Attachments:	2017-03-01 - Cabinet Submission - Electricity Price Mitigation.pdf

Just to add, I retrieved the March 1 Cabinet Submission deck that is saved in the shared folder and the last page says "APPENDIX: SEE MINISTRY OF ENERGY'S ELECTRICITY PRICE MITIGATION –APPENDIX" – do we have this anywhere? Maybe there is something in there that Ken is referring to (which is could equally likely be what Bruno and Adam have provided below).

Thanks Bruno,

Yes that is it. A key part is point is c (50% of the most subordinated debt) - OPG needs to own at least 50% of the subordinated debt (the equity tranche) with this portion suggested to be about 5% of the Trust. This is the 5% that OPG is borrowing from the market. This is why the borrowing is capped from the Province at an epsilon below 45%.

Thanks Adam

One of the list of 14 in the white paper. This was one of the conditions required for OPG to consolidate the Trust

1. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    a. The Trust
    b. Any of OPG's investments in the Trust
    c. The most subordinated debt of the Trust

>
> - Equity could affect OPG's GBE status if it is effectively seen as an interest-free loan; if the return from the structure does not justify an equity position. Otherwise, the Province could continue to inject equity into OPG in perpetuity for no reason. The fact that the Province is the sole shareholder strengthens this point. OPG could be seen as reliant on this funding for operations.
> - The rating agencies would need to be brought into the discussion - would have to see what cash return from the structure would limit the impact on some ratios; the fact that the capital markets debt will be in a SPV means that portion is bankruptcy remote and may not factor into calculations.
> - OPG is at currently at approximately 65% equity, 35% debt while the deemed structure is 45% equity and 55% debt. OPG does have the capacity to take on more debt within the deemed structure. Furthermore, if the structure is separate from the rate regulation process, the deemed structure is not as relevant.

- The related GBE status factor is if OPG can maintain operations and meet their obligations through revenues generated outside of the Province. As long as the debt issued from the Province to OPG is at the market rate, and the revenue from the structure is reasonably expected to cover expenses, the GBE status may not be threatened.
    - There is no minimal credit rating or minimum debt to equity ratio to retain GBE status.
- The markets could also take on more than 51% of the debt from the SPV (51% is minimum).
- There is also the consideration for if the Province issued debt directly to the SPV (i.e., buying securities from the SPV directly rather than going through OPG).
    - Nothing in the 14 conditions prevents this.
    - Need to confirm with OPG auditors.
- The relevant condition is that the Province cannot indirectly (i.e., through OPG) or directly (i.e., to the SPV) finance more than 44% of the structure, either through equity or debt.
- Preferred shares with cumulative dividends if not paid and over a 10 year term would likely get a 50% equity and 50% debt treatment from DBRS, which would lessen the pressure on the capital structure if Province finances OPG directly.
- There could also be a mix of debt and equity financing from the Province over time to OPG.

Overall, a discussion with the credit rating agencies and OPG auditors would probably help clarify options if this is feasible.

Kind regards,

Adam Prokop

How contributing equity to a company that retains a good credit rating could affect its GBE status?

If the loans provided by the Province are not something a prudent lender would agree to do you could potentially be putting at risk the GBE status. What you should do is compare the potential outcome of the different structures against the test that needs to be met to remain a GBE. You should check this on top of the 14 other points.

Hi John,

I think Adam and I had discussed this briefly. We were questioning why the Province could not issue debt to OPG instead of Equity (or even directly into the Trust). The only reason that came to mind was to effect OPG's credit rating (which TD says would be treated as "intermediate equity" for option 3) – don't think GBE status would be affected.

The OEFC already lends to OPG which hasn't seemed to effect its GBE status… not sure what I'm missing here..

I don't follow Ken's bullet #1. Maybe I'm missing something due to having too many files on the go but is it true that if we have a loan to OPG, that the GBE treatment falls apart?

Carlos, and others

I believe the discussion with TDS will be scheduled for either Thursday of Friday and I am not available on both days so here are my comments.

- Page 3: Option#3 is not feasible since it is essentially a type of debt from the Province to OPG and may impact the latter's GBE status, which jeopardizes the entire arrangement.
- Options 2 and 4 are superior to 1 from the Province's perspective providing a greater assurance of dividends, which means less cash flow risk for the province.
- The last bullet on page 4 is a little confusing especially the phrase; "and the debt issued to OPG by the SPV/Trust". It's actually the other way around, OPG uses the cash flow from the equity injection to issue debt to the Trust.
- The cash flow from the equity injection is essentially cost free for OPG however, the Trust will generate interest income on 100% of its debt, as such when the trust is consolidated with OPG, the latter will

show a net interest income. This income can be paid out as dividends to the Province and in essence defray the Province's interest payments on the debt incurred to fund the equity injection.

Thanks and as always happy to discuss.

Ken k

Ontario

Electricity Price Mitigation

Ministry of Energy

March 1, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

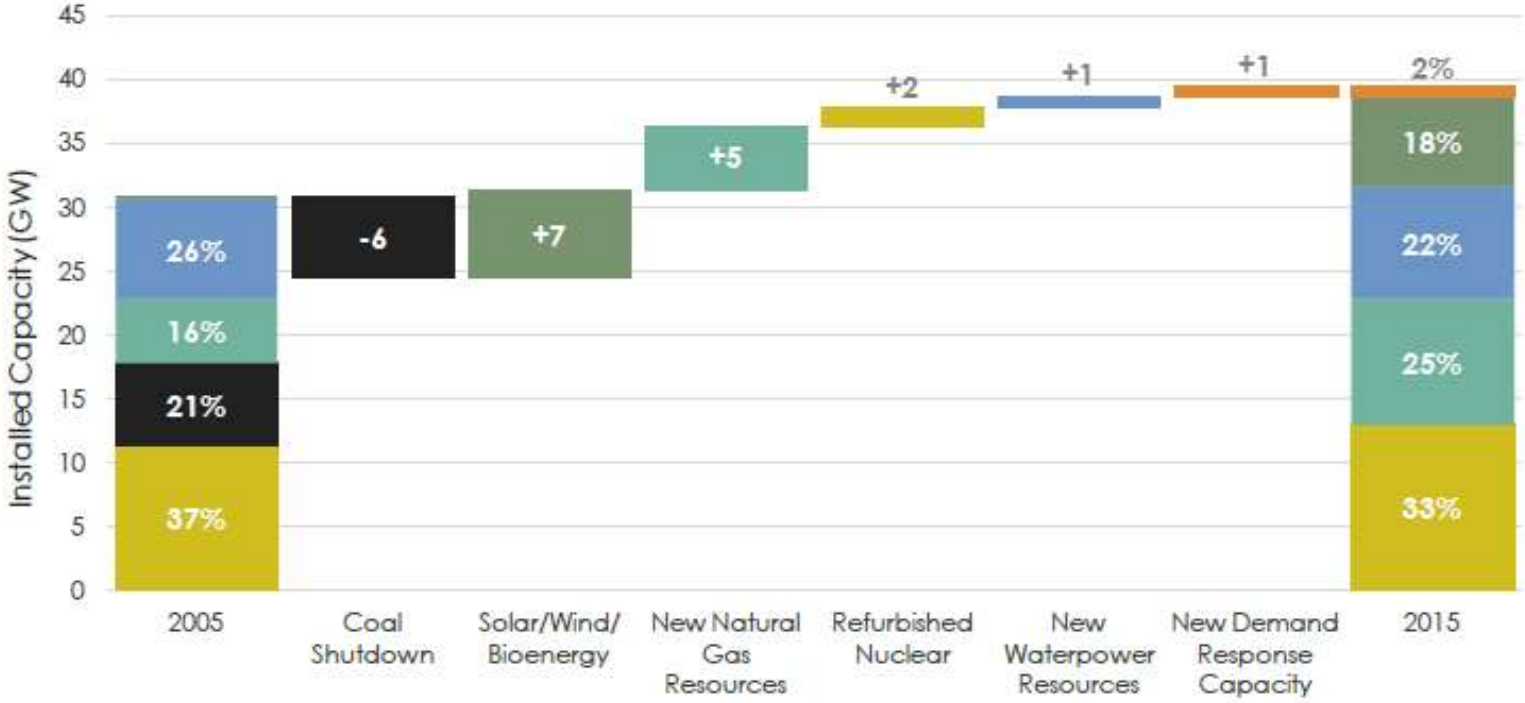
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



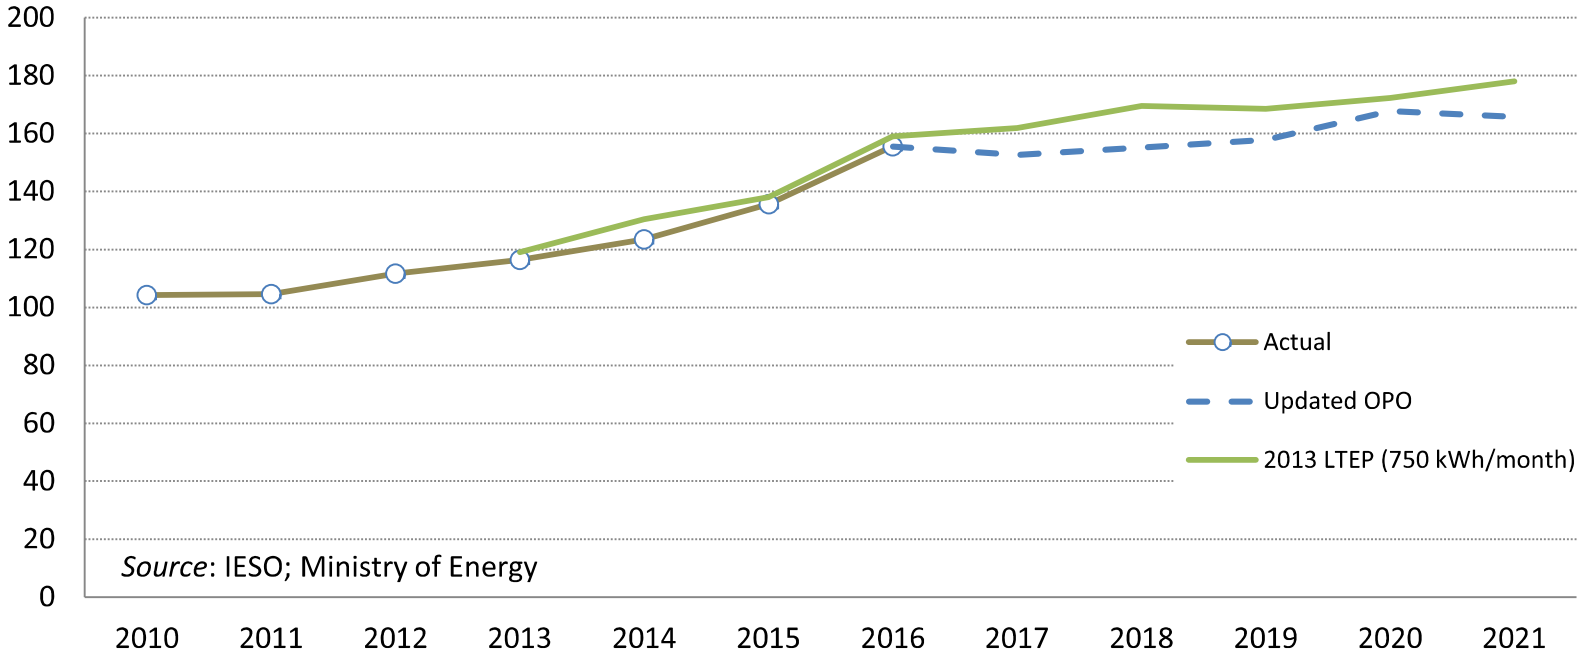
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



CONFIDENTIAL CABINET DOCUMENT

Context – Recent and Existing Government Funded Electricity Cost Mitigations

($Millions)	14-15	15-16	16-17[1]	17-18[1]	18-19[1]	19-20[1]	20-21[1]	Who Benefits
Ontario Clean Energy Benefit (OCEB) [2]	1,078	860	***OCEB ended on December 31, 2015***					• Residential customers, farms, small business (i.e., 10% off, on up to 3,000 kWh/month)
Ontario Rebate for Electricity Consumers (OREC or 8% rebate)*	-	-	300	1,100	1,200	1,200	1,200	• Residential customers, farms, small business (i.e., amount equal to the 8% Provincial portion of HST)
Ending Debt Retirement Charge (DRC) for Residential[3]	-	85	330	330	--	--	--	• Residential customers (i.e., saves about $70 per year for a typical residential consumer)
Northern Ontario Energy Credit (NOEC) [4]	24	26	25	25	25	25	25	• For eligible northern Ontario residents (i.e., for 2017, single people can receive up to $148,and families up to $227, depending on adjusted family income)
Ontario Energy and Property Tax Credit (OEPTC) (Energy component only)[4]	429	444	450	460	470	481	481	• For eligible low-to moderate-income individuals and families, & qualifying seniors (i.e., for 2017, up to $227, depending on adjusted family income)
Northern Industrial Electricity Rate Program (NIERP)	108	120	120	120	120	120	120	• Qualifying northern Ontario large industrial electricity consumers (i.e., rebate of 2cents/kilowatt-hour)
TOTAL	**1,639**	**1,535**	**1,225**	**2,035**	**1,815**	**1,826**	**1,826**	

Notes:

1. 2016-17 to 2020-21 based on forecasted numbers
2. OCEB ended December 31, 2015
3. 2015-16 estimated for 3 months of reduced DRC revenue. Estimated impact up to March 31, 2018.
4. Part of the Ontario Trillium Benefit. While related to energy generally, key policy driver for OEPTC when introduced in 2010 was electricity, as prices were forecast to rise, while fossil fuel prices, particularly natural gas, were low and falling.

* Sourced from Energy PRRT submission

Source: Ministry of Finance

CONFIDENTIAL CABINET DOCUMENT

Context – Recent Actions Taken To Mitigate Electricity Rates

- Following the 2016 Throne Speech, the several actions were announced to further reduce electricity costs.

1. As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8%.

2. Expanded support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.

3. Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

4. Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

5. Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – an average annual savings of $15 million.

Rate Mitigation Proposal

- The following approaches are proposed:

1) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
   - Smoothing Mechanism (i.e., 25% reduction); and
   - Implementation Model.

2) Enhancing competitiveness for Class B electricity consumers (i.e. manufacturing) by lowering the eligibility threshold for Industrial Conservation Initiative (ICI).

3) Helping vulnerable electricity consumers by enhancing electricity support and conservation programs and shifting cost onto the tax-base:
   - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
   - Ontario Electricity Support Program (OESP) Expansion;
   - New Affordability Fund; and
   - On-Reserve First Nations Delivery Credit.

4) Ongoing activities to bend the future cost curve of electricity:
   - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
   - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing option under consideration is illustrative and show potential rate mitigation measures to meet a targeted 25% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to Regulated Price Plan (RPP) -eligible;
  - Rate increases would be capped at Consumer Price Index (CPI) for the first four years. Subsequent years would be set above CPI in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

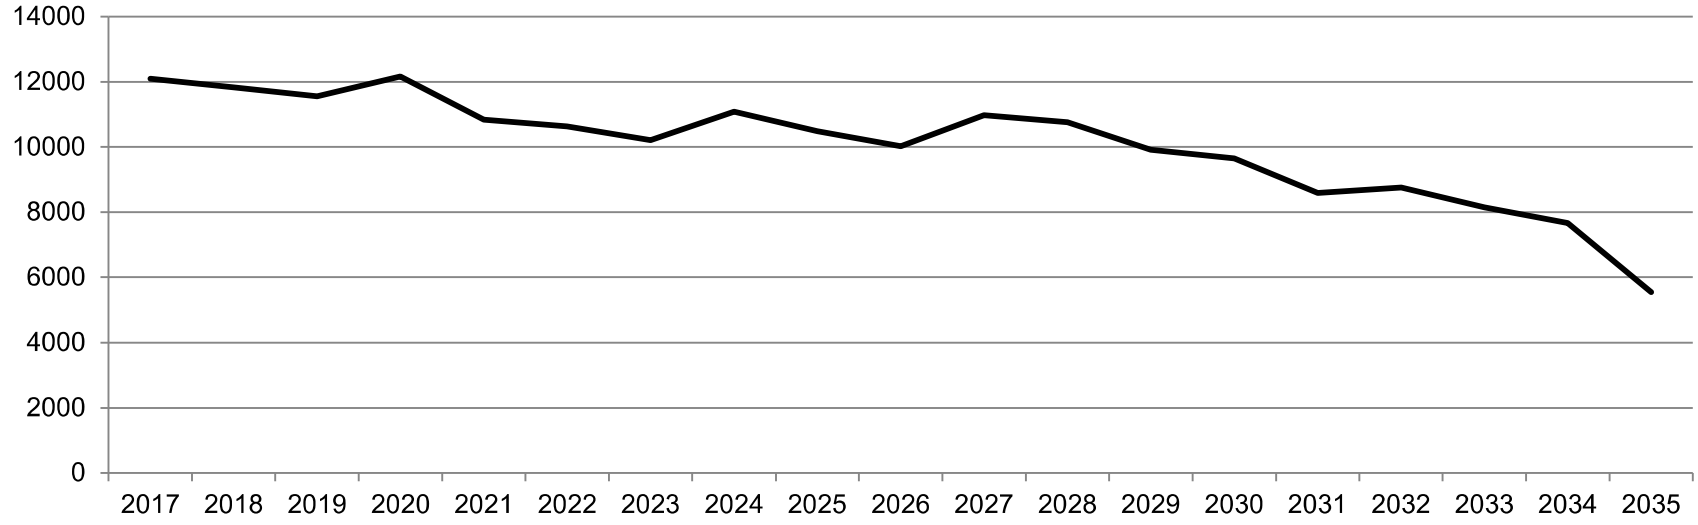
CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators**.**
**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

GA Smoothing – Global Adjustment Forecast

- The amount of Global Adjustment (GA) is forecast to decrease through the forecast period. Several factors contribute to the decline of GA, including:
  - Expiry of electricity generation contracts;
  - Cost of existing contracts reduced due to Inflation; and
  - Higher wholesale electricity prices due to higher natural gas/carbon prices, higher demand and reduced nuclear generating capacity.

Forecast Global Adjustment Cost (nominal $ million)



CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Expected Life of Electricity Generating Assets

- Gas, wind and solar generators are typically contracted for a 20-year period (e.g., with the Ontario Electricity System Operator (IESO), etc).
  - Nuclear and hydroelectric generators are contracted for a much longer period or regulated by the Ontario Energy Board (OEB) on a cost-of-service basis.
- While it is likely that gas, wind and solar generators will be able to operate beyond their current contracts, IESO advises that generators will need to decide what level of capital investment is appropriate for ongoing operations (i.e., by replacing and/or refurbishing major facility components).
  - In IESO's 2016 Ontario Planning Outlook (OPO), it was assumed that the service lives of generators could be extended beyond their contract term based on additional investments and ongoing costs. **Note:** This was not an assessment of the cost/benefits or a prediction of what the generators would actually do at the end of their contracts.
- The table below outlines IESO's current estimates for service lives of gas, wind and solar facilities. The ongoing service lives of these facilities depend on: initial facility design & build, operating activities (e.g., hours of operation, etc.) and level of facility maintenance (i.e., ongoing component repair and replacement).

Technology	Contract Life (yrs)	Expected Life (yrs)	Expected Cost Post-Contract Life
Gas	20	Up to 30	Life varies with initial design, how it is operated and maintained.
Wind	20	Up to 30	Older technologies may deteriorate faster. Elements such as foundations and electrical integration can last longer.
Solar	20	Up to 30	Performance deteriorates to about 80% by end of contract. Some facilities built in the initial contract periods may deteriorate more; however, technology is improving rapidly. Components need to replaced 5 to 30 years depending on design.

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

CONFIDENTIAL CABINET DOCUMENT

A. GA Smoothing for RPP-Eligible Only – Residential Bills Lowered 25% (with Tax-base Funded 8% Rebate and Social Programs, 2% increase)

- Total bill below is based on a revised IESO forecast. See footnotes for more information.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**158**	**164**	**167**	**170**	**181**	**178**
Total Bill (excludes HST)	140	145	148	150	160	158
Impact of GA Financing		-26	-26	-26	-32	-28
Impact of Tax-Basing Social Programs		-2	-2	-2	-3	-3
Subtotal		117	120	122	125	127
8% rebate		-9	-10	-10	-10	-10
HST		15	16	16	16	17
Revised Bill (includes HST)	**158**	**123**	**126**	**128**	**131**	**133**
Year-over-Year Change		-22%	2%	2%	2%	2%
Change from Forecast		**-25%**	**-25%**	**-25%**	**-28%**	**-25%**

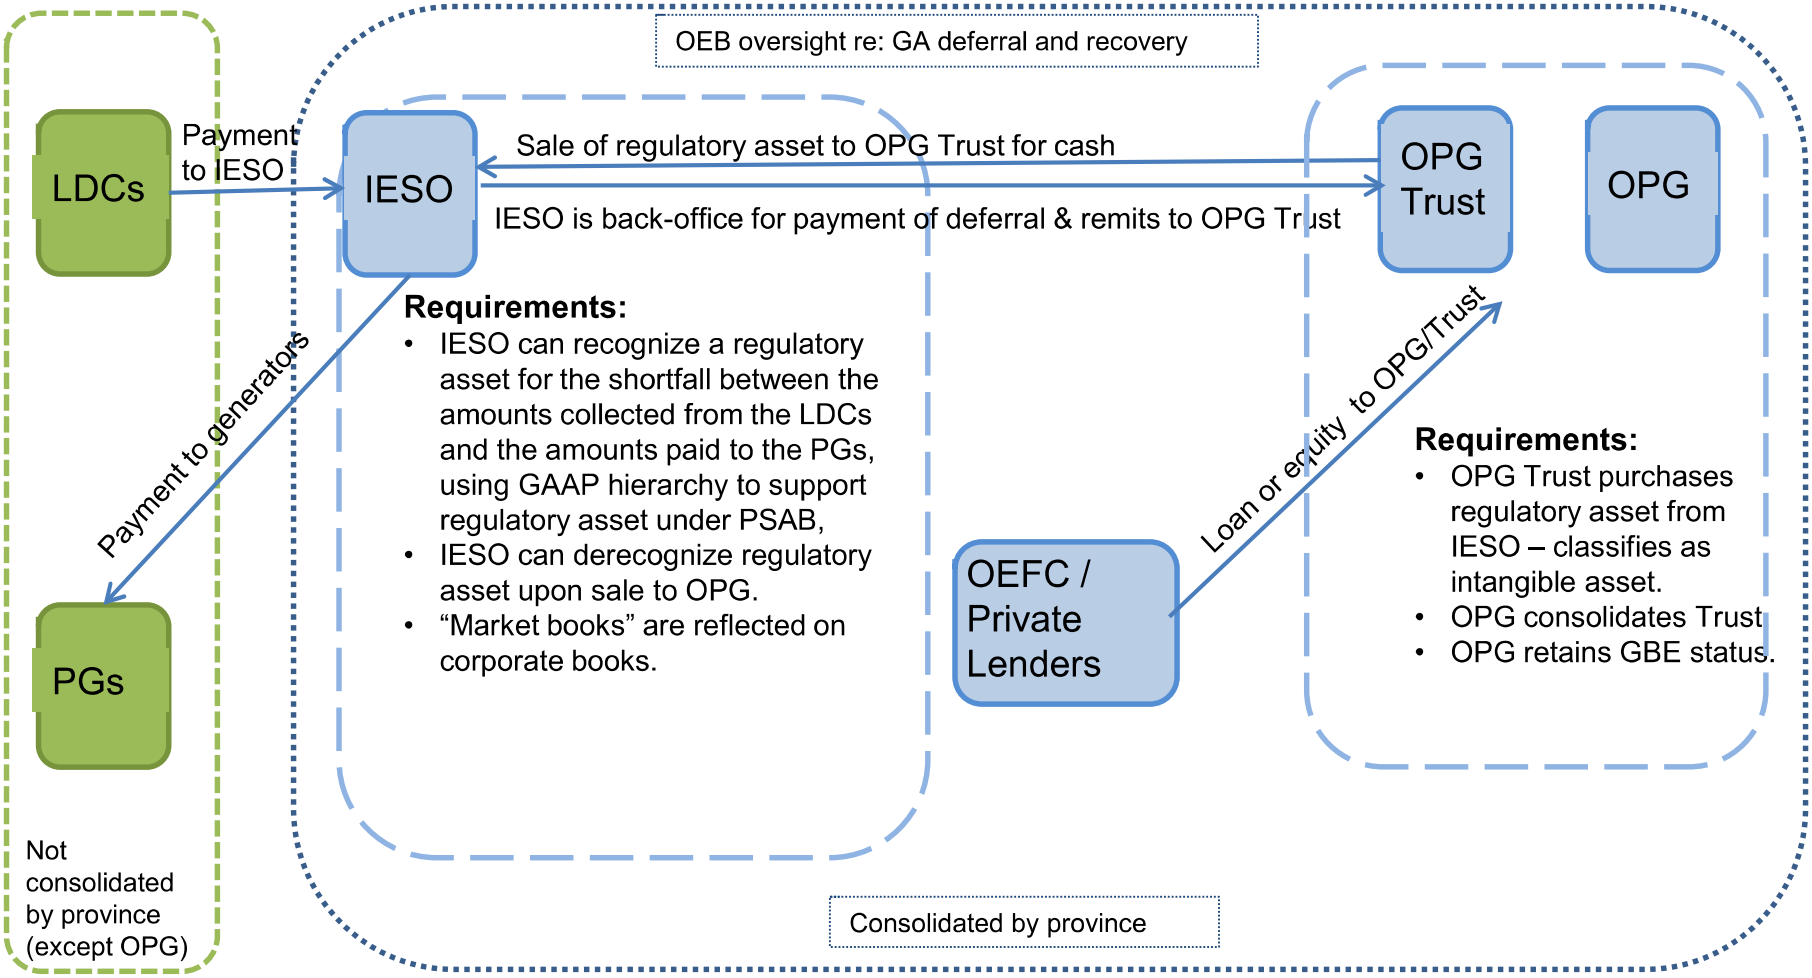
Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%
Change from Forecast		-2%	-2%	-2%	-2%	-2%

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

B. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



CONFIDENTIAL CABINET DOCUMENT

Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

B. GA Smoothing – Accounting Considerations

- OPCD advises that analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure and length of deferral/recovery increase risk and decrease transparency
- If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG will result.
- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

B. GA Smoothing – IESO Considerations

- The Electricity Act enables the Independent Electricity System Operator (IESO) to recover from ratepayers the amounts paid to generators, distributors or other contracted entities.
- The accounting advice received by IESO is that reflecting market balances and regulated assets is a more appropriate presentation for its financial statements going forward.
- IESO is characterized as an "Other Government Organization" (OGO) and consolidated on a line-by-line basis into the Provincial books.

Issue	Response
1. Can IESO adopt regulatory accounting?	• Public sector accounting does not address regulated assets. • Guidance can be drawn from other accounting bodies. • US Federal Accounting Standards Advisory Board (FASB), US Governmental Accounting Standards Board (GASB) and International Accounting Standards Board (IASB) do provide guidance. • FASB accounting standard 980 and IASB have specific references that support the adoption of regulatory accounting. **Conclusion:** There is a hierarchy of accounting principles that support this approach.

B. GA Smoothing – IESO Considerations

Issue	Response
2. Can IESO recognize the GA deferral as a regulatory variance account?	Criteria for recognition are: • Rates are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers. • Rates are designed to recover the specific costs of regulated business-type activities. • In view of demand, it is reasonable to assume that rates will be set to recover the regulated business-type and can be collected from customers. **Conclusion:** Legislation creates the right to collection, currently and in the future. With either OEB or IESO board involvement a regulatory asset can be recognized.
3. Can IESO sell the variance account related to the deferral of the annual Global Adjustment account?	• The sale of the variance account to OPG Trust must be structured as an absolute assignment of future economic benefits of the Asset with no obligations, rights or benefits remaining of IESO. • In that case, this would represent a sale of the future right to collect these amounts from the ratepayer. **Conclusion:** Based upon proposed terms of the sale agreement, there would be no future economic benefit for IESO. Risk and rewards are entirely transferred to OPG Trust.

B. GA Smoothing – OPG Accounting Considerations

- OPG's Special Purpose Vehicle (SPV)/Trust is a stand-alone entity able to conduct business separately under a Trust agreement. **Note:** The conditions required for OPG to consolidate the SPV/Trust are outlined in the following table:

Issue	Response
1. Decision Making	• OPG must have decision making authority on the operation of the SPV/Trust (without a veto right by the Province), including naming of trustees, establishing operating plans and budgets, setting or changing financing policies. • The SPV/Trust while operating within the legislation, must be controlled by OPG to operate freely and to alter terms and conditions not specified in the legislation to ensure recovery of the deferred amounts.
2. Business Risk	• The SPV/Trust must have variability of returns as a normal business enterprise would, including such things as interest charged on deferred amounts, decisions on how to finance these deferred amounts, the ability to make / lose and keep any spread from financing.
3. Funding	• The Province cannot directly or indirectly fund more than 50% of SPV/Trust or any investment in the SPV/Trust. • OPG must own at least 50% of the most exposed equity /sub-debt in the SPV/Trust.
4. Directive	• Directive that is issued should not be prescriptive or direct OPG to set up this business. The directive should only be "guiding" i.e. to allow OPG to evaluate options and put forward to the OPG Board a recommended plan for Shareholder approval.

B. GA Smoothing – OPG Accounting Considerations (cont'd)

Issue	Response
5. Other required Attributes	• The legislation that supports the formation of the SPV/Trust must have the following attributes: – Must require interest, carrying and administrative costs be paid to the Trust to allow for Revenue recognition; – The amount to be deferred must either be specified or be calculated based on a specific formula that is not subject to ongoing decision making by the Province. **The Province cannot have the ability to override this formula;** – SPV/Trust and its debt holders will require their capital guaranteed and paid for directly by the Province if the Province revokes the legislation; and – The spirit of the legislation should be reflected in the Trust Indenture Agreement.

B. GA Smoothing – OPG's Financing Structure Requirements

KEY ELEMENTS REQUIRED TO ENSURE THE DEFERRAL OF GA CHARGES CAN BE FINANCED:

Creating the Right to Recover Deferred GA

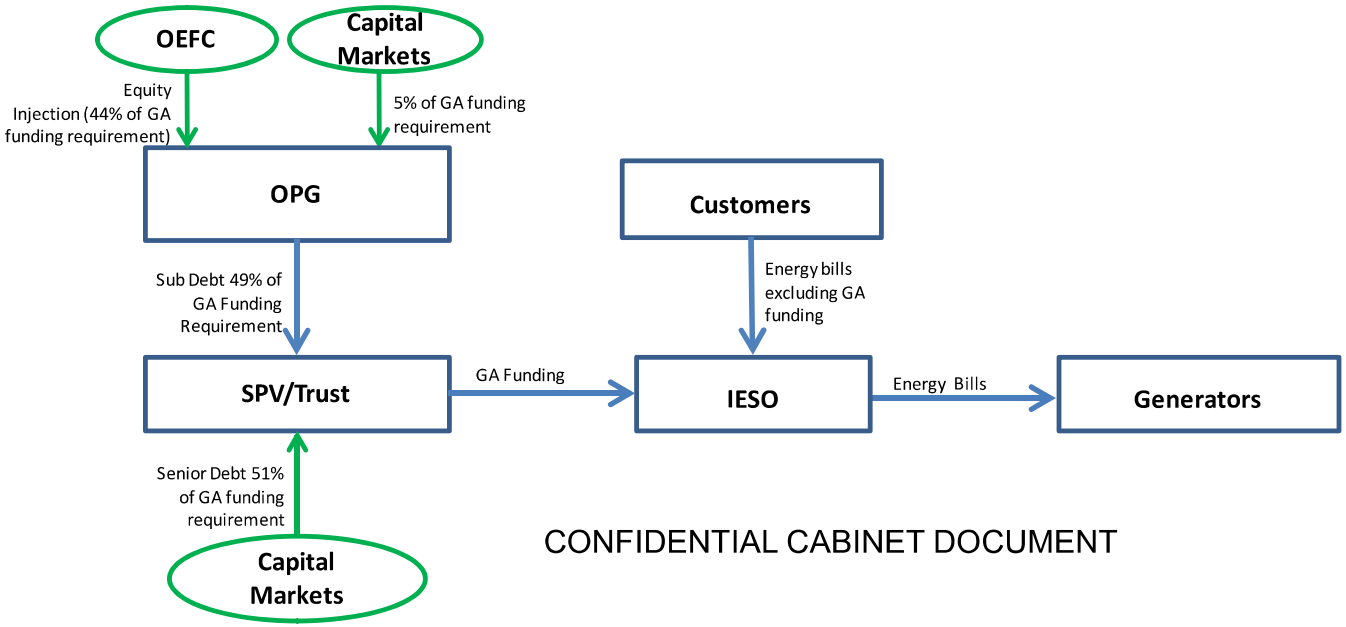
- Legislation enshrines the ability of the IESO to create a Right to charge customers in the future for the Global Adjustment (GA) deferred today including principal amount deferred, interest and other financing costs on the amount deferred and fees, expenses and other administrative costs.
- The Right can be sold to an appropriate Trust or Special Purpose Vehicle (SPV) to obtain funds to pay amounts due to generators under contracts or regulation. These SPVs are generally single purpose entities with no other operations that could add risk to the entity, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings.
- Right must be irrevocable and if the Right is amended by future governments the debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment.
- Right must specify the recovery period or the mechanism for setting the recovery rate including true up of the rate to ensure all amounts are recovered.

Economic Factors

- Limits on the recovery amount (principal, interest, fees and expenses) charged to customers in future periods must have compensating elements such as longer recovery period to ensure the full amount deferred plus interest, financing and other administration costs is recovered from customers.
- Need to balance customer relief with debt holder risk. Longer recovery periods and larger deferred balances increase risk to the debt holder of future government intervention.
- The amount required by the SPV to purchase and service the Right will be funded 51% from debt holders, 5% from OPG through capital markets and 44% from OPG via equity injection to OPG from the Province. The funding from OPG will be loaned to the SPV as subordinated debt.

B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.



CONFIDENTIAL CABINET DOCUMENT

Ontario

GA Smoothing – OEB Considerations

- Ontario Energy Board (OEB) oversight may be required as part of creating a regulatory asset.
- Subject to final confirmation, there are several other spheres for possible OEB oversight:
  - The rate payer impact of IESO deferral account and eventual repayment of the deferred Global Adjustment (GA), within pre-defined legislative parameters;
  - The administrative costs of the OPG's Special Purpose Vehicle (SPV) /Trust (e.g., as the OEB reviews and approves IESO's expenditure and revenue requirements and makes orders fixing just and reasonable rates for the Smart Metering Entity);
  - The SPV/Trust's returns (e.g., as the OEB does with OPG's regulated assets) and whether any income to OPG can be used for the benefit of rate payers;
  - The review of the final structure of the debt issuance for the limited purpose of ensuring requirements of law have been met; and
  - In out years, review of the collection of charges to ensure that collection is sufficient, and not greater than necessary, to pay debt service.
- The scope of OEB oversight will ultimately need to balance the interests and needs of rate payers, the market, OPG and the Province.

B. GA Smoothing – Ontario Financing Authority (OFA) Considerations

- Under the proposed structure, the financing of the deferred Global Adjustment (GA) costs would be effectively done in part by each of the OPG Special Purpose Vehicle (SPV)/Trust, the Province and OPG: the OPG SPV/Trust would borrow 51%, the Province 44% and OPG 5% of the required GA amounts needed to be financed.
  - In the alternative, the Province (through the OFA/OEFC) could borrow the required amounts each year, likely at a lower cost. However, the target for an arms-length trust and potential risk transfer would not be achieved.

	OPG Structured Financing	OFA/OEFC/Provincial Financing
Financing Considerations	• As the OPG SPV/Trust would be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • This would increase the cost of GA smoothing and the ultimate rate impact on future consumers. • The Trust would be exposed to interest rate changes. • Availability of debt financing may also be limited, depending on the overall amount of deferral, and the subsequent rate impact during the recovery period. OPG has cited examples of a 10% threshold on overall rate impacts of the deferral recovery amounts. • With a potential guarantee from the Province for the borrowing of the OPG SPV/Trust, OPG could see borrowing costs closer to the Province. However, this would redirect the risk back to the Province, removing the intended benefits of using this particular structure, and could add risk to the targeted accounting treatment. • With, or potentially even without a provincial guarantee, OPG SPV/Trust's borrowing could be seen as debt effectively supported by the Province by credit rating agencies and included in their analysis and determination of the Province's ratings. • If a Provincial guarantee endangers the targeted accounting treatment, it may be hard to justify the higher cost borrowing by OPG SPV/Trust to be passed through to ratepayers.	• Province's borrowing from the public markets would add to the borrowing program and the Province's gross debt. • The Province would expect to be able to finance the GA deferral at a lower financing cost than the OPG SPV/Trust, but would likely not achieve the targeted accounting treatment based on OPG's analysis. • Net debt would not increase, to the extent supported by increased equity in OPG under that model, and/or if the accounting treatment can be achieved as backed by a GA-related asset (OPG does not consider that the accounting can be achieved if the SPV/Trust is financed by the Province). • The Province's interest on debt (IOD)cost would need to be effectively recovered through the GA. – E.g., an OPG equity return to cover the cost of borrowing for the equity injection. – Or more directly if the Province is providing financing directly to the GA entity. • The cost of borrowing for the Province could change: 1. The Province's credit rating could be at risk of being re-evaluated by Rating Agencies, which may negatively impact the cost at which the Province borrows and 2. An increase in the Province`s borrowing rates, as a result of increased borrowing. The market may not have adequate demand for the Province to carry-out these borrowings without increasing the interest rate on the debt issues for GA financing and for all of the Province's borrowings. • The interest cost of GA deferral would be exposed to changes in the interest rate environment generally.

GA Smoothing – Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
  - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
  - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
  - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
  - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- Although Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA smoothing (i.e., because it is only targeted to RPP consumers), the Ministry has a proposal later in the submission to address competitiveness for Class B consumers (i.e., targeted lowering of the Industrial Conservation Initiative (ICI) eligibility thresholder from 1 MW to 500 kW).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - **Note:** Although Class B and Class A consumers will not receive the rate relief benefits of GA smoothing, both consumers will benefit from tax-basing the electricity social programs.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

- The GA smoothing proposal will accrue total interest of $25 billion based on the proposed option. This amount of interest is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.
  - An increase in the borrowing rate from 5% to 6% would increase the total interest costs by almost $9 billion and would require an extension of the financing term beyond 30 years.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there would be a negative impact on the province's fiscal plan, as shown below.

Fiscal Impact ($M)	2017-18	2018-19	2019-20	2020-21	2021-22
Bills Lowered by 25%, RPP-Eligible Only*	2,534	2,668	2,942	3,420	3,232

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

Source: Ministry of Energy

ENHANCING COMPETITIVENESS FOR CLASS B ELECTRICITY CONSUMERS

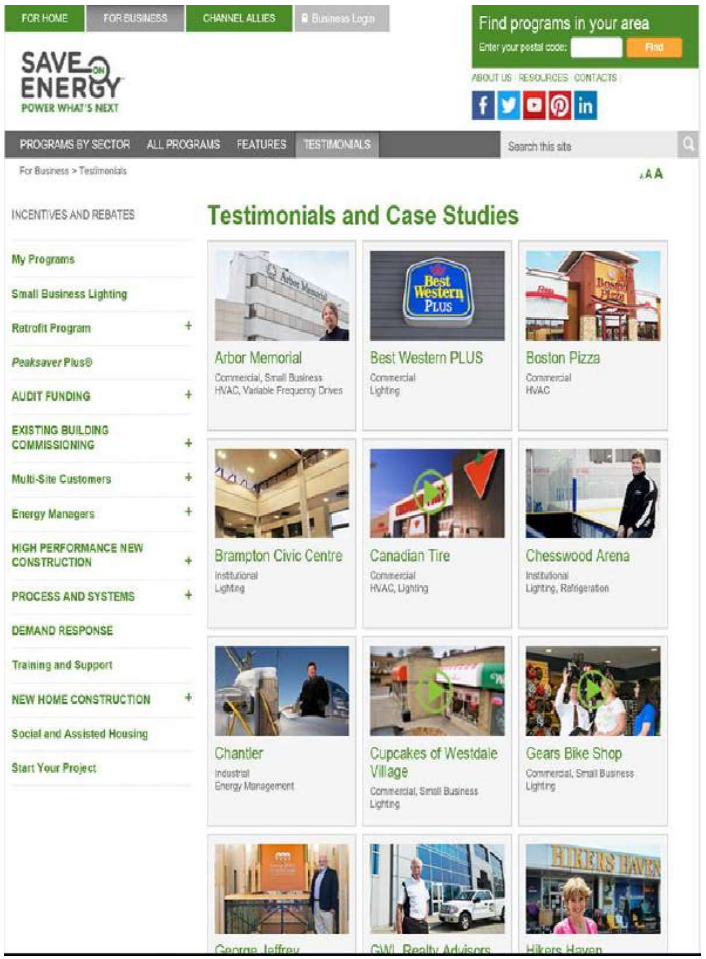
Support for Class B Consumers

- Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

- Through saveONenergy, many Class B consumers have already taken advantage of energy efficiency programs.

  - Although saveONenergy programs like Process and Systems Upgrade Incentive exist, these programs generally require significant investment on behalf of the customer in addition to the incentives and therefore may be difficult to take advantage of.

  - For Class B manufacturers whose electricity consumption is primarily based on process activities (e.g., injection moulding, welding, etc), traditional conservation measures like lighting and ventilation upgrades have limited benefit.



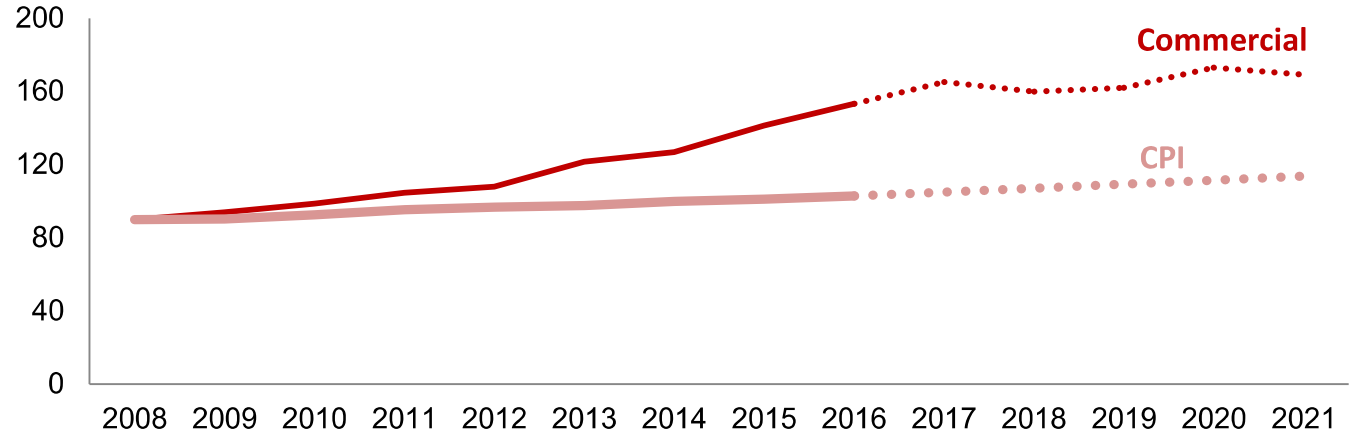
Support for Class B Consumers (cont'd)

- Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers).

- Price mitigation initiatives could be provided to Class B to address stakeholders' concerns (e.g., Coalition of Concerned Manufacturers of Ontario, etc).

- The chart below highlights that the cost of electricity for Class B consumers has risen faster than CPI.

Illustrative Electricity Prices
in $/MWh



***Source*:** IESO; OEB; Ministry of Energy

CONFIDENTIAL CABINET DOCUMENT

Lower ICI Threshold Below 1 MW for Energy Intensive Industry

- The Industrial Conservation Initiative's (ICI) eligibility threshold for participation was recently lowered to 1 MW. The lowering of the ICI eligibility threshold provides an opportunity for additional Class B consumers to save on their electricity costs if they choose to opt-in to ICI (i.e., and become new Class A consumers):
  - Beginning in July 2017, new participants will be billed Global Adjustment (GA) on the basis of their contribution to province-wide peak demand.
  - Prior to lowering the ICI eligibility threshold, electricity consumers with peak demand between 3 and 5 MW could only participate in ICI if they belonged to the following sectors: manufacturing, mining, data processing, refrigerated warehousing and greenhouses. **Note:** To achieve the benefits of ICI, participants must reduce their electricity demand during the five system peak hours.

- To enhance the competitiveness of larger Class B consumers whose electricity demand are too low to currently qualify for ICI, the Ministry proposed to:
  1. Expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts; and
  2. Target the expansion to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing).

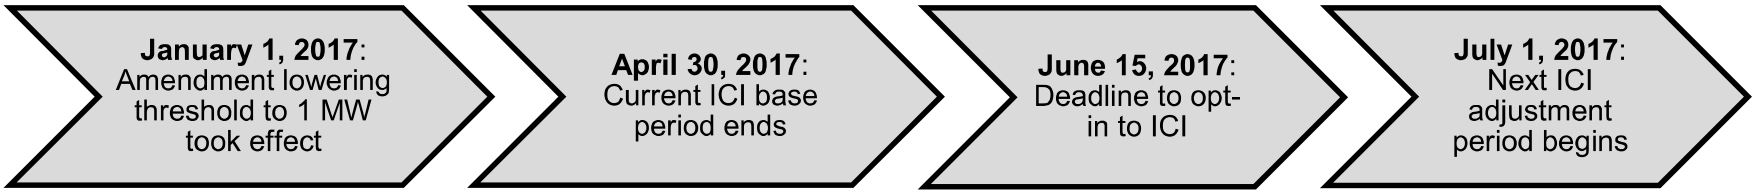
- In addition, the Ministry will assist Class B participation in ICI through a targeted outreach campaign delivered by the Ontario Chamber of Commerce (OCC).

Lower ICI Threshold Below 1 MW – Considerations

- A targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW provides benefit to larger Class B consumers (i.e., manufacturing) while limiting the cost shift to other electricity consumers.
  - **Note:** A Class B consumer that run only a day shift, resulting in fairly peaky load profiles would need to adjusted its behaviour to maximize the benefits of ICI.

- Preliminary analysis by ENERGY staff show that the estimated impact of a targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW would increase a typical residential bill by up to 0.66% or just over $1/month based on a 2016 bill of about $158.
  - The actual impact would vary depending on uptake and consumer responsiveness.
  - With the recent lowering of the ICI eligibility threshold to 1 MW, there is no information available regarding the actual impact on new participants and the electricity system.

- In order for any changes to ICI eligibility to take effect before the next 12-month billing period beginning July 1, 2017, regulatory amendments would have to be made before the end of April 2017.



Lower ICI Threshold Below 1 MW – Legal Considerations

- The quantum of a regulatory charge may be set at different rates within a regulatory structure where the differential prices are intended to serve other regulatory goals including an intention to modify the behavior of persons within the scheme.

- Expanding access to the Class A pricing regime is intended to serve regulatory goals by encouraging consumers to shift their electricity use away from peak hours, which benefits the electricity system as a whole. While Class B consumers will have to pay more of the GA cost in order to finance the reduction for Class A consumers, this is generally permissible since Class B consumers are not modifying their behaviour and the total amount recovered for the GA does not exceed its cost. CLB has previously advised that the differential pricing structure generally only attracts a **moderately low risk** of being a tax, and this risk level does not change if the option of Class A pricing is extended to a broader class of consumers.

- It is more difficult to justify a differential regulatory charge on the basis of behavioral modification when the lower charge is not available to some participants in the regulatory scheme whose conduct could equally serve the same goals. To the extent that there is not a regulatory rationale for extending the new class A option only to certain sectors, risk increases. The amount of risk in this scenario will vary depending on the quantum of the premium that Class B consumers pay to create the behavior modification incentive for Class A and the degree to which the excluded sectors can credibly claim to be able to achieve the same outcome were they permitted to participate in this aspect of the program.

ELECTRICITY SUPPORT AND CONSERVATION PROGRAMS TO HELP VULNERABLE ELECTRICITY CONSUMERS

Electricity Support and Conservation Programs to Help Vulnerable Electricity Consumers

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to deliver electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  A. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  B. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  C. **Establish a new Affordability Fund**, providing energy efficiency measures at no or minimal cost to those who are ineligible for low-income conservation programs, have difficulty paying their electricity bills and who cannot make energy efficiency upgrades without financial assistance.

  D. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

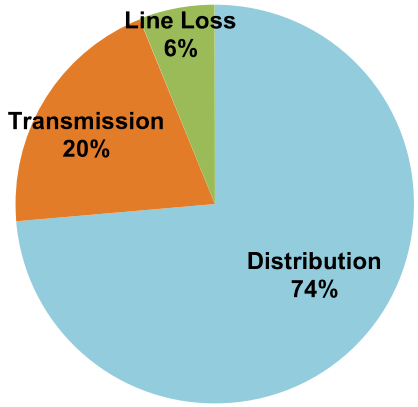
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

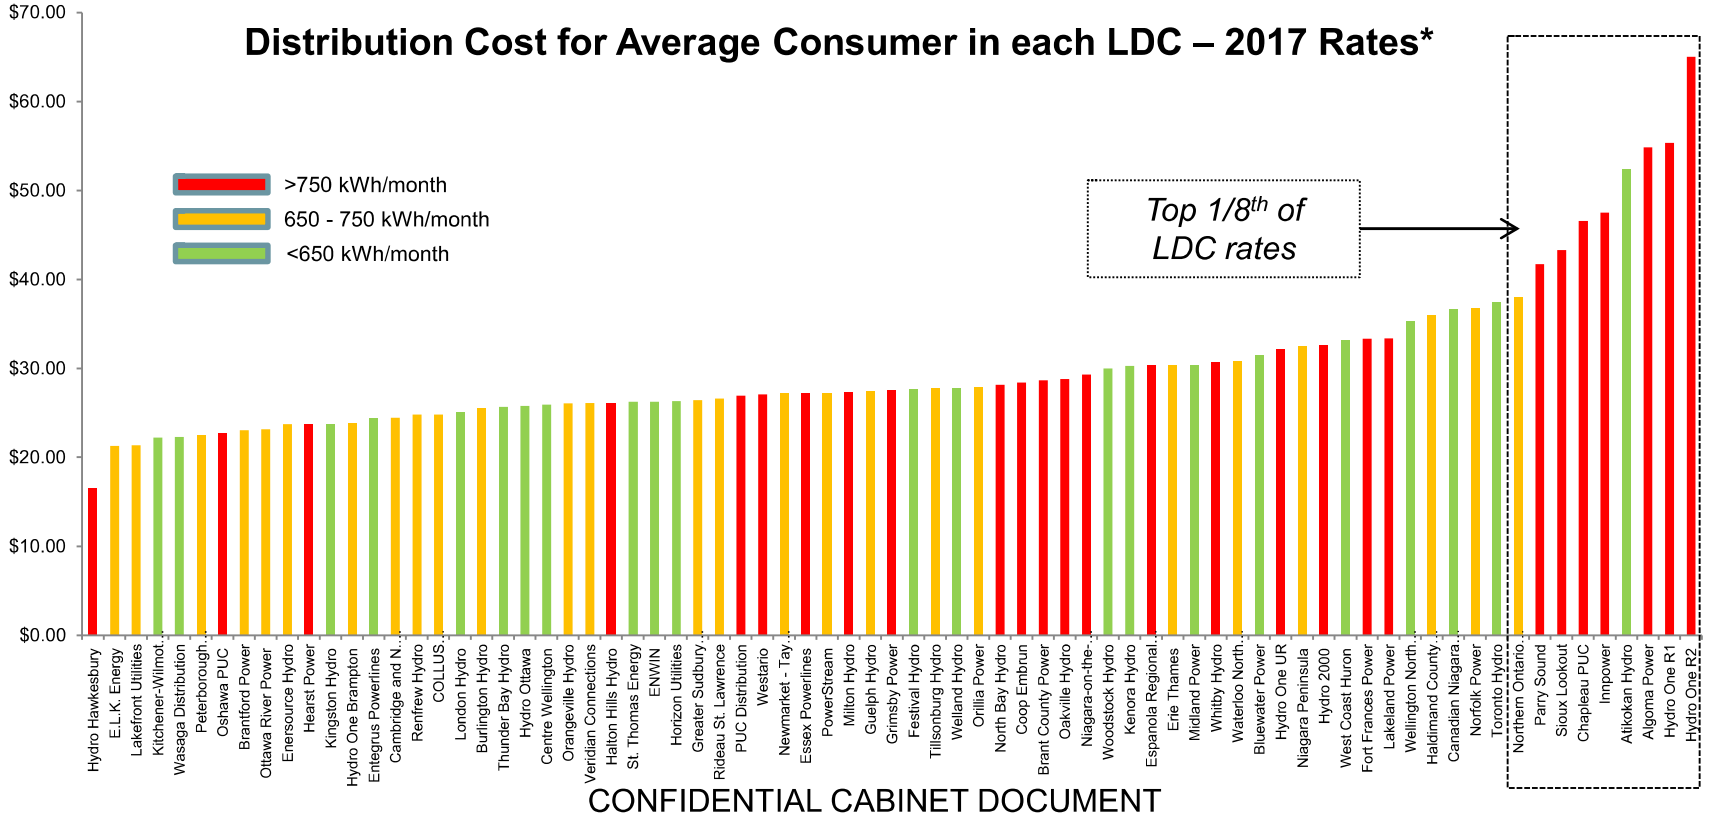
- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario and funded through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - Roughly 800,000 customers would receive benefits from the current RRRP program and from these additional enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.

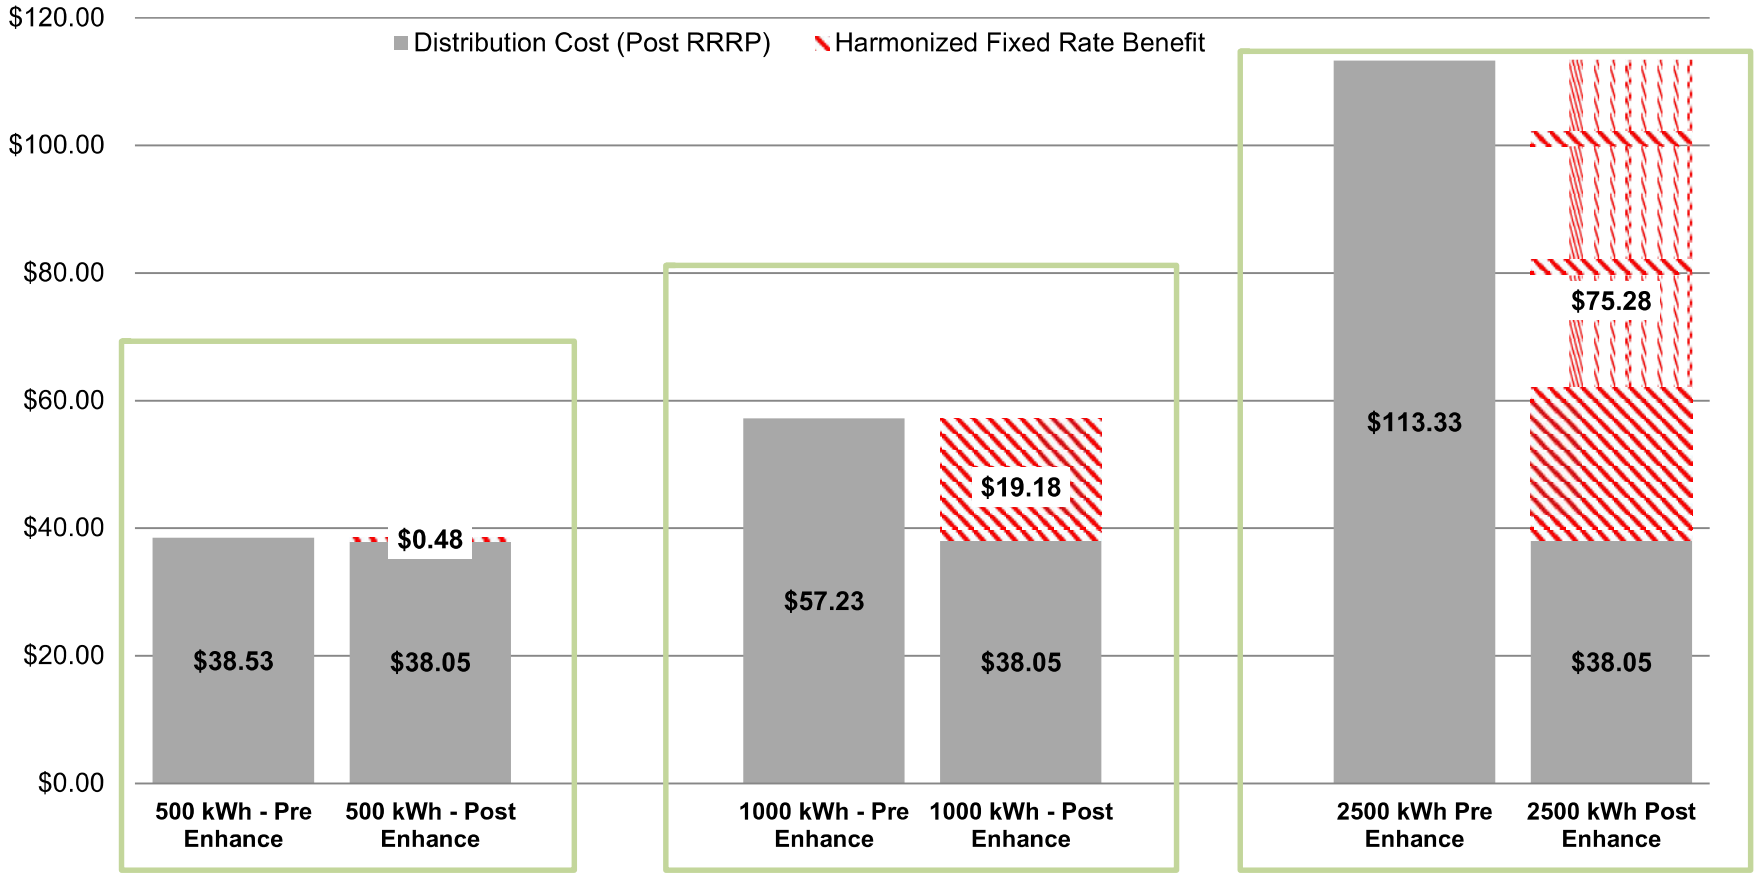


CONFIDENTIAL CABINET DOCUMENT

**2017 Approved and Proposed (Decisions Pending – rates are subject to change).*

A. Harmonized Distribution Cost – Ratepayer Impact (Hydro One R2)

- For Hydro One R2 customers, the enhanced benefits below are in addition to the $60.50 they already receive through the existing RRRP.



Note: *Rates are for 2017 (either approved or proposed). Distribution is one component of Delivery line charge. Transmission and line loss charges not shown.*

CONFIDENTIAL CABINET DOCUMENT

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

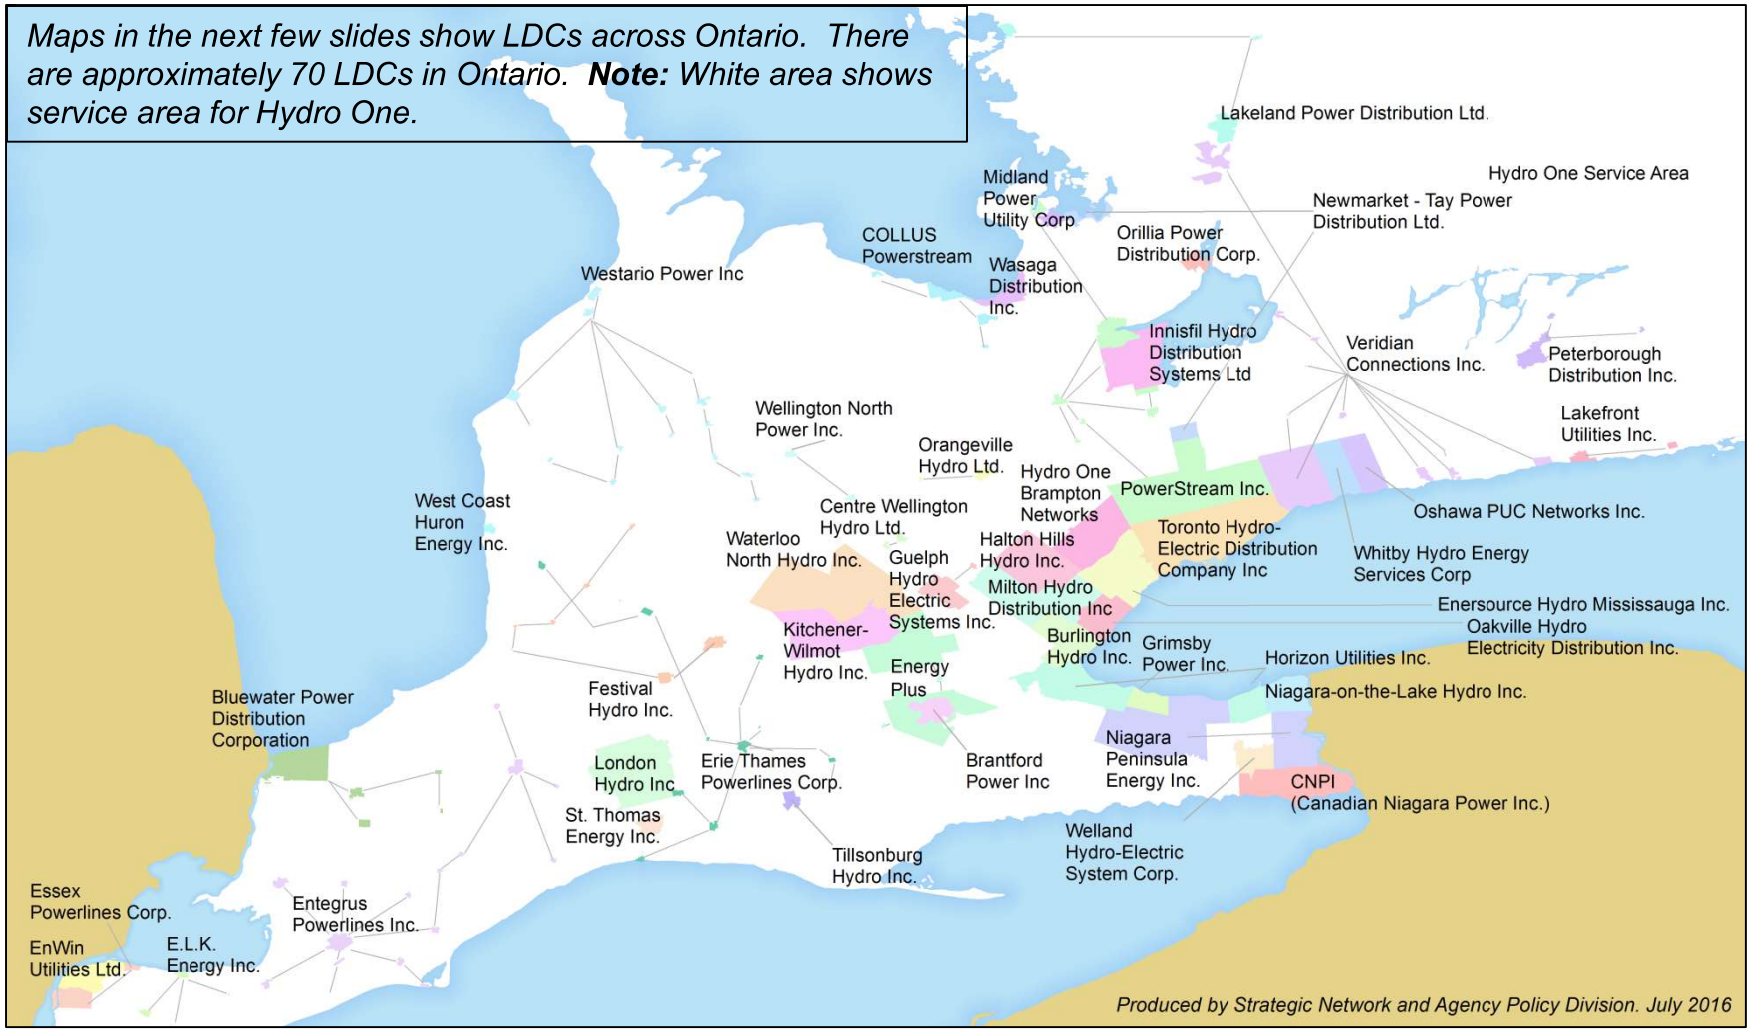
- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board (OEB).

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136
2016 Speech from the Throne Enhancements to R2 Customers	-	117	120	123	127
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234
TOTAL	-	**459**	**472**	**484**	**497**

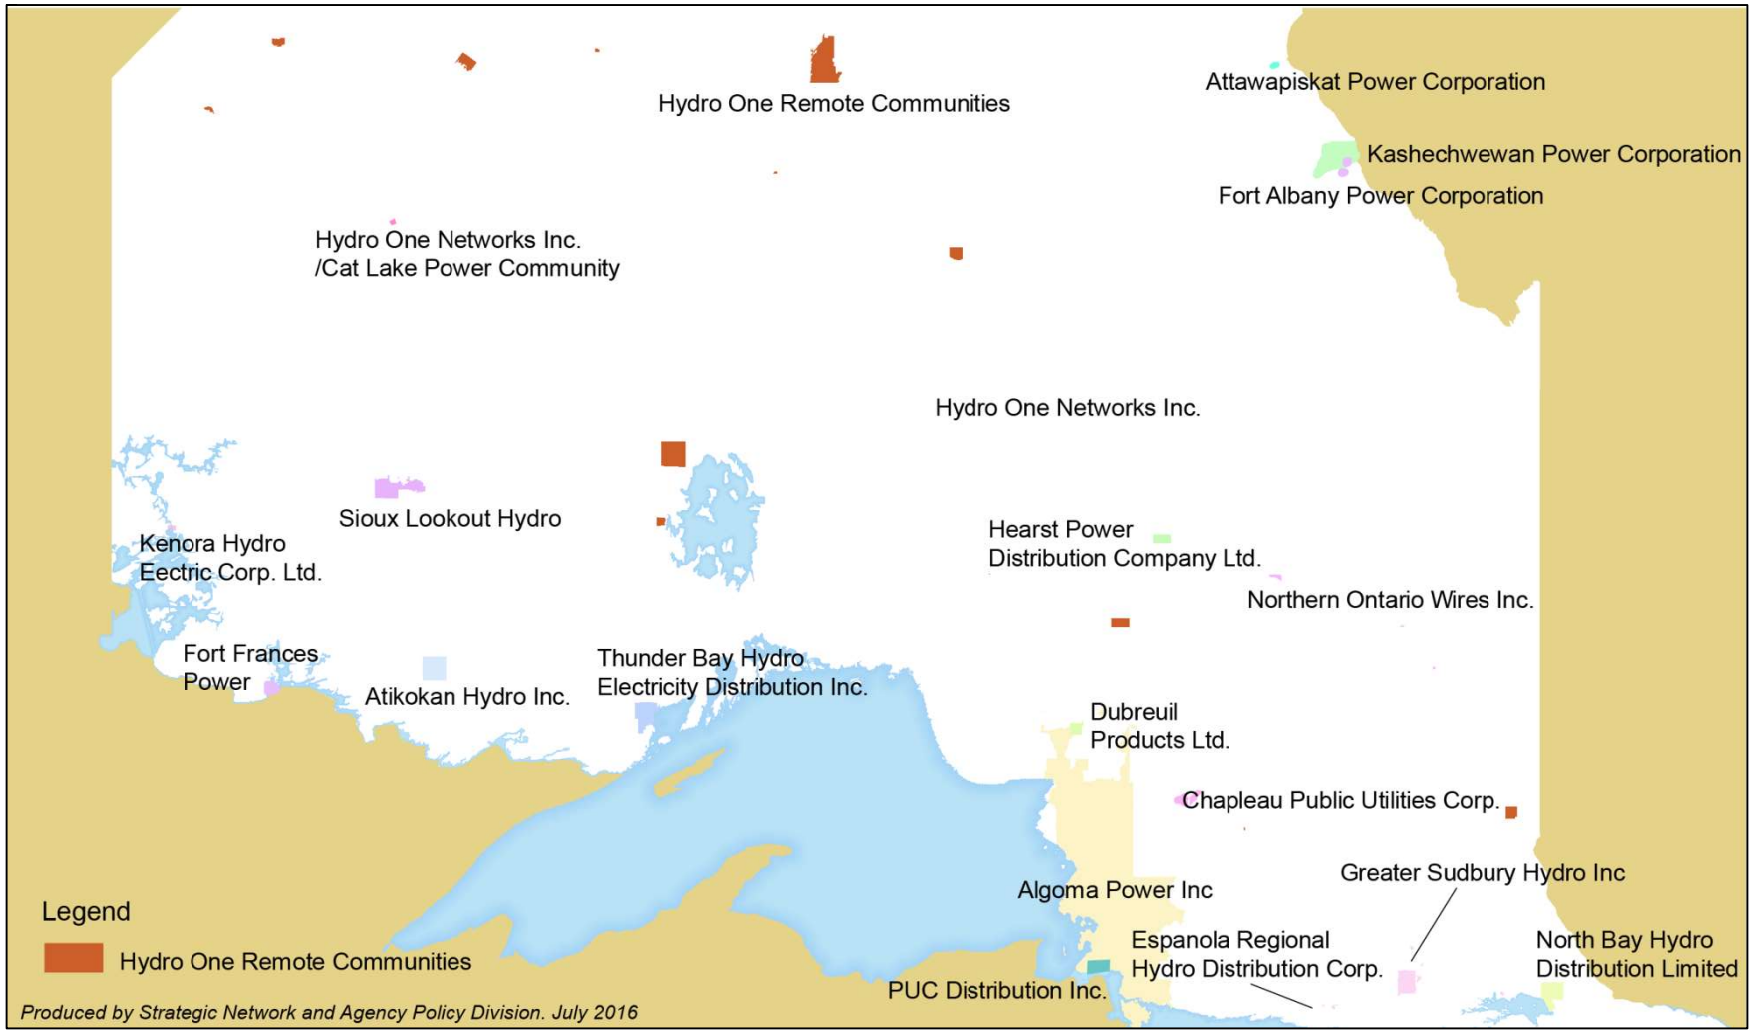
Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.

A. RRRP Enhancement – LDC Service Territory (Southwestern Ontario)

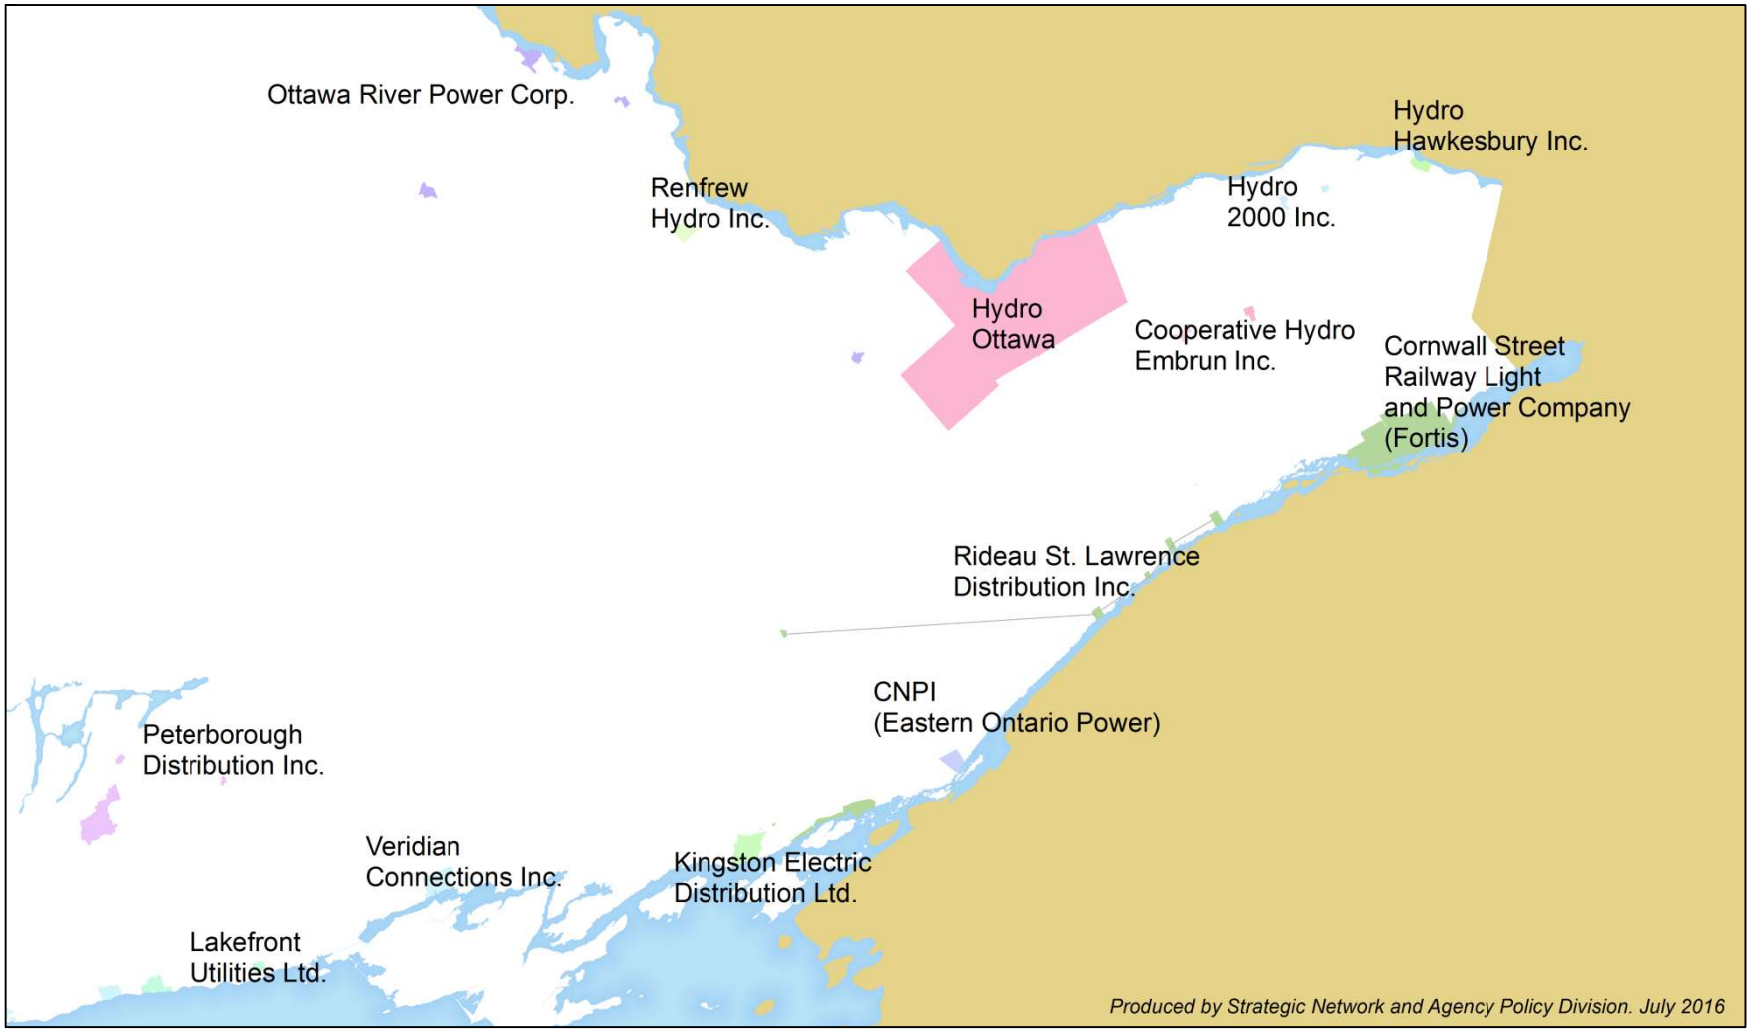
Maps in the next few slides show LDCs across Ontario. There are approximately 70 LDCs in Ontario. ***Note:*** *White area shows service area for Hydro One.*



A. RRRP Enhancement – LDC Service Territory (Northern Ontario)



A. RRRP Enhancement – LDC Service Territory (Eastern Ontario)



B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP credits vary by income level and family size, and there are two credit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in credits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced:
  - Streamline the OESP process to drive participation toward 100%:
    - ENERGY and the Ministry of Community and Social Services (MCSS) have been working on automatic OESP qualification for Ontario Works (OW) and Ontario's Disability Support Program (ODSP) recipients who pay electricity bills.
      - MCSS estimates some 110,000 OW and ODSP recipients pay electricity bills;
      - This process could follow the "deemed eligibility" model used for the Healthy Smiles program. Using an existing model should simplify the implementation process.
      - The qualification process may have to be done manually at first, with a more automated IT solution in the longer-term.
    - Working with the CRA to make the application process easier / quicker to get through by finding an alternative to the requirement to mail-in signed consent forms;
    - Putting in place a more aggressive communications strategy and application intake clinics across the Province to increase awareness of/enrollment in the OESP.
  - Increasing the existing OESP credit scales by an additional 50%; and
  - Expanding the categories of OESP credits.

- It is also recommended that the OESP be supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes):

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

C. Establishing a New Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as “low-income” but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000* residential electricity accounts in arrears; of these about 19,900** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.

* **Note:** Unverified numbers reported by LDCs to the OEB
** **Note:** Low-income customers identified through participation in LEAP

Ontario

C. Establishing a New Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who cannot qualify for low-income conservation programs and are in need, such as those who are facing disconnection.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the principles of the Fund and is working with Hydro One to set up an independent Trust to serve as the Fund Administrator.
  - The Fund Administrator would manage the flow of funds to LDCs based on principles set by the province, and be responsible for establishing processes, administration, and criteria for funding applications, thereby ensuring the program is managed on a consistent basis across the province.
  - LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers in their service territories that meet the targeted eligibility criteria.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

C. Establishing a New Affordability Fund (cont'd)

<u>Implementation</u> (cont'd)

- Recipients could receive measures ranging from an average of $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
  - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
  - Programmable thermostats, weather stripping, insulation (in homes with electric heating).

- Cold climate air source heat pumps would also be an eligible measure under the Affordability Fund. Heat pumps range in cost from $7,000 to $13,000.

- As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New Affordability Fund – Considerations

Considerations

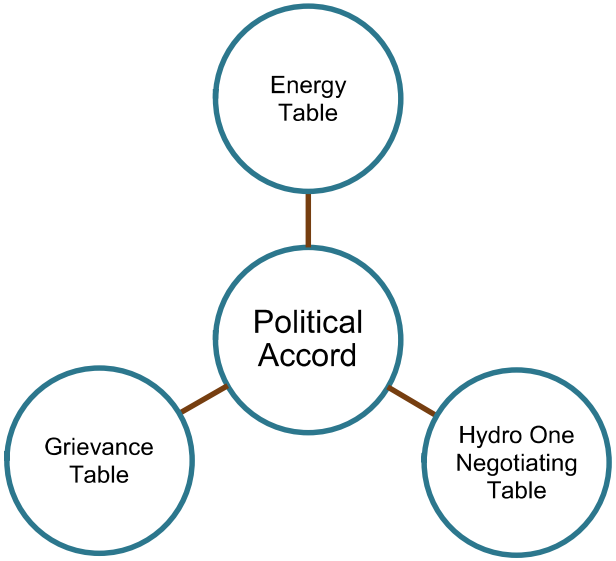
- The Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to seek input from the OEB, LDCs and potentially low income organizations to help develop funding allocation and eligibility principles for the Trust.
- While eligibility principles will be established, LDCs will need a degree of flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with Hydro One and transfer money before end of fiscal year to ensure Hydro One can establish the Trust and the Trust can begin operation as the Fund Administrator.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal. The proposal has an ameliorative purpose as it targets First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities, that affect electricity affordability.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Fiscal Roll-Up

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements*	-	459	472	484	497
Ontario Electricity Support Program, including the 50% Enhancement & New Matrix Categories	-	186	261	325	375
On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.
****Note:** Funding for the Affordability Fund is one-time in 2016/17.

BENDING THE FUTURE COST CURVE OF ELECTRICITY

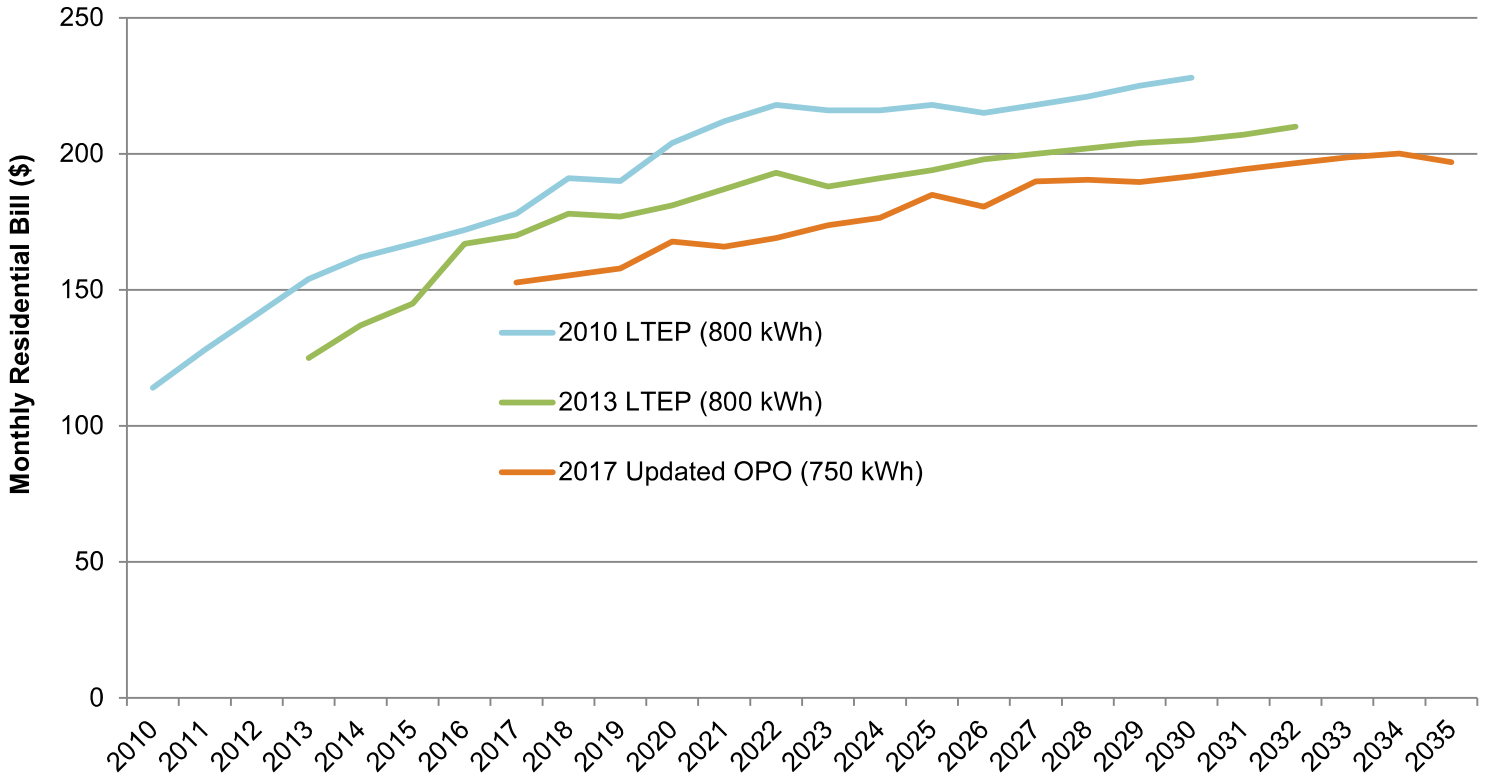
Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.
  - Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – up to [$xx] cost savings.

CONFIDENTIAL CABINET DOCUMENT

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of February 2017) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

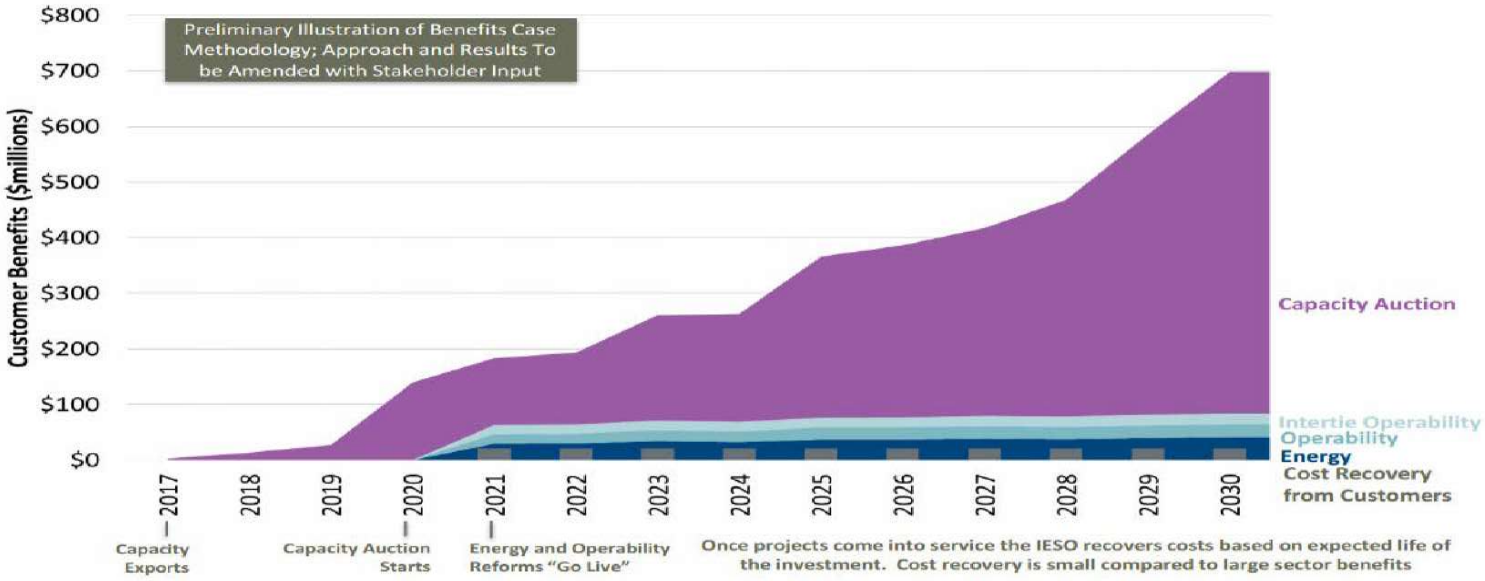
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



CONFIDENTIAL CABINET DOCUMENT

SUPPORT FOR TENANTS

Support for Tenants – Context

- The government is considering measures to provide relief from high electricity prices, and is interested in ensuring that tenants also receive electricity cost reductions and/or relief.

- Currently, tenants generally either pay for their own electricity use through suite meters (i.e., sub-meters or direct arrangements with hydro providers) or pay for electricity indirectly as a service included in their rent:
  - Tenants who pay for their own electricity will receive electricity costs savings directly through their bills; and
  - Low-income tenants who pay own electricity bills can access energy support programs such as the Ontario Electricity Support Program administered by the Ontario Energy Board (OEB).

- Any potential initiatives could focus on the following options:

For tenants who pay own electricity bills

1. Expand OESP to increase relief or raise income thresholds.

For tenants whose electricity is included in rent

2. Require that landlords pass savings on to tenants (could be addressed by MHO through RTA amendments).
   - Options could include requiring landlords to automatically reduce rents, or allow tenants to apply the Landlord and Tenant Board for relief.
3. Provide energy rebates directly to tenants whose rent includes electricity.

Support for Tenants – Potential RTA Hydro Relief Measures / Considerations

- RTA amendments with respect to tenant relief, remedies, and enforcement would be complex, and unable to provide immediate, direct and transparent cost remedies to tenants:
  - Impact of hydro relief measures and electricity cost savings for landlords may vary depending on size of rental building and location (urban/rural):
    - One size fits all approaches would not match actual landlord savings to direct tenant relief; and
    - More targeted approaches would add extreme complexity, leading to greater confusion for landlords and tenants, and difficulty administering enforcement.
  - Passing on actual savings could likely only be done after landlords have experienced decreased costs for a period of time (i.e. one year).
  - Difficulty in informing landlords of their responsibilities and enforcing reductions; would likely have significant resource implications for the Landlord & Tenant Board/Ministry of Attorney General.
  - Difficult for tenants to understand, with the most vulnerable tenants potentially less able to pursue remedies through the LTB.
- The kinds of potential RTA remedies would depend on various specifics regarding the way in which relief was being provided to landlords including whether:
  - The actual electricity cost savings for landlords are transparent to facilitate easy calculation of rent reductions or relief;
  - Hydro relief measures are permanent or temporary; and
  - All relief should be passed on to tenants, or just a portion of the relief (e.g., global adjustment fund, 8% rebate, any other relief).

Support for Tenants – Potential RTA Hydro Relief Measures / Other Considerations (cont'd)

- As part of Climate Change Action Plan, MHO has been directed to mitigate the impact of carbon costs on tenants, and is proposing to prevent landlords from charging above-guideline rent increases for extraordinary utility costs increases.
  - May seem unfair that landlords are required to reduce rents or provide relief when utility costs decrease but cannot increase rents when utility costs increase.
- Relief would be limited to certain segments of tenant population:
  - Post-1991 buildings are exempt from the Rent Increase Guideline and landlords could negate any savings to tenants in these buildings through a higher subsequent rent increase.
    - Over 19% of tenant households are estimated to live in post-1991 private rental units including individually rented condos; a high proportion may already pay for electricity separately.
  - Relief may not be required for social housing tenants:
    - Most social housing tenants (80%) pay as per utility scales, which covers electricity usage other than electric heat; and
    - Utility scales were last updated in 2000 and are reflective electricity prices at that time.
- MHO, working with ENERGY and MAG will report back in Spring 2017 with options for electricity rate mitigation for tenants.

Legislative Authority – Considerations

GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The OPG Trust will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the OPG's SPV/Trust and settle accounts with the OPG Trust as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the SPV/Trust to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the SPV/Trust (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Class B

- **Targeted Lowering ICI Threshold Below 1 MW (to 500kW):** Regulatory amendments (O.Reg. 429/04) will be required to address program details.

Legislative Authority – Considerations (cont'd)

Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **Affordability Fund:** In order to implement new affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement and Technical Briefing
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

Thanks Adam

One of the list of 14 in the white paper. This was one of the conditions required for OPG to consolidate the Trust

1. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    a. The Trust
    b. Any of OPG's investments in the Trust
    c. The most subordinated debt of the Trust

Could you remind me. The condition in the third from bottom bullet. Where did that come from?

On Apr 26, 2017, at 6:56 PM, Adam Prokop <Adam.Prokop@ofina.on.ca> wrote:

> Hello all,
>
> Here are some of my points

- Equity could affect OPG's GBE status if it is effectively seen as an interest-free loan; if the return from the structure does not justify an equity position. Otherwise, the Province could continue to inject equity into OPG in perpetuity for no reason. The fact that the Province is the sole shareholder strengthens this point. OPG could be seen as reliant on this funding for operations.
- The rating agencies would need to be brought into the discussion - would have to see what cash return from the structure would limit the impact on some ratios; the fact that the capital markets debt will be in a SPV means that portion is bankruptcy remote and may not factor into calculations.
- OPG is at currently at approximately 65% equity, 35% debt while the deemed structure is 45% equity and 55% debt. OPG does have the capacity to take on more debt within the deemed structure. Furthermore, if the structure is separate from the rate regulation process, the deemed structure is not as relevant.
- The related GBE status factor is if OPG can maintain operations and meet their obligations through revenues generated outside of the Province. As long as the debt issued from the Province to OPG is at the market rate, and the revenue from the structure is reasonably expected to cover expenses, the GBE status may not be threatened.
    - There is no minimal credit rating or minimum debt to equity ratio to retain GBE status.
- The markets could also take on more than 51% of the debt from the SPV (51% is minimum).
- There is also the consideration for if the Province issued debt directly to the SPV (i.e., buying securities from the SPV directly rather than going through OPG).
    - Nothing in the 14 conditions prevents this.
    - Need to confirm with OPG auditors.
- The relevant condition is that the Province cannot indirectly (i.e., through OPG) or directly (i.e., to the SPV) finance more than 44% of the structure, either through equity or debt.
- Preferred shares with cumulative dividends if not paid and over a 10 year term would likely get a 50% equity and 50% debt treatment from DBRS, which would lessen the pressure on the capital structure if Province finances OPG directly.
- There could also be a mix of debt and equity financing from the Province over time to OPG.

Overall, a discussion with the credit rating agencies and OPG auditors would probably help clarify options if this is feasible.

Kind regards,

Adam Prokop

Hi John,

I think Adam and I had discussed this briefly. We were questioning why the Province could not issue debt to OPG instead of Equity (or even directly into the Trust). The only reason that came to mind was to effect OPG's credit rating (which TD says would be treated as "intermediate equity" for option 3) – don't think GBE status would be affected.

The OEFC already lends to OPG which hasn't seemed to effect its GBE status… not sure what I'm missing here..

Carlos, and others

I believe the discussion with TDS will be scheduled for either Thursday of Friday and I am not available on both days so here are my comments.

- Page 3: Option#3 is not feasible since it is essentially a type of debt from the Province to OPG and may impact the latter's GBE status, which jeopardizes the entire arrangement.
- Options 2 and 4 are superior to 1 from the Province's perspective providing a greater assurance of dividends, which means less cash flow risk for the province.
- The last bullet on page 4 is a little confusing especially the phrase; "and the debt issued to OPG by the SPV/Trust". It's actually the other way around, OPG uses the cash flow from the equity injection to issue debt to the Trust.
- The cash flow from the equity injection is essentially cost free for OPG however, the Trust will generate interest income on 100% of its debt, as such when the trust is consolidated with OPG, the latter will show a net interest income. This income can be paid out as dividends to the Province and in essence defray the Province's interest payments on the debt incurred to fund the equity injection.

Thanks and as always happy to discuss.

Hi Ken,

Thanks for these helpful comments. I do have a question on your first comment. I haven't been as close to the accounting discussion as you have been - why would providing debt from the Province to OPG, for this purpose, affect its status as a GBE, if the loan is provided at a market rate. I haven't gone through this deck carefully yet but wanted to clarify this point.

I do recognize that ultimately OPG would want to make a commercial decision so we are looking to be educated on various structures.

Happy to chat in the lock-up tomorrow.

I think the challenge starts once you cross the deemed capital structure or when OPG starts getting downgraded for carrying too much debt. If the loans provided by the Province are not something a prudent lender would agree to do you could potentially be putting at risk the GBE status. What you should do is compare the potential outcome of the different structures against the test that needs to be met to remain a GBE. You should check this on top of the 14 other points.

Carlos, and others

I believe the discussion with TDS will be scheduled for either Thursday of Friday and I am not available on both days so here are my comments.

- Page 3: Option#3 is not feasible since it is essentially a type of debt from the Province to OPG and may impact the latter's GBE status, which jeopardizes the entire arrangement.
- Options 2 and 4 are superior to 1 from the Province's perspective providing a greater assurance of dividends, which means less cash flow risk for the province.
- The last bullet on page 4 is a little confusing especially the phrase; "and the debt issued to OPG by the SPV/Trust". It's actually the other way around, OPG uses the cash flow from the equity injection to issue debt to the Trust.
- The cash flow from the equity injection is essentially cost free for OPG however, the Trust will generate interest income on 100% of its debt, as such when the trust is consolidated with OPG, the latter will show a net interest income. This income can be paid out as dividends to the Province and in essence defray the Province's interest payments on the

debt incurred to fund the equity injection.

Thanks and as always happy to discuss.

Hi John,

I think Adam and I had discussed this briefly. We were questioning why the Province could not issue debt to OPG instead of Equity (or even directly into the Trust). The only reason that came to mind was to effect OPG's credit rating (which TD says would be treated as "intermediate equity" for option 3) – don't think GBE status would be affected.

The OEFC already lends to OPG which hasn't seemed to effect its GBE status… not sure what I'm missing here..

Hi John,

Sorry, I was thinking of this document, but I see it is an OPG one, not E&Y.

Perhaps we have the E&Y one too, or maybe Ken has a copy that's more handy and can provide it.

Hi John,

If you are referring to the March CabSub, then, yes, and I believe you have a copy and its saved in the folders.

You'll also recall the OPG 14 points document to get the accounting treatment targeted, which was informed by its earlier discussions with EY.

You'll recall that OPG had to be able to maintain its GBE status, which includes have an appropriate capital structure (for which 100% debt financing would be problematic) and the SPV show that it was financeable independent of the Province.

I think this was all in the BNs you guys put together at the time too. Isn't that right?

Is there a nuance I'm missing, as I did not read the full email chain that you forwarded.

Can you send me the TD analysis.

Thanks,
Ron

Good question, the appendix to the MOE cabinet submission includes an opinion from E&Y where this point is very forcefully made. That is why the debt from the Province option is no longer on the table.

Thanks

Hi Ken,

Thanks for these helpful comments. I do have a question on your first comment. I haven't been as close to the accounting discussion as you have been - why would providing debt from the Province to OPG, for this purpose, affect its status as a GBE, if the loan is provided at a market rate. I haven't gone through this deck carefully yet but wanted to clarify this point.

I do recognize that ultimately OPG would want to make a commercial decision so we are looking to be educated on various structures.

Happy to chat in the lock-up tomorrow.

February 27, 2017

Mr. Serge Imbrogno
Deputy Minister,
Ministry of Energy
4th Floor, Hearst Block
900 Bay Street
Toronto, Ontario
M7A 2E1

Dear Deputy:

Below is a summary of OPG's preliminary views on the implementation of the Province's proposed Global Adjustment Smoothing Account and financing structure. These views are contingent on the proposed terms and conditions that were sent to the Ministry of Energy on February 21, 2017.

Understanding that the finalization of the legal terms, the Trust indentures, financing structure and other detailed terms will take several months and will involve collaboration between legal counsel, input from capital markets, parties involved and other stakeholders, this letter is intended to provide the guideline and framework which could form the foundation of the plan.

Please do not hesitate to contact me if you have any questions regarding this summary.

Sincerely,

Mr. Ken Hartwick
Chief Financial Officer and Senior Vice President, Finance
Ontario Power Generation
W: 416-592-6985
C: 647-544-6985
ken.hartwick@ opg.com

cc. Jeff Lyash, President and CEO, OPG

Background:

The Province has indicated that it will take steps to reduce electricity bills in the near term. It has identified reductions in the Global Adjustment Charge (GAC) charged to electricity customers as a means to achieve its policy goals. The Province is proposing to temporarily reduce the amount of the GAC charged to electricity customers (primarily RPP-eligible customers). The exact quantum and duration of the program is still not known but based on discussions with the Province GAC charges of approximately $2-5B per year for the next 5-10 years would be deferred and collected over future periods commencing after the deferral period. A combination of senior debt and subordinated debt (mainly sourced by additional equity from the shareholder) would be issued to fund the amount deferred. The financing cost of the debt and other costs of running the program would form part of the amounts recovered from customers over the term of the program.

The Province has requested that OPG administer the GAC deferral, because of OPG's participation in the market, regulatory knowledge and the potential ability to consolidate the activity and accounting with OPG. Given the significant amount of financing required for the GAC deferral, OPG has developed a financing structure (depicted below) to:

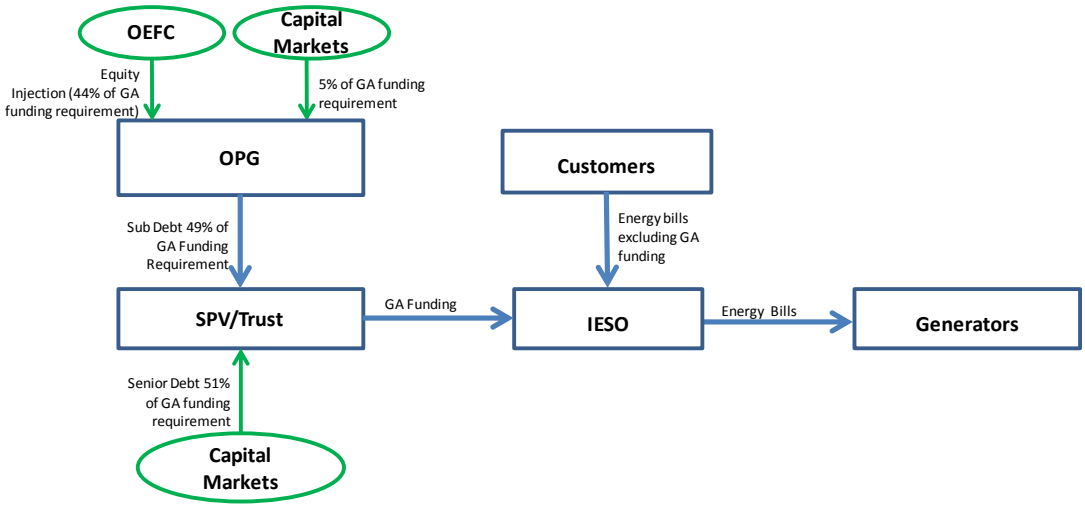
- restrict the risk to OPG;

- maximize the cost-effectiveness of the Trust or the Special Purpose Vehicle ("SPV") financing vehicle; and
- allow for consolidation into OPG financial statements.

The success of this structure is dependent on achieving a number of objectives which are reviewed in the following sections:

A. Ability to Recognize an Asset and Record Revenue
B. Ability to Consolidate the SPV into OPG
C. Ability to Finance
D. External Assessment
E. Risk Summary

All of the percentages shown in the graphic below are indicative and will be highly dependent on the legislation that the Province will enact:



Process:

The IESO will effectively sell the 'right to collect' deferred future revenue from ratepayers (GA Recovery Right asset) to the SPV in return for cash proceeds. In order for the SPV to purchase this asset the SPV will obtain the financing from two key sources: 51% directly from capital markets and 49% as subordinated debt from OPG. OPG will obtain 44% of this financing as an equity injection from the Province and 5% from capital markets.

A. Ability to Recognize an Asset and Record Revenue

Accounting Requirements under International Financial Reporting Standards (IFRS)

1) It is our understanding that the IESO and KPMG have concluded that the sale of this 'right to collect' future revenue (or regulatory asset) is not a financing transaction and will not be recorded as a financial liability. Based on that conclusion, the right to collect will be accounted for as an intangible asset in the SPV.

2) In order to the SPV to record this right as an intangible asset, the right must meet the following conditions:
   - The intangible asset must be separable and arise from a contractual or legal right (i.e. mandated by the Legislation and SPV Indenture Agreement).
   - The SPV must have the control and power to obtain future economic benefits from the intangible asset.
   - The SPV must be able to demonstrate that the intangible asset is purchased at fair value.

3) In order for the SPV to recognize appropriate revenue to offset any ongoing costs, the Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis. This may result in additional amounts to be deferred to achieve the desired customer impact. Payment of revenue to the SPV is also important to service the interest expenses of the debt.

B. Ability to Consolidate the SPV into OPG under IFRS

OPG 'Control' of the SPV - Accounting Requirements

1) In order to meet the accounting definition of 'control', accounting guidance must be considered. There are no bright lines to determine whether OPG has exposure, or rights, to variable returns from its involvement with the SPV, or whether it has the ability to affect the returns of the SPV through its power over the SPV. Rather, all facts and circumstances are considered when assessing whether an entity has control over another entity. Based on the relevant accounting guidance under IFRS, OPG has proposed terms necessary to demonstrate that OPG has control over the SPV. OPG's external auditors, Ernst & Young, has provided their concurrence that based on the information provided to them to date that the following conditions should permit consolidation of the SPV by OPG.

Directive:

1. The SPV must be undertaken by OPG as a business initiative on its merits. A Shareholder Directive is to be limited to direct OPG to investigate the option of establishing a SPV vehicle to administer, finance and operate the Global Adjustment plan. The control, risk and rewards of that SPV will determine its consolidation into OPG as a business enterprise.

SPV:

2. The SPV should not operate in a predetermined way such that OPG does not have decision-making authority over the SPV's ongoing activities after its formation (i.e. should not operate on 'autopilot').
3. OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.
4. The Province cannot have the right to veto OPG's decisions about the relevant activities of the SPV. OPG must have the power over the relevant activities of the SPV and be compensated. The relevant activities of the SPV include (but are not limited to) the evaluation and decisions on financing alternatives, duration, and the strategy to minimize financing costs. OPG must have the power to establish operating and capital budgets of the SPV.
5. OPG must have the power to determine or change operating and financing policies of the SPV, which will affect the variability of risks and returns.
6. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    - The SPV
    - Any of OPG's investments in the most subordinated debt of the Trust
7. OPG must own greater than 50% of the most subordinated debt and targeted to be no less than 5%[1] of the total debt of the SPV. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources. A quantitative analysis should be performed at a later date to corroborate the appropriateness of the 5% threshold to support that the 5% subordinated debt investment is sufficient to absorb most of the expected variability in the SPV.
8. OPG must have the ability to earn variable returns by exercising its authority, which shall be accomplished as follows:

[1] While the rest of the letter refers to a 10% investment in the most junior subordinated debt with OPG owning 5%, it should be noted that OPG should own more than 50% of the most subordinate debt. For simplicity, the degree to which OPG's ownership beyond 50% is not shown in this letter.

a. The cash flow from the restructured asset shall include interest determined based on a relevant benchmark that is appropriate relative to the restructured asset, plus an appropriate margin consistent with the relevant market and other risks
b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the SPV to achieve a more favourable return compared to the return from the restructured asset
c. The SPV shall establish classes of liabilities (senior, subordinated and the most subordinated). The classes would allow the SPV to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity.
d. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the restructured asset, or any residual risk of restructured asset. The targeted return of the subordinated liability should be reflective of the underlying risks and compensate holders for active management that would be required.
e. OPG should participate in the detailed design of the above and the SPV documentation to ensure that it has substantive power and variability, which will allow OPG's Board of Directors to evaluate the opportunity as a business initiative instead of through a shareholder directive.

Nothwithstanding the above, under certain Defined Forced Majeure for emergency events (e.g. unlikely credit market event or disruption where it is not possible to borrow from the market at a reasonable rate), the OEFC may provide bridge financing beyond the designated percentage for a defined period. The relevant terms should ensure that this temporary measure does not detract from the rights of OPG to direct all of the relevant activities of the SPV. Additionally, OPG should not be protected from risk of loss by the OEFC with respect to its subordinated investment, nor should it lose its right to derive the residual returns should such bridge financing be required.

Legislation

9. The Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis, so that the SPV is able to recognize appropriate revenue to offset any ongoing costs.
10. The Legislation must dictate the manner in which the restructured asset would be determined, collected, and the period of collection, so that the determination of the restructured asset will not be subject to the Province's decisions on an ongoing basis, but determined based on a formula. Alternatively, the Legislation may allow for an adjustment to the pre-determined deferral formula based on specific parameters that would limit the adjustment to the restructured asset. Adjustments beyond the specific parameters would require approval by the Board of Trustees.
11. The Legislation must be written to avoid legal or constitutional challenges and be irrevocable to reduce the cost of borrowing and with a specific formula which determines the deferral amount. As irrevocability would be difficult under Canadian law one mitigation would be to provide a Provincial guarantee which only applies with cancellation or amendment of the legislation.
12. The spirit of the above terms should be reflected in the SPV Indenture Agreement as well as Legislation, wherever possible.

2) The Trust is expected to be financed as follows:
   - 51% senior secured debt from external markets
   - 39% senior subordinated debt from OPG (via Province equity injection into OPG)

- 10% junior subordinated debt from OPG (5% from external markets and 5% from Province equity injection into OPG).

When assessing control, an investor shall consider the nature of its relationship with other parties and whether those parties are acting on the investor's behalf (i.e. they are 'de facto agents'). If OPG is assessed to be a 'de facto agent' of the Province, it will compromise the ability for OPG to consolidate the Trust. The split above is to meet the following conditions to ensure that OPG is not considered a 'de facto agent' of the Province:

- The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
  - The Trust
  - Any of OPG's investments in the most subordinated debt of the Trust
- OPG must own greater than 50% of the most subordinated debt and targeted to own no less than 5% of the total debt of the Trust. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources.

3) The Province will need to conclude on whether OPG still meets the definition of a Government Business Enterprise as defined under Public Sector Accounting Board standards in order to obtain the preferred consolidation treatment after the transaction. We also recommend that the Province to undertake the analysis deemed necessary to confirm the accounting treatment in its consolidated Public Accounts, including if the recognition of the intangible asset would result in an offsetting liability in the Public Accounts.

C. Ability to Finance

Property Right or Right to Collect
Legislative Requirements for Financing
The GA Recovery Right must be structured to encompass the following elements:

- Right to recover from and bill Ontario electricity customers for (1) the principal amount of GA that is being deferred, (2) all interest and other financing costs incurred in respect of the deferral of the GA, (3) all fees, expenses and other administrative costs associated with such financing;
- Repayment/amortization schedule as agreed by the IESO and any purchaser of such GA Recovery Right (or pursuant to a pre-defined schedule/formula that covers all of the purchaser's principal, interest and ongoing financing costs on a monthly basis);
- Repayment/amortization schedule must include a true up mechanism to ensure all costs associated with the deferral can be recovered from customers;
- IESO may dispose of the GA Recovery Right, provided that any such disposition shall be a true sale and absolute transfer to the purchaser of the IESO's right, title and interest in and to the GA Recovery Right;
- Purchaser will have the right to require the IESO (or any successor) to collect the principal amount of GA Recovery Right, together with interest, financing and administration costs, on the agreed repayment/amortization schedule;
- Right must be irrevocable and, if amended by future governments, debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment;
- GA Recovery Right will not be subject to any set-off, counterclaim or other defence by the IESO or any successor or affiliated entity; and
- Make certain amendments to the Electricity Act to allow OPG to implement the SPV financing structure (e.g. allowing OPG to create subsidiaries and holding companies, and to have a beneficial interest in the SPV, etc). This would provide flexibility to accommodate possible variations to the financing structure that may be desirable over time.

Detailed legislative requirements are specified in the attachments as follows:

Attachment 1 Legislative requirements to allow deferral of global adjustment amounts to be financeable

Attachment 2 Statutory amendments

The proposed financing structure for the SPV is:

	Risk Profile	Source	% of Total Funding Requirements
Tranche A Senior Debt	The least risky	Capital Markets	51%
Tranche B Sub Debt	In between A&C	OPG via OEFC	39%
Tranche C Sub Debt)	The most risky	OPG via OEFC	5%
		OPG via Capital Markets	5%

SPV structure is used to accomplish the following:

- SPV holds right to charge customers for the benefit of debt holders;
- Allows the financing vehicle to be ring-fenced from OPG as an SPV structure is set up as generally single purpose entities with no other operations that could add risk to the SPV, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings;
- Enables SPV to potentially get a higher credit rating than OPG;
- Supports consolidation with OPG provided accounting requirements are satisfied;

This approach supports a number of objectives of the GA Recovery Right:

- 51% external senior debt supports separation of the SPV from the Province
- 5% junior subordinated debt establishes OPG's "at risk" equity which supports separation of the SPV from the Province
- Subordinated debt provides flexibility to the financing structure and additional credit support to external debt holders
- Subordinated debt sourced from OPG (mainly funded by equity injection from the Province) minimizes impact on OPG credit metrics reducing risk of an OPG rating downgrade that could result in the SPV being consolidated directly with the Province as the SPV would be considered an arm of the Province.

Recent transactions used as precedents are:

Duke Energy Florida Project Finance LLC
June 2016
5 series of bonds totalling USD$1.3B
Weighted average life from 2 to 19 years with interest rates from 1.2% to 3.1%
Credit rating AAA

Utility Debt Securitization Authority
Sponsored by Long Island Power Authority
March 2016
Amount issued USD$0.6B
Weighted average life of 12 years and weighted average yield of 2.7%

August 2016
Amount issued USD$0.5B
Weighted average life of 7 years and weighted average yield of 2.0%

Credit rating AAA

Cumulative outstanding (including previous issuances): USD$4.2B

D. External Assessment

Shakerhill Partners, an external advisor, identified the following items in an assessment of the structure and financeability of the structure:

- The structure is financeable however there are a number of significant risks to the structure:
  - Canadian and Ontario law does not provide the same protection to property right as exists in the US federal and state constitutions to limit the ability of governments to adversely impair contracts to the detriment of the holder;
  - Legislation could mitigate some of the risks – deferred recovery asset to be "uncapped", regular semi-annual true up to ensure recovery, Province provides sufficient committed liquidity to the IESO so that temporary shortfall in recovery does not affect payments to SPV, term of the deferral recovery substantially exceeds the longest maturity of debt of the SPV and that true-up mechanism take account of potential for currency, interest rate and duration mis-match between the debt of the SPV and the recovery mechanism;
  - Size of the program may be too large for Canadian securitization market requiring access to the US securitization market;
- Final maturity of debt should not exceed 30 years from inception of the program
- True up mechanism should be designed such that the forecast of recovery is less than 10% of the customer bill under downside scenarios to limit growth of the deferral balance as a higher portion of the customer bill increases the political risk to debt holders which could result in a lower credit rating and potential impact on financeability
- Securitized debt products are specialized and price at a premium to other fixed rate instruments however a successful program supported by a strong credit rating this premium could shrink over time to a minor spread over Provincial debt
- OPG's credit rating should be maintained provided sufficient equity is injected to maintain credit metrics
- While the structure is not expected to impact the Province there are risks that the program could negatively impact the rating agencies view of the Province's financial management.

E. Risk Summary

i. Consolidation

- Elements of the proposed structure were established to support consolidation of the SPV into OPG. These items may not be sufficient to establish OPG as risk owner of the SPV and the SPV may need to be consolidated directly with the Province.

ii. Financeability

- The legislation establishing the structure and the property right for recovering the financing and associated costs may not be adequate for financing purposes resulting in more expensive financing or an inability to obtain the required external financing.

iii. Cost of Financing

- Future governments may enact legislation that changes the right of the SPV to recover amounts from customers.
- The right to recover amounts from future customers must be irrevocable and subject to full recovery from the government in the event that future governments reduce or eliminate the recovery. A legal structure that is weaker than the precedent US transactions increases the risk to debt holders and the cost of financing.
- Interest rates on bonds in the securitization market are higher than equivalent rated bonds. Rate for a AAA securitization credit is about 50 bps higher than GOC (rated AAA) for a 5 year term. This difference is attributable to the specialized structure of the bond, smaller investor pool for this bond, smaller size of the market and higher perceived risks of the bond.
- Any regulator involvement must not be seen to modify any terms of debt issued or the property right securing the debt as this would increase risk to debt holders.

- It may not be possible to issue debt to match the terms of the deferred asset so shorter term debt would be used which raises risk to re-finance the maturing debt as the market may no longer be interested in this product. As well, underlying reference interest rates may be higher and the market may require a higher spread to invest in this product.
- With the GA Recovery Right program continuing for 10 years, debt issued over this period is subject to changes in both the underlying reference interest rates and appetite of the market for this product.

iv. OPG Credit Rating

- Minimizing the impact of significant additional debt on OPG's credit rating is dependent on higher EBITDA arising from earned income on the GA Recovery Right in excess of external debt. Ability of the SPV to record revenue reflecting the growth in asset value.
- Potential OPG credit rating downgrade if legislative structure is not adequate to support long term recoverability, inability to record revenue from growth in asset value or agencies view equity injection as debt.
- OPG credit rating downgrade could result in loss of GBE status or result in SPV being consolidated directly with the Province.

Attachment 1

LEGISLATIVE REQUIREMENTS TO ALLOW DEFERRAL OF GLOBAL ADJUSTMENT AMOUNTS TO BE FINANCEABLE

The IESO currently has a right to collect GA monthly from ratepayers through provisions in the *Electricity Act, 1998*. It is proposed that collection of a certain portion of the monthly GA be deferred for collection in the future, and that the right to recover the deferred GA from ratepayers be used as a basis for structured financing/securitization.

The current proposal is for a trust to be created as a financing vehicle (the "**Trust**") in connection the deferred GA. The Trust will finance the deferral of the GA by purchasing the right to recover such deferred GA from the IESO for the principal amount of the GA being deferred. For example, if the amount of GA that is being deferred is $200 million in a given month, the Trust will purchase from the IESO the right to future recovery of the deferred GA and the associated financing costs (including interest and transaction costs) for $200 million in cash.

The Trust is expected to finance these purchases from the IESO through a combination of senior secured financing raised in the capital markets and subordinated financing from OPG (the funding for which will mostly be from equity injections from the OEFC/Province).

For accounting purposes, OPG will need to have the ability to direct the activities of the Trust, through a services agreement and/or through the Trust's constating document.

Based on securitized financing raised by utilities in the US (backed by utility cost recovery orders) and the current regulatory framework in Ontario, the legislation in Ontario would need to be amended to provide the following, at a minimum:

1. The IESO will be empowered to create an asset (the "**Regulatory Asset**") consisting of all right, title and interest in and to:

   (a) right to recover from and bill Ontario electricity ratepayers for:

   (i) the principal amount of GA that is being deferred for collection;
   (ii) all interest and other financing costs incurred in respect of the deferral of the GA (whether through senior debt raised in the public markets or subordinated debt raised from OPG or others); and
   (iii) (subject to the comments in paragraph 5 below in respect of OPG's internal administrative costs only) all fees, expenses and other administrative costs associated with such financing, including up-front and ongoing financing costs and any indemnity payments;

all on such repayment/amortization schedule as agreed by the IESO and any purchaser of such right (or pursuant to a pre-defined schedule/formula in the legislation that covers all of the purchaser's principal, interest and ongoing financing costs on a monthly basis); and

(b) all revenues, collections, claims, rights to payments, money or proceeds arising from the rights and interests set out in paragraph (a) above, regardless of whether such revenues, collections, claims, rights to payments, money or proceeds are imposed, billed, received, collected or maintained together with or commingled with other revenues, collections, rights to payments, payments, money or proceeds.

2. The IESO may dispose of the Regulatory Assets created from time to time on such terms as the IESO determines in accordance with the terms of directives to be issued to the IESO from time to time by the Minister, provided that any such disposition shall be a true sale and absolute transfer of the IESO's right, title and interest in and to a Regulatory Asset to the purchaser of the Regulatory Asset.

3. The Regulatory Assets will not be subject to any set-off, counterclaim or other defence by the IESO or any successor or affiliated entity thereof.

4. The legislation will need to recognize the Regulatory Assets as amounts that may be recovered by the IESO (e.g. it could be designated as a "GA Deferral" and would be included in the amounts collectible by the IESO through the GA collection mechanism, and would include interest and financing costs).

5. The purchaser of the Regulatory Asset will have the right to require the IESO (or any successor) to collect the principal amount of GA deferred, together with interest, financing and administration costs, on the agreed repayment/amortization schedule. **[NTD: In the LIPA securitization rate order, if the entity that is authorized to collect rates to service the bonds ends up defaulting, there is the ability to request a court to order "sequestration" and payments of amounts owing to the owner of the Regulatory Asset. Consider whether to include a similar right here. Alternatively, consider whether a security interest over the moneys collected by the IESO could be provided to the purchaser.]**

OEB would be provided with oversight over the internal administrative costs collected by the Financing Trust. This could be accomplished by (a) providing the purchaser of the Regulatory Asset with the right to require

the IESO or a successor to collect only the principal amount of GA together with interest and financing costs and third party fees and expenses, and (b) requiring the IESO to collect amounts through the global adjustment and make payments to the purchaser of the Regulatory Asset with respect to the internal administrative costs incurred by the purchaser in connection with the purchase and management of the Regulatory Asset and the Financing Trust, in accordance with the order of the OEB then in effect. Under this mechanism, the OEB would be required to review the purchaser's internal administrative costs through a streamlined process and issue such orders in accordance with rules to be prescribed under a new regulation under the OEB Act, which would clearly limit the OEB's scope of review and could establish the basis for the purchaser to receive an appropriate fee for its services.

6. In the event that any action is taken or permitted by the Province or any regulatory authority that limits, alters, or impairs the value of a Regulatory Asset or reduces the ability of the IESO or the purchaser of the Regulatory Asset to collect or recover the costs associated therewith, the owner of the Regulatory Asset and the holders of any bonds or other securities issued to finance the purchase of the Regulatory Asset, will have a right of action against the Province for any damages suffered as a result of such amendment.

Attachment 2

STATUTORY AMENDMENTS

The following is preliminary and is based on our current understanding of the proposed structure and objectives. For example, we have assumed that the structure will not entail the insertion of a new Holdco between OPG and the Province. As these aspects are refined, some of the suggested amendments described below may not be needed and other aspects that we are not aware of may need to be considered. Accordingly, these suggested amendments are provided for discussion purposes and are subject to change. We would welcome the opportunity to work with OPG and the Ministry on refining the scope and substance of required legislative and regulatory amendments.

A. Amendments to Implement Structure

Certain *Electricity Act, 1998* amendments would be needed to implement the anticipated structure (which we understand, as noted above, would not include a Holdco), as follows:

- **Section 53.1(1):** Amend to permit owning and operating generation facilities through subsidiaries (not only directly through OPG). In addition, amend to permit OPG to administer, manage, loan moneys to and have a beneficial interest in, if applicable, Financing Trust.

- **Section 53.2:** Amend to permit the Minister to acquire, hold, dispose of or otherwise deal with securities or debt obligations of, or any other interest in, OPG or any subsidiaries. This is to accommodate possible variations to the financing structure that may be desirable over time.

- **Section 53.■ (new):** New statutory section to permit the Minister to enter into arrangements relating to an exercise of powers under 53.2.

- **Section 53.■ (new)**: New statutory section providing that creditors of Financing Trust have no recourse to the assets of OPG or any of its subsidiaries (other than Financing Trust, if applicable). In addition, consideration should be given as to whether the Act should be amended so that the Financing Trust cannot be wound up or liquidated.

B. Miscellaneous Corporate Items to Address

- **OPG Articles:** Amend the OPG's articles to remove the private company restrictions.

- **MOA with Province:** Consider whether any amendments to OPG's MOA with the Province are required to contemplate the Financing Trust.

C. Amendments Under Electricity Act to Implement GA Smoothing

Based on our understanding that the global adjustment smoothing mechanism is intended to benefit residential and small business customers only and that the Minister will be responsible for determining how much global adjustment smoothing is to be applied in a given month, if any, amendments to the *Electricity Act*, *1998* and Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) would be needed to implement the mechanism, as follows:

(i) Electricity Act:

- **Section ■ (New):** Establish a new power for the Minister to make directives to the IESO in relation to the global adjustment smoothing mechanism and, particularly, for purposes of establishing global adjustment smoothing amounts from time to time (expected to be monthly). To the extent possible, the directive power should be drafted so as to limit the ability for a future Minister to require the IESO to do anything that would materially and adversely affect the Financing Trust or its lenders. **[NTD: While our understanding is that the Minister would direct this, we note from other materials we have seen that OPG may instead be recommending a formula approach. It is not clear what the formula would look like, where it would be set out or how it would be applied and by whom]**

- **Paragraph 25.33(1):** This section says that IESO shall make adjustments in accordance with the regulations to ensure that, over time, payments by prescribed classes of market participants reflect amounts paid to OPG, OEFC and distributors, as well as amounts paid to entities with whom IESO has a procurement contract. Add new subsection (c) so as to require IESO to ensure that, over time, payments by prescribed classes of market participants also reflect amounts paid to Financing Trust. **[NTD: Not certain this is needed if only to benefit residential and small business consumers, who are not market participants. May be needed in reference to payments from distributors and retailers]**

- **Paragraph 25.33(2):** This section says that distributors and retailers shall make adjustments in accordance with the regulations to ensure that, over time, payments by prescribed classes of consumers reflect amounts paid to OPG, OEFC and distributors, as well as amounts paid to entities with whom IESO has a procurement contract. Add new subsection (c) so as to require distributors and retailers to ensure that, over time, payments by prescribed classes of consumers also reflect amounts paid to Financing Trust.

- **Note**: As described below, the regulation will need to include new requirements for the IESO to record the global adjustment smoothing amounts in one or more variance accounts and to use those amounts to offset amounts otherwise recorded in the variance accounts under Section 25.33(3) of the Act. For context, we note:

    - Section 25.33(3) says that adjustments under (1) or (2) relating to electricity consumed by consumers whose rates are determined by

the OEB under s. 79.16 of the OEB Act (i.e. RPP Customers) shall instead be made in accordance with the regulations to one or more variance accounts established and maintained by the IESO.

- Section 25.33(4) says IESO, distributors and retailers shall make and receive such payments, set-offs and credits as may be required or permitted by the regulations with respect to consumers described in (3), i.e. RPP Customers.

- Section 25.33(5) says that IESO shall establish and maintain such variance accounts as may be needed to record all amounts payable or receivable by it under 25.33.

(ii) O. Reg. 429/04 (Adjustments Under Section 25.33 of the Act):

- **Section 1(1):** Consider adding definitions for "Financing Trust" and "global adjustment smoothing amount" or such other terms as may be preferred.

- **Section 1.2(1) (New):** Add section providing that, for the purposes of this Regulation, the global adjustment smoothing amount for a month is the amount determined by the IESO in accordance with a directive from the Minister under section ■ of the Electricity Act in respect of the month. **[NTD: See above note re use of Minister directives]**

- **Section 1.2(2) (New):** Consider adding a section providing that the IESO shall publish the global adjustment smoothing amount for a month by no later than the 10th business day of the following month [to align with general publication requirements for global adjustment under s. 1.1(2)].

- **Section 10(1):** Amend formula for calculating Class B GA rate by subtracting the global adjustment smoothing amount for a month from "M", which is the total amount of the global adjustment for the month. The global adjustment smoothing amount could be designated as "X", such that the formula would be (M-X-N)/(P-Q). Define "X" as the global adjustment smoothing amount for the month as determined by the IESO in accordance with the Minister's directive under section ■ of the Electricity Act for the month. **[NTD: See above note re use of Minister directives]**

- **Section 10.1 (New):** Add new section to deal with adjustments under subsection 25.33(3) of the Act, i.e. in respect of RPP consumers. This section should require the IESO to establish, within the variance account(s) it maintains pursuant to subsection 25.33(3) of the Act, one or more subaccounts in which it shall record the global adjustment smoothing amounts applicable to the classes of consumers described in subsection 25.33(3) of the Act. This section must also specify that the IESO shall apply the amounts recorded in the subaccounts against the balances in the variance accounts for purposes of section 79.16(3) of the OEB Act.

  - **Note:** This is a key aspect because, when the OEB determines RPP rates, it must take into account the balances in the variance accounts established by the IESO under s. 25.33 of the Electricity Act and make adjustments with a view to eliminating the balances within 12 months. This proposed new section 10.1 causes the IESO to reduce (in the near term) the variance account balances by the global adjustment smoothing amounts, as provided by Financing Trust, thereby enabling the OEB to determine RPP rates that, despite being lower for RPP consumers in the near term, still eliminate the relevant variance account balances within 12 months.

- **Paragraph 11(2)2.ii:** Amend the formula for calculating the allocation of global adjustment for a month to a licensed distributor that is a market participant by subtracting the global adjustment smoothing amount for a month from "M", which has the same meaning as under section 10(1). The global adjustment smoothing amount could be designated as "X", such that the formula would be [(M-X-N) x (R+S-T)]/(P-Q). Define "X" as suggested under section 10(1).

- **Paragraph 11(2)3:** Amend the formula for calculating the allocation of global adjustment for a month to each Class B market participant by subtracting the global adjustment smoothing amount for a month from "M", which has the same meaning as under section 10(1). The global adjustment smoothing amount could be designated as "X", such that the formula would be [(M-X-N) x U]/(P-Q). Define "X" as suggested under section 10(1).

- **Paragraph 16(7)4:** Consider amending the description of "Global Adjustment" that is required to be included on certain invoices so as to inform consumers that their portion of the global adjustment for the month (i) may have been reduced by the application of a global adjustment smoothing amount from the Financing Trust, or (ii) may include amounts payable to the Financing Trust in respect of global adjustment smoothing amounts previously applied.

- **Section 20(1):** This section establishes an obligation for the Ontario Electricity Financial Corporation and every licensed distributor that is a market participant to give the IESO such information as the IESO may require for the purposes of the Regulation in the form specified by the IESO and before the expiry of the period specified by the IESO. Consider amending to extend this obligation to the Financing Trust.

- **Section 20(6):** This section provides that on request by the OEB, the IESO, a licensed distributor, an embedded generator, a retailer or the OEFC shall give the OEB such information relating to this Regulation as the OEB may require, in the form and within the period specified by the OEB. Consider amending to extend this obligation to the Financing Trust.

D. Amendments Under OEB Act to Implement Cost Recovery for Financing Trust

Amendments to the *Ontario Energy Board Act*, including amendments to O. Reg. 95/05 (Classes of Consumers and Determination of Rates) and the introduction of a new regulation, would be needed to implement a cost recovery process for the Financing Trust in relation to the global adjustment smoothing mechanism, potentially with limited OEB oversight, as follows:

(i) Ontario Energy Board Act:

- **Section 78(3.3):** This provision establishes an obligation for the OEB, when determining rates for the retailing of electricity, to take into account balances in variance accounts established under section 25.33 of the Electricity Act and to make adjustments "with a view to eliminating those balances within 12 months or such shorter time periods as the Minister may direct." Consider whether any amendments are needed, and confirm this works with the framework being proposed.

- **Section 78.7 (New):** We understand that the Province may want the OEB to have an oversight role. One possible approach would be to establish a new statutory section establishing that the IESO shall make payments to the Financing Trust with respect to the internal administrative costs incurred by the Financing Trust in connection with the purchase and management of the Regulatory Asset and the Financing Trust. Such payments by the IESO would need to be made in accordance with the order of the OEB then in effect, which orders shall be made by the OEB in accordance with rules prescribed under a new regulation.

    - The new regulation would need to be clear that the OEB does not have jurisdiction to consider the principal amount or any interest, financing costs, third party fees or expenses. Rather, OEB's role would be limited to considering the internal administrative costs of the Financing Trust and ensuring the Financing Trust receives an appropriate fee for its services, all of which would be recovered by the Financing Trust from the IESO, which would collect those amounts in the global adjustment. Note that, if this approach is accepted, the IESO and distributors and retailers would need the authority to collect such amounts as part of the GA and IESO would need the authority to pay such amounts to the Financing Trust. As such, additional amendments would be needed under O. Reg. 429/04.

- **Note:** Section 79.16 of the OEB Act does not require changes, but the significance of this provision should be understood.

    - Section 79.16 gives the OEB responsibility for determining electricity commodity prices for eligible consumers. Eligibility is determined under Reg. 95/05 (Classes of Consumers and Determination of Rates), which is also known as the Regulated Price Plan (RPP) Regulation.
    - Section 4(2) of the RPP Regulation defines RPP-eligible consumers as low volume consumers (i.e. those who annually use less than 150,000 kWh

or such other amount as prescribed), consumers with demand of 50 kW or less, residential consumers that have accounts with distributors, consumers who annually use 150,000 to 250,000 kW of electricity, and consumers who have accounts with distributors if in the farming business.

- Paragraph 6(1)3 of the RPP Regulation provides that "In determining the rates (for RPP-eligible consumers), the Board shall forecast the cost of electricity to be consumed by the consumers to whom the rates apply, taking into consideration adjustments required under section 25.33 of the *Electricity Act, 1998* and shall ensure that the rates reflect those costs."
- The Ontario Energy Board has developed a Regulated Price Plan Manual (revised February 16, 2016) to describe the processes and methodologies it uses for determining electricity commodity prices that are charged to RPP consumers pursuant to Section 79.16 of the OEB Act and paragraph 6(1)3 of the RPP Regulation.

(ii) O. Reg. 95/05 (Classes of Consumers and Determination of Rates)

- **Paragraph 6(1)3:** Amend so as to require the Board, when forecasting the cost of electricity to be consumed by the consumers to whom the rates apply, to take into consideration not only the adjustments required under section 25.33 of the Electricity Act but also the application or prior application of global adjustment smoothing amounts determined by the IESO in accordance with Minister directives under section ■ of the Electricity Act, and to ensure that the RPP rates reflect those amounts. **[NTD: See above note re use of Minister directives]**

(iii) New Regulation (Payments to the Financing Trust)

- If the OEB is to be given the role of reviewing and approving the recovery of OPG's internal administrative costs for the Financing Trust under the potential section 78.7 (see above), then this regulation should describe the process and criteria pursuant through which the OEB would determine the amounts that the IESO would be required to collect through the global adjustment, in accordance with section 25.33 of the Electricity Act, and pay to the Financing Trust in respect of the provision of global adjustment smoothing amounts. This part of the regulation should establish:

    - any reporting requirements from the Financing Trust and/or the IESO to the OEB in connection with the global adjustment smoothing mechanism;
    - the frequency of the OEB making determinations under this part of the regulation;
    - the process through which the OEB shall make these determinations, which should be a streamlined administrative process rather than a public hearing process or, if a hearing is needed, then the scope of the proceeding should be clearly and narrowly constrained so as to deter intervenor involvement, lengthy proceedings and reduce/eliminate risk to recovery by Financing Trust;

- the basis for the OEB's determinations as to the payments that shall be made to the Financing Trust, which should specify that:
  - the Financing Trust shall recover its prudently incurred internal administrative costs on a forecast basis each year;
  - the Financing Trust shall receive an appropriate fee each year (with some guidance as to what would be appropriate); and
  - the approved payment amounts shall be collected by the IESO through the global adjustment and paid to the Financing Trust in accordance with the order of the OEB then in effect. Note that O. Reg. 429/04 would likely need amendments to permit IESO (and distributors and retailers) to collect these amounts through the global adjustment.

Subject: RE: Ontario Fair Hydro Plan - Equity Infusion

Hi Carlos,

We are available at following times. As you know, Trevor is out tomorrow but I'm happy to coordinate if that date/time suits you best:

Thursday, April 27th: 10:30 – 11:30 am and 2:30 – 5:30 pm

Friday, April 28th: 2:00 – 4:00 pm

Tuesday, May 2nd: 10:00 am – 1:30 pm and 3:30 pm – 5:30 pm

Hi Harold,
Thank you for the Capital Injection Discussion slides.

Can you advise your availability for a conference call this week and next week to discuss further and I will check with others in the OFA and Ministry of Energy .

Regards
Carlos

Mike & team – please see attached for our analysis on the capital injection.

Let us know when you would like to discuss further. We have a # of folks on the road this week, but happy to accommodate later in the week if that works.

So along this line of thinking, could we get Adam and Salman work on a note that discuss various options and details on how to accomplish the equity injection and facilitate the retractable option versus dividending out option in the eventual pay down of the injection?

There would be considerations like – do we segregate the existing common shares and the new injection shares? Equal voting rights for the newly injected equity? What would be the pros and cons if OPG were to engage in any AO down the road, etc.

Also, when OPG was initially set up, was there face value to the shares issued back then? (Not expecting answers to these right away but items to start thinking about.)

I was chatting quickly with Ron and we came to the idea that we may need to engage external lawyers on some of these. Might need to engage in 'balancing act' given we have lawyers in the government.

Always open to working with others too.

John

Hi Bruno,

Yes we were involved in the H1 IPO Transaction. To date, we have not been involved in

the Ontario Fair Hydro Plan except very peripherally. Would you please keep Toby Whitfield looped in to these discussion and give him any necessary background. I think we looked into one very general issue a few weeks back and I also had a general call with Ron Kwan. I'm not sure how MOF LSB will be involved on this in terms of any legislation or financing-related work and would be good to get an idea of that.

Thanks.

Malle

Hi Malle,

I understand that your office was involved in assisting with aspects of the Hydro One IPO transaction. Electricity Finance Branch is participating on a working group (with OPG) looking into the province's equity injection around the Global Adjustment Financing component of the Ontario Fair Hydro Plan. I'm not sure of your involvement at this stage, or with whom, but we're happy to keep you, or appropriate contact, looped in to the discussions that we are having on this issue, or provide background

Thanks
Bruno

Hi Toby

Attached is a draft working note that staff have prepared on the GA Financing structure. It is not ADM approved and continues to evolve so fyi for now. As noted we will be focussing on the equity injection side of things going forward and will keep you informed as we get new information or update the note. For now we are working with OPG, OFA and others to more clearly outline the process by which the Province would purchase further OPG equity as part of the GA Financing process. It is our understanding that this would be in place by June.

Thanks
Bruno

Structure of the Global Adjustment Deferral Mechanism

Issue

The Province is working with Ontario Power Generation (OPG), the Ontario Energy Board (OEB), IESO, external accountants, and other agencies to develop a mechanism to defer the global adjustment (GA) payment as part of the recently announced Ontario Fair Hydro Plan. This note outlines current proposals for this mechanism.

Context

- Smoothing of GA costs over time would involve ratepayers paying only a portion of the GA cost in earlier years, while this shortfall would be made up by future rate payers paying more than the true cost of the GA in later years.
    - There will be a proposed cap of $2.242B on the annual additional cost over the GA to lessen the burden on ratepayers.

- The shortfall in GA payments in earlier years would represent deferred costs to ratepayers. However, the mechanism would still need to compensate power generators on an ongoing basis for the full cost of the GA and would therefore need to borrow and take on debt to make cash payments to power generators.
- Principal payments on debt would be mandatory, but there has been no clarification on whether or not interest payments will be capitalized (i.e., interest accumulates resulting in compounding) or if interest will be recovered from ratepayers on an on-going basis.
    - If interest payments are made by ratepayers on an on-going basis debt costs would be lower, however this would also have the effect of reducing ratepayer savings from the GA deferral mechanism. The commitment is for a 25% reduction on average for all residential customers, which would mean that the amount of principal needs to be larger to offset this effect.
- It has also been proposed that all administrative and other costs from the GA deferral would need to be collected from ratepayers immediately or recognized at the very least as a future benefit to the Province, adding to the costs passed on to ratepayers.

Structure (*refer to Exhibit A*)

- The deferred portion of the GA needs to be recognized as an asset – likely a regulatory asset – by the IESO, which gives the IESO the right to collect the deferred amount from ratepayers at a future date.
- This asset, in turn, would be sold to another party that would receive the revenues associated with this asset.
    - It is proposed that the IESO be required to recover the costs associated with this asset even after selling it.
    - To do this the IESO would need to sell the asset in order to settle its arrangements with generators, and ensure generators are not affected by the deferral.
        - Alternatively, the IESO could simply borrow funds (using the regulatory asset as collateral), but this poses risks for both consolidation on public accounts and credit ratings.
        - With respect to the credit rating risk, DBRS stated in a March 3, 2017 report that "*Provided the debt continues to be fully supported through the electricity rate base, DBRS will treat it as self-supported and exclude it from the calculation of tax-supported debt*".
- OPG is proposing to set up a special purpose vehicle, "OPG Trust", which would purchase the regulatory asset from the IESO.
    - The purchase would be funded by debt from the capital markets (51% of the deferred GA Cost), and OPG (49% of the deferred GA).
    - OPG would finance that 49% through debt from the capital markets (5%) and an equity injection from the Province (44%).

    - The debt would be set-up in tranches to ensure that the 51% of debt directly from the market would be senior, potentially mitigating the risk premium associated with high amounts of borrowing with an intangible, unique asset as collateral.
- There are several other considerations and requirements that would need to be attained in order for the mechanism to work, as detailed in the OPG White Paper sent to the Deputy Minister of Energy on February 27, 2017.

Equity Injection (*refer to Exhibit A & B*)

- The equity injection could lead to increasing, and then stabilizing dividend payouts in consistent with OPG's's risk profile and comparable business entities.
    - Principal and interest payments flowing from the ratepayers through the IESO and the Trust could be paid back to the Province.
    - This would increase steadily as ratepayers begin to pay back principal in about 10 years' time, eventually reaching a cap of $2.242B in principal and interest per year based on Energy's March estimates (based on the capitalized interest scenario).
    - The administrative costs and return for OPG/OPG Trust would also need to be collected by ratepayers, but the dividend payments would be net of these amounts and should still allow the Province to earn a substantial return.
    - Dividend payments could also allow OPG to eventually optimize its capital structure to the targeted or deemed 55%-45% debt to equity split, as dividends allow OPG to reduce its retained earnings thereby reducing equity.
- Recapitalization from the Province is preferable as there are no associated interest expenses or large principal payments that could affect OPG's credit rating.
- If debt financing was utilized, the change in the cost of borrowing could also impact OPG's rate applications for the return recovered from ratepayers through payment amounts, potentially offsetting ratepayer benefit of the GA deferral mechanism.
- The financing structure split between equity (44%) and debt (5% borrowed by OPG and 51% borrowed by OPG Trust) is roughly equivalent to the deemed capital structure of 55% debt and 45% equity for regulated distributors in Ontario.

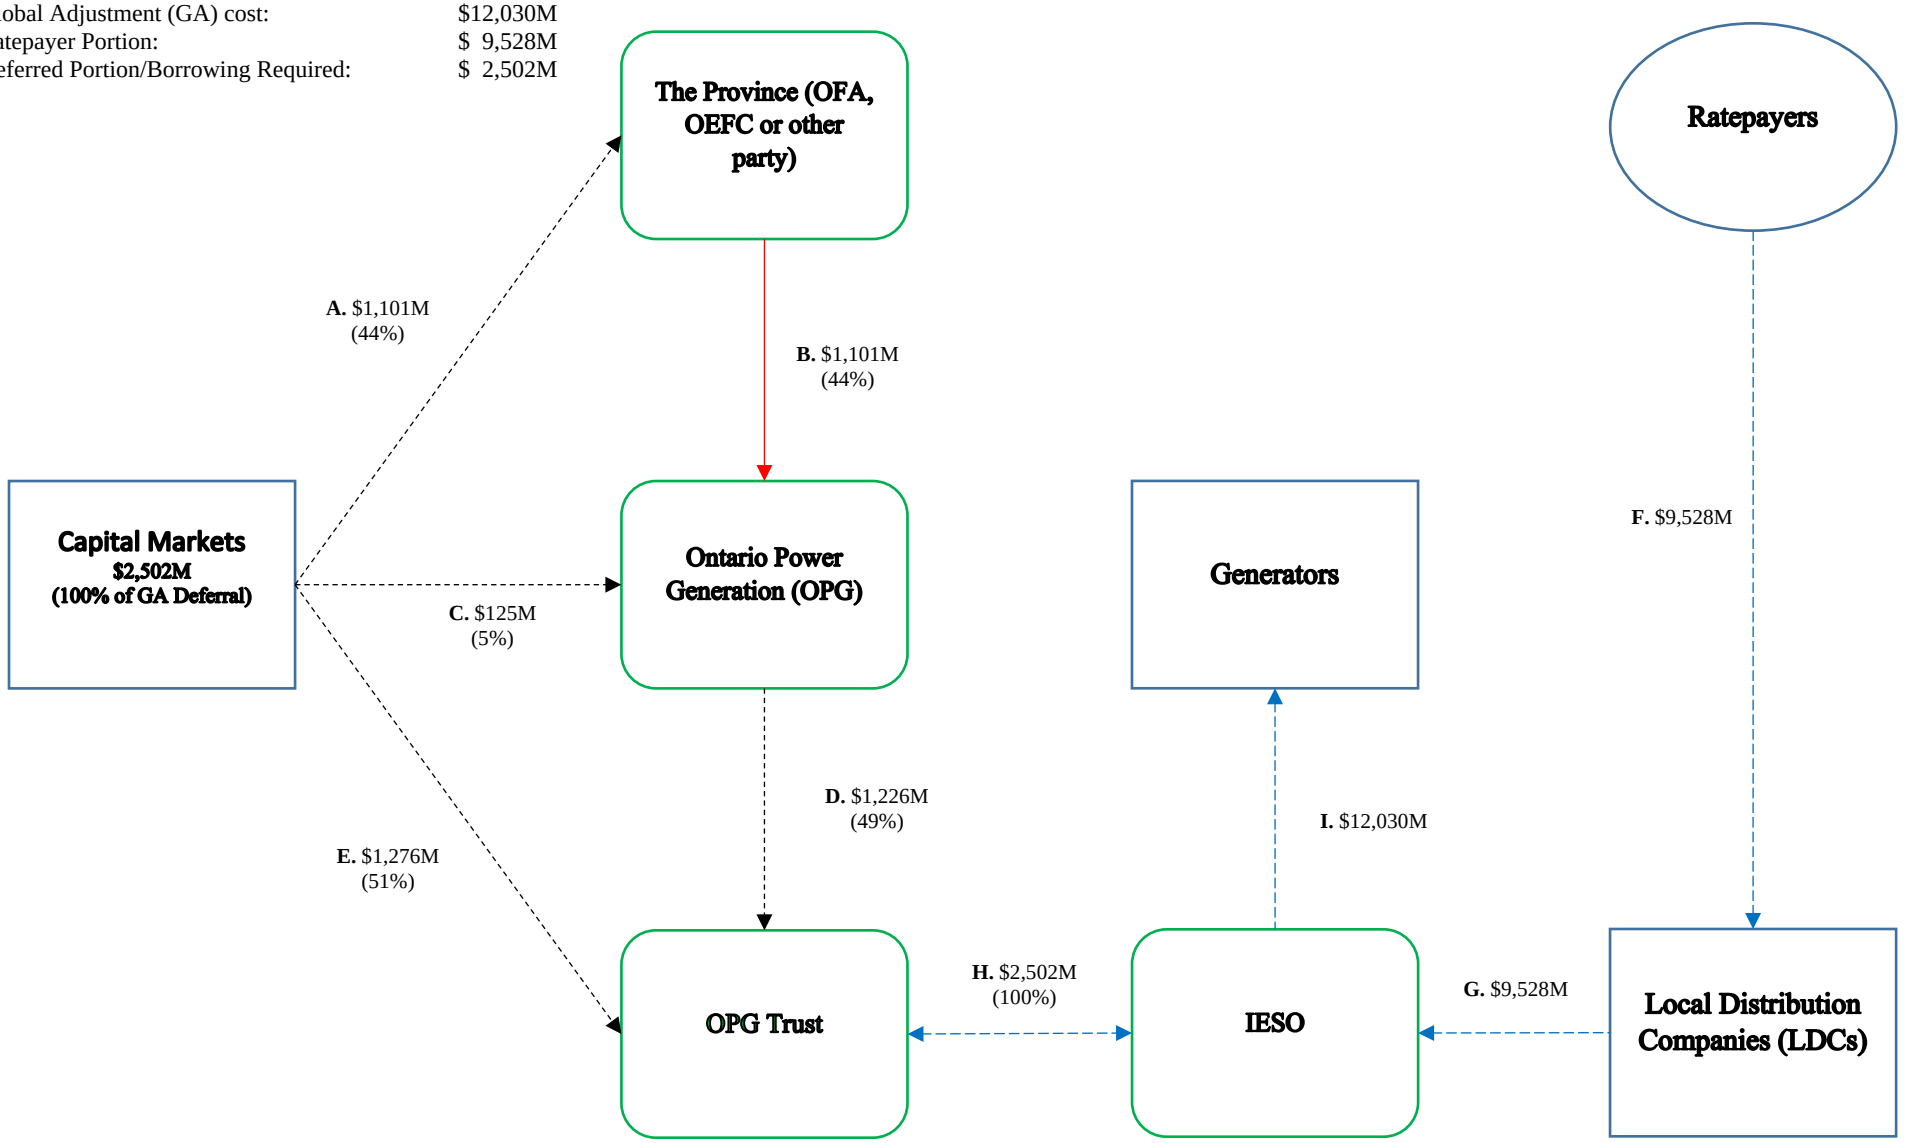
Collection of Interest Payments (*refer to Exhibit C*)

- There are different potential accounting treatments, depending on legislative and regulatory approval, that would impact the amount of borrowing and interest over the long term as well as the total fiscal impact.
    - **Option 1: Collect interest and administrative costs from ratepayers on an on-going basis:** Interest and the costs to finance/administer the GA deferral mechanism would be recovered from ratepayers along the way. This would allow cash and income to be recognized by OPG Trust equivalent to the total borrowing cost from the market (i.e., the interest on the 44% of the GA the Province borrowed from the market, the 5% of the GA OPG borrowed, and the 51% of the GA OPG Trust borrowed). Furthermore, some type of additional return for the risk premium could be made. Overall, there would be no fiscal cost, and less debt would build up over time due to the elimination of the compound effects on interest.
    - **Option 2: Collect interest costs associated with the senior debt**: There are variations on this concept which essentially proposes to only collect some of the interest costs from ratepayers, with the senior debt that OPG Trust borrows directly from the market of primary concern. This is "meeting halfway" between deferring all interest payments and collecting all interest payments from ratepayers immediately.

- Option 3: **Do not collect from ratepayers**. There is a fiscal impact equal to 100% of the interest on the total borrowings as an expense still needs to be recognized, even though cash interest has not been paid. There is also a compounding effect on interest.
- Option 4: **No collection from ratepayers but deferral of expense recognition (Same as Energy's analysis in its Cabinet Submission)**. For this option, there is no collection of interest payments from ratepayers, but OPG Trust is somehow allowed to defer the recognition of interest expense on its books and recognize as a regulatory asset, thus eliminating the fiscal impact.
    - If OPG Trust were allowed to recognize a regulatory asset, then it could defer the interest expense, instead recognizing it as an asset (similar to the idea of a prepaid expense).
    - Thus, OPG would recognize interest income from OPG Trust, but OPG Trust would not recognize an expense related to the amount owed to OPG and instead would increase the regulatory asset by the same amount.
    - The interest income earned by OPG for the 49% of the GA deferral it borrowed would offset the borrowing the Province made from the capital markets.
    - OPG Trust would also defer the recognition of the interest associated with the 51% of the GA deferral it borrowed from the market. The deferred amount would be recognized in a regulatory asset.
    - When OPG starts collecting principal and interest from ratepayers, it will recognize income, but will also amortize the regulatory asset at the same time, thus matching revenue and expenses with each other in the time period and potentially eliminating the fiscal impact.
    - Many factors, including the initial accounting treatment and the effect of consolidation, are significant barriers to the application of this approach.
    - **Alternatively, OPG Trust might be able to recognize income (with a receivable created to balance the transaction) to offset the interest expense without collecting from ratepayers**, i.e., it will be a cash transaction in the future (cash received offset by a decrease in the receivable; no effect on income statement).

Exhibit A; 2017-2018 Estimates for Balance Sheet Transactions

Global Adjustment (GA) cost:	$12,030M
Ratepayer Portion:	$ 9,528M
Deferred Portion/Borrowing Required:	$ 2,502M



Setting up the Trust

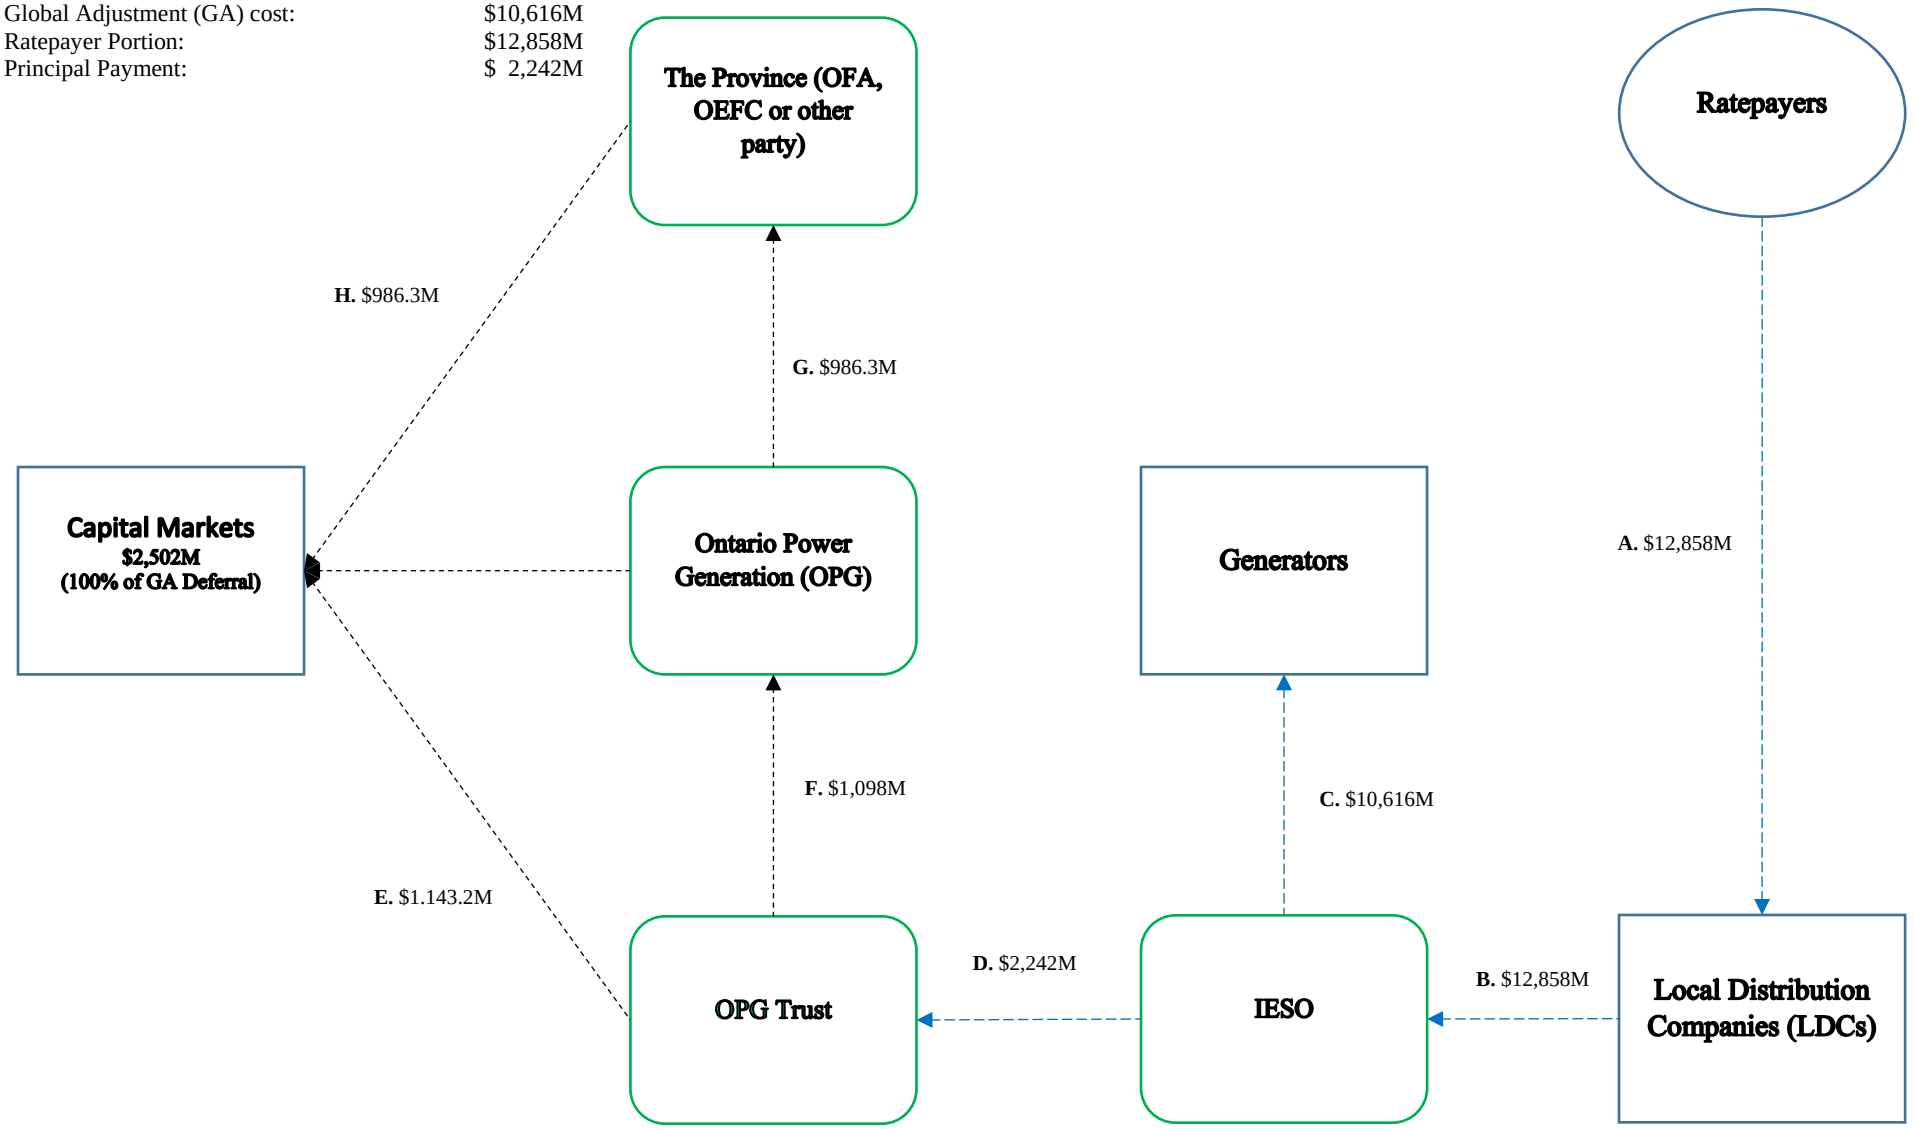
A. The Province borrows 44% of the deferred GA from the market.
B. The Province then funnels this amount to OPG through an equity injection.
C. OPG borrows 5% of the deferred GA from the market.
D. OPG lends an amount equal to the 5% and 44% from the market and the Province, respectively, to a separate legal entity called OPG Trust.
E. OPG Trust borrows 51% of the deferred GA from the market, ending up with 100% of the total $2.502M deferred GA in cash.

Deferral Mechanism

F. Ratepayers pay their portion of the GA to LDCs.
G. The LDCs remit this amount to IESO.
H. IESO, with the proper legislation and accounting treatment, is allowed to recognize a regulatory asset – the right to collect the deferred amount of $2,502M from ratepayers. It then sells this asset for cash to OPG Trust.
I. IESO uses the proceeds from the sale of the regulatory asset and the collection amount from LDCs to pay the full amount of the GA to Generators.

Exhibit B: 2028-2029 Estimates for Principal Payments

Global Adjustment (GA) cost:	$10,616M
Ratepayer Portion:	$12,858M
Principal Payment:	$ 2,242M



Collection of the GA

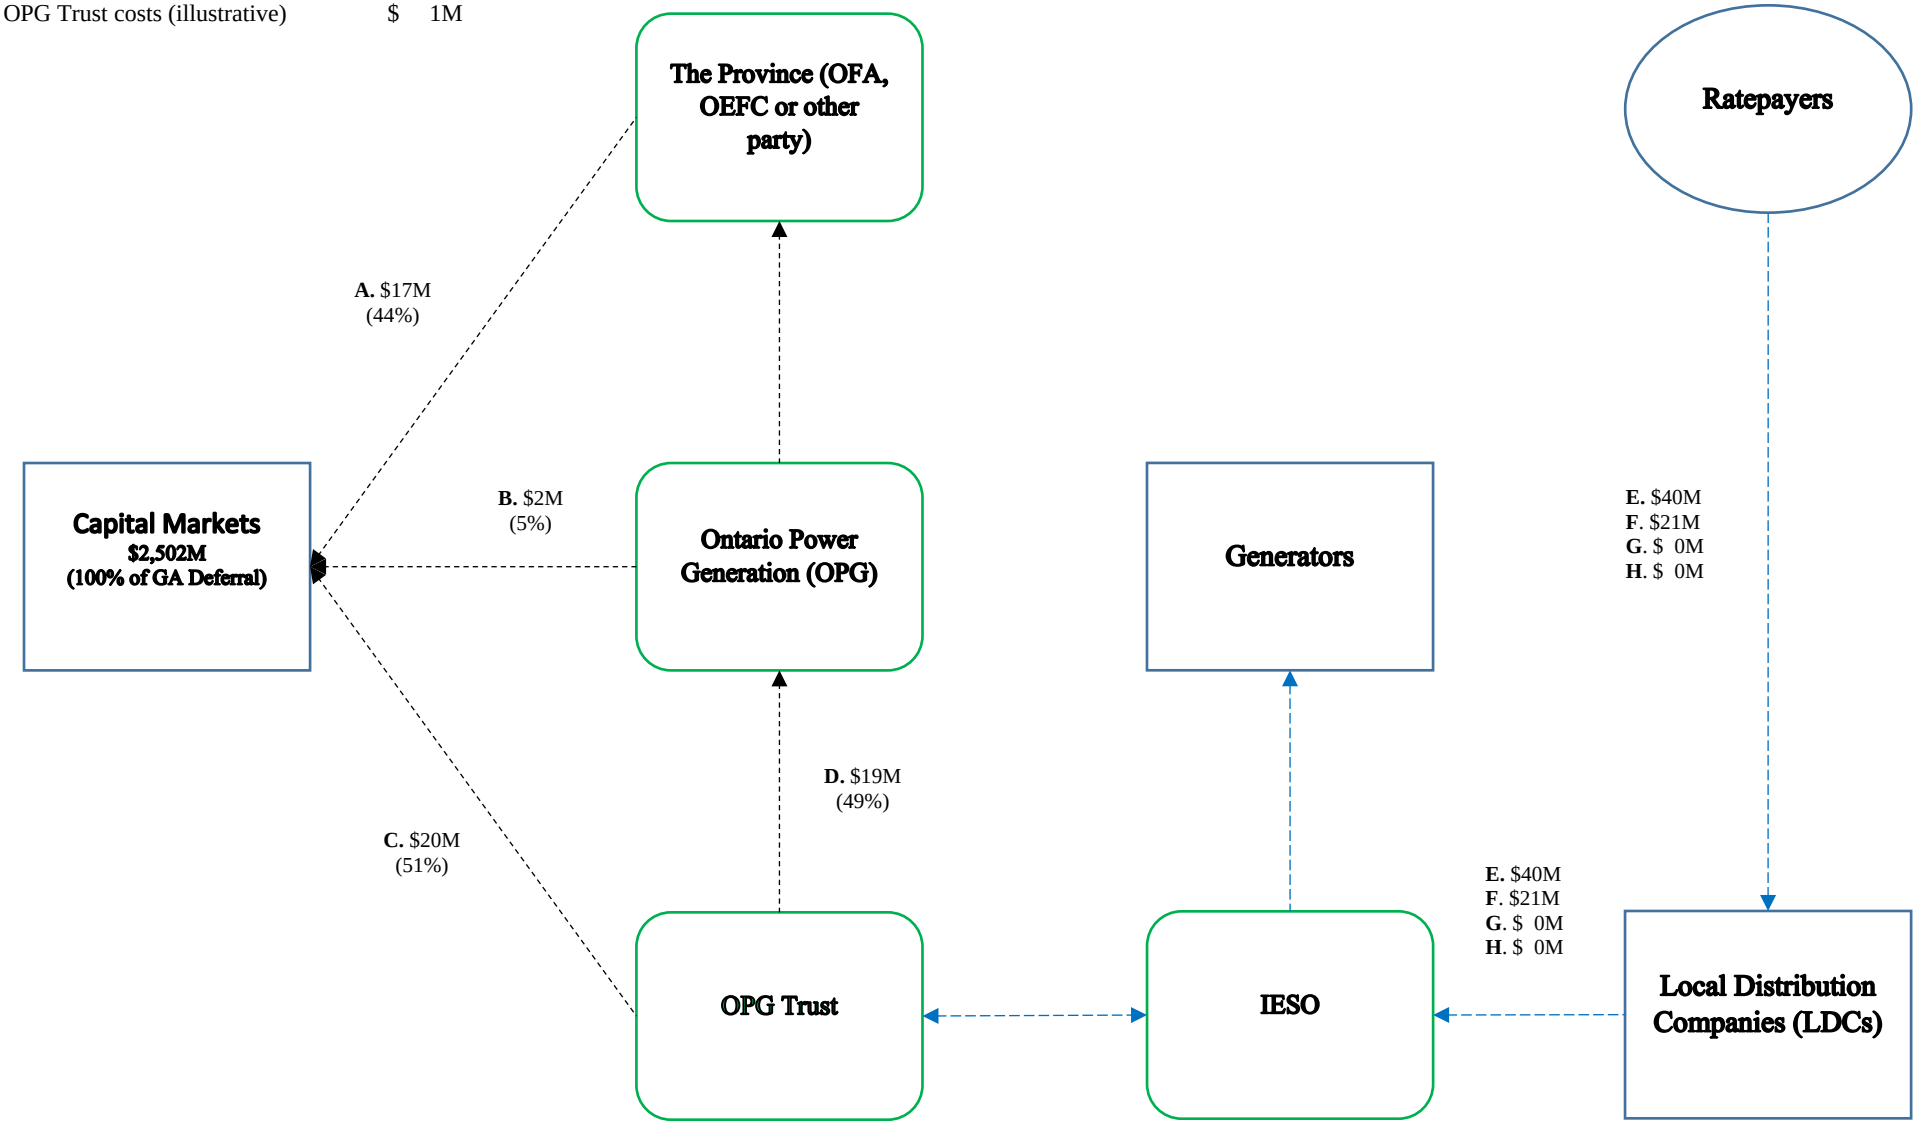
A. Ratepayers pay to LDCs the full cost of the GA plus an additional $2.242M that will be used to reduce the principal of the borrowing (or principal and interest if there is "interest on interest").
B. LDCs remit this amount to IESO.
C. IESO pays the full cost of the actual GA to generators.
D. IESO pays to OPG Trust the additional payment from the ratepayers over the actual GA cost. OPG Trust reduces the asset (for the right to collect GA deferral costs from ratepayers) by an equivalent amount.

Settlement of Principal.

E. OPG Trust pays off principal to the market. In this example, pays off 51%, but could pay more or less depending on various factors (e.g., subordinate debt, managing weighted average interest cost, etc.).
F. OPG Trust pays down principal related to the 49% of the GA Deferral it borrowed from OPG.
G. OPG could give a dividend to the Province equal in order to pay off the outstanding principal it borrowed from the market (44% of the total GA deferral cost)
H. The Province pays back principal to the market.

Exhibit C: 2017-2018 Estimates for Interest Recognition

Interest Recognized	$ 39M
OPG Trust costs (illustrative)	$ 1M



Recognition of Interest

A. The Province recognizes interest on the 44% of the deferred GA it borrowed from the market.

B. OPG recognizes interest on the 5% of the deferred GA it borrowed from the market.

C. OPG recognizes interest on the 51% of the deferred GA it borrowed from the market.

D. OPG Trust recognizes interest on the 49% of the GA it borrowed from OPG; OPG recognizes income for this transaction.

Options for Ratepayer collection

E. Option 1 – collect the entire interest amount from ratepayers plus the Trust administrative costs, thus offsetting the interest expense from total borrowing with the recognition of income. The end result is no fiscal impact.

F. Option 2 – only collect interest income for the 51% of deferred GA from the market and admin costs; OPG Trust would recognize income to offset the interest expense to the market but fiscal impact of 49% of the interest ($19M)

G. Option 3 – Do not collect from ratepayers – fiscal cost of 100% interest.

H. Option 4 – No collection from ratepayers, but OPG Trust is allowed to defer the recognition of interest expense on 100% of debt, leading to no fiscal impact.

Notes

- Assumptions based on Energy models and data, IESO forecasts, and CEFD validation models.
- Sources include Ministry of Energy decks, OPG reports and discussions, external accounting reports, and internal reports/discussions.

Subject: RE: Comments

Hi Krista, John,

We shared your ask with Finance Tax Policy and they have been mulling this over for the past few days. We had a conversation this morning and I wanted to provide a synopsis of that call:

- Tax Policy is of the view that if this is structured as a Trust will be a taxable entity under the Income Tax Act. However, because OPG is the beneficiary of the Trust, it will not pay any taxes. For greater certainty, Tax Policy suggested seeking a ruling from CRA. If necessary, we could seek an exemption from CRA (there is precedent with the Nuclear Funds Trust). Please let me know whether that is consistent with your assessment.
- Since all income from the Trust will flow to OPG, all revenues would be subject to PILs (unless we take action to make specific exemptions).
- As we discussed last week, we have proposed the language that you provided with PILs exemptions for specific earning streams from the trust.
- Tax Policy has a number of questions about how to define those exempted revenue streams and the rationale for those exemptions. They want considerably more detail and more time to consider this issue.

- According to Tax Policy, existing Legislation (James I will leave it to you to describe) provides authority to set out PILs exemptions in regulations. Therefore they suggest we do not need to add anything in to the OFHP legislation at this time. That will provide time to more fully consider the issue and discuss the need for these exemptions.
- I suggested I was generally comfortable with this approach, subject to input from OPG and Torys. I think it is better for us to have more time and the flexibility to include these provisions in regulations. Given where we are in the process, I think we are out of time to settle legislative language that will work for Tax Policy.

James, please feel free to add / modify if I missed anything. Please let us know ASAP if you have concerns.

Hi,

I interpreted the "As we discussed last week, we have proposed the language that you provided with PILs exemptions for specific earning streams from the trust" that the reference was revenues from the Trust to OPG that they are seeking a PILs exemption for, so, different than I had understood.

Attachment 1: BN - GA Equity Injection Structure v6_Markup2Clean.docx

---

Hi Ron,

Pls. see attached note that we are looking to circulate later today among the equity injection working group, at least within the OFA.

Thanks,

John

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV)referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

Commented [JK1]: Check with SIFB or CMD on the right terminology.

Commented [FC2]: To me this is part of the terms and conditions

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
    - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.
- Longer term debt will be issued as soon as possible, subject to market timing constraints.

Commented [JK3]: Did I get this right?

Commented [FC4]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
- The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].

- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK5]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK6]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

Commented [FC7]: Not quarterly?

Commented [JK8]: Monthly now.

Commented [FC9]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [SQ210]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
    - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
    - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

DRAFT: April 11, 2017

[Letterhead of Minister of Energy]

April [●], 2017

Bernard Lord
Board Chair
Ontario Power Generation Inc.
700 University Avenue, 19th Floor
Toronto, Ontario
M5G 1X6

Dear Mr. Lord:

I am writing further to the Premier's news release of March 2, 2017, in which the Province announced the Fair Hydro Plan to lower electricity bills by 25 per cent on average for certain customers starting in the summer of 2017, as part of a significant system restructuring that will address long-standing policy challenges and ensure greater fairness. Given OPG's expertise as a participant in the electricity market and its expertise in rate regulated accounting and investment stewardship over significant pension and nuclear funds, I am writing specifically to request OPG's involvement in the implementation of the Global Adjustment Refinancing component of the Fair Hydro Plan

As you will have read, the 25 percent reduction in residential electricity bills referred to in the March 2nd announcement includes the ~~8 per cent~~ reduction resulting from the rebate of the amount equivalent to the 8 per cent provincial portion of the harmonized sales tax on electricity bills effective January 1, 2017. The Province has also committed that certain customer bills would not increase by more than the rate of inflation for the four years following the 25 per cent average reduction.

In addition, as you know, Ministry of Energy staff have been working on preparing the draft legislation and regulations to implement the Fair Hydro Plan, with input from the IESO, the OEB, OPG and their respective advisors.

The Province is requesting that OPG, working with the Ministry of Energy, the IESO, the OEB, and their respective advisors, consider and recommend a plan for financing mechanisms that could achieve the Province's objectives for the reduction in consumer bills and the limitation on bill increases outlined above and in the Fair Hydro Plan, all in accordance with the legislation and regulations designed to facilitate the Fair Hydro Plan.

In particular, the Province would like OPG's financing plan to consider, among other things, structures and methods that would permit viable refinancing of a portion of the Global Adjustment to reduce electricity prices for certain of today's electricity ratepayers, with the costs of the refinancing to be recovered over a period of up to 30 years, all in accordance with the legislation and regulations designed to facilitate the Fair Hydro Plan. We would expect the financing plan to include:

i) potential structures for the financing, which may include, as appropriate, a special purpose vehicle created for the financing;

ii) potential financing mechanisms and instruments, including senior debt and subordinated debt; and

iii) identification of the capital markets and jurisdictions that can be accessed to finance the rate mitigation.

The Province recognizes the need to provide OPG with the necessary assurances with respect to recovery of the principal, interest, and operating and other costs of any financing and will address the specific requirements identified by OPG and its financial advisors, including in the pending legislation and regulations that will govern the mechanics and requirements of the financing entity. We would also request that your plan identify any amendments to OPG's governing legislation and constating documents needed to facilitate the implementation of the financing plan in a commercial manner.

We would further expect that the financing plan would be implemented in an effective and cost-efficient manner by OPG.

I look forward to receiving a detailed plan that has the support of the OPG Board of Directors by June 1, 2017.

Yours truly,

The Honourable Glenn Thibeault
Minister of Energy

Implementation of Ontario's Fair Hydro Plan
Week of April 10, 2017

Item	Key Deliverables / Considerations	Timing / Next Steps
1) Refinancing the Global Adjustment (ESP/IGS)		
• ENERGY, LSB, IESO, OPG, OEB, TBS and MOF	• Legislation • Defining mitigation and recovery mechanism • Establishing roles for IESO, OPG and OEB • Regulation (amend O.Reg. 95/05) • Shareholder Resolution (work with OPG to determine form) • Accounting opinions from E&Y (OPG) and KPMG (IESO) • Financing: o How long will IESO hold short term liability (weeks/months); o When and how frequently will OPG purchase the asset from IESO; o OPG trust rating agency review and 3rd party lender market sounding (e.g., cost/term, etc); o OPG to confirm if it is considering more than one SPV/subsidiary; o OPG to explore tax considerations; o OPG to indicate how it would determine interest rate on sub-debt; and o OPG to provide amount/frequency of equity required and indicate trigger • Third Party Technical Report (e.g., long lived assets, associated assessment of social, health and environmental benefits) <u>Recent Action Items</u> **OPG:** • OPG to continue to work with lead banks / rating agencies / OFA on financing issues • OPG to confirm accounting if OFA were to act as lead order on borrowing • OPG to determine who will finance / hold the asset until it goes to	• IESO Board meeting on April 12, 2017 – ESP to present on OFHP • AG briefing on April 19, 2017 (TBD) • Provide comfort letter to allow OEB to include in May 2017 RPP • April 21, 2017, "pens down" on Legislative drafting • Approval dates: o TB/LRC on May 1 2017; and o Cabinet on May 3, 2017 • Legislation introduced May 4, 2017. o Opposition Briefing (TBD) • Summer 2017 implementation (June/July). OPG preference for July 1 to align with quarter-end

Item	Key Deliverables / Considerations	Timing / Next Steps
	the market • OPG to embed OFA/Energy (as necessary) in their ongoing internal discussions • ESPD, IESO and OPG to continue discussions around refining refinancing modelling • OPG /LSB to work through requirements / help draft a shareholder resolution in a form to be determined. OPG to continue to consider requirements for enhanced indemnification for Board member • OPG providing shareholder resolution to OPG Board committee April 7, 2017 and will be provided to Ministry following that **IESO:** • IESO to work through technical aspects with IT (i.e., operationalizing the back-office functions) • IESO to work with KPMG in the development of a formal opinion once first draft of legislation is available • IESO to discuss LDC issues with OEB **OEB:** • OEB to continue to work with ENERGY to finalize draft comfort letter regarding May 1 – Regulated Price Plan (RPP) and OESP • OEB to draft RPP communique to be released publicly by April 20, 2017 **Legislative Drafting:** • LSB / Blakes / OPG / IESO will continue to work through legislative drafting issues • LSB has drafted a letter for the Minister to send to LDCs re: contempt of the Legislature • Working group meetings Monday and Tuesday • ENERGY / Blakes / IESO / OEB / OPG to meet on Monday to work through issues related to legislation • KPMG / E&Y to continue to be informed so that they can eventually confirm we've met all conditions • Blakes / OPG to work through financing issues related to 10% cap	

Item	Key Deliverables / Considerations	Timing / Next Steps
	• Blakes / LSB to work with MAG on a second constitutional law opinion from Peter Hogg • TD engaged through OFA to provide financial advice Considerations • OEB-RPP Filing in May 2017. OEB may also be required to set new GA rate for RPP-eligible consumers. • Ongoing legal, accounting and financing risk assessments. • Impact on Electricity Sector Dedicated Income.	
2) Broadening Rural or Remote Rate Protection (RRRP) (SNAP)		
• ENERGY, LSB and LDCs	• Legislation • Regulation (TBD) Recent Action Items • SNAP convened LDC working group on March 23rd and March 24th • SNAP to continue to monitor rate hearings for RRRP LDCs • SNAP to collect billing implementation timeline estimates from LDCs • SNAP working with CSD / TBS on allocation for each program (RRRP, OESP, FN Rate and OREC) without executive control on each Considerations • Consideration of revising definitions of RRRP program for broadening to other LDCs and continue to have current structure in place to provide to existing consumers in Algoma and Remotes. May require separation of RRRP and broader distribution rate protection into separate programs. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC on May 1, 2017 (TBD) • Fall 2017 implementation (per Cabinet Minute)

Commented [RK1]: Why is this still here?

Commented [RK2]: Who at MOF?

Item	Key Deliverables / Considerations	Timing / Next Steps
3) Expanding Ontario Electricity Support Program (OESP) (SNAP)		
• ENERGY, LSB, MCSS and OEB	• Legislation • Regulation <u>Recent Action Items</u> • LRC package for OESP enhancements (50% increase, expanded eligibility) approved by LRC and Cabinet. o Implementation on May 1 to align with OEB decision to end OESP charge on May 1, and to finance program through variance account. • SNAP to continue to work through OESP automatic qualification with MCSS / OEB • SNAP to continue to work with, MOF, OEB and CRA on OESP wet signature • SNAP to work with TBS map out how funds will flow from fiscal plan after legislation passes <u>Considerations</u> • Ministry is working with OEB on how the OESP enhancement will be announced as part of a communications exercise. • Positive progress with OEB on implementation: o OEB has been engaged on implementation timelines for 50% + new eligibility – OEB working with LDCs to ensure systems are upgraded to reflect new credit amounts o Ongoing work with MCSS to auto-enroll those receiving / applying to social programs. Work plan for implementation being developed with OEB support. • As part of legislation / regulatory amendment work, investigating steps required to transition from OESP variance (approx. $100 million) to finance the program to financing with tax funds. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF.	• Report back to TB/MBC on May 1, 2017 (TBD) • LRC on April 10, 2016 • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
4) Providing a First Nations On-Reserve Delivery Credit (SNAP)		
• ENERGY and LSB	• Legislation • Regulation (TBD) <u>Recent Action Items</u> • SNAP convened LDC working group on March 24th • SNAP to move forward with including COO in FN rate implementation / work through implementation issues. SNAP working to meet with COO to have preliminary discussion of the FNDC • OEB has not posted FN rate report just yet as conversations are ongoing between Ministry on a letter from the Minister to the OEB acknowledging receipt of the report and outlining the plan for implementation <u>Considerations</u> • On-reserve eligibility considerations require discussion with Chiefs of Ontario • Work with LDCs on implementation details that need to be captured in legislation. • Legislation required to have program funded by taxpayers. • Technical/governance structures needed to flow taxpayer money to programs. Need to work with IESO/OEB/MOF. • Work with LDCs to consider any bill messaging.	• Report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant OEB estimate of program costs, from $13 million to $20 million • Program in place in 2017 (per Cabinet Minute)

Item	Key Deliverables / Considerations	Timing / Next Steps
5) Establishing an Affordability Fund (CRED)		
• ENERGY, IGS, LSB, Blakes, CSD, OPCD, TBS, MOF and H1 (KPMG and Osler)	• TBC/MBC Submission • Declaration of Trust ("Trust Deed") • Transfer Payment Agreement (TPA) • Administrative Services Agreement (H1-Trust) <u>Recent Action Items</u> • March 23 and 24: Trust Deed and TPA executed. • March 30: Funds transferred to Computershare. • April 7, 2017: Briefing for Advisory Committee members <u>Considerations</u> • Legislative changes not required.	**April to May 2017:** • Advisory Committee recommends Board of Trustees by May 31, 2017; Computershare appoints full Board of Trustees **June 2017:** • Trustees expected to engage with distributors, IESO, OEB, others, to define funding criteria and processes. **June 2017:** • Report back to TB/MBC with final program details and a performance management framework including outcome measures and targets **Summer 2017:** • LDCs begin to apply to the Trust for funds **Late 2017/early 2018:** • ENERGY can apply for additional funds through 2018-19 PRRT based on performance and need. Trust term can be extended with amended/new TPA if agreed by Trust

Item	Key Deliverables / Considerations	Timing / Next Steps
6) Expanding ICI (ESP)		
• ENERGY, LSB, IESO and LDCs	• Regulation (amend O.Reg.429/04) • Regulatory Registry (RR) posting <u>Recent Action Items</u> • ESP working to finalize materials for LRC on April 10, 2017 – draft language from leg. Counsel has been shared with ESP staff • Communications finalized TPA with OCC / ESP, CRED and COMMS to consider providing support to CME (outreach with CME ongoing) <u>Considerations</u> • Amendments need to be in effect as much in advance of the consumer notification date as possible to impact electricity bills this year (May 31, 2017). • Ongoing outreach with LDCs being undertaken by IESO	• RR posting on the proposed amendment – posted March 9, 2017 for 30 days • LRC on April 10, 2016 • Report back to TB/MBC on May 1, 2017 • Effective April/May 2017 (TBD)
7) Energy Sector Efficiencies (i.e., Ontario Energy Board and IESO) (SNAP / ESP)		
• ENERGY, LSB, OEB and IESO	**OEB:** • Directive / Letter (TBD) <u>Considerations</u> • Signal efficiencies intent in OEB business plan letter • Work with OEB/LDCs on LTEP document and proposed directive to OEB **IESO:** • Directive / Letter (TBD) <u>Considerations</u> • IESO's stakeholder engagement re Market Renewal is ongoing.	• Continue this work as part of LTEP

Item	Key Deliverables / Considerations	Timing / Next Steps
8) Additional Initiatives for Small Business and Industrials (i.e., Class B) (ESP)		
• ENERGY, MEDG, MOF, MOECC, MOL and Small Business	• Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers' Recent Action Items • ESP to work with other ministries regarding other measures that can be considered for SMEs Considerations • TBD	• Report back to TBC/MBC and Cabinet in spring 2017 (per Cabinet Minute)
9) Initiatives for Tenants (SNAP)		
• ENERGY and MOH	• Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs Considerations • MHO leading any legislative/regulatory changes needed to have tenants benefit from program. Consider whether benefits are limited to 8% and GA (rather than OESP which is harder to provide to tenants who do not pay their bills). • ENERGY working with MCSS to streamline/automate enrollment for ODSP/OW consumers into OESP.	• Report back to TBC/MBC and Cabinet in fall 2017 (Per Cabinet Minute)
10) Stakeholder/Agency Outreach (Communications)		
• ENERGY	• Minister's letters to: o Ratepayers; o LDCs; o Business (e.g., OCC, CME, Concerned Manufactures, etc); and o Agencies (i.e., IESO, OPG, OEB and H1)	• Early-mid March

Commented [RK3]: Has MOF been engaged? Who?

Item	Key Deliverables / Considerations	Timing / Next Steps
11) Engagement with Officers of the Legislature		
• ENERGY, MOF/OFA, Financial Accountability Officer (FAO)	• Provide FAO staff with a technical briefing on the OFHP	• March 9, 2017: Preliminary discussion • March 14, 2017: Letter received requesting additional information. March 31, 2017, information provided to the FAO
• ENERGY, MOF/OFA, Auditor General (AG)	• Provide the AG with a technical briefing on the OFHP <u>Recent Action Items</u> • Provide AG technical briefing presentation used in media lock-up on OFHP in advance of the technical briefing	• March 2017: Cabinet submissions provided to AG • April 19, 2017: Preliminary discussion on (TBD)
12) Bill Presentment (SNAP/LSB)		
• ENERGY	• Ministry to begin work on bill presentment <u>Recent Action Items</u> • MO to clarify bill presentment expectations with PO (Bill inserts will be ready for July 1 with bill redesign to occur in the Fall)	• Initial discussion on March 31, 2017

Hi John, Emily,

FYI on the attached.

Emily, note point 8 in the legislative issues document:

- restrictions on consumer group's ability to "opt-out" or by-pass the charge (to avoid de-valuing the asset)

Likely not quite on point, but in the ballpark perhaps. Not quite sure what they mean by ''group'' in this context.

Ron

Hi John

Looks fine to me. My only thought as I read through that was the items under #5) I.e., set this, fix that, cap this. My brain is not that nimble, but I think not all of those items would be independently determined, but perhaps more importantly that market conditions assumed could turn out differently and result in some of those parameters changing. I'm thinking particularly of "fix the date until which rate payers receive a discount for GA refinancing". Costs forecast changes could change that right?

Bruno

Subject: Rate Mitigation

Hi Dave,

Please see the following summary of this week's rate mitigation update discussion:

GA Financing

OPG

- RBC, CIBC, Goldman have been approached to act as leads for securitization (both for Canada and US). Terms have not yet been finalized
- Sub-committee meetings are starting up, including facilitating the required equity injections from the Province
- Bankers have suggested timelines are aggressive
- OPG likely to establish the financing in the Fall but will have bridge facilities in place in order to accommodate financing in the interim period.
- The idea is not to go to market each month, but potentially on a quarterly basis. Short term debt would accumulate monthly (the bridge facilities mentioned above would help accommodate this) and then move to longer term borrowing financed via the quarterly offerings.
- Each time OPG goes to market the asset would be re-sized and associated debt would all be considered a single tranche.
- At this point the thinking is that all three credit agencies would rate the debt (Moody's, S&P, Fitch)
- OPG highlighted some of the information that they'll require over the coming weeks/months:
    - Customer data: Rating agencies will have a particular focus on 10% of customer bill and will require information to assess this
    - Equity injection: Might require a second class of shares, redeemable because cash coming back on paydown
    - Mechanism: Seeking clarity on what the process beyond year 4 will be with respect to determining the asset / liability
    - OFA Involvement: OPG suggested that it may be difficult for OFA to purchase large parts of the 51% outside financing, as it may not meet accounting tests for independence. However, OPG is investigating whether OFA could act as a lead order in order to drive interest costs down.
- OPG Board has chartered a special committee of the Board to advise on the structure. For now OPG is comfortable devoting time and resources on the basis of the Premier's announcement. The company may require a Shareholder Declaration / Resolution in order to advance the discussion (likely in April)
    - OPG will work with the Province to carefully worded the Dec./Res. to ensure the Board maintains authority to proceed. Ultimately the Board needs to ensure the proposal they make is in the best interest of OPG based on its credit rating, governance and business interests
    - The board may need enhanced indemnification for this initiative which the Province is considering

IESO

- Conversations on technical process are underway (Ministry, OPG etc.)
- KPMG requires draft legislation before it can provide an opinion on the regulatory construct but this is still in the early stages. IESO will discuss the process and timelines for this opinion.

OEB

- Require a letter from Minister to allow incorporation of GA Smoothing into May 1 RPP. OEB is developing a first draft.
- A news release is planned for the Thursday following Easter announcing new RPP rates.

Blakes

- Blakes provided a summary of legislative changes (see document attached)
- One item in particular that they are thinking through is the impact of consumers exiting the system which would put pressure on the value of the asset. Consideration could be given to a true-up mechanism to ensure the cost is covered or potentially an exit charge

Affordability Fund:

- This initiative is moving quickly with documents to be finalized and executed next week and flow of funds shortly thereafter
- Computershare will act as the initial trustee and the trust documents will set out a process for selecting experts to act as Trustees and guide the flow of funds. Considering Trustees from areas including LDCs, social service agencies, staff level etc.

RRRP, OESP, First Nations Rate:

- Work is proceeding with three separate sub-committees but there is a lot of cross over on all three workstreams
- LDC working groups kicked off last week where they focused on bill presentation and implementation
- OESP:
    - The posting is up for comment (comment period ends April 8th)
    - OESP be removed from the bill at the same time GA financing is implemented (May 1st) pending regulation amendment process
    - Move toward 100% via automatic enrollment is more complex so may not be implemented for May 1st. ENE is working with MCSS to deploy a process similar to ODSP and other low income programs but a Federal exemption is required which conversation with the CRA are ongoing
- RRRP:
    - RRRP cannot be removed from the bill until the legislation is passed
    - Conversations have started but the main work for LDCs will be implementing billing system changes and OEB can help identify who may require IT assistance
- FN Rate:
    - Chiefs of Ontario are interested in participating in a working group
    - Eligibility will be geographically based (all on reserve residents). This may capture some non-First Nations residents. However this should be limited, and would be

extremely complicated to avoid.

ICI:

- LRC on April 11th with a May implementation date
- Will begin outreach to Chamber of Commerce (OCC) and consider others (CME for example)
- ENE will begin to sit down with other Ministries to discuss broader measures for small and medium businesses
- ENE has met with LDCs to ensure they are aware of changes and EDA has flagged that clarity is needed for some small manufactures to ensure conservation incentive remains

Thanks,
Scott

Ok, thanks Rob.

One question. I was wondering about a comment I heard – something along the lines of "specific earning streams from the trust".

Why would Trust differentiate between different earning streams?

Subject: SPV

John,

There were no materials for yesterday's meeting. You may be aware that OPG is seeking a PILs exemption for certain income generated by the SPV.

At this point, we are unaware of any reason to exempt the income from the SPV which is anticipated to be small.

Regards,

Rob

Fyi, and a note is requested on how the equity injection would work.

Maybe we can combine the discussion with Adam but the following are the considerations:

Given the equity injection need of 44% to OPG, we kind of need to figure out how to do this. Likely, a TB submission for the injection would be required. Given the settlement at IESO would be on a monthly basis, how to facilitate the proportionate 44% equity injection would need to be figured out. What would be the framework and or delegated authority.

It'd need to issue shares to the Province.

Any tax implications?

Given the monthly injection (potentially), do we contribute cash in advance or as needed? (Do we care about borrowing frequently – CMD's concern, in my view)

What other areas do we need to work with? TBS OPCD?

Could we utilize convertible loan of some sort?

This injection would need to be classified as an operating asset.

Do we have OPG pay dividends during the period of capitalizing interest?

The 2% or rate of inflation increase, how does this play into the whole project?

No worries, I did ask Ron about the benchmark comment he made to me and Francisco earlier.

He meant that the legislation or regulation would say Canada plus a certain commercial spread and with that as the benchmark, if OPG is able to borrow at a lower cost of funds, it would make a profit.

GA FINANCING – TD'S ADVICE SOUGHT ON EQUITY INJECTION MECHANISM

The Capital Markets Division of the Ontario Financing Authority require TD advisors' recommendations and detailed descriptions of options vis-à-vis the proposal to provide capital ~~equity injection~~ to the Global Adjustment (GA) deferral proposal as part of the larger Ontario's Fair Hydro Plan, as announced on March 2, 2017.

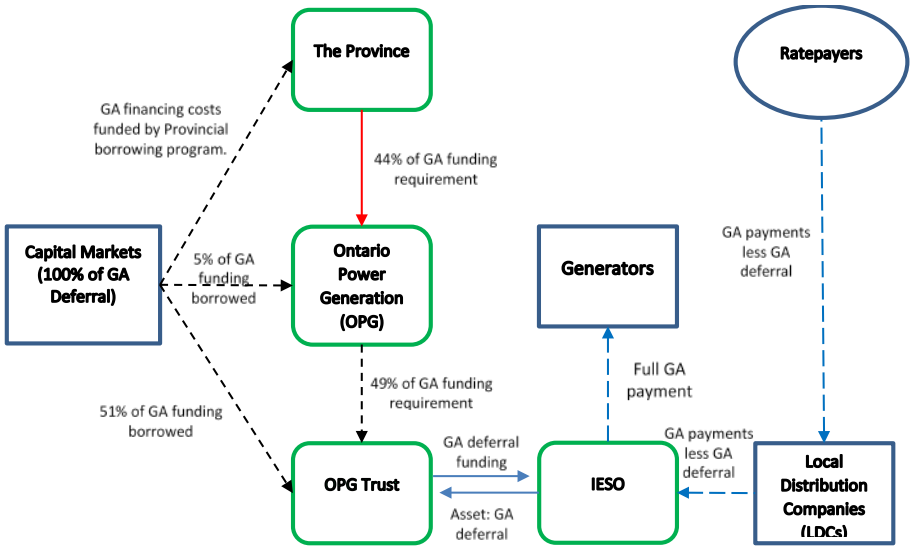
Formatted: Font: 12 pt

Context

Formatted: Font: 12 pt

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its capital

contributions ~~equity injection~~ through its annual borrowing program - from issuing debt into the capital markets.

Options for Equity Injection from TD Securities

The advice sought from TD could be summarized as follows:

When developing options for structuring the capital contributions ~~equity injection~~ from the Province to OPG for the~~amounting to~~ 44% of the ~~debt incurred~~financing requirement ~~-~~by the OPG Trust ~~set up~~ to purchase the regulatory asset from IESO, a number of ~~the following~~ underlying principles need to be addressed.

- While the Province is a sole shareholder of OPG, advice is sought to address potentially higher degrees of complexity of shareholder structure.
    - For example, options should include options for mechanism to create a level of certainty for recovering the capital ~~money~~ provided to OPG no matter if this is done as common equity or through other mechanisms, including the potential used of preferred shares.~~as 'equity injection' for the purpose of the GA deferral proposal~~.
- Under the current state of discussion, t~~T~~he capital contribution ~~equity injection~~ w~~ould~~~~ill~~ be provided on a monthly/quarterly basis to OPG by the Province.
- The capital contribution ~~equity injection~~ results in the Province, the sole shareholder of OPG receiving common shares, or another type of security, from OPG whose valuation is based on a determined and agreed upon methodology. The Province will require an internal discussion before proceeding with a dialogue with OPG on the details.
- This methodology can be as simple as book value or can be based on some ~~kind~~ form of a discounted cashflow (DCF) mechanism but TD's expertise in structuring deals is sought in this request [keeping in mind the first bullet above].
- Given the time limited nature of the capital contribution ~~equity injection~~ the Province would anticipate~~s~~ repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder, as well as having vested legislative authority, can require OPG to issue dividends annually.
- The shares issues by OPG can include some ~~kind~~ form of optionality to be exercised by the Province as and when repayment is ~~required~~due under the GA deferral plan. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, ~~given the potentiality of a new government's different policies subsequent to future elections~~with any number of possible causes, e.g. changes in government policy.
    - ~~OPG c~~Could~~an~~ the structure involve issuing~~e~~ ~~preference~~ preferred shares ~~again~~ with some ~~kind~~ form of optionality for repayment. Preferred~~ence~~ shares, especially those with a specified annual dividend schedule could potentially~~will~~ ensure that the Province remain~~s~~ whole in terms of the incremental interest costs it would incur~~s~~ on the ~~equity injection~~capital contribution.
- Other factors to be considered for repayment:

Formatted

Commented [JK1]: I suggest we delete this and have TD opine on options.

- Should the senior and subordinated debt be ranked as the same and if so does this impact market access
- Should the senior debt be repaid first or should repayment be on a pari-passu basis
- OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.
- Eventually, the Province would need to have a discussion with OPG on the path forward.

Commented [JK2]: Not sure if this is needed here.

Summarizing Issues to Work Around [Pls. Add More CMD and FTD]

- The Province will need to consider various levels of options for certainty in being able to recover its capital ~~getting the money back,~~ as stipulated in the GA deferral plan.
- The Province needs to be kept whole with respect to any financial cost that may arise from making and carrying forward the capital contributions.
- For regulatory purposes, there may be an interest in insuring that the capital contributions ~~equity injection is~~are considered a true equity in OPG's capital structure [TBD but still require consideration].
- The plan require that OPG operates on a commercial basis for the SPV with its Board needing to make independent decisions[, thus the need to have a discussion].

I agree, indeed I tried to ask a similar question at the last meeting with CMD staff but the only answer/message I received was that they are very focused on (1) ensuring there is lending in one form or another through the OFA (2) ensuring the Province can get its money back at maturity or when it decides to do so.

I went a step forward and asked/flagged that I don't fully understand why it needs to be through here given they don't seem to believe common equity would work...

Maybe is easier to brainstorm if we find 5 min to discuss later today.

I think the sub-text is CMD's and maybe FTD's desire to spell out making sure getting its money back.

Any other views, Francisco?

Hi,

I made a few edits.

That said, as sole shareholder, the risk of equity in OPG is a general one, not specific to the equity for the SPV, so I'm not sure why this is being pursued, unless the concern is providing for if the Province is at some point not the sole shareholder. Is that the sub-text?

Thanks, I'm thinking of adding a bullet at the end...

· In order to ensure continued treatment of OPG as a government business enterprise (GBE), the Province would want to avoid the appearance of providing zero or low interest loan.

Steve,

We have been corresponding with Torys today and are in the process of preparing a consolidated mark-up reflecting comments from the Dealers and OPG, which will also incorporate some of the comments received this evening from the IESO/Stikemans. We will circulate the consolidated mark-up before tomorrow's meeting.

I have not been invited. I am reviewing the current draft right now, though I am not sure whether this draft increases our role, or if it just helps us to understand the context in which we will likely have a role at the equity injection stage.

Stephen,
This version does not reflect the top issues raised by the Dealers. We are sitting down with the Dealers now working on a comprehensive mark-up that we will send later today, but it will not be ready by 2 PM. We would like to use tomorrow's meeting to discuss the mark-up we are preparing rather than a further revised version that will not reflect our feedback.

Subject:	RE: "Fair Hydro Act" Legislative Summary (Discussion Draft)
Date:	Tuesday, April 11, 2017 10:15:28 AM

Thanks John,

The legislation still does not seem to have a lot of the main ideas finalized.

- Look at page 24, footnote 21 – "*Under consideration, including the dealers' request for a "servicer guarantee" and a "contractual guarantee" to address a "Change of Law" or if all or a portion of the legislation is ultra vires, requiring (at the lenders option), the Province to pay principal and interest on the outstanding debt until maturity or payout the entire debt including any make-wholes".* The provincial guarantee is still being considered.
- Schedule 3 (Financing Plan – page 29) relates to the equity injection but just provides "a guideline as to what a Financing Plan should address".
- Looks like they are going the separate act route and not including the plan in the Electricity Act.

Kind regards,

Adam Prokop

All - please find attached a revised draft of the summary legislation circulated by Blakes on April 10 which reflects consolidated comments from OPG and the dealers (and their respective counsel). Please note that the attached remains subject to the continuing review of OPG and the dealers. We will have printed copies of the blackline available at today's meeting.

Best Regards,

Nina

Subject: RE: "Fair Hydro Act" Legislative Summary (Discussion Draft)

Steve,

We have been corresponding with Torys today and are in the process of preparing a consolidated mark-up reflecting comments from the Dealers and OPG, which will also incorporate some of the comments received this evening from the IESO/Stikemans. We will circulate the consolidated mark-up before tomorrow's meeting.

Stephen,

This version does not reflect the top issues raised by the Dealers. We are sitting down with the Dealers now working on a comprehensive mark-up that we will send later today, but it will not be ready by 2 PM. We would like to use tomorrow's meeting to discuss the mark-up we are preparing rather than a further revised version that will not reflect our feedback.

Subject: "Fair" Legislation (Discussion Draft)

Thanks for your comments, Michael. The attached version picks up many of your, Peter's and H&W's comments. In some cases it defers consideration, pending dealer input (such as your suggestion of tracking individual, standalone Regulatory Assets per transaction; delinking the investors from the LDCs, in favour of having IESO be the main servicer; and deleting some of the US precedent language). The regulatory input included in your mark-up was particularly helpful, although not easily dealt with tonight without the Province's input, so many of those points have simply been brought forward with additional footnotes for now. The manner and extent of delegations (primarily the Financing Plan and the Fair Allocation Plan), the nature of OEB review and regulatory actions, the scope of the undertaking and other similar issues, are still under consideration by MOE. Your comments to the effect that nothing can affect a funding obligation once incurred were referenced, as I think that is a pervasive and correct idea. The ultimate location of provisions (Part of the Electricity Act; new Act; Regulations) is still under consideration – for now it's all in this document to facilitate this group review. Finally, there are a number of "validity" type points, which arose in your mark-up and which we are still thinking about. We can discuss those further in the morning. Steve

Subject: Torys Comments on Blakes Draft Legislation

All,

I am attaching our comments on the last version of the draft legislation sent to us by Blakes. Both a clean and blacklined version are attached.

This is being distributed to OPG at the same time as everyone else and so remains subject to their comments as this is very much a work in process.

We also just received comments from Hunton & Williams but in the interests of time we have not been able to include those in our mark up, but expect to be in a position to raise any of their big issues at our meeting tomorrow. Also, I will send their comments separately to Blakes.

Regards,

Michael K. Feldman

Hi,

Per our discussion, I just spoke to Felix, I'll set up a conference call for tomorrow morning to go review the appropriation issue for GA financing. Francisco, given the timing, it would be helpful for you and/or Darren to sit in to make sure TBS has a much info as possible to prepare for whatever they need to do.

Thanks

Subject: RE: follow up from call - OPG GA
Date: Friday, March 24, 2017 10:41:12 AM

Hi John,

Just two:

1. Not sure why future BV is relevant at this point. Future BV of OPG shares would be a function of historic carrying costs, net income and dividends so not sure we need to go there at this point. Transactions between the Province and OPG have been deemed as related party transactions by OPCD so in absence of a specific rule or change in policy I'm not sure we would have to account for FMV. Also, given the Province is not taxable it should be a non-issue.

2. I'm not sure why Kaitlin thinks that OPG shares are in Energy's books (she is saying ENE holds the shares). If you check page 504 (Vol 1, 4-2) you will see that the initial $5.1B investment in OPG is under MOF. Furthermore, under the new reporting structure I understand the accountability of OPG is now with MOF although from a legal perspective the Minister of Energy remains as the sole shareholder.

Thanks,

Francisco

Cc: Ken Kandeepan <Ken.Kandeepan@ofina.on.ca>; George Sakura <George.Sakura@ofina.on.ca>
Subject: FW: follow up from call - OPG GA

Regarding this statement

On the value of the shares-My understanding is it doesn't matter, but for simplicity I think we should keep it the same as the current shares unless anyone raises benefits/considerations otherwise

If the new shares will have a retractable/redeemable option, doesn't that option have a value to it, in addition to the $20 BV? If the equity injection were to happen every year at different amounts, a valuation of that option will have to be calculated, which will in turn revise the total BV/per share.

The value of the shares doesn't matter now, but in the future, if we were to sell the shares to the public, we would need to calculate BV in order to calculate the gain/loss. Will have to get some documentation from 20 years ago on how $20 was derived in the first place.

Thanks.

Subject: RE: follow up from call

Revised version. Everything in here is up for discussion, I just wanted to share a straw man for people to react to.

Key changes relative to the last version:

- I've positioned as an ENE TB approval/appropriation request (though I haven't actually run this by ENE yet….)– they already have an operating asset, and hold the current OPG shares so I think any new shares would be held in the same place. I'm thinking about it similar to the equity injection that was done for H1 departure tax payment (ENE booked it but OFA actually flowed the funds). I've embedded within the OPG BP process for simplicity but if you think it should be on a separate track I'm happy to explore that.
- On the value of the shares-My understanding is it doesn't matter, but for simplicity I think we should keep it the same as the current shares unless anyone raises

benefits/considerations otherwise

Realise you guys are still thinking this through, but if your schedule permits It would be helpful if we could regroup today/tomorrow on this so I can hear what you guys are considering and chat next steps

Hi,

My understanding though it'd be good to check with accountants (assuming OPG accountants) would be that it would not matter given OPG does not have its shares trading. I think there are more technical ways of describing this but will leave at that.

On the diagram, it is my understanding that it'd be the Province.

Thanks,

John

Subject: RE: follow up from call

Kaitlin,
After the relevant legislation, Provincial approvals, OPG approvals ….. The funding of the Global

→

Adjustment equity injection, will have a line on the Financing Table that feeds the Ontario Budget and will then be incorporated on the Long Term Borrowing requirements for the Province.

-We are flexible on working with OPG on setting the required advance notice period that OPG needs to provide the Province (Energy, OFA-Corporate and Electricity Finance, OFA Capital Markets, etc).

-Quarterly equity injections looks ok.

-OPG will need to determine who needs to sign-off on the equity injection requests.

-I don't know if OPG has any recommendations wrt how to determine how share price will be determined or if it will be a "par value" – will have to get our accountants involved as how it is booked

John or Kaitlin – the diagram has OEFC funding the equity injection – is that correct?

Regards
carlos

Hi all – just checking in – do you think you'll have any edits to provide today? I have some further thoughts/ considerations I'd like to build in and am hoping to run our thinking up the chain (ENE/MOF) before we discuss with OPG.

Legal is also looking into timing for me so I am hoping to provide a bit more insight on that in the next turn.

Thanks,
Kaitlin

For sure – I pulled that diagram from an OPG white paper but happy to pull that from this note and I'll keep an eye out to make sure its not reference anywhere else.

I just mentioned this to Bruno but so that you're all aware. This one-pager will be something we can build on as our discussions with OPG progress, if we get to a point where we're comfortable it could also serve as an update to the broader implementation group. I've attached a summary of the last meeting and I'll try to share these on an ongoing basis in the future in case its helpful (Ron's on them too so maybe you already see them but just in case).

Subject: RE: follow up from call

Kaitlin,
After the relevant legislation, Provincial approvals, OPG approvals ….. The funding of the Global Adjustment equity injection, will have a line on the Financing Table that feeds the Ontario Budget → and will then be incorporated on the Long Term Borrowing requirements for the Province.

-We are flexible on working with OPG on setting the required advance notice period that OPG needs to provide the Province (Energy, OFA-Corporate and Electricity Finance, OFA Capital Markets, etc).

-Quarterly equity injections looks ok.

-OPG will need to determine who needs to sign-off on the equity injection requests.

-I don't know if OPG has any recommendations wrt how to determine how share price will be determined or if it will be a "par value" – will have to get our accountants involved as how it is booked

John or Kaitlin – the diagram has OEFC funding the equity injection – is that correct?

Regards
carlos

Hi Kaitlin,

I missed this one as I was a bit under the weather last week. Will look at it this afternoon.

We may need to connect on a few things as we're interested in the approaches related to the legislation, etc.

John.

Hi all – just checking in – do you think you'll have any edits to provide today? I have some further thoughts/ considerations I'd like to build in and am hoping to run our thinking up the chain (ENE/MOF) before we discuss with OPG.

Legal is also looking into timing for me so I am hoping to provide a bit more insight on that in the next turn.

Thanks,
Kaitlin

Subject: Rate Mitigation

Hi Dave,

-

Please see the following summary of this week's rate mitigation update discussion:

GA Financing

-

OPG

•□□□□□□□□ RBC, CIBC, Goldman have been approached to act as leads for securitization (both for Canada and US). Terms have not yet been finalized

•□□□□□□□□ Sub-committee meetings are starting up, including facilitating the required equity injections from the Province

•□□□□□□□□ Bankers have suggested timelines are aggressive

•□□□□□□□□ OPG likely to establish the financing in the Fall but will have bridge facilities in place in order to accommodate financing in the interim period.

•□□□□□□□□ The idea is not to go to market each month, but potentially on a quarterly basis. Short term debt would accumulate monthly (the bridge facilities mentioned

above would help accommodate this) and then move to longer term borrowing financed via the quarterly offerings.

•□□□□□□□□ Each time OPG goes to market the asset would be re-sized and associated debt would all be considered a single tranche.

•□□□□□□□□ At this point the thinking is that all three credit agencies would rate the debt (Moody's, S&P, Fitch)

•□□□□□□□□ OPG highlighted some of the information that they'll require over the coming weeks/months:

o Customer data: Rating agencies will have a particular focus on 10% of customer bill and will require information to assess this

o Equity injection: Might require a second class of shares, redeemable because cash coming back on paydown

o Mechanism: Seeking clarity on what the process beyond year 4 will be with respect to determining the asset / liability

o OFA Involvement: OPG suggested that it may be difficult for OFA to purchase large parts of the 51% outside financing, as it may not meet accounting tests for independence. However, OPG is investigating whether OFA could act as a lead order in order to drive interest costs down.

•□□□□□□□□ OPG Board has chartered a special committee of the Board to advise on the structure. For now OPG is comfortable devoting time and resources on the basis of the Premier's announcement. The company may require a Shareholder Declaration / Resolution in order to advance the discussion (likely in April)

o OPG will work with the Province to carefully worded the Dec./Res. to ensure the Board maintains authority to proceed. Ultimately the Board needs to ensure the proposal they make is in the best interest of OPG based on its credit rating, governance and business interests

o The board may need enhanced indemnification for this initiative which the Province is considering

IESO

•□□□□□□□□ Conversations on technical process are underway (Ministry, OPG etc.)

•□□□□□□□□ KPMG requires draft legislation before it can provide an opinion on the

regulatory construct but this is still in the early stages. IESO will discuss the process and timelines for this opinion.

OEB

•□□□□□□□□ Require a letter from Minister to allow incorporation of GA Smoothing into May 1 RPP. OEB is developing a first draft.

•□□□□□□□□ A news release is planned for the Thursday following Easter announcing new RPP rates.

Blakes

•□□□□□□□□ Blakes provided a summary of legislative changes (see document attached)

•□□□□□□□□ One item in particular that they are thinking through is the impact of consumers exiting the system which would put pressure on the value of the asset. Consideration could be given to a true-up mechanism to ensure the cost is covered or potentially an exit charge

Affordability Fund:

•□□□□□□□□ This initiative is moving quickly with documents to be finalized and executed next week and flow of funds shortly thereafter

•□□□□□□□□ Computershare will act as the initial trustee and the trust documents will set out a process for selecting experts to act as Trustees and guide the flow of funds. Considering Trustees from areas including LDCs, social service agencies, staff level etc.

RRRP, OESP, First Nations Rate:

•□□□□□□□□ Work is proceeding with three separate sub-committees but there is a lot of cross over on all three workstreams

•□□□□□□□□ LDC working groups kicked off last week where they focused on bill presentation and implementation

•□□□□□□□□ OESP:

o The posting is up for comment (comment period ends April 8th)

o OESP be removed from the bill at the same time GA financing is implemented (May 1st) pending regulation amendment process

o Move toward 100% via automatic enrollment is more complex so may not be implemented for May 1st. ENE is working with MCSS to deploy a process similar to ODSP and other low income programs but a Federal exemption is required which conversation with the CRA are ongoing

•□□□□□□□□ RRRP:

o RRRP cannot be removed from the bill until the legislation is passed

o Conversations have started but the main work for LDCs will be implementing billing system changes and OEB can help identify who may require IT assistance

•□□□□□□□□ FN Rate:

o Chiefs of Ontario are interested in participating in a working group

o Eligibility will be geographically based (all on reserve residents). This may capture some non-First Nations residents. However this should be limited, and would be extremely complicated to avoid.

ICI:

•□□□□□□□□ LRC on April 11th with a May implementation date

•□□□□□□□□ Will begin outreach to Chamber of Commerce (OCC) and consider others (CME for example)

•□□□□□□□□ ENE will begin to sit down with other Ministries to discuss broader measures for small and medium businesses

•□□□□□□□□ ENE has met with LDCs to ensure they are aware of changes and EDA has flagged that clarity is needed for some small manufactures to ensure conservation incentive remains

Thanks,

Scott

Summary of Legislative Changes

What follows is a summary of five categories of legislative issues that are currently being dealt with by the legislative team. There is significant overlap between the categories (for example, some of the basic legislative changes could be categorized as changes that are designed to address market considerations).

The drafting of the legislative amendments will be a very detailed and iterative process and drafts of the legislation are currently under review by the team. We also anticipate that the provisions will be reviewed by other experts (for example, US counsel and investment banking advisor). However, we do not anticipate that the primary categories of amendment will change.

1. Basic Legislative Changes Required to Bring the Program into Existence

For example:

- explain policy intent (inter-generational funding)
- revise the general objects/purposes of the legislation to permit the program
- add new objects and rights for IESO to permit IESO's role in the program
- add obligations for IESO to make payments with respect to amounts borrowed under the securitization, the repayment of interest costs or charges, and costs related to the operation or management of the trust or other entity
- provide authority to OPG to establish trust or other entity and its right to recover interest costs, charges, and operating and management costs
    - allow for Trust/SPV to warehouse funds
- define the regulatory asset and allow it to be bought/sold between IESO and Trust/SPV
- define (generally) the group of consumers who benefit from GA refinancing and who will be required to repay it
- establishment of the IESO's obligations

2. Legislative Provisions to Establish the Regulatory Role of the OEB

For example,

- OEB role in creation of the regulatory asset
- OEB role with respect to review of calculations as to amounts to be paid by ratepayers to satisfy the debt obligations

DRAFT

- OEB role with respect to “true-up” of GA calculations (annual or semi-annual)
- OEB role regarding administrative costs of the trust or entity

3. Legislative Provisions Related to OPG

For example,

- provisions to ensure that OPG has the legal authority to implement the program
- provisions to ensure that OPG’s assets are properly ring-fenced
- provisions to ensure OPG has authority to create subsidiaries or other entities and transact with the Trust/SPV

4. Legislative Provisions to Address Market Considerations

For example, provisions to provide,

- the creation of the new trust (or other) entity and ensure that it is bankruptcy remote
- clear identification of consumer groups to whom the program applies (“RPP eligible”)
- restrictions on consumer group’s ability to “opt-out” or by-pass the charge (to avoid de-valuing the asset)
- establishment of the owner’s clear right to the regulatory asset to enable payment of principal and interest to investors
- a re-set or true-up mechanism to enable the owner of the payment stream to account for differences between anticipated and actual performance of the GA
- a system to deal with sharing/pro-rating if the ratepayer pays less than the invoiced amount
- irrevocability of the owner’s property right (or a surrogate for irrevocability)
- the establishment of a “true sale” of the regulatory asset

5. Addition of Legislative Provisions (to be considered)

- cap maximum GA refinancing in a year by dollar value
- set a maximum interest amount for GA refinancing debt after year 5

DRAFT

- cap GA refinancing based on OPG financial ratios
- fix the date until which rate payers receive a discount for GA refinancing
- fix a total amount to be borrowed as “principal”, at which point further borrowing must service the debt and does not reduce GA paid by rate payers
- determine how surpluses in collections are to be applied (e.g. reinvest in GA reduction before new debt)
- cap increases to rate payer bills at no more than ■% in a year

DRAFT

GA Financing – Equity Injection

Briefing Note

PURPOSE:

- Develop a timeline / mechanism to facilitate equity injections by the Province to OPG to support GA financing

CONTEXT:

- IESO will effectively sell the "right to collect" deferred future revenue from ratepayers (GA Asset) to the SPV in return for cash proceeds
- In order for the SPV to purchase the GA Asset from the IESO it will obtain financing from two sources
    - 51% from capital markets
    - 49% as subordinated debt from OPG, which OPG will finance through:
        - **44% from an equity injection from the Province**
        - 5% from capital markets

TIMING:

- **April:** Legislative Changes Proposed
- **May 1**: GA smoothing incorporated into RRP rates
- **May – August**: OPG/IESO bridge financing in place to manage debt
- **September**:
    - SPV borrowing begins and would continue on a quarterly basis (ie. Sept/Dec/Mar/June)
        - Bridge financing is used to fund the GA shortfall in the interim months
    - Province would fund equity injection as required by OPG (quarterly basis)

POTENTIAL PROVINCIAL PROCESS

<u>Illustrative Timeline/ Approvals Process</u>

- OPG includes equity injection requirements in Business Plan
    - Target delivery to the Province in November of each year
    - Incorporate forecasted equity injection requirements for Province's fiscal year into business plan (March 31 year-end)
- Province seeks TB/MBC approval for equity issuances as part of Business Plan concurrence process
    - Target February TB date each year to ensure approvals in place as of April 1st of each year
    - TB approval would provide approval for OPG to issue up to x amount of shares within the next year (would need to cover approvals required in articles)
    - TB approval would provide appropriation to ENE/MOF for equity injections to OPG
    - TB approval would delegate authority [to minister/deputy minister] to execute equity injections

Provincial Mechanism

- Is there a more granular mechanism on the loan side? (ie. OPG provides x days notice that they require x amount, x person needs to sign off, etc.)

Appendix – Illustrative Structure

Attachments: 2017 03 22 GA Financing - Equity Injection Discussion v02.docx

---

Revised version. Everything in here is up for discussion, I just wanted to share a straw man for people to react to.

Key changes relative to the last version:

- I've positioned as an ENE TB approval/appropriation request (though I haven't actually run this by ENE yet….)– they already have an operating asset, and hold the current OPG shares so I think any new shares would be held in the same place. I'm thinking about it similar to the equity injection that was done for H1 departure tax payment (ENE booked it but OFA actually flowed the funds). I've embedded within the OPG BP process for simplicity but if you think it should be on a separate track I'm happy to explore that.
- On the value of the shares-My understanding is it doesn't matter, but for simplicity I think we should keep it the same as the current shares unless anyone raises benefits/considerations otherwise

Realise you guys are still thinking this through, but if your schedule permits It would be helpful if we could regroup today/tomorrow on this so I can hear what you guys are considering and chat next steps

Hi,

My understanding though it'd be good to check with accountants (assuming OPG accountants) would be that it would not matter given OPG does not have its shares trading. I think there are

more technical ways of describing this but will leave at that.

On the diagram, it is my understanding that it'd be the Province.

Thanks,

John

GA Financing – Equity Injection

Briefing Note

PURPOSE:

- Develop a timeline / mechanism to facilitate equity injections by the Province to OPG to support GA financing

CONTEXT:

- IESO will effectively sell the "right to collect" deferred future revenue from ratepayers (GA Asset) to the SPV in return for cash proceeds
- In order for the SPV to finance the GA asset on a long-term will obtain financing from two sources on an ongoing basis
    - 51% from capital markets
    - 49% as subordinated debt from OPG, which OPG will finance through:
        - **44% from equity injections from the Province**
        - 5% from capital markets
- OPG will require equity injections on an ongoing basis in order to keep its capital structure in line, and will require flexibility in order to issues shares as needed

GA FINANCING IMPLEMENTATION TIMING:

- **April:** Proposed Legislative Changes Drafted (retroactive to May 1)
- **May 1**: GA smoothing incorporated into "RRP" rates
- **Early June:** Legislation may be passed and SPV created. OPG uses short term facility to accommodate GA asset purchase [OPG TBC]. This represents the earliest possible equity injection [OPG TBC]
- **September**:
    - SPV long-term borrowing begins and would continue

POTENTIAL PROVINCIAL PROCESS FOR EQUITY INJECTIONS

<u>Required Approvals for Equity Injection in May 2017</u>

- ENERGY would seek TB/MBC approval for equity injection up to $xxM over next three years
- Seek approval to use the Operating Asset (vote xx) [ENE CORP TBC]
- Seek appropriation for $xxM in 2017-18 and Note that the out-year requests will be included in ENE's PRRT submission

<u>Ongoing Provincial Approvals Process</u>

- **Nov/Dec**: OPG includes forecasted equity injection requirements in rolling 3-year Business Plan

- **Feb/Mar**: ENERGY seeks TB/MBC approval for equity injection/OPG issuance as part of annual Business Plan concurrence process
    - ENE would seek TB/MBC approval for authority to inject up to $xx in OPG, in exchange for up to xx shares over the next 3 year term [OPG TBC: does this satisfy requirements in articles]
    - Seek approval delegating authority to Minister of Energy to work with the Ministry of Finance to execute equity injections, working with the OFA
    - Seek approval to include the 3-year equity request in ENE's PRRT submission through the operating asset in vote xx
- **Oct/Nov**: ENE would seek appropriation for out-year funding of equity injections

<u>Ongoing Implementation Process</u>

- OPG would send a letter to the Minister of Energy requesting an equity injection of $xx, in exchange for xx shares
- If Minister approves, ENE would work with OFA to flow the money [OFA TBC: Do you need something formal to do this? How much notice do you need to flow the cash? Any other mechanical requirements we should flag?]

Further Considerations

- Share Price Determination:
    - As of December 31, 2016 OPG had 256,300,010 common shares issued and outstanding at a stated value of $5,126 million ($20/share book value)
    - All new issuances would be priced at the same value as existing shares ($20/share)

Subject: Re: EXTERNAL - Interest Recovery
Date: Monday, March 20, 2017 4:24:54 PM
Attachments: image001.png

Thanks. And the cumulative interest would be down by a similar amount over that period? How about over the full 30 year period?

Ron

To: Ronald Kwan
Cc: John Kim; Adam Prokop
Subject: FW: EXTERNAL - Interest Recovery

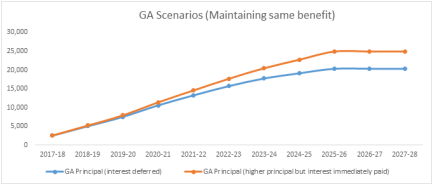
Hi Ron

See Adam's response below to your question. If interest is recovered from ratepayers then GA deferral will be need to be higher to provide same 25% benefit.

Bruno

From: Adam Prokop
Sent: Monday, March 20, 2017 3:44 PM
To: Bruno Amara <Bruno.Amara@ofina.on.ca>; Salman Qadir <Salman.Qadir@ofina.on.ca>
Cc: John Kim <John.Kim@ofina.on.ca>
Subject: RE: EXTERNAL - Interest Recovery

Here is a more exact calculation:



$ Millions

	2017-18	2018-19	2019-20	2020-21	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28
GA (interest deferred)	2,501	5,009	7,509	10,584	13,244	15,698	17,736	19,121	20,332	20,332	20,332
GA (higher principal but interest immediately paid)	2,540	5,178	7,924	11,384	14,554	17,654	20,464	22,734	24,924	24,924	24,924
Difference	39	169	415	800	1,310	1,956	2,728	3,613	4,592	4,592	4,592

Essentially, there will be more principal at the beginning but less interest costs over time (and faster payment of principal) under the method proposed by OPG. The higher principal amount is ~ $5B before repayments start to be made. If interest costs are deferred, the principal is lower but there are higher interest costs. The long-term costs are very similar, but OPG's method allows the Trust to collect cash and recognize income immediately.

Kind regards,

Adam Prokop

I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
> > >
> > > Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks Sriram. We still working with OPG and Torys to understand what exactly they are requesting and why. Based on conversations so far, I think the risk of creating a loophole should be limited, as net revenues from the Trust would be subject to PILs once they flow up from the sub into to OPG corporate entity.

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Hi Gadi, Scott,

I'd think we'd need to loop in TPD on this as well, to get the drafting right, and see about any such policy concerns.

Ron
On Apr 16, 2017, at 5:01 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca<mailto:Gadi.Mayman@ofina.on.ca>> wrote:

Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

On Apr 16, 2017, at 4:25 PM, Nelms, Scott (MOF) <Scott.Nelms@ontario.ca<mailto:Scott.Nelms@ontario.ca>> wrote:

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi Gadi, Scott,

I'd think we'd need to loop in TPD on this as well, to get the drafting right, and see about any such policy concerns.

Ron
On Apr 16, 2017, at 5:01 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca<mailto:Gadi.Mayman@ofina.on.ca>> wrote:

Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

On Apr 16, 2017, at 4:25 PM, Nelms, Scott (MOF) <Scott.Nelms@ontario.ca<mailto:Scott.Nelms@ontario.ca>> wrote:

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca> wrote:

> The *Electricity Act, 1998* applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

> Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Will do.

Just a question, is there a particular reason we are not engaging MOF legal on this? Its draft legislation and we want to make sure we interpret the changes accurately.

Salman

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

> > Subject: Fair Hydro Plan - question on taxation
> >
> > Scott,
> >
> > I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is

footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

Hi,

How did your call go? Does Rob better understand the context, structure and planned nature of the Trust (e.g., non-contributory and not intended as a tax avoidance vehicle)?

Is a discussion with OPG tax folks needed?

Ron

I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
> >
> > Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks Sriram. We still working with OPG and Torys to understand what exactly they are requesting and why. Based on conversations so far, I think the risk of creating a loophole should be limited, as net revenues from the Trust would be subject to PILs once they flow up from the sub into to OPG corporate entity.

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.

Thanks,

Ken

>> Scott,
>>
>> The proposal appears to have some characteristics of a tax avoidance scheme.
>>
>> The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.
>>
>> I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.
>>
>> We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.
>>
>> This matter ought to be the subject of a ruling request.
>>

>>
>> Hi Rob, John Bruno,
>>
>> Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
>>
>> Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.
>>

>>
>> Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

>> Hi Ron, Gadi,
>>
>> I hope you are enjoying the long weekend.
>>
>> As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

>> Subject: Fair Hydro Plan - question on taxation
>>
>> Scott,
>>
>> I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):
>>
>> 4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.
>>
>> Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.
>>
>> Hope this helps.
>> Thanks,
>> Ken

>>
>> Hi Rob, John Bruno,
>>
>> Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
>>
>> Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

>> Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

>> As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

>> Subject: Fair Hydro Plan - question on taxation
>>
>> Scott,
>>
>> I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):
>>
>> 4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.
>>
>> Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.
>>
>> Hope this helps.
>> Thanks,
>> Ken

> Hi Rob, John Bruno,
>
> Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.
>
> Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

>
> Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

> Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

> As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

> I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):
>
> 4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.
>
> Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hi Rob,

I understand you were able to connect with John today. Let us know if you have any further questions.

Just wanted to reiterate Scotts message below. Our timing is quite tight so we'd appreciate any comments you could provide tomorrow. Please also let us know if anyone else should be looped in.

Thanks in advance,
Kaitlin

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice,
Scott

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Hi Gadi, Scott,

I'd think we'd need to loop in TPD on this as well, to get the drafting right, and see about any such policy concerns.

Ron
On Apr 16, 2017, at 5:01 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca<mailto:Gadi.Mayman@ofina.on.ca>> wrote:

Ron always understands the nature of these sorts of complexities around electricity financing way better than I do, so I'm sure he'll have more thoughts or questions, but the only one that comes to mind for me is how this would be structured in legislation to ensure that there isn't the ability for OPG to move income to the non-taxable (I don't think there is a term "non-PiLable") entity from the taxable part of the company? This may seem nit-picky, but in the past I believe we've seen both Hydro One, when it was 100% government owned, and OPG behave the same way as private companies would, and spend considerable time having their accountants endeavour to minimize their PiLs.

On Apr 16, 2017, at 4:25 PM, Nelms, Scott (MOF) <Scott.Nelms@ontario.ca<mailto:Scott.Nelms@ontario.ca>> wrote:

Hi Ron, Gadi,

I hope you are enjoying the long weekend.

As outlined in the chain below, OPG has requested to make tax-exempt / PILs exempt any net earnings of the OPG SPV. It is not anticipated that the trust itself would earn substantial revenues (as explained to me, this would be limited to swap spreads, currency fluctuations etc.). Any revenues that OPG would receive from the trust would be subject to PILs, therefore I'm not sure this will make any difference to the Province. Please let me know if you have any concerns.

Thanks,
Scott

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Rob, John Bruno,

Further to the emails below, I received from OPG the attached draft changes to pertinent legislation. These are somewhat broader than the tax / PILs specific elements. I am hoping you get you something more focused, but in the interest of time I thought I would share this version. These changes are essentially consistent with the earlier descriptions below in terms of content. My understanding is that OPG Trust is unlikely to generate significant (non-PILs applied) revenues, so this is largely an administrative change designed to avoid unintended consequences arising from potentially large, unrealized gains associated with swaps etc.

Please let me know if we should loop anyone else into this conversation (e.g. MoF legal) and whether you would benefit from a conversation with OPG, Torys (OPG's external counsel) and ENE legal directly. I am also available to answer questions on concept. As John knows, all of this is moving extremely quickly so comments as soon as possible would be extremely helpful. My legal colleagues only semi-joking suggested yesterday would be ideal. In the mean time the draft legislation will continue to take up these concepts as they are currently written.

Thanks very much and apologies for the short notice, Scott

Subject: Fwd: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Hi Sriram,

See the email chain on a tax / PILs exempt ask by OPG with respect to the OPG Trust / special purpose vehicle (SPV) for the Fair Hydro Plan.

Perhaps to over-simplify, The SPV would be a new OPG subsidiary that would, in part, obtain financing from the capital markets in order to have the funds to acquire a regulatory asset from the IESO so that the IESO can cover the difference between what it is paying generators and what it is passing through to consumers under the "global adjustment" mechanism. The regulatory asset is the IESO's right to collect from consumers in the future the amounts to cover the global adjustment deferral (including a financing cost).

Note that the timelines for drafting legislation generally for the Plan is very tight.

Scott N. will ask for more detail from OPG.

Would Ann and Rob be the right people to loop in on this?

Ron

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

John,

We do not have a draft as yet.

I understand that not all of the design features of the asset have been finalized.

Our considerations will be limited to those concerning a PII exemption for the income from the SPV.

Regards,

Rob

Hi Scott, Rob,

Would it be helpful to have a call so that TPD can get some more context on the proposed Fair Hydro Plan and proposed structure?

Scott, if you're busy, staff here could provide Rob some context if you're not available.

Ron

On Apr 20, 2017, at 8:46 AM, Lewis, Robin (MOF) <Robin.Lewis@ontario.ca<mailto:Robin.Lewis@ontario.ca>> wrote:
Scott,

The proposal appears to have some characteristics of a tax avoidance scheme.

The Electricity Act, 1998 applies to OPG and its subsidiaries but not a trust. The trust would appear to be subject to regular income tax. However, a trust gets a deduction in computing income for any income paid to a beneficiary. The trust will pay no income tax to the extent that the trust pays out net income to the beneficiaries. Regular tax will not apply on the distribution of income to OPG because OPG is exempt from regular tax.

I would expect that the income would normally be included in the income of the OPG subsidiary for PIL purposes. I suspect that funds borrowed by the trust may generate significant tax shelter such that the income of the trust will be negligible.

We will certainly need more information. In particular, the nature of the asset that is being acquired and the vendor. SPV's are generally used to move assets off balance sheet.

This matter ought to be the subject of a ruling request.

Regards,

Rob Lewis

Subject: RE: EXTERNAL - RE: Fair Hydro Plan - question on taxation

Scott,
It is meant to exempt the net earnings of the trust. Any income OPG earns from its services to the trust would still be subject to taxation. As well, revenue that OPG receives from the subordinated debt to the trust would be subject to taxation.
Thanks,
Ken

Hi Ryan,

I appreciate the explanation. I want to make sure I understand the scope of the exclusion. Does this exempt any earnings in the trust and any earnings that OPG derives from the trust (interest income) from both income tax and PILs?

Thanks,
Scott

Subject: Fair Hydro Plan - question on taxation

Scott,

I understand there was a question regarding the taxation exclusion reference in Summary document. I understand this question is in reference to the following footnote (which is footnote 4 on page 5):

4 MOE to confirm that the legislation will provide that any Financing Entity that is a wholly-owned subsidiary of OPG (1) would not be subject to Part VI of the Electricity Act (Ontario) and (2) in the case of any Financing Entity that is a trust, any income of such trust (for purposes of the Income Tax Act (Canada) or the Taxation Act, 2007 Ontario)) which is paid or made payable to OPG or a wholly-owned subsidiary of OPG as a beneficiary of such trust will not be taken into account in calculating the amount of a payment required to be made by OPG (or such subsidiary) by section 89 or 90 of the Electricity Act.

Overall it is expected that the financing entity, either as a trust or a corporation, will have minimal net income. However, there could be tax situations creating a larger income or loss due to differences in timing or treatment (income vs capital). Given the unique nature of the transaction and lack of precedent to guide treatment then there are uncertainties with respect to tax. The objective is to minimize the tax consequences on both entities hence the request identified in the footnote.

Hope this helps.
Thanks,
Ken

Hi,

My recollection is that the $2.5 billion on average over ten years was used in Energy's deck for the media and that was then used to brief the FAO staff and I thought was provided to the AG staff too.

I don't recall other messaging used for that.

I will double- check.

Also we're expecting PO to get back to us on the name for KidsPharma as well as providing further language /detail on the Basic Income sites and the pilot project itself. I'll touch base with you guys as soon as I know more. We've been clear we need them to follow up by Monday morning.

Happy to discuss!

Cheers,

Kelsey

1 - On page 5 of Chapter 2 for the Fair Hydro Plan:

It currently reads: the reduction in the GA charge would be about 2.5B per year on average over the first ten years.

This is factually true but is not how we are presenting this (and I realise it is not as written about costs) as it might imply the cost is an additional 25B for the first and the following ten years which is not true for example. So we use 25B as total cost over x years. Or something like that. We had aproved language.

2 - On pg 16 of CH2- attached to charts of new osap examples

Can the osap calculator url be added

3 - A question related to Section B - Finances and Econ outlook, page 3 - Ontario's level of Accumulated Deficit as per cent of gdp.

Are there other jurisdictions, national or subnational (of a certain size) that use this measure as their overall deficit? Ie do not have to include capital debt expense. Top subnational etc, which we need (and already have) a full response to.

(this one is anticipating what the primary critique will be of our fiscal plan and trying to proactively defend our

record...if we don't have time to incorporate it, we can look to include info into our comms materials).

Hi John,

Whole I think it is good to explain that the point has been used, it may be that the PO may want to stop using it.

Is there some other message line that has been used on the deferral benefit to consumers, and, on cost, other than the interest one, which is just an amount given an assumed interest rate (and assuming interest capitalization).

Alternatively, the point could be suggested to be dropped, with no replacement?

Under current forecasts, the immediate reduction in the GA would be about $2.5 billion per year on average over the first 10 years, with annual interest costs not exceeding $1.4 billion.

Hi,

We are good too. I did share the latest AO slides with OEP and OTB and staff have been communicating.

What takes more time for staff to fully grasp is how the unpacking of the multiple sales affect each line although neutral on aggregate.

Thanks,

Francisco

Hi John,

Miscommunication in what way? That Brampton should or should not be in the Electricity Outlook to be consistent with the AO outlook, and on Hydro One's 70%?

And is SIFB ready to go to send a new version in if they are rebasing to 70% too?.

Looping in Francisco.

Thanks,
Ron

Brampton/Alectra MEU PILs. On the latter, I wonder if they too will have a large tax shield, so we might not be getting the 5 in out years – and it might be a negative variance for a number of years.

Also, I started a footnote on the GA impact on OPG. Should have added too, for clarity, that all the offset impact is shown in net income, but likely would be split between net income and PILs.

We need to generate GA financing / equity returns risks on to the revenue risks tab.

Thanks,
Ron

Hi John,

But what has changed on the Hydro One side and SIFB`s AO numbers?

I was thinking the two branches had been coordinating on an on-going basis --- so if the EFB numbers were using 84% as the baseline, the AO numbers would be net of more forgone net income. And if the EFB file is at 70%, then the SIFB AO forgone revenue numbers would

be net of less forgone revenue.

Is that the case as each branch has been sending up files, this month versus last?

Ron

Hi Ron,

Yes, we're now working on the 70% baseline. The numbers are generally the same.

NUG numbers changed somewhat.

The Bampton PILs is there.

Unpacked the PILs impact of the office sale.

So, generally the information has not changed significantly. I'd characterize as the 70% baseline and house-keeping.

John.

One more modification….I added the GA interest cost impact in the OPG tab. Also, highlighted in yellow. I'm sure there's a more elegant way of modelling due to my lack of skills at this.

I used FTD's forecast for 2017-18 to 2019-20 and then used our conservative interest income for 2020-21 of 135 (based on 3.5% interest) as a placeholder until FTD does their number.

Hi John,

But what has changed on the Hydro One side and SIFB`s AO numbers?

I was thinking the two branches had been coordinating on an on-going basis --- so if the EFB numbers were using 84% as the baseline, the AO numbers would be net of more forgone net income. And if the EFB file is at 70%, then the SIFB AO forgone revenue numbers would be net of less forgone revenue.

Is that the case as each branch has been sending up files, this month versus last?

Ron

Subject: RE: Electricity Outlook

Hi Ron,

Yes, we're now working on the 70% baseline. The numbers are generally the same.

NUG numbers changed somewhat.

The Bampton PILs is there.

Unpacked the PILs impact of the office sale.

So, generally the information has not changed significantly. I'd characterize as the 70% baseline and house-keeping.

John.

One more modification….I added the GA interest cost impact

in the OPG tab. Also, highlighted in yellow. I'm sure there's a more elegant way of modelling due to my lack of skills at this.

I used FTD's forecast for 2017-18 to 2019-20 and then used our conservative interest income for 2020-21 of 135 (based on 3.5% interest) as a placeholder until FTD does their number.

John.

Hi John,

Miscommunication in what way? That Brampton should or should not be in the Electricity Outlook to be consistent with the AO outlook, and on Hydro One's 70%?

And is SIFB ready to go to send a new version in if they are rebasing to 70% too?.

Looping in Francisco.

Thanks,
Ron

As discussed, please track down and confirm the coordination question with SIFB on H1 and Brampton/Alectra MEU PILs. On the latter, I wonder if they too will have a large tax shield, so we might not be getting the 5 in out years – and it might be a negative variance for a number of years.

Also, I started a footnote on the GA impact on OPG. Should have added too, for clarity, that all the offset impact is shown in net income, but likely would be split between net income and PILs.

We need to generate GA financing / equity returns risks on to the revenue risks tab.

Thanks,
Ron

Hi Francisco, John,

Would it be helpful to send the two underlying spreadsheets together, noting the pivot to 70%, which is fiscally-neutral across the two products, but shown for interim actuals purposes to be closer to Public Accounts?

And note as well the OPG number adjustments to match the IOD adjustment (assuming those have gone up?).

Please bcc me.

Thanks,
Ron

Subject:	Re: Equity Financing
Date:	Saturday, April 22, 2017 10:48:00 AM

Agreed. OPG Trust has not yet been created.

The operating asset appropriation will be for the Ministry that owns the new shares in OPG. Scott Nelms - assuming that will Energy. Can you confirm.

The amount needs to be based on 50% of the expected deferral for the 2017-18 year. IESO may need to weigh in on that.

Cindy

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

Hi Helen

I suspect you are referring to the Affordability Trust that has already been set up by the Province but has nothing to to do with the OPG Trust that I mention in my email.

You may want to touch base with Cindy for a few minutes next week and she should be able to clarify the differences between these two trusts for you.

Thanks

Ken k

Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

Ken, we had understood 1.2 is possibly a go-forward number, but the correct amount for 17-18 should be prorated, as there will not be 12 months of activity. Is that correct?

I thought the trust actually has already been created, but I could be wrong about that.

Subject: RE: Equity Financing

Hi All

There seems to be considerable confusion on this issue and hopefully I can clear that up with this email.

· The Trust has nothing to do with the Province, it will be created by OPG and will be consolidated with OPG, not with the Province and is essentially not an issue with regard to the estimates process.

· The objective of this estimates exercise is to allow the Province, or more specifically the Ministry of Energy to invest a certain amount of funds in OPG. In other words the Province's equity investment in OPG will increase.

· The Province provides cash to OPG, reducing its cash assets and its Investment in OPG, an asset account will increase, in effect one asset is exchanged for another.

· As such an operating asset needs to be set up hopefully in Energy's estimates that allows the Province to make the payment to OPG.

· The amount will be around $1.2 billion, however, Scott should able to provide a more precise number.

Thanks and I am available for a discussion tomorrow, if anyone wishes further clarification, pls call me on my cell at 647-202-4373.

Sorry, 1 more question on this that I hope MOF/ENE and the OFA can help me answer. Scott/Katilin, your finance corporate shop may be able to help with this question too.

I believe the Trust will be held by OPG. Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

Thanks - happy to chat further.

Subject: RE: Equity Financing

Hi everyone, further to James' email below, in order to have the possibility of including the operating asset in Printed Estimates (which is our preferred/recommended option), we need the following information from Energy/MOF by Monday:

1) the exact value of the operating asset that is required (note our comments below regarding any buffers that are to be added)
2) confirmation of the location of where this operating asset will show up (Ministry, admin data info)
3) a business case rationale explaining the purpose and why this is needed

As per our conversation, we are currently in the midst of preparing for Printed Estimates - as such, we have an extremely short runway for this item to be included (we have until possibly Tuesday).

Once we have the necessary information from you, we will then need to send it up to senior officials here, and also ensure that DMs of both Finance and Energy have an opportunity to review/sign off.

Thanks - happy to chat further should you have any questions.

Subject: FW: Equity Financing

Hi, I've highlighted on page one of the attached note what I was referring during the teleconference around financing the trust (51%, 49%).

Any buffer being added to the 49% needs to be explicitly identified in the Treasury Board submission – it is a

decision point for TB to include a buffer. To what degree does the $2.5B have a buffer based on the level of precision in the estimate should also be covered.

The TB submission needs to specify the rationale for the ask (explicitly identifying any buffer amounts being added), and the requested minute.

From: Ronald Kwan
To: John Kim
Subject: Re: Equity Financing
Date: Saturday, April 22, 2017 1:37:23 PM

Hi John,

Is the 50% supposed to then provide a buffer, vs 44%?

And would it be based on a May1 retroactive start time, so 11 months?

And has Energy provided a fiscalsed set of GA deferral estimates?

I thought the earlier discussion was for this to be in Supps. Why the change? I think it makes sense to have it in the Document Estimates, but just want to know why the change.

Ken seems to understand this, except I would not have written his first bullet quite that way, since there is an impact on the Estimates, even if indirect through Energy, as he lays out in his other bullets.

Please keep me apprised, or loop me into the exchange, as needed.

Thanks,
Ron

P.S. An Aside: If Ken and FTD understand that the OFA is providing cash to Energy to inject equity into OPG, how can CMD be thinking about what Francisco was talking about yesterday?

>> Sorry, 1 more question on this that I hope MOF/ENE and the OFA can help me answer. Scott/Katilin, your finance corporate shop may be able to help with this question too.
>>
>> I believe the Trust will be held by OPG. Since this is case, then it wouldn't be an operating asset that we need to show in the Estimates (as the Estimates generally don't show assets of consolidated entities). Instead, we would need to show a payment from MOF or Energy to the trust, and then a reversing adjustment below the line (but all of this would be in expense, not assets)?. In other words, how does MOF/ENE propose this to be shown in Printed Estimates?

I was thinking about the call I had with Toby last Friday. He was suggesting whether the CMD's proposal to hire narrow scope advisor is sufficient. That was essentially where he was going with his inquiries. While this is my assessment and nobody else's, I do wonder if there's scope for us to get more involved in the procurement process. Just throwing it out there.

Not sure how representative Toby's comments were (or if I'm reading them right) within MOF Legal but they seem to be concerned on the accounting focus of perhaps the advice thus far.

Also, happy to engage Francisco's group's expertise, as always.

Hi John,

This procurement path idea comes from Gadi and Mike.

I would suggest that if MOF Legal wants to express considerations on the process that they convey them to CMD directly.

Do you have concerns that if this path is chosen that it could ultimately delay or limit the advice available to the Province, compared to the tight timelines and the advice other entities can access in the interim?

Ron

Subject: Re: GA Financing / TB Sub
Date: Tuesday, April 25, 2017 7:33:56 PM

Hi,

I think the submission should note that the IESO is seeking a financing facility from the OFA to provide bridge financing and a backstop.

It may not be an approval item, but TB should be made aware.

And in my mind, Energy should add it in, as IESO is an Energy agency, which says it needs this to perform under the GA part of the FHP.

We can offer to review and support what energy writes.

I don't think our Minister should be doing this without being certain that it is understood by TB and Energy, including the risk that this could be long-term financing, which could result in a fiscal risk.

Ron

Hey John,

Just following up on our conversation Friday. You had asked about the rationale for certain levels of financing – passing this note along that we just received from OPG. Let me know if you have further questions on this.

Secondly, I'm starting to pull together materials for the TB submission. The first is seeking appropriation for the equity injections, second is any PILs exemptions that the Province is comfortable with. Lastly, Scott thought you guys might also want something built into the submission about increased borrowing requirements of the IESO – would you be able to draft something for inclusion in the submission on this (if required)?

Let me know what you think.

Hi,

I think the facility will need to be enhanced. I heard that the IESO wants a facility size to be able to potentially finance one full year, which could then be in excess of $3 Bn.

We should also discuss with TB staff the ask.

We can discuss in the morning too.

Ron

Sent: March 28, 2017 4:39 PM
To: Leung, Thomas (MOF)
Cc: Montgomery, Kaitlin (MOF)
Subject: RE: GA financing - equity injections

Hi Thomas,

Have you received any feedback from OFA on this document? Would love to see their comments.

Overall the approvals process looks fine.

Minor comments/question:

· PRRT is a four year planning cycle, could we requesting the authority to inject the equity for 4, instead of 3 years?

· We'll probably create an operating asset in Vote 2905 – this is where all the other rate mitigation items are. This I will need to confirm though.

· If Energy is making the equity injection, why are we working with MOF – is it just because you EIGS is under them now?

· Can I assume that the first equity injection would be 2018-19?

Controllership comment is that this is quite complicated and we may want to loop in OPCD and legal in early. They advised there may be a need for external expertise (accounting and legal), but I'll leave this part for now – it's probably too early for this.

John,
Outreach to MOE for clarification and confirmation is recommended. We have not had any discussion with the ministry on this item and cannot therefore comment on their expectation. It does seem similar to the recent decision related to H1.

Subject: MOF - Energy compromise

Nadine,

Regarding the equity injection, it is my understanding, based on what happened with Hydro 1, that MOF and Energy eventually compromised. MOF will keep the historical $5 + $3 B on their books for OPG and H1 Investment in GBE, but for new Hydro 1 issues, the equity will be on Energy's books. In terms of the equity injection GA issue, will the shares received from OPG be on Energy's books, as that constitutes new issues similar to the H1 compromise? This has important connotations given that someone has to go to Treasury Board and ask for an operating asset in the next couple of weeks to be set up and someone has to track for the next 15 years the number of shares received from OPG.

Can OPCD confirm that Energy will have these new issues on their books?

Thanks.

John

Thanks I connected with John Psinas today and let him know I was coordinating for ENE.

Asokan is ENE Controllership Branch - I've kept them in the loop but they aren't too involved in this and will defer to me to seek decisions/approvals on this stuff

Asokan,
I just want to confirm that the Ministry of Energy will record the equity injection payments (likely on a monthly basis (tbd)) and subsequently record the shares received from OPG going forward. From what I understand,

this is line with the Hydro 1 compromise, where new equity will be recorded on Energy's books and that Energy will take the lead in all aspects?

Thanks.

John

Subject: OFA-IESO, discussion re Fair Hydro

Below are the proposed agenda items for our meeting.

Agenda:

1.Draw Amounts
-IESO may need to fund a) Fair Hydro forecast variances (short term), and b) Fair Hydro amounts not purchased by the OPG SPV (long term);
-in order to minimize costs and maximize cash-flow flexibility (matching to OPG SPV buys) – any appetite to amending the current 28 day minimum for draws;

2.IESO's Fair Hydro role
-IESO's credit rating agencies (Moody's Aa2, and DBRS) will examine IESO's credit capacities/solvency – need to update IESO/OFA's credit facilities to remove material adverse effect clauses or similar clauses and acknowledge/agree IESO's role in the Fairy Hydro plan and commitment to advance funds under the credit facility if needed for the Fair Hydro cash-flows.

3.General
General comments regarding IESO's Fair Hydro needs vs. IESO regular ongoing needs (corporate and market)

Regards.

Thanks Bruno,

Yes that is it. A key part is point is c (50% of the most subordinated debt) - OPG needs to own at least 50% of the subordinated debt (the equity tranche) with this portion suggested to be about 5% of the Trust. This is the 5% that OPG is borrowing from the market. This is why the borrowing is capped from the Province at an epsilon below 45%.

Thanks Adam

One of the list of 14 in the white paper. This was one of the conditions required for OPG to consolidate the Trust

1. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    a. The Trust
    b. Any of OPG's investments in the Trust
    c. The most subordinated debt of the Trust

Could you remind me. The condition in the third from bottom bullet. Where did that come from?

On Apr 26, 2017, at 6:56 PM, Adam Prokop <Adam.Prokop@ofina.on.ca> wrote:

> Hello all,
>
> Here are some of my points
>
> - Equity could affect OPG's GBE status if it is effectively seen as an interest-free loan; if the return from the structure does not justify an equity position. Otherwise, the Province could continue to inject equity into OPG in perpetuity for no reason. The fact that the Province is the sole shareholder strengthens this point. OPG could be seen as reliant on this funding for operations.
> - The rating agencies would need to be brought into the discussion - would have to see what cash return from the structure would limit the impact on some ratios; the fact that the capital markets debt will be in a SPV means that portion is bankruptcy remote and may not factor into calculations.
> - OPG is at currently at approximately 65% equity, 35% debt while the deemed structure is 45% equity and 55% debt. OPG does have the capacity to take on more debt within the deemed structure. Furthermore, if the structure is separate from the rate regulation process, the deemed structure is not as relevant.
> - The related GBE status factor is if OPG can maintain operations and meet their obligations through revenues generated outside of the Province. As long as the debt issued from the Province to OPG is at the market rate, and the revenue from the structure is reasonably expected to cover expenses, the GBE status may not be threatened.
>
> - There is no minimal credit rating or minimum debt to equity ratio to retain GBE status.
>
> - The markets could also take on more than 51% of the debt from the SPV (51% is minimum).
> - There is also the consideration for if the Province issued debt directly to the SPV (i.e., buying securities from the SPV directly rather than going through OPG).

    - Nothing in the 14 conditions prevents this.
    - Need to confirm with OPG auditors.

- The relevant condition is that the Province cannot indirectly (i.e., through OPG) or directly (i.e., to the SPV) finance more than 44% of the structure, either through equity or debt.
- Preferred shares with cumulative dividends if not paid and over a 10 year term would likely get a 50% equity and 50% debt treatment from DBRS, which would lessen the pressure on the capital structure if Province finances OPG directly.
- There could also be a mix of debt and equity financing from the Province over time to OPG.

Overall, a discussion with the credit rating agencies and OPG auditors would probably help clarify options if this is feasible.

Kind regards,

Adam Prokop

> Hi John,
>
> I think Adam and I had discussed this briefly. We were questioning why the Province could not issue debt to OPG instead of Equity (or even directly into the Trust). The only

reason that came to mind was to effect OPG's credit rating (which TD says would be treated as "intermediate equity" for option 3) – don't think GBE status would be affected.

The OEFC already lends to OPG which hasn't seemed to effect its GBE status… not sure what I'm missing here..

Carlos, and others

I believe the discussion with TDS will be scheduled for either Thursday of Friday and I am not available on both days so here are my comments.

- Page 3: Option#3 is not feasible since it is essentially a type of debt from the Province to OPG and may impact the latter's GBE status, which jeopardizes the entire arrangement.
- Options 2 and 4 are superior to 1 from the Province's perspective providing a greater assurance of dividends, which means less cash flow risk for the province.
- The last bullet on page 4 is a little confusing especially the phrase; "and the debt issued to OPG by the SPV/Trust". It's actually the other way around, OPG uses the cash flow from the equity injection to issue debt to the Trust.
- The cash flow from the equity injection is essentially cost free for OPG however, the Trust will generate interest income on 100% of its debt, as such when the trust is consolidated with OPG, the latter will show a net interest income. This income can be paid out as dividends to the Province and in essence defray the Province's interest payments on the debt incurred to fund the equity injection.

Thanks and as always happy to discuss.

Hi Ken,

Thanks for these helpful comments. I do have a question on your first comment. I haven't been as close to the accounting discussion as you have been - why would providing debt from the Province to OPG, for this purpose, affect its status as a GBE, if the loan is provided at a market rate. I haven't gone through this deck carefully yet but wanted to clarify this point.

I do recognize that ultimately OPG would want to make a commercial decision so we are looking to be educated on various structures.

Happy to chat in the lock-up tomorrow.

> - Equity could affect OPG's GBE status if it is effectively seen as an interest-free loan; if the return from the structure does not justify an equity position. Otherwise, the Province could continue to inject equity into OPG in perpetuity for no reason. The fact that the Province is the sole shareholder strengthens this point. OPG could be seen as reliant on this funding for operations.
> - The rating agencies would need to be brought into the discussion - would have to see what cash return from the structure would limit the impact on some ratios; the fact that the capital markets debt will be in a SPV means that portion is bankruptcy remote and may not factor into calculations.
> - OPG is at currently at approximately 65% equity, 35% debt while the deemed structure is 45% equity and 55% debt. OPG does have the capacity to take on more debt within the deemed structure. Furthermore, if the structure is separate from the rate regulation process, the deemed structure is not as relevant.
> - The related GBE status factor is if OPG can maintain operations and meet their obligations through revenues generated outside of the Province. As long as the debt issued from the Province to OPG is at the market rate, and the revenue from the structure is reasonably expected to cover expenses,

the GBE status may not be threatened.
    - There is no minimal credit rating or minimum debt to equity ratio to retain GBE status.
- The markets could also take on more than 51% of the debt from the SPV (51% is minimum).
- There is also the consideration for if the Province issued debt directly to the SPV (i.e., buying securities from the SPV directly rather than going through OPG).
    - Nothing in the 14 conditions prevents this.
    - Need to confirm with OPG auditors.
- The relevant condition is that the Province cannot indirectly (i.e., through OPG) or directly (i.e., to the SPV) finance more than 44% of the structure, either through equity or debt.
- Preferred shares with cumulative dividends if not paid and over a 10 year term would likely get a 50% equity and 50% debt treatment from DBRS, which would lessen the pressure on the capital structure if Province finances OPG directly.
- There could also be a mix of debt and equity financing from the Province over time to OPG.

Overall, a discussion with the credit rating agencies and OPG auditors would probably help clarify options if this is feasible.

Kind regards,

Adam Prokop

Hi John,

I think Adam and I had discussed this briefly. We were questioning why the Province could not issue debt to OPG instead of Equity (or even directly into the Trust). The only reason that came to mind was to effect OPG's credit rating (which TD says would be treated as "intermediate equity" for option 3) – don't think GBE status would be affected.

The OEFC already lends to OPG which hasn't seemed to effect its GBE status… not sure what I'm missing here..

Carlos, and others

I believe the discussion with TDS will be scheduled for either Thursday of Friday and I am not available on both days so here are my comments.

- Page 3: Option#3 is not feasible since it is essentially a type of debt from the Province to OPG and may impact the latter's GBE status, which jeopardizes the entire arrangement.
- Options 2 and 4 are superior to 1 from the Province's perspective providing a greater assurance of dividends, which means less cash flow risk for the province.
- The last bullet on page 4 is a little confusing especially the phrase; "and the debt issued to OPG by the SPV/Trust". It's actually the other way around, OPG uses the cash flow from the equity injection to issue debt to the Trust.
- The cash flow from the equity injection is essentially cost free for OPG however, the Trust will generate interest income on 100% of its debt, as such when the trust is consolidated with OPG, the latter will show a net interest income. This income can be paid out as dividends to the Province and in essence

defray the Province's interest payments on the debt incurred to fund the equity injection.

Thanks and as always happy to discuss.

Hi John,

If you are referring to the March CabSub, then, yes, and I believe you have a copy and its saved in the folders.

You'll also recall the OPG 14 points document to get the accounting treatment targeted, which was informed by its earlier discussions with EY.

You'll recall that OPG had to be able to maintain its GBE status, which includes have an appropriate capital structure (for which 100% debt financing would be problematic) and the SPV show that it was financeable independent of the Province.

I think this was all in the BNs you guys put together at the time too. Isn't that right?

Is there a nuance I'm missing, as I did not read the full email chain that you forwarded.

Can you send me the TD analysis.

Thanks,
Ron

Hi Ken,

Thanks for these helpful comments. I do have a question on your first comment. I haven't been as close to the accounting discussion as you have been - why would providing debt from the Province to OPG, for this purpose, affect its status as a GBE, if the loan is provided at a market rate. I haven't gone through this deck carefully yet but wanted to clarify this point.

I do recognize that ultimately OPG would want to make a commercial decision so we are looking to be educated on various structures.

Happy to chat in the lock-up tomorrow.

Hello all,

Here are some of my points

- Equity could affect OPG's GBE status if it is effectively seen as an interest-free loan; if the return from the structure does not justify an equity position. Otherwise, the Province could continue to inject equity into OPG in perpetuity for no reason. The fact that the Province is the sole shareholder strengthens this point. OPG could be seen as reliant on this funding for operations.
- The rating agencies would need to be brought into the discussion - would have to see what cash return from the structure would limit the impact on some ratios; the fact that the capital markets debt will be in a SPV means that portion is bankruptcy remote and may not factor into calculations.
- OPG is at currently at approximately 65% equity, 35% debt while the deemed structure is 45% equity and 55% debt. OPG does have the capacity to take on more debt within the deemed structure. Furthermore, if the structure is separate from the rate regulation process, the deemed structure is not as relevant.
- The related GBE status factor is if OPG can maintain operations and meet their obligations through revenues generated outside of the Province. As long as the debt issued from the Province to OPG is at the market rate, and the revenue from the structure is reasonably expected to cover expenses, the GBE status may not be threatened.
    - There is no minimal credit rating or minimum debt to equity ratio to retain GBE status.
- The markets could also take on more than 51% of the debt from the SPV (51% is minimum).
- There is also the consideration for if the Province issued debt directly to the SPV (i.e., buying securities from the SPV directly rather than going through OPG).
    - Nothing in the 14 conditions prevents this.
    - Need to confirm with OPG auditors.
- The relevant condition is that the Province cannot indirectly (i.e., through OPG) or directly (i.e., to the SPV) finance more than 44% of the structure, either through equity or debt.
- Preferred shares with cumulative dividends if not paid and over a 10 year term would likely get a 50% equity and 50% debt treatment from DBRS, which would lessen the pressure on the capital structure if Province finances OPG directly.
- There could also be a mix of debt and equity financing from the Province over time to

OPG.

Overall, a discussion with the credit rating agencies and OPG auditors would probably help clarify options if this is feasible.

Kind regards,

Adam Prokop

Sorry, I may have derailed. I was referring to Province also being a prudent investor in this. If they are not, is there not a risk of the Provinces contribution being seen as a grant and therefore, fiscal impact.

I think I went in a circle. I'm gonna put my phone down now and maybe now think out loud in an email.

Hi John,

I think Adam and I had discussed this briefly. We were questioning why the Province could not issue debt to OPG instead of Equity (or even directly into the Trust). The only reason that came to mind was to effect OPG's credit rating (which TD says would be treated as "intermediate equity" for option 3) – don't think GBE status would be affected.

The OEFC already lends to OPG which hasn't seemed to effect its GBE status… not sure what I'm missing here..

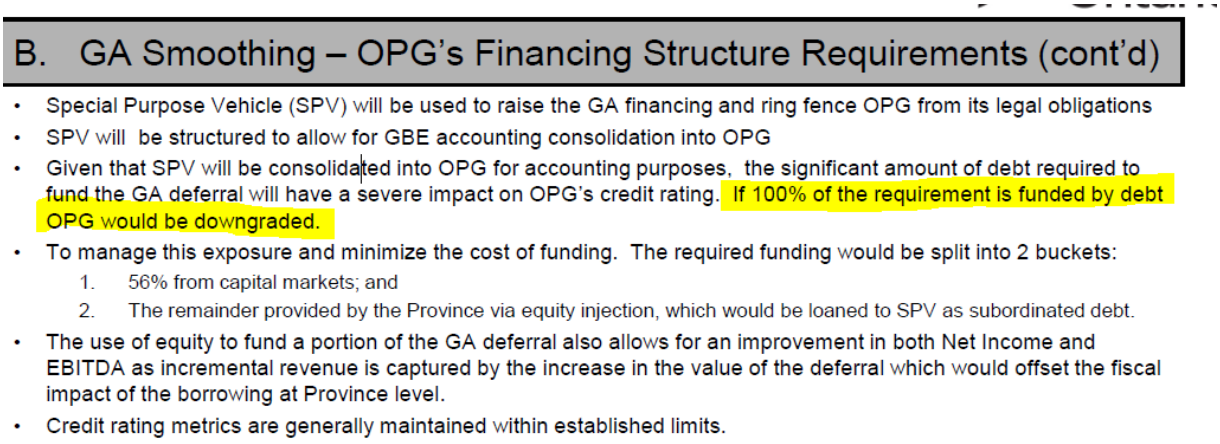
Thanks Salman,

Attached is the version that I have on e-mail (probably not the latest). The appendixes don't say much but in the attached cabinet submission (p. 21) this is the mention of the GBE status:



B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.

Just to add, I retrieved the March 1 Cabinet Submission deck that is saved in the shared folder and the last page says "APPENDIX: SEE MINISTRY OF ENERGY'S ELECTRICITY PRICE MITIGATION –APPENDIX" – do we have this anywhere? Maybe there is something in there that Ken is referring to (which is could equally likely be what Bruno and Adam have provided below).

Subject: Re: Ontario Fair Hydro Plan - Equity Infusion - initial comments from TD

Thanks Bruno,

Yes that is it. A key part is point is c (50% of the most subordinated debt) - OPG needs to own

at least 50% of the subordinated debt (the equity tranche) with this portion suggested to be about 5% of the Trust. This is the 5% that OPG is borrowing from the market. This is why the borrowing is capped from the Province at an epsilon below 45%.

Thanks Adam

One of the list of 14 in the white paper. This was one of the conditions required for OPG to consolidate the Trust

1. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    a. The Trust
    b. Any of OPG's investments in the Trust
    c. The most subordinated debt of the Trust

Could you remind me. The condition in the third from bottom bullet. Where did that come from?

On Apr 26, 2017, at 6:56 PM, Adam Prokop <Adam.Prokop@ofina.on.ca> wrote:

Hello all,

Here are some of my points

- Equity could affect OPG's GBE status if it is effectively seen as an interest-free loan; if the return from the structure does not justify an equity position. Otherwise, the Province could continue to inject equity into OPG in perpetuity for no reason. The fact that the Province is the sole shareholder strengthens this point. OPG could be seen as reliant on this funding for operations.
- The rating agencies would need to be brought into the discussion - would have to see what cash return from the structure would limit the impact on some ratios; the fact that the capital markets debt will be in a SPV means that portion is bankruptcy remote and may not factor into calculations.
- OPG is at currently at approximately 65% equity, 35% debt while the deemed structure is 45% equity and 55% debt. OPG does have the capacity to take on more debt within the deemed structure. Furthermore, if the structure is separate from the rate regulation process, the deemed structure is not as relevant.
- The related GBE status factor is if OPG can maintain operations and meet their obligations through revenues generated outside of the Province. As long as the debt issued from the Province to OPG is at the market rate, and the revenue from the structure is reasonably expected to cover expenses, the GBE status may not be threatened.
    - There is no minimal credit rating or minimum debt to equity ratio to retain GBE status.
- The markets could also take on more than 51% of the debt from the SPV (51% is minimum).
- There is also the consideration for if the Province issued debt directly to the SPV (i.e., buying securities from the SPV directly rather than going through OPG).
    - Nothing in the 14 conditions prevents this.
    - Need to confirm with OPG auditors.
- The relevant condition is that the Province cannot indirectly (i.e., through OPG) or directly (i.e., to the SPV) finance more than 44% of the structure, either through equity or debt.

- Preferred shares with cumulative dividends if not paid and over a 10 year term would likely get a 50% equity and 50% debt treatment from DBRS, which would lessen the pressure on the capital structure if Province finances OPG directly.
- There could also be a mix of debt and equity financing from the Province over time to OPG.

Overall, a discussion with the credit rating agencies and OPG auditors would probably help clarify options if this is feasible.

Kind regards,

Adam Prokop

How contributing equity to a company that retains a good credit rating could affect its GBE status?

If the loans provided by the Province are not something a prudent lender would agree to do you could potentially be putting at risk the GBE status. What you should do is compare the potential outcome of

the different structures against the test that needs to be met to remain a GBE. You should check this on top of the 14 other points.

Hi John,

I think Adam and I had discussed this briefly. We were questioning why the Province could not issue debt to OPG instead of Equity (or even directly into the Trust). The only reason that came to mind was to effect OPG's credit rating (which TD says would be treated as "intermediate equity" for option 3) – don't think GBE status would be affected.

The OEFC already lends to OPG which hasn't seemed to effect its GBE status… not sure what I'm missing here..

I don't follow Ken's bullet #1. Maybe I'm missing something due to having too many files on the go but is it true that if we have a loan to OPG, that the GBE treatment falls apart?

Carlos, and others

I believe the discussion with TDS will be scheduled for either Thursday of Friday and I am not available on both days so here are my comments.

- Page 3: Option#3 is not feasible since it is essentially a type of debt from the Province to OPG and may impact the latter's GBE status, which jeopardizes the entire arrangement.
- Options 2 and 4 are superior to 1 from the Province's perspective providing a greater assurance of dividends, which means less cash flow risk for the province.
- The last bullet on page 4 is a little confusing especially the phrase; "and the debt issued to OPG by the SPV/Trust". It's actually the other way around, OPG uses the cash flow from the equity injection to issue debt to the Trust.
- The cash flow from the equity injection is essentially cost free for OPG however, the Trust will generate interest income on 100% of its debt, as such when the trust is consolidated with OPG, the latter will show a net interest income. This income can be paid out as dividends to the Province and in essence defray the Province's interest payments on the debt incurred to fund the equity injection.

Thanks and as always happy to discuss.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	March 1, 2017
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet – March 1, 2017

SUBMISSION TITLE:	Electricity Price Mitigation

Based on Cabinet Submission

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): o Enhance existing Electricity Support and move existing programs to government funding: – Broaden Rural or Remote Electricity Rate Program (RRRP) – Expand the Ontario Electricity Support Program (OESP) – Create an LDC Affordability Fund – Provide On-Reserve First Nations Delivery Credit o On-going activities to bend the costs curve of electricity (Ontario Energy Board, Independent Electricity System Operators) o Providing significant and immediate rate relief through cost deferral of the Global Adjustment (Smoothing the Global Adjustment) o Lowering eligibility threshold for Industrial Conservation Initiative	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested – Social Programs	200.0	665.0	753.0
– Global Adjustment Smoothing*	0.0	2,534.0	2,668.0
Initiative cost recommended	0.0	0.0	0.0
Recommended program base (Ontario Rebate for Electricity Consumers)	300.0	1006.0	1004.0
Offset Recommended	0.0	0.0	0.0
Total Fiscal Impact	200.0	3,199.0	3,421.0

*Assumes Global Adjustment smoothing impacts the deficit

IV. KEY COMMENTS AND CONSIDERATIONS

Since 2010, electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers

(i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

Ontario currently provides rate mitigation to various electricity consumers through a combination of government funded and rate-based programs. Rate-based programs are funded by shifting costs from one electricity consumer group to another.

The government has committed to providing electricity cost relief to consumers. Since the 2016 Throne Speech, the government has taken a number of actions to further reduce electricity costs, including:

- Providing an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST, effective January 1, 2017.
- Expanding support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.
- Expanding Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to additional commercial, institutional and small industrial consumers.

The Ministry of Energy is proposing additional electricity price mitigation initiatives that will provide additional rate relief across all residential and small business electricity consumers, providing up to 25% rate relief in aggregate, by helping the most vulnerable Ontarians through enhancements to existing support programs, smoothing the impacts of the global adjustment and working to bend the future cost curve of electricity.

1) Helping the most vulnerable Ontarians (Customers who are disproportionately affected by increased electricity costs) by enhancing electricity support programs and shifting cost onto the tax-base:
    a) Enhance the Rural or Remote Electricity Rate Protection (RRRP including harmonizing distribution cost for customers with the highest distribution rates)
    b) Expand the Ontario Electricity Support Program (OESP)
    c) Establish a new one-time Local Distribution Company (LDC) Affordability Fund in 2016-17
    d) Delivery charge relief for on-reserve First Nations customers

2) Ongoing activities to bend the future cost curve of electricity:
    a) Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
    b) Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.
    c) Explore additional cost savings to future electricity rates as part of the 2017 Long-Term Energy Plan to help offset the impact of GA recoveries.

3) Refinancing Global Adjustment assets in order to smooth the impacts of the Global Adjustment across ratepayers over a longer period of time.

4) Support for tenants (under development) & Supports for smaller Class B consumers – the Ministry is exploring options to extend electricity support programs to those who do not qualify for existing programs, either because they do not pay for their own electricity bills or because they are too large for the RPP (and associated support programs) but too small to qualify for the ICI for large consumers.

<u>1) Enhancing electricity support programs and shifting cost onto the tax-base</u>

To date, a number of electricity support programs are funded through the electricity rate-base. The Ministry is proposing to shift these costs to government funding and to enhance these programs to

provide additional support to a subset of customers who are disproportionately affected by increased electricity costs.

The Ministry estimates that proceeding with the enhancement of the electricity support programs and shifting cost onto government funding would cost $200M in 2016-17 and increasing to $892M by 2020-21. Moving existing program costs to the tax base would result in a small cost reduction for other ratepayers (approximately $2 for the average residential consumer), but represents more than half of the fiscal impact associated with these proposals.The following table shows the fiscal impact of the proposals (Note: 2017-18 figures are full year, however programs would require implementation period estimated 3-6 months):

SUPPORT PROGRAMS TARGETTING MOST VULNERABLE USERS:

($M)		2016-17	2017-18	2018-19	2019-20	2020-21
1A. RRRP	Status Quo[1,2]	-	243	250	256	263
	Enhancement[2]	-	216	222	228	234
	TOTAL[2]	-	**459**	**472**	**484**	**497**
1B. OESP	Status Quo[1,2]	-	118	159	193	222
	Enhancement[2]	-	67	102	132	153
	TOTAL	-	**186**	**261**	**325**	**375**
1C. Establishing a New LDC Affordability Fund		200	-	-	-	-
1D. On-Reserve First Nations Delivery Credit		-	20	20	20	20
TOTAL FISCAL IMPACT:		**200**	**665**	**753**	**829**	**892**

1. Currently funded by the Rate Base.
2. Status Quo and Enhancement amounts are sourced from previous Ministry decks; Totals from the Cabinet Submission.

Appendix D provides details on each of the programs and their enhancement.

2) Ongoing activities to bend the future cost curve of electricity

The Ministry is proposing a number of ongoing activities to bend the future cost of electricity. This includes leveraging the Ontario Energy Board (OEB) to identify opportunities for red-tape reduction and future LDC efficiencies. In addition, the Ministry will continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives.

Details of these activities can be found in Appendix E.

3) Global Adjustment Smoothing

The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.

The Ministry indicates the majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as

incurred basis' through the GA while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.

The Ministry is proposing to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. Through GA Smoothing, these costs would be spread over a longer period and provide immediate ratepayer relief. The result of this GA proposal is that cost to ratepayers remains lowered in the short term reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month. Bill increases will be kept in line with the Consumer Price Index (CPI) until the end of 2021, and from 2022 onwards, bills will increase at a rate that ensures recovery of the accumulated debt, interest costs and administrative costs by 2048 without exceeding 10% of total electricity costs.

The Ministry continues efforts to identify an effective business structure to support:

- Required increase in provincial borrowing
- No increase in net debt,
- No impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG.

Based on the current stage of the analysis of the accounting, legal and financing risks, it is possible that the deferral of the GA will be recognized as an expense in the fiscal plan. The table below shows the projected fiscal impact:

($M)	2017-18	2018-19	2019-20	2020-21
GA Smoothing for RPP Eligible Only – Residential Bills Lowered 25% (with Government Funded 8% Rebate and Social Programs, 2% increase)	2,534	2,668	2,942	3,420
Interest Portion	*32*	*162*	*298*	*449*

Note: Potential to avoid fiscal impact would depend heavily on decision on finalization of the accounting, legal and financing analysis. Based on an annual interest rate of 5% compounded monthly.

Analysis conducted by the Ontario Financing Authority, MOF indicates that over the 30-year GA smoothing period, estimated total accumulated interest costs exceed the estimated total cumulative savings produced under each option. Interest costs are also highly sensitive to interest rate assumptions and actual borrowing costs.

- In an effort to smooth out the GA, ratepayers will incur interest costs that over a 30-year period, will be added to the GA payments ratepayers make. Under the options above, interest costs exceed the amount being financed (i.e. benefit being provided) over the 30-year periods.

$ millions	Total Cumulative Savings	Total Accumulated Interest Costs
Option 1	$24,977	$35,542

Assumes an annual interest rate of 5% (compounded monthly).

The Ministry will report back to TB/MBC in Spring 2017 on a recommended approach, with an objective of addressing legal, financing and accounting challenges while minimizing fiscal risks. If unsuccessful in identifying an effective transaction design which avoids significant fiscal impacts, it is reasonable to require the Ministry to return with results of further analysis of alternative approaches to mitigate fiscal impacts versus adding GA smoothing directly to the deficit.

More details can be found in Appendix F.

4) Supports for non-RPP Class B consumers

Class B electricity consumers are too large for the RPP and too small to be Class A, and therefore do not qualify for price mitigation programs available to those consumers. The Ministry is proposing to expand ICI by extending eligibility to large Class B consumers with average monthly peak demand over 500 kWh in order to encourage consumers to shift electricity use away from peak hours.

The Ministry is also considering supports for renters/tenants that do not pay their own electricity bills, but it is not making recommendations at this time. The Ministry will report back in 2017-18 on additional options. Appendix G provides more information.

Monthly Electricity Bill Impact

Appendix H illustrates expected impacts of the above proposals on electricity bills. An average residential customer bill in July 2017 is expected to see a 25% decrease, which will vary based on usage and on the local distribution company. This includes the 8% rebate that came into effect on January 1 2017. Enhanced RRRP initiative and expanded OESP will provide additional bill savings for certain consumers:

- Enhanced RRRP – An estimated 800,000 customers would benefit seeing additional savings in the range of $3-$22 on their monthly bill.
- Expanded OESP – OESP consumers would see savings of approximately $40 – $113 on their monthly bill (up from the current $30 - $75).

The LDC Affordability Fund will produce bill savings once installation of energy efficiency measures is completed for targeted consumers.

The On-reserve First Nations Delivery Credit could result in an $85 monthly savings if Ontario Energy Board's recommendations are implemented.

Key Risks and Considerations

Electricity Support Programs - Cost Projection, Program Effectiveness and Fiscal Impact

The Ministry of Energy is bringing forward a suite of initiatives to address the impact of rising electricity prices. The sector is complex and a number of key assumptions used as inputs into the model are variables/forecasts themselves. As such, there is an inherent risk in the cost estimates that are provided. Hence, it is important to ensure the models and assumptions are stress tested. Sensitivity analysis, which would allow the government to develop a risk based outlook to manage potential fluctuations in the cost of these initiatives, would support better decision making and support meeting the government's fiscal targets.

Cost projections may also need to be refined as program details are finalized. This is similar to the initial projections for the cost of the 8% rebate in September 2016. At the time of the briefings in advance of the initial approval, the cost projection for the 8% rebate was $1B for the first year. The projections were refined, resulting in a revised estimate of $1.1B for the first year, rising to $1.2 B in the out years.

Program costs are also highly dependent on uptake and electricity usage and as such, can fluctuate from year to year. For example, the OESP currently has an uptake rate of 30%, the Ministry's cost estimates assume ramping up to 100% over four years (i.e., moving to 100% participation), there is potential for significant underspending if participation rate is between 30% and 100%. It is also important to understand how these enhanced electricity programs may impact the behaviour of various key stakeholders going forward with regard to program uptake and electricity usage and hence the assumptions built into the models and the financial estimates.

As there is no sunset date for the proposals, it is important to understand the full cost of the initiatives for the longer term, beyond the year 2021-22 as outlined in the submission. Furthermore, electricity prices are projected to increase above inflation for the foreseeable future. It is unclear if the initiatives proposed in the submission would be sufficient to bring the cost increases to be at or below inflation. Otherwise, the gap could continue to increase/widen and may necessitate further action and supports by the government.

It is also important to note that the effectiveness of the existing suite of electricity support programs (e.g. OESP, Home Assistance Program, RRRP) could also be evaluated to ensure that they are meeting program objectives and outcomes prior to enhancement and expansion. Key risks to highlight with individual program proposals:

- RRRP - the proposal is likely to create disincentives from the eligible LDCs towards productivity and performance improvements to drive down delivery costs/changes. In addition, the proposal may create an incentive for LDCs that fall just outside the cut-off to drive up their distribution costs to gain eligibility into the program. It is also important to note that the fiscal impact of this initiative is projected to increase beyond 2023 due to regular rate increases. It is recommended that the Ministry provide a long term forecast along with underlying assumptions, with risk bands that account for variability of distribution costs and the proposed distribution charge cap, to show the full expected financial impact of this initiative on the long term fiscal plan.

- OESP - the OESP currently has low uptake, consideration could be given to focussing efforts on increasing the take-up of the existing program, and seeing the effectiveness of the supports, before benefits are further enhanced. This approach may not only lower the fiscal impact in the short-term, but ensure that the effectiveness of the program can be assessed before it is scaled up.

- Affordability Fund – as program development continues to be finalized, the Ministry should continue to work with Treasury Board Secretariat and the Ministry of Finance on considerations around eligibility, relief amounts, fiscal impacts under different administration/delivery options (eg program delivery by outside entities through a trust structure vs ministry delivery), and key implementation risks.

  Considerations should be given to the development of performance metrics, including methods to evaluate whether the program is meeting its objectives and outcomes, to ensure the program is responding to the right elements and doesn't inadvertently incent adverse behaviour regardless of the capacity to pay.

  To be accounted for as a non-controlled trust, several elements must be addressed including who really controls the trust, who are the beneficiaries and whether unused funds are to be returned to the Province in the event of a windup.

As such, it is recommended that the Ministry of Energy work with Treasury Board Secretariat (Centre of Excellence for Evidence-Based Decision Making) and the Ministry of Finance as program development is finalized in order to better assess program costs projections, forecasting models, program effectiveness and performance metrics and outcomes and report back to TB/MBC.

<u>Global Adjustment - Accounting Implications and Fiscal Impacts</u>

There remains continued uncertainty around effective transaction design and related accounting treatment for a number of the initiatives (the Global Adjustment (GA) Smoothing and the New Affordability Fund). The risk exists that the fiscal impact of the proposals may be significantly higher than currently contemplated and estimated. The cost projections in this proposal are highly sensitive to interest rates, and Energy's and IESO's 30-year forecast of GA costs.

The intent is to establish a structure where the entity that takes on the GA and the debt required to smooth rates over a period of time would be a trust consolidated by Ontario Power Generation and thus reflected on the Province's books through modified equity consolidation.

If all the requirements can be met, an accounting analysis is expected to support: 1) increase in provincial borrowing; 2) no increase in net debt; 3) no impact on reported annual surplus/deficit, but depending on funding to OPG/Trust from the province, an increase in interest on debt and an increase in offsetting income reported for from the province's investment in OPG.

To date, the Ontario Auditor General (OAG) opinion on the proposal has not been sought. TBS will work with AG on the transaction. The auditors of OPG and IESO are providing their preliminary assessments and the Office of the Provincial Controller (OPCD) has been engaged.

The Ministry's submission assumes that the proposed GA smoothing will receive a favourable accounting treatment; hence it will not impact the provincial net debt and fiscal plan (For prudence, until there is legal, financing and accounting risk assessment, GA smoothing is shown as impacting the deficit). Should the favourable accounting treatment not be received, the impacts would be significant and variable depending on market changes (interest rates and cost of generation). In addition to having a significant fiscal impact, the proposed plan would also introduce significant volatility to the medium- to long-term fiscal plan as interest rates, energy prices, and consumer behaviour change.

The current cost estimates assume that the GA smoothing is provided to RPP Eligible participants. Given the reduction in the RPP in the initial years, and ability to opt out later, applying the GA smoothing impact to RPP eligible participants is appropriate; otherwise, consumers would have an incentive to opt out of the RPP costs when costs begin to increase and it would be challenging to fully recover the debt, or charge remaining RPP consumers proportionately more.

<u>Implementation/Legal/Other Considerations</u>

- Legal advice on the constitutional risk posed by the proposal to defer the current costs to consumers of the global adjustment, to be paid for by consumers in future years, noted a moderately high constitutional risk of resulting in an unconstitutional tax. It creates a refinancing structure which results in future consumers paying disproportionately more of the GA cost and therefore cross-subsidizing near-term consumers.
    - This advice was based on a review of the proposal from February 9, 2017. The Ministry's draft Cabinet submission indicates this risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

APPENDIX A: PROPOSED MINUTE (DRAFT)

Should TB/MBC wish to proceed with the Ministry's request, the following minute could be considered:

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to 15%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048.

b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

- Formal accounting opinions from OPG and IESO auditors.
- Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
- Report on the multi-year profile of GA smoothing, identifying specific assumptions.
- Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
- Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

c) If a non-fiscal mechanism cannot be established:
   1. Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
   2. Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

ii. Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii. Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

f) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

g) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

h) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

i) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

j) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

iv. Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v. Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

k) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi. Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B electricity consumers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii. Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*
$ Millions		**2016-17**	**2017-18**	**2018-19**	**2016-17**
Initiative cost		200.00	3,199.000	3,421.0000	
Expense changes:					
Social Programs	Oper	0.0000	665.0000	753.0000	200.0000
Global Adjustment Smoothing (Contributing towards up to 25% bill reduction)(Assumes it impacts the deficit)	Oper	0.0000	2,534.0000	2,668.0000	0.0000
Total Fiscal Impact		**200.0000**	**3,199.0000**	**3,421.0000**	**200.0000**

APPENDIX C: ELECTRICITY SECTOR BACKGROUND

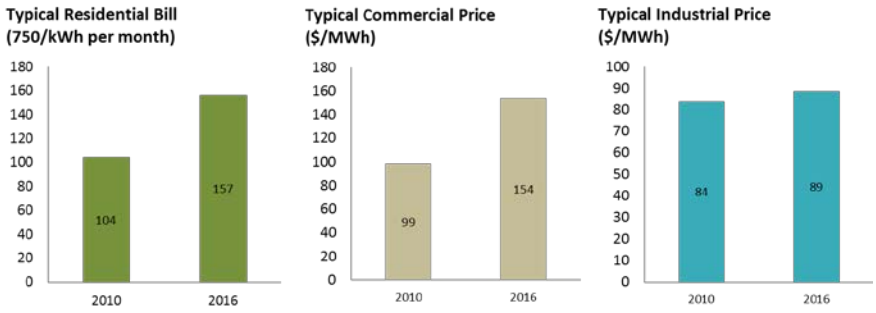
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.

  - The Rural or Remote Rate Protection (RRRP) program is provided to rural or remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Currently, electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

The existing program costs are summarized in the table below:

($M)	2014-15	2015-16	2016-17[1]	2017-18[1]	2018-19[1]	2019-20[1]	2020-21[1]
OCEB	1,078	860	-	-	-	-	-
OREC	-	-	300	1,100*	1,200	1,200	1,200
Ending DRC[2]	-	85	330	330			
NIERP	108	120	120	120	120	120	120
NOEC	24	26	25	25	25	25	25
OEPTC[3]	429	444	450	460	470	481	481
TOTAL	1,639	1,535	1,225	2,035	1,815	1,826	1,826

1. 2016-17, 2017-18 based on forecasted numbers
2. Effective January 1, 2016. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

OCEB – Ontario Clean Energy Benefit, NIERP – Northern Industrial Electricity Rate program, DRC – Debt Retirement Charge, OREC – Ont. Rebate for Electricity Consumers, NOEC – Northern Ontario Energy Credit, OEPTC – Ont. Energy & Property Tax Credit

APPENDIX D: DETAILED INFORMATION SUPPORTING PROPOSED INITIATIVES

The Ministry is proposing the following to further mitigate electricity prices for consumers:

1. Targeted initiatives helping the most vulnerable Ontarians (Customers who are disproportionately affected by increased electricity costs) by enhancing electricity support programs and shifting cost onto the tax-base:

    - Targeted customers:
        - High Delivery Cost Customers – Some customers in rural areas where the cost to delivery electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
        - Low-Income Customers: Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
        - First Nation On-Reserve Customers: On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

    - Initiatives providing targeted assistance to ease the electricity cost burden:
      1a. Enhance the Rural or Remote Electricity Rate Protection (RRRP);
      1b. Expand the Ontario Electricity Support Program (OESP);
      1c. Establish a Local Distribution Company (LDC) Affordability Fund; and
      1d. Delivery charge relief for on-reserve First Nations customers.

2. Ongoing activities to bend the future cost curve of electricity:
    - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
    - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

3. Refinancing Global Adjustment assets in order to smooth the impacts of the Global Adjustment across ratepayers over a longer period of time.

4. Support for tenants & Supports for non-RPP Class B consumers.

1) Enhancing electricity support programs and shifting cost onto the tax-base

<u>1a) Rural or Remote Rate Protection (RRRP) Enhancement</u>

The Rural or Remote Rate Protection (RRRP) program mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.

The program, which costs approximately $242M/year is currently funded by other ratepayers. For an average residential customer, the cost of supporting RRRP is roughly $1.58 per month. For other customers, the cost to support the RRRP can range from $65 for a greenhouse to $8,000 for a medium industrial.

Part of the program helps fund the costs of Hydro One customers classified in the "R2" low density residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest delivery costs in the Province.

- From 2001-2016 the program provided $125.4M annually to help defray these costs.

- In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
- As of Jan 2017, R2 customers receive $60.50/month off their distribution costs.

While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (e.g. Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma) and Hydro One R1 customers (medium density).

The Ministry is proposing to enhance RRRP by:

- harmonizing the fixed distribution rates at $38/month for R2, R1 and the next seven highest cost LDCs (enhanced benefits for ~280,000 consumers and new cost decreases for ~420,000 consumers)
- funding its costs through the tax base from the rate base;

For this proposal, targeted RRRP consumers (an estimated 800,000 customers would benefit from this enhancement) would see additional savings in the range of $3-$22 on their monthly bill. The fiscal impact of this program is approximately $459M in 2017-18.

Implementation considerations:

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

Fiscal considerations:

- Distribution costs vary year to year.
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
TOTAL	-	459	472	484	497

1b) Ontario Electricity Support Program (OESP) Expansion

The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base. OESP credits vary by income level and family size, and there are two credit scales that include:

- The basic program credit ranges from $30/month to $50/month.
- An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.

The OESP was launched on January 1, 2016, and in just over a year:

- Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
- Almost $50 million in credits have been provided to vulnerable consumers.
- Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.

The Ministry is proposing to enhance OESP and fund its costs through the tax base by:

- increasing the existing benefit scales by an additional 50%;
- expanding the categories of OESP credits

The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes – greater access to OESP credits at smaller family sizes at different income levels)::

Existing OESP Credit Scales

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$30	$30	$34	$38	$42	$50	$50
$28,001 - $39,000			$30	$34	$38	$42	$50
$39,001 - $48,000					$30	$34	$38
$48,001 - $52,000							$30

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$45	$45	$50	$55	$60	$75	$75
$28,001 - $39,000			$45	$50	$55	$60	$75
$39,001 - $48,000					$45	$50	$55
$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$45	$45	$51	$57	$63	$75	$75
$28,001 - $39,000		$40	$45	$51	$57	$63	$75
$39,001 - $48,000			$35	$40	$45	$51	$57
$48,001 - $52,000					$35	$40	$45

Sliding Scale #2	Household Size						
Income Bracket	1	2	3	4	5	6	7+
< $28,000	$68	$68	$75	$83	$90	$113	$113
$28,001 - $39,000		$60	$68	$75	$83	$90	$113
$39,001 - $48,000			$52	$60	$68	$75	$83
$48,001 - $52,000					$52	$60	$68

For this proposal, OESP consumers would see savings of approximately $40 – $113 on their monthly bill (up from the current $30 - $75). This proposal would have a fiscal impact of approximately $186M in 2017-18 increasing to $375M by 2020-21.

Implementation and fiscal considerations:

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).

- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix require will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

Note:OESP participation ramps up to 100% year 4

1c) LDC Affordability Fund

The existing Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills. Program eligibility is aligned with other low-income support programs such as the OESP.

The Ministry is proposing to establish an Affordability Fund which would be available to LDCs only to provide similar energy efficiency measures as provided under HAP to targeted customers (i.e., those who are most in need, such as those who are facing disconnection and who cannot qualify for the low-income programs).

To establish the Fund, the government would enter into a TPA with Hydro One. The TPA would include terms for Hydro One to establish a non-controlled Trust to administer and distribute funds to LDCs across the province on the basis of principles established by the Province and implemented at the discretion of the Trustees. The Trust would distribute funds to LDCs across the province including, Hydro One, at the direction of the Trustees.

The Ministry indicates the Affordability Fund would not be used to provide grants or financial assistance to customers to forgive all or a portion of their arrears or electricity bill. It is not clear how the non-controlled independent entity (the AF Trust) would be blocked from a decision to cover arrears.

LDCs would apply for funding to the Fund administrator (Hydro One) to offer energy efficiency measures to its customers that meet the targeted eligibility criteria. Determination of eligibility could involve a number of factors and metrics:

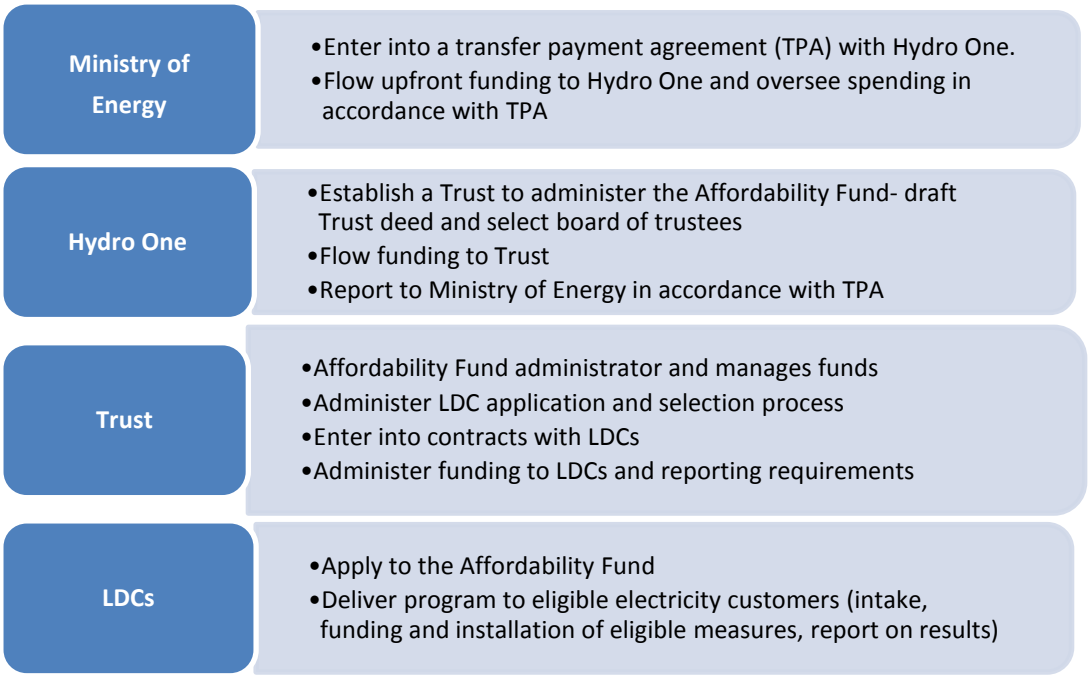
- Do not meet the definition of "low-income";
- May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
- Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
- Require financial assistance to pay for energy efficiency measures.

Recipients could receive measures (e.g. energy-saving light bulbs, programmable thermostats, cold climate air source heat pumps) ranging from $3,000 to $5,000 per customer, at no or minimal cost. As an illustration, with $200M, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

The Ministry is proposing that the Fund be provided through a one-time payment of $200M in 2016-17. Administration expense estimated to be 10% of the fund $20M, including expenses related to the Trust, Hydro One and LDCs. It is expected that the funds through the Affordability Fund will be deployed within a year (funds are expected to be exhausted by March 31, 2018). The TPA will include the option to extend the original funding amount into future years in the event of under spending. The TPA will also include the option to incorporate potential future funding from the tax base.

The Ministry indicates providing the $200M immediately provides LDCs with the required upfront commitment to apply for funding and initiate planning and implementation activities.

Figure 1: Summary of Roles and Responsibilities



Implementation and fiscal considerations:

- An illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households (having met targeted eligibility criteria), depending on measures and uptake.
- Administration expense estimated to be 10% of the fund $20M, including expenses related to the Trust, Hydro One and LDCs.
- The LDC Affordability Fund would be a fiscal impact of $200 million in fiscal year 2016-17.
- The TPA will include the option to extend the original funding amount into future years in the event of under spending. The TPA will also include the option to incorporate potential future funding from the tax base.

1d) On-reserve First Nations Delivery Credit

On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve, average income is considerably lower, lower employment rates, historical grievances related to energy development on reserve lands and traditional territories, and impacts of energy infrastructure either present or due to connection delays. These challenges result in significantly higher electricity consumption levels and costs.

At the request of the Minister of Energy, the OEB worked with the Chiefs of Ontario to develop options to address these issues.

The ministry is proposing to implement the recommendations of the OEB's report:

- Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate.
- Automatically qualify on-reserve First Nations residential customers (~21,500 customers)
- Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
- Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.

The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out. The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of up to $20 million (21,494 total customers across 9 distributors). OEB notes total annual costs could range between $13M to $20M.

Implementation and fiscal considerations:

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan
- Rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Appendix E: Ongoing Activities to Bend the Future Cost Curve of Electricity

Ontario Energy Board (OEB)

The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.

The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework. While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance. Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.

In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

The Ministry is proposing to help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation. In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses. This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

Independent Electricity System Operator (IESO)

The Ministry will continue to move forward with Independent Electricity System Operator’s (IESO) Market Renewal initiatives:

- Moving to “technology-agnostic” procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
- Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.

Changes related to IESO’s Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:

- About $1/month or less than 1% at current retail prices for a typical residential bill; and
- About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.

Appendix F: Refinancing Global Adjustment Assets To Smooth the Global Adjustment Across Ratepayers Over a Longer Time Period

At this time, the Ministry continues to work towards finalizing a structure for this initiative and plans to return to TB/MBC in Spring 2017.

The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized. The majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.

To enable this transition, generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing (including returns to shareholders), and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs. The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).

The Ministry indicates there is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs. In 2016, GA costs were $12.3 billion.

GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief. By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.

The result of this GA proposal is that cost to ratepayers remains lowered in the short term reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by up to $26/month. Bill increases will be kept in line with the Consumer Price Index (CPI) until the end of 2021, and from 2022 onwards, bills will increase at a rate that ensures recovery of the accumulated debt, interest costs and administrative costs by 2048 without exceeding 10% of total electricity costs.

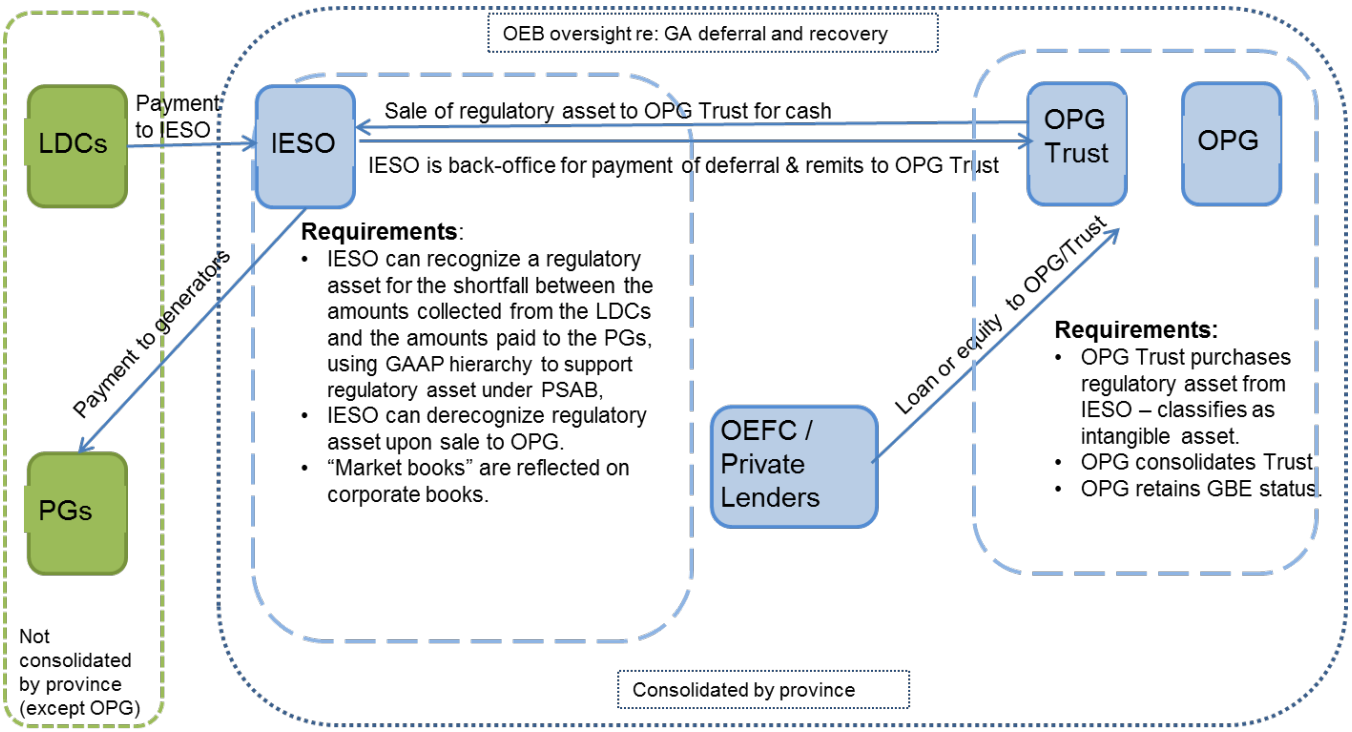
The GA Smoothing options under consideration are illustrative, the Ministry notes, targeted to RPP eligible participants, and show potential rate mitigation measures to meet a total bill savings of 25%, 20% and 18% reduction from the projected residential bill in 2017 requires a significant GA subsidy. These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month. Actual ratepayer savings would vary due to differences in consumption patterns. Graphics for 25% and 18% appear at the end of this section.

The Ministry is working through different implementation options so as to mitigate negative fiscal plan implications GA smoothing. The following table shows the projected fiscal costs related to GA smoothing without legal and accounting treatments.

Fiscal Impact ($M)	2017-18	2018-19	2019-20	2020-21	2021-22
Bills Lowered by 25%, RPP-Eligible Only*	2,534	2,668	2,942	3,420	3,232

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

The Ministry has put forward a potential GA smoothing structure, as well as interactions between the sector entities and elements required to meet accounting objectives. The Proposed structure is still subject to legal, financing and accounting confirmation, and absent confirmation there would be a fiscal impact to the province.



The Ministry acknowledges analysis of the proposed structure is not complete and that there are several requirements still pending related to IESO and OPG that are high risk regarding resolution.

If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase on income from OPG.

- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.

Policy, Legal, Fiscal, Accounting considerations:

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

    - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumers, further increasing future costs for individual ratepayers.

- Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices. A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs

- If Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA Smoothing (i.e., because it is only targeted to RPP consumers) – consideration could be given to provide tax-based measures to off-set electricity costs (e.g., tax-credits, programs, etc).

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

- The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation.

    - A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax.

      Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

- There is risk for any potential no fiscal impact implementation structure for GA smoothing given that the Ontario Auditor General has raised concerns about recognizing rate regulated assets and liabilities in previous Annual Reports.

A. GA Smoothing for RPP-Eligible Only (Borrow $2.5 billion in 2017, Residential Bills Lowered 25%, Lower Total Debt)

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 such that the average monthly residential electricity bill increases by 6.5% per year with a limit of $2.2 billion above the true cost of GA in any given year to cap repayment charges at around 10% of total bill. IESO forecast is based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer.

Appendix G: Support for Tenants & Supports for Class B – Conservation Efforts

Support for Tenants:

The Ministry of Energy and the Ministry of Housing have explored whether it is possible to extend these programs to tenants who do not pay their own electricity bills.

The Residential Tenancies Act (RTA) governs the relationship between landlords and tenants. While it may be possible to use the RTA to direct landlords to pass on savings such as the 8% Rebate to tenants, there would be significant complexities with such an approach (E.g., different metering configurations including bulk metering, individual, both combined in a building; enforcement to ensure rebates based on; and to distinction if it only applies to pre-1991 buildings that are covered by rent controls)

The Ministry of Energy and the Ministry of Housing have concluded that the most vulnerable consumers in the province in social housing do benefit indirectly from the existing mitigation measures such as the 8% Rebate. Social housing providers do receive the 8% Rebate, which allows them to offset some of their electricity costs, and can use these savings for other issues related to the building.

Support for non-RPP Class B electricity consumers

Non-RPP Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

Non-RPP Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers). The Ministry notes, the cost of electricity for Class B consumers has risen faster than CPI.

- Further lower the threshold for participation in the Industrial Conservation Initiatives (ICI) below the current 1MW, which was recently approved – takes effect July 2017. Sector restrictions would be included. It could be narrowed to a specific sector – allow only manufacturers below 1 MW to participate.
    - Cost would be covered by other ratepayers. Ministry's preliminary analysis notes an increase of just over $1/month increase for a typical residential bill.
    - Regulatory amendments need to be made before end of April 2017 (due to putting it in place before next 12 month billing period beginning Jul 1 ,2017)
- Eliminate DRC earlier than scheduled April 2018 for all non-RPP Class B consumers (Saves $7/MWh)
    - Shift Class B DRC to Class A consumers
    - Partially reduce Class B DRC (A $148M fiscal impact if lowered by 50% to $3.50/MWh)
    - Remove DRC completely for Class B (fiscal impact estimated at $295M in 2017-18)

- DRC Benefit Voucher – Class B customers would receive a voucher equivalent to all or a portion of their DRC charges on their electricity bills. The customer would use this voucher to increase or 'top-up' incentive amounts available through the Ontario Climate Change Solutions Deployment Corporation (OCCSDC). Vouchers could incent higher participation towards OCCSDC programs, helping these customers transition to a low-carbon economy.
    - Vouchers could be funded either through the GGRA if the voucher can be linked to GHG reductions, or the tax base. It is estimated that the outstanding balance for DRC relating to Class B customers from April 1, 2017 to March 31, 2018 is approximately $295M.
    - Not all Class B customers may be able to benefit from the vouchers (e.g. a facility with limited ability to implement new energy efficiency measures).
    - LDCs may need to make changes to their administrative processes and billing systems in order to confirm value of voucher.

APPENDIX H: ILLUSTRATIVE BILL IMPACT

The follow table show electricity bill impact of 25% reduction..

GA Smoothing for <u>RPP Eligible Only</u> – Residential Bills Lowered 25% (with Government Funded 8% Rebate and Social Programs, 2% increase)

- Total bill below is based on a revised IESO forecast. See footnotes for more information.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**158**	**164**	**167**	**170**	**181**	**178**
Total Bill (excludes HST)	140	145	148	150	160	158
Impact of GA Financing		-26	-26	-26	-32	-28
Impact of Tax-Basing Social Programs		-2	-2	-2	-3	-3
Subtotal		117	120	122	125	127
8% rebate		-9	-10	-10	-10	-10
HST		15	16	16	16	17
Revised Bill (includes HST)	**158**	**123**	**126**	**128**	**131**	**133**
Year-over-Year Change		-22%	2%	2%	2%	2%
Change from Forecast		**-25%**	**-25%**	**-25%**	**-28%**	**-25%**

Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%
Change from Forecast		-2%	-2%	-2%	-2%	-2%

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
    1. 56% from capital markets; and
    2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.

From: John Kim
To: Montgomery, Kaitlin (MOF)
Subject: Re: Ontario Fair Hydro Plan
Date: Thursday, April 27, 2017 7:49:30 AM

Thanks. Have a request for you. Do you have the appendix to the fhp cabsub? I have not seen it but heard someone refer to recently.

On Apr 26, 2017, at 6:47 PM, Montgomery, Kaitlin (MOF) <Kaitlin.Montgomery@ontario.ca> wrote:

All - Thank you for the detailed comments that you provided on Saturday and Sunday. Please find attached the next turn of the legislation. We have tried to balance the comments that we received to address the points that you have raised. This draft does not reflect the drafting points that were raised over Monday and Tuesday and we will reflect those points in our next instructions to legislative counsel. Please review and identify any significant substantive issues by 6 p.m. today. We continue to work toward pens down on Friday, meaning the draft that we have at that point in time will be proposed for introduction in the House. Thank you again for your contributions to this process.

All - Please find attached the next turn in the consultation draft (v.3) of the proposed legislation. We have been working to address the feedback that you provided earlier in the week. A number of points remain in progress. As with the earlier versions, by sharing this document, we hope to continue to advance our discussions.

Our timeline has been extended and we are now working to a pens down date of April 28th. We will not get another extension. Accordingly, we ask for your detailed, written comments on the draft, which we require no later than Sunday at noon.

We will continue to work on the bill in the interim, so earlier instructions are helpful to us. With your input on this timeline, we expect to be able to provide one more circulation around Tuesday or Wednesday next week.

We have not had the opportunity to add notes or to update our crosswalk to the Blakes summary document.

We look forward to receiving your written comments.

From: Ronald Kwan
To: John Kim
Subject: Re: PILs Exemptions
Date: Tuesday, April 25, 2017 5:22:06 PM

Hi,

I assume this is to protect the interest revenue OPG earns from its sub-debt to the SPV.

PILs would hurt OPG's ROE and bottom line.

No net fiscal impact for the Province on PILs vs net income, but would the Province want a higher ROE to protect the asset value of the equity on the Province's books?

Ron

Subject: RE: Comments

Hi Krista, John,

We shared your ask with Finance Tax Policy and they have been mulling this over for the past few days. We had a conversation this morning and I wanted to provide a synopsis of that call:

- Tax Policy is of the view that if this is structured as a Trust will be a taxable entity under the Income Tax Act. However, because OPG is the beneficiary of the Trust, it will not pay any taxes. For greater certainty, Tax Policy suggested seeking a ruling from CRA. If necessary, we could seek an exemption from CRA (there is precedent with the Nuclear Funds Trust). Please let me know whether that is consistent with your assessment.
- Since all income from the Trust will flow to OPG, all revenues would be subject to PILs (unless we take action to make specific exemptions).
- As we discussed last week, we have proposed the language that you provided with PILs exemptions for specific earning streams from the trust.
- Tax Policy has a number of questions about how to define those exempted revenue streams and the rationale for those exemptions. They want considerably more detail and more time to consider this issue.
- According to Tax Policy, existing Legislation (James I will leave it to you to describe) provides authority to set out PILs exemptions in regulations. Therefore they suggest we do not need to add anything in to the OFHP legislation at this time. That will provide time to more fully consider the issue and discuss the need for these exemptions.
- I suggested I was generally comfortable with this approach, subject to input from OPG and Torys. I think it is better for us to have more time and the flexibility to include these provisions in regulations. Given where we are in the process, I think we are out of time to settle legislative language that will work for Tax Policy.

James, please feel free to add / modify if I missed anything. Please let us know ASAP if you have concerns.

Scott

Hi Ron,

Thanks.

On the note we shared with you on Monday, attached above, would you be okay with us sharing the draft with OPG? We have CMD's comments and also EIGS' comments are imminent.

Thanks,

John

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to support the implementation of the equity injection portion of the proposed ~~implement a~~ Global Adjustment (GA) smoothing mechanism.
- Under the proposed GA smoothing mechanism
  - OPG will develop a Special Purpose Vehicle (SPV), referred to in this BN as "OPG Trust", to purchase the "right to collect" assets from the IESO in return for cash proceeds.
  - OPG Trust will be structured to finance on its own 51% of its funding requirements through the capital markets, with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed by OPG through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
      - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g., debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

BORROWING

- [For each GA settlement period, (?),] ~~T~~the 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility that~~which~~ will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.

Commented [KR(1]:

Formatted: 7. Bullet 2

Commented [JK2]: Check with SIFB or CMD on the right terminology.

Commented [FC3]: To me this is part of the terms and conditions

- OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.

- Longer term debt will be issued as soon as possible, subject to market timing constraints.
  - OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
  - The OFA is also expected to retain a dealer to provide due diligence and independent advice for the Province's equity injection [TBC] into OPG and long-term borrowing by OPG Trust [TBC].
- The long term debt issued by OPG Trust may also be callable to buy back the bonds once the financed GA starts to be repaid. [TBC]

Commented [JK4]: Did I get this right?

Commented [FC5]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

Commented [KR(6R5]: Or rather, financing from OPG into the Trust at the outset?

Commented [JK7]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [JK8]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure as ~~once~~ the GA financing program ~~has~~ subsides / begins to reduce its accumulated debt~~d~~.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

Commented [FC9]: Not quarterly?

Commented [JK10]: Monthly now.

Commented [FC11]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [KR(12]: Appropriate wording?

PROCESS

- OPG Trust would receive ~~the~~monthly (?) notice to purchase the amount of (?) asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.

- Separately, OPG and OPG Trust would take out debt from the capital markets totalling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

LEGISLATION, APPROPRIATIONS APPROVALS PROCESS AND TIMING

- The proposed timing for the legislation is May~~, early June~~.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] [Energy] would bring forward a TB submission ~~TBS would~~to provide for an annual allocation for an appropriation for the equity injection (an operating asset (?)), with a three-year program review cycle.

Electricity Finance Branch / Corporate and Electricity Finance Division, Ontario Financing Authority
April 4, 2017

Commented [SQ213]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

Commented [KR(14]: Likely need to beef this up and the status of this process and discussion with TBS staff.

Should likely also confirm with OPCD how this will be recorded.

And in which ministry the new equity in OPG will be recorded.

Hi John,

My understanding of the earlier discussions was that there should at least a return on this, though more like a debt-rate of return, with the possibility of a spread (or a loss). Is that still not the case?

Is there an accounting risk of saying this is not equity, but a loan to OPG? I would think OPG wants to avoid that too, so that it's capital structure is not messed up (one purpose of the equity injection structure, I thought), and, thus, would have been holding firm on getting a cost of capital embedded in the regulatory asset it is supposed to be buying on a commercial basis.

Is that right?

Thanks, I'm thinking of adding a bullet at the end...

· In order to ensure continued treatment of OPG as a government business enterprise (GBE), the Province would want to avoid the appearance of providing zero or low interest loan.

Subject: "Fair" Legislation (Discussion Draft)

Thanks for your comments, Michael. The attached version picks up many of your, Peter's and H&W's comments. In some cases it defers consideration, pending dealer input (such as your suggestion of tracking individual, standalone Regulatory Assets per transaction; delinking the investors from the LDCs, in favour of having IESO be the main servicer; and deleting some of the US precedent language). The regulatory input included in your mark-up was particularly helpful, although not easily dealt with tonight without the Province's input, so many of those points have simply been brought forward with additional footnotes for now. The manner and extent of delegations (primarily the Financing Plan and the Fair Allocation Plan), the nature of OEB review and regulatory actions, the scope of the undertaking and other similar issues, are still under consideration by MOE. Your comments to the effect that nothing can affect a funding obligation once incurred were referenced, as I think that is a pervasive and correct idea. The ultimate location of provisions (Part of the Electricity Act; new Act; Regulations) is still under consideration – for now it's all in this document to facilitate this group review. Finally, there are a number of "validity" type points, which arose in

your mark-up and which we are still thinking about. We can discuss those further in the morning. Steve

Subject: Torys Comments on Blakes Draft Legislation

All,

I am attaching our comments on the last version of the draft legislation sent to us by Blakes. Both a clean and blacklined version are attached.

This is being distributed to OPG at the same time as everyone else and so remains subject to their comments as this is very much a work in process.

We also just received comments from Hunton & Williams but in the interests of time we have not been able to include those in our mark up, but expect to be in a position to raise any of their big issues at our meeting tomorrow. Also, I will send their comments separately to Blakes.

Regards,

Michael K. Feldman

Date: Wednesday, April 26, 2017 8:05:38 AM

John,

There were no materials for yesterday's meeting. You may be aware that OPG is seeking a PILs exemption for certain income generated by the SPV.

At this point, we are unaware of any reason to exempt the income from the SPV which is anticipated to be small.

Regards,

Rob

Subject: TBS Rate Mitigation Update - Minister"s Briefing
Date: Wednesday, April 19, 2017 6:04:26 PM
Attachments: TBS Rate Mitigation Update - Minister"s Briefing_20170418.pdf

---

Hi John/Bruno,

Please find attached a copy of the Minister's briefing deck on Rate Mitigation that Gadi attended with TBS yesterday. Please review and let me know if you have any comments on this.

Thanks,
Gavin He

Ron K.

TBS

Rate Mitigation Update

Minister's Briefing

April 18, 2017

Agenda

- Background
- Timelines
- TBS work streams
- Update on components of plan
  - GA refinancing
  - Affordability fund
  - Social programs – OESP, RRRP, FNORDC
  - ICI
- Next steps

NT a Securitization structure, even though that's where the bankers and lawyers come in with that mindset

Background

TBS

- The proposed Global Adjustment smoothing option would reduce RPP eligible residential bills by 25%, and cap rate increases for the next four years at the Consumer Price Index (CPI).
- Subsequent years would be set above CPI in order to ensure that bill increases related to the deferred GA amounts are capped at around 10% of the total bill while allowing for repayment of related financing and administrative costs over the recover term ending by 2047.
- People with low incomes, those served by local distribution companies (LDCs) with the highest distribution costs, OESP recipients and On-Reserve First Nation households are expected to benefit from even greater reductions to their electricity bills.
- These new measures will cost the government up to $2.5 billion over the next three years. Assuming GA refinancing is not on the tax base

Source: Ministry of Energy Technical Briefing Deck

Timelines

TBS

- AG briefing on April 19, 2017 (ENERGY Lead)

- Approval dates:
  - TB – May 1, 2017 now May 9th likely
  - LRC -- GA refinancing – May 1 2017, other legislation – complete
  - Cabinet -- May 3, 2017

everything else moves back a week

- Legislation introduced May 4, 2017.
  - Opposition Briefing (TBD)

- Effective dates
  - In place now – Affordability Fund
  - May 1 – GA Refinancing (retroactive); first financing by OPG Trust – Fall 2017; regulations and commercial contracts to be drafted/negotiated before first financing
  - July 1 – Implementation of expanded electricity support programs (OESP, RRRP FNORDC, ICI).

TBS Work streams

- Member of Rate Mitigation Implementation Group
- Preparation of analyst note for May 1 Treasury Board meeting
  - Draft minute from March 1 submission included in Appendix A
- Review of draft legislation – GA refinancing and social programs
- Review of financial model – GA refinancing
- Accounting analysis – GA refinancing -- coordination of opinions from OPG and IESO and overall analysis; Affordability Fund – accounting analysis and coordination with Hydro One

Rate Mitigation Implementation Group (RMI)

TBS

- The Rate Mitigation Implementation Working Group was created in mid-March with representatives from Energy, TBS, MOF, OPG, IESO, and the OEB, as well as external legal advisors.
- The implementation group meets weekly in order to discuss status on key outstanding issues, including considerations relevant to drafting of the legislation for Global Adjustment Refinancing.
- RMI participants also actively participate in broader discussions involving both internal and external advisors on key aspects of the GA legislation, including identification of potential creditor, legal and accounting risks.
- If passed, the legislation would enable IESO and OPG to work together to refinance the GA over a longer period of time. The legislation would also outline the role for the OEB, as it relates to the financing proposal.
- Note that the March 1st draft TB minute directs the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment.

GA Refinancing

TBS

- Process to review draft legislation
  - OPCD involved in review of draft framework document as of April 4th
  - Accounting teams from IESO and OPG as well as their advisors also reviewing drafts as well as OEB and OFA
  - Advisors:
    - Province – Blakes, TD, EY
    - OPG – Torys, Hunton (US), Goldman Sachs, CIBC, EY
    - IESO – Stikemans, KPMG
    - Dealers – Oslers
  - First draft of legislation received April 15
  - Outstanding issues -- see next slide
  - Accounting opinions from IESO and OPG – tracking to May 1; will be based on the same draft legislation and common assumptions
  - OPCD working with accounting teams from IESO, OPG, OFA to identify and resolve issues

EY may only give a formal opinion in early May because there is too much confidentiality at that point. Richely thinks they'll only give a letter. She's going to talk to OPG's CFO.

GA Refinancing – Outstanding issues (draft as of April 16, 2017)

TBS

- Overall
  - Terms of provincial guarantee
  - Interest recovery by OPG Trust during first 5 years
- OPG
  - Fair allocation plan – impact on role in financing shortfall
  - Variability in returns – accounting analysis
- IESO
  - Restrictions on recovering funding shortfall if amount cannot be financed by external investors
  - Role in collections cycle

GA Draft Legislation

Building blocks

- Fair Allocation Plan (FAP)
  - Plan to allocate costs and benefits from investments in decarbonizing and modernizing the generation of electrical energy fairly among present and future consumers
  - Prepared by Minister of Energy, subject to amendment
  - FAP should not extend beyond 2047
  - FAP cannot impact debt already issued to finance shortfall or repayment thereof

- Financing Plan
  - Created by OPG, may be amended at any time
  - Plan as to how deferred amounts will be financed and repaid
  - To be consistent with FAP

GA Draft Legislation

TBS

Building blocks (cont'd)

- Regulatory Asset
  - Right to recover from rate payers, through collection by LDCs and IESO, the regulatory charge, late fees, and interest established by legislation
  - Legislation will create property rights and allow for security interests in the Regulatory Asset
  - OEB approval re: right to recover shortfall

Electricity Support Programs

TBS

- As part of the suite of electricity price mitigation initiatives, TB/MBC on March 1, 2017 approved the enhancement of a number of electricity support programs, including shifting the costs of these programs from the rate-base to government funding.

- These programs include:
  - Affordability Fund
  - Ontario Electricity Support Program (OESP)
  - Rural or Remote Electricity Rate Protection (RRRP) Program
  - First Nations On-Reserve Delivery Credit (FNORDC)

- Through the 2017-18 PRRT, multi-year funding for these programs, based on refined forecasts, were built into the Ministry of Energy's allocation (Appendix B provides details).

- The following slides provide an update on the implementation of these programs.

Electricity Support Programs – Affordability Fund

TBS

- As part of the March 1 approval, TB/MBC approved a commitment of up to $200M on a multi-year basis towards the Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.
- On March 6, TB/MBC approved $100M in 2016-17 to establish the fund, which the Ministry of Energy transferred to a limited purpose Trust (the Affordability Fund) on March 30, 2017.
- Recommendations on beneficiaries will be made by Electricity Distributors based on principles established in the Trust Declaration and decisions on distributions will be made by the Board of Trustees.
- In order to provide funding to the Trust, the Ministry of Energy entered into a Transfer Payment Agreement (TPA) with the Interim Trustee of the Trust (Computershare). It is expected that by May 31st, Computershare will be replaced by an independent Board of Trustees which will be appointed based on the advice of an independent Advisory Committee.
- Preliminary accounting analysis of the Trust concludes that the entity is not controlled by either the Province or Hydro One which is engaged to provide administrative services to the Trust under an Administrative Services Agreement. Hydro One is currently undertaking a more detailed accounting analysis under IFRS.

Electricity Support Programs – Affordability Fund

- No legislative changes are required to create this program.
- The Ministry is planning to report back to TB/MBC in June 2017 with final program details and a performance management framework, including outcome measures and targets.
- The Ministry expects LDC can begin to apply the Trust for funding beginning in Summer 2017.
- The Ministry has also been directed to report back to TB/MBC through the 2018-19 PRRT with a value for money assessment, including spending to date and results and outcomes achieved.

Electricity Support Programs – Ontario Electricity Support Program

TBS

- As part of the March 1 approval, TB/MBC approved expanding the benefit level of OESP by 50%, moving the program from a ratepayer funded program to a government funded program, and pursuing additional measures to substantially increase take up.

- On April 10, LRC / Cabinet approved regulatory amendments under the Ontario Energy Board Act, 1998. These amendments included:
  - Increasing funding by 50% for existing OESP consumers;
  - Add new classes of OESP-eligible consumers; and
  - Ensure the IESO continues to fund the program through its OESP variance account (estimated at $100M)

- The Ministry has also begun work with the Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making, to accelerate / maximize program uptake.

Electricity Support Programs – Ontario Electricity Support Program

- Next Steps:
  - May 1, 2017 – TB/MBC & LRC – proposed legislation to shift the funding of this program from rate-payer to government funding.
  - Spring 2017 – further regulatory amendments on program design / eligibility criteria and report back to TB/MBC with final program details, including performance metrics.

Electricity Support Programs – RRRP

- As part of the March 1 approval, TB/MBC approved broadening the RRRP program to mitigate distribution charges for customers of LDC with some of the highest distribution rates and moving the program from a ratepayer funded program to a government funded program beginning in 2017.

- The Ministry is currently working on the program details and has convened a LDC working group in late March.

- Next Steps:
  - May 1, 2017 – TB/MBC & LRC – proposed legislation to shift the funding of this program from rate-payer to government funding.
  - Spring 2017 – regulatory amendments on program design / eligibility criteria and report back to TB/MBC with final program details, including performance measurement framework.

Electricity Support Programs – FNORDC

TBS

- As part of the March 1 approval, TB/MBC approved the establishment of a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

- The Ministry is currently working on the program details, including working with the Chiefs of Ontario.

- Next Steps:
  - May 1, 2017 – TB/MBC & LRC – proposed legislation to create the FNORDC
  - Spring 2017 – regulatory amendments on program design / eligibility criteria and report back to TB/MBC with final program details, including performance measurement framework.

Electricity Support Programs – Other Initiatives

TBS

Additional initiatives supporting electricity price mitigation:

- **Expanding Industrial Conservation Initiative (ICI)**
  - Lowering ICI eligibility threshold to 500 kW for consumers in targeted sectors, such as manufacturing. Program to remain funded through the rate-base.
  - Reg amendments were approved by LRC / Cabinet on April 10, 2017.
  - Implementation set for May 2017; eligible consumers can opt in to the ICI by June 15 so that they can be considered as Class A consumers in the annual billing period starting on July 1.
- **Additional Initiatives** for **Small Business and Industrials** (ENERGY, MEDG, MOF, MOECC, MOL, Small Business)
  - Identify additional opportunities to assist Class B electricity consumers and small and medium sized manufacturers
  - Report back to TBC/MBC and Cabinet in fall 2017
- **Initiatives for Tenants** (ENERGY, MOH)
  - Explore ways to provide direct assistance to tenants that are not sub-metered and do not directly benefit under the existing and proposed rate mitigation programs
  - Report back to TBC/MBC and Cabinet in fall 2017

APPENDIX A: PROPOSED MINUTE (DRAFT) – MARCH 1, 2017 TB MEETING

TBS

Should TB/MBC wish to proceed with the Ministry's request, the following minute could be considered:

Approve electricity rate mitigation actions that support up to a 25% electricity bill reduction (including the 8% reduction announced in 2016) for an average household in 2017.

In this regard, the Board:

i. Direct the Ministry of Energy to implement electricity rate mitigation for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP) and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor by:

a) Subject to completed legal, accounting and financing risk assessments, refinance the Global Adjustment (GA) in order to partially defer RPP-eligible ratepayer GA costs by reducing projected after-tax electricity costs for a typical residential customer consuming 750kWh per month in 2017 by about 16%. Total projected bill increases will be kept in line with CPI until the end of 2021. From 2022 onwards, bills will increase at a rate that ensures gradual recovery of the accumulated debt by 2048, with escalation in subsequent years set above Consumer Price Index (CPI) in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

b) Direct the Ministry to report back to TB/MBC by Spring 2017, prior to going to LRC with any legislation, on the approach to refinance Global Adjustment , including, but not limited to:

- Formal accounting opinions from OPG and IESO auditors.
- Completed legal, financing and accounting risk assessments. Assessments to include, but not limited to proposed legislation, technical aspects such as Eurig analysis, and risk to borrowing (in discussion with the OFA).
- Report on the multi-year profile of GA smoothing, identifying specific assumptions.
- Report on sensitivity analysis completed as assumptions vary, such as under different recovery rates and periods.
- Overall risk mitigation plan addressing completed legal, accounting and financing risk assessments.

c) If a non-fiscal mechanism cannot be established:

- Direct the Ministry to report back to Cabinet and TB/MBC with options for achieving a comparable level of electricity rate mitigation in the most cost effective way, in order to minimize the impact on the province's fiscal plan.
- Note costs to government of proceeding if cost of refinancing of Global Adjustment is recognized as an expense in the fiscal plan of up to $2,534,000,000 in 2017-18, $2,668,000,000 in 2018-19, $2,942,000,000 in 2019-20, $3,420,000,000 in 2020-21 and $3,232,000,000 in 2021-22.

Appendix A: March 1, 2017 TB/MBC Minute (Slide 2 of 3)

TBS

ii) Broadening the Rural or Remote Rate Protection (RRRP) program to mitigate distribution charges for customers of Local Distribution Companies (LDC) with some of the highest distribution rates, and moving the program from a ratepayer funded program to a government funded program beginning in 2017, including:

a) Harmonizing distribution cost for customers with the highest distribution rates (Hydro One (R1 and R2 rate classes), Algoma Power, Atikokan Hydro, InnPower, Chapleau Public Utilities Commission, Sioux Lookout Hydro, Lakeland Power (Parry Sound service territory) and Northern Ontario Wires Inc) at the lowest distribution rate paid by the average consumer of the LDCs noted by fall 2017.

b) Note costs estimated at up to $459,000,000 in 2017-18, $472,000,000 in 2018-19, $484,000,000 in 2019-20, and $497,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to broaden RRRP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the broadened program now government funded
- Report on and assessment of impacts of consolidation of LDCs
- Assessment of distribution rates and implications for the program

iii) Expanding every benefit level of the Ontario Electricity Support Program by 50%, moving the program from a ratepayer funded program to a government funded program beginning in 2017 and pursuing additional measures to substantially increase take-up.

a) Note costs estimated at up to $186,000,000 in 2017-18, $261,000,000 in 2018-19, $325,000,000 in 2019-20, and $375,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

c) Direct the Ministry to work Treasury Board Secretariat (Behavioural Insights Unit, Centre of Excellence for Evidence-Based Decision Making) to accelerate/ maximize program uptake.

d) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including fiscal plan implications to expand OESP.

e) Direct the Ministry to report back to TB/MBC in 2017-18 on the program's effectiveness, efficiency, and sustainability. Report back to include, but not limited to:

- Identify eligibility criteria, and refinements being made.
- Current program outcomes identified and results achieved to date.
- Establishing program performance management framework including targets for the expanded program now government funded.

Appendix A: March 1, 2017 TB/MBC Minute (Slide 3 of 3)

TBS

iv) Establishing a new government funded Affordability Fund to provide energy efficiency measures to electricity customers who do not qualify for existing low income conservation programs and who have difficulty paying their electricity bills.

a) Approve to commit up to $200,000,000 on a multi-year basis to support the Affordability Fund.

b) Direct the Ministry to report back to TB/MBC with program details, including performance management framework, and multi-year funding profile, and fiscal plan implications.

v) Establishing a new province-wide government funded program beginning in 2017 that would eliminate the delivery charge for First Nations customers on reserve.

a) Note costs estimated at up to $20,000,000 in 2017-18, $20,000,000 in 2018-19, $20,000,000 in 2019-20, and $20,000,000 in 2020-21 and on-going as part of the 2017-18 PRRT planning process.

b) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, including performance management framework, and clarifying how the programs aligns with the significant Ontario Energy Board estimate of program costs, from $13M to $20M.

c) Direct that any underspending related to any of the initiatives be returned to Treasury Board/Management Board of Cabinet and not be reallocated within the Ministry.

vi) Expanding the Industrial Conservation Initiative (ICI) by reducing the eligibility threshold to 500kW to enhance competitiveness for Class B manufacturers beginning July 2017.

a) Direct the Ministry to report back to TB/MBC by Spring 2017 with final program details, results achieved to date versus expectations for the ICI program, impacts of the change for participation, and impact for ratepayers as costs are recovered from ratepayers.

vii) Direct the Ministry:

a) To work with Treasury Board Secretariat and the Ministry of Finance on the development of a comprehensive risk-based costing, including forecast models and sensitivity tests on assumptions and financial estimates, for the electricity mitigation initiatives.

b) To report back to TB/MBC through regular updates including quarterly reports and the 2018-19 Program Review, Renewal and Transformation (PRRT) on the status of implementation, and revised out-year expenditure requirements if applicable.

c) To continue to work with the Ontario Energy Board, the Independent Electricity System Operator and Ontario Power Generation, through the Long-Term Energy Plan 2017, to further reduce electricity rates across the system.

d) To work with the Ministry of Finance, Treasury Board Secretariat, Cabinet Office and Office of the Premier on an integrated communications strategy.

Appendix B: Multi-Year Funding Profile for Social Programs Providing Electricity Price Mitigation

TBS

- The following tables provides the current multi-year funding profile for social programs providing electricity price mitigation

($ million)	2016-17	2017-18	2018-19	2019-20	2020-21
Ontario Rebate for Electricity Consumers (OREC) (Revised Forecast for OFHP)	300	939	882	882	895
Ontario Fair Hydro Plan (OFHP):					
Affordability Fund	100				
Expanding and Enhancing OESP		344	261	325	375
Broadening RRRP		140	472	484	497
Providing First Nations On-Reserve Delivery Credit		15	20	20	20
OFHP Total	100	499	753	829	892
TOTAL	400	1438	1635	1711	1787

Hi all

As promised, John and I have tried to keep it as short as possible, feel free to edit.

Thanks

Ken k

Options for Equity Injection from TD Securities

When developing options for structuring the equity injection from the Province to OPG amounting to 44% of the debt incurred by the OPG Trust set up to purchase the regulatory asset from IESO the following underlying principles need to be addressed.

- The equity injection will be provided on a monthly/quarterly basis to OPG by the Province.
- The equity injection results in the Province, the sole shareholder of OPG receiving shares from OPG whose valuation is based on a determined and agreed upon methodology.
- This methodology can be as simple as book value or can be based on some kind of a DCF.
- Given the time limited nature of the equity injection the Province anticipates repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder, as well as having vested legislative authority, can require OPG to issue dividends annually.
- The shares issues by OPG can include some kind of optionality to be exercised by the Province as and when repayment is required. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, given the potentiality of a new government's different policies subsequent to future elections.
    - OPG can issue preference shares again with some kind of optionality for repayment. Preference shares, especially those with a specified annual dividend will ensure that the Province remains whole in terms of the incremental interest costs it incurs on the equity injection.
- Other factors to be considered for repayment:
    - Should the senior and subordinated debt be ranked as the same and if so does this impact market access
    - Should the senior debt be repaid first or should repayment be on a pari-passu basis
    - OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.

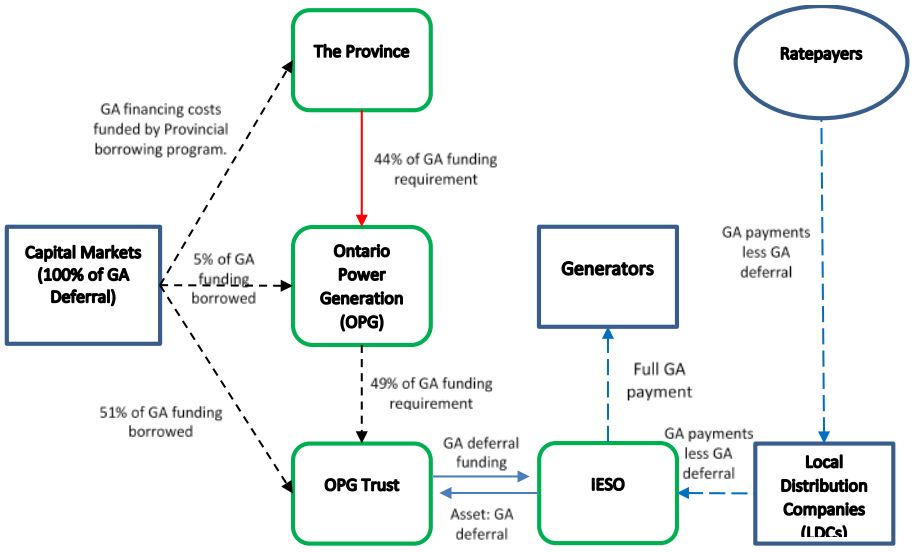
GA FINANCING – TD'S ADVICE SOUGHT ON EQUITY INJECTION MECHANISM

The Capital Markets Division of the Ontario Financing Authority require TD advisors' recommendations and detailed descriptions of options vis-à-vis the proposal to provide equity injection to the Global Adjustment (GA) deferral proposal as part of the larger Ontario's Fair Hydro Plan, as announced on March 2, 2017.

Context

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate capacity, from the capital markets

(5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

Options for Equity Injection from TD Securities

The advice sought from TD could be summarized as follows:

When developing options for structuring the equity injection from the Province to OPG for the~~amounting to~~ 44% of the ~~debt incurred~~financing requirement ~~-~~by the OPG Trust ~~set up~~ to purchase the regulatory asset from IESO, a number of ~~the following~~ underlying principles need to be addressed.

- While the Province is a sole shareholder of OPG, advice is sought to address potentially higher degrees of complexity of shareholder structure.
    - For example, options should include options for mechanism to create a level of certainty for recovering the money provided to OPG as 'equity injection' for the purpose of the GA deferral proposal.
- Under the current state of discussion, t~~T~~he equity injection will be provided on a monthly/quarterly basis to OPG by the Province.
- The equity injection results in the Province, the sole shareholder of OPG receiving shares from OPG whose valuation is based on a determined and agreed upon methodology. The Province will require an internal discussion before proceeding with a dialogue with OPG on the details.
- This methodology can be as simple as book value or can be based on some ~~kind~~ form of a discounted cashflow (DCF) mechanism but TD's expertise in structuring deals is sought in this request [keeping in mind the first bullet above].
- Given the time limited nature of the equity injection the Province would anticipate~~s~~ repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder, as well as having vested legislative authority, can require OPG to issue dividends annually.
- The shares issues by OPG can include some ~~kind~~ form of optionality to be exercised by the Province as and when repayment is ~~required~~due under the GA deferral plan. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, ~~given the potentiality of a new government's different policies subsequent to future elections~~with any number of possible causes, e.g. changes in government policy.
    - ~~OPG c~~Could~~an~~ the structure involve issuing~~e~~ ~~preference~~ preferred shares ~~again~~ with some ~~kind~~ form of optionality for repayment. Preferred~~ence~~ shares, especially those with a specified annual dividend schedule could potentially~~will~~ ensure that the Province remain~~s~~ whole in terms of the incremental interest costs it would incur~~s~~ on the equity injection.
- Other factors to be considered for repayment:
    - Should the senior and subordinated debt be ranked as the same and if so does this impact market access
    - Should the senior debt be repaid first or should repayment be on a pari-passu basis

Formatted

Commented [JK1]: I suggest we delete this and have TD opine on options.

Commented [JK2]: Not sure if this is needed here.

- OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.
- Eventually, the Province would need to have a discussion with OPG on the path forward.

Summarizing Issues to Work Around [Pls. Add More CMD and FTD]

- The Province will need to consider various levels of options for certainty in getting the money back, as stipulated in the GA deferral plan.
- For regulatory purposes, there may be an interest in insuring that the equity injection is considered a true equity in OPG's capital structure [TBD but still require consideration].
- The plan require that OPG operates on a commercial basis for the SPV with its Board needing to make independent decisions[, thus the need to have a discussion].

Hi,

I made a few edits.

That said, as sole shareholder, the risk of equity in OPG is a general one, not specific to the equity for the SPV, so I'm not sure why this is being pursued, unless the concern is providing for if the Province is at some point not the sole shareholder. Is that the sub-text?

Ron

GA FINANCING – TD'S ADVICE SOUGHT ON CAPITAL CONTRIBUTION MECHANISM

The Capital Markets Division of the Ontario Financing Authority require TD advisors' recommendations and detailed descriptions of options vis-à-vis the proposal to provide capital ~~equity injection~~ to the Global Adjustment (GA) deferral proposal as part of the larger Ontario's Fair Hydro Plan, as announced on March 2, 2017.

Ontario

Electricity Price Mitigation

Ministry of Energy

March 1, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

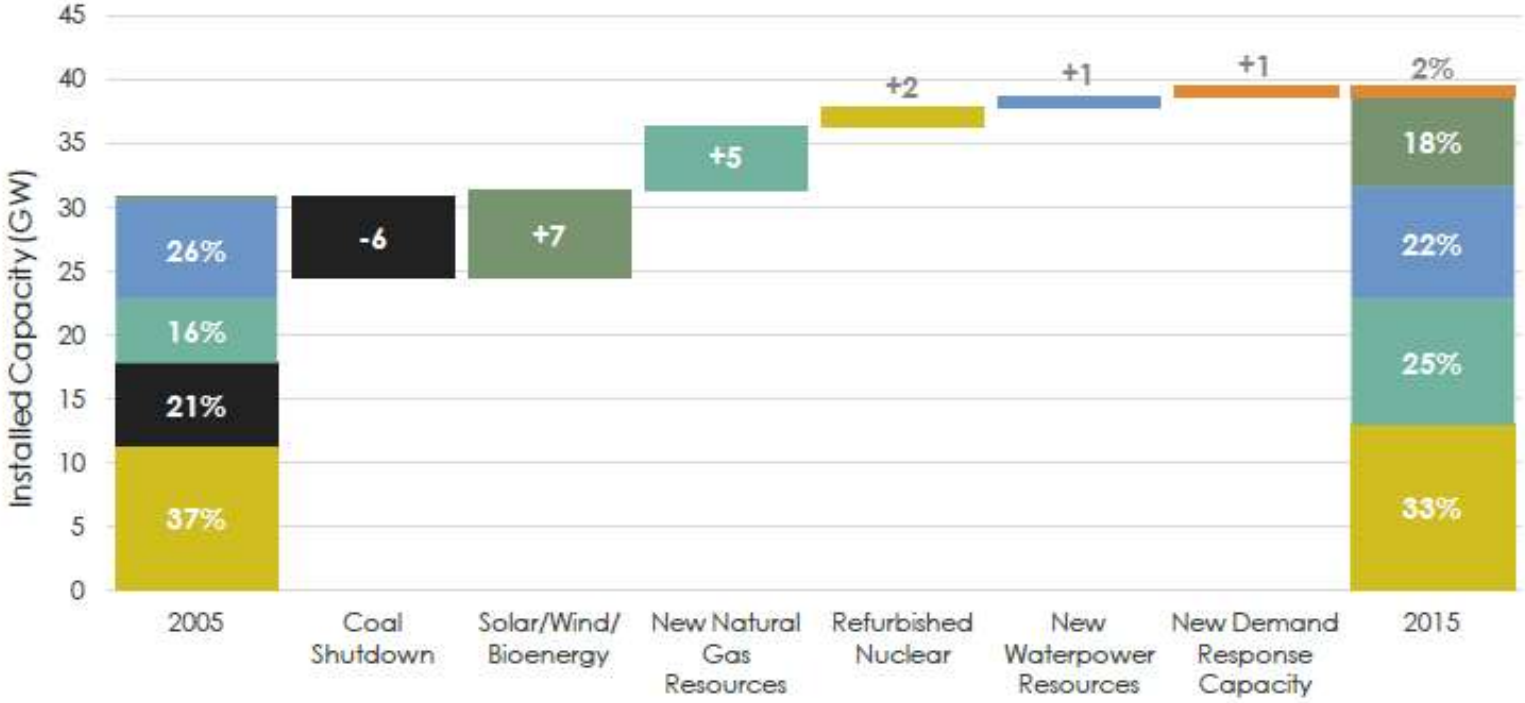
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



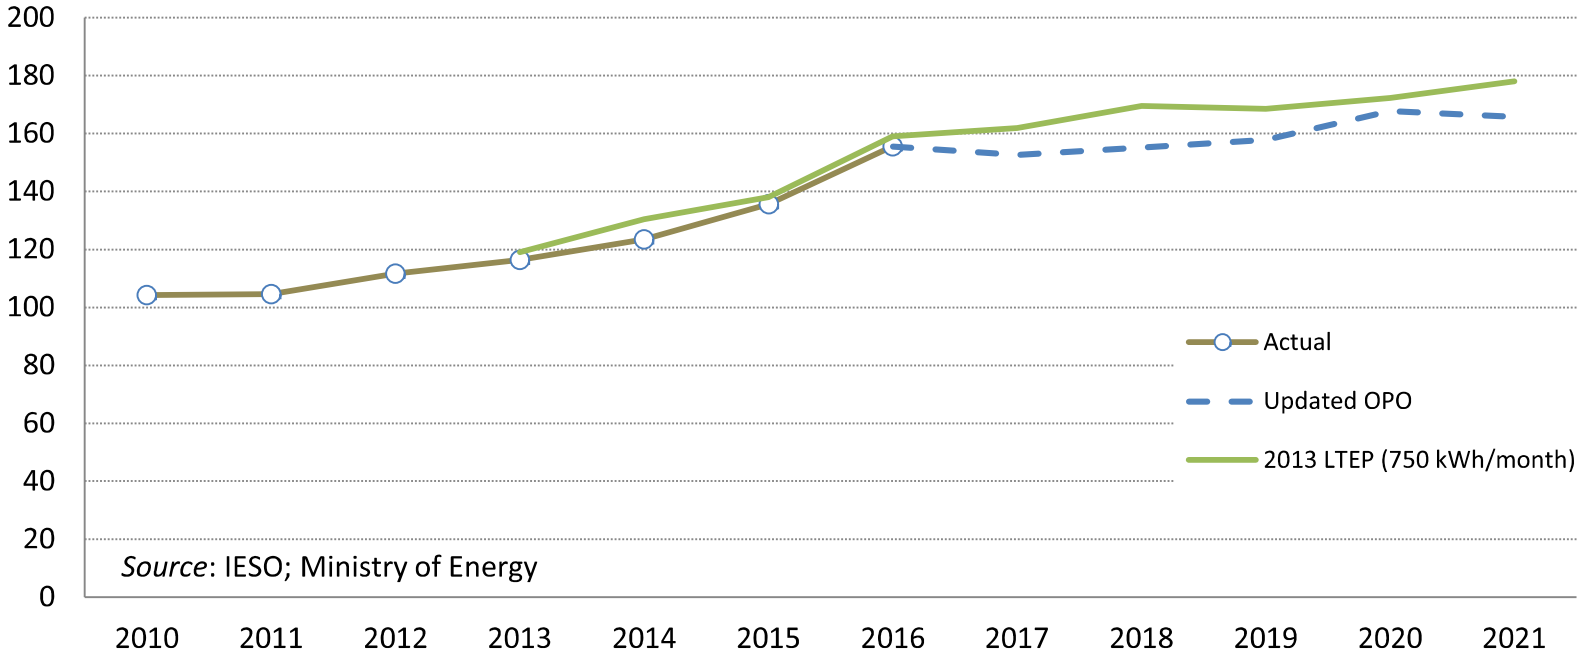
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



CONFIDENTIAL CABINET DOCUMENT

Context – Recent and Existing Government Funded Electricity Cost Mitigations

($Millions)	14-15	15-16	16-17[1]	17-18[1]	18-19[1]	19-20[1]	20-21[1]	Who Benefits
Ontario Clean Energy Benefit (OCEB) [2]	1,078	860	***OCEB ended on December 31, 2015***					• Residential customers, farms, small business (i.e., 10% off, on up to 3,000 kWh/month)
Ontario Rebate for Electricity Consumers (OREC or 8% rebate)*	-	-	300	1,100	1,200	1,200	1,200	• Residential customers, farms, small business (i.e., amount equal to the 8% Provincial portion of HST)
Ending Debt Retirement Charge (DRC) for Residential[3]	-	85	330	330	--	--	--	• Residential customers (i.e., saves about $70 per year for a typical residential consumer)
Northern Ontario Energy Credit (NOEC) [4]	24	26	25	25	25	25	25	• For eligible northern Ontario residents (i.e., for 2017, single people can receive up to $148,and families up to $227, depending on adjusted family income)
Ontario Energy and Property Tax Credit (OEPTC) (Energy component only)[4]	429	444	450	460	470	481	481	• For eligible low-to moderate-income individuals and families, & qualifying seniors (i.e., for 2017, up to $227, depending on adjusted family income)
Northern Industrial Electricity Rate Program (NIERP)	108	120	120	120	120	120	120	• Qualifying northern Ontario large industrial electricity consumers (i.e., rebate of 2cents/kilowatt-hour)
TOTAL	**1,639**	**1,535**	**1,225**	**2,035**	**1,815**	**1,826**	**1,826**	

Notes:

1. 2016-17 to 2020-21 based on forecasted numbers
2. OCEB ended December 31, 2015
3. 2015-16 estimated for 3 months of reduced DRC revenue. Estimated impact up to March 31, 2018.
4. Part of the Ontario Trillium Benefit. While related to energy generally, key policy driver for OEPTC when introduced in 2010 was electricity, as prices were forecast to rise, while fossil fuel prices, particularly natural gas, were low and falling.

* Sourced from Energy PRRT submission

Source: Ministry of Finance

CONFIDENTIAL CABINET DOCUMENT

Context – Recent Actions Taken To Mitigate Electricity Rates

- Following the 2016 Throne Speech, the several actions were announced to further reduce electricity costs.

1. As of January 1, 2017, Ontario is rebating an amount equal to the provincial portion of the HST to reduce eligible residential, small business and farm electricity bills by 8%.

2. Expanded support available to eligible rural ratepayers by updating Rural or Remote Rate Protection (RRRP) with additional relief, decreasing total electricity bills by an average of $45 each month when combined with the 8% rebate.

3. Expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants.

4. Suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

5. Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – an average annual savings of $15 million.

Rate Mitigation Proposal

- The following approaches are proposed:

1) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
   - Smoothing Mechanism (i.e., 25% reduction); and
   - Implementation Model.

2) Enhancing competitiveness for Class B electricity consumers (i.e. manufacturing) by lowering the eligibility threshold for Industrial Conservation Initiative (ICI).

3) Helping vulnerable electricity consumers by enhancing electricity support and conservation programs and shifting cost onto the tax-base:
   - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
   - Ontario Electricity Support Program (OESP) Expansion;
   - New Affordability Fund; and
   - On-Reserve First Nations Delivery Credit.

4) Ongoing activities to bend the future cost curve of electricity:
   - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates;
   - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing option under consideration is illustrative and show potential rate mitigation measures to meet a targeted 25% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to Regulated Price Plan (RPP) -eligible;
  - Rate increases would be capped at Consumer Price Index (CPI) for the first four years. Subsequent years would be set above CPI in order to ensure that bill increases due to repayments are capped at around 10% of the total bill.

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

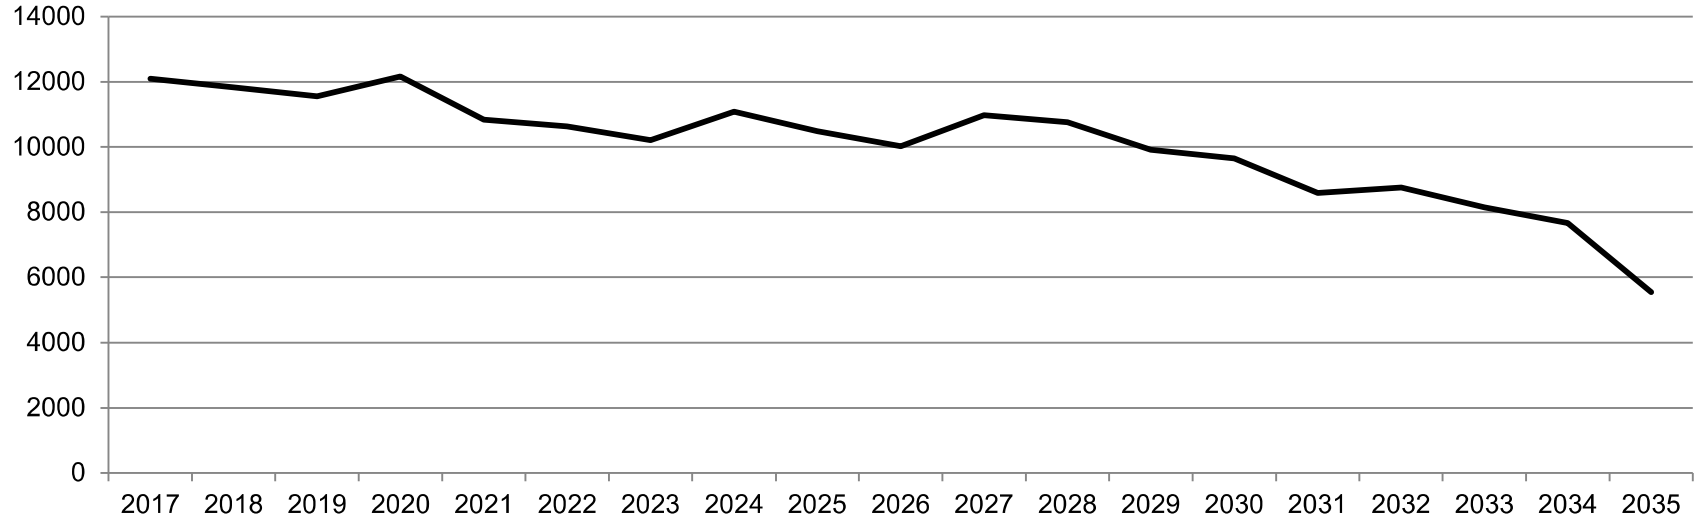
CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators**.**
**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

GA Smoothing – Global Adjustment Forecast

- The amount of Global Adjustment (GA) is forecast to decrease through the forecast period. Several factors contribute to the decline of GA, including:
  - Expiry of electricity generation contracts;
  - Cost of existing contracts reduced due to Inflation; and
  - Higher wholesale electricity prices due to higher natural gas/carbon prices, higher demand and reduced nuclear generating capacity.

Forecast Global Adjustment Cost (nominal $ million)



CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Expected Life of Electricity Generating Assets

- Gas, wind and solar generators are typically contracted for a 20-year period (e.g., with the Ontario Electricity System Operator (IESO), etc).
  - Nuclear and hydroelectric generators are contracted for a much longer period or regulated by the Ontario Energy Board (OEB) on a cost-of-service basis.
- While it is likely that gas, wind and solar generators will be able to operate beyond their current contracts, IESO advises that generators will need to decide what level of capital investment is appropriate for ongoing operations (i.e., by replacing and/or refurbishing major facility components).
  - In IESO's 2016 Ontario Planning Outlook (OPO), it was assumed that the service lives of generators could be extended beyond their contract term based on additional investments and ongoing costs. **Note:** This was not an assessment of the cost/benefits or a prediction of what the generators would actually do at the end of their contracts.
- The table below outlines IESO's current estimates for service lives of gas, wind and solar facilities. The ongoing service lives of these facilities depend on: initial facility design & build, operating activities (e.g., hours of operation, etc.) and level of facility maintenance (i.e., ongoing component repair and replacement).

Technology	Contract Life (yrs)	Expected Life (yrs)	Expected Cost Post-Contract Life
Gas	20	Up to 30	Life varies with initial design, how it is operated and maintained.
Wind	20	Up to 30	Older technologies may deteriorate faster. Elements such as foundations and electrical integration can last longer.
Solar	20	Up to 30	Performance deteriorates to about 80% by end of contract. Some facilities built in the initial contract periods may deteriorate more; however, technology is improving rapidly. Components need to replaced 5 to 30 years depending on design.

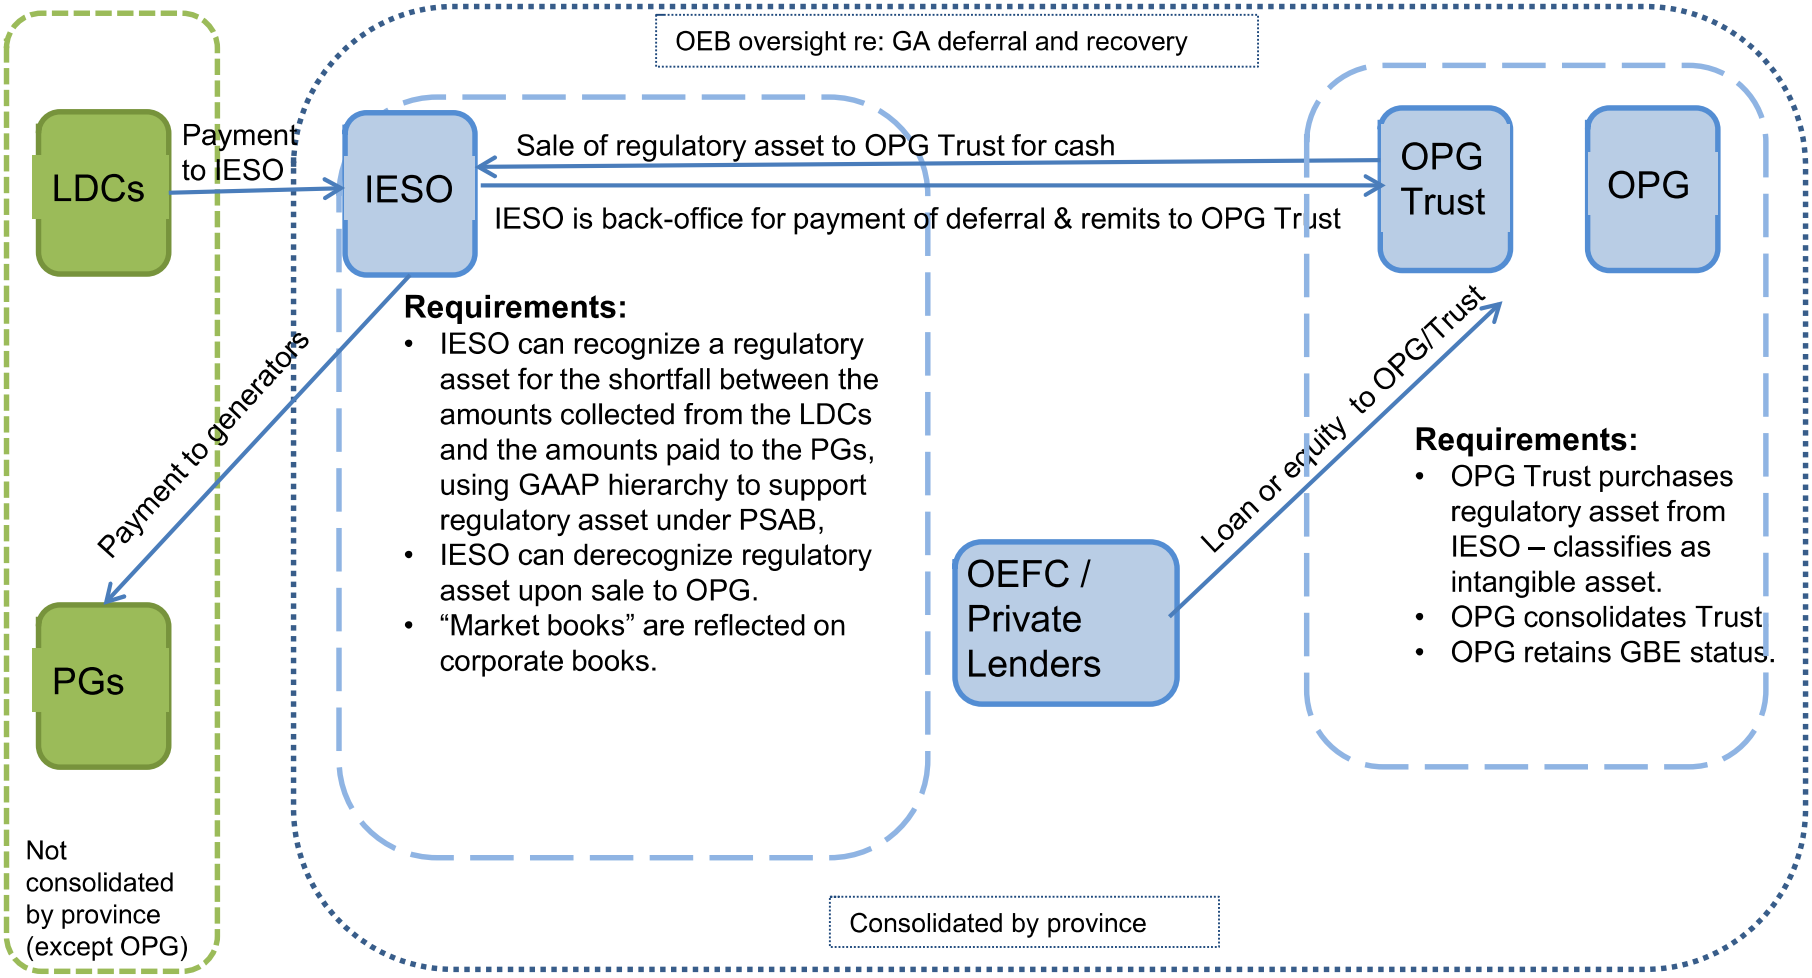
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

B. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



CONFIDENTIAL CABINET DOCUMENT

Note: Proposed structure is subject to legal and accounting confirmation, absent that confirmation, there would be a fiscal impact to the province.

B. GA Smoothing – Accounting Considerations

- OPCD advises that analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure and length of deferral/recovery increase risk and decrease transparency
- If all requirements can be met, an accounting analysis is expected to support: (1) increase in provincial borrowing (2) no increase in net debt, and (3) no impact on annual surplus/deficit, but depending on funding to OPG/Trust from Province, an increase in interest on debt and an increase in income from OPG will result.
- IESO requirements – IESO Finance, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs using GAAP hierarchy to support regulatory asset under PSAB
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG Finance, EY (OPG auditor), PwC (OPG Advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

B. GA Smoothing – IESO Considerations

- The Electricity Act enables the Independent Electricity System Operator (IESO) to recover from ratepayers the amounts paid to generators, distributors or other contracted entities.
- The accounting advice received by IESO is that reflecting market balances and regulated assets is a more appropriate presentation for its financial statements going forward.
- IESO is characterized as an "Other Government Organization" (OGO) and consolidated on a line-by-line basis into the Provincial books.

Issue	Response
1. Can IESO adopt regulatory accounting?	• Public sector accounting does not address regulated assets. • Guidance can be drawn from other accounting bodies. • US Federal Accounting Standards Advisory Board (FASB), US Governmental Accounting Standards Board (GASB) and International Accounting Standards Board (IASB) do provide guidance. • FASB accounting standard 980 and IASB have specific references that support the adoption of regulatory accounting. **Conclusion:** There is a hierarchy of accounting principles that support this approach.

B. GA Smoothing – IESO Considerations

Issue	Response
2. Can IESO recognize the GA deferral as a regulatory variance account?	Criteria for recognition are: • Rates are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers. • Rates are designed to recover the specific costs of regulated business-type activities. • In view of demand, it is reasonable to assume that rates will be set to recover the regulated business-type and can be collected from customers. **Conclusion:** Legislation creates the right to collection, currently and in the future. With either OEB or IESO board involvement a regulatory asset can be recognized.
3. Can IESO sell the variance account related to the deferral of the annual Global Adjustment account?	• The sale of the variance account to OPG Trust must be structured as an absolute assignment of future economic benefits of the Asset with no obligations, rights or benefits remaining of IESO. • In that case, this would represent a sale of the future right to collect these amounts from the ratepayer. **Conclusion:** Based upon proposed terms of the sale agreement, there would be no future economic benefit for IESO. Risk and rewards are entirely transferred to OPG Trust.

B. GA Smoothing – OPG Accounting Considerations

- OPG's Special Purpose Vehicle (SPV)/Trust is a stand-alone entity able to conduct business separately under a Trust agreement. **Note:** The conditions required for OPG to consolidate the SPV/Trust are outlined in the following table:

Issue	Response
1. Decision Making	• OPG must have decision making authority on the operation of the SPV/Trust (without a veto right by the Province), including naming of trustees, establishing operating plans and budgets, setting or changing financing policies. • The SPV/Trust while operating within the legislation, must be controlled by OPG to operate freely and to alter terms and conditions not specified in the legislation to ensure recovery of the deferred amounts.
2. Business Risk	• The SPV/Trust must have variability of returns as a normal business enterprise would, including such things as interest charged on deferred amounts, decisions on how to finance these deferred amounts, the ability to make / lose and keep any spread from financing.
3. Funding	• The Province cannot directly or indirectly fund more than 50% of SPV/Trust or any investment in the SPV/Trust. • OPG must own at least 50% of the most exposed equity /sub-debt in the SPV/Trust.
4. Directive	• Directive that is issued should not be prescriptive or direct OPG to set up this business. The directive should only be "guiding" i.e. to allow OPG to evaluate options and put forward to the OPG Board a recommended plan for Shareholder approval.

B. GA Smoothing – OPG Accounting Considerations (cont'd)

Issue	Response
5. Other required Attributes	• The legislation that supports the formation of the SPV/Trust must have the following attributes: – Must require interest, carrying and administrative costs be paid to the Trust to allow for Revenue recognition; – The amount to be deferred must either be specified or be calculated based on a specific formula that is not subject to ongoing decision making by the Province. **The Province cannot have the ability to override this formula;** – SPV/Trust and its debt holders will require their capital guaranteed and paid for directly by the Province if the Province revokes the legislation; and – The spirit of the legislation should be reflected in the Trust Indenture Agreement.

B. GA Smoothing – OPG's Financing Structure Requirements

KEY ELEMENTS REQUIRED TO ENSURE THE DEFERRAL OF GA CHARGES CAN BE FINANCED:

Creating the Right to Recover Deferred GA

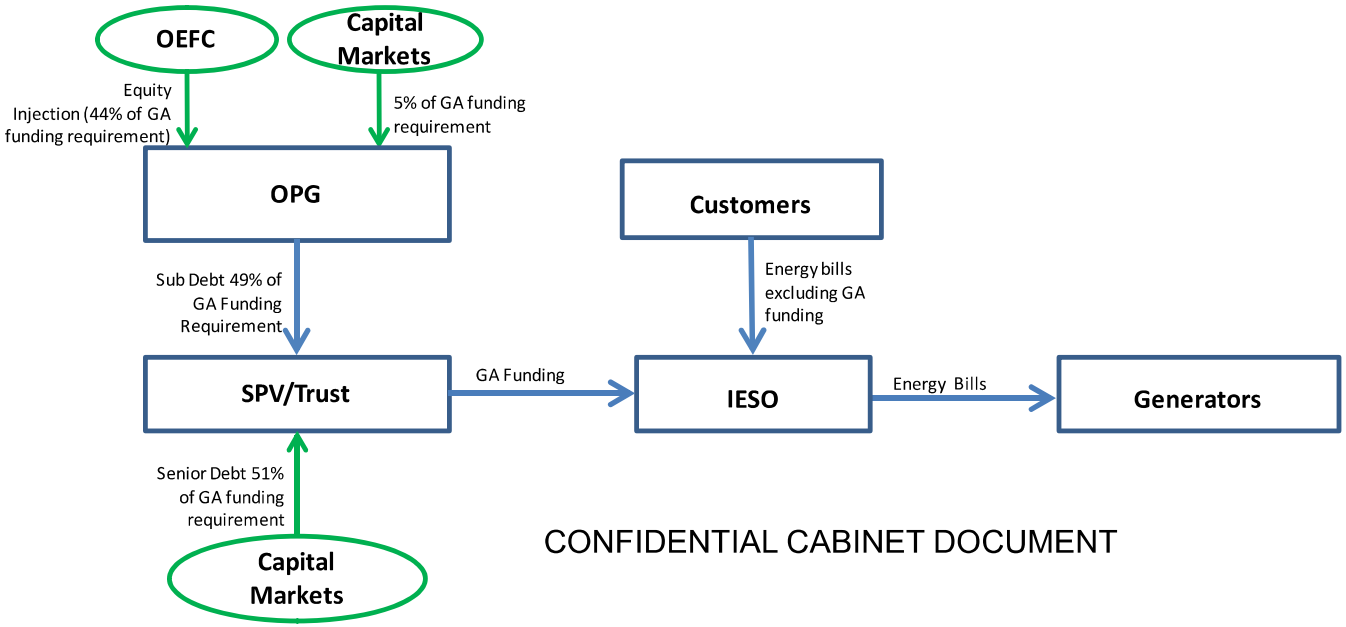
- Legislation enshrines the ability of the IESO to create a Right to charge customers in the future for the Global Adjustment (GA) deferred today including principal amount deferred, interest and other financing costs on the amount deferred and fees, expenses and other administrative costs.
- The Right can be sold to an appropriate Trust or Special Purpose Vehicle (SPV) to obtain funds to pay amounts due to generators under contracts or regulation. These SPVs are generally single purpose entities with no other operations that could add risk to the entity, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings.
- Right must be irrevocable and if the Right is amended by future governments the debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment.
- Right must specify the recovery period or the mechanism for setting the recovery rate including true up of the rate to ensure all amounts are recovered.

Economic Factors

- Limits on the recovery amount (principal, interest, fees and expenses) charged to customers in future periods must have compensating elements such as longer recovery period to ensure the full amount deferred plus interest, financing and other administration costs is recovered from customers.
- Need to balance customer relief with debt holder risk. Longer recovery periods and larger deferred balances increase risk to the debt holder of future government intervention.
- The amount required by the SPV to purchase and service the Right will be funded 51% from debt holders, 5% from OPG through capital markets and 44% from OPG via equity injection to OPG from the Province. The funding from OPG will be loaned to the SPV as subordinated debt.

B. GA Smoothing – OPG's Financing Structure Requirements (cont'd)

- Special Purpose Vehicle (SPV) will be used to raise the GA financing and ring fence OPG from its legal obligations
- SPV will be structured to allow for GBE accounting consolidation into OPG
- Given that SPV will be consolidated into OPG for accounting purposes, the significant amount of debt required to fund the GA deferral will have a severe impact on OPG's credit rating. If 100% of the requirement is funded by debt OPG would be downgraded.
- To manage this exposure and minimize the cost of funding. The required funding would be split into 2 buckets:
  1. 56% from capital markets; and
  2. The remainder provided by the Province via equity injection, which would be loaned to SPV as subordinated debt.
- The use of equity to fund a portion of the GA deferral also allows for an improvement in both Net Income and EBITDA as incremental revenue is captured by the increase in the value of the deferral which would offset the fiscal impact of the borrowing at Province level.
- Credit rating metrics are generally maintained within established limits.



CONFIDENTIAL CABINET DOCUMENT

Ontario

GA Smoothing – OEB Considerations

- Ontario Energy Board (OEB) oversight may be required as part of creating a regulatory asset.
- Subject to final confirmation, there are several other spheres for possible OEB oversight:
  - The rate payer impact of IESO deferral account and eventual repayment of the deferred Global Adjustment (GA), within pre-defined legislative parameters;
  - The administrative costs of the OPG's Special Purpose Vehicle (SPV) /Trust (e.g., as the OEB reviews and approves IESO's expenditure and revenue requirements and makes orders fixing just and reasonable rates for the Smart Metering Entity);
  - The SPV/Trust's returns (e.g., as the OEB does with OPG's regulated assets) and whether any income to OPG can be used for the benefit of rate payers;
  - The review of the final structure of the debt issuance for the limited purpose of ensuring requirements of law have been met; and
  - In out years, review of the collection of charges to ensure that collection is sufficient, and not greater than necessary, to pay debt service.
- The scope of OEB oversight will ultimately need to balance the interests and needs of rate payers, the market, OPG and the Province.

B. GA Smoothing – Ontario Financing Authority (OFA) Considerations

- Under the proposed structure, the financing of the deferred Global Adjustment (GA) costs would be effectively done in part by each of the OPG Special Purpose Vehicle (SPV)/Trust, the Province and OPG: the OPG SPV/Trust would borrow 51%, the Province 44% and OPG 5% of the required GA amounts needed to be financed.
  - In the alternative, the Province (through the OFA/OEFC) could borrow the required amounts each year, likely at a lower cost. However, the target for an arms-length trust and potential risk transfer would not be achieved.

	OPG Structured Financing	OFA/OEFC/Provincial Financing
Financing Considerations	• As the OPG SPV/Trust would be borrowing in its own corporate capacity from the public markets, it will likely incur a higher interest cost compared to the Province's borrowing. • This would increase the cost of GA smoothing and the ultimate rate impact on future consumers. • The Trust would be exposed to interest rate changes. • Availability of debt financing may also be limited, depending on the overall amount of deferral, and the subsequent rate impact during the recovery period. OPG has cited examples of a 10% threshold on overall rate impacts of the deferral recovery amounts. • With a potential guarantee from the Province for the borrowing of the OPG SPV/Trust, OPG could see borrowing costs closer to the Province. However, this would redirect the risk back to the Province, removing the intended benefits of using this particular structure, and could add risk to the targeted accounting treatment. • With, or potentially even without a provincial guarantee, OPG SPV/Trust's borrowing could be seen as debt effectively supported by the Province by credit rating agencies and included in their analysis and determination of the Province's ratings. • If a Provincial guarantee endangers the targeted accounting treatment, it may be hard to justify the higher cost borrowing by OPG SPV/Trust to be passed through to ratepayers.	• Province's borrowing from the public markets would add to the borrowing program and the Province's gross debt. • The Province would expect to be able to finance the GA deferral at a lower financing cost than the OPG SPV/Trust, but would likely not achieve the targeted accounting treatment based on OPG's analysis. • Net debt would not increase, to the extent supported by increased equity in OPG under that model, and/or if the accounting treatment can be achieved as backed by a GA-related asset (OPG does not consider that the accounting can be achieved if the SPV/Trust is financed by the Province). • The Province's interest on debt (IOD)cost would need to be effectively recovered through the GA. – E.g., an OPG equity return to cover the cost of borrowing for the equity injection. – Or more directly if the Province is providing financing directly to the GA entity. • The cost of borrowing for the Province could change: 1. The Province's credit rating could be at risk of being re-evaluated by Rating Agencies, which may negatively impact the cost at which the Province borrows and 2. An increase in the Province`s borrowing rates, as a result of increased borrowing. The market may not have adequate demand for the Province to carry-out these borrowings without increasing the interest rate on the debt issues for GA financing and for all of the Province's borrowings. • The interest cost of GA deferral would be exposed to changes in the interest rate environment generally.

GA Smoothing – Legal Considerations

- In principle, refinancing the Global Adjustment (GA) to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- Legal risk arises if it becomes apparent that the Government is not spreading cost so that it is shared proportionately by future consumers who cause a need for or benefit from the generation asset, but rather is doing so in order to lower the price in the short term by increasing the price in the long term. If the proposed financing served to encumber future consumers with a premium payment to cover the GA financing in order to subsidize current ratepayers, then there would be a moderately high constitutional risk that the financing proposal would result in an unconstitutional tax.

- Former Supreme Court Justice Ian Binnie has provided a legal opinion concluding that the current proposal is at a moderately high risk of being a tax, for the following reasons:
  - The degree of constitutional risk is in direct proportion to the extent the government is not able to show a proper match between the cost of providing facilities for electricity generation and the group of consumers who benefit year to year from electricity generated by those facilities.
  - If the government fails to establish that the relevant electricity generating assets will continue to perform economically over the 30 year period, or if the GA charge is in the opinion of the Court disproportionately backend loaded, the GA will not qualify as a regulatory charge (and would be characterized as a tax).
  - By shifting costs to the 20-30 year customers, the government may in reality be disproportionately back-end loading the GA with the effect that the 20-30 year consumers will be subsidizing the 1-20 year consumers.
  - The judges can be expected to be aware of the difficult political problem of high energy costs in in Ontario, and will take a careful look at the government's evidence in support of the re-allocation of the GA.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- Although Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA smoothing (i.e., because it is only targeted to RPP consumers), the Ministry has a proposal later in the submission to address competitiveness for Class B consumers (i.e., targeted lowering of the Industrial Conservation Initiative (ICI) eligibility thresholder from 1 MW to 500 kW).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - **Note:** Although Class B and Class A consumers will not receive the rate relief benefits of GA smoothing, both consumers will benefit from tax-basing the electricity social programs.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

- The GA smoothing proposal will accrue total interest of $25 billion based on the proposed option. This amount of interest is sensitive to many factors, including interest rate, natural gas and carbon prices, generation costs and demand levels.
  - An increase in the borrowing rate from 5% to 6% would increase the total interest costs by almost $9 billion and would require an extension of the financing term beyond 30 years.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there would be a negative impact on the province's fiscal plan, as shown below.

Fiscal Impact ($M)	2017-18	2018-19	2019-20	2020-21	2021-22
Bills Lowered by 25%, RPP-Eligible Only*	2,534	2,668	2,942	3,420	3,232

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

Source: Ministry of Energy

ENHANCING COMPETITIVENESS FOR CLASS B ELECTRICITY CONSUMERS

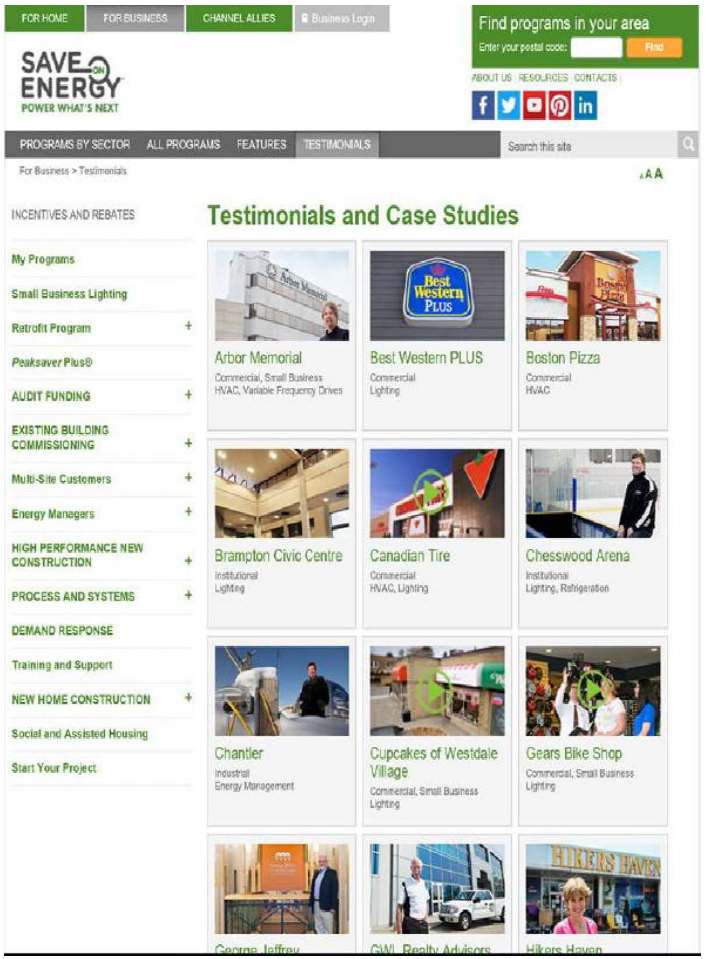
Support for Class B Consumers

- Class B electricity consumers comprise about 50,000 customers, including many mid-size manufacturers (i.e., automotive parts suppliers, plastics manufacturers), large commercial buildings (i.e., office blocks, mid-sized shopping malls) and broader public sector facilities (i.e., hospitals, college campuses).

- Through saveONenergy, many Class B consumers have already taken advantage of energy efficiency programs.

  - Although saveONenergy programs like Process and Systems Upgrade Incentive exist, these programs generally require significant investment on behalf of the customer in addition to the incentives and therefore may be difficult to take advantage of.

  - For Class B manufacturers whose electricity consumption is primarily based on process activities (e.g., injection moulding, welding, etc), traditional conservation measures like lighting and ventilation upgrades have limited benefit.



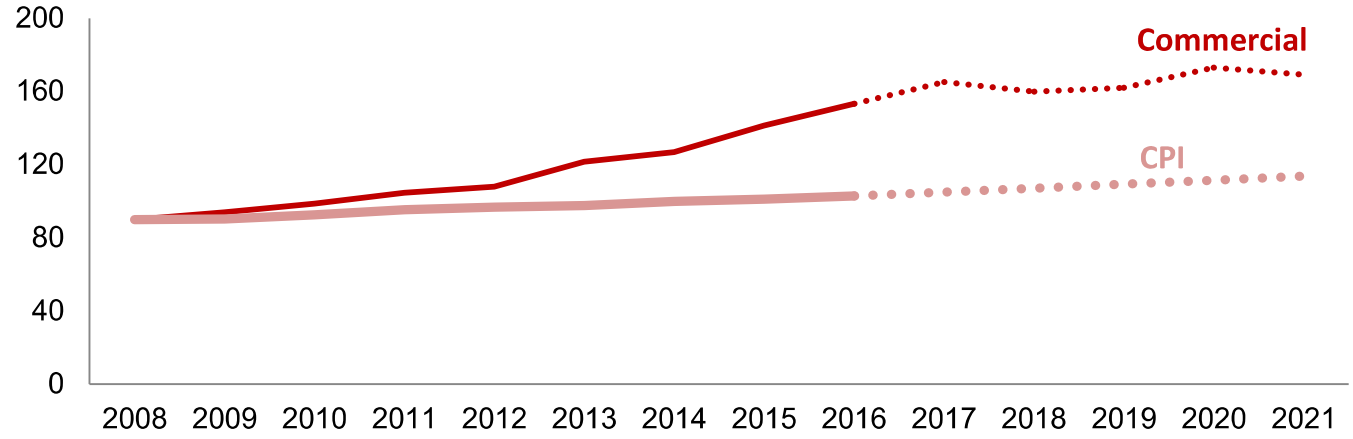
Support for Class B Consumers (cont'd)

- Class B consumers are too large for the Regulated Price Plan (so do not qualify for the 8% rebate for small businesses or Time-Of-Use pricing) and too small to be Class A (so do not qualify for the Industrial Conservation Initiative (ICI) for large consumers).

- Price mitigation initiatives could be provided to Class B to address stakeholders' concerns (e.g., Coalition of Concerned Manufacturers of Ontario, etc).

- The chart below highlights that the cost of electricity for Class B consumers has risen faster than CPI.

Illustrative Electricity Prices
in $/MWh



***Source*:** IESO; OEB; Ministry of Energy

CONFIDENTIAL CABINET DOCUMENT

Lower ICI Threshold Below 1 MW for Energy Intensive Industry

- The Industrial Conservation Initiative's (ICI) eligibility threshold for participation was recently lowered to 1 MW. The lowering of the ICI eligibility threshold provides an opportunity for additional Class B consumers to save on their electricity costs if they choose to opt-in to ICI (i.e., and become new Class A consumers):
  - Beginning in July 2017, new participants will be billed Global Adjustment (GA) on the basis of their contribution to province-wide peak demand.
  - Prior to lowering the ICI eligibility threshold, electricity consumers with peak demand between 3 and 5 MW could only participate in ICI if they belonged to the following sectors: manufacturing, mining, data processing, refrigerated warehousing and greenhouses. **Note:** To achieve the benefits of ICI, participants must reduce their electricity demand during the five system peak hours.

- To enhance the competitiveness of larger Class B consumers whose electricity demand are too low to currently qualify for ICI, the Ministry proposed to:
  1. Expand ICI by extending eligibility to larger Class B consumers with average monthly peak demand over 500 kilowatts; and
  2. Target the expansion to energy intensive industries with the North American Industry Classification System (NAICS) codes 31 - 33 (i.e., Manufacturing).

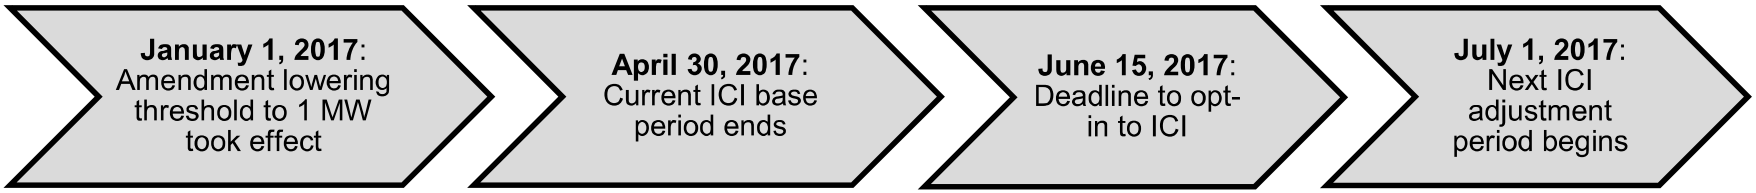
- In addition, the Ministry will assist Class B participation in ICI through a targeted outreach campaign delivered by the Ontario Chamber of Commerce (OCC).

Lower ICI Threshold Below 1 MW – Considerations

- A targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW provides benefit to larger Class B consumers (i.e., manufacturing) while limiting the cost shift to other electricity consumers.
  - **Note:** A Class B consumer that run only a day shift, resulting in fairly peaky load profiles would need to adjusted its behaviour to maximize the benefits of ICI.

- Preliminary analysis by ENERGY staff show that the estimated impact of a targeted lowering of the ICI eligibility threshold from 1 MW to 500 kW would increase a typical residential bill by up to 0.66% or just over $1/month based on a 2016 bill of about $158.
  - The actual impact would vary depending on uptake and consumer responsiveness.
  - With the recent lowering of the ICI eligibility threshold to 1 MW, there is no information available regarding the actual impact on new participants and the electricity system.

- In order for any changes to ICI eligibility to take effect before the next 12-month billing period beginning July 1, 2017, regulatory amendments would have to be made before the end of April 2017.



Lower ICI Threshold Below 1 MW – Legal Considerations

- The quantum of a regulatory charge may be set at different rates within a regulatory structure where the differential prices are intended to serve other regulatory goals including an intention to modify the behavior of persons within the scheme.

- Expanding access to the Class A pricing regime is intended to serve regulatory goals by encouraging consumers to shift their electricity use away from peak hours, which benefits the electricity system as a whole. While Class B consumers will have to pay more of the GA cost in order to finance the reduction for Class A consumers, this is generally permissible since Class B consumers are not modifying their behaviour and the total amount recovered for the GA does not exceed its cost. CLB has previously advised that the differential pricing structure generally only attracts a **moderately low risk** of being a tax, and this risk level does not change if the option of Class A pricing is extended to a broader class of consumers.

- It is more difficult to justify a differential regulatory charge on the basis of behavioral modification when the lower charge is not available to some participants in the regulatory scheme whose conduct could equally serve the same goals. To the extent that there is not a regulatory rationale for extending the new class A option only to certain sectors, risk increases. The amount of risk in this scenario will vary depending on the quantum of the premium that Class B consumers pay to create the behavior modification incentive for Class A and the degree to which the excluded sectors can credibly claim to be able to achieve the same outcome were they permitted to participate in this aspect of the program.

ELECTRICITY SUPPORT AND CONSERVATION PROGRAMS TO HELP VULNERABLE ELECTRICITY CONSUMERS

Electricity Support and Conservation Programs to Help Vulnerable Electricity Consumers

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to deliver electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  A. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  B. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  C. **Establish a new Affordability Fund**, providing energy efficiency measures at no or minimal cost to those who are ineligible for low-income conservation programs, have difficulty paying their electricity bills and who cannot make energy efficiency upgrades without financial assistance.

  D. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

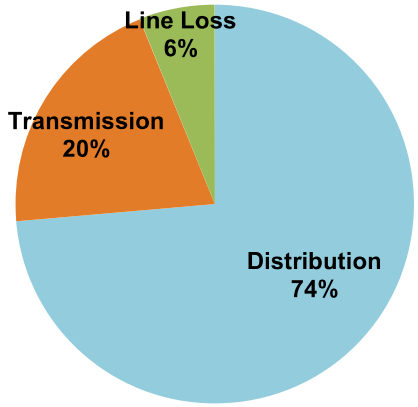
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

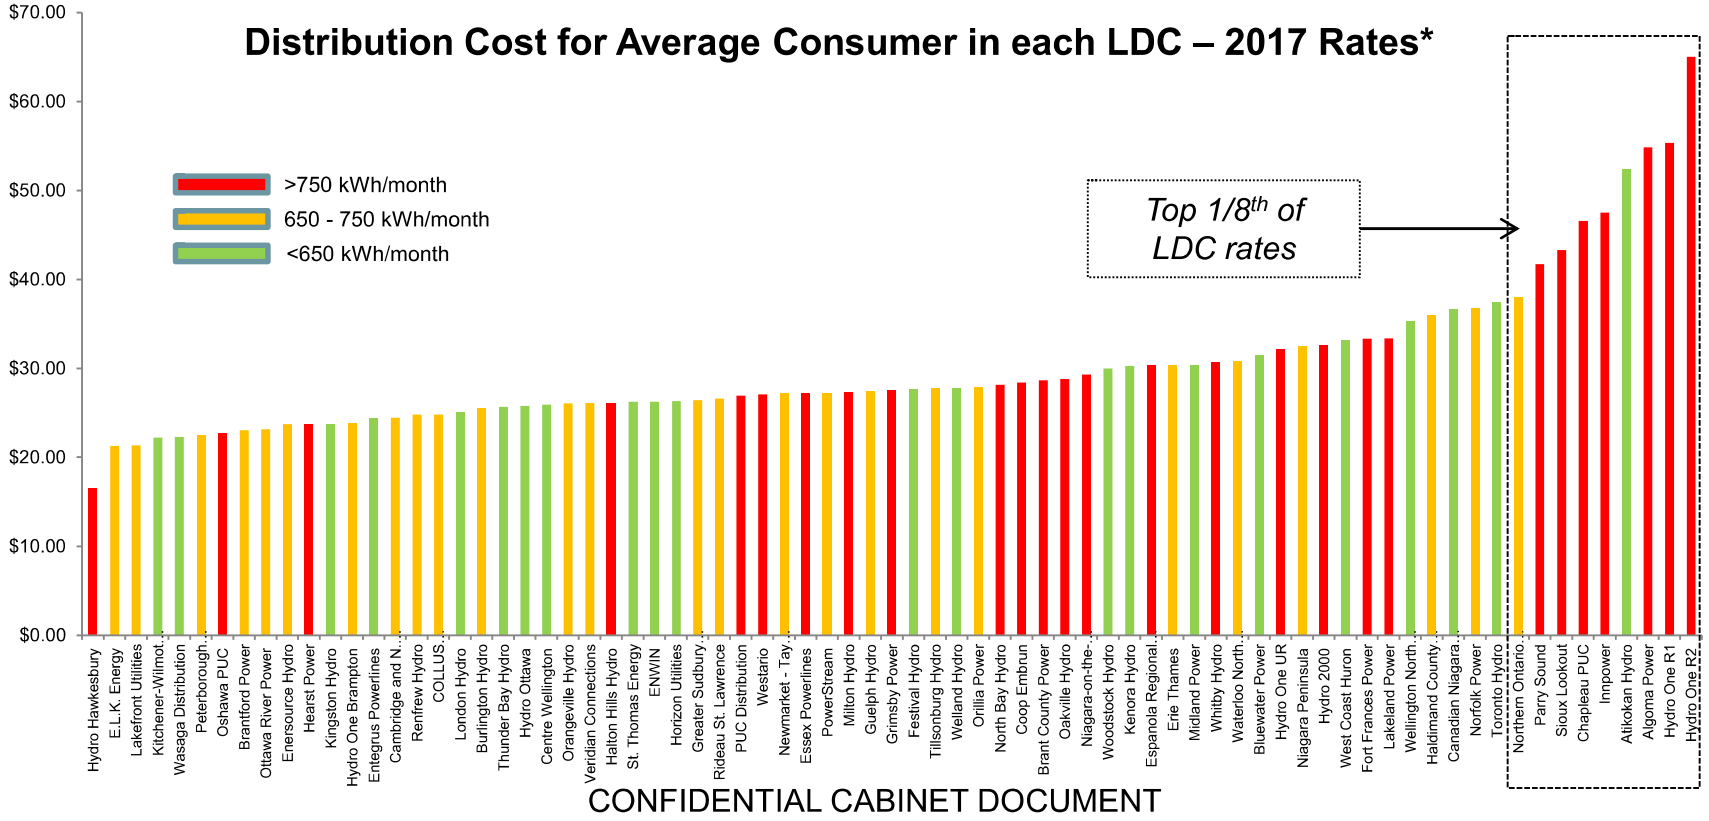
- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario and funded through the regulatory line of the electricity bill. Currently costs $1.58/month for a 750kWh consumer.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable or equitable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - Roughly 800,000 customers would receive benefits from the current RRRP program and from these additional enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.

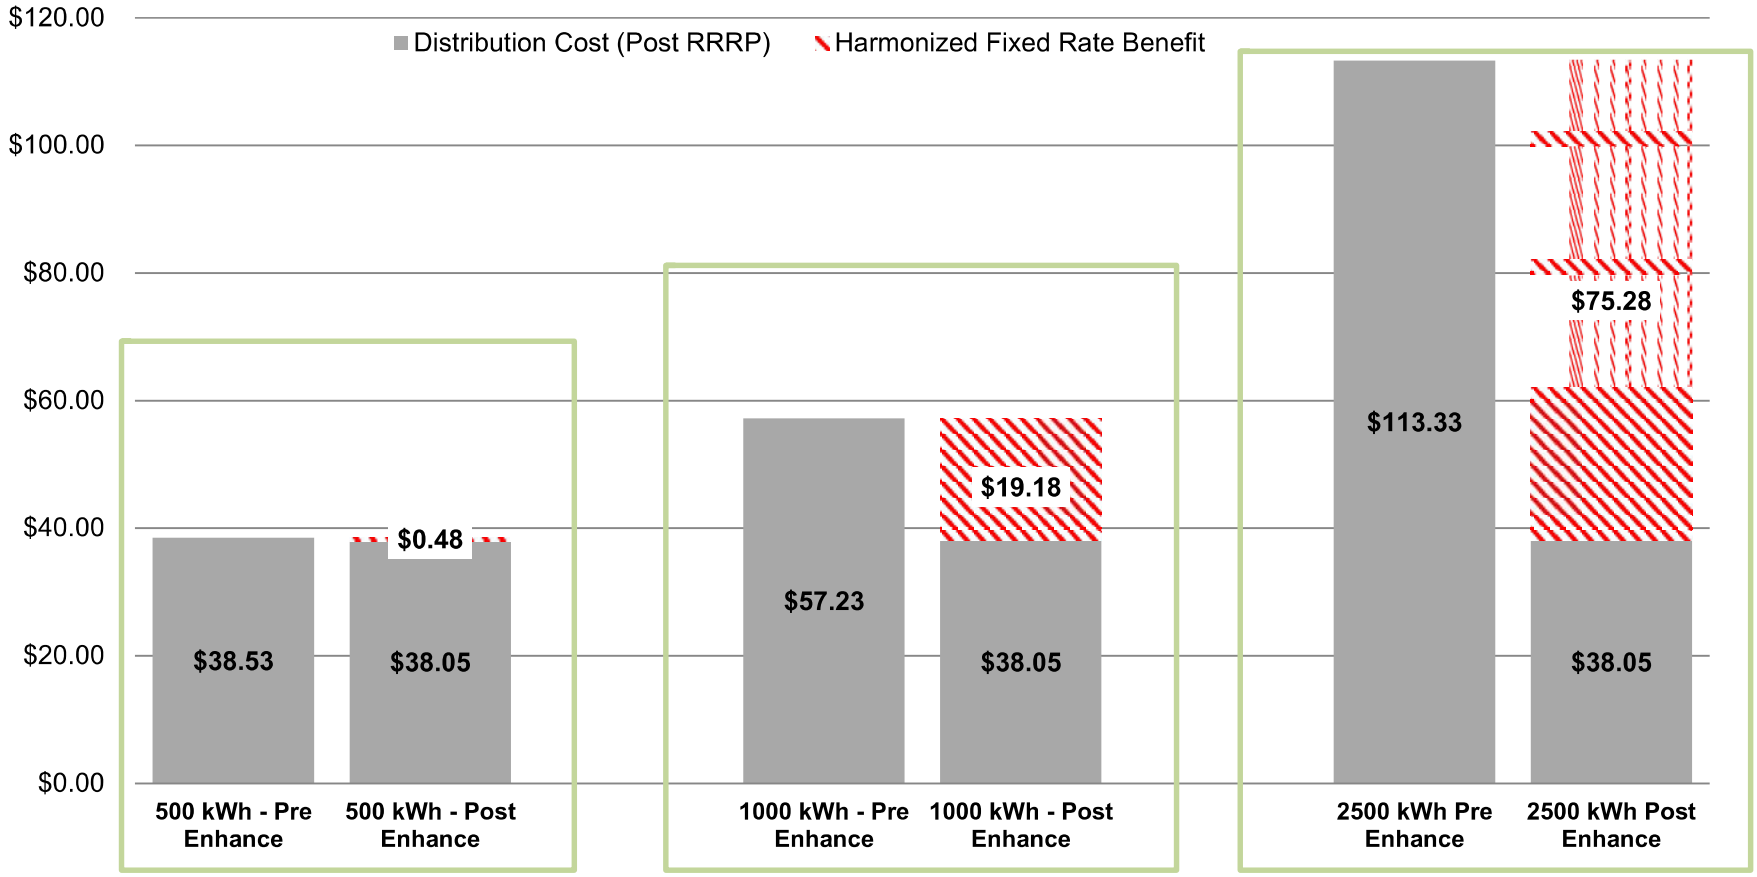


CONFIDENTIAL CABINET DOCUMENT

**2017 Approved and Proposed (Decisions Pending – rates are subject to change).*

A. Harmonized Distribution Cost – Ratepayer Impact (Hydro One R2)

- For Hydro One R2 customers, the enhanced benefits below are in addition to the $60.50 they already receive through the existing RRRP.



Note: *Rates are for 2017 (either approved or proposed). Distribution is one component of Delivery line charge. Transmission and line loss charges not shown.*

Distribution is one component of Delivery line charge.
Transmission and line loss charges not shown.

CONFIDENTIAL CABINET DOCUMENT

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

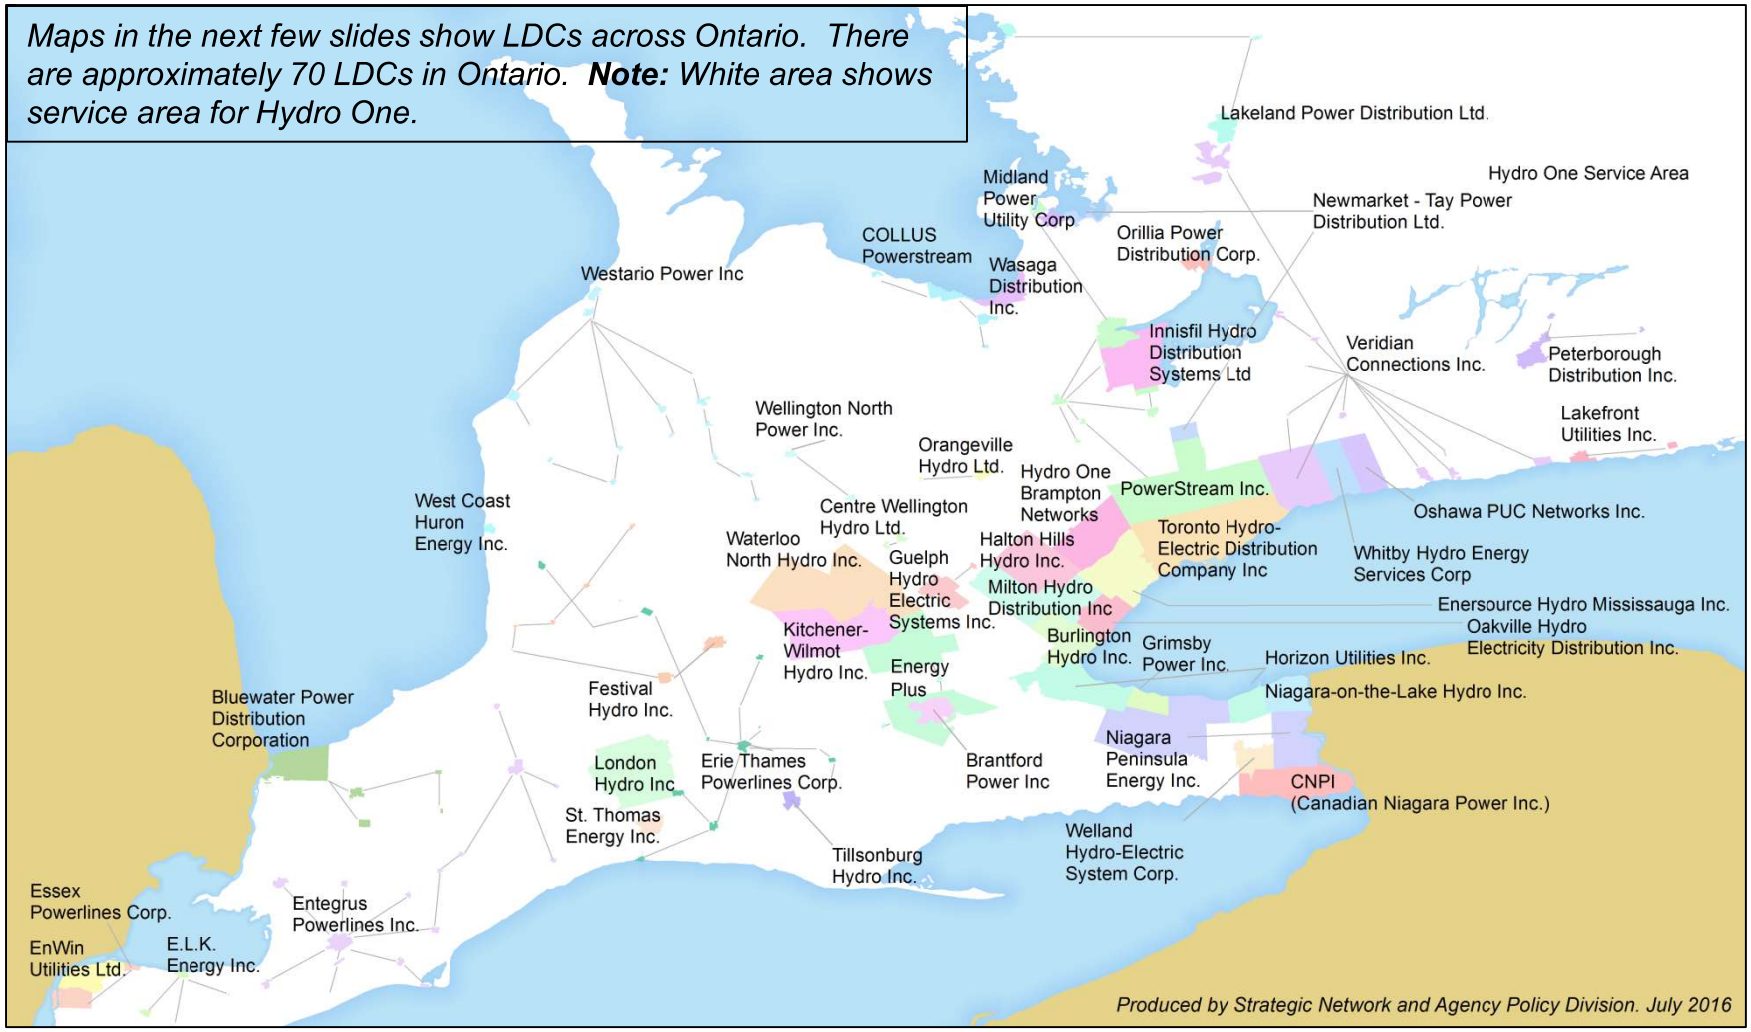
- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board (OEB).

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136
2016 Speech from the Throne Enhancements to R2 Customers	-	117	120	123	127
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234
TOTAL	-	**459**	**472**	**484**	**497**

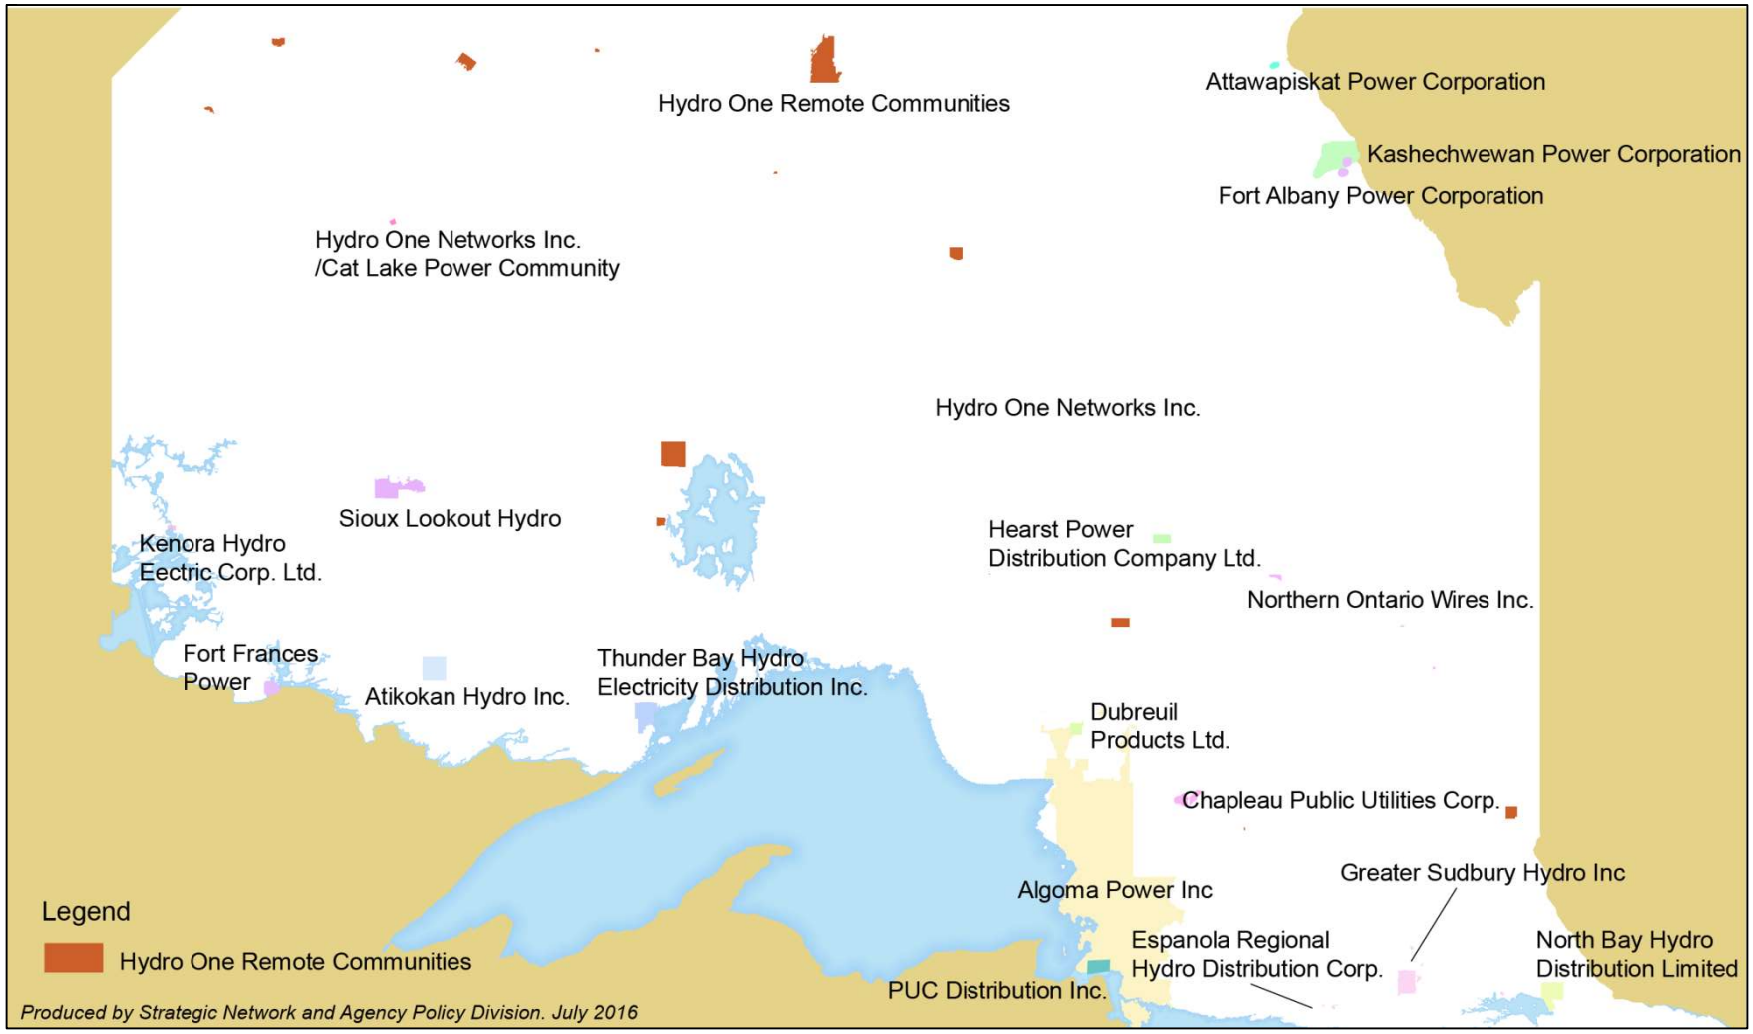
Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.

A. RRRP Enhancement – LDC Service Territory (Southwestern Ontario)

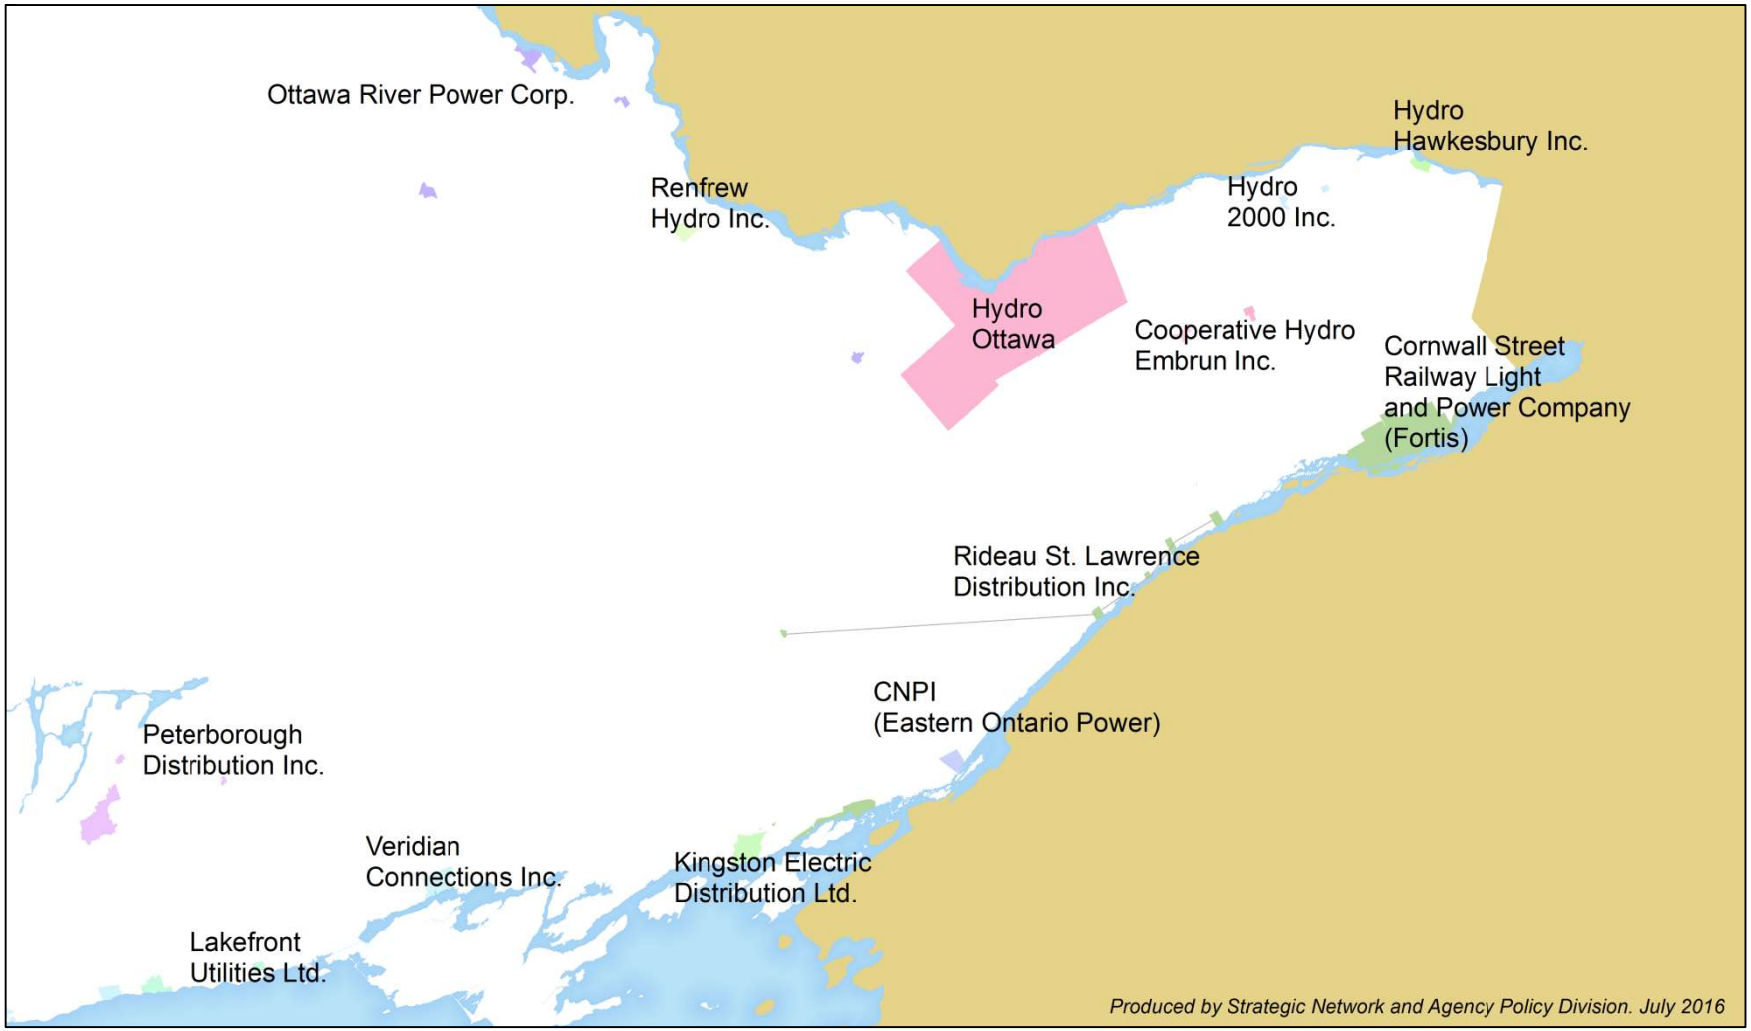
Maps in the next few slides show LDCs across Ontario. There are approximately 70 LDCs in Ontario. ***Note:*** *White area shows service area for Hydro One.*



A. RRRP Enhancement – LDC Service Territory (Northern Ontario)



A. RRRP Enhancement – LDC Service Territory (Eastern Ontario)



B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP credits vary by income level and family size, and there are two credit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in credits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced:
  - Streamline the OESP process to drive participation toward 100%:
    - ENERGY and the Ministry of Community and Social Services (MCSS) have been working on automatic OESP qualification for Ontario Works (OW) and Ontario's Disability Support Program (ODSP) recipients who pay electricity bills.
      - MCSS estimates some 110,000 OW and ODSP recipients pay electricity bills;
      - This process could follow the "deemed eligibility" model used for the Healthy Smiles program. Using an existing model should simplify the implementation process.
      - The qualification process may have to be done manually at first, with a more automated IT solution in the longer-term.
    - Working with the CRA to make the application process easier / quicker to get through by finding an alternative to the requirement to mail-in signed consent forms;
    - Putting in place a more aggressive communications strategy and application intake clinics across the Province to increase awareness of/enrollment in the OESP.
  - Increasing the existing OESP credit scales by an additional 50%; and
  - Expanding the categories of OESP credits.

- It is also recommended that the OESP be supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP credit scales and how the scales would be enhanced if increased by 50% and credits are extended to additional groups (represented in the circled boxes):

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-base. The scope of changes would depend on the implementation / delivery mechanisms.
- The OESP regulation will likely require changes to enable OW and ODSP recipients to be "deemed eligible" for the OESP.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Existing OESP credits	–	118	159	193	222
Incremental Enhance OESP credits by +50%	–	59	80	97	111
Incremental additional OESP categories	–	8	22	35	42
Total	–	**186**	**261**	**325**	**375**

C. Establishing a New Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as “low-income” but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000* residential electricity accounts in arrears; of these about 19,900** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.

* **Note:** Unverified numbers reported by LDCs to the OEB
** **Note:** Low-income customers identified through participation in LEAP

Ontario

C. Establishing a New Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who cannot qualify for low-income conservation programs and are in need, such as those who are facing disconnection.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the principles of the Fund and is working with Hydro One to set up an independent Trust to serve as the Fund Administrator.
  - The Fund Administrator would manage the flow of funds to LDCs based on principles set by the province, and be responsible for establishing processes, administration, and criteria for funding applications, thereby ensuring the program is managed on a consistent basis across the province.
  - LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers in their service territories that meet the targeted eligibility criteria.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

C. Establishing a New Affordability Fund (cont'd)

<u>Implementation</u> (cont'd)

- Recipients could receive measures ranging from an average of $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
  - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
  - Programmable thermostats, weather stripping, insulation (in homes with electric heating).

- Cold climate air source heat pumps would also be an eligible measure under the Affordability Fund. Heat pumps range in cost from $7,000 to $13,000.

- As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New Affordability Fund – Considerations

Considerations

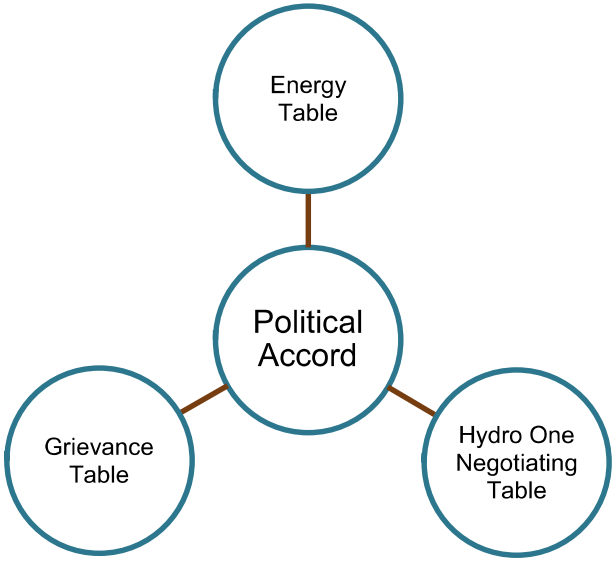
- The Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to seek input from the OEB, LDCs and potentially low income organizations to help develop funding allocation and eligibility principles for the Trust.
- While eligibility principles will be established, LDCs will need a degree of flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with Hydro One and transfer money before end of fiscal year to ensure Hydro One can establish the Trust and the Trust can begin operation as the Fund Administrator.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- On June 27, 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal. The proposal has an ameliorative purpose as it targets First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities, that affect electricity affordability.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**

On-Reserve First Nation Delivery Credit	-	20	20	20	20
Affordability Fund**	200	-	-	-	-
Total	200	665	753	829	892

***Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Does not include Algoma Power or Hydro One Remotes, which would continue to be on the rate-base.
****Note:** Funding for the Affordability Fund is one-time in 2016/17.

BENDING THE FUTURE COST CURVE OF ELECTRICITY

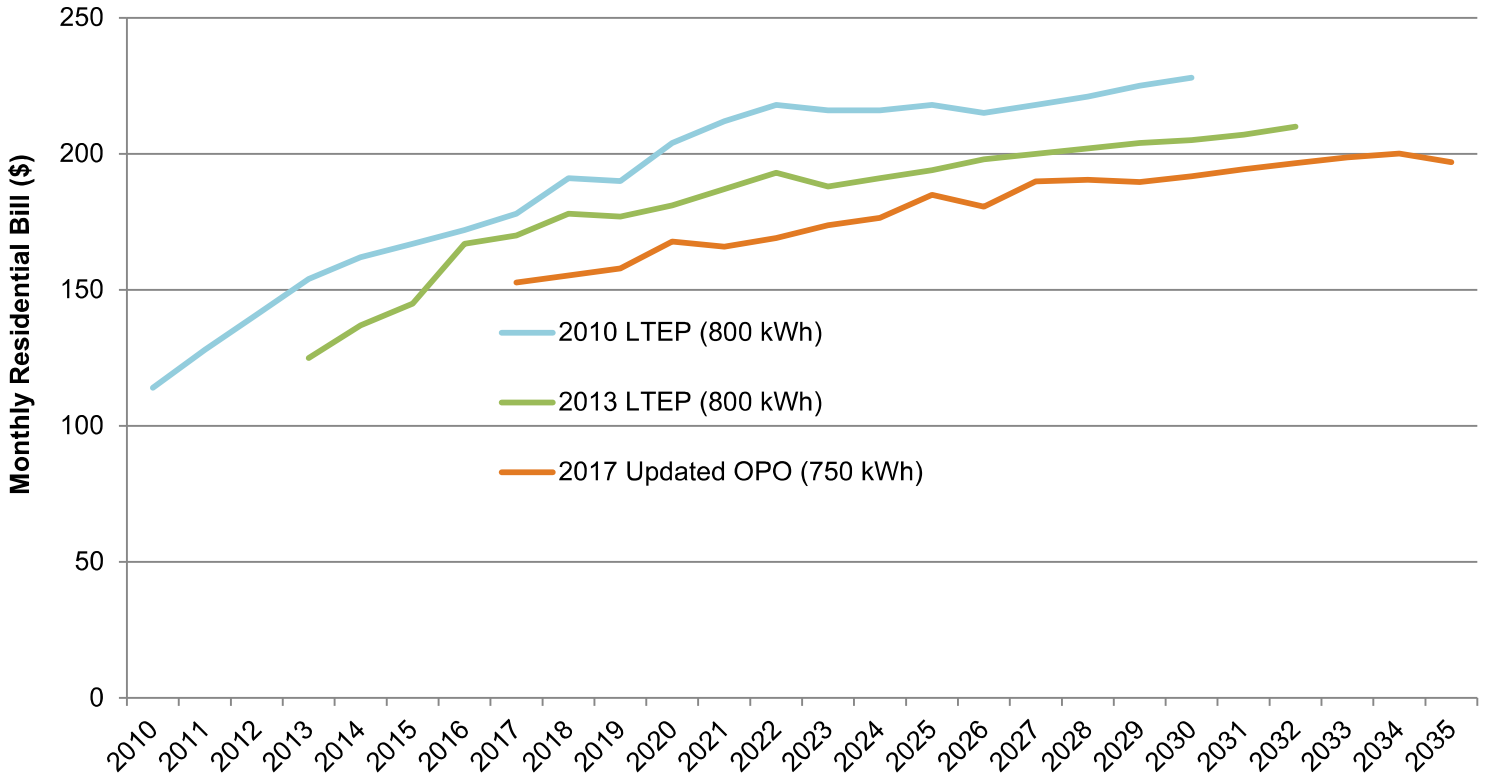
Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.
  - Limiting the Feed-In Tariff (FIT) 5 procurement target to 150 MW and suspending future FIT procurements – up to [$xx] cost savings.

CONFIDENTIAL CABINET DOCUMENT

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of February 2017) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

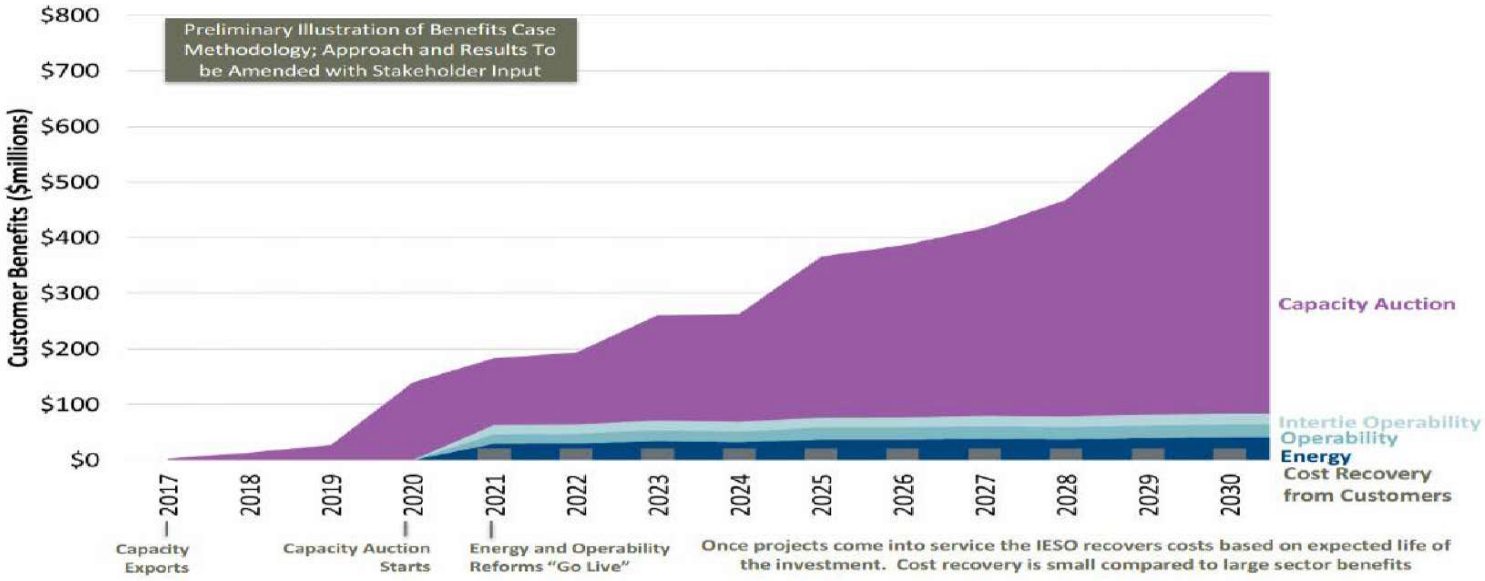
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



CONFIDENTIAL CABINET DOCUMENT

SUPPORT FOR TENANTS

Support for Tenants – Context

- The government is considering measures to provide relief from high electricity prices, and is interested in ensuring that tenants also receive electricity cost reductions and/or relief.

- Currently, tenants generally either pay for their own electricity use through suite meters (i.e., sub-meters or direct arrangements with hydro providers) or pay for electricity indirectly as a service included in their rent:
  - Tenants who pay for their own electricity will receive electricity costs savings directly through their bills; and
  - Low-income tenants who pay own electricity bills can access energy support programs such as the Ontario Electricity Support Program administered by the Ontario Energy Board (OEB).

- Any potential initiatives could focus on the following options:

For tenants who pay own electricity bills

1. Expand OESP to increase relief or raise income thresholds.

For tenants whose electricity is included in rent

2. Require that landlords pass savings on to tenants (could be addressed by MHO through RTA amendments).
   - Options could include requiring landlords to automatically reduce rents, or allow tenants to apply the Landlord and Tenant Board for relief.
3. Provide energy rebates directly to tenants whose rent includes electricity.

Support for Tenants – Potential RTA Hydro Relief Measures / Considerations

- RTA amendments with respect to tenant relief, remedies, and enforcement would be complex, and unable to provide immediate, direct and transparent cost remedies to tenants:
  - Impact of hydro relief measures and electricity cost savings for landlords may vary depending on size of rental building and location (urban/rural):
    - One size fits all approaches would not match actual landlord savings to direct tenant relief; and
    - More targeted approaches would add extreme complexity, leading to greater confusion for landlords and tenants, and difficulty administering enforcement.
  - Passing on actual savings could likely only be done after landlords have experienced decreased costs for a period of time (i.e. one year).
  - Difficulty in informing landlords of their responsibilities and enforcing reductions; would likely have significant resource implications for the Landlord & Tenant Board/Ministry of Attorney General.
  - Difficult for tenants to understand, with the most vulnerable tenants potentially less able to pursue remedies through the LTB.
- The kinds of potential RTA remedies would depend on various specifics regarding the way in which relief was being provided to landlords including whether:
  - The actual electricity cost savings for landlords are transparent to facilitate easy calculation of rent reductions or relief;
  - Hydro relief measures are permanent or temporary; and
  - All relief should be passed on to tenants, or just a portion of the relief (e.g., global adjustment fund, 8% rebate, any other relief).

Support for Tenants – Potential RTA Hydro Relief Measures / Other Considerations (cont'd)

- As part of Climate Change Action Plan, MHO has been directed to mitigate the impact of carbon costs on tenants, and is proposing to prevent landlords from charging above-guideline rent increases for extraordinary utility costs increases.
  - May seem unfair that landlords are required to reduce rents or provide relief when utility costs decrease but cannot increase rents when utility costs increase.
- Relief would be limited to certain segments of tenant population:
  - Post-1991 buildings are exempt from the Rent Increase Guideline and landlords could negate any savings to tenants in these buildings through a higher subsequent rent increase.
    - Over 19% of tenant households are estimated to live in post-1991 private rental units including individually rented condos; a high proportion may already pay for electricity separately.
  - Relief may not be required for social housing tenants:
    - Most social housing tenants (80%) pay as per utility scales, which covers electricity usage other than electric heat; and
    - Utility scales were last updated in 2000 and are reflective electricity prices at that time.
- MHO, working with ENERGY and MAG will report back in Spring 2017 with options for electricity rate mitigation for tenants.

Legislative Authority – Considerations

GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The OPG Trust will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the OPG's SPV/Trust and settle accounts with the OPG Trust as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the SPV/Trust to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the SPV/Trust (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Class B

- **Targeted Lowering ICI Threshold Below 1 MW (to 500kW):** Regulatory amendments (O.Reg. 429/04) will be required to address program details.

Legislative Authority – Considerations (cont'd)

Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **Affordability Fund:** In order to implement new affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement and Technical Briefing
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

To discuss

GA FINANCING – EQUITY INJECTION OVERVIEW

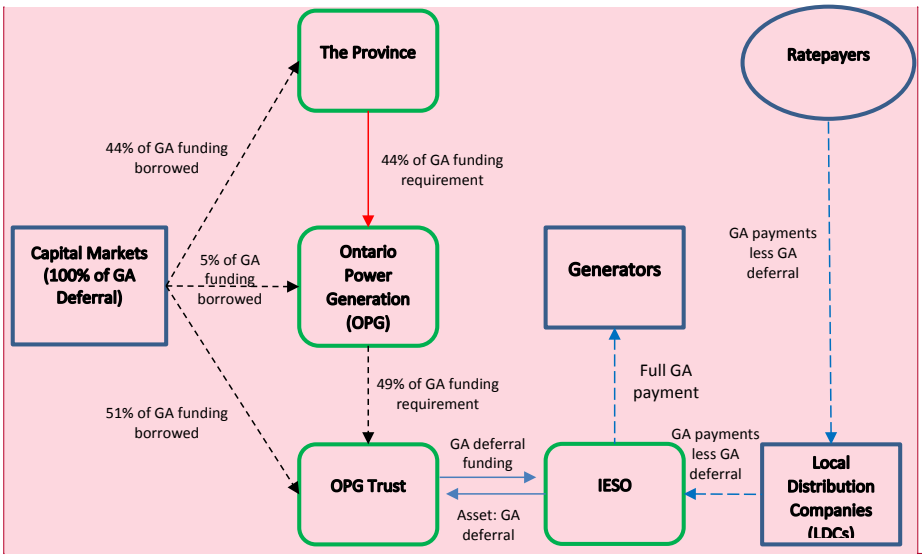
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC2]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK3]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS4]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

    - ~~Note that as with the Hydro One capital contribution, this capital contribution would be reflected on the Province's balance sheet (being and exchange of assets – cash for shares) rather than the statement of operations and would, therefore, not result in a fiscal impact to the Province~~

Commented [JK5]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC6R5]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

Commented [FC7]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing, that would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or

otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

ECONOMIC IMPACTS OF ONTARIO'S FAIR HYDRO PLAN

The material provided below if sourced largely from the Ministry of Energy's cabinet submission.

FAIR HYDRO PLAN

Customers / Residential

OREC:

- All residential consumers received an "8%" rebate equal to the provincial portion of the HST on their hydro bills starting January 1, 2017, on their bill. (Including Businesses and Farms).

Global Adjustment Smoothing:

- Consumers eligible for reductions under GA smoothing are those eligible under the Regulated Price Plan (RPP). These are primarily residential customers representing about 46% of total GA costs. The RPP also includes farms and low volume customers (up to 50 kW demand or 250,000 kilowatt-hours annually).
- The GA accounts for the difference between contracted and regulated prices paid to generators compared to the hourly market clearing price, as well as the cost of conservation programs. The GA has risen over the past decade as the province's electricity system has decarbonized. The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity. The majority of the province's electricity generators are under 20-year contracts and some of the assets are expected to continue to be able to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years). Similarly, conservation costs are recovered annually on an 'as incurred basis' through the GA, while conservation initiatives can reasonably be expected to provide benefits to the electricity system over many years.
- Under the GA smoothing plan, the long-term benefit of these assets to the electricity system is recognized and some of the costs recovered in current rates would be deferred for recovery in future rates. GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief. The result of this GA proposal is that cost to eligible ratepayers would be lowered in the short term, reducing projected after-tax electricity costs for a typical customer consuming 750kWh per month in 2017 by an estimated $26/month.
- A financial structure to implement GA smoothing is proposed that would have no fiscal impact. However, there will be an impact on provincial gross debt over time as various parties including the Province, will need to incur debt to finance the deferral of a portion of current GA costs.

Please see last page for Energy's estimated Annual Debt Schedule.

OESP Expansion:

- Low Income customers receive additional on bill benefits which vary based on income and household size.
    - Will move current funding of the OESP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

Existing OESP Credit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000			$30	$34	$38	$42	$50
	$39,001 - $48,000					$30	$34	$38
	$48,001 - $52,000							$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000			$45	$50	$55	$60	$75
	$39,001 - $48,000					$45	$50	$55
	$48,001 - $52,000							$45

Proposed +50% OESP Credit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000		$40	$45	$51	$57	$63	$75
	$39,001 - $48,000			$35	$40	$45	$51	$57
	$48,001 - $52,000					$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000		$60	$68	$75	$83	$90	$113
	$39,001 - $48,000			$52	$60	$68	$75	$83
	$48,001 - $52,000					$52	$60	$68

Source: Ministry of Energy, Ontario's Fair Hydro Plan, Technical Briefing, March 2, 2017

RRRP Expansion:

- Rural or remote residential customers will receive additional relief on the 'Delivery' portion of their hydro bill. 800,000 customers are expected to benefit.
    - These customers are served by the following distribution companies:
        - Hydro One R1, Hydro One R2, Northern Ontario Wires Inc., Lakeland Parry Sound, Chapleau PUC, Sioux Lookout Hydro, InnPower, Atikokan Hydro and Algoma Power
    - Will move current funding of the RRRP from the ratepayer to the government to provide ***all ratepayers*** with an incremental benefit, with the expanded program funded by the government.

First Nations On-Reserve Delivery Credit:

- Will eliminate the delivery charge for all on-reserve First Nations households and remove the monthly service charge for customers of licensed distributors which charge a bundled rate. Will automatically qualify on-reserve First Nations households (~21,500 customers). Estimated to provide residential customers an average monthly benefit of $85.

Staff Comments:

- Unclear if on-reserve First Nations households (eligible with On-Delivery Credit) will also benefit from OESP Expansion and Affordability Fund.

Establishing a New Affordability Fund:

- Assist electricity customers who need financial assistance to undertake energy efficiency improvements. TB Approved $100 million for 2016-17 (not public).

Staff Comments:

- This fund aims to target those who cannot qualify for current low-income conservation programs. Local Distribution Companies would be tasked with identifying recipients. The fund helps with measures such as energy efficient lighting, appliances, and for electrically heated homes, insulation and weather stripping.
- Assuming this will not appear in any form on the hydro bill but instead a transfer from LDCs (via the fund) to eligible customers.

Industry

- **Expand the Industrial Conservation Initiative:** Enhance competitiveness for small manufacturers. Reduce ICI eligibility to those with monthly peaks of 500 kilowatts, down from the current threshold of 1 megawatt.
    - Targeting eligibility to energy intensive industries with NAICS codes 31-33.

Other

- **Improving Electricity Sector Efficiencies:** IESO's Market Renewal Initiatives are estimated to save the electricity sector (as a total) $200 million per year starting in 2021.

FISCAL COSTS

- **Note:** In estimating economic impacts consideration should be given to the government's commitment to balance the fiscal plan. i.e., the costs of the Ontario Fair Hydro Plan may be assumed to be offset by lower expense elsewhere or higher revenues.

- **Fiscal Costs of the RRRP Program:**

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
Legacy RRRP to Hydro One R2 Customers	-	126	130	133	136
2016 Speech from the Throne Enhancements to R2 Customers	-	117	120	123	127
Proposed Enhancements to Hydro One and Identified LDCs	-	216	222	228	234

Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of February 2017. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing.

Mr. Serge Imbrogno
Deputy Minister,
Ministry of Energy
4th Floor, Hearst Block
900 Bay Street
Toronto, Ontario
M7A 2E1

Dear Deputy:

Below is a summary of OPG's preliminary views on the implementation of the Province's proposed Global Adjustment Smoothing Account and financing structure. These views are contingent on the proposed terms and conditions that were sent to the Ministry of Energy on February 21, 2017.

Understanding that the finalization of the legal terms, the Trust indentures, financing structure and other detailed terms will take several months and will involve collaboration between legal counsel, input from capital markets, parties involved and other stakeholders, this letter is intended to provide the guideline and framework which could form the foundation of the plan.

Please do not hesitate to contact me if you have any questions regarding this summary.

Sincerely,

Mr. Ken Hartwick
Chief Financial Officer and Senior Vice President, Finance
Ontario Power Generation
W: 416-592-6985
C: 647-544-6985
ken.hartwick@ opg.com

cc. Jeff Lyash, President and CEO, OPG

Background:

The Province has indicated that it will take steps to reduce electricity bills in the near term. It has identified reductions in the Global Adjustment Charge (GAC) charged to electricity customers as a means to achieve its policy goals. The Province is proposing to temporarily reduce the amount of the GAC charged to electricity customers (primarily RPP-eligible customers). The exact quantum and duration of the program is still not known but based on discussions with the Province GAC charges of approximately $2-5B per year for the next 5-10 years would be deferred and collected over future periods commencing after the deferral period. A combination of senior debt and subordinated debt (mainly sourced by additional equity from the shareholder) would be issued to fund the amount deferred. The financing cost of the debt and other costs of running the program would form part of the amounts recovered from customers over the term of the program.

The Province has requested that OPG administer the GAC deferral, because of OPG's participation in the market, regulatory knowledge and the potential ability to consolidate the activity and accounting with OPG. Given the significant amount of financing required for the GAC deferral, OPG has developed a financing structure (depicted below) to:

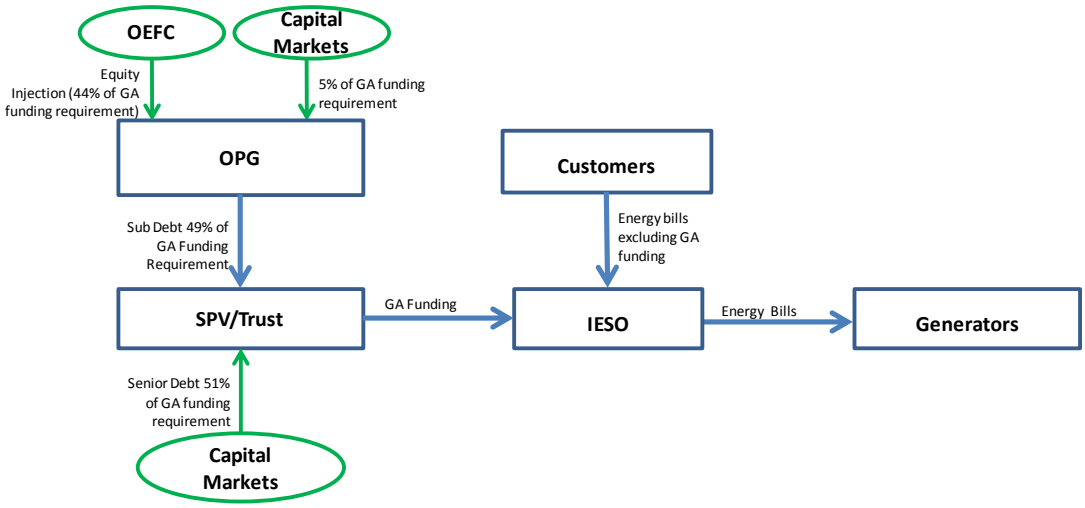
- restrict the risk to OPG;

- maximize the cost-effectiveness of the Trust or the Special Purpose Vehicle ("SPV") financing vehicle; and
- allow for consolidation into OPG financial statements.

The success of this structure is dependent on achieving a number of objectives which are reviewed in the following sections:

A. Ability to Recognize an Asset and Record Revenue
B. Ability to Consolidate the SPV into OPG
C. Ability to Finance
D. External Assessment
E. Risk Summary

All of the percentages shown in the graphic below are indicative and will be highly dependent on the legislation that the Province will enact:



Process:

The IESO will effectively sell the 'right to collect' deferred future revenue from ratepayers (GA Recovery Right asset) to the SPV in return for cash proceeds. In order for the SPV to purchase this asset the SPV will obtain the financing from two key sources: 51% directly from capital markets and 49% as subordinated debt from OPG. OPG will obtain 44% of this financing as an equity injection from the Province and 5% from capital markets.

A. Ability to Recognize an Asset and Record Revenue

Accounting Requirements under International Financial Reporting Standards (IFRS)

1) It is our understanding that the IESO and KPMG have concluded that the sale of this 'right to collect' future revenue (or regulatory asset) is not a financing transaction and will not be recorded as a financial liability. Based on that conclusion, the right to collect will be accounted for as an intangible asset in the SPV.

2) In order to the SPV to record this right as an intangible asset, the right must meet the following conditions:
   - The intangible asset must be separable and arise from a contractual or legal right (i.e. mandated by the Legislation and SPV Indenture Agreement).
   - The SPV must have the control and power to obtain future economic benefits from the intangible asset.
   - The SPV must be able to demonstrate that the intangible asset is purchased at fair value.

3) In order for the SPV to recognize appropriate revenue to offset any ongoing costs, the Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis. This may result in additional amounts to be deferred to achieve the desired customer impact. Payment of revenue to the SPV is also important to service the interest expenses of the debt.

B. Ability to Consolidate the SPV into OPG under IFRS

OPG 'Control' of the SPV - Accounting Requirements

1) In order to meet the accounting definition of 'control', accounting guidance must be considered. There are no bright lines to determine whether OPG has exposure, or rights, to variable returns from its involvement with the SPV, or whether it has the ability to affect the returns of the SPV through its power over the SPV. Rather, all facts and circumstances are considered when assessing whether an entity has control over another entity. Based on the relevant accounting guidance under IFRS, OPG has proposed terms necessary to demonstrate that OPG has control over the SPV. OPG's external auditors, Ernst & Young, has provided their concurrence that based on the information provided to them to date that the following conditions should permit consolidation of the SPV by OPG.

Directive:

1. The SPV must be undertaken by OPG as a business initiative on its merits. A Shareholder Directive is to be limited to direct OPG to investigate the option of establishing a SPV vehicle to administer, finance and operate the Global Adjustment plan. The control, risk and rewards of that SPV will determine its consolidation into OPG as a business enterprise.

SPV:

2. The SPV should not operate in a predetermined way such that OPG does not have decision-making authority over the SPV's ongoing activities after its formation (i.e. should not operate on 'autopilot').
3. OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province. No party shall have the ability to remove OPG from its role and authority in the SPV.
4. The Province cannot have the right to veto OPG's decisions about the relevant activities of the SPV. OPG must have the power over the relevant activities of the SPV and be compensated. The relevant activities of the SPV include (but are not limited to) the evaluation and decisions on financing alternatives, duration, and the strategy to minimize financing costs. OPG must have the power to establish operating and capital budgets of the SPV.
5. OPG must have the power to determine or change operating and financing policies of the SPV, which will affect the variability of risks and returns.
6. The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
    - The SPV
    - Any of OPG's investments in the most subordinated debt of the Trust
7. OPG must own greater than 50% of the most subordinated debt and targeted to be no less than 5%[1] of the total debt of the SPV. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources. A quantitative analysis should be performed at a later date to corroborate the appropriateness of the 5% threshold to support that the 5% subordinated debt investment is sufficient to absorb most of the expected variability in the SPV.
8. OPG must have the ability to earn variable returns by exercising its authority, which shall be accomplished as follows:

[1] While the rest of the letter refers to a 10% investment in the most junior subordinated debt with OPG owning 5%, it should be noted that OPG should own more than 50% of the most subordinate debt. For simplicity, the degree to which OPG's ownership beyond 50% is not shown in this letter.

a. The cash flow from the restructured asset shall include interest determined based on a relevant benchmark that is appropriate relative to the restructured asset, plus an appropriate margin consistent with the relevant market and other risks
b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the SPV to achieve a more favourable return compared to the return from the restructured asset
c. The SPV shall establish classes of liabilities (senior, subordinated and the most subordinated). The classes would allow the SPV to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity.
d. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the restructured asset, or any residual risk of restructured asset. The targeted return of the subordinated liability should be reflective of the underlying risks and compensate holders for active management that would be required.
e. OPG should participate in the detailed design of the above and the SPV documentation to ensure that it has substantive power and variability, which will allow OPG's Board of Directors to evaluate the opportunity as a business initiative instead of through a shareholder directive.

Nothwithstanding the above, under certain Defined Forced Majeure for emergency events (e.g. unlikely credit market event or disruption where it is not possible to borrow from the market at a reasonable rate), the OEFC may provide bridge financing beyond the designated percentage for a defined period. The relevant terms should ensure that this temporary measure does not detract from the rights of OPG to direct all of the relevant activities of the SPV. Additionally, OPG should not be protected from risk of loss by the OEFC with respect to its subordinated investment, nor should it lose its right to derive the residual returns should such bridge financing be required.

Legislation

9. The Legislation must require interest, carrying and administrative costs to be paid to the SPV on a monthly basis, so that the SPV is able to recognize appropriate revenue to offset any ongoing costs.
10. The Legislation must dictate the manner in which the restructured asset would be determined, collected, and the period of collection, so that the determination of the restructured asset will not be subject to the Province's decisions on an ongoing basis, but determined based on a formula. Alternatively, the Legislation may allow for an adjustment to the pre-determined deferral formula based on specific parameters that would limit the adjustment to the restructured asset. Adjustments beyond the specific parameters would require approval by the Board of Trustees.
11. The Legislation must be written to avoid legal or constitutional challenges and be irrevocable to reduce the cost of borrowing and with a specific formula which determines the deferral amount. As irrevocability would be difficult under Canadian law one mitigation would be to provide a Provincial guarantee which only applies with cancellation or amendment of the legislation.
12. The spirit of the above terms should be reflected in the SPV Indenture Agreement as well as Legislation, wherever possible.

2) The Trust is expected to be financed as follows:
   - 51% senior secured debt from external markets
   - 39% senior subordinated debt from OPG (via Province equity injection into OPG)

- 10% junior subordinated debt from OPG (5% from external markets and 5% from Province equity injection into OPG).

When assessing control, an investor shall consider the nature of its relationship with other parties and whether those parties are acting on the investor's behalf (i.e. they are 'de facto agents'). If OPG is assessed to be a 'de facto agent' of the Province, it will compromise the ability for OPG to consolidate the Trust. The split above is to meet the following conditions to ensure that OPG is not considered a 'de facto agent' of the Province:

- The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following:
  - The Trust
  - Any of OPG's investments in the most subordinated debt of the Trust
- OPG must own greater than 50% of the most subordinated debt and targeted to own no less than 5% of the total debt of the Trust. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources.

3) The Province will need to conclude on whether OPG still meets the definition of a Government Business Enterprise as defined under Public Sector Accounting Board standards in order to obtain the preferred consolidation treatment after the transaction. We also recommend that the Province to undertake the analysis deemed necessary to confirm the accounting treatment in its consolidated Public Accounts, including if the recognition of the intangible asset would result in an offsetting liability in the Public Accounts.

C. Ability to Finance

Property Right or Right to Collect
Legislative Requirements for Financing
The GA Recovery Right must be structured to encompass the following elements:

- Right to recover from and bill Ontario electricity customers for (1) the principal amount of GA that is being deferred, (2) all interest and other financing costs incurred in respect of the deferral of the GA, (3) all fees, expenses and other administrative costs associated with such financing;
- Repayment/amortization schedule as agreed by the IESO and any purchaser of such GA Recovery Right (or pursuant to a pre-defined schedule/formula that covers all of the purchaser's principal, interest and ongoing financing costs on a monthly basis);
- Repayment/amortization schedule must include a true up mechanism to ensure all costs associated with the deferral can be recovered from customers;
- IESO may dispose of the GA Recovery Right, provided that any such disposition shall be a true sale and absolute transfer to the purchaser of the IESO's right, title and interest in and to the GA Recovery Right;
- Purchaser will have the right to require the IESO (or any successor) to collect the principal amount of GA Recovery Right, together with interest, financing and administration costs, on the agreed repayment/amortization schedule;
- Right must be irrevocable and, if amended by future governments, debt holders have the right of action against the government to recover the amount outstanding including interest, fees, expenses and any damages resulting from the amendment;
- GA Recovery Right will not be subject to any set-off, counterclaim or other defence by the IESO or any successor or affiliated entity; and
- Make certain amendments to the Electricity Act to allow OPG to implement the SPV financing structure (e.g. allowing OPG to create subsidiaries and holding companies, and to have a beneficial interest in the SPV, etc). This would provide flexibility to accommodate possible variations to the financing structure that may be desirable over time.

Detailed legislative requirements are specified in the attachments as follows:

Attachment 1 Legislative requirements to allow deferral of global adjustment amounts to be financeable

Attachment 2 Statutory amendments

The proposed financing structure for the SPV is:

	Risk Profile	Source	% of Total Funding Requirements
Tranche A Senior Debt	The least risky	Capital Markets	51%
Tranche B Sub Debt	In between A&C	OPG via OEFC	39%
Tranche C Sub Debt)	The most risky	OPG via OEFC	5%
		OPG via Capital Markets	5%

SPV structure is used to accomplish the following:

- SPV holds right to charge customers for the benefit of debt holders;
- Allows the financing vehicle to be ring-fenced from OPG as an SPV structure is set up as generally single purpose entities with no other operations that could add risk to the SPV, dilute debt holder rights, allow parties from other operations to claim rights to the future recovery from customers or allow these other parties to initiate bankruptcy proceedings;
- Enables SPV to potentially get a higher credit rating than OPG;
- Supports consolidation with OPG provided accounting requirements are satisfied;

This approach supports a number of objectives of the GA Recovery Right:

- 51% external senior debt supports separation of the SPV from the Province
- 5% junior subordinated debt establishes OPG's "at risk" equity which supports separation of the SPV from the Province
- Subordinated debt provides flexibility to the financing structure and additional credit support to external debt holders
- Subordinated debt sourced from OPG (mainly funded by equity injection from the Province) minimizes impact on OPG credit metrics reducing risk of an OPG rating downgrade that could result in the SPV being consolidated directly with the Province as the SPV would be considered an arm of the Province.

Recent transactions used as precedents are:

Duke Energy Florida Project Finance LLC
June 2016
5 series of bonds totalling USD$1.3B
Weighted average life from 2 to 19 years with interest rates from 1.2% to 3.1%
Credit rating AAA

Utility Debt Securitization Authority
Sponsored by Long Island Power Authority
March 2016
Amount issued USD$0.6B
Weighted average life of 12 years and weighted average yield of 2.7%

August 2016
Amount issued USD$0.5B
Weighted average life of 7 years and weighted average yield of 2.0%

Credit rating AAA

Cumulative outstanding (including previous issuances): USD$4.2B

D. External Assessment

Shakerhill Partners, an external advisor, identified the following items in an assessment of the structure and financeability of the structure:

- The structure is financeable however there are a number of significant risks to the structure:
  - Canadian and Ontario law does not provide the same protection to property right as exists in the US federal and state constitutions to limit the ability of governments to adversely impair contracts to the detriment of the holder;
  - Legislation could mitigate some of the risks – deferred recovery asset to be "uncapped", regular semi-annual true up to ensure recovery, Province provides sufficient committed liquidity to the IESO so that temporary shortfall in recovery does not affect payments to SPV, term of the deferral recovery substantially exceeds the longest maturity of debt of the SPV and that true-up mechanism take account of potential for currency, interest rate and duration mis-match between the debt of the SPV and the recovery mechanism;
  - Size of the program may be too large for Canadian securitization market requiring access to the US securitization market;
- Final maturity of debt should not exceed 30 years from inception of the program
- True up mechanism should be designed such that the forecast of recovery is less than 10% of the customer bill under downside scenarios to limit growth of the deferral balance as a higher portion of the customer bill increases the political risk to debt holders which could result in a lower credit rating and potential impact on financeability
- Securitized debt products are specialized and price at a premium to other fixed rate instruments however a successful program supported by a strong credit rating this premium could shrink over time to a minor spread over Provincial debt
- OPG's credit rating should be maintained provided sufficient equity is injected to maintain credit metrics
- While the structure is not expected to impact the Province there are risks that the program could negatively impact the rating agencies view of the Province's financial management.

E. Risk Summary

i. Consolidation

- Elements of the proposed structure were established to support consolidation of the SPV into OPG. These items may not be sufficient to establish OPG as risk owner of the SPV and the SPV may need to be consolidated directly with the Province.

ii. Financeability

- The legislation establishing the structure and the property right for recovering the financing and associated costs may not be adequate for financing purposes resulting in more expensive financing or an inability to obtain the required external financing.

iii. Cost of Financing

- Future governments may enact legislation that changes the right of the SPV to recover amounts from customers.
- The right to recover amounts from future customers must be irrevocable and subject to full recovery from the government in the event that future governments reduce or eliminate the recovery. A legal structure that is weaker than the precedent US transactions increases the risk to debt holders and the cost of financing.
- Interest rates on bonds in the securitization market are higher than equivalent rated bonds. Rate for a AAA securitization credit is about 50 bps higher than GOC (rated AAA) for a 5 year term. This difference is attributable to the specialized structure of the bond, smaller investor pool for this bond, smaller size of the market and higher perceived risks of the bond.
- Any regulator involvement must not be seen to modify any terms of debt issued or the property right securing the debt as this would increase risk to debt holders.

- It may not be possible to issue debt to match the terms of the deferred asset so shorter term debt would be used which raises risk to re-finance the maturing debt as the market may no longer be interested in this product. As well, underlying reference interest rates may be higher and the market may require a higher spread to invest in this product.
- With the GA Recovery Right program continuing for 10 years, debt issued over this period is subject to changes in both the underlying reference interest rates and appetite of the market for this product.

iv. OPG Credit Rating

- Minimizing the impact of significant additional debt on OPG's credit rating is dependent on higher EBITDA arising from earned income on the GA Recovery Right in excess of external debt. Ability of the SPV to record revenue reflecting the growth in asset value.
- Potential OPG credit rating downgrade if legislative structure is not adequate to support long term recoverability, inability to record revenue from growth in asset value or agencies view equity injection as debt.
- OPG credit rating downgrade could result in loss of GBE status or result in SPV being consolidated directly with the Province.

Attachment 1

LEGISLATIVE REQUIREMENTS TO ALLOW DEFERRAL OF GLOBAL ADJUSTMENT AMOUNTS TO BE FINANCEABLE

The IESO currently has a right to collect GA monthly from ratepayers through provisions in the *Electricity Act, 1998*. It is proposed that collection of a certain portion of the monthly GA be deferred for collection in the future, and that the right to recover the deferred GA from ratepayers be used as a basis for structured financing/securitization.

The current proposal is for a trust to be created as a financing vehicle (the "**Trust**") in connection the deferred GA. The Trust will finance the deferral of the GA by purchasing the right to recover such deferred GA from the IESO for the principal amount of the GA being deferred. For example, if the amount of GA that is being deferred is $200 million in a given month, the Trust will purchase from the IESO the right to future recovery of the deferred GA and the associated financing costs (including interest and transaction costs) for $200 million in cash.

The Trust is expected to finance these purchases from the IESO through a combination of senior secured financing raised in the capital markets and subordinated financing from OPG (the funding for which will mostly be from equity injections from the OEFC/Province).

For accounting purposes, OPG will need to have the ability to direct the activities of the Trust, through a services agreement and/or through the Trust's constating document.

Based on securitized financing raised by utilities in the US (backed by utility cost recovery orders) and the current regulatory framework in Ontario, the legislation in Ontario would need to be amended to provide the following, at a minimum:

1. The IESO will be empowered to create an asset (the "**Regulatory Asset**") consisting of all right, title and interest in and to:

   (a) right to recover from and bill Ontario electricity ratepayers for:

   (i) the principal amount of GA that is being deferred for collection;
   (ii) all interest and other financing costs incurred in respect of the deferral of the GA (whether through senior debt raised in the public markets or subordinated debt raised from OPG or others); and
   (iii) (subject to the comments in paragraph 5 below in respect of OPG's internal administrative costs only) all fees, expenses and other administrative costs associated with such financing, including up-front and ongoing financing costs and any indemnity payments;

all on such repayment/amortization schedule as agreed by the IESO and any purchaser of such right (or pursuant to a pre-defined schedule/formula in the legislation that covers all of the purchaser's principal, interest and ongoing financing costs on a monthly basis); and

(b) all revenues, collections, claims, rights to payments, money or proceeds arising from the rights and interests set out in paragraph (a) above, regardless of whether such revenues, collections, claims, rights to payments, money or proceeds are imposed, billed, received, collected or maintained together with or commingled with other revenues, collections, rights to payments, payments, money or proceeds.

2. The IESO may dispose of the Regulatory Assets created from time to time on such terms as the IESO determines in accordance with the terms of directives to be issued to the IESO from time to time by the Minister, provided that any such disposition shall be a true sale and absolute transfer of the IESO's right, title and interest in and to a Regulatory Asset to the purchaser of the Regulatory Asset.

3. The Regulatory Assets will not be subject to any set-off, counterclaim or other defence by the IESO or any successor or affiliated entity thereof.

4. The legislation will need to recognize the Regulatory Assets as amounts that may be recovered by the IESO (e.g. it could be designated as a "GA Deferral" and would be included in the amounts collectible by the IESO through the GA collection mechanism, and would include interest and financing costs).

5. The purchaser of the Regulatory Asset will have the right to require the IESO (or any successor) to collect the principal amount of GA deferred, together with interest, financing and administration costs, on the agreed repayment/amortization schedule. **[NTD: In the LIPA securitization rate order, if the entity that is authorized to collect rates to service the bonds ends up defaulting, there is the ability to request a court to order "sequestration" and payments of amounts owing to the owner of the Regulatory Asset. Consider whether to include a similar right here. Alternatively, consider whether a security interest over the moneys collected by the IESO could be provided to the purchaser.]**

OEB would be provided with oversight over the internal administrative costs collected by the Financing Trust. This could be accomplished by (a) providing the purchaser of the Regulatory Asset with the right to require

the IESO or a successor to collect only the principal amount of GA together with interest and financing costs and third party fees and expenses, and (b) requiring the IESO to collect amounts through the global adjustment and make payments to the purchaser of the Regulatory Asset with respect to the internal administrative costs incurred by the purchaser in connection with the purchase and management of the Regulatory Asset and the Financing Trust, in accordance with the order of the OEB then in effect. Under this mechanism, the OEB would be required to review the purchaser's internal administrative costs through a streamlined process and issue such orders in accordance with rules to be prescribed under a new regulation under the OEB Act, which would clearly limit the OEB's scope of review and could establish the basis for the purchaser to receive an appropriate fee for its services.

6. In the event that any action is taken or permitted by the Province or any regulatory authority that limits, alters, or impairs the value of a Regulatory Asset or reduces the ability of the IESO or the purchaser of the Regulatory Asset to collect or recover the costs associated therewith, the owner of the Regulatory Asset and the holders of any bonds or other securities issued to finance the purchase of the Regulatory Asset, will have a right of action against the Province for any damages suffered as a result of such amendment.

Attachment 2

STATUTORY AMENDMENTS

The following is preliminary and is based on our current understanding of the proposed structure and objectives. For example, we have assumed that the structure will not entail the insertion of a new Holdco between OPG and the Province. As these aspects are refined, some of the suggested amendments described below may not be needed and other aspects that we are not aware of may need to be considered. Accordingly, these suggested amendments are provided for discussion purposes and are subject to change. We would welcome the opportunity to work with OPG and the Ministry on refining the scope and substance of required legislative and regulatory amendments.

A. Amendments to Implement Structure

Certain *Electricity Act, 1998* amendments would be needed to implement the anticipated structure (which we understand, as noted above, would not include a Holdco), as follows:

- **Section 53.1(1):** Amend to permit owning and operating generation facilities through subsidiaries (not only directly through OPG). In addition, amend to permit OPG to administer, manage, loan moneys to and have a beneficial interest in, if applicable, Financing Trust.

- **Section 53.2:** Amend to permit the Minister to acquire, hold, dispose of or otherwise deal with securities or debt obligations of, or any other interest in, OPG or any subsidiaries. This is to accommodate possible variations to the financing structure that may be desirable over time.

- **Section 53.■ (new):** New statutory section to permit the Minister to enter into arrangements relating to an exercise of powers under 53.2.

- **Section 53.■ (new)**: New statutory section providing that creditors of Financing Trust have no recourse to the assets of OPG or any of its subsidiaries (other than Financing Trust, if applicable). In addition, consideration should be given as to whether the Act should be amended so that the Financing Trust cannot be wound up or liquidated.

B. Miscellaneous Corporate Items to Address

- **OPG Articles:** Amend the OPG's articles to remove the private company restrictions.

- **MOA with Province:** Consider whether any amendments to OPG's MOA with the Province are required to contemplate the Financing Trust.

C. Amendments Under Electricity Act to Implement GA Smoothing

Based on our understanding that the global adjustment smoothing mechanism is intended to benefit residential and small business customers only and that the Minister will be responsible for determining how much global adjustment smoothing is to be applied in a given month, if any, amendments to the *Electricity Act*, *1998* and Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) would be needed to implement the mechanism, as follows:

(i) Electricity Act:

- **Section ■ (New):** Establish a new power for the Minister to make directives to the IESO in relation to the global adjustment smoothing mechanism and, particularly, for purposes of establishing global adjustment smoothing amounts from time to time (expected to be monthly). To the extent possible, the directive power should be drafted so as to limit the ability for a future Minister to require the IESO to do anything that would materially and adversely affect the Financing Trust or its lenders. **[NTD: While our understanding is that the Minister would direct this, we note from other materials we have seen that OPG may instead be recommending a formula approach. It is not clear what the formula would look like, where it would be set out or how it would be applied and by whom]**

- **Paragraph 25.33(1):** This section says that IESO shall make adjustments in accordance with the regulations to ensure that, over time, payments by prescribed classes of market participants reflect amounts paid to OPG, OEFC and distributors, as well as amounts paid to entities with whom IESO has a procurement contract. Add new subsection (c) so as to require IESO to ensure that, over time, payments by prescribed classes of market participants also reflect amounts paid to Financing Trust. **[NTD: Not certain this is needed if only to benefit residential and small business consumers, who are not market participants. May be needed in reference to payments from distributors and retailers]**

- **Paragraph 25.33(2):** This section says that distributors and retailers shall make adjustments in accordance with the regulations to ensure that, over time, payments by prescribed classes of consumers reflect amounts paid to OPG, OEFC and distributors, as well as amounts paid to entities with whom IESO has a procurement contract. Add new subsection (c) so as to require distributors and retailers to ensure that, over time, payments by prescribed classes of consumers also reflect amounts paid to Financing Trust.

- **Note**: As described below, the regulation will need to include new requirements for the IESO to record the global adjustment smoothing amounts in one or more variance accounts and to use those amounts to offset amounts otherwise recorded in the variance accounts under Section 25.33(3) of the Act. For context, we note:

    - Section 25.33(3) says that adjustments under (1) or (2) relating to electricity consumed by consumers whose rates are determined by

the OEB under s. 79.16 of the OEB Act (i.e. RPP Customers) shall instead be made in accordance with the regulations to one or more variance accounts established and maintained by the IESO.

- Section 25.33(4) says IESO, distributors and retailers shall make and receive such payments, set-offs and credits as may be required or permitted by the regulations with respect to consumers described in (3), i.e. RPP Customers.

- Section 25.33(5) says that IESO shall establish and maintain such variance accounts as may be needed to record all amounts payable or receivable by it under 25.33.

(ii) O. Reg. 429/04 (Adjustments Under Section 25.33 of the Act):

- **Section 1(1):** Consider adding definitions for "Financing Trust" and "global adjustment smoothing amount" or such other terms as may be preferred.

- **Section 1.2(1) (New):** Add section providing that, for the purposes of this Regulation, the global adjustment smoothing amount for a month is the amount determined by the IESO in accordance with a directive from the Minister under section ■ of the Electricity Act in respect of the month. **[NTD: See above note re use of Minister directives]**

- **Section 1.2(2) (New):** Consider adding a section providing that the IESO shall publish the global adjustment smoothing amount for a month by no later than the 10th business day of the following month [to align with general publication requirements for global adjustment under s. 1.1(2)].

- **Section 10(1):** Amend formula for calculating Class B GA rate by subtracting the global adjustment smoothing amount for a month from "M", which is the total amount of the global adjustment for the month. The global adjustment smoothing amount could be designated as "X", such that the formula would be (M-X-N)/(P-Q). Define "X" as the global adjustment smoothing amount for the month as determined by the IESO in accordance with the Minister's directive under section ■ of the Electricity Act for the month. **[NTD: See above note re use of Minister directives]**

- **Section 10.1 (New):** Add new section to deal with adjustments under subsection 25.33(3) of the Act, i.e. in respect of RPP consumers. This section should require the IESO to establish, within the variance account(s) it maintains pursuant to subsection 25.33(3) of the Act, one or more subaccounts in which it shall record the global adjustment smoothing amounts applicable to the classes of consumers described in subsection 25.33(3) of the Act. This section must also specify that the IESO shall apply the amounts recorded in the subaccounts against the balances in the variance accounts for purposes of section 79.16(3) of the OEB Act.

  - **Note:** This is a key aspect because, when the OEB determines RPP rates, it must take into account the balances in the variance accounts established by the IESO under s. 25.33 of the Electricity Act and make adjustments with a view to eliminating the balances within 12 months. This proposed new section 10.1 causes the IESO to reduce (in the near term) the variance account balances by the global adjustment smoothing amounts, as provided by Financing Trust, thereby enabling the OEB to determine RPP rates that, despite being lower for RPP consumers in the near term, still eliminate the relevant variance account balances within 12 months.

- **Paragraph 11(2)2.ii:** Amend the formula for calculating the allocation of global adjustment for a month to a licensed distributor that is a market participant by subtracting the global adjustment smoothing amount for a month from "M", which has the same meaning as under section 10(1). The global adjustment smoothing amount could be designated as "X", such that the formula would be [(M-X-N) x (R+S-T)]/(P-Q). Define "X" as suggested under section 10(1).

- **Paragraph 11(2)3:** Amend the formula for calculating the allocation of global adjustment for a month to each Class B market participant by subtracting the global adjustment smoothing amount for a month from "M", which has the same meaning as under section 10(1). The global adjustment smoothing amount could be designated as "X", such that the formula would be [(M-X-N) x U]/(P-Q). Define "X" as suggested under section 10(1).

- **Paragraph 16(7)4:** Consider amending the description of "Global Adjustment" that is required to be included on certain invoices so as to inform consumers that their portion of the global adjustment for the month (i) may have been reduced by the application of a global adjustment smoothing amount from the Financing Trust, or (ii) may include amounts payable to the Financing Trust in respect of global adjustment smoothing amounts previously applied.

- **Section 20(1):** This section establishes an obligation for the Ontario Electricity Financial Corporation and every licensed distributor that is a market participant to give the IESO such information as the IESO may require for the purposes of the Regulation in the form specified by the IESO and before the expiry of the period specified by the IESO. Consider amending to extend this obligation to the Financing Trust.

- **Section 20(6):** This section provides that on request by the OEB, the IESO, a licensed distributor, an embedded generator, a retailer or the OEFC shall give the OEB such information relating to this Regulation as the OEB may require, in the form and within the period specified by the OEB. Consider amending to extend this obligation to the Financing Trust.

D. Amendments Under OEB Act to Implement Cost Recovery for Financing Trust

Amendments to the *Ontario Energy Board Act*, including amendments to O. Reg. 95/05 (Classes of Consumers and Determination of Rates) and the introduction of a new regulation, would be needed to implement a cost recovery process for the Financing Trust in relation to the global adjustment smoothing mechanism, potentially with limited OEB oversight, as follows:

(i) Ontario Energy Board Act:

- **Section 78(3.3):** This provision establishes an obligation for the OEB, when determining rates for the retailing of electricity, to take into account balances in variance accounts established under section 25.33 of the Electricity Act and to make adjustments "with a view to eliminating those balances within 12 months or such shorter time periods as the Minister may direct." Consider whether any amendments are needed, and confirm this works with the framework being proposed.

- **Section 78.7 (New):** We understand that the Province may want the OEB to have an oversight role. One possible approach would be to establish a new statutory section establishing that the IESO shall make payments to the Financing Trust with respect to the internal administrative costs incurred by the Financing Trust in connection with the purchase and management of the Regulatory Asset and the Financing Trust. Such payments by the IESO would need to be made in accordance with the order of the OEB then in effect, which orders shall be made by the OEB in accordance with rules prescribed under a new regulation.

    - The new regulation would need to be clear that the OEB does not have jurisdiction to consider the principal amount or any interest, financing costs, third party fees or expenses. Rather, OEB's role would be limited to considering the internal administrative costs of the Financing Trust and ensuring the Financing Trust receives an appropriate fee for its services, all of which would be recovered by the Financing Trust from the IESO, which would collect those amounts in the global adjustment. Note that, if this approach is accepted, the IESO and distributors and retailers would need the authority to collect such amounts as part of the GA and IESO would need the authority to pay such amounts to the Financing Trust. As such, additional amendments would be needed under O. Reg. 429/04.

- **Note:** Section 79.16 of the OEB Act does not require changes, but the significance of this provision should be understood.

    - Section 79.16 gives the OEB responsibility for determining electricity commodity prices for eligible consumers. Eligibility is determined under Reg. 95/05 (Classes of Consumers and Determination of Rates), which is also known as the Regulated Price Plan (RPP) Regulation.
    - Section 4(2) of the RPP Regulation defines RPP-eligible consumers as low volume consumers (i.e. those who annually use less than 150,000 kWh

or such other amount as prescribed), consumers with demand of 50 kW or less, residential consumers that have accounts with distributors, consumers who annually use 150,000 to 250,000 kW of electricity, and consumers who have accounts with distributors if in the farming business.

- Paragraph 6(1)3 of the RPP Regulation provides that "In determining the rates (for RPP-eligible consumers), the Board shall forecast the cost of electricity to be consumed by the consumers to whom the rates apply, taking into consideration adjustments required under section 25.33 of the *Electricity Act, 1998* and shall ensure that the rates reflect those costs."
- The Ontario Energy Board has developed a Regulated Price Plan Manual (revised February 16, 2016) to describe the processes and methodologies it uses for determining electricity commodity prices that are charged to RPP consumers pursuant to Section 79.16 of the OEB Act and paragraph 6(1)3 of the RPP Regulation.

(ii) O. Reg. 95/05 (Classes of Consumers and Determination of Rates)

- **Paragraph 6(1)3:** Amend so as to require the Board, when forecasting the cost of electricity to be consumed by the consumers to whom the rates apply, to take into consideration not only the adjustments required under section 25.33 of the Electricity Act but also the application or prior application of global adjustment smoothing amounts determined by the IESO in accordance with Minister directives under section ■ of the Electricity Act, and to ensure that the RPP rates reflect those amounts. **[NTD: See above note re use of Minister directives]**

(iii) New Regulation (Payments to the Financing Trust)

- If the OEB is to be given the role of reviewing and approving the recovery of OPG's internal administrative costs for the Financing Trust under the potential section 78.7 (see above), then this regulation should describe the process and criteria pursuant through which the OEB would determine the amounts that the IESO would be required to collect through the global adjustment, in accordance with section 25.33 of the Electricity Act, and pay to the Financing Trust in respect of the provision of global adjustment smoothing amounts. This part of the regulation should establish:

    - any reporting requirements from the Financing Trust and/or the IESO to the OEB in connection with the global adjustment smoothing mechanism;
    - the frequency of the OEB making determinations under this part of the regulation;
    - the process through which the OEB shall make these determinations, which should be a streamlined administrative process rather than a public hearing process or, if a hearing is needed, then the scope of the proceeding should be clearly and narrowly constrained so as to deter intervenor involvement, lengthy proceedings and reduce/eliminate risk to recovery by Financing Trust;

- the basis for the OEB's determinations as to the payments that shall be made to the Financing Trust, which should specify that:
  - the Financing Trust shall recover its prudently incurred internal administrative costs on a forecast basis each year;
  - the Financing Trust shall receive an appropriate fee each year (with some guidance as to what would be appropriate); and
  - the approved payment amounts shall be collected by the IESO through the global adjustment and paid to the Financing Trust in accordance with the order of the OEB then in effect. Note that O. Reg. 429/04 would likely need amendments to permit IESO (and distributors and retailers) to collect these amounts through the global adjustment.
