 2016, but I assume they mean 2017).
  - Program in place in 2017 (per Cabinet minute).

FN On-Reserve Delivery Credit

- Requires legislation. TBD if regulations are also required.
- It is noted that Energy needs to work with IESO/OEB/MOF on technical and governance structures needed to flow government funds to the program.
- Timing / next steps:
  - Report back to TB/MBC by spring 2017 with final program details.
  - Program in place in 2017 (per Cabinet minute).

Affordability Fund

- Does not require legislative changes.
- Timing / next steps:
  - On March 23/24 a declaration of trust and transfer payment agreement were executed.
  - On March 30 funds were transferred to Computershare.
  - An Advisory Committee to recommend Board of Trustees by May 31, 2017. Computershare appoints full Board of Trustees.
  - June 2017: Trustees engage with IESO, OEB, others to define funding criteria and processes. Report back to TB/MBC with final program details.
  - Summer 2017: LDCs apply to Trust for funds.
  - Late 2017/early 2018: Energy may apply for additional funds through 18-19 PRRT based on performance and need. Energy was initially allocated $100 million for the fund. The initial request had been for $200 million.

Subject: OFHP Update

Hi Dave,

Please see the following update (and attached materials) from this morning's rate mitigation meeting:

GA Financing

Legal Update
Fair allocation plan (think of this as the line showing savings and costs to ratepayers associated with this program over time)
Province has set plan for deferrals for the first 4 years (25% and annual increases tied to inflation)
Need process (within pre-set parameters and input from OPG) to determine path for deferrals and recovery for subsequent years (5-30)
Originally viewed Province as taking a role in setting out this path
Feedback from market that Province should not be involved
Need to determine appropriate lead entity (e.g. OPG or IESO)
Need to be linked to life of underlying assets in order to mitigate constitutional risk
Consider 1-2 year refresh on the plan
Structure is still in flux
Treasury Plan
OPG Trust sets this plan
Limited oversight in order to ensure OPG Trust can raise $ in the market at a reasonable cost
Must fit within the limits set by fair allocation plan (but can vary under the cost curve depending on market and interest rate realities)
Once specific bonds issued, fair allocation plan cannot override
Role for OEB
Needs to be extremely limited in order to meet market requirements
However need to project consumer confidence
Options are currently under reivew
Collectability is a key point that requires a number of provisions in legislation including
Irrevocable charges
Role of LDCs, IESO in collections
Non-bypassability (exiting the electricity system / going off grid)
Provincial back-stops
Springing guarantees that arise in the event Province takes certain actions that erode value to bondholders
Need to be limited and contingent in order to meet accounting tests
Dealers considering whether this needs to be in legislation or in a side agreement
Want to make sure that it is narrowly focused in terms of triggering events to cover only material impacts and avoid unintended consequences (investors taking legal action)

- Over time as relevant policy changes are implemented, trustee may look to a 3rd party (e.g. opinion, ratings confirmation) to ensure that value of debt is not degraded

If Province takes on any of the debt, need to determine what can happen from an accounting perspective. Situations to review:
Temporary freeze on borrowing markets

Permanent impairment of OPG's ability to purchase a portion of the asset from IESO (in this case may need a guarantee from the Province)
Timeline for legislation
Pens down April 21
May 1st TB, LRC, Cab
May 4th introduction
Currently working from a Blakes document as a straw-person that would act as instructions to legislative counsel
Driving to timeline, very aggressive

OPG
Special committee of the board met last week
RBC, CIBC, Goldman included
Discussed this is much larger than past models
Imperative that this structure follows past transaction models
Also reviewed stress scenarios (interest rates are most impactful)
Shareholder letter
Providing to committee tomorrow and will share with government thereafter
Reviewing sub-debt attributes
Certain characteristics needed in order to support senior debt financing (most notably will take on longevity risk)
Characteristics of the sub-debt would drive pricing (not tied to Province's cost of funds; likely to be higher interest rate)
At minimum, want to ensure that OPG's earnings are higher to offset incremental IOD to the Province

OEB
Comfort letter from the Province is nearly ready, hopefully tomorrow
Balancing amount of information needed

IESO
Want to narrow issues to what is needed in legislation
Regulatory asset
Speaking with KPMG today
Meeting with ENE today to discuss business issues

Affordability Fund
Advisory committee established to recommend final trustees
Will start mid-month deliberations
By May 31
3 from LDCs and 2 from social services
Hydro One is providing logistical support

Social programs (OESP, FN Rate, RRRP)
Same timelines for approvals as GA
Lots of details to sort through in regulation once legislation in place

Give comfort to LDCs, IESO, Board in terms of what will be included in regulations in order for them to begin implementation

Appearance on Energy Financials:

Will have flexibility to flow funds between programs while ensuring transparncy (4 line items but not executive control on each)

ENE could move $ between programs without TBS approval

OESP: May 1 implementation of enhancements, OEB using up existing funds so no immediate draw on fiscal plan, working with social program ministries to assist with implementation, working with MoF / CRA to remove wet signature requirement

RRRP: plan to have in place by July 1 for 8 utilities; retro-active start as safety valve if needed for utilities with more limited capacity to move quickly

FN Rate: working to set up a meeting with COO to discuss options (for next week), Province does not want to be involved in choosing who is FN therefore plan to determine eligibility solely on the basis of geography

ICI

Expanded to include greenhouses

Need to meet 500kw threshold

Were already eligible at 1MW; therefore, not many that aren't already been captured

Seeking LRC regulatory approval April 10th

Working with CME, OCC on outreach campaigns on benefits of ICI and other conservation initiatives

Bill Presentment

Will not attempt to change the bill for July 1

- If try to be more aggressive on changes to the bill may jeopardize implementation

Want a larger re-work, look at all the constraints and regulations

- For example, reconsider changing name of "delivery"
- Timing: fall for re-design

In the interim, want an insert that shows %

AG

Walk through with ENE / MoF staff on April 19th

TBS will share technical materials in advance

FAO

Submitted materials last week

Will circle back to determine status

Thanks,
Scott

Subject: OPG Equity Injection Summary

Hey Bruno,

Just a quick recap of the meeting today.

OPG Comments

- Suggesting that equity injection would take place after the legislation and trust structure in place.
- First introduction to legislation in April.
- May timeline for completion of all requirements, with a target of the reduction occurring on June or July bills.
- Ministry of Energy is focusing on the legislation.
- The OFA side will be working on the Provincial approvals for equity injection.
- Interim financing might be required for OPG Trust, particularly for the 51% of the GA funded through capital markets.
- Equity injection is meant to be as simple as possible – quarterly injections is being tabled with annual shareholder and board approval.
- Would likely need a ten-year plan (requiring annual approval), with a description of the aggregate shares to be issued from time-to-time drafted in official documentation.
- Thus, seeking a type of “blanket approval” mechanism.
- Timing is an issue; there may be a shortfall between funds received from the Province/Market and funds needed to purchase assets from IESO.
- Special board meetings from OPG are likely to meet the May target.
- Recognizes that the scheduled timeline is a moving target.

Discussion Questions

- Is May a realistic timeline?
- How will the approval process work with OPG and Province; will it be timed with other annual approvals?
- The source of interim financing has not yet been determined.
- OFA needs to open discussion with TBS to determine what approvals are needed and what process should be implemented.
- There may be a conflict between the targeted irrevocability of the future revenues from ratepayers and the aspect of share redemption – a Provincial guarantee may be required.
- OFA would act as support to TBS.
- There are accounting considerations with the equity injections for the par value, additional paid-in capital, and number of shares in the subscription.
- What funding does OPG have available now, and what could be used for interim financing for OPG Trust? (They have $700M line of credit for Darlington refurbishment and general corporate purposes, and $1B revolving bank credit facility, both which have been untapped as of Dec 31, 2016. Short term credit of $460M only has $74M in availability.)

Overall, the meeting was very high level. A placeholder meeting will be scheduled for next week.

Kind regards,

ANNOTATED AGENDA
MO UPDATE: March 20, 2017

ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

1. Ontario Fair Hydro Plan – Equity Injection:

Staff from OEFC, OFA capital markets, Ministry of Finance, and OPG held a teleconference to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan.

- The Province has proposed refinancing a portion of the Global Adjustment costs over a longer time period for Regulated Price Plan eligible customers.
- The Province intends to introduce legislation to setup a special purpose vehicle, referred to herein as "OPG Trust", which would handle the deferral of the global adjustment as well as the eventual recovery of the deferred amount, along with financing and administration costs, from ratepayers.
- OPG Trust would be financed directly from the capital markets (51% of OPG Trust's capital structure) and 49% from loans from OPG. OPG would fund the majority of its loan to OPG Trust (44% of the capital structure) via an equity injection from the Province.
- OPG commented that:
    - Interim financing might be required for OPG Trust, particularly for the 51% of the GA funded through capital markets.
    - Would likely need a ~~ten~~multi-year plan (requiring annual approval), with a description of the aggregate shares to be issued from time-to-time drafted in official documentation.
    - Timing is an issue; there may be a shortfall between funds received from the Province/Market and funds needed to purchase assets from IESO.
- The ~~OFA~~ CEFD and EIGS staff~~side~~ will be ~~working~~ to establish clarity and steps required on the Provincial approvals for the equity injection; however, additional questions were raised during the discussion:
    - How/What the approval process will be for OPG, OFA, TBS, and Province?
    - What ~~is~~ would be the source of interim financing if there are time lags?
    - ~~There may be a conflict between the targeted irrevocability of the future revenues from ratepayers and the aspect of share redemption.~~
    - ~~There are accounting considerations with the equity injections for the par value, additional paid-in capital, and number of shares in the subscription.~~

Ontario Fair Hydro Plan – Equity Injection Discussion

Purpose

On March 16, 2017, members from OEFC, OFA capital markets, Ministry of Finance, and OPG held a teleconference to discuss the mechanics behind an equity injection between the Province and OPG to support the Ontario Fair Hydro Plan (OFHP). These members are part of a working group established to facilitate the financing process for the OFHP.

Context

In early March 2017, the Province announced Ontario's Fair Hydro Plan (OFHP) aimed at reducing electricity bills by 25 percent on average for all residential consumers in the province. The Province has proposed refinancing a portion of the Global Adjustment costs over a longer time period for Regulated Price Plan eligible customers (e.g., residential, farm, small businesses). According to the Plan, the Province intends to introduce legislation that would, if passed, enable the IESO and OPG to work together to undertake this financing.

The legislation is intended to setup a special purpose vehicle, referred to herein as "OPG Trust", which would handle the deferral of the global adjustment as well as the eventual recovery of the deferred amount, along with financing and administration costs, from ratepayers. OPG Trust would be financed directly from the capital markets (51% of OPG Trust's capital structure) and 49% from loans from OPG. OPG would fund the majority of its loan to OPG Trust (44% of the capital structure) via an equity injection from the Province.

The teleconference call held on March 16, 2017, set out the initial discussion for the working group to set objectives, relay relevant information that the parties had gathered, and determine what information is required to move forward.

Teleconference Call

OPG Comments

- Suggested that the equity injection would take place after the legislation and trust structure in place.
- First introduction to legislation is planned for April.
- May timeline for completion of all requirements, with a target of the reduction occurring on June or July bills.
- Ministry of Energy is focusing on the legislation.
- The OFA side will be working on the Provincial approvals for the equity injection.
- Interim financing might be required for OPG Trust, particularly for the 51% of the GA funded through capital markets.
- Equity injection is meant to be as simple as possible – quarterly injections is being tabled with annual shareholder and board approval.
- Would likely need a ten-year plan (requiring annual approval), with a description of the aggregate shares to be issued from time-to-time drafted in official documentation.
- Thus, seeking a type of "blanket approval" mechanism.

- Timing is an issue; there may be a shortfall between funds received from the Province/Market and funds needed to purchase assets from IESO.
- Special board meetings from OPG are likely to meet the May target.
- Recognizes that the scheduled timeline is a moving target.

Discussion Questions

- Is May a realistic timeline?
- How will the approval process work with OPG and Province; will it be timed with other annual approvals?
- The source of interim financing has not yet been determined.
- OFA needs to open discussion with TBS to determine what approvals are needed and what process should be implemented.
- There may be a conflict between the targeted irrevocability of the future revenues from ratepayers and the aspect of share redemption – a Provincial guarantee may be required.
- OFA would act as support to TBS.
- There are accounting considerations with the equity injections for the par value, additional paid-in capital, and number of shares in the subscription.
- What funding does OPG have available now, and what could be used for interim financing for OPG Trust? (Update – OPG has $700M line of credit for Darlington refurbishment and general corporate purposes, and $1B revolving bank credit facility which DBRS refers to as commercial paper, both which have been untapped as of Dec 31, 2016. Short term credit of $460M only has $74M in availability.)

The initial meeting was a general overview of the goals and requirements from the working group. A placeholder meeting will be scheduled for next week.

Just a quick recap of the meeting today.

OPG Comments

- Suggesting that equity injection would take place after the legislation and trust structure in place.
- First introduction to legislation in April.
- May timeline for completion of all requirements, with a target of the reduction occurring on June or July bills.
- Ministry of Energy is focusing on the legislation.
- The OFA side will be working on the Provincial approvals for equity injection.
- Interim financing might be required for OPG Trust, particularly for the 51% of the GA funded through capital markets.
- Equity injection is meant to be as simple as possible – quarterly injections is being tabled with annual shareholder and board approval.
- Would likely need a ten-year plan (requiring annual approval), with a description of the aggregate shares to be issued from time-to-time drafted in official documentation.
- Thus, seeking a type of “blanket approval” mechanism.
- Timing is an issue; there may be a shortfall between funds received from the Province/Market and funds needed to purchase assets from IESO.
- Special board meetings from OPG are likely to meet the May target.
- Recognizes that the scheduled timeline is a moving target.

Discussion Questions

- Is May a realistic timeline?
- How will the approval process work with OPG and Province; will it be timed with other annual approvals?
- The source of interim financing has not yet been determined.

- OFA needs to open discussion with TBS to determine what approvals are needed and what process should be implemented.
- There may be a conflict between the targeted irrevocability of the future revenues from ratepayers and the aspect of share redemption – a Provincial guarantee may be required.
- OFA would act as support to TBS.
- There are accounting considerations with the equity injections for the par value, additional paid-in capital, and number of shares in the subscription.
- What funding does OPG have available now, and what could be used for interim financing for OPG Trust? (They have $700M line of credit for Darlington refurbishment and general corporate purposes, and $1B revolving bank credit facility, both which have been untapped as of Dec 31, 2016. Short term credit of $460M only has $74M in availability.)

Overall, the meeting was very high level. A placeholder meeting will be scheduled for next week.

---

Looks quite good Bruno. Some very minor suggested edits.

I am thinking of sharing with Francisco and maybe with others Monday.

I'm happy that you run with things. Other than maybe putting some controls on junior staff reaching out to OPG, I'm quite happy.

John

Hi John

We sent the attached draft note and offered follow-up discussion. Should MoF Legal be invited to work group calls or is it fine to just keep them in the loop.

By the way. Sorry, not much of a day off for you.

Hi Toby,

Hope you're doing well.

I understand you may have had some discussions with Bruno about the Province's role with the GA Smoothing/Financing and the OPG equity injection.

We developed the attached ***draft note*** to provide a high level overview of the Province's Equity Injection. There are still some questions we have that are yet to be answered, hence the 'TBC' and frequent comments.

Nevertheless we thought it might be helpful to provide this to you as a launching off point for further discussions.

Happy to chat further.

Thanks,
Shajee

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for OPG from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority are coordinating with Ontario Power Generation to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle ~~henceforth~~ referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be ~~required~~ structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms, specialized features such as callable, redeemable, etc. [Also see below.]

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets. OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.
- Longer term debt will be issued as soon as possible, subject to market timing constraints.~~.~~
    - OPG to retain~~s~~ 3 dealers to advice on the long-term borrowing and financing of the GA.

Commented [JK1]: Not sure if we want to keep conveying that we're doing something to goal seek, regardless of original intent

Commented [AP2]: Legislation being proposed from the White Paper suggest that IESO would collect these payments to be remitted to OPG Trust.

Commented [JK3R2]: Also, confirmed through OPG staff.

Commented [JK4]: Check with SIFB or CMD on the right terminology.

Commented [JK5]: Did I get this right?

- The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].

- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK6]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK7]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province ~~will~~ is expected to provide monthly equity injections to OPG
- In return, OPG ~~will~~ would issue new shares to the Province at a value of $20 per share.
- These share issuances ~~will~~ currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ28]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
    - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
    - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

MINISTRY OF
ENERGY

OPG Business Plan

May 2017

Context

- As required by the Memorandum of Agreement (MOA) between Ontario Power Generation and the Minister of Energy, OPG provided its Business Plan for 2017-2019 to the Ministry of Energy on November 29, 2016 for concurrence
  - Note that while OPG is seeking concurrence for its three year 2017-19 business plan, the plan also includes financial projections for 2020 and 2021
- The Minister's concurrence requires presentation of OPG's business plan before TB/MBC
- The Ministry of Energy review and analysis of OPG's business plan is supported by the Electricity Investment and Governance Secretariat, a unit within the Ministry of Finance and the Corporate and Electricity Finance Division of the Ontario Financing Authority
- The following presentation provides an overview of OPG's business plan, including:
  1. Business Plan Overview
  2. Other Considerations

Context *(cont'd)*

- Proceeding with Provincial concurrence now will demonstrate that OPG has support from its shareholder as it implements the plan and provides clarity to the Ontario Energy Board (OEB) as it reviews OPG's current rate application covering the 2017-2021 period

- Business plan forecasts may be affected by Ontario's Fair Hydro Plan (OFHP). Given the stage of implementation of OFHP and the timing of the receipt of the business plan in November 2016, these changes are not reflected in OPG's plan

  - The Ministry anticipates that as part of supporting the financing and administration of the global adjustment smoothing mechanism, OPG would purchase the right to future cash flows from IESO, financed partly by capital infusions from the Province, and majority by third-party lending

  - These changes are generally expected to be fiscally neutral as they would result in an increase in Provincial interest on debt, offset by increases in OPG net income

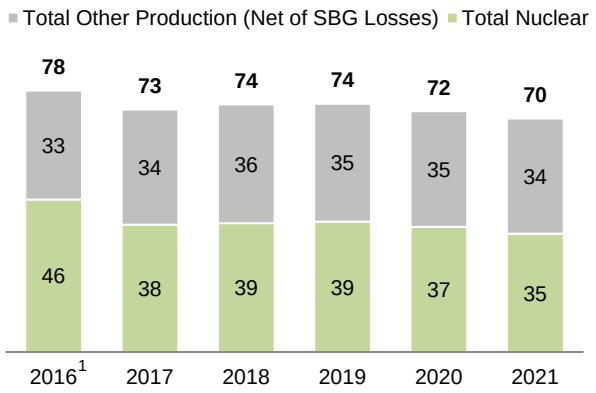
  - In addition, the Province's net debt position should remain unchanged

1. Business Plan Overview

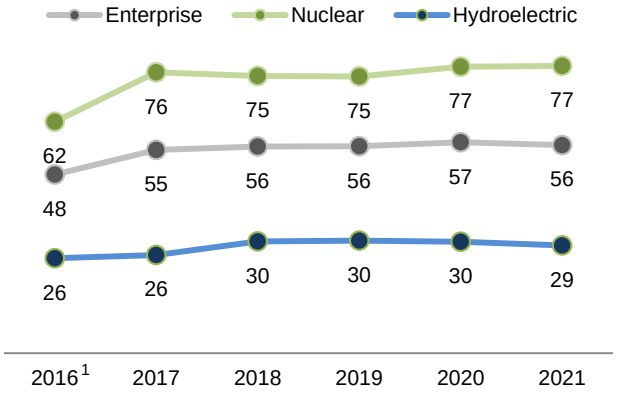
a) Production & Total Cost of Generation

- OPG's production is expected to fall to 69.8 TWh by 2021 from 78.2 TWh in 2016
  - Reflects a declining trend in the Darlington production due to refurbishment outages starting in October 2016
  - Also includes a partial overlap starting in 2021 between second and third unit refurbishments
- While Operations, Maintenance and Administration (OM&A) remains relatively stable over the planning period (see next slide), total generating cost (TGC)* shows an increasing trend over the planning period relative to 2016, reflecting:
  - Lower nuclear production due to Darlington refurbishment outages, and
  - Increased sustaining capital spending (included in TGC) on two large hydroelectric projects, the Lower Mattagami dam safety upgrade and the Sir Adam Beck I GS power canal liner rehabilitation

Production (TWh)



Total Generating Cost ($/MWh)



1. Actuals

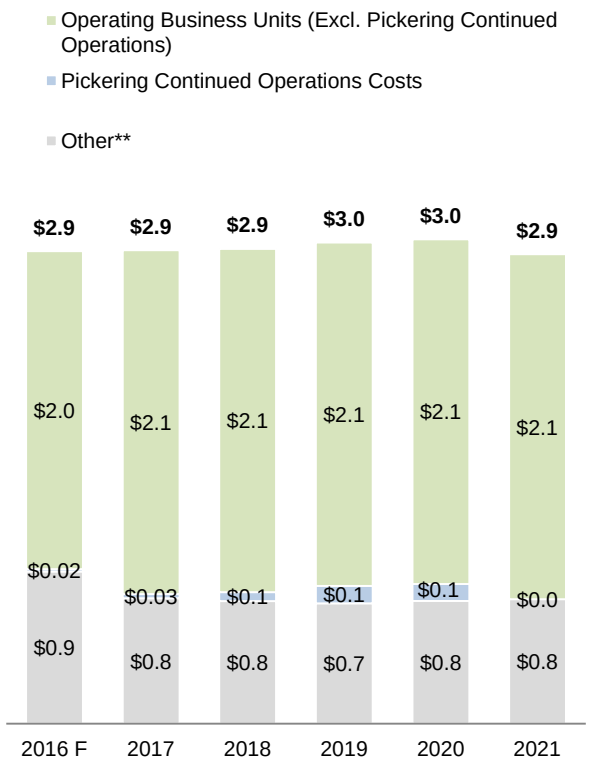
*TGC = OM&A expenses from ongoing operations + fuel and Gross Revenue Charge expenses for OPG-operated stations + sustaining capital expenditures) divided by OPG generation adjusted for surplus baseload generation losses

1. Business Plan Overview

b) Operations, Maintenance and Administration (OM&A) Expenses

- Annual OM&A expenses from ongoing operations are expected to stay consistent over the plan period, averaging $2.9B per year
- Increases over 2016 are mainly attributable to:
  - Increases in business unit expenditures, including changes in nuclear outage scope at Darlington, and planned hiring to fill staffing gaps
  - Incremental outage and other program costs to enable Pickering continued operations
  - Partially offset by declining pension and OPEB costs over the period due to projected pension asset returns, increased employee contributions, and adoption of a new method for applying discount rates to determine interest components of pension costs

OM&A from Ongoing Operations* ($B)



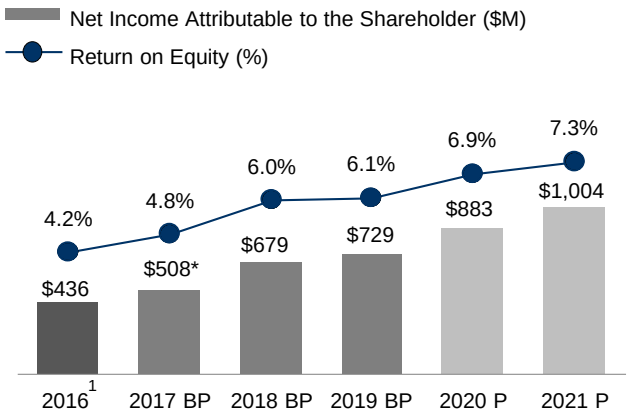
*Excludes Darlington refurbishment OM&A expenses and all OEB variance and deferral account offsets
** Includes centrally held pension /OPEB costs and support services

1. Business Plan Overview

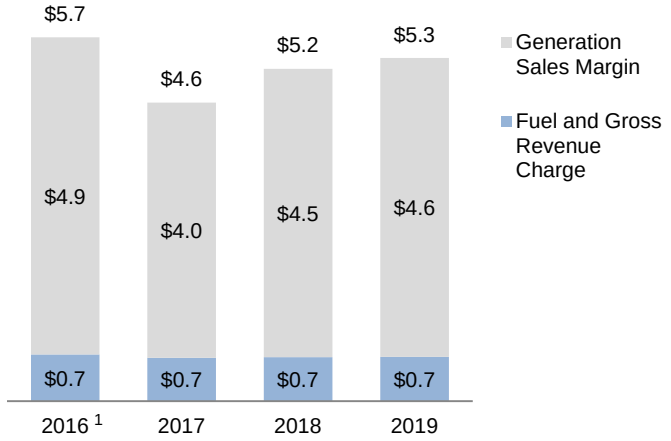
c) Financials

- OPG is forecasting net income attributable to the Shareholder to reach $1B in 2021, from $436M in 2016
  - 2017 net income is forecast to increase as a result of new regulated rates, a gain on sale of OPG's head office, higher capitalized interest for the Darlington Refurbishment expenditures partially offset by reduced production as a result of planned outages at Sir Adam Beck I and DeCew II hydro stations
  - Net income in 2018 and 2019 is planned to increase, primarily due to higher forecast production, and earnings from oncoming stations, including Nanticoke solar in 2019
- As a result, return-on-equity (ROE) is estimated to increase from 4.2% in 2016 to 7.3% by 2021
- Overall, the 2017-19 Business Plan is largely unchanged relative to last year's plan in terms of commitments for Net Income, and Total Shareholder Return

Net Income ($M) and ROE (%)



Revenue Margin ($B)



*Includes extraordinary gain associated with the sale of OPG head office

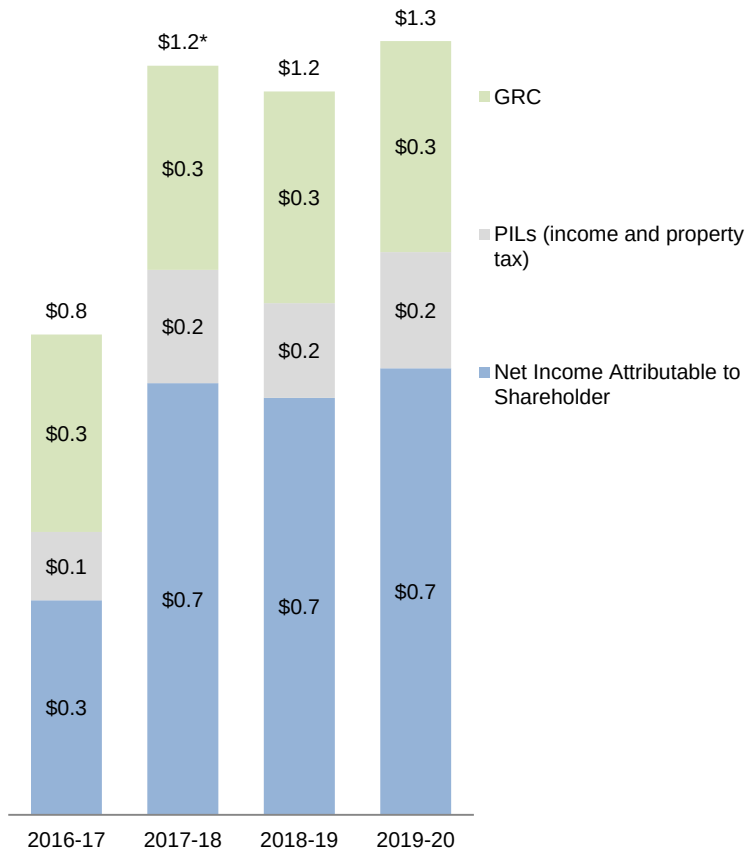
1. Actuals

1. Business Plan Overview

d) Provincial Fiscal Impacts: Shareholder Return and Payments-in-Lieu of Taxes

- Total fiscal revenue impacts to the Province, including net income return to the shareholder and payments-in-lieu of taxes, averages ~$1B over the period
  - Provincial revenues from OPG are dedicated to servicing and paying down stranded debt and the investment cost of the Province acquiring the equity in OPG.
- ~~Total r~~Return to the shareholder improves ~~over the period largely~~ due to changes in net income, which OPG attributes to:
  - Assumed OEB rate outcomes
  - Completion of the first Darlington unit refurbishment
  - Further cost efficiencies
- Net income is consolidated by the Province as Revenue from Government Business Enterprises (GBEs)
- Income tax PILs, Gross Revenue Charges (GRC) and property tax PILs paid to ~~are consolidated by~~ the Ontario Electricity Financial Corporation (OEFC) to help service and pay down stranded debt are consolidated in Public Accounts under Taxation Revenue
- OPG also pays a portion of the Gross Revenue Charge (GRC) ~~and Property Taxes to the OEFC to the Province's Consolidated Revenue Fund~~

Total Fiscal Revenues ~~Shareholder Return~~ ($B)



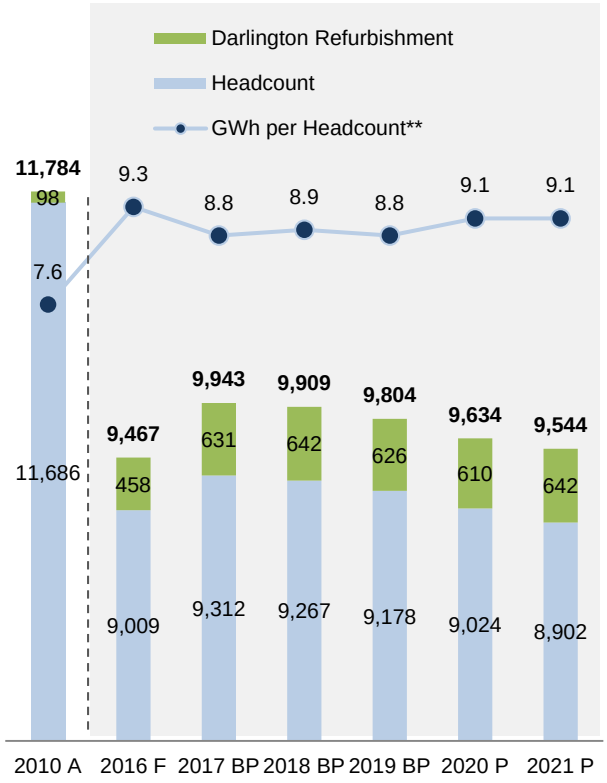
*Includes gain associated with the sale of OPG head office

1. Business Plan Overview

e) Business Transformation Initiative & Labour Costs

- As part of a company-wide business transformation, OPG has saved over $1B in costs from January 2011 to December 2016
  - Headcount has fallen from 11,686 in 2010 to a forecasted 9,009 in 2016 while GWh per headcount has increased from 7.6 to 9.3
- However, OPG is ramping up recruitment between 2016 and 2017 to fill key vacancies in certain areas (particularly in the Nuclear business unit) due to high levels of attrition from employee demographics, as well as continued Pickering operations beyond 2020
  - OPG is forecasting regular headcount to show a net increase of ~300 by the end of 2017 before gradually decreasing to 4% lower than 2017 levels in 2021
- In addition, to date OPG has hired ~60 Term employees, a new category of non-regular staff negotiated with the Power Workers' Union (PWU) through collective bargaining in 2015
  - Intention is to add fewer regular staff in circumstances where they are likely to be laid off as a result of the end of Pickering commercial operations

Ongoing Operations Regular Headcount and Productivity



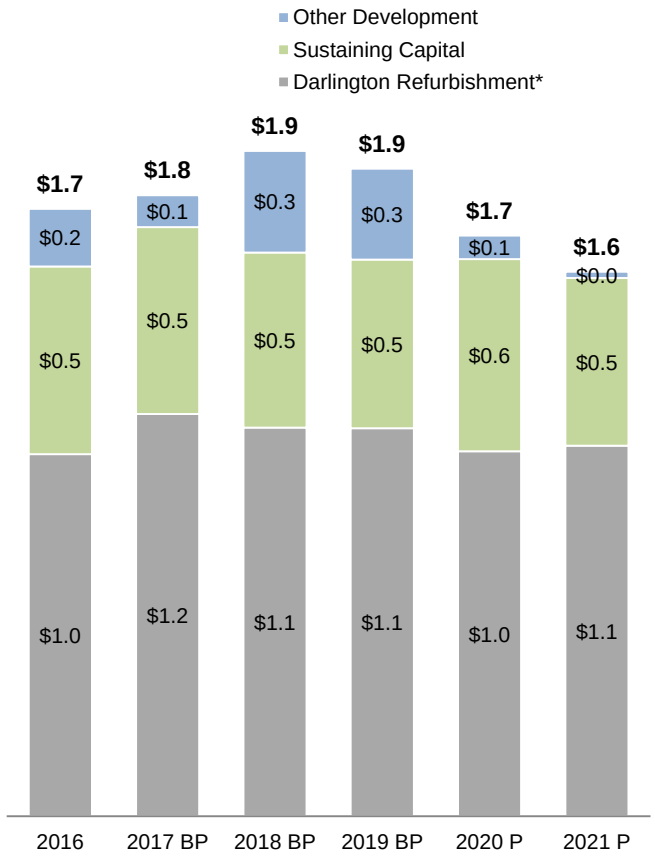
**Production is normalized by adding back hydroelectric surplus baseload generation losses and, in 2017- 2021, the lower production due to the Darlington refurbishment outages

1. Business Plan Overview

f) Operating Highlights - Projects and Capital Expenditures

- OPG continues to focus on delivery of its major projects over the plan period, including:
  - **Darlington Refurbishment**: Unit 2 is assumed to be returned to service in February 2020 with the second unit refurbishment commencing immediately thereafter and the third unit refurbishment starting in July 2021, assuming necessary concurrence from the Province is obtained
  - **Sustaining Capital:** Expenditures average $570M, including:
    - Nuclear expenditures unrelated to refurbishment at Darlington and costs for continued operation of Pickering
    - Regulated hydro expenditures including upgrades at Sir Adam Beck and upgrades to DeCew II
    - Lower Mattagami upgrades in 2018 and 2019
  - **Other Developments:** Investments in current and emerging generation technologies including solar and energy storage including construction and operation of the Nanticoke solar facility

Capital Expenditure Estimates ($B)



*Includes expenditures budgeted by Support Services

2. Other Considerations

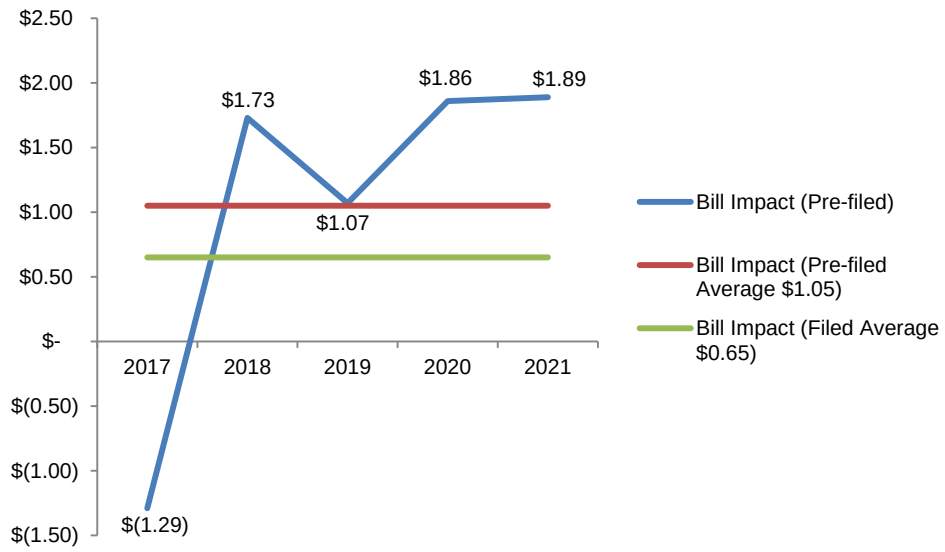
Rate Application

- OPG's 2017-19 Business Plan is dependent on the outcome of its rate filing with the OEB for the five-year period from 2017-2021
- Oral hearings began February 21, 2017 with a decision expected in Q3 2017
- OPG's 2017-19 Business Plan assumes new rates are effective January 1, 2017
  - The OEB setting a later effective date would negatively impact OPG's 2017-18 fiscal year net income by ~$50-60M per month of delay*

Rate-Smoothing Proposal:

- On March 2, 2017 the Province filed an amendment to O.Reg.53/05, which enables OPG to smooth its rates based on OPG's total bill impact, rather than on the basis of nuclear rates only
- On March 8, 2017 OPG filed a revised rate smoothing proposal with the OEB, which is expected to decrease the average annual impact on the monthly customer bill for an average consumption of 750 KWh/month from about $1.05 to 65 cents per month per year

Comparison of Annual Bill Impact ($/Month per year)



*Forecasted in May 2016

2. Other Considerations

Sales

	OPG Head Office	R.L. Hearn Site	Lakeview Site
Current Status	Completed	Agreement Reached	OPG and Infrastructure Ontario are preparing for marketing
Site Description	700 University Ave. and parking garage at 40 Murray St. in Toronto	~33 acres at the R.L. Hearn site in Toronto	~67 acres to be transferred by the purchaser to the City of Mississauga (Municipal Park Lands) and ~110 acres to be developed for mixed uses (Uplands)
Buyer	KingSett Canadian Real Estate Income Fund LP	Studios of America Limited Partner	TBD
Value	Estimated up-front 2017-18 fiscal impact of ~$375M (includes after-tax gain as well as PILs to OEFC)	TBD	TBD
Other Considerations	N/A	N/A	Negotiations with the City have been lengthy and costs to remediate/prepare site may be significant due to concerns regarding site condition
Timing	The sale closed in April 2017	Anticipated to close in Q3 2017	Marketing is planned to start in April 2017, pending negotiations with the City, with an anticipated closing in 2017

2. Other Considerations

Special Status for OPG to Approve International Travel

- On January 24, 2017, OPG's President and CEO wrote to the Deputy Minister requesting authority for OPG to approve international travel for its employees
  - Section 5.3 of the Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive allows agencies/organizations, for which international travel may be integral to their business, to seek TB/MBC approval for special status to ensure that the approval process does not have an undue negative effect on its ability to conduct business
- OPG has indicated that international travel is integral to the safe and prudent operation of its business and that special status will enable efficient decision-making while lowering travel costs
  - OPG cites the importance of enabling its engagement with the international community (in particular in regards to nuclear safety), procurement activities, and investment and due diligence processes for its pension fund and nuclear funds
  - OPG requires a high level of international business travel at approximately 90-100 trips annually, while Darlington accounts for 45% and is expected to see increases
  - OPG indicated that the approval process, which took 23 days on average in 2016, delays flight bookings which results in higher costs as airlines raise fares closer to the travel date
  - OPG believes the inability to make timely commitments on events and meetings impacts employee engagement as well as its international relationships and reputation
- OPG has asked that this application be included with the Ministry's submission to TB/MBC seeking concurrence with OPG's 2017-19 business plan

Appendix

2016 Year-End Financials

OPG Balance Sheet as at Dec 31 $B	2016

Mr. Bernard Lord
Chair
Ontario Power Generation
1900-700 University Avenue
Toronto ON M5G 1X6

Dear Mr. Lord,

Thank you for your submission of Ontario Power Generation's (OPG) 2017-2019 Business Plan ("the Plan"). We have reviewed the Plan and find it to be consistent with our government's expectations.

I support the operational and financial targets set by OPG in its business plan. We recognize the substantial cost reductions that OPG has recently achieved and expect OPG to work closely with the Province to fully realize the additional efficiencies incorporated in the Plan in a manner that is consistent with financial targets and the continued safe and environmentally responsible operation of OPG's facilities.

We commend OPG on its successful start to the Darlington Refurbishment Project, a key objective of Ontario's 2013 Long-Term Energy Plan (2013 LTEP). As a priority project for the government, I expect that OPG will continue to focus on delivering the project as per the schedule and budget contained in the Release Quality Estimate approved by the OPG Board and by the government. I also expect OPG to continue to minimize project risks consistent with the nuclear refurbishment principles set out in the 2013 LTEP, and seek concurrence prior to commencing subsequent unit refurbishments after Unit 2 is successfully returned to service.

We continue to support the planned operation of Pickering units up to 2024 as the station's output will provide reliable, cost-effective and emission-free electricity supply during the Darlington and initial Bruce refurbishments. I expect OPG to seek concurrence to proceed with ongoing Pickering operation after the necessary regulatory approvals are complete.

I understand that the recently approved Ontario Nuclear Funds Agreement (ONFA) Reference Plan has resulted in a reduction of the estimated liabilities ~~costs to consumers~~ for future decommissioning and long-term management of waste from Ontario's nuclear fleet. ~~plants. In addition, the segregated nuclear funds set aside under ONFA have reached fully funded status.~~ With many decades of nuclear generation in the Province's future, we expect OPG to continue managing its decommissioning and waste management obligations [and related segregated funds] in a prudent manner~~, the decision to fund these costs now provides security for future generations of Ontarians~~.

I appreciate the efforts of OPG staff, management and the Board of Directors to date as we worked to develop a plan to refinance the Global Adjustment (GA). Refinancing the GA would provide significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. OPG will be instrumental to the success of this initiative and we plan to introduce legislation that would, if passed, enable OPG to work with the Independent Electricity System Operator (IESO) to implement this plan.

Commented [RK1]: Recommended not to use this wording, particularly also using the fully-funded wording that follows.

Under ONFA, for prudence, the Province required OPG to accelerate contributions to the funds, in advance of collecting the amounts from ratepayers. Even if the funds are currently estimated to be fully-funded, OPG (and the Province as Shareholder) still needs to recover its nuclear liabilities costs in rates.

Commented [RK2]: If wording is retained, should be reworded.

"As a result of the lower estimated liabilities and recent financial market performance, the segregated nuclear funds set aside under ONFA are currently estimated to be fully funded."

Commented [FC3R2]: Should be noted that the funds are fully funded today but changes in market conditions could put the funds in a temporary deficit position in a very short period.

I expect OPG to continue to keep the government informed with regard to the company's key ongoing and emerging initiatives and progress in achieving its financial and operational performance commitments. As OPG's performance directly impacts Ontario's fiscal plan, we note the importance of achieving or exceeding OPG's financial performance commitments.

This letter constitutes our concurrence with OPG's Board approved 2017-2019 Business Plan as provided for under the Memorandum of Agreement between OPG and the Shareholder dated July 17, 2015.

Sincerely,

Glenn Thibeault
Minister of Energy

c: Jeff Lyash, President and Chief Executive Officer, OPG
Ali Ghiassi, Chief of Staff, Ministry of Finance
Scott Thompson, Deputy Minister, Ministry of Finance
Serge Imbrogno, Deputy Minister, Ministry of Energy

Commented [RK4]: Only add in if Energy CoS is included.

Thanks Shajee,

Please refer to the folder version where I added:

- **Alternatively, OPG Trust might be able to recognize income (with a receivable created to balance the transaction) to offset the interest expense without collecting from ratepayers**, i.e., it will be a cash transaction in the future (cash received offset by a decrease in the receivable; no effect on income statement).

Structure of the Global Adjustment Deferral Mechanism

Issue

The Province is working with Ontario Power Generation (OPG), the Ontario Energy Board (OEB), IESO, external accountants, and other agencies to develop a mechanism to defer the global adjustment (GA) payment as part of the recently announced Ontario Fair Hydro Plan.

Context

- Ratepayers would only pay a portion of the GA cost in initial years, with the Province essentially taking on debt to pay off the deferred portion immediately.
- In later years, ratepayers would pay more than the true cost of the GA to settle the financing costs taken on to defer the cost.
    - There will be a cap on the annual additional cost over the GA to lessen the burden on ratepayers.
- Principal payments are mandatory, but there has been no clarification on whether or not interest payments will be deferred or if they will be collected from ratepayers on a frequent basis.
    - Having "interest on interest" (i.e., compounding effect) with deferrals on interest payments increases peak debt by approximately $5B and leads to billions of additional accumulated interest costs, based on preliminary estimates.
    - However, if interest payments are made by ratepayers, it lessens the relief provided by the GA deferral mechanism.
- Furthermore, it has also been proposed that all administrative and other costs from the GA deferral would need to be collected from ratepayers or recognized at the very least, adding to the costs passed on to ratepayers.

Structure (*refer to Exhibit A*)

- The deferred portion of the GA needs to be recognized as an asset by IESO, likely as a regulatory asset that gives IESO the right to collect the deferred amount from ratepayers at a future date.
- This asset, in turn, would be sold to another party that would have the collection of the revenue streams associated with this asset.
    - The proposal states that IESO would be required to collect the costs associated with this asset even after selling it.
    - IESO needs to sell the asset in order to secure cash to settle its arrangements with generators, thus ensuring that generators are not affected by the deferral.
    - Alternatively, IESO could simply borrow funds (using the regulatory asset as collateral), but this has implications for consolidation on public accounts including the impact on credit ratings.
    - On the other hand, DBRS stated in a March 3, 2017 report that "*Provided the debt continues to be fully supported through the electricity rate base, DBRS will treat it as self-supported and exclude it from the calculation of tax-supported debt*".
- OPG is proposing to set up a special purpose vehicle, "OPG Trust", that would be the party purchasing the regulatory asset from IESO.
    - It would be funded by the capital markets (51% of the deferred GA Cost), and OPG (49% of the deferred GA).
    - OPG would finance that 49% through a loan from the capital markets (5%) and an equity injection from the province (44%).
    - The debt would be set-up in tranches to ensure that the 51% of debt directly from the market would be senior, potentially mitigating the risk premium associated with high amounts of borrowing with an intangible, unique asset as collateral.
- There are several other considerations and requirements that would need to be attained in order for the mechanism to work, as detailed in the OPG White Paper released on February 27, 2017.

Equity Injection (*refer to Exhibit A & B*)

- The rationale behind an equity injection is that it could lead to increasing, and then stabilizing, dividend payouts in commensurate with the Ontario Power Generation's risk profile and comparable business entities.
    - Principal payments and interest flowing from the ratepayers through IESO and the Trust could be relayed back to the Province.
    - This would increase steadily as ratepayers begin to pay back principal in an estimated ten years' time, eventually reaching a cap of an estimated $2.242B in principal and interest per year based on Energy's March estimates (with interest on interest).
    - The administrative costs and return for OPG/OPG Trust would also need to be collected by ratepayers, but the dividend payments would be net of these amounts and should still allow the Province to earn a substantial return.

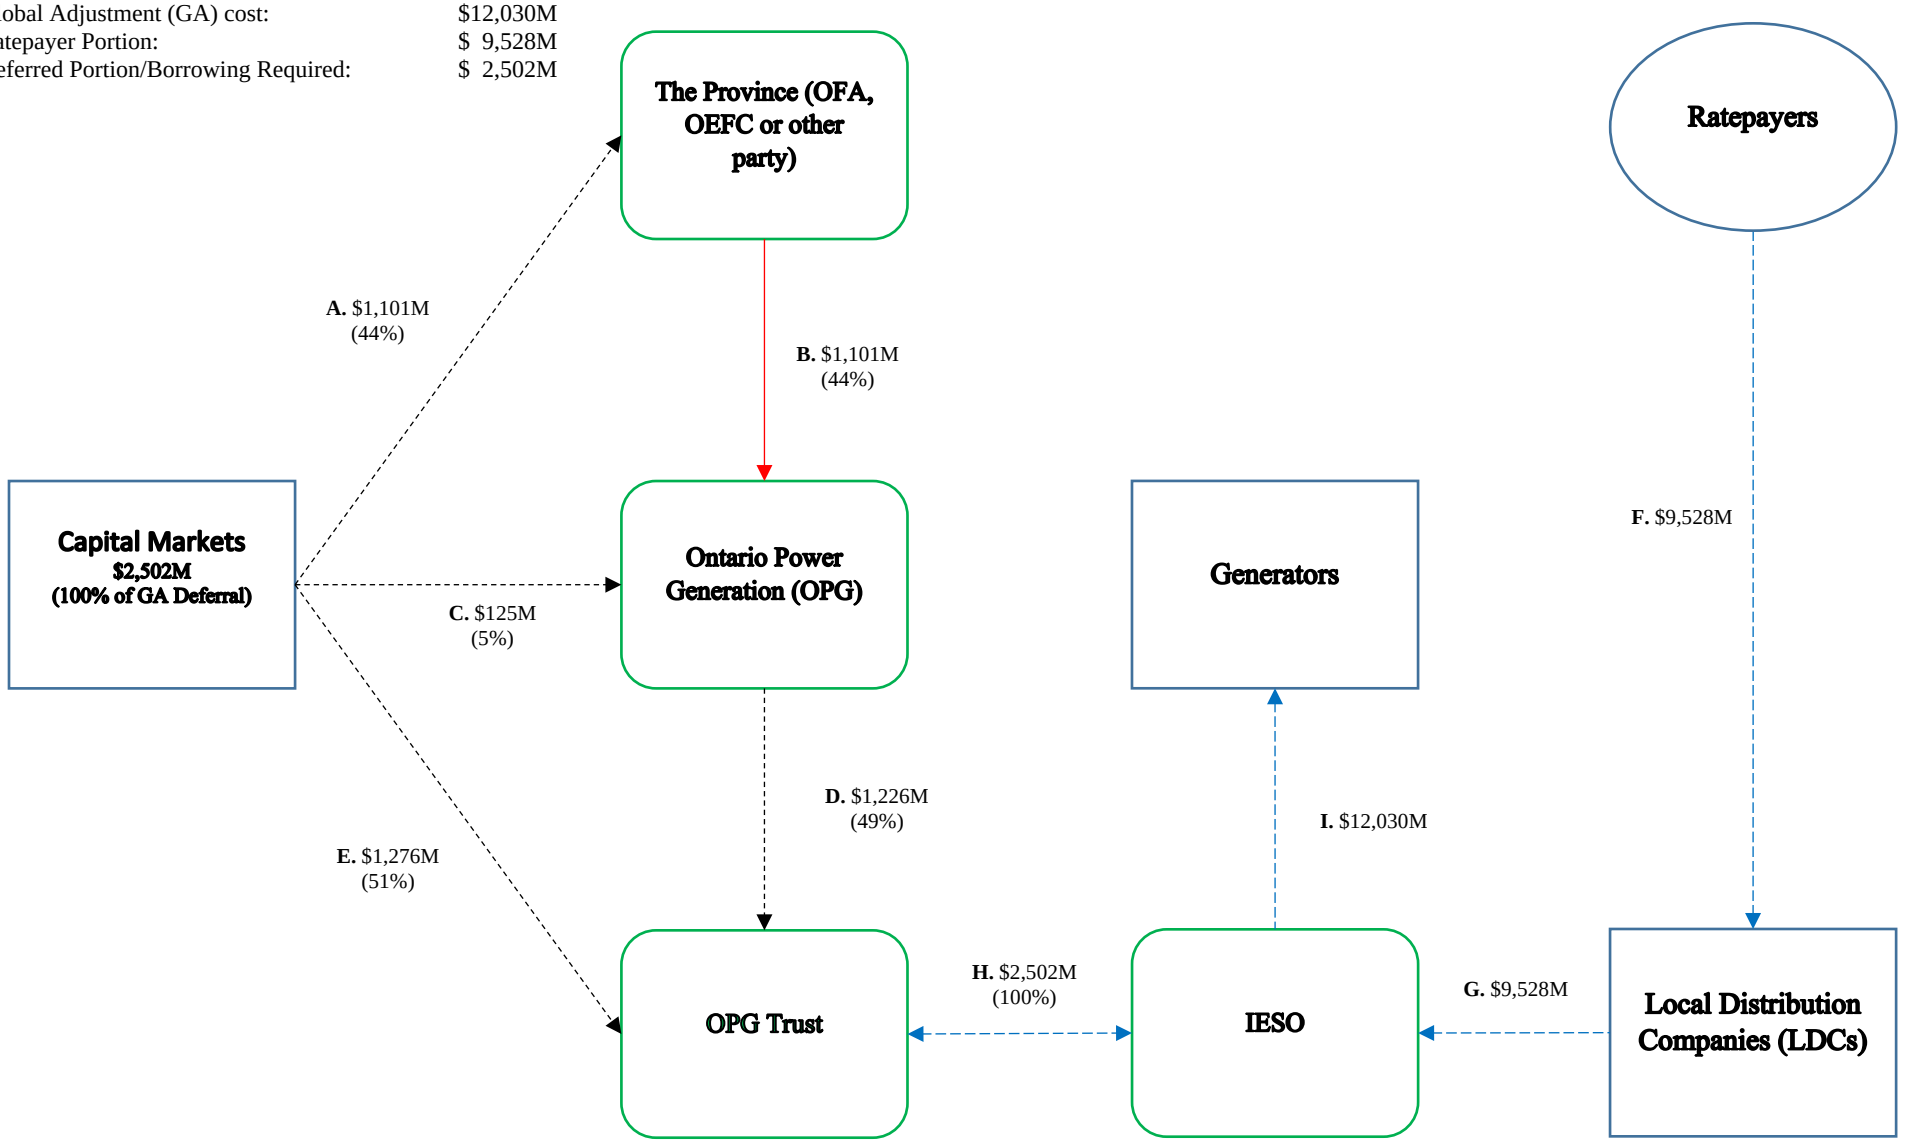
    - Dividend payments could also allow OPG to eventually optimize its capital structure to the targeted 55%-45% debt to equity split.
- Recapitalization from the Province is preferable as there are no associated interest expenses or large principal payments that could affect OPG's credit rating.
- If debt financing was utilized, the change in the cost of borrowing could also impact OPG's rate applications for the return recovered from ratepayers through payment amounts.
- The financing structure split between equity (44%) and debt (56% - 5% borrowed by OPG and 51% borrowed by OPG Trust) is roughly equivalent to the deemed capital structure of 55% debt and 45% equity for regulated distributors in Ontario.

Collection of Interest Payments (*refer to Exhibit C*)

- There are different potential accounting treatments that can be undertaken, depending on legislative and regulatory approval that will impact the amount of borrowing and interest over the long term as well as the total fiscal impact.
    - **Option 1: Collect interest and administrative costs from ratepayers immediately:** Interest and the costs to finance/administer the GA deferral mechanism would be recovered from ratepayers immediately. This would allow cash and income to be recognized by OPG Trust equivalent to the total borrowing cost from the market (i.e., the interest on the 44% of the GA the Province borrowed from the market, the 5% of the GA OPG borrowed, and the 51% of the GA OPG Trust borrowed). Furthermore, some type of additional return for the risk premium could be collected as well. Overall, there would be no fiscal cost, and less debt will build up over time due to the elimination of the compound effects on interest. However, the relief provided to ratepayers from the principal payments on deferred costs would be mitigated by this interest payment, although it is quite low for the initial 4 -5 years.
    - **Option 2: Collect interest costs associated with the senior debt**: There are variations on this concept which is essentially proposing to only collect some of the interest costs from ratepayers, with the senior debt that OPG Trust borrows directly from the market of primary concern. This is "meeting halfway" between deferring all interest payments and collecting all interest payments from ratepayers immediately.
    - Option 3: **Do not collect from ratepayers**. There is a fiscal impact equal to 100% of the interest on the total borrowings. There is also a compounding effect on interest as even though cash interest has not been paid, an expense still needs to be recognized.
    - Option 4: **No collection from ratepayers but deferral of expense recognition**. For this option, there is no collection of interest payments from ratepayers, but OPG Trust is somehow allowed to defer the recognition of interest expense on its books, thus eliminating the fiscal impact.
        - If OPG Trust were allowed to recognize a regulatory asset, then it could defer the interest expense, instead recognizing it as an asset (similar to the idea of a prepaid expense).
        - Thus, OPG would recognize interest income from OPG Trust, but OPG Trust would not recognize an expense related to the amount owed to OPG and instead would increase the regulatory asset by the same amount.
        - The interest income earned by OPG for the 49% of the GA deferral it borrowed would offset the borrowing the Province made from the capital markets.
        - OPG Trust would also defer the recognition of the interest associated with the 51% of the GA deferral it borrowed from the market. The deferred amount would be recognized in a regulatory asset.
        - When OPG starts collecting principal and interest from ratepayers, it will recognize income, but will also amortize the regulatory asset at the same time, thus matching revenue and expenses with each other in the time period and potentially eliminating the fiscal impact.
        - Many factors, including the initial accounting treatment and the effect of consolidation, are significant barriers to the application of this approach.

Exhibit A; 2017-2018 Estimates for Balance Sheet Transactions

Global Adjustment (GA) cost:	$12,030M
Ratepayer Portion:	$ 9,528M
Deferred Portion/Borrowing Required:	$ 2,502M



Setting up the Trust

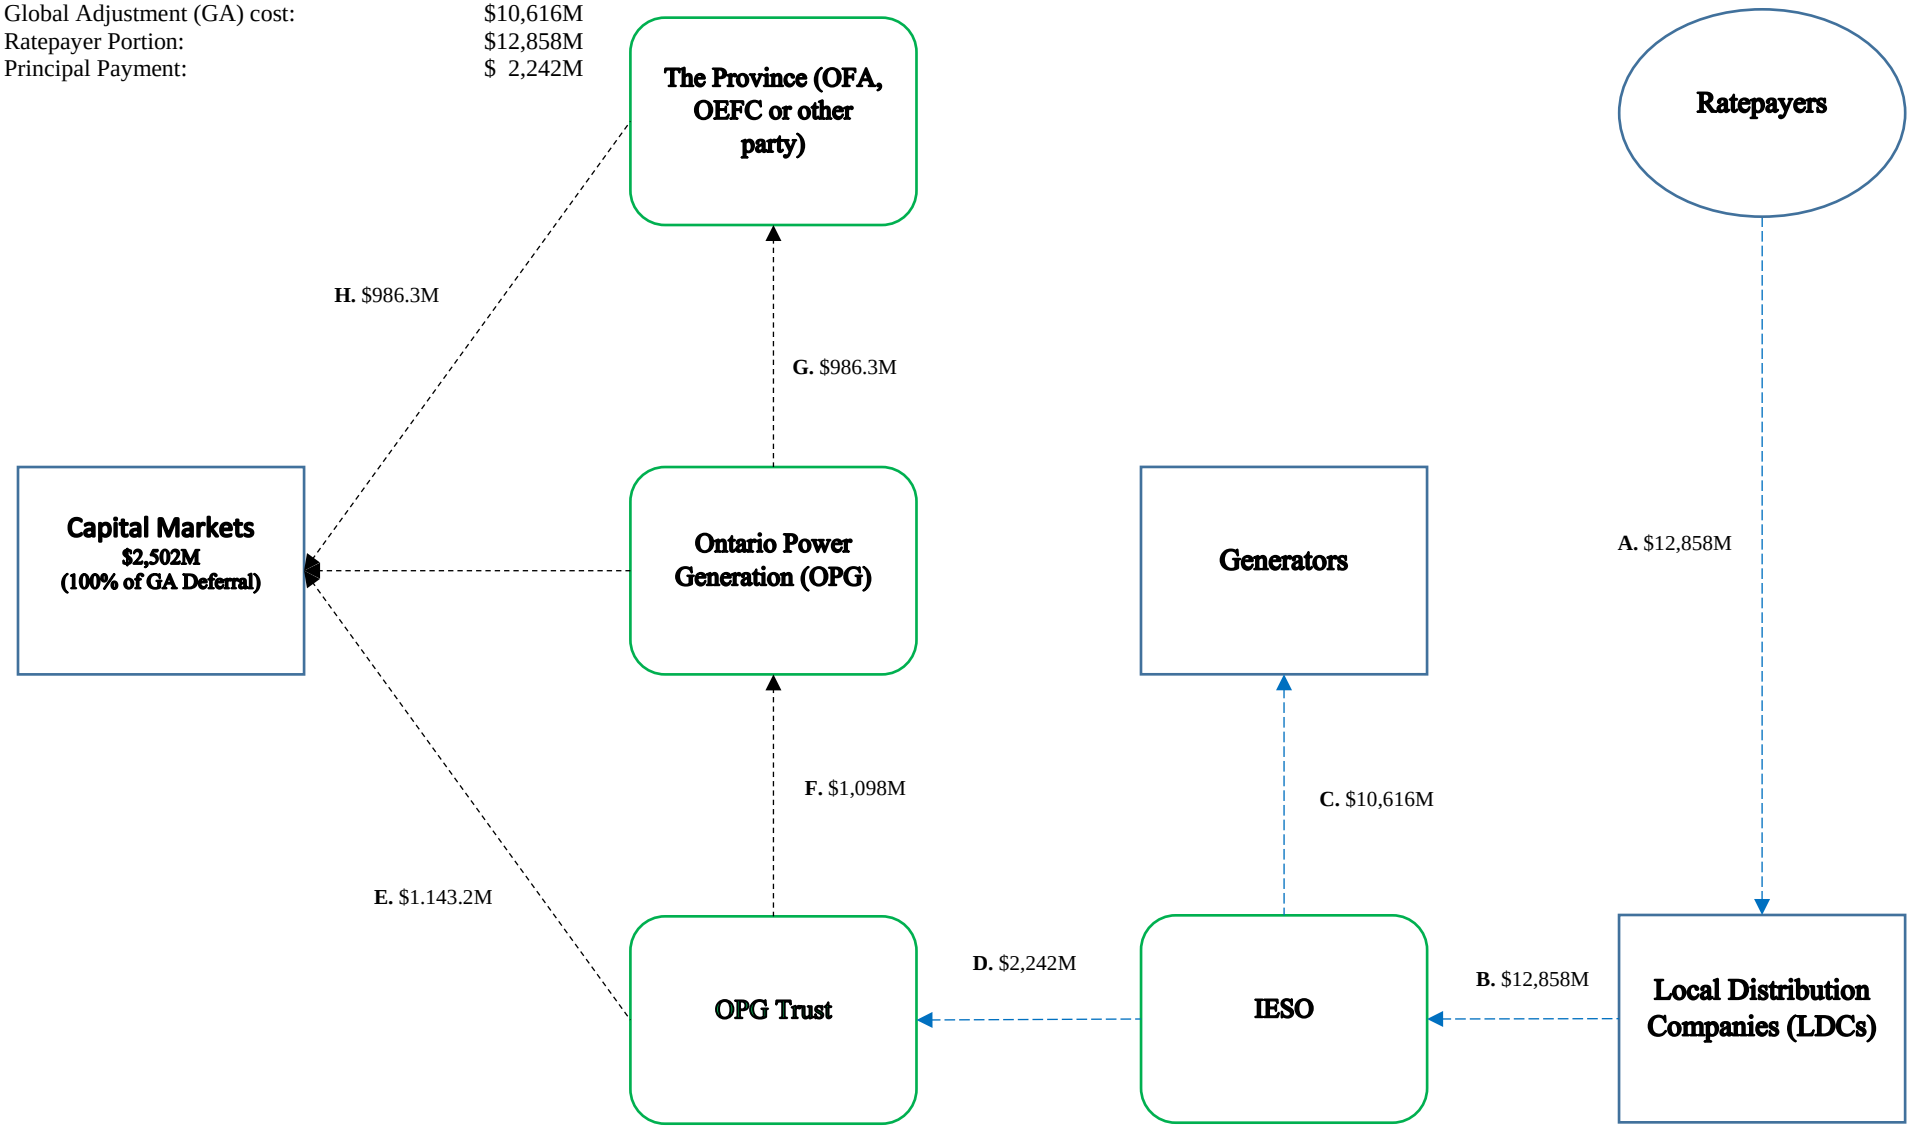
A. The Province borrows 44% of the deferred GA from the market.
B. The Province then funnels this amount to OPG through an equity injection.
C. OPG borrows 5% of the deferred GA from the market.
D. OPG lends an amount equal to the 5% and 44% from the market and the Province, respectively, to a separate legal entity called OPG Trust.
E. OPG Trust borrows 51% of the deferred GA from the market, ending up with 100% of the total $2.502M deferred GA in cash.

Deferral Mechanism

F. Ratepayers pay their portion of the GA to LDCs.
G. The LDCs remit this amount to IESO.
H. IESO, with the proper legislation and accounting treatment, is allowed to recognize a regulatory asset – the right to collect the deferred amount of $2,502M from ratepayers. It then sells this asset for cash to OPG Trust.
I. IESO uses the proceeds from the sale of the regulatory asset and the collection amount from LDCs to pay the full amount of the GA to Generators.

Exhibit B: 2028-2029 Estimates for Principal Payments

Global Adjustment (GA) cost:	$10,616M
Ratepayer Portion:	$12,858M
Principal Payment:	$ 2,242M



Collection of the GA

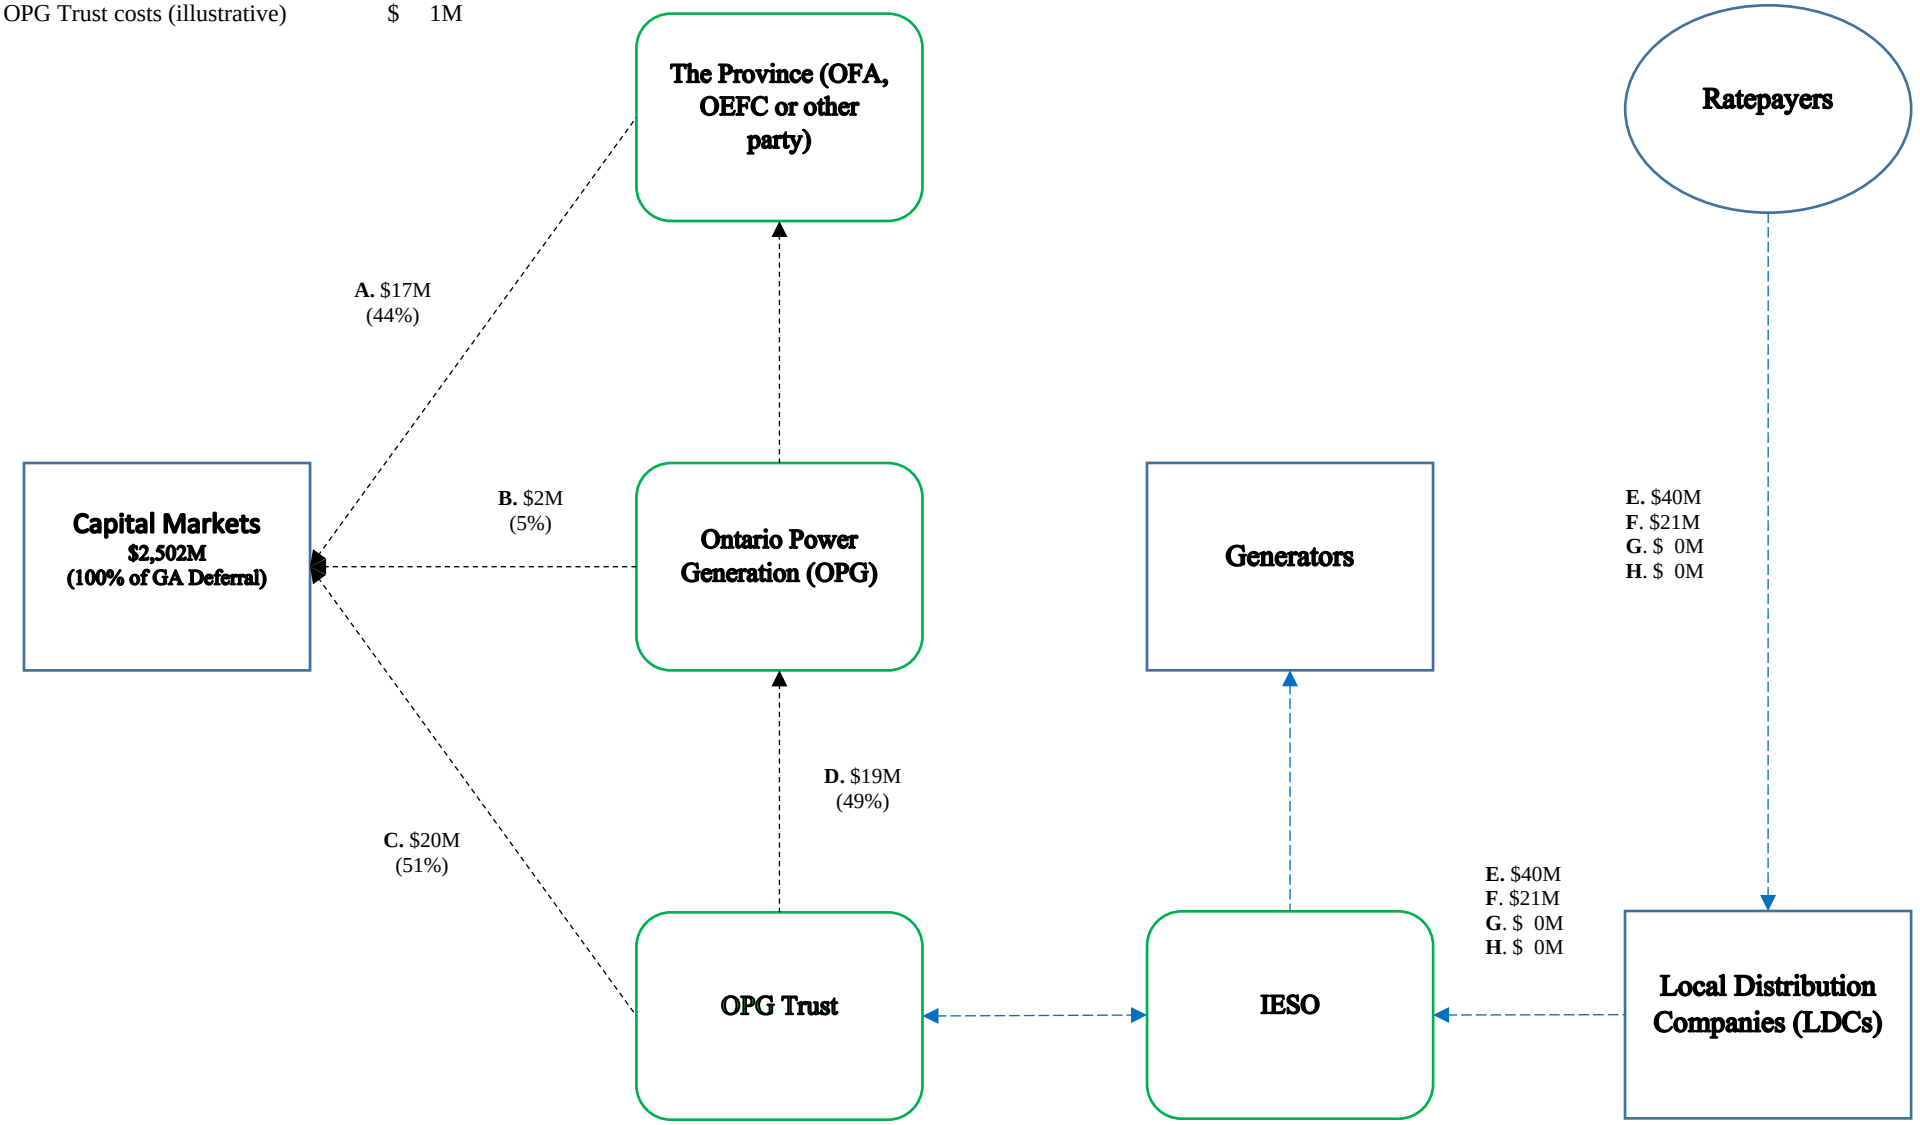
A. Ratepayers pay to LDCs the full cost of the GA plus an additional $2.242M that will be used to reduce the principal of the borrowing (or principal and interest if there is "interest on interest").
B. LDCs remit this amount to IESO.
C. IESO pays the full cost of the actual GA to generators.
D. IESO pays to OPG Trust the additional payment from the ratepayers over the actual GA cost. OPG Trust reduces the asset (for the right to collect GA deferral costs from ratepayers) by an equivalent amount.

Settlement of Principal.

E. OPG Trust pays off principal to the market. In this example, pays off 51%, but could pay more or less depending on various factors (e.g., subordinate debt, managing weighted average interest cost, etc.).
F. OPG Trust pays down principal related to the 49% of the GA Deferral it borrowed from OPG.
G. OPG could give a dividend to the Province equal in order to pay off the outstanding principal it borrowed from the market (44% of the total GA deferral cost)
H. The Province pays back principal to the market.

Exhibit C: 2017-2018 Estimates for Interest Recognition

Interest Recognized	$ 39M
OPG Trust costs (illustrative)	$ 1M



Recognition of Interest

A. The Province recognizes interest on the 44% of the deferred GA it borrowed from the market.

B. OPG recognizes interest on the 5% of the deferred GA it borrowed from the market.

C. OPG recognizes interest on the 51% of the deferred GA it borrowed from the market.

D. OPG Trust recognizes interest on the 49% of the GA it borrowed from OPG; OPG recognizes income for this transaction.

Options for Ratepayer collection

E. Option 1 – collect the entire interest amount from ratepayers plus the Trust administrative costs, thus offsetting the interest expense from total borrowing with the recognition of income. The end result is no fiscal impact.

F. Option 2 – only collect interest income for the 51% of deferred GA from the market and admin costs; OPG Trust would recognize income to offset the interest expense to the market but fiscal impact of 49% of the interest ($19M)

G. Option 3 – Do not collect from ratepayers – fiscal cost of 100% interest.

H. Option 4 – No collection from ratepayers, but OPG Trust is allowed to defer the recognition of interest expense on 100% of debt, leading to no fiscal impact.

Notes

- Assumptions based on Energy models and data, IESO forecasts, and CEFD validation models.
- Sources include Ministry of Energy decks, OPG reports and discussions, external accounting reports, and internal reports/discussions.

From: Hunter, Robert A. (ENERGY) [Robert.A.Hunter@ontario.ca]
To: Gavin He [Gavin.He@ofina.on.ca]
CC: Shajee Kathirgamanathan [Shajee.Kathirgamanathan@ofina.on.ca]
Subject: RE: Benefit Implementation
Date: Wednesday, March 08, 2017 16:54:59
Attachment 1: January 2017 IESO Invoice.docx

Hi Gavin,

I sent the Invoice on February 16, 2017 around the same time as the settlement statement. Shajee should have received this email as he is on the mailing list. I've attached the invoice for both the OCEB and the OREC to this email in case my previous email was not received.

The Ministry's portal is active and running and can be found here: https://extra.sse.gov.on.ca/sites/MOEN-oceb/OREC/SitePages/Home.aspx[extra.sse.gov.on.ca]. Your login ID is GavinH and I will send you a temporary password in a system generated email. Please change this password immediately upon login.

If you want to view the data in the portal the steps for doing so are as follows:
This is the process to follow when you want to download all LDC or USMP data for comparison.

1. Click on "LDC Submissions" or "Submeterer Submissions" on the homepage for whichever you are interested in.
2. At menu on top of page, select "List"
3. On drop down menu under "Current View" which is currently selected as "All Items", select "ExcelExport"
4. Click "List" again, then select "Export to Excel" button/icon
5. Click "Open" to access data. In spreadsheet, scroll right. Under "Settlement Period" heading deselect all and then select the reporting period of interest.

Would you still like us to provide you with access to the IESO Reports Website? If so, I will need some additional information and will have to get Ministry approvals. Please let me know.

If you have any other questions don't hesitate to contact me.

Thanks,

-Robert

To: Gavin He <Gavin.He@ofina.on.ca>
Subject: RE: Benefit Implementation

Hi Gavin, this contact request is for a new portal that is being created by the Ministry, and is separate from the IESO Reports Website. Historically for the OCEB, there were two portals, one that is Ministry operated and one that is run by the IESO. The new rebate program mirrors the OCEB program in that there will be both a ministry operated portal and an IESO operated portal (IESO Reports Website).

IESO portal access is still in process while we work on finalizing our agreement with them. I will follow-up with more information once this is complete.

Hopefully this answers your question.

Thanks,

Hi all,

FYI – The Ministry is currently creating a new reporting portal for the Rebate program. The following staff from the OFA had access to the Ministry's previous clean energy benefit portal:

Adrian Nalasco - adrian.nalasco@ofina.on.ca
Darren Scanlan - Darren.Scanlan@ofina.on.ca
Ronald Kwan - Ronald.Kwan@ofina.on.ca

Can you confirm whether the OFA would like to carry forward with the same contacts? If not, could you please update this list to provide the 3 contacts you would like to have access?

We are looking for this information by the end of the week and will just use the current 3 contacts if no changes are received.

Thank you,

-Robert

Subject: RE: Benefit Implementation

Hi all, just wanted to remind everybody about timing as we will need to get these MOUs finalized for a Jan 1 implementation date. Can I ask when we can all agree to an MOU that can be signed by ADMs?

On our end we need to send to our DM and MO as well, so I would like to send that mid-week this week.

-Sunita

Hi John,

In response to your question we have updated the language in the MOU Section 3. b) to be more clear. Please see the below language that we plan to include in this MOU.

> "The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time."

Does this language provide the level of clarity that you are looking for? If not, please let me know and we can discuss.

Thank you,

-Robert

Hi Sunita, Robert,

We need some clarity on what you mean by this not most likely.

Thanks,

John.

Subject: RE: Benefit Implementation

Hi John,

In regards to records that the OFA must maintain related to the OREC, we do not need to have direct database access to your records, but records should be available upon request of the Ministry. Most likely we would ask for documents to be shared electronically via email if necessary, unless directed otherwise.

Regards,

-Robert

Hi Robert,

In the version you sent back, you mention the Ministry having full access to such records. What are your expectations of how such access to take place?

John.

Hello,

Following up on Sunita's earlier email; have you had a chance to review the attached MOU? If there are any changes please let us know as soon as possible. We are aiming to have this finalized by the end of this week.

Thank you,

-Robert

Hi, attached is the ENERGY-OFA MOU, one or two adjustments in the attached.

If you are in agreement let us know and we can clean up and get ready for signature. We'll need to complete this first week of December.

Thanks,

Hi Michael,

Attached is a working draft of the MOU. OFA Legal had based it on the OCEB one, slightly updated for the proposed new rebate. I'm sure Energy will have some updates to suggest on it too.

Subject: FW: OREC/OCEB February 2017 IESO Invoice
Importance: Low

Hi,

At the moment, I'm the only one receiving these OCEB invoices from EFB.

Hope it's ok if I ask Energy to CC both/one of you along with Gavin and Salman to ensure we get coverage in case I'm away or miss this.

I'm compiling these invoices here S:\Users\CEF\Hydro 2017\Electricity Prices\OREC\Invoices.

There's nothing actionable at the moment but in the future we might want to consider an OREC model at which point it would be useful to have these at the ready

Thanks,
Shajee

Subject: OREC/OCEB February 2017 IESO Invoice

Hello,

Please find attached the OREC/OCEB IESO Invoices for the Month of February 2017.

Please note that the IESO has issued **two** OREC/OCEB invoices for February. The amount issued on March 14 included an overstated amount. A second credit invoice has been issued in the morning of March 15.

The IESO has instructed the Ministry to net the 2 invoices and pay the difference of $74,085,131.77, as stated in the email attached.

This invoice is being sent based off of the previous OCEB mailing list. If you would like to change the contacts in your organization that receive this email, please respond to this email and I will make the necessary changes.

Thank you,

Hi Bruno,

Yes – that is what the understanding has been. i.e. OPGT can go to the market every month but may wait a few months to go in larger tranches.

The purchase of regulatory asset is not obligations as per the legislation we have seen to date.

Salman

Hi Salman

I was not aware of the point below. Have seen this in any of the communication. Anyone else?

"OPG Trust is not expected to access public capital markets monthly, nor is it required to purchase the regulatory asset."

Bruno
