Hi James,

Some additional edits from Ron.

Thanks,

John.

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 27, 2016 |
| **Agenda Class:** | Discussion (In Camera) |
| **Last reviewed by:** TB/MBC March 24, 2015 | **Tracking to:** Cabinet (October 5, 2016) |

| **SUBMISSION TITLE:** | 2016-2018 Business Plan for Ontario Power Generation |
|---|---|

## I. DECISION BEFORE THE BOARD

- Receive Ontario Power Generation's (OPG) 2016-2018 Business Plan framework with requirement to align with Treasury Board Secretariat's Executive Compensation Framework Regulation

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Receive the 2016-2018 business plan for Ontario Power Generation | *Receive* |
| • Note Minister of Energy will provide concurrence with OPG's Business Plan, which will include a caveat that OPG align its compensation strategy with requirements of Treasury Board Secretariat's Executive Compensation Framework Regulation. | *Note* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2014-15** | **2015-16** | **2016-17** |

| Initiative cost requested | 0.0 | 0.0 | 0.0 |
| Initiative cost recommended | 0.0 | 0.0 | 0.0 |
| Recommended program base | 0.0 | 0.0 | 0.0 |
| Offset Recommended (Specify Ministry/Program) | 0.0 | 0.0 | 0.0 |
| Total Fiscal Impact | 0.0 | 0.0 | 0.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting ~~Review of the~~OPG's annual business plans for review by Treasury Board ~~was stipulated as part of the 2013-14 Results-based Planning process~~.

Note that it is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence. The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur. Appendix C provides more information on the concurrence process.

In March 2016, due to the timing of government decisions on Darlington nuclear refurbishment, OPG submitted a preliminary non-Board--approved draft of its business plan to the Ministry. Financial figures from the preliminary draft business plan were not incorporated into the already finalized Province's fiscal plan for the 2016 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have one-for-one impact on the Province's surplus/deficit position. OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2017.

***Overview of Current Business Plan***

OPG's 2016-18 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2016-2018 Business Plan show a decrease in earnings before tax of $289 million in 2016-17 and an improvement of $194 million in 2017-18 over the estimates in the 2016 Budget, which was largely based on the estimates from the 2015 Budget. OPG is projecting generally growing net income contributions to the Province's fiscal plan over the planning period. These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations decline by ~$120 million in 2018 and by ~$230 million in 2021, primarily due to lower pension and other post-employment benefit (OPEB) costs. The plan also incorporates continued efficiency improvements expected to be achieved through business unit and support group initiatives, including attrition-based staff reductions in certain areas.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – During the planned period, headcount from ongoing operations is forecasted to fall from 9,302 in 2016 to 8,811 in 2021.
    - Last year's concurrence letter included a caveat that OPG reduce its non-nuclear headcount by an additional 5% of 2015 levels by 2020. Using the 2015 business plan headcount level for 2015 (3716, which is consistent with the 2014 actual headcount of 3724), the 2020 projected headcount (3390) is an 8.8% reduction from 2015 Plan.
  - Key Projects: The plan assumes ongoing operations at Pickering for about four years beyond 2020, and that the execution of the Darlington refurbishment is consistent with approved budgets and as scheduled.

- Rate Application to the OEB
  - Rate Application – In May 2016, OPG filed a 5-year nuclear and hydroelectric rate application with the OEB covering the 2017-2021 period. The rate application includes a nuclear rate smoothing proposal to avoid price spikes that would arise during the Darlington refurbishment, by deferring the recovery of a portion of nuclear revenues to the post-refurbishment period.
  - Ratepayer Costs –OPG has estimated that the combined monthly bill impacts of new nuclear and hydroelectric rates to the typical residential customer ~~is expected~~ to average an annual increase of about $1.05 per month over the 2017-2021 period. The expected average annual impact on a typical residential customer's monthly bill over the period to 2021 is estimated to be ~0.7%.
- OPG's Executive Compensation Framework (Appendix F provides more information)
  - OPG's Business plan contains the company's proposed executive compensation framework. OPG has expressed an urgent need to adjust its compensation framework to ensure that effective leadership is in place for successful delivery on its key priorities and projects.
  - OPG's proposed compensation framework would target the 50th percentile relative to benchmarked peers for most roles. Treasury Board Secretariat (TBS) issued an Executive Compensation Framework Regulation that caps salary and performance-related payments for executives at no more than the 50th percentile of appropriate comparators.
  - ~~Acceptance~~ Concurrence of OPG's Business Plan ~~is required for fulfillment of~~ under the Memorandum of Agreement (MOA) ~~requirements, and~~ signals government support of OPG and its rate application.
    - The Ministry of Energy indicates conditional concurrence with OPG's Business plan would be explicit in that concurrence does not extend to OPG's proposed compensation framework, as embedded in its Business Plan. OPG would need to develop a new framework that demonstrates progress to meet the requirements outlined in TBS' regulation, working with the Minsitry of Energy and TBS. A new framework would require concurrence to implement.
- Capital Structure & Independent Borrowing Platform.
  - OPG is evaluating options to improve its actual capital structure to be more aligned with OEB's deemed capital structure used to set OPG's regulated rates.
  - OPG is also looking at the option to pursue a public capital market financing strategy. OPG indicates its 2016-2018 Business Plan does not reflect the impacts of any public financing strategy. OPG currently borrows for general corporate purposes from the Ontario Electricity Financial Corporation (an agency of the Ministry of Finance).
  - Once OPG has completed its evaluation, it will present options ~~for proceeding~~ for Shareholder concurrence.

**Commented [RK1]:** Should not presume proceeding with public capital borrowing. Options could include continuing to borrow from OEFC/the Province.

*Other Key Fiscal Risks:*

Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing would have a negative fiscal impact.

## APPENDIX A: PROPOSED MINUTE

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan, with the caveat that acceptance of OPG's compensation strategies will be subject to OPG's future alignment with requirements of Treasury Board Secretariat's Executive Compensation Framework Regulation.

ii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

## APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

## APPENDIX D: PREMIER'S ADVISORY COUNCIL ON GOVERNMENT ASSETS

In April 2014, the Premier established a Premier's Advisory Council on Government Assets (PAC) to review and identify opportunities to optimize the value and performance of Ontario government business enterprises including OPG and Hydro One. In April 2015, PAC presented the Premier with a report detailing the Council's ~~initial~~final findings and recommendations.

- For OPG, PAC recommended a detailed focus on the Darlington refurbishment project, as well as specific efficiency enhancements.
- For Hydro One, PAC recommended selling, over time, a majority interest in Hydro One through share sales to the public.

The government has moved forward with these recommendations. Hydro One completed its first phase of share sales in November 2015 through an initial public offering (IPO), and ~~the~~a secondary offering in April 2016. In addition, the Province has approved the Darlington refurbishment project, announced in January 2016.

## APPENDIX E: SUMMARY OF KEY HIGHLIGHTS FROM BUSINESS PLANS

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in March 2015. This is in part because the rate application currently before the Ontario Energy Board include a number of significant changes, as discussed below.

*Rate Application:*

OPG is proceeding with a rate submission, currently under review by the Ontario Energy Board (OEB). The outcome of these proceedings will have a substantial impact on OPG's ability to achieve business plan targets.

In May 2016, OPG filed a 5-year nuclear and hydroelectric rate application with the OEB covering the 2017-2021 period. Consistent with the amendments to Ontario Regulation 53/05, the rate application includes a nuclear rate smoothing proposal to avoid price spikes that would arise during the Darlington refurbishment, by deferring the recovery of nuclear revenues to the post-refurbishment period. The business plan assumes a nuclear base rate increases of 11 per cent per year beginning in 2017, until the end of the Darlington refurbishment period with the nuclear rate smoothing and the hydroelectric base rate increases of about 1.5 per cent per year.

OPG has estimated that the combined bill impacts of new nuclear and hydroelectric rates to the typical residential customer is expected to average about $1.05 per month annually over the 2017-2021 period. The expected average annual impact on a typical residential customer's monthly bill over the period to 2021 is estimated to be ~0.7%. The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and ~35% by 2021.

It will be up to the OEB to approve OPG's rates through its rate application process, which includes public hearings and an extensive intervener process.

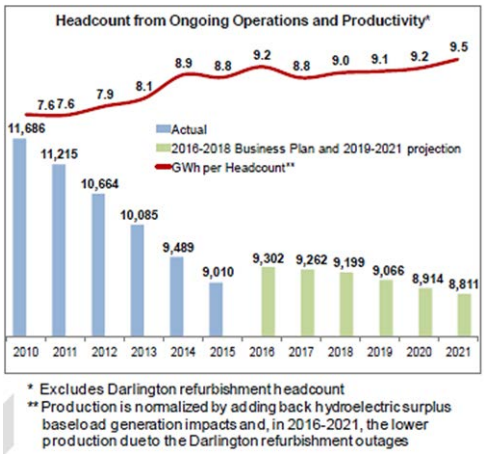
*Finding Efficiencies (Benefits Ratepayers):*

As part of a company-wide business transformation, OPG has saved over $1 billion in costs from January 2011 to December 2016 through headcount reductions of approximately 2,800 employees from on-going operations.

OPG has implemented increased pension contributions and other pension reforms for PWU, Society and Management staff to better align with the broader public sector. Through negotiations, OPG has achieved 1% compensation increases for PWU and Society for each of the next 3 years. As of the end of 2015 OPG had approximately 9,250 staff, with 90% represented by two unions. Of the 1,027 staff not represented by a union, 80 are Executives who would be covered by the proposed framework.

OPG has reduced management headcount by 19% per cent since 2010. OPG has also reduced total base salary costs for management by 18% since 2010.

OPG's headcount reductions forecasted for 2020 are consistent with the direction in the last concurrence letter to reduce non-nuclear headcounts by 5% based on 2015 levels by 2020. Non-nuclear headcount is projected to be approximately 3,400 in 2020, representing an approximate nine percent reduction from the 2015 staffing level included in OPG's 2015-2017 Business Plan, submitted last year. See graph on next page.



*Key OPG Risks:*

- All figures included in OPG's 2016-2018 Business Plan are based on USGAAP basis. Any decision to consolidate OPG's financials on the Province's books on an International Financial Reporting Standards (IFRS) may result in negative fiscal impacts. Ministry of Energy staff understand that staff from the Office of the Provincial Controller's Office are working with OPG to better understand impacts.

- Adverse OEB decisions that do not allow for the full recovery of costs as planned will reduce OPG's earnings and cash flows, and could stress credit metrics (e.g., disallowance of compensation costs). In line with US GAAP, OPG accounts for pension and OPEB on an accrual basis. If the outcome of the OEB's generic proceeding is to account for pension and OPEB on a cash basis, OPG would need to write-off the amounts in the accrual account (balance of ~$450M at the end of 2016 or over ~$900M by the end of 2021), with a one-for-one fiscal impact.

- An inability to achieve nuclear production targets would reduce OPG's earnings. Technical challenges associated with ongoing Pickering operations could result in difficulties reaching proposed forecasts. In addition, the OEB has increased OPG's Nuclear Generation forecasts in previous applications.

- There are important financial and reputation risks related to the Darlington Refurbishment Project that if the actual costs exceed the budgeted amounts or if OPG is not able to meet its schedule. Failure to meet the refurbishment objectives of the project will potentially have ongoing impact to the operational performance of the nuclear station, leading to long-term impacts to OPG.

- OPG was requested to work with the Office of the Provincial Controller and the Office of the Auditor General of Ontario to assess the impact of transitioning to the International Financial Reporting Standards (IFRS), in consolidating OPG to the Province's Accounts. Adoption of IFRS by the Province in consolidating OPG's financial results could have significant implications, including increased income volatility and material income impacts starting in 2015-16 fiscal year and up to $1 billion in 2016-17.

*Auditor and Ombudsman Reviews:*

On December 2, 2015, the Auditor General tabled her 2015 Annual Report which included a follow-up to the 2013 Value-for-money audit of OPG's Human Resources. The Auditor General found that OPG had fully implemented 8 of the 14 recommendations, with another 6 in the process of being implemented. The follow up found that OPG had made reasonable progress on all recommendations made in the original report. On January 13, 2016, the Minister of Energy wrote to OPG's requesting a status update in June 2016 on the progress of the remaining recommendations.

*Large Renewable Procurement:*

OPG was a successful applicant in the IESO's Large Renewable Procurement program as announced on March 10, 2016. OPG has been awarded a contract for a 44 MW Nanticoke Solar Photovoltaic project in Haldimand County.

## APPENDIX F: EXECUTIVE COMPENSATION

The Ministry has provided the following overview of OPG's proposed executive compensation framework:

OPG has indicated that an improved executive compensation framework is necessary to deliver on key projects, which is consistent with the commercial vision for the company.

Within its Business Plan, OPG proposed a compensation framework that would allow the company to begin to move its executives to the 50th percentile of the comparable benchmarks, established in a third-party review of compensation.

To align with requirements under TBS' compensation framework, OPG must revisit its current proposal and submit a compliant strategy to the Ministry of Energy in accordance with the regulation.

- OPG's current proposal sought to move ~80 executives up to the 50th percentile of comparable benchmarks and help OPG with its challenge of retaining and attracting the necessary skills to deliver on key government priorities (e.g., Darlington refurbishment).
- TBS' Compensation Framework Regulation caps salary and performance-related payments for designated executives in the public sector, including those at OPG, at no more than the 50th percentile of appropriate comparators. OPG would be required to seek public comment as part of developing its executive compensation program and post a compliant program to its public website on or before September 5, 2017.

OPG has indicated that for executive cohort, the following efficiencies have been realized:

- Reductions in the executive group headcount has resulted in cumulative savings of $10M, with an additional $5M/year going forward.
- Permanent elimination of 12 executive positions since 2012.
- Where executive vacancies have been filled, replacements are at or below predecessor cost.
- Increased employee pension contributions by 1% in 2016 and 2% in 2017 with reduced company contributions.
- New hires are at pension rule of 90 rather than rule of 84.

Other Considerations:

Further, financial advisors have made the following recent recommendations on OPG's executive compensation proposal:

- The 50th percentile target (of benchmarked peers) should measure total compensation including pension accumulation of the OPG employees, not just salaries.
- OPG should introduce a more affordable and less risky defined contribution plan to replace the existing defined benefit plans for new hires.
- OPG should substitute net income with some measure of operating productivity or cost structure in the Medium Term Incentive Plan (MTIP) performance targets.
- OPG should change the MTIP payout target from 70% to 80% and make the payout matrix less flat.
- Voluntarily expand the group of Named Executive Officers disclosed in Annual Information Forms.
- Introduce a policy that all newly externally hired management staff be given a defined contribution pension plan instead of a defined benefit plan.

## APPENDIX G: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING –

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

| **Revenue** ($millions) | **2015-16** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|---|
| **2016 Ontario Budget** | | | | |
| Ontario Power Generation | | | | |
| Net Income | 257 | 471 | 586 | 673 |
| Income Tax | 100 | 224 | 159 | 182 |
| **Consolidation Adj[1]** | 241 | | | |
| **2016- 2018 OPG Business Plan** | | | | |
| Ontario Power Generation | | | | |
| Net Income | 278 | 302 | 694 | 686 |
| Income Tax | 105 | 104 | 245 | 155 |
| **Consolidation Adj[1]** | 247 | | | |
| **Change in GBE Net Income & Consolidation Adjustment +/(-)** | | | | |
| Ontario Power Generation | 27[2] | (169) | 108 | 13 |
| **Change in GBE Income Tax PILs +/(-)** | | | | |
| Ontario Power Generation | 38 | (120) | 86 | (27) |
| **TOTAL OF OPG CHANGES** | **65** | **(289)** | **194** | **(14)** |

1. Includes Provincial consolidation adjustments totalling $241M for 2015-16 in Budget 2016 and $247M in Public Accounts for unrealized gains or losses on the nuclear funds net of Bruce variance account.
2. Change in OPG net income in 2015-16 of $21M plus change in ONFA-related consolidation adjustment, for comparison purpose only, of $6M in 2015-16.

OPG's fiscal results are also impacted by Other PILs to the Ontario Electricity Financial Corporation (OEFC) and the Province. The following table reflects these others impacts in addition to the latest net income and income tax PILs from OPG's August update.

| **Revenue** ($millions) | **2015-16** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|---|
| **2016 Ontario Budget** | | | | |
| Combined Other PILs & Other GRC | 341 | 342 | 351 | 359 |
| Other PILs (GRC to OEFC, Proxy Property Tax) | 214 | 213 | 223 | 232 |
| Other GRC (to MOF & Niagara Parks Commission)[1] | 127 | 129 | 128 | 137 |
| **2016-18 OPG Business Plan** | | | | |
| Combined Other PILs & Other GRC[2] | 335 | 353 | 358 | 366 |
| Other PILs (GRC to OEFC, Proxy Property Tax)[3] | 215 | 215 | 220 | 220 |
| Other PILs (GRC to MOF & Niagara Parks Commission)[3] | 120 | 135 | 140 | 140 |
| **OPG Monthly Update (August 2016)** | | | | |
| Net Income | - | 361 | - | - |
| Income Tax PILs to OEFC | - | 98 | - | - |

1. The GRC to MOF & Niagara Parks Commission (NPC) is provided to enable comparison to the 2016-18 Business Plan.
2. Include GRC to OEFC, GRC to MOF and NPC and Proxy Property Tax, provided to TBS by Energy on September 14, 2016.
3. Preliminary 2016-19 Business Plan forecast provided by Energy, January 29, 2016. (Do not add to the Combined Other PILs & Other GRC row, likely due to rounding.)

| Total Fiscal Impact | 0.0 | 0.0 | 0.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.~~.~~

~~Note that~~ ~~I~~it is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

**Formatted:** Tab stops: Not at 0.69"

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.
~~Appendix C provides more information on the concurrence process.~~

In March 2016, due to the timing of government decisions on Darlington nuclear refurbishment, OPG submitted a preliminary non-Board-approved draft of its business plan to the Ministry. Financial figures from the preliminary draft business plan were not incorporated into the already finalized Province's fiscal plan for the 2016 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have one-for-one impact on the Province's surplus/deficit position. OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2017.

***Overview of Current Business Plan***

OPG's 2016-18 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2016-2018 Business Plan show a decrease in earnings before tax of $289 million in 2016-17 and an improvement of $194 million in 2017-18 over the estimates in the 2016 Budget, which was largely based on the estimates from the 2015 Budget. OPG is projecting generally growing net income contributions to the Province's fiscal plan over the planning period. These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations decline by ~$120 million in 2018 and by ~$230 million in 2021, primarily due to lower pension and other post-employment benefit (OPEB) costs. The plan also incorporates continued efficiency improvements expected to be achieved through business unit and support group initiatives, including attrition-based staff reductions in certain areas.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – During the planned period, headcount from ongoing operations is forecasted to fall from 9,302 in 2016 to 8,811 in 2021.
    - Last year's concurrence letter included a caveat that OPG reduce its non-nuclear headcount by an additional 5% of 2015 levels by 2020. Using the 2015 business plan headcount level for 2015 (3716, which is consistent with the 2014 actual headcount of 3724), the 2020 projected headcount (3390) is an 8.8% reduction from 2015 Plan.

Formatted: Tab stops: Not at 0.69"

Formatted: Font: 5 pt

- Key Projects: The plan assumes ongoing operations at Pickering for about four years beyond 2020, and that the execution of the Darlington refurbishment is consistent with approved budgets and as scheduled.

- Rate Application to the OEB
  - Rate Application – In May 2016, OPG filed a 5-year nuclear and hydroelectric rate application with the OEB covering the 2017-2021 period. The rate application includes a nuclear rate smoothing proposal to avoid price spikes that would arise during the Darlington refurbishment, by deferring the recovery of a portion of nuclear revenues to the post-refurbishment period.
  - Ratepayer Costs –OPG has estimated that the combined monthly bill impacts of new nuclear and hydroelectric rates to the typical residential customer to average an annual increase of about $1.05 per month over the 2017-2021 period. The expected average annual impact on a typical residential customer's monthly bill over the period to 2021 is estimated to be ~0.7%.
- OPG's Executive Compensation Framework (Appendix F provides more information)
  - OPG's Business plan contains the company's proposed executive compensation framework. OPG has expressed an urgent need to adjust its compensation framework to ensure that effective leadership is in place for successful delivery on its key priorities and projects.
  - OPG's proposed compensation framework would target the 50th percentile relative to benchmarked peers for most roles. Treasury Board Secretariat (TBS) issued an Executive Compensation Framework Regulation that caps salary and performance-related payments for executives at no more than the 50th percentile of appropriate comparators.
  - Concurrence of OPG's Business Plan under the Memorandum of Agreement (MOA) signals government support of OPG and its rate application.
    - The Ministry of Energy indicates conditional concurrence with OPG's Business plan would be explicit in that concurrence does not extend to OPG's proposed compensation framework, as embedded in its Business Plan. OPG would need to develop a new framework that demonstrates progress to meet the requirements outlined in TBS' regulation, working with the Minsitry of Energy and TBS. A new framework would require concurrence to implement.
- Capital Structure & Independent Borrowing Platform.
  - OPG is evaluating options to improve its actual capital structure to be more aligned with OEB's deemed capital structure used to set OPG's regulated rates.
  - OPG is also looking at the option to pursue a public capital market financing strategy. OPG indicates its 2016-2018 Business Plan does not reflect the impacts of any public financing strategy. OPG currently borrows for general corporate purposes from the Ontario Electricity Financial Corporation (an agency of the Ministry of Finance).
  - OPG and ENERGY have been meeting in the spring and summer with Ministry of Finance / Ontario Financing Authority, TBS and other officials on this.
  - Once OPG has completed its evaluation, it will present options for ~~Shareholder~~ Provincial concurrence.

*Other Key Fiscal Risks:*

Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the Province's financial statements could result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing (vs the Province's borrowing cost for OEFC to lend to OPG) would have a negative fiscal impact.

## APPENDIX A: PROPOSED MINUTE

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan, with the caveat that acceptance of OPG's compensation strategies will be subject to OPG's future alignment with requirements of Treasury Board Secretariat's Executive Compensation Framework Regulation.

ii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

## APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

## APPENDIX D: PREMIER'S ADVISORY COUNCIL ON GOVERNMENT ASSETS

In April 2014, the Premier established a Premier's Advisory Council on Government Assets (PAC) to review and identify opportunities to optimize the value and performance of Ontario government business enterprises including OPG and Hydro One. In April 2015, PAC presented the Premier with a report detailing the Council's final findings and recommendations.

- For OPG, PAC recommended a detailed focus on the Darlington refurbishment project, as well as specific efficiency enhancements.
- For Hydro One, PAC recommended selling, over time, a majority interest in Hydro One through share sales to the public.

The government has moved forward with these recommendations. Hydro One completed its first phase of share sales in November 2015 through an initial public offering (IPO), and a secondary offering in April 2016. In addition, the Province has approved the Darlington refurbishment project, announced in January 2016.

## APPENDIX E: SUMMARY OF KEY HIGHLIGHTS FROM BUSINESS PLANS

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in March 2015. This is in part because the rate application currently before the Ontario Energy Board include a number of significant changes, as discussed below.

*Rate Application:*

OPG is proceeding with a rate submission, currently under review by the Ontario Energy Board (OEB). The outcome of these proceedings will have a substantial impact on OPG's ability to achieve business plan targets.

In May 2016, OPG filed a 5-year nuclear and hydroelectric rate application with the OEB covering the 2017-2021 period. Consistent with the amendments to Ontario Regulation 53/05, the rate application includes a nuclear rate smoothing proposal to avoid price spikes that would arise during the Darlington refurbishment, by deferring the recovery of nuclear revenues to the post-refurbishment period. The business plan assumes a nuclear base rate increases of 11 per cent per year beginning in 2017, until the end of the Darlington refurbishment period with the nuclear rate smoothing and the hydroelectric base rate increases of about 1.5 per cent per year.

OPG has estimated that the combined bill impacts of new nuclear and hydroelectric rates to the typical residential customer is expected to average about $1.05 per month annually over the 2017-2021 period. The expected average annual impact on a typical residential customer's monthly bill over the period to 2021 is estimated to be ~0.7%. The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and ~35% by 2021.

It will be up to the OEB to approve OPG's rates through its rate application process, which includes public hearings and an extensive intervener process.

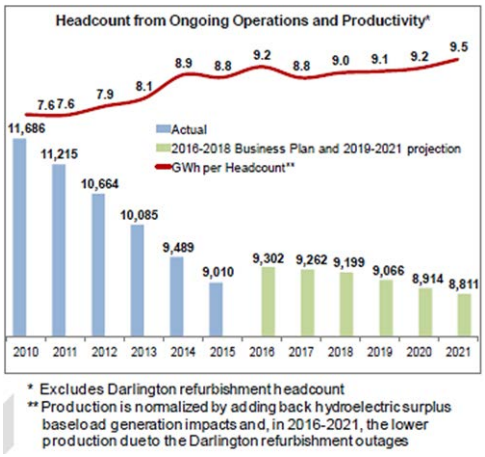
*Finding Efficiencies (Benefits Ratepayers):*

As part of a company-wide business transformation, OPG has saved over $1 billion in costs from January 2011 to December 2016 through headcount reductions of approximately 2,800 employees from on-going operations.

OPG has implemented increased pension contributions and other pension reforms for PWU, Society and Management staff to better align with the broader public sector. Through negotiations, OPG has achieved 1% compensation increases for PWU and Society for each of the next 3 years. As of the end of 2015 OPG had approximately 9,250 staff, with 90% represented by two unions. Of the 1,027 staff not represented by a union, 80 are Executives who would be covered by the proposed framework.

OPG has reduced management headcount by 19% per cent since 2010. OPG has also reduced total base salary costs for management by 18% since 2010.

OPG's headcount reductions forecasted for 2020 are consistent with the direction in the last concurrence letter to reduce non-nuclear headcounts by 5% based on 2015 levels by 2020. Non-nuclear headcount is projected to be approximately 3,400 in 2020, representing an approximate nine percent reduction from the 2015 staffing level included in OPG's 2015-2017 Business Plan, submitted last year. See graph on next page.



*Key OPG Risks:*

- All figures included in OPG's 2016-2018 Business Plan are based on USGAAP basis. Any decision to consolidate OPG's financials on the Province's books on an International Financial Reporting Standards (IFRS) may result in negative fiscal impacts. Ministry of Energy staff understand that staff from the Office of the Provincial Controller's Office are working with OPG to better understand impacts.

- Adverse OEB decisions that do not allow for the full recovery of costs as planned will reduce OPG's earnings and cash flows, and could stress credit metrics (e.g., disallowance of compensation costs). In line with US GAAP, OPG accounts for pension and OPEB on an accrual basis. If the outcome of the OEB's generic proceeding is to account for pension and OPEB on a cash basis, OPG would need to write-off the amounts in the accrual account (balance of ~$450M at the end of 2016 or over ~$900M by the end of 2021), with a one-for-one fiscal impact.

- An inability to achieve nuclear production targets would reduce OPG's earnings. Technical challenges associated with ongoing Pickering operations could result in difficulties reaching proposed forecasts. In addition, the OEB has increased OPG's Nuclear Generation forecasts in previous applications.

- There are important financial and reputation risks related to the Darlington Refurbishment Project that if the actual costs exceed the budgeted amounts or if OPG is not able to meet its schedule. Failure to meet the refurbishment objectives of the project will potentially have ongoing impact to the operational performance of the nuclear station, leading to long-term impacts to OPG.

- OPG was requested to work with the Office of the Provincial Controller and the Office of the Auditor General of Ontario to assess the impact of transitioning to the International Financial Reporting Standards (IFRS), in consolidating OPG to the Province's Accounts. Adoption of IFRS by the Province in consolidating OPG's financial results could have significant implications, including increased income volatility and material income impacts starting in 2015-16 fiscal year and up to $1 billion in 2016-17.

*Auditor and Ombudsman Reviews:*

On December 2, 2015, the Auditor General tabled her 2015 Annual Report which included a follow-up to the 2013 Value-for-money audit of OPG's Human Resources. The Auditor General found that OPG had fully implemented 8 of the 14 recommendations, with another 6 in the process of being implemented. The follow up found that OPG had made reasonable progress on all recommendations made in the original report. On January 13, 2016, the Minister of Energy wrote to OPG's requesting a status update in June 2016 on the progress of the remaining recommendations.

*Large Renewable Procurement:*

OPG was a successful applicant in the IESO's Large Renewable Procurement program as announced on March 10, 2016. OPG has been awarded a contract for a 44 MW Nanticoke Solar Photovoltaic project in Haldimand County.

## APPENDIX F: EXECUTIVE COMPENSATION

The Ministry has provided the following overview of OPG's proposed executive compensation framework:

OPG has indicated that an improved executive compensation framework is necessary to deliver on key projects, which is consistent with the commercial vision for the company.

Within its Business Plan, OPG proposed a compensation framework that would allow the company to begin to move its executives to the 50th percentile of the comparable benchmarks, established in a third-party review of compensation.

To align with requirements under TBS' compensation framework, OPG must revisit its current proposal and submit a compliant strategy to the Ministry of Energy in accordance with the regulation.

- OPG's current proposal sought to move ~80 executives up to the 50th percentile of comparable benchmarks and help OPG with its challenge of retaining and attracting the necessary skills to deliver on key government priorities (e.g., Darlington refurbishment).
- TBS' Compensation Framework Regulation caps salary and performance-related payments for designated executives in the public sector, including those at OPG, at no more than the 50th percentile of appropriate comparators. OPG would be required to seek public comment as part of developing its executive compensation program and post a compliant program to its public website on or before September 5, 2017.

OPG has indicated that for executive cohort, the following efficiencies have been realized:

- Reductions in the executive group headcount has resulted in cumulative savings of $10M, with an additional $5M/year going forward.
- Permanent elimination of 12 executive positions since 2012.
- Where executive vacancies have been filled, replacements are at or below predecessor cost.
- Increased employee pension contributions by 1% in 2016 and 2% in 2017 with reduced company contributions.
- New hires are at pension rule of 90 rather than rule of 84.

Other Considerations:

Further, financial advisors have made the following recent recommendations on OPG's executive compensation proposal:

- The 50th percentile target (of benchmarked peers) should measure total compensation including pension accumulation of the OPG employees, not just salaries.
- OPG should introduce a more affordable and less risky defined contribution plan to replace the existing defined benefit plans for new hires.
- OPG should substitute net income with some measure of operating productivity or cost structure in the Medium Term Incentive Plan (MTIP) performance targets.
- OPG should change the MTIP payout target from 70% to 80% and make the payout matrix less flat.
- Voluntarily expand the group of Named Executive Officers disclosed in Annual Information Forms.
- Introduce a policy that all newly externally hired management staff be given a defined contribution pension plan instead of a defined benefit plan.

## APPENDIX G: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING –

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

| **Revenue** ($millions) | **2015-16** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|---|
| **2016 Ontario Budget** | | | | |
| Ontario Power Generation | | | | |
| Net Income | 257 | 471 | 586 | 673 |
| Income Tax | 100 | 224 | 159 | 182 |
| **Consolidation Adj[1]** | 241 | | | |
| **2016- 2018 OPG Business Plan** | | | | |
| Ontario Power Generation | | | | |
| Net Income | 278 | 302 | 694 | 686 |
| Income Tax | 105 | 104 | 245 | 155 |
| **Consolidation Adj[1]** | 247 | | | |
| **Change in GBE Net Income & Consolidation Adjustment +/(-)** | | | | |
| Ontario Power Generation | 27[2] | (169) | 108 | 13 |
| **Change in GBE Income Tax PILs +/(-)** | | | | |
| Ontario Power Generation | 38 | (120) | 86 | (27) |
| **TOTAL OF OPG CHANGES** | **65** | **(289)** | **194** | **(14)** |

1. Includes Provincial consolidation adjustments totalling $241M for 2015-16 in Budget 2016 and $247M in Public Accounts for unrealized gains or losses on the nuclear funds net of Bruce variance account.
2. Change in OPG net income in 2015-16 of $21M plus change in ONFA-related consolidation adjustment, for comparison purpose only, of $6M in 2015-16.

OPG's fiscal results are also impacted by Other PILs to the Ontario Electricity Financial Corporation (OEFC) and the Province. The following table reflects these others impacts in addition to the latest net income and income tax PILs from OPG's August update.

| **Revenue** ($millions) | **2015-16** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|---|
| **2016 Ontario Budget** | | | | |
| Combined Other PILs & Other GRC | 341 | 342 | 351 | 359 |
| Other PILs (GRC to OEFC, Proxy Property Tax) | 214 | 213 | 223 | 232 |
| Other GRC (to MOF & Niagara Parks Commission)[1] | 127 | 129 | 128 | 137 |
| **2016-18 OPG Business Plan** | | | | |
| Combined Other PILs & Other GRC[2] | 335 | 353 | 358 | 366 |
| Other PILs (GRC to OEFC, Proxy Property Tax)[3] | 215 | 215 | 220 | 220 |
| Other PILs (GRC to MOF & Niagara Parks Commission)[3] | 120 | 135 | 140 | 140 |
| **OPG Monthly Update (August 2016)** | | | | |
| Net Income | - | 361 | - | - |
| Income Tax PILs to OEFC | - | 98 | - | - |

1. The GRC to MOF & Niagara Parks Commission (NPC) is provided to enable comparison to the 2016-18 Business Plan.
2. Include GRC to OEFC, GRC to MOF and NPC and Proxy Property Tax, provided to TBS by Energy on September 14, 2016.
3. Preliminary 2016-19 Business Plan forecast provided by Energy, January 29, 2016. (Do not add to the Combined Other PILs & Other GRC row, likely due to rounding.)

**From:** John Kim
**To:** Ronald Kwan
**Subject:** A call from OPCD
**Date:** Friday, January 13, 2017 4:13:14 PM

---

Hi Ron,

Helen Graham and Cindy Veinot gave me a call. Helen called first and then asked me to a call with Cindy.

So DM of Energy appears to have engaged DM of TBS which is how OPCD received the deck. Energy asked for comments from an accounting perspective which is how OPCD seemed to have gotten engaged.

They wanted mostly clarification on Global Adjustment and what it covers. Cindy's comments were to the point that she would not see how this will not lead to a fiscal hit. That you cannot create a receivable/asset , unless there is a counterparty or unless it is a rate regulated entity.

I'm running out of steam so will be heading out shortly but will try to provide you with a note this weekend.

Thanks,

John.

**CABINET BRIEFING NOTE**

| | |
|---|---|
| **Committee:** | Cabinet |
| **Meeting Date:** | September ~~14~~13, 2016 |
| **Ministry:** | ENERGY |
| **Last reviewed by:** | **Tracking to:** Cabinet – September ~~14~~13, 2016 |

**[BASED ON DRAFT CABINET SUBMISSION]**

**SUBMISSION TITLE:** Electricity Price Mitigation (Ontario Rebate for Electricity Consumers)

## I. REQUEST/DECISION REQUIRED:

The Ministry of Energy is proposing measures to provide relief to various electricity consumer classes. These measure include:

1.a. Provide an ~~pre-tax~~ 8% rebate equal to the provincial portion of HST to consumers eligible for the ~~to~~ Regulated Price Plan (RPP) ~~consumers~~;

1.b. Updating Rural or Remote Rate Protection (RRRP);

2.a. Expanding the Industrial Conservation Initiative (ICI) eligibility to customers above 1MW in all sectors;

~~2.b.~~ Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest 1% reduction in rates, with modest savings from proceeds intended for electricity relief through the Climate Change Action Plan to provide fiscal offsets.

~~2.c.~~

~~2.d.~~2.b. ~~[Approve in principle an expenditure increase estimated at $261M [estimate subject to refinement from ENERGY] in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund.]~~

**Commented [SK21]:** Re-ordered/numbered to align with revised deck.

**Commented [SK22]:** Unclear if this is necessary for the cabinet note as the TB/MBC note may be worried more on fiscal implications.

**Commented [RK3]:** Remove from here, but should be part of fiscal impact part of the note.

**Commented [SK24R3]:** Will do. It's in the financial summary section.

## II. KEY POINTS:

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online.

As part of the 2016 Budget, the government committed to mitigating electricity cost impacts that were anticipated from the cap and trade program. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a

cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

| | Measure | Targeted Recipients | Impact (annually) | |
|---|---|---|---|---|
| | | | Fiscal | Rate Base |
| **1.a** | 8% Rebate to Regulated Price Plan eligible consumers | Residential, small business, small farms and other small users | $1B | - |
| **1.b** | Updating Rural or Remote Rate Protection | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. | - | $110M |
| **2.a** | Expanding ICI eligibility to customers above 1MW in all sectors | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors | - | $47M/ $82M* |
| **2.b** | Redirecting cap and trade proceeds recycling:<br>• As part of the original CCAP policy, $330M of the cap & trade proceeds was to be recycled for electricity price mitigation for residential and non-residential users.<br>• Under this proposal, $270 M would be used to mitigate non-residential users<br>• provides $60M for potential fiscal offsets to the 8% rebate | Commercial and industrial electricity customers | ($60M)** | - |

*Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.
**To meet the Budget 2016 commitment, the Climate Change Action Plan (CCAP) committed $1.3B from the Greenhouse Gas Reduction Account (GGRA) or about $330M annually. Current proposal will require $60M less or $270M annually. Assumes the $60M is diverted to in-plan initiatives.

- ENERGY provided the following overview of bill impacts:

| Regulated Price Plan (Residential) Impact[1]* | | Class B (Commercial)[4] | Class A (Industrial)[4] | |
|---|---|---|---|---|
| Average[2] (750 kWh/month) | Rural[3]** (1000 kWh/month) | | Existing | New |

**Commented [SK25]:** Table below from the latest ENERGY Deck (FPC Major Project Morning of Sept 8).

| | | | | |
|---|---|---|---|---|
| -$~~10~~11/month (-~~6~~8%) | -$45/month (-20%) | -$1/MWh (-1%) | -$1/MWh (-1%) | Up to -$52/MWh (-34%) |

~~Note: The impact of cap and trade would not be added to electricity bills until 2017 and impact of ICI would not be added until 2018. All impacts included here for illustrative purposes~~

1~~*~~. ENERGY did not provide the monthly impact for other Regulated Price Plan not classified as Residential (eg. farms, small businesses) that would benefit from the 8% Rebate to Regulated Price Plan.

2. Regulated Price Plan Impact represents the pre-tax values of 8% rebate and does not include the impact of ICI expansion and RRRP update (total impact of $1.31/month based on 750 kWh/month).

3.~~**~~ Rural customers refers to those Hydro One customers eligible to receive RRRP (R2 rate class customers). Impact shown is pre-tax and does not include the impact of ICI expansion and RRRP update (total impact of $1.74/month based on 1000 kWh/month).

4. The impact of cap and trade would not be added to electricity bills until 2017 and impact of ICI would not be added until 2018.

**1.a. 8% Rebate to Regulated Price Plan (RPP)**

- An 8% rebate ~~on the pre-tax portion~~ for Regulated Price Plan (RPP) eligible consumers would be equal to the provincial portion of HST and funded by the tax base.
- The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

| *$ millions* | **2017** | **2018** | **2019** | **2020** |
|---|---|---|---|---|
| | 1,003 | 1,014 | 975 | 1,049 |
| Avg. 2017-20 | 1,010 | | | |

- On a fiscal year basis, the above estimates become:

| *$ millions* | **2016-17** | **2017-18** | **2018-19** | **2019-20** |
|---|---|---|---|---|
| | 261 | 1,006 | 1,004 | 994 |
| 3-Year Avg. | 1,001 | | | |

- Ministry of Energy staff are in the process of developing a refined estimate of the cost.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - While non-Regulated Price Plan eligible consumers would not see a benefit from the 8% rebate under this option, all industrial and commercial consumers would receive proceeds recycling through the Greenhouse Gas Reduction Account (GGRA).
  - Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.
- New legislation would be required and closely mirror the Ontario Clean Energy Benefit (OCEB) Act, 2010. More details further below.
- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.
- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.

  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- The rebate would not be directly linked to HST.

**1.b. Updating (Increasing) Rural or Remote Rate Protection**

- RRRP funding supporting Hydro One R2 (rural) customers capped at current levels since 2004.
- The current program provides a monthly subsidy of ~~a about~~ $~~32~~31.50/month.
- Proposal will provide an additional $110 million in support to approximately 329,000 R2 customers to $235 million annually.
- Proposal will increase the subsidy by about $28/month and equalize R2 bills with Hydro One R1 (medium) density customers at 1,000 kWh.
- All residential consumers would see an average cost increase of about $0.60/month.
- ENERGY is considering options to periodically adjust the amount of rate protection eg. indexed at inflation or “trued up” on a regular basis.

**2.a. Expanding ICI Eligibility to customers above 1MW in all sectors**

- Lower threshold for participation in ICI to 1 MW and remove sectoral restrictions.
- Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
- Expanding the ICI will reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods (80MW in the short term and 165 MW in the long term)
- Bill savings to new participants up to 21% in the short term and up to 34% long-term.
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - Companies that would become eligible under such an expansion include Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.
- Class B consumers would have a collective increase in the Global Adjustment of $47M in the short term and $~~87M~~ 82M in the long term from this initiative.
- Residential consumers would see an average cost increase of $0.42/month in the short term and $0.74/month in the long term.

**2.b. Redirect Cap and Trade Proceeds Recycling**

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers.
- Ontario’s Climate Change Action Plan (CCAP) includes up to $1.32 billion over 4 years to help keep electricity rates affordable for residential and industrial consumers.
- ~~The GGRA allocated $120M to average residential consumers, $170M to commercial and $40M to industrial consumers.~~

**Commented [SK26]:** Suggest deletion. This breakdown is not in the latest deck. Furthermore the chart on Slide 21 shows $335M original allocation, not $330M.

**Tab x**

- The 8% rebate to the Regulated Price Plan consumers fulfills the commitment to reduce residential rates by $2/month.
    - Proposal would lead to savings of the $120M in GGRA proceeds previously allocated to residential consumers, and help offset the fiscal impact of the 8% rebate to the Regulated Price Plan consumers.
- To provide price mitigation to commercial and industrial electricity consumers, ENERGY is proposing to direct an additional $60M of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to mitigate impacts.
- The current proposal would require an estimated $60 million less per year, or $0.24 billion less over the first compliance period.

## III. KEY CONSIDERATIONS

- This request ~~on~~for an 8% rebate does not align with the 2016 Budget fiscal plan and there are no proposed offsets.

- Due to the nature of the ICI Global Adjustment mechanism and cost recovery of the RRRP, the rate base proposals (~~#~~#21b and ~~#3~~#2a), while benefiting the targeted recipients, would **come at a cost to all other electricity rate payers in Ontario**.

- ~~This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets.~~

- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
    - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC) were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
    - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
    - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

-

**8% Rebate to Regulated Price Plan**

- The 8% ~~pre-tax~~ rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average, cap and trade commitment.

- This 8% ~~pre-tax~~ rebate equal to the provincial portion of HST is similar to the previous Ontario Clean Energy Benefit (See Appendix for background) which provided a 10% post-tax rebate.
- The proposal indicates the Regulated Price Plan consumption amount to be 58TWh [Slide 2 in latest, FPC-Major Projects Deck]. Unclear if this applies to all eligible RPP consumers. Preliminary MOF consumption for the OCEB program approximated 64-68TWh of annual electricity consumption.
- The OCEB legislation was set out with an end date, and was subsequently modified to be capped at 3,000 kWh per month for all electricity customers after 8 months of the program.
    - This proposal does not specify any consumption caps nor an end date.
- Due to the lack of a cap, compared to OCEB, this proposal is more generous to the high volume RPP users.
    - OCEB rebate was applicable for up to 36,000 kWh annually (12 months times 3,000 kWh cap per month) while this proposal would be **more generous for those consuming more than 50,850 kWh** annually.

**Commented [SK7]:** 36000*0.113/0.08 = 50,850

36000 – max OCEB eligible consumption
0.113 – pre-tax effective OCEB rebate
0.08 – pre-tax effective rebate (8%)

  - Furthermore, highest volume users in this proposal would receive **up to 392% more** than under the OCEB program.
- Unclear why any proposals for a cap would be any more complex or onerous to LDCs than prior OCEB cap (instituted beginning September 2012 to termination of OCEB program in December 2015). However, cap may affect some types of consumers more than others, such as small businesses, condo dwellers in separately-metered units paying for electricity usage in the common elements, and residential consumers heating with electricity.

- ~~Blanket r~~Reduction in electricity prices for all users irrespective of consumption amounts hamper efforts to conserve electricity, and mutes TOU price signals.
- [Businesses ~~that fall under the Regulated Price Plan~~ pay little to no HST due to the Input Tax Credit. For those businesses eligible for the Regulated Price plan, ~~T~~the 8% reduction can be deemed a windfall ~~for these users~~.]

**Expanding ICI Eligibility to customers above 1MW in all sectors**

- Not all users with demand above 1MW will be in a position to take full advantage of the ICI expansion (eg. inability to load shift during peaks).
- Consumers in the commercial sector currently do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
  - Expansion of the ICI can give commercial consumers who are able to shift demand during peak hours, the opportunity to opt-in and benefit.

**Updating Rural or Remote Rate Protection**

- According to ENERGY, the RRRP is a $175M program with the majority of program funding ($125.5M) to Hydro One's lowest-density 'R2' customers
- ~~Unclear why customers on RRRP who are not Hydro One's R2 customers are not also targeted for this benefit.~~

**Redirect Cap and Trade Proceeds Recycling**

- Deck implies $60M in savings ~~from 8% Rebate for the RPP consumers.~~compared to earlier climate change electricity price mitigation recycling plan.
  - ~~Unclear, how the redirected amount $60M ($120M-$60M) will be allocated to commercial and industrial users.~~
  - A fiscal offset to the initiative would materialize only if the $60M is diverted to in-plan initiatives.

## IV. Cabinet Committee Discussion Summary

n/a

**Commented [SK28]:** 36000 – max OCEB eligible consumption
0.113 – pre-tax effective OCEB rebate

36000*0.113 = 4068 [OCEB effective rebated consumption]

Max under proposal: 250,000
pre-tax effective rebate: 0.08
Proposal's effective rebated consumption: 250,000*0.08 = 20,000

(20,000-4068)/4068 = **3.9164**

**Commented [SK29]:** Is this referring to the issue with common elements in condos and how they fall under one bill separate from the units?

**Commented [SK10]:** Will need to verify

**Commented [JK11]:** Which sectors? There was a deck recently that showed the composition of GA in the bills paid by sectors. I believe it was one of the price mitigation decks.

**Commented [SK212R11]:** This is a general statement.

Slide 32 in the 20160902_330pm deck.

**Commented [SK213]:** I'm trying to say that there's a portion of RRRP customers who will not receive this benefit.

Is there a reason these other customers are not also getting the expansion?

## V. Financial Summary

| $ Millions | 2016-17 | 2017-18 | 2018-19 |
|---|---|---|---|
| Initiative cost requested | 261 | 1,006 | 1,004 |
| Requested program base | 261 | 1,006 | 1,004 |
| Total fiscal impact (draw from c-funds) | 261 | 1,006 | 1,004 |

## VI. Performance Measures

[To estimate the impact of the program, the savings provided to the various consumers, and any potential for adjustments to the program, information should be provided from LDCs on consumption profiles and rebate amounts, particularly those affected by the 8% rebate on Regulated Price Plan Consumers.]

## APPENDIX A: PROPOSED POLICY MINUTE

[WORK IN PROGRESS, WAITING ON ENERGY'S FINAL SUBMISSION]

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

i) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

ii) Increase the total amount of rate protection available to R2 with low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

iii) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

iv) Expanding eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for:

i) the proposed *Ontario Rebate for Electricity Consumers Act, 2016* – and any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments and consequential legislative amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*, subject to the Legislature's approval of the Act, including the following elements:

   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;

**Commented [SK214]:** This was from the Policy Minute. I assume this is the 'Minute' we are waiting for.

v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments.
vii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date.

4. ENERGY notes the following amendments:

i) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

ii) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density rural electricity customers and provide for a periodic adjustment mechanism.

5. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

6. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan.

~~CABINET AGREED THAT:~~

~~1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:~~
~~A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND~~
~~B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.~~

~~2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:~~
~~A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;~~
~~B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;~~
~~C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;~~

D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.

3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE ELECTRICITY ACT, 1998 TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.
4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE ONTARIO ENERGY BOARD ACT, 1998 TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.
5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.
6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE GREENHOUSE GAS REDUCTION ACCOUNT PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.
7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

**Tab x**

## APPENDIX B: BACKGROUND – ONTARIO CLEAN ENERGY BENEFIT

- OCEB was in effect from 2011 to 2015, and provided residential, farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax.
    - Effective September 2012 electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month.
- OCEB helped Ontario families through the transition to a more reliable and cleaner electricity system, with the monthly cap balancing the fiscal implications of providing electricity relief.
- OCEB costs totalled $1,006 million in 2013-14 and $1,078 million in 2014-15, with a projected cost for 2015-16 of $860 million (for the 9 months remaining in the program).

| **Eligible Consumers** | |
|---|---|
| **Categories Listed in Legislation (coincides with categories eligible for RPP)** | |
| **Residential** | • a dwelling<br>• a property within the meaning of the Condominium Act, 1998<br>• a residential complex, within the meaning of the Residential Tenancies Act, 2006<br>• a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the Co-operative Corporations Act |
| **Farms** | • carries on a business that is a farming business for the purposes of the Farm Registration and Farm Organizations Funding Act, 1993, and<br>• holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act |
| **Demand for electricity of 50 kW or less, or consumes not more than 250,000 kWh annually** | Would include small business, smaller broader- public-sector entities, and other small users. |
| **Special Cases (not eligible for RPP, but eligible for OCEB)** | |
| **Consumers On Retail Contracts** | Includes consumers with existing retail contracts and those who sign them during the duration of the program. |
| **Cornwall Electric and Hydro One Remote Communities Inc.** | Included since they are licensed distributors. |
| **Other Consumers Prescribed by Regulation** | 10 First Nations remote unlicensed distributors have been added by regulation. |
| **Exclusions** | |
| **Generators** | Generation station service and the microFIT distribution service charge are excluded in legislation. |

---

Good morning. I quickly put an initial marker down so that it could be turned around reasonably quickly. Also saved in the folder.

Thanks,

John.

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

**CONTEXT**

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear, LRP II), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC), which is providing a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017, for eligible small businesses, farms and residential consumers, and has expanded the Rural or Remote Electricity Rate Protection program, saving eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

**COMMENTS**

- A significant number of Energy's proposals involve shifting costs from the rate base to the tax base.
- While the subset of proposals costed by Energy may have a fairly limited residential rate payer impact (e.g. about $6-7/month for residential, or less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost (~~about~~ potentially more than $2 billion in 2017-18 if including yet-to-be-costed items).
- Additional fiscal exposure comes from proposals not yet costed by Energy (e.g., conservation costs, with Energy consulting OPCD on accounting). Energy also presents other proposals where costs and impacts are "TBD".
- In addition to the fiscal costs above, Energy is also presenting a preliminary proposal to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA). While details of this proposal have not been developed, there is a risk of significant fiscal impacts (e.g., of about $5.5 Bn in calendar 2017) during the period that GA costs are deferred, depending on the scenario. ENERGY has approached the Ontario Provincial Controller Division (OPCD) for accounting advice.

- Over the past five years, the existing fiscally-funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,535 | 1,225 | 2,035 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**ENERGY'S BROAD POLICY THEMES / RATIONALES**

A key theme / rationale cited by Energy is to no longer use the rate-base to pay for "social programs" by shifting the cost of OESP, RRRP and a proposed First Nation Rate to the tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| **Fund cost-shifting through Tax base.**<br><br>**Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.**<br>• **Estimated to reduce average monthly residential bill by ≈ $0.55 in 2017, increasing to ≈ $1.45 in 2022.**<br><br>**Provide further support for rural consumers by expanding the Rural or Remote Rate Protection (RRRP) program.**<br>• **Estimated to reduce average monthly residential bill by ≈** | • Would provide on-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households.<br>• There may be a risk that expanding OESP or RRRP may change the view of the federal government that it is not a taxable benefit. When OESP was created, TPD worked with Finance Canada and Energy to ensure that it was not considered a taxable benefit. | • 2017-18: $162 M<br>• Increasing to $322 M in 2020-21.<br><br>• 2017-18: $666 M<br>• Increasing to $719 M in 2020-21 |

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| **$1.55 in 2017, increasing to ≈ $1.75 in 2022.** | | |
| | | |
| **Amortize conservation program costs to smooth recovery of costs from ratepayer. Alternatively, rate smooth conservation costs through an IESO deferral account.** | • Ministry of Energy is consulting OPCD on whether consevation costs can be amortized according to accounting standards. Without the ability under accounting standards to amortise the cost, there would be a fiscal impact. Energy states total remaining 2017-2020 electricity conservation program costs are expected to be approximately $2.1 billion.<br>• Energy notes that an alternative to amortizing conservation costs would be to fund these costs through tax base.<br>o Conservation programs provide electricity system benefits. Fiscal-fundingwould result in a cross-subsidisation from tax-base<br>o Accessing the cap & trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the fiscal plan | • [If amortization is not permitted, 2017-18 fiscal impact of $450 M.] [TBC] |
| **Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term rate impact, even if TT funding displaces near-term, non-incremental projects coming onto service – amortised annual costs are small<br>• May have no rate mitigation impact in some cases if, as indicated by Energy, investments are made in incremental projects that would not have been built due to cost barriers under the OEB's beneficiaries pay principle<br>• Could lower utility value (share price) and affect fiscal contributions from the electricity sector (net income), including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return<br>• Could have an upfront fiscal impact if Province does not own the asset and is not able to amortize those projects [TBC with OPCD].<br>• Energy has indicated that if these investments are provided from the OEB there would be a need to develop oversight mechanisms as is not the OEB's role to review cost prudence of tax-based mechanisms. | • Up to $390 million annually from 2017-18 to 2020-21. |
| **Dedicate the Departure Tax** | • In connection with the 2015 IPO of Hydro One shares, Hydro One paid OEFC a $2.6 billion "departure tax". | • $260 million annually from |

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| | • The departure tax was not a fiscal windfall. It was net fiscally neutral -- while it represented revenue to OEFC, it was an expense to Hydro One and to the Province on consolidation into Public Accounts.<br>• Repurposing the departure tax to provide rate mitigation would have a dollar-per dollar fiscal impact and could trigger an increase in OEFC's stranded debt.<br>• The Province would remain exposed to a negative fiscal impact (lower share price and lower net income) if the OEB decides to allocate all or part of the deffered tax benefit recognized by Hydro One to ratepayers. | 2017-18 to 2020-21. |
| **OPG to Increase Cost Effectiveness and Improve Efficiency** | • Provide expectation that OPG meet more aggressive cost targets, improving efficiency by ~$3/Megawatt hour (MWh), with OPG regulated rates set on this basis.<br>• Dollar-for-dollar fiscal exposure if OPG is not able to meet the targeted lower cost targets. | • $240 million per year. |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• Provide more details regarding the Global Adjustment (GA) | • No expected fiscal impact. |
| **End the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers** | • Current legislated March 31, 2018 end of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end.<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported | • $450 M in 2017-18 |
| **Consider options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA)** | • Incurring debt to pay the generators their contracted or regulated payments<br>• Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not fully address the fiscal impact/accounting treatment, or implementation<br>o Based on preliminary discussions with KPMG, Energy has identified the need to create an asset [to offset the creation of the liability] to be held by an entity yet to be determined, e.g. OEFC, IESO or LDCs<br>o Energy is said to be working with LSB, IESO, MOF, TBS and external accountants on legislative, regulatory and accounting requirements<br>• Likely will lead to significant annual fiscal impact and increase in net debt (estimated by Energy to be up to $~~66~~ 65 Bn, depending on Energy's scenario) – Energy to consult with OPCD on accounting treatment<br>• Likely requires legislation to implement.<br>• Furthermore, likely entails significant legal / Constitutional Law risks | • Risk of fiscal impact of more than $2 billion in 2017-18 and ongoing during period GA costs are derferred. |

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| **Tax Relief for Solar and Wind** | • Consider funding the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process<br>• Energy's estimation of the NPV benefit to the ratepayers at about $3.3 billion, which would be funded through the tax base, a significant fiscal hit | • Annual fiscal impact not yet determined. |
| **Enhance Tax-base RPP Rebat by 5%, to 13%** | • This proposal would increase the funding requirement of the newly established Ontario Rebate for Electricity Consumers (OREC) by about $700 million per fiscal year, to reduce an average residential bill by about $7 each month or $84 annually.<br>• The current OREC provides average savings of about $11 each month or $130 annually. | • About $700 per year |

**DETAIL ON ENERGY PROPOSALS**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP ($0.42-0.85 bn in 2017 to $0.62-1.18 bn in 2022):

Would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and Rural or Remote Electricity Rate Program (RRRP), to the tax base. Lower range of fiscal impat estimate is based on current programs. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Upper range of fiscal impact estimate includes the following changes to the programs.
  - Current RRRP mostly supports Hydro One rural consumers. RRRP could be expanded to mitigate delivery costs for not only Hydro One customers but other high-cost LDCs.
  - OESP program benefits could be increased across the board by 50 per cent, which would mean:
    - Single low income consumers would see an increase from $30 to $45/ month ($540/year); and
    - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year).
- Energy also notest that if moved to the tax base, OESP could be broadened to include all potential low-income households, despite whether they directly pay for electricity. Broadening OESP in this way could result in a further fiscal impact.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Amortize Conservation Program Costs:

Certain conservation costs are proposed to be amortized over the lifetime of the benefits resulting from the funded conservation measures. Energy proposes that this would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative

costs). Energy estimates this would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020.

- Energy would seek an opinion from IESO's external auditor and from the Ontario Provincial Controller Division (OPCD) to determine whether conservation costs could be amortized according to rate-regulated accounting standards.
  - Under Public Sector Accounting Board (PSAB) accounting standards, used by both the Province and IESO, only certain assets can be amortized. Conservation costs would not meet this criteria. Rate-regulated accounting was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

- If amortization accounting of conservation costs is not permitted, a fiscal impact would result from this proposal. Energy also notes directly funding conservation costs from the tax base as an alternative option.

- Alternatively, Energy proposes that a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
  - Energy notes that this option would not require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open Energy to criticism by the Controller and/or Auditor General since the rate impact is the same.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward. The $5.7 billion target already includes all fiscal benefits expected from the sale of Hydro One common shares (this includes net gains from shares and the Provincial portion of the deferred tax benefit recognized by Hydro One in 2015).

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects.
- In effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
  - Inclusion of investments in First Nation communities that are not in provincial lands would trigger an upfront fiscal impact as the Province may not be able to amortize these projects (TBC with OPCD).
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).

  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
  - This could also question the government's policy rationale for selling Hydro One shares when it would be effectively investing back into the electricity sector through a different vehicle.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.
- Energy also suggests that investments could be made into projects that are currently not preceding due to cost barriers under the OEB's beneficiary pays principle.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This would have a dollar-for-dolar fiscal impact.
- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province on consolidation, as the income (revenue) to the OEFC was fully offset by a reduction in the Province's revenue from net income of Hydro One (dollar-for-dollar lower due to the departure tax expense).
- The payment was also cash neutral, the $2.6 billion were funded from a capital contribution made by the Province into Hydro One and received back by the Province in OEFC as the departure tax payment was made in cash.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. It would be the first time since 2004 that stranded debt would increase.
- Having OEFC help implement this measure may require introducing changes to OEFC's objects.
- This would be a one-time measure, potentially spread out over a few years, as the departure tax was one-time.

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.
  - This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
  - As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.
- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.

  - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
  - Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
  - In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.
- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
  - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.
  - If OPG is unable to meet more aggressive cost targets, this could affect its net income and payments-in-lieu of taxes to OEFC, and the Province's fiscal plan (Energy estimates it at $240 million per year).

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :
In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of electricity price mitigation options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the Global Adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments. This will involve debt financing and recovering over a 25 to 30 year period.

While details of this proposal have not been developed, there is a risk of significant fiscal impacts, e.g., of up to $2 billion annually (under options 1a~~2~~, ~~&~~1b~~3~~, and low GA Financing scenario), or more (e.g., about $5.5 bn in 2017 under ~~option 4~~high GA Financing scenario), as estimated by Energy, during the period that GA costs are deferred, depending on the scenario.

Under the high GA Financing scenario~~option 4~~, now discussed in the Appendix of the latest deck, net debt could rise by $6~~5~~6 Bn over time, as estimated by Energy, and the cost pressure could be up to $51 per month by 2047. There would be significant interest rate exposure to the fiscal impact and accumulated debt estimates. The size of the deficit and debt impacts could affect the Province's credit rating and cost of debt.

**Commented [GH1]:** This option has been moved to the appendix section, not sure if need to be mentioned.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
  - ~~Option 1: Status Quo – ratepayers continue to pay the full cost of GA each year~~
  - Option 1a~~2~~: Moderate ~~short-term cost reductions~~GA financing, paying $3.2 and $3.4 billion below the true cost of GA, with limits of no more than $2 billion above the true cost of GA

  - Option 1b: Moderate GA financing, paying $1.1 billion below the true cost of GA, with limits of no more than $2 billion above the true cost of GA
  - Option 3: Low / GA financing – paying $2.5 billion below the true cost of GA and increases in each subsequent year until the total amount of money borrowed is paid off, with limits of no more than $2 billion above the true cost of GA. ~~Maximized short-term cost reductions with limits of no more than $2 billion above the true cost of GA~~
  - Option 4: High / GA financing – paying $4.4 and $5 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively, with no limits above the true cost of GA. ~~Maximized short-term cost reductions with no limits on the ratepayer GA over-payments in later years~~
- Impact of the Level of Financing on Large Industrial Electricity Consumers provided in the deck was based on previous scenarios. It should be updated using above scenarios.
- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact [TBC].

Tax Relief for Solar and Wind Contracts :
Energy's proposal would use the tax-base to fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.

- From 2017 onward, the estimated value of the more than 1,800 MW of large wind projects in commercial operation under the FIT 1 program at a price of $135/MWh is approximately $9.4 billion (NPV 2017).
- The weighted average price for large wind projects over the RES I, II and III competitive procurements was $95.1/MWh.
- If the competitive RES wind pricing were applied to the 1,800 MW of FIT 1 large wind projects, total program value would be estimated at $6.1 billion (NPV 2017).
- The $3.3 billion (NPV) difference could be considered the value of above competitive procurement pricing and could be shifted from the rate-base to the tax-base.

> On the table, I marked out some requests – split OESP and RRRP into separate rows, and add a 17-18 fiscal cost / exposure column (including commenting more on and adding in the fiscal risk of the OPG efficiencies related proposal). On the Trillium Trust, it might be fair to point out that Energy raises the prospect of investing in projects that would not otherwise be viewed by the OEB as projects that meet a system benefits test – so not really a rate saving if the projects would not have been done on the rate base. Really a tax-based subsidisation for other policy reasons.

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,
Ron

<Comments on Electricity Sector Transformation Proposals v9 (CEFD)_Markup2.docx>

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear, LRP II), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC), which ~~will~~is providing a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017, for eligible small businesses, farms and residential consumers, and has ~~taken steps to~~ expanded the Rural or Remote Electricity Rate Protection program, ~~expected to~~ saving eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

## COMMENTS

A significant number of Energy's proposals ~~generally~~ involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $~~5~~6-~~6~~7/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost (about $~~1~~2 billion ~~to $1.3 billion~~in 2017-18), with some proposals not costed (e.g., conservation costs, with Energy consulting OPCD on accounting). ~~Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion).~~ Energy also presents other proposals where costs and impacts are "TBD".

In addition to the fiscal costs above, Energy is also presenting a preliminary proposal to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA). While details of this proposal have not been developed, there is a risk of significant fiscal impacts of ~~up to over~~ more than $2 billion annually during the period that GA costs are deferred depending on the scenario. ENERGY has approached the Ontario Provincial Controller Division (OPCD) for accounting advice.

**Commented [GH1]:** This was included in the debt-financing GA section below, so not sure if we need to mention it here.

Over the past five years, the existing fiscally ~~-~~funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| **Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility~~., and provide further support for rural consumers by expanding the Rural or Remote Rate Protection (RRRP) program.~~** | • Significant fiscal exposure -- $0.42-0.845 bn in 2017 to $0.62-1.18 bn in 2022, ~~at current levels,~~ higher if OESP is enhanced. On-bill benefits.<br>• Funding programs through tax base estimated to reduce average monthly residential bill by approximately $2 in 2017, increasing to approximately $3 in 2022.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| **Provide further support for rural consumers by expanding the Rural or Remote Rate Protection (RRRP) program.** | • |
| **Amortize ~~Fund~~ conservation program costs to smooth recovery of costs from ratepayer. Alternatively, rate smooth conservation costs through an IESO deferral account. ~~programs through the tax base for the~~** | • It is unclear whether consevation costs could be amortized according to accounting standards. If this option was pursued without establishing Provincial Controller agreement on accounting, there could be a fiscal risk. Energy states total remaining 2017-2020 electricity conservation program costs are expected to be approximately $2.1 billion. |

**Commented [RK3]:** Could we add in a fiscal cost columbn instead, to show Energy's estimated 17-18 fiscal cost, or what we think is the exposure (accounting TBC can be footnoted).

**Commented [EK4]:** Updated based on slide 12 in Energy's updated deck.

**Commented [RK2]:** Can we split the OESP and RRRP into two rows,

| | |
|---|---|
| ~~remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time~~ | • Energy notes that an alternative to amortizing conservation costs would be to fund these costs through tax base. ~~Potentially significant fiscal impact – current program costs are about $0.45 bn~~<br>o Conservation programs do provide an electricity system benefits, but ~~would now be~~ fiscal~~ly~~ funding~~ed, so~~ would result in a cross-subsidisation from tax-base<br>o Accessing the cap & trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| **Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value (share price) and impact fiscal contributions from the electricity sector (net income), including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return<br>• In the case of projects located in First Nation territories it could have an upfront fiscal impact if Province is not able to amortize those projects (TBC with OPCD).<br>• Energy has indicated that if these investments are provided from the OEB there would be a need to develop oversight mechanisms as is not the OEB's role to review cost prudence of tax-based mechanisms. |
| **Dedicate the Departure Tax** | • In connection with the 2015 IPO of Hydro One shares, Hydro One paid OEFC a $2.6 billion "departure tax".<br>• The departure tax was not a windfall. It was fiscally neutral, it represented revenue to OEFC and an expense to Hydro One.<br>• Repurposing the departure tax to provide rate mitigation would have a dollar-per dollar fiscal impact and could trigger an increase in OEFC's stranded debt.<br>• The Province would remain exposed to a negative fiscal impact (lower share price and lower net income) if the OEB decides to allocate all or part of the deffered tax benefit recognized by Hydro One to ratepayers. |
| **Empower Energy Agencies to Increase Cost Effectiveness and Improve Efficiency** | • IESO to modernize the electricity market through market renewal<br>• OEB to identify opportunities for future LDC efficiencies/rates<br>• OEB to work with OPG operational efficiencies and pass on to ratepayers |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• Provide more details regarding th Global Adjustment (GA) |
| **End the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers** | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt |

**Formatted:** Indent: Left: 0.03", Hanging: 0.25"

**Formatted:** Indent: Left: -0.04"

| | |
|---|---|
| | • Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |
| **Consider options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA)** | • Incurring debt to pay the generators their contracted or regulated payments<br>• Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation<br>• Likely will lead to significant fiscal impact due to creation of large liability item (estimated to be up to $66Bn) either directly on the Province's books or upon consolidation<br>• Furthermore, likely entails significant legal / Constitutional Law risks. |
| **Tax Relief for Solar and Wind** | • Consider funding the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process<br>• Energy's estimation of the NPV benefit to the ratepayers at about $3.3 billion, which would be funded through the tax base, a significant fiscal hit |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP ($0.42-0.85 bn in 2017 to $0.62-1.18 bn in 2022~~Total of about $0.4 to 0.45 Billion/year~~):

~~This w~~Would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), ~~-~~and ~~the~~ Rural or Remote Electricity Rate Program (RRRP), to the tax base. Lower range of fiscal impat estimate is based on current programs. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Upper range of fiscal impact estimate includes the following changes to the programs. ~~Energy notes that~~
  - Current RRRP mostly supports Hydro One rural consumers. RRRP could be expanded to mitigate delivery costs for not only Hydro One customers but other high-cost LDCs.
  - OESP program benefits could be increased across the board by 50 per cent, which would mean:
    - Single low income consumers would see an increase from $30 to $45/ month ($540/year); and
    - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year).
  - ~~The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).~~
- Energy also notest that if moved to the tax base, OESP could be broadened to include all potential low-income households, despite whether they directly pay for electricity. Broadening OESP in this way could result in a further fiscal impact.

**Formatted:** Font: 11.5 pt

**Formatted:** Indent: Left: 0.25"

**Formatted:** English (Canada)

**Formatted:** Indent: Left: 0.5"

**Formatted:** Indent: Left: 0", Line spacing: Multiple 1.15 li

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

~~Fund~~ Amortize Conservation Program~~s~~ Costs ~~through the Tax Base~~:

Certain conservation costs are proposed to be amortized over the lifetime of the benefits resulting from the funded conservation measures. Energy proposes that this would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs). Energy estimates this would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020.

- Energy would seek an opinion from IESO's external auditor and from the Ontario Provincial Controller (OPC) to determine whether conservation costs could be amortized according to rate-regulated accounting standards.
  - Under Public Sector Accounting Board (PSAB) accounting standards, used by both the Province and IESO, only certain assets can be amortized. Conservation costs would not meet this criteria. Rate-regulated accounting was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

- If amortization of conservation costs was not permitted, a fiscal impact could result from this proposal. Energy also notes directly funding conservation costs from the tax base as an alternative option.

- Alternatively, Energy proposes that a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
  - Energy notes that this option would not require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open Energy to criticism by the Controller and/or Auditor General since the rate impact is the same.

~~This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.~~

- ~~Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.~~

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward. The $5.7 billion target already includes all

fiscal benefits expected from the sale of Hydro One common shares (this includes net gains from shares and the Provincial portion of the deferred tax benefit recognized by Hydro One in 2015).

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
    - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
    - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
    - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
    - Inclusion of investments in First Nation communities that are not in provincial lands would trigger an upfront fiscal impact as the Province may not be able to amortize these projects (TBC with OPCD).
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
    - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
    - This could also question the government's policy rationale for selling Hydro One shares when it would be effectively investing back into the electricity sector through a different vehicle.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.
- Energy also suggests that projects that the OEB does not currently consider eligible (as system benefits probably don't exceed investment costs) could be considered. This would mean moving forward projects for other policy objectives rather than rate mitigation.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income (revenue) to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income (expense) of Hydro One.
- The payment was also cash neutral, the $2.6 billion were funded from a capital contribution made by the Province into Hydro One and received back by the Province in OEFC as the departure tax payment was made in cash.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. It would be the first time since 2004 that stranded debt would increase. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- Having OEFC help implement this measure may require introducing changes to OEFC's objects as is legal mandate is to help reduce and pay down stranded debt.
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.
    - This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
    - As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
    - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
    - IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.
- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.
    - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
    - Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
    - In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.
- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
    - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.
    - If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :

**Commented [JK5]:** Not sure what exactly the single schedule system means...stayed away from mentioning as a result.

**Commented [JK6]:** http://www.ieso.ca/Pages/Participate/Stakeholder-Engagement/SE-114.aspx

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of electricity price mitigation options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost~~delay recovery of part~~ of the Global Adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments.~~by~~ This will involve debt financing and recovering over a 25 to 30 year period.

While details of this proposal have not been developed, there is a risk of significant fiscal impacts of up to or more than $2 billion annually during the period that GA costs are deferred, depending on the scenario.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
  - Option 1: Status Quo – ratepayers continue to pay the full cost of GA each year
  - Option 2: Moderate short-term cost reductions with limits of no more than $2 billion above the true cost of GA
  - Option 3: Maximized short-term cost reductions with limits of no more than $2 billion above the true cost of GA
  - Option 4: Maximized short-term cost reductions with no limits on the ratepayer GA over-payments in later years
- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact, such as having to book a large deficit amount.

Tax Relief for Solar and Wind Contracts :
Energy's proposal would use the tax-base to fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.

- From 2017 onward, the estimated value of the more than 1,800 MW of large wind projects in commercial operation under the FIT 1 program at a price of $135/MWh is approximately $9.4 billion (NPV 2017).
- The weighted average price for large wind projects over the RES I, II and III competitive procurements was $95.1/MWh.
- If the competitive RES wind pricing were applied to the 1,800 MW of FIT 1 large wind projects, total program value would be estimated at $6.1 billion (NPV 2017).
- The $3.3 billion (NPV) difference could be considered the value of above competitive procurement pricing and could be shifted from the rate-base to the tax-base.

---

So Gavin….this template gives you a sense of how you could structure the GA note that Ron left off. He set up the Issue section nicely so start from there.

There could be a section before or after the context on what the proposal is…..as in a Proposal section. Then get into our commentaries.

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

<u>OESP & RRRP (Total of about $0.4 to 0.45 Billion/year</u>):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

<u>Fund Conservation Programs through the Tax-Base</u>:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

# Comments on Proposed Initiatives to Transform Ontario's Electricity Sector

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on the potential initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e. meeting goals towards decarbonize) and modernize the electricity infrastructure (i.e. more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in ~~Hydro One~~ transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting ~~January~~ January 1, ~~2018~~ 2017 for eligible small businesses, farms and residential~~s~~ consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting ~~some~~ costs from the rate base to the tax base. ~~A general comment on the proposals would be that w~~While these proposals may have a fairly limited residential rate payer impact (~~,~~e.g. about $5-6/month for residential, ~~(~~less than 5% of the average monthly bill), the proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion)~~;~~. Note these impacts are lower than ~~somewhat down from the impacts from an~~ those prestend in an earlier deck ($1.3 billion to $1.9 billion).

Over the past five years, the fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt etirement Charge
NIERP – Northern Ontario Electricity Rate program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

## Proposals

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This ~~includes~~ would shift~~ing~~ the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), ~~as well as an additional 50% increase,~~ and the Rural or Remote Electricity Rate Program (RRRP), to the tax base.

*Note: that the fiscal exposure ~~is larger~~ would increase if the OESP take up rate is larger, and faster than assumed.*

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time the costs would transition ~~and to transition costs~~ to the new "green bank ~~eneity~~entity" ~~over time~~.

- Energy's rationale for t~~T~~he cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects. Incremental investments would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.) May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy is proposed using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC) ~~and helped reduce stranded debt~~. The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- 
- Using some or all of it for price mitigation would ~~change~~ require restating the net stranded debt paydown by OEFC ~~resulting from~~related to the IPO. [As the departure tax paid was fiscally neutral,

OEFC's uplift was primarily related to the deferred tax benefit and the s.50.3 benefit under the *Electricity Act*.]

- This would ~~also~~ be a one-time measure, ~~(~~potentially spread out over a few years~~)~~, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) ~~(~~would have an impact of about $0.45 billion~~/year~~ in 2017-18 ~~to 2017-18)~~.

- The end of the DRC had previously been linked with the end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the proposed end date of the DRC.

Hi,

This is a file dump of the earlier work….I need to start going through but figured I shred the template we are working with.

John.

**COMMERCIALLY SENSITIVE AND CONFIDENTIAL**

## Comments on Proposed Initiatives to Transform Ontario's Electricity Sector

The Ministry of Energy is providing an update on progress related to transforming the province's electricity sector by elaborating on the potential initiatives, as outlined in its deck.

**CONTEXT**

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e. meeting goals towards decarbonize) and modernize the electricity infrastructure (i.e. more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One in Hydro One transmission and distribution systems.

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2018 for eligible small businesses, farms and residential consumer and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month.

**COMMENTS**

Energy's proposals generally involve shifting some costs from the rate base to the tax base. A general comment on the proposals would be that while the proposals may have a fairly limited impact, e.g. a little over $8/month for residentia (about little over 5% of the average monthly bill), the proposals would not come at a non-material incremental fiscal cost ($1.3 billion to $1.9 billion).

Over the past five years, the fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt etirement Charge
NIERP – Northern Ontario Electricity Rate program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

OESP & RRRP (Total of about $0.4 Billion/year):

This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

Industrial Conservation Initiative (ICI -- About $900+ Million/year):

Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.

- Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
- As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.

- This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
- Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

Other fiscal cost risks (Total of about $0.8+ Bn):

- Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
- Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
- Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

Hi Ron,

Pls. see attached updated note.

Thanks,

John.

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

**CONTEXT**

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear, LRP II), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC), which is providing a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017, for eligible small businesses, farms and residential consumers, and has expanded the Rural or Remote Electricity Rate Protection program, saving eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

**COMMENTS**

- A significant number of Energy's proposals involve shifting costs from the rate base to the tax base.
- While the subset of proposals costed by Energy may have a fairly limited residential rate payer impact (e.g. about $6-7/month for residential, or less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost (~~about~~ potentially more than $2 billion in 2017-18 if including yet-to-be-costed items).
- Additional fiscal exposure comes from proposals not yet costed by Energy (e.g., conservation costs, with Energy consulting OPCD on accounting). Energy also presents other proposals where costs and impacts are "TBD".
- In addition to the fiscal costs above, Energy is also presenting a preliminary proposal to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA). While details of this proposal have not been developed, there is a risk of significant fiscal impacts (e.g., of about $5.5 Bn in calendar 2017) during the period that GA costs are deferred, depending on the scenario. ENERGY has approached the Ontario Provincial Controller Division (OPCD) for accounting advice.

**ENERGY'S BROAD POLICY THEMES / RATIONALES**

A key theme / rationale cited by Energy is to no longer use the rate-base to pay for "social programs" by shifting the cost of OESP, RRRP and a proposed First Nation Rate to the tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| **Fund cost-shifting through Tax base.**<br><br>**Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.**<br>• **Estimated to reduce average monthly residential bill by ~~≈ $0.55 in 2017, increasing to ≈ $1.45 in 2022,~~$0.83 based on current OESP charge.**<br><br>**Provide further support for rural consumers by expanding the Rural or Remote Rate Protection (RRRP) program.** | • Would provide on-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households.<br>• There may be a risk that expanding OESP or RRRP may change the view of the federal government that it is not a taxable benefit. When OESP was created, TPD worked with Finance Canada and Energy to ensure that it was not considered a taxable benefit. | OESP<br>• 2017-18: $162 M<br>• Increasing to $32~~2~~3 M in 2020-21.<br><br>Conservation<br>• 2017-18: $~~666~~457 M |

Formatted: Normal, No bullets or numbering
Formatted: Indent: Left: -0.01", Hanging: 0.13"

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| | ~~• Energy has indicated that if these investments are provided from the OEB there would be a need to develop oversight mechanisms as is not the OEB's role to review cost prudence of tax-based mechanisms.~~ | |
| ~~**Dedicate the Departure Tax**~~ | ~~• In connection with the 2015 IPO of Hydro One shares, Hydro One paid OEFC a $2.6 billion "departure tax".~~<br>~~• The departure tax was not a fiscal windfall. It was net fiscally neutral -- while it represented revenue to OEFC, it was an expense to Hydro One and to the Province on consolidation into Public Accounts.~~<br>~~• Repurposing the departure tax to provide rate mitigation would have a dollar-per dollar fiscal impact and could trigger an increase in OEFC's stranded debt.~~<br>~~• The Province would remain exposed to a negative fiscal impact (lower share price and lower net income) if the OEB decides to allocate all or part of the deffered tax benefit recognized by Hydro One to ratepayers.~~ | ~~• $260 million annually from 2017-18 to 2020-21.~~ |
| **OPG to Increase Cost Effectiveness and Improve Efficiency** | • Provide expectation that OPG meet more aggressive cost targets, improving efficiency by ~$3/Megawatt hour (MWh), with OPG regulated rates set on this basis.<br>• Dollar-for-dollar fiscal exposure if OPG is not able to meet the targeted lower cost targets. | • $240 million per year. |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• Provide more details regarding the Global Adjustment (GA) | • No expected fiscal impact. |
| **End the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers** | • Current legislated March 31, 2018 end of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end.<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported | • $450 M in 2017-18 |
| **Consider options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA)** | • Incurring debt to pay the generators their contracted or regulated payments<br>• Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not fully address the fiscal impact/accounting treatment, or implementation<br>o Based on preliminary discussions with KPMG, Energy has identified the need to create an asset [to offset | • Risk of fiscal impact of more than $2 billion in 2017-18 and ongoing during period GA costs are derferred. |

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| | the creation of the liability] to be held by an entity yet to be determined, e.g. OEFC, IESO or LDCs<br>o Energy is said to be working with LSB, IESO, MOF, TBS and external accountants on legislative, regulatory and accounting requirements<br>o Energy's deck clearly identify that under the current legal framework the GA would not be able to recover interest costs of the deferral<br>• Likely will lead to significant annual fiscal impact and increase in net debt (estimated by Energy to be up to $~~66~~ 65 Bn, depending on Energy's scenario) – Energy to consult with OPCD on accounting treatment<br>• Likely requires legislation to implement.<br>• Furthermore, likely entails significant legal / Constitutional Law risks | |
| **Tax Relief for Solar and Wind** | • Consider funding the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process<br>• Energy's estimation of the NPV benefit to the ratepayers at about $3.3 billion, which would be funded through the tax base, a significant fiscal hit | • Annual fiscal impact not yet determined. |
| **Enhance Tax-base RPP Rebat by 5%, to 13%** | • This proposal would increase the funding requirement of the newly established Ontario Rebate for Electricity Consumers (OREC) by about $700 million per fiscal year, to reduce an average residential bill by about $7 each month or $84 annually.<br>• The current OREC provides average savings of about $11 each month or $130 annually. | • About $700 per year |

**DETAIL ON ENERGY PROPOSALS INCLUDED IN THE JANUARY 18th DECK**

Formatted: Superscript

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP ($0.5142-0.8562 bn in 2017 to $0.6280-10.1892 bn in 2022):

Would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and Rural or Remote Electricity Rate Program (RRRP), to the tax base. Lower range of fiscal impat estimate is based on current programs. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Upper range of fiscal impact estimate includes the following changes to the programs.
  - Current RRRP mostly supports Hydro One rural consumers. RRRP could be expanded to mitigate delivery costs for not only Hydro One customers but other high-cost LDCs.
  - OESP program benefits could be increased across the board by 50 per cent, which would mean:
    - Single low income consumers would see an increase from $30 to $45/ month ($540/year); and

  - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year).
- Energy also notest that if moved to the tax base, OESP could be broadened to include all potential low-income households, despite whether they directly pay for electricity. Broadening OESP in this way could result in a further fiscal impact.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Formatted: No bullets or numbering

Low Income Conservation Benefit Program

- A new low income conservation benefit program would build on existing programs.
  - Existing low income programs delivered by local distribution companies and IESO help qualified homeowners and social and/or assisted housing providers improve the energy efficiency of their homes.
  - With respect to a new program Energy notes that participants could receive incentives for conservation measures not currently covered, increased incentive amounts, and targeted education and awareness initiatives.

Formatted: List Paragraph, Bulleted + Level: 1 + Aligned at: 0" + Indent at: 0.25"

Formatted: List Paragraph, Indent: Left: 0.25", Bulleted + Level: 2 + Aligned at: 0.5" + Indent at: 0.75"

- Energy notes an illustrative budget of $60 million per year, but states that further analysis is required on costing and implementation details, including alignment with the existing conservation framework.

Formatted: List Paragraph, Indent: Left: 0.25", No bullets or numbering

Formatted: List Paragraph, Bulleted + Level: 1 + Aligned at: 0" + Indent at: 0.25"

~~Amortize Conservation Program Costs:~~

~~Certain conservation costs are proposed to be amortized over the lifetime of the benefits resulting from the funded conservation measures. Energy proposes that this would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs). Energy estimates this would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020.~~

- ~~Energy would seek an opinion from IESO's external auditor and from the Ontario Provincial Controller Division (OPCD) to determine whether conservation costs could be amortized according to rate-regulated accounting standards.~~
  - ~~Under Public Sector Accounting Board (PSAB) accounting standards, used by both the Province and IESO, only certain assets can be amortized. Conservation costs would not meet this criteria. Rate-regulated accounting was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.~~
  - ~~Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.~~
  - ~~Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.~~

- If amortization accounting of conservation costs is not permitted, a fiscal impact would result from this proposal. Energy also notes directly funding conservation costs from the tax base as an alternative option.

- Alternatively, Energy proposes that a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
  - Energy notes that this option would not require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open Energy to criticism by the Controller and/or Auditor General since the rate impact is the same.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward. The $5.7 billion target already includes all fiscal benefits expected from the sale of Hydro One common shares (this includes net gains from shares and the Provincial portion of the deferred tax benefit recognized by Hydro One in 2015).

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects.
- In effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
  - Inclusion of investments in First Nation communities that are not in provincial lands would trigger an upfront fiscal impact as the Province may not be able to amortize these projects (TBC with OPCD).
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
  - This could also question the government's policy rationale for selling Hydro One shares when it would be effectively investing back into the electricity sector through a different vehicle.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.
- Energy also suggests that investments could be made into projects that are currently not proceeding due to cost barriers under the OEB's beneficiary pays principle.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This would have a dollar-for-dolar fiscal impact.
- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province on consolidation, as the income (revenue) to the OEFC was fully offset

~~by a reduction in the Province's revenue from net income of Hydro One (dollar-for-dollar lower due to the departure tax expense).~~

- ~~The payment was also cash neutral, the $2.6 billion were funded from a capital contribution made by the Province into Hydro One and received back by the Province in OEFC as the departure tax payment was made in cash.~~
- ~~Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. It would be the first time since 2004 that stranded debt would increase.~~
- ~~Having OEFC help implement this measure may require introducing changes to OEFC's objects.~~
- ~~This would be a one-time measure, potentially spread out over a few years, as the departure tax was one-time.~~

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.
    - This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
    - As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
    - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
    - IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.
- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.
    - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
    - Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
    - In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.
- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
    - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.

- If OPG is unable to meet more aggressive cost targets, this could affect its net income and payments-in-lieu of taxes to OEFC, and the Province's fiscal plan (Energy estimates it at $240 million per year).

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :
In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of electricity price mitigation options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the Global Adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments. This will involve debt financing and recovering over a 25 to 30 year period.

While details of this proposal have not been developed, there is a risk of significant fiscal impacts, e.g., of up to $2 billion annually (under options 1a~~2~~, ~~&~~1b~~3~~, and low GA Financing scenario), or more (e.g., about $5.5 bn in 2017 under ~~option 4~~high GA Financing scenario), as estimated by Energy, during the period that GA costs are deferred, depending on the scenario.

Under the high GA Financing scenario~~option 4~~, now discussed in the Appendix of the latest deck, net debt could rise by $6~~5~~6 Bn over time, as estimated by Energy, and the cost pressure could be up to $51 per month by 2047. There would be significant interest rate exposure to the fiscal impact and accumulated debt estimates. The size of the deficit and debt impacts could affect the Province's credit rating and cost of debt.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
  - ~~Option 1: Status Quo – ratepayers continue to pay the full cost of GA each year~~
  - Option 1a~~2~~: Moderate ~~short-term cost reductions~~GA financing, paying $3.2 and $3.4 billion below the true cost of GA, with limits of no more than $2 billion above the true cost of GA
  - Option 1b: Moderate GA financing, paying $1.1 billion below the true cost of GA, with limits of no more than $2 billion above the true cost of GA
  - Option 3: Low / GA financing – paying $2.5 billion below the true cost of GA and increases in each subsequent year until the total amount of money borrowed is paid off, with limits of no more than $2 billion above the true cost of GA.~~Maximized short-term cost reductions with limits of no more than $2 billion above the true cost of GA~~
  - Option 4: High / GA financing – paying $4.4 and $5 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively, with no limits above the true cost of GA.~~Maximized short-term cost reductions with no limits on the ratepayer GA over-payments in later years~~
- It should be noted that under any of these options the relief period is quite limited when compare to the period under where future ratepayers will have to pay the cost of the deferral. Chart 1a and 1b (slides 10 and 11) illustrate that the impact of the relief would not last beyond 2022 (1a) and 2024 (1b) whill the higher cost caused by the deferral would hit electricity bills until 2042 at the least.

**Formatted:** Font: 11.5 pt

**Commented [GH1]:** This option has been moved to the appendix section, not sure if need to be mentioned.

**Formatted:** Default Paragraph Font, Font: 11.5 pt

**Formatted:** Font: 11.5 pt

- Impact of the Level of Financing on Large Industrial Electricity Consumers provided in the deck was based on previous scenarios. It should be updated using above scenarios.
- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact [TBC].
- Preliminary discussions between CEFD and OPCD staff suggest that there are material fiscal and reporting risk associated with this proposal.

Tax Relief for Solar and Wind Contracts :
Energy's proposal would use the tax-base to fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.

- From 2017 onward, the estimated value of the more than 1,800 MW of large wind projects in commercial operation under the FIT 1 program at a price of $135/MWh is approximately $9.4 billion (NPV 2017).
- The weighted average price for large wind projects over the RES I, II and III competitive procurements was $95.1/MWh.
- If the competitive RES wind pricing were applied to the 1,800 MW of FIT 1 large wind projects, total program value would be estimated at $6.1 billion (NPV 2017).
- The $3.3 billion (NPV) difference could be considered the value of above competitive procurement pricing and could be shifted from the rate-base to the tax-base.

Formatted Table

**Formatted:** Normal, Indent: Left: 0"

## Appendix: Options not currently recommended by Energy

Formatted: Normal, Indent: Left: 0"

Formatted: Font: Bold

| | | |
|---|---|---|
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term rate impact, even if TT funding displaces near-term, non-incremental projects coming onto service – amortised annual costs are small<br>• May have no rate mitigation impact in some cases if, as indicated by Energy, investments are made in incremental projects that would not have been built due to cost barriers under the OEB's beneficiaries pay principle<br>• Could lower utility value (share price) and affect fiscal contributions from the electricity sector (net income), including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return<br>• Could have an upfront fiscal impact if Province does not own the asset and is not able to amortize those projects [TBC with OPCD].<br>• Energy has indicated that if these investments are provided from the OEB there would be a need to develop oversight mechanisms as is not the OEB's role to review cost prudence of tax-based mechanisms. | • Up to $390 million annually from 2017-18 to 2020-21. |
| **Dedicate the Departure Tax** | • In connection with the 2015 IPO of Hydro One shares, Hydro One paid OEFC a $2.6 billion "departure tax".<br>• The departure tax was not a fiscal windfall. It was net fiscally neutral -- while it represented revenue to OEFC, it was an expense to Hydro One and to the Province on consolidation into Public Accounts.<br>• Repurposing the departure tax to provide rate mitigation would have a dollar-per dollar fiscal impact and could trigger an increase in OEFC's stranded debt.<br>• The Province would remain exposed to a negative fiscal impact (lower share price and lower net income) if the OEB decides to allocate all or part of the deffered tax benefit recognized by Hydro One to ratepayers. | • $260 million annually from 2017-18 to 2020-21. |
| **Amortize conservation program costs to smooth recovery of costs from ratepayer. Alternatively, rate smooth conservation costs through an IESO deferral account.** | • Ministry of Energy is consulting OPCD on whether consevation costs can be amortized according to accounting standards. Without the ability under accounting standards to amortise the cost, there would be a fiscal impact. Energy states total remaining 2017-2020 electricity conservation program costs are expected to be approximately $2.1 billion. | • [If amortization is not permitted, 2017-18 fiscal impact of $450 M.] [TBC]. |

- Energy notes that an alternative to amortizing conservation costs would be to fund these costs through tax base.
  - Conservation programs provide electricity system benefits. Fiscal-fundingwould result in a cross-subsidisation from tax-base
- Accessing the cap & trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the fiscal plan

**Formatted:** Normal, Indent: Left: 0"

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward. The $5.7 billion target already includes all fiscal benefits expected from the sale of Hydro One common shares (this includes net gains from shares and the Provincial portion of the deferred tax benefit recognized by Hydro One in 2015).

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects.
- In effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
  - Inclusion of investments in First Nation communities that are not in provincial lands would trigger an upfront fiscal impact as the Province may not be able to amortize these projects (TBC with OPCD).
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
  - This could also question the government's policy rationale for selling Hydro One shares when it would be effectively investing back into the electricity sector through a different vehicle.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.
- Energy also suggests that investments could be made into projects that are currently not preceding due to cost barriers under the OEB's beneficiary pays principle.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This would have a dollar-for-dolar fiscal impact.
- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province on consolidation, as the income (revenue) to the OEFC was fully offset

by a reduction in the Province's revenue from net income of Hydro One (dollar-for-dollar lower due to the departure tax expense).

- The payment was also cash neutral, the $2.6 billion were funded from a capital contribution made by the Province into Hydro One and received back by the Province in OEFC as the departure tax payment was made in cash.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. It would be the first time since 2004 that stranded debt would increase.
- Having OEFC help implement this measure may require introducing changes to OEFC's objects.
- This would be a one-time measure, potentially spread out over a few years, as the departure tax was one-time.

Formatted: Normal, Indent: Left: 0"

Amortize Conservation Program Costs:

Certain conservation costs are proposed to be amortized over the lifetime of the benefits resulting from the funded conservation measures. Energy proposes that this would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs). Energy estimates this would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020.

- Energy would seek an opinion from IESO's external auditor and from the Ontario Provincial Controller Division (OPCD) to determine whether conservation costs could be amortized according to rate-regulated accounting standards.
  - Under Public Sector Accounting Board (PSAB) accounting standards, used by both the Province and IESO, only certain assets can be amortized. Conservation costs would not meet this criteria. Rate-regulated accounting was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

- If amortization accounting of conservation costs is not permitted, a fiscal impact would result from this proposal. Energy also notes directly funding conservation costs from the tax base as an alternative option.

- Alternatively, Energy proposes that a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
  - Energy notes that this option would not require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open Energy to criticism by the Controller and/or Auditor General since the rate impact is the same.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses.<br><br>OCEB expired December 31, 2015, as planned. OCEB was put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. |
| **Ending DRC from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.<br><br>This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate Program** | 120 | March 2010 | As announced in 2015 Budget, the government committed to ongoing support for northern industrials with $120 million allocated annually.<br>The Northern Industrial Electricity Rate (NIER) was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER was initially established as a three-year program in Budget 2010, effective April 1, 2010,. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families, and up to $1,148 for qualifying seniors. [1] |

1. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline – Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,105** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses.<br><br>OCEB expired December 31, 2015, as planned. OCEB was put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. |
| **Ending DRC from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.<br><br>This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate Program** | 120 | March 2010 | As announced in 2015 Budget, the government committed to ongoing support for northern industrials with $120 million allocated annually.<br>The Northern Industrial Electricity Rate (NIER) was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER was initially established as a three-year program in Budget 2010, effective April 1, 2010,. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families, and up to $1,148 for qualifying seniors. [1] |

1. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline – Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

# Cost Shifts in Ontario's Electricity Sector

## Working Draft

November 2016

CONFIDENTIAL DRAFT

# Context

- Necessary investments in Ontario's electricity system have led to increased prices, prompting government to introduced a number of price mitigation programs for all consumer types.
  - In addition to existing rate mitigation programs, the 2016 Throne Speech announced a package of rate mitigation initiatives to address electricity prices for residential, commercial and industrial consumers.

- Ontario has a number of programs in place to manage residential electricity prices, including:
  - Ontario Electricity Support Program (OESP);
  - Rural or Remote Rate Protect (RRRP);
  - Northern Ontario Energy Credit (NOEC);
  - Ontario Energy and Property Tax Credit (OEPTC);
  - Ontario Rebate for Electricity Customers (OREC); and
  - Ending the Debt Retirement Charge (DRC) from residential bills.

- Ontario also has a number of programs in place to manage industrial electricity prices, including:
  - Industrial Conservation Initiative (ICI);
  - Industrial Electricity Incentive (IEI);
  - Industrial Accelerator Program (IAP);
  - Northern Industrial Electricity Rate Program (NIERP);
  - saveONenergy for Business Program; and
  - Demand Response.

# Context (cont'd)

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in Ontario's Electricity Sector

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in Ontario's Electricity Sector (cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

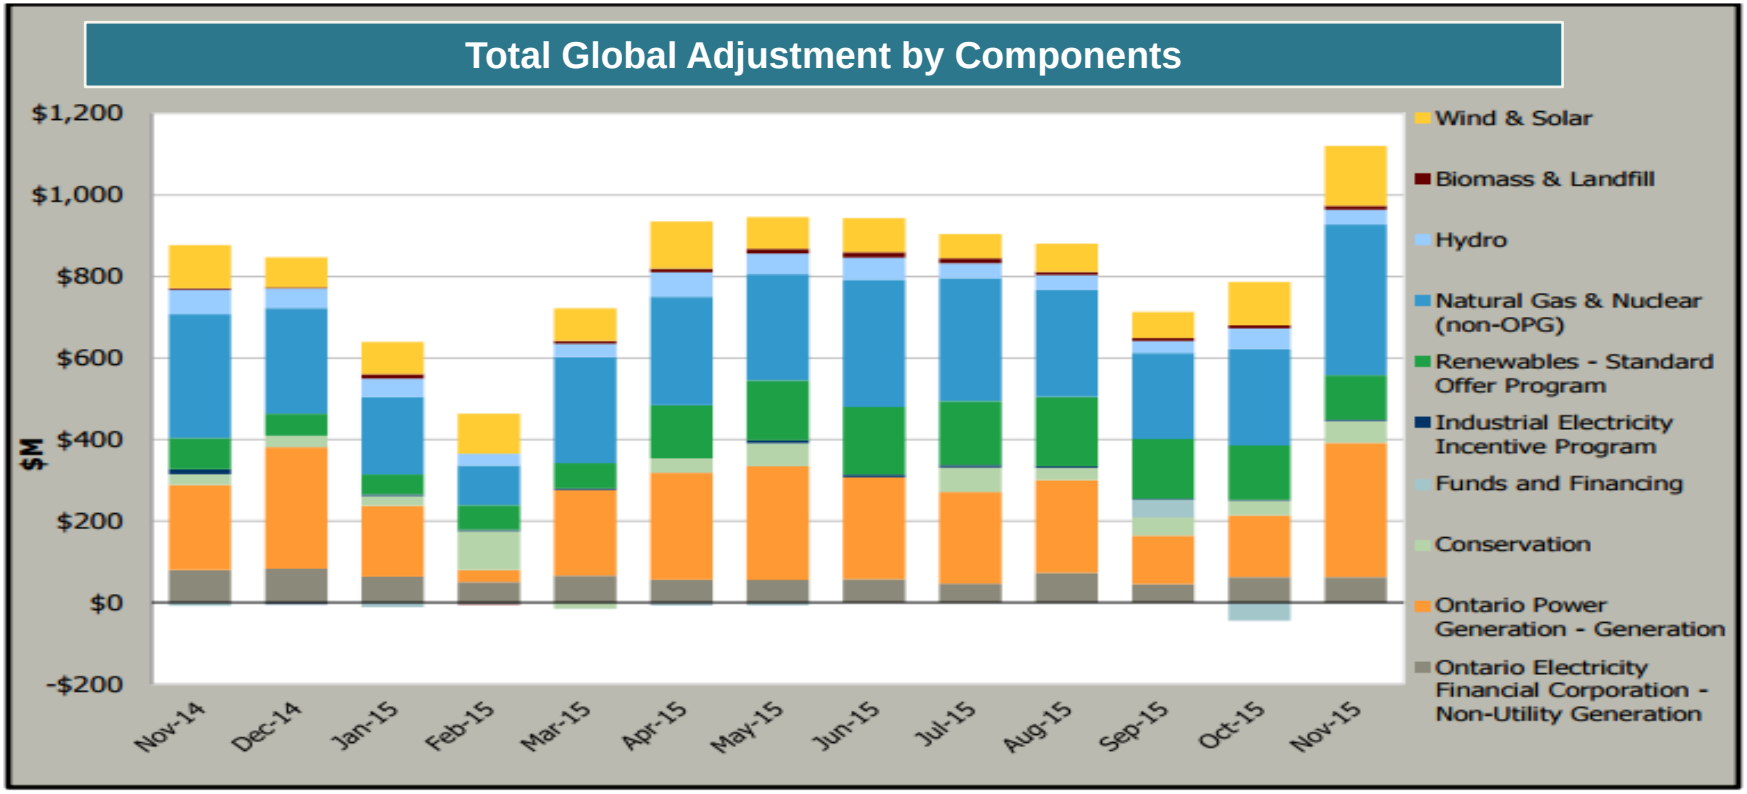
| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,000 |
| Ending DRC[2] | - | - | - | - | 75 | 300 | 300 |

| OEPTC[2] | 445 | 445 | 445 | 445 | 445 | 445 | 445 |
| TOTAL | 1,621 | 1,583 | 1,591 | 1,654 | 1,526 | 1,190 | 1,890 |

1. 2016-17 onwards based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on estimates of Energy component of the rebate.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011 – 2017.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1,190 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.9 billion.

DRAFT

# Additional Background on Taxpayer funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses.<br><br>OCEB expired December 31, 2015, as planned. # Debt Financing the Global Adjustment

January 10, 2017

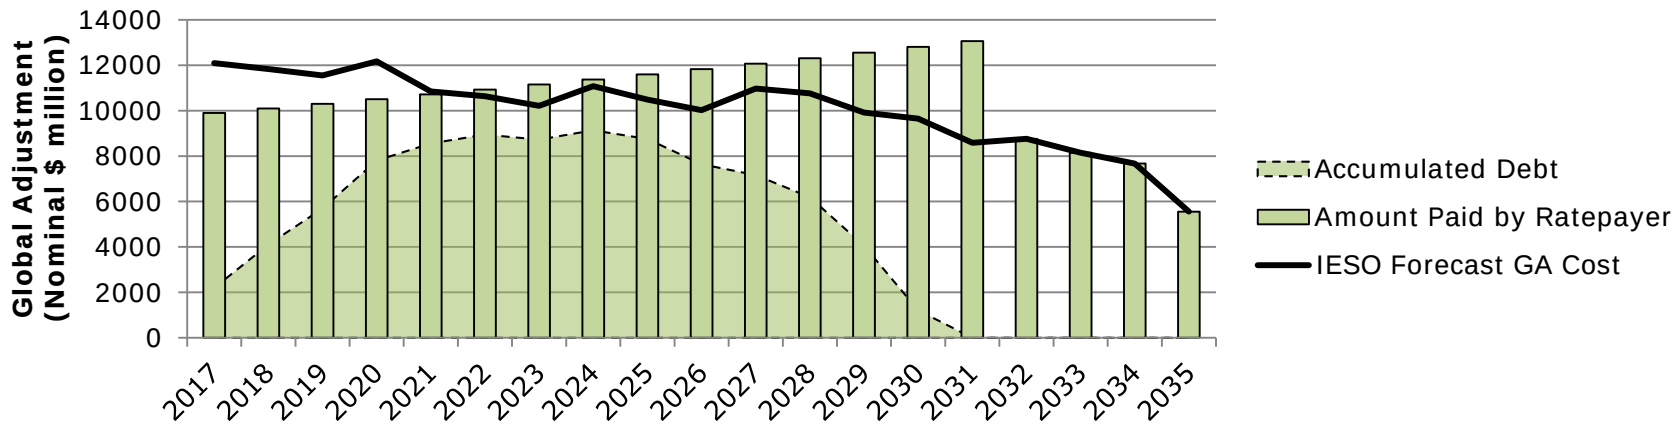
*Working Draft for Discussion Purposes Only*

# Purpose

- To analyze the system cost and ratepayer impact of partially financing the cost of the global adjustment (GA) by incurring debt to defer some of the cost.
- An indicative GA financing proposal is presented followed by a qualitative discussion of the proposal's risks.
- The remainder of the presentation quantitatively examines several different scenarios for debt financing the GA, showing:
  - The amount of debt incurred;
  - Impact on total system cost; and
  - Impact on residential bills.

# Indicative Proposal to Debt Finance the Global Adjustment

- For the purpose of discussion, the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the accumulated debt has been completely paid off.
- All scenarios consider setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "tilted" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- Analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook.



**Sample debt financing**: Ratepayers pay less than the cost of GA in early years, accumulating $9 billion of debt that is paid off in 2031 by paying more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Incurring debt to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves accruing large amounts of debt to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on rates (see Scenario 3 for an example of such interest rate risk).

- GA and HOEP provide a natural hedge against each other. Smoothing only one component would lead to greater price volatility. For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate.

- Conversely, if GA is higher than forecast (i.e., because of lower HOEP or additional out-of-market costs), the debt would increase to a higher amount, requiring additional debt service payments and/or a longer recovery period.

- Should Ontario demand be lower than forecasted, the cost of paying off the debt will be shared by a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Legal, Fiscal and Stakeholder

Legal:

- Such changes to the financing of the GA may require legislative or other amendments and will require further consultation with Legal Services Branch.

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.

- The significant amount of additional Provincial borrowing needed to debt finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating. Further analysis is required and would suggest early engagement with Ministry of Finance / Ontario Financing Authority.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" of the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# GA Debt Financing Scenarios

1. Status Quo
   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

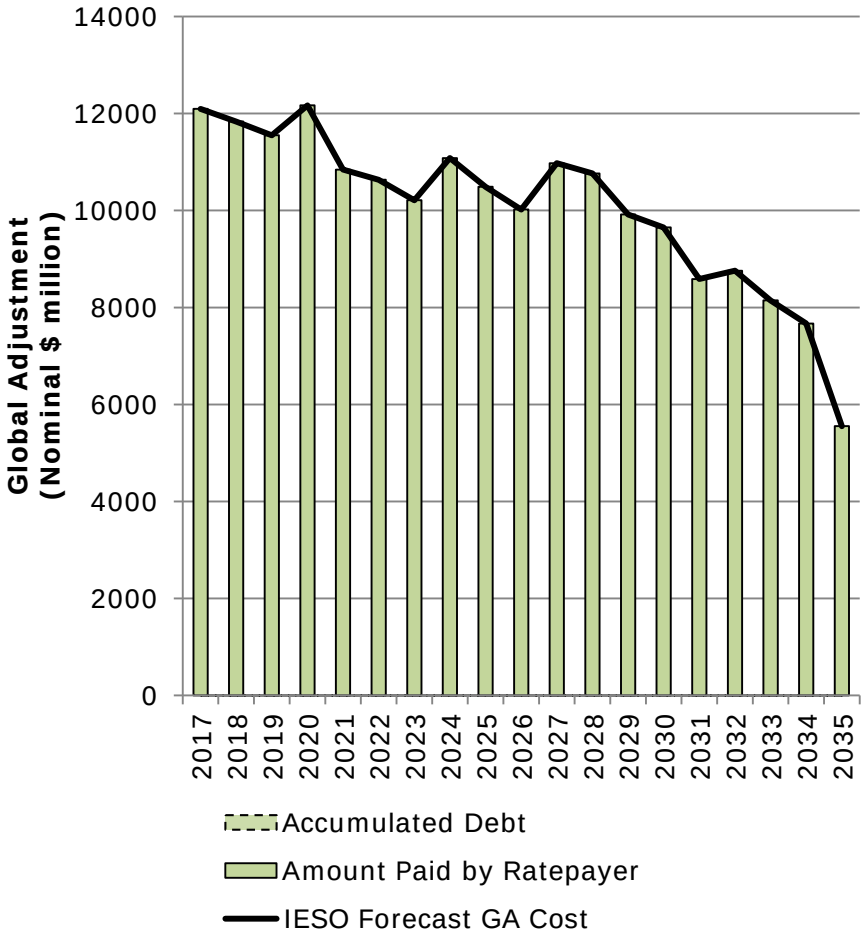
2. Maximize short-term cost reductions
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the accumulated debt is paid off over a 25-30 year financing period. This scenario assumes a 3% borrowing interest rate.

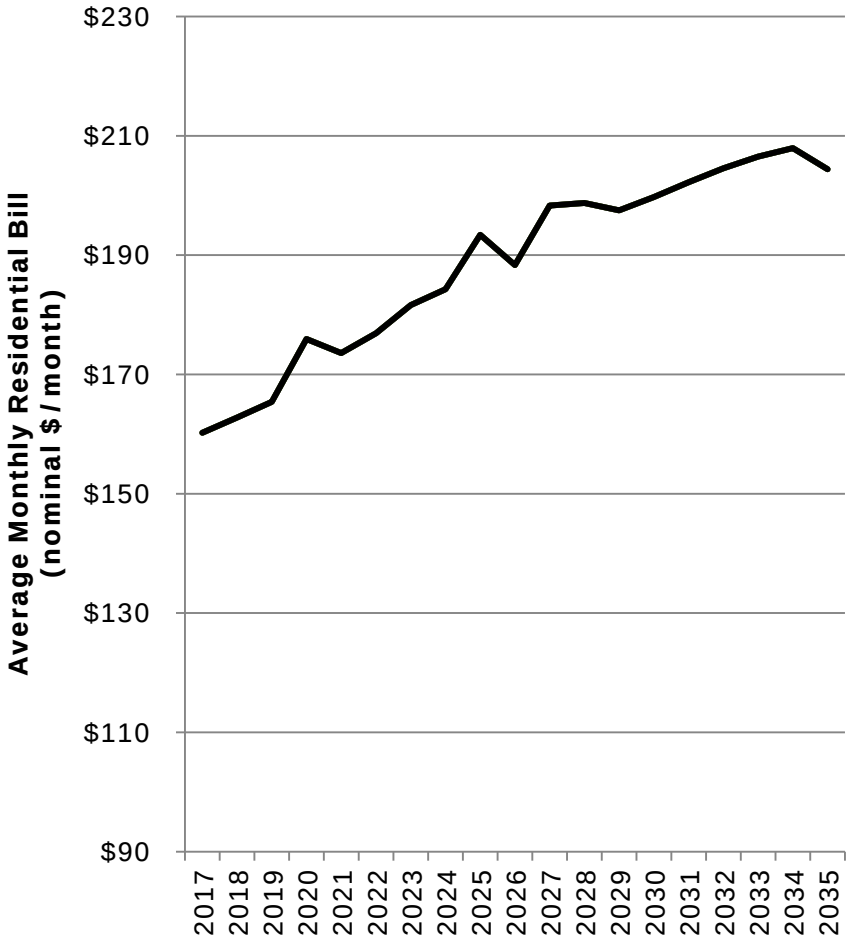
3. Interest Rate Risk
   - Using the 30-year financing case from Scenario 2, this scenario looks at the consequence of an increase of 2 percentage points in the borrowing interest rate.

4. Maximize short-term cost reductions with limits
   - The same as Scenario 2 but with GA over-payments capped at $2 billion above the true cost of GA in any given year.

# 1. Status Quo – Global and Residential Impacts

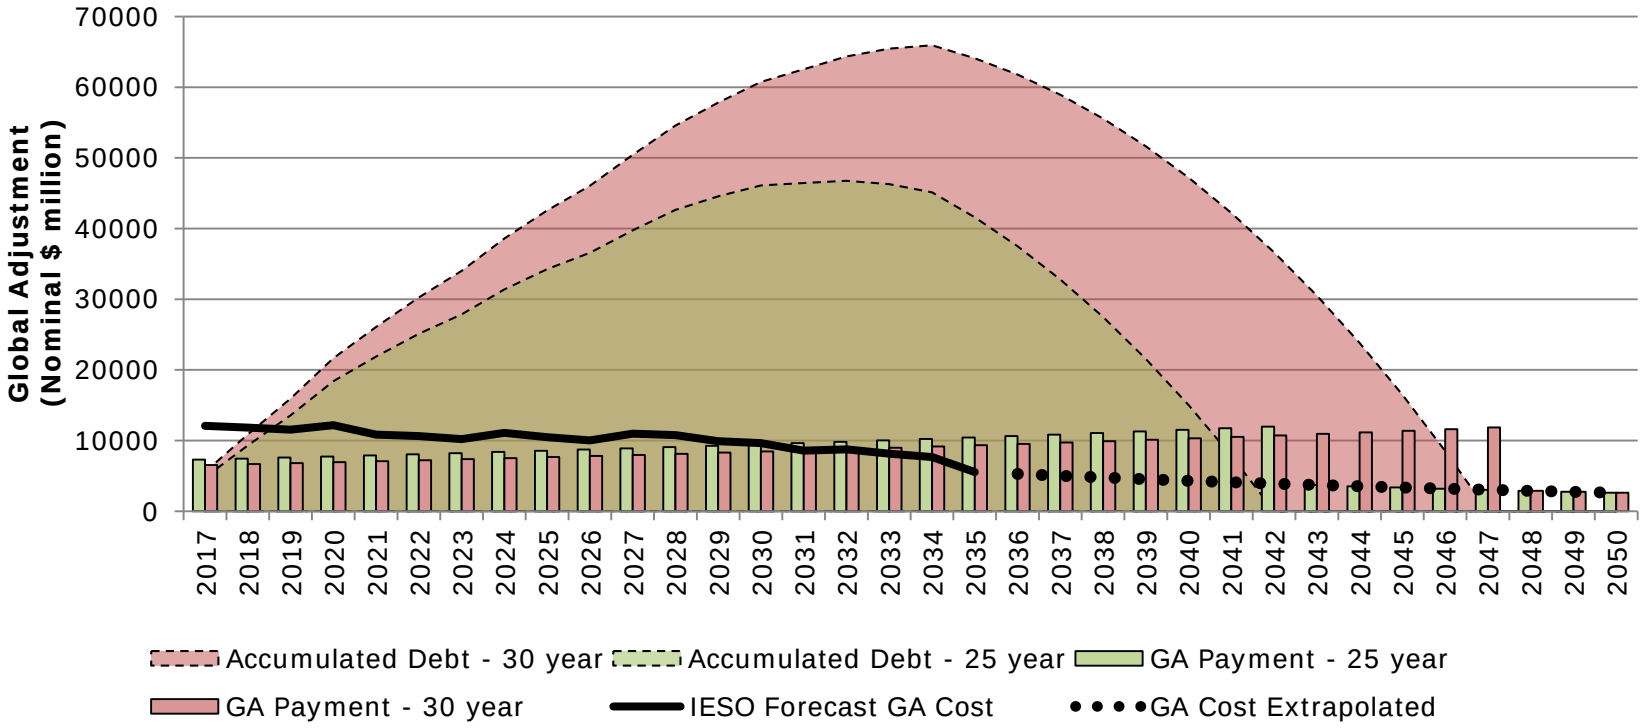
- Ratepayers continue paying the true cost of GA.





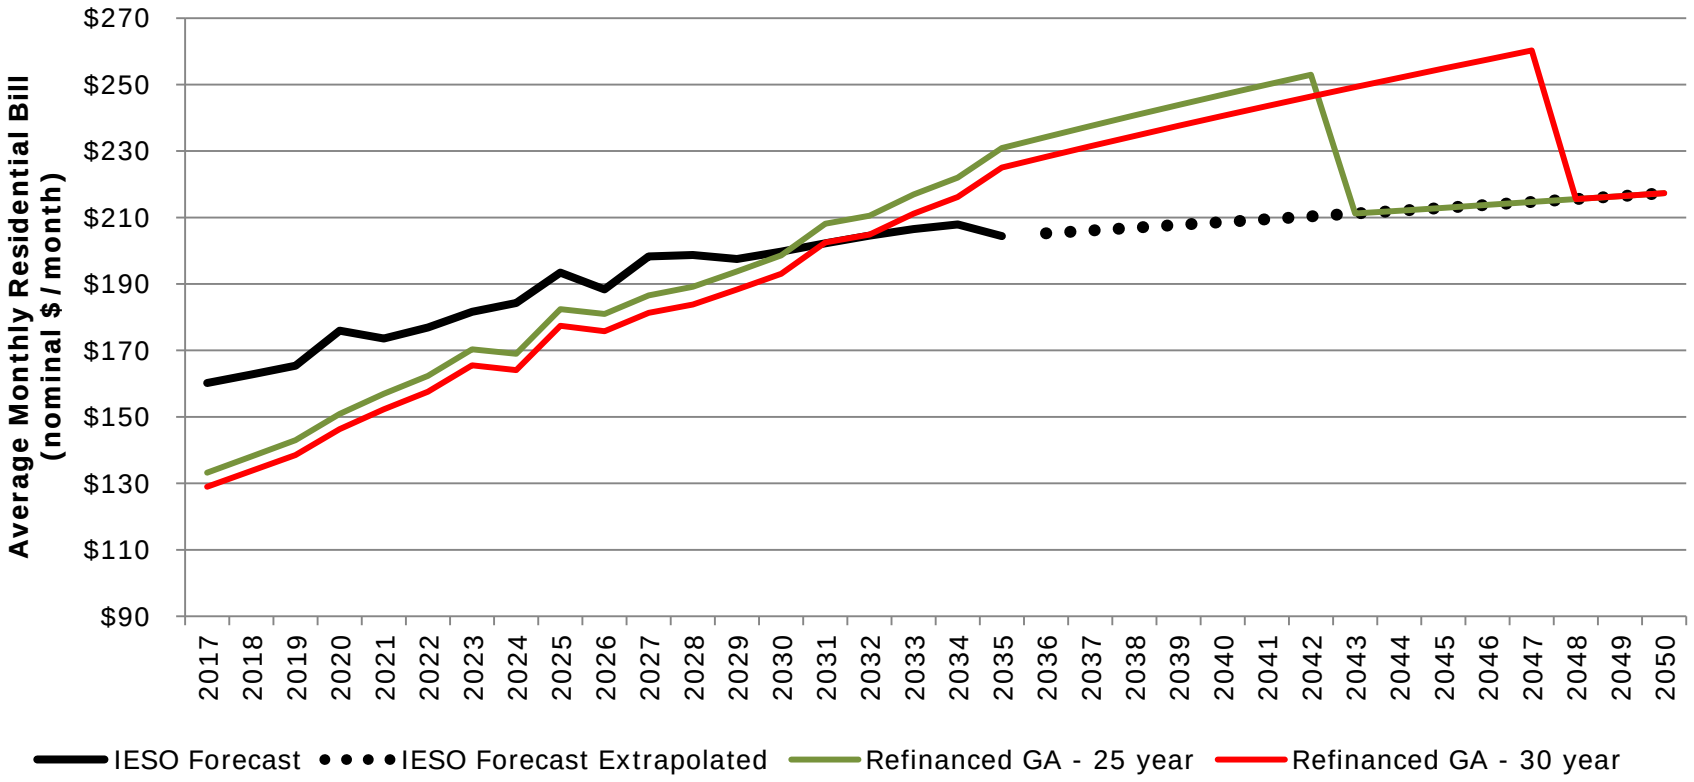
# 2. Maximize Short-term Cost Reduction – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year financing, green) and 2047 (30 year financing, red) respectively.



- A **reduction of 40-46% in GA payments** in 2017 is possible in this scenario by **accumulating up to $66 billion of debt.**
- Further reductions would require additional payments beyond those indicated in order to pay off the debt by 2042 and 2047 in each of the scenarios respectively.

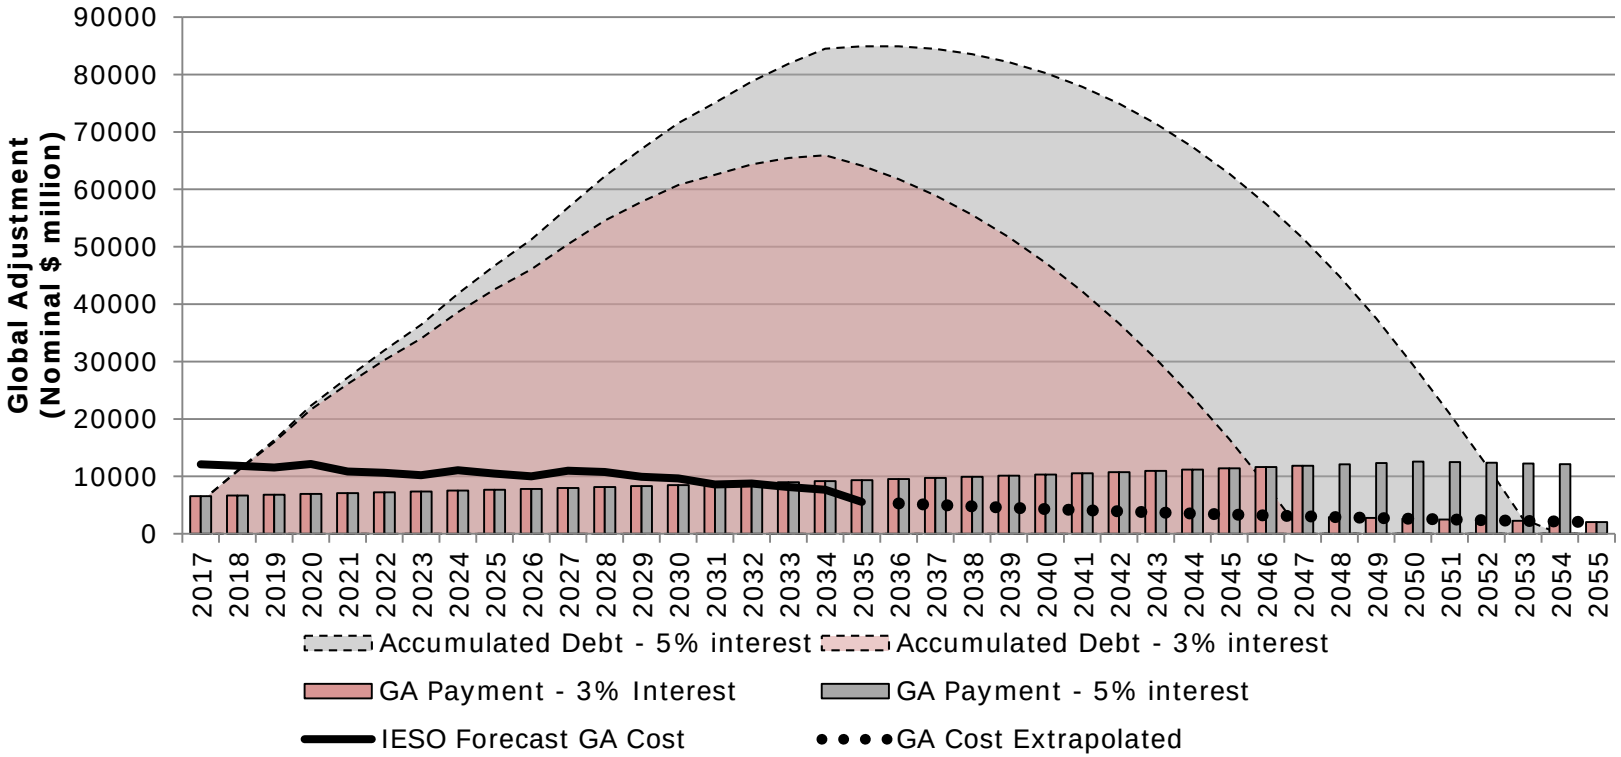
# 2. Maximize Short-term Cost Reduction – Residential Impacts



- This scenario results in a **short-term reduction of up $27-$31/month** in 2017 at the cost of **a long-term increase of up to $43-$46/month** relative to the IESO forecast.
- Due to the significant increase in electricity bills in later years, Scenario 4 considers limiting the amount above the true cost of the GA that is paid by ratepayers.

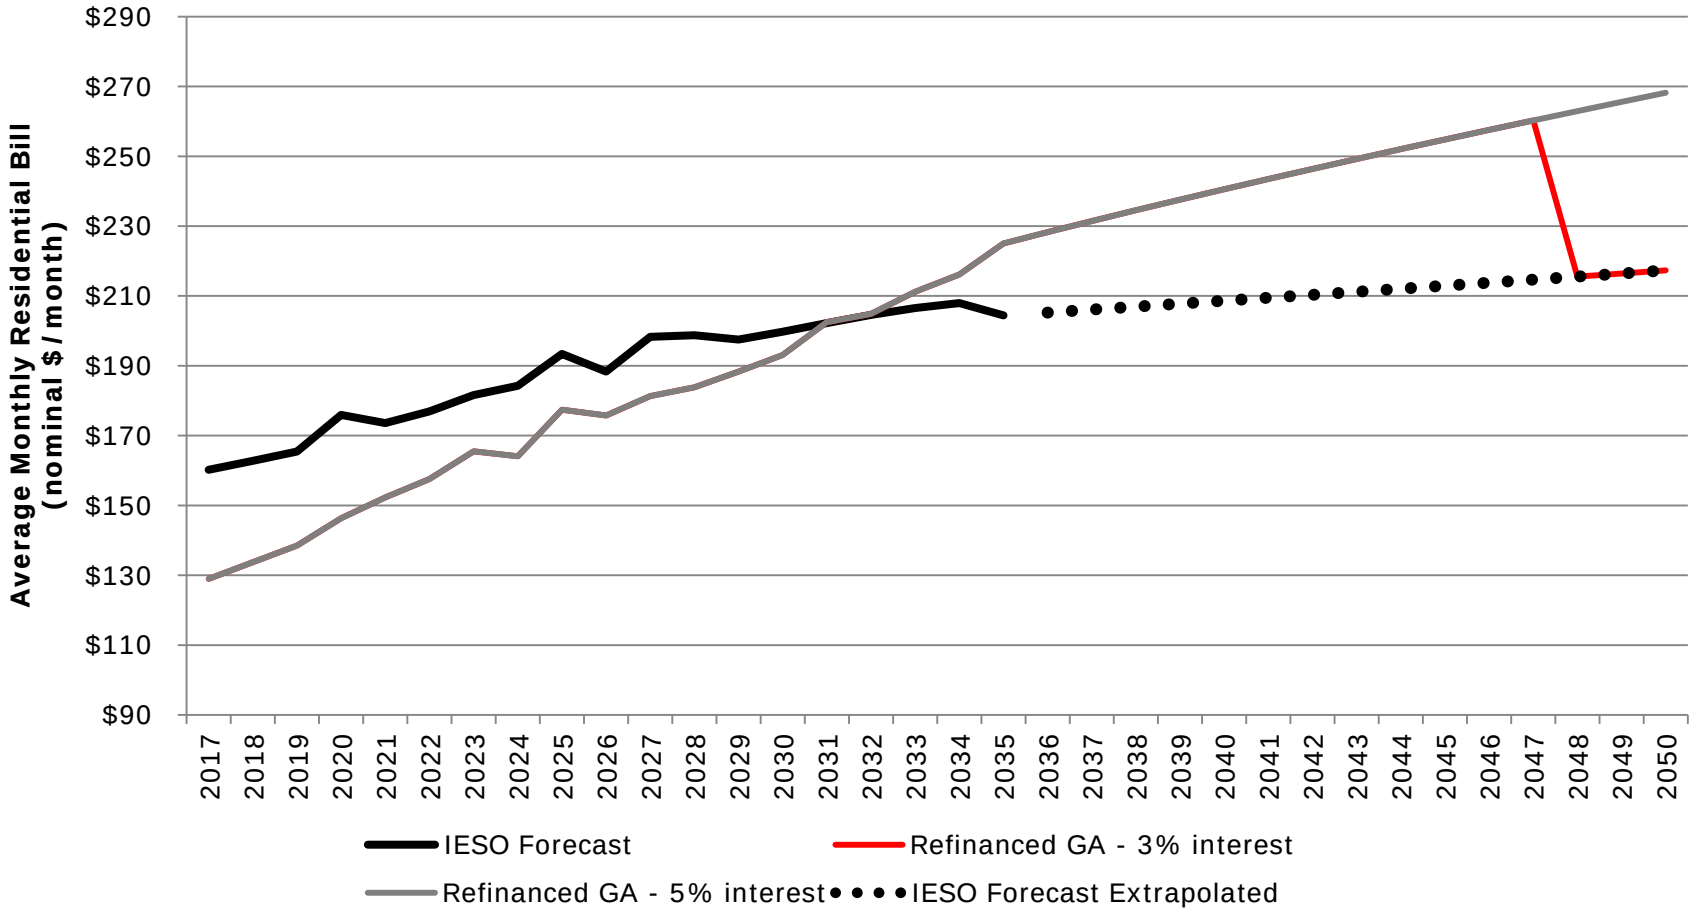
# 3. Interest Rate Risk – Global Impacts

- This scenario compares the maximal 30-year financing case from Scenario 2 (red, assuming a 3% interest rate) and calculates the resulting debt that would accrue due to an increase of two percentage points in the borrowing interest rate (grey, 5% interest).



- Under a 30-year financing payment schedule that assumes a borrowing interest rate of 3% (red), an increase in interest rate to 5% results in **more than $50 billion of accumulated debt in 2047** (grey) requiring further GA over-payments beyond 2047 in order to service the debt.

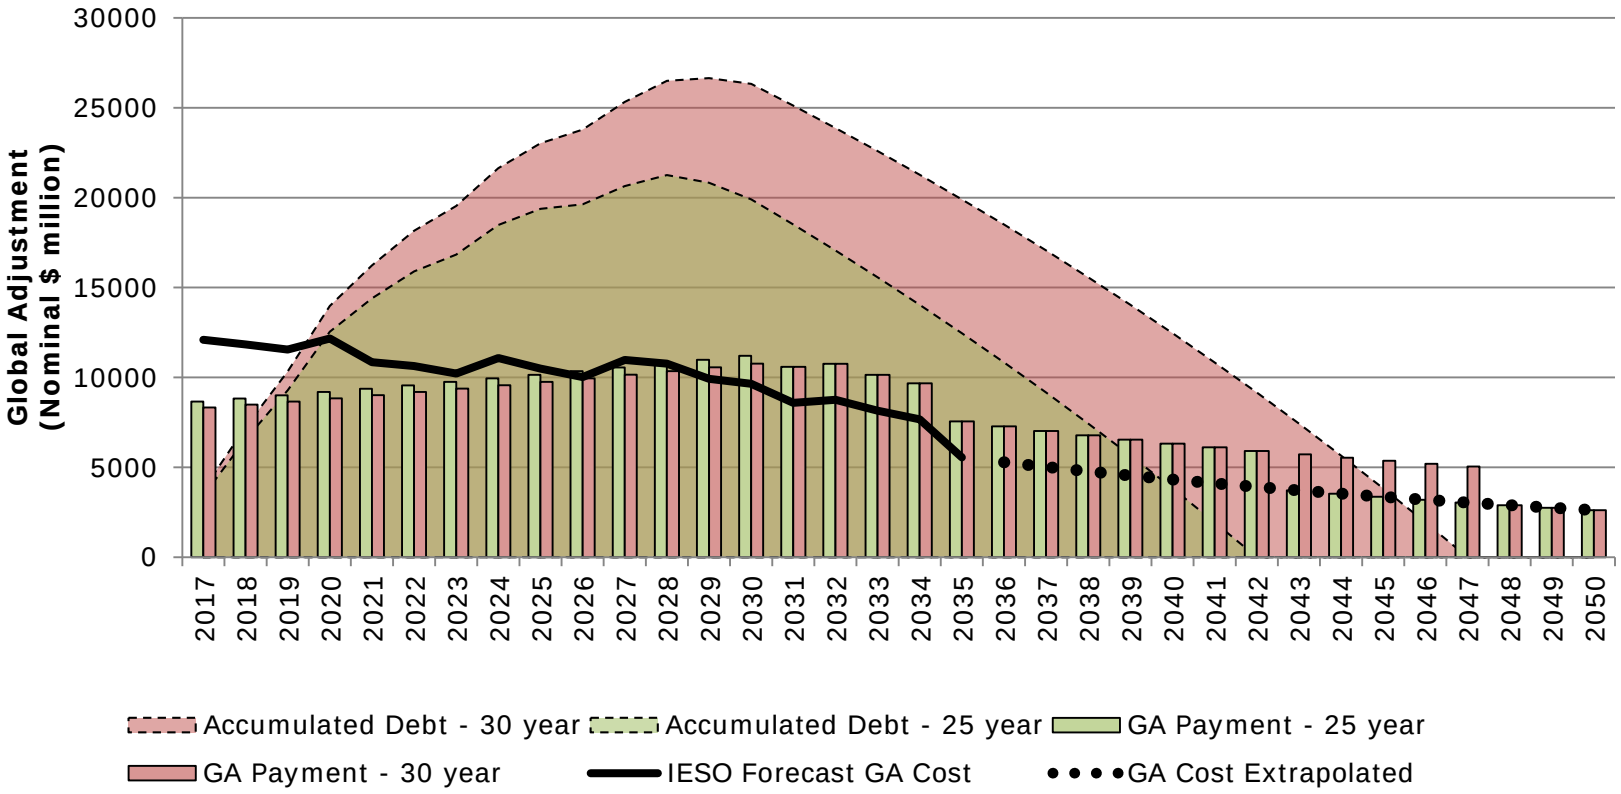
# 3. Interest Rate Risk – Residential Impacts



- In this scenario, an increase in the borrowing interest rate lengthens the financing period beyond 2047.

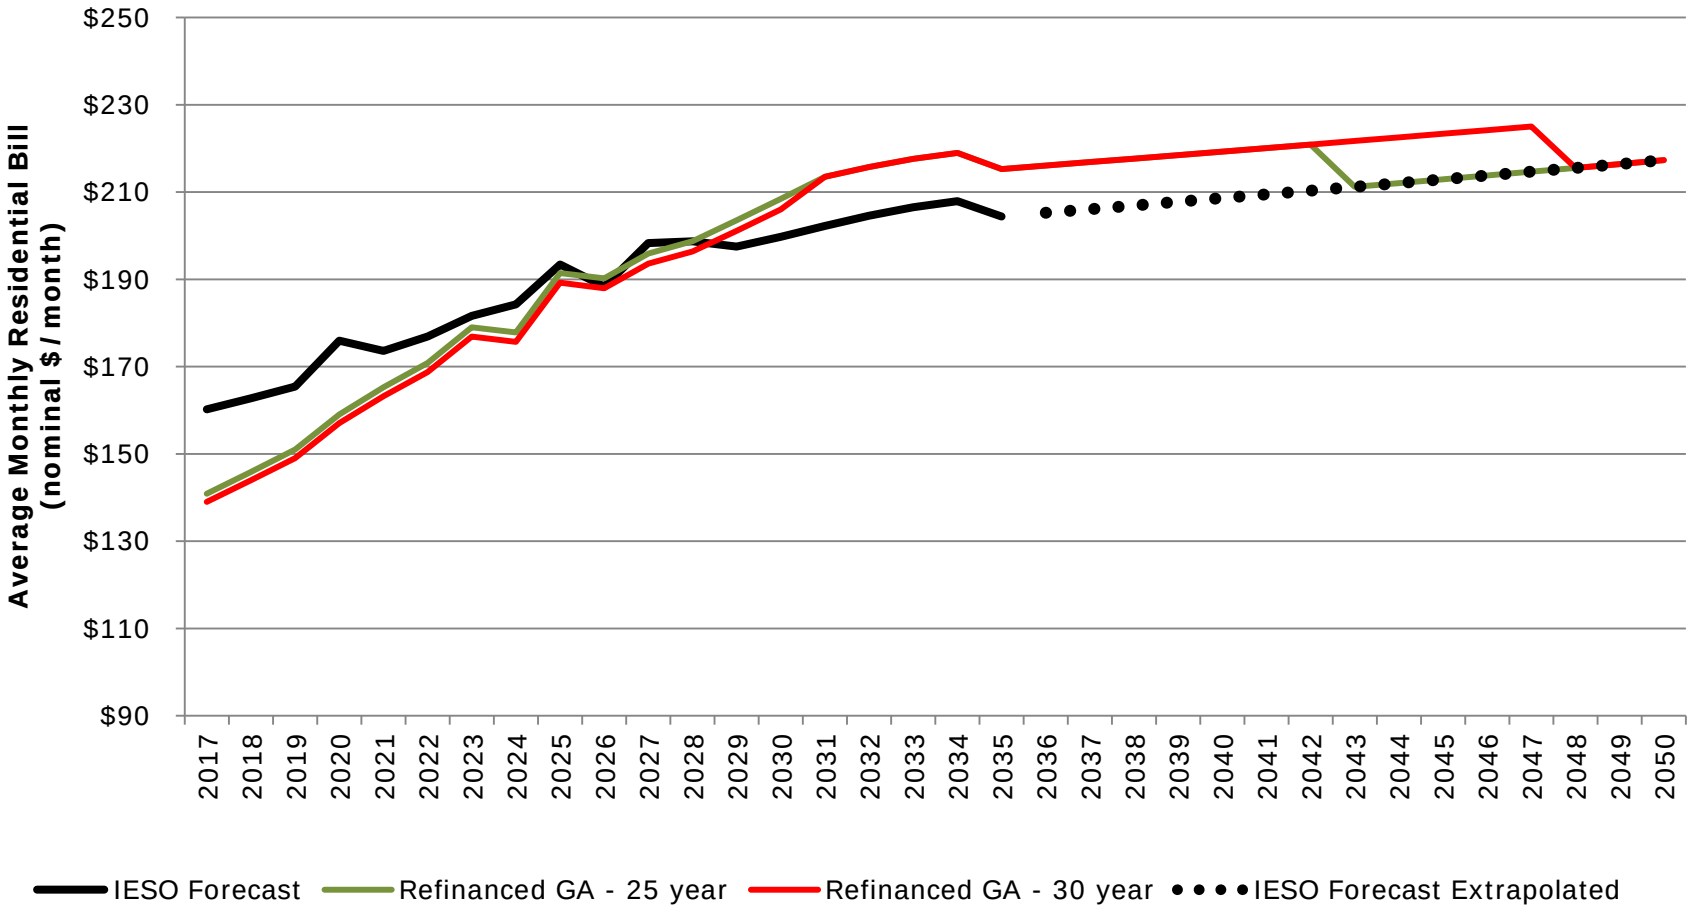
# 4. Maximize Short-term Cost Reduction with Limits – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year, green) and 2047 (30 year, red) respectively subject to limiting ratepayer over-payments to no more than $2 billion above the true cost of GA.



- A **reduction of 28-31% in GA payments** in 2017 is possible in this scenario by **accumulating up to $26 billion of debt.**

# 4. Maximize Short-term Cost Reduction with Limits – Residential Impacts



- This scenario results in **a short-term reduction of up $19-$21/month** in 2017 at the cost of **a long-term increase of up to $11/month** in 2029-2047 relative to the IESO forecast.

# Debt Financing the Global Adjustment

January 10, 2017

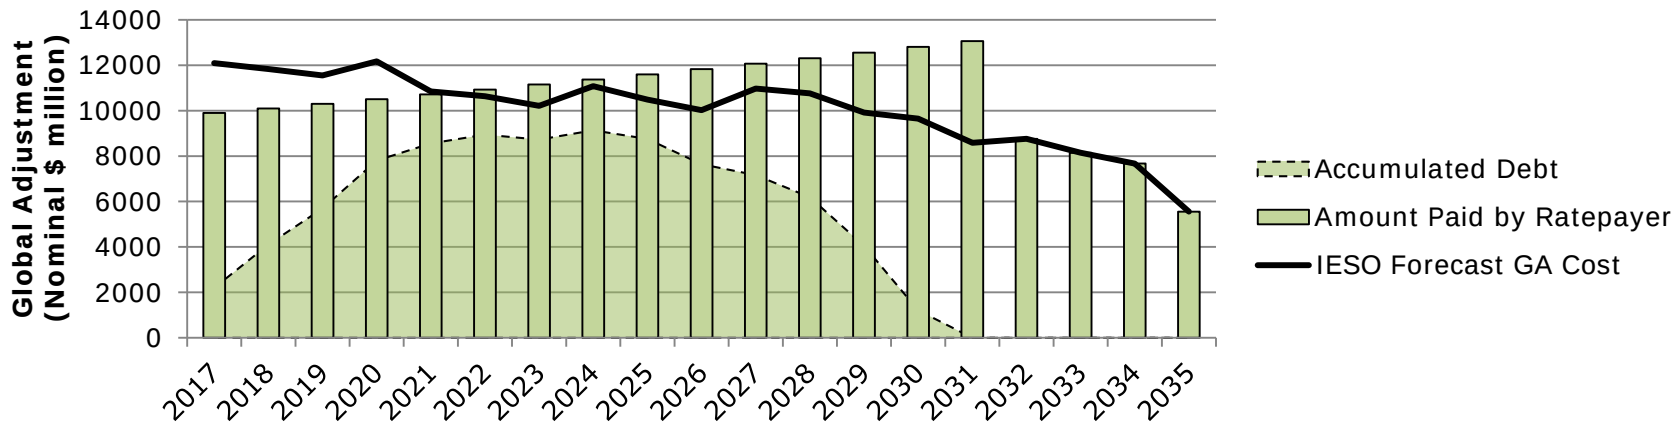
*Working Draft for Discussion Purposes Only*

# Purpose

- To analyze the system cost and ratepayer impact of partially financing the cost of the global adjustment (GA) by incurring debt to defer some of the cost.
- An indicative GA financing proposal is presented followed by a qualitative discussion of the proposal's risks.
- The remainder of the presentation quantitatively examines several different scenarios for debt financing the GA, showing:
  - The amount of debt incurred;
  - Impact on total system cost; and
  - Impact on residential bills.

# Indicative Proposal to Debt Finance the Global Adjustment

- For the purpose of discussion, the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the accumulated debt has been completely paid off.
- All scenarios consider setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "tilted" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- Analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook.



**Sample debt financing**: Ratepayers pay less than the cost of GA in early years, accumulating $9 billion of debt that is paid off in 2031 by paying more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Incurring debt to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves accruing large amounts of debt to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on rates (see Scenario 3 for an example of such interest rate risk).

- GA and HOEP provide a natural hedge against each other. Smoothing only one component would lead to greater price volatility. For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate.

- Conversely, if GA is higher than forecast (i.e., because of lower HOEP or additional out-of-market costs), the debt would increase to a higher amount, requiring additional debt service payments and/or a longer recovery period.

- Should Ontario demand be lower than forecasted, the cost of paying off the debt will be shared by a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Legal, Fiscal and Stakeholder

Legal:

- Such changes to the financing of the GA may require legislative or other amendments and will require further consultation with Legal Services Branch.

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.

- The significant amount of additional Provincial borrowing needed to debt finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating. Further analysis is required and would suggest early engagement with Ministry of Finance / Ontario Financing Authority.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" of the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# GA Debt Financing Scenarios

1. Status Quo
   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

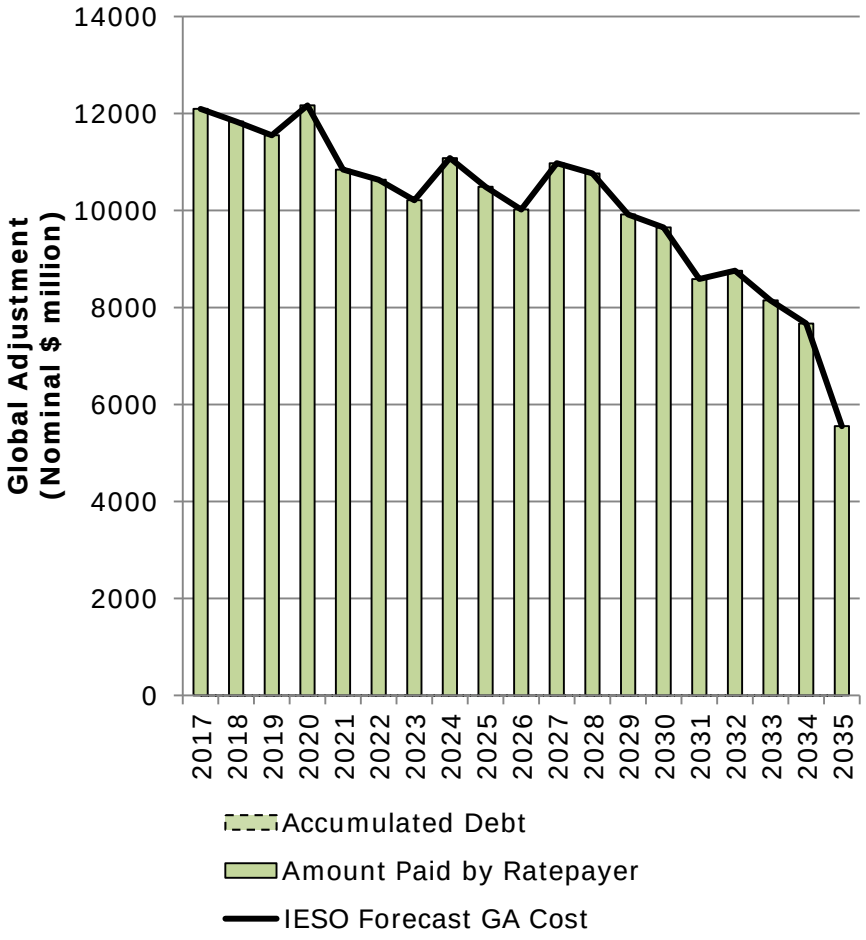
2. Maximize short-term cost reductions
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the accumulated debt is paid off over a 25-30 year financing period. This scenario assumes a 3% borrowing interest rate.

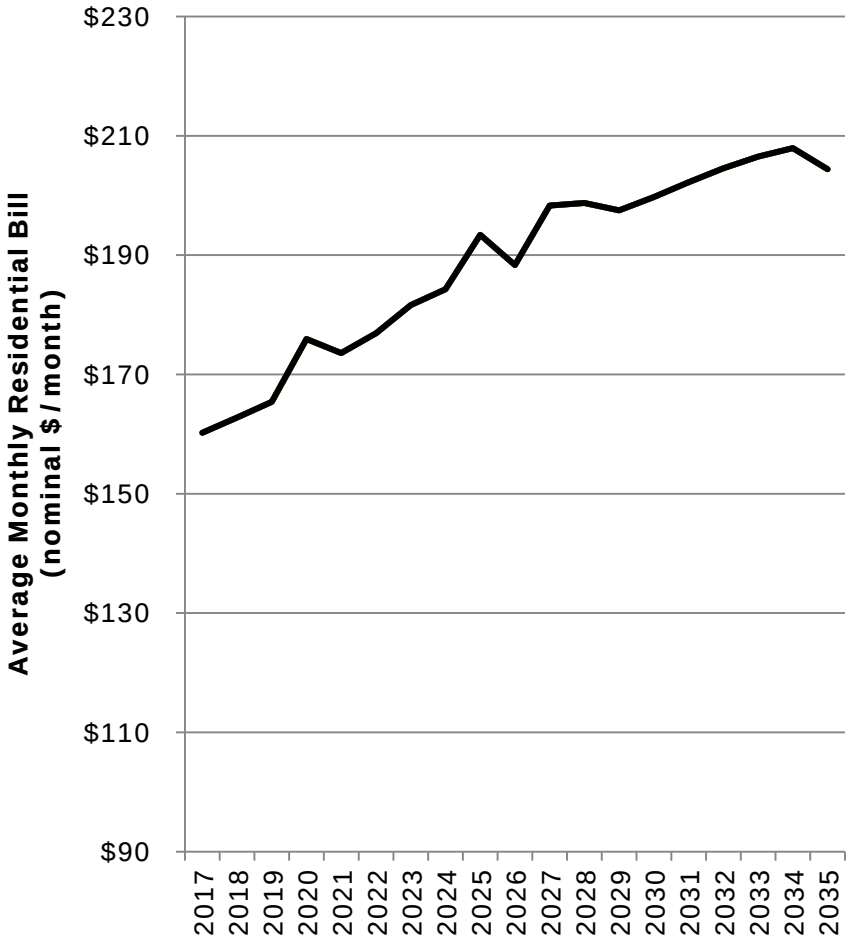
3. Interest Rate Risk
   - Using the 30-year financing case from Scenario 2, this scenario looks at the consequence of an increase of 2 percentage points in the borrowing interest rate.

4. Maximize short-term cost reductions with limits
   - The same as Scenario 2 but with GA over-payments capped at $2 billion above the true cost of GA in any given year.

# 1. Status Quo – Global and Residential Impacts

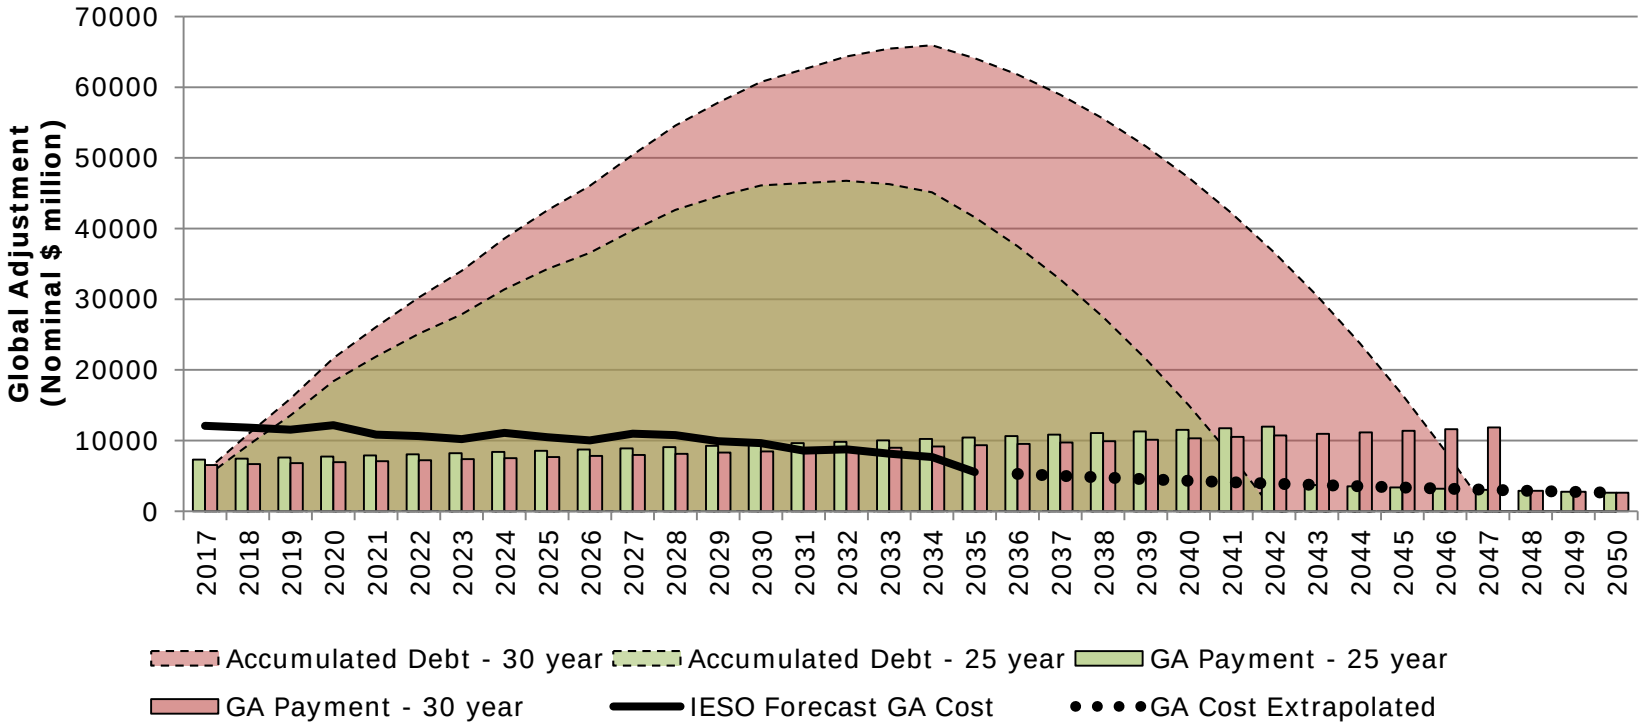
- Ratepayers continue paying the true cost of GA.





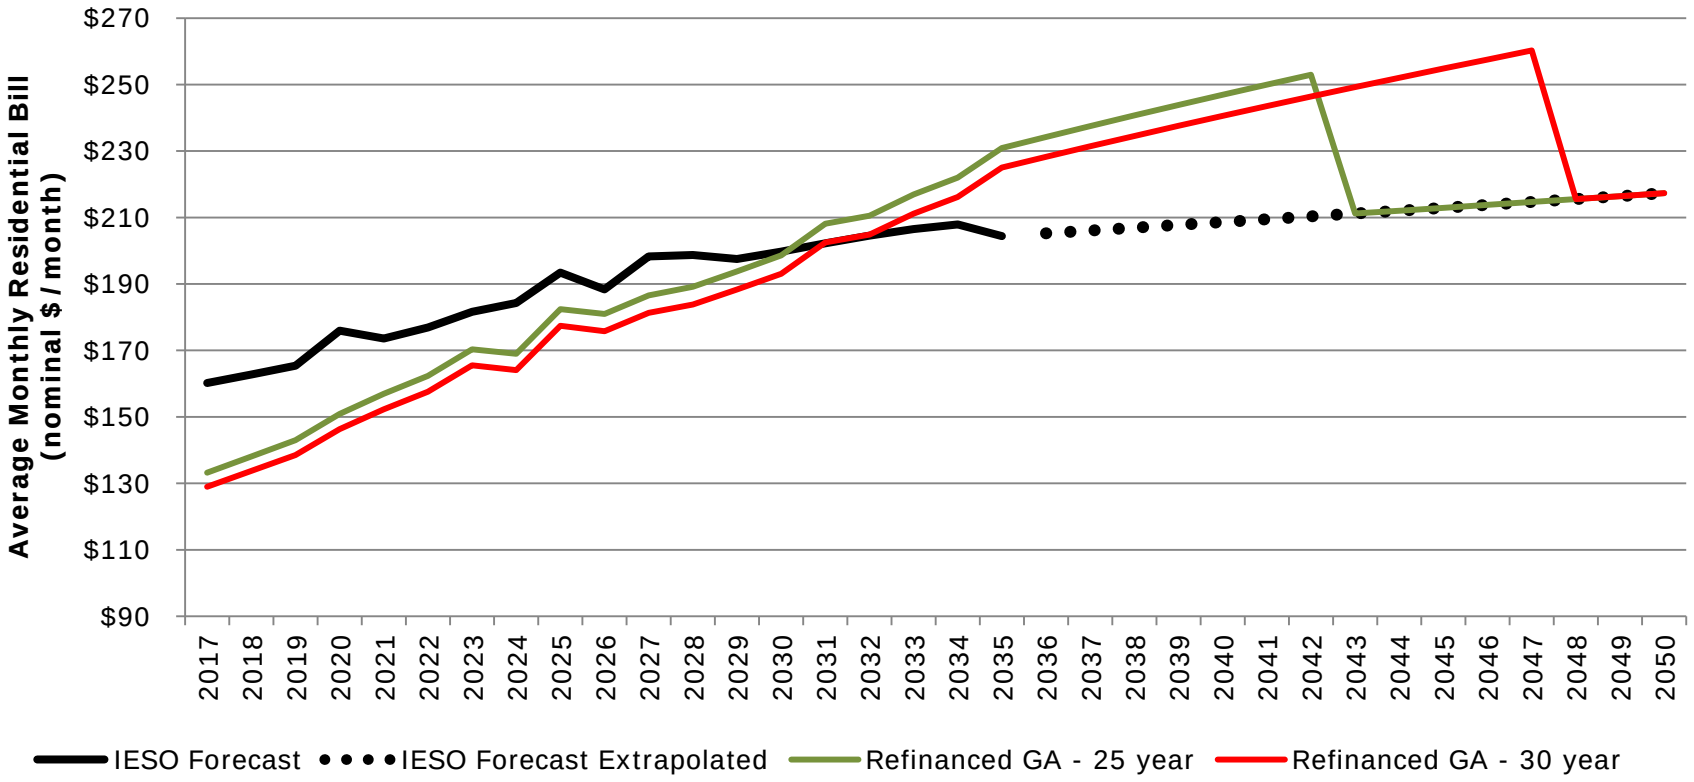
# 2. Maximize Short-term Cost Reduction – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year financing, green) and 2047 (30 year financing, red) respectively.



- A **reduction of 40-46% in GA payments** in 2017 is possible in this scenario by **accumulating up to $66 billion of debt.**
- Further reductions would require additional payments beyond those indicated in order to pay off the debt by 2042 and 2047 in each of the scenarios respectively.

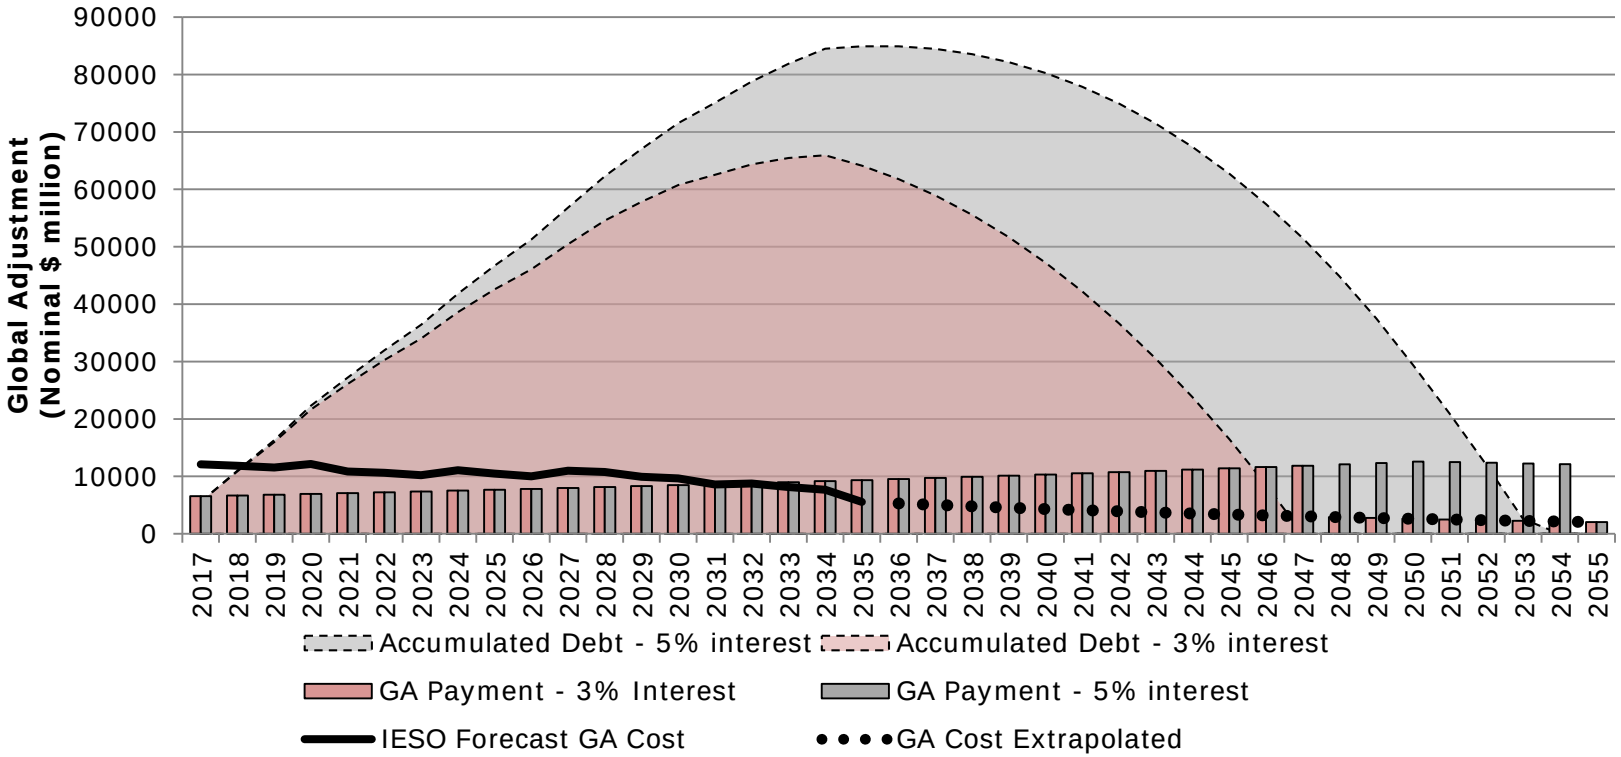
# 2. Maximize Short-term Cost Reduction – Residential Impacts



- This scenario results in a **short-term reduction of up $27-$31/month** in 2017 at the cost of **a long-term increase of up to $43-$46/month** relative to the IESO forecast.
- Due to the significant increase in electricity bills in later years, Scenario 4 considers limiting the amount above the true cost of the GA that is paid by ratepayers.

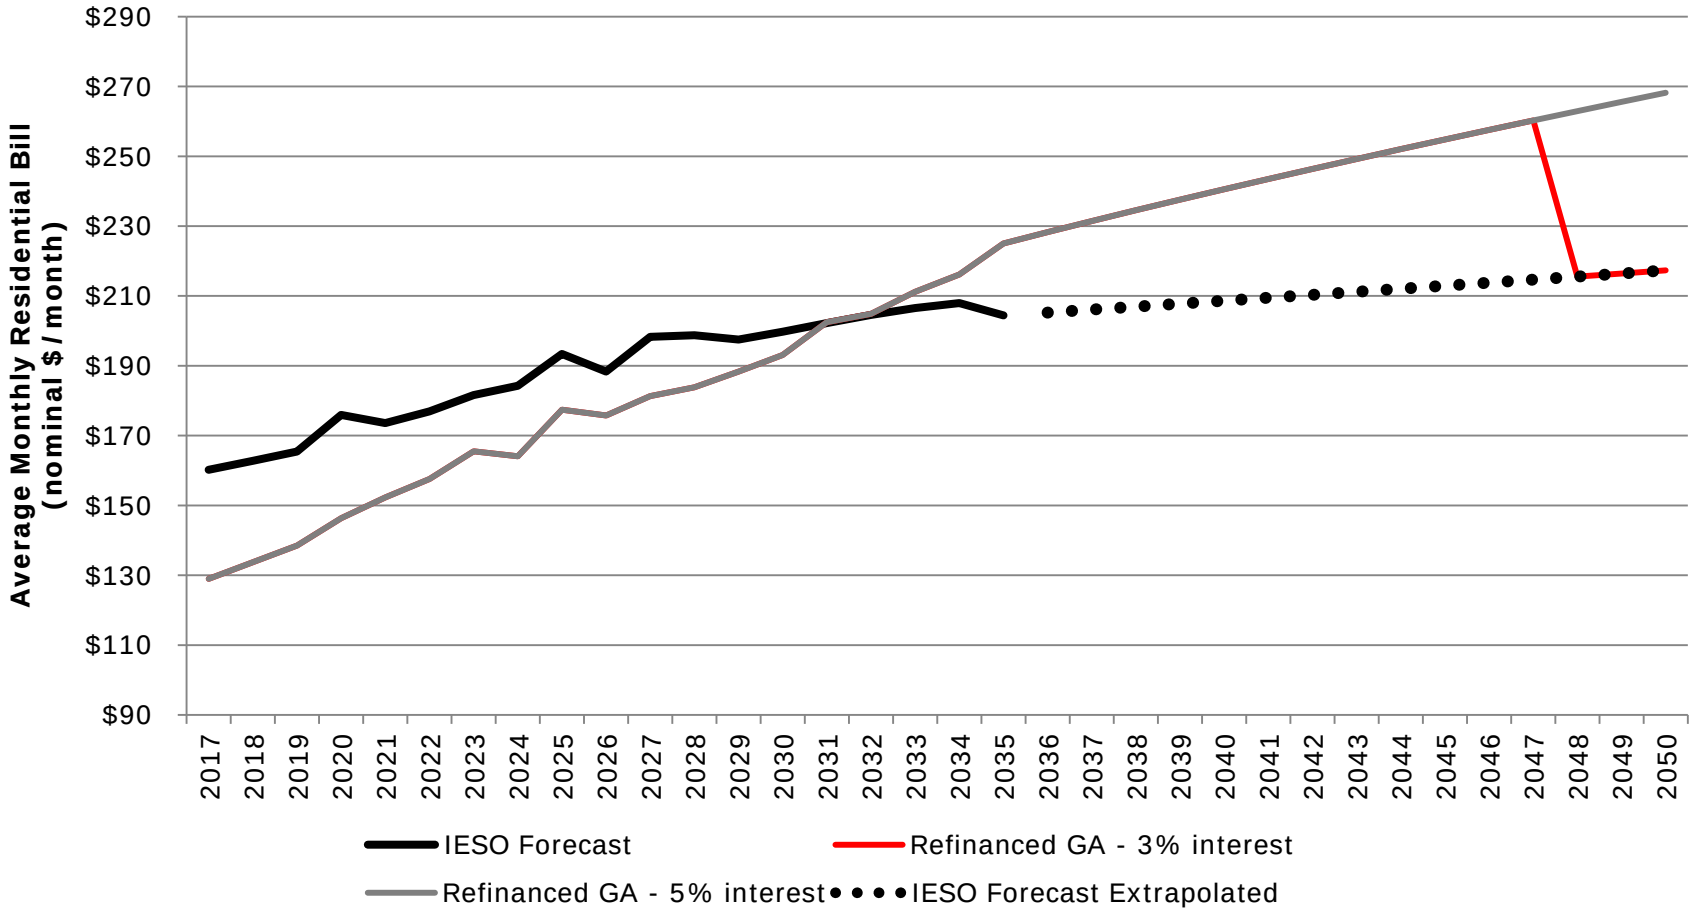
# 3. Interest Rate Risk – Global Impacts

- This scenario compares the maximal 30-year financing case from Scenario 2 (red, assuming a 3% interest rate) and calculates the resulting debt that would accrue due to an increase of two percentage points in the borrowing interest rate (grey, 5% interest).



- Under a 30-year financing payment schedule that assumes a borrowing interest rate of 3% (red), an increase in interest rate to 5% results in **more than $50 billion of accumulated debt in 2047** (grey) requiring further GA over-payments beyond 2047 in order to service the debt.

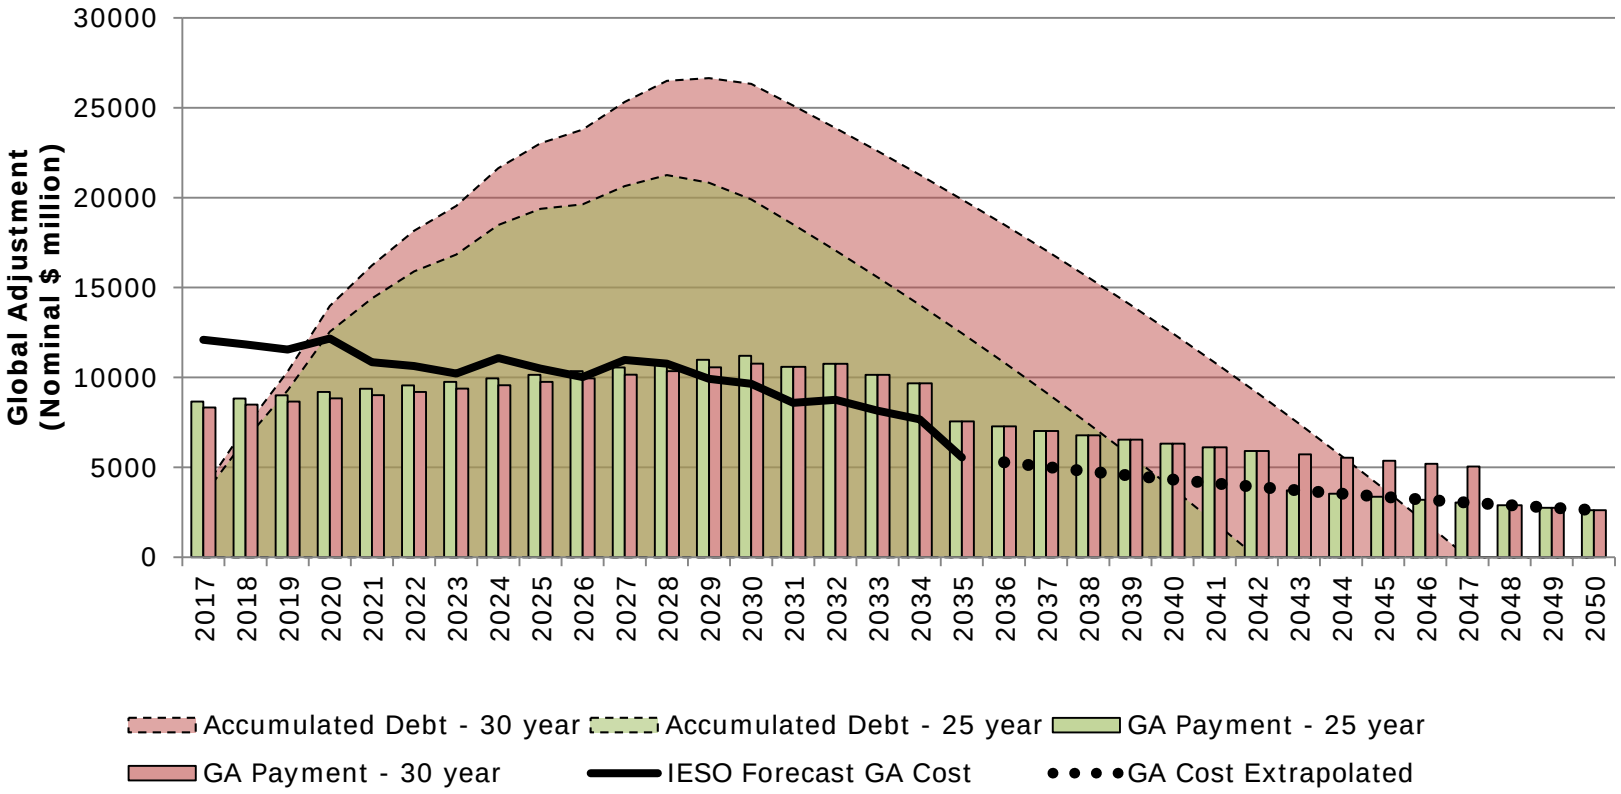
# 3. Interest Rate Risk – Residential Impacts



- In this scenario, an increase in the borrowing interest rate lengthens the financing period beyond 2047.

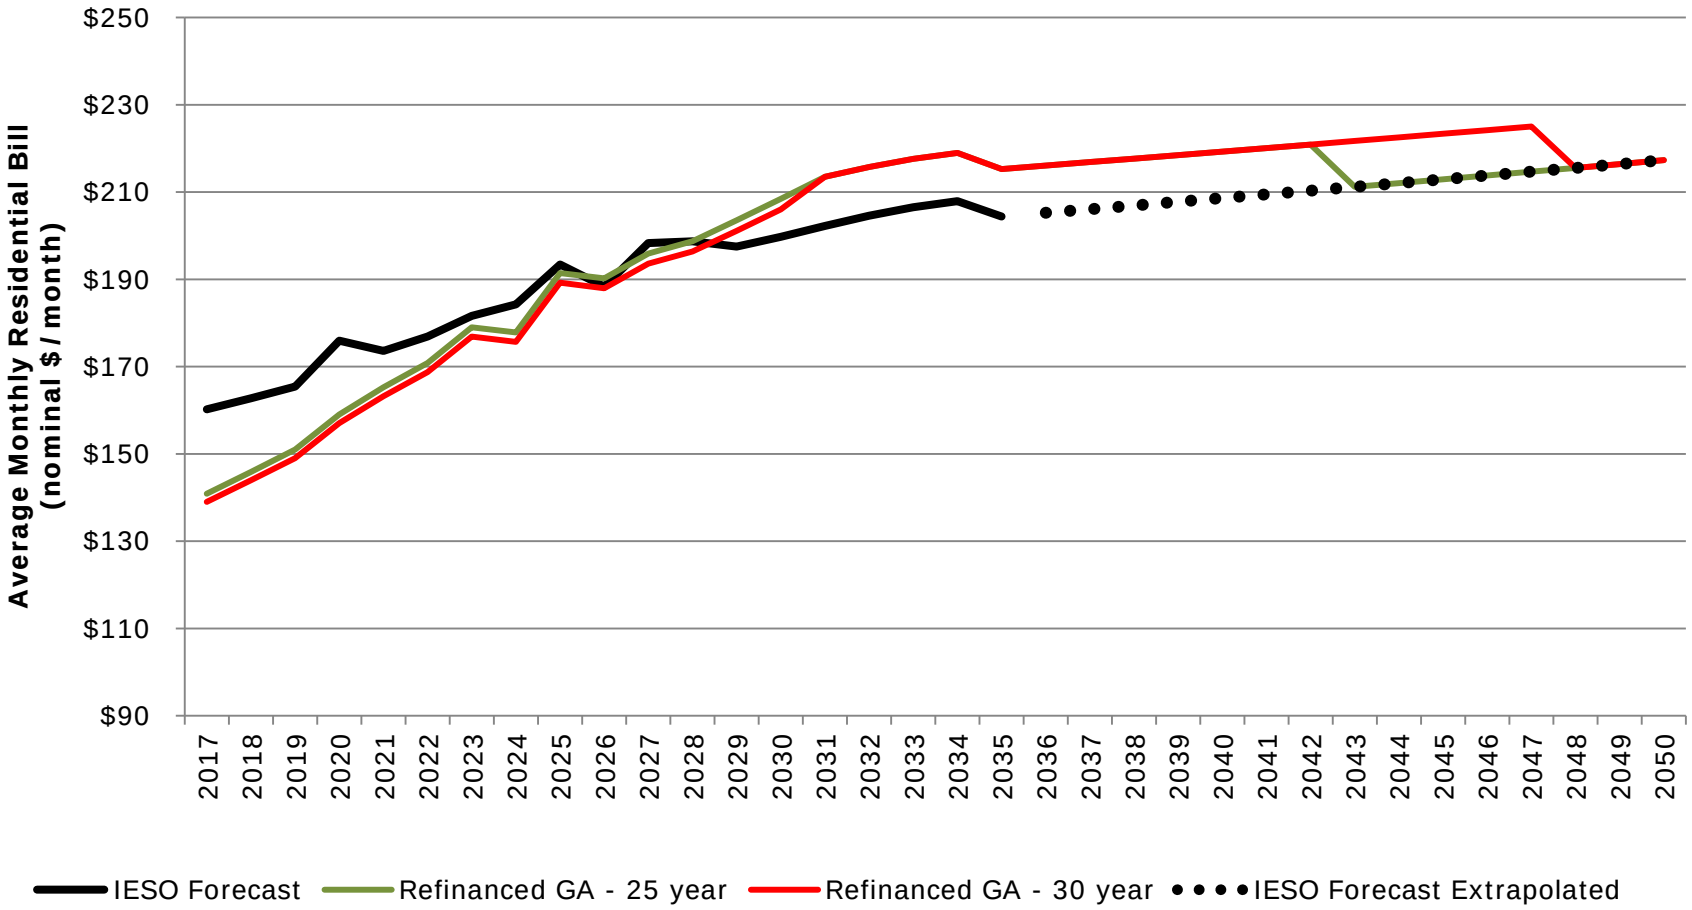
# 4. Maximize Short-term Cost Reduction with Limits – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year, green) and 2047 (30 year, red) respectively subject to limiting ratepayer over-payments to no more than $2 billion above the true cost of GA.



- A **reduction of 28-31% in GA payments** in 2017 is possible in this scenario by **accumulating up to $26 billion of debt.**

# 4. Maximize Short-term Cost Reduction with Limits – Residential Impacts



- This scenario results in **a short-term reduction of up $19-$21/month** in 2017 at the cost of **a long-term increase of up to $11/month** in 2029-2047 relative to the IESO forecast.

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | | |
|---|---|---|
| **Ministry:** | Energy | |
| **Meeting Date:** | September 12, 2016 | |
| **Agenda Class:** | Major | |
| **Last reviewed by:** N/A | | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives<br>• Recommend proceeding to Cabinet with the proposed legislation amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1100.0 | 1100.0 |
| Initiative cost recommended | 300.0 | 1100.0 | 1100.0 |
| Recommended program base | 300.0 | 1100.0 | 1100.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 1040.0 | 1040.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B eligible electricity consumers (i.e., commercial, institutional and small industrial).
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal $1100M | Residential, small business and small farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal ($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $1040M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base ($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base ($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.1 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset

the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and could incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on

both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reduction in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,100,000,000 in 2017-18 and $1,100,000,000 in 2018-19, and $1,200,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change to invest an estimated amount of up to $1,080,000,000, from 2017-18 to 2020-21, of cap and trade auction proceeds for non- Regulated Price Plan commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan that reduce greenhouse gas emissions.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21, which was allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with the Premier's Office and Cabinet Office on the development and implementation of an integrated communications strategy.

# APPENDIX B: FINANCIAL TABLES

## APPENDIX C: ELECTRICITY SECTOR BACKGROUND

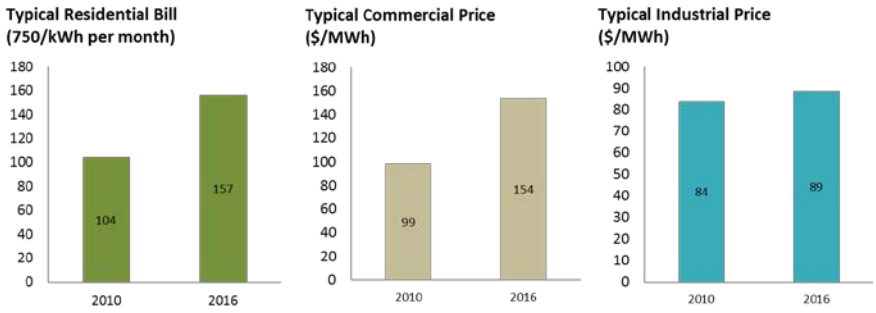
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>  – Coffee / snack retailer<br>  – Convenience store<br>  – Apparel store<br>  – Hair salon<br>  – Small insurance office | • Class A consumers<br>  – Manufacturer<br>  – Large grocery store<br>  – Mines<br>  – Auto assembly plants<br>• Class B consumers<br>  – Commercial offices (low rise)<br>  – Hotel<br>  – General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX F: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

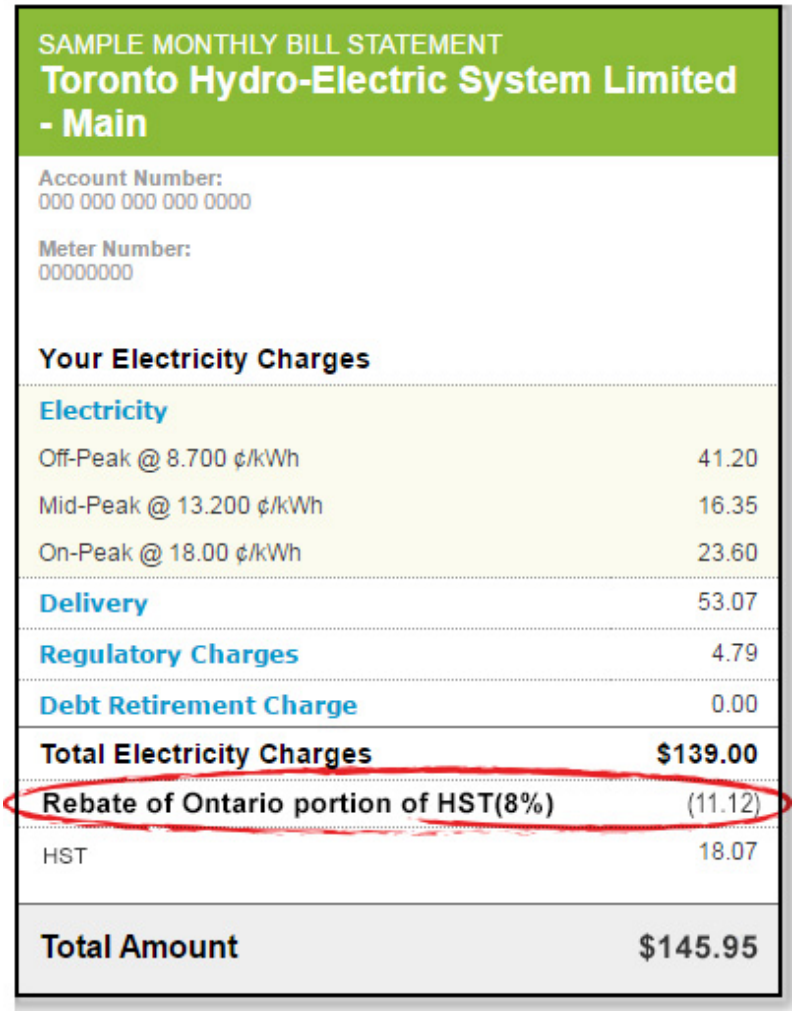
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

## APPENDIX E: ILLUSTRATIVE BILL MOCK-UP



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | (11.12) |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

---

Hi John,
In advance of our meeting, just sharing a draft summary I prepared based on what I heard on the call. There are likely many errors as I joined the call late. Can you perhaps suggest edits based on your understanding (in track changes mode).
Thanks. N

**Electricity Price Mitigation**
**Teleconference call summary**

**Participants: IESO (Kim Marshall), KPMG (Michel Picard), Cindy Veinot & N. Petsche (OPCD), Steen Hume (MOE), Ronald Kwan (OEFC/OFA)**

| General: | CFS | IESO | |
|---|---|---|---|
| | Notes | Notes | Actions |
| Variance accounts are not all recognized on the CFS? In order to have an asset recognized on the books, need to have a receivable (amounts billed), unless an asset can be established another way (through legislation)<br><br>Current vs. future IESO role: if move from current settlement related role, and have to negotiate and manage the debt then it will seem more like the OFA. Option to use another party to provide this advice, and not have OFA hold the debt. | - Questionable whether any receivable reflected on the Province's f/s would be sufficiently supportable from the AG's perspective under PSAB.<br>- Consider if might be off-balance sheet financing based if debt acquired through 3rd party vs. OFA.<br>- Want to understand why the debt for the GA is not on the Province's books. (Q from MOE…why would it be assumed that cash flows related to the rate base would be consolidated on the Province's books and intermingled with cash flows related to tax base) | - Issue: 4 M Consumers wouldn't have a liability on their books that would correspond with a recoverable (one to many scenario with no amounts billed)<br>- Strategically difficult to pass along the recoverable to the LDCs as it would impact the d/e ratios; uncertain how many follow IFRS without rate regulated accounting; LDCs also don't have the credit capacity to absorb the debt<br>- Current IESO role: used as a settlement system to support the market (sets | - Considering creating a receivable through legislation (vs. direct contracts or billing)<br>- Need an 'authorized' expenditure in order to be recoverable. Assess on what basis we can create an asset which is recoverable. All extra costs need to be recognized as being recoverable (even interest)<br>- Since need legal authority to recover, presumably you would also need legal authority to defer and collect in the future but need to address the proposed change in role of the IESO<br>- Consider who would hold debt (OFA or third party) . Would be |

| | | | |
|---|---|---|---|
| | | HOEP every 5 mins, matches supply and demand, collects through GA for costs of reliable T,D, generation)<br>- As a successor company to previous Ontario Hydro, the IESO would borrow from the OEFC; OPA is a new construct so would borrow from the OFA if needed.<br>- IESO's original accounting was established as an agent for settlement purposes. Legacy contracts were for cash to suppliers which were recovered through the GA. John and Adrian were involved with est of the OPA and est of the RPP variance acct. Was never a GA var. OPA always reported the RPP act (1 set of books) – entered into 3500+ contracts with generating | higher rates? Would be provincial guarantee? OPA had AA credit rating and contracts entered into and debt borrowed based on that rating (one ranking lower than the province)<br>- James (legal) asked by Steen Hume to help to id what the new legislative responsibilities of the IESO might look like. |

| | | | |
|---|---|---|---|
| | | entities (40B) which NEVER appeared on the Province's books (no rev/exp or debt. These were considered executory contracts, or contractual obligations but NOT liabs of the OPA.<br>- On a monthly basis any GA amounts are settled through the GA; no liability reflected on the IESO's books – currently $10B of recoverable amounts not reflected on the IESO's books (no legal obligation, just an agent for settlement). Seen as a conduit to collect the monies paid to producers, even if does take possession.<br>- Proposal is that the RPP accounts which normally had a term of 6-12 months for recovery would be extended to 25 years | |

| | | | |
|---|---|---|---|
| | | - 2 sets of books (operating/market vs. financial)<br>- Amounts recoverable through GA NOT reflected on IESO's b/s as a flow through – no impact on the p&l<br>- Currently, the only debt that shows on the IESO's books is related to its operations, NOT MARKET DEBT | - IESO/KPMG to provide background supporting accounting for GA recoveries off book |
| ON vs. MB – legislates that all people of the province must be rate payers (cannot opt out of paying rates). ON doesn't have this requirement, but has a strong ratebase now so reasonable recoverability of costs through rates (the GA). Lenders rely upon this reasonable probability of recovery (AA rating) as basis to lend money to IESO to cover the time gap w.r.t. billings for GA. | | - The OEB has oversight and determines rates. If a regulator agreed that costs could be recovered, would meet requirements of rate regulated asset; but PSAB doesn't recognize rate regulated assets/liabs<br>- regulatory assets normally recovered over 5 years, so 25 years would have to be defended and proven as collectible<br>- would need certainty of recoverability to be an | |

| | | | |
|---|---|---|---|
| | | asset (OEB would consider intergenerational equity) in assessing recoverability | |
| Noted that 25 year period for rate mitigation is not the same as a longer term recovery period for capital refurbishment (intergenerational equity considerations)<br>Noted that other jurisdictions might have longer contract periods (wind and solar>20), and that operating period >20 in reality, so future costs likely lower to consumers. AB wind contracts>25 years. Justification for change → contract periods are too short | | | |
| | | | |
| Policy considerations:<br>1) Argument for rate mitigation deferral period (contracts to short; precedents)<br>2) IESO's changing role (James to consider)<br>3) Legislative requirements to allow for deferral (which costs would be authorized as recoverable)<br><br>Accounting considerations<br>4) How to create an asset (accounting vs. legislation) Would legislation create an asset on the IESO's books?<br>5) Off balance sheet financing (3rd party vs. OFA) and related accounting on IESO and CFS | | | |

---

Hi everyone,

Just received a draft Cab Sub from ENE, which they expect will change again based on comments from their MO. We are reviewing this now as we understand our MO may be interested in a briefing. We will forward invites and any additional materials as we receive. Password is the external Budget password.

Thanks,
Madeleine

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Context – Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

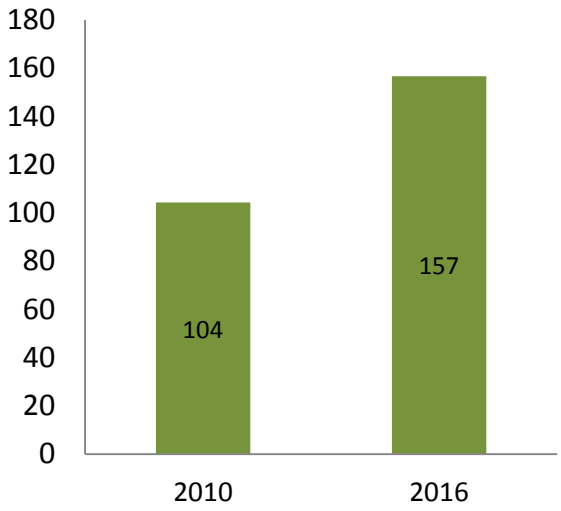
- The following slide provide further information on the prices paid by different classes of electricity consumers.

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

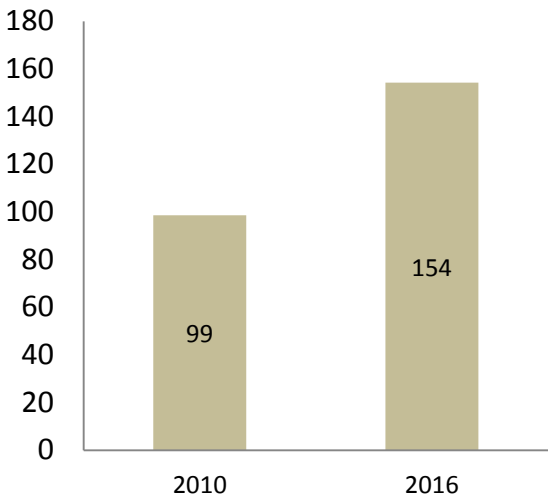
# Context – Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.

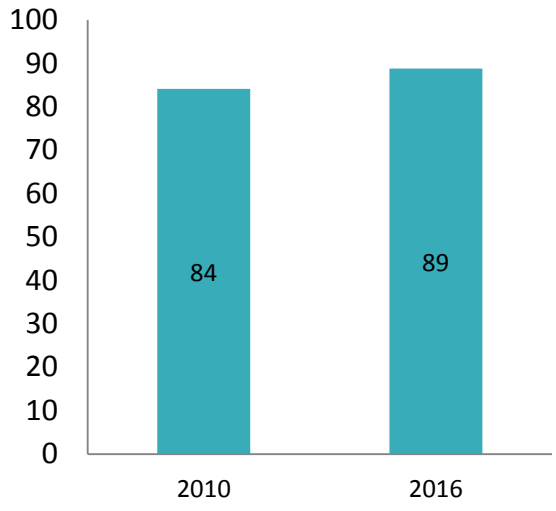
**Typical Residential Bill (750/kWh per month)**



**Typical Commercial Price ($/MWh)**



**Typical Industrial Price ($/MWh)**



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Existing Rate Mitigation

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.

- As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs.

# Existing Rate Mitigation (cont'd)

| Program | Consumer Type | Rate/Tax-based | Description |
|---|---|---|---|
| Northern Ontario Energy Credit | **Residential** | Tax | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year. |
| Ontario Energy and Property Tax Credit | | Tax | Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families. |
| Ontario Electricity Support Program | | Rate | Provides ongoing assistance directly on the bills of eligible low-income electricity consumers. |
| Rural or Remote Rate Protection | | Rate | Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas. |
| saveONenergy Conservation Programs (including Home Assistance Program for low income customers) | | Rate | Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars. |
| saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs) | **Commercial** | Rate | saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information. |
| Industrial Conservation Initiative | **Industrial** | Rate | Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills. |
| Industrial Accelerator Program | | Rate | Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid. |
| Industrial Electricity Incentive | | Rate | Provides reduced electricity rates for companies starting or expanding operations in Ontario. |
| Northern Industrial Electricity Rate Program | | Tax | Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers. |
| Demand Response | | Rate | Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system. |

# Current Cost Shifts in Ontario's Electricity System

- Ontario has implemented several programs that have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial).

- The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# 2016 Budget Commitment – Overview

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- The $1.3 billion was estimated to go to different electricity consumer classes as follows:
  - $120 million for residential consumers;
  - $170 million for commercial consumers; and
  - $40 for industrial consumers.

# Electricity System Cost Reduction Initiatives

- A number of actions have and are being taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Context – Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal – Overview

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST;

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial);

  3) Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  4) Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

# Rate Mitigation Proposal – Illustrative* Impacts

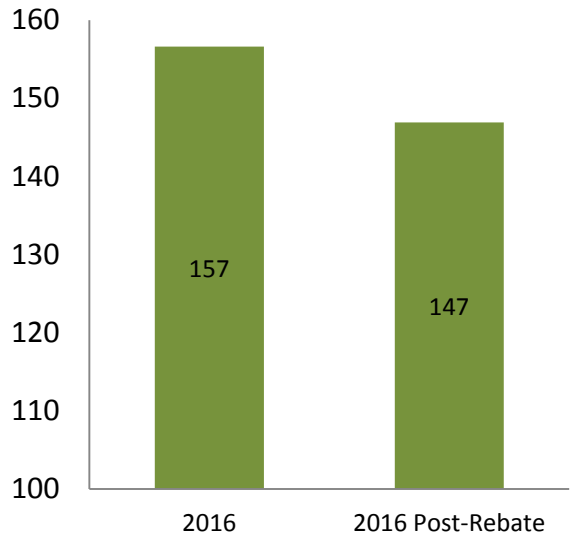
| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact | Class A (Industrial) Impact | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion | $270 million annually | -$10/ month<br><br>(-6%) | -$45/ month<br><br>(-20%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

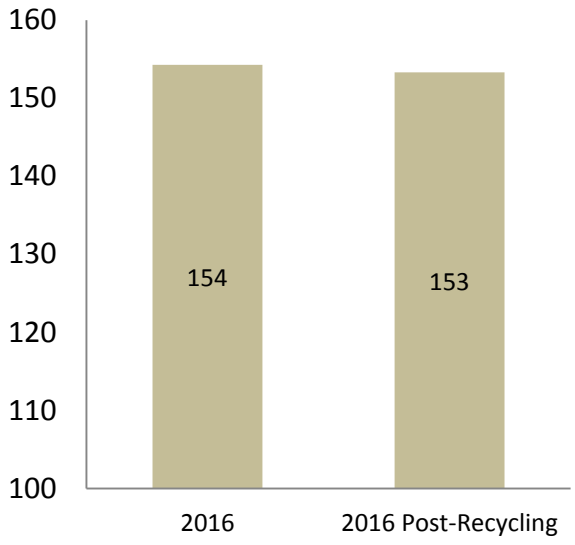
****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

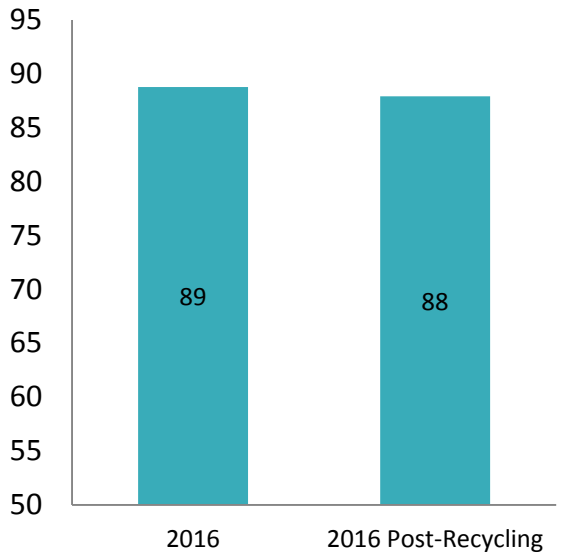
**Typical Residential Bill**
**750/kWh per month**



**Typical Commercial Price ($/MWh)**



**Typical Industrial Price ($/MWh)**



**Residential:** The net impact of the 8% rebate is a 6% reduction.

**Commercial:** The net impact of proceeds recycling is a 1% reduction.

**Industrial:** The net impact of proceeds recycling is a 1% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016. Commercial and industrial electricity prices reflect YTD June 2016. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) 8% Rebate to Regulated Price Plan Eligible Consumers

- ENERGY is proposing to introduce legislation/regulation by X [placeholder for date] to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

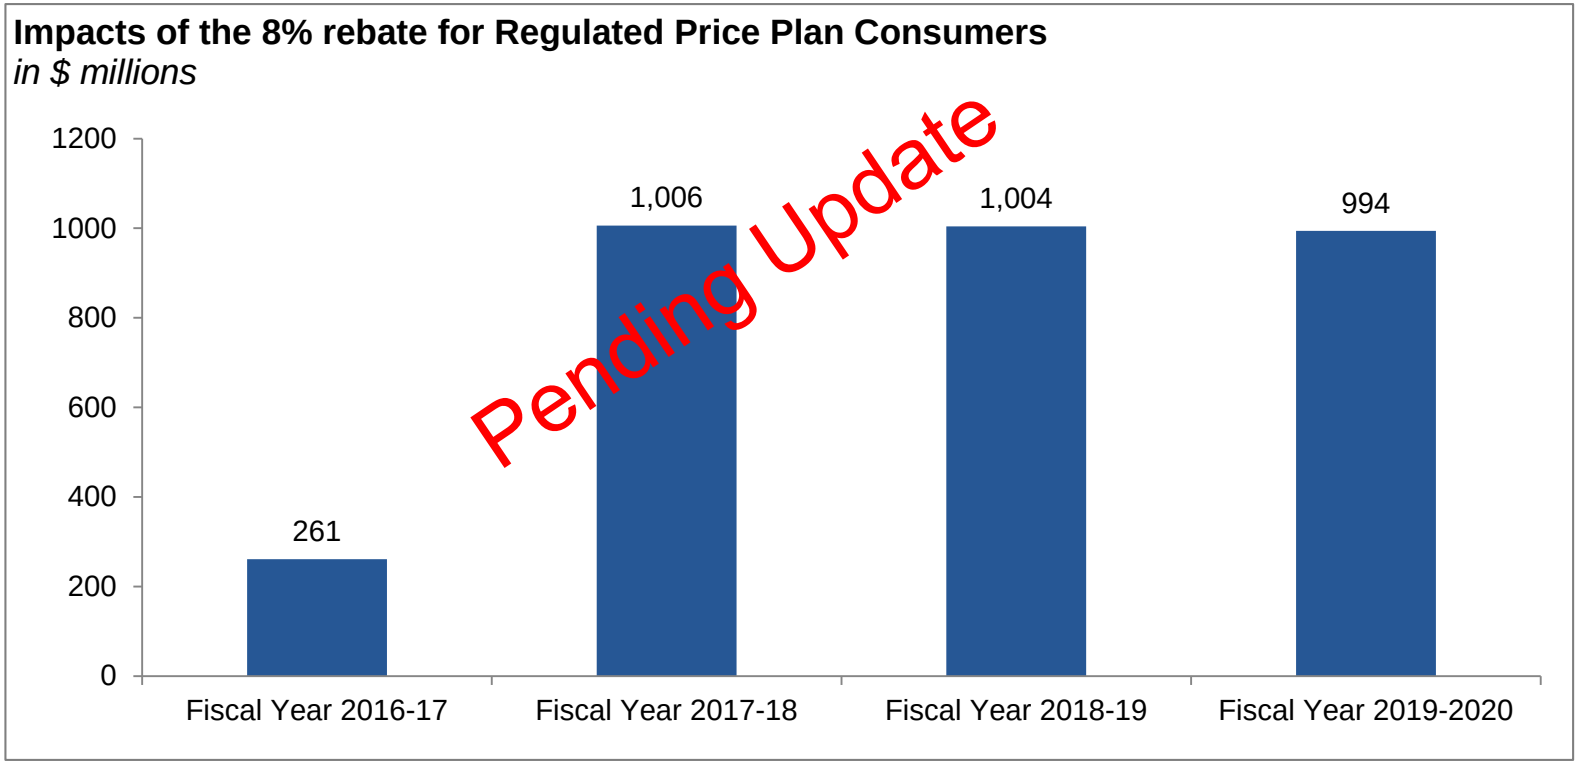
| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# 1) 8% Rebate to Regulated Price Plan Eligible Consumers – Projected Impact

- ENERGY estimates that the average annual cost of an 8% rebate to consumers eligible for Regulated Price Plan consumers would be approximately $1.0 billion between 2017 and 2020.



# 2) Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility effective [X placeholder date].

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# 2) ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

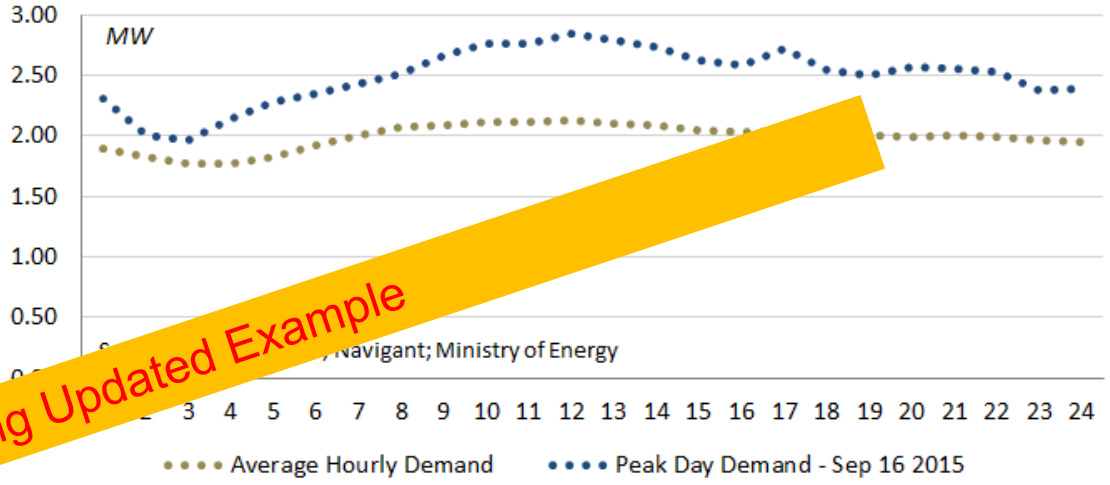
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# 2) ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Fi… could expect to … vings if they a… …ble to respond to …ces during high demand …

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



Pending Updated Example

**Illustrative Bill Savings, 2-3 MW Consumer**

*Manufacturer, NAICS code 32*

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 29.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **80.06** |
| *Savings* | | *-14%* | *-25%* | *-37%* |

*Source*: Navigant; Ministry of Energy

*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# 3) Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

# 3) Rural or Remote Rate Protection (RRRP) Update

| Bill Comparisons @ 1000kWh/month (Pre-HST) | | |
|---|---|---|
| | **Total Current Delivery**** Charge** | **Total Current Bill** |
| **Hydro One R2** (Current RRRP Subsidy Levels) | ~$111 | ~$229 |
| **Hydro One R2** (With Proposed RRRP Expansion) | ~$83 | ~$201 |
| **Hydro One R1** | ~$82.50 | ~$201 |
| **Algoma Power** (Receives RRRP) | ~$79.50 | ~$197 |
| **Provincial Average*** | ~$51 | ~$169 |
| **Lowest Cost Total Bill LDC**** | ~$48 | ~$149* |
| **Lowest Cost Delivery Charge LDC***** | ~$36 | ~$154 |

**Average Bill of Ontario municipal LDCs and non-municipal Algoma Power, CNPI, and Hydro One Urban. Excludes Hydro One Remote, Hydro One R1 and Cornwall Electric.*

***The LDC with the lowest total bill is Fort Frances Power Corporation (FFPC). However, FFPC does not have the lowest delivery costs in the province. FFPC customers who are not enrolled with a retailer receive a $0.0125/kwh discount on power due to a historic (1905) mill agreement. In order to maintain the discount, FFPC maintains its ROE at 0%.*

****Hydro Hawkesbury has the lowest delivery rates at ~$36 per month*

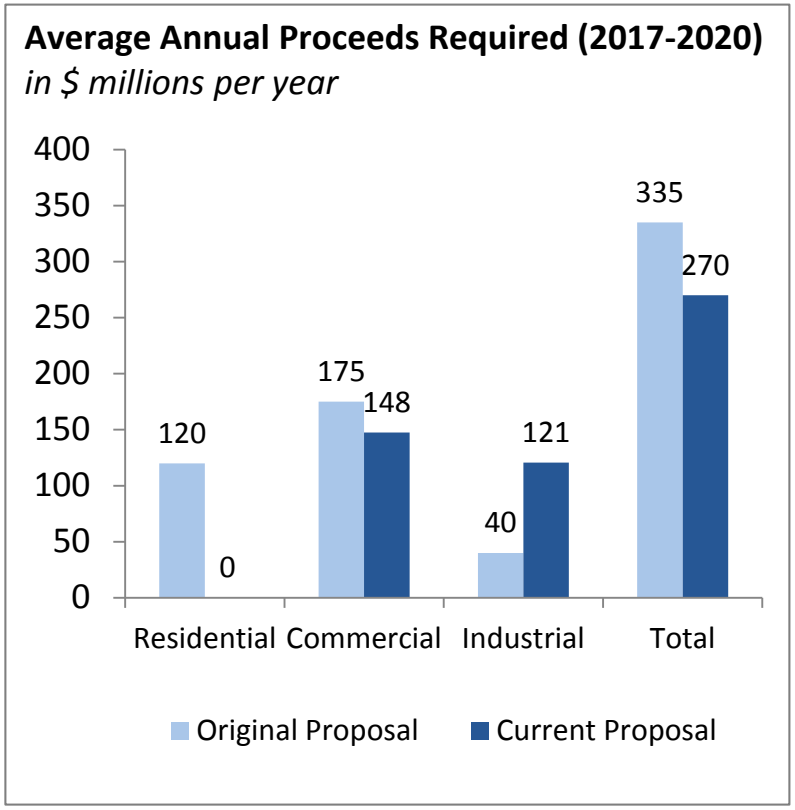
*****Delivery charges include distribution rates (fixed and variable), transmission, and line loss.*

# 4) Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Considerations – Implementation

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive ~~payments~~ rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998). See appendix for bill mock-up.
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Considerations – Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $240 million relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $240 million in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.

# Considerations – Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

# Communications – Key Messages

- [Placeholder]

# Proposed Cabinet Minute

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.

Pending Update

26

# Proposed Cabinet Minute (cont'd)

3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE *ELECTRICITY ACT, 1998* TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.

4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE *ONTARIO ENERGY BOARD ACT, 1998* TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.

5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.

Pending Update

6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE *GREENHOUSE GAS REDUCTION ACCOUNT* PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.

7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

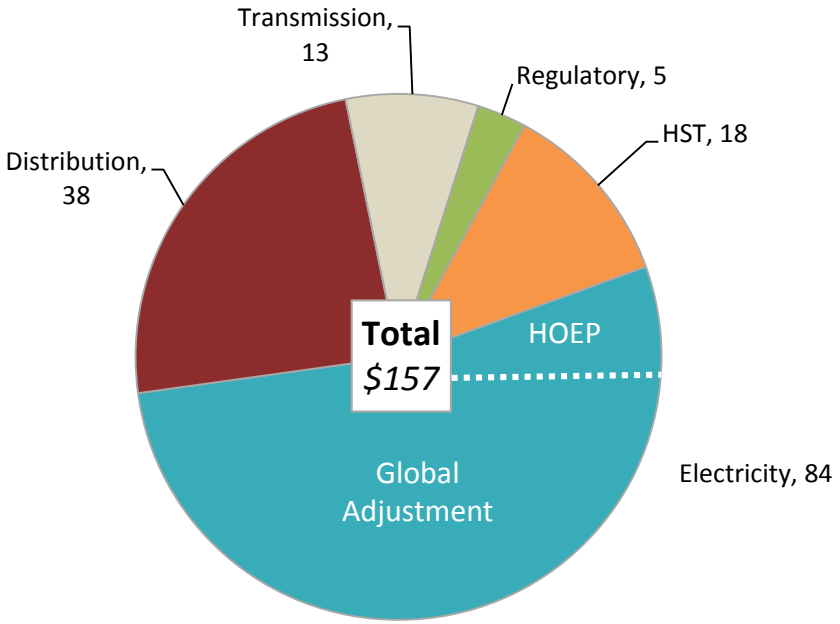
# Appendix

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

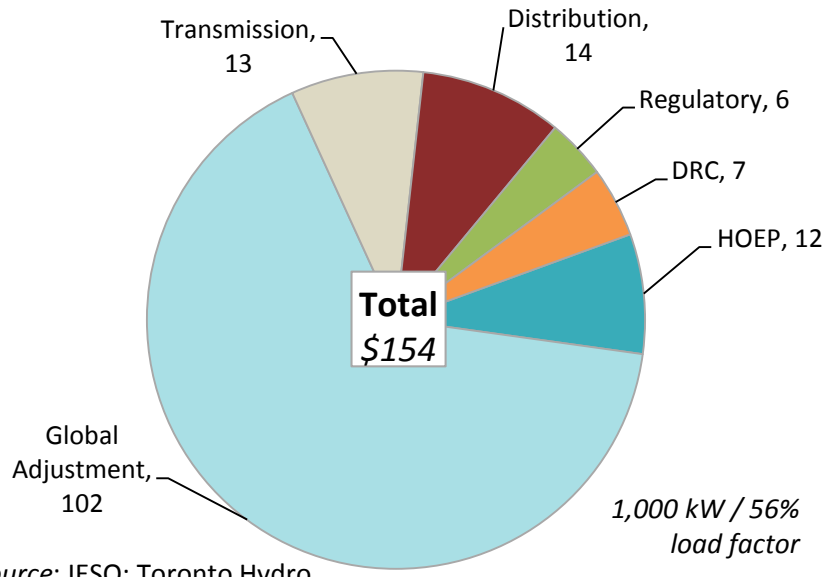
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

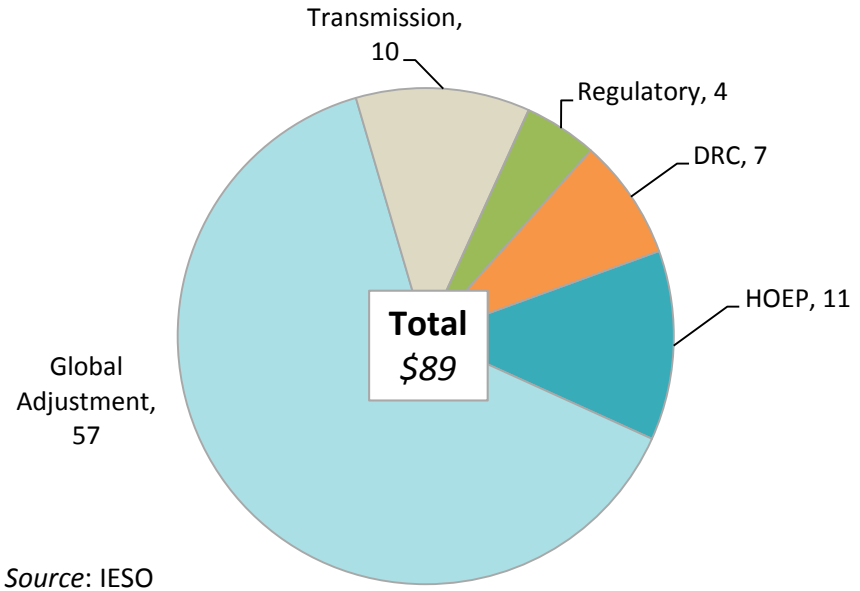
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

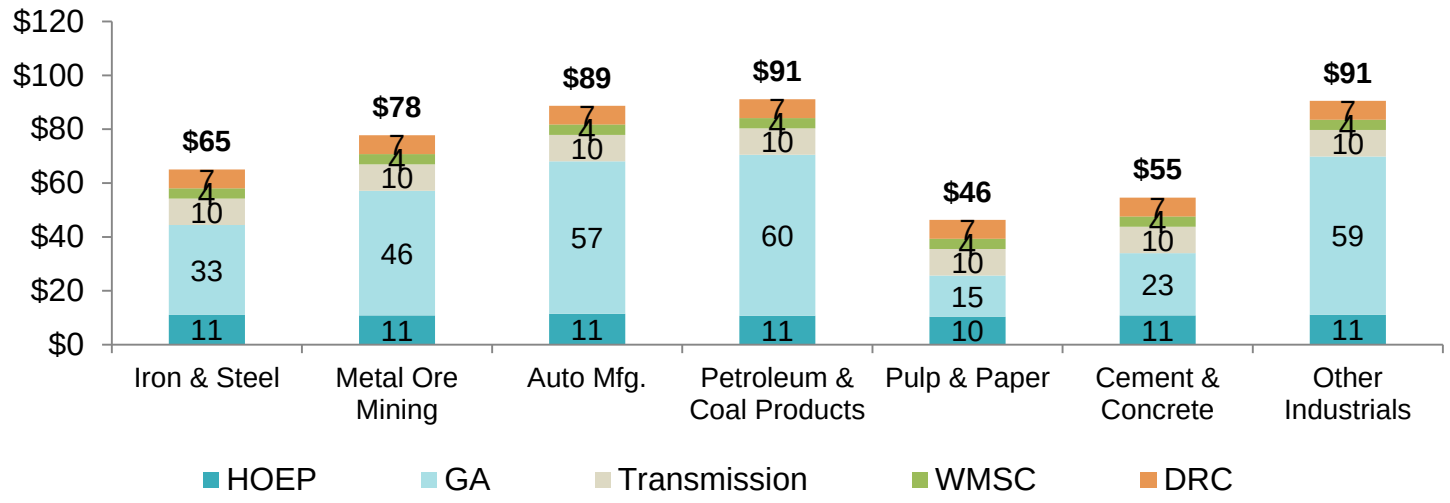
*** Note:** Industrial consumers receive input tax credits for their HST.

# Industrial Electricity Prices by Sector

- While industrial consumers (Class A) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# saveONenergy Conservation Programs

| Program | Consumer Type | Description |
|---|---|---|
| **Heating and Cooling Initiative** | **Residential** | Provides rebates to help offset the cost of purchasing and installing new heating and cooling equipment in the home. |
| **Coupons** | | Available in-store for one month in the spring and fall and can be downloaded year-round to use at participating retailers to help Ontarians save on a wide range of energy-efficient products including LED bulbs, power bars with integrated timers and more. |
| **Audit Funding** | **Business** | Up to 50% of the cost of an energy audit to identify opportunities for energy efficiency upgrades and eligible incentives. |
| **Retrofit Program** | | Provides various incentives for as much as 50 per cent of project costs, and advanced funding for assisted and social housing buildings, for updating old or inefficient equipment, including lighting, motors, unitary AC or packaged rooftop units. |
| **Small Business Lighting** | | Provides incentives for new energy efficient lighting. |
| **New Home Construction** | | Designed to encourage home builders and renovators to construct energy-efficient homes, and includes incentives for installation of energy-efficient measures. |
| **Training and Support** | | Helps provide access to the most up-to-date training, such as in building commissioning, certified measurement and verification, and how to be an energy manager. |
| **Process and Systems** | | Provides up to $50,000 for engineering studies and up to 70% of capital costs for energy efficiency upgrades. |
| **Industrial Accelerator Program** | | Assists eligible transmission-connected companies to fast track capital investment in major energy conservation projects. |

# HST – Overview

- The HST is a value-added tax. Unlike a sales tax, under a value-added tax most businesses effectively do not pay tax on their inputs because they are able to claim input tax credits (ITCs).
  - Through ITCs, the HST removes embedded sales taxes paid by businesses.
  - Only HST registrants that have taxable sales can claim ITCs. Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
  - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totalling about $445 million in tax relief.

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
  - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependant children under age 19.
  - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

# Placeholder – HST Exemptions in Other Jurisdictions

| Jurisdiction | Tax | Business | Residential | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

# HST – Considerations

- An across-the-board 8% rebate could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

# Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

| REBATE RATES FOR PSBs | | |
|---|---|---|
| **PSB Type** | **Ontario (8%)** | **Federal (5%)** |
| Municipalities | 78% | 100% |
| Universities & Public Colleges | 78% | 67% |
| School Authorities | 93% | 68% |
| Hospital Authorities | 87% | 83% |
| Charities and Qualifying Non-Profit Organizations* | 82% | 50% |

**A qualifying non-profit organization receives at least 40% of its funding from government.*

# Placeholder – Electricity Bill Mock-Up

# Industrial Conservation Initiative (ICI) – Overview

- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

# Expected Numbers of Newly Eligible ICI Consumers

- As part of its ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

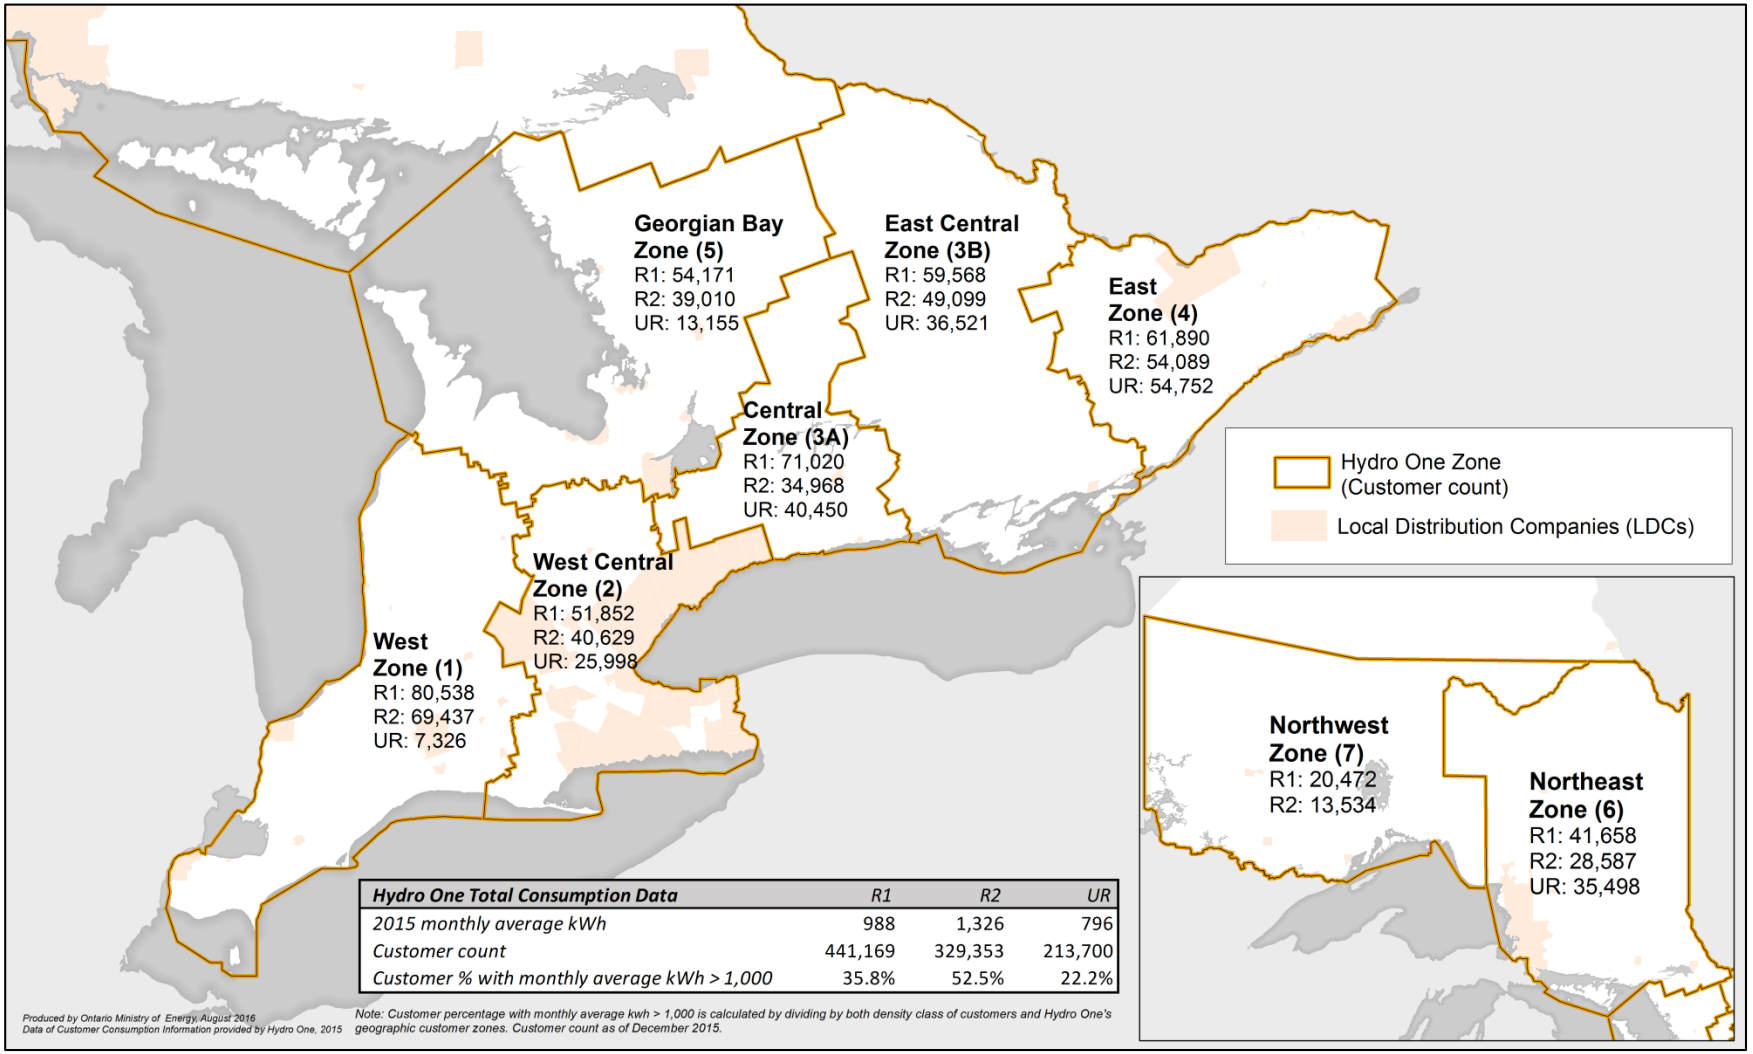
- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

| | **1-2 MW** | **2-3 MW** | **3-5 MW*** |
|---|---|---|---|
| # of customers – ICI survey | 649 | 197 | 171 |
| # of customers – Adjusted for response rate | 854 | 259 | 225 |

*Source:* Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

# Hydro One Consumers by Customers Class

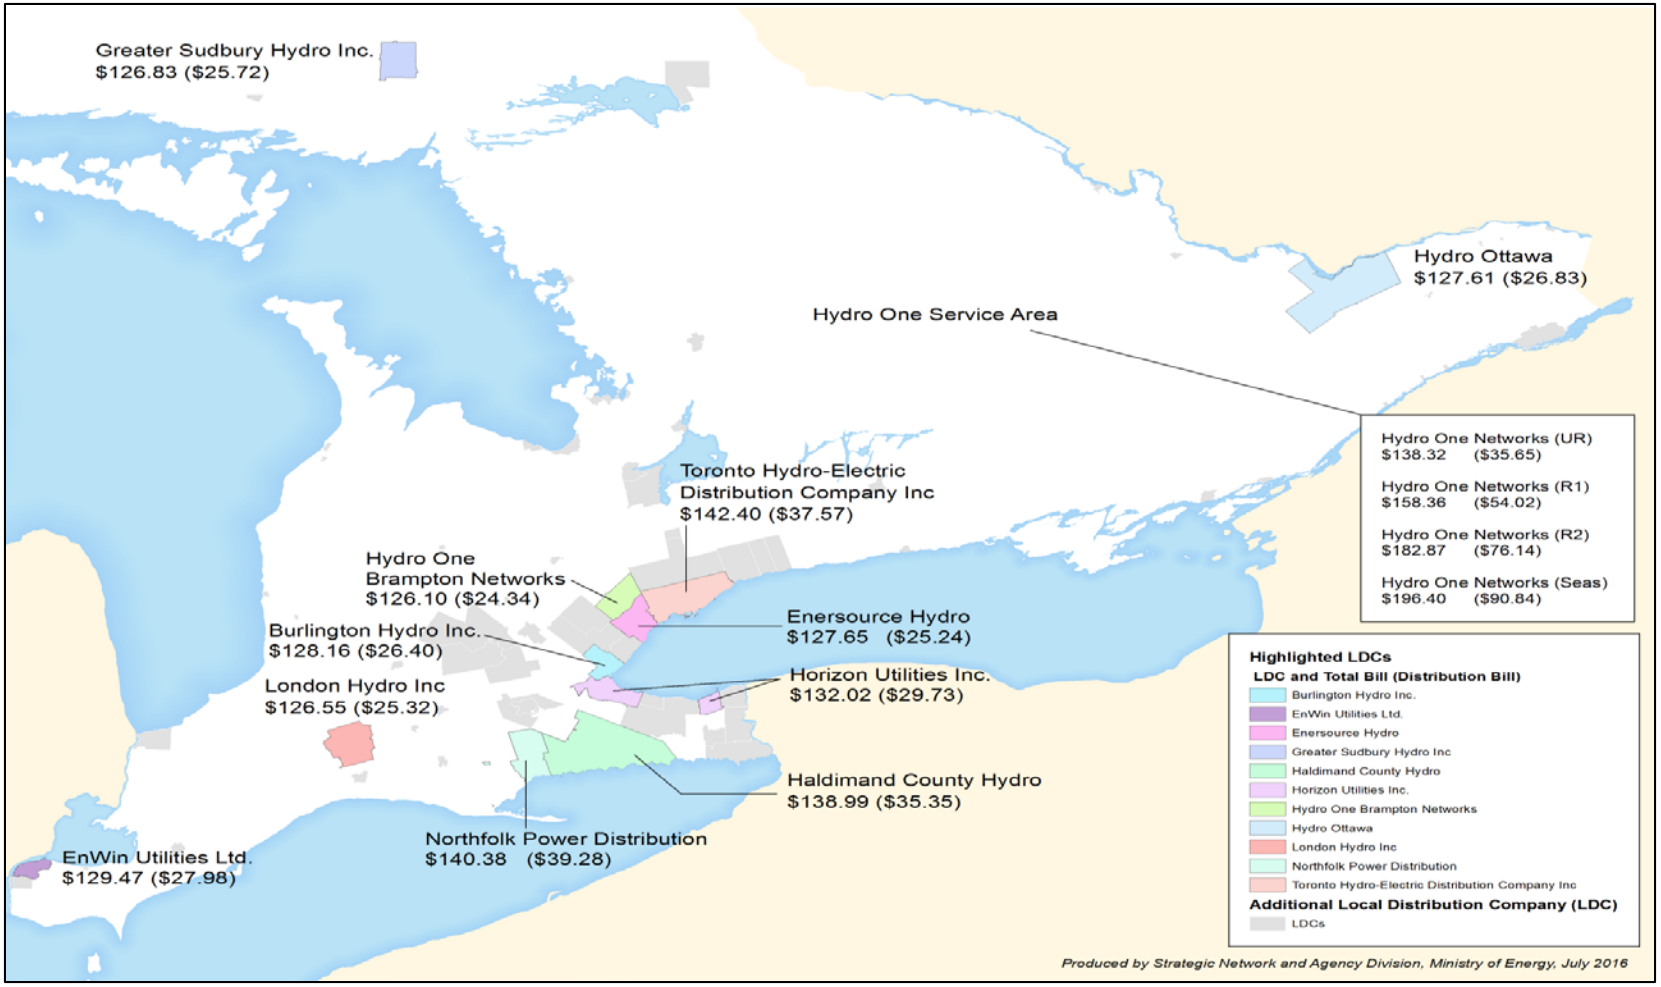


| *Hydro One Total Consumption Data* | *R1* | *R2* | *UR* |
|---|---|---|---|
| *2015 monthly average kWh* | 988 | 1,326 | 796 |
| *Customer count* | 441,169 | 329,353 | 213,700 |
| *Customer % with monthly average kWh > 1,000* | 35.8% | 52.5% | 22.2% |

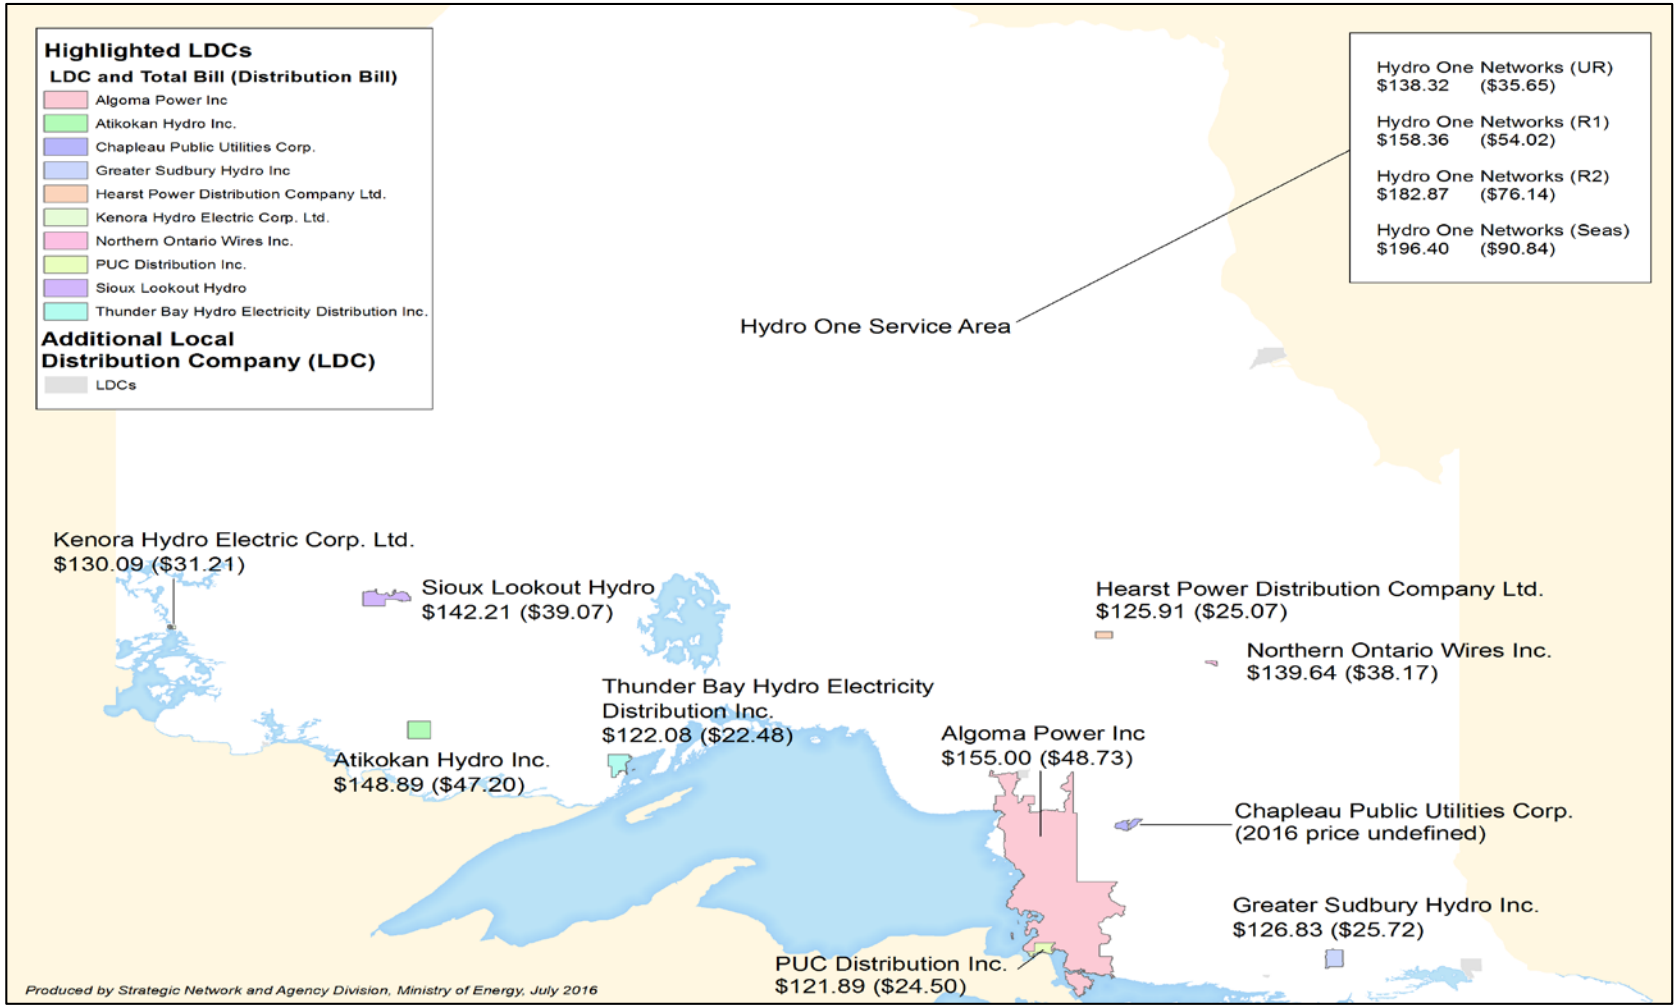
*Produced by Ontario Ministry of Energy, August 2016*
*Data of Customer Consumption Information provided by Hydro One, 2015*

*Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.*

# Selected Rate Comparison – Total Bill and Distribution Rate



# Selected Rate Comparison – Total Bill and Distribution Rate



# Alignment With Climate Change Action Plan

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3 billion over 4 years to greenhouse gas (GHG) reduction initiatives, funded by Cap and Trade auction proceeds.

- The CCAP includes up to $1.32 billion over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas (GHG) emmissions by 2020.

| ***$ Billions*** | **2017-18** | **2018-19** | **2019-20** | **2020-21** | **Total** |
|---|---|---|---|---|---|
| Total Committed in CCAP | **$1.5 – 2.1** | **$1.5 – 2.1** | **$1.5 – 2.1** | **$1.5 – 2.1** | **$6.0 – 8.3** |
| *Electricity Price Mitigation* | *Up to 0.3* | *Up to 0.3* | *Up to 0.3* | *Up to 0.3* | *Up to 1.3* |

- Ontario's *Climate Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail;
  - Hamilton LRT;
  - Hurontario LRT; and
  - Energy efficiency in schools.

---

Hi Felix and James,

I understand that Energy is involved in two submission to a Minister's Table on Climate Change on December 8. The submissions are:

- Long-Term Energy Plan update
- Rate mitigation

Would you have copies of these submissions?

Thanks,
Emily

**Attachments:** Proposed Initiatives to Transform Ontario"s Electricity Sector_Dec9-16_v15 copy.pptx

---

Hi,

Apparently a draft “bootleg” copy.

Please review and do a markup. A short note with staff comments would be helpful too.

Is a draft for EOD doable?

The “Trillium Trust” would notionally be either all incremental electricity projects vs Moving Ontario Forward, and hitting the bottom line once in-service and amortised. Or crowds out Moving Ontario Forward projects. However, could hurt the fiscal bottom line if it is perceived as detracting from Hydro One potential rate base growth, hurting market value upfront, and net income (and corporate taxes) over time. Does that make sense?

And little or no near-term rate impact, as new projects would affect the rate base years out, unless the Trillium Trust is used for existing Tx projects already about to come on line.

I might want to argue that if they do the DRC one, it is in effect giving up a chunk of the Departure Tax benefit to OEFC. And on the departure tax, aside from all the regulatory principles arguments, I might think about saying that the elimination of the deferred tax liability portion was just truing up the PILs amounts owing.

Thanks,
Ron

Ontario

ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new “green bank entity” over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the “Trillium Trust” to make investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded  interties and expansion of natural gas to rural areas, etc.
- Empower energy  agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario’s electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to “opt into” a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.16 | 2.31 | 2.41 | 2.49 | 2.54 | 2.58 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| 6. Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 8. Cancel / Adjust FIT | - | - | 0.13 | 0.13 | 0.14 | 0.14 | Long-Term |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| **Considered but not Recommended** | | | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 2. Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.88 | 3.08 | 3.21 | 3.33 | 3.39 | 3.44 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 2.82 | 3.05 | 2.47 | 2.56 | 2.13 | 2.14 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.34 | 1.38 | Long-Term |

| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | 110 | 450 | - | - | - |
| 8. Cancel / Adjust FIT | - | - | - | - | - |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD |
| **Considered but not Recommended** | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | - | - | - | - | - |
| 2. Cancel LRP I | - | - | - | - | - |

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

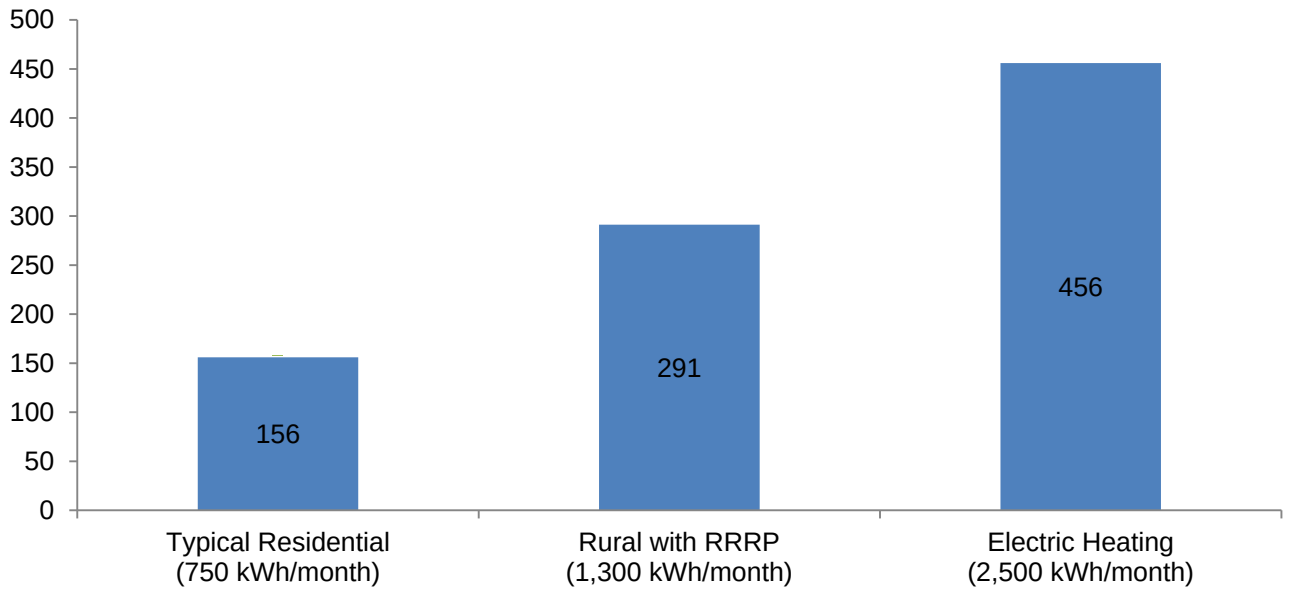
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

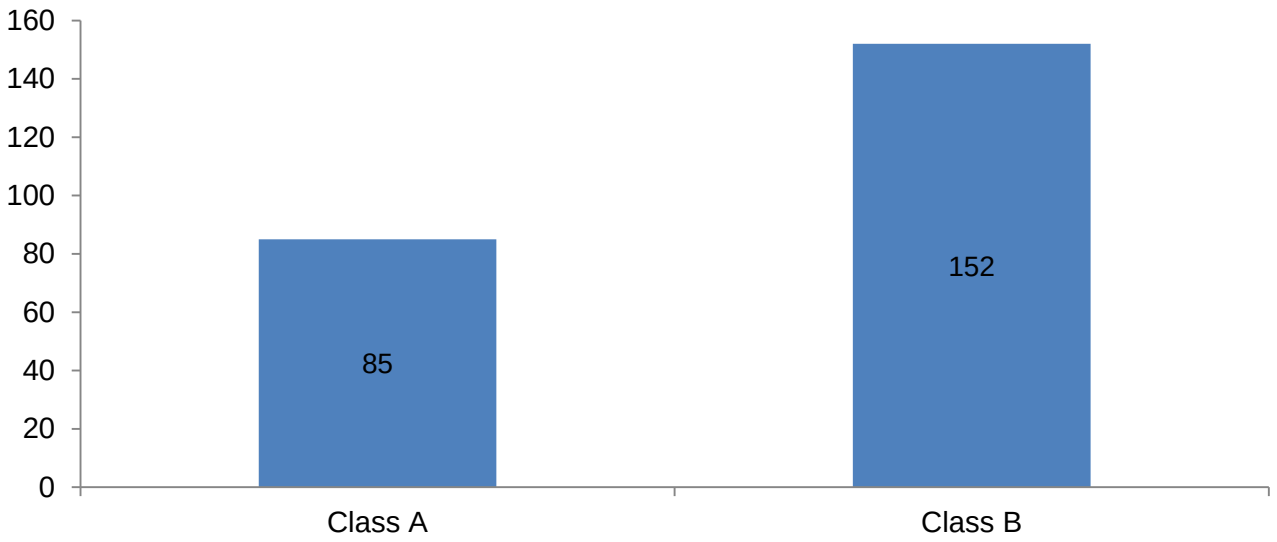


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,200* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,105** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 ~~[placeholder for OFA]~~ on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based on new borrowing and increasing based on cumulative borrowing.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide

DRAFT

# Effect of Additional Proposed Taxpayer funded Electricity Price Mitigation

| Proposal | Fiscal Costs ($M) | Residential Ratepayer Savings |
|---|---|---|
| **EXISTING MEASURES** | | |
| OREC | 1,100 | $11/month |
| NIERP | 120 | n/a* |
| NOEC | 25 | n/a* |
| OEPTC[3] | 460 | n/a* |
| **TOTAL Costs from Existing Measures** | **1,705** | **11** |
| | | |
| **PROPOSED MEASURES** | | |
| **Proposal 2:** Fund Electricity Support Programs Through the Tax-Base (OESP, RRRP, First Nations Delivery Rate) | 420 (yr 2017-18)** | $2.45/month |
| **Proposal 3:** Eliminate the Industrial Conservation Initiative funding from ratebase, and shift to tax base | 900 | $4/month |
| **Proposal 7:** Reduced cost of OPG Borrowing | 30-35 | $0.18/month |
| **Proposal 8:** Reduce DRC to $3.50/MWh or end DRC early for Commercial/Small Industrial Class B Electricity Users | 190-380 (yr 2017-18)*** | n/a* |
| **TOTAL Costs/Savings from Proposed Measures** | **1,584 – 1,778** | **$6.63/month** |
| **TOTAL Costs/Savings from All Taxpayer funded Measures** | **3,289 – 3,483** | **$17.63/month** |

* Costs were not borne by the ratebase.
** Assumes 75%/25% split between 2017 and 2018 costs
*** DRC is removed from all electricity bill by April 1, 2018

Suggest using slide From previous page instead

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy [illegible] the [illegible]

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.5 billion by 2020-21. That is a 67% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

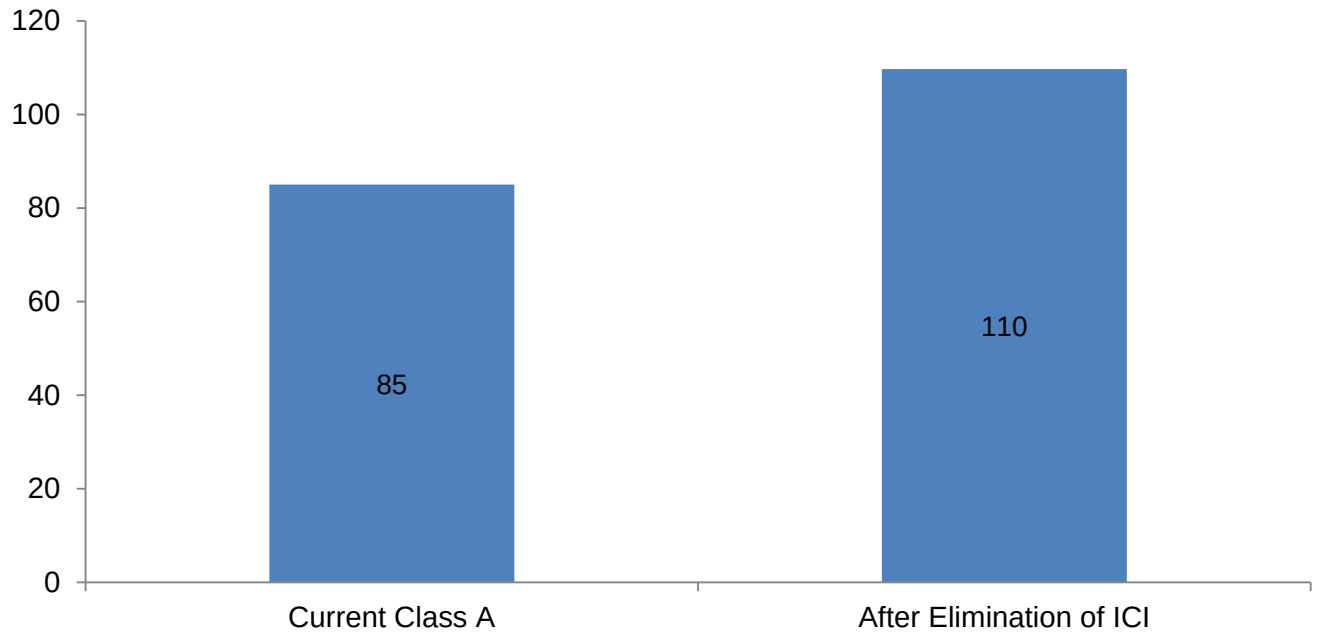
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

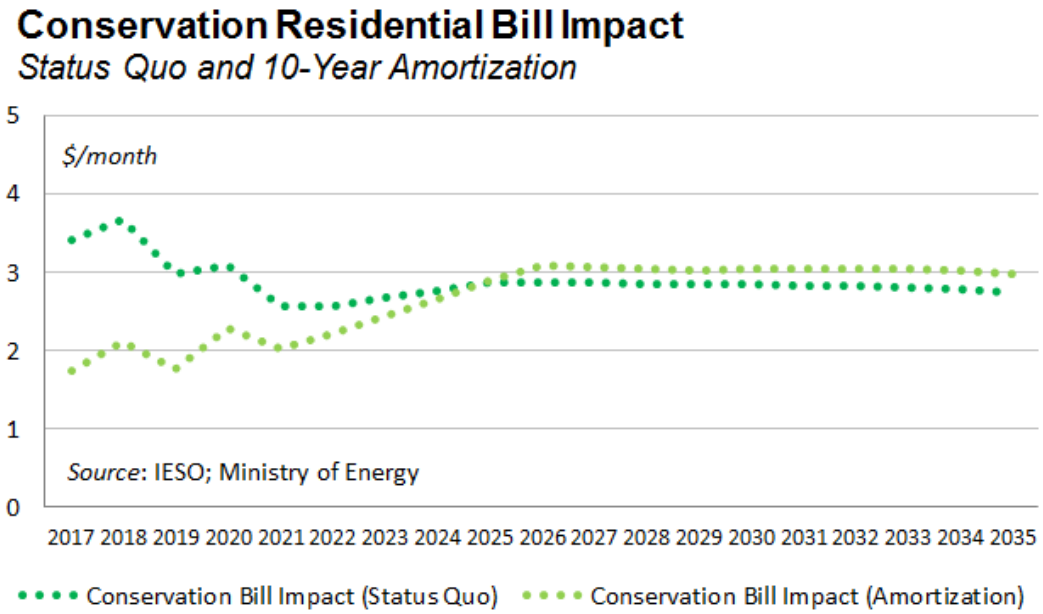
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro- November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.5 billion a year).

# Appendix

# Electricity Consumer Classes

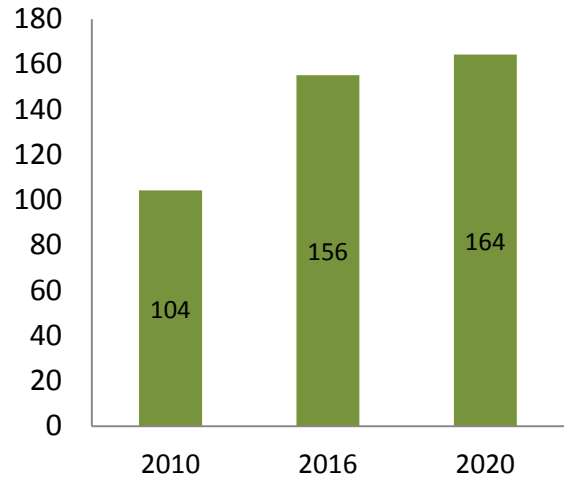
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

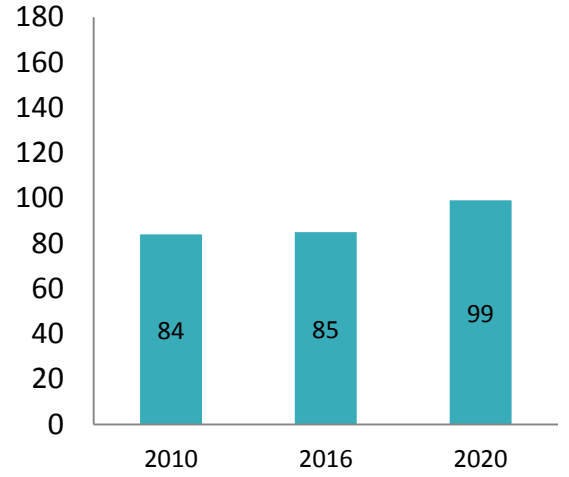
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

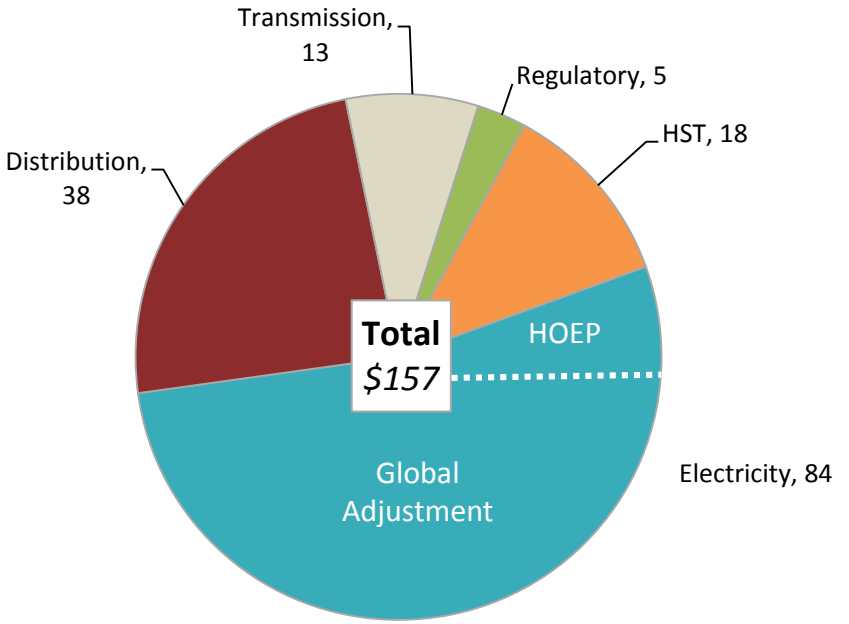
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



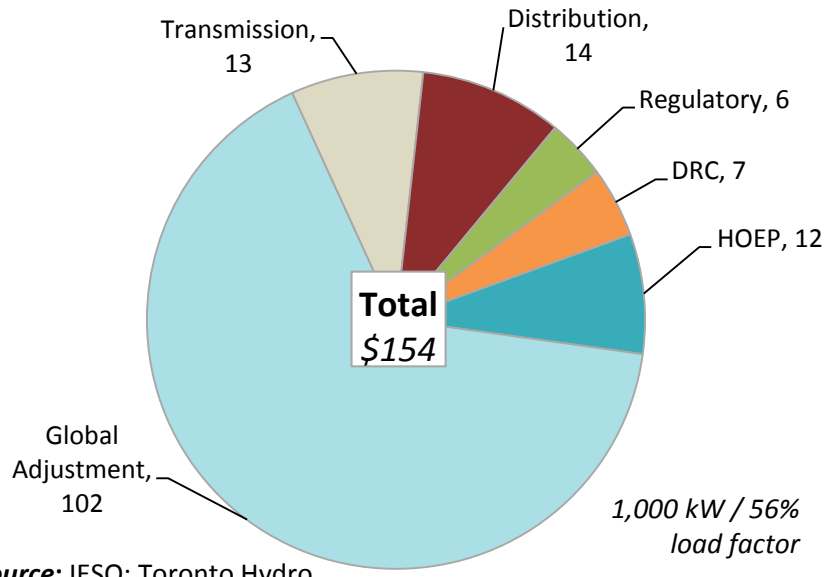
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

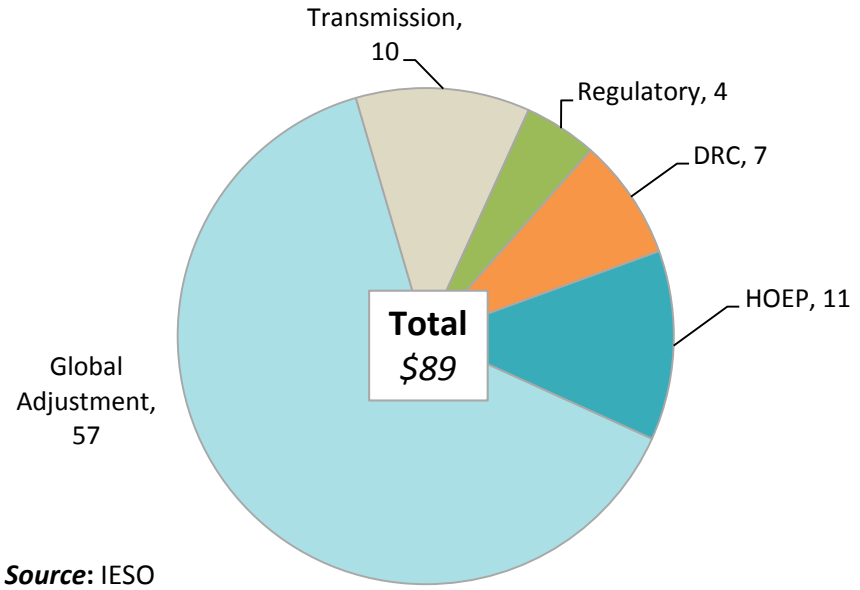
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



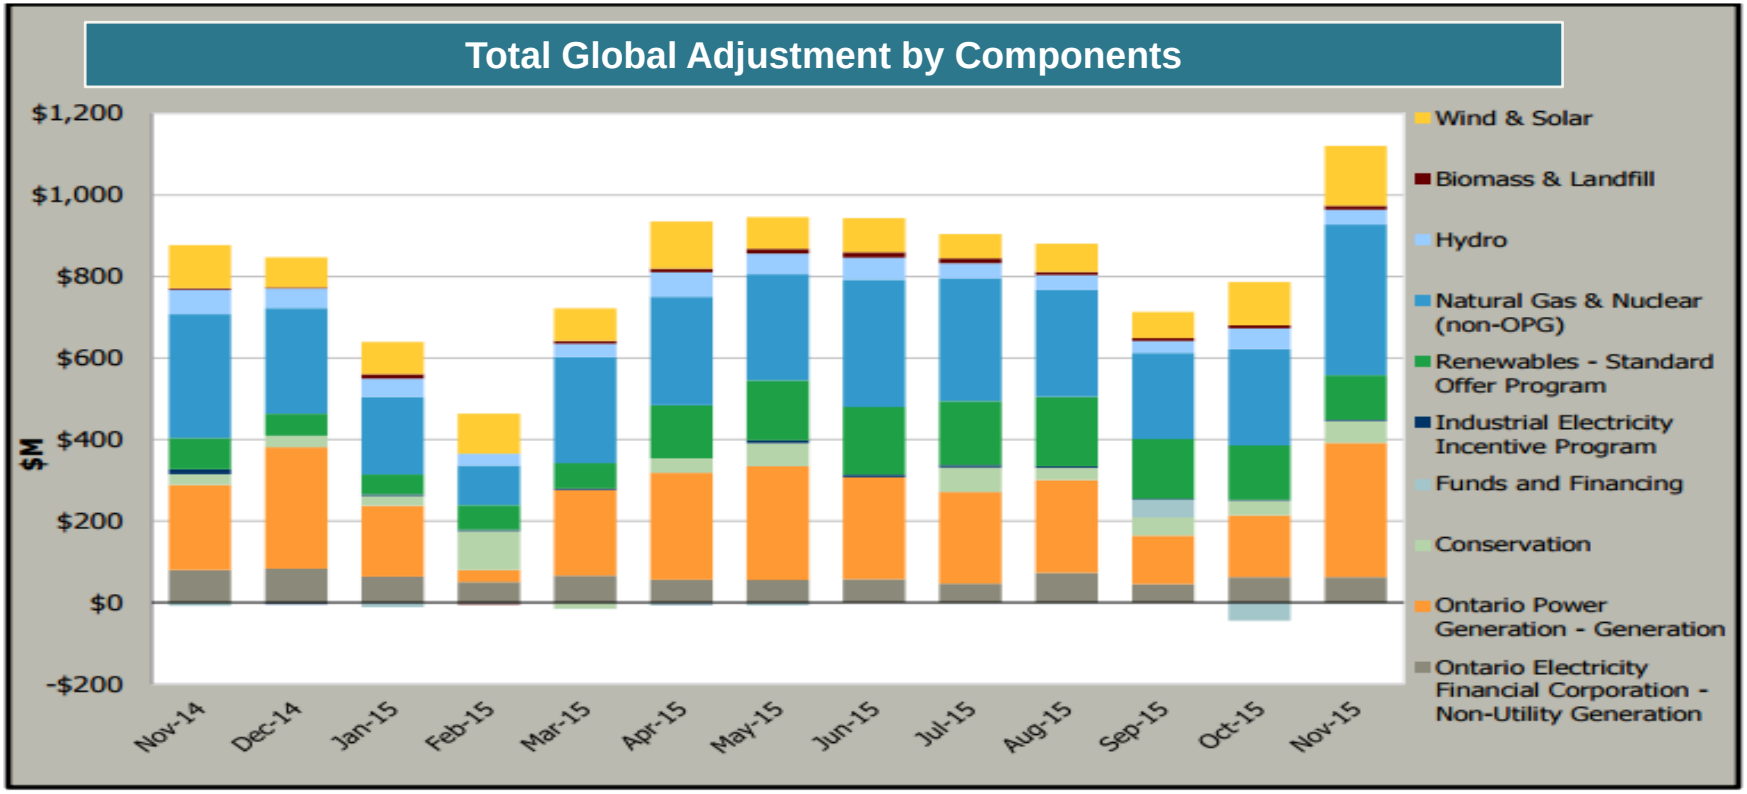
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

| Offset Recommended (Specify Ministry/Program) | 0.0 | 0.0 | 0.0 |
| Total Fiscal Impact | 0.0 | 0.0 | 0.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

As stipulated as part of the 2013-14 Results-based Planning process, the Ministry of Energy is submitting OPG's annual business plans for review by Treasury Board to facilitate incorporating implications into the Province's fiscal plan.~~.~~

~~Note that~~ ~~I~~it is under the responsibility of the Minister of Energy on whether or not to provide the Minister's concurrence of OPG's annual multi-year business plan. The Treasury Board submission provides the Minister of Energy with an opportunity to highlight why concurrence is being given and any conditions placed on it. Appendix C provides more information on the concurrence process and the 2013-14 minute.

Under the memorandum of agreement (MOA, July 2015) between the Province (as sole shareholder and the Ministry of Energy as representative of the shareholder) and OPG, the company is required to annually submit its board-approved multi-year business plan to the Minister of Energy for concurrence.

**Formatted:** Tab stops: Not at 0.69"

The concurrence letter from the Minister to the company will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company including indicating any elements of the business plan the government does not concur.
~~Appendix C provides more information on the concurrence process.~~

In March 2016, due to the timing of government decisions on Darlington nuclear refurbishment, OPG submitted a preliminary non-Board-approved draft of its business plan to the Ministry. Financial figures from the preliminary draft business plan were not incorporated into the already finalized Province's fiscal plan for the 2016 Budget. The Ministry of Energy indicates it is generally supportive of the fiscal, financial and operational strategies laid out in the business plan.

The earnings before tax (net income and income tax payments in lieu – PILs) of OPG are consolidated on the Province's financial statements and have one-for-one impact on the Province's surplus/deficit position. OPG is expected to submit its next multi-year business plan later this year for the period starting January 1, 2017.

***Overview of Current Business Plan***

OPG's 2016-18 Business Plan details key company undertakings such as business transformation and nuclear refurbishment that will have a substantial electricity system benefit, ratepayer and shareholder impacts. These items were flagged in the previous year's multi-year business plan as well.

- Key Income Statement Forecasts:
  - The figures in the OPG Board approved 2016-2018 Business Plan show a decrease in earnings before tax of $289 million in 2016-17 and an improvement of $194 million in 2017-18 over the estimates in the 2016 Budget, which was largely based on the estimates from the 2015 Budget. OPG is projecting generally growing net income contributions to the Province's fiscal plan over the planning period. These estimates are highly dependent on electricity and financial market conditions, regulatory decisions by the Ontario Energy Board (OEB), potential changes to accounting standards or the basis of consolidation in Public Accounts, operational performance, and/or government policy, which can change materially. The first table in Appendix G shows the changes to Province's fiscal plan.
  - Annual Operations, Maintenance & Administration (OM&A) expenses from ongoing operations decline by ~$120 million in 2018 and by ~$230 million in 2021, primarily due to lower pension and other post-employment benefit (OPEB) costs. The plan also incorporates continued efficiency improvements expected to be achieved through business unit and support group initiatives, including attrition-based staff reductions in certain areas.
  - The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and over ~30% by 2021. Note: OPG provides predominantly, lower-cost baseload generating capability, rather than more expensive peaking generating capability.
  - Headcount Efficiencies – During the planned period, headcount from ongoing operations is forecasted to fall from 9,302 in 2016 to 8,811 in 2021.
    - Last year's concurrence letter included a caveat that OPG reduce its non-nuclear headcount by an additional 5% of 2015 levels by 2020. Using the 2015 business plan headcount level for 2015 (3716, which is consistent with the 2014 actual headcount of 3724), the 2020 projected headcount (3390) is an 8.8% reduction from 2015 Plan.

Formatted: Tab stops: Not at 0.69"

Formatted: Font: 5 pt

- Key Projects: The plan assumes ongoing operations at Pickering for about four years beyond 2020, and that the execution of the Darlington refurbishment is consistent with approved budgets and as scheduled.

- Rate Application to the OEB
  - Rate Application – In May 2016, OPG filed a 5-year nuclear and hydroelectric rate application with the OEB covering the 2017-2021 period. The rate application includes a nuclear rate smoothing proposal to avoid price spikes that would arise during the Darlington refurbishment, by deferring the recovery of a portion of nuclear revenues to the post-refurbishment period.
  - Ratepayer Costs –OPG has estimated that the combined monthly bill impacts of new nuclear and hydroelectric rates to the typical residential customer to average an annual increase of about $1.05 per month over the 2017-2021 period. The expected average annual impact on a typical residential customer's monthly bill over the period to 2021 is estimated to be ~0.7%.
- OPG's Executive Compensation Framework (Appendix F provides more information)
  - OPG's Business plan contains the company's proposed executive compensation framework. OPG has expressed an urgent need to adjust its compensation framework to ensure that effective leadership is in place for successful delivery on its key priorities and projects.
  - OPG's proposed compensation framework would target the 50th percentile relative to benchmarked peers for most roles. Treasury Board Secretariat (TBS) issued an Executive Compensation Framework Regulation that caps salary and performance-related payments for executives at no more than the 50th percentile of appropriate comparators.
  - Concurrence of OPG's Business Plan under the Memorandum of Agreement (MOA) signals government support of OPG and its rate application.
    - The Ministry of Energy indicates conditional concurrence with OPG's Business plan would be explicit in that concurrence does not extend to OPG's proposed compensation framework, as embedded in its Business Plan. OPG would need to develop a new framework that demonstrates progress to meet the requirements outlined in TBS' regulation, working with the Minsitry of Energy and TBS. A new framework would require concurrence to implement.
- Capital Structure & Independent Borrowing Platform.
  - OPG is evaluating options to improve its actual capital structure to be more aligned with OEB's deemed capital structure used to set OPG's regulated rates.
  - OPG is also looking at the option to pursue a public capital market financing strategy. OPG indicates its 2016-2018 Business Plan does not reflect the impacts of any public financing strategy. OPG currently borrows for general corporate purposes from the Ontario Electricity Financial Corporation (an agency of the Ministry of Finance).
  - Once OPG has completed its evaluation, it will present options for Shareholder concurrence.

*Other Key Fiscal Risks:*

Regulatory risks: Potential disallowance of recovery of OPG's current or future deferral and variance account balances (including for the proposed nuclear rate smoothing), future treatment of pension costs.

Accounting risks: Any change in the basis of accounting used for consolidation of OPG on the

Province's financial statements could result in potentially significant fiscal impacts.

Financing Costs: Higher cost public capital market borrowing would have a negative fiscal impact.

## APPENDIX A: PROPOSED MINUTE

Note receipt of a Business Plan for Ontario Power Generation.

In this regard,

i.) Note the Minister of Energy will provide Ontario Power Generation (OPG) with a concurrence letter for its Business Plan, with the caveat that acceptance of OPG's compensation strategies will be subject to OPG's future alignment with requirements of Treasury Board Secretariat's Executive Compensation Framework Regulation.

ii.) Direct the Ministry, in consultation with the Ministry of Finance / Ontario Financing Authority, to report back to the Board in early January each year with the approved or latest draft business plans for Ontario Power Generation for fiscal planning purposes.

## APPENDIX C: CONCURRENCE OVERVIEW

Under agreements between the Province (as sole shareholder) and OPG, the company is required to annually submit its multi-year business plan to the Minister of Energy for concurrence. Review of the business plan by Treasury Board prior to concurrence was stipulated as part of the 2013-14 Results-based Planning process (see below).

Concurrence is typically provided to OPG via a letter from the Minister of Energy. The letter will note key elements of the business plan, how these elements relate to the policy direction and priorities of the Province, and the government's expectation for the performance of the company. The letter may also indicate any elements of the business plan of which the government does not concur and/or provide additional guidance on expectations going forward.

The current submission looks at the multi-year business plan for OPG covering 2016-2018. Concurrence with the plan is still pending.

Below is the 2013-14 Results-based Plan Minute:

Directed the Ministry of Energy and its agencies, Ontario Power Generation Inc. and Hydro One Inc., in consultation with the Ontario Financing Authority, to report back:

- Annually each autumn with the respective multi-year business plans of the agencies as approved by the Boards of the companies, for review by Treasury Board/Management Board of Cabinet.
  - In this regard, the report should include the following, on a calendar and government fiscal year basis:
  - Multi-year financial and operational targets, including net income and earnings-before-tax.
  - Projected revenues and cash flows to the Province, including the Ontario Electricity Financial Corporation.
  - Planned financings from the Ontario Electricity Financial Corporation.
- Quarterly with financial projection updates and progress reports on the agencies' respective business plan targets and any other new developments, initiatives or risks that may have a material fiscal impact on the Province including variance analysis of last quarter and year-to-date against the annual business plan reviewed by Treasury Board/Management Board of Cabinet.

## APPENDIX D: PREMIER'S ADVISORY COUNCIL ON GOVERNMENT ASSETS

In April 2014, the Premier established a Premier's Advisory Council on Government Assets (PAC) to review and identify opportunities to optimize the value and performance of Ontario government business enterprises including OPG and Hydro One. In April 2015, PAC presented the Premier with a report detailing the Council's final findings and recommendations.

- For OPG, PAC recommended a detailed focus on the Darlington refurbishment project, as well as specific efficiency enhancements.
- For Hydro One, PAC recommended selling, over time, a majority interest in Hydro One through share sales to the public.

The government has moved forward with these recommendations. Hydro One completed its first phase of share sales in November 2015 through an initial public offering (IPO), and a secondary offering in April 2016. In addition, the Province has approved the Darlington refurbishment project, announced in January 2016.

## APPENDIX E: SUMMARY OF KEY HIGHLIGHTS FROM BUSINESS PLANS

The Ministry indicates OPG financial and ratepayer forecasts show some changes from last year's business plan projections, as reviewed by Treasury Board in March 2015. This is in part because the rate application currently before the Ontario Energy Board include a number of significant changes, as discussed below.

*Rate Application:*

OPG is proceeding with a rate submission, currently under review by the Ontario Energy Board (OEB). The outcome of these proceedings will have a substantial impact on OPG's ability to achieve business plan targets.

In May 2016, OPG filed a 5-year nuclear and hydroelectric rate application with the OEB covering the 2017-2021 period. Consistent with the amendments to Ontario Regulation 53/05, the rate application includes a nuclear rate smoothing proposal to avoid price spikes that would arise during the Darlington refurbishment, by deferring the recovery of nuclear revenues to the post-refurbishment period. The business plan assumes a nuclear base rate increases of 11 per cent per year beginning in 2017, until the end of the Darlington refurbishment period with the nuclear rate smoothing and the hydroelectric base rate increases of about 1.5 per cent per year.

OPG has estimated that the combined bill impacts of new nuclear and hydroelectric rates to the typical residential customer is expected to average about $1.05 per month annually over the 2017-2021 period. The expected average annual impact on a typical residential customer's monthly bill over the period to 2021 is estimated to be ~0.7%. The cost of OPG generated electricity to customers is projected to remain ~40% below the average non-OPG cost of electricity to 2018, and ~35% by 2021.

It will be up to the OEB to approve OPG's rates through its rate application process, which includes public hearings and an extensive intervener process.

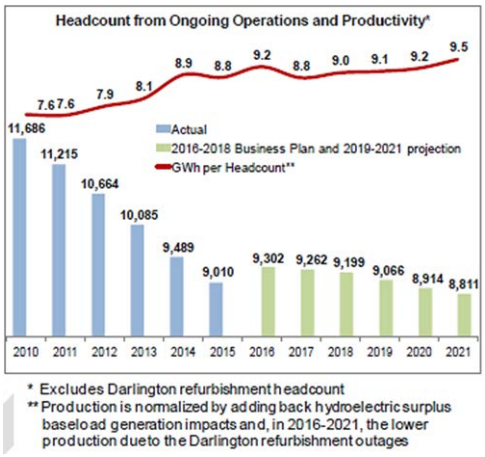
*Finding Efficiencies (Benefits Ratepayers):*

As part of a company-wide business transformation, OPG has saved over $1 billion in costs from January 2011 to December 2016 through headcount reductions of approximately 2,800 employees from on-going operations.

OPG has implemented increased pension contributions and other pension reforms for PWU, Society and Management staff to better align with the broader public sector. Through negotiations, OPG has achieved 1% compensation increases for PWU and Society for each of the next 3 years. As of the end of 2015 OPG had approximately 9,250 staff, with 90% represented by two unions. Of the 1,027 staff not represented by a union, 80 are Executives who would be covered by the proposed framework.

OPG has reduced management headcount by 19% per cent since 2010. OPG has also reduced total base salary costs for management by 18% since 2010.

OPG's headcount reductions forecasted for 2020 are consistent with the direction in the last concurrence letter to reduce non-nuclear headcounts by 5% based on 2015 levels by 2020. Non-nuclear headcount is projected to be approximately 3,400 in 2020, representing an approximate nine percent reduction from the 2015 staffing level included in OPG's 2015-2017 Business Plan, submitted last year. See graph on next page.



*Key OPG Risks:*

- All figures included in OPG's 2016-2018 Business Plan are based on USGAAP basis. Any decision to consolidate OPG's financials on the Province's books on an International Financial Reporting Standards (IFRS) may result in negative fiscal impacts. Ministry of Energy staff understand that staff from the Office of the Provincial Controller's Office are working with OPG to better understand impacts.

- Adverse OEB decisions that do not allow for the full recovery of costs as planned will reduce OPG's earnings and cash flows, and could stress credit metrics (e.g., disallowance of compensation costs). In line with US GAAP, OPG accounts for pension and OPEB on an accrual basis. If the outcome of the OEB's generic proceeding is to account for pension and OPEB on a cash basis, OPG would need to write-off the amounts in the accrual account (balance of ~$450M at the end of 2016 or over ~$900M by the end of 2021), with a one-for-one fiscal impact.

- An inability to achieve nuclear production targets would reduce OPG's earnings. Technical challenges associated with ongoing Pickering operations could result in difficulties reaching proposed forecasts. In addition, the OEB has increased OPG's Nuclear Generation forecasts in previous applications.

- There are important financial and reputation risks related to the Darlington Refurbishment Project that if the actual costs exceed the budgeted amounts or if OPG is not able to meet its schedule. Failure to meet the refurbishment objectives of the project will potentially have ongoing impact to the operational performance of the nuclear station, leading to long-term impacts to OPG.

- OPG was requested to work with the Office of the Provincial Controller and the Office of the Auditor General of Ontario to assess the impact of transitioning to the International Financial Reporting Standards (IFRS), in consolidating OPG to the Province's Accounts. Adoption of IFRS by the Province in consolidating OPG's financial results could have significant implications, including increased income volatility and material income impacts starting in 2015-16 fiscal year and up to $1 billion in 2016-17.

*Auditor and Ombudsman Reviews:*

On December 2, 2015, the Auditor General tabled her 2015 Annual Report which included a follow-up to the 2013 Value-for-money audit of OPG's Human Resources. The Auditor General found that OPG had fully implemented 8 of the 14 recommendations, with another 6 in the process of being implemented. The follow up found that OPG had made reasonable progress on all recommendations made in the original report. On January 13, 2016, the Minister of Energy wrote to OPG's requesting a status update in June 2016 on the progress of the remaining recommendations.

*Large Renewable Procurement:*

OPG was a successful applicant in the IESO's Large Renewable Procurement program as announced on March 10, 2016. OPG has been awarded a contract for a 44 MW Nanticoke Solar Photovoltaic project in Haldimand County.

## APPENDIX F: EXECUTIVE COMPENSATION

The Ministry has provided the following overview of OPG's proposed executive compensation framework:

OPG has indicated that an improved executive compensation framework is necessary to deliver on key projects, which is consistent with the commercial vision for the company.

Within its Business Plan, OPG proposed a compensation framework that would allow the company to begin to move its executives to the 50th percentile of the comparable benchmarks, established in a third-party review of compensation.

To align with requirements under TBS' compensation framework, OPG must revisit its current proposal and submit a compliant strategy to the Ministry of Energy in accordance with the regulation.

- OPG's current proposal sought to move ~80 executives up to the 50th percentile of comparable benchmarks and help OPG with its challenge of retaining and attracting the necessary skills to deliver on key government priorities (e.g., Darlington refurbishment).
- TBS' Compensation Framework Regulation caps salary and performance-related payments for designated executives in the public sector, including those at OPG, at no more than the 50th percentile of appropriate comparators. OPG would be required to seek public comment as part of developing its executive compensation program and post a compliant program to its public website on or before September 5, 2017.

OPG has indicated that for executive cohort, the following efficiencies have been realized:

- Reductions in the executive group headcount has resulted in cumulative savings of $10M, with an additional $5M/year going forward.
- Permanent elimination of 12 executive positions since 2012.
- Where executive vacancies have been filled, replacements are at or below predecessor cost.
- Increased employee pension contributions by 1% in 2016 and 2% in 2017 with reduced company contributions.
- New hires are at pension rule of 90 rather than rule of 84.

Other Considerations:

Further, financial advisors have made the following recent recommendations on OPG's executive compensation proposal:

- The 50th percentile target (of benchmarked peers) should measure total compensation including pension accumulation of the OPG employees, not just salaries.
- OPG should introduce a more affordable and less risky defined contribution plan to replace the existing defined benefit plans for new hires.
- OPG should substitute net income with some measure of operating productivity or cost structure in the Medium Term Incentive Plan (MTIP) performance targets.
- OPG should change the MTIP payout target from 70% to 80% and make the payout matrix less flat.
- Voluntarily expand the group of Named Executive Officers disclosed in Annual Information Forms.
- Introduce a policy that all newly externally hired management staff be given a defined contribution pension plan instead of a defined benefit plan.

## APPENDIX G: PROVINCIAL FISCAL PLAN IMPLICATIONS OF BUSINESS PLANS PROCEEDING –

Ontario Power Generation is a Government Business Enterprises (GBE), and consolidated to the Province's financials on a modified equity basis. The Province's Fiscal Plan reflects the entity as Income from Business Enterprises and Electricity Payments-in-Lieu of Taxes (PILs) (As Revenue only).

| **Revenue** ($millions) | **2015-16** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|---|
| **2016 Ontario Budget** | | | | |
| Ontario Power Generation | | | | |
| Net Income | 257 | 471 | 586 | 673 |
| Income Tax | 100 | 224 | 159 | 182 |
| **Consolidation Adj[1]** | 241 | | | |
| **2016- 2018 OPG Business Plan** | | | | |
| Ontario Power Generation | | | | |
| Net Income | 278 | 302 | 694 | 686 |
| Income Tax | 105 | 104 | 245 | 155 |
| **Consolidation Adj[1]** | 247 | | | |
| **Change in GBE Net Income & Consolidation Adjustment +/(-)** | | | | |
| Ontario Power Generation | 27[2] | (169) | 108 | 13 |
| **Change in GBE Income Tax PILs +/(-)** | | | | |
| Ontario Power Generation | 38 | (120) | 86 | (27) |
| **TOTAL OF OPG CHANGES** | **65** | **(289)** | **194** | **(14)** |

1. Includes Provincial consolidation adjustments totalling $241M for 2015-16 in Budget 2016 and $247M in Public Accounts for unrealized gains or losses on the nuclear funds net of Bruce variance account.
2. Change in OPG net income in 2015-16 of $21M plus change in ONFA-related consolidation adjustment, for comparison purpose only, of $6M in 2015-16.

OPG's fiscal results are also impacted by Other PILs to the Ontario Electricity Financial Corporation (OEFC) and the Province. The following table reflects these others impacts in addition to the latest net income and income tax PILs from OPG's August update.

| **Revenue** ($millions) | **2015-16** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|---|
| **2016 Ontario Budget** | | | | |
| Combined Other PILs & Other GRC | 341 | 342 | 351 | 359 |
| Other PILs (GRC to OEFC, Proxy Property Tax) | 214 | 213 | 223 | 232 |
| Other GRC (to MOF & Niagara Parks Commission)[1] | 127 | 129 | 128 | 137 |
| **2016-18 OPG Business Plan** | | | | |
| Combined Other PILs & Other GRC[2] | 335 | 353 | 358 | 366 |
| Other PILs (GRC to OEFC, Proxy Property Tax)[3] | 215 | 215 | 220 | 220 |
| Other PILs (GRC to MOF & Niagara Parks Commission)[3] | 120 | 135 | 140 | 140 |
| **OPG Monthly Update (August 2016)** | | | | |
| Net Income | - | 361 | - | - |
| Income Tax PILs to OEFC | - | 98 | - | - |

1. The GRC to MOF & Niagara Parks Commission (NPC) is provided to enable comparison to the 2016-18 Business Plan.
2. Include GRC to OEFC, GRC to MOF and NPC and Proxy Property Tax, provided to TBS by Energy on September 14, 2016.
3. Preliminary 2016-19 Business Plan forecast provided by Energy, January 29, 2016. (Do not add to the Combined Other PILs & Other GRC row, likely due to rounding.)

Hi John,

In regards to records that the OFA must maintain related to the OREC, we do not need to have direct database access to your records, but records should be available upon request of the Ministry. Most likely we would ask for documents to be shared electronically via email if necessary, unless directed otherwise.

Regards,

-Robert

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations thereunder (the "Act"), certain consumers will be entitled to receive financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers" or "OREC", in respect of the cost of electricity consumed by them commencing January 1, 2017;

2. Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f)of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

**1. Payment Authorization**

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

**2. Payment Process**

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

b) The Ministry will take all necessary steps to provide the OFA with access to the IESO Portal so that the OFA will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

**3. Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

e)

**4. OREC Cost Forecasting**

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process .

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

~~d)~~ e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement of the forecasts.

**Formatted:** Indent: Left: 0.5", No bullets or numbering

**Formatted:** No bullets or numbering

**5. Limited Role of the OFA**

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

**6. Review and Termination**

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

Formatted: Highlight

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

Formatted: Highlight

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:

**Whereas:**

1. Pursuant to the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations thereunder (the "Act"), certain consumers will be entitled to receive financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers" or "OREC", in respect of the cost of electricity consumed by them commencing January 1, 2017;

2. Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f)of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

**1. Payment Authorization**

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

**2. Payment Process**

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

b) The Ministry will take all necessary steps to provide the OFA with access to the IESO Portal so that the OFA will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

**3. Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

e)

**4. OREC Cost Forecasting**

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process .

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

~~d)~~ e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement of the forecasts.

**Formatted:** Indent: Left: 0.5", No bullets or numbering

**Formatted:** No bullets or numbering

**5. Limited Role of the OFA**

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

**6. Review and Termination**

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

Formatted: Highlight

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

Formatted: Highlight

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.

Hi Ken,

Hi Ken,

We've checked with Ken R., etc.

And ready to send back. Just wanted to loop you in before doing so.

Thanks,

John.

**Subject:** RE: Benefit Implementation

Hi, attached is the ENERGY-OFA MOU, one or two adjustments in the attached.

If you are in agreement let us know and we can clean up and get ready for signature. We'll need to complete this first week of December.

Thanks,

---

**Subject:** RE: Benefit Implementation

Hi Michael,

Attached is a working draft of the MOU. OFA Legal had based it on the OCEB one, slightly updated for the proposed new rebate. I'm sure Energy will have some updates to suggest on it too.

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("" or "OREC"), against", in respect of the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

**1. Payment Authorization**

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

**2. Payment Process**

~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

**3. Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ~~ensure that~~provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of ~~has full access to~~ such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

**4. OREC Cost Forecasting**

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

~~d)a) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.~~

d) ~~e)~~ The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

**5. Limited Role of the OFA**

**Formatted:** Indent: Left: 0.25", Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.75" + Indent at: 1"

**Commented [SQ22]:** The only change outlined in the latest version.

**Commented [KR3]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

**Commented [RK4R3]:** How about dealing with it by switching the order and slightly amending the new "e)"?

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

**6. Review and Termination**

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:

**Subject:** Major Projects this week

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week. Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 12, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

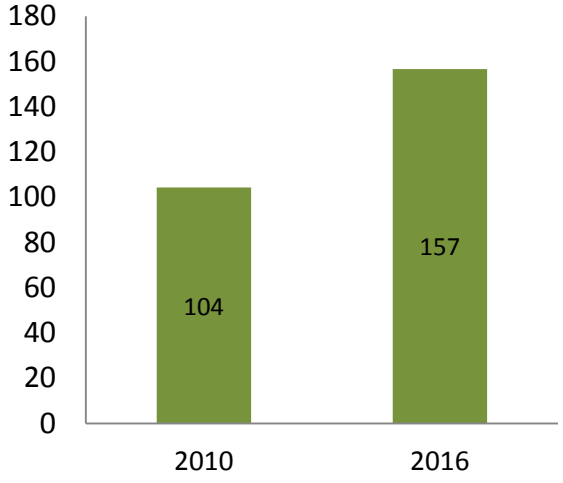
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

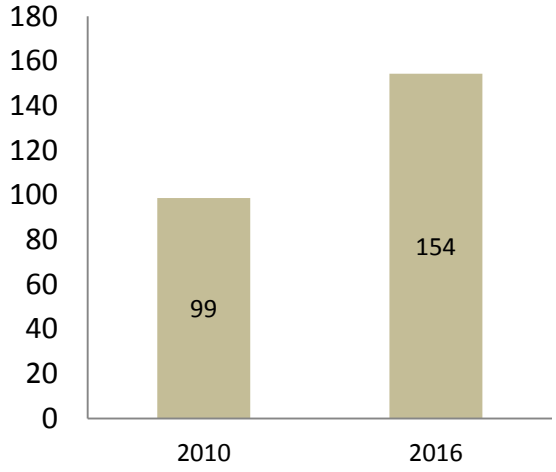
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

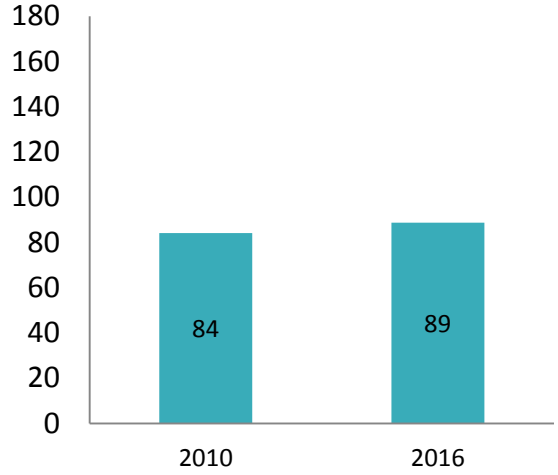
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



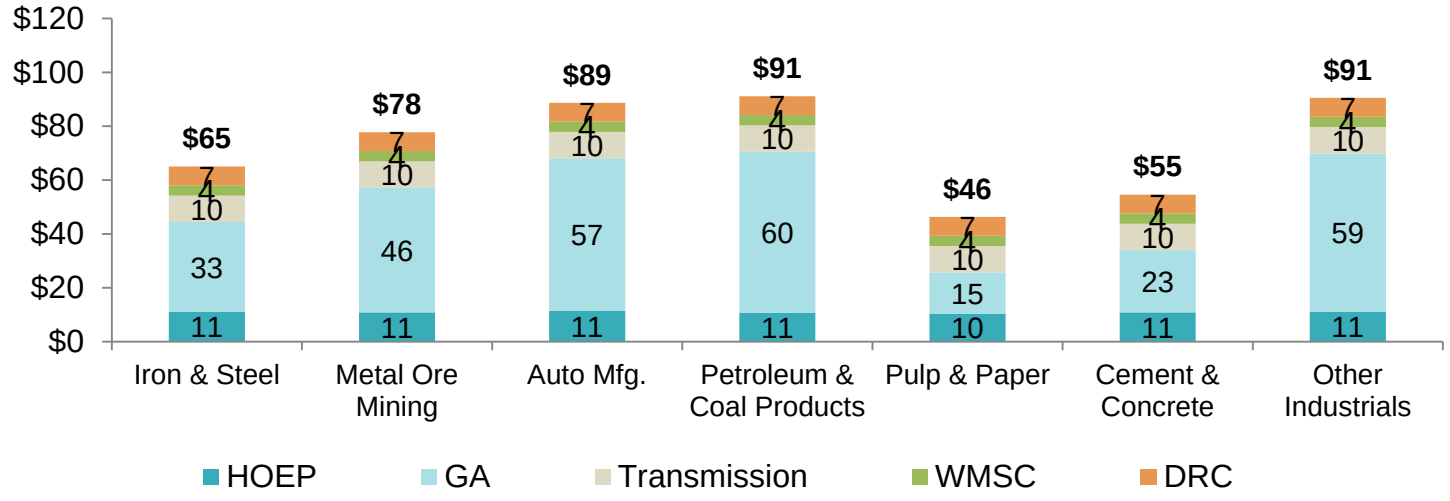
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

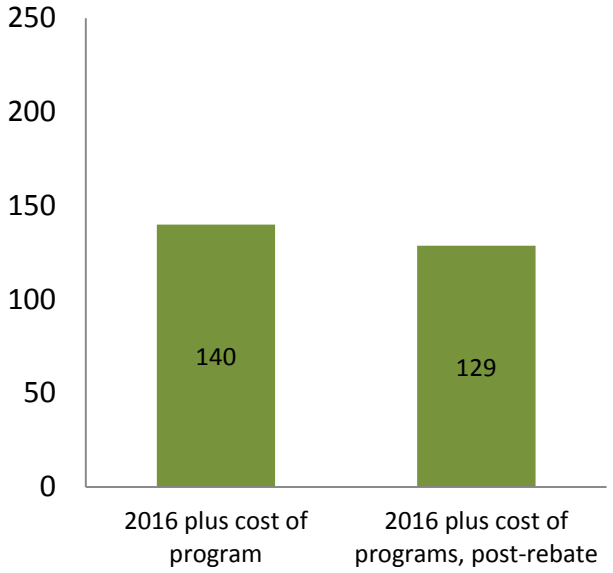
# Rate Mitigation Proposal – Illustrative Benefits*

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

- **Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Proceeds recycling is an estimated average over the first compliance period (2017-2020).

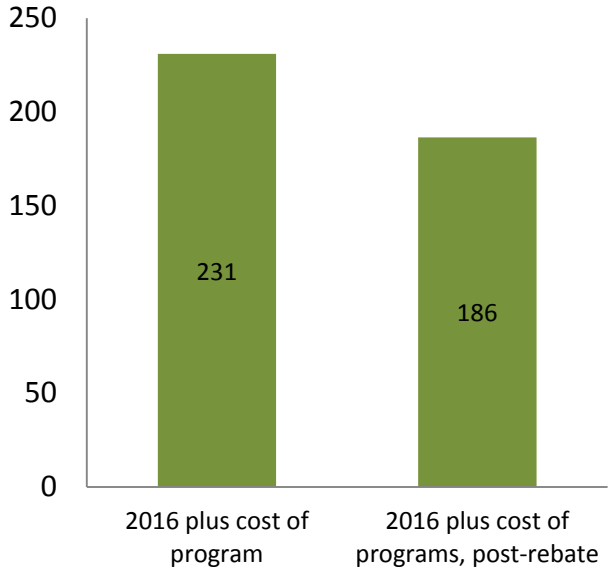
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750 kWh per month, 8% only**



The pre-tax impact is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000 kWh per month, 8% and RRRP Update**

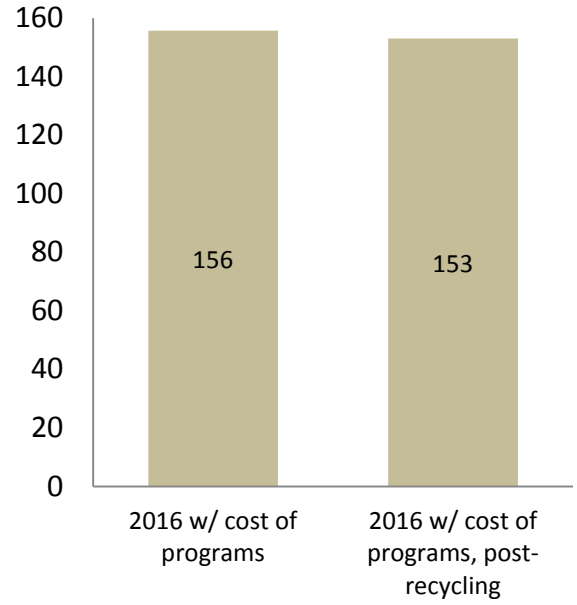


The pre-tax impact of the rate mitigation initiatives is a 20% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016.

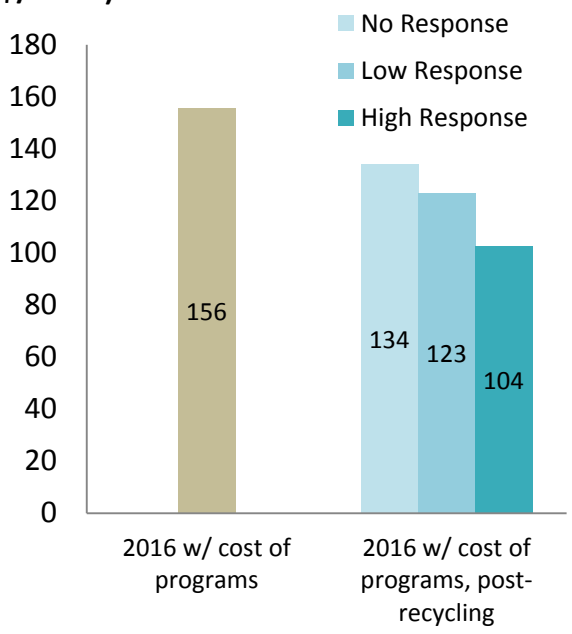
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



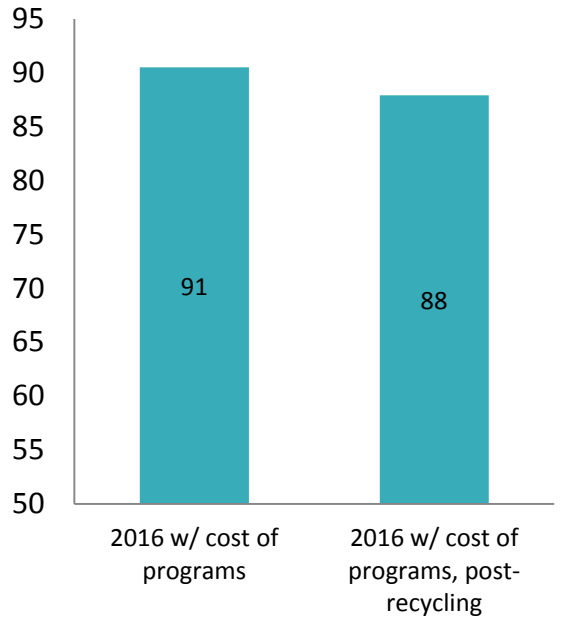
**Class B:** The benefit is a 2% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The benefit is a reduction of 14% to 34%.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The benefit of the rate mitigation initiatives is a 3% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

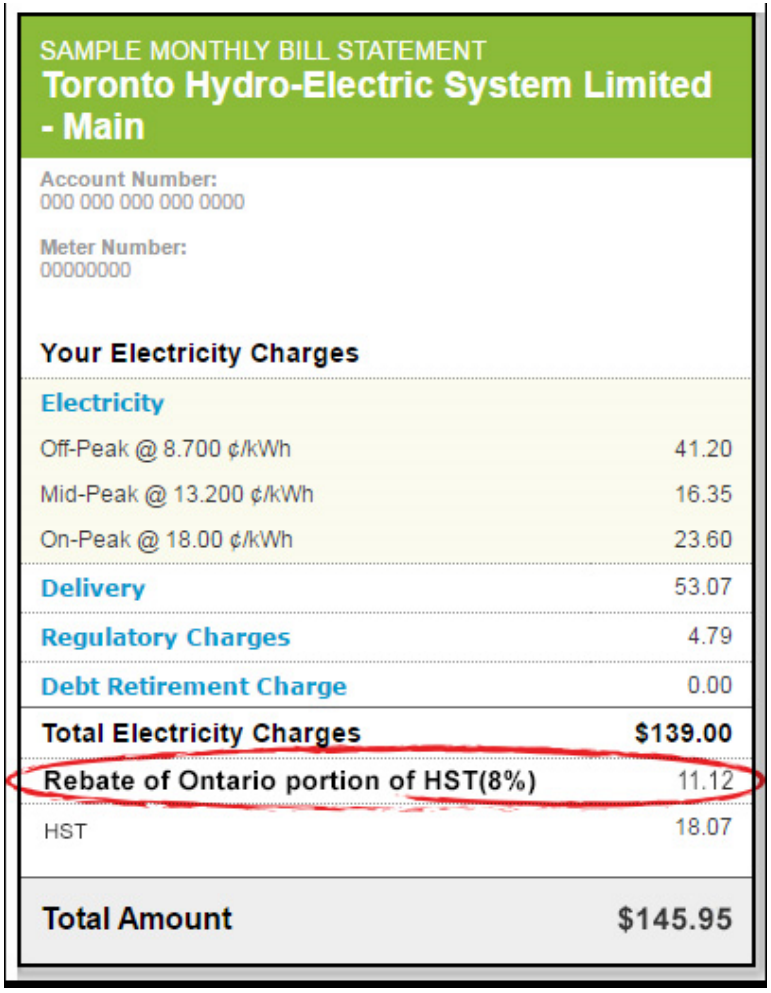
- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Electricity Bill Mock-Up



SAMPLE MONTHLY BILL STATEMENT

| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

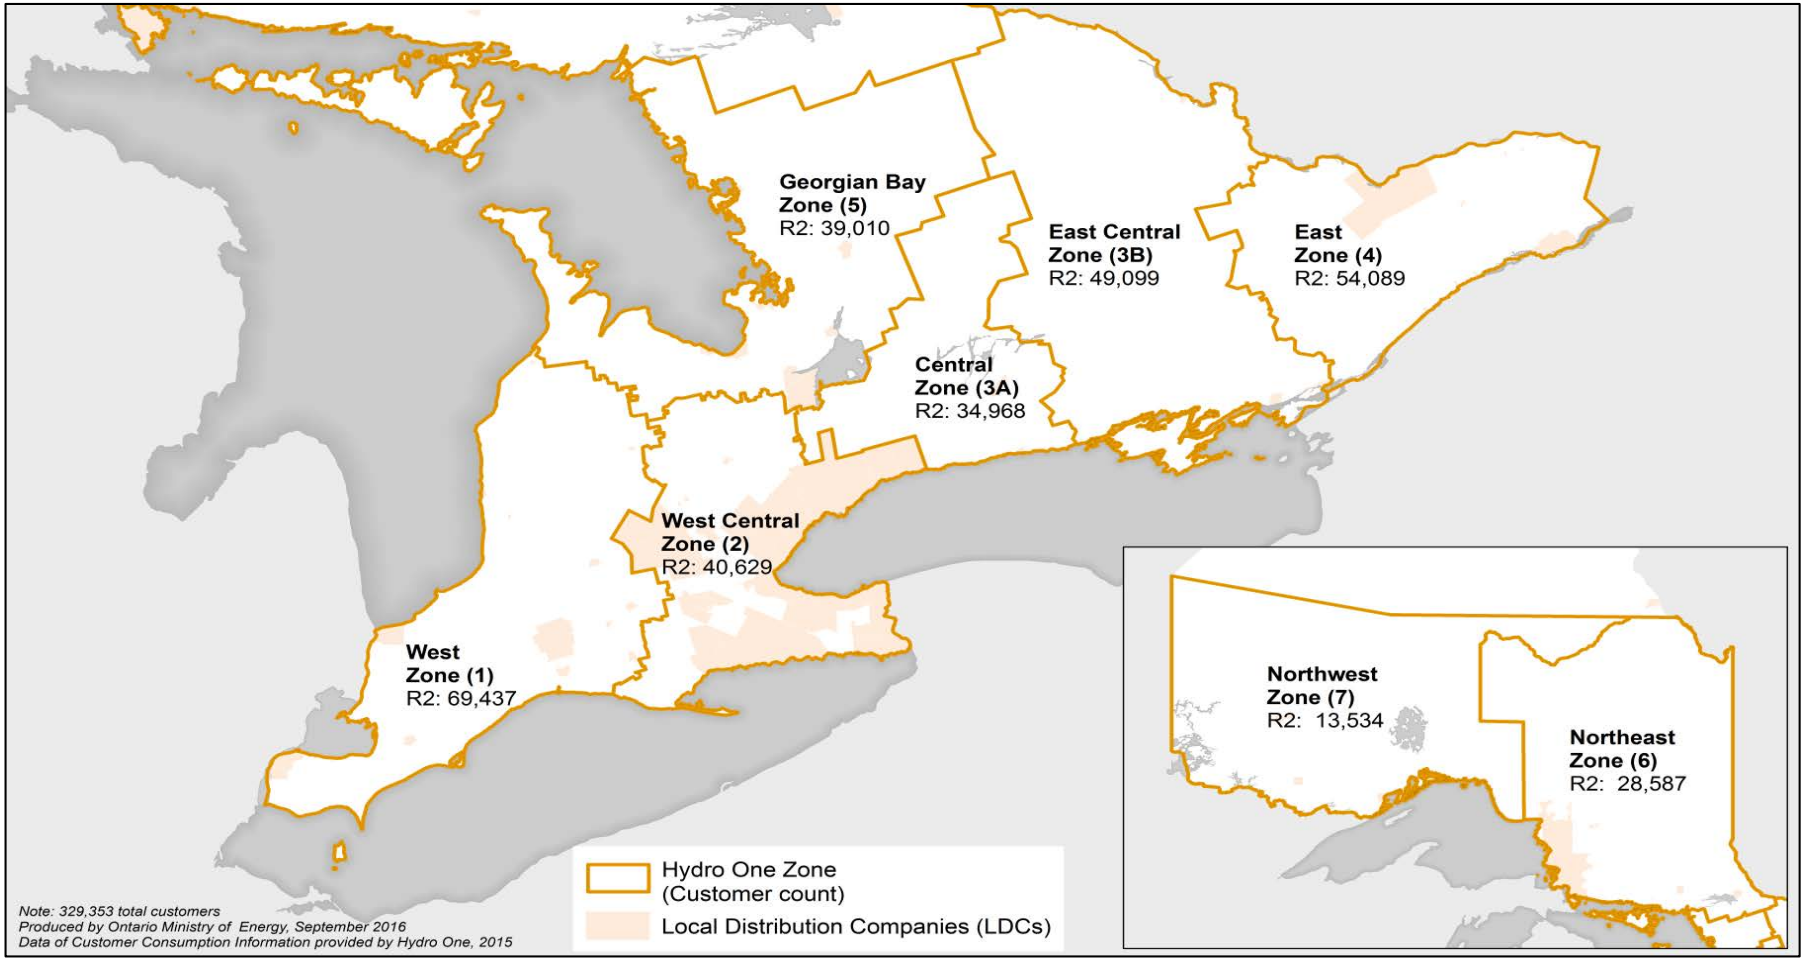
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

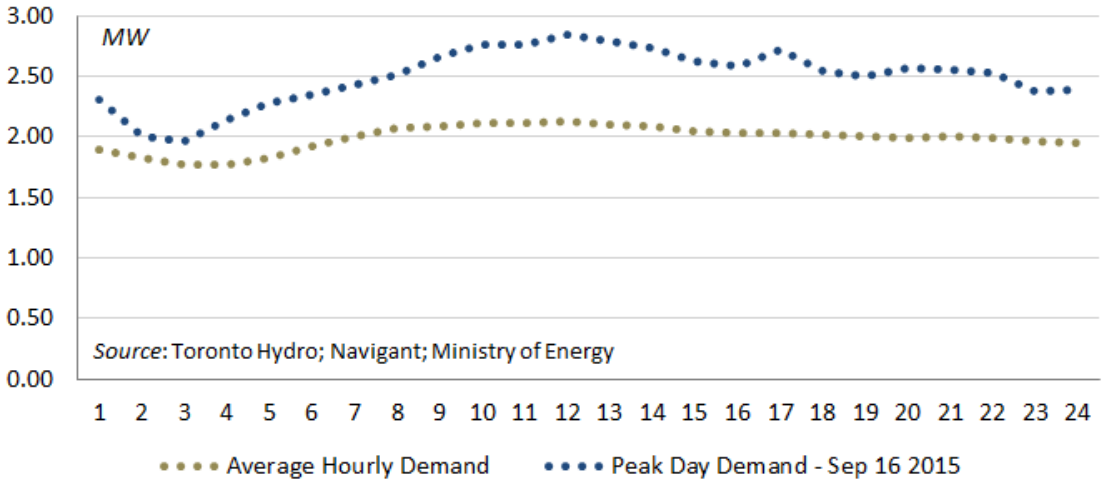
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

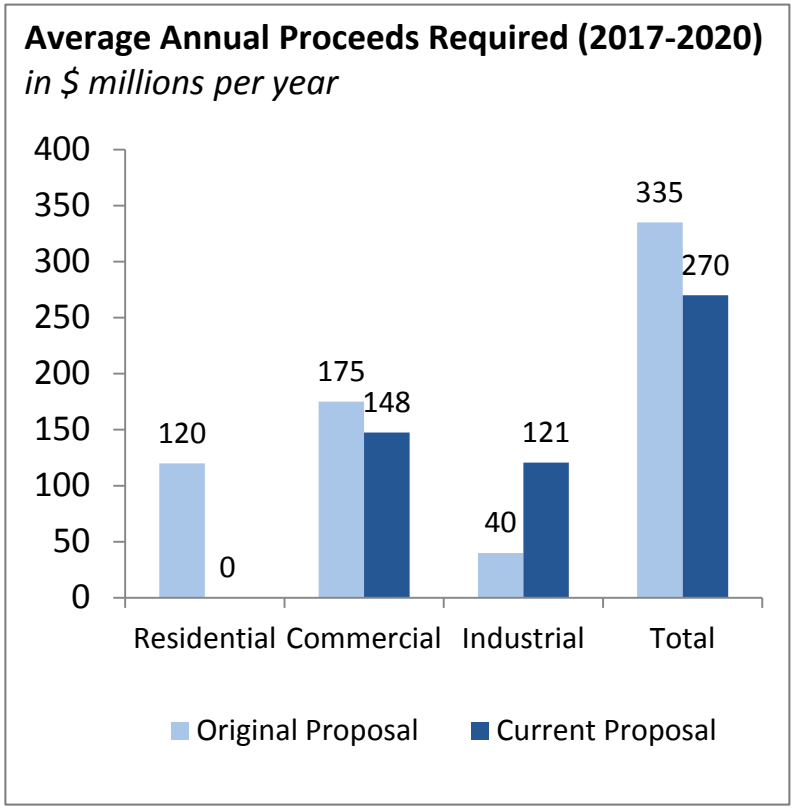
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- ~~HST~~ 8% Rebate of the pre-tax electricity costs (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Pending Update

Ontario

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

   i. Provide a rebate of 8% ~~on~~ of the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

   ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

   iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals. **[TBD]**

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after cost of new programs, before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after cost of new programs, before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $140 /month | N/A | 8% ~~pre-tax~~ rebate: - $11 | $129 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $231 /month | RRRP: –$32 | 8% ~~pre-tax~~ rebate + Updated RRRP: - $45 | $186 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $102 /month | OESP: -$38 | 8% ~~pre-ta~~x rebate: - $8 | $94 /month |
| Small Business (Toronto – 403,200 kWh/month) | $150 /MWh | N/A | 8% ~~pre-tax~~ rebate: - $12/MWh | $138 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $204 /MWh | N/A | 8% ~~pre-ta~~x rebate: - $16/MWh | $188 /MWh |

***Note:** Some residential consumers ~~can~~ may also receive relief for sales tax on home energy of up to $224 for 2016 through the ~~tax credits based on income, age and geography (Northern Ontario Energy Credit and~~ Ontario Energy and Property Tax Credit~~)~~. People who live in the North may receive additional relief for home energy costs of up to $224 for 2016 through the Northern Ontario Energy Credit. These credits are delivered through the Ontario Trillium Benefit ~~Tax Credit and can be as high as $1,332 per year for a family~~.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact, | New Rate, |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling + ICI: -$53.90/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI and proceeds recycling).

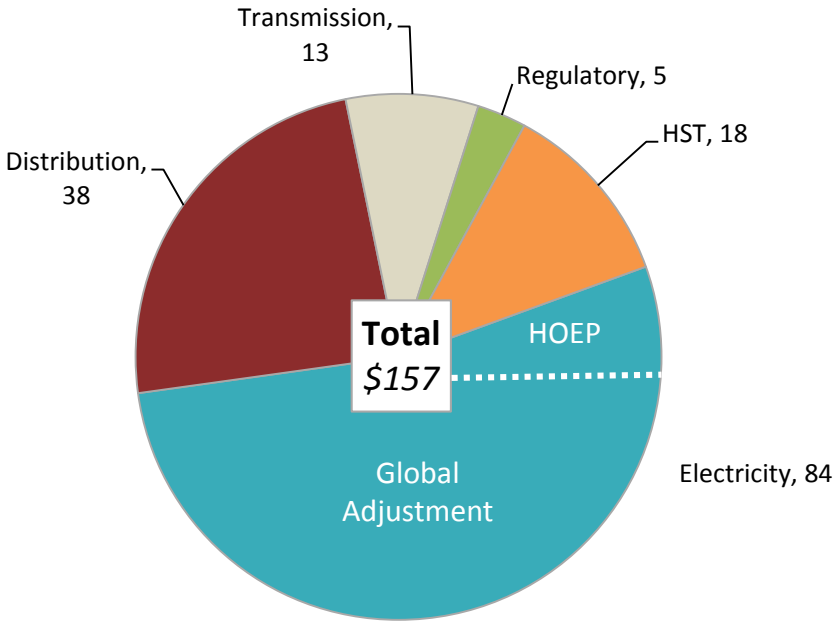
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

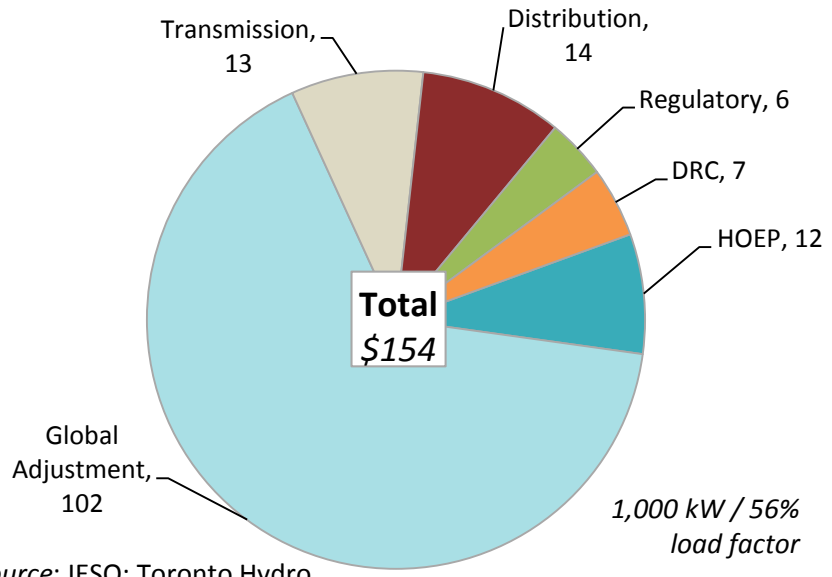
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

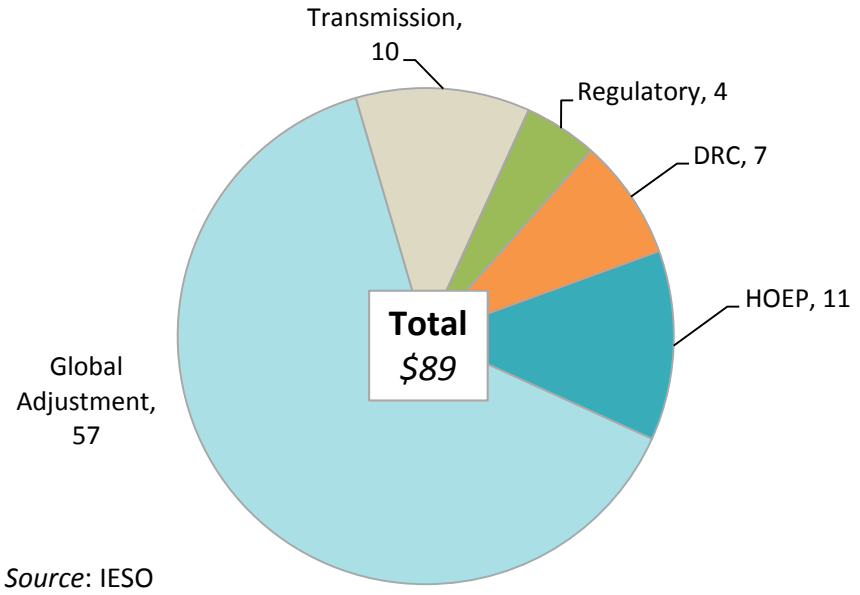
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Will wait to hear back. I've illustrated 3 options in how the Bill can be calculated. I think Option 3 is correct, but will want confirmation. The rounding makes the calculation tough.

**Subject:** Calculation Question

Hi Daniel,

We got the attached word document explaining the calculation for the 8% rebate.

We're trying to figure out the calculation of the rebate including how you apply the ICI and RRRP impacts. However due to rounding we're not too sure.

I've constructed the attached excel chart showing 3 options on how to perform the calculation. I believe Option 3 is how the calculation ***should be*** performed but have heard conflicting viewpoints (illustrated in Options 1 and 2).

Would you have a minute tomorrow to chat. Just want to make sure we're doing the calculation the right way.

Thanks,
Shajee

**Q. For a typical residential consumer, what is the benefit of the proposed 8% rebate?**

A. For a current Regulated Price Plan time-of-use consumer in Toronto using 750 kWh per month, the pre-tax monthly bill is about $139 ($157 with tax).

The proposed rebate would be applied pre-tax, and therefore would save a typical residential consumer just over $11/month, or $133 annually. As electricity charges increase over time, the amount of the benefit would increase.

[Note: the net benefit after the cost of new programs is $10 per month.]

Bill Impacts for Average Consumer – Toronto Hydro (750 kWh – $/month)

| Current bill (after tax) | HST on Current Bill | Current bill (pre-tax) | 8% pre-tax rebate | Cost of RRRP and ICI expansion | New bill (pre-tax) | Net benefit (pre-tax) | New bill (after tax) | Net benefit (after tax) |
|---|---|---|---|---|---|---|---|---|
| $157 | $18 | $139 | **$11** | $1.31 | $129 | **$10** | $147 | **$10 (6%)** |

**Q. What is the combined benefit of the 8% rebate and updated RRRP subsidy?**

A. A Hydro One R2 consumer using 1000 kWh per month currently pays $229 before tax. The updated RRRP subsidy would decrease this by $29 to $200 per month and the 8% rebate would decrease their bill by a further $16 for a new total of $184 per month before tax. This represents a $45 per month pre-tax benefit or $540 per year.

[Note: the net benefit after the cost of additional programs is $46 per month]

Bill Impacts for Rural Consumers – Hydro One R2 (1000 kWh – $/month)

| Current bill (after tax) | HST on Current Bill | Current bill (pre-tax) | Update RRRP Subsidy | 8% pre-tax rebate | Net benefit (pre-tax) w/o cost of ICI/RRRP | Cost of RRRP and ICI expansion | New bill (pre-tax) | Net benefit (pre-tax) | New bill (after tax) | Net benefit (after tax) |
|---|---|---|---|---|---|---|---|---|---|---|
| $259 | $30 | $229 | $29 | $16 | **$45** | $1.74 | $186 | **$43** | $212 | **$46 (18%)** |

*Note some totals may not sum due to rounding.

| Current Bill | |

**COMMERCIALLY SENSITIVE AND CONFIDENTIAL**

## Comments on Proposed Initiatives to Transform Ontario's Electricity Sector

The Ministry of Energy is providing an update on progress related to transforming the province's electricity sector by elaborating on the potential initiatives, as outlined in its deck.

**CONTEXT**

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e. meeting goals towards decarbonize) and modernize the electricity infrastructure (i.e. more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One in Hydro One transmission and distribution systems.

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2018 for eligible small businesses, farms and residential consumer and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month.

**COMMENTS**

Energy's proposals generally involve shifting some costs from the rate base to the tax base. A general comment on the proposals would be that while thee proposals may have a fairly limited impact, e.g. about $5-6/month for residential (less than 5% of the average monthly bill), the proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion), somewhat down from the impacts from an earlier deck ($1.3 billion to $1.9 billion).

Over the past five years, the fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,195 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt etirement Charge
NIERP – Northern Ontario Electricity Rate program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This includes shifting the cost of the Ontario Electricity Support Program (OESP), as well as an additional 50% increase, and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework and to transition costs to the new "green bank eneity" over time.

- The cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects. Incremental investments would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.) May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.

- This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
- Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):

- Ending the DRC early for Class B customers (commercial, small industrial) (about $0.45 billion/year to 2017-18)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |

| | | | | | |
|---|---|---|---|---|---|
| **NIERP** | 120 | 120 | 120 | 120 | 120 |
| **NOEC** | 25 | 25 | 25 | 25 | 25 |
| **OEPTC**[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| **1. OESP, RRRP, First Nation rate** | | 398 | 419 | 433 | 447 |
| **2. Conservation Programs through Tax Base** | 110 | 450 | 450 | 450 | 450 |
| **4. Departure Tax** | | TBD | TBD | TBD | TBD |
| **7. DRC Ended for Class B** | 110 | 450 | | | |
| **TOTAL** | **1,415** | **3,303** | **2,584** | **2,709** | **2,723** |

**Commented [DS1]:** Can add TBDs for a new Trillium Trust row, but just wanted to check in case you are updating / changing the order of items based on the latest deck

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" beyond the Moving Ontario Forward initiative to make certain investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties ~~and expansion of natural gas to rural areas~~, etc. (note that expanding access to natural gas is already included under Moving Ontario Forward.)
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.16 | 2.31 | 2.41 | 2.49 | 2.54 | 2.58 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| 6. Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 8. Cancel / Adjust FIT | - | - | 0.13 | 0.13 | 0.14 | 0.14 | Long-Term |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| **Considered but not Recommended** | | | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 2. Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.88 | 3.08 | 3.21 | 3.33 | 3.39 | 3.44 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 2.82 | 3.05 | 2.47 | 2.56 | 2.13 | 2.14 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.34 | 1.38 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

Went through the tables and double checked the numbers, also based on updated. (Sorry about the messy check file but attached, as an fyi.)

Thanks,

John.

on and adding in the fiscal risk of the OPG efficiencies related proposal). On the Trillium Trust, it might be fair to point out that Energy raises the prospect of investing in projects that would not otherwise be viewed by the OEB as projects that meet a system benefits test – so not really a rate saving if the projects would not have been done on the rate base. Really a tax-based subsidisation for other policy reasons.

I'll review more later this evening.

Thanks,
Ron

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,
Ron

<Comments on Electricity Sector Transformation Proposals v9 (CEFD)_Markup2.docx>

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear, LRP II), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC), which is providing a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017, for eligible small businesses, farms and residential consumers, and has expanded the Rural or Remote Electricity Rate Protection program, saving eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

## COMMENTS

- A significant number of Energy's proposals involve shifting costs from the rate base to the tax base.
- While the subset of proposals costed by Energy may have a fairly limited residential rate payer impact (e.g. about $6-7/month for residential, or less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost (about $2 billion in 2017-18).
- Additional fiscal exposure comes from proposals not yet costed by Energy (e.g., conservation costs, with Energy consulting OPCD on accounting). Energy also presents other proposals where costs and impacts are "TBD".
- In addition to the fiscal costs above, Energy is also presenting a preliminary proposal to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA). While details of this proposal have not been developed, there is a risk of significant fiscal impacts (e.g., of about $5.5 Bn in calendar 2017) during the period that GA costs are deferred, depending on the scenario. ENERGY has approached the Ontario Provincial Controller Division (OPCD) for accounting advice.

- Over the past five years, the existing fiscally-funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,~~005~~035 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

## ENERGY'S BROAD POLICY THEMES / RATIONALES

A key theme / rationale cited by Energy is to no longer use the rate-base to pay for "social programs" by shifting the cost of OESP, RRRP and a proposed First Nation Rate to the tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| **Fund cost-shifting through Tax base.**<br><br>**Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.**<br>• **Estimated to reduce average monthly residential bill by ≈ $0.55 in 2017, increasing to ≈ $1.45 in 2022.** | • Would provide on-bill benefits.<br><br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. | • 2017-18: $162 M<br><br>• Increasing to $322 M in 2020-21. |
| **Provide further support for rural consumers by expanding the Rural or Remote Rate Protection (RRRP) program.**<br>• **Estimated to reduce average monthly residential bill by ≈** | | • 2017-18: $666 M<br><br>• Increasing to $719 M in 2020-21 |

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| **$1.55 in 2017, increasing to ≈ $1.75 in 2022.** | | |
| | | |
| **Amortize conservation program costs to smooth recovery of costs from ratepayer. Alternatively, rate smooth conservation costs through an IESO deferral account.** | • Ministry of Energy is consulting OPCD on whether consevation costs can be amortized according to accounting standards. Without the ability under accounting standards to amortise the cost, there would be a fiscal impact. Energy states total remaining 2017-2020 electricity conservation program costs are expected to be approximately $2.1 billion.<br>• Energy notes that an alternative to amortizing conservation costs would be to fund these costs through tax base.<br>o Conservation programs provide electricity system benefits. Fiscal-fundingwould result in a cross-subsidisation from tax-base<br>o Accessing the cap & trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the fiscal plan | • [If amortization is not permitted, 2017-18 fiscal impact of $450 M.] [TBC] |
| **Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term rate impact, even if TT funding displaces near-term, non-incremental projects coming onto service – amortised annual costs are small<br>• May have no rate mitigation impact in some cases if, as indicated by Energy, investments are made in incremental projects that would not have been built due to cost barriers under the OEB's beneficiaries pay principle<br>• Could lower utility value (share price) and affect fiscal contributions from the electricity sector (net income), including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return<br>• Could have an upfront fiscal impact if Province does not own the asset and is not able to amortize those projects [TBC with OPCD].<br>• Energy has indicated that if these investments are provided from the OEB there would be a need to develop oversight mechanisms as is not the OEB's role to review cost prudence of tax-based mechanisms. | • Up to $390 million annually from 2017-18 to 2020-21. |
| **Dedicate the Departure Tax** | • In connection with the 2015 IPO of Hydro One shares, Hydro One paid OEFC a $2.6 billion "departure tax". | • $260 million annually from |

| Energy Theme / Rationale | Key Staff Comments | Estimated Fiscal Cost |
|---|---|---|
| | • The departure tax was not a fiscal windfall. It was net fiscally neutral -- while it represented revenue to OEFC, it was an expense to Hydro One and to the Province on consolidation into Public Accounts.<br>• Repurposing the departure tax to provide rate mitigation would have a dollar-per dollar fiscal impact and could trigger an increase in OEFC's stranded debt.<br>• The Province would remain exposed to a negative fiscal impact (lower share price and lower net income) if the OEB decides to allocate all or part of the deffered tax benefit recognized by Hydro One to ratepayers. | 2017-18 to 2020-21. |
| **OPG to Increase Cost Effectiveness and Improve Efficiency** | • Provide expectation that OPG meet more aggressive cost targets, improving efficiency by ~$3/Megawatt hour (MWh), with OPG regulated rates set on this basis.<br>• Dollar-for-dollar fiscal exposure if OPG is not able to meet the targeted lower cost targets. | • $240 million per year. |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• Provide more details regarding the Global Adjustment (GA) | • No expected fiscal impact. |
| **End the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers** | • Current legislated March 31, 2018 end of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end.<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported | • $450 M in 2017-18 |
| **Consider options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA)** | • Incurring debt to pay the generators their contracted or regulated payments<br>• Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation<br>• Likely will lead to significant annual fiscal impact and increase in net debt (estimated by Energy to be up to $66 Bn, depending on Energy's scenario) – Energy to consult with OPCD on accounting treatment<br>• Likely requires legislation to implement.<br>• Furthermore, likely entails significant legal / Constitutional Law risks | • Risk of fiscal impact of more than $2 billion in 2017-18 and ongoing during period GA costs are derferred. |
| **Tax Relief for Solar and Wind** | • Consider funding the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process<br>• Energy's estimation of the NPV benefit to the ratepayers at about $3.3 billion, which would be funded through the tax base, a significant fiscal hit | • Annual fiscal impact not yet determined. |

**DETAIL ON ENERGY PROPOSALS**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP ($0.42-0.85 bn in 2017 to $0.62-1.18 bn in 2022):

Would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and Rural or Remote Electricity Rate Program (RRRP), to the tax base. Lower range of fiscal impat estimate is based on current programs. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Upper range of fiscal impact estimate includes the following changes to the programs.
  - Current RRRP mostly supports Hydro One rural consumers. RRRP could be expanded to mitigate delivery costs for not only Hydro One customers but other high-cost LDCs.
  - OESP program benefits could be increased across the board by 50 per cent, which would mean:
    - Single low income consumers would see an increase from $30 to $45/ month ($540/year); and
    - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year).
- Energy also notest that if moved to the tax base, OESP could be broadened to include all potential low-income households, despite whether they directly pay for electricity. Broadening OESP in this way could result in a further fiscal impact.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Amortize Conservation Program Costs:

Certain conservation costs are proposed to be amortized over the lifetime of the benefits resulting from the funded conservation measures. Energy proposes that this would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs). Energy estimates this would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020.

- Energy would seek an opinion from IESO's external auditor and from the Ontario Provincial Controller Division (OPCD) to determine whether conservation costs could be amortized according to rate-regulated accounting standards.
  - Under Public Sector Accounting Board (PSAB) accounting standards, used by both the Province and IESO, only certain assets can be amortized. Conservation costs would not meet this criteria. Rate-regulated accounting was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

- If amortization accounting of conservation costs is not permitted, a fiscal impact would result from this proposal. Energy also notes directly funding conservation costs from the tax base as an alternative option.

- Alternatively, Energy proposes that a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
    - Energy notes that this option would not require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open Energy to criticism by the Controller and/or Auditor General since the rate impact is the same.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward. The $5.7 billion target already includes all fiscal benefits expected from the sale of Hydro One common shares (this includes net gains from shares and the Provincial portion of the deferred tax benefit recognized by Hydro One in 2015).

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
    - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
    - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects.
- In effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
    - Inclusion of investments in First Nation communities that are not in provincial lands would trigger an upfront fiscal impact as the Province may not be able to amortize these projects (TBC with OPCD).
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
    - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
    - This could also question the government's policy rationale for selling Hydro One shares when it would be effectively investing back into the electricity sector through a different vehicle.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.
- Energy also suggests that investments could be made into projects that are currently not preceding due to cost barriers under the OEB's beneficiary pays principle.

<u>Departure Tax</u>:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This would have a dollar-for-dolar fiscal impact.
- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province on consolidation, as the income (revenue) to the OEFC was fully offset

by a reduction in the Province's revenue from net income of Hydro One (dollar-for-dollar lower due to the departure tax expense).

- The payment was also cash neutral, the $2.6 billion were funded from a capital contribution made by the Province into Hydro One and received back by the Province in OEFC as the departure tax payment was made in cash.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. It would be the first time since 2004 that stranded debt would increase.
- Having OEFC help implement this measure may require introducing changes to OEFC's objects.
- This would be a one-time measure, potentially spread out over a few years, as the departure tax was one-time.

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.
    - This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
    - As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
    - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
    - IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.
- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.
    - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
    - Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
    - In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.
- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
    - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.

- If OPG is unable to meet more aggressive cost targets, this could affect its net income and payments-in-lieu of taxes to OEFC, and the Province's fiscal plan (Energy estimates it at $240 million per year).

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :
In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of electricity price mitigation options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the Global Adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments. This will involve debt financing and recovering over a 25 to 30 year period.

While details of this proposal have not been developed, there is a risk of significant fiscal impacts, e.g., of up to $2 billion annually (under options 2&3), or more (e.g., about $5.5 bn in 2017 under option 4), as estimated by Energy, during the period that GA costs are deferred, depending on the scenario.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
  - Option 1: Status Quo – ratepayers continue to pay the full cost of GA each year
  - Option 2: Moderate short-term cost reductions with limits of no more than $2 billion above the true cost of GA
  - Option 3: Maximized short-term cost reductions with limits of no more than $2 billion above the true cost of GA
  - Option 4: Maximized short-term cost reductions with no limits on the ratepayer GA over-payments in later years
- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact [TBC].

Tax Relief for Solar and Wind Contracts :
Energy's proposal would use the tax-base to fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.

- From 2017 onward, the estimated value of the more than 1,800 MW of large wind projects in commercial operation under the FIT 1 program at a price of $135/MWh is approximately $9.4 billion (NPV 2017).
- The weighted average price for large wind projects over the RES I, II and III competitive procurements was $95.1/MWh.
- If the competitive RES wind pricing were applied to the 1,800 MW of FIT 1 large wind projects, total program value would be estimated at $6.1 billion (NPV 2017).
- The $3.3 billion (NPV) difference could be considered the value of above competitive procurement pricing and could be shifted from the rate-base to the tax-base.

## SUMMARY: TAXPAYER FUNDED ELECTRICITY PRICE MITIGATION

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

FYI – TBS' comments on the rate mitigation deck. Not out of step with our analysis.

**From:** MacIntyre, Kyle (TBS) <Kyle.MacIntyre@ontario.ca>
**Sent:** Wednesday, December 7, 2016 10:39 AM
**To:** Katona, Keley (ENERGY)
**Cc:** McLean, David (MOF)
**Subject:** Comments on Energy's deck

Hi Keley,

Thanks for the opportunity to review. Here are our key comments:

- There is a need for greater understanding/information of the cost, objectives and outcomes of the proposals on additional electricity price relief is required. Some of the proposals, such as transitioning rate-based programs to tax-based, have significant fiscal impacts which need to be better outlined/understood in the deck. Clarity is also needed to understand the objectives and outcomes of moving these programs to the tax-base, including the impacts this would have for electricity consumers.

- Timing is a key consideration that should be addressed – should these proposals be for immediate and near-term implementation, it would create significant fiscal impacts in 2017-18 and 2018-19. Scalable options should be considered for all initiatives (i.e., options for the implementation of initiatives to be spread over the long-term, or through a staged-approach to help minimize the fiscal impact).

- Some of the proposals from Energy would require accounting changes (e.g. amortizing conversation program costs). Energy should work with OPCD in developing these proposals. The Auditor General may also need to be consulted.

Ontario

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II); and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

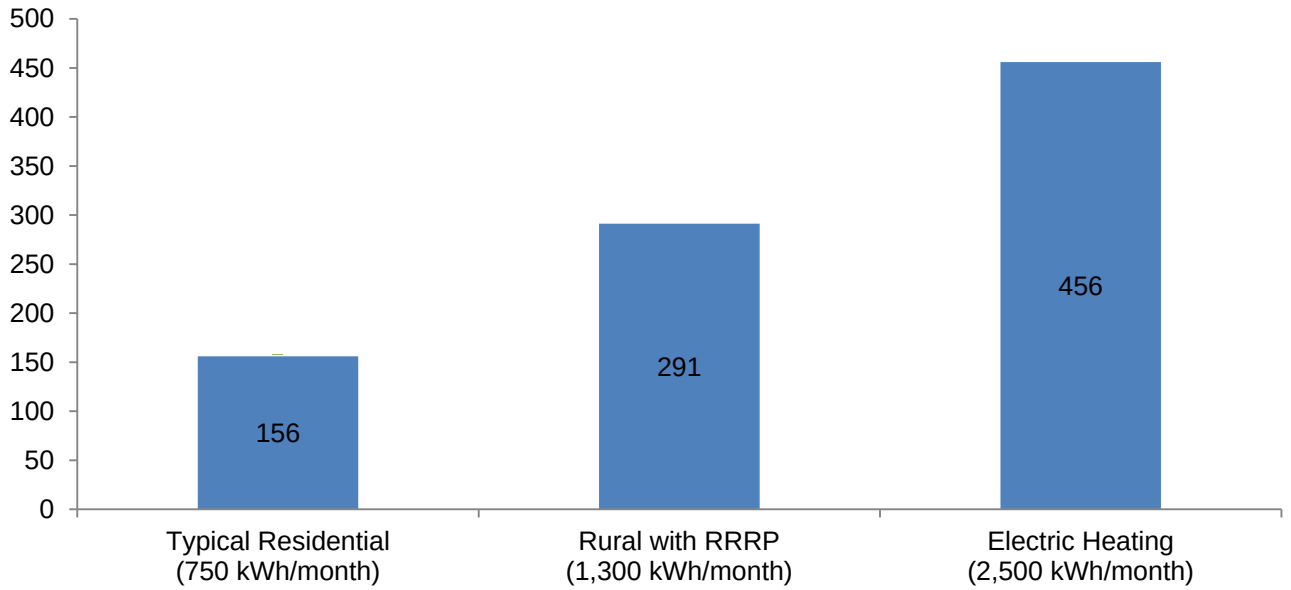
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

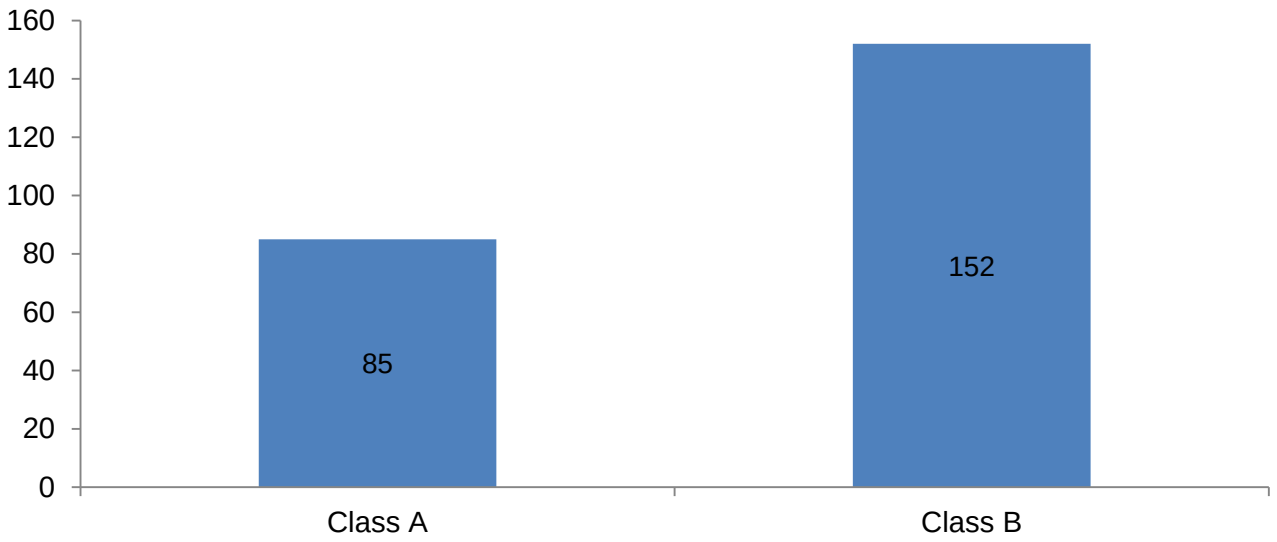


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.
- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.
- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

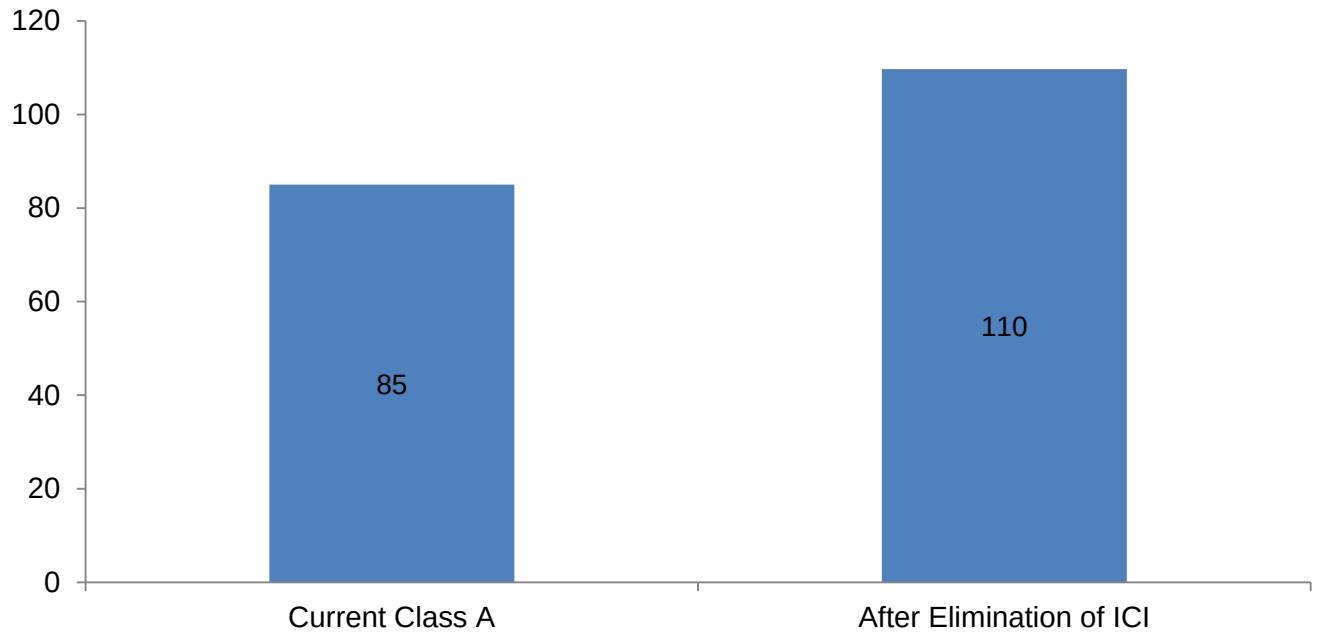
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

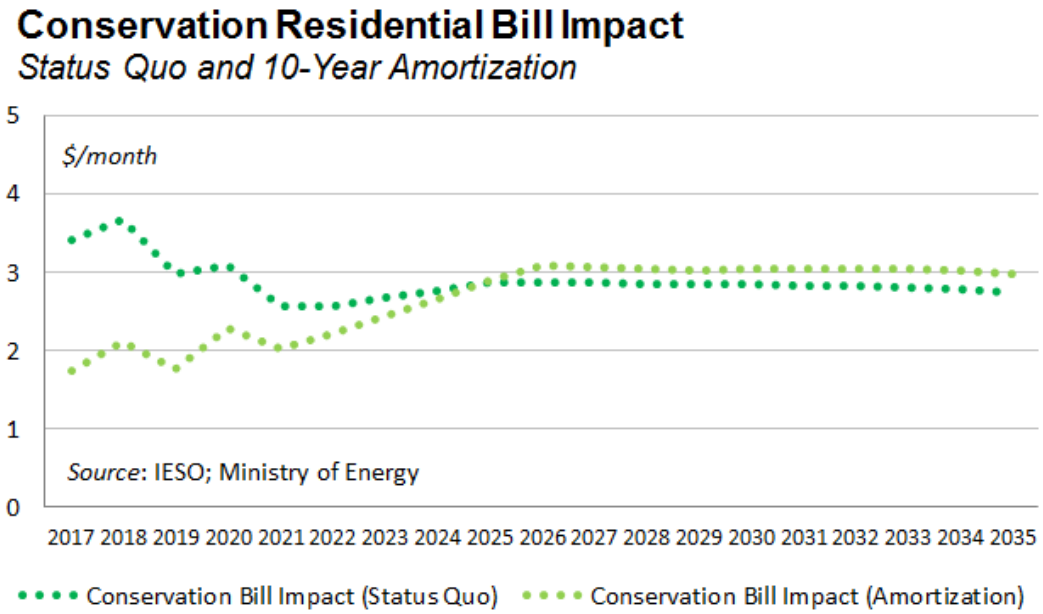
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

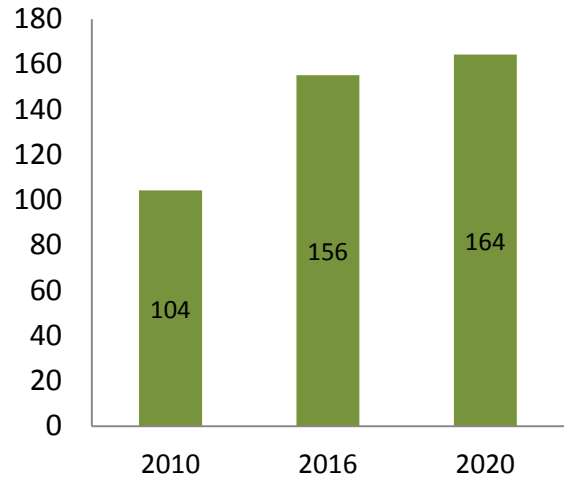
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

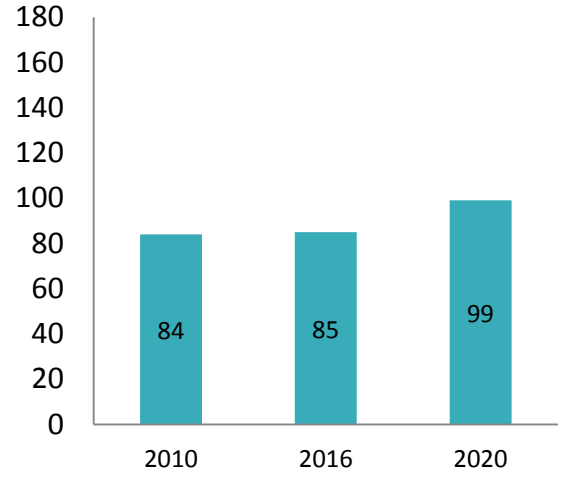
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

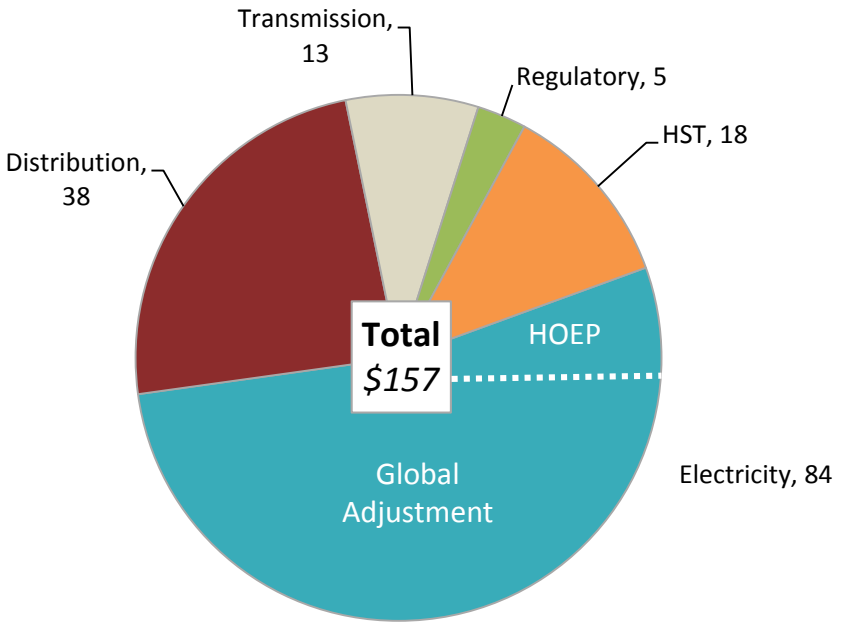
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



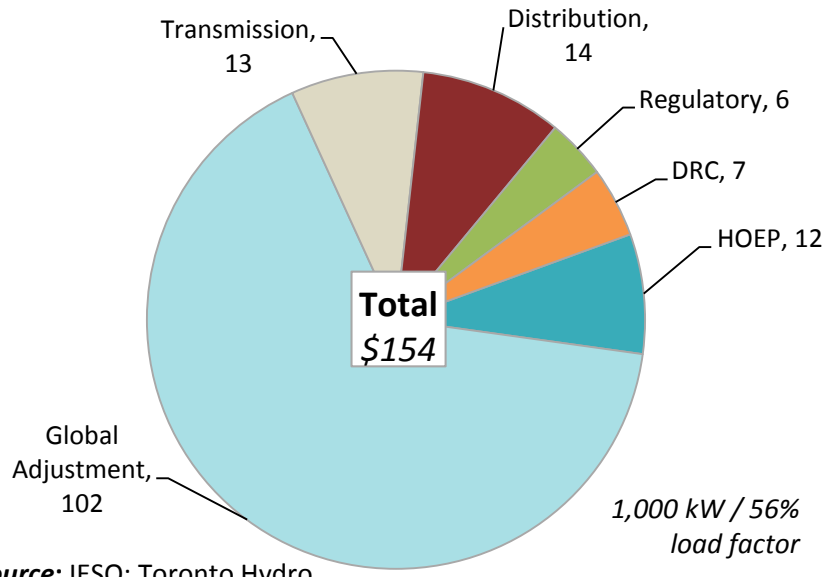
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

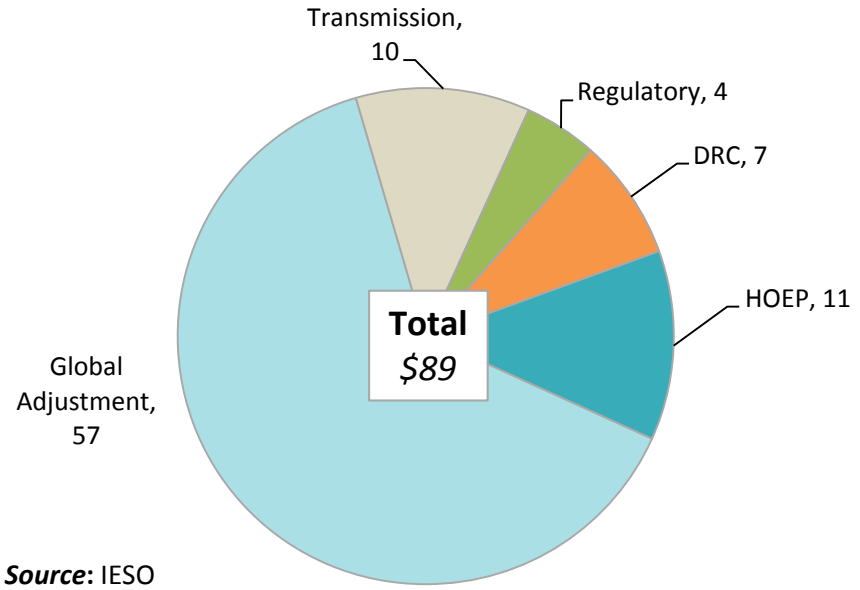
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



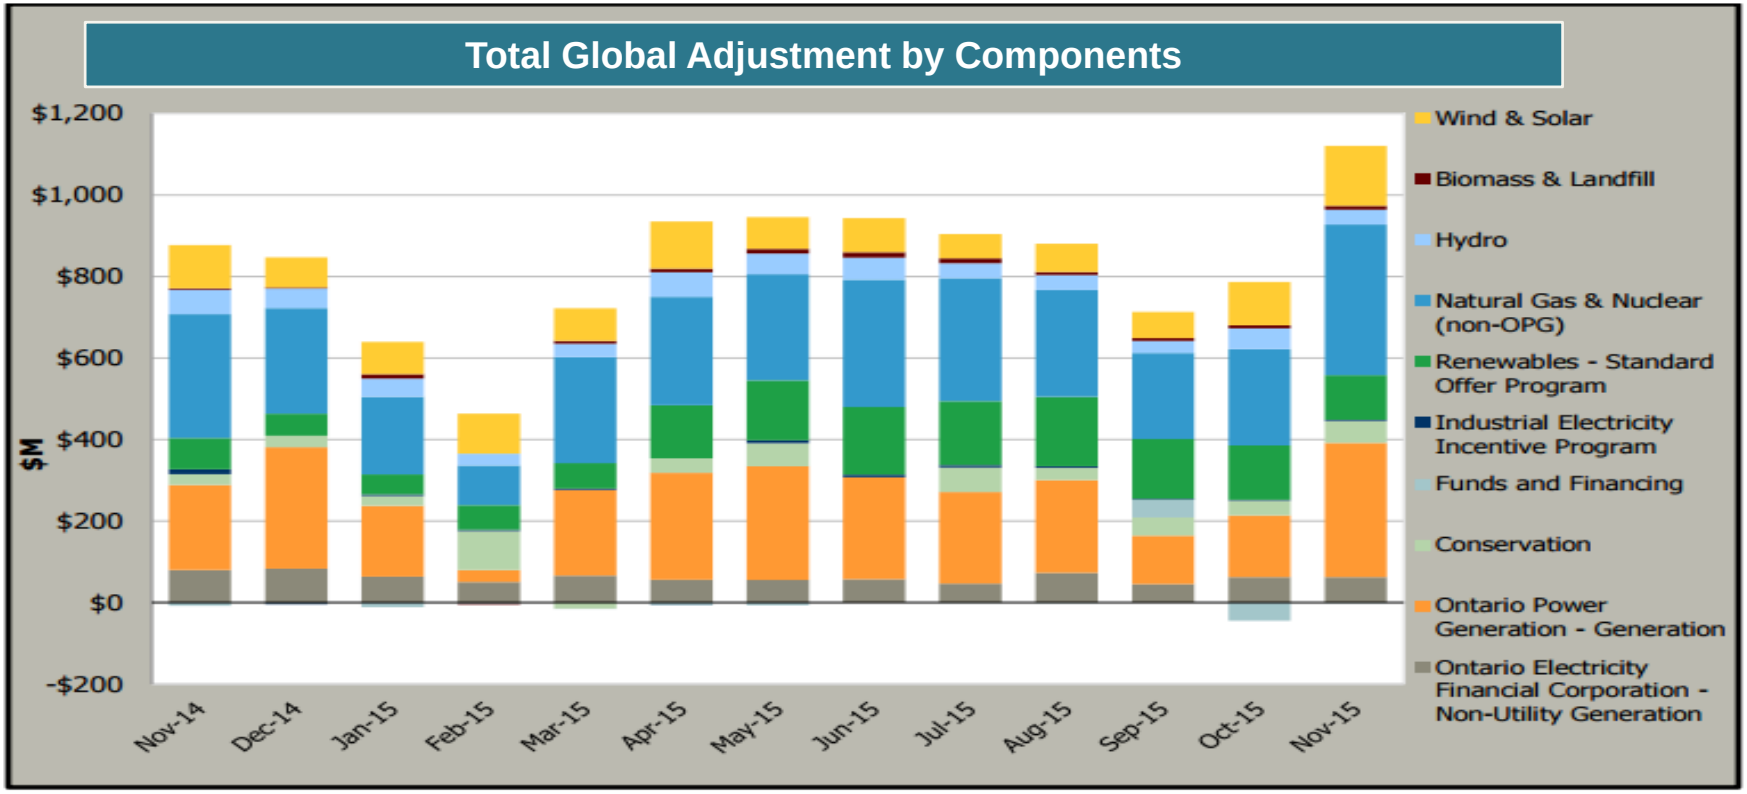
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses.<br><br>OCEB expired December 31, 2015, as planned. OCEB was put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. |
| **Ending DRC from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.<br><br>This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate Program** | 120 | March 2010 | As announced in 2015 Budget, the government committed to ongoing support for northern industrials with $120 million allocated annually.<br>The Northern Industrial Electricity Rate (NIER) was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER was initially established as a three-year program in Budget 2010, effective April 1, 2010,. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families, and up to $1,148 for qualifying seniors. [1] |

1. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline – Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

---

Hi Emily,

We drafted a table to outline a list of electricity price mitigation programs with fiscal impacts. I'm still working on a timeline, will have that ready shortly. In the meantime just wanted to share this with you.

Please see file attached or found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Cost Shifts\Cost Shifting - Sent to MO on 2016-11-18 - w CEFD Slides v2-Table.pptx

If you have any comments/issues please let us know.

Thanks,
Shajee

# Cost Shifts in Ontario's Electricity Sector

## Working Draft

November 2016

CONFIDENTIAL DRAFT

# Context

- Necessary investments in Ontario's electricity system have led to increased prices, prompting government to introduced a number of price mitigation programs for all consumer types.
  - In addition to existing rate mitigation programs, the 2016 Throne Speech announced a package of rate mitigation initiatives to address electricity prices for residential, commercial and industrial consumers.

- Ontario has a number of programs in place to manage residential electricity prices, including:
  - Ontario Electricity Support Program (OESP);
  - Rural or Remote Rate Protect (RRRP);
  - Northern Ontario Energy Credit (NOEC); and
  - Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also has a number of programs in place to manage industrial electricity prices, including:
  - Industrial Conservation Initiative (ICI);
  - Industrial Electricity Incentive (IEI);
  - Industrial Accelerator Program (IAP);
  - saveONenergy for Business Program; and
  - Demand Response.

# Context (cont'd)

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in Ontario's Electricity Sector

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in Ontario's Electricity Sector (cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

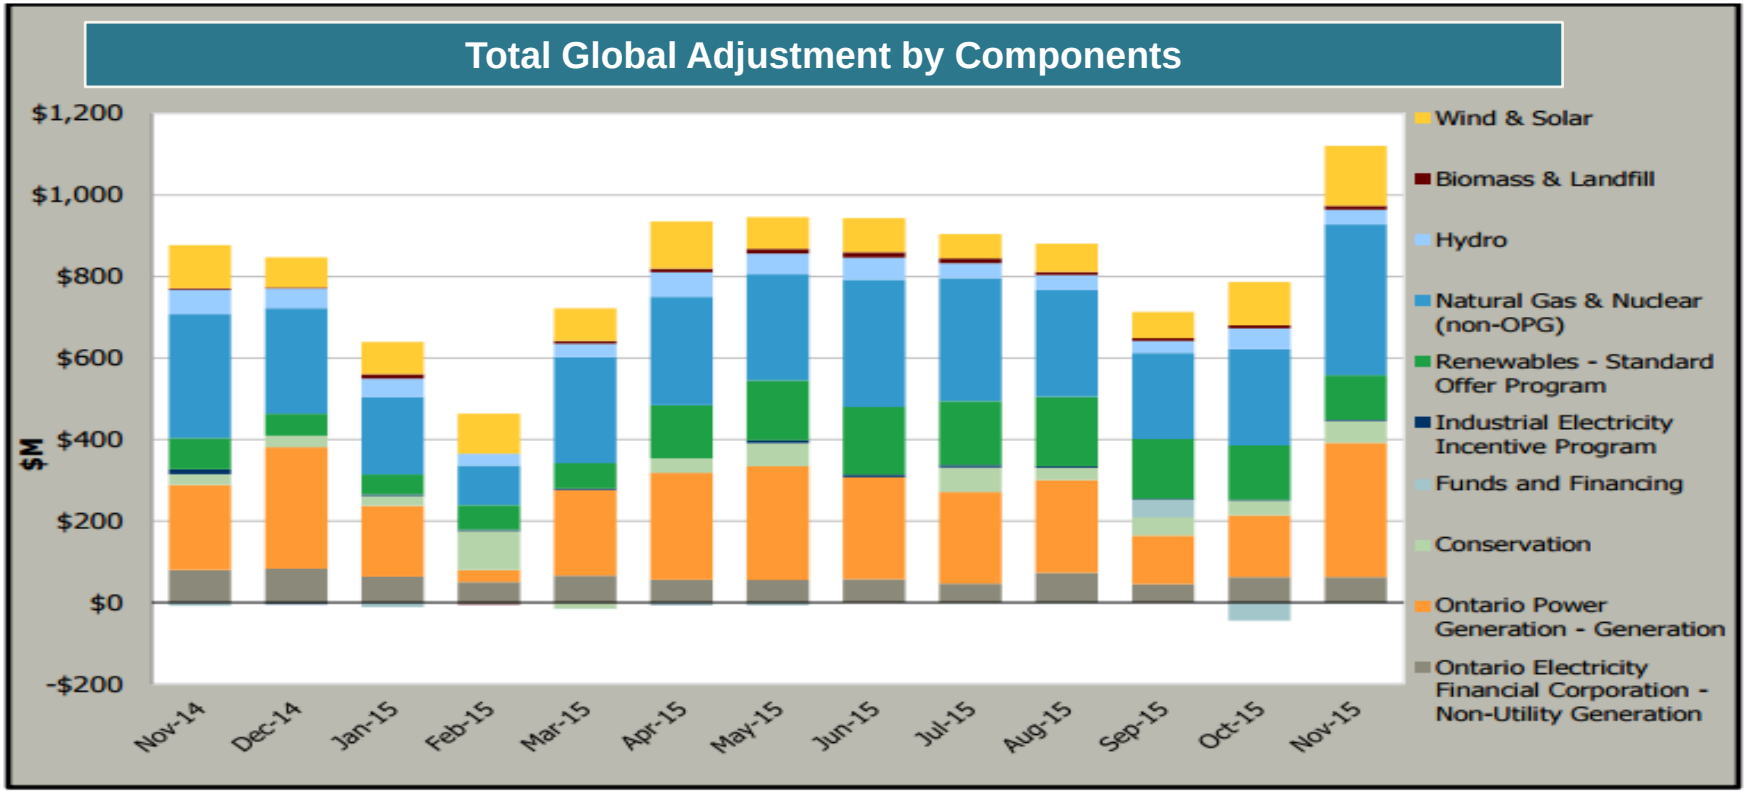
| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

DRAFT

# Taxpayer funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses.<br><br>OCEB was a responsible way of helping Ontario families through the transition to a more reliable and cleaner electricity system, with the monthly cap balancing the fiscal implications of providing electricity relief.<br><br>Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. |
| **Ending DRC from Residential Bills** | ~300 | Jan 1, 2016 to Mar 31, 2018 | As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.<br><br>This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,000 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST), an eight per cent savings. |
| **Northern Industrial Electricity Rate Program** | 120 | March 2010 | The Northern Industrial Electricity Rate (NIER) was extended in 2012 for an additional three-year term, effective April 1, 2013, and expiring March 31, 2016, with an allocation up to $120 million per year.<br><br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br><br>NIER was initially established as a three-year program in Budget 2010 and effective as of April 1, 2010, to provide an estimated $150 million per year to eligible large industrial companies in northern Ontario. |
| **Northern Ontario Energy Credit** | 25 | Budget 2010 Announcement | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | 445 | Budget 2010 Announcement | Delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families, and up to $1,148 for qualifying seniors. [1] |

1. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

I can think of....

NIER
OREC
NOEC
OEPTC

For the last two, I know that about 3 years ago, there was an estimate done to allocate to electricity side from the total cost while doing the fiscal impact work.

Could you think of anything else?

# Cost Shifts in Ontario's Electricity Sector

## Working Draft

November 2016

CONFIDENTIAL DRAFT

# Context

- Necessary investments in Ontario's electricity system have led to increased prices, prompting government to introduced a number of price mitigation programs for all consumer types.
  - In addition to existing rate mitigation programs, the 2016 Throne Speech announced a package of rate mitigation initiatives to address electricity prices for residential, commercial and industrial consumers.

- Ontario has a number of programs in place to manage residential electricity prices, including:
  - Ontario Electricity Support Program (OESP);
  - Rural or Remote Rate Protect (RRRP);
  - Northern Ontario Energy Credit (NOEC); and
  - Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also has a number of programs in place to manage industrial electricity prices, including:
  - Industrial Conservation Initiative (ICI);
  - Industrial Electricity Incentive (IEI);
  - Industrial Accelerator Program (IAP);
  - saveONenergy for Business Program; and
  - Demand Response.

# Context (cont'd)

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in Ontario's Electricity Sector

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in Ontario's Electricity Sector (cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).

**Subject:** RE: Cost Shifts in the Electricity Sector

Thanks.

We should be able to get some historical year-by-year OEPTC and NOEC and NIER numbers.

DRC amount forgone I think was a little higher in the original submission. And the OREC amount in the LRC submission earlier this month is now at $1.2.

Can we do comments/markups of Energy's slides too?

Ron

# Debt Financing the Global Adjustment

January 10, 2017

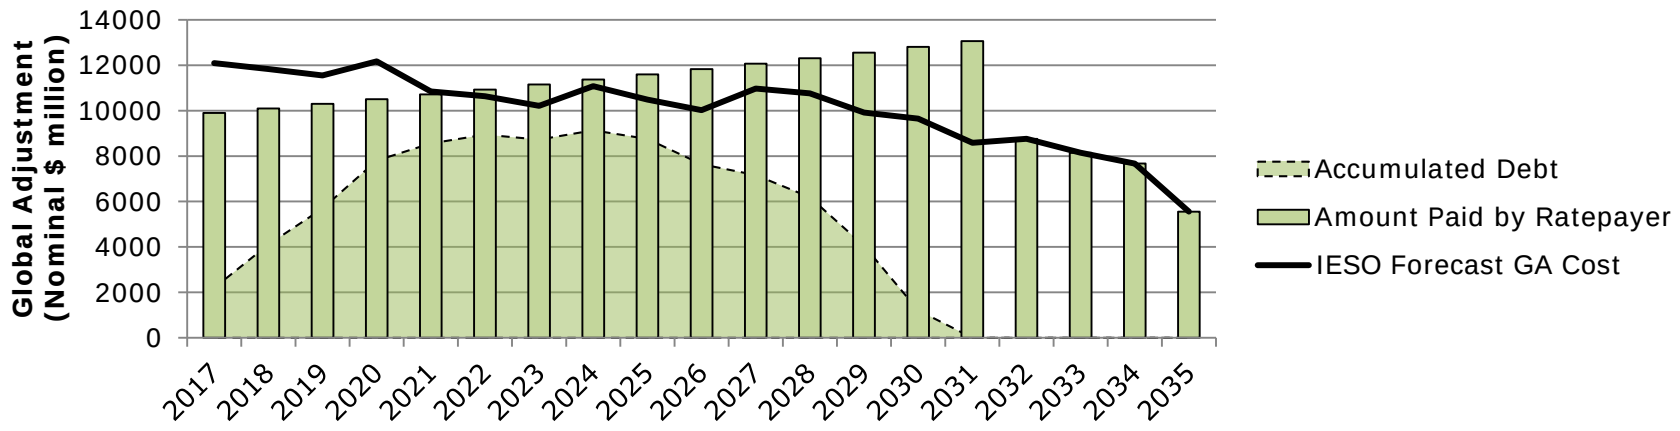
*Working Draft for Discussion Purposes Only*

# Purpose

- To analyze the system cost and ratepayer impact of partially financing the cost of the global adjustment (GA) by incurring debt to defer some of the cost.
- An indicative GA financing proposal is presented followed by a qualitative discussion of the proposal's risks.
- The remainder of the presentation quantitatively examines several different scenarios for debt financing the GA, showing:
  - The amount of debt incurred;
  - Impact on total system cost; and
  - Impact on residential bills.

# Indicative Proposal to Debt Finance the Global Adjustment

- For the purpose of discussion, the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the accumulated debt has been completely paid off.
- All scenarios consider setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "tilted" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- Analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook.



**Sample debt financing**: Ratepayers pay less than the cost of GA in early years, accumulating $9 billion of debt that is paid off in 2031 by paying more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Incurring debt to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves accruing large amounts of debt to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on rates (see Scenario 3 for an example of such interest rate risk).

- GA and HOEP provide a natural hedge against each other. Smoothing only one component would lead to greater price volatility. For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate.

- Conversely, if GA is higher than forecast (i.e., because of lower HOEP or additional out-of-market costs), the debt would increase to a higher amount, requiring additional debt service payments and/or a longer recovery period.

- Should Ontario demand be lower than forecasted, the cost of paying off the debt will be shared by a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Legal, Fiscal and Stakeholder

Legal:

- Such changes to the financing of the GA may require legislative or other amendments and will require further consultation with Legal Services Branch.

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.

- The significant amount of additional Provincial borrowing needed to debt finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating. Further analysis is required and would suggest early engagement with Ministry of Finance / Ontario Financing Authority.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" of the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# GA Debt Financing Scenarios

1. Status Quo
   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

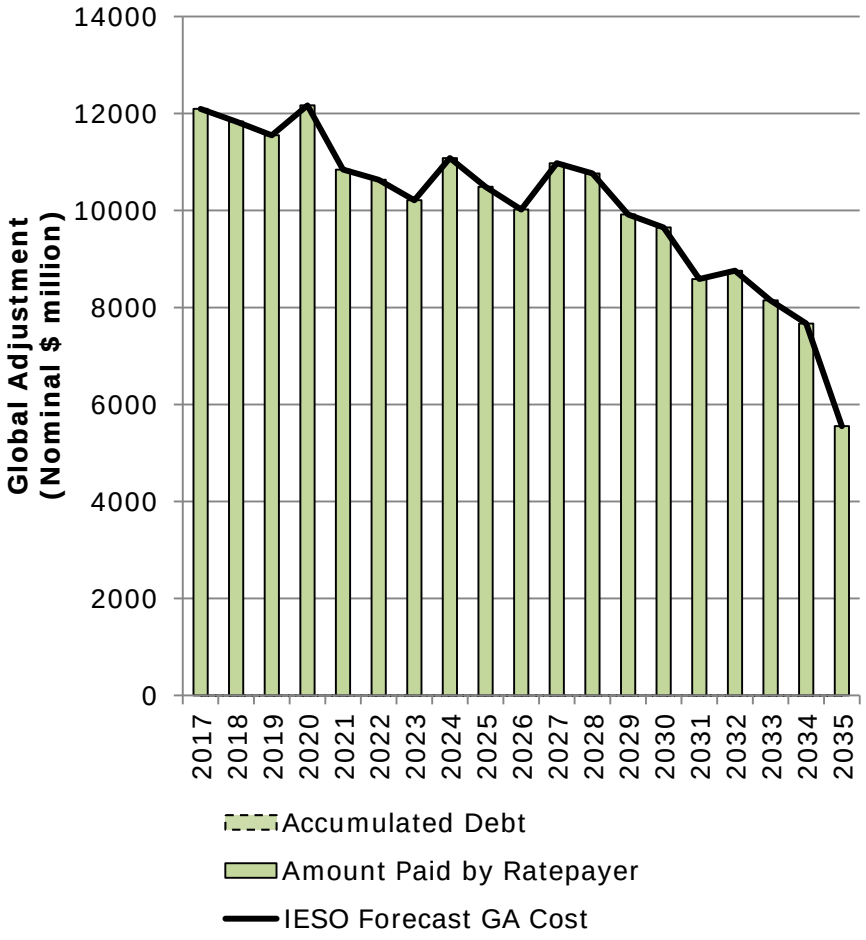
2. Maximize short-term cost reductions
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the accumulated debt is paid off over a 25-30 year financing period. This scenario assumes a 3% borrowing interest rate.

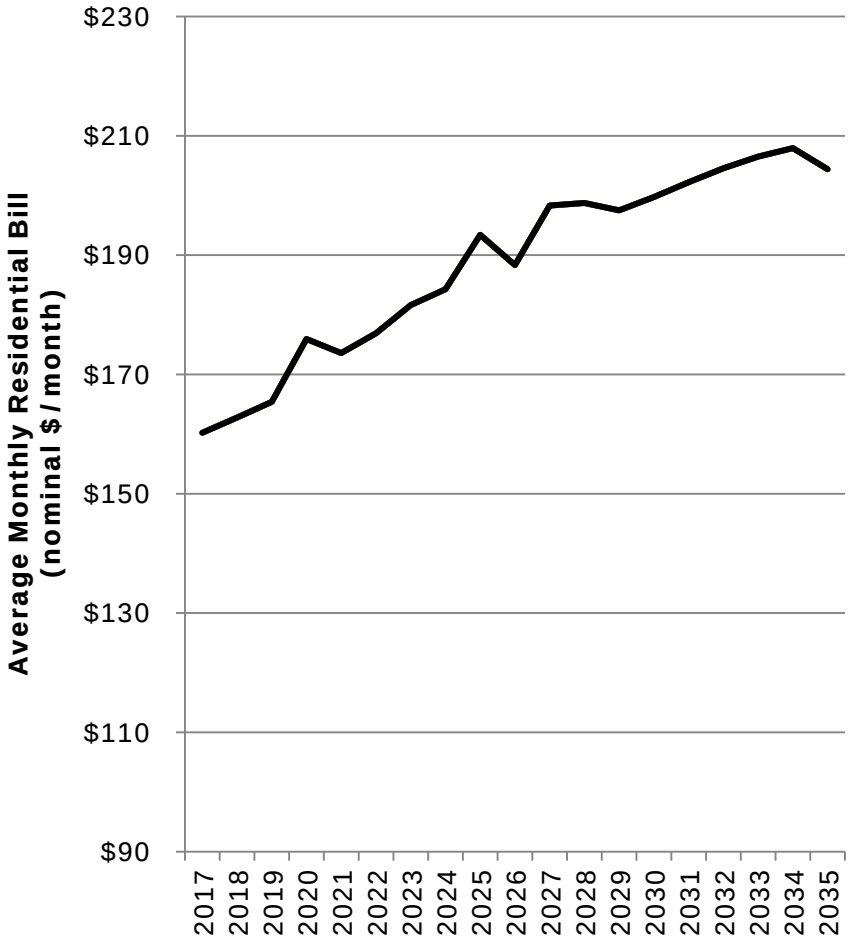
3. Interest Rate Risk
   - Using the 30-year financing case from Scenario 2, this scenario looks at the consequence of an increase of 2 percentage points in the borrowing interest rate.

4. Maximize short-term cost reductions with limits
   - The same as Scenario 2 but with GA over-payments capped at $2 billion above the true cost of GA in any given year.

# 1. Status Quo – Global and Residential Impacts

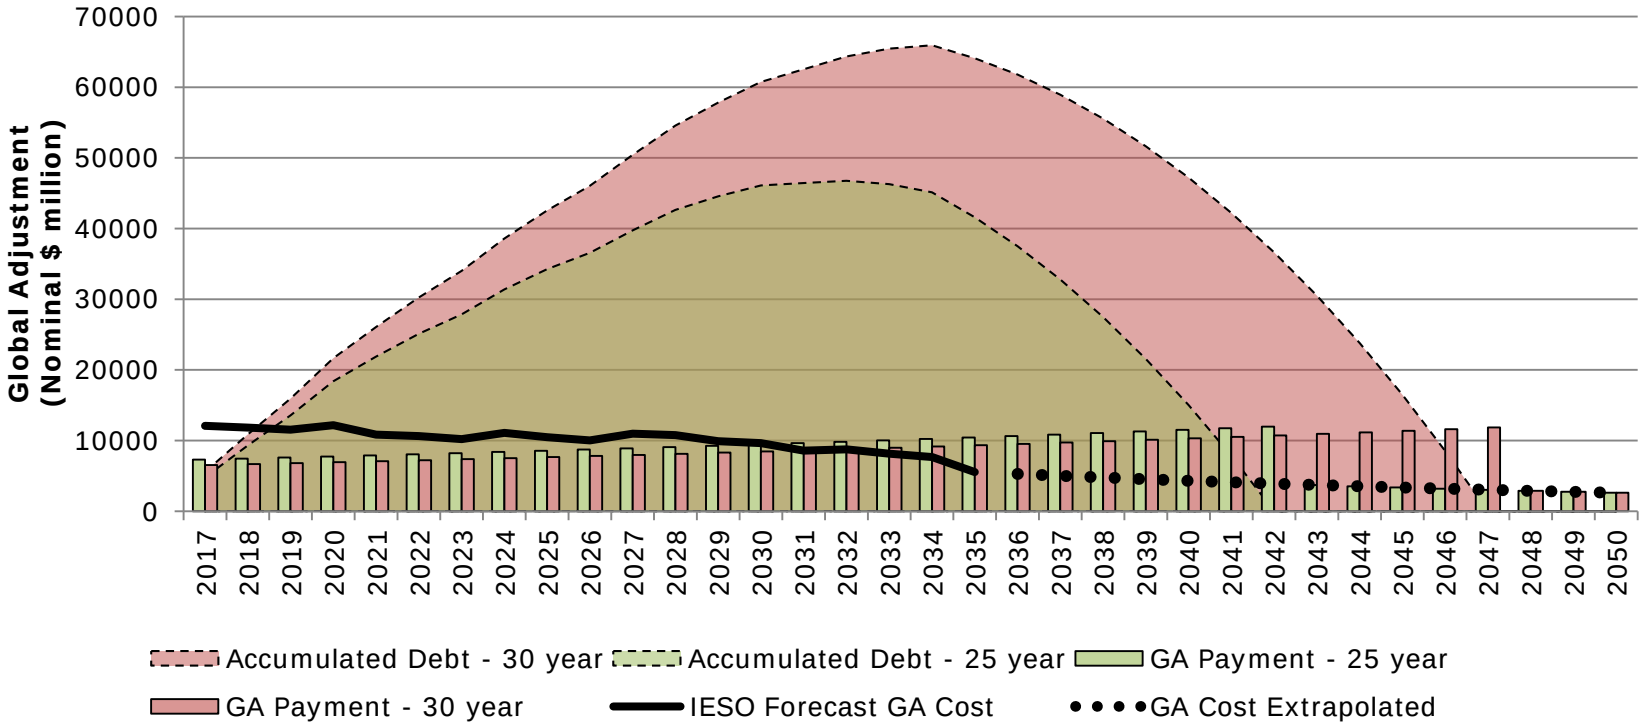
- Ratepayers continue paying the true cost of GA.





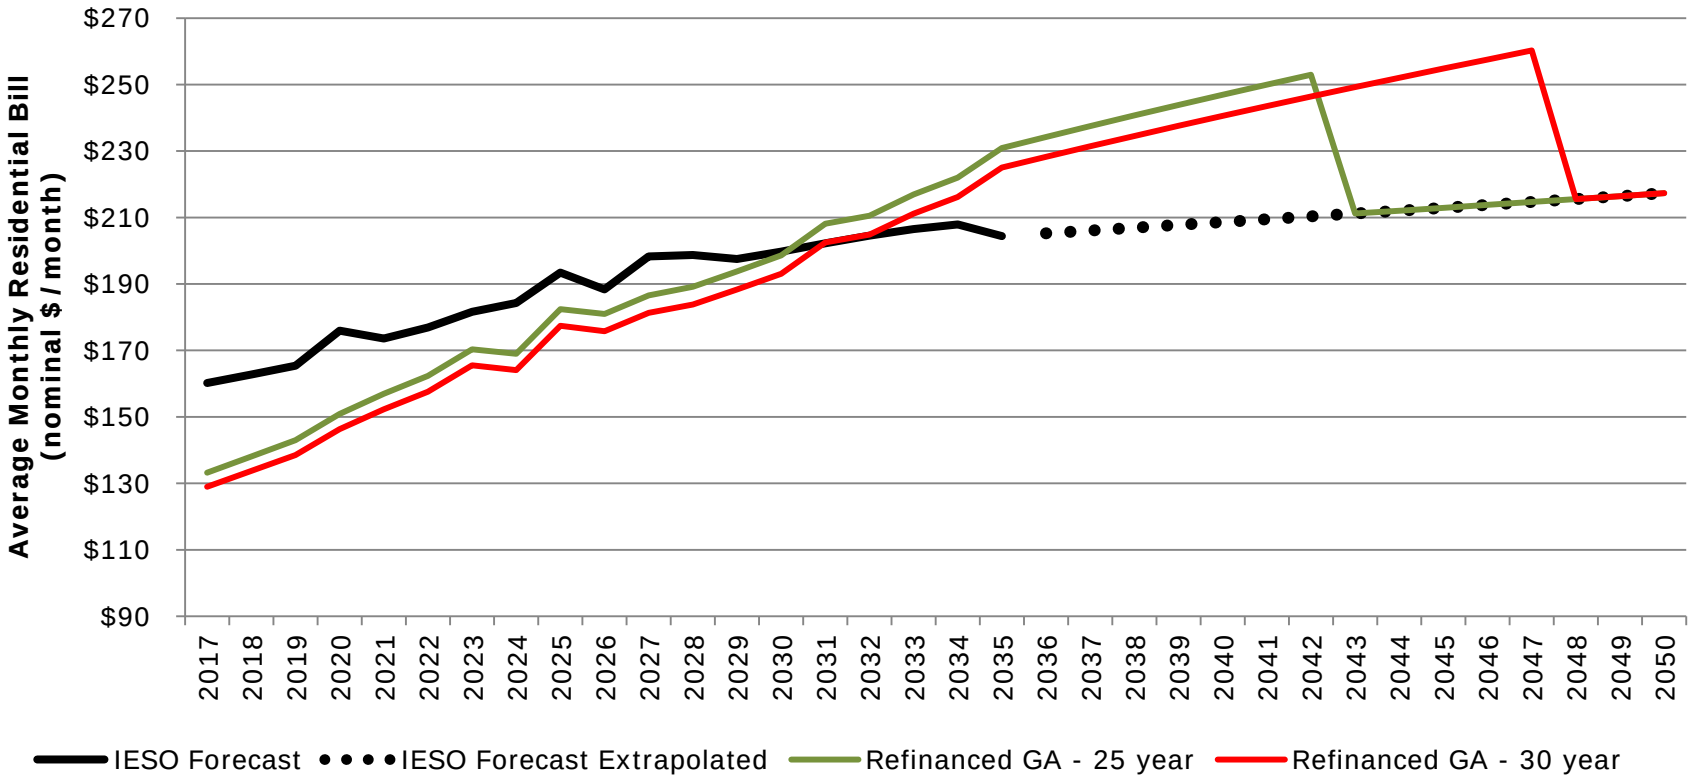
# 2. Maximize Short-term Cost Reduction – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year financing, green) and 2047 (30 year financing, red) respectively.



- A **reduction of 40-46% in GA payments** in 2017 is possible in this scenario by **accumulating up to $66 billion of debt.**
- Further reductions would require additional payments beyond those indicated in order to pay off the debt by 2042 and 2047 in each of the scenarios respectively.

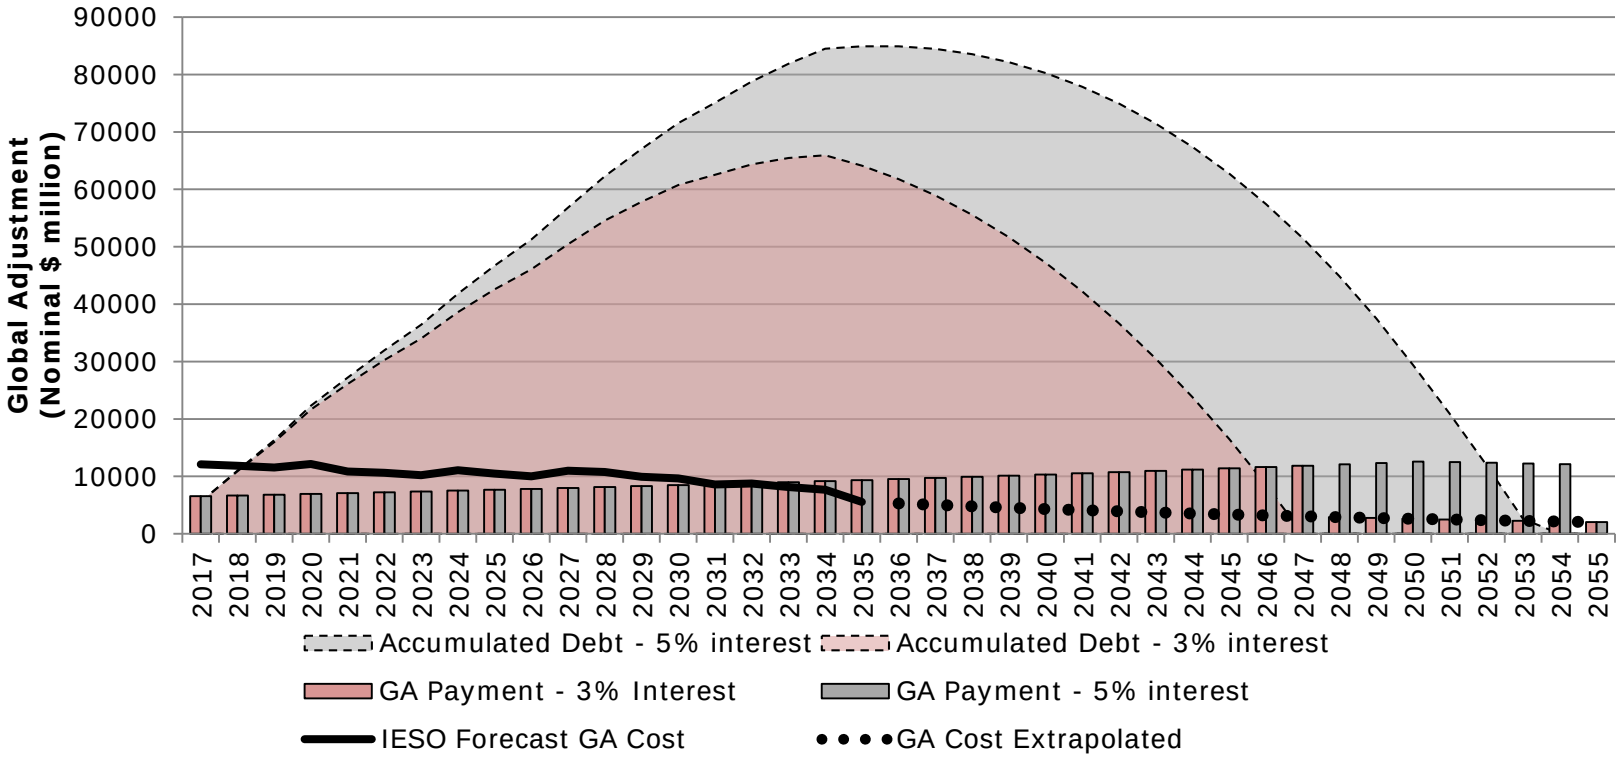
# 2. Maximize Short-term Cost Reduction – Residential Impacts



- This scenario results in a **short-term reduction of up $27-$31/month** in 2017 at the cost of **a long-term increase of up to $43-$46/month** relative to the IESO forecast.
- Due to the significant increase in electricity bills in later years, Scenario 4 considers limiting the amount above the true cost of the GA that is paid by ratepayers.

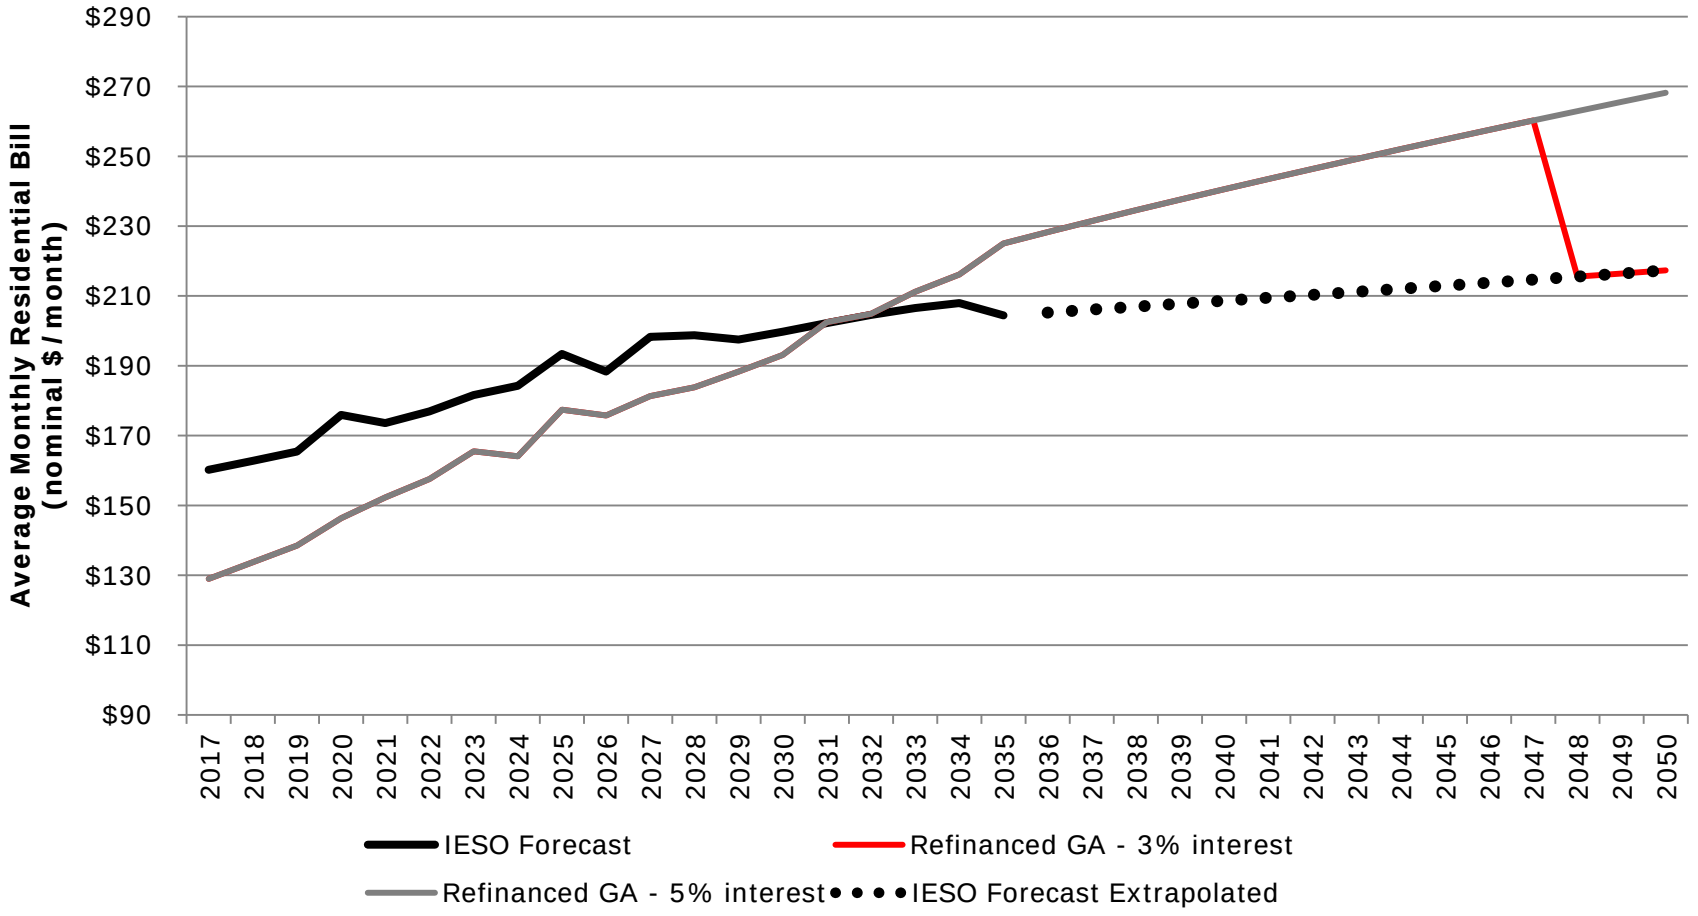
# 3. Interest Rate Risk – Global Impacts

- This scenario compares the maximal 30-year financing case from Scenario 2 (red, assuming a 3% interest rate) and calculates the resulting debt that would accrue due to an increase of two percentage points in the borrowing interest rate (grey, 5% interest).



- Under a 30-year financing payment schedule that assumes a borrowing interest rate of 3% (red), an increase in interest rate to 5% results in **more than $50 billion of accumulated debt in 2047** (grey) requiring further GA over-payments beyond 2047 in order to service the debt.

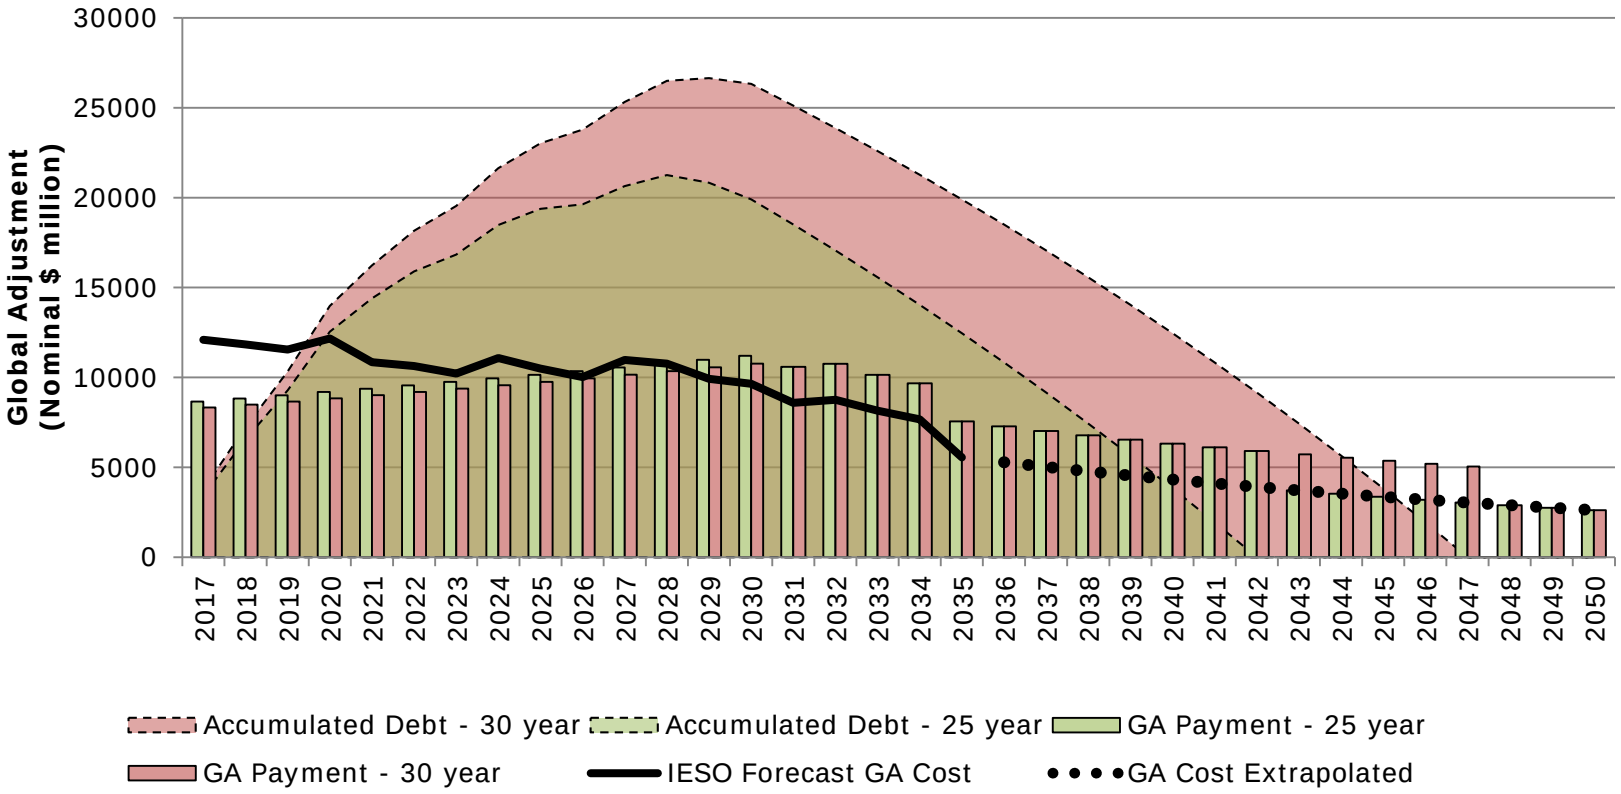
# 3. Interest Rate Risk – Residential Impacts



- In this scenario, an increase in the borrowing interest rate lengthens the financing period beyond 2047.

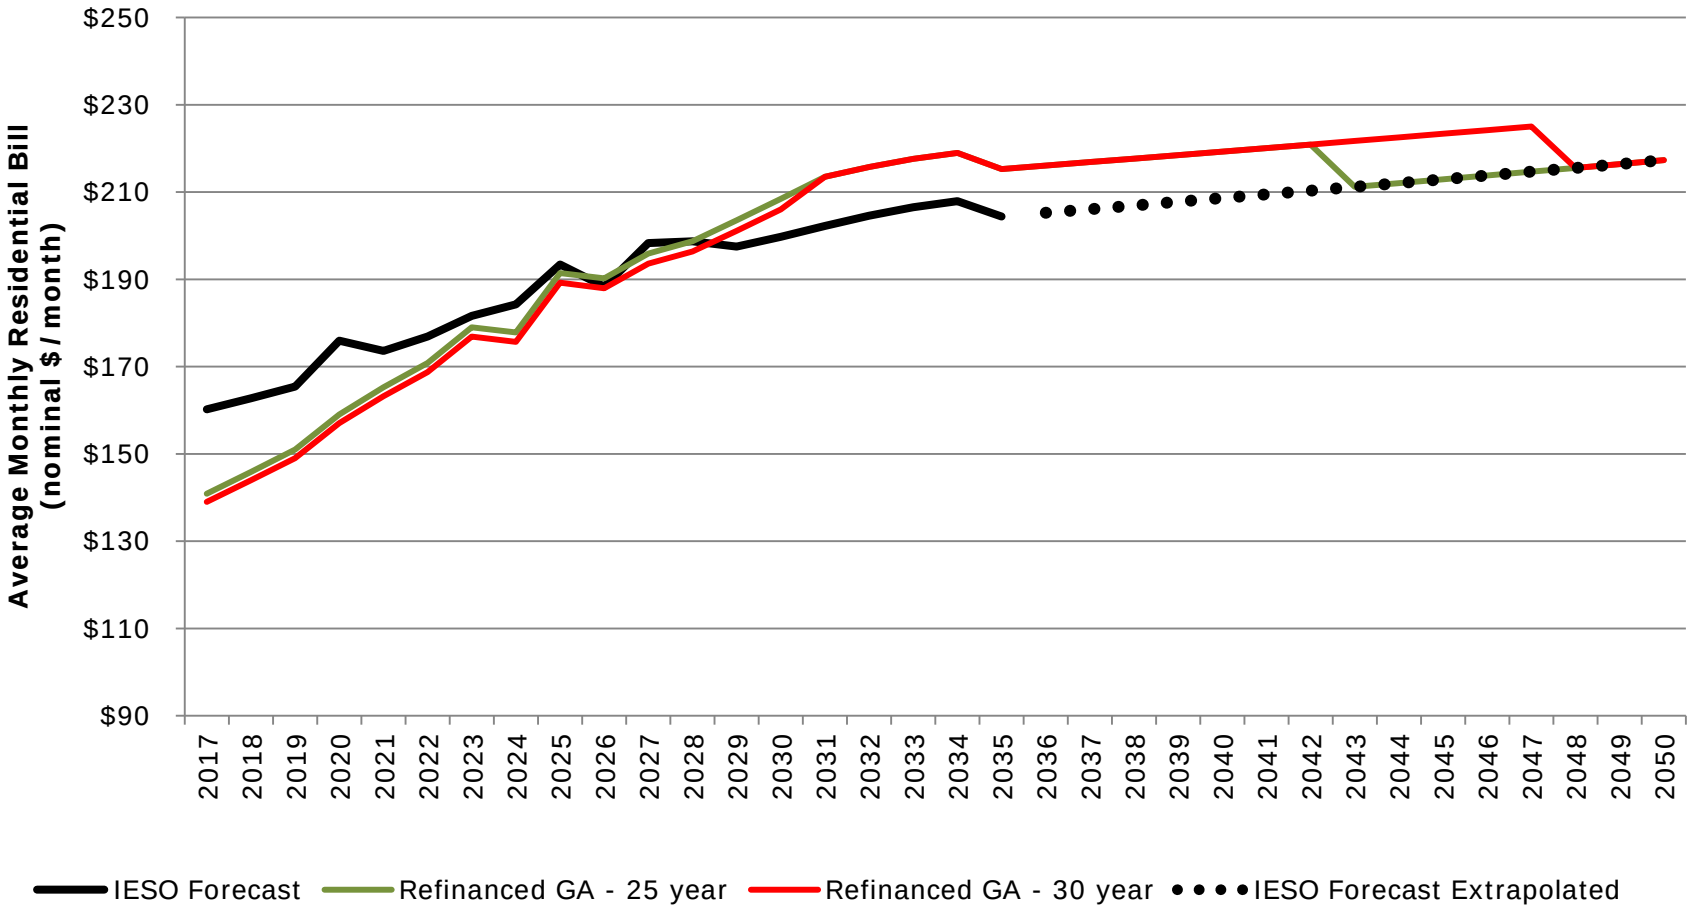
# 4. Maximize Short-term Cost Reduction with Limits – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year, green) and 2047 (30 year, red) respectively subject to limiting ratepayer over-payments to no more than $2 billion above the true cost of GA.



- A **reduction of 28-31% in GA payments** in 2017 is possible in this scenario by **accumulating up to $26 billion of debt.**

# 4. Maximize Short-term Cost Reduction with Limits – Residential Impacts



- This scenario results in **a short-term reduction of up $19-$21/month** in 2017 at the cost of **a long-term increase of up to $11/month** in 2029-2047 relative to the IESO forecast.

# Distribution Rates & Cost Mitigation

January 2017

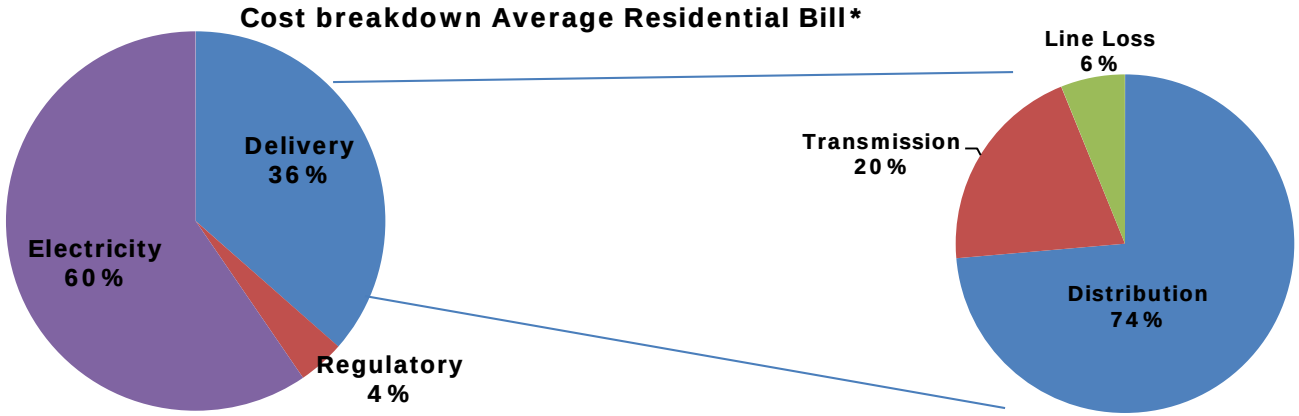
# Presentation Overview

- The delivery charge covers the cost of delivering electricity from generating stations across the province to end users.
  - It includes charges to allow Local Distribution Companies (LDCs) to recover the distribution costs associated with delivering electricity across low-voltage networks;
  - costs to cover transporting electricity over the high-voltage transmission network; and
  - costs to pay for any electricity that was lost during the delivery process.
- This presentation provides an overview of the delivery charge, including distribution & transmission rates; how distribution rates are set, who sets them and opportunities to contain those costs.
- The deck is divided into three main sections:
  1. Overview of Delivery Line Costs
  2. Existing Rate Mitigation Measures
  3. Further Rate Mitigation Options

# Overview of Delivery Line Costs

# Typical Consumer Bill – Delivery Line

- The "**Delivery"** line on a typical consumer bill accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and encompasses the sum** of three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system.
    - This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when it is delivered over a power line.
    - Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.



** The combination of these charges into "Delivery" and their appearance on the bill are prescribed by O. Reg 275/04

* Toronto Hydro Bill @ 750Kwhs

# Delivery Line: Distribution Costs

- **Distribution costs** are the costs needed for LDCs to deliver electricity to local consumers over the lower-voltage networks operating at below 50 kV. Costs cover activities such as
  - Designing, building and maintaining overhead and underground distribution lines, poles, stations and local transformers,
  - Operating local systems (including reading meters, providing customer service, and emergency response)
  - Delivering electricity from the transmission system to homes and businesses, and
  - Regulated profit
- The cost to deliver electricity is not uniform and varies from LDC to LDC depending on a number of different cost drivers including:
  - Differences in business conditions and service territory among LDCs e.g. costs to service an urban service territory vs a rural service territory, ratio of overhead vs. underground wires, expanding customer base vs. stagnating or declining customers, relative age of assets; i.e. new system vs. old system;
  - Short-term rate impacts (both up and down) due to temporary additional charges known as “rate riders”; and
  - Management decisions with respect to investment and expenditure.
- In order to recover the costs to deliver electricity to its customer base LDCs charge customers distribution rates for the services that they provide.
  - These rates are regulated by the Ontario Energy Board.
  - As a result of investment requirements and other planning/policy decisions, distribution rates have been rising in recent years (see appendix).

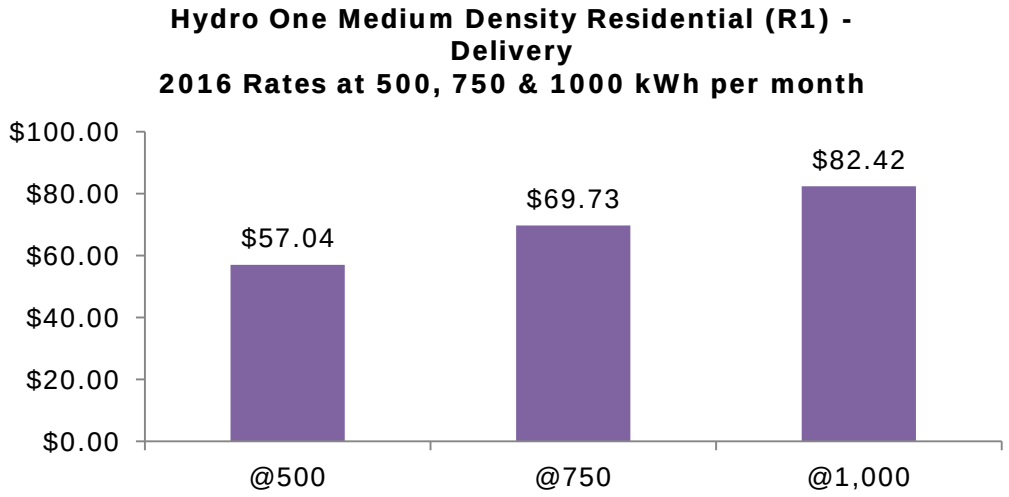
# Delivery Line: Transmission & Line Loss Costs

- **Transmission Costs** represent the costs associated with delivering electricity to LDCs through the high voltage transmission networks operating at 50 kV and above. Costs cover activities such as:
  - Designing, building and maintaining the high voltage transmission lines and towers, transformer stations, transmission corridors, and vegetation management,
  - Providing services and emergency response to maintain transmission system reliability,
  - Delivering electricity at high voltages to LDCs from generation sources,
  - Regulated profit.
  - Transmission rates charged to recover transmission costs from LDC residential customers are not uniform across the province. The vary based on how individual LDCs use the transmission system.
  - LDCs do not earn any profit or markup on transmission costs. These costs are simply passed through to customers distribution customers
- **Line Loss Costs** represent costs associated with distribution system losses. These losses occur during the distribution of energy through conductors and transformers. Losses can also occur through theft and metering errors, etc.
  - Distribution systems that operate at lower voltages and lower customer density have higher distribution losses. Therefore, line losses vary throughout the province.

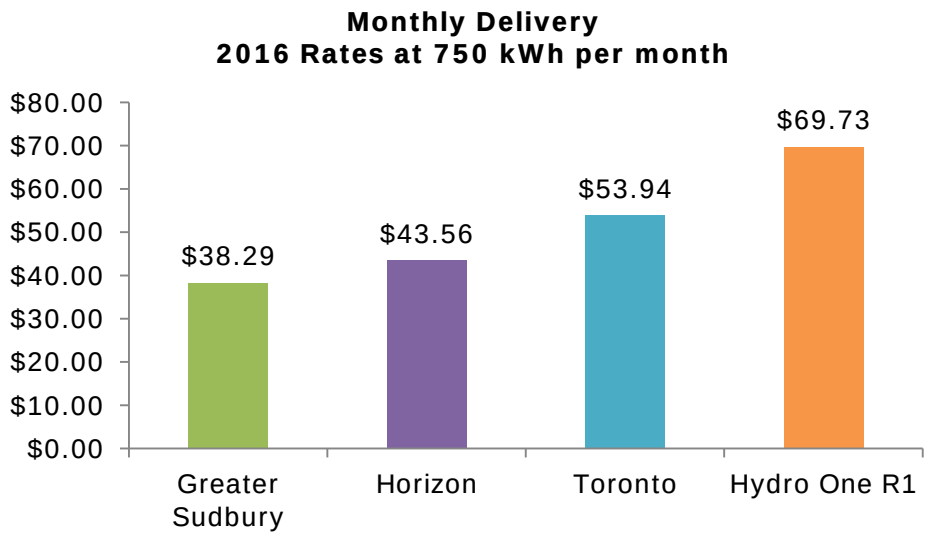
# Role of the Ontario Energy Board

- LDCs are licensed and regulated by the Ontario Energy Board (OEB), a quasi-judicial body responsible for regulating the electricity and natural gas sectors in the public interest.
- The OEB currently sets the rates for 69 LDCs across the province.
    - LDCs recover their costs (revenue requirement) through the distribution rates approved by the OEB.
- Costs to provide distribution services are unique to each LDC, which is why the OEB, through its rate-setting processes, undertakes comprehensive reviews of each utility's specific costs in order to set just and reasonable rates for each LDC.
- In addition to approving the amount of allowable costs LDCs can pass on to customers through rates, the OEB must also approve how those costs are allocated to the different customers of an LDC (i.e. residential, commercial, industrial), as well as the specific rates to recover those approved costs.
- The OEB uses an adjudicative process to set rates – see the slide "Setting Distribution Rates" in the appendix for more details on the process.

# Variation of Delivery Costs Across and Within LDCs

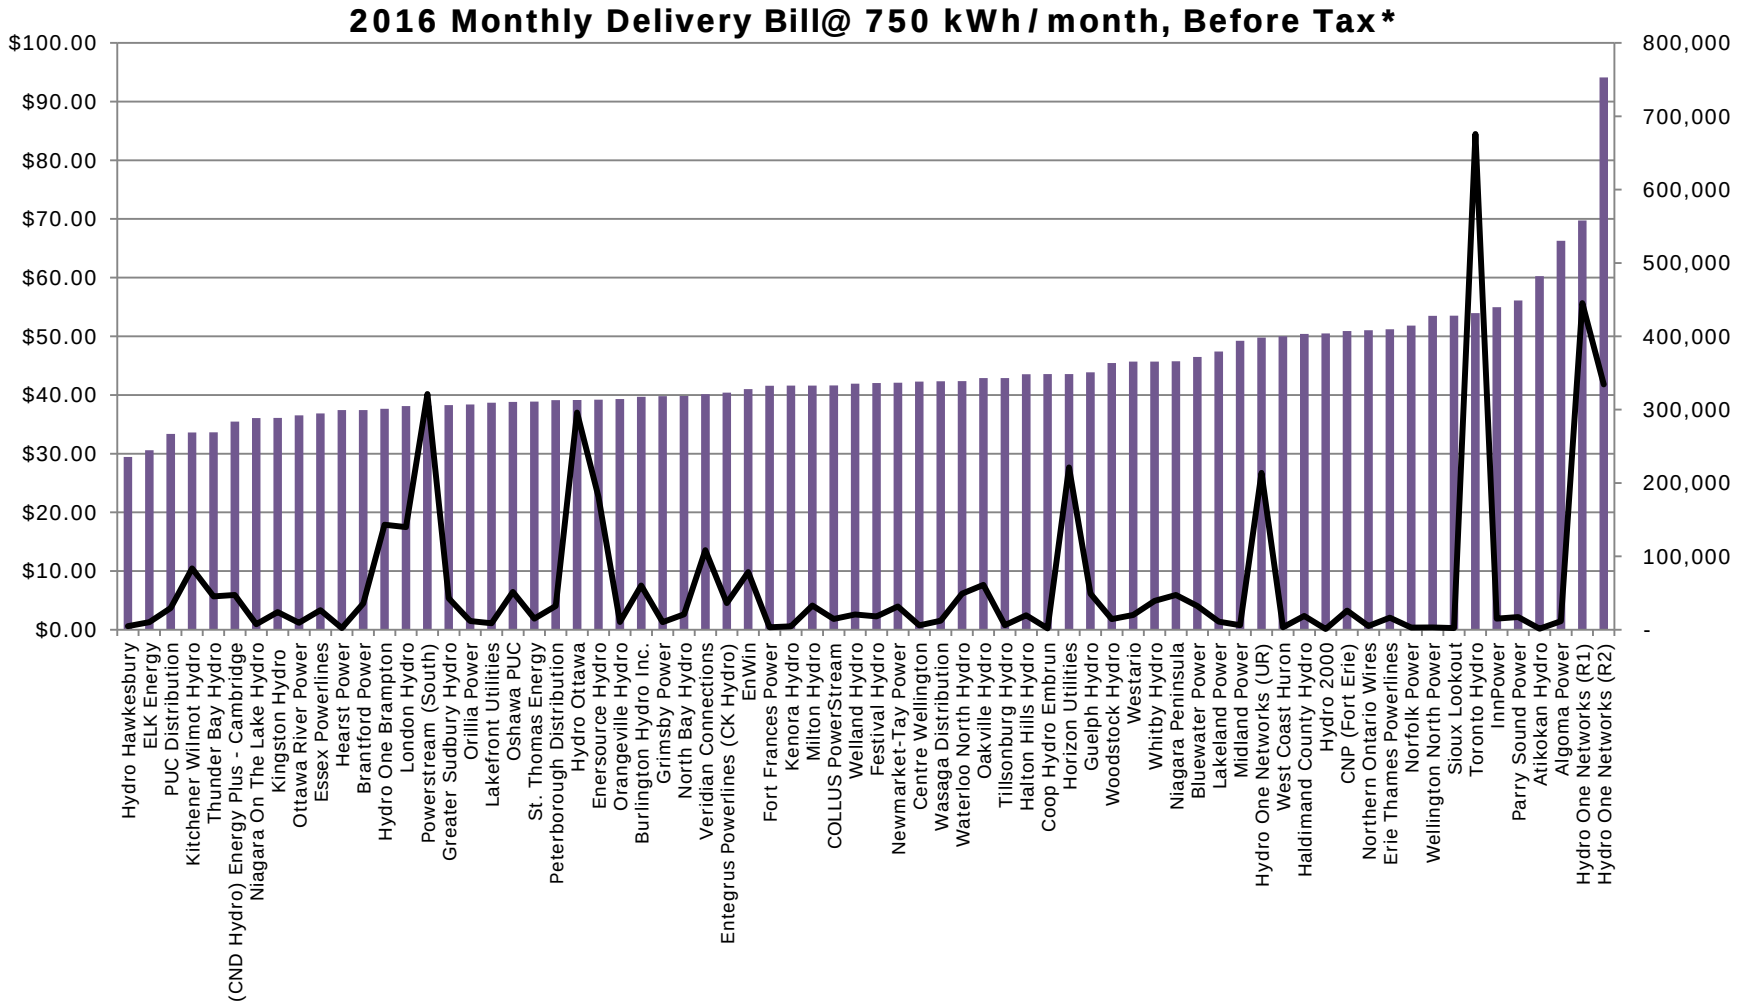


- Consumers within same LDC pay different monthly delivery charges:
  - The delivery charge includes costs that are both fixed and volumetric.
  - Delivery will vary for different customers depending on the total amount of kWhs consumed in a billing period.



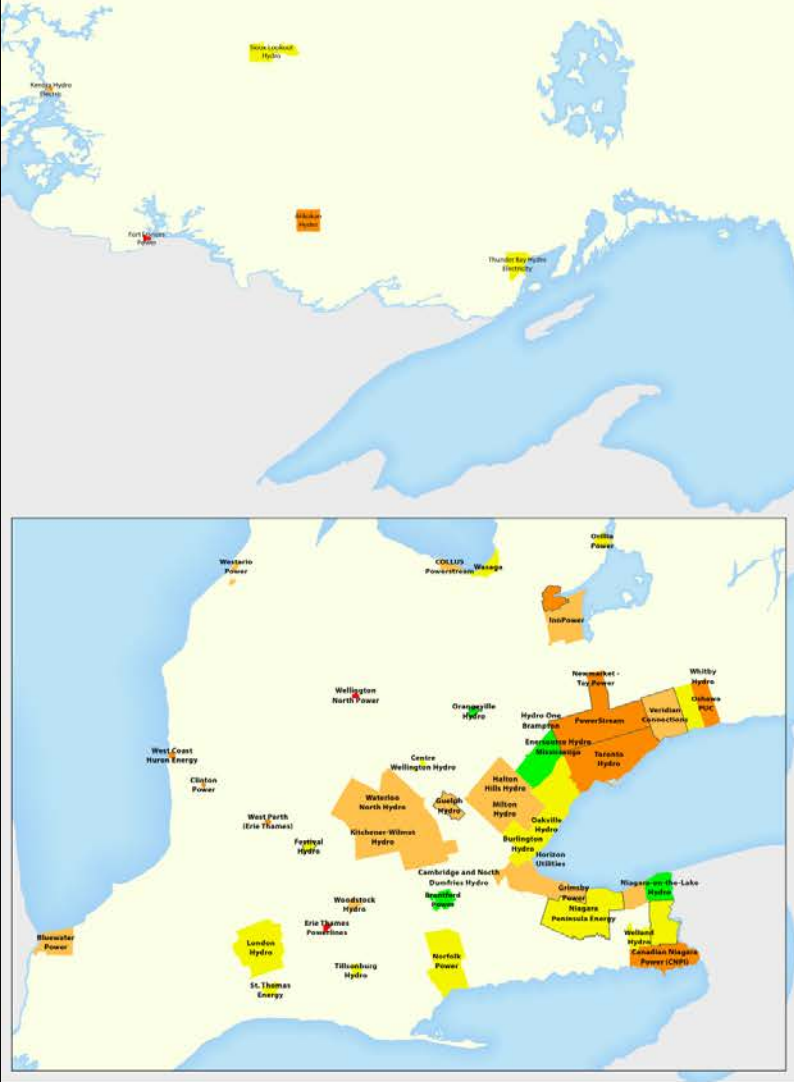
- Consumers with the same monthly consumption but served by different LDCs pay different delivery charges
  - The delivery charge can vary substantively for different LDCs, mostly due to the distribution cost component.
  - Approved revenue requirement for distribution rates, transmission rates and line loss factors are unique to each LDC.

# Wide Variation in Delivery Rates Across the Province



* Hydro One customer numbers are for 2016 and divided by rate class. Reflects RRRP as set for 2016 ($31.50)

# LDC Distribution Rate Changes (2006 vs 2016)



| Total Dx Rate | 2006 | 2016 | % Rate Change |
|---|---|---|---|
| Hydro One UR (High Density) | $29.13 | $35.65 | 22.4% |
| Hydro One R1 (Medium Density) | $37.73 | $54.02 | 43.2% |
| Hydro One R2 (Low Density) | $44.65 | $76.14 | 70.5% |

## Legend

**LDC Rate Comparison 2006 vs 2016**

**% Total Rate Change ( # of LDCs )**

- -17.3% to 0% ( 5 )
- 0.1% to 15% ( 25 )
- 15.1% to 30% ( 21 )

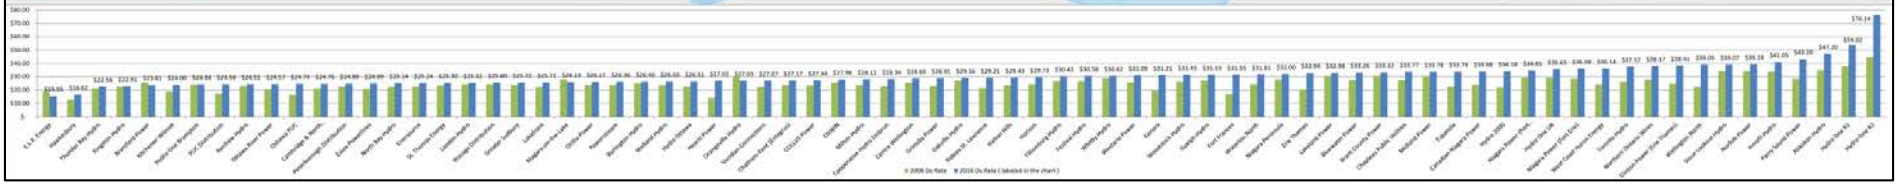
## KEY FINDINGS

- In summary, distribution rates (including rate riders) have increased by about 24.5% across the Province, with significant variation between regions and LDCs (-17% to 148%).
- There is generally no correlation between LDC size or location and distribution rate increase in absolute or percentage terms.
- The current analysis shows no clear relationship between the percentage rate increase and the absolute rate level (that is, high rate increase LDCs may still have among the lowest rates, and low rate increases may have higher rates.
- No clear relationship between amalgamation and rates.
- The analysis does suggest that Hydro One has the highest rates, and some of their customers have seen higher than average rate increases.

## NOTES

- **Rate Calculation:** Monthly residential distribution bill rates, before taxes, are based on consumption of 750 kWh. Distribution charges account for approximately 23% of the average 2016 residential bill.
  All figures calculated by ENERGY staff without input from OEB.
- **Colours:** Colour coding of the map only depicts the change in LDC rate amounts (i.e. LDCs in red don't necessarily have the highest total rates).
- **Mergers:** Rates for customers in merged LDCs have experienced different levels of change. For merged entities, the largest LDC in 2006 was used. An accompanying map focuses on merged entities.
- **Points in Time:** Current analysis compares 2016 and 2006 only. Rates could have had an uneven trajectory, especially considering regulatory decisions such as time limited charges/rebates with temporary impacts.



# OEB Mandating Move to Fixed Distribution Rates

- By 2019, the variation of delivery costs across customers within the same LDC will level off, as the distribution charge (which makes up ~3/4 of the delivery charge) is moving to a fully fixed charge.
    - Currently, electricity distributors recover their costs through a combination of a fixed monthly charge and a volumetric charge based on kilowatt hours used, but the OEB is phasing in fully-fixed distribution rates. Most LDCs will have fully fixed rates within four years, with some variation to mitigate significant rate impacts for some customers.
- According to the OEB, fully fixed distribution rates will help achieve three main objectives:
    - It will enable residential customers to leverage new technologies, manage costs through conservation, and better understand the value of distribution services.
    - It is a fairer way to recover the costs of providing distribution service.
    - It will provide greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning.
- As LDCs transition to a single fixed charge to access the system, customers with the lowest consumption will pay more for distribution, while customers with high consumption will pay less.
- For customers of Hydro One Networks, the OEB approved a five-year transition to fixed distribution rates for its high density urban residential rate class (UR), and an eight-year transition for medium- and low-density residential (R1 and R2) and seasonal residential rate class customers.
    - This is to allow the impact of the change to be held at less than 10% for low volume customers at the $10^{th}$ percentile of consumption.
- The OEB is currently working on an initiative to look at the rate design of Commercial and Industrial Customers as well.

# Existing rate mitigation measures

# Rural or Remote Electricity Rate Protection (RRRP)

- There are existing rate-payer funded mechanisms in place to provide delivery charge protection to consumers who live in areas that are very costly to serve.
- The Rural or Remote Electricity Rate Protection (RRRP) is a rate subsidy intended to moderate charges for electricity distribution in lower density rural and remote areas where costs to serve customers are higher than for urban/more densely populated areas.
    - RRRP is provided to rural grid-connected residential customers served by Hydro One (R2 rate class) and to customers of Algoma Power.
    - RRRP also supports costs to provide electricity service to off-grid remote communities served by Hydro One Remote Communities, and three James bay communities connected to the grid (Fort Albany, Attawapiskat and Kashechewan).
- RRRP is governed by S.79 (2) of the Ontario Energy Board Act, 1998 (OEBA) which requires rate protection for prescribed rural and remote customers.
    - It also allows the government to determine cost protection, recovery, and rate classes through regulation (O.Reg 442/01).
- In the September 2016 Speech from the Throne*, the government announced an enhancement to RRRP to increase the amount of rate protection for Hydro One R2 customers. The cost of RRRP, including this enhancement, is expected to be about $290M annually.
    - As of January 1 2017, the RRRP subsidy supporting approximately 330,000 Hydro One R2 customers increased from $31.50/month to $60.50/month.
    - Hydro One customers classified as R2 have the highest distribution costs across the province.
- Costs to support the program are recovered through a regulated charge on all customers approved by the OEB and collected by the Independent Electricity System Operator (IESO) on all electricity used in the Province.
    - For 2017, an average residential consumer (750kWh/month) pays $1.58/month to contribute to RRRP.

# Other Rate Mitigation Programs

**Ontario Electricity Support Program (OESP)**

- The Ontario Energy Board (OEB) has developed the OESP, which provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements.
    - The OESP credit amount qualified customers receive is based on household income and household size.
    - OESP monthly credits range from $30-$50.

**The Low-Income Energy Assistance Program (LEAP)**

- LEAP, introduced by the OEB in January 2011, is a comprehensive province-wide strategy designed to help qualifying low-income consumers. The program includes:
    - Emergency financial assistance: A one-time grant towards your electricity or natural gas bill if you are temporarily unable to make ends meet in an emergency situation.
    - Special rules – Utilities have to follow special rules when dealing with customers with limited finances; for example, waiving security deposits, allowing longer payment times and more.

**Ontario Energy and Property Tax Credit (OEPTC)**

- OETPC provides low- to moderate-income individuals and families with relief on the sales tax they pay on energy and with their property taxes. Since July 2012, the OEPTC is paid monthly as part of the Ontario Trillium Benefit delivered through the income tax system. For the 2016 benefit year, qualifying individuals and families could receive a maximum benefit of $1,008 per year, and qualifying seniors could receive a maximum benefit of up to $1,148.

**Northern Ontario Energy Credit (NOEC)**

- NOEC provides targeted assistance to low- to moderate- income individuals and families living in northern Ontario who can be exposed to higher energy costs due to more severe winters and heavier reliance on more expensive home heating fuels. NOEC is paid monthly as part of the Ontario Trillium Benefit and is delivered through the income tax system. For the 2016 benefit year, qualifying individuals received up to $146 annually and families (including single parents), received up to $224 annually.

# Further Rate Mitigation Options

# Program Proposal: Delivery Charge Relief

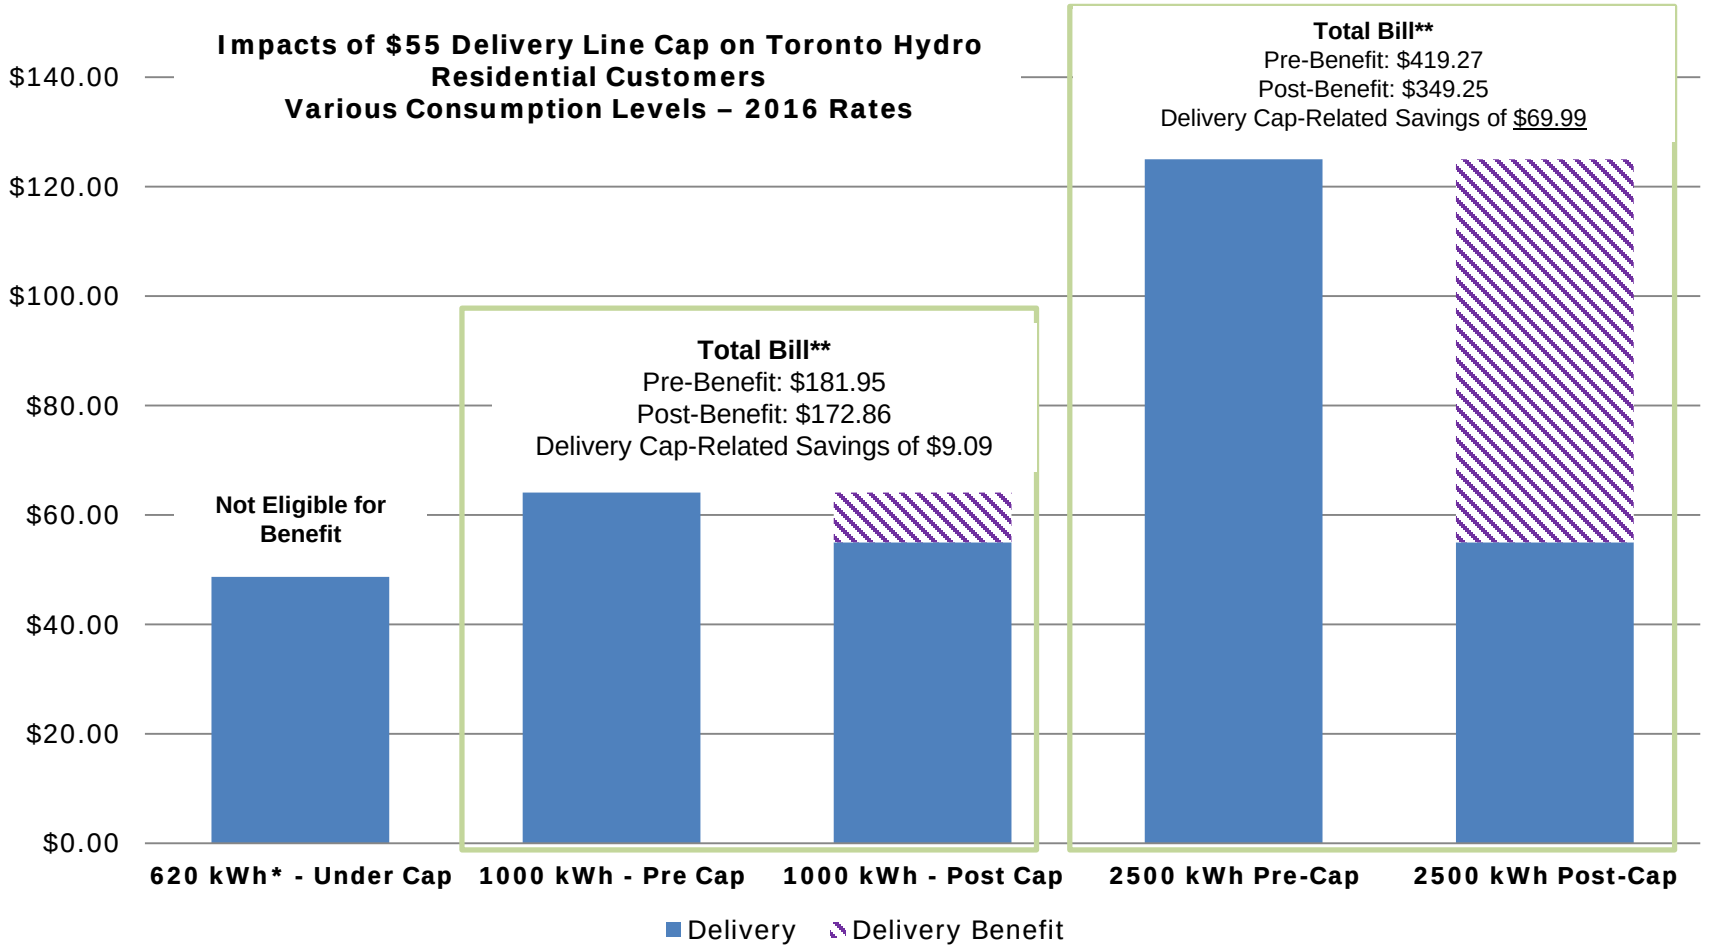
- To provide further relief for customers across the province, the province could create a 'customer-specific' program that would cap the delivery line cost.
- The proposed program would limit the amount an LDC can bill consumers for Delivery at a to-be-determined reasonable cost. Delivery costs that exceed the cap would be covered by support from the fiscal plan.
- The proposed program would target customers within the LDC territory based on their Delivery cost.
    - Delivery costs vary month to month and LDCs will need to keep track of the customers who will receive the receive the additional support.
- Eligibility for increased protection would be based solely on delivery charges above the established threshold and therefore would not be specific to any one LDC. All LDCs must be prepared to offer the program to some of their customers

o A delivery line item cap of **$55-$60** would align with what a Toronto Hydro customer consuming between 750-1000kWhs would pay in delivery costs (2016 rates).

- Additional information on fiscal projections and ratepayer impacts to be provided.

# Delivery Charge Relief: Ratepayer Impacts

- Below is an example of a Toronto Hydro customer at different consumption levels and the level of subsidy they would receive.



*620kWh is the average Toronto Hydro residential consumption level. ENERGY estimates 17.5% of Toronto Hydro consumers average >1000kWh/month.

** Includes Electricity, Delivery, and Regulatory Charges. Excludes HST and 8% rebate.

Ontario

MINISTRY OF ENERGY

# Delivery Charge Relief: Fiscal Considerations

- Setting a cap or threshold for maximum delivery charges is a more equitable approach to providing increased rate relief, as it is not specific to any one LDC and it targets rate protection for those with the highest delivery costs.
    - Eligibility for increased protection would be based solely on delivery charges above the established threshold and therefore would not be specific to any one LDC. All LDCs must be prepared to offer the program to some of their customers.
    - This program would be in addition to the existing RRRP program, which should remain as rate-payer funded protection for costs specifically driven by low-density.

**Risks**

- Costs and ratepayer impacts depend on the number of customers within each LDC whose delivery charges exceed the cap.
    - Costs to the tax base will fluctuate seasonally and will have year-over-year changes, creating uncertainty in forecasting. Ministry is preparing case study analysis.
    - Costs for LDCs to implement is likely material for many distributors to upgrade customer billing systems. Those costs would ultimately be passed back to the customers of those LDCs.
- There is a high risk of entrenching external subsidies, as there is no clear path to transition away from subsidies and toward a more sustainable, cost-based rate framework.

# Delivery Charge Relief: Implementation Considerations

- LDCs would track credit variances in a variance account and settle amounts with the IESO, which receives taxpayer funding from ENERGY/MoF in the same manner as the 8% rebate happens today.
    - While this new program would build on exiting transfer payment protocols in use under the ORECA, it would be complex for LDCs to implement, as CIS upgrades are likely needed.
    - OEB estimates that the implementation would take at least 6 months or more, following finalized regulations, given need to change customer billing systems and determine settlement procedures.
- This program structure could be temporary until the completion of the OEB-mandated move to completely fixed distribution costs, scheduled for 2019 (2020-2022 for Hydro One), as there would no longer be distribution cost variance between customers of the same LDC.

**Risks**

- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis.
    - Capping delivery charges may impact OEB rate-setting processes and create disincentives towards utility productivity and performance improvements.
- Carrying costs for LDCs may also be a challenge for some LDCs with cash-flow constraints, and may affect debt-to-equity ratios.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.

# Delivery Charge Relief: Options for Setting a Cap

- When implementing the program, setting the cap by linking with a specific LDC's delivery costs may be viewed as arbitrary.
- It could also create difficulties over time as the chosen LDC's rates (ex: Toronto Hydro) may change in unpredictable ways due to cost pressures unique to that LDC.
- A more robust effort to set a cap would be to link it to a specific rate level, relative to the spread of other rates in the province. Option include:
    - Setting the cap at the average of approved delivery charges for 1000kWh: **$53.46**
    - Setting the cap at a level where 75% of all approved delivery charges fall below for 1000kWh: **$58.17**
    - Setting the cap at a level equal to the lowest service territory currently receiving RRRP support for 750kWh: **$66.29**
- Various options and methods can be designed using simple or weighted rate averages and consumption thresholds.
- Selecting a level similar to Toronto Hydro's rates could satisfy the near-term policy intent while providing a reliable measure for adjusting the cap moving forward.
    - The OEB could be given authority to adjust the cap year-over-year based on the desired marker.

# Additional Option: Move RRRP to Tax-base

- RRRP is targeted at all customers who face the highest delivery costs in the province. Given that this program attempts to address a perceived inequity between rural and urban consumers, it could be funded by the tax-base rather than the rate-base.
- Bringing the current RRRP program to the taxbase would represent ~$290M/year in costs, with the OEB authorized to increase funding year-over-year in relation to the average distribution rate increase in Ontario.

| Year | RRRP($M) (Assuming 2.6% annual increase) |
|---|---|
| 2017 | $292 |
| 2018 | $300 |
| 2019 | $306 |
| 2020 | $315 |
| 2021 | $322 |
| 2022 | $329 |

- Doing so would save the average residential consumer (750kWh) $1.58/month in Regulatory charges.
- ENERGY recommends that the RRRP program *remain on the rate-base* to address the specific costs related to low density, with additional support coming from the tax-base through the proposed Delivery Charge Relief program.
    - RRRP provides funding to support off-grid communities serviced by Hydro One Remotes. Placing these costs on the tax-base may lead to an extensive re-evaluation of the funding framework for these communities, as well as other remote communities not serviced by Hydro One Remotes.

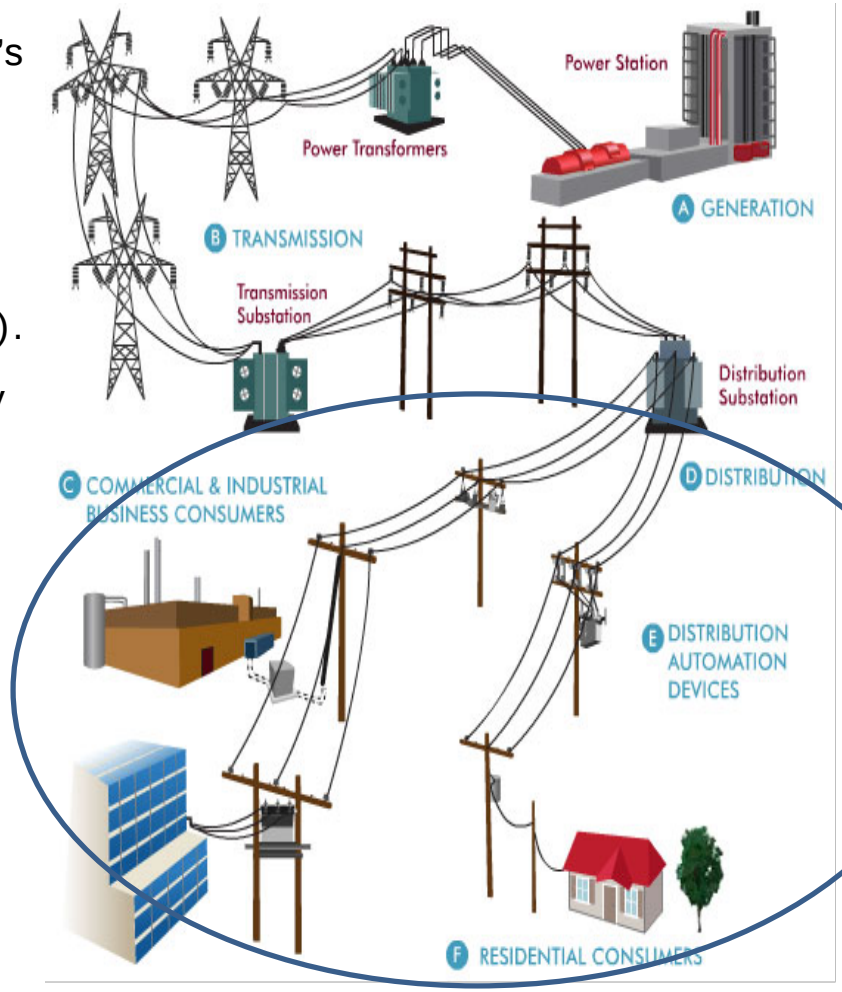
# Next Steps

- Complete fiscal and ratepayer impact analysis for delivery relief program
- Return with recommendation on a cap-setting mechanism and analysis of implementation considerations.
- Receive direction and prepare for Cabinet submission and legislation.

# Appendix A: General Information

# Ontario's Electricity Grid

- Ontario's transmission and distribution networks form the backbone of the province's electricity system, as they link electricity consumers with power generators.
- The **transmission system** is comprised of high voltage lines, towers, transformation and safety equipment used to transport electricity at voltages above 50 kilovolts (kV).
- The **distribution systems** deliver electricity to local consumers over the lower-voltage networks operating at 50 kV and below.
- Key elements in the distribution system:
  - Transformers to step power down from transmission to distribution voltage.
  - There are typically several voltage changes before the electricity reaches the consumer.
  - Overhead or underground lines.
- Electricity delivery to the customer is the responsibility of **Local Distribution Companies** (LDCs) e.g. Toronto Hydro.



# Sample Electricity Bill

**Electricity Charges:**
This is the cost of electricity supplied during the billing period and can be purchased either through a local distribution company or through a licensed electricity retailer.

**Regulatory Charge:**
This charge covers costs such as market regulation, management of the system, and rural and remote rate protection. It also includes the Standard Supply Service administration charge of $0.25 stated on a 30-day basis.

**8% Provincial Benefit:**
Effective January 1, 2017, customers receive a an 8% rebate equivalent to the provincial portion of the HST.

SAMPLE MONTHLY BILL STATEMENT

**Anytown Hydro-Electric Limited**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| HST | 18.07 |
| **8% Provincial Rebate** | (11.12) |
| **Total Amount** | **$145.95** |

**Delivery Charges:**
**Customer Service Charge**: A fixed charge for costs relating to meter reading, billing, customer service and account maintenance, and general utility operations.
**Distribution Charge**: A variable charge for costs of building and maintaining the distribution system, including overhead and underground power lines, poles, and transformer stations. .
**Transmission Charge**: A variable charge for the costs of transmitters to operate and maintain the high-voltage transmission system that carries electricity from generating stations to your utility.
**Loss Adjustment**
When electricity is delivered over a power line some is lost as heat. In calculating your electricity costs for the billing period, LDCs multiply the electricity cost by an OEB-approved adjustment factor to accounts for those losses.

# Local Distribution Companies – Key Facts

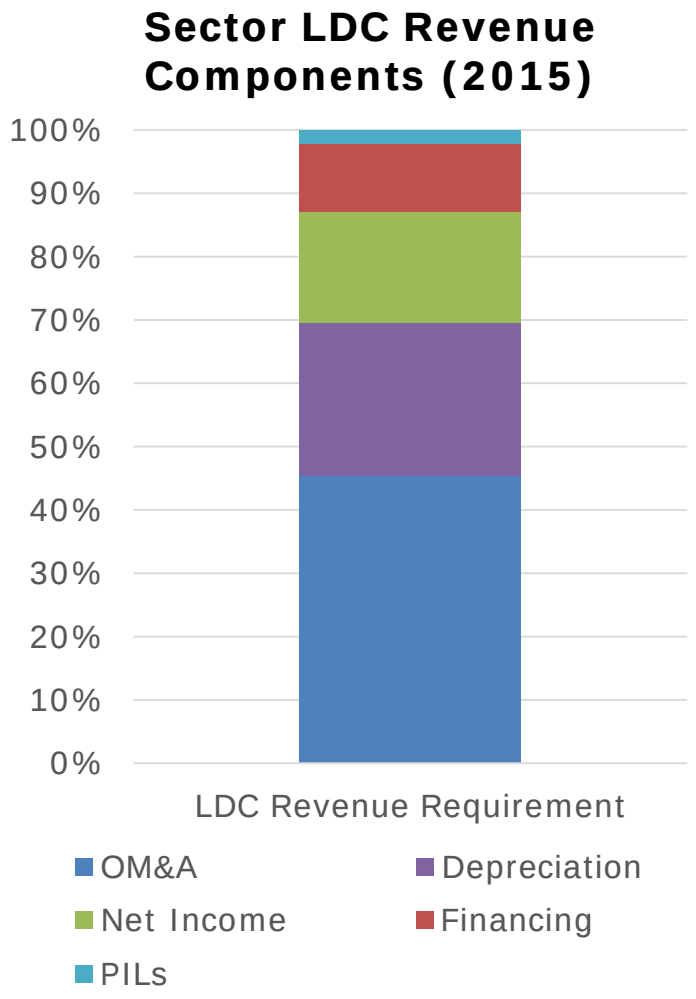
- There are currently 69 LDCs in Ontario that are rate-regulated by the OEB. 3 LDCs (Cat Lake Power, Dubreuil Lumber and Cornwall Street Railway Light) are licensed by the OEB, but are not rate-regulated.
- LDCs vary significantly in size:
  - Range from roughly 1,200 to 1.2 million customers (Hydro 2000 and Hydro One respectively)
  - The smallest 29 LDCs (36%) account for less than 4% of Ontario's customers (<13,000 customers).
- The distribution sector:
  - Serves 5 million customers (residential, industry, commercial / MUSH),
  - Has $48.7 billion in assets, and
  - Generates $3.6 billion in revenues.
- In addition to distributing electricity to customers through their 199,456 km of distribution lines, LDCs provide services such as: billing, outage management, overall customer contact, and conservation programs.

# Distribution Sector Cost & Performance Trends

- Like other components of Ontario's electricity system, distribution sector costs have risen as investments have been made to update and modernize system infrastructure.
    - Overall distribution sector revenues collected from customers have risen from $577.66 per customer annually in 2006 to $703.36 per customer annually in 2015 (21.8% increase).
    - For the typical residential customer* (750kwh/month), monthly distribution costs have risen from $24.49 in 2006 to $30.75 in 2016. Distribution costs represent 23% of the total average pre-tax residential bill.
- Over the same time period, distribution sector productivity and cost efficiency have decreased. This trend raises concern that customers are not realizing a net benefit from sector cost increases, as customers receive less value from the distribution portion of their bill.
    - OM&A costs per customer have increased on average from $235 in 2006 to $319 in 2015.
    - For the period 2002-2012, sector productivity has decreased by an annual average of -0.93% when including Hydro One and Toronto Hydro, the worst performers.
    - When compared to other utility services and neighbouring jurisdictional studies, Ontario's electricity distribution sector is the only one to realize a negative productivity rate.
- Over this time period, LDC consolidation has been the driving force behind sector restructuring and the search for efficiencies. However, the historical consolidation process has not appeared to deliver cost savings/efficiencies for consumers.
    - Customers of LDCs acquired by Hydro One in the first wave of consolidation (1999-2003) have seen distribution costs rise by up to 268% (Arkona, Ontario) when comparing 2006 rates to 2016.
- Policy direction on investments, including smart meters, have also contributed to increasing sector costs while driving broader system and social benefits.

*Simple average of monthly 750 kWh distribution bill, exclusive of taxes using OEB rates database, including H1 residential classes, but excluding 88 acquired LDCs.

# LDC Revenue Breakdown



- While there is considerable variation in this breakdown, on average LDC revenue components can be explained as follows:
  - **OM&A (46%):** Includes system operation & maintenance, customer service, billing/collections, regulatory expenses, salaries.
  - **Depreciation (24%):** Reflects accounting treatment of investments in system infrastructure (property, plant and equipment) and other assets. In proposing new investment, LDCs must justify the need and usefulness to the OEB.
  - **Net Income (17%):** Reflects income after PILs/taxes.
  - **Financing (11%):** Reflects interest expense.
  - **PILs or income tax (2%):** PILs expense or income tax expense for privately owned utilities.
- These costs do not include costs associated with operating unregulated affiliates. Any OM&A service costs shared between LDC and affiliate are prorated for inclusion in the ratebase.

*Source: 2015 OEB Yearbook of Distributors*
*Reflects total revenue of 71 LDCs*
*Some subsequently consolidated*

# Previously Considered Cost Mitigation Options

- The Ministry has considered distribution sector cost reduction options in the past which stemmed from determinations that certain aspects of the sector status quo were not appropriate or in the public interest.

- Ministry staff recommend not pursuing these options due to their contentious nature and the availability of more comprehensive solutions that can drive both cost reductions and system performance improvements.

    1. **Direct Consolidation Policy:** The Ministry could mandate LDC consolidation or provide additional incentives for voluntary consolidation in an attempt to reduce OM&A costs, leading to rate reductions for consumers.

    o Historical analysis reveals that, in general, consolidation has not led to the expected efficiency gains or cost reductions for affected customers. Hydro One, which has led the bulk of consolidation activity, is recognized by the OEB as one of the most inefficient LDCs in the province. Without appropriate regulatory incentives, consolidation transactions may not result in OM&A reductions to the benefit of customers.

    2. **ROE Reduction:** The Ministry could instruct the OEB to review its ROE policy in light of LDCs monopoly position and fixed distribution rates.

    o ROE is an established requirement of utility regulation and has been upheld by judicial review. Attempts to reduce ROE could be challenged in court. As well, as ROE is used by municipal shareholders to fund municipal services, this could lead to broader communication and stakeholder management issues.

    3. **Payments-in-Lieu of Taxes Policy:** The Ministry of Finance could restructure or eliminate the PILs regime to reduce the tax burden on LDCs, which would lead to cost savings for ratepayers.

    o PILs are a vital component of OEFC's debt retirement outlook. With the departure of Hydro One from the PILs regime and the ending of the debt retirement charge on residential bills, restructuring the PILs regime would impact OEFC's ability to service the debt and could impact Ontario's credit outlook.

- Performance-based options have the potential to indirectly incent consolidation (in a manner that returns benefits to consumers) and potentially reduce ROE in an equitable manner in the event performance expectations are not met.

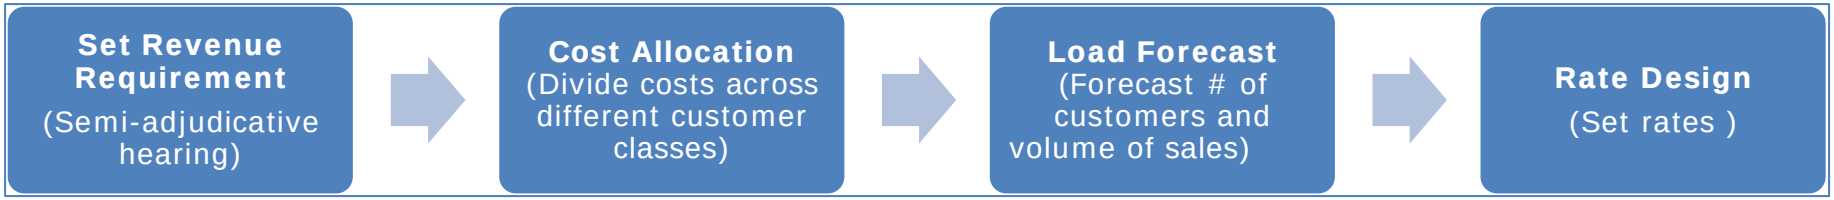
# RRRP Administrative Roles

| | |
|---|---|
| Ontario<br>**Ministry of Energy** | • The Province sets out the parameters of the program through legislation (s.79, OEB Act) and regulations (O. Reg 442/01, O. Reg. 445/07).<br>• These set out, among other things:<br>  • Eligible customers<br>  • Amounts available to Hydro One Networks and James Bay First Nations. |
| Ontario Energy Board | • The OEB determines annually the charge levied on all electricity consumption. |
| hydro one | • Hydro One Networks determines the monthly RRRP subsidy available to each of its customers based on amount of RRRP made available to it through Regulation, the number of R2 customers, and accounting for any surplus or deficit in its variance account. |
| ieso | • The IESO collects the charge from distributors across the Province and re-distributes to those distributors whose customers are eligible to receive the subsidy. |

# Appendix B: Distribution Rate-Setting

# Setting Distribution Rates

- Electricity distributors apply to the OEB to determine which costs they can pass on to their customers through rates (revenue requirement). The OEB has a mandate to set just and reasonable rates for LDCs that protect the interests of consumers while facilitating the maintenance of a financially-viable electricity industry.
- The OEB's "Renewed Regulatory Framework" is continuing to evolve how LDC's apply for rates to drive increased productivity. Principally there are two streams of electricity rate applications.
    - Cost-based applications (Cost of Service or Custom)– where the OEB sets rates based on an LDC's forecast of their costs and volumes, including a return on capital. Typically these are set for a 5 year term, with the 1st year establishing the base rates for the term.
    - Mechanistic Incentive Rates (IRM) that are based on the current approved rates plus inflation and any productivity improvement requirements. This methodology is used annually following a cost-based application until the end of the term.
- When establishing distribution rates, the OEB must evaluate a number of costs to establish the approved revenue requirement that is the basis for the rates charged by the LDC.
- Once the revenue requirement is established, the OEB must approve a fair allocation of those costs to the various customer classes (residential, commercial, industrial etc.)
- From that the OEB approves the specific rates charged to each customer class, which can include some fixed charges as well as ones based on volume.



# Application Review Process

- The OEB reviews each rate application independently through a public process.
- The process begins with an LDC submitting an application and includes a number of activities at each stage.
- The process includes opportunities for various representatives (intervenors) to make arguments about the facts of the application.
- The application review process can vary from a few months to up to a year depending on complexity of the application.
    - Cost-based applications tend to take a longer review timeline than IRMs.
    - More complex applications will also typically have an oral hearing.

ENERGY

# Rate Mitigation Plan Options

## Working Draft

January 2017

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants) and suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings).

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Options

- In recognition of the costs borne by ratepayers related to decarbonizing and modernizing the province's electricity sector, options for further rate mitigation include:

  1. Global Adjustment (GA) Financing

  2. Delivery Rate Relief

  3. Other Electricity Support Programs Funded Through the Tax-base:
     - Ontario Electricity Support Program (OESP);
     - Low-Income Conservation; and
     - First Nations Rate.

- As an alternative to the GA financing, in addition to Delivery Rate Relief and Other Electricity Support Programs Funded Through the Tax-base, other mitigation measures could be pursued, including:

  1. Enhanced Tax-based RPP Rebate (5%)

  2. Contract Renegotiations
     - Contract Extensions – Wind and Solar; and
     - Clean Energy Supply (CES) Contracts.

  3. Amortization of Conservation Expenses

# Proposed Options – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | - | 17.49 | 15.01 | 12.49 | 14.91 | 6.32 | 4.03 | Immediate |
| 2.. Delivery Rate Relief | - | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 3. Electricity Support Programs Funded through the Tax-Base | | | | | | | | |
| a. Ontario Electricity Support Program (OESP)* | - | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | Immediate |
| b. Low-Income Conservation | - | - | - | - | - | - | - | N/A |
| c. First Nations Rate | - | - | - | - | - | - | - | N/A |

**Other Options to Consider:**

| *$/750kWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Enhanced Tax-based RPP Rebate (5%) | - | 7.04 | 7.17 | 7.31 | 7.77 | 7.61 | 7.83 | Immediate |

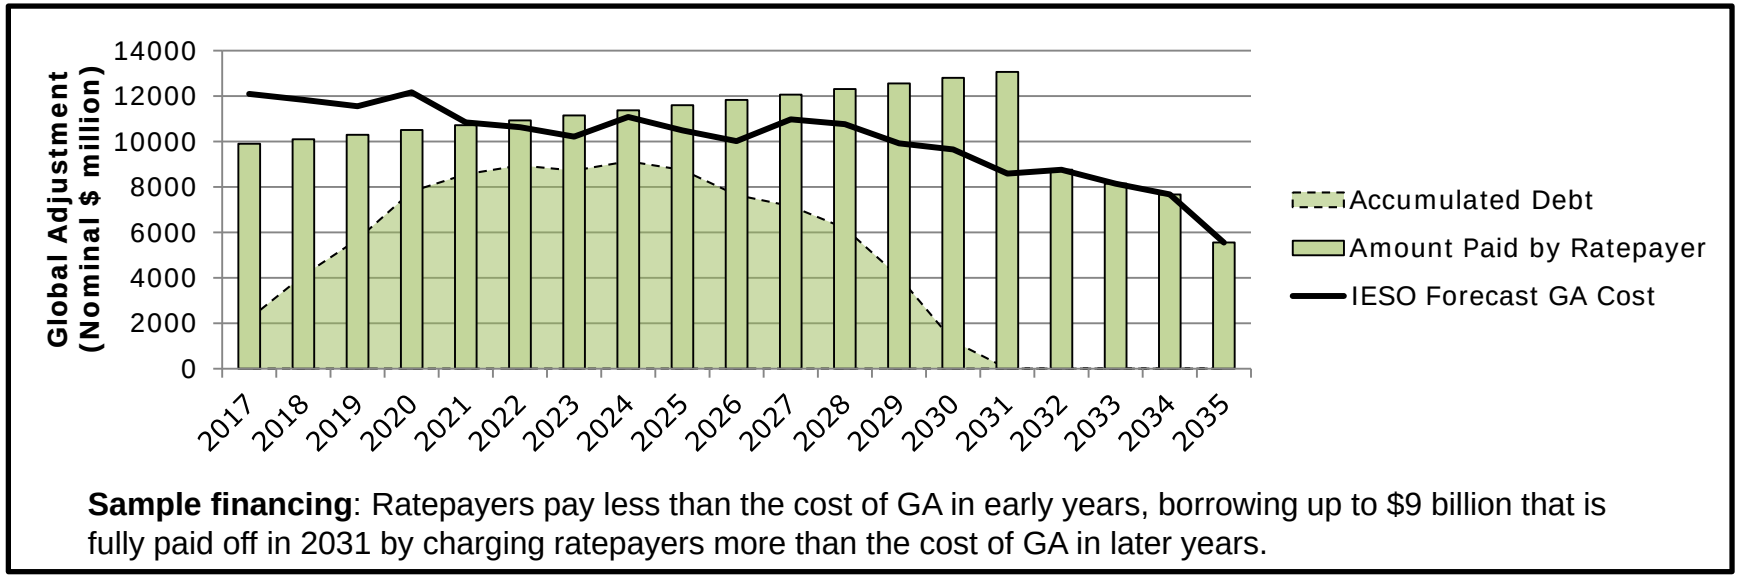
| b. Clean Energy Supply Contract | - | - | - | - | - |
| 3. Conservation Amortization | - | - | - | - | - |

***Note:** Includes costs of program expansion and various assumptions as detailed on relevant slides.
****Note:** Risk to fiscal plan of up to $240 million annually (foregone net income) if OPG is unable to reach more aggressive operational efficiency targets.

**Source:** Ministry of Finance, Energy

# 1. Global Adjustment (GA) Financing

- It is proposed that the amount of global adjustment (GA) paid by ratepayers in each year over the forecast period is set at a fixed amount and money is borrowed to make up the remainder of the GA cost in each year.
- Starting on January 1, 2017, the amount of GA paid by ratepayers is set at a value lower than the true cost of GA in 2017 and is increased according to a pre-defined schedule until the debt has been paid off.
- GA costs will be “smoothed” over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected actual cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- All analysis is based on forecasts from Independent Electricity System Operator (IESO), assumes a 5% annual borrowing interest rate and an inflation rate of 2% per year.

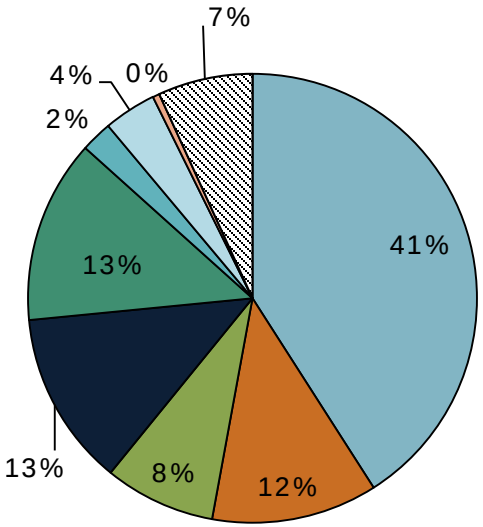


**Sample financing**: Ratepayers pay less than the cost of GA in early years, borrowing up to $9 billion that is fully paid off in 2031 by charging ratepayers more than the cost of GA in later years.

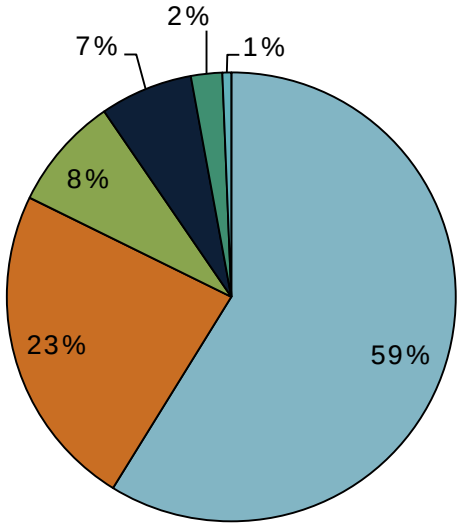
# 1. GA Financing – Cost Breakout

- The allocation of GA costs in 2016 is compared to the proportion of generation in the graph below.
- This cost breakdown will evolve over time as 2,181 MW of contracted generation comes online in the coming years.

**2016 GA Cost: $12.3 billion**



**2016 Generation: 155 TWh**



| | GA ($M) | Gen. (TWh) |
|---|---|---|
| Nuclear | 5,053 | 91 |
| Hydro | 1,473 | 36 |
| Natural Gas | 985 | 13 |
| Wind | 1,552 | 10 |
| Solar | 1,630 | 3 |
| Biomass, Landfill and Byproduct | 278 | 1 |
| Conservation | 467 | |
| IEI Program | 60 | |
| OEFC* | 842 | |

*OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators.
** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

# 1. GA Financing – Options

1a. Moderate / GA Financing

- The amount of GA paid by ratepayers in 2017 is lowered by $3.1 and $3.3 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

1b. Moderate / GA Financing with Delayed Increase

- The starting GA payment from all ratepayers in 2017 is lowered by $1.1 and $1.4 billion, ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.

Low / GA Financing (see in Appendix)

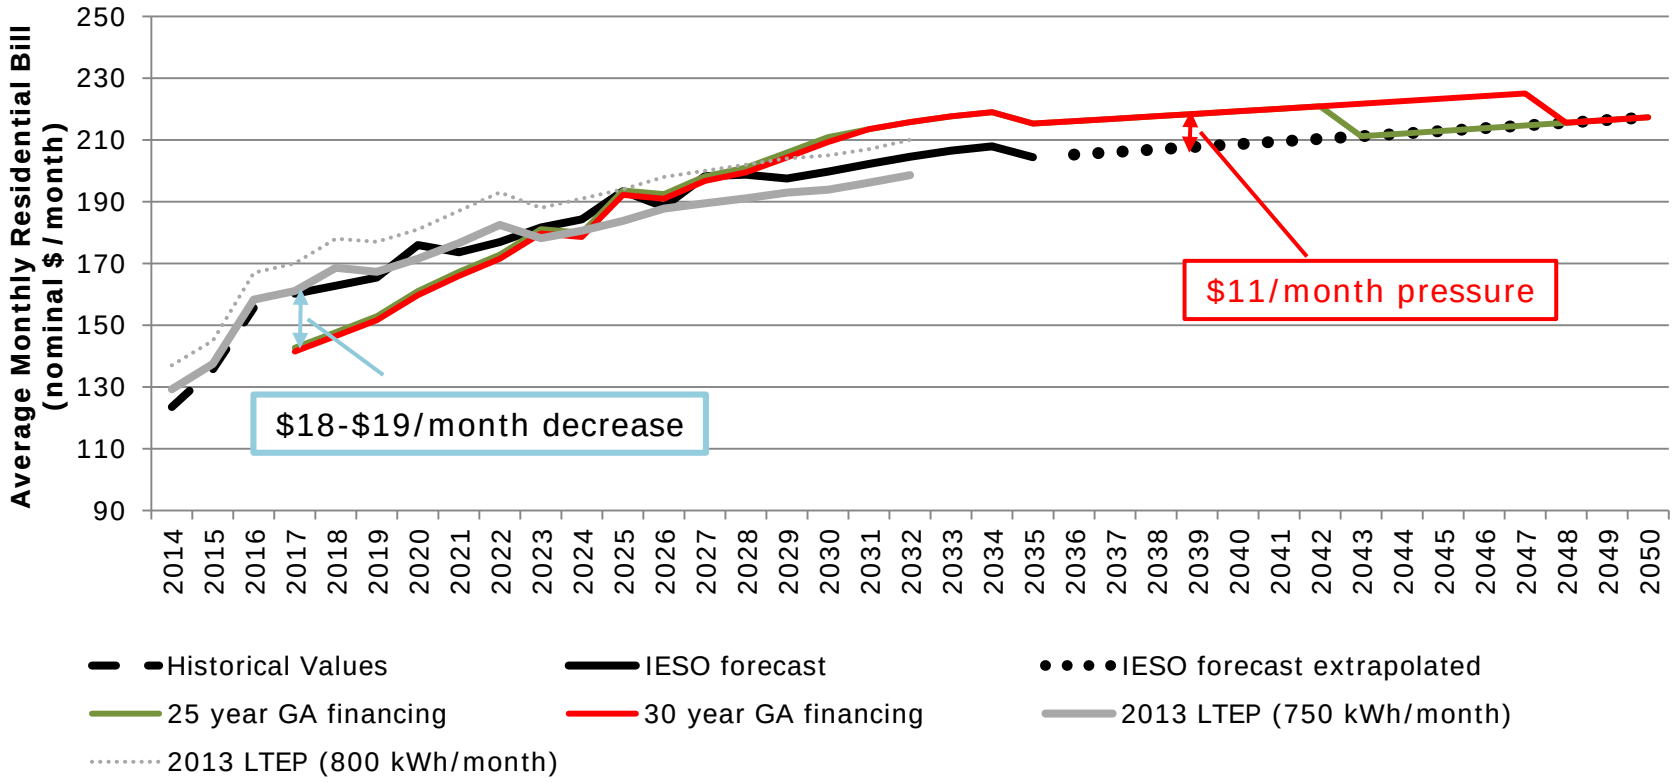
- The amount of GA paid by ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and increases in each subsequent year until the total amount of money borrowed is paid off.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

High / GA Financing (see in Appendix)

- The amount of GA paid by ratepayers in 2017 is lowered by $4.4 and $5 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- No limit is placed on the amount charged to ratepayers above the true cost of GA.

# 1a. Moderate / GA Financing – Impact on Residential Electricity Bills

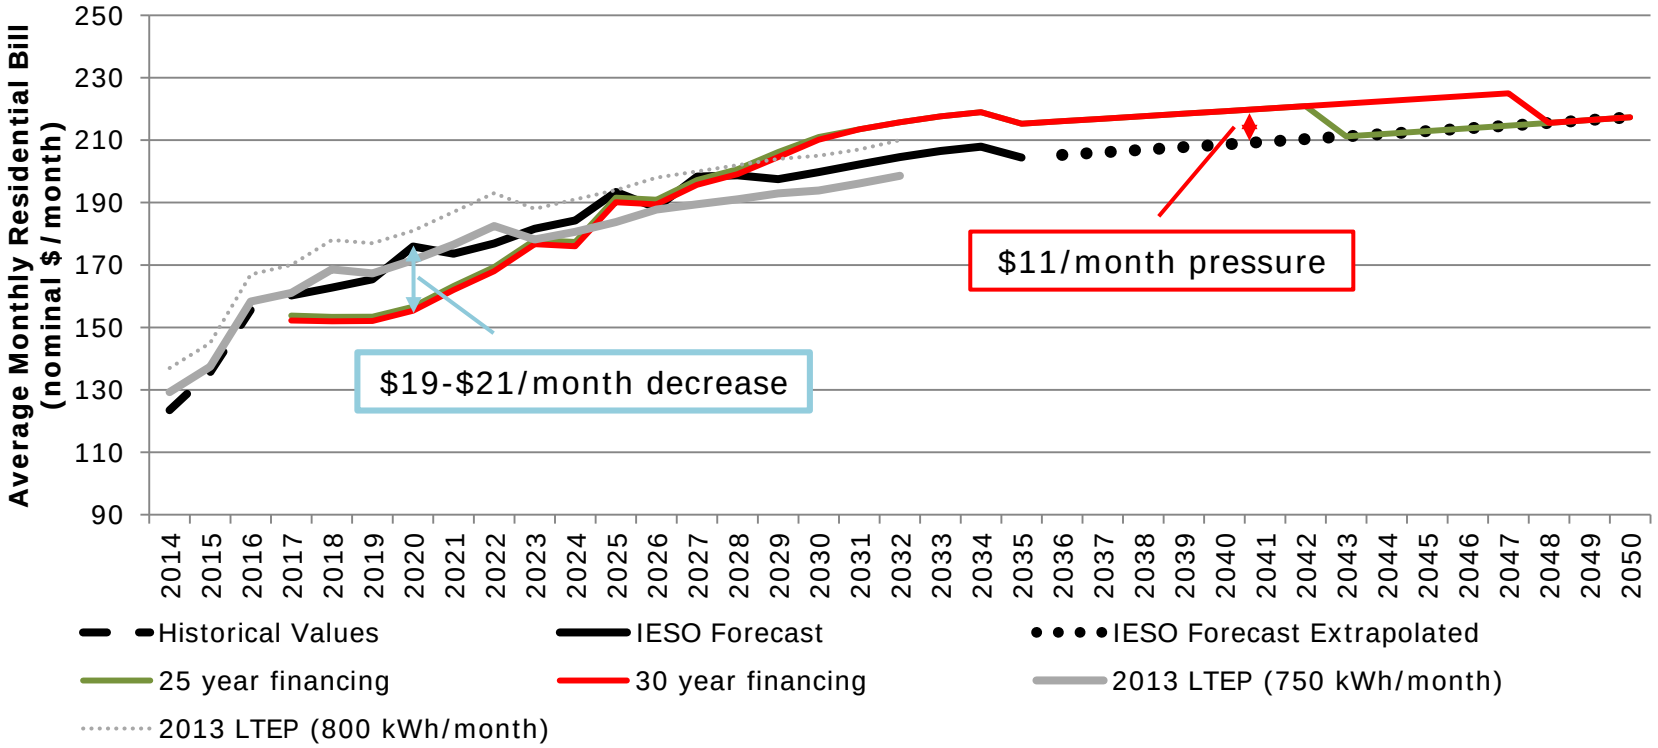
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered by $3.1 billion (green line) and $3.3 billion (red line) and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 25 and 30 years respectively.



- By **borrowing up to $19-$23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $17-$19/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1b. Moderate / GA Financing with Delayed Increase in Payments – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $1.1 billion (green line) and $1.4 billion (red line), ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.



- By **borrowing up to $19-$23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $19-$21/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1. GA Financing – Accounting (cont'd)

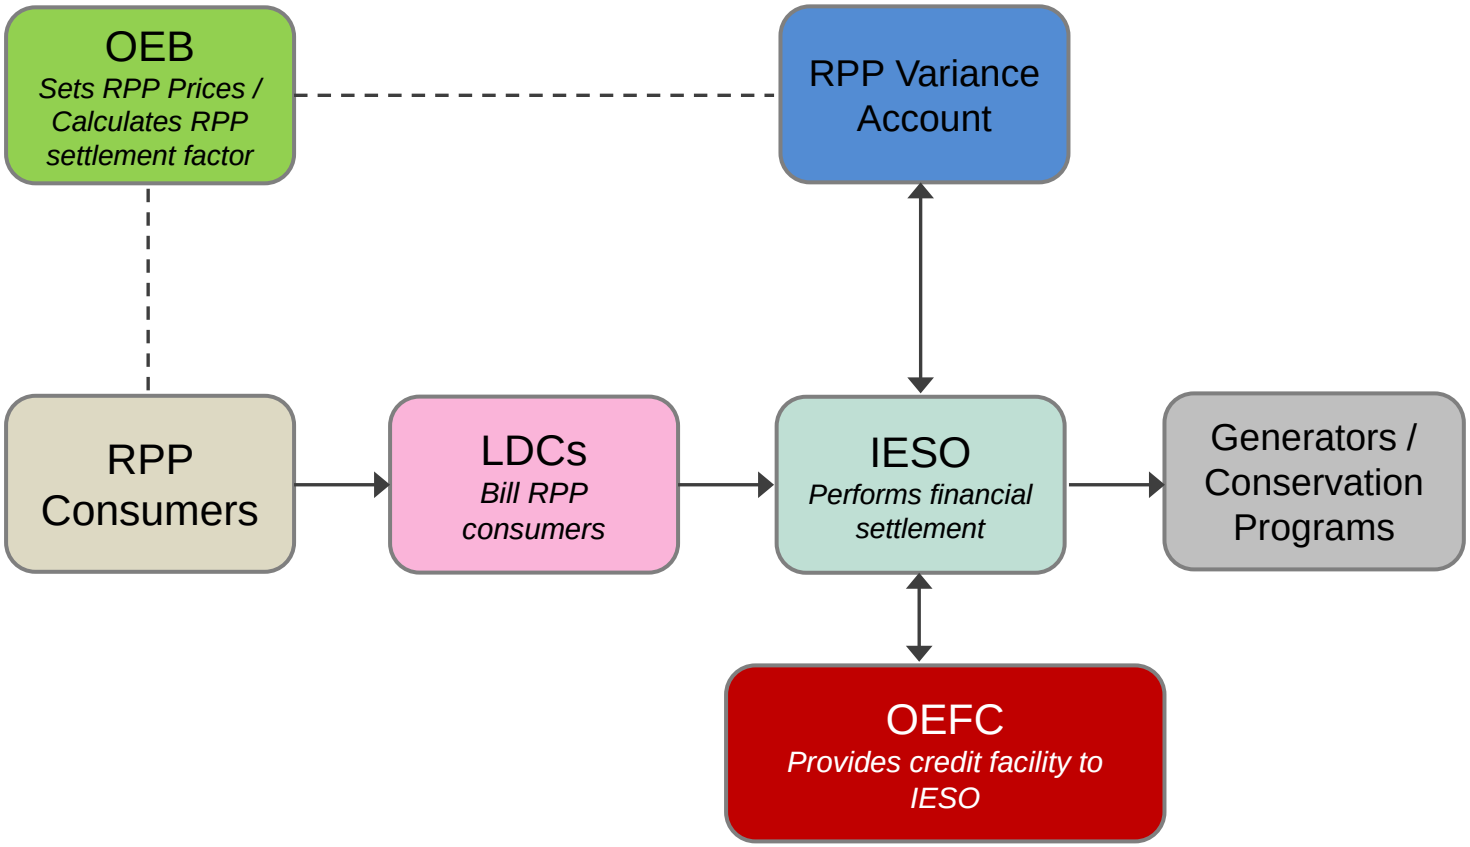
**Considerations**

- ENERGY continues to work with LSB, IESO, MOF/OFA, TBS and external accountants to identify legislative, regulatory, borrowing and accounting requirements associated with GA financing option.
  - Ongoing analysis on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk (i.e., consolidation).
  - Historically electricity sector financing has been conducted by the Ontario Financing Authority (i.e., managing OEFC's stranded debt and borrowing on behalf of IESO).
  - The significant amount of additional Provincial borrowing needed to finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating and overall borrowing capacity.
  - The Auditor General (AG) may comment on the appropriateness of financing the Global Adjustment and/or on the need to consolidate any financing on the Province's books.

- Discussions have broadly focused on:
  - Consolidation risks;
  - Creating an "asset" (and confirm that it meets accounting requirements);
  - Identifying who will hold the asset(s), this could include:
    - Province (e.g., OEFC, etc);
    - IESO;
    - LDCs; or
    - New entity.
  - Determine the source of the financing (e.g., third party, OFA, IO, etc)
  - Exploring different recovery / administrative options (e.g., DRC, RPP, etc)

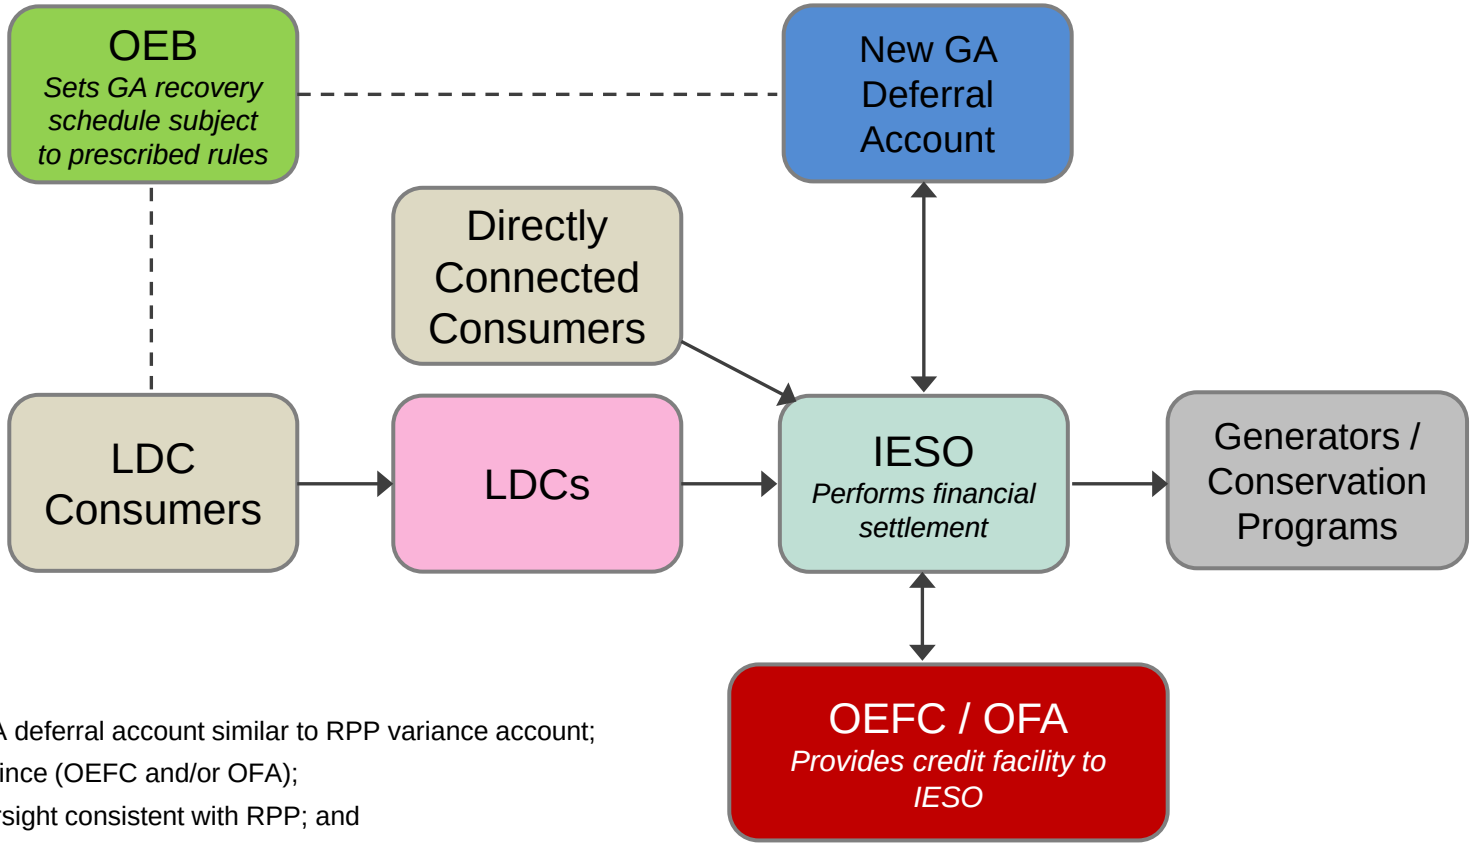
# 1. GA Financing – Current Regulated Price Plan (RPP) Variance Recovery

- The diagram outlines current Regulated Price Plan (RPP) structure and related flow of funds.



# 1. GA Financing – Recovery Approach (Option 1)

- The diagram outlines an option that is a variation on the current RPP approach.

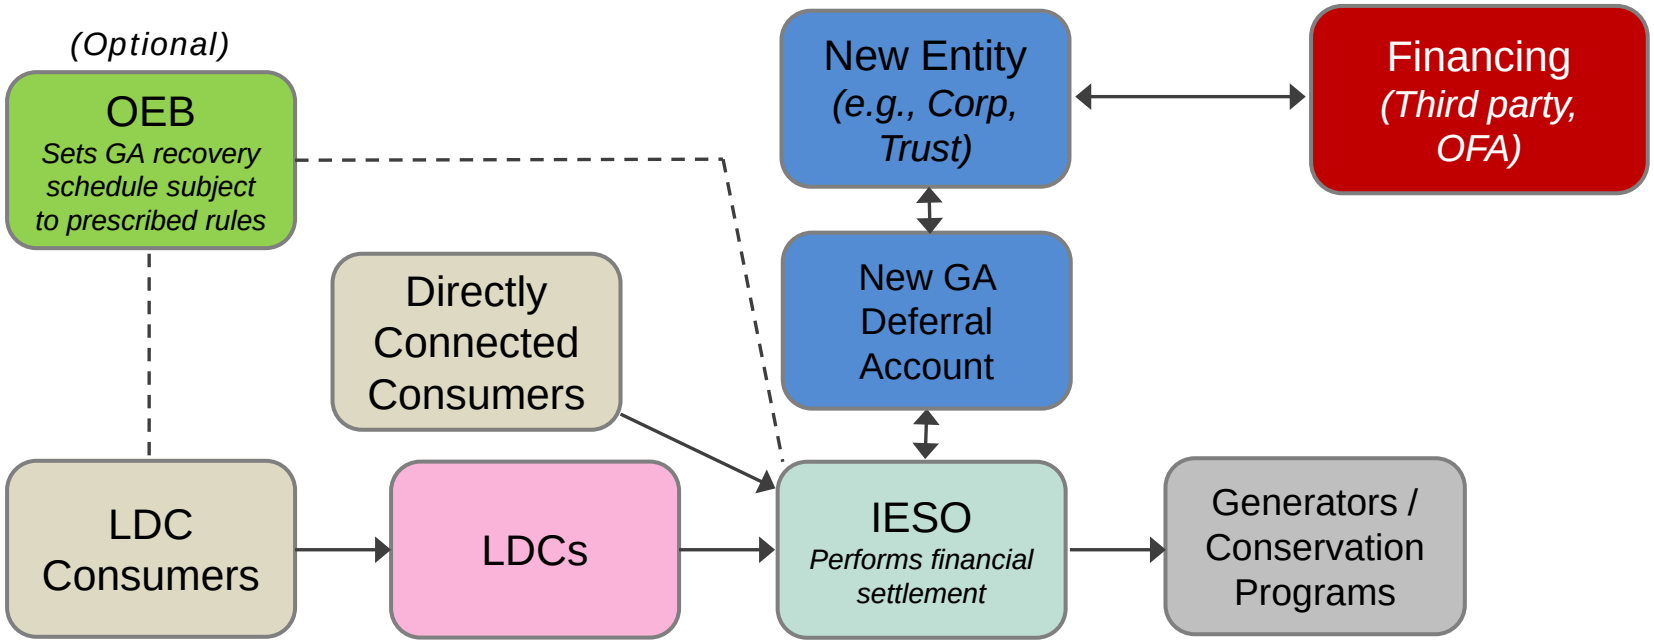


**Key Assumptions**

- Establish an new GA deferral account similar to RPP variance account;
- Financing from Province (OEFC and/or OFA);
- OEB regulatory oversight consistent with RPP; and
- GA Financing available to all consumers.

# 1. GA Financing – Recovery Approach (Option 2)

- The diagram outlines an alternative approach that introduces a new arms-length entity.



**Key Assumptions**

- GA Financing available to all consumers;
- Establish a new arms-length entity (e.g., corporation, trust, etc.) with trustees or a board of either public sector employees or stakeholders / bondholders;
- Purpose of the entity in legislation is to recover deferred GA amounts over 25-30 years from electricity consumers (i.e., ensure guaranteed repayment);
- Financing either through OFA or could be independent or from Province (TBD); and
- Set up outside of the OEB construct (i.e., not regulated). Alternatively, light touch regulatory oversight similar to RPP.

# 1. GA Financing – Considerations (cont'd)

**Considerations**

*Legal:*

- Legislation would be required to authorize the financing proposal.
  - Amendments to the *Electricity Act, 1998* (EA) could authorize the financing of certain costs within or part of the GA. However, whether any other legislation requires amendment is not known at this time.
  - The GA regime currently provides that "true costs" represent the true costs of making payments to generators or counter parties to contracts, not the incurring of discretionary financing or interest costs.
  - Considerations such as the need to analyze legal risks or the need to address costs retroactively (if the proposal requires a January 1, 2017 start) could add to the legal and drafting complexity. Further legal analysis is required.

# 2. Delivery Charge Relief – Background

- The **Delivery** line on a typical consumer bill accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line, as well as power theft. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.
- To help mitigate delivery costs, the Province has expanded the Rural or Remote Protection Program (RRRP) to further reduce distribution costs for rural customers across the province.
  - Starting on January 1 2017, 330,000 Hydro One low density (R2 class) customers will receive $60.50 per month in RRRP to bring their total Delivery line costs to roughly $95 for 1,000 kWh/month.

* Toronto Hydro Bill @ 750Kwhs

# 2. Delivery Charge Relief – Proposed Program Overview

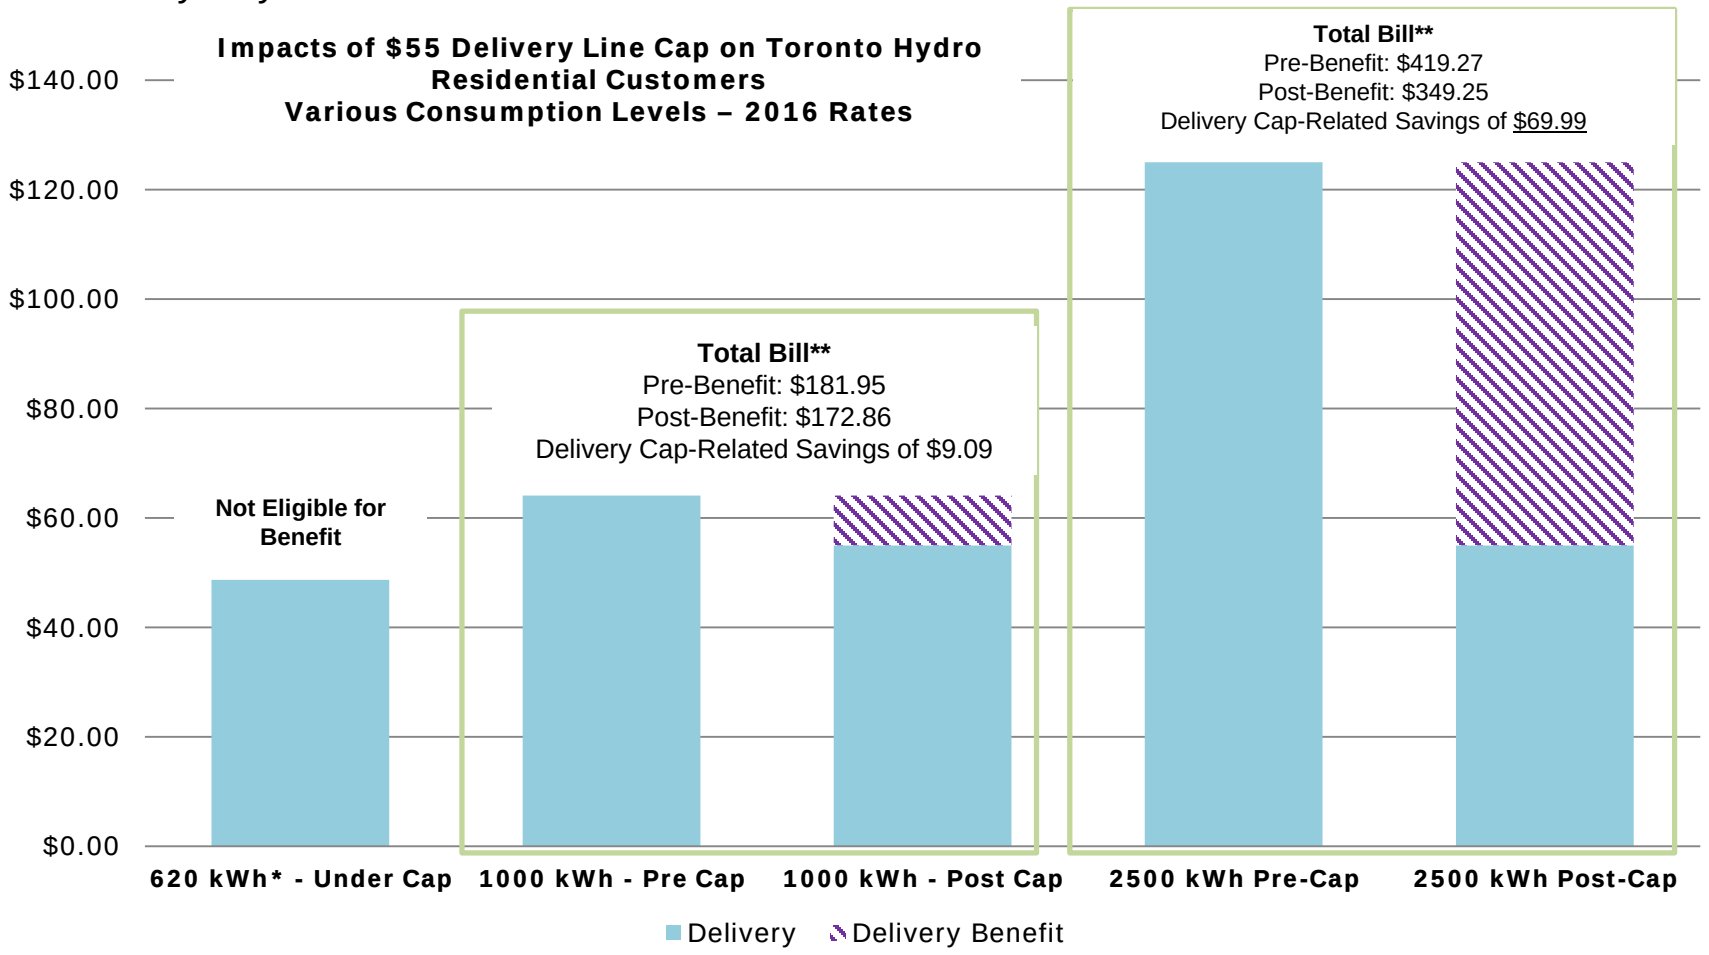
- To provide further relief for customers across the province, the province could create a ‘customer-specific’ program that would cap the delivery line cost.
- The proposed program would limit the amount an LDC can bill consumers for Delivery at a to-be-determined reasonable cost. Delivery costs that exceed the cap would be covered by support from the fiscal plan.
- The proposed program would target customers within the LDC territory based on their Delivery cost.
  - Delivery costs vary month to month and LDCs will need to keep track of the customers who will receive the receive the additional support.
- Eligibility for increased protection would be based solely on delivery charges above the established threshold and therefore would not be specific to any one LDC. All LDCs must be prepared to offer the program to some of their customers

**Considerations**

- Costs and ratepayer impacts depend on the number of customers within each LDC whose delivery charges exceed the cap.
  - Costs will fluctuate seasonally and will have year-over-year changes, creating uncertainty in forecasting. Ministry is preparing case study analysis.
- There may be implementation challenges for some LDCs and could take them up to 6 months to implement the program.
- Capping delivery charges may impact OEB rate-setting processes and create disincentives towards utility productivity and performance improvements.

# 2. Delivery Charge Relief – Proposed Program Overview (cont'd)

- Below is an example of a Toronto Hydro customer at different consumption levels and the level of subsidy they would receive.



*620kWh is the average Toronto Hydro residential consumption level. ENERGY estimates 17.5% of Toronto Hydro consumers average >1000kWh/month.

** Includes Electricity, Delivery, and Regulatory Charges. Excludes HST and 8% rebate.

Ontario

MINISTRY OF ENERGY

# 3a. Ontario Electricity Support Program (OESP) Expansion

- The OESP is an income-tested, application based program that lowers the electricity costs of the most vulnerable consumers by providing a rebate directly on their electricity bills.
- The OESP provides basic benefits to most consumers and enhanced benefits to Indigenous customers and customers with electric heat and medical devices.
- OESP funding is collected from a charge levied on all electricity ratepayers. Based on current level of program up-take and funding collection, OESP program benefits could be increased across the board by 50%. This would mean:
  - Single low income consumers would see an increase from $30 to $45/ month ($540/year);
  - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year); and
  - Indigenous and Métis consumers would also see benefit increases at the same level as those with electric heat and medical devices.
    - The Ministry is also considering options to support a “Delivery” line credit for Indigenous consumers. This would cost ~$18 million/year (Option 2d on slide 8) and would save Indigenous consumers between $75 and $100/month.
- Greater focus and support can be placed on lower income Ontarians by funding OESP through the tax base. This would also reduce costs for all consumers as a result of eliminating the OESP charge.
  - Average residential customer savings: $0.83/month; and
  - Average industrial customer savings: $1.10/MWh.

# 3a. OESP Expansion – Fiscal Impacts

- Table below shows estimate of program costs up to 2022:

| Year | OESP Status Quo($M) | +50%($M) | TOTAL ($M) |
|---|---|---|---|
| 2017 | $108 | $54 | **$162** |
| 2018 | $150 | $75 | **$225** |
| 2019 | $186 | $93 | **$279** |
| 2020 | $215 | $108 | **$323** |
| 2021 | $243 | $122 | **$365** |
| 2022 | $272 | $136 | **$408** |

- 2017 program costs are based at current program sign-up rate – 30% of eligible consumers. Cost projections assume the program grows to 100% of eligible consumers by 2022 and remains at that level.
- At the time of program design, it was estimated that 40-50% participation would be high for an application-based program delivered through electricity bills. However OESP can be enhanced by working to ensure the program uptake is as close as possible to 100%:
  - Streamlining the application process to make it easier and quicker to get through;
  - Putting in place a more aggressive communications strategy to make sure people are aware of the program;
  - Increasing funding for key partner agencies to work directly with individuals who are applying; and
  - Exploring automatic OESP qualification for those who receive provincial programs (e.g., ODSP).
- OEB is currently exploring options for simplifying the OESP process, including exploring options with MCSS on auto-enrollment options, discussing options to eliminate wet signature consent forms with the federal government, and working with partners to do open houses to better reach vulnerable consumers.

# 3a. OESP Expansion – Considerations

- **Framework:** New legislation would be required to establish and define the parameters of a tax-based OESP. This may reveal additional considerations, including possible assessment as a tax credit.
- **Implementation:** Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- **Alternative Delivery:** If the OESP was funded by the tax-base, it could also be explored whether the OESP could be better delivered as a provincial program via the tax system. This may help ensure that the program's participation rate is as high as possible, and could expand coverage to the ~142,000 low-income households that do not receive an electricity bill.
- **Transition to Social Assistance:** Moving OESP to the taxbase can be a transitional step in folding this program into a reform of social and disability assistance programs and enhancement of MCSS' Social Assistance Management System moving forward.
- **Additional Enhancements:** The enhanced credit could be expanded to include additional eligibility categories of customers. For example, a new "Low Density Consumer" category could be introduced that provides Hydro One R2 and/or R1 customers (highest distribution rates) who are already OESP eligible with the enhanced credit.
- **Variance Account:** The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.

# 3b. Low Income Conservation Benefit Program

- Existing low income programs delivered by LDCs and IESO help qualified homeowners and social and/or assisted housing providers improve the energy efficiency of their homes.
  - Programs include the Home Assistance Program and the Retrofit Program (Social Housing Stream).
- A new Low Income Conservation Benefit Program would build on existing programs.
  - Participants could receive incentives for conservation measures not currently covered (e.g. air conditioning, heat pumps (electric heated homes)).
  - Increased incentive amounts (e.g., under the existing Retrofit Program, incentives cover up to 50% of the total cost of the energy efficiency upgrade).
  - Targeted education and awareness initiatives.
- The new program would be delivered through LDCs and/or IESO.
- The new program would coordinate with CCAP initiatives.
- The budget estimate below is illustrative and assumes annual program budgets three times the 2015 spending for the Home Assistance Program.

| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 |
|---|---|---|---|---|---|---|
| Proposed Budget ($ Million) | $60 | $60 | $60 | $60 | $60 | $60 |

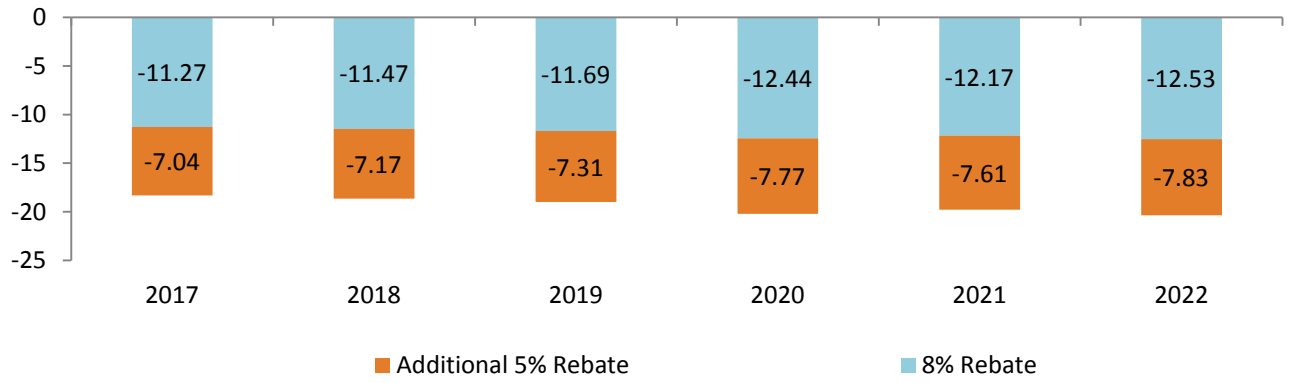
- Further analysis is required on costing and implementation details, including alignment with the Conservation First Framework.

# Other Options to Consider

# 1. Enhanced Tax-Base RPP Rebate (5%)

- Enhancing the rebate by a further 5% on the amount before tax provides an average savings of about $7 each month or $84 annually for a typical residential electricity consumer.
- As of January 1, 2017, electricity consumers eligible for the Regulated Price Plan (RPP) receive an 8% rebate equivalent to the provincial portion of HST on their pre-tax bill.
- The eligibility criteria for the 8% rebate is as follows:
  - Consumers with a demand of 50 kW or less;
  - Consumers with a demand of 250,000 kWh/year or less;
  - Farms;
  - Multi-unit residential buildings and other facilities used as residential rental units;
  - Dwellings;
  - Condominiums; and
  - Co-operatives with housing units.

**Benefit for a Typical Residential RPP Consumer**
*in $/750-kWh month*



# 1. Enhanced Tax-Base RPP Rebate (5%) (cont'd)

**Considerations**

- Amendments would be required related to the *Ontario Rebate for Electricity Consumers Act, 2016.*
- The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of other regulations to put in place mechanisms needed to implement the financial assistance.
- The rebate could be made retroactive to January 1, 2017. Similar to the current 8% rebate, electricity consumers would receive a retroactive payment once the local distributor begins issuing the rebates if the distributor needs more time to adjust its billing systems.

**Fiscal Cost of an Enhanced Rebate**
*in $millions*

| Cost ($M) | 2016-2017 | 2017-2018 | 2018-2019 | 2019-2020 | 2020-2021 | 2021-2022 |
|---|---|---|---|---|---|---|
| **Cost of 8% rebate** | 271 | 1,119 | 1,086 | 1,171 | 1,159 | 1,208 |
| **Cost of 13% rebate** | 440 | 1,818 | 1,764 | 1,903 | 1,884 | 1,963 |
| **Cost of incremental 5% rebate** | 169 | 699 | 679 | 732 | 724 | 755 |

# 2a. Extend Length of Existing Wind / Solar Contracts

- Wind and solar developments are typically contracted through standard offer procurements on 20 year fixed terms at fixed pricing.
- Many of these projects have already reached commercial operation.
- The province could explore options for IESO to negotiate extensions to existing renewable energy contracts, for example, by 10 years, in return for the contract holders agreeing to a lower price in the near term.
- Since extending the contracts would lock in an additional 10 years of GHG emissions free generation to support electrification of transportation and other sectors, consideration could be given to funding the contract extensions with future cap and trade proceeds.

**Considerations**

- Projects in commercial operation offer potential for near-term rate reduction whereas projects that have yet to reach commercial operation provide potential to mitigate future rate increases only.
- The attractiveness of this option to contract holders would vary from project to project and would depend on project economics.
- Revised pricing would be subject to negotiation, and associated ratepayer savings would be difficult to forecast accurately.
- The duration of contract renegotiation is difficult to forecast and may not be achievable in the near term.
  - Proponents may have to renegotiate their project financing arrangements, ensure project investors are satisfied with any changes in ROI, and extend land leases.
- Project host communities and Indigenous communities whose traditional territory the projects are sited in may not be interested in these projects extending their operational period; discussions/consultation may be required in advance of this potential option moving forward.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- Should Ontario be successful in negotiating lower prices in the near term, it should be noted that contract holders will be in a strong bargaining position (given their existing fixed-priced contracts), and will likely extract additional value from the negotiations.

- The Province is not a party to the contracts and has never been involved in the negotiation of the contracts themselves. IESO would be required to renegotiate the contracts, which would likely involve a direction or directive to IESO.

- Further analysis is required as to how ENERGY could express its policy intent to have IESO renegotiate the contracts for a reduced rate at a longer term, however it is unlikely that IESO could guarantee the outcome.

- Further analysis is also required to ascertain whether there is scope within the existing contracts for IESO to renegotiate their terms in this manner.

- Extending contract terms may require investments in component replacement and additional operation and maintenance costs that developers would seek to recover under any renegotiated contract.

- Extending contract terms would reduce planned flexibility and increase the risk of overpayment as this existing capacity would now be contracted into the 2040s and not the 2030s.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- Ontario has over 4,500 MW of wind in commercial operation, with the vast majority being large scale (>500kW) developments.
  - This includes over 2,700 MW of large FIT 1 and GEIA wind projects representing 47 contracts (average size ~58 MW) and over 1,000 MW of solar projects representing 103 contracts.
- Below are two potential approaches to reducing ratepayer costs in the near term by extending contract terms at reduced prices. An illustrative example of a typical large wind project is used.
- **Example:** 100 MW FIT 1 wind project achieving Commercial Operation in 2014 (i.e., 17 years remaining on initial 20 year contract), assuming a 10 year contract extension negotiated at the LRP I low weighted average wind price of $64.5/MWh
  - (17 years @ $135/MWh + 10 years @ $64.5/MWh)
- **Potential Approach 1:** Provide a single new contract price that is the average of the lower extension price and the FIT contract price over the new contract term. The new price would be lower over a longer term.
  - **Illustrative Example:** New contract for 27 years at $129/MWh.
  - New contract price set to allow 10% rate of return over 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract (remaining term extended for 10 additional years) |
|---|---|---|
| Contract Cost (NPV 2017) | $550 Million | $582 Million |
| Average Monthly Ratepayer Impact Over First 5 Years | $0.03 savings | |
| Average Monthly Ratepayer Impact Over Remaining 22 Years | $0.02 increase | |
| Average Monthly Ratepayer Impact Over Entire 27 Year Contract | $0.01 increase | |

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- **Potential Approach 2:** Offer facilities a revised contract that extends terms and is structured to offer lower pricing in the initial contract years and higher pricing in the later years of the contract.
  - **Illustrative Example:** New contract for 27 years at $85.9/MWh over the first 5 years and $169/MWh over the remaining 22 years.
    - Price over first 5 years is LRP I weighted average wind price.
    - Price over remaining 22 years is set to allow 10% rate of return over entire 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract | |
|---|---|---|---|
| | | Initial 5 Years | Last 22 Years |
| Contract Cost (NPV 2017) | $550 Million | $632 Million | |
| Monthly Average Ratepayer Impact Over First 5 Years | $0.09 savings | | |
| Monthly Average Ratepayer Impact Over Remaining 22 Years | $0.07 increase | | |
| Monthly Average Ratepayer Impact Over Entire 27 Year Contract | $0.04 increase | | |

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

- Below are illustrative estimates of potential GA savings if all contracts for large FIT and GEIA wind and solar projects in commercial operation are renegotiated according to the approaches illustrated above.
- Estimates are for large (10 MW or greater) FIT 1 and GEIA wind and solar projects in commercial operation, totalling about 2,700 MW of wind and about 900 MW of solar capacity. A 10 year contract extension is assumed at a price of:
  - **For Wind:** LRP I low weighted wind price of $64.5/MWh
  - **For Solar:** LRP I low weighted solar price of $141.5/MWh

**Potential Approach 1:**

| | **Current Contracts*** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $23.3 Billion | $23.1 Billion |
| Average Annual Contract Value (First 5 Years) | $1.6 Billion | $1.4 Billion |
| *Figures assume projects remain operational after contract expiry at the LRP I low weighted price inflated to the year of contract expiry, as per OPO assumptions . | | |

**Potential Approach 2:**

| | **Current Contracts** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $23.3 Billion | $25.6 Billion |
| Average Annual Contract Value (First 5 Years) | $ 1.6 Billion | $0.8 Billion |

**Source**: Figures reflect IESO contract data current as of Sept 2016. Also includes two Phase III solar projects (100 MW combined) that came online in late 2016 not included in Sept 2016 IESO contract data.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

- Contract re-negotiations could be piloted with large wind and solar contract holders.
- For example, the top 5 contract holders by portfolio value (online projects 10 MW and larger) include:

| Contract Holder | Technology | # of Contracts | Capacity (MW) | Estimated Value (NPV 2017) |
|---|---|---|---|---|
| Samsung* | Wind & Solar | 7 | 899 | $5.0 Billion |
| NextERA | Wind | 6 | 534 | $2.7 Billion |
| Northland Power | Wind & Solar | 15 | 290 | $1.8 ~~2~~ Billion |
| Pattern / Capital Power | Wind | 1 | 270 | $1.4 ~~5~~ Billion |
| ENGIE | Wind | 4 | 265 | $1.2 Billion |
| All Other | Wind & Solar | 76 | 1398 | $8.1 Billion |
| **Total** | **Wind & Solar** | **109** | **3654** | **$20.2 Billion** |

Source: IESO contract data current as of Sept 2016.
*Includes two Phase III solar projects (100 MW combined) that came online in late 2016 not included in Sept 2016 IESO contract data.

# 2b. Clean Energy Supply (CES) Contracts

- There are 13 natural gas facilities operating under Clean Energy Supply (CES) contracts. Given the current excess capacity, some of these facilities could be renegotiated to reduce output in the near term.

- In conjunction, OPG could seek to negotiate outright purchases of certain Ontario gas assets. Given the current excess capacity in electricity supply in Ontario, OPG can seek to negotiate outright purchases of certain Ontario gas assets and reposition them such that ratepayers would pay only for the "current need" component:
  - Contract terms would be renegotiated with the Province to temporarily idle the facilities;
  - Variable expenditures would be largely avoided with the facilities only incurring fixed costs; and
  - Plant life would be extended to a period post-2024 when additional power would be required.

- OPG has estimated monthly residential bill reductions of $2.37 to $4.00 from 2017 to 2019 if such an approach was taken for Ontario's gas portfolio.

- Natural targets would be assets that OPG either jointly owns (e.g., Portland, Brighton Beach) or operate on OPG's site with acquisition funding coming from Provincial borrowing.
  - Although OPG could also look beyond its facilities to the broader natural gas fleet in Ontario.

**Considerations**

- This proposal would reduce GHGs and provide some near-term cost benefits through lower staffing and maintenance costs:
  - Contract terms would be renegotiated with to temporarily idle the facilities;
  - Variable expenditures would be largely avoided with the facilities only incurring fixed costs; and
  - Plant life would be extended to a period post-2024 when additional power would be required.

- It will likely be challenging to find a willing seller and/or to negotiate a favourable price:
  - Sellers that are approached are in a strong position to extract value from OPG/the Province; and
  - Similarly, OPG's negotiating position would be weakened if this was viewed as part of the broader rate mitigation strategy.

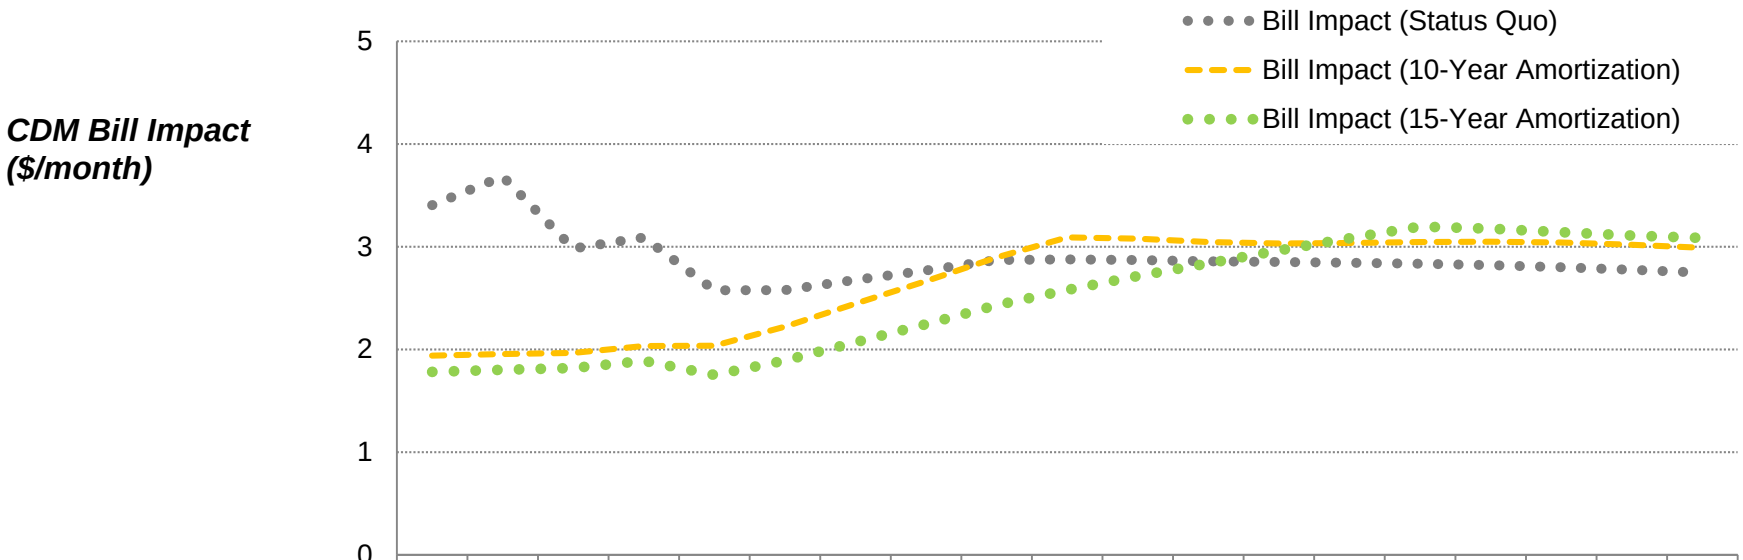
- In the past, OPG and IESO's contract renegotiations have been contentious and lengthy.

# 3. Amortize Conservation Program Costs

- This option would not be pursued if the Global Adjustment (GA) was financed (Option 1).
- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework (CFF) and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized. This would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs).
  - The time period over which costs could be amortized would be over the lifetime of funded CDM measures.
  - ENERGY would work with IESO to determine the appropriate lifetime period – the graph on the next slide, which illustrates residential bill impacts, presents two cases: **10-year and 15-year measure lifetimes**.
- In both cases, amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020. Over time the benefit would decrease and turn into a cost (higher electricity rates than would otherwise occur), as interest charges begin to grow. Estimated interest charges are as follows (a 3% interest rate is assumed; increases in interest rates could result in higher overall interest charges):
  - $712 million ($2016) – Amortizing eligible 2017-2035 CDM costs for 10-year period; and
  - $1.3 billion ($2016) – Amortizing eligible 2017-2035 CDM costs for 15-year period .
- Legislative changes would be needed to allow recovery of interest payments from ratepayers, or these costs could be recovered from the Consolidated Revenue Fund (CRF, or taxes).
- An alternative that could be explored would be to pay for CDM costs, or for a portion of these, from the tax-base (*see Appendix for more detail on tax funding option*).

# 3. Amortize Conservation Program Costs (cont'd)

## Conservation Residential Bill Impact – Status Quo, 10-Year and 15-Year Amortization



| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | 2035 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Bill Impact (Status Quo) | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | 2.68 | 2.77 | 2.87 | 2.88 | 2.87 | 2.86 | 2.85 | 2.84 | 2.83 | 2.82 | 2.80 | 2.78 | 2.75 |
| Bill Impact (10-Year Amortization) | 1.94 | 1.95 | 1.97 | 2.03 | 2.04 | 2.22 | 2.45 | 2.67 | 2.90 | 3.09 | 3.08 | 3.05 | 3.03 | 3.04 | 3.04 | 3.05 | 3.04 | 3.02 | 2.99 |
| Bill Impact (15-Year Amortization) | 1.78 | 1.80 | 1.82 | 1.89 | 1.75 | 1.89 | 2.07 | 2.25 | 2.43 | 2.58 | 2.71 | 2.84 | 2.96 | 3.08 | 3.20 | 3.18 | 3.14 | 3.11 | 3.09 |

Source: IESO; Ministry of Energy

**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10 of 15-year borrowing rate of 3.0%.

# 3. Amortize Conservation Program Costs (cont'd)

**Considerations**

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 3. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- ENERGY has received an opinion on the proposal to amortize CDM costs from IESO's external auditor.
  - Ernst and Young indicated that an argument could be made to support the recognition of the costs as an asset as the costs meet essential asset characteristics, as prescribed by PSAB.

- ENERGY staff have developed a note to seek an opinion from the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.

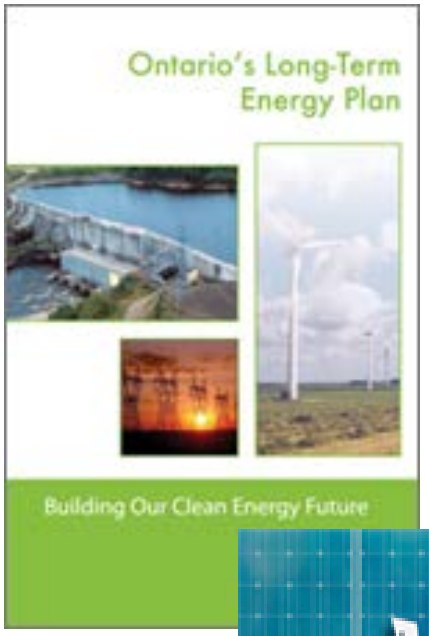
- If there is a desire to pursue this option, ENERGY would seek a formal opinion from the OPC on whether CDM costs could be amortized according to rate-regulated accounting standards, ENERGY would send its note along with IESO external auditor's opinion to OPC.
  - In 2013 when this option had been explored, staff at the OPC agreed with the view that amortized conservation costs can be considered as assets, but noted that the Auditor General may disagree with considering amortized conservation costs as assets.

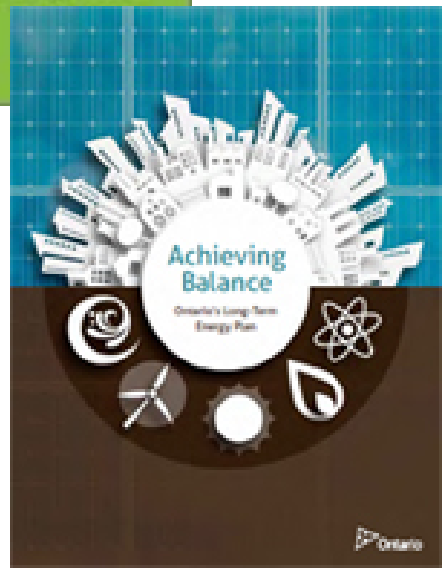
- Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# Long-Term Energy Plan

# Longer-Term Energy Plan – Overview

- The Long-Term Energy Plan (LTEP) is the energy sector's roadmap, with a focus on integrated policy and setting the direction for Ontario's energy future.
- The 2013 LTEP included content on both Ontario's electricity as well as fuels sub-sectors. The next LTEP will integrate the electricity and fuels sub-sectors to provide a complete picture of Ontario's energy system.
- Developing the LTEP is a highly collaborative process in which ENERGY and IESO directly engage with stakeholders, indigenous communities and the public.
- The Ministry sought stakeholder as well as public feedback through in-person engagement sessions, online tools, and an Environmental Registry posting.
- The Ministry is currently developing the next LTEP, and is targeting a tentative April 2017 release date.





# LTEP – Process and Timeline

**Jan - Feb**
Policy Development

- Ministry staff to review engagement feedback and to provide recommendations for DMO/ MO and Minister on LTEP policies and themes.

**Feb - March**
Modeling

- Additional modelling to inform potential initiatives and themes will be made to IESO/other modelers to update outlooks.
- Policy decisions may be adjusted based on modeling outcomes.

**March**
Plan development

- Ministry will prepare LTEP submission and IESO/OEB implementation directives for Cabinet Approval.

**Early April**
Cabinet Approval

- Cabinet approves LTEP document; as well as IESO/OEB implementation directives

*Writer to work alongside and participate in briefings and theme development.*

**Early – Mid April**
Finalize and produce document

- Layout/ graphics/ translation of final document
- Ministry staff provide final review

**End April**
Publish LTEP and implementation directives

- Final LTEP published on ENERGY website
- Minister issues Cabinet-approved implementation directives to IESO & OEB
- LTEP lockup

**May – July**
Implementation Plan Development

- IESO and OEB develop implementation plans based on directives

**Aug – Sept 2017**
Implementation Plan Approval

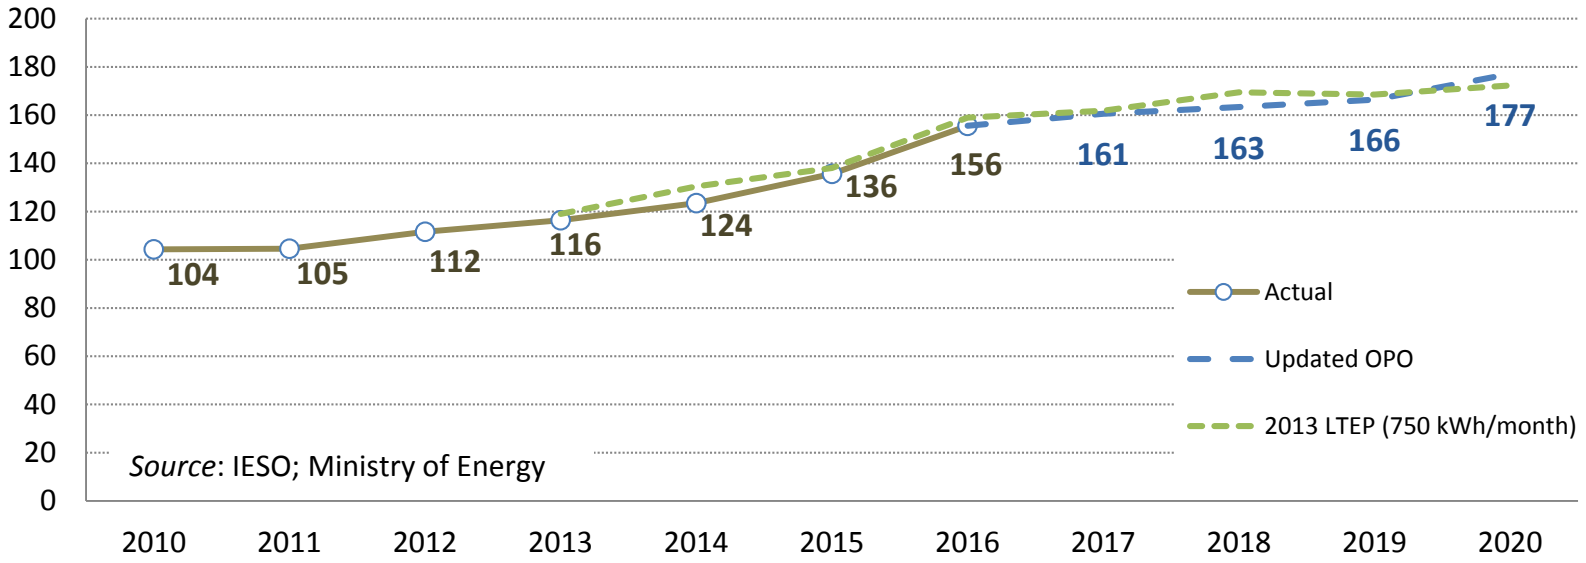
- Implementation plans submitted to Minister of Energy for approval

# Appendix

# Context – Residential Electricity Prices

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bill is currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecast.

**Typical Residential Electricity Bills**
*Historical and Forecast in $/month*

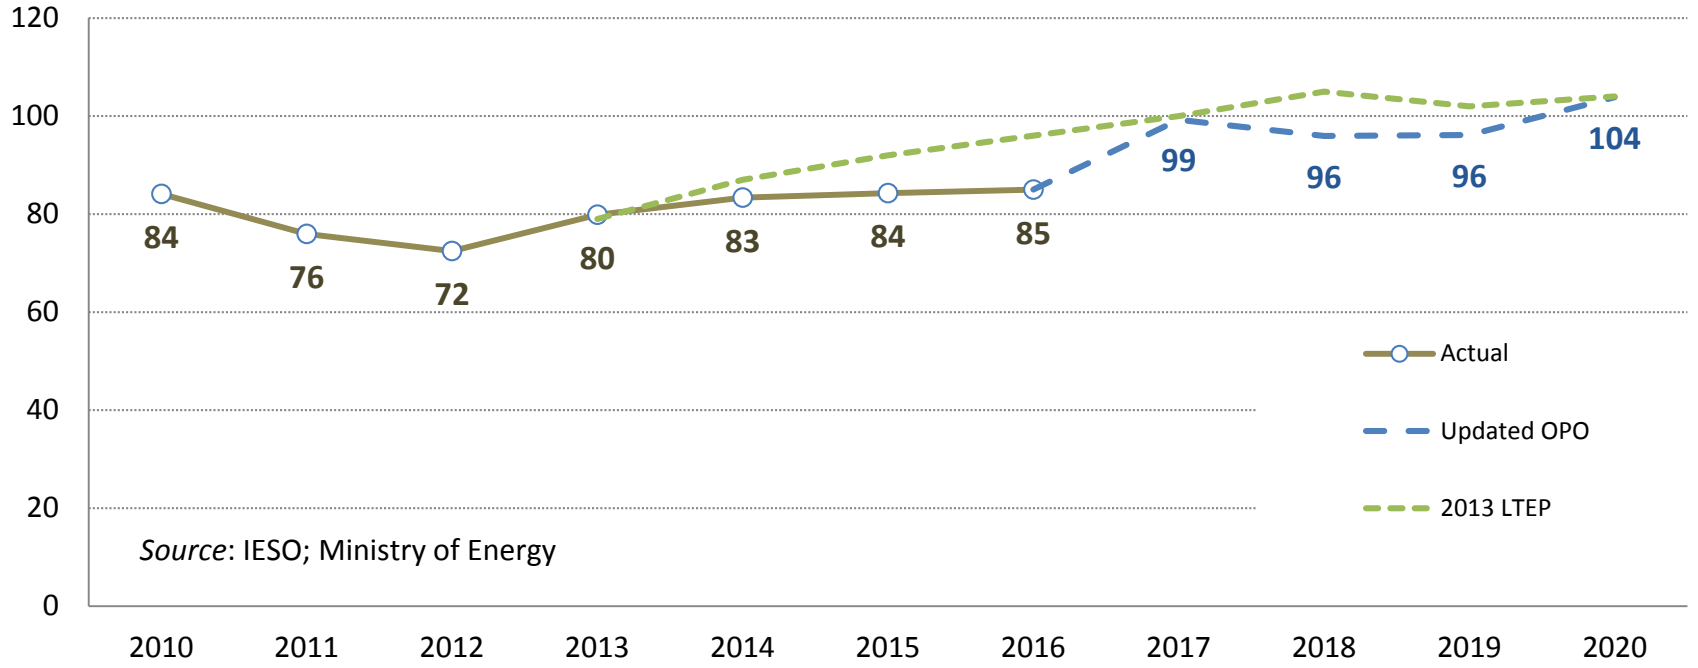


**Note**: The 2013 LTEP forecast for residential bills was based on 800 kWh/month without RRRP or electric heating; the above has been rebased to 750 kWh/month for comparison purposes. Typical residential are based on Toronto Hydro. The updated OPO forecast above includes the 8% rebate to offset the provincial portion of HST, ICI expansion and RRRP expansion.

# Context – Large Industrial Electricity Prices

- Industrial electricity prices continue to be a concern for many businesses.
  - **Note:** The typical industrial electricity price is currently below the 2013 LTEP forecast.

**Typical Class A Electricity Prices**
*Historical and Forecast in $/MWh*



**Note**: The 2013 LTEP forecast for industrial reflects a transmission connected Class A electricity consumer. The updated OPO forecast above includes ICI expansion and RRRP expansion.

# Global Adjustment (GA) Financing

- The global adjustment (GA) is comprised of costs for regulated and contracted generation, as well as conservation.
- Some contracted generation assets are expected to have a useful life that extends beyond the term of their current financial contracts (typically 20-years).
- Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives provide benefits to the electricity system over the course of many years.
- Since the GA only includes costs related to the contractual life of these assets, there may be an opportunity to recognize the longer-term benefit of these assets to the electricity system and “bring forward” that benefit for ratepayers today, while deferring some of the current costs.
- An indicative GA financing proposal is presented that lowers ratepayers costs over the short term by borrowing money but increases costs over the long term when GA costs are forecast to be lower.
- **Note:** Not all generating assets will continue operations at the end of their contract term. Regulatory constraints (i.e., nuclear licences) or low demand conditions (i.e., as experienced with current expiring NUGs) would mean that some generators will shutdown at the expiry of their contract. Future ratepayers would be paying for these assets that are no longer producing power.

# GA Financing – Considerations

**Considerations**

- Borrowing money to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - Deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" in the sector. **Note:** the Debt Retirement Charge (DRC) was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

- The GA financing proposal involves borrowing large amounts of money over a long period of time (16-30 years, depending on the scenario) to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on electricity rates. A long-term interest rate of 5% is assumed for this analysis.

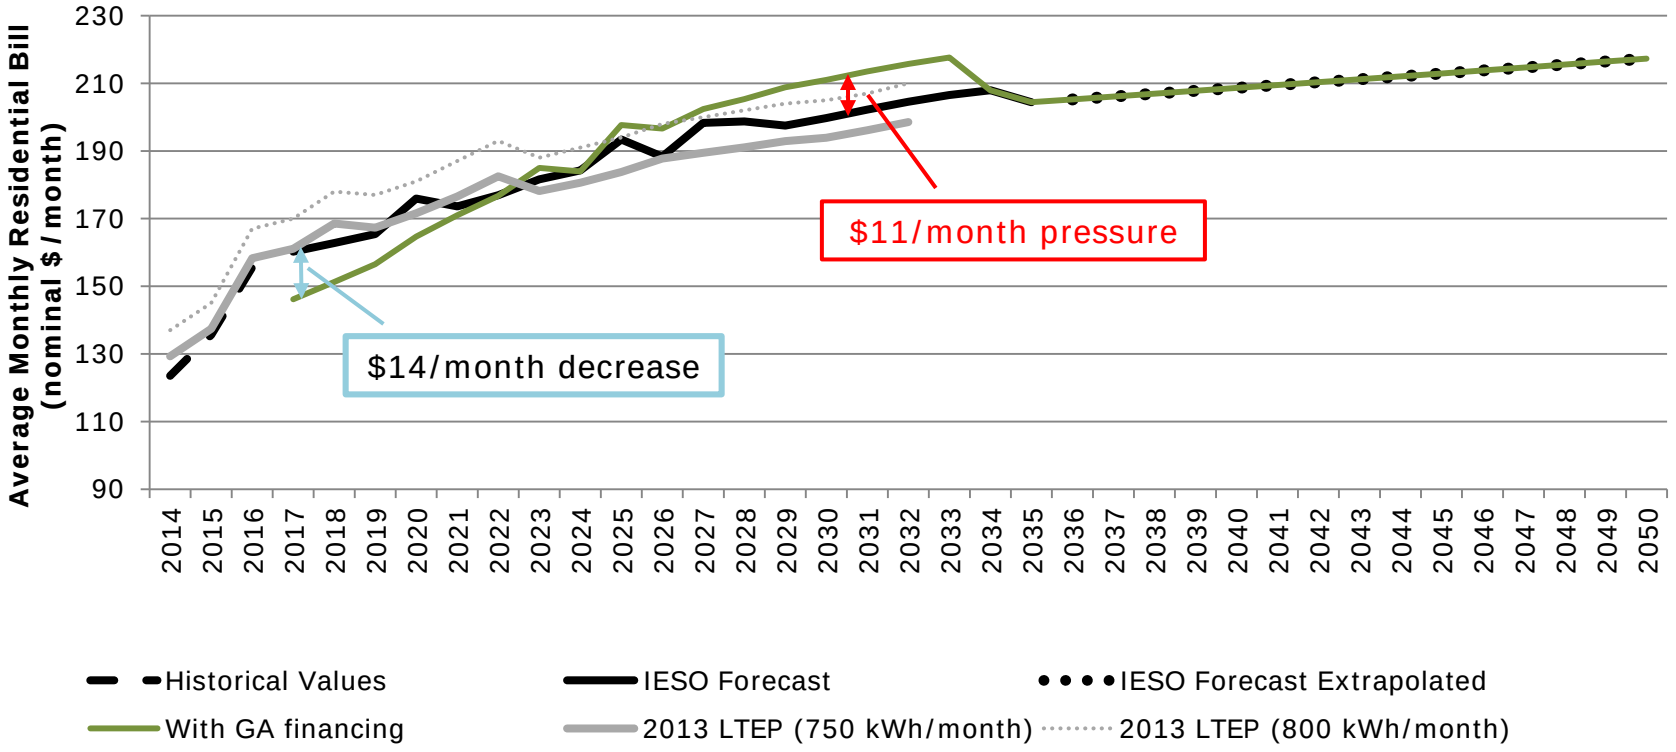
- GA and HOEP provide a natural hedge against each other – when one goes up, the other goes down – keeping total electricity costs relatively stable and predictable. Smoothing only the GA would lead to greater price volatility for consumers unless the schedule and amount of ratepayer payments was defined relative to the actual cost of GA.

- Some Class A consumers pay limited GA and would receive little benefit under the financing proposal. These consumers also currently pay very low rates. In addition, in recognition that Class B electricity consumers pay the majority of GA costs, could limit GA cost reductions through financing to Class B consumers only.

- Should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Low / GA Financing – Impact on Residential Electricity Bills

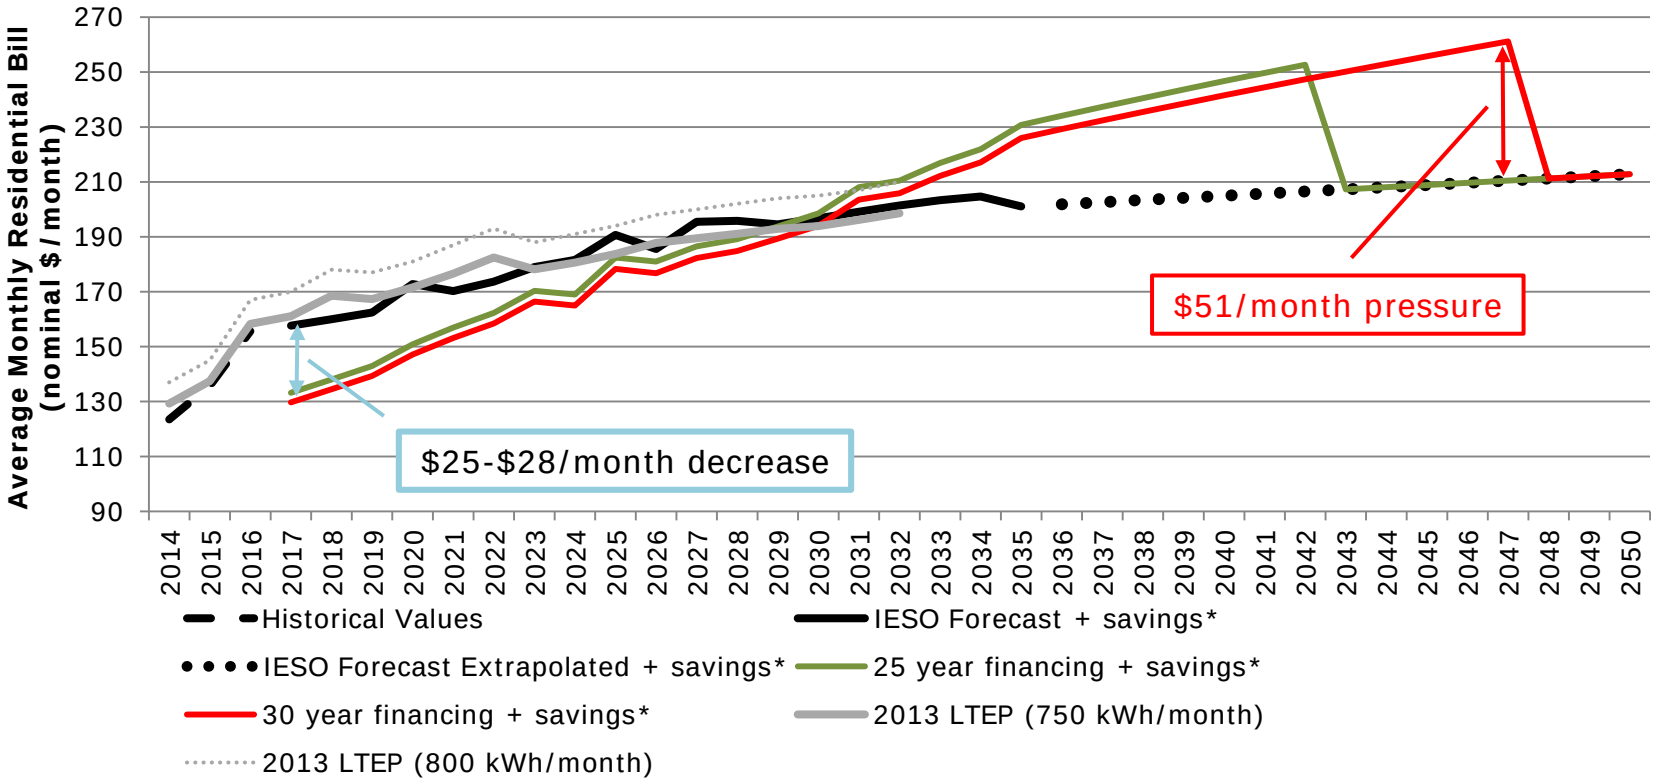
- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $2.5 billion and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 2032.



- By **borrowing up to $9.3 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $14/month** at the cost of **increased future electricity bills over 10 years of up to $11/month** above the true cost of electricity production.

# High / GA Financing – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $4.4 and $5 billion and increases at 2% each year until the borrowed money is paid back over a 25 and 30 year financing period respectively.

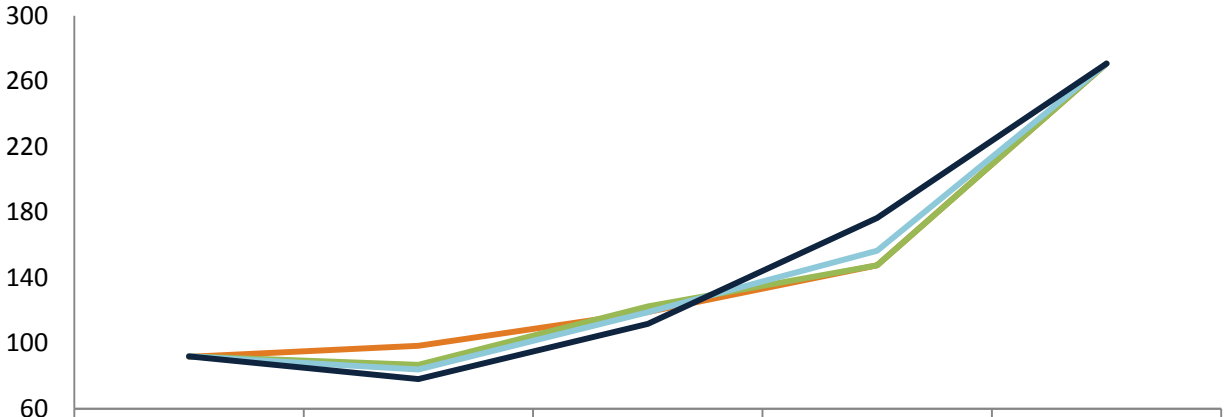


- By **borrowing up to $65 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $25-$28/month** at the cost of **increased future electricity bills over 12-17 years of up to $46-$51/month** above the true cost of electricity production.

# GA Financing – Impact of the Level of Financing on Large Industrial Electricity Consumers

- Below graph illustrates the estimated impact of the level of GA financing for an average Class A electricity consumer over a 25 year amortization period.

**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



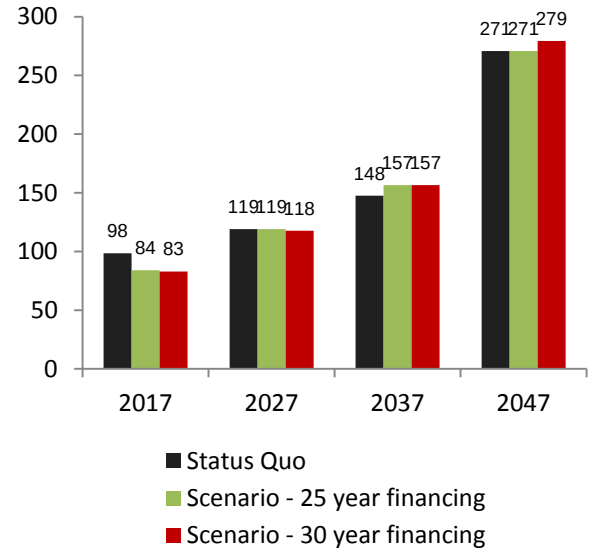
| | 2016 | 2017 | 2027 | 2037 | 2047 |
|---|---|---|---|---|---|
| Status Quo | 92 | 98 | 119 | 148 | 271 |
| Low Financing | - | 87 | 122 | 148 | 271 |
| Moderate Financing | | 84 | 119 | 157 | 271 |
| High Financing | | 78 | 112 | 177 | 271 |

**Note:** Assumes that demand by industrial sector continues at average 2011-2015 levels. Please see the Appendix or more information on the estimated impact on large industrial electricity consumers.

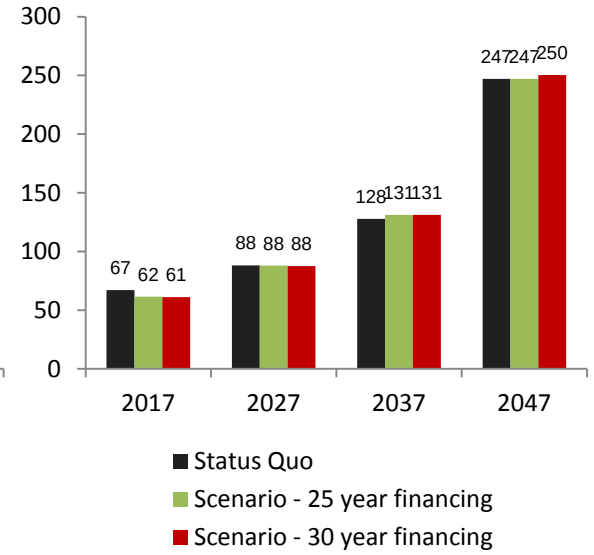
# GA Financing – Illustrative Impact for Large Industrial Electricity Consumers

- Below graphs illustrate the estimated impact under the moderate GA financing scenario for an average Class A electricity consumer, a consumer that pays low GA (i.e., pulp and paper) and high GA (i.e., refining and chemical manufacturing).

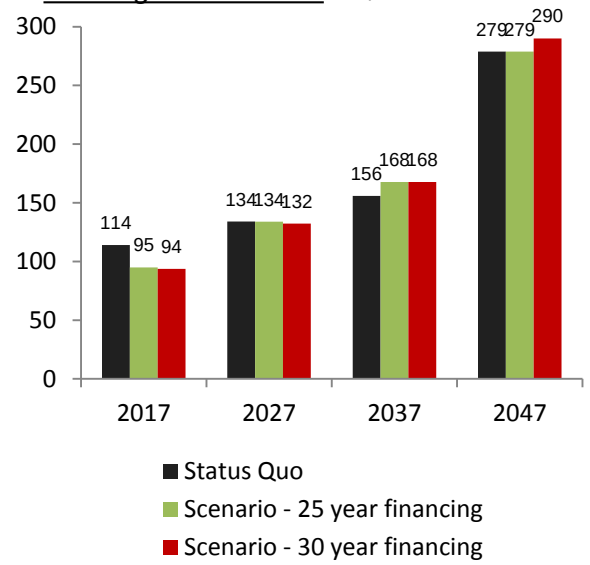
**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



**Estimated All-In Electricity Price**
*for Pulp & Paper in $/MWh*



**Estimated All-In Electricity Price**
*for Refining & Chemicals in $/MWh*



**Note:** Assumes that demand by industrial sector continues at average 2011-2015 levels.

# Other Options Considered – Typical Residential Electricity Consumer

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| Conservation Funding Options | | | | | | | |
| a. Amortize Conservation Program Costs (15-Year Amortization) | 1.62 | 1.88 | 1.16 | 1.20 | 0.82 | 0.69 | Immediate |
| b. Fund Conservation Programs Through The Tax-Base | 3.47 | 3.83 | 3.17 | 3.35 | 2.84 | 2.90 | Immediate |
| Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |
| Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc.) | - | - | - | 2.16 | 2.16 | 2.17 | Medium to Long-Term |
| Dedicate Departure Tax | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | Immediate |
| Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Options Considered – Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| Conservation Funding Options | | | | | | | |
| a. Amortize Conservation Program Costs (15-Year Amortization) | 1.12 | 1.30 | 0.80 | 0.83 | 0.57 | 0.47 | Immediate |
| b. Fund Conservation Programs Through The Tax-Base | 2.88 | 3.17 | 2.66 | 2.77 | 2.36 | 2.41 | Immediate |
| Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |
| Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc.) | - | - | - | 1.79 | 1.79 | 1.79 | Medium to Long-Term |
| Dedicate Departure Tax | 1.86 | 1.86 | 1.86 | 1.86 | 1.86 | 1.86 | Immediate |
| Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Distribution Rates & Cost Mitigation

January 2017

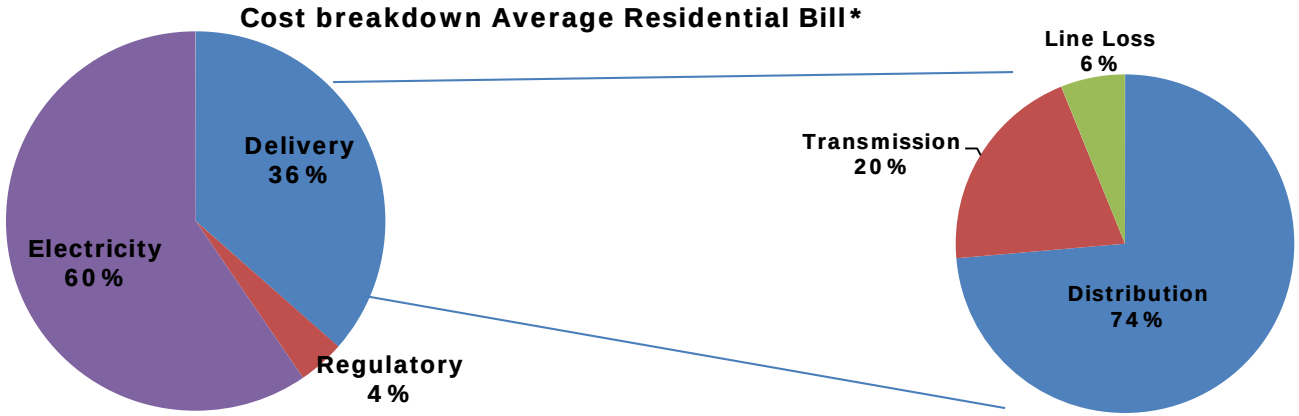
# Presentation Overview

- The delivery charge covers the cost of delivering electricity from generating stations across the province to end users.
  - It includes charges to allow Local Distribution Companies (LDCs) to recover the distribution costs associated with delivering electricity across low-voltage networks;
  - costs to cover transporting electricity over the high-voltage transmission network; and
  - costs to pay for any electricity that was lost during the delivery process.
- This presentation provides an overview of the delivery charge, including distribution & transmission rates; how distribution rates are set, who sets them and opportunities to contain those costs.
- The deck is divided into three main sections:
  1. Overview of Delivery Line Costs
  2. Existing Rate Mitigation Measures
  3. Further Rate Mitigation Options

# Overview of Delivery Line Costs

# Typical Consumer Bill – Delivery Line

- The "**Delivery"** line on a typical consumer bill accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and encompasses the sum** of three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system.
    - This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when it is delivered over a power line.
    - Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.



** The combination of these charges into "Delivery" and their appearance on the bill are prescribed by O. Reg 275/04

* Toronto Hydro Bill @ 750Kwhs

# Delivery Line: Distribution Costs

- **Distribution costs** are the costs needed for LDCs to deliver electricity to local consumers over the lower-voltage networks operating at below 50 kV. Costs cover activities such as
  - Designing, building and maintaining overhead and underground distribution lines, poles, stations and local transformers,
  - Operating local systems (including reading meters, providing customer service, and emergency response)
  - Delivering electricity from the transmission system to homes and businesses, and
  - Regulated profit
- The cost to deliver electricity is not uniform and varies from LDC to LDC depending on a number of different cost drivers including:
  - Differences in business conditions and service territory among LDCs e.g. costs to service an urban service territory vs a rural service territory, ratio of overhead vs. underground wires, expanding customer base vs. stagnating or declining customers, relative age of assets; i.e. new system vs. old system;
  - Short-term rate impacts (both up and down) due to temporary additional charges known as “rate riders”; and
  - Management decisions with respect to investment and expenditure.
- In order to recover the costs to deliver electricity to its customer base LDCs charge customers distribution rates for the services that they provide.
  - These rates are regulated by the Ontario Energy Board.
  - As a result of investment requirements and other planning/policy decisions, distribution rates have been rising in recent years (see appendix).

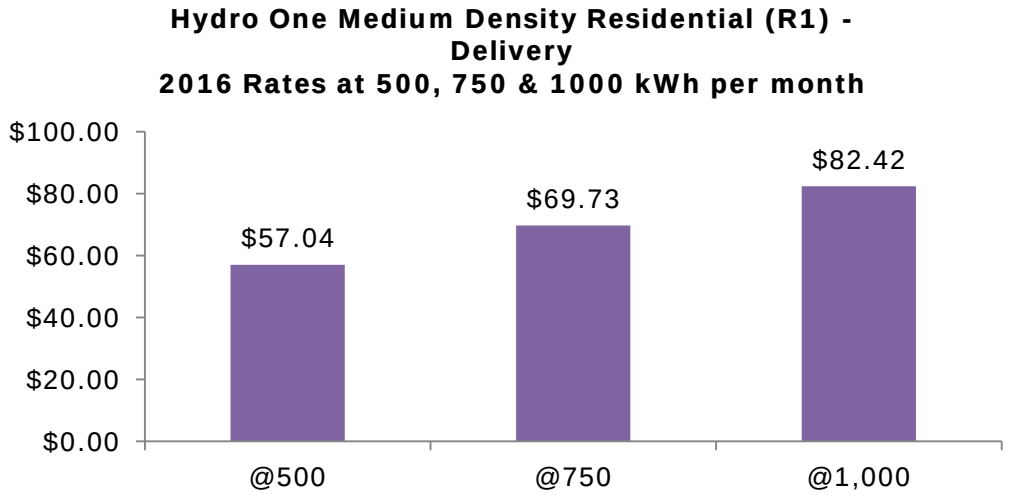
# Delivery Line: Transmission & Line Loss Costs

- **Transmission Costs** represent the costs associated with delivering electricity to LDCs through the high voltage transmission networks operating at 50 kV and above. Costs cover activities such as:
  - Designing, building and maintaining the high voltage transmission lines and towers, transformer stations, transmission corridors, and vegetation management,
  - Providing services and emergency response to maintain transmission system reliability,
  - Delivering electricity at high voltages to LDCs from generation sources,
  - Regulated profit.
  - Transmission rates charged to recover transmission costs from LDC residential customers are not uniform across the province. The vary based on how individual LDCs use the transmission system.
  - LDCs do not earn any profit or markup on transmission costs. These costs are simply passed through to customers distribution customers
- **Line Loss Costs** represent costs associated with distribution system losses. These losses occur during the distribution of energy through conductors and transformers. Losses can also occur through theft and metering errors, etc.
  - Distribution systems that operate at lower voltages and lower customer density have higher distribution losses. Therefore, line losses vary throughout the province.

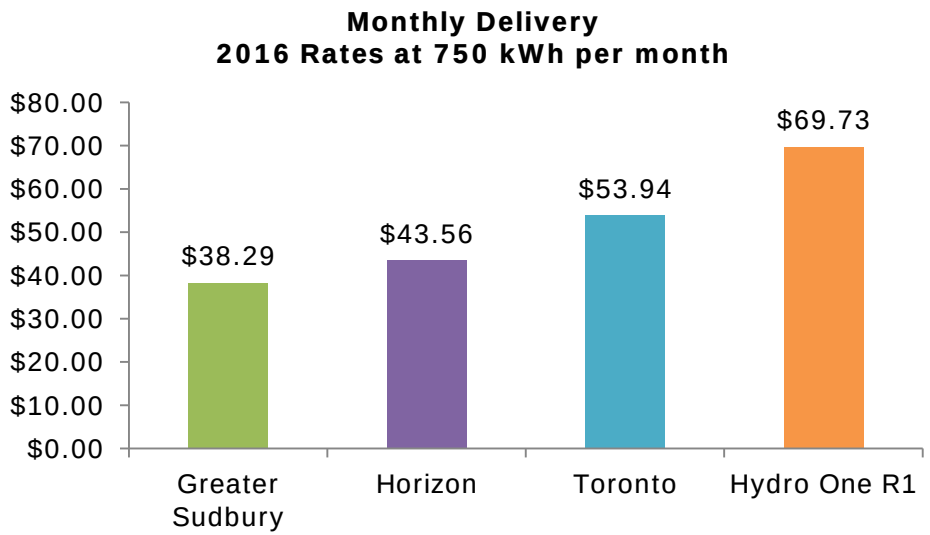
# Role of the Ontario Energy Board

- LDCs are licensed and regulated by the Ontario Energy Board (OEB), a quasi-judicial body responsible for regulating the electricity and natural gas sectors in the public interest.
- The OEB currently sets the rates for 69 LDCs across the province.
    - LDCs recover their costs (revenue requirement) through the distribution rates approved by the OEB.
- Costs to provide distribution services are unique to each LDC, which is why the OEB, through its rate-setting processes, undertakes comprehensive reviews of each utility's specific costs in order to set just and reasonable rates for each LDC.
- In addition to approving the amount of allowable costs LDCs can pass on to customers through rates, the OEB must also approve how those costs are allocated to the different customers of an LDC (i.e. residential, commercial, industrial), as well as the specific rates to recover those approved costs.
- The OEB uses an adjudicative process to set rates – see the slide "Setting Distribution Rates" in the appendix for more details on the process.

# Variation of Delivery Costs Across and Within LDCs

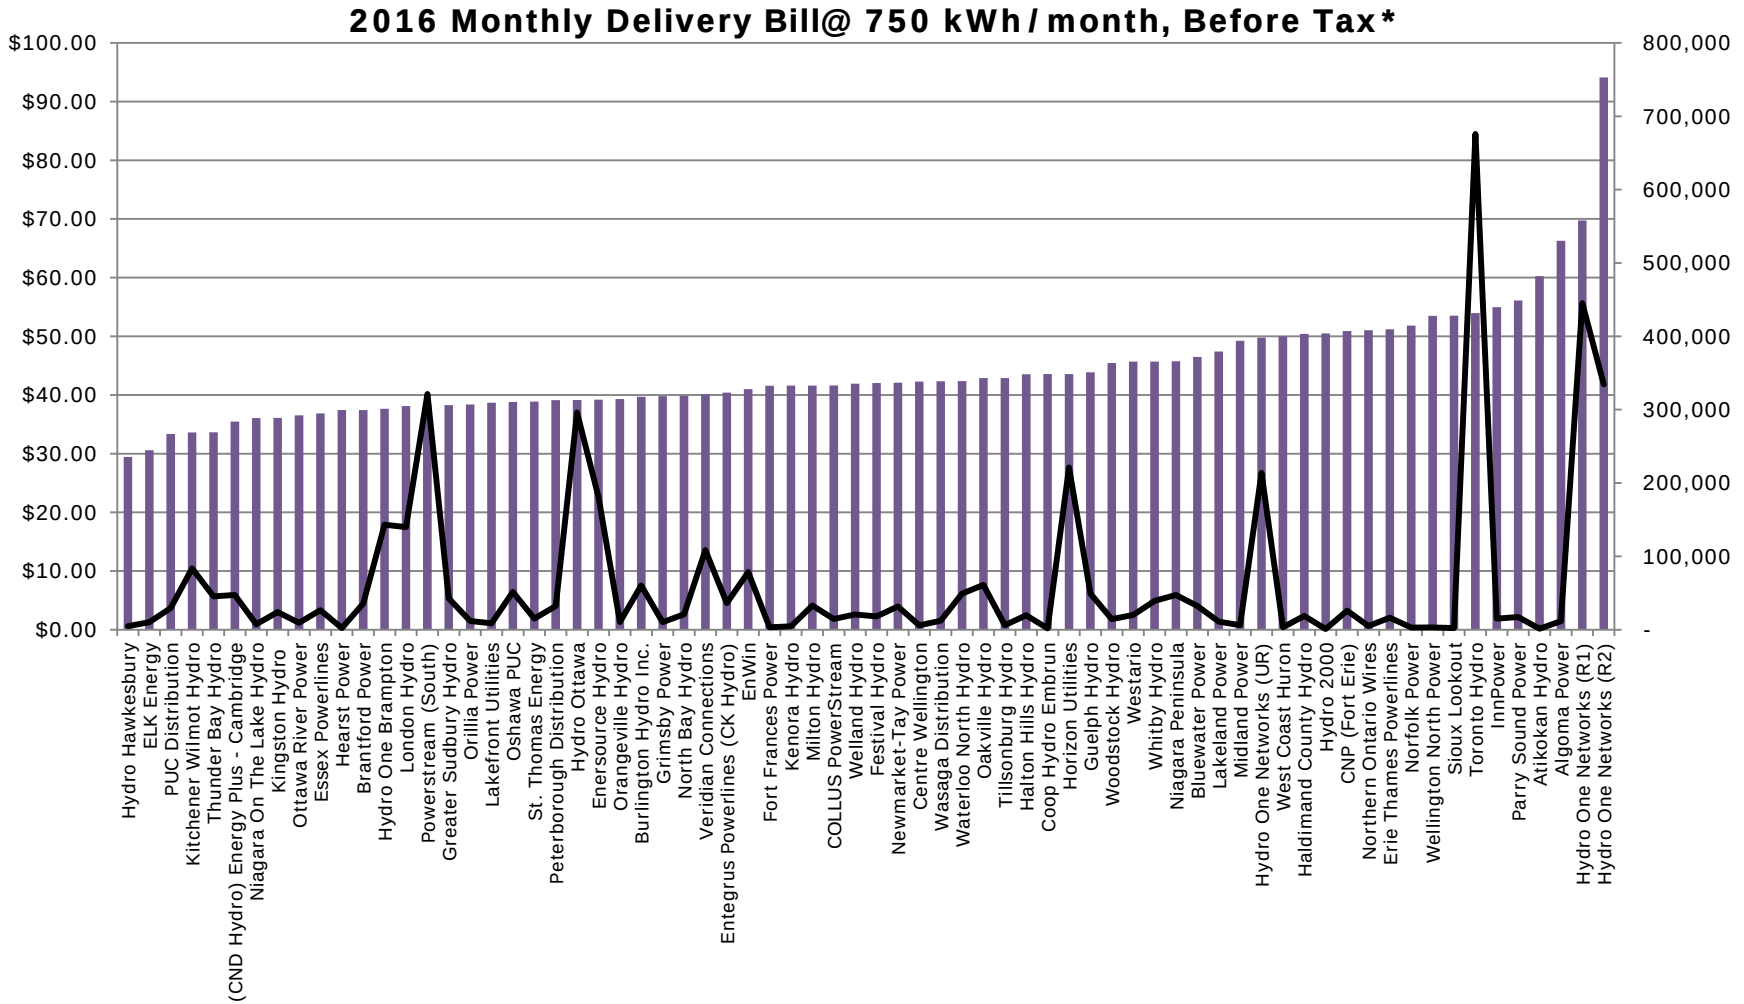


- Consumers within same LDC pay different monthly delivery charges:
  - The delivery charge includes costs that are both fixed and volumetric.
  - Delivery will vary for different customers depending on the total amount of kWhs consumed in a billing period.



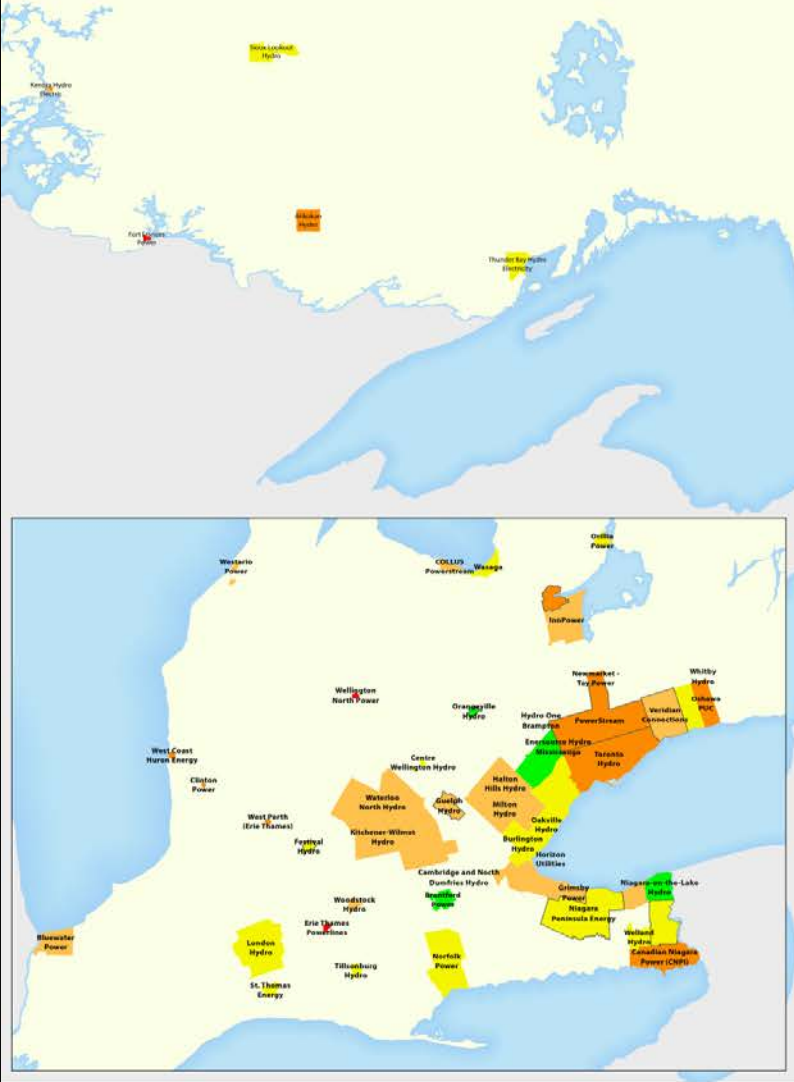
- Consumers with the same monthly consumption but served by different LDCs pay different delivery charges
  - The delivery charge can vary substantively for different LDCs, mostly due to the distribution cost component.
  - Approved revenue requirement for distribution rates, transmission rates and line loss factors are unique to each LDC.

# Wide Variation in Delivery Rates Across the Province



* Hydro One customer numbers are for 2016 and divided by rate class. Reflects RRRP as set for 2016 ($31.50)

# LDC Distribution Rate Changes (2006 vs 2016)



| Total Dx Rate | 2006 | 2016 | % Rate Change |
|---|---|---|---|
| Hydro One UR (High Density) | $29.13 | $35.65 | 22.4% |
| Hydro One R1 (Medium Density) | $37.73 | $54.02 | 43.2% |
| Hydro One R2 (Low Density) | $44.65 | $76.14 | 70.5% |

## Legend

**LDC Rate Comparison 2006 vs 2016**

**% Total Rate Change ( # of LDCs )**

- -17.3% to 0% ( 5 )
- 0.1% to 15% ( 25 )
- 15.1% to 30% ( 21 )

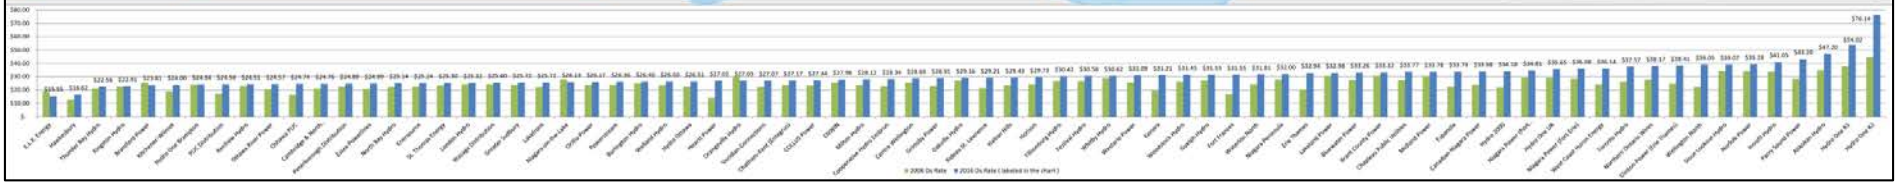
## KEY FINDINGS

- In summary, distribution rates (including rate riders) have increased by about 24.5% across the Province, with significant variation between regions and LDCs (-17% to 148%).
- There is generally no correlation between LDC size or location and distribution rate increase in absolute or percentage terms.
- The current analysis shows no clear relationship between the percentage rate increase and the absolute rate level (that is, high rate increase LDCs may still have among the lowest rates, and low rate increases may have higher rates.
- No clear relationship between amalgamation and rates.
- The analysis does suggest that Hydro One has the highest rates, and some of their customers have seen higher than average rate increases.

## NOTES

- **Rate Calculation:** Monthly residential distribution bill rates, before taxes, are based on consumption of 750 kWh. Distribution charges account for approximately 23% of the average 2016 residential bill.
  All figures calculated by ENERGY staff without input from OEB.
- **Colours:** Colour coding of the map only depicts the change in LDC rate amounts (i.e. LDCs in red don't necessarily have the highest total rates).
- **Mergers:** Rates for customers in merged LDCs have experienced different levels of change. For merged entities, the largest LDC in 2006 was used. An accompanying map focuses on merged entities.
- **Points in Time:** Current analysis compares 2016 and 2006 only. Rates could have had an uneven trajectory, especially considering regulatory decisions such as time limited charges/rebates with temporary impacts.



# OEB Mandating Move to Fixed Distribution Rates

- By 2019, the variation of delivery costs across customers within the same LDC will level off, as the distribution charge (which makes up ~3/4 of the delivery charge) is moving to a fully fixed charge.
    - Currently, electricity distributors recover their costs through a combination of a fixed monthly charge and a volumetric charge based on kilowatt hours used, but the OEB is phasing in fully-fixed distribution rates. Most LDCs will have fully fixed rates within four years, with some variation to mitigate significant rate impacts for some customers.
- According to the OEB, fully fixed distribution rates will help achieve three main objectives:
    - It will enable residential customers to leverage new technologies, manage costs through conservation, and better understand the value of distribution services.
    - It is a fairer way to recover the costs of providing distribution service.
    - It will provide greater revenue stability for distributors, which will position them for technological change in the sector, remove any disincentive to promote conservation, and help with their investment planning.
- As LDCs transition to a single fixed charge to access the system, customers with the lowest consumption will pay more for distribution, while customers with high consumption will pay less.
- For customers of Hydro One Networks, the OEB approved a five-year transition to fixed distribution rates for its high density urban residential rate class (UR), and an eight-year transition for medium- and low-density residential (R1 and R2) and seasonal residential rate class customers.
    - This is to allow the impact of the change to be held at less than 10% for low volume customers at the $10^{th}$ percentile of consumption.
- The OEB is currently working on an initiative to look at the rate design of Commercial and Industrial Customers as well.

# Existing rate mitigation measures

# Rural or Remote Electricity Rate Protection (RRRP)

- There are existing rate-payer funded mechanisms in place to provide delivery charge protection to consumers who live in areas that are very costly to serve.
- The Rural or Remote Electricity Rate Protection (RRRP) is a rate subsidy intended to moderate charges for electricity distribution in lower density rural and remote areas where costs to serve customers are higher than for urban/more densely populated areas.
    - RRRP is provided to rural grid-connected residential customers served by Hydro One (R2 rate class) and to customers of Algoma Power.
    - RRRP also supports costs to provide electricity service to off-grid remote communities served by Hydro One Remote Communities, and three James bay communities connected to the grid (Fort Albany, Attawapiskat and Kashechewan).
- RRRP is governed by S.79 (2) of the Ontario Energy Board Act, 1998 (OEBA) which requires rate protection for prescribed rural and remote customers.
    - It also allows the government to determine cost protection, recovery, and rate classes through regulation (O.Reg 442/01).
- In the September 2016 Speech from the Throne*, the government announced an enhancement to RRRP to increase the amount of rate protection for Hydro One R2 customers. The cost of RRRP, including this enhancement, is expected to be about $290M annually.
    - As of January 1 2017, the RRRP subsidy supporting approximately 330,000 Hydro One R2 customers increased from $31.50/month to $60.50/month.
    - Hydro One customers classified as R2 have the highest distribution costs across the province.
- Costs to support the program are recovered through a regulated charge on all customers approved by the OEB and collected by the Independent Electricity System Operator (IESO) on all electricity used in the Province.
    - For 2017, an average residential consumer (750kWh/month) pays $1.58/month to contribute to RRRP.

# Other Rate Mitigation Programs

**Ontario Electricity Support Program (OESP)**

- The Ontario Energy Board (OEB) has developed the OESP, which provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements.
    - The OESP credit amount qualified customers receive is based on household income and household size.
    - OESP monthly credits range from $30-$50.

**The Low-Income Energy Assistance Program (LEAP)**

- LEAP, introduced by the OEB in January 2011, is a comprehensive province-wide strategy designed to help qualifying low-income consumers. The program includes:
    - Emergency financial assistance: A one-time grant towards your electricity or natural gas bill if you are temporarily unable to make ends meet in an emergency situation.
    - Special rules – Utilities have to follow special rules when dealing with customers with limited finances; for example, waiving security deposits, allowing longer payment times and more.

**Ontario Energy and Property Tax Credit (OEPTC)**

- OETPC provides low- to moderate-income individuals and families with relief on the sales tax they pay on energy and with their property taxes. Since July 2012, the OEPTC is paid monthly as part of the Ontario Trillium Benefit delivered through the income tax system. For the 2016 benefit year, qualifying individuals and families could receive a maximum benefit of $1,008 per year, and qualifying seniors could receive a maximum benefit of up to $1,148.

**Northern Ontario Energy Credit (NOEC)**

- NOEC provides targeted assistance to low- to moderate- income individuals and families living in northern Ontario who can be exposed to higher energy costs due to more severe winters and heavier reliance on more expensive home heating fuels. NOEC is paid monthly as part of the Ontario Trillium Benefit and is delivered through the income tax system. For the 2016 benefit year, qualifying individuals received up to $146 annually and families (including single parents), received up to $224 annually.

# Further Rate Mitigation Options

# Program Proposal: Delivery Charge Relief

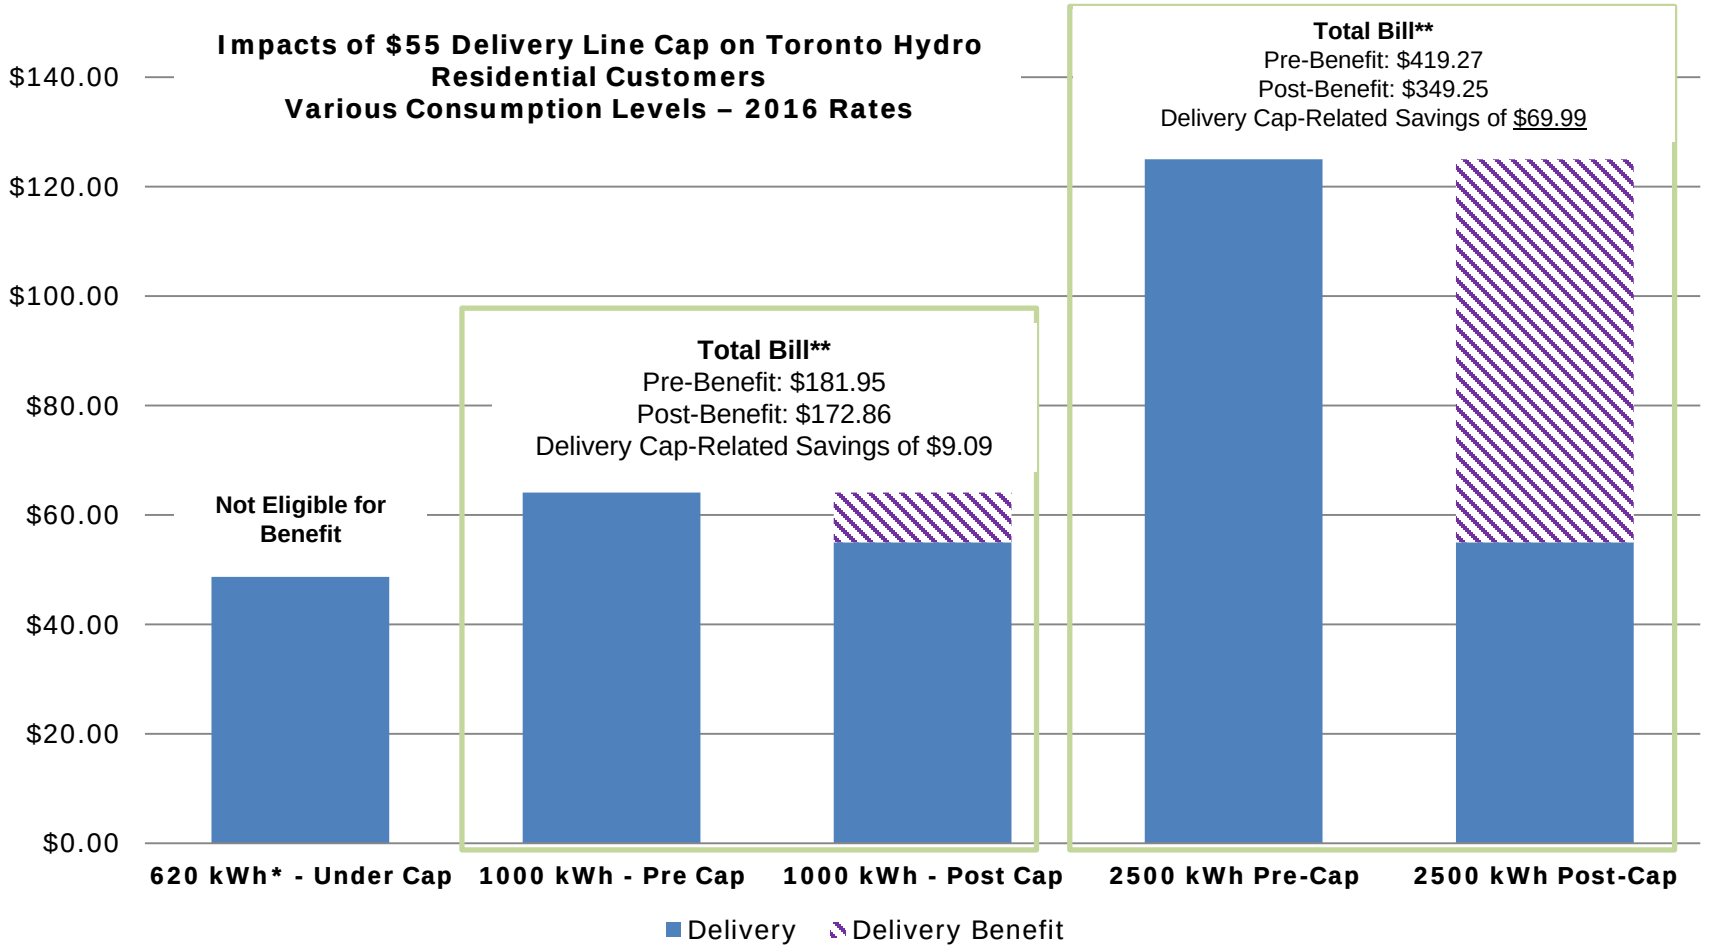
- To provide further relief for customers across the province, the province could create a 'customer-specific' program that would cap the delivery line cost.
- The proposed program would limit the amount an LDC can bill consumers for Delivery at a to-be-determined reasonable cost. Delivery costs that exceed the cap would be covered by support from the fiscal plan.
- The proposed program would target customers within the LDC territory based on their Delivery cost.
    - Delivery costs vary month to month and LDCs will need to keep track of the customers who will receive the receive the additional support.
- Eligibility for increased protection would be based solely on delivery charges above the established threshold and therefore would not be specific to any one LDC. All LDCs must be prepared to offer the program to some of their customers

o A delivery line item cap of **$55-$60** would align with what a Toronto Hydro customer consuming between 750-1000kWhs would pay in delivery costs (2016 rates).

- Additional information on fiscal projections and ratepayer impacts to be provided.

# Delivery Charge Relief: Ratepayer Impacts

- Below is an example of a Toronto Hydro customer at different consumption levels and the level of subsidy they would receive.



*620kWh is the average Toronto Hydro residential consumption level. ENERGY estimates 17.5% of Toronto Hydro consumers average >1000kWh/month.

** Includes Electricity, Delivery, and Regulatory Charges. Excludes HST and 8% rebate.

Ontario

MINISTRY OF ENERGY

# Delivery Charge Relief: Fiscal Considerations

- Setting a cap or threshold for maximum delivery charges is a more equitable approach to providing increased rate relief, as it is not specific to any one LDC and it targets rate protection for those with the highest delivery costs.
    - Eligibility for increased protection would be based solely on delivery charges above the established threshold and therefore would not be specific to any one LDC. All LDCs must be prepared to offer the program to some of their customers.
    - This program would be in addition to the existing RRRP program, which should remain as rate-payer funded protection for costs specifically driven by low-density.

**Risks**

- Costs and ratepayer impacts depend on the number of customers within each LDC whose delivery charges exceed the cap.
    - Costs to the tax base will fluctuate seasonally and will have year-over-year changes, creating uncertainty in forecasting. Ministry is preparing case study analysis.
    - Costs for LDCs to implement is likely material for many distributors to upgrade customer billing systems. Those costs would ultimately be passed back to the customers of those LDCs.
- There is a high risk of entrenching external subsidies, as there is no clear path to transition away from subsidies and toward a more sustainable, cost-based rate framework.

# Delivery Charge Relief: Implementation Considerations

- LDCs would track credit variances in a variance account and settle amounts with the IESO, which receives taxpayer funding from ENERGY/MoF in the same manner as the 8% rebate happens today.
    - While this new program would build on exiting transfer payment protocols in use under the ORECA, it would be complex for LDCs to implement, as CIS upgrades are likely needed.
    - OEB estimates that the implementation would take at least 6 months or more, following finalized regulations, given need to change customer billing systems and determine settlement procedures.
- This program structure could be temporary until the completion of the OEB-mandated move to completely fixed distribution costs, scheduled for 2019 (2020-2022 for Hydro One), as there would no longer be distribution cost variance between customers of the same LDC.

**Risks**

- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis.
    - Capping delivery charges may impact OEB rate-setting processes and create disincentives towards utility productivity and performance improvements.
- Carrying costs for LDCs may also be a challenge for some LDCs with cash-flow constraints, and may affect debt-to-equity ratios.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.

# Delivery Charge Relief: Options for Setting a Cap

- When implementing the program, setting the cap by linking with a specific LDC's delivery costs may be viewed as arbitrary.
- It could also create difficulties over time as the chosen LDC's rates (ex: Toronto Hydro) may change in unpredictable ways due to cost pressures unique to that LDC.
- A more robust effort to set a cap would be to link it to a specific rate level, relative to the spread of other rates in the province. Option include:
    - Setting the cap at the average of approved delivery charges for 1000kWh: **$53.46**
    - Setting the cap at a level where 75% of all approved delivery charges fall below for 1000kWh: **$58.17**
    - Setting the cap at a level equal to the lowest service territory currently receiving RRRP support for 750kWh: **$66.29**
- Various options and methods can be designed using simple or weighted rate averages and consumption thresholds.
- Selecting a level similar to Toronto Hydro's rates could satisfy the near-term policy intent while providing a reliable measure for adjusting the cap moving forward.
    - The OEB could be given authority to adjust the cap year-over-year based on the desired marker.

# Additional Option: Move RRRP to Tax-base

- RRRP is targeted at all customers who face the highest delivery costs in the province. Given that this program attempts to address a perceived inequity between rural and urban consumers, it could be funded by the tax-base rather than the rate-base.
- Bringing the current RRRP program to the taxbase would represent ~$290M/year in costs, with the OEB authorized to increase funding year-over-year in relation to the average distribution rate increase in Ontario.

| Year | RRRP($M) (Assuming 2.6% annual increase) |
|---|---|
| 2017 | $292 |
| 2018 | $300 |
| 2019 | $306 |
| 2020 | $315 |
| 2021 | $322 |
| 2022 | $329 |

- Doing so would save the average residential consumer (750kWh) $1.58/month in Regulatory charges.
- ENERGY recommends that the RRRP program *remain on the rate-base* to address the specific costs related to low density, with additional support coming from the tax-base through the proposed Delivery Charge Relief program.
    - RRRP provides funding to support off-grid communities serviced by Hydro One Remotes. Placing these costs on the tax-base may lead to an extensive re-evaluation of the funding framework for these communities, as well as other remote communities not serviced by Hydro One Remotes.

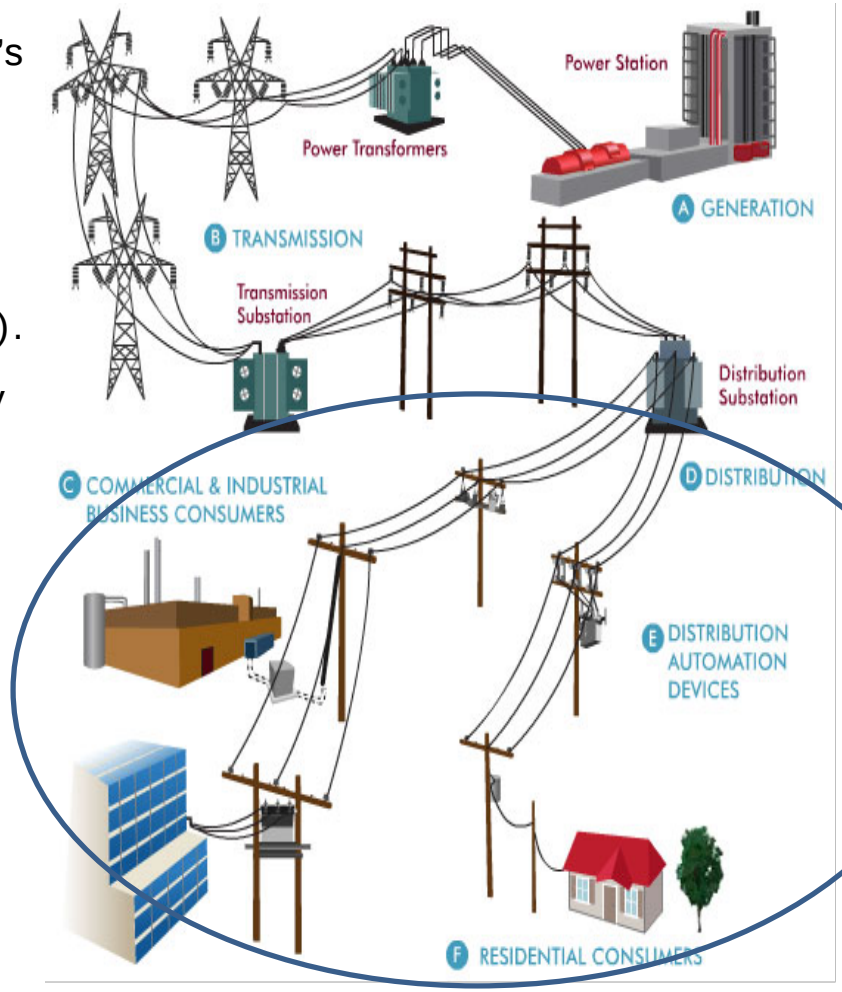
# Next Steps

- Complete fiscal and ratepayer impact analysis for delivery relief program
- Return with recommendation on a cap-setting mechanism and analysis of implementation considerations.
- Receive direction and prepare for Cabinet submission and legislation.

# Appendix A: General Information

# Ontario's Electricity Grid

- Ontario's transmission and distribution networks form the backbone of the province's electricity system, as they link electricity consumers with power generators.
- The **transmission system** is comprised of high voltage lines, towers, transformation and safety equipment used to transport electricity at voltages above 50 kilovolts (kV).
- The **distribution systems** deliver electricity to local consumers over the lower-voltage networks operating at 50 kV and below.
- Key elements in the distribution system:
  - Transformers to step power down from transmission to distribution voltage.
  - There are typically several voltage changes before the electricity reaches the consumer.
  - Overhead or underground lines.
- Electricity delivery to the customer is the responsibility of **Local Distribution Companies** (LDCs) e.g. Toronto Hydro.



# Sample Electricity Bill

**Electricity Charges:**
This is the cost of electricity supplied during the billing period and can be purchased either through a local distribution company or through a licensed electricity retailer.

**Regulatory Charge:**
This charge covers costs such as market regulation, management of the system, and rural and remote rate protection. It also includes the Standard Supply Service administration charge of $0.25 stated on a 30-day basis.

**8% Provincial Benefit:**
Effective January 1, 2017, customers receive a an 8% rebate equivalent to the provincial portion of the HST.

SAMPLE MONTHLY BILL STATEMENT

**Anytown Hydro-Electric Limited**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| HST | 18.07 |
| **8% Provincial Rebate** | (11.12) |
| **Total Amount** | **$145.95** |

**Delivery Charges:**
**Customer Service Charge**: A fixed charge for costs relating to meter reading, billing, customer service and account maintenance, and general utility operations.
**Distribution Charge**: A variable charge for costs of building and maintaining the distribution system, including overhead and underground power lines, poles, and transformer stations. .
**Transmission Charge**: A variable charge for the costs of transmitters to operate and maintain the high-voltage transmission system that carries electricity from generating stations to your utility.
**Loss Adjustment**
When electricity is delivered over a power line some is lost as heat. In calculating your electricity costs for the billing period, LDCs multiply the electricity cost by an OEB-approved adjustment factor to accounts for those losses.

# Local Distribution Companies – Key Facts

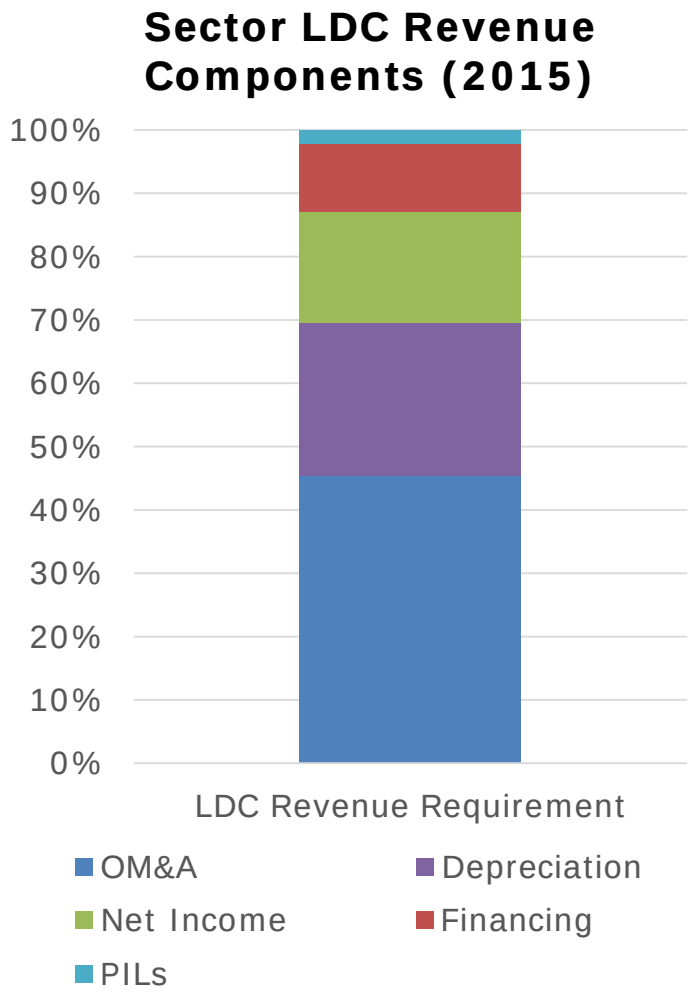
- There are currently 69 LDCs in Ontario that are rate-regulated by the OEB. 3 LDCs (Cat Lake Power, Dubreuil Lumber and Cornwall Street Railway Light) are licensed by the OEB, but are not rate-regulated.
- LDCs vary significantly in size:
  - Range from roughly 1,200 to 1.2 million customers (Hydro 2000 and Hydro One respectively)
  - The smallest 29 LDCs (36%) account for less than 4% of Ontario's customers (<13,000 customers).
- The distribution sector:
  - Serves 5 million customers (residential, industry, commercial / MUSH),
  - Has $48.7 billion in assets, and
  - Generates $3.6 billion in revenues.
- In addition to distributing electricity to customers through their 199,456 km of distribution lines, LDCs provide services such as: billing, outage management, overall customer contact, and conservation programs.

# Distribution Sector Cost & Performance Trends

- Like other components of Ontario's electricity system, distribution sector costs have risen as investments have been made to update and modernize system infrastructure.
    - Overall distribution sector revenues collected from customers have risen from $577.66 per customer annually in 2006 to $703.36 per customer annually in 2015 (21.8% increase).
    - For the typical residential customer* (750kwh/month), monthly distribution costs have risen from $24.49 in 2006 to $30.75 in 2016. Distribution costs represent 23% of the total average pre-tax residential bill.
- Over the same time period, distribution sector productivity and cost efficiency have decreased. This trend raises concern that customers are not realizing a net benefit from sector cost increases, as customers receive less value from the distribution portion of their bill.
    - OM&A costs per customer have increased on average from $235 in 2006 to $319 in 2015.
    - For the period 2002-2012, sector productivity has decreased by an annual average of -0.93% when including Hydro One and Toronto Hydro, the worst performers.
    - When compared to other utility services and neighbouring jurisdictional studies, Ontario's electricity distribution sector is the only one to realize a negative productivity rate.
- Over this time period, LDC consolidation has been the driving force behind sector restructuring and the search for efficiencies. However, the historical consolidation process has not appeared to deliver cost savings/efficiencies for consumers.
    - Customers of LDCs acquired by Hydro One in the first wave of consolidation (1999-2003) have seen distribution costs rise by up to 268% (Arkona, Ontario) when comparing 2006 rates to 2016.
- Policy direction on investments, including smart meters, have also contributed to increasing sector costs while driving broader system and social benefits.

*Simple average of monthly 750 kWh distribution bill, exclusive of taxes using OEB rates database, including H1 residential classes, but excluding 88 acquired LDCs.

# LDC Revenue Breakdown



- While there is considerable variation in this breakdown, on average LDC revenue components can be explained as follows:
  - **OM&A (46%):** Includes system operation & maintenance, customer service, billing/collections, regulatory expenses, salaries.
  - **Depreciation (24%):** Reflects accounting treatment of investments in system infrastructure (property, plant and equipment) and other assets. In proposing new investment, LDCs must justify the need and usefulness to the OEB.
  - **Net Income (17%):** Reflects income after PILs/taxes.
  - **Financing (11%):** Reflects interest expense.
  - **PILs or income tax (2%):** PILs expense or income tax expense for privately owned utilities.
- These costs do not include costs associated with operating unregulated affiliates. Any OM&A service costs shared between LDC and affiliate are prorated for inclusion in the ratebase.

*Source: 2015 OEB Yearbook of Distributors*
*Reflects total revenue of 71 LDCs*
*Some subsequently consolidated*

# Previously Considered Cost Mitigation Options

- The Ministry has considered distribution sector cost reduction options in the past which stemmed from determinations that certain aspects of the sector status quo were not appropriate or in the public interest.

- Ministry staff recommend not pursuing these options due to their contentious nature and the availability of more comprehensive solutions that can drive both cost reductions and system performance improvements.

    1. **Direct Consolidation Policy:** The Ministry could mandate LDC consolidation or provide additional incentives for voluntary consolidation in an attempt to reduce OM&A costs, leading to rate reductions for consumers.

    o Historical analysis reveals that, in general, consolidation has not led to the expected efficiency gains or cost reductions for affected customers. Hydro One, which has led the bulk of consolidation activity, is recognized by the OEB as one of the most inefficient LDCs in the province. Without appropriate regulatory incentives, consolidation transactions may not result in OM&A reductions to the benefit of customers.

    2. **ROE Reduction:** The Ministry could instruct the OEB to review its ROE policy in light of LDCs monopoly position and fixed distribution rates.

    o ROE is an established requirement of utility regulation and has been upheld by judicial review. Attempts to reduce ROE could be challenged in court. As well, as ROE is used by municipal shareholders to fund municipal services, this could lead to broader communication and stakeholder management issues.

    3. **Payments-in-Lieu of Taxes Policy:** The Ministry of Finance could restructure or eliminate the PILs regime to reduce the tax burden on LDCs, which would lead to cost savings for ratepayers.

    o PILs are a vital component of OEFC's debt retirement outlook. With the departure of Hydro One from the PILs regime and the ending of the debt retirement charge on residential bills, restructuring the PILs regime would impact OEFC's ability to service the debt and could impact Ontario's credit outlook.

- Performance-based options have the potential to indirectly incent consolidation (in a manner that returns benefits to consumers) and potentially reduce ROE in an equitable manner in the event performance expectations are not met.

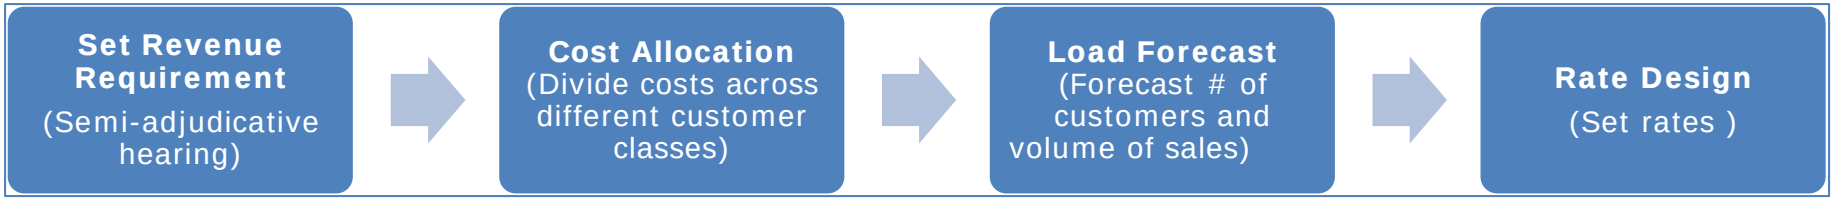
# RRRP Administrative Roles

| | |
|---|---|
| Ontario<br>**Ministry of Energy** | • The Province sets out the parameters of the program through legislation (s.79, OEB Act) and regulations (O. Reg 442/01, O. Reg. 445/07).<br>• These set out, among other things:<br>  • Eligible customers<br>  • Amounts available to Hydro One Networks and James Bay First Nations. |
| Ontario Energy Board | • The OEB determines annually the charge levied on all electricity consumption. |
| hydro one | • Hydro One Networks determines the monthly RRRP subsidy available to each of its customers based on amount of RRRP made available to it through Regulation, the number of R2 customers, and accounting for any surplus or deficit in its variance account. |
| ieso | • The IESO collects the charge from distributors across the Province and re-distributes to those distributors whose customers are eligible to receive the subsidy. |

# Appendix B: Distribution Rate-Setting

# Setting Distribution Rates

- Electricity distributors apply to the OEB to determine which costs they can pass on to their customers through rates (revenue requirement). The OEB has a mandate to set just and reasonable rates for LDCs that protect the interests of consumers while facilitating the maintenance of a financially-viable electricity industry.
- The OEB's "Renewed Regulatory Framework" is continuing to evolve how LDC's apply for rates to drive increased productivity. Principally there are two streams of electricity rate applications.
    - Cost-based applications (Cost of Service or Custom)– where the OEB sets rates based on an LDC's forecast of their costs and volumes, including a return on capital. Typically these are set for a 5 year term, with the 1st year establishing the base rates for the term.
    - Mechanistic Incentive Rates (IRM) that are based on the current approved rates plus inflation and any productivity improvement requirements. This methodology is used annually following a cost-based application until the end of the term.
- When establishing distribution rates, the OEB must evaluate a number of costs to establish the approved revenue requirement that is the basis for the rates charged by the LDC.
- Once the revenue requirement is established, the OEB must approve a fair allocation of those costs to the various customer classes (residential, commercial, industrial etc.)
- From that the OEB approves the specific rates charged to each customer class, which can include some fixed charges as well as ones based on volume.



# Application Review Process

- The OEB reviews each rate application independently through a public process.
- The process begins with an LDC submitting an application and includes a number of activities at each stage.
- The process includes opportunities for various representatives (intervenors) to make arguments about the facts of the application.
- The application review process can vary from a few months to up to a year depending on complexity of the application.
    - Cost-based applications tend to take a longer review timeline than IRMs.
    - More complex applications will also typically have an oral hearing.

ENERGY

# Rate Mitigation Plan Options

## Working Draft

January 2017

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants) and suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings).

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Options

- In recognition of the costs borne by ratepayers related to decarbonizing and modernizing the province's electricity sector, options for further rate mitigation include:

  1. Global Adjustment (GA) Financing

  2. Delivery Rate Relief

  3. Other Electricity Support Programs Funded Through the Tax-base:
     - Ontario Electricity Support Program (OESP);
     - Low-Income Conservation; and
     - First Nations Rate.

- As an alternative to the GA financing, in addition to Delivery Rate Relief and Other Electricity Support Programs Funded Through the Tax-base, other mitigation measures could be pursued, including:

  1. Enhanced Tax-based RPP Rebate (5%)

  2. Contract Renegotiations
     - Contract Extensions – Wind and Solar; and
     - Clean Energy Supply (CES) Contracts.

  3. Amortization of Conservation Expenses

# Proposed Options – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | - | 17.49 | 15.01 | 12.49 | 14.91 | 6.32 | 4.03 | Immediate |
| 2.. Delivery Rate Relief | - | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 3. Electricity Support Programs Funded through the Tax-Base | | | | | | | | |
| a. Ontario Electricity Support Program (OESP)* | - | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | Immediate |

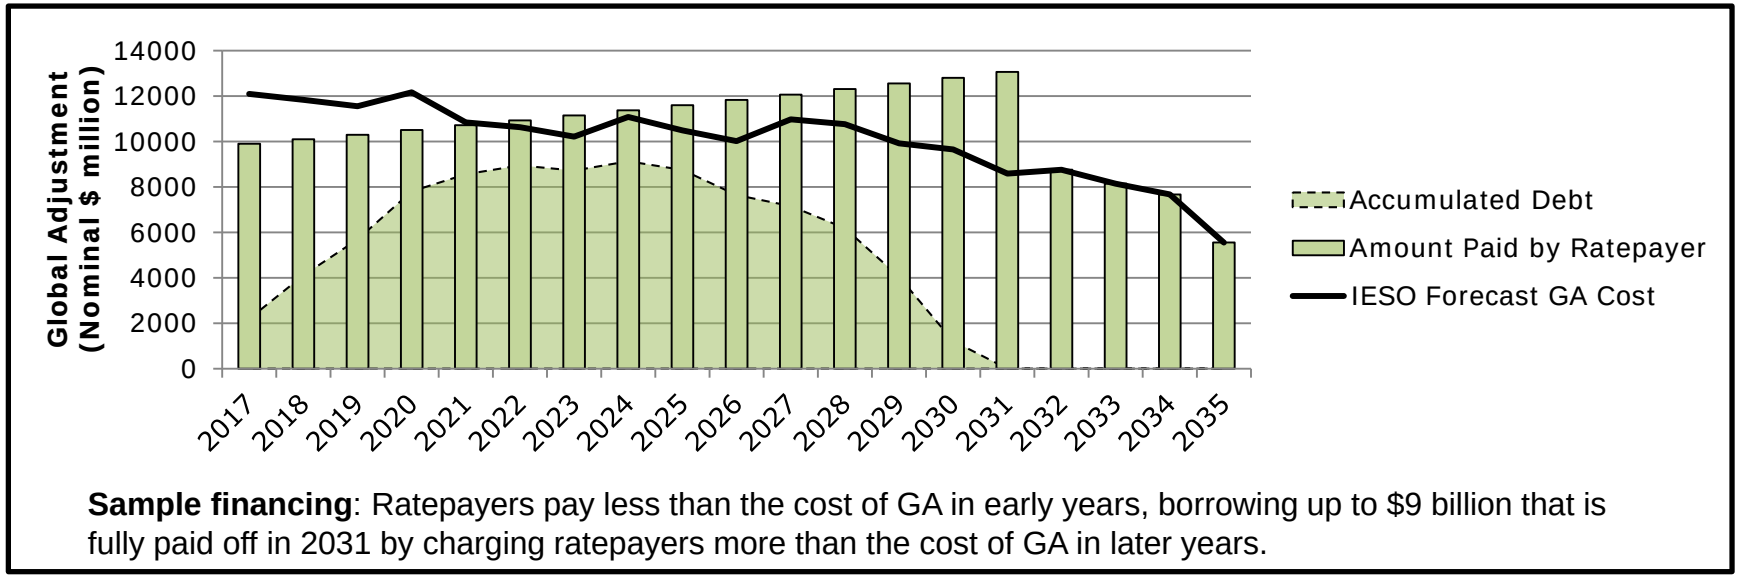
| 3. Conservation Amortization | - | - | - | - | - |

***Note:** Includes costs of program expansion and various assumptions as detailed on relevant slides.
****Note:** Risk to fiscal plan of up to $240 million annually (foregone net income) if OPG is unable to reach more aggressive operational efficiency targets.

**Source:** Ministry of Finance, Energy

# 1. Global Adjustment (GA) Financing

- It is proposed that the amount of global adjustment (GA) paid by ratepayers in each year over the forecast period is set at a fixed amount and money is borrowed to make up the remainder of the GA cost in each year.
- Starting on January 1, 2017, the amount of GA paid by ratepayers is set at a value lower than the true cost of GA in 2017 and is increased according to a pre-defined schedule until the debt has been paid off.
- GA costs will be “smoothed” over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected actual cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- All analysis is based on forecasts from Independent Electricity System Operator (IESO), assumes a 5% annual borrowing interest rate and an inflation rate of 2% per year.

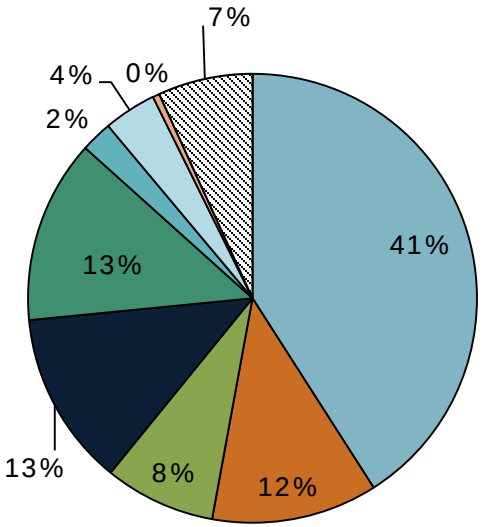


**Sample financing**: Ratepayers pay less than the cost of GA in early years, borrowing up to $9 billion that is fully paid off in 2031 by charging ratepayers more than the cost of GA in later years.

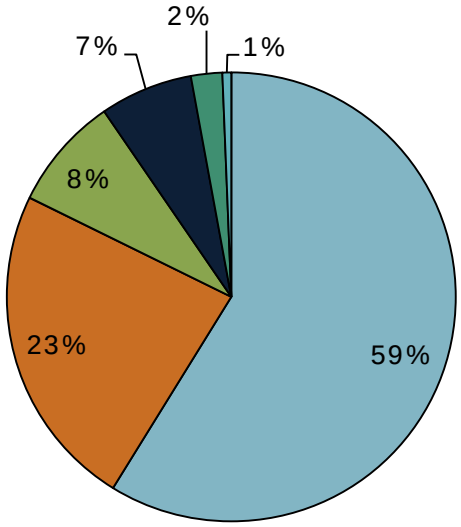
# 1. GA Financing – Cost Breakout

- The allocation of GA costs in 2016 is compared to the proportion of generation in the graph below.
- This cost breakdown will evolve over time as 2,181 MW of contracted generation comes online in the coming years.

**2016 GA Cost: $12.3 billion**



**2016 Generation: 155 TWh**



| | GA ($M) | Gen. (TWh) |
|---|---|---|
| Nuclear | 5,053 | 91 |
| Hydro | 1,473 | 36 |
| Natural Gas | 985 | 13 |
| Wind | 1,552 | 10 |
| Solar | 1,630 | 3 |
| Biomass, Landfill and Byproduct | 278 | 1 |
| Conservation | 467 | |
| IEI Program | 60 | |
| OEFC* | 842 | |

*OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators.
** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

# 1. GA Financing – Options

1a. Moderate / GA Financing

- The amount of GA paid by ratepayers in 2017 is lowered by $3.1 and $3.3 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

1b. Moderate / GA Financing with Delayed Increase

- The starting GA payment from all ratepayers in 2017 is lowered by $1.1 and $1.4 billion, ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.

Low / GA Financing (see in Appendix)

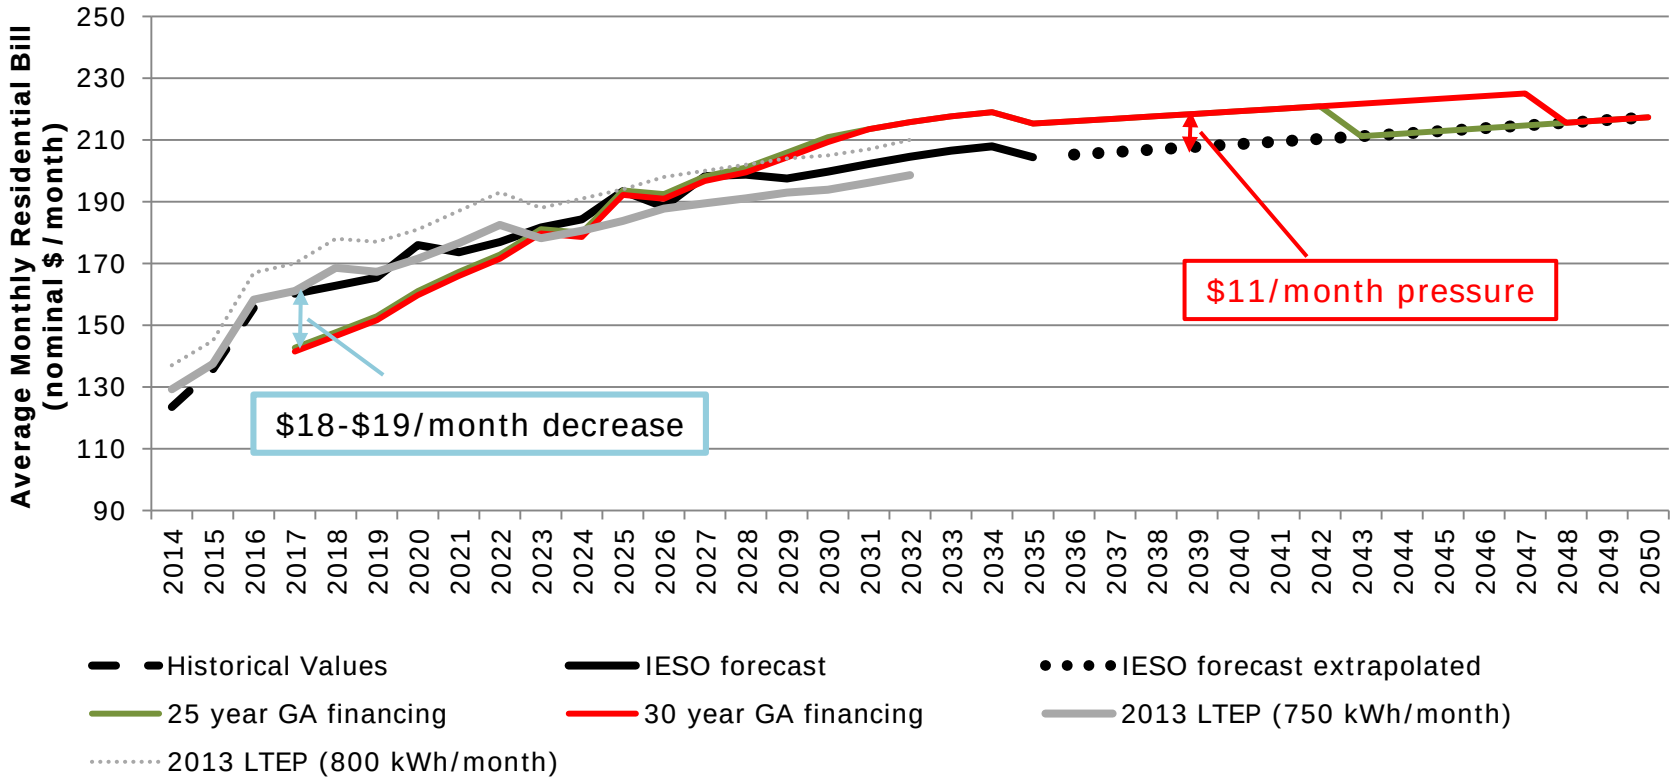
- The amount of GA paid by ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and increases in each subsequent year until the total amount of money borrowed is paid off.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

High / GA Financing (see in Appendix)

- The amount of GA paid by ratepayers in 2017 is lowered by $4.4 and $5 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- No limit is placed on the amount charged to ratepayers above the true cost of GA.

# 1a. Moderate / GA Financing – Impact on Residential Electricity Bills

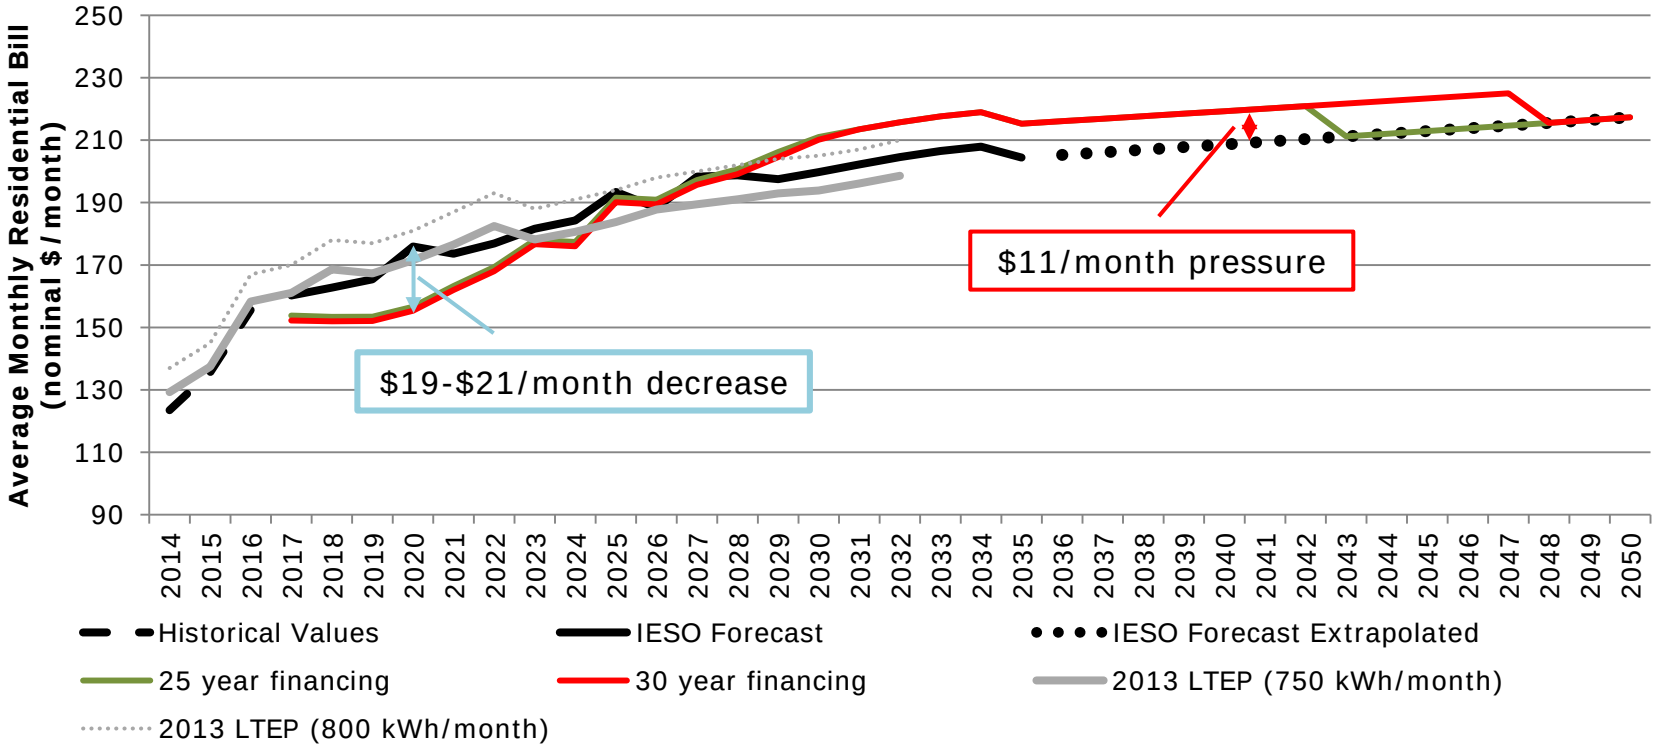
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered by $3.1 billion (green line) and $3.3 billion (red line) and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 25 and 30 years respectively.



- By **borrowing up to $19-$23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $17-$19/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1b. Moderate / GA Financing with Delayed Increase in Payments – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $1.1 billion (green line) and $1.4 billion (red line), ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.



- By **borrowing up to $19-$23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $19-$21/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1. GA Financing – Accounting (cont'd)

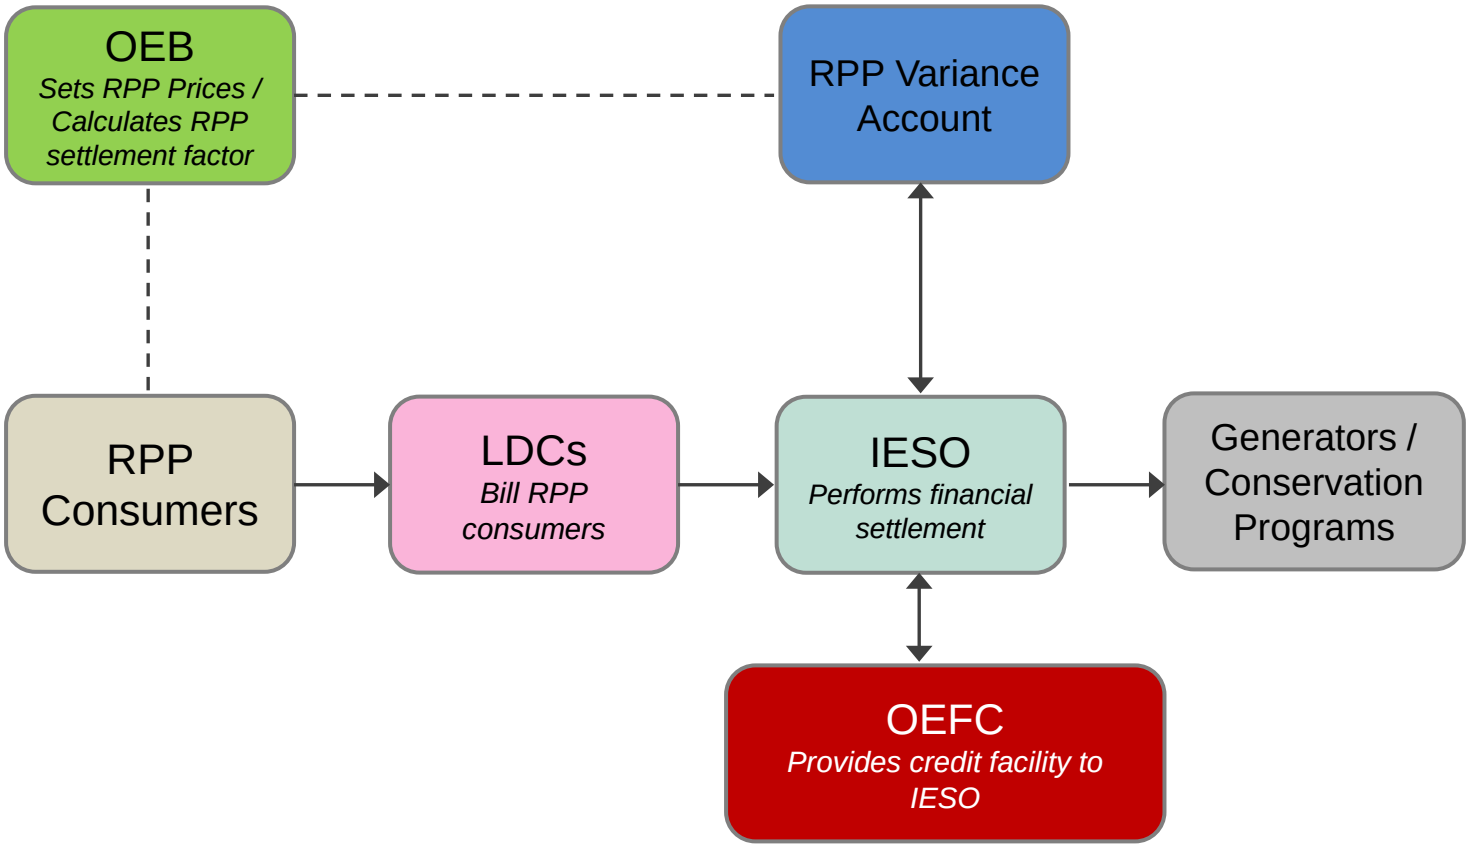
**Considerations**

- ENERGY continues to work with LSB, IESO, MOF/OFA, TBS and external accountants to identify legislative, regulatory, borrowing and accounting requirements associated with GA financing option.
  - Ongoing analysis on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk (i.e., consolidation).
  - Historically electricity sector financing has been conducted by the Ontario Financing Authority (i.e., managing OEFC's stranded debt and borrowing on behalf of IESO).
  - The significant amount of additional Provincial borrowing needed to finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating and overall borrowing capacity.
  - The Auditor General (AG) may comment on the appropriateness of financing the Global Adjustment and/or on the need to consolidate any financing on the Province's books.

- Discussions have broadly focused on:
  - Consolidation risks;
  - Creating an "asset" (and confirm that it meets accounting requirements);
  - Identifying who will hold the asset(s), this could include:
    - Province (e.g., OEFC, etc);
    - IESO;
    - LDCs; or
    - New entity.
  - Determine the source of the financing (e.g., third party, OFA, IO, etc)
  - Exploring different recovery / administrative options (e.g., DRC, RPP, etc)

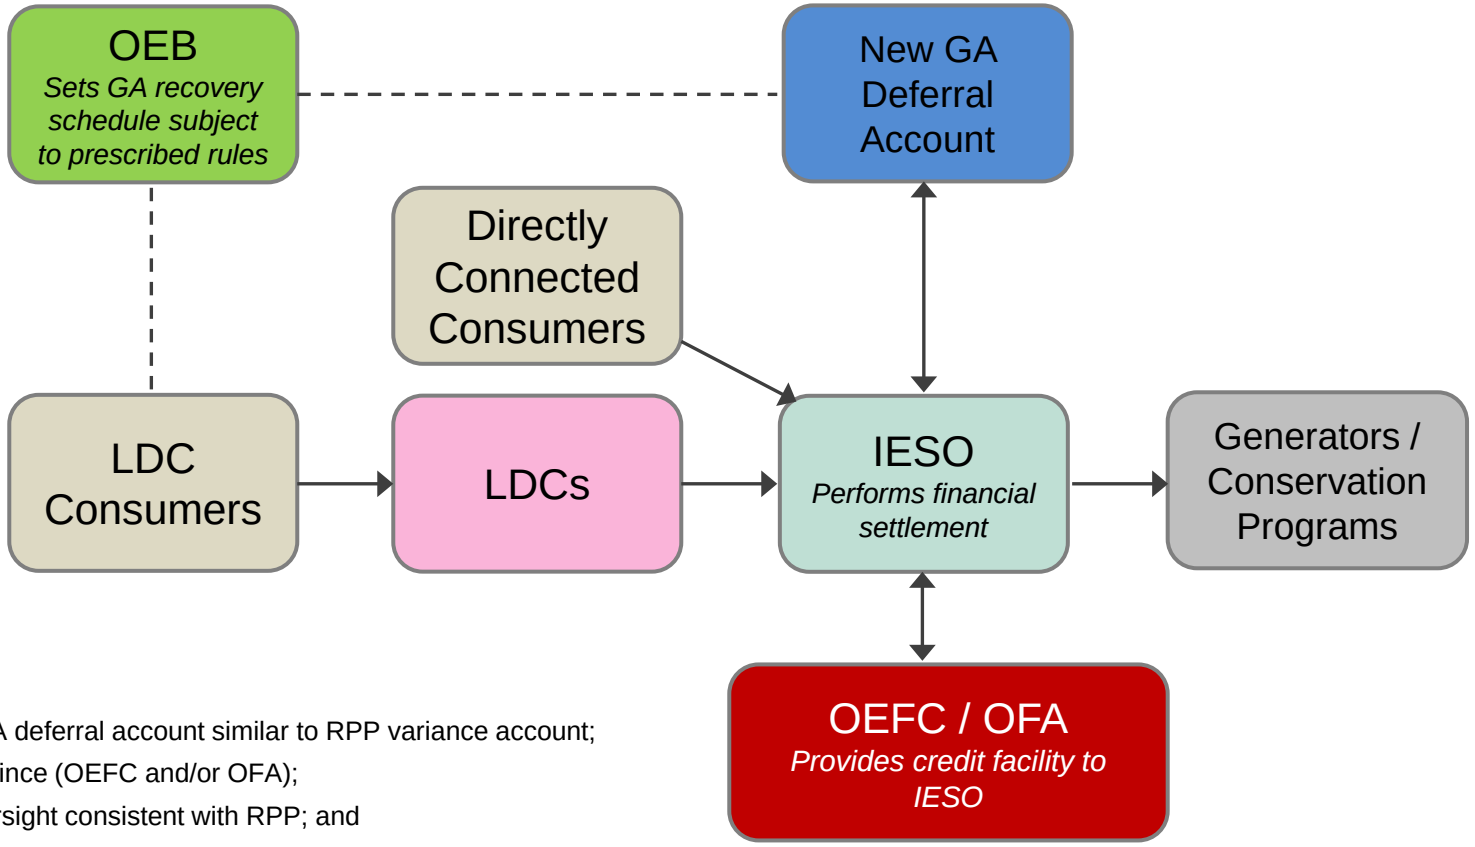
# 1. GA Financing – Current Regulated Price Plan (RPP) Variance Recovery

- The diagram outlines current Regulated Price Plan (RPP) structure and related flow of funds.



# 1. GA Financing – Recovery Approach (Option 1)

- The diagram outlines an option that is a variation on the current RPP approach.

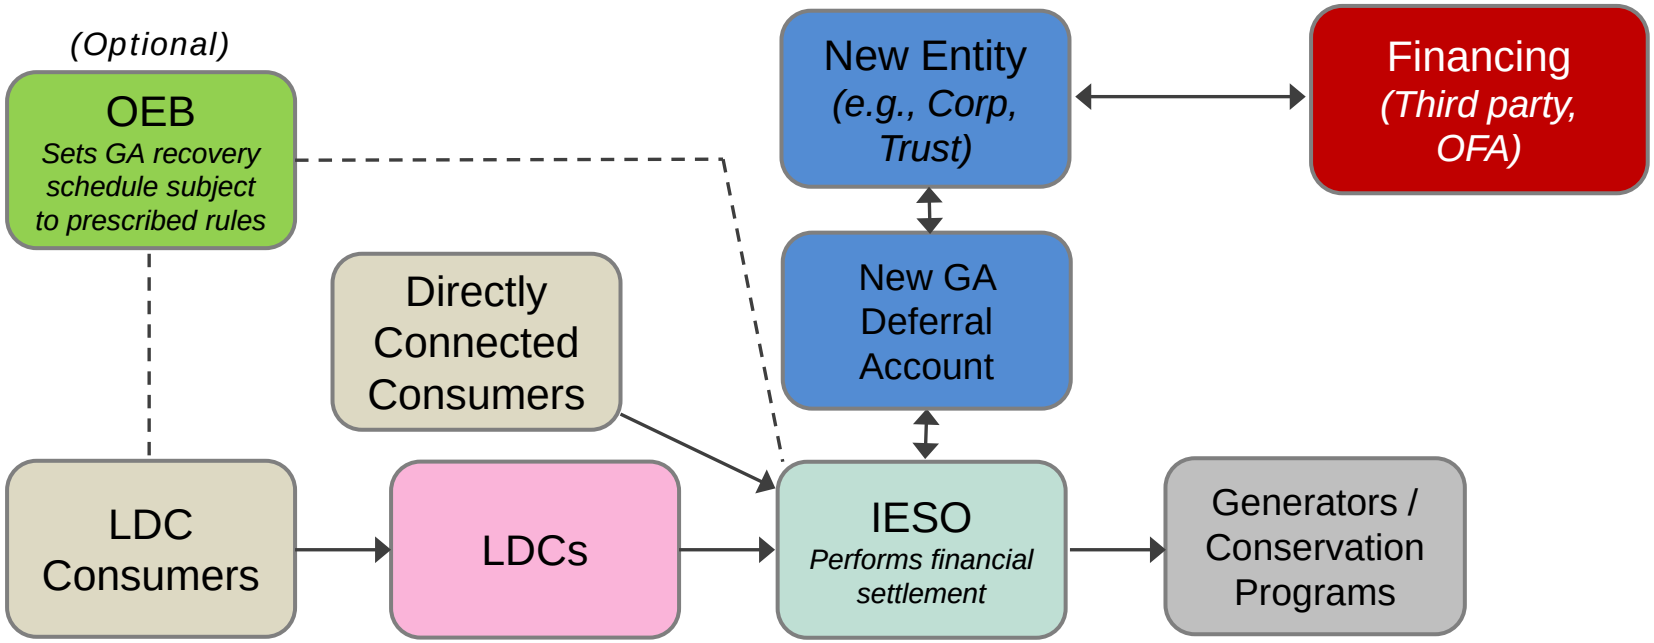


**Key Assumptions**

- Establish an new GA deferral account similar to RPP variance account;
- Financing from Province (OEFC and/or OFA);
- OEB regulatory oversight consistent with RPP; and
- GA Financing available to all consumers.

# 1. GA Financing – Recovery Approach (Option 2)

- The diagram outlines an alternative approach that introduces a new arms-length entity.



**Key Assumptions**

- GA Financing available to all consumers;
- Establish a new arms-length entity (e.g., corporation, trust, etc.) with trustees or a board of either public sector employees or stakeholders / bondholders;
- Purpose of the entity in legislation is to recover deferred GA amounts over 25-30 years from electricity consumers (i.e., ensure guaranteed repayment);
- Financing either through OFA or could be independent or from Province (TBD); and
- Set up outside of the OEB construct (i.e., not regulated). Alternatively, light touch regulatory oversight similar to RPP.

# 1. GA Financing – Considerations (cont'd)

**Considerations**

*Legal:*

- Legislation would be required to authorize the financing proposal.
  - Amendments to the *Electricity Act, 1998* (EA) could authorize the financing of certain costs within or part of the GA. However, whether any other legislation requires amendment is not known at this time.
  - The GA regime currently provides that "true costs" represent the true costs of making payments to generators or counter parties to contracts, not the incurring of discretionary financing or interest costs.
  - Considerations such as the need to analyze legal risks or the need to address costs retroactively (if the proposal requires a January 1, 2017 start) could add to the legal and drafting complexity. Further legal analysis is required.

# 2. Delivery Charge Relief – Background

- The **Delivery** line on a typical consumer bill accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line, as well as power theft. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.
- To help mitigate delivery costs, the Province has expanded the Rural or Remote Protection Program (RRRP) to further reduce distribution costs for rural customers across the province.
  - Starting on January 1 2017, 330,000 Hydro One low density (R2 class) customers will receive $60.50 per month in RRRP to bring their total Delivery line costs to roughly $95 for 1,000 kWh/month.

* Toronto Hydro Bill @ 750Kwhs

# 2. Delivery Charge Relief – Proposed Program Overview

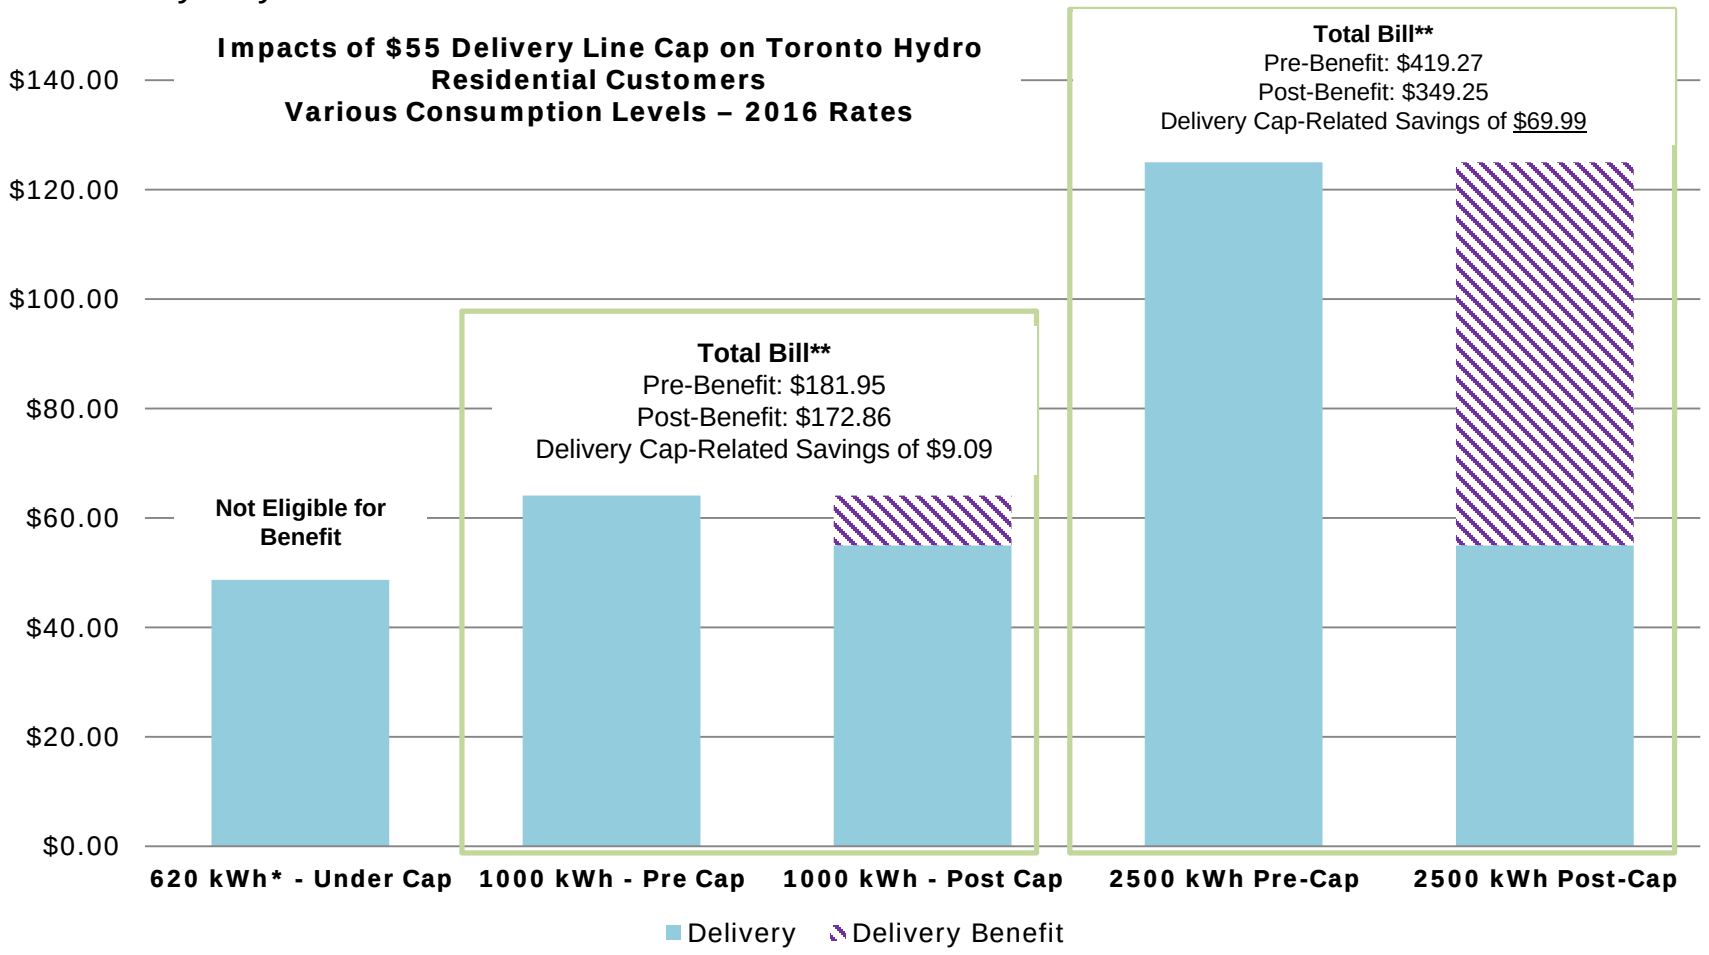
- To provide further relief for customers across the province, the province could create a ‘customer-specific’ program that would cap the delivery line cost.
- The proposed program would limit the amount an LDC can bill consumers for Delivery at a to-be-determined reasonable cost. Delivery costs that exceed the cap would be covered by support from the fiscal plan.
- The proposed program would target customers within the LDC territory based on their Delivery cost.
  - Delivery costs vary month to month and LDCs will need to keep track of the customers who will receive the receive the additional support.
- Eligibility for increased protection would be based solely on delivery charges above the established threshold and therefore would not be specific to any one LDC. All LDCs must be prepared to offer the program to some of their customers

**Considerations**

- Costs and ratepayer impacts depend on the number of customers within each LDC whose delivery charges exceed the cap.
  - Costs will fluctuate seasonally and will have year-over-year changes, creating uncertainty in forecasting. Ministry is preparing case study analysis.
- There may be implementation challenges for some LDCs and could take them up to 6 months to implement the program.
- Capping delivery charges may impact OEB rate-setting processes and create disincentives towards utility productivity and performance improvements.

# 2. Delivery Charge Relief – Proposed Program Overview (cont'd)

- Below is an example of a Toronto Hydro customer at different consumption levels and the level of subsidy they would receive.



*620kWh is the average Toronto Hydro residential consumption level. ENERGY estimates 17.5% of Toronto Hydro consumers average >1000kWh/month.

** Includes Electricity, Delivery, and Regulatory Charges. Excludes HST and 8% rebate.

Ontario

MINISTRY OF ENERGY

# 3a. Ontario Electricity Support Program (OESP) Expansion

- The OESP is an income-tested, application based program that lowers the electricity costs of the most vulnerable consumers by providing a rebate directly on their electricity bills.
- The OESP provides basic benefits to most consumers and enhanced benefits to Indigenous customers and customers with electric heat and medical devices.
- OESP funding is collected from a charge levied on all electricity ratepayers. Based on current level of program up-take and funding collection, OESP program benefits could be increased across the board by 50%. This would mean:
  - Single low income consumers would see an increase from $30 to $45/ month ($540/year);
  - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year); and
  - Indigenous and Métis consumers would also see benefit increases at the same level as those with electric heat and medical devices.
    - The Ministry is also considering options to support a “Delivery” line credit for Indigenous consumers. This would cost ~$18 million/year (Option 2d on slide 8) and would save Indigenous consumers between $75 and $100/month.
- Greater focus and support can be placed on lower income Ontarians by funding OESP through the tax base. This would also reduce costs for all consumers as a result of eliminating the OESP charge.
  - Average residential customer savings: $0.83/month; and
  - Average industrial customer savings: $1.10/MWh.

# 3a. OESP Expansion – Fiscal Impacts

- Table below shows estimate of program costs up to 2022:

| Year | OESP Status Quo($M) | +50%($M) | TOTAL ($M) |
|---|---|---|---|
| 2017 | $108 | $54 | **$162** |
| 2018 | $150 | $75 | **$225** |
| 2019 | $186 | $93 | **$279** |
| 2020 | $215 | $108 | **$323** |
| 2021 | $243 | $122 | **$365** |
| 2022 | $272 | $136 | **$408** |

- 2017 program costs are based at current program sign-up rate – 30% of eligible consumers. Cost projections assume the program grows to 100% of eligible consumers by 2022 and remains at that level.
- At the time of program design, it was estimated that 40-50% participation would be high for an application-based program delivered through electricity bills. However OESP can be enhanced by working to ensure the program uptake is as close as possible to 100%:
  - Streamlining the application process to make it easier and quicker to get through;
  - Putting in place a more aggressive communications strategy to make sure people are aware of the program;
  - Increasing funding for key partner agencies to work directly with individuals who are applying; and
  - Exploring automatic OESP qualification for those who receive provincial programs (e.g., ODSP).
- OEB is currently exploring options for simplifying the OESP process, including exploring options with MCSS on auto-enrollment options, discussing options to eliminate wet signature consent forms with the federal government, and working with partners to do open houses to better reach vulnerable consumers.

# 3a. OESP Expansion – Considerations

- **Framework:** New legislation would be required to establish and define the parameters of a tax-based OESP. This may reveal additional considerations, including possible assessment as a tax credit.
- **Implementation:** Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- **Alternative Delivery:** If the OESP was funded by the tax-base, it could also be explored whether the OESP could be better delivered as a provincial program via the tax system. This may help ensure that the program's participation rate is as high as possible, and could expand coverage to the ~142,000 low-income households that do not receive an electricity bill.
- **Transition to Social Assistance:** Moving OESP to the taxbase can be a transitional step in folding this program into a reform of social and disability assistance programs and enhancement of MCSS' Social Assistance Management System moving forward.
- **Additional Enhancements:** The enhanced credit could be expanded to include additional eligibility categories of customers. For example, a new "Low Density Consumer" category could be introduced that provides Hydro One R2 and/or R1 customers (highest distribution rates) who are already OESP eligible with the enhanced credit.
- **Variance Account:** The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.

# 3b. Low Income Conservation Benefit Program

- Existing low income programs delivered by LDCs and IESO help qualified homeowners and social and/or assisted housing providers improve the energy efficiency of their homes.
  - Programs include the Home Assistance Program and the Retrofit Program (Social Housing Stream).
- A new Low Income Conservation Benefit Program would build on existing programs.
  - Participants could receive incentives for conservation measures not currently covered (e.g. air conditioning, heat pumps (electric heated homes)).
  - Increased incentive amounts (e.g., under the existing Retrofit Program, incentives cover up to 50% of the total cost of the energy efficiency upgrade).
  - Targeted education and awareness initiatives.
- The new program would be delivered through LDCs and/or IESO.
- The new program would coordinate with CCAP initiatives.
- The budget estimate below is illustrative and assumes annual program budgets three times the 2015 spending for the Home Assistance Program.

| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 |
|---|---|---|---|---|---|---|
| Proposed Budget ($ Million) | $60 | $60 | $60 | $60 | $60 | $60 |

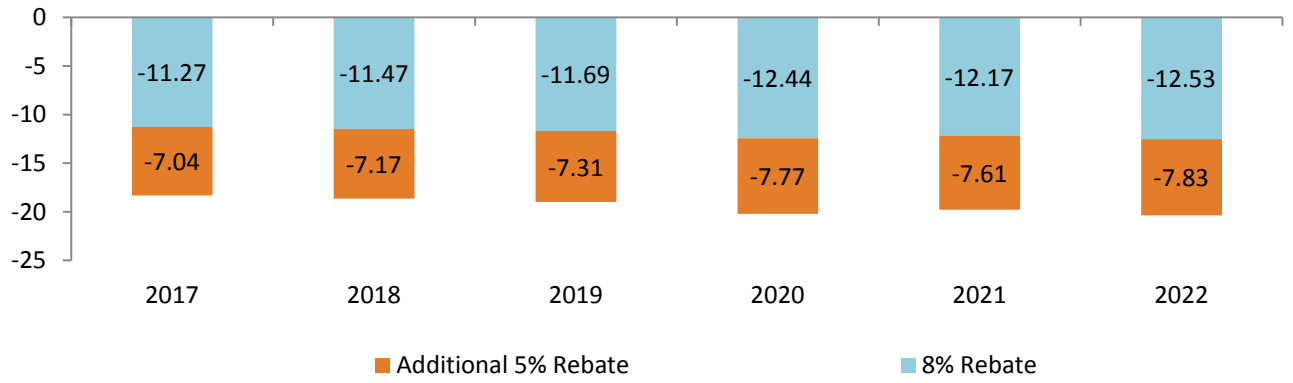
- Further analysis is required on costing and implementation details, including alignment with the Conservation First Framework.

# Other Options to Consider

# 1. Enhanced Tax-Base RPP Rebate (5%)

- Enhancing the rebate by a further 5% on the amount before tax provides an average savings of about $7 each month or $84 annually for a typical residential electricity consumer.
- As of January 1, 2017, electricity consumers eligible for the Regulated Price Plan (RPP) receive an 8% rebate equivalent to the provincial portion of HST on their pre-tax bill.
- The eligibility criteria for the 8% rebate is as follows:
  - Consumers with a demand of 50 kW or less;
  - Consumers with a demand of 250,000 kWh/year or less;
  - Farms;
  - Multi-unit residential buildings and other facilities used as residential rental units;
  - Dwellings;
  - Condominiums; and
  - Co-operatives with housing units.

**Benefit for a Typical Residential RPP Consumer**
*in $/750-kWh month*



# 1. Enhanced Tax-Base RPP Rebate (5%) (cont'd)

**Considerations**

- Amendments would be required related to the *Ontario Rebate for Electricity Consumers Act, 2016.*
- The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of other regulations to put in place mechanisms needed to implement the financial assistance.
- The rebate could be made retroactive to January 1, 2017. Similar to the current 8% rebate, electricity consumers would receive a retroactive payment once the local distributor begins issuing the rebates if the distributor needs more time to adjust its billing systems.

**Fiscal Cost of an Enhanced Rebate**
*in $millions*

| Cost ($M) | 2016-2017 | 2017-2018 | 2018-2019 | 2019-2020 | 2020-2021 | 2021-2022 |
|---|---|---|---|---|---|---|
| **Cost of 8% rebate** | 271 | 1,119 | 1,086 | 1,171 | 1,159 | 1,208 |
| **Cost of 13% rebate** | 440 | 1,818 | 1,764 | 1,903 | 1,884 | 1,963 |
| **Cost of incremental 5% rebate** | 169 | 699 | 679 | 732 | 724 | 755 |

# 2a. Extend Length of Existing Wind / Solar Contracts

- Wind and solar developments are typically contracted through standard offer procurements on 20 year fixed terms at fixed pricing.
- Many of these projects have already reached commercial operation.
- The province could explore options for IESO to negotiate extensions to existing renewable energy contracts, for example, by 10 years, in return for the contract holders agreeing to a lower price in the near term.
- Since extending the contracts would lock in an additional 10 years of GHG emissions free generation to support electrification of transportation and other sectors, consideration could be given to funding the contract extensions with future cap and trade proceeds.

**Considerations**

- Projects in commercial operation offer potential for near-term rate reduction whereas projects that have yet to reach commercial operation provide potential to mitigate future rate increases only.
- The attractiveness of this option to contract holders would vary from project to project and would depend on project economics.
- Revised pricing would be subject to negotiation, and associated ratepayer savings would be difficult to forecast accurately.
- The duration of contract renegotiation is difficult to forecast and may not be achievable in the near term.
  - Proponents may have to renegotiate their project financing arrangements, ensure project investors are satisfied with any changes in ROI, and extend land leases.
- Project host communities and Indigenous communities whose traditional territory the projects are sited in may not be interested in these projects extending their operational period; discussions/consultation may be required in advance of this potential option moving forward.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- Should Ontario be successful in negotiating lower prices in the near term, it should be noted that contract holders will be in a strong bargaining position (given their existing fixed-priced contracts), and will likely extract additional value from the negotiations.

- The Province is not a party to the contracts and has never been involved in the negotiation of the contracts themselves. IESO would be required to renegotiate the contracts, which would likely involve a direction or directive to IESO.

- Further analysis is required as to how ENERGY could express its policy intent to have IESO renegotiate the contracts for a reduced rate at a longer term, however it is unlikely that IESO could guarantee the outcome.

- Further analysis is also required to ascertain whether there is scope within the existing contracts for IESO to renegotiate their terms in this manner.

- Extending contract terms may require investments in component replacement and additional operation and maintenance costs that developers would seek to recover under any renegotiated contract.

- Extending contract terms would reduce planned flexibility and increase the risk of overpayment as this existing capacity would now be contracted into the 2040s and not the 2030s.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- Ontario has over 4,500 MW of wind in commercial operation, with the vast majority being large scale (>500kW) developments.
  - This includes over 2,700 MW of large FIT 1 and GEIA wind projects representing 47 contracts (average size ~58 MW) and over 1,000 MW of solar projects representing 103 contracts.
- Below are two potential approaches to reducing ratepayer costs in the near term by extending contract terms at reduced prices. An illustrative example of a typical large wind project is used.
- **Example:** 100 MW FIT 1 wind project achieving Commercial Operation in 2014 (i.e., 17 years remaining on initial 20 year contract), assuming a 10 year contract extension negotiated at the LRP I low weighted average wind price of $64.5/MWh
  - (17 years @ $135/MWh + 10 years @ $64.5/MWh)
- **Potential Approach 1:** Provide a single new contract price that is the average of the lower extension price and the FIT contract price over the new contract term. The new price would be lower over a longer term.
  - **Illustrative Example:** New contract for 27 years at $129/MWh.
  - New contract price set to allow 10% rate of return over 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract (remaining term extended for 10 additional years) |
|---|---|---|
| Contract Cost (NPV 2017) | $550 Million | $582 Million |
| Average Monthly Ratepayer Impact Over First 5 Years | $0.03 savings | |
| Average Monthly Ratepayer Impact Over Remaining 22 Years | $0.02 increase | |
| Average Monthly Ratepayer Impact Over Entire 27 Year Contract | $0.01 increase | |

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- **Potential Approach 2:** Offer facilities a revised contract that extends terms and is structured to offer lower pricing in the initial contract years and higher pricing in the later years of the contract.
  - **Illustrative Example:** New contract for 27 years at $85.9/MWh over the first 5 years and $169/MWh over the remaining 22 years.
    - Price over first 5 years is LRP I weighted average wind price.
    - Price over remaining 22 years is set to allow 10% rate of return over entire 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract | |
|---|---|---|---|
| | | Initial 5 Years | Last 22 Years |
| Contract Cost (NPV 2017) | $550 Million | $632 Million | |
| Monthly Average Ratepayer Impact Over First 5 Years | $0.09 savings | | |
| Monthly Average Ratepayer Impact Over Remaining 22 Years | $0.07 increase | | |
| Monthly Average Ratepayer Impact Over Entire 27 Year Contract | $0.04 increase | | |

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

- Below are illustrative estimates of potential GA savings if all contracts for large FIT and GEIA wind and solar projects in commercial operation are renegotiated according to the approaches illustrated above.
- Estimates are for large (10 MW or greater) FIT 1 and GEIA wind and solar projects in commercial operation, totalling about 2,700 MW of wind and about 900 MW of solar capacity. A 10 year contract extension is assumed at a price of:
  - **For Wind:** LRP I low weighted wind price of $64.5/MWh
  - **For Solar:** LRP I low weighted solar price of $141.5/MWh

**Potential Approach 1:**

| | **Current Contracts*** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $23.3 Billion | $23.1 Billion |
| Average Annual Contract Value (First 5 Years) | $1.6 Billion | $1.4 Billion |
| *Figures assume projects remain operational after contract expiry at the LRP I low weighted price inflated to the year of contract expiry, as per OPO assumptions . | | |

**Potential Approach 2:**

| | **Current Contracts** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $23.3 Billion | $25.6 Billion |
| Average Annual Contract Value (First 5 Years) | $ 1.6 Billion | $0.8 Billion |

**Source**: Figures reflect IESO contract data current as of Sept 2016. Also includes two Phase III solar projects (100 MW combined) that came online in late 2016 not included in Sept 2016 IESO contract data.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

- Contract re-negotiations could be piloted with large wind and solar contract holders.
- For example, the top 5 contract holders by portfolio value (online projects 10 MW and larger) include:

| Contract Holder | Technology | # of Contracts | Capacity (MW) | Estimated Value (NPV 2017) |
|---|---|---|---|---|
| Samsung* | Wind & Solar | 7 | 899 | $5.0 Billion |
| NextERA | Wind | 6 | 534 | $2.7 Billion |
| Northland Power | Wind & Solar | 15 | 290 | $1.8 ~~2~~ Billion |
| Pattern / Capital Power | Wind | 1 | 270 | $1.4 ~~5~~ Billion |
| ENGIE | Wind | 4 | 265 | $1.2 Billion |
| All Other | Wind & Solar | 76 | 1398 | $8.1 Billion |
| **Total** | **Wind & Solar** | **109** | **3654** | **$20.2 Billion** |

Source: IESO contract data current as of Sept 2016.
*Includes two Phase III solar projects (100 MW combined) that came online in late 2016 not included in Sept 2016 IESO contract data.

# 2b. Clean Energy Supply (CES) Contracts

- There are 13 natural gas facilities operating under Clean Energy Supply (CES) contracts. Given the current excess capacity, some of these facilities could be renegotiated to reduce output in the near term.

- In conjunction, OPG could seek to negotiate outright purchases of certain Ontario gas assets. Given the current excess capacity in electricity supply in Ontario, OPG can seek to negotiate outright purchases of certain Ontario gas assets and reposition them such that ratepayers would pay only for the "current need" component:
  - Contract terms would be renegotiated with the Province to temporarily idle the facilities;
  - Variable expenditures would be largely avoided with the facilities only incurring fixed costs; and
  - Plant life would be extended to a period post-2024 when additional power would be required.

- OPG has estimated monthly residential bill reductions of $2.37 to $4.00 from 2017 to 2019 if such an approach was taken for Ontario's gas portfolio.

- Natural targets would be assets that OPG either jointly owns (e.g., Portland, Brighton Beach) or operate on OPG's site with acquisition funding coming from Provincial borrowing.
  - Although OPG could also look beyond its facilities to the broader natural gas fleet in Ontario.

**Considerations**

- This proposal would reduce GHGs and provide some near-term cost benefits through lower staffing and maintenance costs:
  - Contract terms would be renegotiated with to temporarily idle the facilities;
  - Variable expenditures would be largely avoided with the facilities only incurring fixed costs; and
  - Plant life would be extended to a period post-2024 when additional power would be required.

- It will likely be challenging to find a willing seller and/or to negotiate a favourable price:
  - Sellers that are approached are in a strong position to extract value from OPG/the Province; and
  - Similarly, OPG's negotiating position would be weakened if this was viewed as part of the broader rate mitigation strategy.

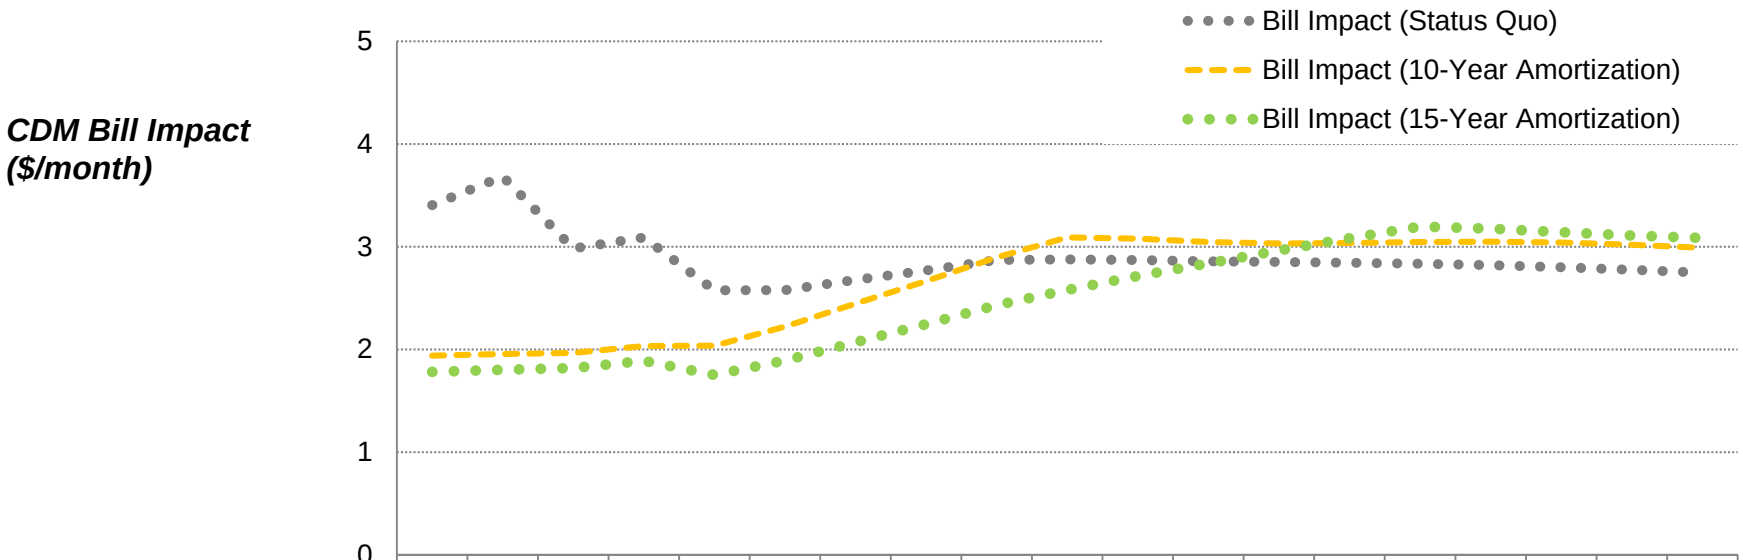
- In the past, OPG and IESO's contract renegotiations have been contentious and lengthy.

# 3. Amortize Conservation Program Costs

- This option would not be pursued if the Global Adjustment (GA) was financed (Option 1).
- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework (CFF) and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized. This would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs).
  - The time period over which costs could be amortized would be over the lifetime of funded CDM measures.
  - ENERGY would work with IESO to determine the appropriate lifetime period – the graph on the next slide, which illustrates residential bill impacts, presents two cases: **10-year and 15-year measure lifetimes**.
- In both cases, amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020. Over time the benefit would decrease and turn into a cost (higher electricity rates than would otherwise occur), as interest charges begin to grow. Estimated interest charges are as follows (a 3% interest rate is assumed; increases in interest rates could result in higher overall interest charges):
  - $712 million ($2016) – Amortizing eligible 2017-2035 CDM costs for 10-year period; and
  - $1.3 billion ($2016) – Amortizing eligible 2017-2035 CDM costs for 15-year period .
- Legislative changes would be needed to allow recovery of interest payments from ratepayers, or these costs could be recovered from the Consolidated Revenue Fund (CRF, or taxes).
- An alternative that could be explored would be to pay for CDM costs, or for a portion of these, from the tax-base (*see Appendix for more detail on tax funding option*).

# 3. Amortize Conservation Program Costs (cont'd)

## Conservation Residential Bill Impact – Status Quo, 10-Year and 15-Year Amortization



| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | 2035 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Bill Impact (Status Quo) | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | 2.68 | 2.77 | 2.87 | 2.88 | 2.87 | 2.86 | 2.85 | 2.84 | 2.83 | 2.82 | 2.80 | 2.78 | 2.75 |
| Bill Impact (10-Year Amortization) | 1.94 | 1.95 | 1.97 | 2.03 | 2.04 | 2.22 | 2.45 | 2.67 | 2.90 | 3.09 | 3.08 | 3.05 | 3.03 | 3.04 | 3.04 | 3.05 | 3.04 | 3.02 | 2.99 |
| Bill Impact (15-Year Amortization) | 1.78 | 1.80 | 1.82 | 1.89 | 1.75 | 1.89 | 2.07 | 2.25 | 2.43 | 2.58 | 2.71 | 2.84 | 2.96 | 3.08 | 3.20 | 3.18 | 3.14 | 3.11 | 3.09 |

Source: IESO; Ministry of Energy

**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10 of 15-year borrowing rate of 3.0%.

# 3. Amortize Conservation Program Costs (cont'd)

**Considerations**

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 3. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- ENERGY has received an opinion on the proposal to amortize CDM costs from IESO's external auditor.
  - Ernst and Young indicated that an argument could be made to support the recognition of the costs as an asset as the costs meet essential asset characteristics, as prescribed by PSAB.

- ENERGY staff have developed a note to seek an opinion from the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.

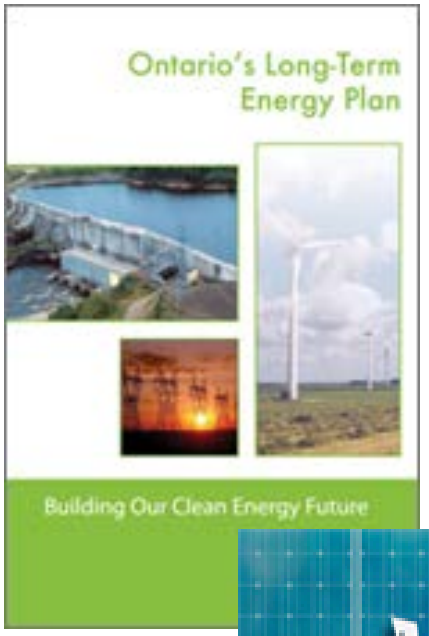
- If there is a desire to pursue this option, ENERGY would seek a formal opinion from the OPC on whether CDM costs could be amortized according to rate-regulated accounting standards, ENERGY would send its note along with IESO external auditor's opinion to OPC.
  - In 2013 when this option had been explored, staff at the OPC agreed with the view that amortized conservation costs can be considered as assets, but noted that the Auditor General may disagree with considering amortized conservation costs as assets.

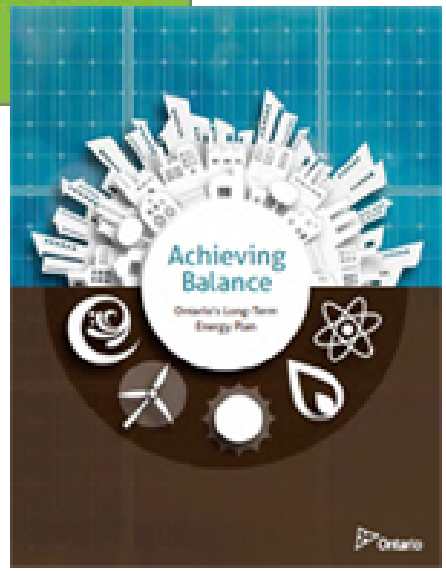
- Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# Long-Term Energy Plan

# Longer-Term Energy Plan – Overview

- The Long-Term Energy Plan (LTEP) is the energy sector's roadmap, with a focus on integrated policy and setting the direction for Ontario's energy future.
- The 2013 LTEP included content on both Ontario's electricity as well as fuels sub-sectors. The next LTEP will integrate the electricity and fuels sub-sectors to provide a complete picture of Ontario's energy system.
- Developing the LTEP is a highly collaborative process in which ENERGY and IESO directly engage with stakeholders, indigenous communities and the public.
- The Ministry sought stakeholder as well as public feedback through in-person engagement sessions, online tools, and an Environmental Registry posting.
- The Ministry is currently developing the next LTEP, and is targeting a tentative April 2017 release date.





# LTEP – Process and Timeline

**Jan - Feb**
Policy Development

- Ministry staff to review engagement feedback and to provide recommendations for DMO/ MO and Minister on LTEP policies and themes.

**Feb - March**
Modeling

- Additional modelling to inform potential initiatives and themes will be made to IESO/other modelers to update outlooks.
- Policy decisions may be adjusted based on modeling outcomes.

**March**
Plan development

- Ministry will prepare LTEP submission and IESO/OEB implementation directives for Cabinet Approval.

**Early April**
Cabinet Approval

- Cabinet approves LTEP document; as well as IESO/OEB implementation directives

*Writer to work alongside and participate in briefings and theme development.*

**Early – Mid April**
Finalize and produce document

- Layout/ graphics/ translation of final document
- Ministry staff provide final review

**End April**
Publish LTEP and implementation directives

- Final LTEP published on ENERGY website
- Minister issues Cabinet-approved implementation directives to IESO & OEB
- LTEP lockup

**May – July**
Implementation Plan Development

- IESO and OEB develop implementation plans based on directives

**Aug – Sept 2017**
Implementation Plan Approval

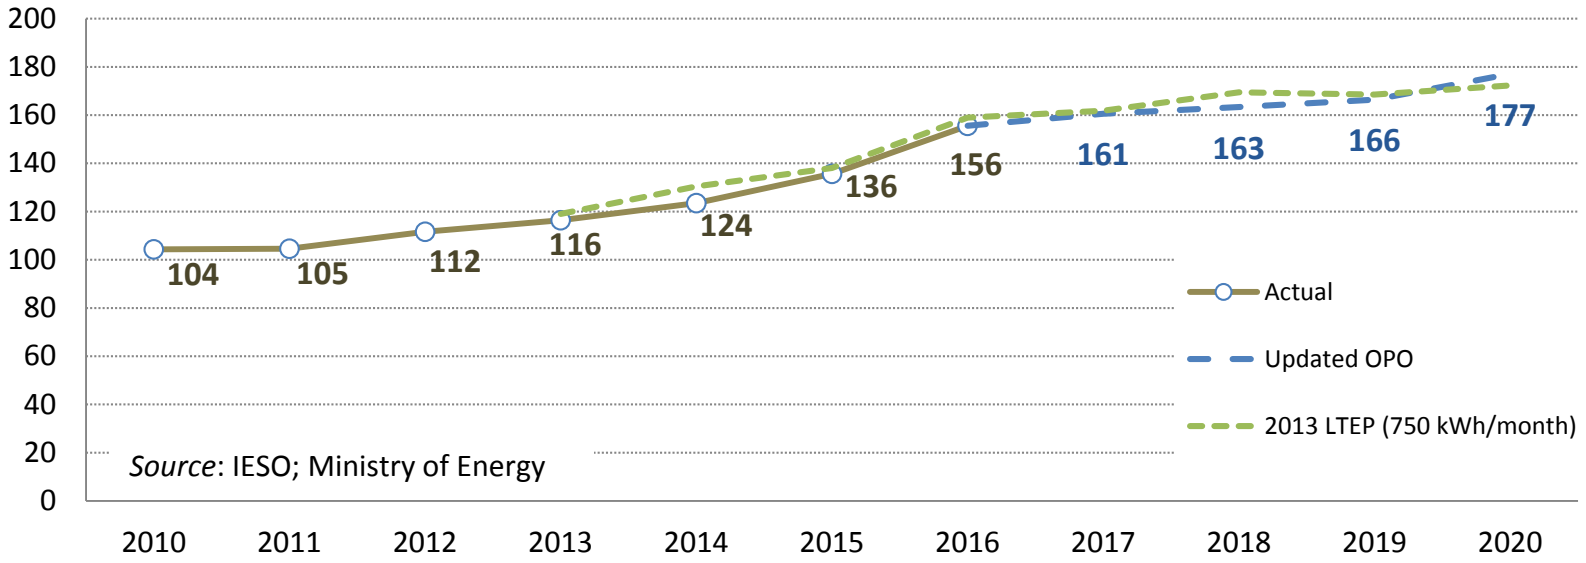
- Implementation plans submitted to Minister of Energy for approval

# Appendix

# Context – Residential Electricity Prices

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bill is currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecast.

**Typical Residential Electricity Bills**
*Historical and Forecast in $/month*

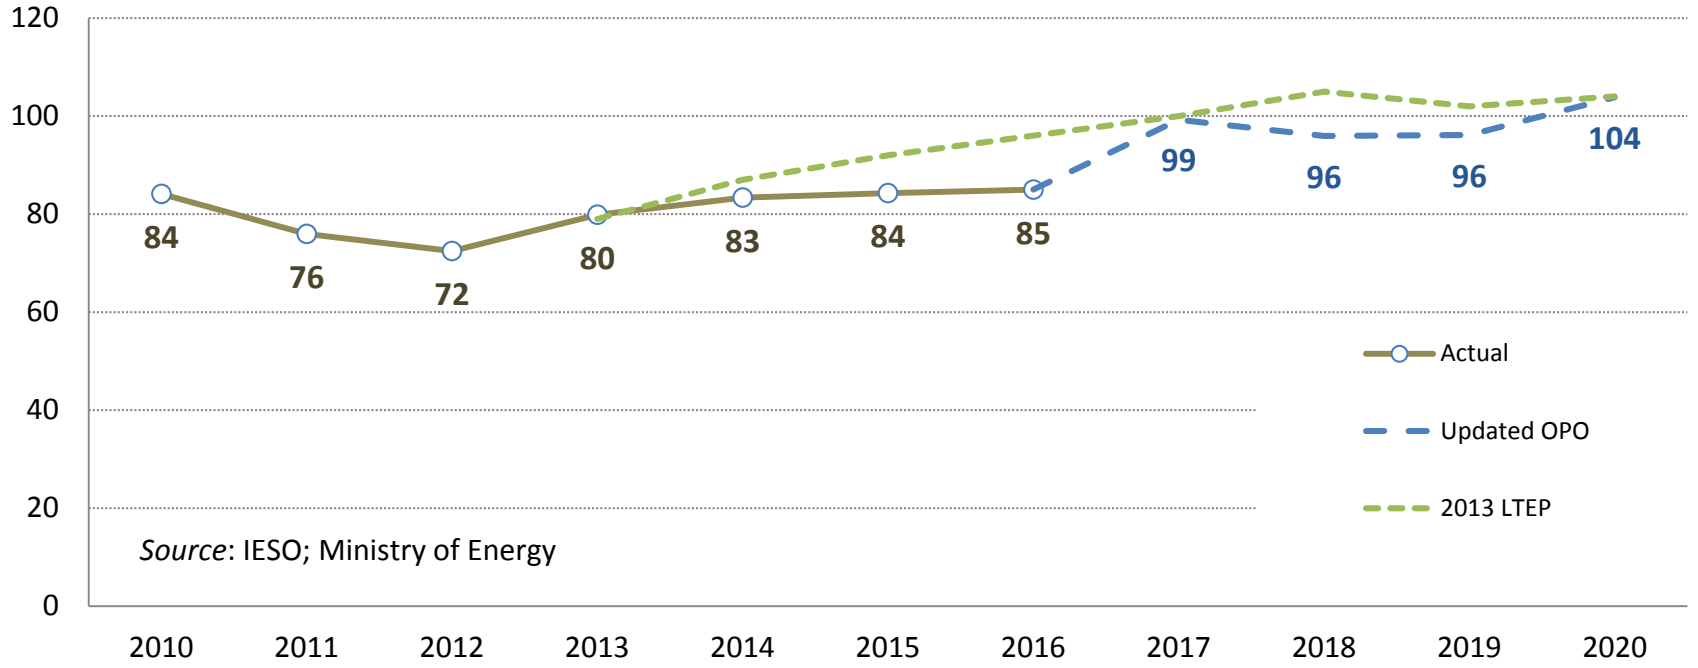


**Note**: The 2013 LTEP forecast for residential bills was based on 800 kWh/month without RRRP or electric heating; the above has been rebased to 750 kWh/month for comparison purposes. Typical residential are based on Toronto Hydro. The updated OPO forecast above includes the 8% rebate to offset the provincial portion of HST, ICI expansion and RRRP expansion.

# Context – Large Industrial Electricity Prices

- Industrial electricity prices continue to be a concern for many businesses.
  - **Note:** The typical industrial electricity price is currently below the 2013 LTEP forecast.

**Typical Class A Electricity Prices**
*Historical and Forecast in $/MWh*



**Note**: The 2013 LTEP forecast for industrial reflects a transmission connected Class A electricity consumer. The updated OPO forecast above includes ICI expansion and RRRP expansion.

# Global Adjustment (GA) Financing

- The global adjustment (GA) is comprised of costs for regulated and contracted generation, as well as conservation.
- Some contracted generation assets are expected to have a useful life that extends beyond the term of their current financial contracts (typically 20-years).
- Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives provide benefits to the electricity system over the course of many years.
- Since the GA only includes costs related to the contractual life of these assets, there may be an opportunity to recognize the longer-term benefit of these assets to the electricity system and “bring forward” that benefit for ratepayers today, while deferring some of the current costs.
- An indicative GA financing proposal is presented that lowers ratepayers costs over the short term by borrowing money but increases costs over the long term when GA costs are forecast to be lower.
- **Note:** Not all generating assets will continue operations at the end of their contract term. Regulatory constraints (i.e., nuclear licences) or low demand conditions (i.e., as experienced with current expiring NUGs) would mean that some generators will shutdown at the expiry of their contract. Future ratepayers would be paying for these assets that are no longer producing power.

# GA Financing – Considerations

**Considerations**

- Borrowing money to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - Deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" in the sector. **Note:** the Debt Retirement Charge (DRC) was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

- The GA financing proposal involves borrowing large amounts of money over a long period of time (16-30 years, depending on the scenario) to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on electricity rates. A long-term interest rate of 5% is assumed for this analysis.

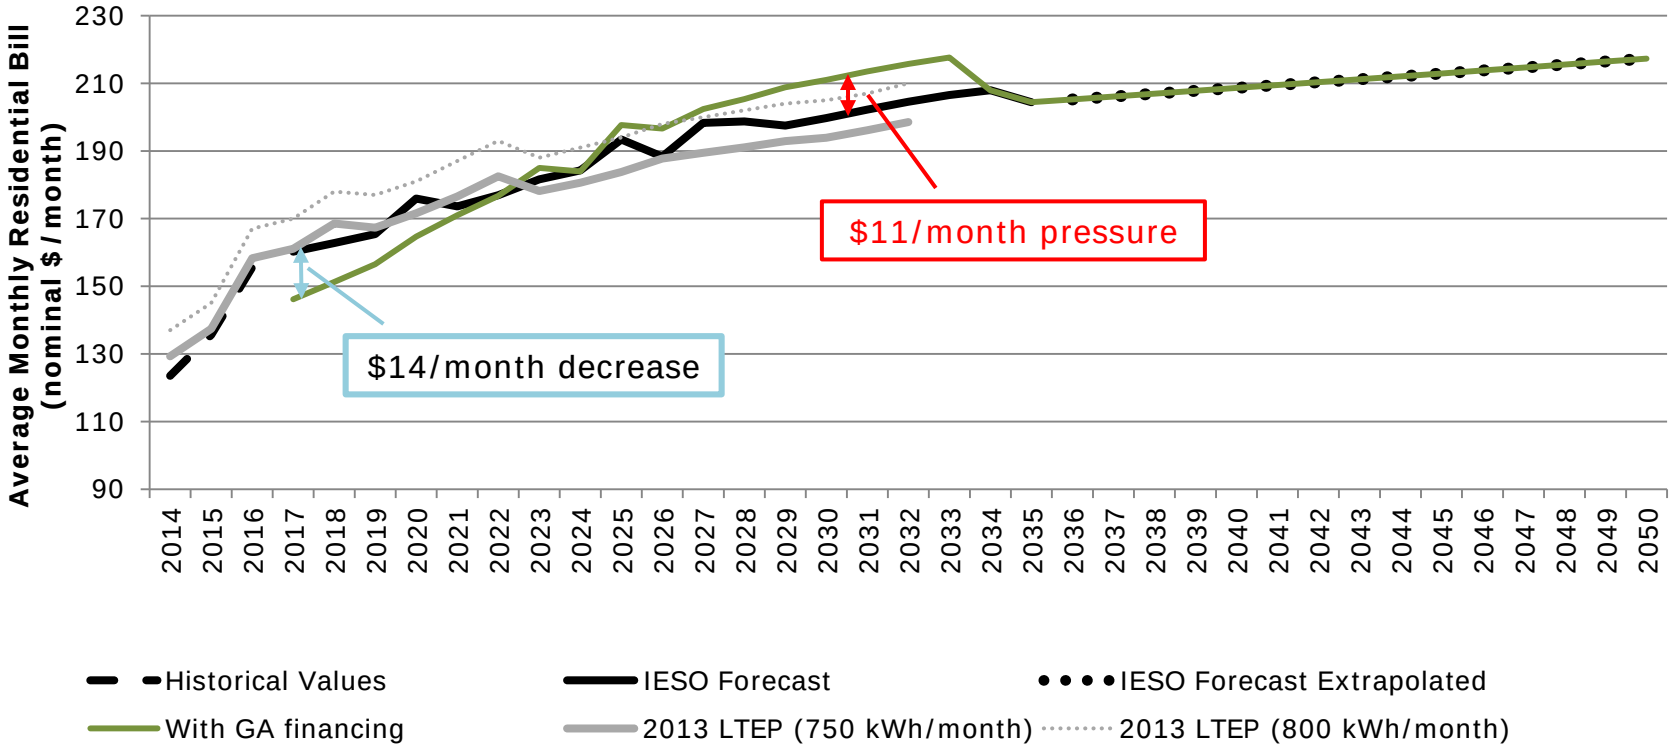
- GA and HOEP provide a natural hedge against each other – when one goes up, the other goes down – keeping total electricity costs relatively stable and predictable. Smoothing only the GA would lead to greater price volatility for consumers unless the schedule and amount of ratepayer payments was defined relative to the actual cost of GA.

- Some Class A consumers pay limited GA and would receive little benefit under the financing proposal. These consumers also currently pay very low rates. In addition, in recognition that Class B electricity consumers pay the majority of GA costs, could limit GA cost reductions through financing to Class B consumers only.

- Should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Low / GA Financing – Impact on Residential Electricity Bills

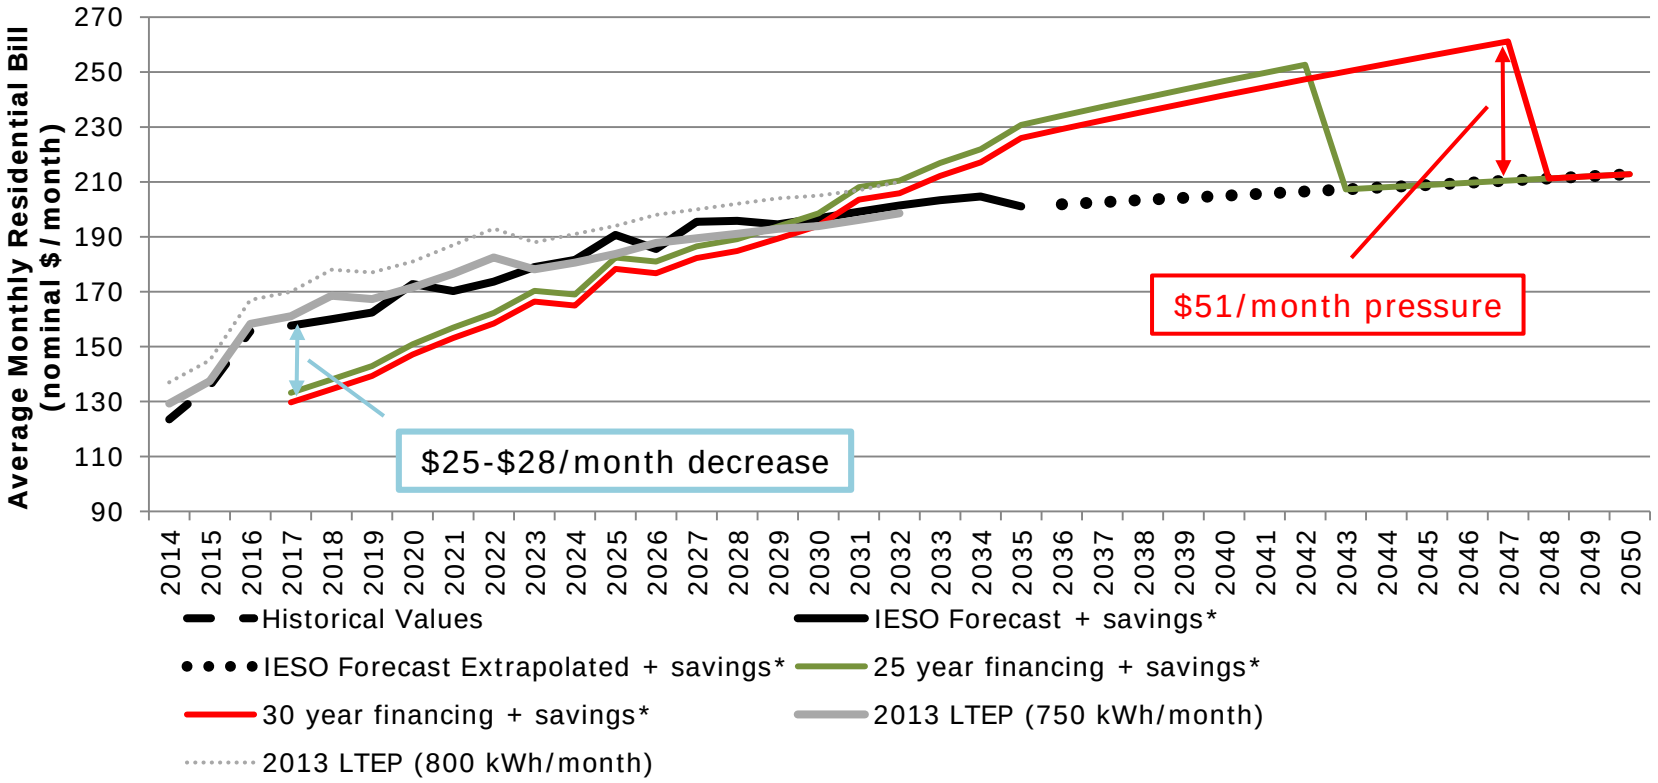
- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $2.5 billion and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 2032.



- By **borrowing up to $9.3 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $14/month** at the cost of **increased future electricity bills over 10 years of up to $11/month** above the true cost of electricity production.

# High / GA Financing – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $4.4 and $5 billion and increases at 2% each year until the borrowed money is paid back over a 25 and 30 year financing period respectively.

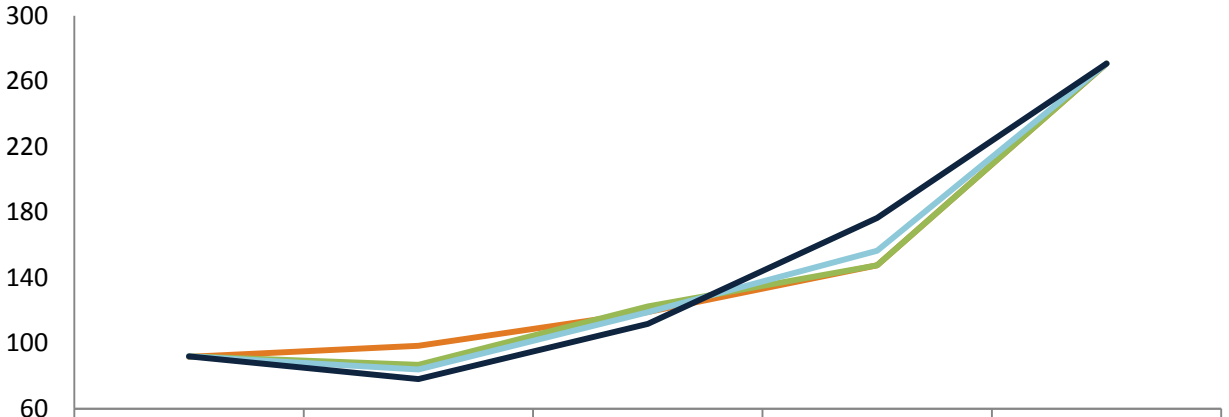


- By **borrowing up to $65 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $25-$28/month** at the cost of **increased future electricity bills over 12-17 years of up to $46-$51/month** above the true cost of electricity production.

# GA Financing – Impact of the Level of Financing on Large Industrial Electricity Consumers

- Below graph illustrates the estimated impact of the level of GA financing for an average Class A electricity consumer over a 25 year amortization period.

**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



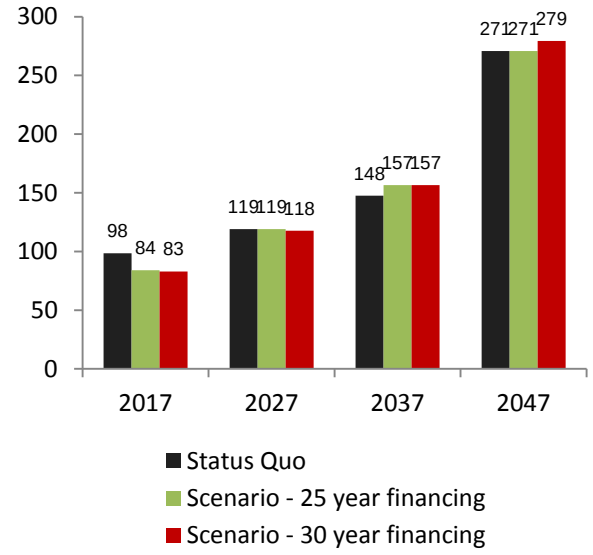
| | 2016 | 2017 | 2027 | 2037 | 2047 |
|---|---|---|---|---|---|
| Status Quo | 92 | 98 | 119 | 148 | 271 |
| Low Financing | - | 87 | 122 | 148 | 271 |
| Moderate Financing | | 84 | 119 | 157 | 271 |
| High Financing | | 78 | 112 | 177 | 271 |

**Note:** Assumes that demand by industrial sector continues at average 2011-2015 levels. Please see the Appendix or more information on the estimated impact on large industrial electricity consumers.

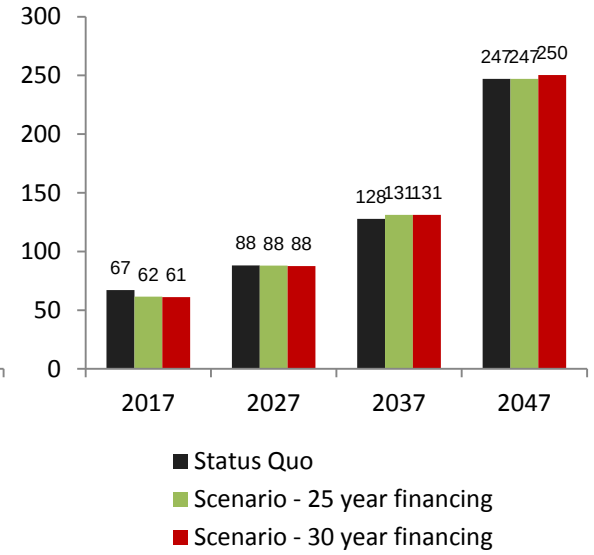
# GA Financing – Illustrative Impact for Large Industrial Electricity Consumers

- Below graphs illustrate the estimated impact under the moderate GA financing scenario for an average Class A electricity consumer, a consumer that pays low GA (i.e., pulp and paper) and high GA (i.e., refining and chemical manufacturing).

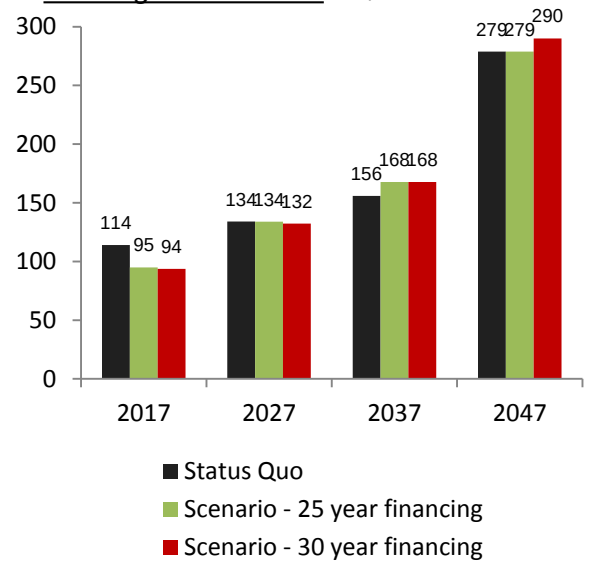
**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



**Estimated All-In Electricity Price**
*for Pulp & Paper in $/MWh*



**Estimated All-In Electricity Price**
*for Refining & Chemicals in $/MWh*



**Note:** Assumes that demand by industrial sector continues at average 2011-2015 levels.

# Other Options Considered – Typical Residential Electricity Consumer

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| Conservation Funding Options | | | | | | | |
| a. Amortize Conservation Program Costs (15-Year Amortization) | 1.62 | 1.88 | 1.16 | 1.20 | 0.82 | 0.69 | Immediate |
| b. Fund Conservation Programs Through The Tax-Base | 3.47 | 3.83 | 3.17 | 3.35 | 2.84 | 2.90 | Immediate |
| Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |
| Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc.) | - | - | - | 2.16 | 2.16 | 2.17 | Medium to Long-Term |
| Dedicate Departure Tax | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | Immediate |
| Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Options Considered – Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| Conservation Funding Options | | | | | | | |
| a. Amortize Conservation Program Costs (15-Year Amortization) | 1.12 | 1.30 | 0.80 | 0.83 | 0.57 | 0.47 | Immediate |
| b. Fund Conservation Programs Through The Tax-Base | 2.88 | 3.17 | 2.66 | 2.77 | 2.36 | 2.41 | Immediate |
| Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |
| Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc.) | - | - | - | 1.79 | 1.79 | 1.79 | Medium to Long-Term |
| Dedicate Departure Tax | 1.86 | 1.86 | 1.86 | 1.86 | 1.86 | 1.86 | Immediate |
| Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

*COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE*

**Electricity Price Mitigation Proposal: Dedication Departure Tax**

**Issue:** The Ministry of Energy, as part of a suite of proposed initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication of the Departure Tax payment from the Hydro One IPO, to ratepayers.

**Context: Departure Tax**

- In connection with the Hydro One IPO, Hydro One's exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ceased to apply and Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.

- As a result of this deemed disposition, Hydro One was liable to make a "departure tax" payment in lieu of tax under the Electricity Act in respect of the income and capital gain, to the OEFC. Prior to the IPO, the Province, as shareholder of Hydro One, made a capital contribution into Hydro One and received new common shares of Hydro One Limited for a total of $2.6 billion. This provided Hydro One with funds that it used to pay the "departure tax" to OEFC.
    - This transaction was fiscally neutral to the Province as the Province consolidates both OEFC's revenue and Hydro One's net income on its books (Please see the background section for an illustration of the departure tax)
    - OEFC (and the Province upon consolidation) recorded a higher payment in lieu of tax revenue due to the departure tax, but this amount will be offset by the reduction in Hydro One's net income as a result of the payment.

- On November 4, 2015, Hydro One paid OEFC the $2.6 billion "departure tax".

**Proposal Overview:**

- The Ministry of Energy has not provided specifics with regards to the potential implementation of electricity price mitigation measures through the dedication of the departure tax. The methodology noted below is the CEFD's assessment of the likely method of implementation.

- The dedication of the $2.6 billion in departure tax to the benefit of electricity ratepayers would likely involve the transfer of $2.6 billion from OEFC to the Province, resulting in an expense to the OEFC and revenue to the Province credited to the Consolidated Revenue Fund.
    - The Province would then direct $2.6 billion to ratepayers through the Ministry of Energy as a rate mitigation program, which would record an expense related to this program
        - A decision as to the length of the mitigation measure would also need to be made by the government.
    - The measure could be highlighted as a separate line item on the ratepayers monthly bill, identifying the impact of the reduction to ratepayers from the departure tax payment.

**Staff Comments**

**Impact to the Province/OEFC**

- Should the Ministry of Energy decide to dedicate the departure tax to ratepayers, there would be a significant negative fiscal impact up to $2.6B.
  - The departure tax payment by Hydro One to the OEFC, was effectively a true-up for lower PILs payments from Hydro One in previous years – and therefore should not be viewed as a one-time $2.6B cash windfall for the Province.
  - Since the Province already made a $2.6 billion capital contribution prior to the IPO to Hydro One to fund the departure tax, any amount dedicated from the departure tax to ratepayers would result in a fiscal impact.
- 
- [EFB: Please insert a bullet about stranded debt, or feel free to edit this bullet]In moving forward with a proposal to dedicate the Departure Tax, the OEFC would record a $2.6B expense on its financial statements
  - Originally, these funds were paid to the OEFC with the purpose to be dedicated towards the repayment of stranded debt. Re-allocating this amount may have an impact on the defeasance schedule of this debt.

- The Province has indicated that it plans on removing the Debt Retirement Charge (DRC) from electricity bills starting April 1, 2018. The decision to dedicate the departure taxwhich would cause stranded debt to increase may also make it more difficult for the Province to move forward with this policy initiative. EFB: Please review to ensure comfort with this point as well.

**Formatted:** Highlight

**Impact to Ratepayers:**

- CEFD staff have performed an initial analysis of the impact to residential and industrial ratepayers from the allocation of $2.6 billion from the departure tax to ratepayers. Overall the impact to ratepayers from this potential proposal is relatively minimal.
  - Assuming that the $2.6 billion is allocated over a 5 year period, the benefit to residential ratepayers is $2.76 per month and industrial ratepayers is $3.71 per MWh
  - Assuming that the $2.6 billion is allocated over a 10 year period the benefit to residential ratepayers is $1.39 per month and industrial ratepayers is $1.86 per MWh

| Departure Tax Savings to Ratepayers | Allocation over 5 years | Allocation over 10 years |
|---|---|---|
| **Residential Ratepayers (savings $/mth)** | **$2.76** | **$1.39** |
| **Industrial Ratepayers (savings $/MWh** | **$3.71** | **$1.86** |

***Assumes total TWh supplied of 140 hours and monthly demand of 750 KWh per residential household**

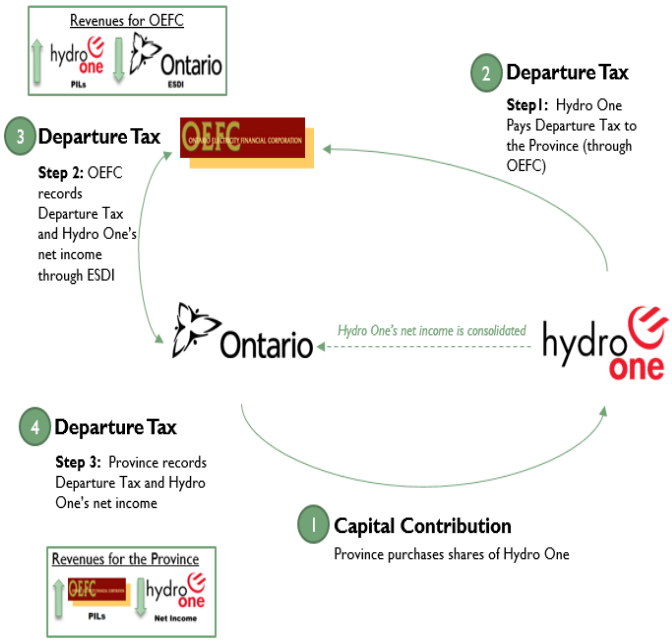
**Other Considerations:**

- Aside from the proposed implementation methodology cited above, which results in an expense to the OEFC and revenue to the Province, as an alternative, OEFC could use its existing cash on hand to retire $2.6 billion of existing debt that it currently has outstanding with the Province. (As of March 2016, OEFC had over $3.4 billion in cash and cash equivalents on its balance sheet).
    - This alternative would allow the Province to obtain $2.6 billion in funds without causing a direct fiscal impact to OEFC and negatively impacting stranded debt.

- It may however be a difficult communication exercise for the Province to link the receipt of $2.6 billion in cash ifrom the retirement of outstanding debt held with the Province to a specific electricity price mitigation measure.

**Background**

**Departure Tax Fiscal Overview**



1. **Capital contribution** of $2.6 B represents a payment of cash for more shares in the company. This is fiscally neutral (the Province is just exchanging one asset for another).
2. **Departure Tax Payment (Step 1):** Hydro One pays the departure tax to OEFC. This is an expense, so Hydro One's net income decreases.
3. **Departure Tax Payment (Step 2):** OEFC records payment in lieu of tax (PILs) revenue from the departure tax but also receives less income through the Electricity Sector Dedicated Income (ESDI) generated from Hydro One's net income. The end result is neutral to the Stranded Debt.
4. **Departure Tax Payment (Step 3):** The Province records PILs (through consolidation of OEFC) and also records Hydro One's net income, which fell in Step 1. The end result is a fiscally neutral transaction.

*COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE*

**Electricity Price Mitigation Proposal: Dedication Departure Tax**

**Issue:** The Ministry of Energy, as part of a suite of proposed initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication of the Departure Tax payment from the Hydro One IPO, to ratepayers.

**Context: Departure Tax**

- In connection with the Hydro One IPO, Hydro One's exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ceased to apply and Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.

- As a result of this deemed disposition, Hydro One was liable to make a "departure tax" payment in lieu of tax under the Electricity Act in respect of the income and capital gain, to the OEFC. [In order to facilitate this], ~~P~~prior to the IPO, the Province, as shareholder of Hydro One, made a capital contribution into Hydro One and received new common shares of Hydro One Limited for a total of $2.6 billion. This provided Hydro One with funds that it used to pay the "departure tax" to OEFC.
    - This transaction was fiscally neutral to the Province as the Province consolidates both OEFC's revenue and Hydro One's net income on its books. (Please see the background section for an illustration of the departure tax)
    - OEFC (and the Province upon consolidation) recorded a higher payment in lieu of tax revenue due to the departure tax, but this amount will be offset by the reduction in Hydro One's net income as a result of the payment.

- On November 4, 2015, Hydro One paid OEFC the $2.6 billion "departure tax".

**Proposal Overview:**

- The Ministry of Energy has not provided specifics with regards to the potential implementation of electricity price mitigation measures through the dedication of the departure tax. The methodology noted below is the CEFD's assessment of the likely method of implementation.

- The dedication of the $2.6 billion in departure tax to the benefit of electricity ratepayers would likely involve the transfer of $2.6 billion from OEFC to the Province, resulting in an expense to the OEFC and revenue to the Province credited to the Consolidated Revenue Fund.
    - The Province would then direct $2.6 billion to ratepayers through the Ministry of Energy as a rate mitigation program, which would record an expense related to this program
        - A decision as to the length of the mitigation measure would also need to be made by the government.
    - The measure could be highlighted as a separate line item on the ratepayers monthly bill, identifying the impact of the reduction to ratepayers from the departure tax payment.

**Staff Comments**

**Impact to the Province ~~/~~and OEFC**

- Should the Ministry of Energy decide to dedicate the departure tax to ratepayers, there would be a significant negative fiscal impact of up to $2.6B.
    - The departure tax payment by Hydro One to the OEFC, was effectively a true-up for lower PILs payments from Hydro One in previous years – and therefore should not be viewed as a one-time $2.6B cash windfall for the Province.
    - Since the Province already made a $2.6 ~~billion~~ B capital contribution prior to the IPO to Hydro One to fund the departure tax, any amount dedicated from the departure tax to ratepayers would result in a fiscal impact.

- ~~[EFB: Please insert a bullet about stranded debt, or feel free to edit this bullet]~~In moving forward with a proposal to dedicate the Departure Tax, the OEFC would record a $2.6B expense on its financial statements
    - Originally, these funds were paid to the OEFC with the purpose to be dedicated towards ~~the repayment of~~ reducing stranded debt. Re-allocating this amount may have an impact on the defeasance schedule of this debt.

- [The Province has removed the Debt Retirement Charge from residential electricity bills beginning January 1, 2016 and indicated that it plans on removing the Debt Retirement Charge (DRC) from commercial, industrial and all other electricity bills starting April 1, 2018.
    - The decision to dedicate the departure tax which would cause stranded debt to increase may also make it more difficult for the Province to move forward with this policy initiative. ~~EFB: Please review to ensure comfort with this point as well.~~]

**Commented [SK61]:** Tricky relationship stranded debt and end of the residual stranded debt and debt retirement charge.

Happy to remove, however, announcement of April 1 2018 end date made in FES 2015; same time period as the IPO.

Clearly there was a consideration between the two policy initiatives.

**Impact to Ratepayers:**

- CEFD staff have performed an initial analysis of the impact to residential and industrial ratepayers from the allocation of $2.6 billion from the departure tax to ratepayers. Overall the impact to ratepayers from this potential proposal is relatively minimal.
    - Assuming that the $2.6 billion is allocated over a 5 year period, the benefit to residential ratepayers is $2.76 per month and industrial ratepayers is $3.71 per MWh

**Subject:** RE: Draft BN for Monday TB/MBC Meeting

Attached is an updated draft briefing note for TB/MBC on Monday. Cap and trade minutes updated to reflect MOECC and CO input. The Financial Summary table future year numbers have moved back to the numbers used at Chair's briefing, in consultation with Energy (there's a minute explicitly saying Energy will through the upcoming PRRT process update the outyear numbers). The $300M for 2016-17 remains and aligns with the signed admin sheet for the TB/MBC item.

James

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | | |
|---|---|---|
| **Ministry:** | Energy | |
| **Meeting Date:** | September 12, 2016 | |
| **Agenda Class:** | Major | |
| **Last reviewed by:** N/A | | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives.<br>• Recommend proceeding to Cabinet with the proposed legislation amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 300.0 | 1006.0 | 1004.0 |
| Recommended program base | 300.0 | 1006.0 | 1004.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B eligible electricity consumers (i.e., commercial, institutional and small industrial).
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal<br>About $1.0B | Residential, small business and small farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal<br>($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $946M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base<br>($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base<br>($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity ratepayers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.1 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset

the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and could incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on

both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reduction in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19, and $1,004,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change to invest an estimated amount of up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds for non- Regulated Price Plan electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism with a linkage to GHG emission reductions and the government's Climate Change Action Plan. Cap and trade auction proceeds would be used to promote fuel switching to make electricity more competitive with traditionally cheaper fossil fuels, supporting the Government's Climate Change Action Plan.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions.

In this regard:

1) Note any redirection of proceeds previously allocated in the Climate Change Action Plan is subject to the evaluation of the Minister of the Environment and Climate Change.

2) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21, which was allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with the Premier's Office and Cabinet Office on the development and implementation of an integrated communications strategy.

# APPENDIX B: FINANCIAL TABLES

## APPENDIX C: ELECTRICITY SECTOR BACKGROUND

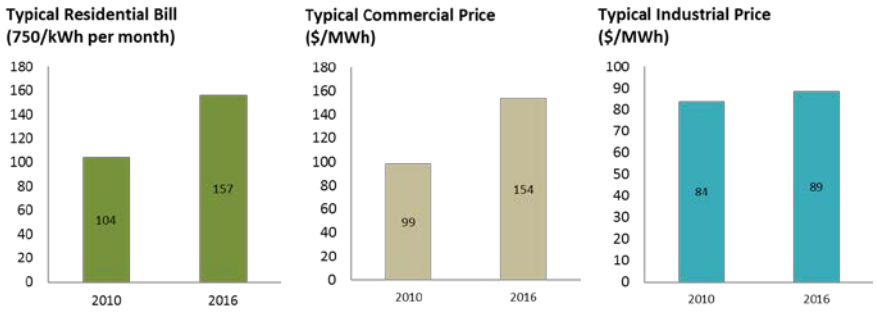
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>  – Coffee / snack retailer<br>  – Convenience store<br>  – Apparel store<br>  – Hair salon<br>  – Small insurance office | • Class A consumers<br>  – Manufacturer<br>  – Large grocery store<br>  – Mines<br>  – Auto assembly plants<br>• Class B consumers<br>  – Commercial offices (low rise)<br>  – Hotel<br>  – General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX F: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

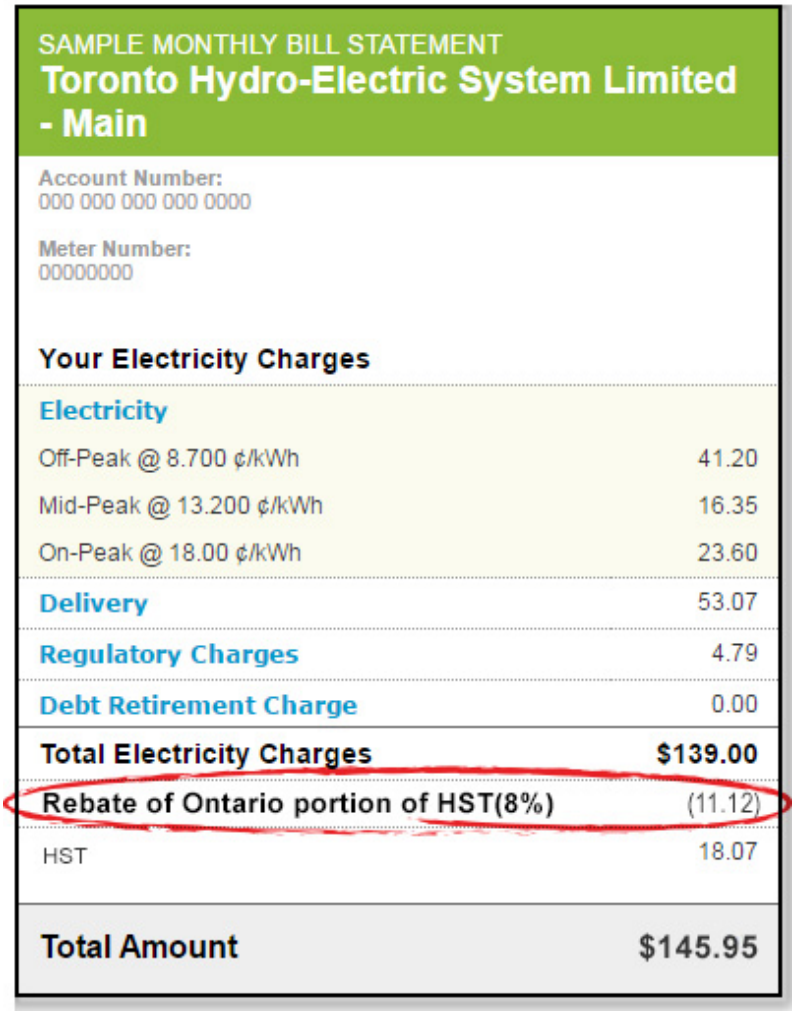
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

## APPENDIX E: ILLUSTRATIVE BILL MOCK-UP



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:

**Subject:** RE: Electricity Item - Cabinet/TB on Monday at 9 am

Hi Felix,

I understand Ron is planning to attend so we are not planning to be there.

Hope all goes well!

Thanks,

John.

**Subject:** Electricity Item - Cabinet/TB on Monday at 9 am

Hi everyone,

This is to let everyone know that Energy's Electricity item will be going to TB/MBC on Monday morning at 9 am. The meeting will be at the Council Chambers, Room 275, in the Legislature.

Due to the room size, not everyone may be able to go inside the room - but we are happy to have folks outside in the anteroom should questions come up.

If you plan to attend, please arrive by 8:45 am.

We will be sharing the next version of the assessment note and TB minute later today / this evening.

Thanks,
Felix

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 12, 2016 |
| **Agenda Class:** | Major |
| **Last reviewed by:** N/A | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan eligible consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in 2016-17 in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives.<br>• Recommend proceeding to Cabinet with the proposed legislation and amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 300.0 | 1006.0 | 1004.0 |
| Recommended program base | 300.0 | 1006.0 | 1004.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to additional commercial, institutional and small industrial consumers.
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal<br>About $1.0B | Residential, small business and farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal<br>($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $946M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base<br>($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base<br>($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity ratepayers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.0 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural or remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reductions in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) do not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19, and $1,004,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Further to the Cabinet Minute of May 11, 2016 and the Treasury Board Minute of May 19, 2016, note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change, Treasury Board Secretariat, Ministry of Finance, Cabinet Office and Office of the Premier, to allocate up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds to address rate-impacts on non-Regulated Price Plan electricity consumers (e.g., industrial, commercial and institutional) related to cap and trade and the expansion of other rate-based programs, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of Energy to work with the Ministry of the Environment and Climate Change and report back to Cabinet by the end of 2016 with options on the appropriate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and allow electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with Office of the Premier and Cabinet Office on the development and implementation of an integrated communications strategy.

# APPENDIX C: ELECTRICITY SECTOR BACKGROUND

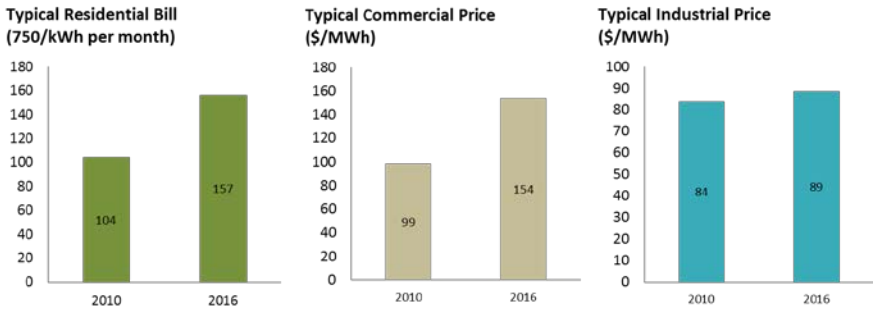
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural or remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>– Coffee / snack retailer<br>– Convenience store<br>– Apparel store<br>– Hair salon<br>– Small insurance office | • Class A consumers<br>– Manufacturer<br>– Large grocery store<br>– Mines<br>– Auto assembly plants<br>• Class B consumers<br>– Commercial offices (low rise)<br>– Hotel<br>– General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX E: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

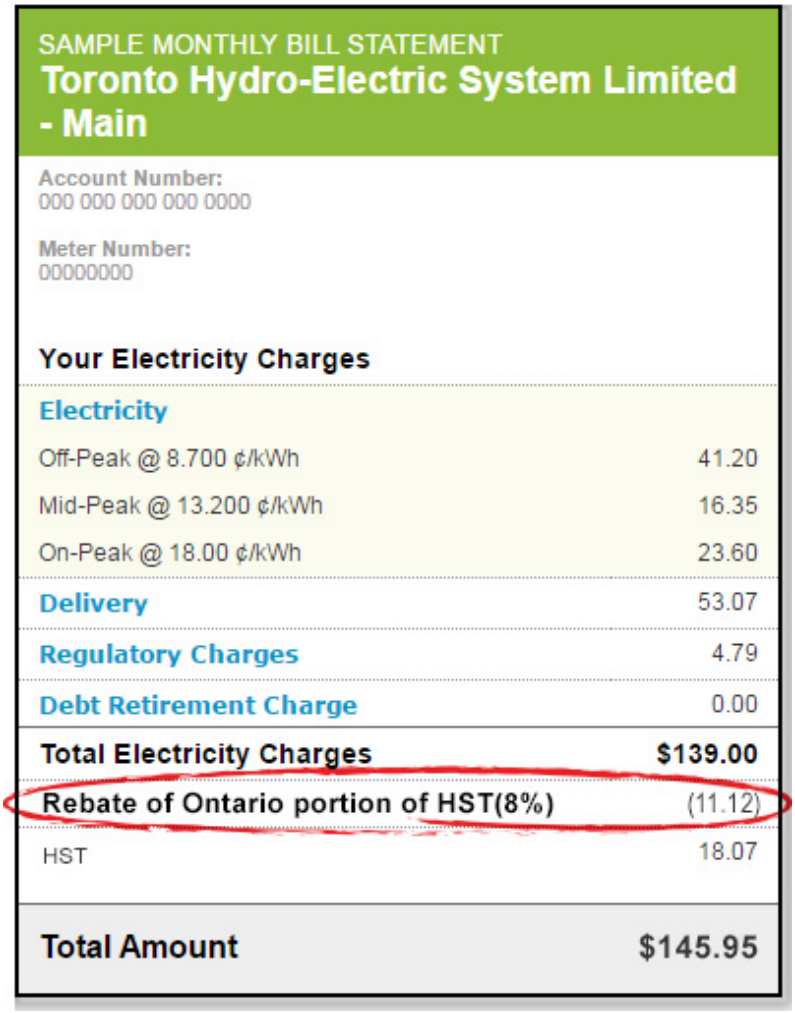
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

## APPENDIX F: ILLUSTRATIVE BILL MOCK-UP



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | (11.12) |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

## APPENDIX G: BACKGROUND CONTEXT

**Budget commitment** (*2016 Ontario Budget - Chapter I: Building Prosperity and Creating Jobs*)**:**

The government will also take steps to ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

**CCAP public document** (under *Action Area – Buildings and Homes: Reduce emissions from fossil-fuel use in buildings*)**:**

Keep Electricity Rates Affordable: Use cap and trade proceeds to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

**CCAP policy minute** (May 11, 2016)**:**

ENERGY develop additional options to addressing rate-impacts on electricity consumers and work with MOECC, the Premier's Office and Cabinet Office regarding the selected option for inclusion in the action plan

**CCAP TB/MBC minute** (May 19, 2016)**:**

i) Approve-in-principle the following estimated ranges to guide potential investment of cap and trade proceeds over four years, from 2017-18 to 2020-21, should proceeds be available:

| **CCAP Action** | **Initiative** | **Potential Funding range from proceeds over 4-year period** | **Estimated GHG reduction in 2020 associated with potential funding** |
|---|---|---|---|
| Moving toward a lower-carbon energy supply with adequate capacity and affordable low-carbon electricity. | Eliminate Carbon Price Impacts / Grid Emission Reductions to Ratepayers | · Range - $1,000,000,000 to $1,320,000,000 | 3,000,000 Tonnes (Energy Planning) |

**Subject:** Electricity item

Hi everyone,

Just received a draft Cab Sub from ENE, which they expect will change again based on comments from their MO. We are reviewing this now as we understand our MO may be interested in a briefing. We will forward invites and any additional materials as we receive. Password is the external Budget password.

Thanks,
Madeleine

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Context – Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

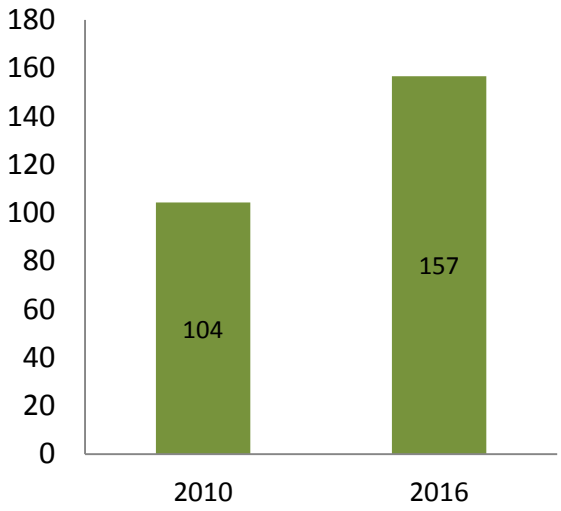
- The following slide provide further information on the prices paid by different classes of electricity consumers.

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

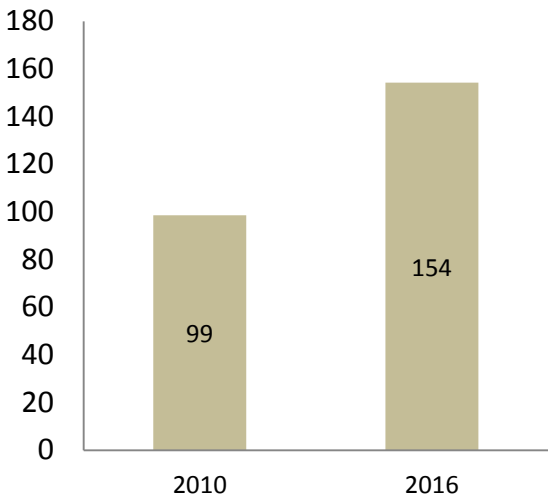
# Context – Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.

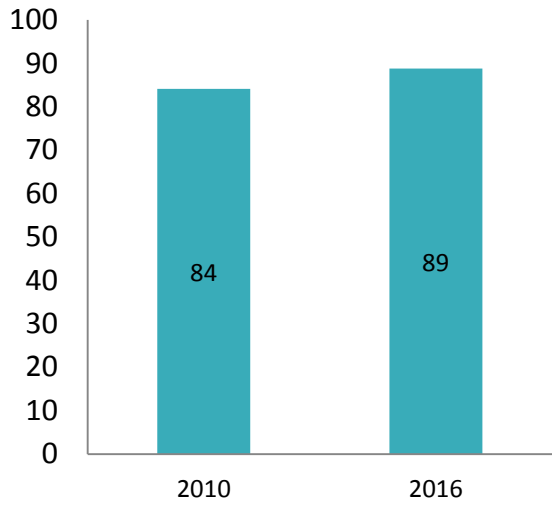
**Typical Residential Bill (750/kWh per month)**



**Typical Commercial Price ($/MWh)**



**Typical Industrial Price ($/MWh)**



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Existing Rate Mitigation

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.

- As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs.

# Existing Rate Mitigation (cont'd)

| Program | Consumer Type | Rate/Tax-based | Description |
|---|---|---|---|
| Northern Ontario Energy Credit | **Residential** | Tax | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year. |
| Ontario Energy and Property Tax Credit | | Tax | Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families. |
| Ontario Electricity Support Program | | Rate | Provides ongoing assistance directly on the bills of eligible low-income electricity consumers. |
| Rural or Remote Rate Protection | | Rate | Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas. |
| saveONenergy Conservation Programs (including Home Assistance Program for low income customers) | | Rate | Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars. |
| saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs) | **Commercial** | Rate | saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information. |
| Industrial Conservation Initiative | **Industrial** | Rate | Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills. |
| Industrial Accelerator Program | | Rate | Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid. |
| Industrial Electricity Incentive | | Rate | Provides reduced electricity rates for companies starting or expanding operations in Ontario. |
| Northern Industrial Electricity Rate Program | | Tax | Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers. |
| Demand Response | | Rate | Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system. |

# Current Cost Shifts in Ontario's Electricity System

- Ontario has implemented several programs that have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial).

- The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# 2016 Budget Commitment – Overview

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- The $1.3 billion was estimated to go to different electricity consumer classes as follows:
  - $120 million for residential consumers;
  - $170 million for commercial consumers; and
  - $40 for industrial consumers.

# Electricity System Cost Reduction Initiatives

- A number of actions have and are being taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Context – Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal – Overview

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST;

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial);

  3) Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  4) Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

# Rate Mitigation Proposal – Illustrative* Impacts

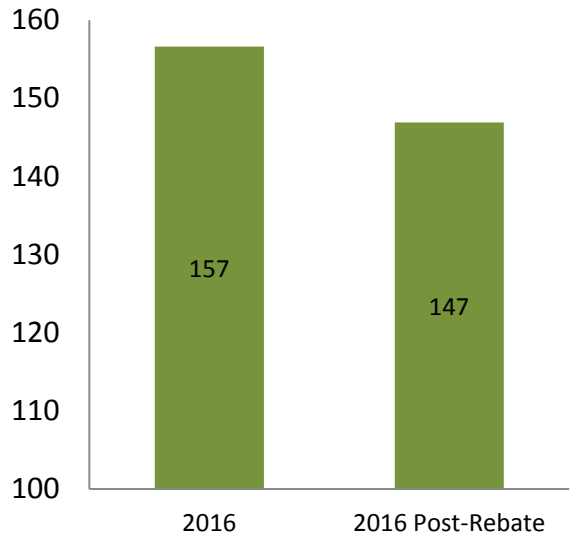
| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact | Class A (Industrial) Impact | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion | $270 million annually | -$10/ month<br><br>(-6%) | -$45/ month<br><br>(-20%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

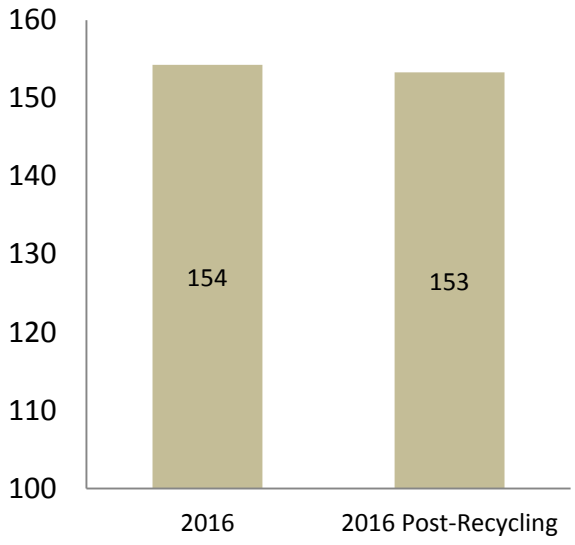
****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

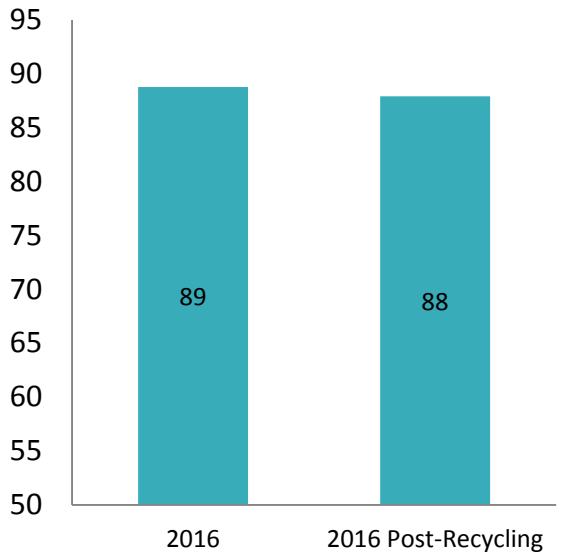
**Typical Residential Bill**
**750/kWh per month**



**Typical Commercial Price ($/MWh)**



**Typical Industrial Price ($/MWh)**



**Residential:** The net impact of the 8% rebate is a 6% reduction.

**Commercial:** The net impact of proceeds recycling is a 1% reduction.

**Industrial:** The net impact of proceeds recycling is a 1% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016. Commercial and industrial electricity prices reflect YTD June 2016. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) 8% Rebate to Regulated Price Plan Eligible Consumers

- ENERGY is proposing to introduce legislation/regulation by X [placeholder for date] to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

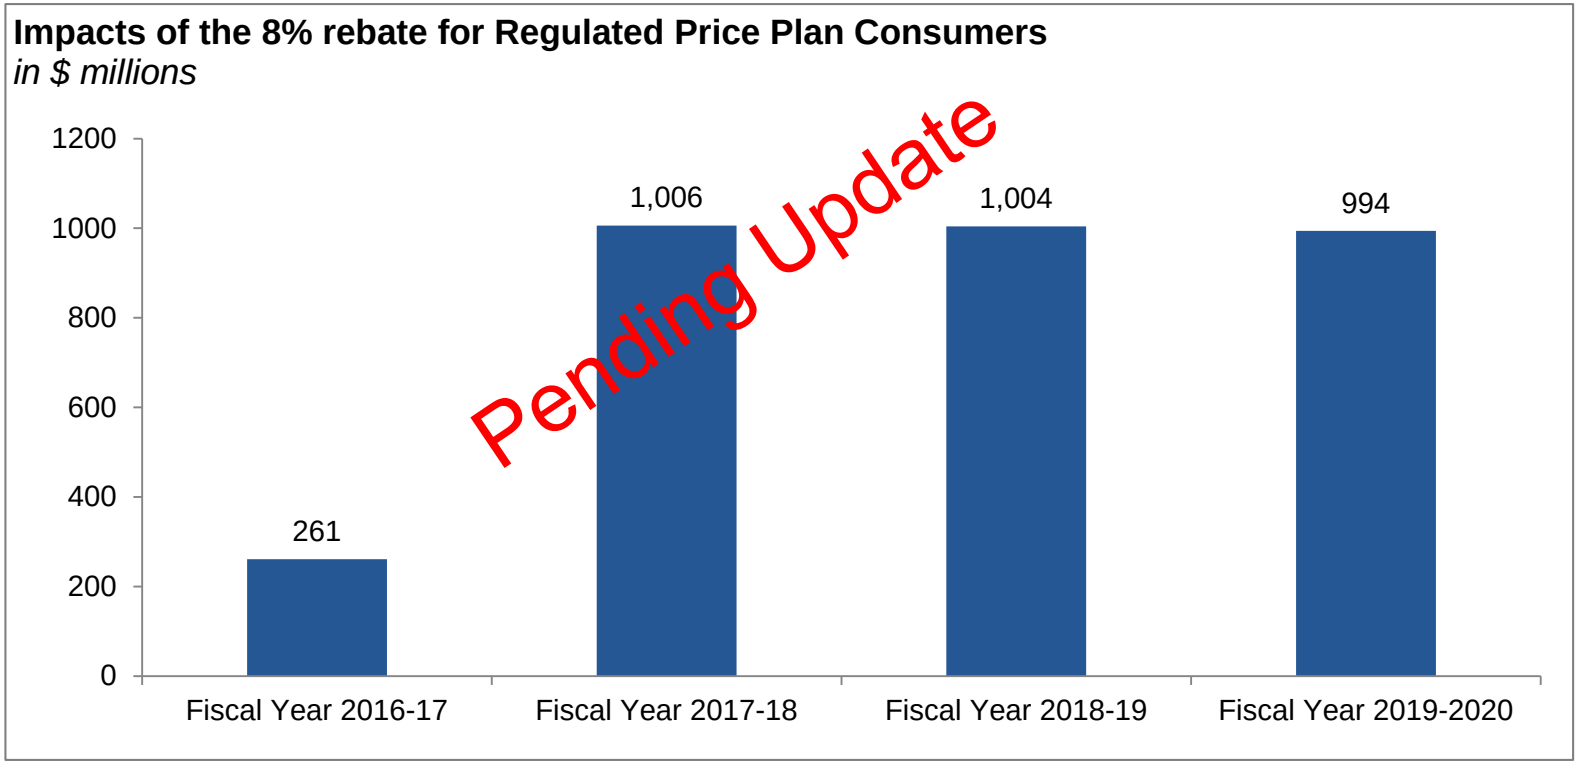
| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# 1) 8% Rebate to Regulated Price Plan Eligible Consumers – Projected Impact

- ENERGY estimates that the average annual cost of an 8% rebate to consumers eligible for Regulated Price Plan consumers would be approximately $1.0 billion between 2017 and 2020.



# 2) Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility effective [X placeholder date].

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# 2) ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

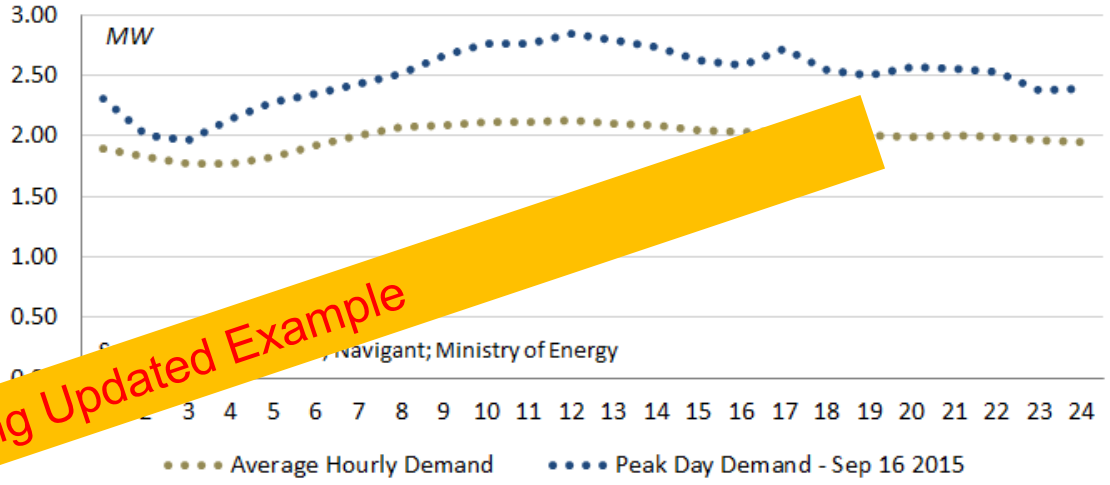
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# 2) ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Fi… could expect to … vings if they a… …ble to respond to …ces during high demand …

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



Pending Updated Example

**Illustrative Bill Savings, 2-3 MW Consumer**

*Source*: Navigant; Ministry of Energy

*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# 3) Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

# 3) Rural or Remote Rate Protection (RRRP) Update

| Bill Comparisons @ 1000kWh/month (Pre-HST) | | |
|---|---|---|
| | **Total Current Delivery**** Charge** | **Total Current Bill** |
| **Hydro One R2** (Current RRRP Subsidy Levels) | ~$111 | ~$229 |
| **Hydro One R2** (With Proposed RRRP Expansion) | ~$83 | ~$201 |
| **Hydro One R1** | ~$82.50 | ~$201 |
| **Algoma Power** (Receives RRRP) | ~$79.50 | ~$197 |
| **Provincial Average*** | ~$51 | ~$169 |
| **Lowest Cost Total Bill LDC**** | ~$48 | ~$149* |
| **Lowest Cost Delivery Charge LDC***** | ~$36 | ~$154 |

**Average Bill of Ontario municipal LDCs and non-municipal Algoma Power, CNPI, and Hydro One Urban. Excludes Hydro One Remote, Hydro One R1 and Cornwall Electric.*

***The LDC with the lowest total bill is Fort Frances Power Corporation (FFPC). However, FFPC does not have the lowest delivery costs in the province. FFPC customers who are not enrolled with a retailer receive a $0.0125/kwh discount on power due to a historic (1905) mill agreement. In order to maintain the discount, FFPC maintains its ROE at 0%.*

****Hydro Hawkesbury has the lowest delivery rates at ~$36 per month*

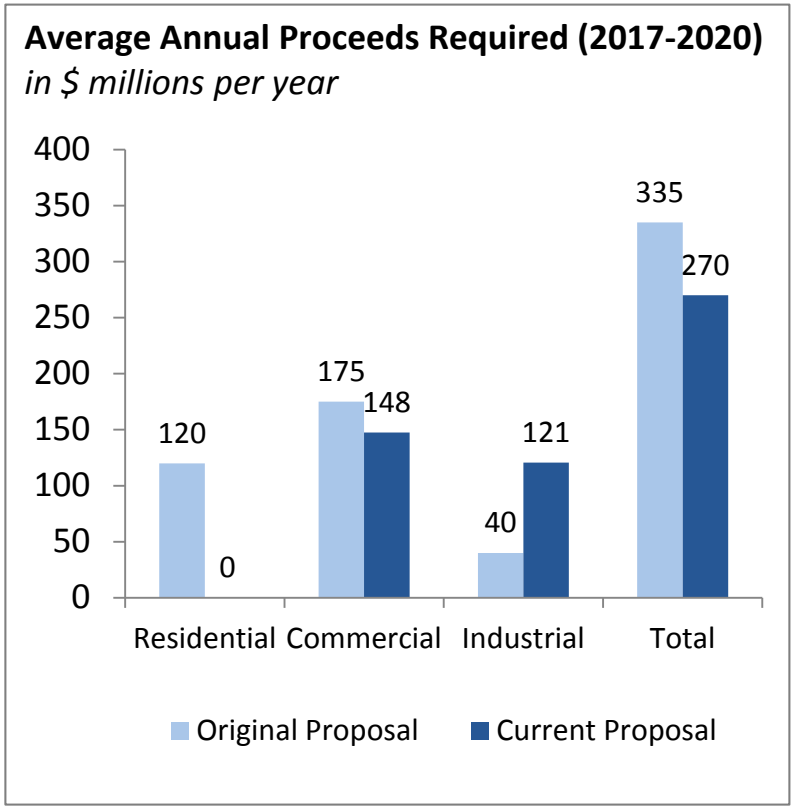
*****Delivery charges include distribution rates (fixed and variable), transmission, and line loss.*

# 4) Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Considerations – Implementation

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive ~~payments~~ rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998). See appendix for bill mock-up.
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Considerations – Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $240 million relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $240 million in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.

# Considerations – Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

# Communications – Key Messages

- [Placeholder]

# Proposed Cabinet Minute

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.

Pending Update

26

# Proposed Cabinet Minute (cont'd)

3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE *ELECTRICITY ACT, 1998* TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.

4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE *ONTARIO ENERGY BOARD ACT, 1998* TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.

5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.

Pending Update

6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE *GREENHOUSE GAS REDUCTION ACCOUNT* PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.

7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

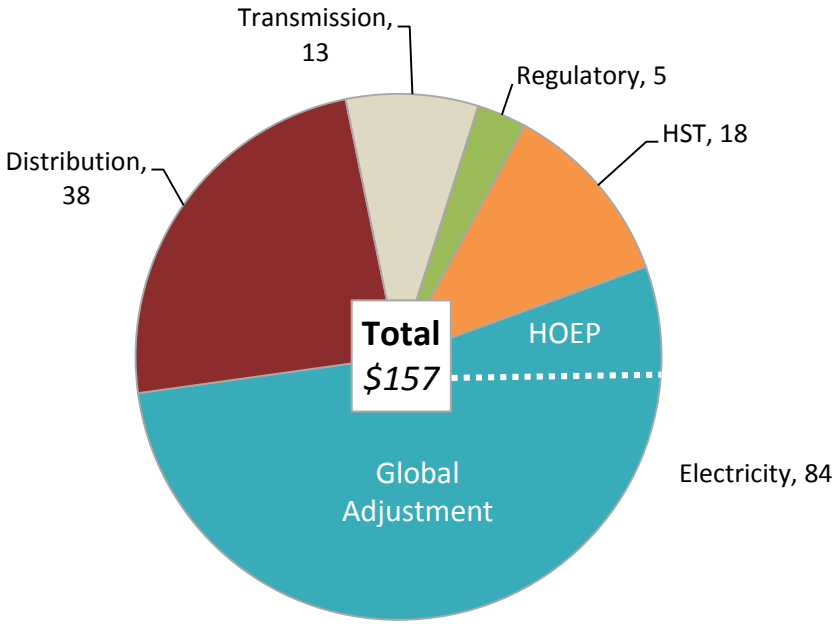
# Appendix

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

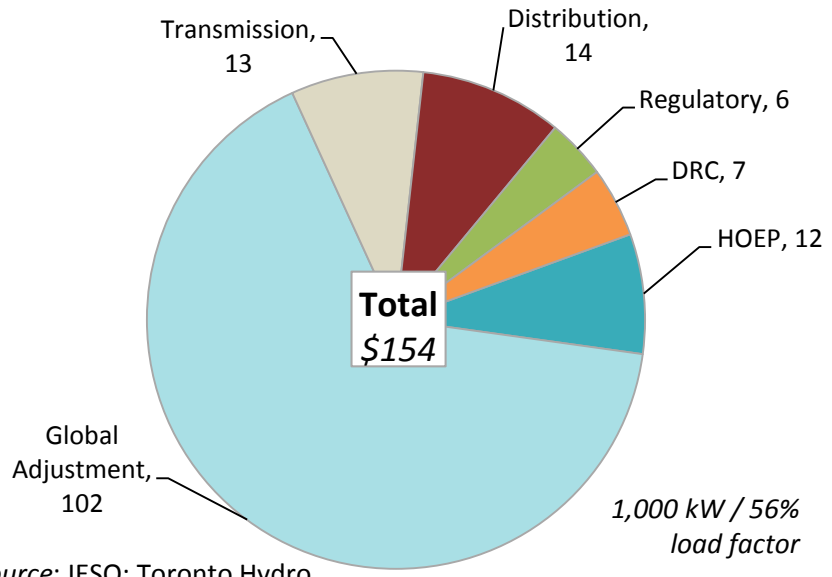
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

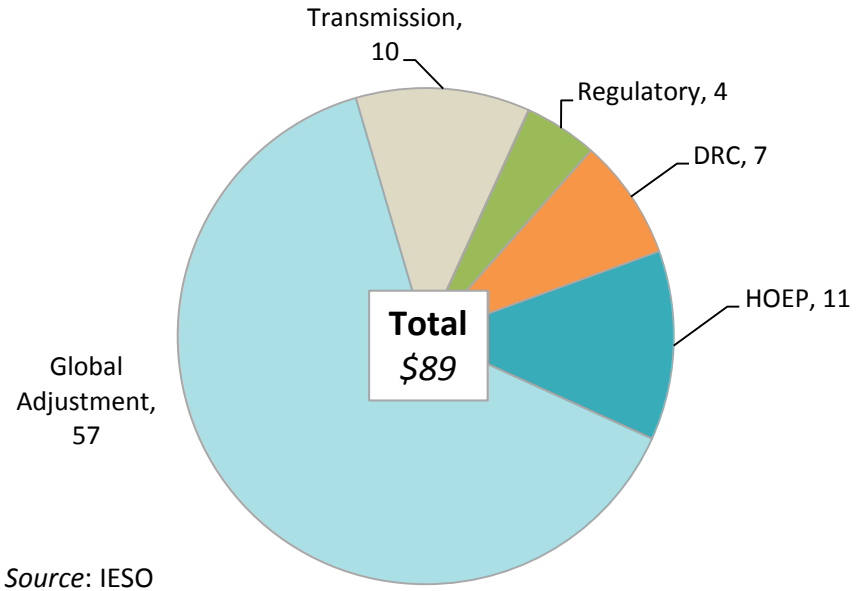
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

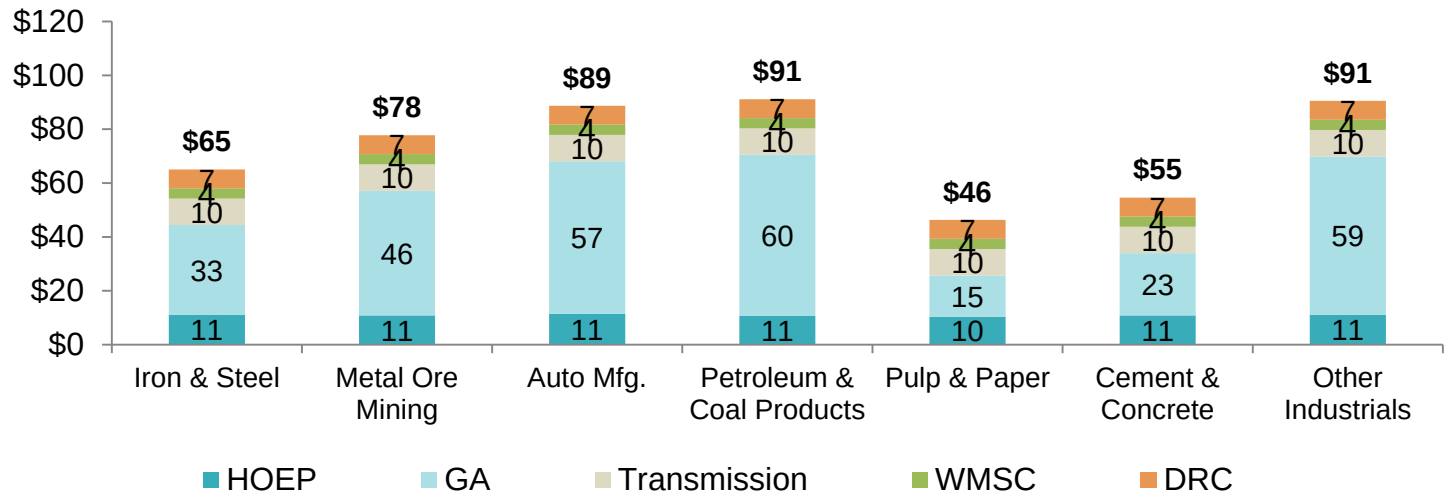
*** Note:** Industrial consumers receive input tax credits for their HST.

# Industrial Electricity Prices by Sector

- While industrial consumers (Class A) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# saveONenergy Conservation Programs

| Program | Consumer Type | Description |
|---|---|---|
| **Heating and Cooling Initiative** | **Residential** | Provides rebates to help offset the cost of purchasing and installing new heating and cooling equipment in the home. |
| **Coupons** | | Available in-store for one month in the spring and fall and can be downloaded year-round to use at participating retailers to help Ontarians save on a wide range of energy-efficient products including LED bulbs, power bars with integrated timers and more. |
| **Audit Funding** | **Business** | Up to 50% of the cost of an energy audit to identify opportunities for energy efficiency upgrades and eligible incentives. |
| **Retrofit Program** | | Provides various incentives for as much as 50 per cent of project costs, and advanced funding for assisted and social housing buildings, for updating old or inefficient equipment, including lighting, motors, unitary AC or packaged rooftop units. |
| **Small Business Lighting** | | Provides incentives for new energy efficient lighting. |
| **New Home Construction** | | Designed to encourage home builders and renovators to construct energy-efficient homes, and includes incentives for installation of energy-efficient measures. |
| **Training and Support** | | Helps provide access to the most up-to-date training, such as in building commissioning, certified measurement and verification, and how to be an energy manager. |
| **Process and Systems** | | Provides up to $50,000 for engineering studies and up to 70% of capital costs for energy efficiency upgrades. |
| **Industrial Accelerator Program** | | Assists eligible transmission-connected companies to fast track capital investment in major energy conservation projects. |

# HST – Overview

- The HST is a value-added tax. Unlike a sales tax, under a value-added tax most businesses effectively do not pay tax on their inputs because they are able to claim input tax credits (ITCs).
  - Through ITCs, the HST removes embedded sales taxes paid by businesses.
  - Only HST registrants that have taxable sales can claim ITCs. Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
  - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totalling about $445 million in tax relief.

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
  - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependant children under age 19.
  - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

# Placeholder – HST Exemptions in Other Jurisdictions

| Jurisdiction | Tax | Business | Residential | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

# HST – Considerations

- An across-the-board 8% rebate could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

# Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

| REBATE RATES FOR PSBs | | |
|---|---|---|
| **PSB Type** | **Ontario (8%)** | **Federal (5%)** |
| Municipalities | 78% | 100% |
| Universities & Public Colleges | 78% | 67% |
| School Authorities | 93% | 68% |
| Hospital Authorities | 87% | 83% |
| Charities and Qualifying Non-Profit Organizations* | 82% | 50% |

**A qualifying non-profit organization receives at least 40% of its funding from government.*

# Placeholder – Electricity Bill Mock-Up

# Industrial Conservation Initiative (ICI) – Overview

- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

# Expected Numbers of Newly Eligible ICI Consumers

- As part of its ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

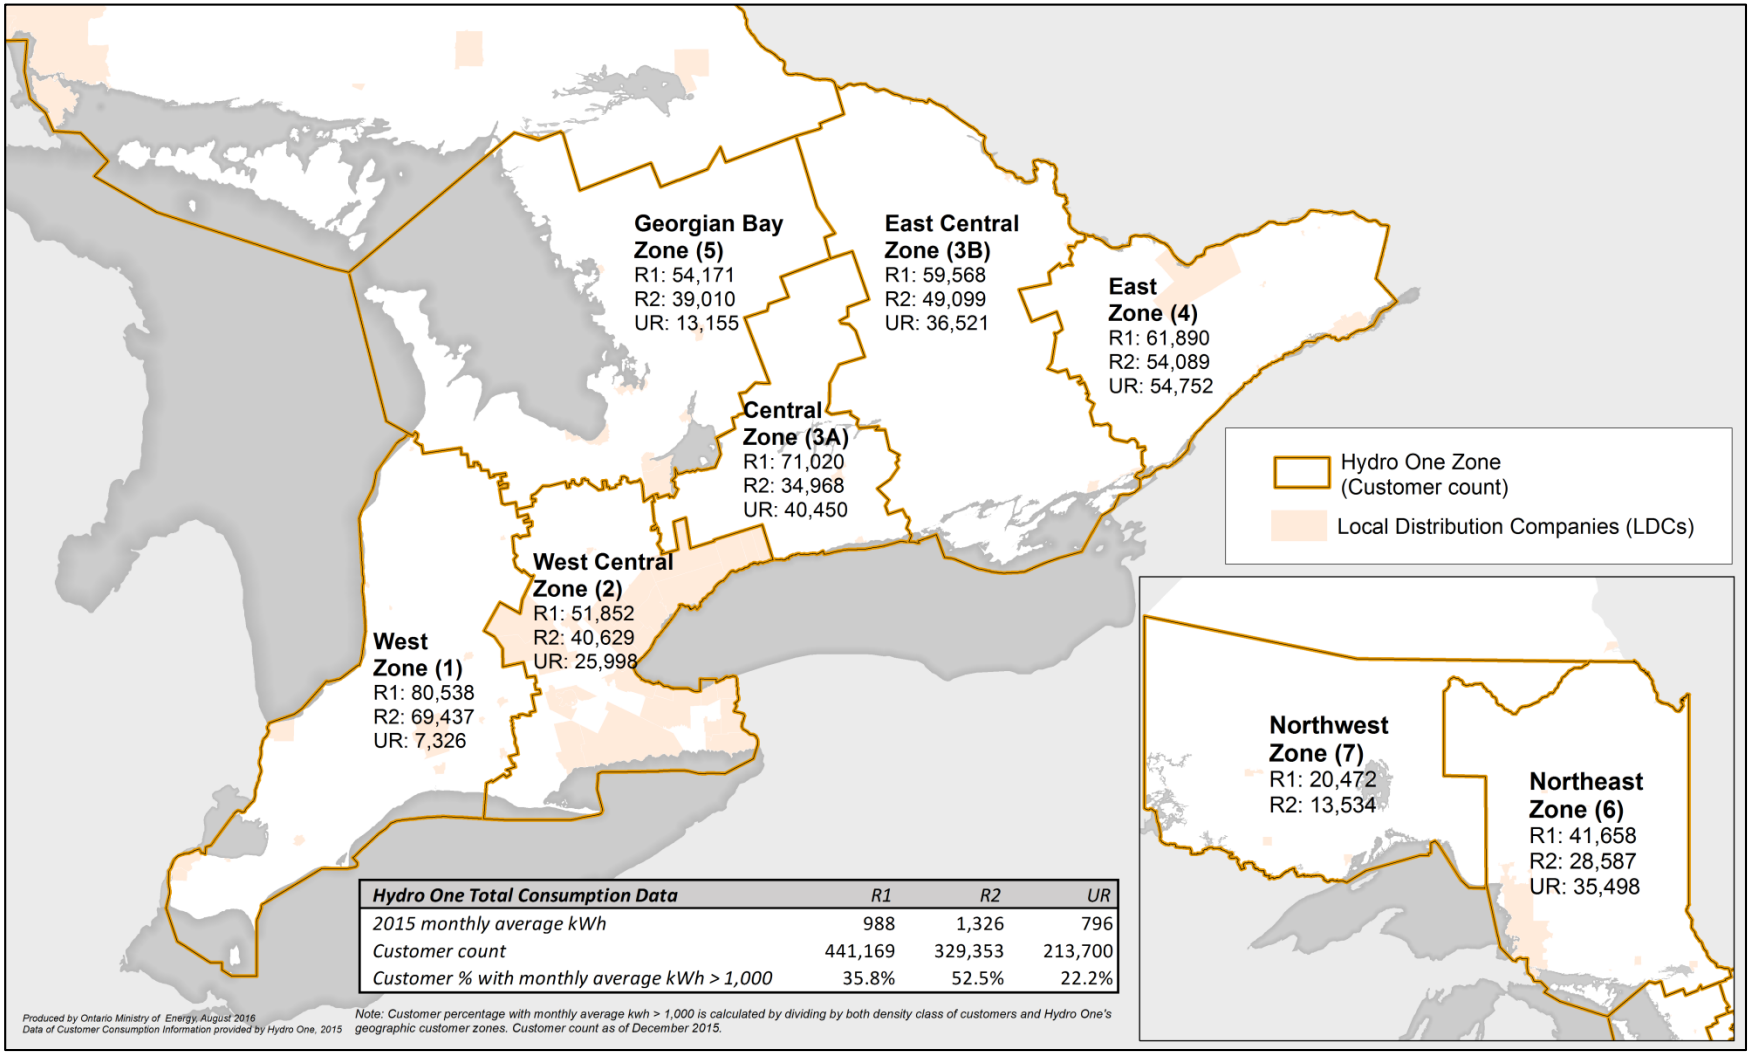
- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

| | **1-2 MW** | **2-3 MW** | **3-5 MW*** |
|---|---|---|---|
| # of customers – ICI survey | 649 | 197 | 171 |
| # of customers – Adjusted for response rate | 854 | 259 | 225 |

*Source:* Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

# Hydro One Consumers by Customers Class

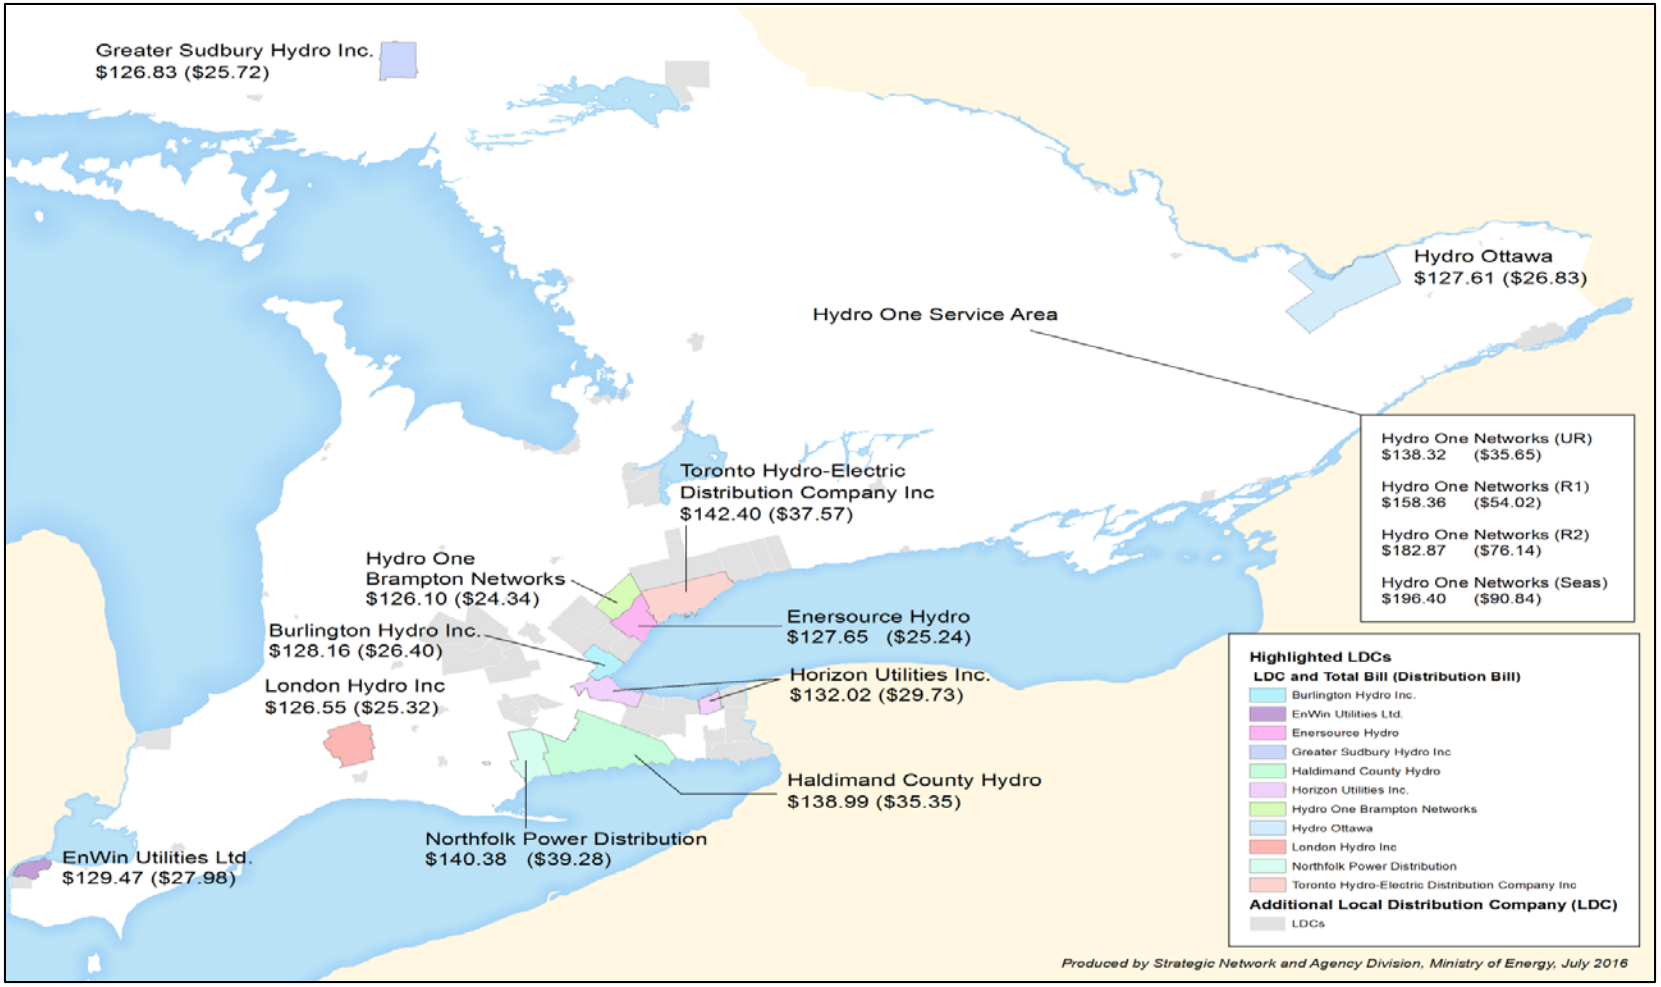


| *Hydro One Total Consumption Data* | *R1* | *R2* | *UR* |
|---|---|---|---|
| *2015 monthly average kWh* | 988 | 1,326 | 796 |
| *Customer count* | 441,169 | 329,353 | 213,700 |
| *Customer % with monthly average kWh > 1,000* | 35.8% | 52.5% | 22.2% |

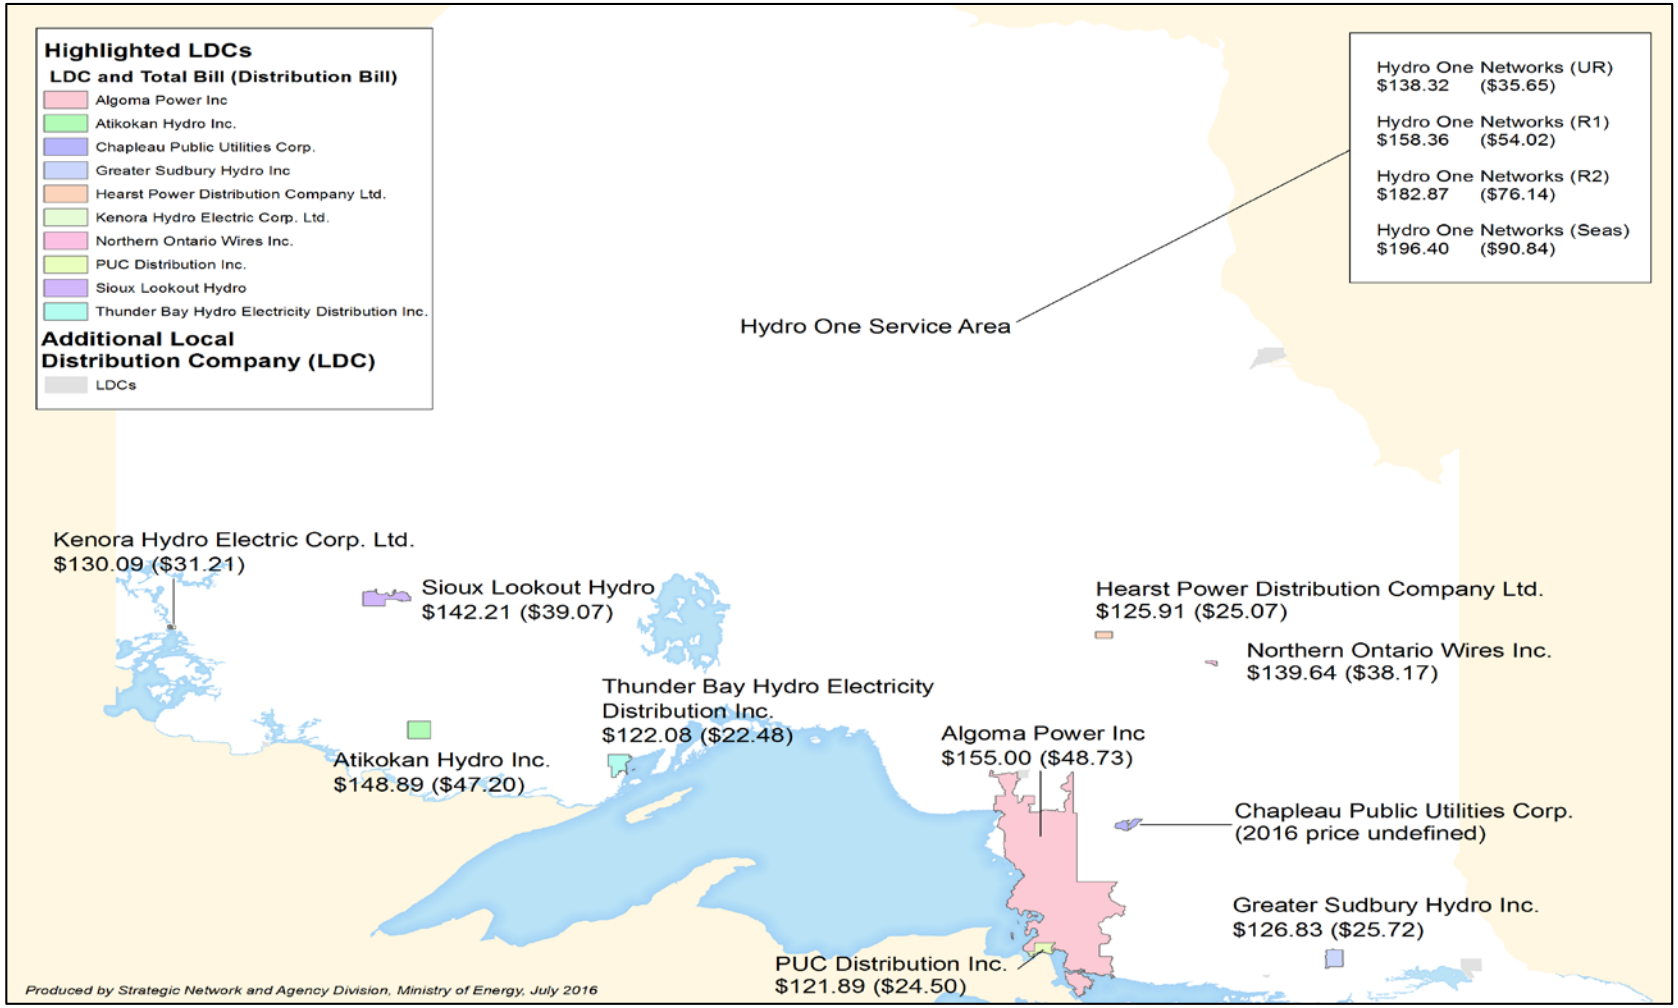
*Produced by Ontario Ministry of Energy, August 2016*
*Data of Customer Consumption Information provided by Hydro One, 2015*

*Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.*

# Selected Rate Comparison – Total Bill and Distribution Rate



# Selected Rate Comparison – Total Bill and Distribution Rate



# Alignment With Climate Change Action Plan

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3 billion over 4 years to greenhouse gas (GHG) reduction initiatives, funded by Cap and Trade auction proceeds.

- The CCAP includes up to $1.32 billion over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas (GHG) emmissions by 2020.

| ***$ Billions*** | **2017-18** | **2018-19** | **2019-20** | **2020-21** | **Total** |
|---|---|---|---|---|---|
| Total Committed in CCAP | **$1.5 – 2.1** | **$1.5 – 2.1** | **$1.5 – 2.1** | **$1.5 – 2.1** | **$6.0 – 8.3** |
| *Electricity Price Mitigation* | *Up to 0.3* | *Up to 0.3* | *Up to 0.3* | *Up to 0.3* | *Up to 1.3* |

- Ontario's *Climate Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail;
  - Hamilton LRT;
  - Hurontario LRT; and
  - Energy efficiency in schools.

**To:** Fung, Felix (TBS); Strang, James (TBS)
**Cc:** Kim, John (OFA)
**Subject:** Energy Cabinet Submissions

Hi Felix and James,

I understand that Energy is involved in two submission to a Minister's Table on Climate Change on December 8. The submissions are:

- Long-Term Energy Plan update
- Rate mitigation

Would you have copies of these submissions?

Thanks,
Emily

**Subject:** Energy and Price Mitigation

Hi,

Apparently a draft "bootleg" copy.

Please review and do a markup. A short note with staff comments would be helpful too.

Is a draft for EOD doable?

The "Trillium Trust" would notionally be either all incremental electricity projects vs Moving Ontario Forward, and hitting the bottom line once in-service and amortised. Or crowds out Moving Ontario Forward projects. However, could hurt the fiscal bottom line if it is perceived as detracting from Hydro One potential rate base growth, hurting market value upfront, and net income (and corporate taxes) over time. Does that make sense?

And little or no near-term rate impact, as new projects would affect the rate base years out, unless the Trillium Trust is used for existing Tx projects already about to come on line.

I might want to argue that if they do the DRC one, it is in effect giving up a chunk of the Departure Tax benefit to OEFC. And on the departure tax, aside from all the regulatory principles arguments, I might think about saying that the elimination of the deferred tax liability portion was just truing up the PILs amounts owing.

Thanks,
Ron

ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new “green bank entity” over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the “Trillium Trust” to make investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded  interties and expansion of natural gas to rural areas, etc.
- Empower energy  agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario’s electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to “opt into” a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.16 | 2.31 | 2.41 | 2.49 | 2.54 | 2.58 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| 6. Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 8. Cancel / Adjust FIT | - | - | 0.13 | 0.13 | 0.14 | 0.14 | Long-Term |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| **Considered but not Recommended** | | | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 2. Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|

| 2. Cancel LRP I | - | - | - | - | - |

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on ~~the~~ potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to~~wards~~ decarbonize) and modernize the electricity infrastructure (~~i.~~e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the~~se~~ subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), th~~e~~ose proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those pres~~t~~ented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit NIERP – Northern ~~Ontario~~Industrial Electricity Rate program DRC – Debt etirement Charge

OREC – Ontario Rebate for Electricity Consumers NOEC – Northern Ontario Energy Credit OEPTC – Ont. Energy & Property Tax Credit
~~DRC – Debt etirement Charge~~ ~~OEPTC – Ontario Energy and Property Tax Credit~~

## Energy's Broad Policy Themes / Rationales

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the **OESP or expanding eligibility** | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the ne**w "green bank entity" over time** | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infr**astructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return on |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

## Detail on Proposals

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy noted ~~in previous drafts of its price mitigation deck~~ that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - ~~OESP credits could be increased to address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits).~~
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, ~~.~~ ~~I~~incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.~~.~~
  - ~~o~~
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).

  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy ~~is proposed~~lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related ~~to the~~ deferred tax benefit, as well ~~and~~ as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported~~proposed end date of the DRC~~.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OESP, RRRP, First Nation rate | | 398 | 419 | 433 | 447 |
| Conservation Programs through Tax Base | 110 | 450 | 450 | 450 | 450 |
| [Trillium Trust] | TBD | TBD | TBD | TBD | TBD |
| Departure Tax | | TBD | TBD | TBD | TBD |
| DRC removal for Class B | 110 | 450 | | | |
| **Proposed Program Total:** | **220** | **1,298** | **869** | **883** | **897** |
| | | | | | |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[2] | 450 | 460 | 470 | 481 | 481 |
| **Existing Program Total:[3]** | **1,225** | **2,005** | **1,715** | **1,826** | **1,826** |
| **TOTAL[3]** | **1,445** | **3,303** | **2,584** | **2,709** | **2,723** |

1. Based on forecasted numbers
2. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission
3. Total would be significantly larger with the TBDs crystalized.

Thanks very much, Jenarra. Appreciate the quick turnaround.

I've accepted TPD's edits in the attached version and have tracked a few additional edits based on draft feedback from OFA. Please let me know if there are any additional edits or comments by 10am tomorrow.

Please note, Deputy Thompson will attend Secretary's briefing tomorrow for this item. Due to his availability, this item has been moved to the beginning of the agenda and is **now scheduled for 11:30am**.

Thanks to all for your help.
Madeleine

**Subject:** RE: FPC related request

Hi everyone,

With appreciation for the fact that we're all working with limited materials at this stage, please see attached draft TB/MBC assessment note regarding the electricity price mitigation item for Secretary's briefing tomorrow.

We would appreciate TPD's and OFA's additions to the note – any further details you have from the FPC briefing or your own analysis would be great. Please provide by **10:00am tomorrow** as we have to print the note for Agenda Office in advance of the briefing. Apologies for the tight turnaround.

Finally, I understand you are available to support at the briefing tomorrow. The item is scheduled for 12:20pm in the TB/MBC Boardroom on the first floor of the Frost Building, but usually best to arrive 10-15 minutes in advance if possible. Let me know if you have any questions or concerns.

Thanks in advance for your support on this file.

**Subject:** RE: FPC related request

Hi Sriram –

Have looped in with are team working on the submission and we haven't received any additional information and continue to work off the FPC deck. The team did connect with Cabinet Office yesterday and they indicated they received direction to hold off on connecting with MOECC on the cap and trade element at this stage (I am looking to confirm but it sounds as though there is some sensitivity around engaging MOECC before the proposal is fully fleshed out). We have adopted the same approach – at least until we have a proposal from ENE which would provide greater clarity on initiatives that might be eligible for offset.

Happy for you to join the Secretary's Briefing with OFA tomorrow and will forward the invitation. The leads in our area (Madeleine Morgenstern/Sandy Luk) will connect with OFA/TPD regarding choreography and logistics as well as the note which is under development. The briefing runs from 1130-130pm and this item is on the agenda for 1220pm.

On a related note, OFA has been leading the TBS policy briefings on this which

you/your staff may also want to attend (happy to extend the invite for this as well). We have heard that the direction is for the item to track direct to cabinet on the 13th after TB/MBC on the 12th.

P.

# TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 13, 2016 |
| **Agenda Class:** | Major |
| **Last reviewed by:** N/A | **Tracking to:** Cabinet - September 14, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

**NO MATERIALS RECEIVED –BASED ON FPC SUBMISSION**

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing ~~an~~ a pre-tax 8% rebate to Regulated Price Plan consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural and Remote Rate Protection program; and,<br>– Using cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade. Balance of proceeds intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets (to be confirmed by Energy).<br>• Approve in principle an expenditure increase estimated at~~of~~ $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. [estimate subject to refinement from the Ministry]<br>• Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement.<br>• Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD). | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 261.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 261.0 | 1006.0 | 1004.0 |

| | | | |
|---|---|---|---|
| Recommended program base | 261.0 | 1006.0 | 1004.0 |
| Offset Recommended | 0.0 | 60.0 (TBD) | 60.0 (TBD) |
| Total Fiscal Impact | 261.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online.

As part of the 2016 Budget, the government committed to mitigating electricity cost impacts that were anticipated from the cap and trade program. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation~~In order to achieve this~~, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal *(based on FPC materials; proposal still being refined by Ministry)*

The Ministry is proposing the following to mitigate electricity prices for consumers:

- Provide an 8% pre-tax rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB but without ~~a~~ the 3,000 kilowatt-hour per month cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Use of cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade.

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal ($1B)* | Residential, ~~Farms, Ss~~small business and small farms, and other small users |
| **2.** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base ($47M/$82M)** | ~~Small~~ Intermediate and large-sized ~~I~~industrial, ~~Commercial~~ commercial and ~~Institutional~~ institutional consumers above 1MW in all sectors |

| | | | |
|---|---|---|---|
| **3.** | Updating Rural and Remote Rate Protection | Rate base ($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |
| **4.** | Redirecting proceed recycling to Commercial and Industrial or provide fiscal offsets to the 8% rebate | TBD | TBD |

* Annual ~~Numbers~~ numbers from ENERGY.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Consumer impacts of the proposal are TBD.
Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#2 and #3) benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

Fiscal Impact

- Slide 25 of the final version of the recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year".
- The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

| *$ millions* | **2017** | **2018** | **2019** | **2020** |
|---|---|---|---|---|
| | 1,003 | 1,014 | 975 | 1,049 |
| Avg. 2017-20 | 1,010 | | | |

- On a fiscal year basis, the above estimates become:

| *$ millions* | **2016-17** | **2017-18** | **2018-19** | **2019-20** |
|---|---|---|---|---|
| | 261 | 1,006 | 1,004 | 994 |
| 3-Year Avg. | 1,001 | | | |

- Ministry staff are in the process of developing a refined estimate of the cost.

Cap and Trade Proceeds
The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan consumers (~~most~~ larger industrial, ~~and~~ commercial, and other ~~consumers~~). As such, ~~in addition to providing supports to these consumers through ICI expansion,~~ the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to mitigate impacts.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets.

- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment.
- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.
- 
- New legislation would be required (~~based~~ may be similar to the~~on~~ Ontario Clean Energy Benefit Act, 2010). Amendments to various regulations to expand ICI and RRRP would also be required. ~~Should the program have an end date, it is recommended that the date be specified in legislation.~~

I had a chance to meet with the Electricity Distribution Association. They raised a number of issues. I expressed interest in getting their advice on how to increase take-up of the OESP.

Here are their suggestions (appendix 2).

I will defer to Energy and Finance as to which ones of their suggestions are worth pursuing further.

EDA
*The Voice of Ontario's Electricity Distributors*

January 25, 2017

Mr. Steve Orsini
Secretary of the Cabinet
Cabinet Office
Whitney Block, 6th Floor
99 Wellesley St. West
Toronto, ON M7A 1A1

Dear Mr. Orsini:

On behalf of the Electricity Distributors Association, I would like to thank you for taking the time to meet with my colleague, Ted Wigdor, and me earlier this month. We greatly appreciated the opportunity to review with you a number of public policy issues we are currently working on through our submission on the Long-Term Energy Plan and our pre-budget submission.

As we discussed, some local distribution companies (LDCs) are exploring new partnership models so that LDCs can tap into more private equity but maintain municipal ownership. We really appreciated your recommendations and will pursue them further.

We have also provided the government some recommendations on potential cost savings in the distribution sector. We wish to emphasize a couple of recommendations. Our members are experiencing significantly higher costs when filing rate applications. A more streamlined process will result in approximately $35 million in savings for ratepayers annually. As well, the recent changes to the Rural or Remote Rate Protection Program will result in annual costs of approximately $237 million to ratepayers. We believe that this is a social program and recommend that the program be funded through the tax base rather than the rate base.

As you know, we support voluntary consolidation of LDCs where there is a business case that demonstrates benefits to the LDCs, their shareholders and customers. Consolidations are ongoing, and more activity is currently underway than in the past. As requested, we have compiled the number of LDCs over the years, along with current discussions that are underway, in Appendix 1 to this letter.

Regarding recommendations on how to increase the uptake on the Ontario Electricity Support Program, we are enclosing recommendations brought forward from our members in Appendix 2 to this letter.

Thank you once again for meeting with us. We look forward to continuing this productive dialogue. In the meantime, if you have any follow questions, please feel free to contact me directly at 905-265-5313.

Sincerely yours,

Teresa Sarkesian
President and CEO

## APPENDIX 1

### NUMBER OF LDCs

(excluding First Nations utilities)

*2000 – 251
*2001 – 172
*2002 – 97
*2003 – 95
*2004 – 94
**2005 – 89
**2006 – 87
**2007 – 84
**2008 – 82
**2009 – 77
**2010 – 77
**2011 – 75
**2012 – 73
**2013 – 73
**2014 – 72
**2015 – 71
**2016 – 65

* data provided by the EDA
**data provided by the OEB

### Policy/Legislative Changes

Here is a list of policy recommendations and legislative changes that helped stimulate mergers and acquisitions since 2000.

1. Many of the mergers took place upon passage of the *Energy Competition Act, 1998.* One of the requirements under this Act was that electricity utilities be transformed as business corporations under the *Ontario Business Corporations Act*. While the legislation did not impose mergers, many mergers took place during that time. From 2000 to 2002 Hydro One acquired 89 LDCs, representing 58% of the consolidation in those years. The remaining 42% of the consolidation, 65 LDCs, were municipality-to-municipality transactions.
2. In 2009 the Ontario government put in place an exemption from transfer tax on transfers of electricity assets in the public sector.
3. In 2012 the government established the Distribution Sector Review Panel, chaired by Murray Elston. The panel's report was released in Dec. 2012.
4. In 2014 the government established the Premier's Advisory Council on Government Assets chaired by Ed Clark, which issued its report in 2015.

### Upcoming/Potential Mergers

- Horizon Utilities, Enersource and PowerStream will be merging on Feb. 1 2017, and the new company, Alectra, is expected to complete its acquisition of Hydro One Brampton on March 1, 2017.
- In 2016 Hydro One reached an agreement to acquire Orillia Power. The purchase is under review by the Ontario Energy Board.
- As well, Hydro One has put in an offer for Peterborough Distribution Inc.
- Thunder Bay Hydro and Kenora Hydro announced in 2016 that they are exploring a merger.
- St. Thomas Energy and Entegrus Powerlines announced in 2016 that they are exploring a merger.

- In 2016, Veridian Connections, Whitby Hydro and Oshawa PUC signed a Memorandum of Understanding to explore an amalgamation of the three utilities.
- The board of Wasaga Distribution is looking to sell the company but has not yet signed a sale agreement.
- The town of Midland is considering selling Midland Power Utility Corporation but has not yet signed a sale agreement.
- Guelph Hydro is in an exploratory review of its future structure/ownership.
- West Coast Huron (Goderich) is in merger considerations with Erie Thames Powerlines having a right of first refusal.
- Collus PowerStream is considering a sale or merger of the remaining 50% of its company.

## APPENDIX 2

## ONTARIO ELECTRICITY SUPPORT PROGRAM

Regarding the OESP, we canvassed our members to identify potential barriers to widespread uptake of the program along with possible solutions for the government to consider:

Language:
It is a possibility that many residents eligible for the OESP do not speak English as a first language. To raise awareness of the program, the government may wish to develop a campaign targeting those Ontarians with materials translated into a variety of languages, starting with those that have a relatively high immigration rate, e.g. Mandarin or Cantonese, Tagalog, etc. (depending on the geographic area that is being targeted)

Social Stigma/Self-Identification:
Some feedback has been received that possible recipients are embarrassed and feel that there is social stigma to be labeled "in need of financial support or assistance". They also may not be comfortable with more third parties being aware of their socio-economic status beyond traditional social service agencies and the tax system.

Application Process:
A few LDCs commented that some of the questions are difficult to comprehend. Perhaps those questions could be converted to plainer language.
As well, the application process requires the applicant to include supporting documentation that the applicant may not have, or it may require the applicant to rely on the assistance of someone else to complete the application process. Perhaps the government could consider reasonable facsimiles of the supporting documents, or rely on information that the government should already have, e.g. previous tax returns.

Technical Glitches:
There were also many technical issues with the application portal that led to high rejection rates. The portal was not able to properly match the applicants' information to the LDCs' customer information systems, leading to those rejections. These issues could cause frustration for the applicants and cause them to abandon their application. The OEB was made aware of these system problems but it is not known if they have been rectified. A simplified system without technical issues will likely increase the uptake of the program. Accessibility is key.

Cross-Ministry/Intergovernmental Collaboration:
LDCs also recommend that the Ministry of Energy consider working with the Ministry of Housing and/or the Ministry of Community and Social Services, and the federal government to ensure the program reaches the right people. Examples of tactics these ministries could work on together include:

- Mail drop and posters for social housing complexes.
- Send posters and/or flyers to unemployment offices and food banks.
- Send repeated inserts with disability, EI, OAS and CPP cheques and any other ones where people are receiving social assistance.

People receiving these forms of transfer payments may qualify under the OESP.

Other locations where materials could be made available include:

- MPPs' constituency offices
- Public libraries
- Community centres
- Government offices

Schedule on the Income Tax Form:
There are currently schedules on the provincial income tax form to determine eligibility for sales tax or property tax credits. Since the OESP is based on income, perhaps the Ministry of Energy could work with the Ministry of Finance to develop a schedule on the income tax return to determine OESP eligibility.

Help Provided by LDCs:
LDCs can offer some assistance in promotional efforts, e.g. social media and websites, based on available resources. Some of them have done some extra promotion, including:

- Sending a customer service team to retirement communities to present the program and assist with applications.
- Sending letters to recent LEAP recipients
- Sending letters to all community centres in their service territory

However, utilities may not have the resources to run ongoing campaigns or implement additional tactics. Perhaps the government could provide assistance to support these activities or provide support to local social service agencies to provide these activities.

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hello John,

Yes, the table Tim sent you yesterday is the 30-year financing version of scenario 1a. Below is the same table but for the 30-year financing version of scenario 1b. Don't hesitate to let us know if there is anything else you need.

Cheers,

Justin Malecki, PhD
Senior Advisor, Energy System Planning
Ontario Ministry of Energy

Hi John,

Attached is a few charts for the fiscal impact for each scenario. Note that the assumption is that the debt is drawn down at the end of the year and interest on that drawdown incurs the following year.

Salman

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hello John,

Yes, the table Tim sent you yesterday is the 30-year financing version of scenario 1a. Below is the same table but for the 30-year financing version of scenario 1b. Don't hesitate to let us know if there is anything else you need.

Cheers,

Justin Malecki, PhD
Senior Advisor, Energy System Planning
Ontario Ministry of Energy

**Subject:** RE: GA scenario

John, here's the data you requested. Note that we have not included in-year interest costs (so any deferral doesn't start accumulating interest until the next year). We have since done it using a monthly schedule, but this is the version that was used in the deck. Let me know if you have any questions.

Hi Tim,

Hope all's well.

I left you a voicemail and wanted to clarify what I'm looking for. Would you have the accumulated debt figure, by year, for the 23bn scenario?

Thanks,

John.

**Memorandum**

**To: File**
**Date:** March 22, 2012
**Re**: Accounting Treatment for OPA Charges, Other Financial Assets and Other Financial Liabilities

---

1. **Charges – Overview**

"Charges" are amounts incurred by the OPA to recover amounts paid or payable by the OPA to another person with respect to electricity.

The OPA has a legislated responsibility to record the transactions flowing through the global adjustment mechanism. The global adjustment and settlement accounts have been created for this purpose. The global adjustment and settlement accounts record charges that flow between the OPA and the IESO. The account flows include the amounts paid and received for: Demand Response 2 (DR2), Demand Response 3 (DR3), non-utility generation (NUG), regulated nuclear generation balancing amount (nuclear) and regulated hydro electric generation balancing amount (hydro). These accounts are settled simultaneously by the IESO. The account also records the amounts paid and received for OPA contracts (standard offer, generation and conservation/demand management, Feed-In Tariff and hydroelectric contract initiatives) which the OPA settles on a monthly basis with the IESO.

The DR3, NUG, nuclear, hydro, and OPA contract balances are offset in the global adjustment account eliminating the need for a flow of funds between the IESO and the OPA. The OPA records the effect of the transactions to meet its legislated responsibility. The OPA's generation contracts are estimated each month and settled on the actual amount owing in the following month. This gives rise to timing differences. The settlement dates can cross calendar months, creating a monthly balance in the account. Differences created from timing or settlement dates are reclassified into accounts receivable at month end.

The OPA is entitled under legislation to recover eligible charge amounts, as per section 25.2 (3) of the Electricity Act:
*(3) For greater certainty, the OPA may, subject to the regulations, establish and impose charges to recover from consumers its costs and payments under procurement contracts.*

### 1.1 Accounting Treatment for OPA Contract and Conservation Charges

Charges are currently recorded as accounts receivable from the IESO in the OPA's financial statements, as they represent current assets that are recoverable within 1 year. Specifically, charges represent financial assets, as per **PS.S.1000.40** below and are only recorded as receivable once they have been incurred by the OPA. Under legislation, the OPA has a contractual right to receive cash from another party (in this case the IESO via the Global

Adjustment Mechanism) with respect to amounts incurred for eligible charge amounts. This concept is consistent with criteria (c) of the definition below:

*.**40*** *A financial asset is any asset that is:*

*(a) cash;*
*(b) a realizable asset that is convertible to cash;*
*(c) a contractual right to receive cash or another financial asset from another party;*
*(d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;*
*(e) an equity instrument of another entity;*
*(f) an investment in a government business enterprise or government business partnership;*
*(g) a financial claim on an outside organization or individual; or*
*(h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph* **Error! Hyperlink reference not valid.***. [Former paragraph* **Error! Hyperlink reference not valid.** *retained in Archived Pronouncements]*

**Amounts Payable**

Amounts payable arise for OPA contract charges when the value of HOEP exceeds the value of the suppliers' contract price. In this case, the charges would become an OPA liability to the market in the form of charges payable to the IESO (which, in turn, must be returned to the market via the Global Adjustment). Such charges payable to the market meet the criteria for recognition as a liability, as outlined below:

**PS.3200.03**

*Liabilities should be recognized in the financial statements when:*

*(a) there is an appropriate basis of measurement; and*

*(b) a reasonable estimate can be made of the amount involved.* [SEPT. 2004]

---

## 2. Other financial assets and liabilities

Other financial assets and liabilities are made up of retailer settlement amounts, government procurements and regulated price plan variance amounts.

### 2.1 Other Financial Assets - Retailer Settlements and Government Procurements - Overview

Legislative provisions ensure that electricity retailers are made whole by the OPA for contracts with low-volume and designated consumers that were entered into before prices were frozen by legislation effective November 11, 2002. The OPA and retailers settling any differences between the HOEP and the contract price for each contract meet these provisions. When HOEP is greater than the contract price, the OPA receives payments from the retailers and records a financial liability. When HOEP is less than the contract price, the OPA pays the retailer and records a financial asset. The OPA tracks these variances in the retailer contract settlement deferral accounts. The retailer contract discount settlement account captures the funds related to the retailer incentives existing at the creation of the RPP. The retailer incentives captured are

held in a separate deferral account for settlement concurrent with the retailer settlement deferral accounts.

The OPA began amortizing these costs over the period of 2009-2011 to reflect the recovery of these amounts through its annual usage rate approved by the OEB. As at December 31, 2011, the balances of the retailer settlements are nil and have been recovered in full.

The OPA reimburses the government for costs incurred for electricity procurement and records the costs as a financial asset. Any subsequent balances are included in future revenue requirement submissions. The OPA began amortizing the government procurement costs in 2009 on a straight-line basis, and as at December 31, 2011, the balance to recover for these costs is nil.

### 2.2 Accounting Treatment – Retailer Settlements and Government Procurements

Under PSAS, retailer settlements and government procurements are treated as other financial assets in the OPA's financial statements. As they are normally not recovered within one year, they are categorized as non-current assets. As per **PS.S.1000**, retailer settlement and government procurement balances qualify as financial assets as per criteria (c) below:

> *.**40** A financial asset is any asset that is:*
>
> *(i) cash;*
> *(j) a realizable asset that is convertible to cash;*
> *(k) a contractual right to receive cash or another financial asset from another party;*
> *(l) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;*
> *(m) an equity instrument of another entity;*
> *(n) an investment in a government business enterprise or government business partnership;*
> *(o) a financial claim on an outside organization or individual; or*
> *(p) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph* **Error! Hyperlink reference not valid.***. [Former paragraph* **Error! Hyperlink reference not valid.** *retained in Archived Pronouncements]*

The OPA is required to carry the balance related to retailer settlement variances between the HOEP and contract price, as per legislation. The OPA is also entitled to recover these balances through legislative provisions, which represent a contractual right to receive cash or another financial asset from another party, as per criteria (c) above. Where retailer settlements fall into a liability balance, they would be categorized as other financial liabilities, as they would meet the criteria for recognition of a liability, as outlined in section 3.1 below.

## 3. Other Financial Liabilities – Regulated Price Plan (RPP) Variance - Overview

While prices for RPP consumers are set every six months by the OEB based upon a forecast of the cost of power over the next year, it is likely that there will be a difference between the actual and forecast cost of supplying electricity to all RPP consumers. When the hourly Ontario

energy price (HOEP) is greater than the RPP, the OPA pays the excess amount and records a financial asset as the electricity market funds paid are receivable from the market. When the HOEP is less than the RPP, the OPA receives the difference and records a financial liability as the funds received will be returned to the market. The OPA tracks this variance in the RPP variance account.

### 3.1 Accounting Treatment – RPP

RPP variance amounts are recorded by the OPA as other financial liabilities in the financial statements, as they meet the liability criteria outlined below:

**PS. S.1000**

***.45*** *Liabilities have three essential characteristics:*

*(a) they embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;*

*(b) the duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event, or on demand; and*

*(c) the transactions or events obligating the government have already occurred.*

Under legislation, the OPA is required to fund RPP variances where the HOEP is less than the RPP, which implies a duty or responsibility that the OPA has little to no discretion to avoid, as per criteria (a). For instances where the HOEP exceeds the RPP rate, the OPA would record a financial asset, as this circumstance would meet the criterion of **PS.S.1000.40** (financial asset), outlined in section 2.2 above.

**External Auditor Approval of Accounting Treatment**

The accounting treatment of OPA charges, retailer settlement, government procurement and RPP balances has been consistent since the OPA's inception and is approved by the OPA's external auditors on an annual basis. Based on governing legislation, the external auditors agree that these balances represent true assets and liabilities to the OPA. The signed auditors' report, along with the OPA's audited annual financial statements, can be found on the OPA website in the MD&A section of the OPA annual report.

---

Hi John,

In advance of our meeting, just sharing a draft summary I prepared based on what I heard on the call. There are likely many errors as I joined the call late. Can you perhaps suggest edits based on your understanding (in track changes mode). Thanks. N

**Electricity Price Mitigation**
**Teleconference call summary**
**January 20, 2017**
**Participants: IESO (Kim Marshall), KPMG (Michel Picard), Cindy Veinot & N. Petsche (OPCD), Steen Hume (MOE), Ronald Kwan (OEFC/OFA)**

| General: | CFS | IESO | |
|---|---|---|---|
| | Notes | Notes | Actions |
| Variance accounts are not all recognized on the CFS? In order to have an asset recognized on the books, need to have a receivable (amounts billed), unless an asset can be established another way (through legislation)<br><br>Current vs. future IESO role: if move from current settlement related role, and have to negotiate and manage the debt then it will seem more like the OFA. Option to use another party to provide this advice, and not have OFA hold the debt. | - Questionable whether any receivable reflected on the Province's f/s would be sufficiently supportable from the AG's perspective under PSAB.<br>- Consider if might be off-balance sheet financing based if debt acquired through 3rd party vs. OFA.<br>- Want to understand why the debt for the GA is not on the Province's books. (Q from MOE…why would it be assumed that cash flows related to the rate base would be consolidated on the Province's books and intermingled with cash flows related to tax base) | - Issue: 4 M Consumers wouldn't have a liability on their books that would correspond with a recoverable (one to many scenario with no amounts billed)<br>- Strategically difficult to pass along the recoverable to the LDCs as it would impact the d/e ratios; uncertain how many follow IFRS without rate regulated accounting; LDCs also don't have the credit capacity to absorb the debt<br>- Current IESO role: used as a settlement system to support the market (sets | - Considering creating a receivable through legislation (vs. direct contracts or billing)<br>- Need an 'authorized' expenditure in order to be recoverable. Assess on what basis we can create an asset which is recoverable. All extra costs need to be recognized as being recoverable (even interest)<br>- Since need legal authority to recover, presumably you would also need legal authority to defer and collect in the future but need to address the proposed change in role of the IESO<br>- Consider who would hold debt (OFA or third party) . Would be |

| | | | |
|---|---|---|---|
| | | HOEP every 5 mins, matches supply and demand, collects through GA for costs of reliable T,D, generation)<br>- As a successor company to previous Ontario Hydro, the IESO would borrow from the OEFC; OPA is a new construct so would borrow from the OFA if needed.<br>- IESO's original accounting was established as an agent for settlement purposes. Legacy contracts were for cash to suppliers which were recovered through the GA. John and Adrian were involved with est of the OPA and est of the RPP variance acct. Was never a GA var. OPA always reported the RPP act (1 set of books) – entered into 3500+ contracts with generating | higher rates? Would be provincial guarantee? OPA had AA credit rating and contracts entered into and debt borrowed based on that rating (one ranking lower than the province)<br>- James (legal) asked by Steen Hume to help to id what the new legislative responsibilities of the IESO might look like. |

| | | | |
|---|---|---|---|
| | | entities (40B) which NEVER appeared on the Province's books (no rev/exp or debt. These were considered executory contracts, or contractual obligations but NOT liabs of the OPA.<br>- On a monthly basis any GA amounts are settled through the GA; no liability reflected on the IESO's books – currently $10B of recoverable amounts not reflected on the IESO's books (no legal obligation, just an agent for settlement). Seen as a conduit to collect the monies paid to producers, even if does take possession.<br>- Proposal is that the RPP accounts which normally had a term of 6-12 months for recovery would be extended to 25 years | |

| | | | |
|---|---|---|---|
| | | - 2 sets of books (operating/market vs. financial)<br>- Amounts recoverable through GA NOT reflected on IESO's b/s as a flow through – no impact on the p&l<br>- Currently, the only debt that shows on the IESO's books is related to its operations, NOT MARKET DEBT | - IESO/KPMG to provide background supporting accounting for GA recoveries off book |
| ON vs. MB – legislates that all people of the province must be rate payers (cannot opt out of paying rates). ON doesn't have this requirement, but has a strong ratebase now so reasonable recoverability of costs through rates (the GA). Lenders rely upon this reasonable probability of recovery (AA rating) as basis to lend money to IESO to cover the time gap w.r.t. billings for GA. | | - The OEB has oversight and determines rates. If a regulator agreed that costs could be recovered, would meet requirements of rate regulated asset; but PSAB doesn't recognize rate regulated assets/liabs<br>- regulatory assets normally recovered over 5 years, so 25 years would have to be defended and proven as collectible<br>- would need certainty of recoverability to be an | |

| | | | |
|---|---|---|---|
| | | asset (OEB would consider intergenerational equity) in assessing recoverability | |
| Noted that 25 year period for rate mitigation is not the same as a longer term recovery period for capital refurbishment (intergenerational equity considerations)<br>Noted that other jurisdictions might have longer contract periods (wind and solar>20), and that operating period >20 in reality, so future costs likely lower to consumers. AB wind contracts>25 years. Justification for change → contract periods are too short | | | |
| | | | |
| Policy considerations:<br>1) Argument for rate mitigation deferral period (contracts to short; precedents)<br>2) IESO's changing role (James to consider)<br>3) Legislative requirements to allow for deferral (which costs would be authorized as recoverable)<br><br>Accounting considerations<br>4) How to create an asset (accounting vs. legislation) Would legislation create an asset on the IESO's books?<br>5) Off balance sheet financing (3rd party vs. OFA) and related accounting on IESO and CFS | | | |
| | | | |

**Re**: Accounting Treatment for OPA Charges, Other Financial Assets and Other Financial Liabilities

---

1. **Charges – Overview**

"Charges" are amounts incurred by the OPA to recover amounts paid or payable by the OPA to another person with respect to electricity.

The OPA has a legislated responsibility to record the transactions flowing through the global adjustment mechanism. The global adjustment and settlement accounts have been created for this purpose. The global adjustment and settlement accounts record charges that flow between the OPA and the IESO. The account flows include the amounts paid and received for: Demand Response 2 (DR2), Demand Response 3 (DR3), non-utility generation (NUG), regulated nuclear generation balancing amount (nuclear) and regulated hydro electric generation balancing amount (hydro). These accounts are settled simultaneously by the IESO. The account also records the amounts paid and received for OPA contracts (standard offer, generation and conservation/demand management, Feed-In Tariff and hydroelectric contract initiatives) which the OPA settles on a monthly basis with the IESO.

The DR3, NUG, nuclear, hydro, and OPA contract balances are offset in the global adjustment account eliminating the need for a flow of funds between the IESO and the OPA. The OPA records the effect of the transactions to meet its legislated responsibility. The OPA's generation contracts are estimated each month and settled on the actual amount owing in the following month. This gives rise to timing differences. The settlement dates can cross calendar months, creating a monthly balance in the account. Differences created from timing or settlement dates are reclassified into accounts receivable at month end.

The OPA is entitled under legislation to recover eligible charge amounts, as per section 25.2 (3) of the Electricity Act:
*(3) For greater certainty, the OPA may, subject to the regulations, establish and impose charges to recover from consumers its costs and payments under procurement contracts.*

### 1.1 Accounting Treatment for OPA Contract and Conservation Charges

Charges are currently recorded as accounts receivable from the IESO in the OPA's financial statements, as they represent current assets that are recoverable within 1 year. Specifically, charges represent financial assets, as per **PS.S.1000.40** below and are only recorded as receivable once they have been incurred by the OPA. Under legislation, the OPA has a contractual right to receive cash from another party (in this case the IESO via the Global

Adjustment Mechanism) with respect to amounts incurred for eligible charge amounts. This concept is consistent with criteria (c) of the definition below:

*.**40*** *A financial asset is any asset that is:*

*(a) cash;*
*(b) a realizable asset that is convertible to cash;*
*(c) a contractual right to receive cash or another financial asset from another party;*
*(d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;*
*(e) an equity instrument of another entity;*
*(f) an investment in a government business enterprise or government business partnership;*
*(g) a financial claim on an outside organization or individual; or*
*(h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph* **Error! Hyperlink reference not valid.***. [Former paragraph* **Error! Hyperlink reference not valid.** *retained in Archived Pronouncements]*

**Amounts Payable**

Amounts payable arise for OPA contract charges when the value of HOEP exceeds the value of the suppliers' contract price. In this case, the charges would become an OPA liability to the market in the form of charges payable to the IESO (which, in turn, must be returned to the market via the Global Adjustment). Such charges payable to the market meet the criteria for recognition as a liability, as outlined below:

**PS.3200.03**

*Liabilities should be recognized in the financial statements when:*

*(a) there is an appropriate basis of measurement; and*

*(b) a reasonable estimate can be made of the amount involved.* [SEPT. 2004]

---

## 2. Other financial assets and liabilities

Other financial assets and liabilities are made up of retailer settlement amounts, government procurements and regulated price plan variance amounts.

### 2.1 Other Financial Assets - Retailer Settlements and Government Procurements - Overview

Legislative provisions ensure that electricity retailers are made whole by the OPA for contracts with low-volume and designated consumers that were entered into before prices were frozen by legislation effective November 11, 2002. The OPA and retailers settling any differences between the HOEP and the contract price for each contract meet these provisions. When HOEP is greater than the contract price, the OPA receives payments from the retailers and records a financial liability. When HOEP is less than the contract price, the OPA pays the retailer and records a financial asset. The OPA tracks these variances in the retailer contract settlement deferral accounts. The retailer contract discount settlement account captures the funds related to the retailer incentives existing at the creation of the RPP. The retailer incentives captured are

held in a separate deferral account for settlement concurrent with the retailer settlement deferral accounts.

The OPA began amortizing these costs over the period of 2009-2011 to reflect the recovery of these amounts through its annual usage rate approved by the OEB. As at December 31, 2011, the balances of the retailer settlements are nil and have been recovered in full.

The OPA reimburses the government for costs incurred for electricity procurement and records the costs as a financial asset. Any subsequent balances are included in future revenue requirement submissions. The OPA began amortizing the government procurement costs in 2009 on a straight-line basis, and as at December 31, 2011, the balance to recover for these costs is nil.

### 2.2 Accounting Treatment – Retailer Settlements and Government Procurements

Under PSAS, retailer settlements and government procurements are treated as other financial assets in the OPA's financial statements. As they are normally not recovered within one year, they are categorized as non-current assets. As per **PS.S.1000**, retailer settlement and government procurement balances qualify as financial assets as per criteria (c) below:

> *.**40** A financial asset is any asset that is:*
>
> *(i) cash;*
> *(j) a realizable asset that is convertible to cash;*
> *(k) a contractual right to receive cash or another financial asset from another party;*
> *(l) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;*
> *(m) an equity instrument of another entity;*
> *(n) an investment in a government business enterprise or government business partnership;*
> *(o) a financial claim on an outside organization or individual; or*
> *(p) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph* **Error! Hyperlink reference not valid.***. [Former paragraph* **Error! Hyperlink reference not valid.** *retained in Archived Pronouncements]*

The OPA is required to carry the balance related to retailer settlement variances between the HOEP and contract price, as per legislation. The OPA is also entitled to recover these balances through legislative provisions, which represent a contractual right to receive cash or another financial asset from another party, as per criteria (c) above. Where retailer settlements fall into a liability balance, they would be categorized as other financial liabilities, as they would meet the criteria for recognition of a liability, as outlined in section 3.1 below.

## 3. Other Financial Liabilities – Regulated Price Plan (RPP) Variance - Overview

While prices for RPP consumers are set every six months by the OEB based upon a forecast of the cost of power over the next year, it is likely that there will be a difference between the actual and forecast cost of supplying electricity to all RPP consumers. When the hourly Ontario

energy price (HOEP) is greater than the RPP, the OPA pays the excess amount and records a financial asset as the electricity market funds paid are receivable from the market. When the HOEP is less than the RPP, the OPA receives the difference and records a financial liability as the funds received will be returned to the market. The OPA tracks this variance in the RPP variance account.

### 3.1 Accounting Treatment – RPP

RPP variance amounts are recorded by the OPA as other financial liabilities in the financial statements, as they meet the liability criteria outlined below:

**PS. S.1000**

***.45*** *Liabilities have three essential characteristics:*

*(a) they embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;*

*(b) the duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event, or on demand; and*

*(c) the transactions or events obligating the government have already occurred.*

Under legislation, the OPA is required to fund RPP variances where the HOEP is less than the RPP, which implies a duty or responsibility that the OPA has little to no discretion to avoid, as per criteria (a). For instances where the HOEP exceeds the RPP rate, the OPA would record a financial asset, as this circumstance would meet the criterion of **PS.S.1000.40** (financial asset), outlined in section 2.2 above.

**External Auditor Approval of Accounting Treatment**

The accounting treatment of OPA charges, retailer settlement, government procurement and RPP balances has been consistent since the OPA's inception and is approved by the OPA's external auditors on an annual basis. Based on governing legislation, the external auditors agree that these balances represent true assets and liabilities to the OPA. The signed auditors' report, along with the OPA's audited annual financial statements, can be found on the OPA website in the MD&A section of the OPA annual report.

Hi John,

In advance of our meeting, just sharing a draft summary I prepared based on what I heard on the call. There are likely many errors as I joined the call late. Can you perhaps suggest edits based on your understanding (in track changes mode). Thanks. N

**Electricity Price Mitigation**
**Teleconference call summary**
**January 20, 2017**
**Participants: IESO (Kim Marshall), KPMG (Michel Picard), Cindy Veinot & N. Petsche (OPCD), Steen Hume (MOE), Ronald Kwan (OEFC/OFA)**

| General: | CFS | IESO | |
|---|---|---|---|
| | Notes | Notes | Actions |
| Variance accounts are not all recognized on the CFS? In order to have an asset recognized on the books, need to have a receivable (amounts billed), unless an asset can be established another way (through legislation)<br><br>Current vs. future IESO role: if move from current settlement related role, and have to negotiate and manage the debt then it will seem more like the OFA. Option to use another party to provide this advice, and not have OFA hold the debt. | - Questionable whether any receivable reflected on the Province's f/s would be sufficiently supportable from the AG's perspective under PSAB.<br>- Consider if might be off-balance sheet financing based if debt acquired through 3rd party vs. OFA.<br>- Want to understand why the debt for the GA is not on the Province's books. (Q from MOE…why would it be assumed that cash flows related to the rate base would be consolidated on the Province's books and intermingled with cash flows related to tax base) | - Issue: 4 M Consumers wouldn't have a liability on their books that would correspond with a recoverable (one to many scenario with no amounts billed)<br>- Strategically difficult to pass along the recoverable to the LDCs as it would impact the d/e ratios; uncertain how many follow IFRS without rate regulated accounting; LDCs also don't have the credit capacity to absorb the debt<br>- Current IESO role: used as a settlement system to support the market (sets | - Considering creating a receivable through legislation (vs. direct contracts or billing)<br>- Need an 'authorized' expenditure in order to be recoverable. Assess on what basis we can create an asset which is recoverable. All extra costs need to be recognized as being recoverable (even interest)<br>- Since need legal authority to recover, presumably you would also need legal authority to defer and collect in the future but need to address the proposed change in role of the IESO<br>- Consider who would hold debt (OFA or third party) . Would be |

| | | | |
|---|---|---|---|
| | | HOEP every 5 mins, matches supply and demand, collects through GA for costs of reliable T,D, generation)<br>- As a successor company to previous Ontario Hydro, the IESO would borrow from the OEFC; OPA is a new construct so would borrow from the OFA if needed.<br>- IESO's original accounting was established as an agent for settlement purposes. Legacy contracts were for cash to suppliers which were recovered through the GA. John and Adrian were involved with est of the OPA and est of the RPP variance acct. Was never a GA var. OPA always reported the RPP act (1 set of books) – entered into 3500+ contracts with generating | higher rates? Would be provincial guarantee? OPA had AA credit rating and contracts entered into and debt borrowed based on that rating (one ranking lower than the province)<br>- James (legal) asked by Steen Hume to help to id what the new legislative responsibilities of the IESO might look like. |

| | | | |
|---|---|---|---|
| | | entities (40B) which NEVER appeared on the Province's books (no rev/exp or debt. These were considered executory contracts, or contractual obligations but NOT liabs of the OPA.<br>- On a monthly basis any GA amounts are settled through the GA; no liability reflected on the IESO's books – currently $10B of recoverable amounts not reflected on the IESO's books (no legal obligation, just an agent for settlement). Seen as a conduit to collect the monies paid to producers, even if does take possession.<br>- Proposal is that the RPP accounts which normally had a term of 6-12 months for recovery would be extended to 25 years | |

| | | | |
|---|---|---|---|
| | | - 2 sets of books (operating/market vs. financial)<br>- Amounts recoverable through GA NOT reflected on IESO's b/s as a flow through – no impact on the p&l<br>- Currently, the only debt that shows on the IESO's books is related to its operations, NOT MARKET DEBT | - IESO/KPMG to provide background supporting accounting for GA recoveries off book |
| ON vs. MB – legislates that all people of the province must be rate payers (cannot opt out of paying rates). ON doesn't have this requirement, but has a strong ratebase now so reasonable recoverability of costs through rates (the GA). Lenders rely upon this reasonable probability of recovery (AA rating) as basis to lend money to IESO to cover the time gap w.r.t. billings for GA. | | - The OEB has oversight and determines rates. If a regulator agreed that costs could be recovered, would meet requirements of rate regulated asset; but PSAB doesn't recognize rate regulated assets/liabs<br>- regulatory assets normally recovered over 5 years, so 25 years would have to be defended and proven as collectible<br>- would need certainty of recoverability to be an | |

| | | | |
|---|---|---|---|
| | | asset (OEB would consider intergenerational equity) in assessing recoverability | |
| Noted that 25 year period for rate mitigation is not the same as a longer term recovery period for capital refurbishment (intergenerational equity considerations)<br>Noted that other jurisdictions might have longer contract periods (wind and solar>20), and that operating period >20 in reality, so future costs likely lower to consumers. AB wind contracts>25 years. Justification for change → contract periods are too short | | | |
| | | | |
| Policy considerations:<br>1) Argument for rate mitigation deferral period (contracts to short; precedents)<br>2) IESO's changing role (James to consider)<br>3) Legislative requirements to allow for deferral (which costs would be authorized as recoverable)<br><br>Accounting considerations<br>4) How to create an asset (accounting vs. legislation) Would legislation create an asset on the IESO's books?<br>5) Off balance sheet financing (3rd party vs. OFA) and related accounting on IESO and CFS | | | |
| | | | |

**Subject:** Latest Electricity Note for Chair's briefing

Hi everyone,

Here's the latest electricity price TB assessment note for Chair's briefing today. We made some changes based on the Minister's comments yesterday but we will continue to make changes as we get more information over the coming days. Can I ask that you please track-change any changes back to us should you have any further comments?

Please note that Chair's briefing for this item is at 2:30 pm - please join us for the briefing.

Thanks,
Felix

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 13, 2016 |
| **Agenda Class:** | Major |
| **Last reviewed by:** N/A | **Tracking to:** Cabinet - September 14, 2016 |

**SUBMISSION TITLE:** Electricity Price Mitigation

**FINALIZED ~~NO~~ MATERIALS NOT YET RECEIVED – BASED ON DRAFT POLICY SUBMISSION**

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing a pre-tax 8% rebate to Regulated Price Plan consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural ~~and~~ or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade (A 1% reduction in rates). Balance of proceeds, $60M, intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets.<br>• Approve in principle an expenditure increase estimated at $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. [estimate subject to refinement from the Ministry]<br>• Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement.<br>• Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD).<br>• | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 261.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 261.0 | 1006.0 | 1004.0 |
| Recommended program base | 261.0 | 1006.0 | 1004.0 |

| | | | |
|---|---|---|---|
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | 60.0 (TBD) | 60.0 (TBD) |
| Total Fiscal Impact | 261.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)
- Update the Rural ~~and~~ or Remote Rate Protection (RRRP) program, to provide relief to rural customers
- Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest (1%) reduction in rates

Public high-profile communications would coincide with introduction of legislation (September

2016). Currently, the 8% rebate would be available starting January 1, 2017 (it could be prescribed earlier), along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Recycling cap and trade proceeds would commence in 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal $1B* | Residential, small business and small farms, and other small users |
| **2a.** | Use cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs of reducing rates by 1%.<br><br>No Fiscal Impact | For the 2016 Budget, cap and trade proceeds were projected at $330M/year.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | The 8% rebate above allows for a portion of cap and trade proceeds to be redirected to other GHG reduction initiatives already in the fiscal plan. | ($60M) | Provides Fiscal Plan flexibility of $60M only if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $946M | Matches Financial Summary on page 1 for 2017-18 |

* Annual numbers from ENERGY.

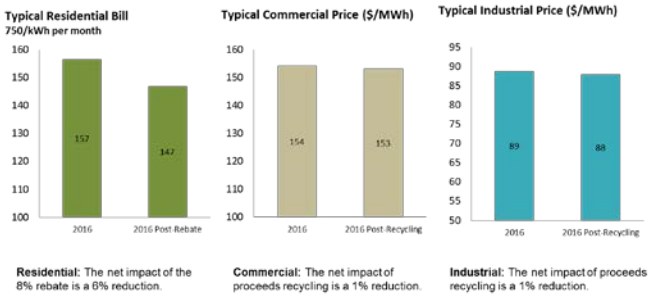
| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base ($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural ~~and~~ or Remote Rate Protection | Rate base ($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all

other electricity rate payers in Ontario.

The graphic from the Ministry on the following page highlights the bill impacts by electricity consumer class.



The residential net impact of the 8% rebate is a 6% reduction due to the costs of RRRP and ICI expansion being factored in after the 8% pre-tax rebate is calculated and applied. The original HST amount is then added in. The net benefit for residential is the 8% rebate less the cost of RRRP and ICI expansion.

Fiscal Impact

~~The most recent Electricity Price Mitigation Options deck notes that~~ "ENERGY estimates that proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year".

**Commented [SK21]:** Suggest deleting. We've received decks after this.

The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

| *$ millions* | **2017** | **2018** | **2019** | **2020** |
|---|---|---|---|---|
| | 1,003 | 1,014 | 975 | 1,049 |
| Avg. 2017-20 | 1,010 | | | |

- On a fiscal year basis, the above estimates become:

| *$ millions* | **2016-17** | **2017-18** | **2018-19** | **2019-20** |
|---|---|---|---|---|
| | 261 | 1,006 | 1,004 | 994 |
| 3-Year Avg. | 1,001 | | | |

The Ministry also indicates the current proposal would provide recycling of cap and trade proceeds to commercial and industrial consumers on a volumetric basis. This would require an estimated $60 million less per year in proceeds than previously estimated (i.e., providing fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan).

There are no details as this point if the $261M in 2016-17 would be offset from the Treasury Board Contingency Fund or provided through supplementary estimates.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to go beyond mitigating cap and trade impacts and provide a 1% bill impact (shown in the graphic at top of page 4).

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented (A bill mock-up is pending from the Ministry). The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and

effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural ~~and~~ or remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment. Also, the budget committed to offsetting the impact of cap and trade on industrial and commercial consumers, a 1% reduction is being proposed using cap and trade proceeds, which could be recycled elsewhere on GHG reduction initiatives.
- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

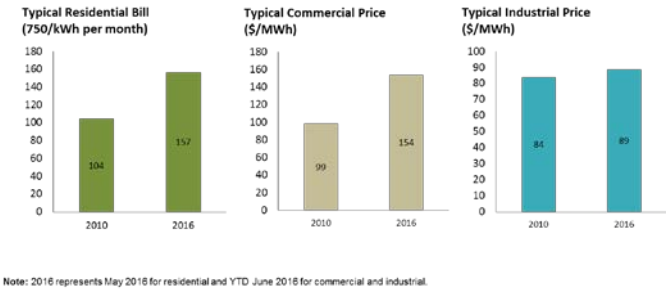
## APPENDIX C: ELECTRICITY SECTOR BACKGROUND

The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.
- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).

- Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs:

| Program | Consumer Type | Rate/Tax -based | Description |
|---|---|---|---|
| Northern Ontario Energy Credit | **Residential** | Tax | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year. |
| Ontario Energy and Property Tax Credit | | Tax | Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families. |
| Ontario Electricity Support Program | | Rate | Provides ongoing assistance directly on the bills of eligible low-income electricity consumers. |
| Rural or Remote Rate Protection | | Rate | Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas. |
| saveONenergy Conservation Programs (including Home Assistance Program for low income customers) | | Rate | Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars. |
| saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs) | **Commercial** | Rate | saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information. |
| Industrial Conservation Initiative | **Industrial** | Rate | Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills. |
| Industrial Accelerator Program | | Rate | Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid. |
| Industrial Electricity Incentive | | Rate | Provides reduced electricity rates for companies starting or expanding operations in Ontario. |
| Northern Industrial Electricity Rate Program | | Tax | Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers. |
| Demand Response | | Rate | Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system. |

Ontario has implemented several programs that have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial). The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

A number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.

- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

he following information has been provided by the Ministry.

1. **Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

   The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

   - Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
   - An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>– Coffee / snack retailer<br>– Convenience store<br>– Apparel store<br>– Hair salon<br>– Small insurance office | • Class A consumers<br>– Manufacturer<br>– Large grocery store<br>– Mines<br>– Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>– Commercial offices (low rise)<br>– Hotel<br>– General warehousing |

2. **Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

   Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

   ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:

   - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
   - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
   - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | **Benefit to New ICI Participants** | **System Benefit** | **Financial Impact** | **Residential Bill Impact** |
|---|---|---|---|---|
| | **Bill Savings** | **Peak Demand Reduction (MW)** | **GA shifted to Class B ($M)** | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

### 3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110Mn in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

### 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

The following table identifies the illustrative impacts.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact | Class A (Industrial) Impact | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion | $270 million annually | -$10/ month<br>(-6%) | -$45/ month<br>(-20%) | -$1/MWh<br>(-1%) | -$1/ MWh<br>(-1%) | Up to -$52/MWh<br>(-34%) |

***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

## APPENDIX E: PROPOSED POLICY MINUTE

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.
3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE ELECTRICITY ACT, 1998 TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.
4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE ONTARIO ENERGY BOARD ACT, 1998 TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.
5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.
6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE GREENHOUSE GAS REDUCTION ACCOUNT PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.
7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

**Subject:** Major Projects this week

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week. Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 12, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

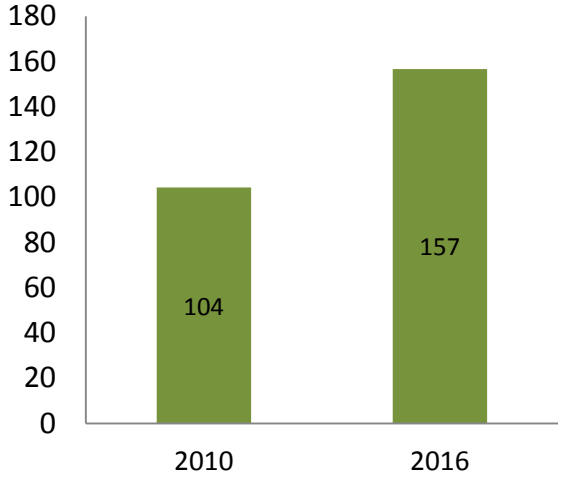
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

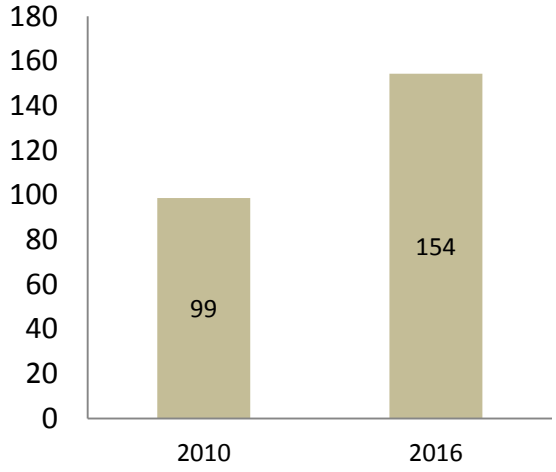
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

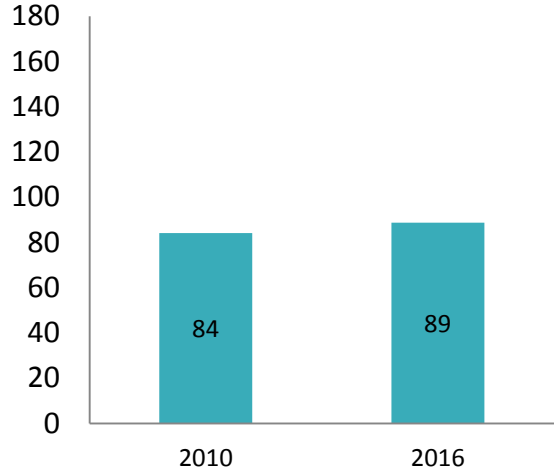
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



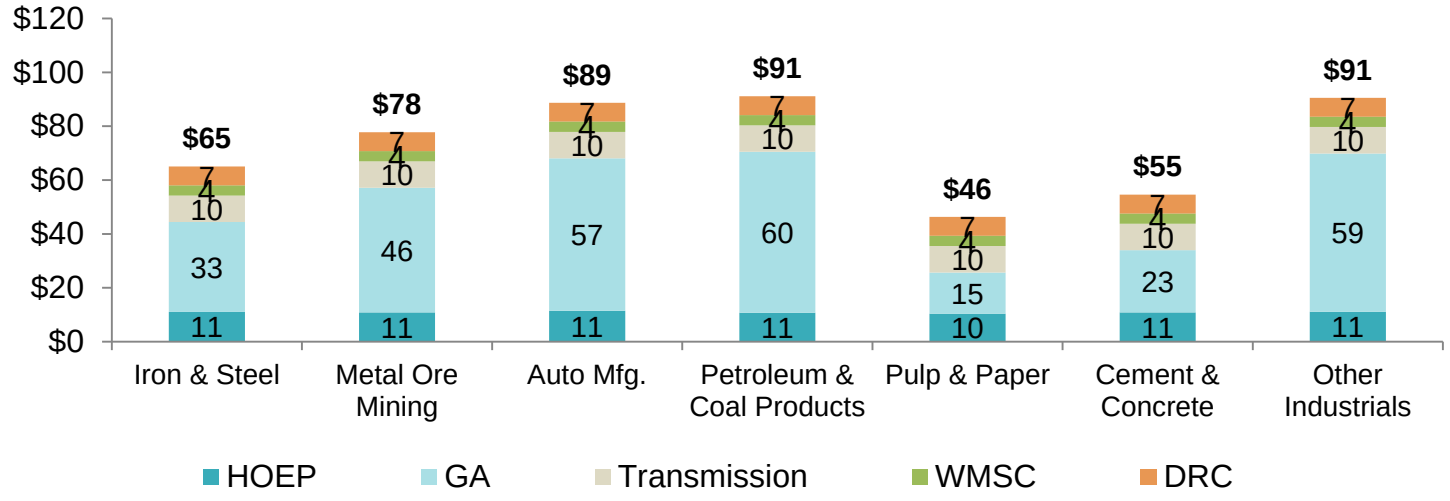
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

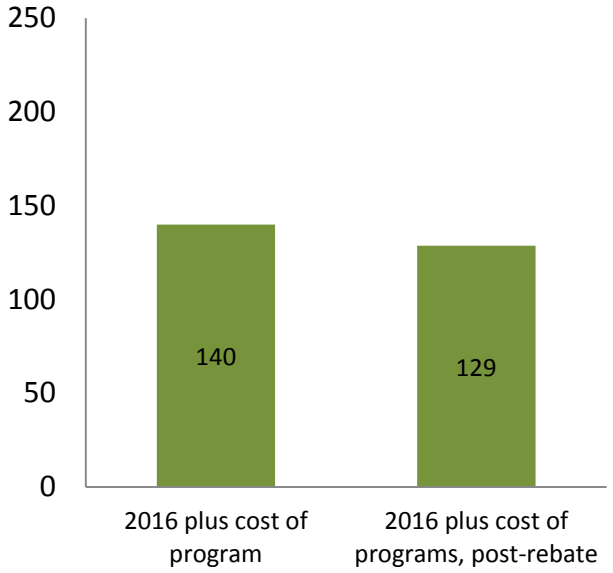
# Rate Mitigation Proposal – Illustrative Benefits*

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

- **Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Proceeds recycling is an estimated average over the first compliance period (2017-2020).

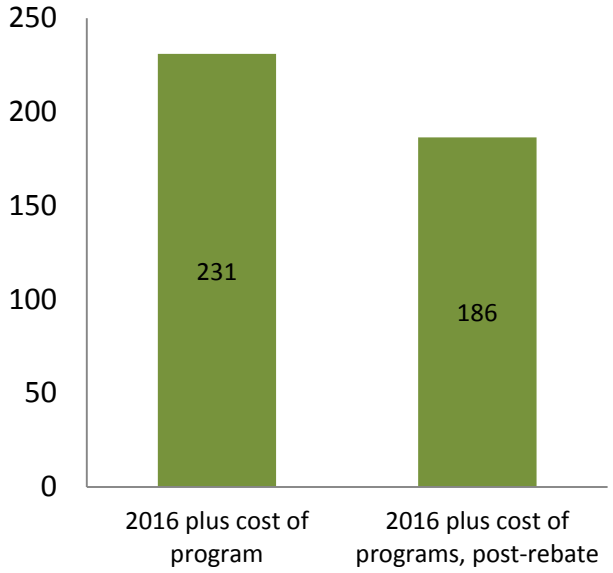
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750 kWh per month, 8% only**



The pre-tax impact is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000 kWh per month, 8% and RRRP Update**

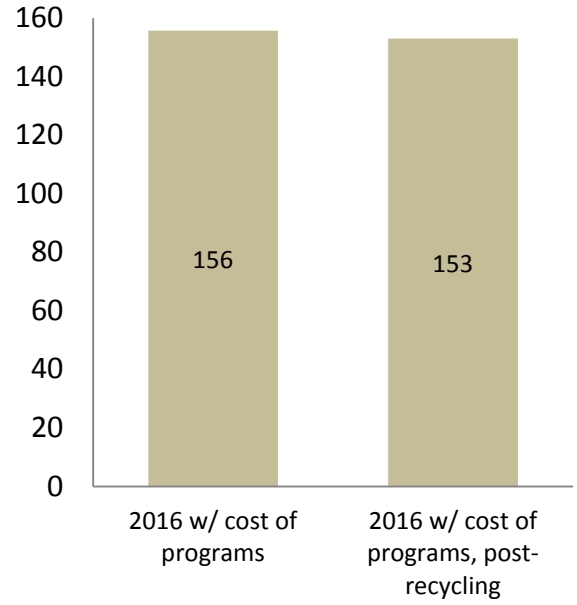


The pre-tax impact of the rate mitigation initiatives is a 20% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016.

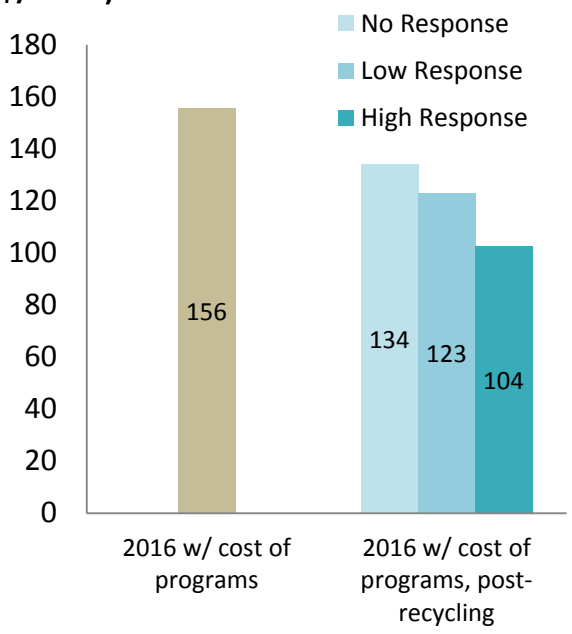
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



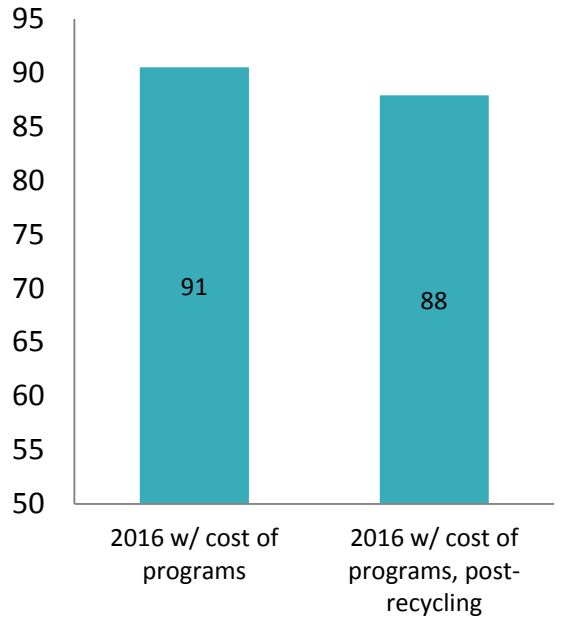
**Class B:** The benefit is a 2% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The benefit is a reduction of 14% to 34%.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The benefit of the rate mitigation initiatives is a 3% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Electricity Bill Mock-Up

| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

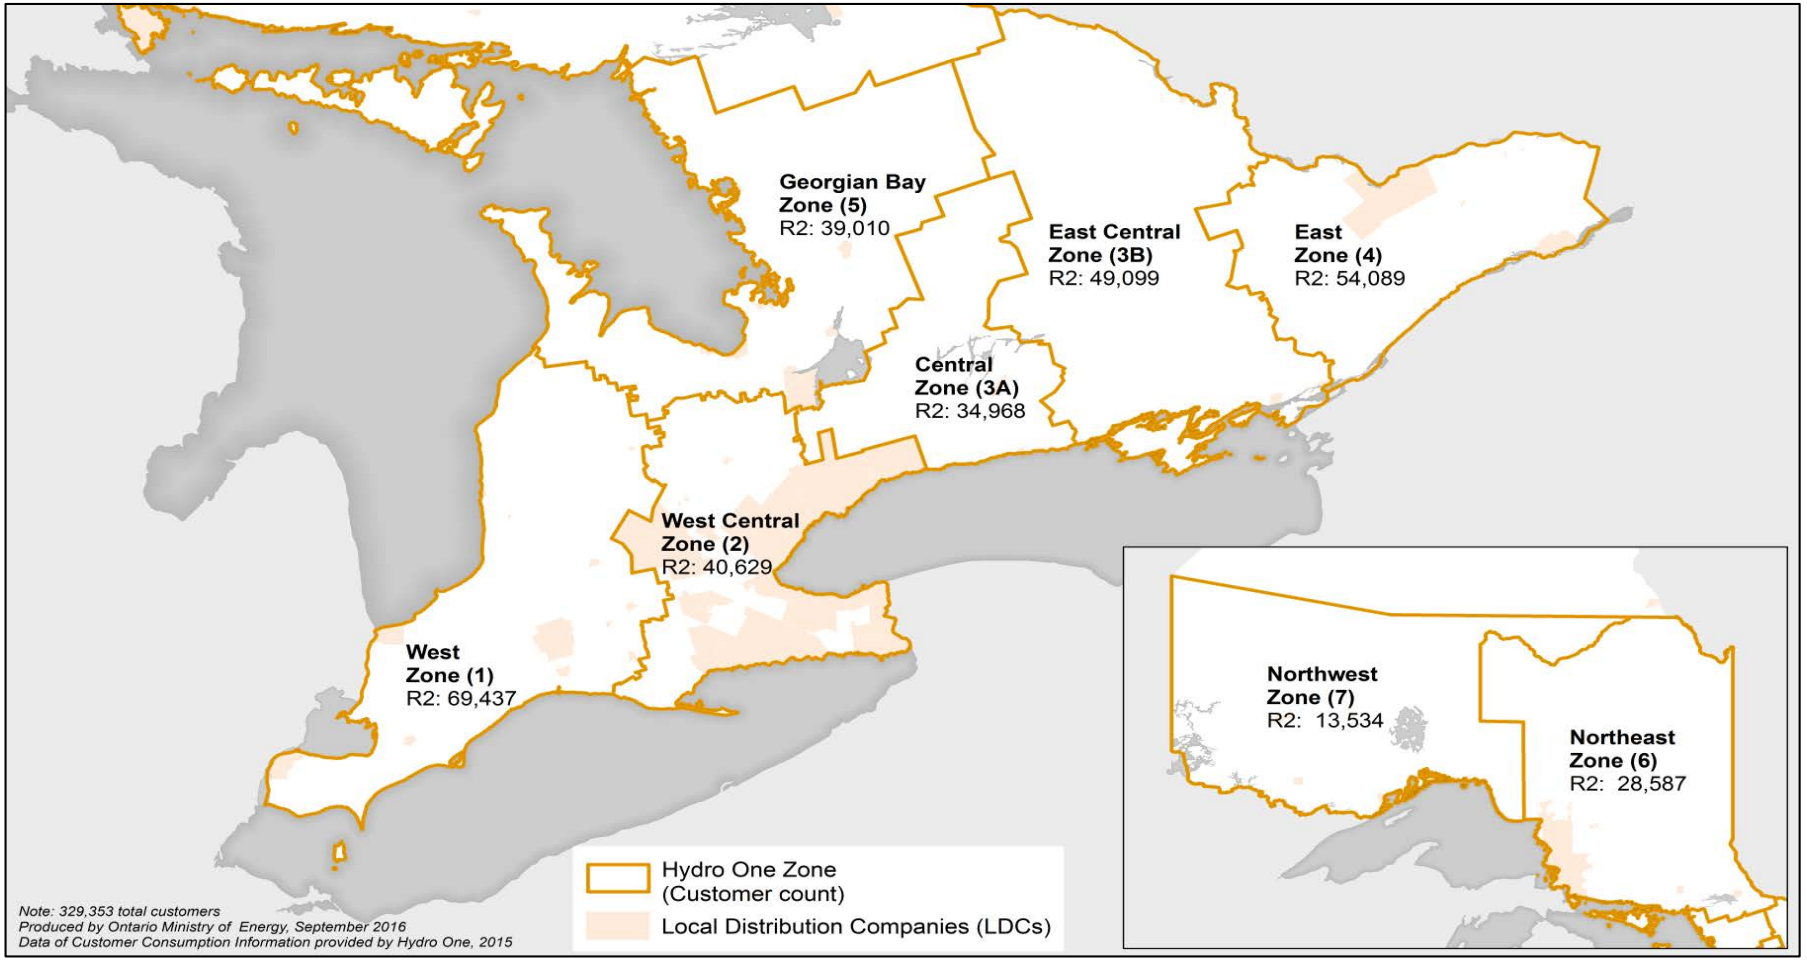
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

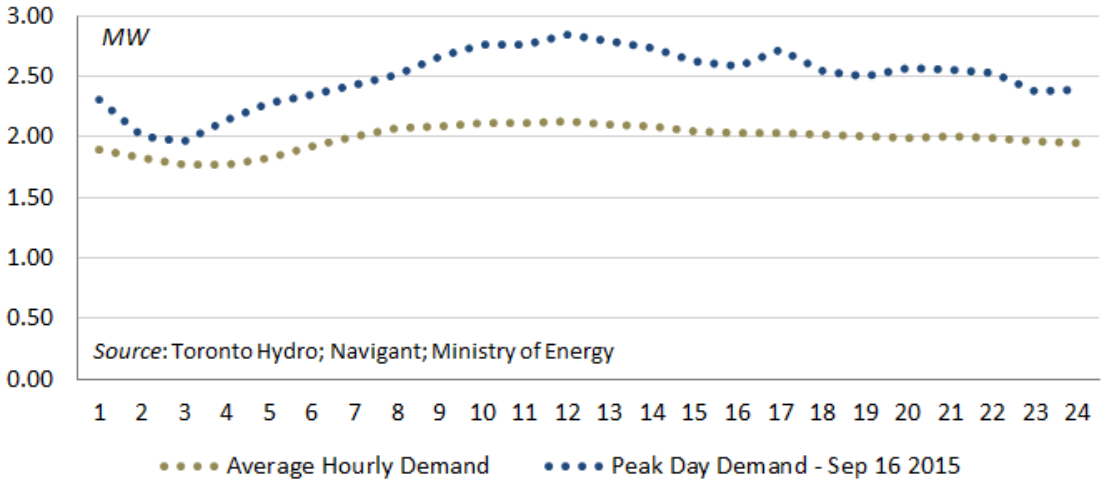
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

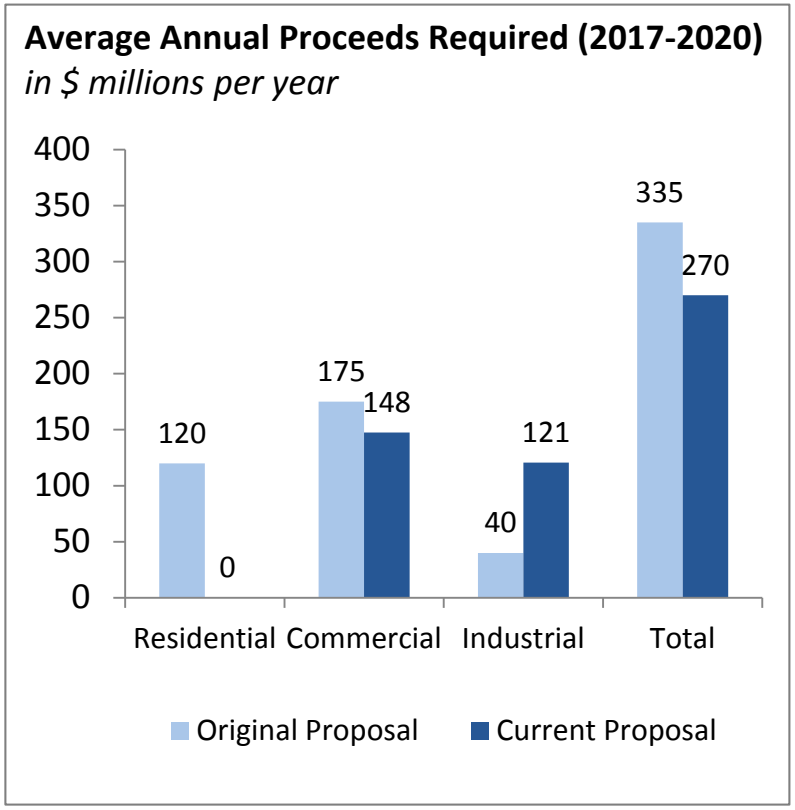
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- ~~HST~~ 8% Rebate of the pre-tax electricity costs (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Pending Update

Ontario

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

   i. Provide a rebate of 8% ~~on~~ of the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

   ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

   iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals. **[TBD]**

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after cost of new programs, before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after cost of new programs, before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $140 /month | N/A | 8% ~~pre-tax~~ rebate: - $11 | $129 /month |

***Note:** Some residential consumers ~~can~~ may also receive relief for sales tax on home energy of up to $224 for 2016 through the ~~tax credits based on income, age and geography (Northern Ontario Energy Credit and~~ Ontario Energy and Property Tax Credit~~)~~. People who live in the North may receive additional relief for home energy costs of up to $224 for 2016 through the Northern Ontario Energy Credit. These credits are delivered through the Ontario Trillium Benefit ~~Tax Credit and can be as high as $1,332 per year for a family~~.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact, | New Rate, |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling + ICI: -$53.90/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI and proceeds recycling).

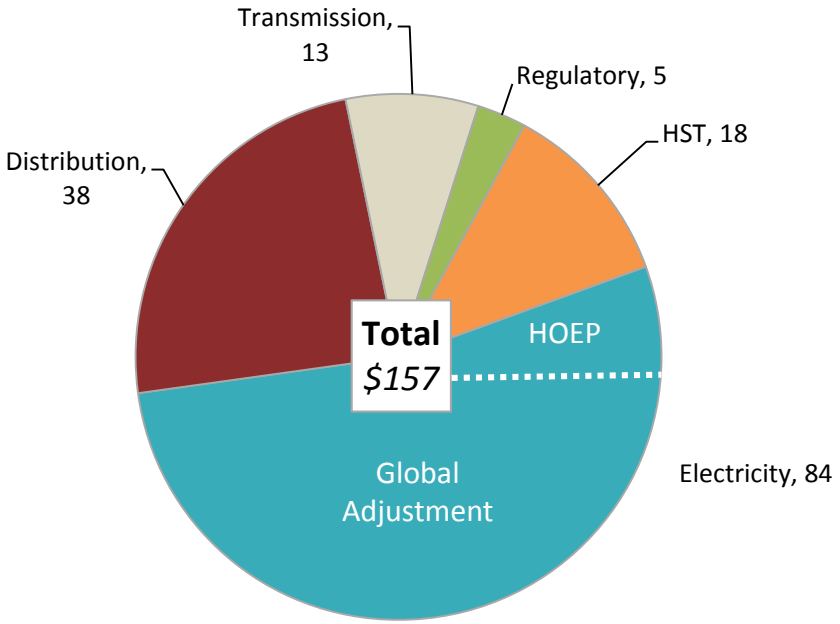
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

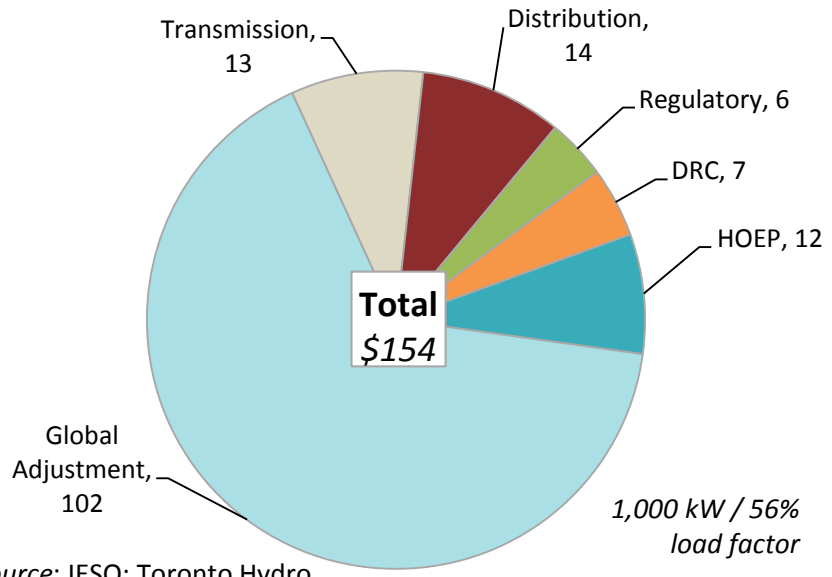
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

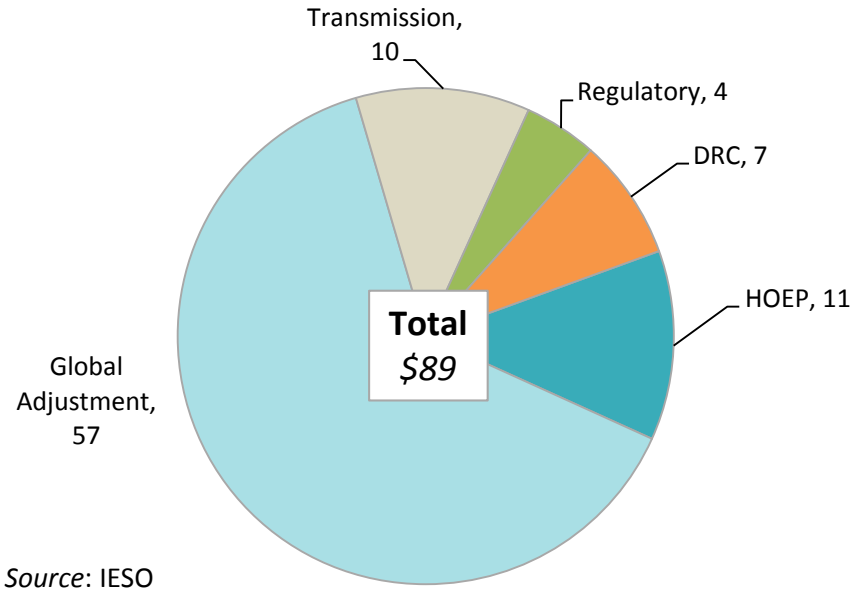
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Hi,
Attached is the latest iteration of the Cabinet submission, including an updated minute. This is with our MO for review but wanted to keep you updated so you can continue to revise your TB / CAB notes. Note that some of the numbers have changed to remain consistent with methodology throughout the submission.

Hi Boafoa,

Wondering if it's possible for the electricity item to be last on the agenda tomorrow. We have a Minister's briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

**Subject:** Major Projects this week

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week. Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 12, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

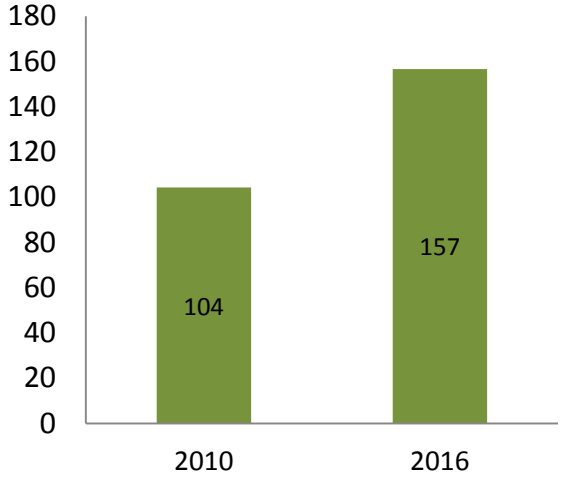
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

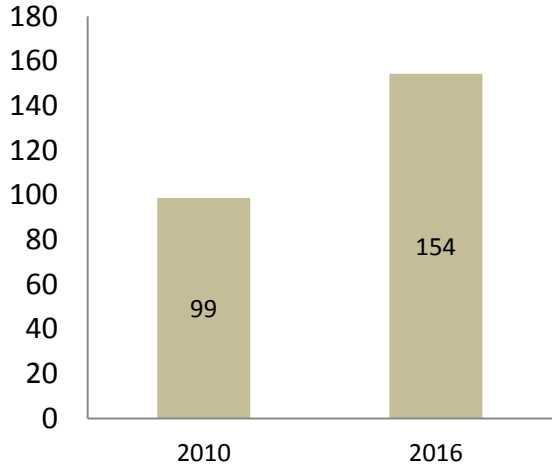
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

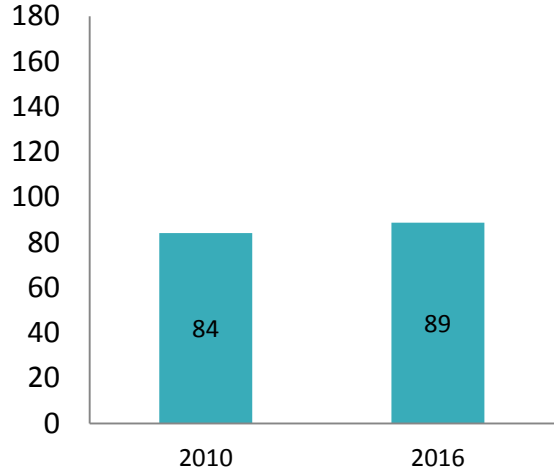
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



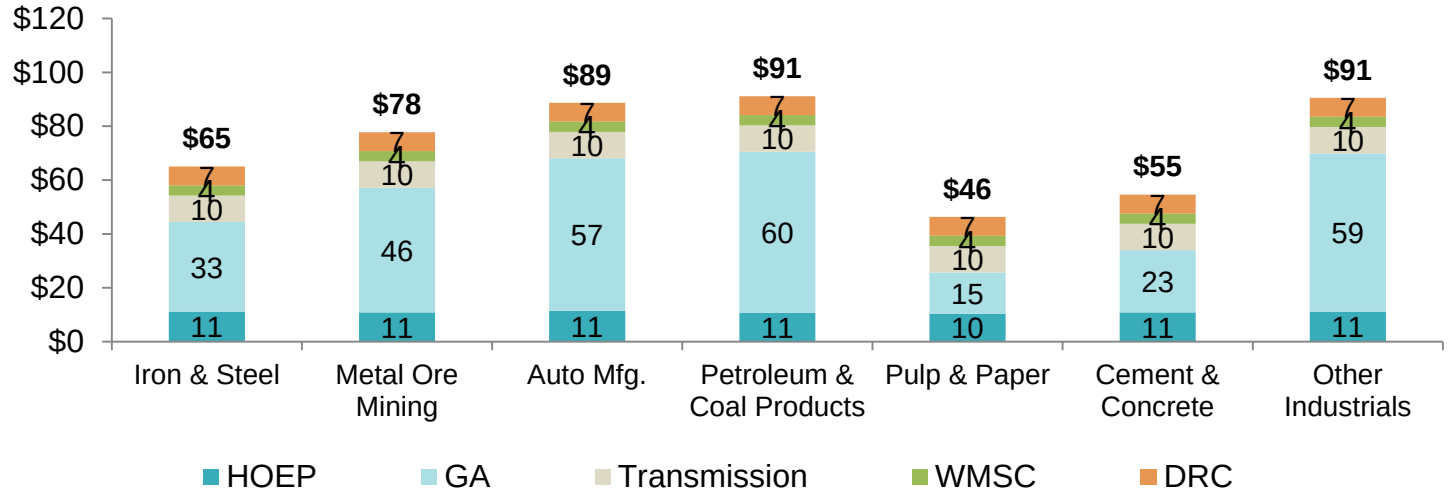
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

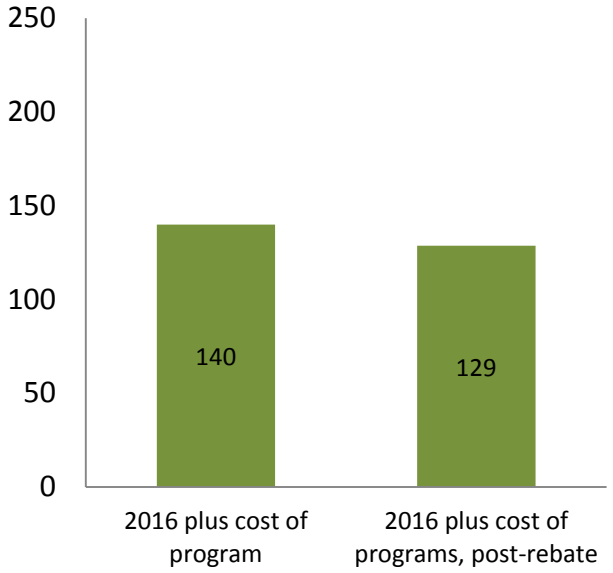
# Rate Mitigation Proposal – Illustrative Benefits*

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

- **Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Proceeds recycling is an estimated average over the first compliance period (2017-2020).

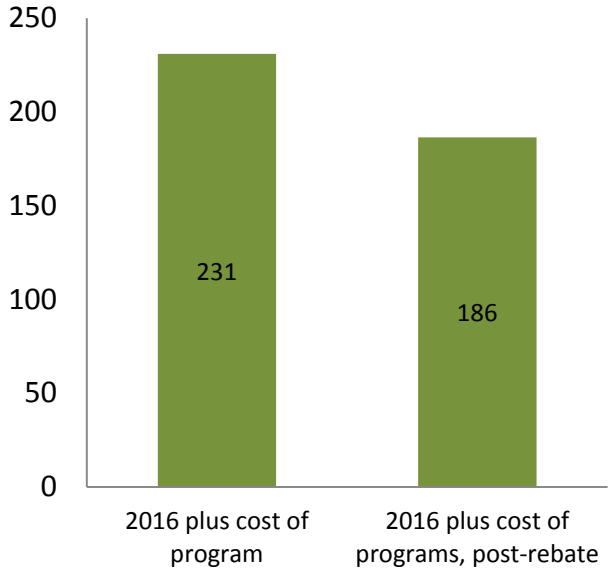
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750 kWh per month, 8% only**



The pre-tax impact is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000 kWh per month, 8% and RRRP Update**

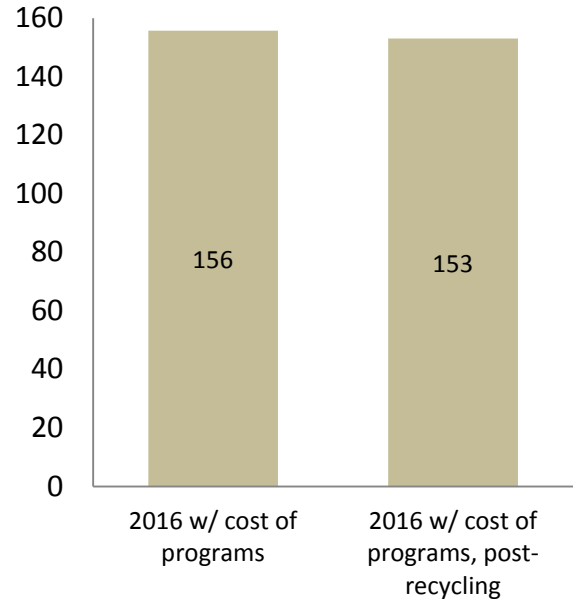


The pre-tax impact of the rate mitigation initiatives is a 20% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016.

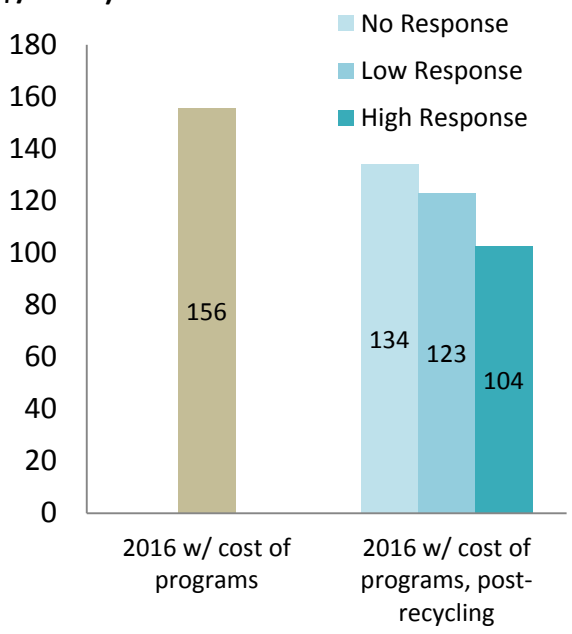
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



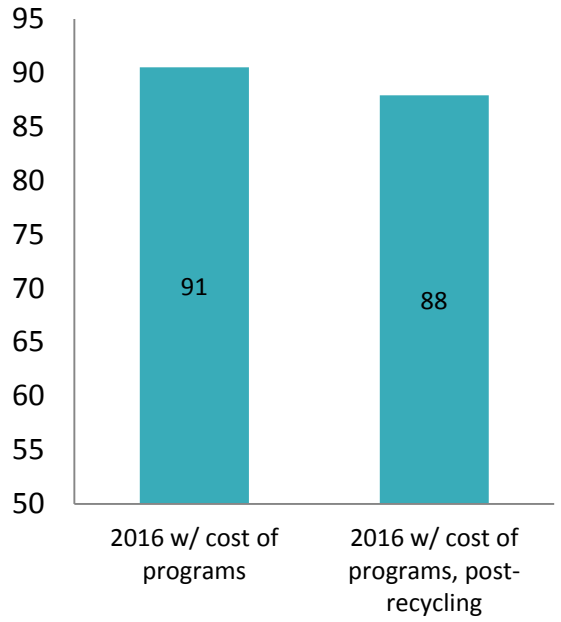
**Class B:** The benefit is a 2% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The benefit is a reduction of 14% to 34%.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The benefit of the rate mitigation initiatives is a 3% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

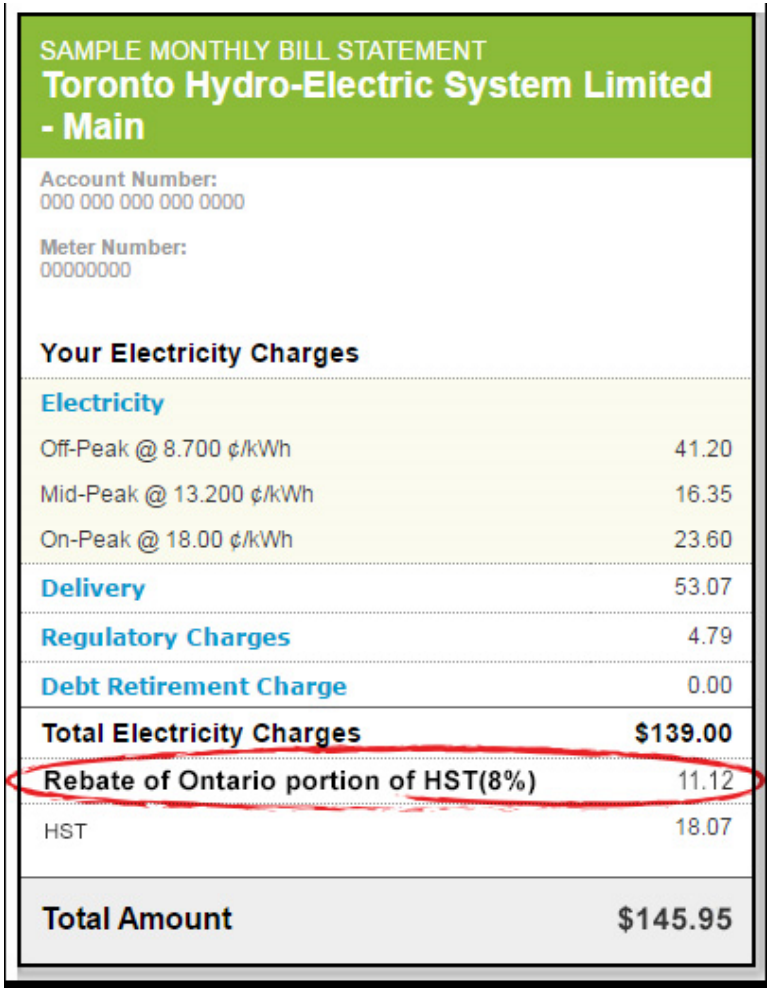
- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Electricity Bill Mock-Up



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | 11.12 |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

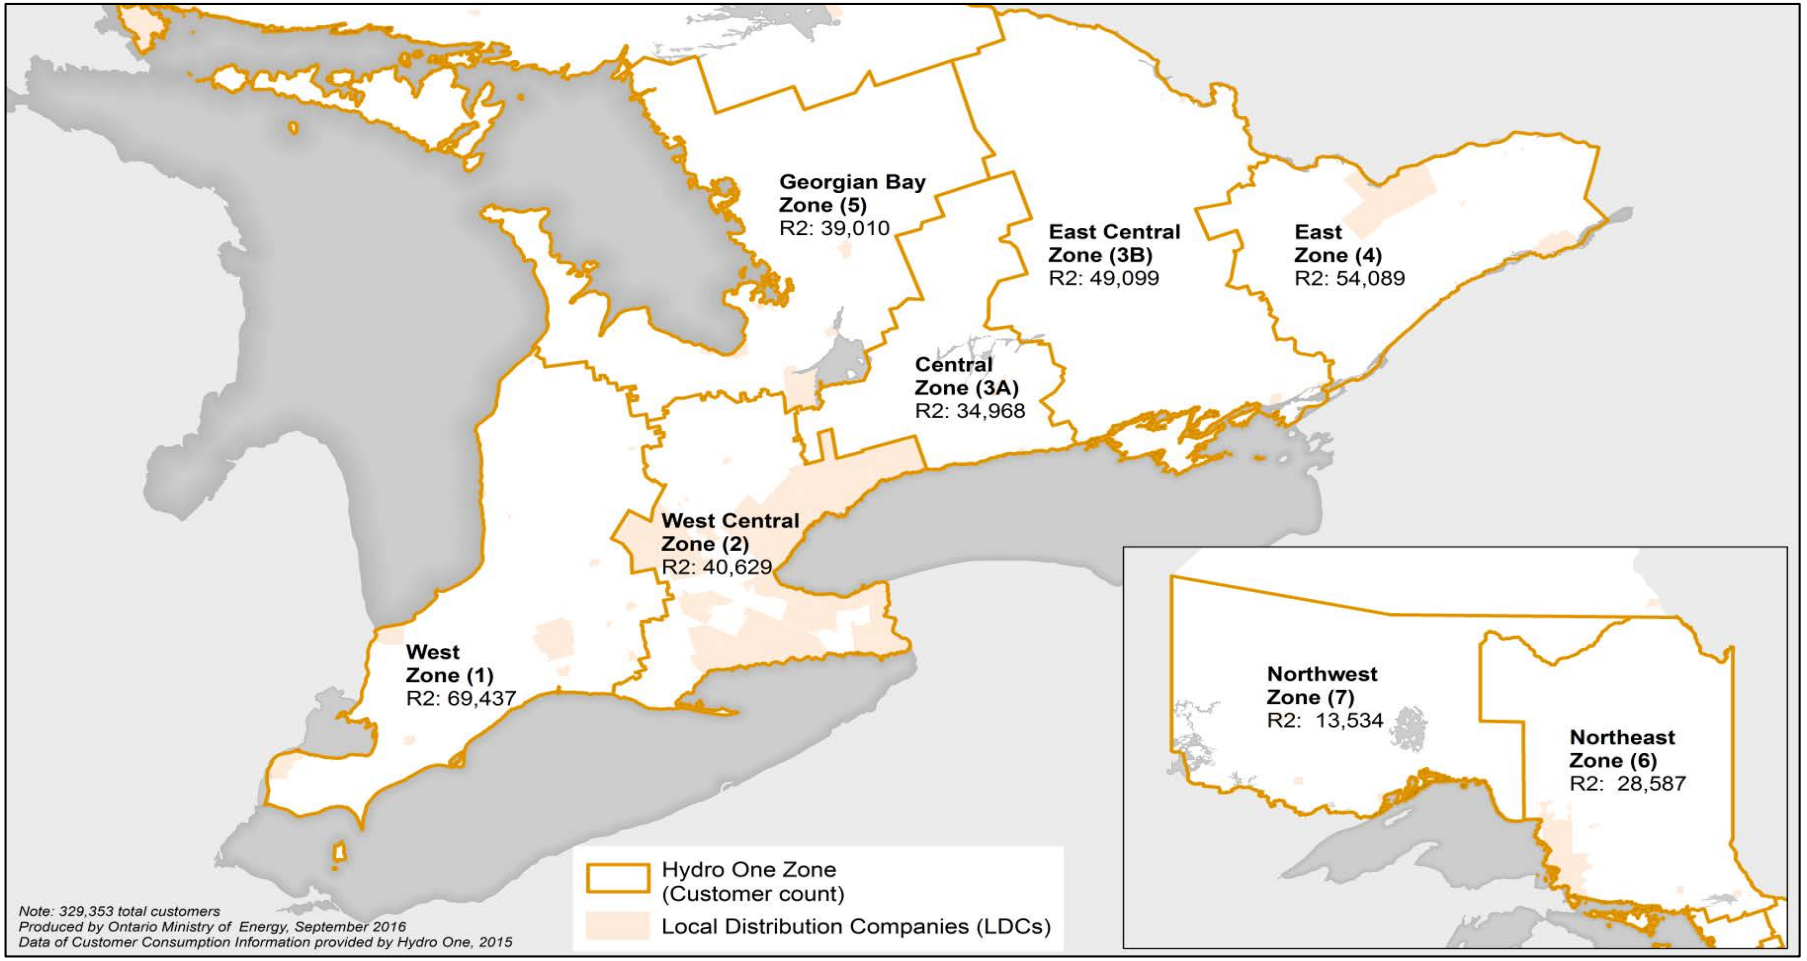
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

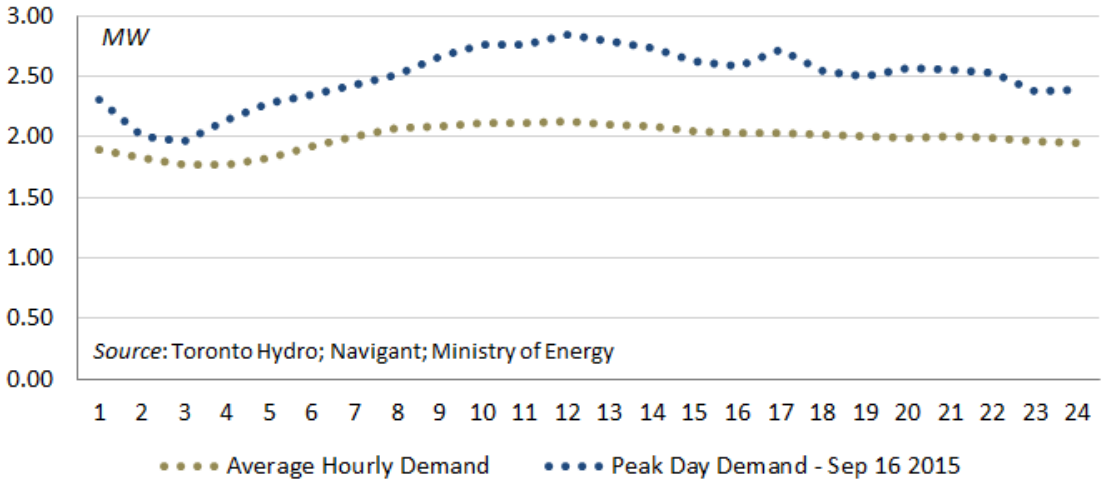
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

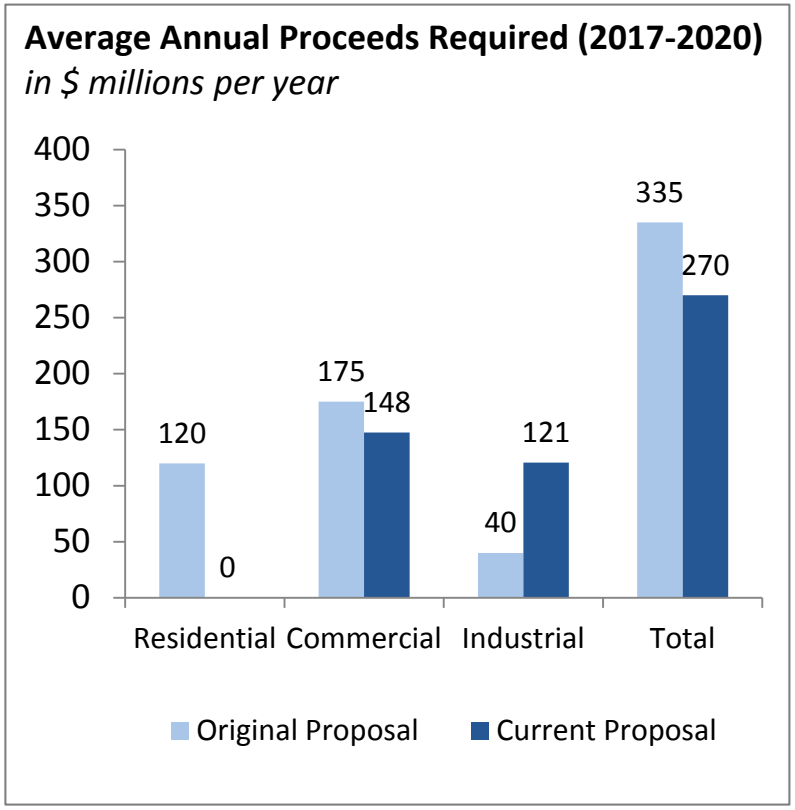
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- ~~HST~~ 8% Rebate of the pre-tax electricity costs (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Pending Update

Ontario

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

   i. Provide a rebate of 8% ~~on~~ of the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

   ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

   iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals. **[TBD]**

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after cost of new programs, before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after cost of new programs, before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $140 /month | N/A | 8% ~~pre-tax~~ rebate: - $11 | $129 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $231 /month | RRRP: –$32 | 8% ~~pre-tax~~ rebate + Updated RRRP: - $45 | $186 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $102 /month | OESP: -$38 | 8% ~~pre-ta~~x rebate: - $8 | $94 /month |
| Small Business (Toronto – 403,200 kWh/month) | $150 /MWh | N/A | 8% ~~pre-tax~~ rebate: - $12/MWh | $138 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $204 /MWh | N/A | 8% ~~pre-ta~~x rebate: - $16/MWh | $188 /MWh |

***Note:** Some residential consumers ~~can~~ may also receive relief for sales tax on home energy of up to $224 for 2016 through the ~~tax credits based on income, age and geography (Northern Ontario Energy Credit and~~ Ontario Energy and Property Tax Credit~~)~~. People who live in the North may receive additional relief for home energy costs of up to $224 for 2016 through the Northern Ontario Energy Credit. These credits are delivered through the Ontario Trillium Benefit ~~Tax Credit and can be as high as $1,332 per year for a family~~.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact, | New Rate, |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling + ICI: -$53.90/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI and proceeds recycling).

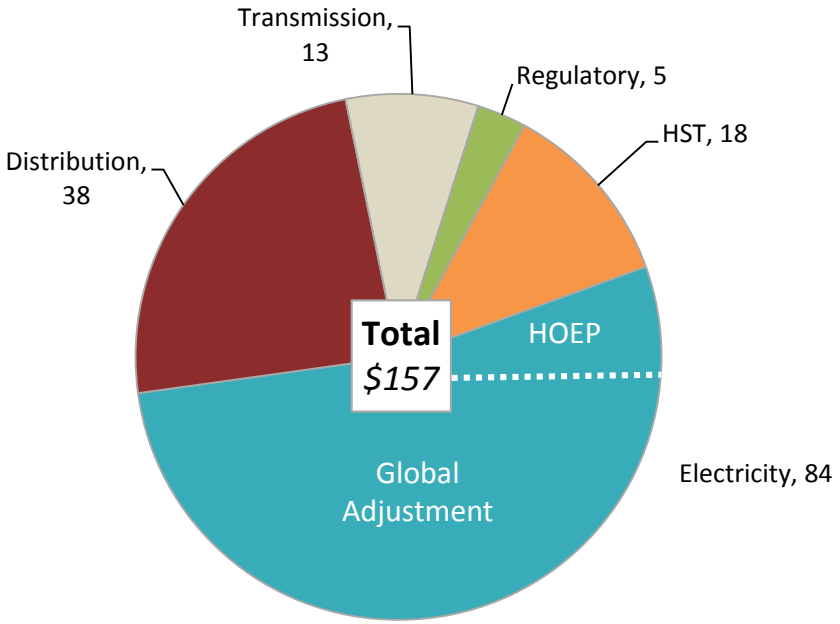
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

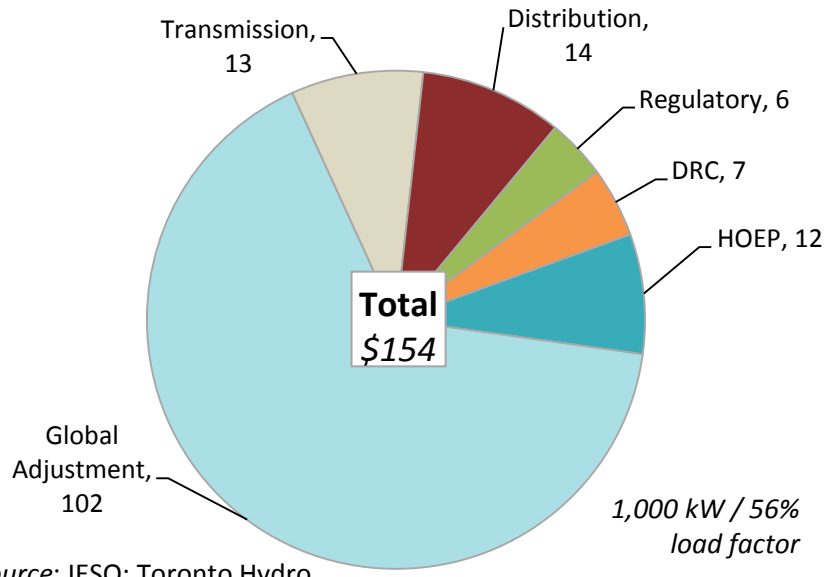
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

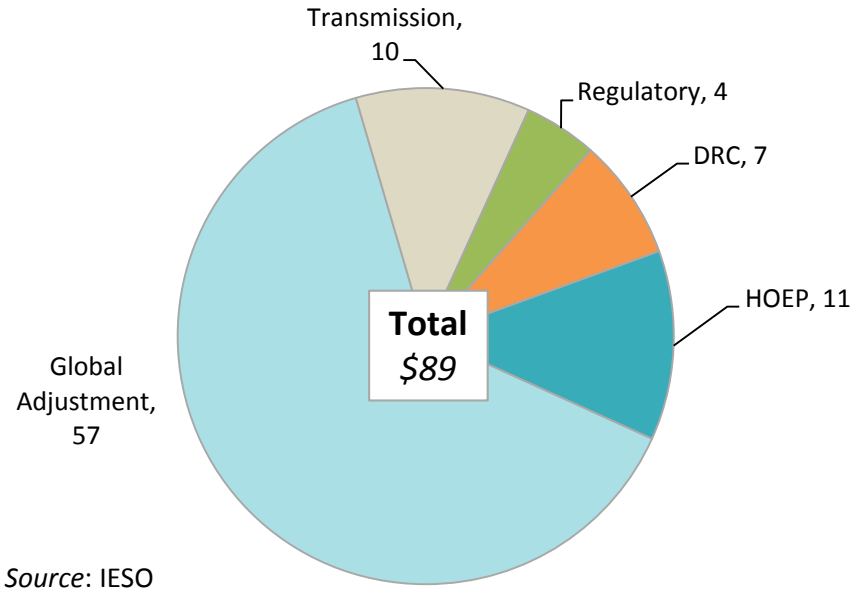
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Hi,
Attached is the latest iteration of the Cabinet submission, including an updated minute. This is with our MO for review but wanted to keep you updated so you can continue to revise your TB / CAB notes. Note that some of the numbers have changed to remain consistent with methodology throughout the submission.

Hi Boafoa,

Wondering if it's possible for the electricity item to be last on the agenda tomorrow. We have a Minister's briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week.  Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

***Policy***

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

i) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

ii) Increase the total amount of rate protection available to R2 ~~with~~ low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

iii) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

iv) Expand~~ing~~ eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for:

i) the proposed *Ontario Rebate for Electricity Consumers Act, 2016*~~ **[NTD-LSB – please confirm what title to use.]** and any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments and consequential legislative amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*~~, which would, subject to the Legislature's approval of the Act, includ~~e~~~~ing~~ the following elements:

i. The rebate would be available starting January 1, 2017;
ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way

in which electricity vendors providing the rebate are to be reimbursed;

v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;

vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments.

~~vi.~~vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*,

viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date.

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5.~~4~~. ENERGY notes the following amendments:

i) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

ii) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density ~~rural~~ electricity customers and provide for a periodic adjustment mechanism.

~~5~~6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7~~6~~. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan.

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 12, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

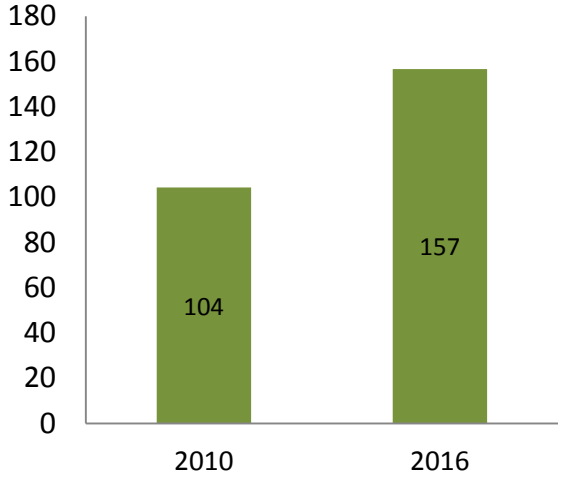
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

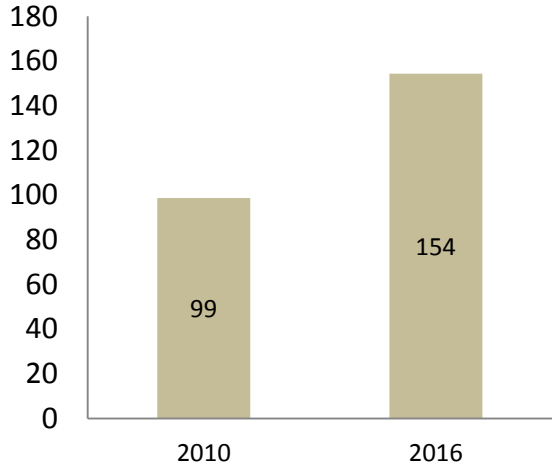
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

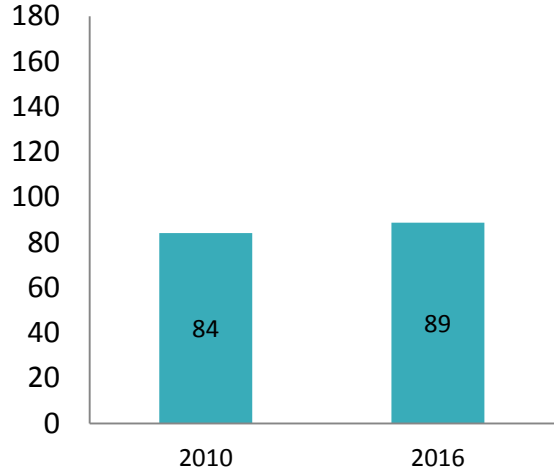
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



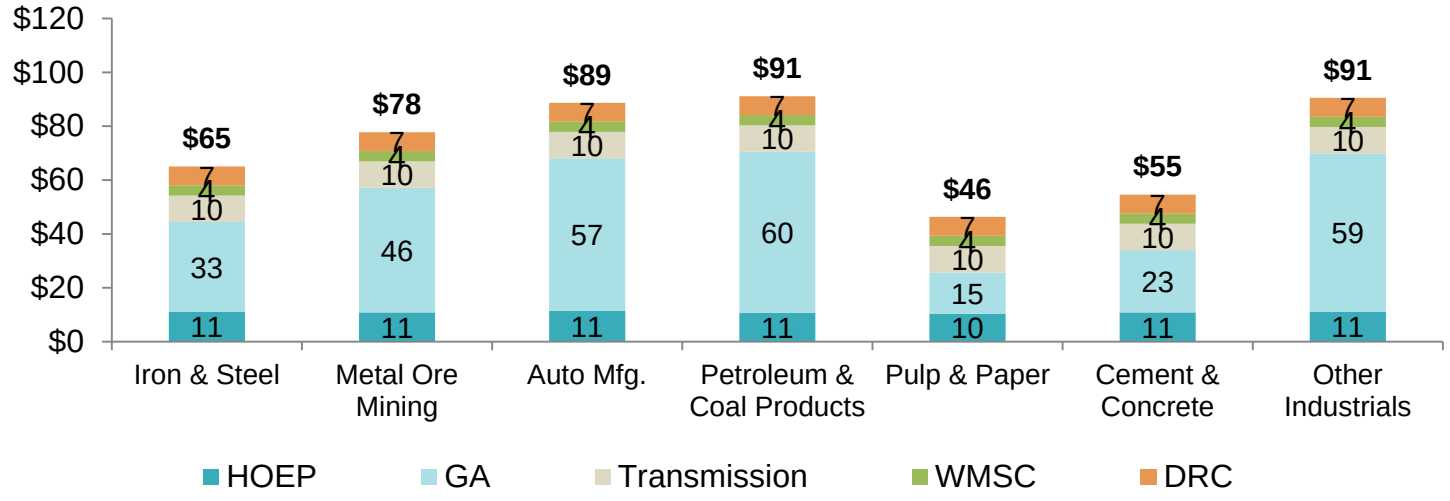
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

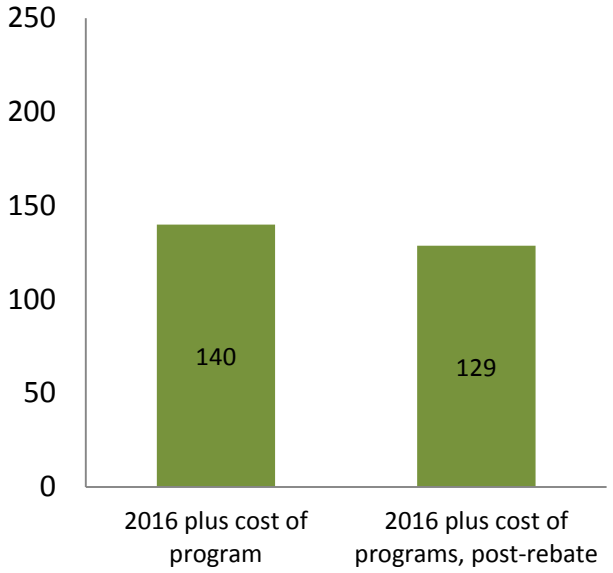
# Rate Mitigation Proposal – Illustrative Benefits*

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

- **Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Proceeds recycling is an estimated average over the first compliance period (2017-2020).

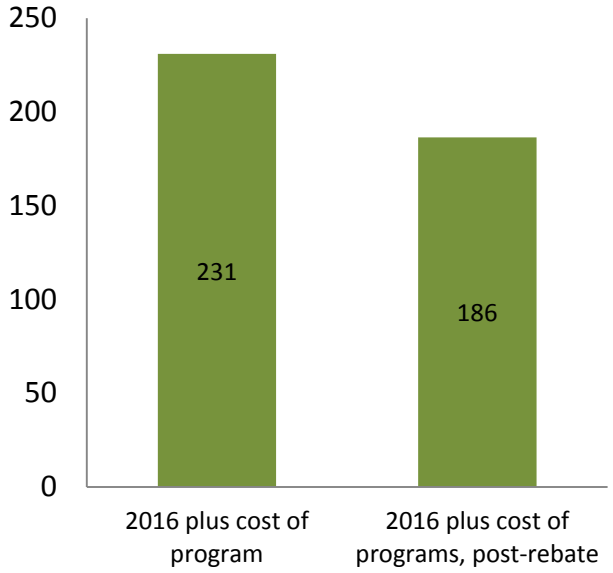
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750 kWh per month, 8% only**



The pre-tax impact is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000 kWh per month, 8% and RRRP Update**

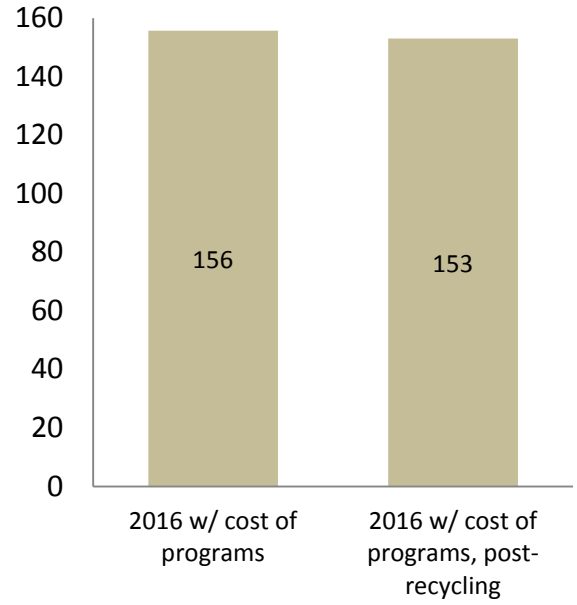


The pre-tax impact of the rate mitigation initiatives is a 20% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016.

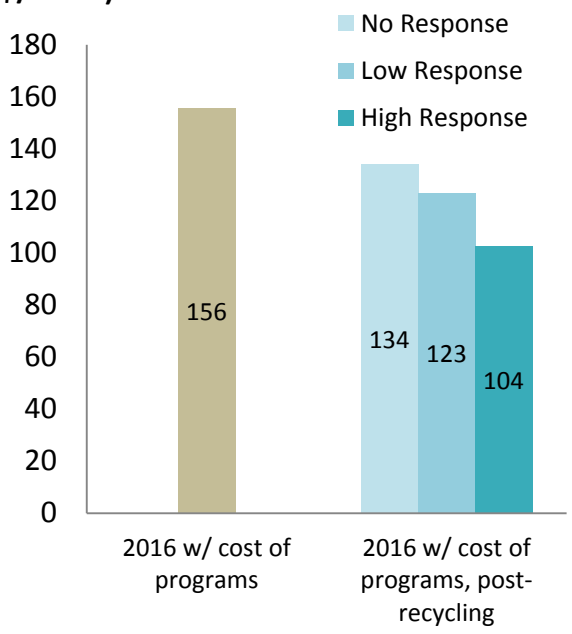
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



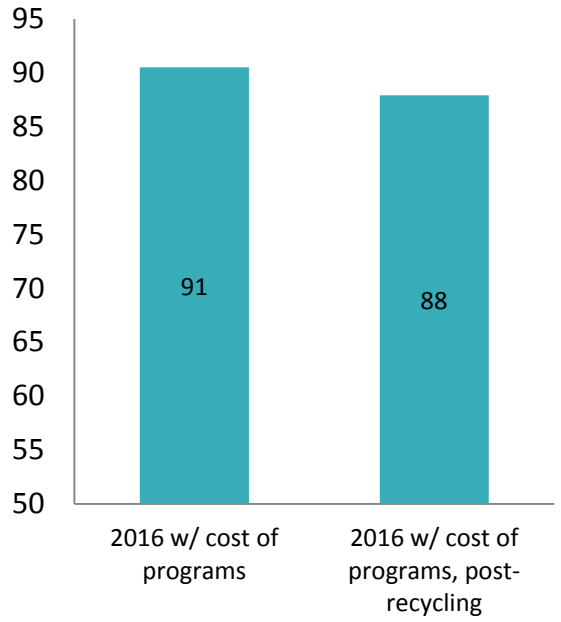
**Class B:** The benefit is a 2% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The benefit is a reduction of 14% to 34%.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The benefit of the rate mitigation initiatives is a 3% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

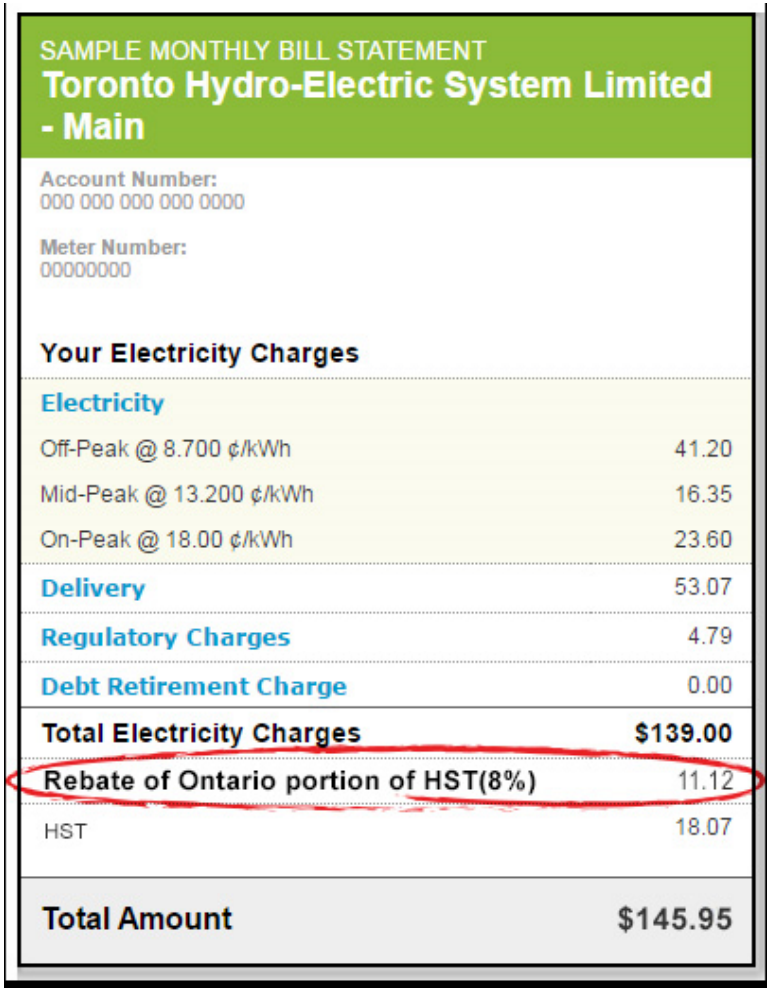
- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Electricity Bill Mock-Up



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |

| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

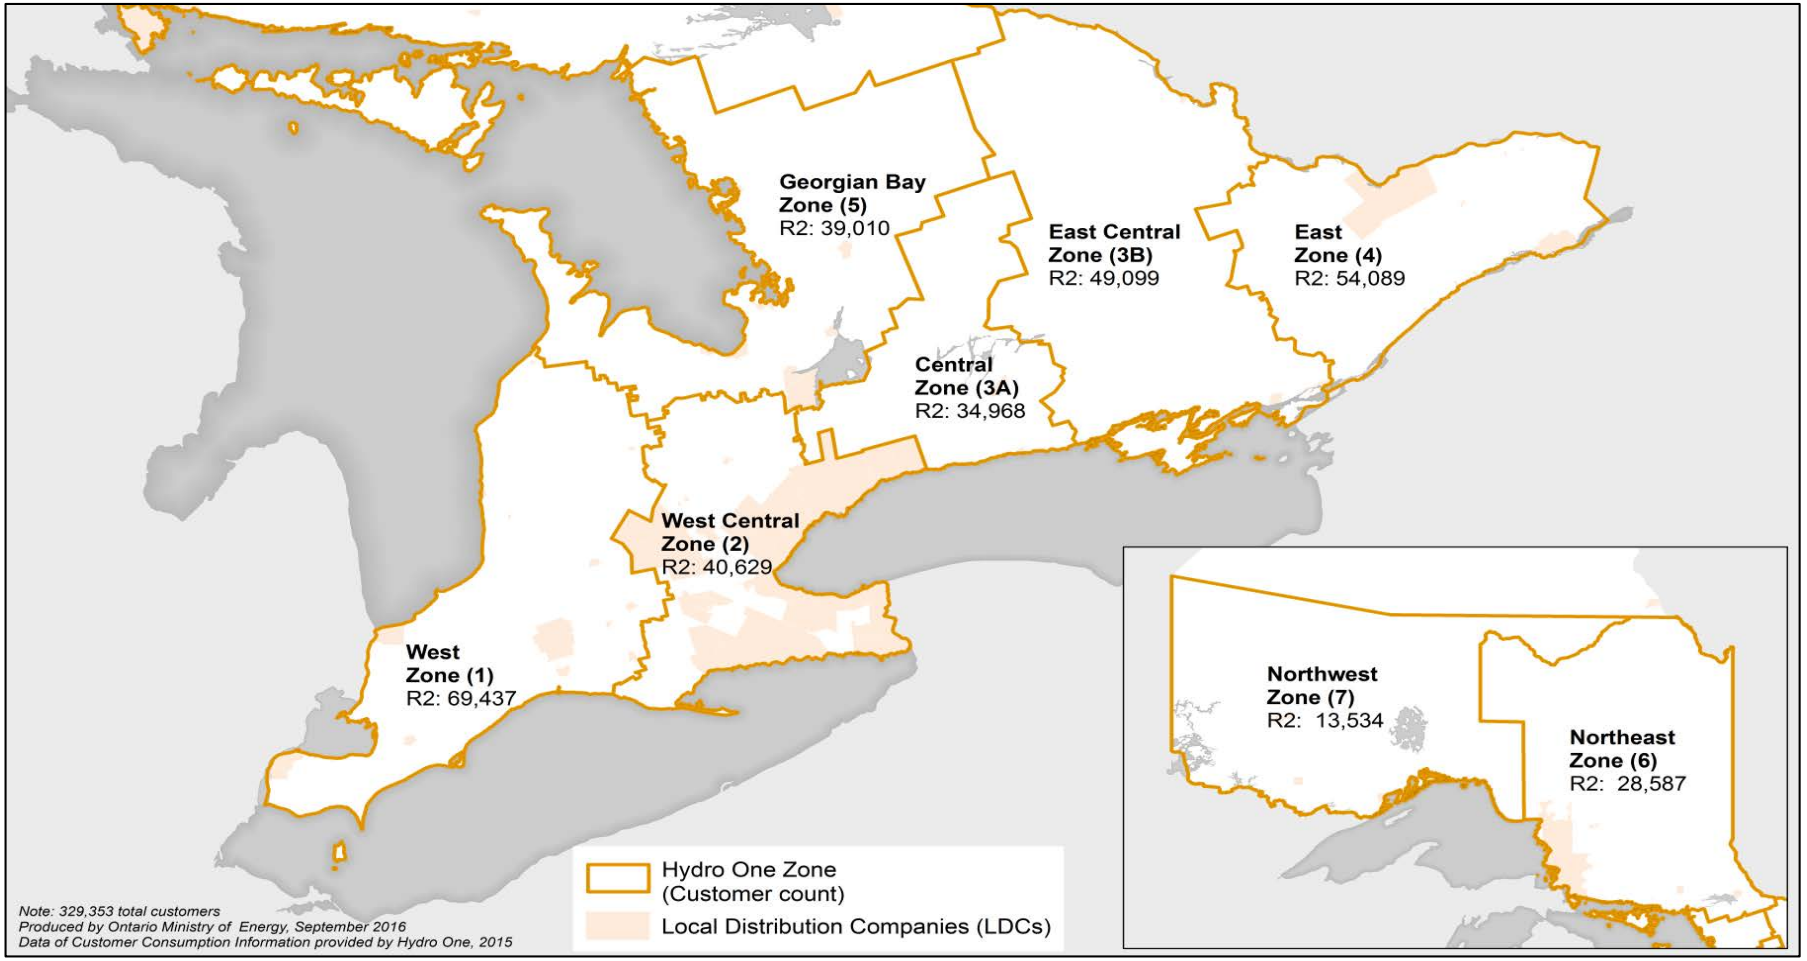
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

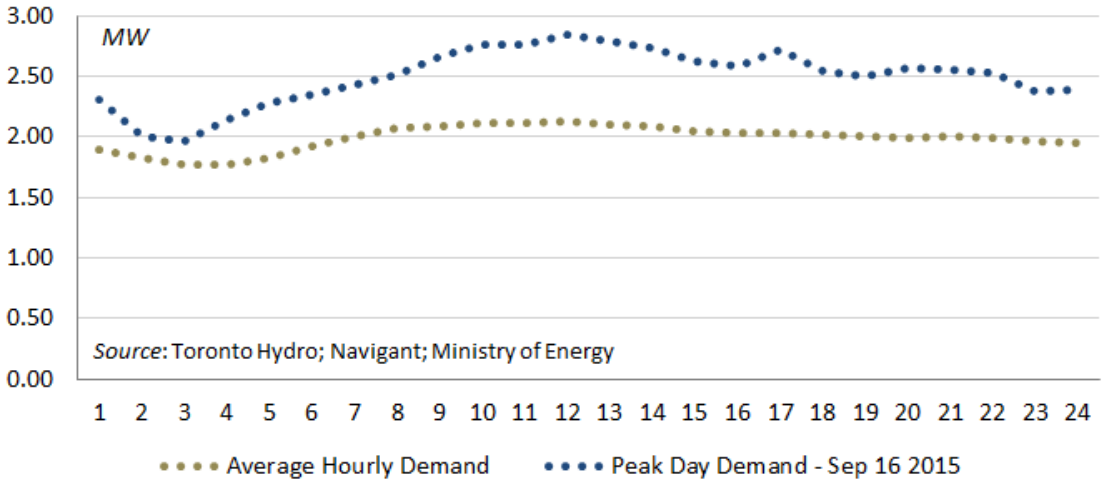
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

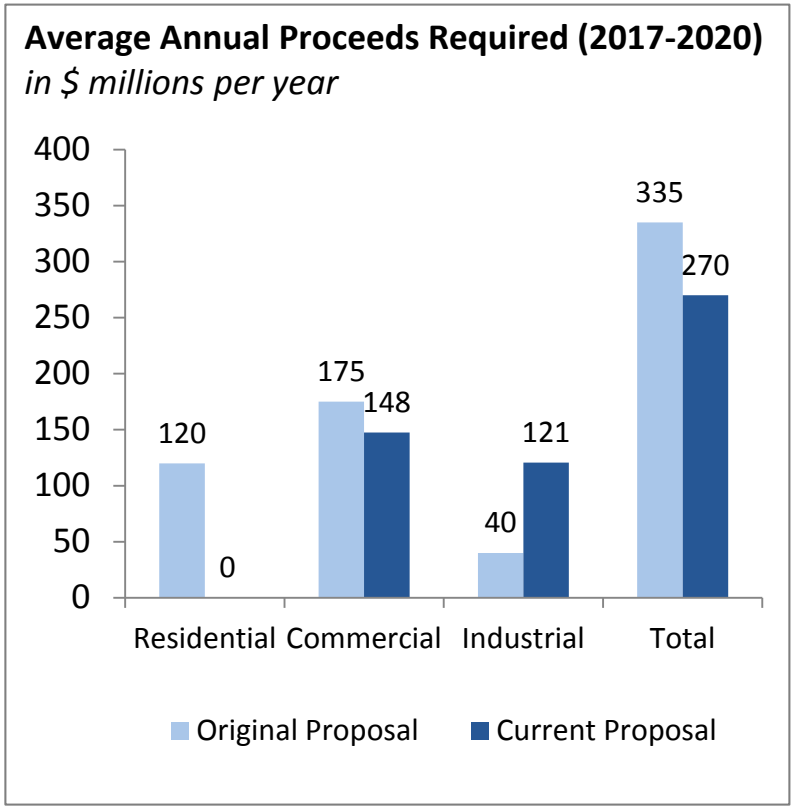
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Pending Update

Ontario

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

    i. Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

    ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

    iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

    iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals. **[TBD]**

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after cost of new programs, before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after cost of new programs, before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $140 /month | N/A | 8% pre-tax rebate: - $11 | $129 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $231 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $186 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $102 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $94 /month |
| Small Business (Toronto – 403,200 kWh/month) | $150 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $138 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $204 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $188 /MWh |

***Note:** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact, | New Rate, |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling + ICI: -$53.90/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI and proceeds recycling).

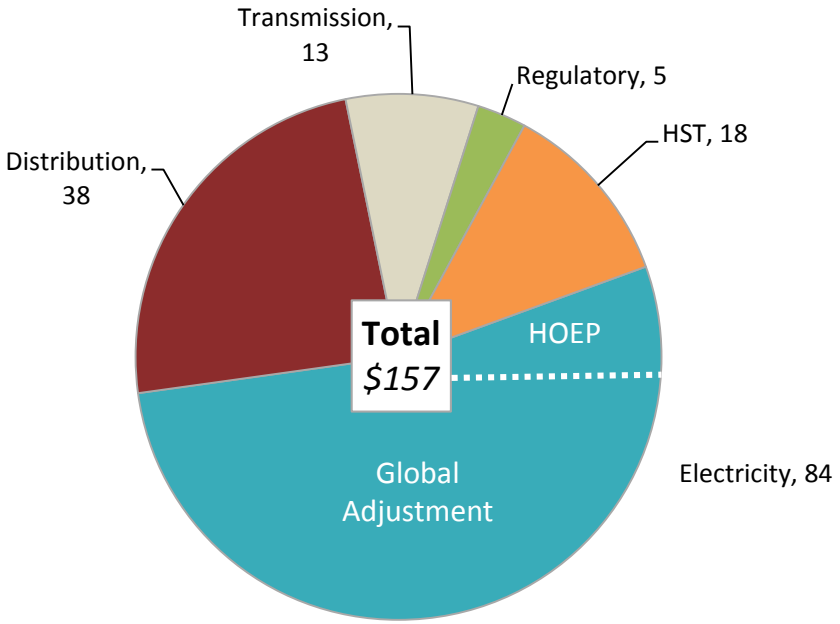
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

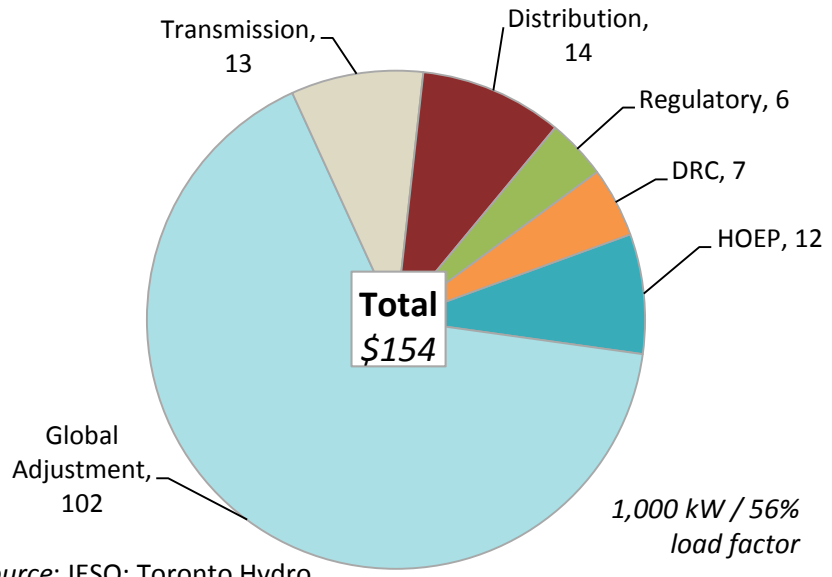
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

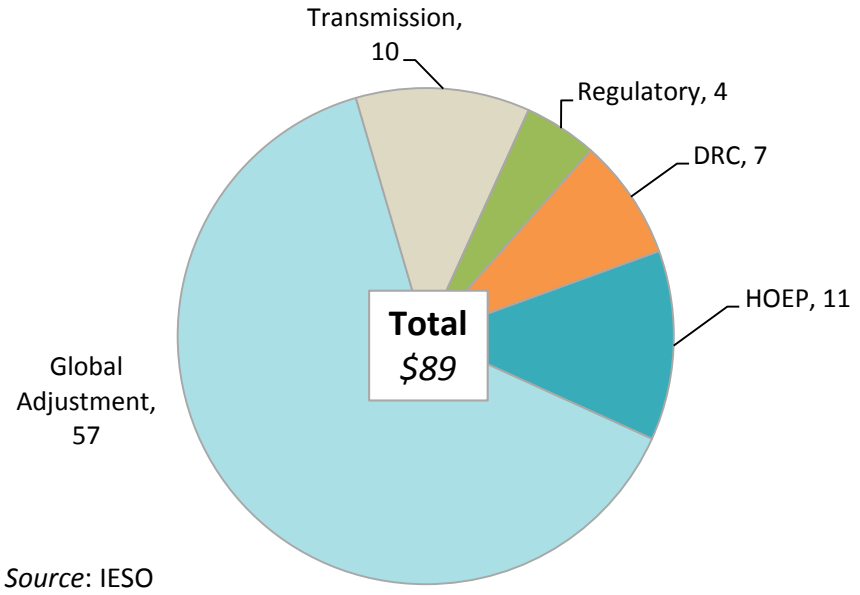
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

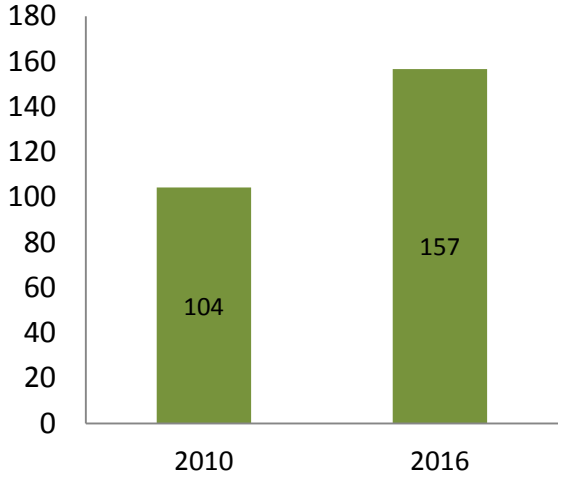
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

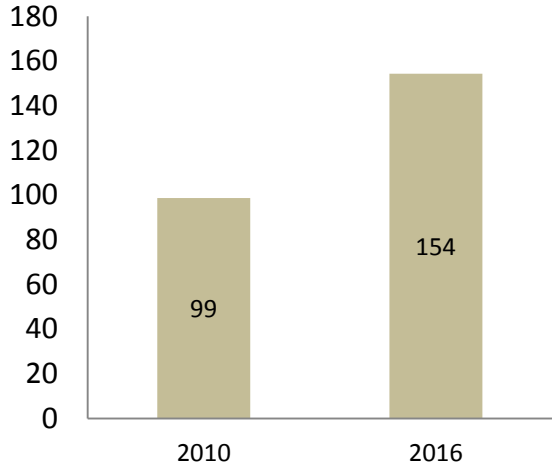
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

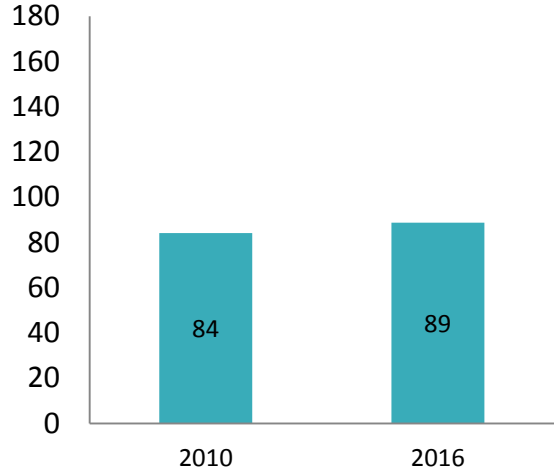
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



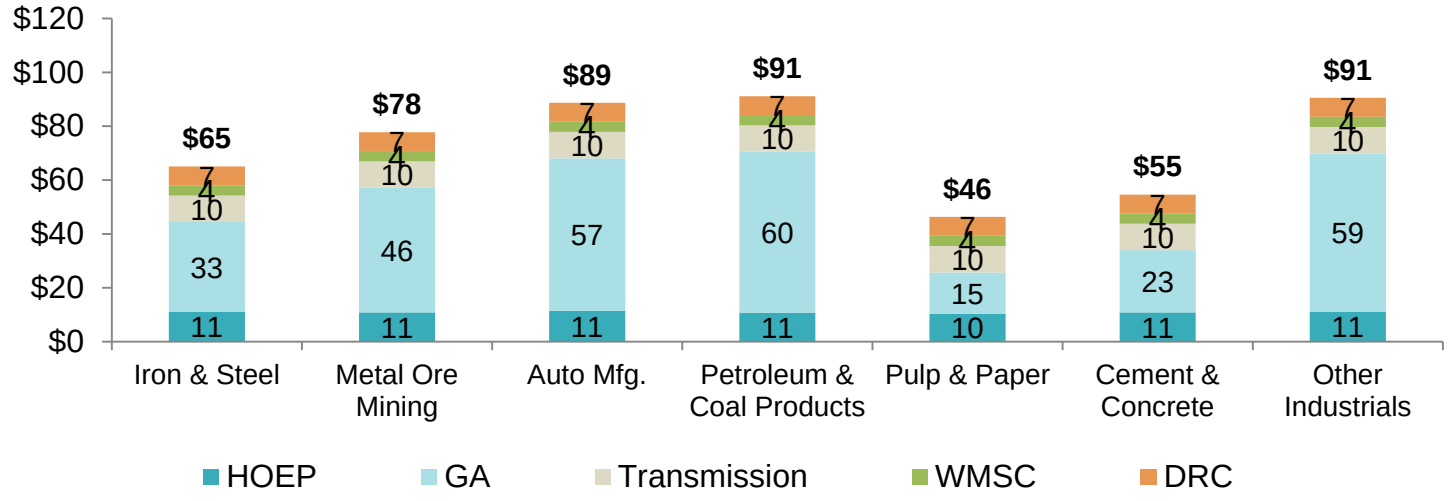
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP. ~~See Appendix for discussion on HST considerations.~~

# Rate Mitigation Proposal – Illustrative Benefits*

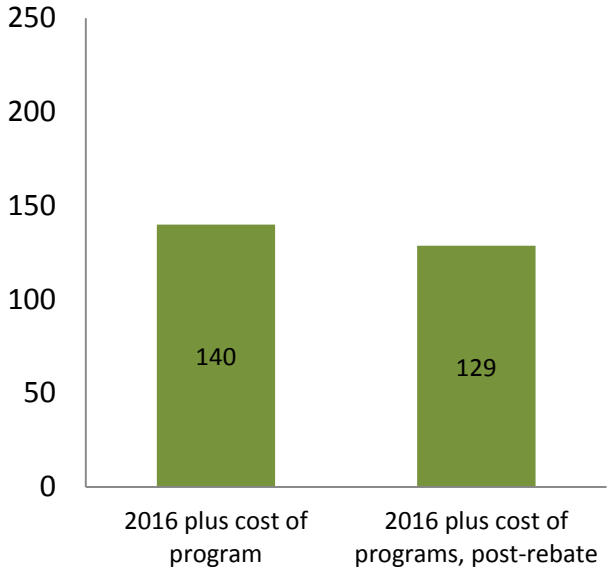
| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

- **Notes:** The above benefits do not include the cost of ICI expansion, and the RRRP update (total impact of $1.74/MWh).

The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Proceeds recycling is an estimated average over the first compliance period (2017-2020).

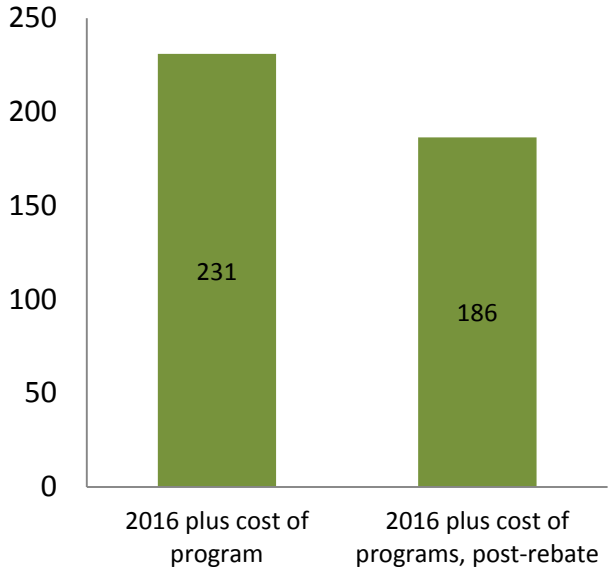
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750 kWh per month, 8% only**



The pre-tax impact is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000 kWh per month, 8% and RRRP Update**

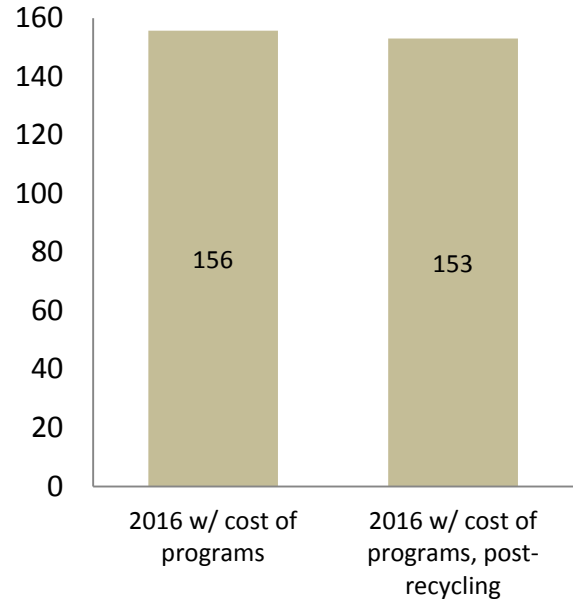


The pre-tax impact of the rate mitigation initiatives is a 20% reduction.

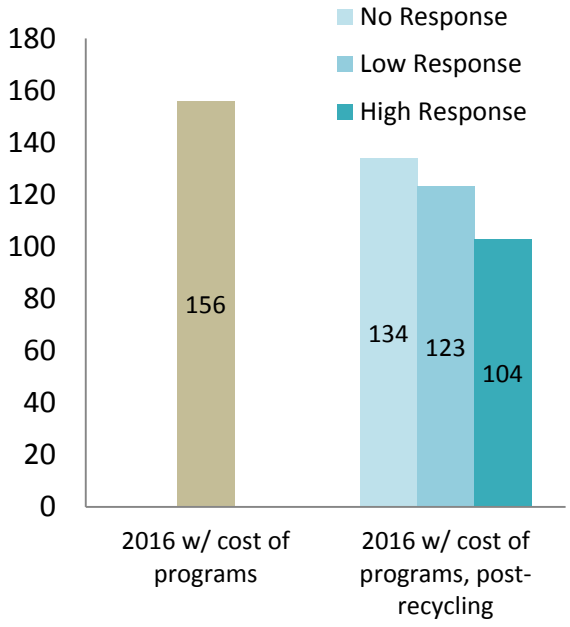
**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016.

# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

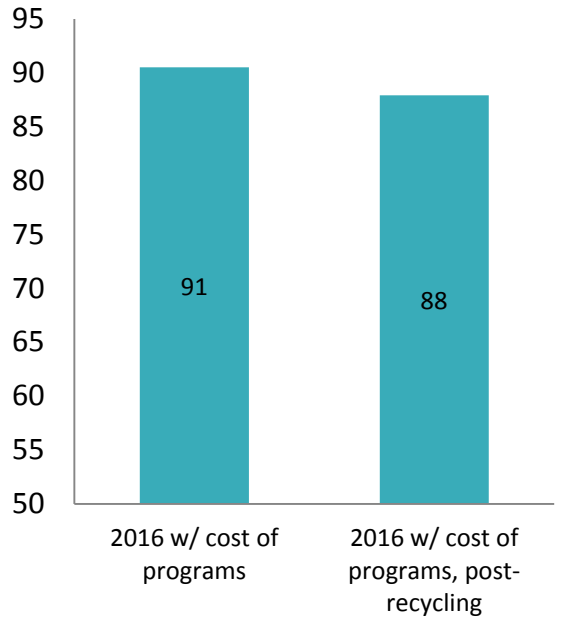
**Typical Class B (Commercial) Price ($/MWh)**



**Typical New Class A Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



**Class B:** The benefit is a 2% reduction.

**New Class A:** The ~~net impact~~ benefit is a reduction of 14% to 34%.

**Existing Class A:** The ~~net impact~~ benefit ~~of~~ the rate mitigation initiatives is a 3% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

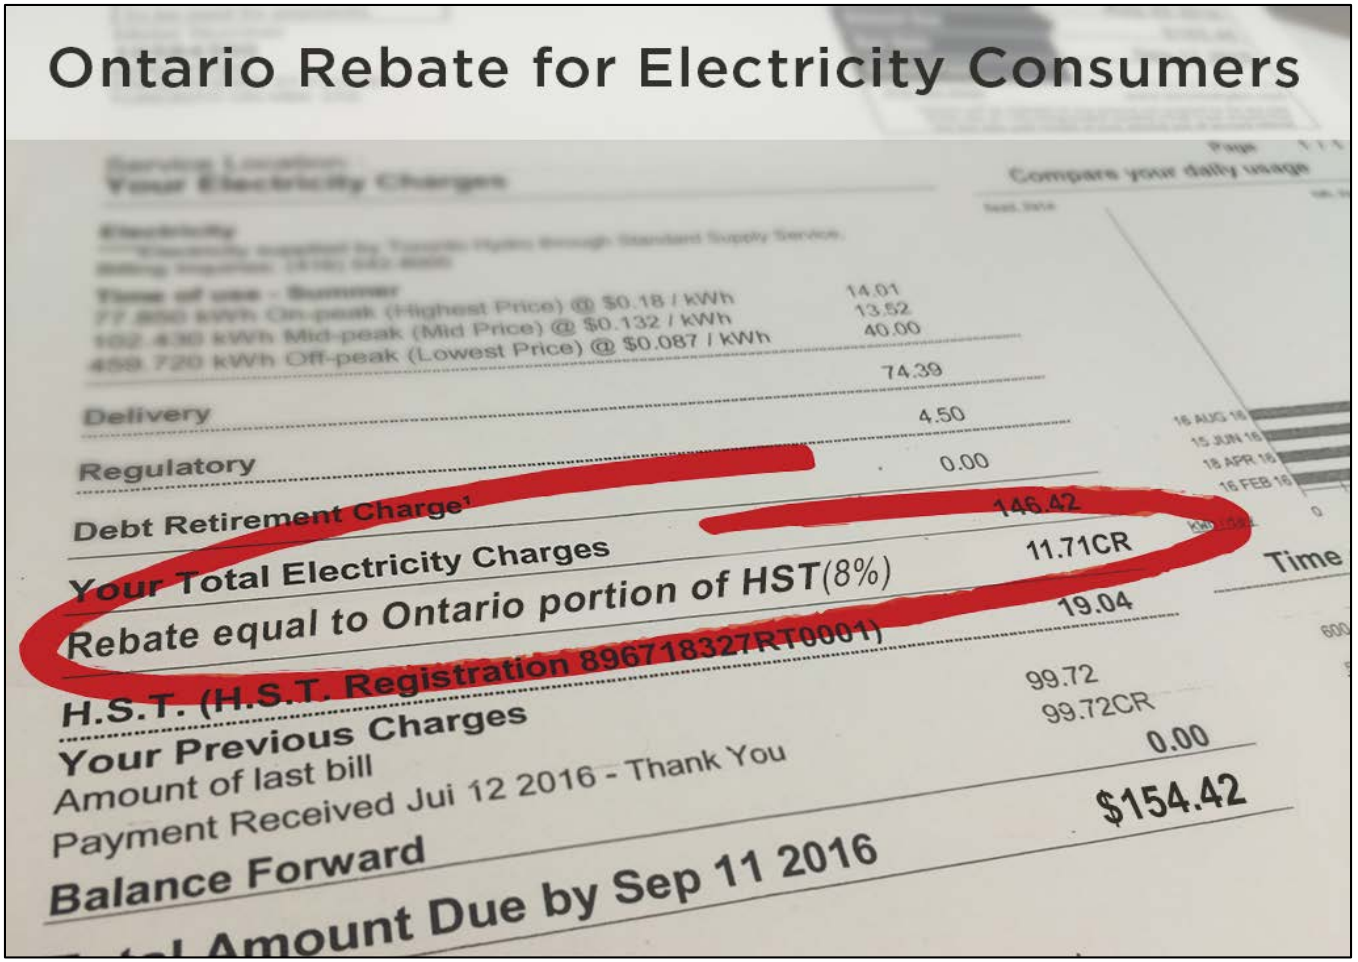
| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

To be updated by Comms

# Illustrative Electricity Bill Mock-Up



**Note:** Final bill presentment pending submission to LRC.

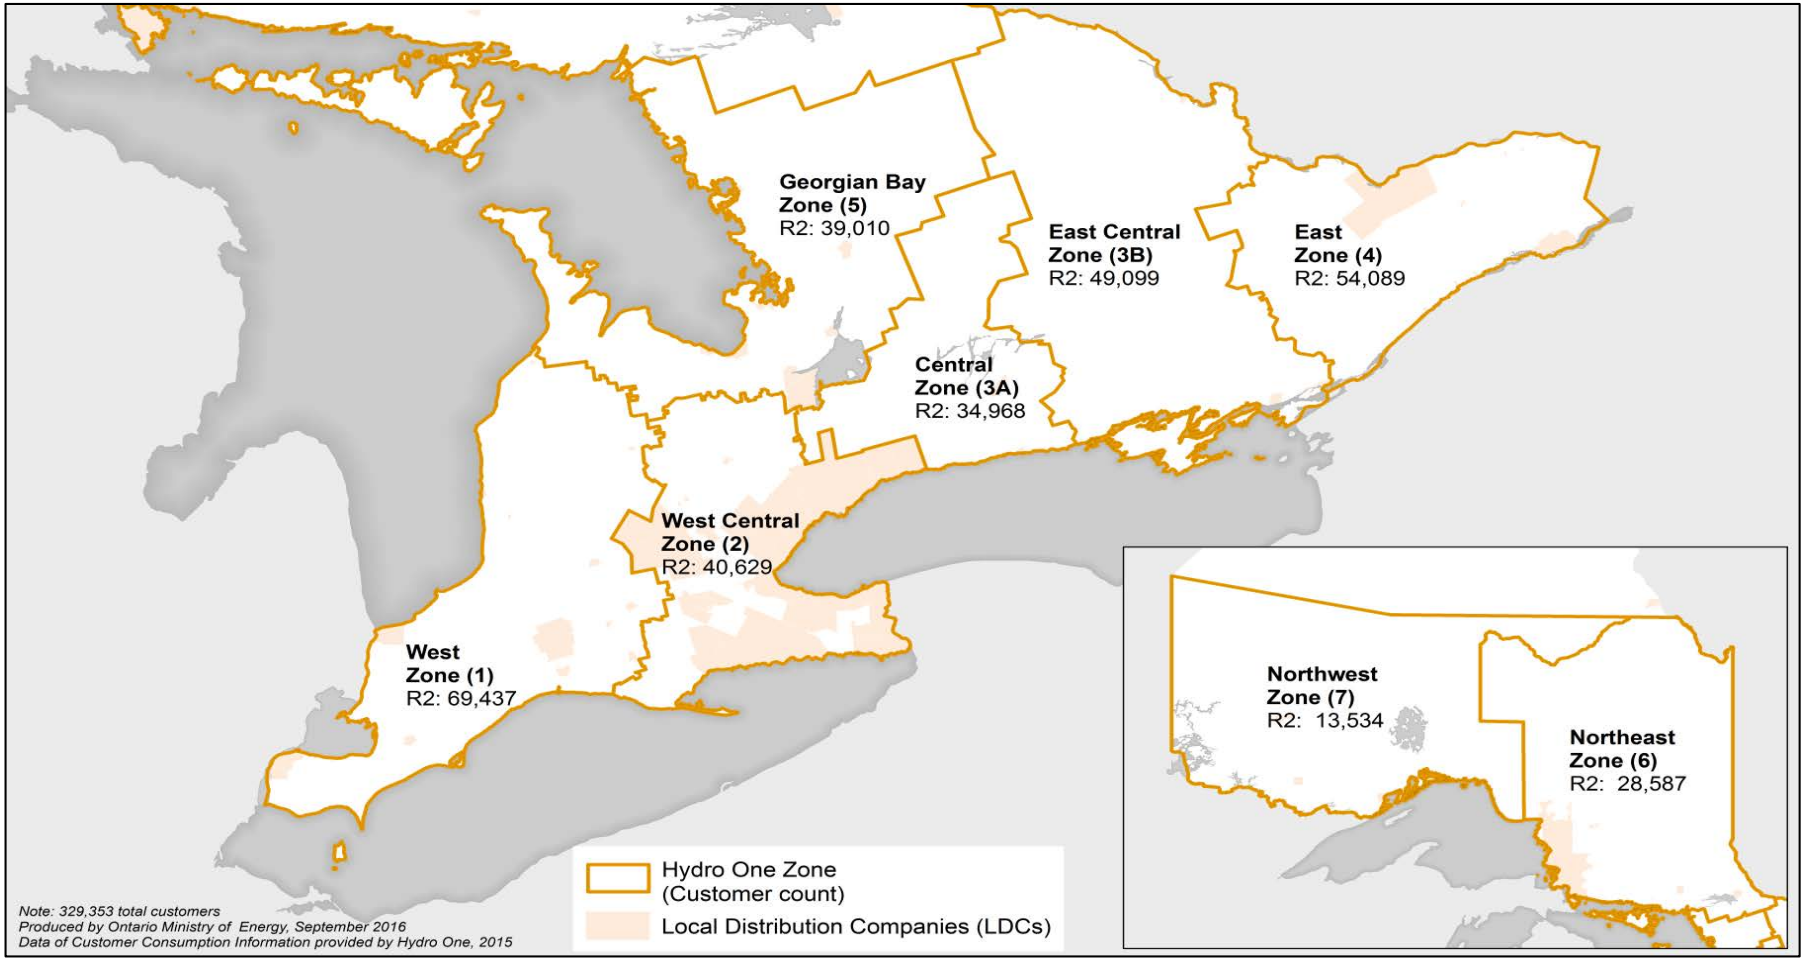
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded ~~subsidy~~ program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided ~~subsidy~~ to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit ~~subsidy~~ of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit ~~subsidy~~ remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

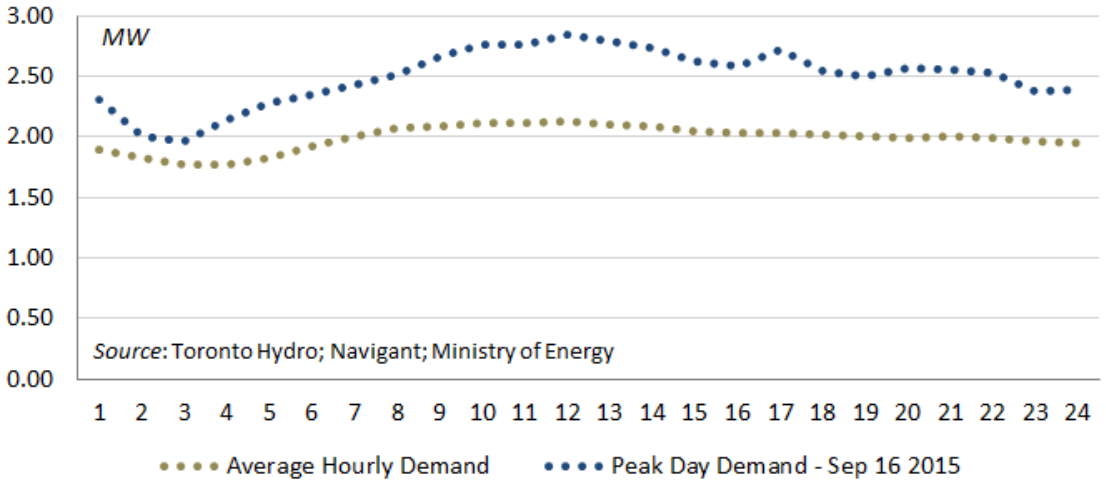
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

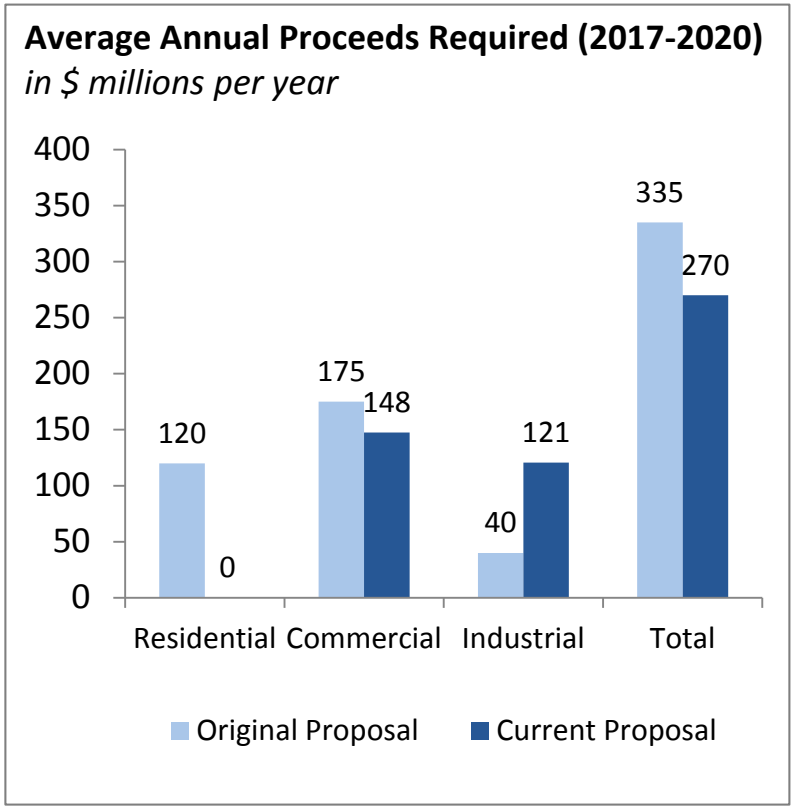
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- ~~New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.~~ On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion ~~additional funds~~ may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Pending Update

Ontario

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

    i. Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

    ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

    iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

    iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals. **[TBD]**

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

Since we're going to LRC, not sure we need this.

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after cost of new programs, before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after cost of new programs, before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | ~~$139~~ $140 /month | N/A | 8% pre-tax rebate: - $11 | ~~$128~~ $129 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | ~~$229~~ $231 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | ~~$185~~ $186 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | ~~$101~~ $102 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | ~~$93~~ $94 /month |
| Small Business (Toronto – 403,200 kWh/month) | ~~$148~~ $150 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | ~~$136~~ $138 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | ~~$202~~ $204 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | ~~$186~~ $188 /MWh |

***Note:** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact, | New Rate, |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling + ICI: -$53.90/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI and proceeds recycling).

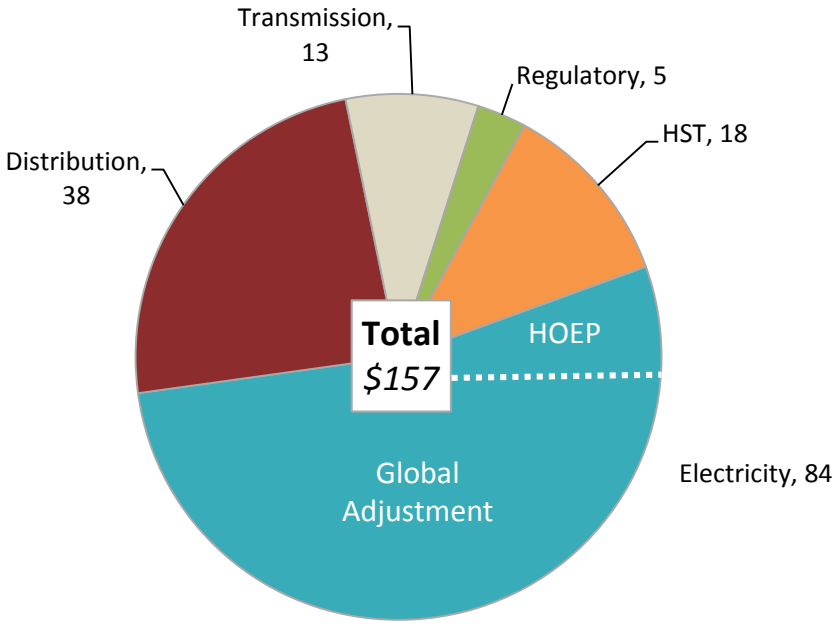
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

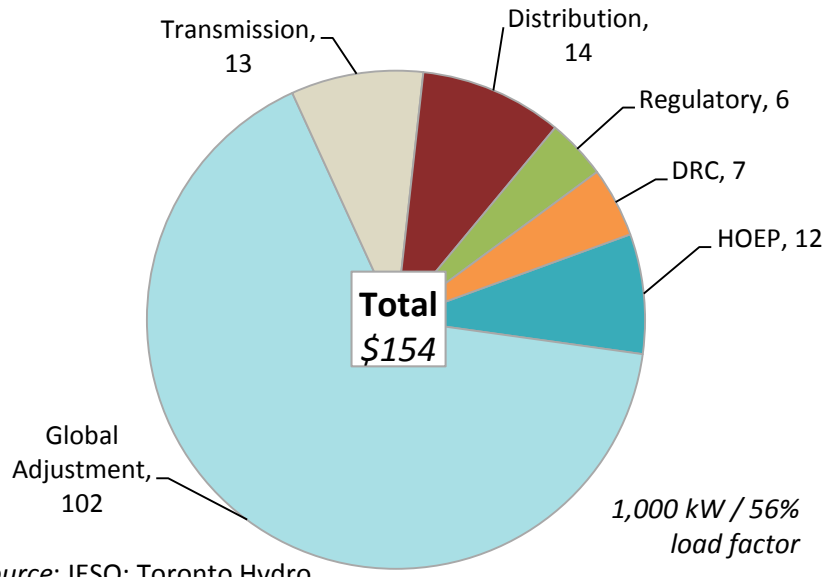
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

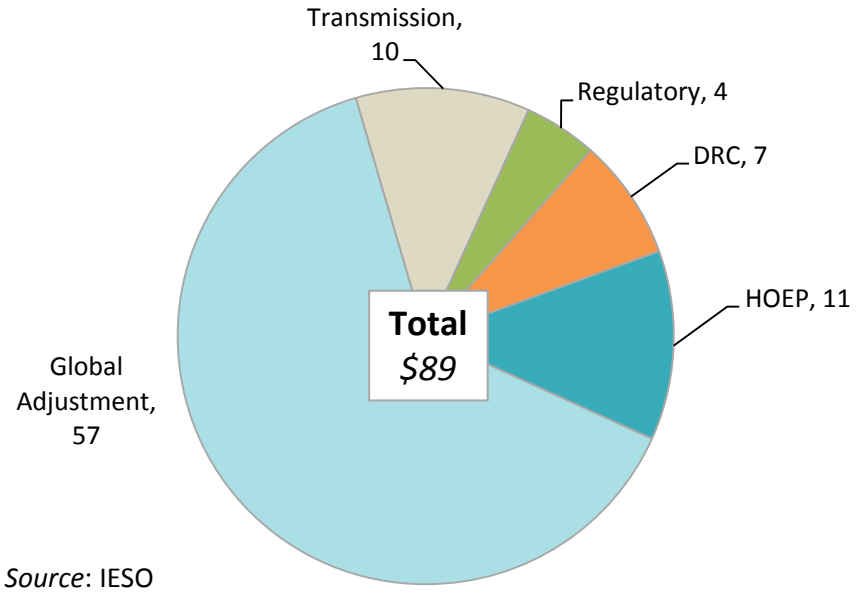
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Hi Boafoa,

Wondering if it's possible for the electricity item to be last on the agenda tomorrow. We have a Minister's briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week.  Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

# Ontario Rebate for Electricity Consumers Act, 2016

## EXPLANATORY NOTE

The *Ontario Rebate for Electricity Consumers Act, 2016* authorizes financial assistance for certain Ontario electricity consumers in respect of electricity costs. Consumers receive the financial assistance by means of an 8 per cent reduction in the amount payable before tax under their electricity accounts for each billing period. The amount of financial assistance for a billing period is required to be shown on invoices issued to consumers for the billing period.

The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of various other regulations, including to set out other ways for consumers to receive financial assistance, to alter the default rules in the Act for how to calculate the financial assistance and to limit or alter who is entitled to financial assistance. The Act amends the *Ontario Clean Energy Benefit Act, 2010* to authorize the making of regulations under that Act in respect of cut-off dates for financial assistance under that Act.

The Act contains administrative and enforcement provisions, including requirements relating to record keeping by electricity vendors and authorization for inspections and inquiries with respect to amounts of financial assistance provided and reimbursements to electricity vendors. The *Ontario Energy Board Act, 1998* is amended so that provisions of the *Ontario Rebate for Electricity Consumers Act, 2016* and regulations made under it will be enforceable by the Ontario Energy Board.

# An Act in respect of the cost of electricity

| 19. | Commencement |
| 20. | Short title |

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

## Definitions

**1.** (1) In this Act,

"billing period" means a period of time that is wholly or partly in the eligible period and for which an invoice in respect of an eligible account is issued; ("période de facturation")

"Board" means the Ontario Energy Board; ("Commission")

"consumer" means a person,

(a) to whom an invoice is issued in respect of an eligible account for a billing period, or

(b) who is prescribed by the regulations or who satisfies such conditions as may be prescribed by the regulations; ("consommateur")

"distribution system" has the same meaning as in section 3 of the *Ontario Energy Board Act, 1998*; ("réseau de distribution")

"electricity vendor" means the IESO, a licensed distributor, a licensed retailer or a person prescribed by the regulations; ("vendeur d'électricité")

"eligible account" means, in respect of a consumer, an account with an electricity vendor, or with a person prescribed by the regulations, for the provision of electricity in Ontario if,

(a) the consumer has a demand for electricity of 50 kilowatts or less, or such other amount of demand for electricity as may be prescribed,

(b) the consumer annually uses not more than 250,000 kilowatt hours of electricity, or such other amount of use of electricity as may be prescribed,

(c) the consumer,

(i) carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993*, and

(ii) holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act,

(d) the account relates to,

(i) a dwelling,

(ii) a property, within the meaning of the *Condominium Act, 1998*,

(iii) a residential complex, within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

(iv) a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*, or

(e) the consumer or the account satisfies such conditions as may be prescribed by the regulations; ("compte admissible")

"eligible period" means the period commencing January 1, 2017; ("période admissible")

"IESO" has the same meaning as in subsection 2 (1) of the *Electricity Act, 1998*; ("SIERE")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system; ("distributeur titulaire d'un permis")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("détaillant titulaire d'un permis")

"market rules" means the market rules made under section 32 of the *Electricity Act, 1998*; (règles du marché")

"regulations" means the regulations made under this Act; ("règlement")

"retail" has the same meaning as in section 56 of the *Ontario Energy Board Act, 1998*; ("vendre au détail")

"unit sub-metering" means activities that are unit sub-metering for the purposes of the *Ontario Energy Board Act, 1998*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" means a person who is licensed to engage in unit sub-metering by the Board under Part V of the *Ontario Energy Board Act, 1998*. ("fournisseur de compteurs divisionnaires d'unité")

**Eligible account**

(2) For the purposes of this Act, if a consumer would, but for this subsection, have an eligible account with a licensed retailer and with a licensed distributor, but only one of them issues an invoice to the consumer for a billing period for all amounts payable by the consumer to them for the billing period,

(a) the consumer is deemed to have an eligible account for the billing period only with whichever of them issues the invoice for the billing period; and

(b) the licensed distributor or licensed retailer who issues the invoice for the billing period is deemed to be imposing all charges and other amounts payable under the invoice for the purposes of determining the amount of financial assistance to which the consumer is entitled.

**Base invoice amount**

**2.** (1) For the purposes of this Act, the base invoice amount for a billing period in respect of an eligible account is determined in accordance with the regulations and, unless otherwise prescribed by the regulations, includes, if the invoice is issued by a licensed distributor or a licensed retailer, amounts in respect of,

(a) the commodity price of the electricity;

(b) the rates and charges set out in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998* that are not required under subsection (2) or the regulations to be excluded;

(c) any adjustment on the invoice required pursuant to section 25.33 of the *Electricity Act, 1998*;

(d) any debt retirement charge payable by the consumer under subsection 85 (4) of the *Electricity Act, 1998*; and

(e) anything else prescribed by the regulations.

**Exclusions**

(2) Except as otherwise prescribed by the regulations, the base invoice amount for a billing period must exclude,

(a) the balance of any amounts carried forward from previous invoices;

(b) all penalties and interest;

(c) any charges that do not relate to the consumption of electricity;

(d) the fixed monthly service charge payable by a generation facility, within the meaning of section 56 of the *Ontario Energy Board Act, 1998*, that is classified as “microFIT” in a rate order issued by the Board under subsection 78 (3) of that Act;

(e) charges labelled as “specific service charges” or “retail service charges” in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998*;

(f) the amount of any harmonized sales tax payable under Part IX of the *Excise Tax Act* (Canada); and

(g) any other amounts prescribed by the regulations.

**Financial assistance**

**3.** (1) A consumer who has an eligible account during a billing period is entitled to receive financial assistance in respect of the cost of electricity during the billing period in an amount equal to 8 per cent of the base invoice amount for the billing period in respect of the eligible account.

**Exception**

(2) Despite subsection (1), a consumer is not entitled to receive financial assistance under this Act,

(a) in respect of electricity consumed in generation station service;

(b) in such circumstances as may be prescribed by the regulations; or

(c) if the regulations prescribe that the consumer is not entitled to receive financial assistance.

**Payment of financial assistance**

(3) The financial assistance to which a consumer is entitled under this Act shall be paid,

(a) by crediting the consumer's eligible account; or

(b) in such other manner as may be prescribed by the regulations.

**Money appropriated by the Legislature**

(4) The money required for the purposes of this Act shall be paid out of the money appropriated for those purposes by the Legislature.

**No assignment of financial assistance**

(5) An assignment by a consumer to another person or entity, including a licensed retailer, of the consumer's entitlement to any payment, rebate or credit does not apply to any financial assistance to which the consumer is entitled under this Act, whether the assignment was made before or after this subsection comes into force.

**Same**

(6) Subsection (7) applies if,

(a) a consumer provides to another person electricity in respect of which the consumer is entitled to financial assistance under subsection (1); and

(b) an invoice for the electricity is issued to the person by the consumer, by an agent of the consumer or by a unit sub-meter provider providing unit sub-metering for the consumer.

**Requirement to pass on benefit**

(7) Despite subsections (1) and (5), the consumer and every unit sub-meter provider providing unit sub-metering for the consumer shall ensure that each person who is liable to pay an invoice referred to in clause (6) (b) receives a credit, determined in the manner prescribed by the regulations, in respect of the financial assistance to which the consumer is entitled with respect to electricity the consumer provides to the person.

**Invoices**

**4.** (1) Unless otherwise prescribed by the regulations, every electricity vendor who issues an invoice for a billing period to a consumer in respect of an eligible account shall clearly show on the invoice,

(a) a credit equal to the amount of the financial assistance provided to the consumer for the billing period; and

(b) the net amount of the invoice after the credit.

**Invoice issued by consumer, etc.**

(2) An invoice that is issued by a consumer, an agent of a consumer, a unit sub-meter provider or another person prescribed by the regulations must be in the form required by the regulations and contain or be accompanied by the information required by the regulations.

**Transitional**

(3) If, for technical or operational reasons, an electricity vendor or a person referred to in subsection (2) is unable to adapt its invoices to comply with this Act and the regulations by the time it issues its first invoice for electricity consumed in 2017 in respect of an eligible account,

(a) the electricity vendor or person shall adapt its invoices as soon as possible and, in any event, no later than July 1, 2017; and

(b) consumers continue to be entitled to receive the financial assistance to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

**Financial arrangements**
**Purposes**
**5.** (1) The purposes of this section are,

(a) to ensure that financial assistance under this Act and the regulations is provided to those persons entitled to receive it; and

(b) to authorize the making of financial arrangements to reimburse electricity vendors, and other persons prescribed by the regulations, for financial assistance provided under this Act and the regulations.

**Regulations**
(2) The Lieutenant Governor in Council may, for the purpose of this section, make regulations,

(a) authorizing the Minister of Energy to make payments to persons who are electricity vendors or persons prescribed by the regulations in respect of the amount of financial assistance to which consumers are entitled under this Act and prescribing methods for determining the amounts payable;

(b) requiring the IESO to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of financial assistance provided under this Act or the regulations and prescribing methods for determining the amounts payable;

(c) requiring a licensed distributor to make payments to other licensed distributors or licensed retailers in respect of financial assistance under this Act and prescribing methods for determining the amounts payable;

(d) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments in respect of financial assistance to consumers or other persons entitled to receive the financial assistance and prescribing the circumstances in which such payments are to be made and methods for determining the amounts payable;

(e) authorizing the Minister of Energy to make payments of financial assistance directly to consumers and prescribing the circumstances when such payments are to be made;

(f) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments to the Minister of Finance in respect of amounts received by them or in circumstances prescribed by the regulations and prescribing methods for determining the amounts payable;

(g) authorizing payments referred to in clause (a), (b), (c), (d) or (f) to be made by way of set-offs and credits and prescribing conditions entitling or requiring amounts to be set off or credited;

(h) governing the payments required under clause (a), (b), (c), (d) or (f), including methods for paying the amounts payable and when the payments must be made, and governing methods for determining amounts to be set off or credited, including the times within which amounts must or may be set off or credited;

(i) for the purposes of this Act and the regulations, requiring persons who are electricity vendors or persons prescribed by the regulations to provide information to the Minister of Energy, the Minister of Finance, the IESO, the Board or licensed distributors and prescribing the information to be provided and when it must be provided;

(j) governing the establishment and maintenance of variance accounts required for the purposes of this Act.

**Conflict with market rules and codes**

(3) In the event of a conflict, a regulation made under subsection (2) prevails over the market rules to the extent of the conflict and prevails over a code issued by the Board under section 70.1 of the *Ontario Energy Board Act, 1998* to the extent of the conflict.

**Provision of information**

(4) A person may do anything required by a regulation made under clause (2) (i) despite any agreement to the contrary and, if the person does so,

(a) the person is not liable for doing the thing in contravention of any agreement to the contrary; and

(b) doing the thing is deemed not to constitute a breach, termination, repudiation or frustration of any contract.

**Limitation periods for financial assistance, reimbursement**

**Financial assistance**

**6.** (1) Despite any past entitlement of a consumer to financial assistance under this Act, no financial assistance is payable to a consumer after a limitation period prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after a limitation period prescribed by the regulations in respect of the electricity vendor or other person, where such reimbursement is based on a consumer's past entitlement not yet paid or reimbursed under this Act, other than in such circumstances as may be prescribed by the regulations.

**Definition**

**7.** In sections 8, 9 and 10,

"Minister" means the Minister of Finance or such other member of the Executive Council to whom the administration of those sections is assigned under the *Executive Council Act*.

**Records**

**8.** (1) Every electricity vendor and every person prescribed by the regulations shall keep at a location in Ontario such records as are necessary to determine and verify compliance with this Act and the regulations and any records required by the regulations to be kept.

**Electronic records**

(2) If a person keeps records in an electronic form, the person shall ensure that, from the time the records are first made and for as long as they are required to be retained,

(a) they remain complete and unaltered, apart from any changes or additions made in the normal course of communication, storage or display; and

(b) they are capable of being printed and of being produced in electronically readable format for inspection, examination or audit.

**Retention of records**

(3) Records required to be kept under subsection (1) shall not be destroyed unless authorization has been given in writing by the Minister.

**Offence**

(4) Every person who fails to keep records in accordance with this section is guilty of an offence and, on conviction, is liable to a fine of not less than $50 and not more than $5,000.

**Inspections and inquiries**

**9.** (1) The Minister may appoint one or more inspectors who are authorized to exercise any of the powers and perform any of the duties of a person authorized by the Minister under subsection 31 (1) of the *Retail Sales Tax Act* for any purpose related to the administration and enforcement of this Act.

**Same**

(2) Subsections 31 (1), (2), (2.1) and (2.2) of the *Retail Sales Tax Act* apply, with necessary modifications, with respect to the administration and enforcement of this Act.

**Admission of evidence**

(3) The Minister, or a person authorized by the Minister, may, for any purpose related to the administration of this Act or the regulations, reproduce from original data stored electronically any information previously submitted as required under this Act or the regulations in any form by any person, and the electronically reproduced document shall be admissible in evidence and shall have the same probative force as the original document would have had if it had been proved in the ordinary way.

**Inquiry**

(4) The Minister may, for any purpose related to the administration of this Act or the regulations, authorize any person, whether or not the person is an employee in the Ministry of the Minister, to make such inquiry as the Minister considers necessary with reference to anything relating to the administration of this Act or the regulations.

**Copies**

(5) If a book, record or other document is examined or produced under this section, the person by whom it is examined or to whom it is produced or any officer of the Ministry may make, or cause to be made, one or more copies of it, and a document purporting to be certified by the person to be a copy made pursuant to this section is admissible in evidence and has the same probative force as the original document would have if proved in the ordinary way.

**Compliance**

(6) No person shall hinder or molest or interfere with any person doing anything that the person is authorized by this section to do or prevent or attempt to prevent any person doing any such thing.

**Same**

(7) Despite any other law to the contrary, every person shall, unless the person is unable to do so, do everything he, she or it is required by this section to do.

**Administration of oaths**

(8) Declarations or affidavits in connection with statements of information submitted pursuant to this section may be taken before any person having authority to administer an oath or before any person specially authorized for that purpose by the Lieutenant Governor in Council, but any person so specially authorized shall not charge any fee for doing so.

**Application of Public Inquiries Act, 2009**

(9) Section 33 of the *Public Inquiries Act, 2009* applies to an inquiry under subsection (4).

**Recovery of overpayments**

**Definitions**

**10.** (1) In this section,

"inspector" means an inspector referred to in section 9; ("inspecteur")

"overpayment" means an amount received by a person in excess of any reimbursement to which the person is entitled under this Act and the regulations. ("trop-perçu")

**Notice of overpayment**

(2) If it appears to an inspector that a person has received an overpayment, the Minister may send a written notice to the person advising the person of the following:

1. That the person has received an overpayment.

2. The amount of the overpayment and how it was calculated.

3. The required steps to be taken by the person with respect to the overpayment.

4. The date, not more than six months after the date of the notice, by which these steps must be completed.

5. That the Minister has the authority to assess the person for the amount of the overpayment, plus interest, if the person fails to complete the required steps by the specified date.

**Calculation of amount of overpayment**

(3) For the purposes of this section, an inspector shall calculate an overpayment or the outstanding balance of an overpayment in the manner and form and using such procedures as the Minister considers adequate and expedient.

**Assessment**

(4) If a person fails to complete the steps required in a notice under subsection (2) within the time specified in the notice, and any additional time requested by the person and permitted by the Minister, the Minister may assess or reassess the amount of the overpayment, or the outstanding balance of the overpayment, based on the inspector's calculation described in subsection (3).

**Penalty**

(5) If the Minister makes an assessment or reassessment under subsection (4) and is satisfied that the person's non-compliance with the required steps in the notice was attributable to neglect, carelessness, wilful default or fraud, the Minister may assess a penalty against the person equal to the outstanding balance of the overpayment when the penalty is assessed.

**Time limit**

(6) The Minister shall not assess or reassess under subsection (4) more than 48 months after the end of the month in which the person received the overpayment.

**Exception, where misrepresentation, etc.**

(7) Subsection (6) does not apply if the Minister establishes that the person has made a misrepresentation that is attributable to neglect, carelessness or wilful default or has committed any fraud in supplying information under this Act or the regulations or in omitting to disclose information.

**Deemed debt retirement charge**

(8) An amount assessed or reassessed by the Minister under this section is deemed for the purposes of the administration and enforcement of this Act to be a debt retirement charge, as defined in subsection 85 (1) of the *Electricity Act, 1998*, that has been collected, on the last day of the month in which the person received the overpayment, by the person as a collector appointed under subsection 85.3 (1) of the *Electricity Act, 1998* and, for those purposes,

(a) sections 85.11, 85.12, 85.14, 85.17 and 85.30 of that Act apply with necessary modifications;

(b) in the application of sections 85.11 and 85.14 of that Act and without limiting the generality of clause (a), references to the Financial Corporation are read as references to the Minister of Finance and references to the Minister of Finance are read as references to the Minister as defined in section 7 of this Act;

(c) the regulations made under that Act for the purposes of calculating the rate or rates of interest payable under section 85.11 of that Act and the manner of calculating the amount of interest apply with necessary modifications; and

(d) sections 23 and 36, subsections 37 (1), (1.1) and (2) and sections 37.1, 38 and 39 of the *Retail Sales Tax Act* apply with necessary modifications.

**Disposition of repaid amounts**

(9) If all or part of an overpayment is repaid to the Minister of Finance, the Minister of Energy shall make such financial arrangements and payments as may be necessary to ensure that any electricity vendor or other person entitled to all or part of the overpayment receives the appropriate amount.

**Confidentiality**

**11.** (1) Except as authorized by this section, no person employed by the Government of Ontario shall,

(a) knowingly communicate or knowingly allow to be communicated to any person any information obtained by or on behalf of the Minister of Energy or the Minister of Finance for the purposes of this Act; or

(b) knowingly allow any person to inspect or to have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Testimony**

(2) No person employed by the Government of Ontario shall be required, in connection with any legal proceedings,

(a) to give evidence relating to any information obtained by or on behalf of the Minister of Energy or Minister of Finance for the purposes of this Act; or

(b) to produce any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Exception**

(3) Subsections (1) and (2) do not apply in respect of,

(a) criminal proceedings under any Act of the Parliament of Canada;

(b) proceedings in respect of the trial of any person for an offence under an Act of the Legislature; or

(c) proceedings relating to the administration or enforcement of this Act or Part V.1 or VI of the *Electricity Act, 1998*.

**Communication**

(4) A person employed by the Government of Ontario may, in the course of duties in connection with the administration or enforcement of this Act,

(a) communicate or allow to be communicated to another person employed by the Government of Ontario in the administration or enforcement of any law or to an employee of the Board information obtained by or on behalf of either Minister for the purposes of this Act; and

(b) allow another person employed by the Government of Ontario in the administration or enforcement of any law or an employee of the Board to inspect or have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Reciprocal communication**

(5) A person who receives information or obtains access to any record or thing under subsection (4) has a duty to communicate or furnish to that Minister on a reciprocal basis any information, record or thing obtained by the person that affects the administration or enforcement of this Act.

**Use of information**

(6) Any information, record or thing communicated or furnished under this section may be used only for the administration or enforcement of this Act or an Act that is administered or enforced by the person receiving the information, record or thing.

**Same**

(7) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to,

(a) the person from whom the information, record or thing was obtained;

(b) any person by whom an amount is payable or has been paid under this Act; or

(c) the legal representative of a person mentioned in clause (a) or (b) or the agent of the person authorized in writing in that behalf.

**Information**

(8) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to any person employed by any government if,

(a) the information, record or thing obtained by that government for the purpose of any Act that imposes a tax or duty are communicated or furnished on a reciprocal basis to the Minister; and

(b) the information, record or thing will not be used for any purpose other than the administration or enforcement of a law that provides for the imposition of a tax or duty.

**Offence**

(9) Every person who contravenes any provision of this section is guilty of an offence and on conviction is liable to a fine of not more than $2,000.

**Offences**

**False statements, etc., and fraud**

**12.** (1) Every person who engages in any of the following acts or omissions is guilty of an offence:

1. Making, participating in, assenting to or acquiescing in the making of a false or deceptive statement in any document or answer required or submitted under this Act or the regulations.

2. Destroying, altering, mutilating, hiding or otherwise disposing of information or records of an electricity vendor or other person, for the purpose of evading compliance with this Act or the regulations.

3. Making, assenting to or acquiescing in the making of a false or deceptive entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

4. Omitting to make or assenting to or acquiescing in the omission of an entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

5. Wilfully evading or attempting to evade, in any manner, compliance with an obligation under this Act or the regulations.

**Penalty upon conviction**

(2) A person convicted of an offence under subsection (1) is liable to either or both of the following penalties in addition to any other penalty assessed under this Act:

1. A fine in an amount that is not less than $1,000 and not more than $10,000.

2. Imprisonment for a term of not more than two years.

**General offence**

(3) Every person who contravenes, by any act or omission, a requirement imposed under this Act is guilty of an offence and, on conviction, is liable, where no other penalty is provided for the offence, to a fine of not less than $50 and not more than $5,000.

**Limitation period**

**13.** A proceeding to prosecute an offence under this Act must be commenced within six years after the date on which the matter of the offence arose.

**Payment of fines**

**14.** Fines imposed on conviction of an offence under this Act are payable to the Minister of Finance on behalf of the Crown in right of Ontario.

**Regulations**

**15.** (1) The Lieutenant Governor in Council may make regulations,

(a) subject to the Minister of Energy's powers under subsection (2), prescribing anything required to be or referred to in this Act as being prescribed by the regulations;

(b) defining any word or expression used in this Act that is not already expressly defined in this Act;

(c) requiring any person to take such action or refrain from taking such action as may be necessary for the purposes of or in connection with any regulation made under this Act;

(d) governing information that must or may be provided to consumers concerning this Act and eligibility for financial assistance under it;

(e) governing the determination of the base invoice amount for a billing period with respect to a class of electricity vendors or a class of consumers;

(f) prescribing a method of paying or crediting to a consumer an amount of financial assistance to which the consumer is entitled under this Act and the circumstances in which the method applies;

(g) requiring a unit sub-meter provider to provide financial assistance in respect of the cost of electricity and prescribing,

(i) the circumstances in which the financial assistance is to be provided,

(ii) the person or class of persons entitled to receive the financial assistance,

(iii) the method of determining the amount of the financial assistance to be provided,

(iv) the manner for paying or otherwise providing the financial assistance;

(h) setting out one or more limitation periods for the purposes of subsection 6 (1) or (2), and governing the circumstances in which that subsection does not apply;

(i) respecting records to be kept by electricity vendors or by persons prescribed by the regulations;

(j) providing for matters which, in the opinion of the Lieutenant Governor in Council, are necessary or desirable to facilitate the implementation of this Act and the regulations.

**Regulations, Minister of Energy**

(2) The Minister of Energy may make regulations,

(a) prescribing information that must or may be included on invoices issued to consumers or that must or may accompany invoices issued to consumers or payments of financial assistance under this Act;

(b) governing the presentation of financial assistance under this Act on invoices issued to consumers;

(c) prescribing anything required to be or referred to in section 4 as being prescribed by the regulations.

**Retroactive regulations**

(3) A regulation made under this Act is, if it so provides, effective with reference to a period before it is filed.

**Subdelegation**

(4) The Lieutenant Governor in Council may, by regulation, delegate to the Minister of Energy the power to make some or all of the regulations under subsection (1).

***Ontario Clean Energy Benefit Act, 2010***

**16. (1) The *Ontario Clean Energy Benefit Act, 2010* is amended by adding the following section:**

**Cut-off dates for financial assistance, reimbursement**
**Financial assistance**

**6.1** (1) Despite any entitlement of consumers to financial assistance under this Act, no financial assistance is payable to a consumer after the date prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after the date prescribed by the regulations in respect of the electricity vendor or other person, other than in such circumstances as may be prescribed by the regulations.

**(2) Subsection 15 (1) of the Act is amended by adding the following clause:**

(i.1) setting out one or more dates for the purposes of subsection 6.1 (1) or (2), and governing the circumstances in which that subsection does not apply;

***Ontario Energy Board Act, 1998***

**17. (1) The definition of "enforceable provision" in section 3 of the *Ontario Energy Board Act, 1998* is amended by adding the following clause:**

(c.2) a provision of the *Ontario Rebate for Electricity Consumers Act, 2016* or the regulations made under it,

**(2) Section 70 of the Act is amended by adding the following subsection:**

**Deemed condition of licences, unit sub-meter provider, *Ontario Rebate for Electricity Consumers Act, 2016***

(2.3) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations made under it.

**Commencement**

**18. Subject to subsection (2), this Act comes into force on the later of January 1, 2017 and the day it receives Royal Assent.**

**Short title**

**19. The short title of this Act is the *Ontario Rebate for Electricity Consumers Act, 2016*.**

***Policy***

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

i) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

ii) Increase the total amount of rate protection available to R2 with low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

iii) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

iv) Expanding eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for:

i) the proposed *Ontario Rebate for Electricity Consumers Act, 2016* – **NTD-LSB – please confirm what title to use.]** and any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments and consequential legislative amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*, subject to the Legislature's approval of the Act, including the following elements:

   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way

in which electricity vendors providing the rebate are to be reimbursed;

v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments.
vii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date.

4. ENERGY notes the following amendments:

i) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

ii) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density rural electricity customers and provide for a periodic adjustment mechanism.

5. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

6. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan.

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

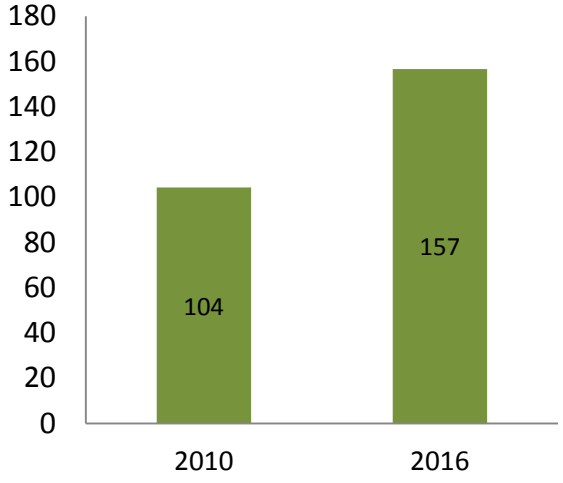
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

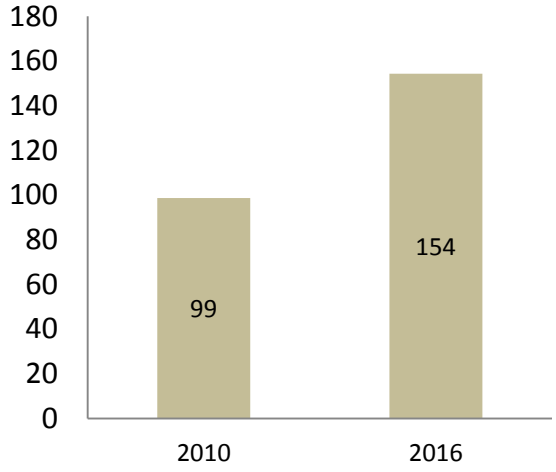
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

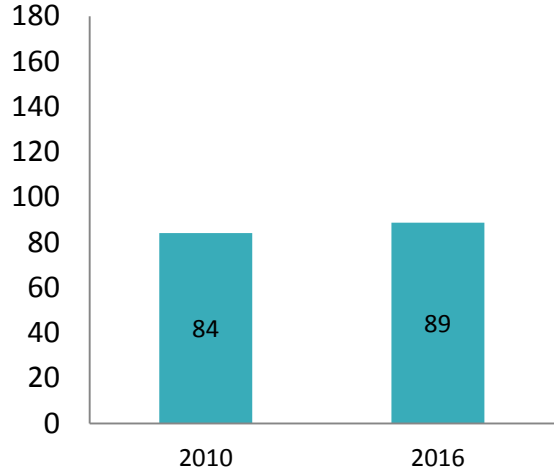
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



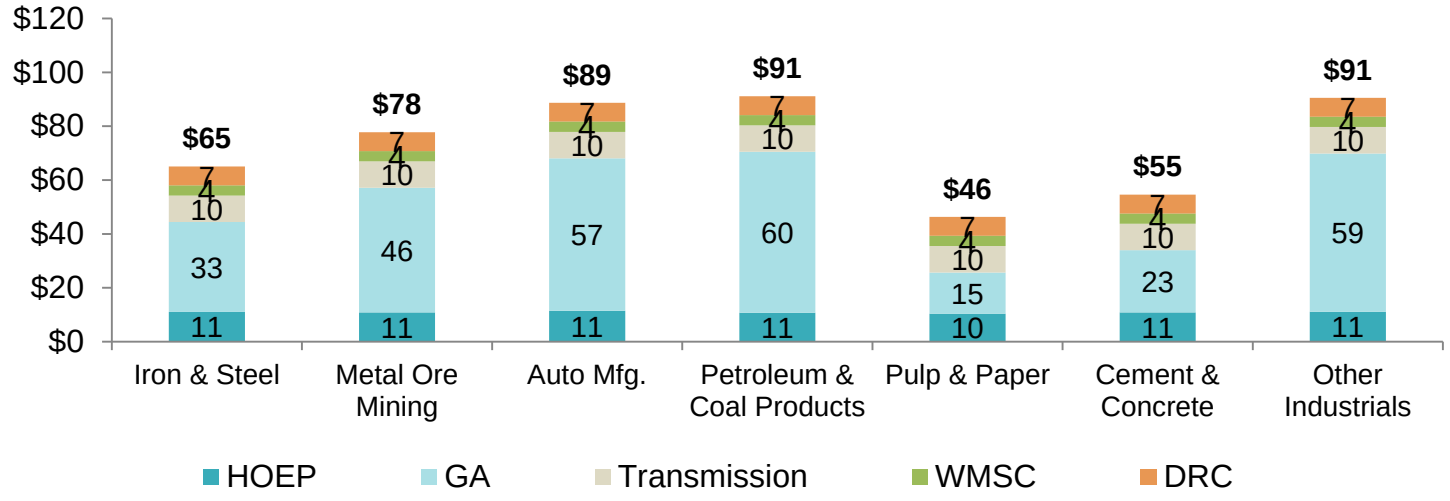
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2010, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Notes:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP. See Appendix for discussion on HST considerations.

# Rate Mitigation Proposal – Illustrative Impacts

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact* | Class A (Industrial) Impact* | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)*** | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

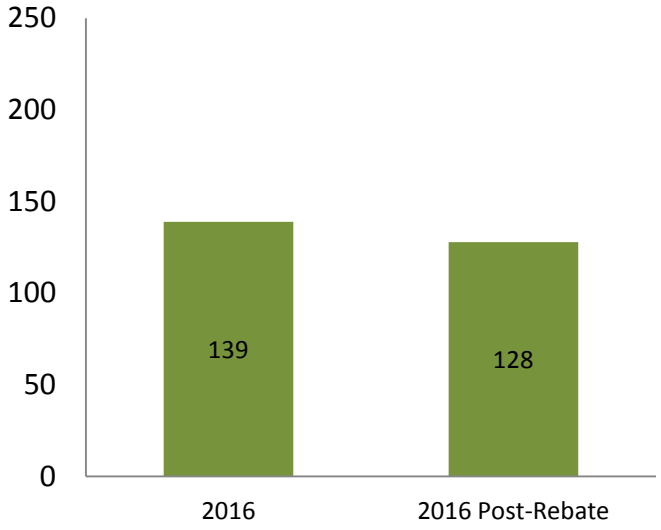
***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes.

**** Note:** Average Regulated Price Plan Impact represents a pre-tax value of the 8% rebate and does not include the impact of ICI expansion and RRRP update (total impact of $1.31/month based on 750 kWh/month).

*****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers). Impact shown is pre-tax and does not include the impact of ICI expansion and RRRP update (total impact of $1.74/month based on 1000 kWh/month).

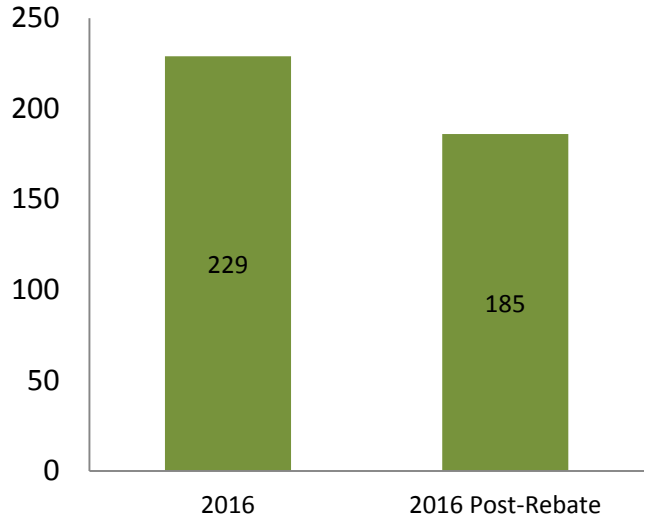
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750/kWh per month, 8% only**



The pre-tax impact of a 8% reduction.

**Rural (R2) Residential Bill**
**1,000/kWh per month, 8% and RRRP update**

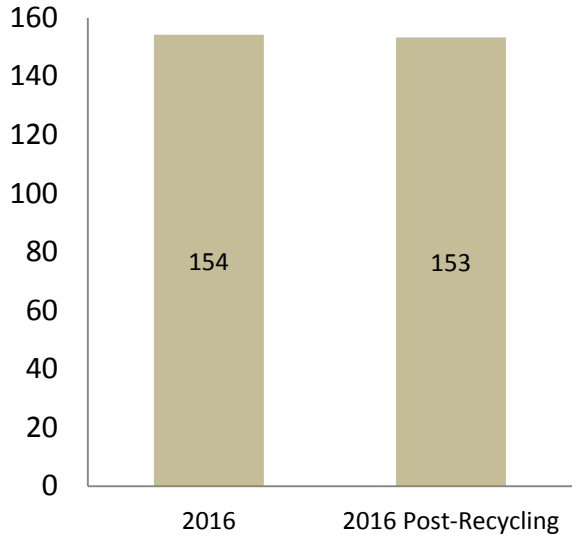


The pre-tax impact of the rate mitigation initiatives is a 19% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016. Commercial and industrial electricity prices reflect YTD June 2016.

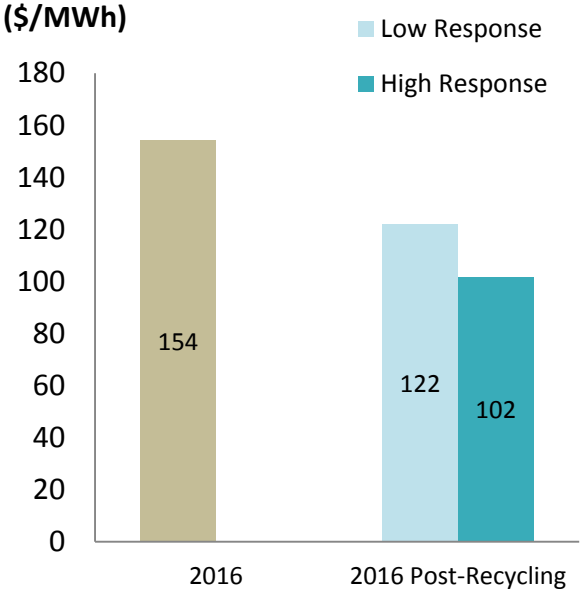
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



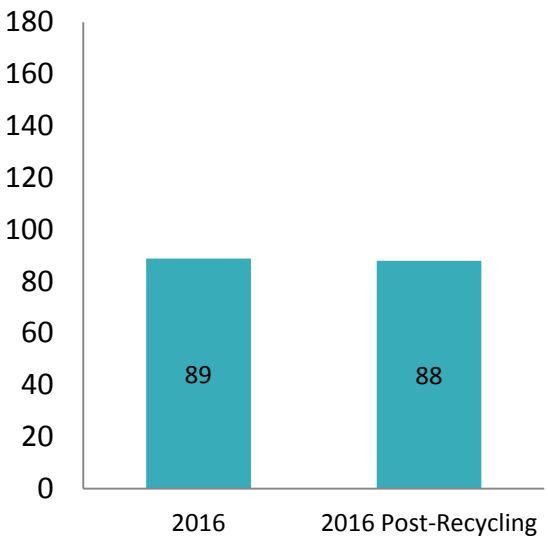
**Class B:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The net impact of the rate mitigation initiatives is a reduction of up to 21% and 34% for low and high response respectively.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Placeholder – Electricity Bill Mock-Up

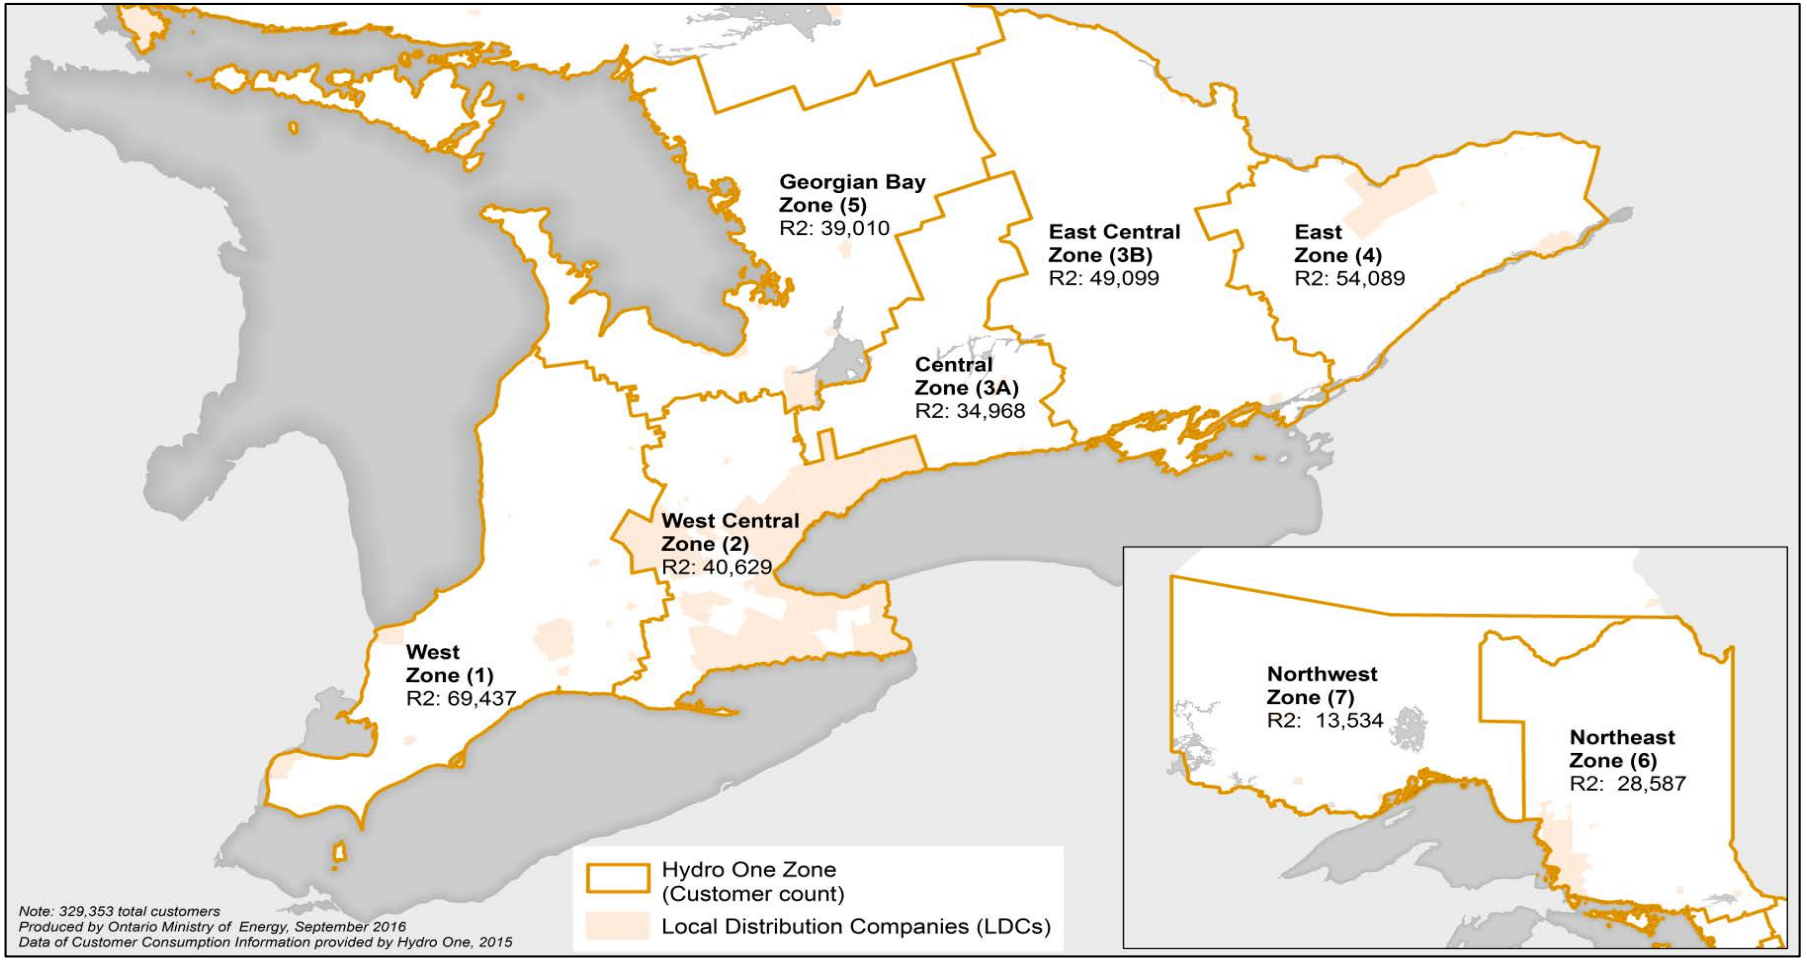
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility effective [X placeholder date].

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

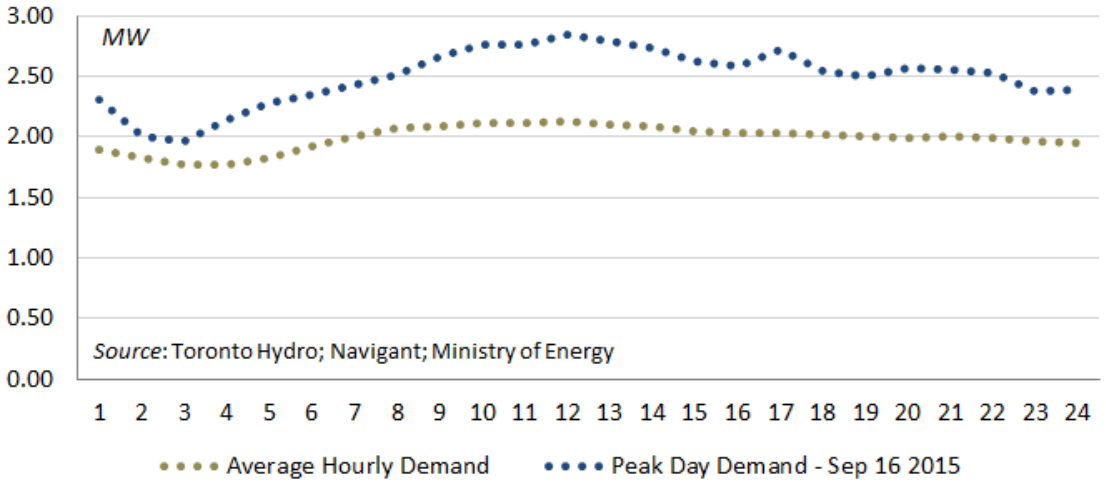
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

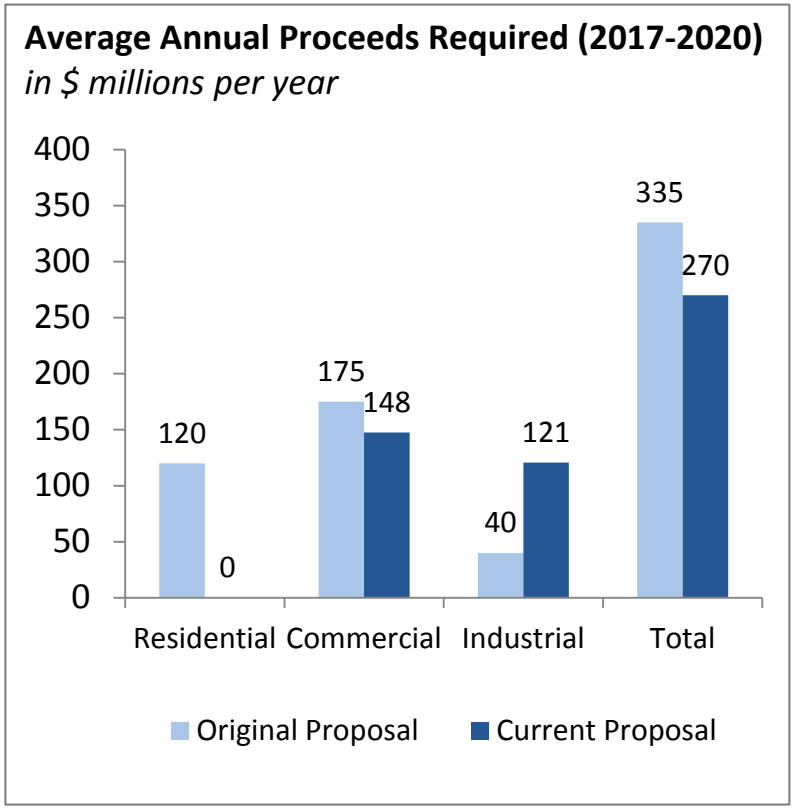
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $240 million relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $240 million in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after tax) (before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after tax) (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate: - $16<br>Updated RRRP: - $28 | $185 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $148 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $136 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $202 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $186 /MWh |

***Note:** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact | New Rate |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI: -$49/MWh NIERP: -$20/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh<br>ICI: -$51.30/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI, proceeds recycling).

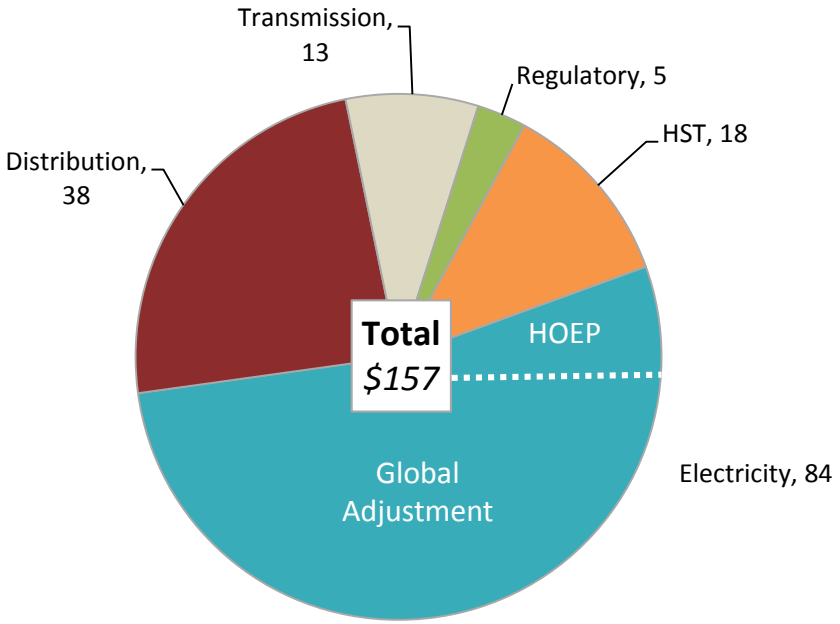
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

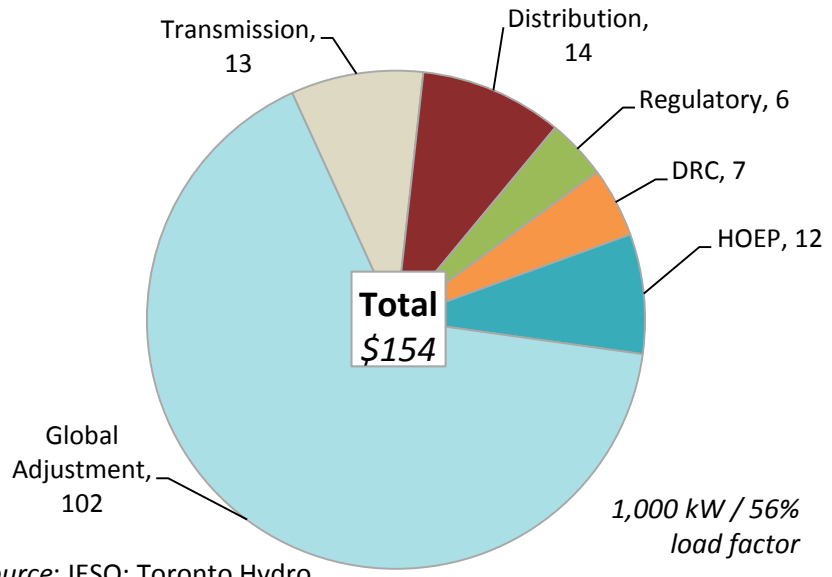
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

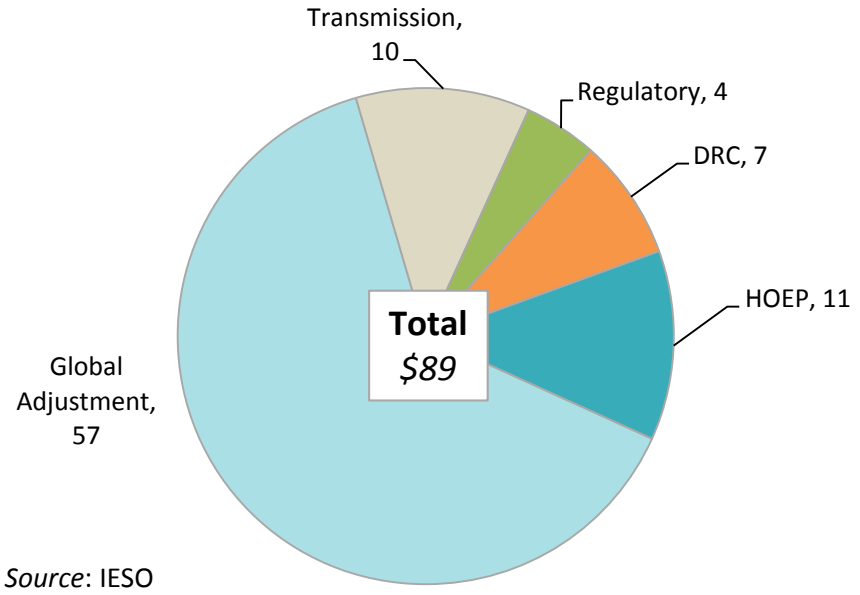
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Hi Boafoa,

Wondering if it's possible for the electricity item to be last on the agenda tomorrow. We have a Minister's briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

**Subject:** Major Projects this week

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week.  Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks

# Ontario Rebate for Electricity Consumers Act, 2016

## EXPLANATORY NOTE

The *Ontario Rebate for Electricity Consumers Act, 2016* authorizes financial assistance for certain Ontario electricity consumers in respect of electricity costs. Consumers receive the financial assistance by means of an 8 per cent reduction in the amount payable before tax under their electricity accounts for each billing period. The amount of financial assistance for a billing period is required to be shown on invoices issued to consumers for the billing period.

The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of various other regulations, including to set out other ways for consumers to receive financial assistance, to alter the default rules in the Act for how to calculate the financial assistance and to limit or alter who is entitled to financial assistance. The Act amends the *Ontario Clean Energy Benefit Act, 2010* to authorize the making of regulations under that Act in respect of cut-off dates for financial assistance under that Act.

The Act contains administrative and enforcement provisions, including requirements relating to record keeping by electricity vendors and authorization for inspections and inquiries with respect to amounts of financial assistance provided and reimbursements to electricity vendors. The *Ontario Energy Board Act, 1998* is amended so that provisions of the *Ontario Rebate for Electricity Consumers Act, 2016* and regulations made under it will be enforceable by the Ontario Energy Board.

# An Act in respect of the cost of electricity

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

## Definitions

**1.** (1) In this Act,

"billing period" means a period of time that is wholly or partly in the eligible period and for which an invoice in respect of an eligible account is issued; ("période de facturation")

"Board" means the Ontario Energy Board; ("Commission")

"consumer" means a person,

(a) to whom an invoice is issued in respect of an eligible account for a billing period, or

(b) who is prescribed by the regulations or who satisfies such conditions as may be prescribed by the regulations; ("consommateur")

"distribution system" has the same meaning as in section 3 of the *Ontario Energy Board Act, 1998*; ("réseau de distribution")

"electricity vendor" means the IESO, a licensed distributor, a licensed retailer or a person prescribed by the regulations; ("vendeur d'électricité")

"eligible account" means, in respect of a consumer, an account with an electricity vendor, or with a person prescribed by the regulations, for the provision of electricity in Ontario if,

(a) the consumer has a demand for electricity of 50 kilowatts or less, or such other amount of demand for electricity as may be prescribed,

(b) the consumer annually uses not more than 250,000 kilowatt hours of electricity, or such other amount of use of electricity as may be prescribed,

(c) the consumer,

(i) carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993*, and

(ii) holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act,

(d) the account relates to,

(i) a dwelling,

(ii) a property, within the meaning of the *Condominium Act, 1998*,

(iii) a residential complex, within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

(iv) a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*, or

(e) the consumer or the account satisfies such conditions as may be prescribed by the regulations; ("compte admissible")

"eligible period" means the period commencing January 1, 2017; ("période admissible")

"IESO" has the same meaning as in subsection 2 (1) of the *Electricity Act, 1998*; ("SIERE")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system; ("distributeur titulaire d'un permis")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("détaillant titulaire d'un permis")

"market rules" means the market rules made under section 32 of the *Electricity Act, 1998*; (règles du marché")

"regulations" means the regulations made under this Act; ("règlement")

"retail" has the same meaning as in section 56 of the *Ontario Energy Board Act, 1998*; ("vendre au détail")

"unit sub-metering" means activities that are unit sub-metering for the purposes of the *Ontario Energy Board Act, 1998*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" means a person who is licensed to engage in unit sub-metering by the Board under Part V of the *Ontario Energy Board Act, 1998*. ("fournisseur de compteurs divisionnaires d'unité")

**Eligible account**

(2) For the purposes of this Act, if a consumer would, but for this subsection, have an eligible account with a licensed retailer and with a licensed distributor, but only one of them issues an invoice to the consumer for a billing period for all amounts payable by the consumer to them for the billing period,

(a) the consumer is deemed to have an eligible account for the billing period only with whichever of them issues the invoice for the billing period; and

(b) the licensed distributor or licensed retailer who issues the invoice for the billing period is deemed to be imposing all charges and other amounts payable under the invoice for the purposes of determining the amount of financial assistance to which the consumer is entitled.

**Base invoice amount**

**2.** (1) For the purposes of this Act, the base invoice amount for a billing period in respect of an eligible account is determined in accordance with the regulations and, unless otherwise prescribed by the regulations, includes, if the invoice is issued by a licensed distributor or a licensed retailer, amounts in respect of,

(a) the commodity price of the electricity;

(b) the rates and charges set out in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998* that are not required under subsection (2) or the regulations to be excluded;

(c) any adjustment on the invoice required pursuant to section 25.33 of the *Electricity Act, 1998*;

(d) any debt retirement charge payable by the consumer under subsection 85 (4) of the *Electricity Act, 1998*; and

(e) anything else prescribed by the regulations.

**Exclusions**

(2) Except as otherwise prescribed by the regulations, the base invoice amount for a billing period must exclude,

(a) the balance of any amounts carried forward from previous invoices;

(b) all penalties and interest;

(c) any charges that do not relate to the consumption of electricity;

(d) the fixed monthly service charge payable by a generation facility, within the meaning of section 56 of the *Ontario Energy Board Act, 1998*, that is classified as “microFIT” in a rate order issued by the Board under subsection 78 (3) of that Act;

(e) charges labelled as “specific service charges” or “retail service charges” in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998*;

(f) the amount of any harmonized sales tax payable under Part IX of the *Excise Tax Act* (Canada); and

(g) any other amounts prescribed by the regulations.

**Financial assistance**

**3.** (1) A consumer who has an eligible account during a billing period is entitled to receive financial assistance in respect of the cost of electricity during the billing period in an amount equal to 8 per cent of the base invoice amount for the billing period in respect of the eligible account.

**Exception**

(2) Despite subsection (1), a consumer is not entitled to receive financial assistance under this Act,

(a) in respect of electricity consumed in generation station service;

(b) in such circumstances as may be prescribed by the regulations; or

(c) if the regulations prescribe that the consumer is not entitled to receive financial assistance.

**Payment of financial assistance**

(3) The financial assistance to which a consumer is entitled under this Act shall be paid,

(a) by crediting the consumer's eligible account; or

(b) in such other manner as may be prescribed by the regulations.

**Money appropriated by the Legislature**

(4) The money required for the purposes of this Act shall be paid out of the money appropriated for those purposes by the Legislature.

**No assignment of financial assistance**

(5) An assignment by a consumer to another person or entity, including a licensed retailer, of the consumer's entitlement to any payment, rebate or credit does not apply to any financial assistance to which the consumer is entitled under this Act, whether the assignment was made before or after this subsection comes into force.

**Same**

(6) Subsection (7) applies if,

(a) a consumer provides to another person electricity in respect of which the consumer is entitled to financial assistance under subsection (1); and

(b) an invoice for the electricity is issued to the person by the consumer, by an agent of the consumer or by a unit sub-meter provider providing unit sub-metering for the consumer.

**Requirement to pass on benefit**

(7) Despite subsections (1) and (5), the consumer and every unit sub-meter provider providing unit sub-metering for the consumer shall ensure that each person who is liable to pay an invoice referred to in clause (6) (b) receives a credit, determined in the manner prescribed by the regulations, in respect of the financial assistance to which the consumer is entitled with respect to electricity the consumer provides to the person.

**Invoices**

**4.** (1) Unless otherwise prescribed by the regulations, every electricity vendor who issues an invoice for a billing period to a consumer in respect of an eligible account shall clearly show on the invoice,

(a) a credit equal to the amount of the financial assistance provided to the consumer for the billing period; and

(b) the net amount of the invoice after the credit.

**Invoice issued by consumer, etc.**

(2) An invoice that is issued by a consumer, an agent of a consumer, a unit sub-meter provider or another person prescribed by the regulations must be in the form required by the regulations and contain or be accompanied by the information required by the regulations.

**Transitional**

(3) If, for technical or operational reasons, an electricity vendor or a person referred to in subsection (2) is unable to adapt its invoices to comply with this Act and the regulations by the time it issues its first invoice for electricity consumed in 2017 in respect of an eligible account,

(a) the electricity vendor or person shall adapt its invoices as soon as possible and, in any event, no later than July 1, 2017; and

(b) consumers continue to be entitled to receive the financial assistance to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

**Financial arrangements**
**Purposes**
**5.** (1) The purposes of this section are,

(a) to ensure that financial assistance under this Act and the regulations is provided to those persons entitled to receive it; and

(b) to authorize the making of financial arrangements to reimburse electricity vendors, and other persons prescribed by the regulations, for financial assistance provided under this Act and the regulations.

**Regulations**
(2) The Lieutenant Governor in Council may, for the purpose of this section, make regulations,

(a) authorizing the Minister of Energy to make payments to persons who are electricity vendors or persons prescribed by the regulations in respect of the amount of financial assistance to which consumers are entitled under this Act and prescribing methods for determining the amounts payable;

(b) requiring the IESO to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of financial assistance provided under this Act or the regulations and prescribing methods for determining the amounts payable;

(c) requiring a licensed distributor to make payments to other licensed distributors or licensed retailers in respect of financial assistance under this Act and prescribing methods for determining the amounts payable;

(d) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments in respect of financial assistance to consumers or other persons entitled to receive the financial assistance and prescribing the circumstances in which such payments are to be made and methods for determining the amounts payable;

(e) authorizing the Minister of Energy to make payments of financial assistance directly to consumers and prescribing the circumstances when such payments are to be made;

(f) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments to the Minister of Finance in respect of amounts received by them or in circumstances prescribed by the regulations and prescribing methods for determining the amounts payable;

(g) authorizing payments referred to in clause (a), (b), (c), (d) or (f) to be made by way of set-offs and credits and prescribing conditions entitling or requiring amounts to be set off or credited;

(h) governing the payments required under clause (a), (b), (c), (d) or (f), including methods for paying the amounts payable and when the payments must be made, and governing methods for determining amounts to be set off or credited, including the times within which amounts must or may be set off or credited;

(i) for the purposes of this Act and the regulations, requiring persons who are electricity vendors or persons prescribed by the regulations to provide information to the Minister of Energy, the Minister of Finance, the IESO, the Board or licensed distributors and prescribing the information to be provided and when it must be provided;

(j) governing the establishment and maintenance of variance accounts required for the purposes of this Act.

**Conflict with market rules and codes**

(3) In the event of a conflict, a regulation made under subsection (2) prevails over the market rules to the extent of the conflict and prevails over a code issued by the Board under section 70.1 of the *Ontario Energy Board Act, 1998* to the extent of the conflict.

**Provision of information**

(4) A person may do anything required by a regulation made under clause (2) (i) despite any agreement to the contrary and, if the person does so,

(a) the person is not liable for doing the thing in contravention of any agreement to the contrary; and

(b) doing the thing is deemed not to constitute a breach, termination, repudiation or frustration of any contract.

**Limitation periods for financial assistance, reimbursement**

**Financial assistance**

**6.** (1) Despite any past entitlement of a consumer to financial assistance under this Act, no financial assistance is payable to a consumer after a limitation period prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after a limitation period prescribed by the regulations in respect of the electricity vendor or other person, where such reimbursement is based on a consumer's past entitlement not yet paid or reimbursed under this Act, other than in such circumstances as may be prescribed by the regulations.

**Definition**

**7.** In sections 8, 9 and 10,

"Minister" means the Minister of Finance or such other member of the Executive Council to whom the administration of those sections is assigned under the *Executive Council Act*.

**Records**

**8.** (1) Every electricity vendor and every person prescribed by the regulations shall keep at a location in Ontario such records as are necessary to determine and verify compliance with this Act and the regulations and any records required by the regulations to be kept.

**Electronic records**

(2) If a person keeps records in an electronic form, the person shall ensure that, from the time the records are first made and for as long as they are required to be retained,

(a) they remain complete and unaltered, apart from any changes or additions made in the normal course of communication, storage or display; and

(b) they are capable of being printed and of being produced in electronically readable format for inspection, examination or audit.

**Retention of records**

(3) Records required to be kept under subsection (1) shall not be destroyed unless authorization has been given in writing by the Minister.

**Offence**

(4) Every person who fails to keep records in accordance with this section is guilty of an offence and, on conviction, is liable to a fine of not less than $50 and not more than $5,000.

**Inspections and inquiries**

**9.** (1) The Minister may appoint one or more inspectors who are authorized to exercise any of the powers and perform any of the duties of a person authorized by the Minister under subsection 31 (1) of the *Retail Sales Tax Act* for any purpose related to the administration and enforcement of this Act.

**Same**

(2) Subsections 31 (1), (2), (2.1) and (2.2) of the *Retail Sales Tax Act* apply, with necessary modifications, with respect to the administration and enforcement of this Act.

**Admission of evidence**

(3) The Minister, or a person authorized by the Minister, may, for any purpose related to the administration of this Act or the regulations, reproduce from original data stored electronically any information previously submitted as required under this Act or the regulations in any form by any person, and the electronically reproduced document shall be admissible in evidence and shall have the same probative force as the original document would have had if it had been proved in the ordinary way.

**Inquiry**

(4) The Minister may, for any purpose related to the administration of this Act or the regulations, authorize any person, whether or not the person is an employee in the Ministry of the Minister, to make such inquiry as the Minister considers necessary with reference to anything relating to the administration of this Act or the regulations.

**Copies**

(5) If a book, record or other document is examined or produced under this section, the person by whom it is examined or to whom it is produced or any officer of the Ministry may make, or cause to be made, one or more copies of it, and a document purporting to be certified by the person to be a copy made pursuant to this section is admissible in evidence and has the same probative force as the original document would have if proved in the ordinary way.

**Compliance**

(6) No person shall hinder or molest or interfere with any person doing anything that the person is authorized by this section to do or prevent or attempt to prevent any person doing any such thing.

**Same**

(7) Despite any other law to the contrary, every person shall, unless the person is unable to do so, do everything he, she or it is required by this section to do.

**Administration of oaths**

(8) Declarations or affidavits in connection with statements of information submitted pursuant to this section may be taken before any person having authority to administer an oath or before any person specially authorized for that purpose by the Lieutenant Governor in Council, but any person so specially authorized shall not charge any fee for doing so.

**Application of Public Inquiries Act, 2009**

(9) Section 33 of the *Public Inquiries Act, 2009* applies to an inquiry under subsection (4).

**Recovery of overpayments**

**Definitions**

**10.** (1) In this section,

"inspector" means an inspector referred to in section 9; ("inspecteur")

"overpayment" means an amount received by a person in excess of any reimbursement to which the person is entitled under this Act and the regulations. ("trop-perçu")

**Notice of overpayment**

(2) If it appears to an inspector that a person has received an overpayment, the Minister may send a written notice to the person advising the person of the following:

1. That the person has received an overpayment.

2. The amount of the overpayment and how it was calculated.

3. The required steps to be taken by the person with respect to the overpayment.

4. The date, not more than six months after the date of the notice, by which these steps must be completed.

5. That the Minister has the authority to assess the person for the amount of the overpayment, plus interest, if the person fails to complete the required steps by the specified date.

**Calculation of amount of overpayment**

(3) For the purposes of this section, an inspector shall calculate an overpayment or the outstanding balance of an overpayment in the manner and form and using such procedures as the Minister considers adequate and expedient.

**Assessment**

(4) If a person fails to complete the steps required in a notice under subsection (2) within the time specified in the notice, and any additional time requested by the person and permitted by the Minister, the Minister may assess or reassess the amount of the overpayment, or the outstanding balance of the overpayment, based on the inspector's calculation described in subsection (3).

**Penalty**

(5) If the Minister makes an assessment or reassessment under subsection (4) and is satisfied that the person's non-compliance with the required steps in the notice was attributable to neglect, carelessness, wilful default or fraud, the Minister may assess a penalty against the person equal to the outstanding balance of the overpayment when the penalty is assessed.

**Time limit**

(6) The Minister shall not assess or reassess under subsection (4) more than 48 months after the end of the month in which the person received the overpayment.

**Exception, where misrepresentation, etc.**

(7) Subsection (6) does not apply if the Minister establishes that the person has made a misrepresentation that is attributable to neglect, carelessness or wilful default or has committed any fraud in supplying information under this Act or the regulations or in omitting to disclose information.

**Deemed debt retirement charge**

(8) An amount assessed or reassessed by the Minister under this section is deemed for the purposes of the administration and enforcement of this Act to be a debt retirement charge, as defined in subsection 85 (1) of the *Electricity Act, 1998*, that has been collected, on the last day of the month in which the person received the overpayment, by the person as a collector appointed under subsection 85.3 (1) of the *Electricity Act, 1998* and, for those purposes,

(a) sections 85.11, 85.12, 85.14, 85.17 and 85.30 of that Act apply with necessary modifications;

(b) in the application of sections 85.11 and 85.14 of that Act and without limiting the generality of clause (a), references to the Financial Corporation are read as references to the Minister of Finance and references to the Minister of Finance are read as references to the Minister as defined in section 7 of this Act;

(c) the regulations made under that Act for the purposes of calculating the rate or rates of interest payable under section 85.11 of that Act and the manner of calculating the amount of interest apply with necessary modifications; and

(d) sections 23 and 36, subsections 37 (1), (1.1) and (2) and sections 37.1, 38 and 39 of the *Retail Sales Tax Act* apply with necessary modifications.

**Disposition of repaid amounts**

(9) If all or part of an overpayment is repaid to the Minister of Finance, the Minister of Energy shall make such financial arrangements and payments as may be necessary to ensure that any electricity vendor or other person entitled to all or part of the overpayment receives the appropriate amount.

**Confidentiality**

**11.** (1) Except as authorized by this section, no person employed by the Government of Ontario shall,

(a) knowingly communicate or knowingly allow to be communicated to any person any information obtained by or on behalf of the Minister of Energy or the Minister of Finance for the purposes of this Act; or

(b) knowingly allow any person to inspect or to have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Testimony**

(2) No person employed by the Government of Ontario shall be required, in connection with any legal proceedings,

(a) to give evidence relating to any information obtained by or on behalf of the Minister of Energy or Minister of Finance for the purposes of this Act; or

(b) to produce any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Exception**

(3) Subsections (1) and (2) do not apply in respect of,

(a) criminal proceedings under any Act of the Parliament of Canada;

(b) proceedings in respect of the trial of any person for an offence under an Act of the Legislature; or

(c) proceedings relating to the administration or enforcement of this Act or Part V.1 or VI of the *Electricity Act, 1998*.

**Communication**

(4) A person employed by the Government of Ontario may, in the course of duties in connection with the administration or enforcement of this Act,

(a) communicate or allow to be communicated to another person employed by the Government of Ontario in the administration or enforcement of any law or to an employee of the Board information obtained by or on behalf of either Minister for the purposes of this Act; and

(b) allow another person employed by the Government of Ontario in the administration or enforcement of any law or an employee of the Board to inspect or have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Reciprocal communication**

(5) A person who receives information or obtains access to any record or thing under subsection (4) has a duty to communicate or furnish to that Minister on a reciprocal basis any information, record or thing obtained by the person that affects the administration or enforcement of this Act.

**Use of information**

(6) Any information, record or thing communicated or furnished under this section may be used only for the administration or enforcement of this Act or an Act that is administered or enforced by the person receiving the information, record or thing.

**Same**

(7) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to,

(a) the person from whom the information, record or thing was obtained;

(b) any person by whom an amount is payable or has been paid under this Act; or

(c) the legal representative of a person mentioned in clause (a) or (b) or the agent of the person authorized in writing in that behalf.

**Information**

(8) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to any person employed by any government if,

(a) the information, record or thing obtained by that government for the purpose of any Act that imposes a tax or duty are communicated or furnished on a reciprocal basis to the Minister; and

(b) the information, record or thing will not be used for any purpose other than the administration or enforcement of a law that provides for the imposition of a tax or duty.

**Offence**

(9) Every person who contravenes any provision of this section is guilty of an offence and on conviction is liable to a fine of not more than $2,000.

**Offences**

**False statements, etc., and fraud**

**12.** (1) Every person who engages in any of the following acts or omissions is guilty of an offence:

1. Making, participating in, assenting to or acquiescing in the making of a false or deceptive statement in any document or answer required or submitted under this Act or the regulations.

2. Destroying, altering, mutilating, hiding or otherwise disposing of information or records of an electricity vendor or other person, for the purpose of evading compliance with this Act or the regulations.

3. Making, assenting to or acquiescing in the making of a false or deceptive entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

4. Omitting to make or assenting to or acquiescing in the omission of an entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

5. Wilfully evading or attempting to evade, in any manner, compliance with an obligation under this Act or the regulations.

**Penalty upon conviction**

(2) A person convicted of an offence under subsection (1) is liable to either or both of the following penalties in addition to any other penalty assessed under this Act:

1. A fine in an amount that is not less than $1,000 and not more than $10,000.

2. Imprisonment for a term of not more than two years.

**General offence**

(3) Every person who contravenes, by any act or omission, a requirement imposed under this Act is guilty of an offence and, on conviction, is liable, where no other penalty is provided for the offence, to a fine of not less than $50 and not more than $5,000.

**Limitation period**

**13.** A proceeding to prosecute an offence under this Act must be commenced within six years after the date on which the matter of the offence arose.

**Payment of fines**

**14.** Fines imposed on conviction of an offence under this Act are payable to the Minister of Finance on behalf of the Crown in right of Ontario.

**Regulations**

**15.** (1) The Lieutenant Governor in Council may make regulations,

(a) subject to the Minister of Energy's powers under subsection (2), prescribing anything required to be or referred to in this Act as being prescribed by the regulations;

(b) defining any word or expression used in this Act that is not already expressly defined in this Act;

(c) requiring any person to take such action or refrain from taking such action as may be necessary for the purposes of or in connection with any regulation made under this Act;

(d) governing information that must or may be provided to consumers concerning this Act and eligibility for financial assistance under it;

(e) governing the determination of the base invoice amount for a billing period with respect to a class of electricity vendors or a class of consumers;

(f) prescribing a method of paying or crediting to a consumer an amount of financial assistance to which the consumer is entitled under this Act and the circumstances in which the method applies;

(g) requiring a unit sub-meter provider to provide financial assistance in respect of the cost of electricity and prescribing,

(i) the circumstances in which the financial assistance is to be provided,

(ii) the person or class of persons entitled to receive the financial assistance,

(iii) the method of determining the amount of the financial assistance to be provided,

(iv) the manner for paying or otherwise providing the financial assistance;

(h) setting out one or more limitation periods for the purposes of subsection 6 (1) or (2), and governing the circumstances in which that subsection does not apply;

(i) respecting records to be kept by electricity vendors or by persons prescribed by the regulations;

(j) providing for matters which, in the opinion of the Lieutenant Governor in Council, are necessary or desirable to facilitate the implementation of this Act and the regulations.

**Regulations, Minister of Energy**

(2) The Minister of Energy may make regulations,

(a) prescribing information that must or may be included on invoices issued to consumers or that must or may accompany invoices issued to consumers or payments of financial assistance under this Act;

(b) governing the presentation of financial assistance under this Act on invoices issued to consumers;

(c) prescribing anything required to be or referred to in section 4 as being prescribed by the regulations.

**Retroactive regulations**

(3) A regulation made under this Act is, if it so provides, effective with reference to a period before it is filed.

**Subdelegation**

(4) The Lieutenant Governor in Council may, by regulation, delegate to the Minister of Energy the power to make some or all of the regulations under subsection (1).

***Ontario Clean Energy Benefit Act, 2010***

**16. (1) The *Ontario Clean Energy Benefit Act, 2010* is amended by adding the following section:**

**Cut-off dates for financial assistance, reimbursement**
**Financial assistance**

**6.1** (1) Despite any entitlement of consumers to financial assistance under this Act, no financial assistance is payable to a consumer after the date prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after the date prescribed by the regulations in respect of the electricity vendor or other person, other than in such circumstances as may be prescribed by the regulations.

**(2) Subsection 15 (1) of the Act is amended by adding the following clause:**

(i.1) setting out one or more dates for the purposes of subsection 6.1 (1) or (2), and governing the circumstances in which that subsection does not apply;

***Ontario Energy Board Act, 1998***

**17. (1) The definition of "enforceable provision" in section 3 of the *Ontario Energy Board Act, 1998* is amended by adding the following clause:**

(c.2) a provision of the *Ontario Rebate for Electricity Consumers Act, 2016* or the regulations made under it,

**(2) Section 70 of the Act is amended by adding the following subsection:**

**Deemed condition of licences, unit sub-meter provider, *Ontario Rebate for Electricity Consumers Act, 2016***

(2.3) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations made under it.

**Commencement**

**18. Subject to subsection (2), this Act comes into force on the later of January 1, 2017 and the day it receives Royal Assent.**

**Short title**

**19. The short title of this Act is the *Ontario Rebate for Electricity Consumers Act, 2016*.**

***Policy***

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

i) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

ii) Increase the total amount of rate protection available to R2 with low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

iii) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

iv) Expanding eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for:

i) the proposed *Ontario Rebate for Electricity Consumers Act, 2016* – **NTD-LSB – please confirm what title to use.]** and any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments and consequential legislative amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*, subject to the Legislature's approval of the Act, including the following elements:

   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way

in which electricity vendors providing the rebate are to be reimbursed;

v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments.
vii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date.

4. ENERGY notes the following amendments:

i) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

ii) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density rural electricity customers and provide for a periodic adjustment mechanism.

5. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

6. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan.

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

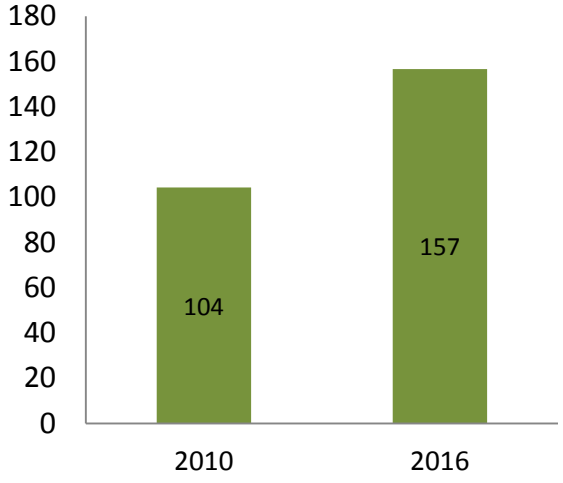
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

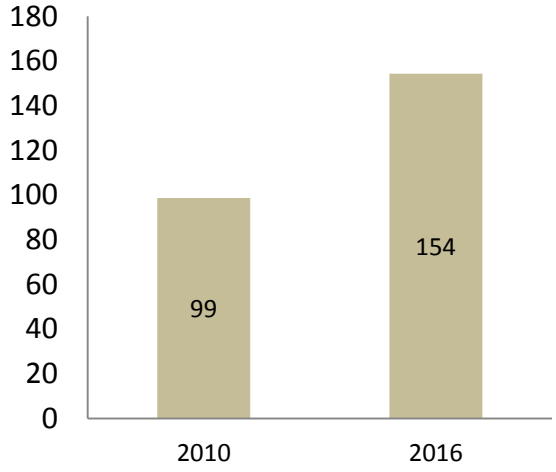
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

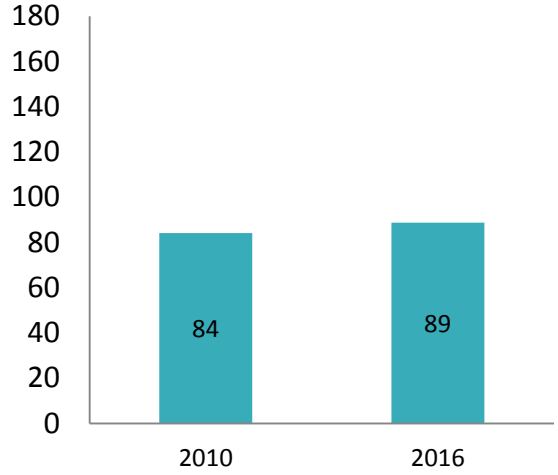
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



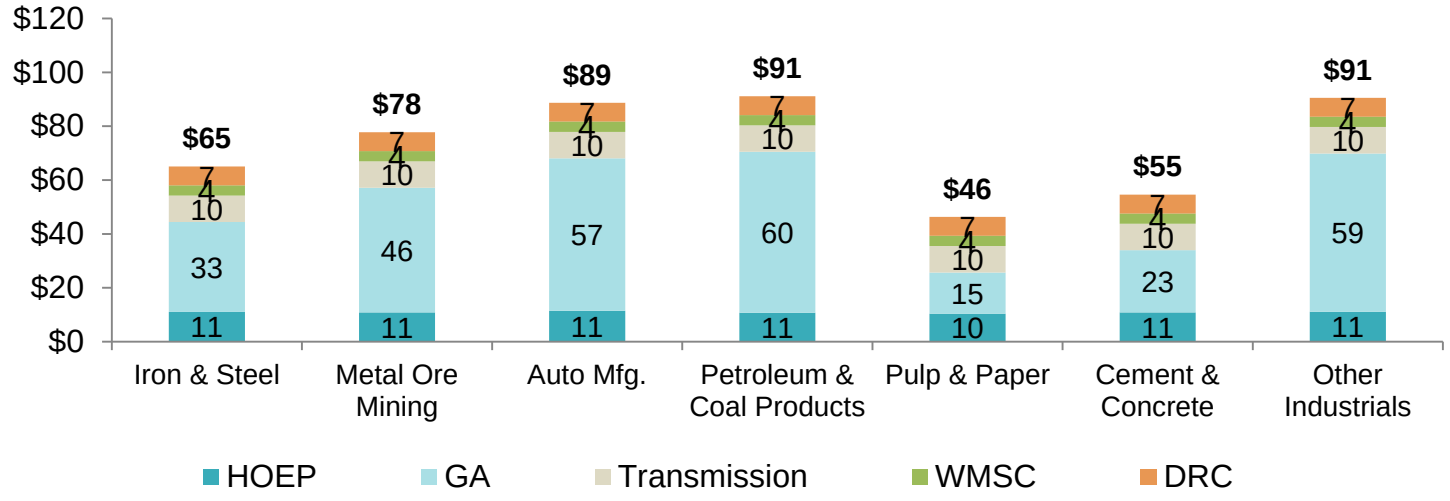
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2010, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Notes:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP. See Appendix for discussion on HST considerations.

# Rate Mitigation Proposal – Illustrative Impacts

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact* | Class A (Industrial) Impact* | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)*** | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

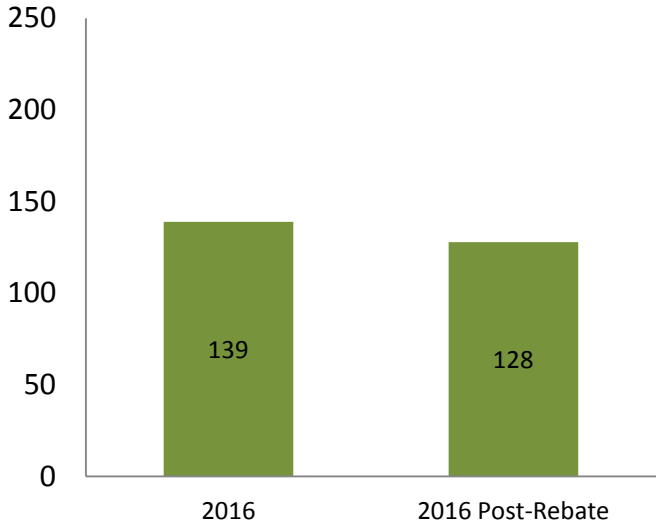
***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes.

**** Note:** Average Regulated Price Plan Impact represents a pre-tax value of the 8% rebate and does not include the impact of ICI expansion and RRRP update (total impact of $1.31/month based on 750 kWh/month).

*****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers). Impact shown is pre-tax and does not include the impact of ICI expansion and RRRP update (total impact of $1.74/month based on 1000 kWh/month).

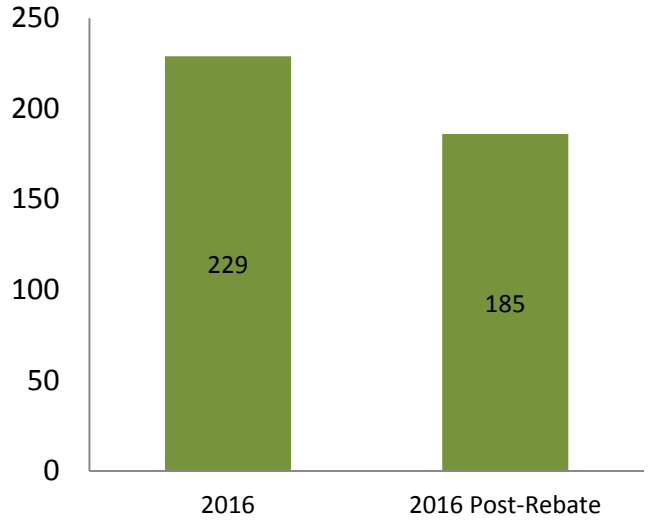
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750/kWh per month, 8% only**



The pre-tax impact of a 8% reduction.

**Rural (R2) Residential Bill**
**1,000/kWh per month, 8% and RRRP update**

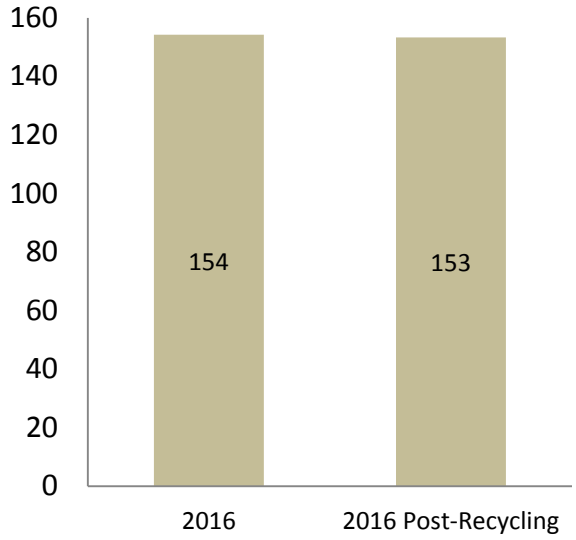


The pre-tax impact of the rate mitigation initiatives is a 19% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016. Commercial and industrial electricity prices reflect YTD June 2016.

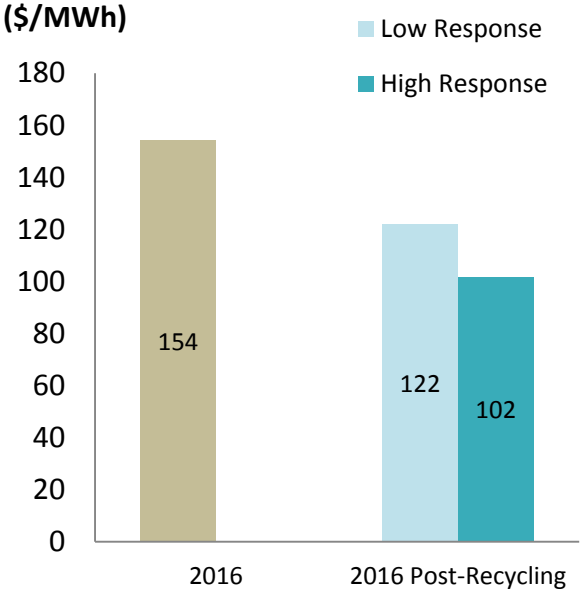
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



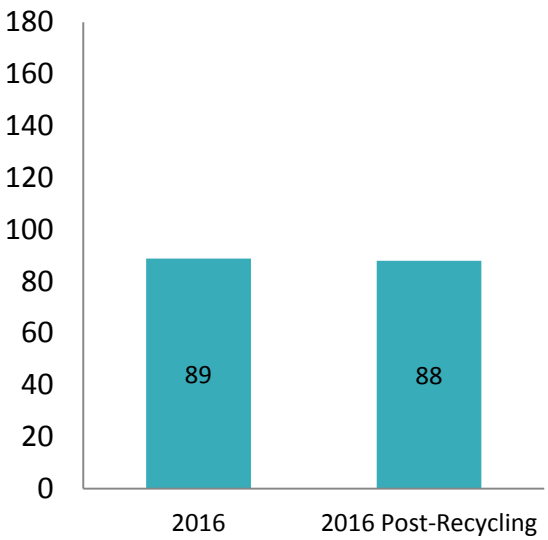
**Class B:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The net impact of the rate mitigation initiatives is a reduction of up to 21% and 34% for low and high response respectively.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Placeholder – Electricity Bill Mock-Up

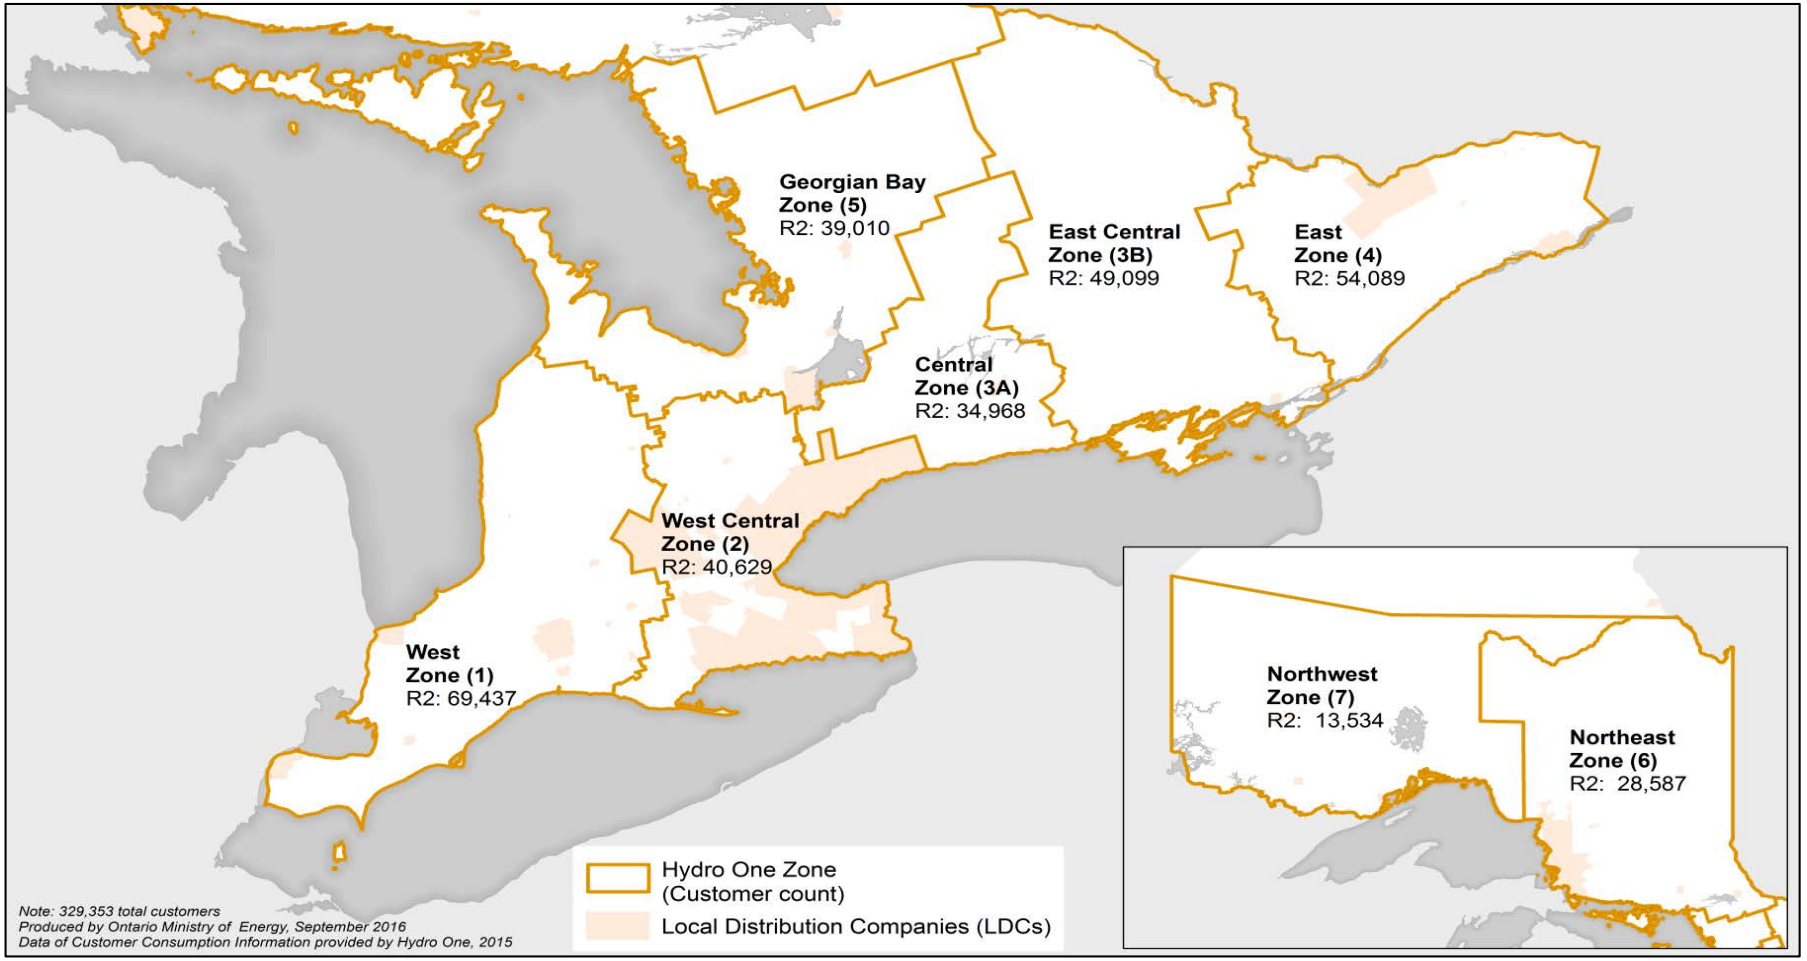
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility effective [X placeholder date].

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

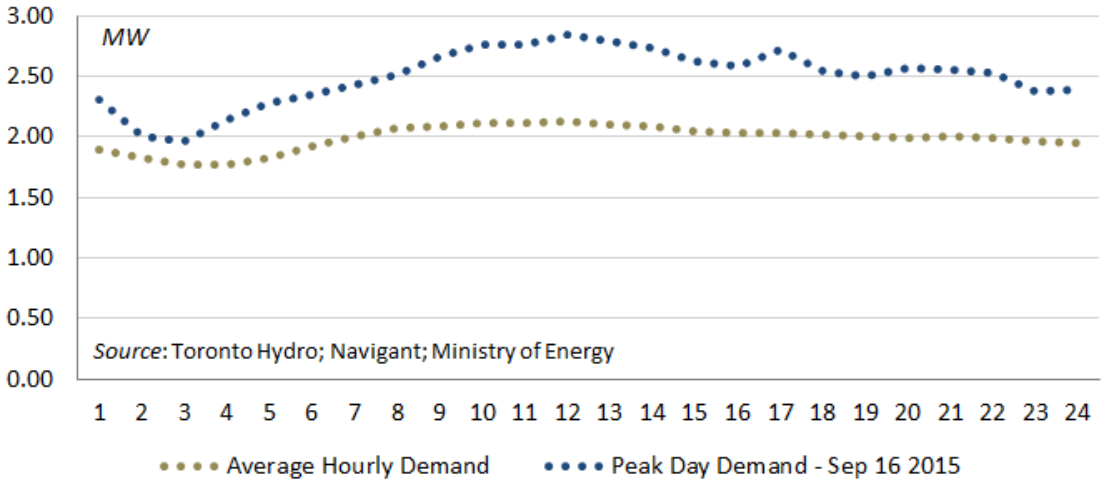
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

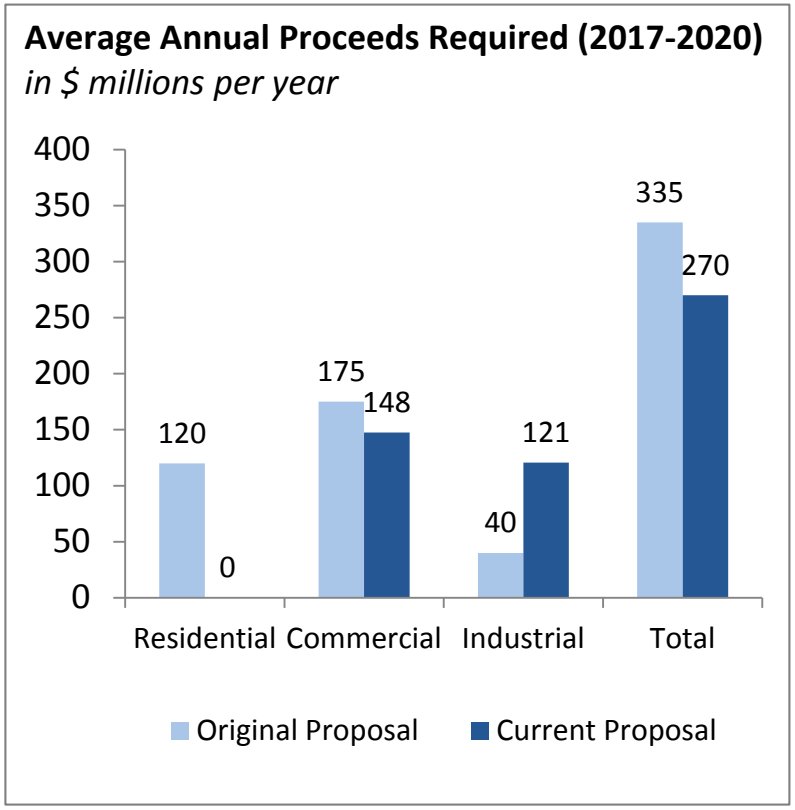
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $240 million relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $240 million in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Illustrative Bill Impacts

| | Current Bill (after tax) (before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after tax) (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate: - $16<br>Updated RRRP: - $28 | $185 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $148 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $136 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $202 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $186 /MWh |

***Note:** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact | New Rate |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI: -$49/MWh NIERP: -$20/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh<br>ICI: -$51.30/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI, proceeds recycling).

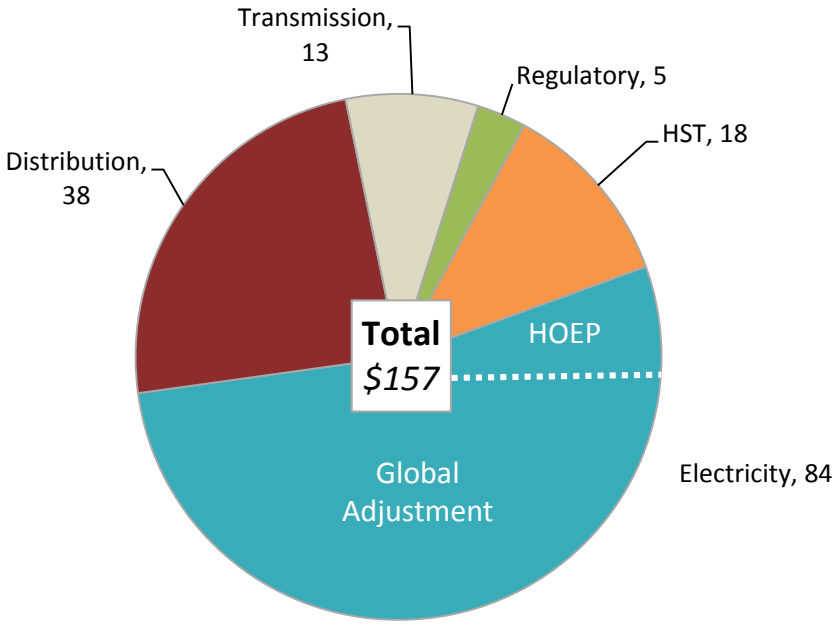
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

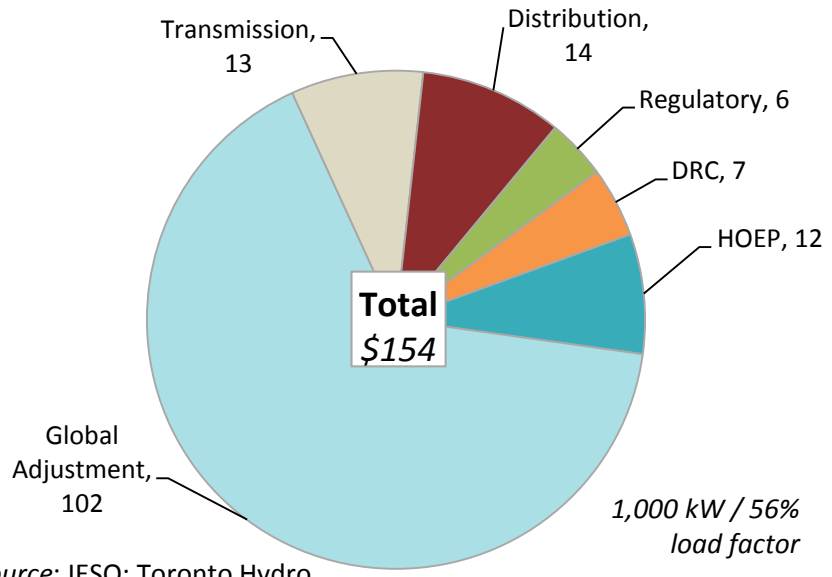
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

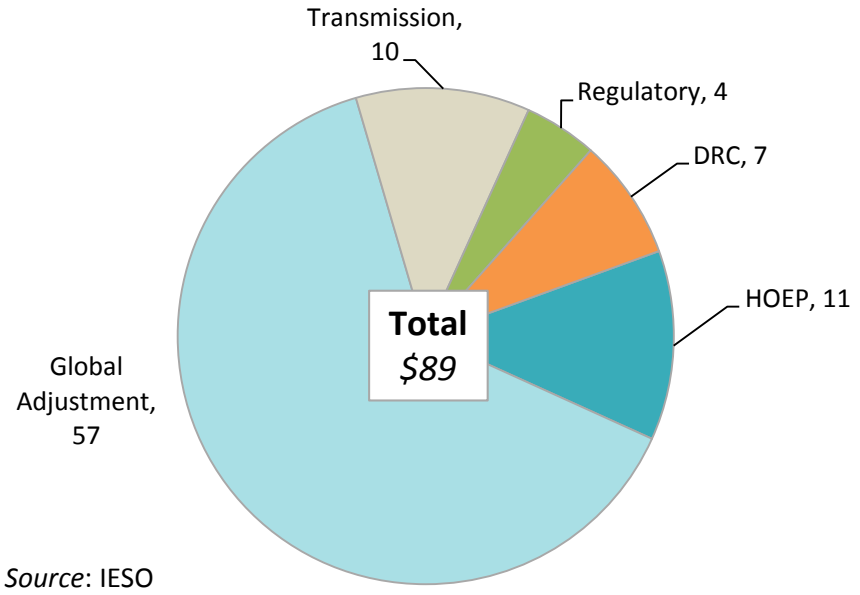
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Hi Boafoa,

Wondering if it's possible for the electricity item to be last on the agenda tomorrow. We have a Minister's briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week. Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

# Ontario Rebate for Electricity Consumers Act, 2016

## EXPLANATORY NOTE

The *Ontario Rebate for Electricity Consumers Act, 2016* authorizes financial assistance for certain Ontario electricity consumers in respect of electricity costs. Consumers receive the financial assistance by means of an 8 per cent reduction in the amount payable before tax under their electricity accounts for each billing period. The amount of financial assistance for a billing period is required to be shown on invoices issued to consumers for the billing period.

The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of various other regulations, including to set out other ways for consumers to receive financial assistance, to alter the default rules in the Act for how to calculate the financial assistance and to limit or alter who is entitled to financial assistance. The Act amends the *Ontario Clean Energy Benefit Act, 2010* to authorize the making of regulations under that Act in respect of cut-off dates for financial assistance under that Act.

The Act contains administrative and enforcement provisions, including requirements relating to record keeping by electricity vendors and authorization for inspections and inquiries with respect to amounts of financial assistance provided and reimbursements to electricity vendors. The *Ontario Energy Board Act, 1998* is amended so that provisions of the *Ontario Rebate for Electricity Consumers Act, 2016* and regulations made under it will be enforceable by the Ontario Energy Board.

# An Act in respect of the cost of electricity

| 18. | Ontario Energy Board Act, 1998 |
| 19. | Commencement |
| 20. | Short title |

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

## Definitions

**1.** (1) In this Act,

"billing period" means a period of time that is wholly or partly in the eligible period and for which an invoice in respect of an eligible account is issued; ("période de facturation")

"Board" means the Ontario Energy Board; ("Commission")

"consumer" means a person,

(a) to whom an invoice is issued in respect of an eligible account for a billing period, or

(b) who is prescribed by the regulations or who satisfies such conditions as may be prescribed by the regulations; ("consommateur")

"distribution system" has the same meaning as in section 3 of the *Ontario Energy Board Act, 1998*; ("réseau de distribution")

"electricity vendor" means the IESO, a licensed distributor, a licensed retailer or a person prescribed by the regulations; ("vendeur d'électricité")

"eligible account" means, in respect of a consumer, an account with an electricity vendor, or with a person prescribed by the regulations, for the provision of electricity in Ontario if,

(a) the consumer has a demand for electricity of 50 kilowatts or less, or such other amount of demand for electricity as may be prescribed,

(b) the consumer annually uses not more than 250,000 kilowatt hours of electricity, or such other amount of use of electricity as may be prescribed,

(c) the consumer,

(i) carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993*, and

(ii) holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act,

(d) the account relates to,

(i) a dwelling,

(ii) a property, within the meaning of the *Condominium Act, 1998*,

(iii) a residential complex, within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

(iv) a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*, or

(e) the consumer or the account satisfies such conditions as may be prescribed by the regulations; ("compte admissible")

"eligible period" means the period commencing January 1, 2017; ("période admissible")

"IESO" has the same meaning as in subsection 2 (1) of the *Electricity Act, 1998*; ("SIERE")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system; ("distributeur titulaire d'un permis")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("détaillant titulaire d'un permis")

"market rules" means the market rules made under section 32 of the *Electricity Act, 1998*; (règles du marché")

"regulations" means the regulations made under this Act; ("règlement")

"retail" has the same meaning as in section 56 of the *Ontario Energy Board Act, 1998*; ("vendre au détail")

"unit sub-metering" means activities that are unit sub-metering for the purposes of the *Ontario Energy Board Act, 1998*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" means a person who is licensed to engage in unit sub-metering by the Board under Part V of the *Ontario Energy Board Act, 1998*. ("fournisseur de compteurs divisionnaires d'unité")

**Eligible account**

(2) For the purposes of this Act, if a consumer would, but for this subsection, have an eligible account with a licensed retailer and with a licensed distributor, but only one of them issues an invoice to the consumer for a billing period for all amounts payable by the consumer to them for the billing period,

(a) the consumer is deemed to have an eligible account for the billing period only with whichever of them issues the invoice for the billing period; and

(b) the licensed distributor or licensed retailer who issues the invoice for the billing period is deemed to be imposing all charges and other amounts payable under the invoice for the purposes of determining the amount of financial assistance to which the consumer is entitled.

**Base invoice amount**

**2.** (1) For the purposes of this Act, the base invoice amount for a billing period in respect of an eligible account is determined in accordance with the regulations and, unless otherwise prescribed by the regulations, includes, if the invoice is issued by a licensed distributor or a licensed retailer, amounts in respect of,

(a) the commodity price of the electricity;

(b) the rates and charges set out in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998* that are not required under subsection (2) or the regulations to be excluded;

(c) any adjustment on the invoice required pursuant to section 25.33 of the *Electricity Act, 1998*;

(d) any debt retirement charge payable by the consumer under subsection 85 (4) of the *Electricity Act, 1998*; and

(e) anything else prescribed by the regulations.

**Exclusions**

(2) Except as otherwise prescribed by the regulations, the base invoice amount for a billing period must exclude,

(a) the balance of any amounts carried forward from previous invoices;

(b) all penalties and interest;

(c) any charges that do not relate to the consumption of electricity;

(d) the fixed monthly service charge payable by a generation facility, within the meaning of section 56 of the *Ontario Energy Board Act, 1998*, that is classified as “microFIT” in a rate order issued by the Board under subsection 78 (3) of that Act;

(e) charges labelled as “specific service charges” or “retail service charges” in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998*;

(f) the amount of any harmonized sales tax payable under Part IX of the *Excise Tax Act* (Canada); and

(g) any other amounts prescribed by the regulations.

**Financial assistance**

**3.** (1) A consumer who has an eligible account during a billing period is entitled to receive financial assistance in respect of the cost of electricity during the billing period in an amount equal to 8 per cent of the base invoice amount for the billing period in respect of the eligible account.

**Exception**

(2) Despite subsection (1), a consumer is not entitled to receive financial assistance under this Act,

(a) in respect of electricity consumed in generation station service;

(b) in such circumstances as may be prescribed by the regulations; or

(c) if the regulations prescribe that the consumer is not entitled to receive financial assistance.

**Payment of financial assistance**

(3) The financial assistance to which a consumer is entitled under this Act shall be paid,

(a) by crediting the consumer's eligible account; or

(b) in such other manner as may be prescribed by the regulations.

**Money appropriated by the Legislature**

(4) The money required for the purposes of this Act shall be paid out of the money appropriated for those purposes by the Legislature.

**No assignment of financial assistance**

(5) An assignment by a consumer to another person or entity, including a licensed retailer, of the consumer's entitlement to any payment, rebate or credit does not apply to any financial assistance to which the consumer is entitled under this Act, whether the assignment was made before or after this subsection comes into force.

**Same**

(6) Subsection (7) applies if,

(a) a consumer provides to another person electricity in respect of which the consumer is entitled to financial assistance under subsection (1); and

(b) an invoice for the electricity is issued to the person by the consumer, by an agent of the consumer or by a unit sub-meter provider providing unit sub-metering for the consumer.

**Requirement to pass on benefit**

(7) Despite subsections (1) and (5), the consumer and every unit sub-meter provider providing unit sub-metering for the consumer shall ensure that each person who is liable to pay an invoice referred to in clause (6) (b) receives a credit, determined in the manner prescribed by the regulations, in respect of the financial assistance to which the consumer is entitled with respect to electricity the consumer provides to the person.

**Invoices**

**4.** (1) Unless otherwise prescribed by the regulations, every electricity vendor who issues an invoice for a billing period to a consumer in respect of an eligible account shall clearly show on the invoice,

(a) a credit equal to the amount of the financial assistance provided to the consumer for the billing period; and

(b) the net amount of the invoice after the credit.

**Invoice issued by consumer, etc.**

(2) An invoice that is issued by a consumer, an agent of a consumer, a unit sub-meter provider or another person prescribed by the regulations must be in the form required by the regulations and contain or be accompanied by the information required by the regulations.

**Transitional**

(3) If, for technical or operational reasons, an electricity vendor or a person referred to in subsection (2) is unable to adapt its invoices to comply with this Act and the regulations by the time it issues its first invoice for electricity consumed in 2017 in respect of an eligible account,

(a) the electricity vendor or person shall adapt its invoices as soon as possible and, in any event, no later than July 1, 2017; and

(b) consumers continue to be entitled to receive the financial assistance to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

**Financial arrangements**
**Purposes**
**5.** (1) The purposes of this section are,

(a) to ensure that financial assistance under this Act and the regulations is provided to those persons entitled to receive it; and

(b) to authorize the making of financial arrangements to reimburse electricity vendors, and other persons prescribed by the regulations, for financial assistance provided under this Act and the regulations.

**Regulations**
(2) The Lieutenant Governor in Council may, for the purpose of this section, make regulations,

(a) authorizing the Minister of Energy to make payments to persons who are electricity vendors or persons prescribed by the regulations in respect of the amount of financial assistance to which consumers are entitled under this Act and prescribing methods for determining the amounts payable;

(b) requiring the IESO to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of financial assistance provided under this Act or the regulations and prescribing methods for determining the amounts payable;

(c) requiring a licensed distributor to make payments to other licensed distributors or licensed retailers in respect of financial assistance under this Act and prescribing methods for determining the amounts payable;

(d) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments in respect of financial assistance to consumers or other persons entitled to receive the financial assistance and prescribing the circumstances in which such payments are to be made and methods for determining the amounts payable;

(e) authorizing the Minister of Energy to make payments of financial assistance directly to consumers and prescribing the circumstances when such payments are to be made;

(f) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments to the Minister of Finance in respect of amounts received by them or in circumstances prescribed by the regulations and prescribing methods for determining the amounts payable;

(g) authorizing payments referred to in clause (a), (b), (c), (d) or (f) to be made by way of set-offs and credits and prescribing conditions entitling or requiring amounts to be set off or credited;

(h) governing the payments required under clause (a), (b), (c), (d) or (f), including methods for paying the amounts payable and when the payments must be made, and governing methods for determining amounts to be set off or credited, including the times within which amounts must or may be set off or credited;

(i) for the purposes of this Act and the regulations, requiring persons who are electricity vendors or persons prescribed by the regulations to provide information to the Minister of Energy, the Minister of Finance, the IESO, the Board or licensed distributors and prescribing the information to be provided and when it must be provided;

(j) governing the establishment and maintenance of variance accounts required for the purposes of this Act.

**Conflict with market rules and codes**

(3) In the event of a conflict, a regulation made under subsection (2) prevails over the market rules to the extent of the conflict and prevails over a code issued by the Board under section 70.1 of the *Ontario Energy Board Act, 1998* to the extent of the conflict.

**Provision of information**

(4) A person may do anything required by a regulation made under clause (2) (i) despite any agreement to the contrary and, if the person does so,

(a) the person is not liable for doing the thing in contravention of any agreement to the contrary; and

(b) doing the thing is deemed not to constitute a breach, termination, repudiation or frustration of any contract.

**Limitation periods for financial assistance, reimbursement**

**Financial assistance**

**6.** (1) Despite any past entitlement of a consumer to financial assistance under this Act, no financial assistance is payable to a consumer after a limitation period prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after a limitation period prescribed by the regulations in respect of the electricity vendor or other person, where such reimbursement is based on a consumer's past entitlement not yet paid or reimbursed under this Act, other than in such circumstances as may be prescribed by the regulations.

**Definition**

**7.** In sections 8, 9 and 10,

"Minister" means the Minister of Finance or such other member of the Executive Council to whom the administration of those sections is assigned under the *Executive Council Act*.

**Records**

**8.** (1) Every electricity vendor and every person prescribed by the regulations shall keep at a location in Ontario such records as are necessary to determine and verify compliance with this Act and the regulations and any records required by the regulations to be kept.

**Electronic records**

(2) If a person keeps records in an electronic form, the person shall ensure that, from the time the records are first made and for as long as they are required to be retained,

(a) they remain complete and unaltered, apart from any changes or additions made in the normal course of communication, storage or display; and

(b) they are capable of being printed and of being produced in electronically readable format for inspection, examination or audit.

**Retention of records**

(3) Records required to be kept under subsection (1) shall not be destroyed unless authorization has been given in writing by the Minister.

**Offence**

(4) Every person who fails to keep records in accordance with this section is guilty of an offence and, on conviction, is liable to a fine of not less than $50 and not more than $5,000.

**Inspections and inquiries**

**9.** (1) The Minister may appoint one or more inspectors who are authorized to exercise any of the powers and perform any of the duties of a person authorized by the Minister under subsection 31 (1) of the *Retail Sales Tax Act* for any purpose related to the administration and enforcement of this Act.

**Same**

(2) Subsections 31 (1), (2), (2.1) and (2.2) of the *Retail Sales Tax Act* apply, with necessary modifications, with respect to the administration and enforcement of this Act.

**Admission of evidence**

(3) The Minister, or a person authorized by the Minister, may, for any purpose related to the administration of this Act or the regulations, reproduce from original data stored electronically any information previously submitted as required under this Act or the regulations in any form by any person, and the electronically reproduced document shall be admissible in evidence and shall have the same probative force as the original document would have had if it had been proved in the ordinary way.

**Inquiry**

(4) The Minister may, for any purpose related to the administration of this Act or the regulations, authorize any person, whether or not the person is an employee in the Ministry of the Minister, to make such inquiry as the Minister considers necessary with reference to anything relating to the administration of this Act or the regulations.

**Copies**

(5) If a book, record or other document is examined or produced under this section, the person by whom it is examined or to whom it is produced or any officer of the Ministry may make, or cause to be made, one or more copies of it, and a document purporting to be certified by the person to be a copy made pursuant to this section is admissible in evidence and has the same probative force as the original document would have if proved in the ordinary way.

**Compliance**

(6) No person shall hinder or molest or interfere with any person doing anything that the person is authorized by this section to do or prevent or attempt to prevent any person doing any such thing.

**Same**

(7) Despite any other law to the contrary, every person shall, unless the person is unable to do so, do everything he, she or it is required by this section to do.

**Administration of oaths**

(8) Declarations or affidavits in connection with statements of information submitted pursuant to this section may be taken before any person having authority to administer an oath or before any person specially authorized for that purpose by the Lieutenant Governor in Council, but any person so specially authorized shall not charge any fee for doing so.

**Application of Public Inquiries Act, 2009**

(9) Section 33 of the *Public Inquiries Act, 2009* applies to an inquiry under subsection (4).

**Recovery of overpayments**

**Definitions**

**10.** (1) In this section,

"inspector" means an inspector referred to in section 9; ("inspecteur")

"overpayment" means an amount received by a person in excess of any reimbursement to which the person is entitled under this Act and the regulations. ("trop-perçu")

**Notice of overpayment**

(2) If it appears to an inspector that a person has received an overpayment, the Minister may send a written notice to the person advising the person of the following:

1. That the person has received an overpayment.

2. The amount of the overpayment and how it was calculated.

3. The required steps to be taken by the person with respect to the overpayment.

4. The date, not more than six months after the date of the notice, by which these steps must be completed.

5. That the Minister has the authority to assess the person for the amount of the overpayment, plus interest, if the person fails to complete the required steps by the specified date.

**Calculation of amount of overpayment**

(3) For the purposes of this section, an inspector shall calculate an overpayment or the outstanding balance of an overpayment in the manner and form and using such procedures as the Minister considers adequate and expedient.

**Assessment**

(4) If a person fails to complete the steps required in a notice under subsection (2) within the time specified in the notice, and any additional time requested by the person and permitted by the Minister, the Minister may assess or reassess the amount of the overpayment, or the outstanding balance of the overpayment, based on the inspector's calculation described in subsection (3).

**Penalty**

(5) If the Minister makes an assessment or reassessment under subsection (4) and is satisfied that the person's non-compliance with the required steps in the notice was attributable to neglect, carelessness, wilful default or fraud, the Minister may assess a penalty against the person equal to the outstanding balance of the overpayment when the penalty is assessed.

**Time limit**

(6) The Minister shall not assess or reassess under subsection (4) more than 48 months after the end of the month in which the person received the overpayment.

**Exception, where misrepresentation, etc.**

(7) Subsection (6) does not apply if the Minister establishes that the person has made a misrepresentation that is attributable to neglect, carelessness or wilful default or has committed any fraud in supplying information under this Act or the regulations or in omitting to disclose information.

**Deemed debt retirement charge**

(8) An amount assessed or reassessed by the Minister under this section is deemed for the purposes of the administration and enforcement of this Act to be a debt retirement charge, as defined in subsection 85 (1) of the *Electricity Act, 1998*, that has been collected, on the last day of the month in which the person received the overpayment, by the person as a collector appointed under subsection 85.3 (1) of the *Electricity Act, 1998* and, for those purposes,

(a) sections 85.11, 85.12, 85.14, 85.17 and 85.30 of that Act apply with necessary modifications;

(b) in the application of sections 85.11 and 85.14 of that Act and without limiting the generality of clause (a), references to the Financial Corporation are read as references to the Minister of Finance and references to the Minister of Finance are read as references to the Minister as defined in section 7 of this Act;

(c) the regulations made under that Act for the purposes of calculating the rate or rates of interest payable under section 85.11 of that Act and the manner of calculating the amount of interest apply with necessary modifications; and

(d) sections 23 and 36, subsections 37 (1), (1.1) and (2) and sections 37.1, 38 and 39 of the *Retail Sales Tax Act* apply with necessary modifications.

**Disposition of repaid amounts**

(9) If all or part of an overpayment is repaid to the Minister of Finance, the Minister of Energy shall make such financial arrangements and payments as may be necessary to ensure that any electricity vendor or other person entitled to all or part of the overpayment receives the appropriate amount.

**Confidentiality**

**11.** (1) Except as authorized by this section, no person employed by the Government of Ontario shall,

(a) knowingly communicate or knowingly allow to be communicated to any person any information obtained by or on behalf of the Minister of Energy or the Minister of Finance for the purposes of this Act; or

(b) knowingly allow any person to inspect or to have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Testimony**

(2) No person employed by the Government of Ontario shall be required, in connection with any legal proceedings,

(a) to give evidence relating to any information obtained by or on behalf of the Minister of Energy or Minister of Finance for the purposes of this Act; or

(b) to produce any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Exception**

(3) Subsections (1) and (2) do not apply in respect of,

(a) criminal proceedings under any Act of the Parliament of Canada;

(b) proceedings in respect of the trial of any person for an offence under an Act of the Legislature; or

(c) proceedings relating to the administration or enforcement of this Act or Part V.1 or VI of the *Electricity Act, 1998*.

**Communication**

(4) A person employed by the Government of Ontario may, in the course of duties in connection with the administration or enforcement of this Act,

(a) communicate or allow to be communicated to another person employed by the Government of Ontario in the administration or enforcement of any law or to an employee of the Board information obtained by or on behalf of either Minister for the purposes of this Act; and

(b) allow another person employed by the Government of Ontario in the administration or enforcement of any law or an employee of the Board to inspect or have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Reciprocal communication**

(5) A person who receives information or obtains access to any record or thing under subsection (4) has a duty to communicate or furnish to that Minister on a reciprocal basis any information, record or thing obtained by the person that affects the administration or enforcement of this Act.

**Use of information**

(6) Any information, record or thing communicated or furnished under this section may be used only for the administration or enforcement of this Act or an Act that is administered or enforced by the person receiving the information, record or thing.

**Same**

(7) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to,

(a) the person from whom the information, record or thing was obtained;

(b) any person by whom an amount is payable or has been paid under this Act; or

(c) the legal representative of a person mentioned in clause (a) or (b) or the agent of the person authorized in writing in that behalf.

**Information**

(8) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to any person employed by any government if,

(a) the information, record or thing obtained by that government for the purpose of any Act that imposes a tax or duty are communicated or furnished on a reciprocal basis to the Minister; and

(b) the information, record or thing will not be used for any purpose other than the administration or enforcement of a law that provides for the imposition of a tax or duty.

**Offence**

(9) Every person who contravenes any provision of this section is guilty of an offence and on conviction is liable to a fine of not more than $2,000.

**Offences**

**False statements, etc., and fraud**

**12.** (1) Every person who engages in any of the following acts or omissions is guilty of an offence:

1. Making, participating in, assenting to or acquiescing in the making of a false or deceptive statement in any document or answer required or submitted under this Act or the regulations.

2. Destroying, altering, mutilating, hiding or otherwise disposing of information or records of an electricity vendor or other person, for the purpose of evading compliance with this Act or the regulations.

3. Making, assenting to or acquiescing in the making of a false or deceptive entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

4. Omitting to make or assenting to or acquiescing in the omission of an entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

5. Wilfully evading or attempting to evade, in any manner, compliance with an obligation under this Act or the regulations.

**Penalty upon conviction**

(2) A person convicted of an offence under subsection (1) is liable to either or both of the following penalties in addition to any other penalty assessed under this Act:

1. A fine in an amount that is not less than $1,000 and not more than $10,000.

2. Imprisonment for a term of not more than two years.

**General offence**

(3) Every person who contravenes, by any act or omission, a requirement imposed under this Act is guilty of an offence and, on conviction, is liable, where no other penalty is provided for the offence, to a fine of not less than $50 and not more than $5,000.

**Limitation period**

**13.** A proceeding to prosecute an offence under this Act must be commenced within six years after the date on which the matter of the offence arose.

**Payment of fines**

**14.** Fines imposed on conviction of an offence under this Act are payable to the Minister of Finance on behalf of the Crown in right of Ontario.

**Regulations**

**15.** (1) The Lieutenant Governor in Council may make regulations,

(a) subject to the Minister of Energy's powers under subsection (2), prescribing anything required to be or referred to in this Act as being prescribed by the regulations;

(b) defining any word or expression used in this Act that is not already expressly defined in this Act;

(c) requiring any person to take such action or refrain from taking such action as may be necessary for the purposes of or in connection with any regulation made under this Act;

(d) governing information that must or may be provided to consumers concerning this Act and eligibility for financial assistance under it;

(e) governing the determination of the base invoice amount for a billing period with respect to a class of electricity vendors or a class of consumers;

(f) prescribing a method of paying or crediting to a consumer an amount of financial assistance to which the consumer is entitled under this Act and the circumstances in which the method applies;

(g) requiring a unit sub-meter provider to provide financial assistance in respect of the cost of electricity and prescribing,

(i) the circumstances in which the financial assistance is to be provided,

(ii) the person or class of persons entitled to receive the financial assistance,

(iii) the method of determining the amount of the financial assistance to be provided,

(iv) the manner for paying or otherwise providing the financial assistance;

(h) setting out one or more limitation periods for the purposes of subsection 6 (1) or (2), and governing the circumstances in which that subsection does not apply;

(i) respecting records to be kept by electricity vendors or by persons prescribed by the regulations;

(j) providing for matters which, in the opinion of the Lieutenant Governor in Council, are necessary or desirable to facilitate the implementation of this Act and the regulations.

**Regulations, Minister of Energy**

(2) The Minister of Energy may make regulations,

(a) prescribing information that must or may be included on invoices issued to consumers or that must or may accompany invoices issued to consumers or payments of financial assistance under this Act;

(b) governing the presentation of financial assistance under this Act on invoices issued to consumers;

(c) prescribing anything required to be or referred to in section 4 as being prescribed by the regulations.

**Retroactive regulations**

(3) A regulation made under this Act is, if it so provides, effective with reference to a period before it is filed.

**Subdelegation**

(4) The Lieutenant Governor in Council may, by regulation, delegate to the Minister of Energy the power to make some or all of the regulations under subsection (1).

***Ontario Clean Energy Benefit Act, 2010***

**16. (1) The *Ontario Clean Energy Benefit Act, 2010* is amended by adding the following section:**

**Cut-off dates for financial assistance, reimbursement**
**Financial assistance**

**6.1** (1) Despite any entitlement of consumers to financial assistance under this Act, no financial assistance is payable to a consumer after the date prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after the date prescribed by the regulations in respect of the electricity vendor or other person, other than in such circumstances as may be prescribed by the regulations.

**(2) Subsection 15 (1) of the Act is amended by adding the following clause:**

(i.1) setting out one or more dates for the purposes of subsection 6.1 (1) or (2), and governing the circumstances in which that subsection does not apply;

***Ontario Energy Board Act, 1998***

**17. (1) The definition of "enforceable provision" in section 3 of the *Ontario Energy Board Act, 1998* is amended by adding the following clause:**

(c.2) a provision of the *Ontario Rebate for Electricity Consumers Act, 2016* or the regulations made under it,

**(2) Section 70 of the Act is amended by adding the following subsection:**

**Deemed condition of licences, unit sub-meter provider, *Ontario Rebate for Electricity Consumers Act, 2016***

(2.3) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations made under it.

**Commencement**

**18. Subject to subsection (2), this Act comes into force on the later of January 1, 2017 and the day it receives Royal Assent.**

**Short title**

**19. The short title of this Act is the *Ontario Rebate for Electricity Consumers Act, 2016*.**

***Policy***

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

i) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

ii) Increase the total amount of rate protection available to R2 with low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

iii) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

iv) Expanding eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for:

i) the proposed *Ontario Rebate for Electricity Consumers Act, 2016* – **NTD-LSB – please confirm what title to use.]** and any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments and consequential legislative amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*, subject to the Legislature's approval of the Act, including the following elements:

   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way

in which electricity vendors providing the rebate are to be reimbursed;

v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments.
vii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date.

4. ENERGY notes the following amendments:

i) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

ii) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density rural electricity customers and provide for a periodic adjustment mechanism.

5. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

6. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan.

Cabinet approved version [name] of this draft legislation for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

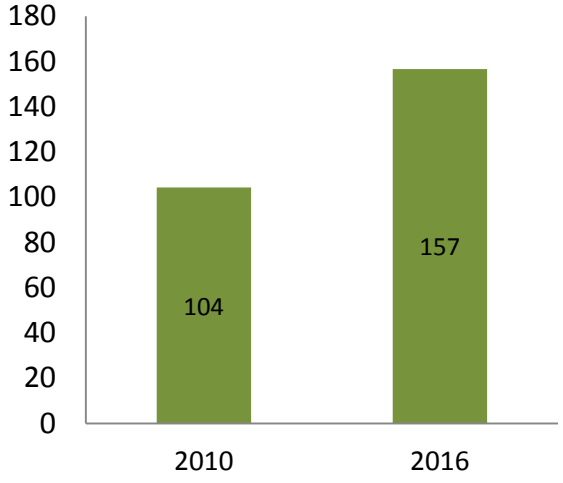
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

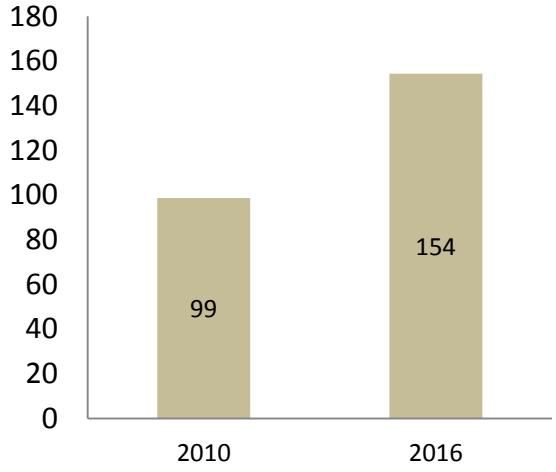
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

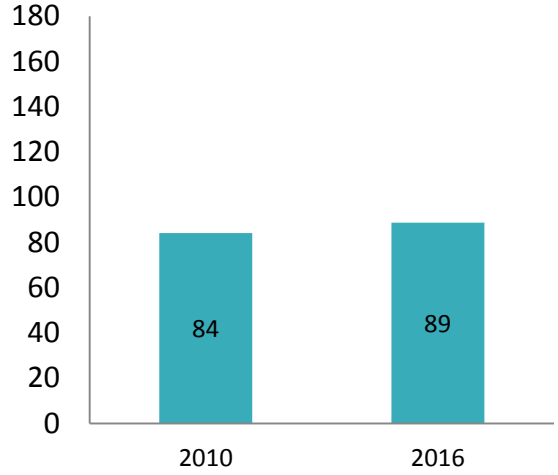
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



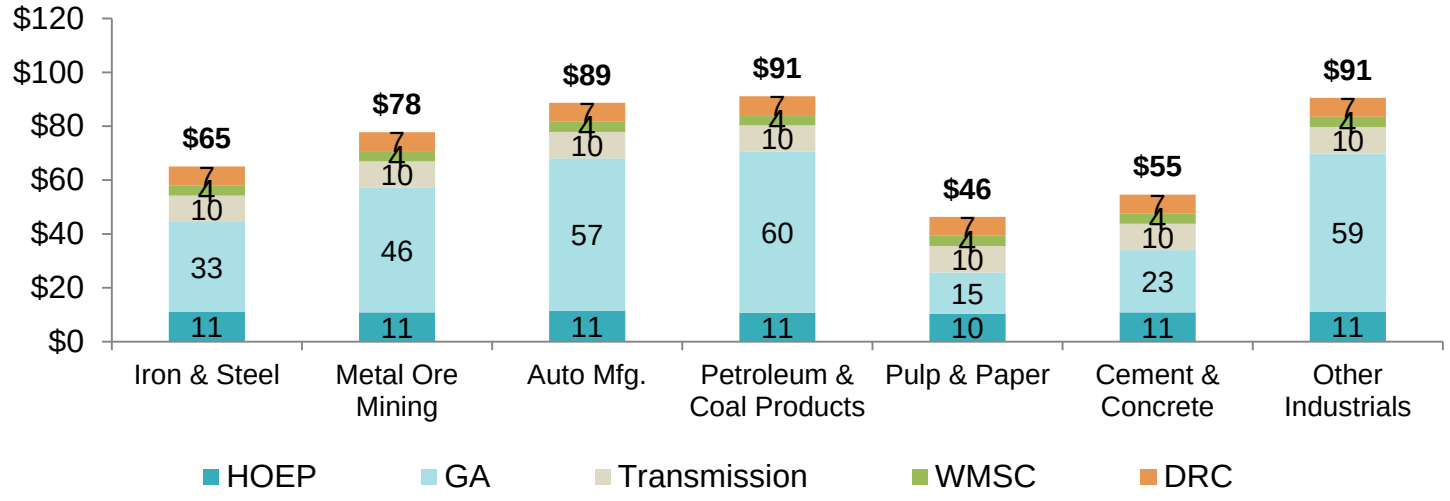
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2010, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Notes:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP. See Appendix for discussion on HST considerations.

# Rate Mitigation Proposal – Illustrative Impacts

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact* | Class A (Industrial) Impact* | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)*** | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

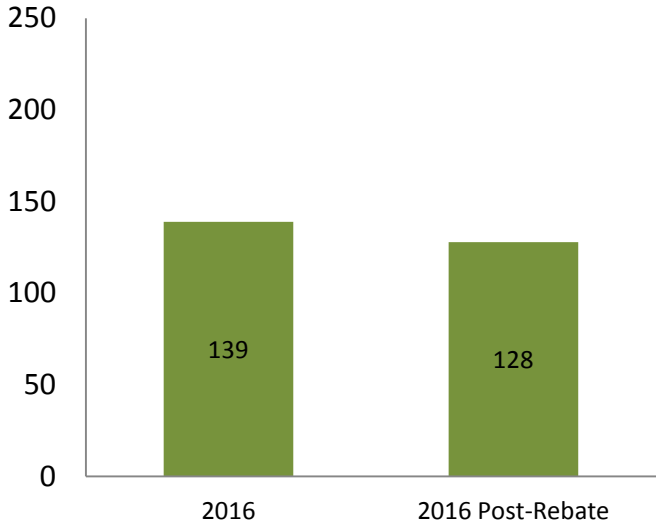
***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes.

**** Note:** Average Regulated Price Plan Impact represents a pre-tax value of the 8% rebate and does not include the impact of ICI expansion and RRRP update (total impact of $1.31/month based on 750 kWh/month).

*****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers). Impact shown is pre-tax and does not include the impact of ICI expansion and RRRP update (total impact of $1.74/month based on 1000 kWh/month).

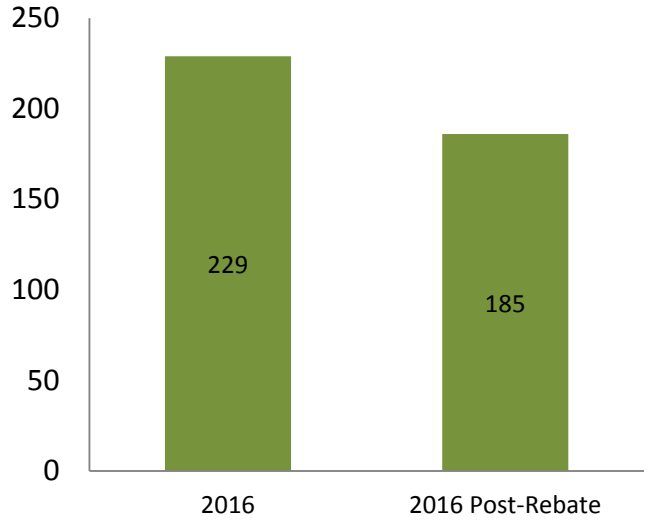
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750/kWh per month, 8% only**



The pre-tax impact of a 8% reduction.

**Rural (R2) Residential Bill**
**1,000/kWh per month, 8% and RRRP update**

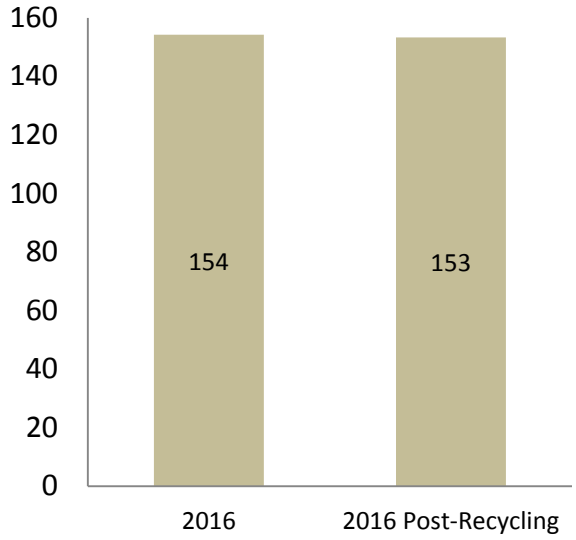


The pre-tax impact of the rate mitigation initiatives is a 19% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016. Commercial and industrial electricity prices reflect YTD June 2016.

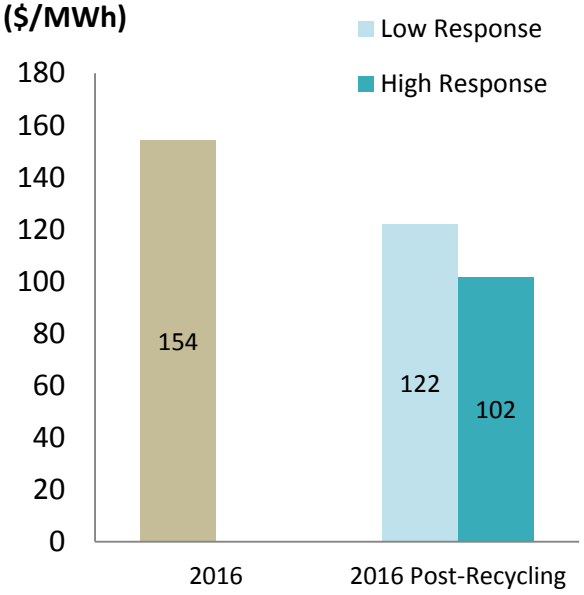
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



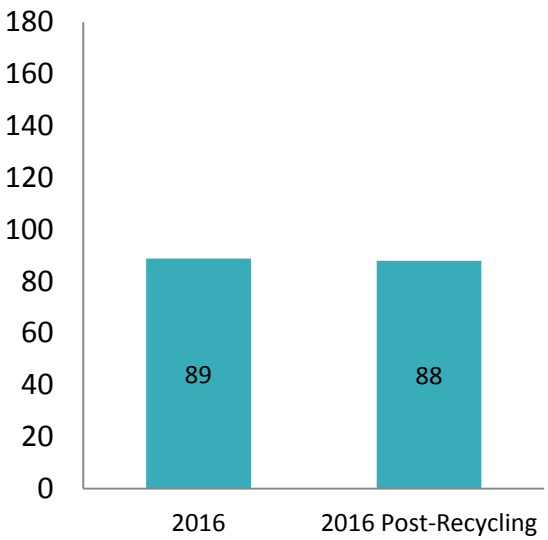
**Class B:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The net impact of the rate mitigation initiatives is a reduction of up to 21% and 34% for low and high response respectively.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Placeholder – Electricity Bill Mock-Up

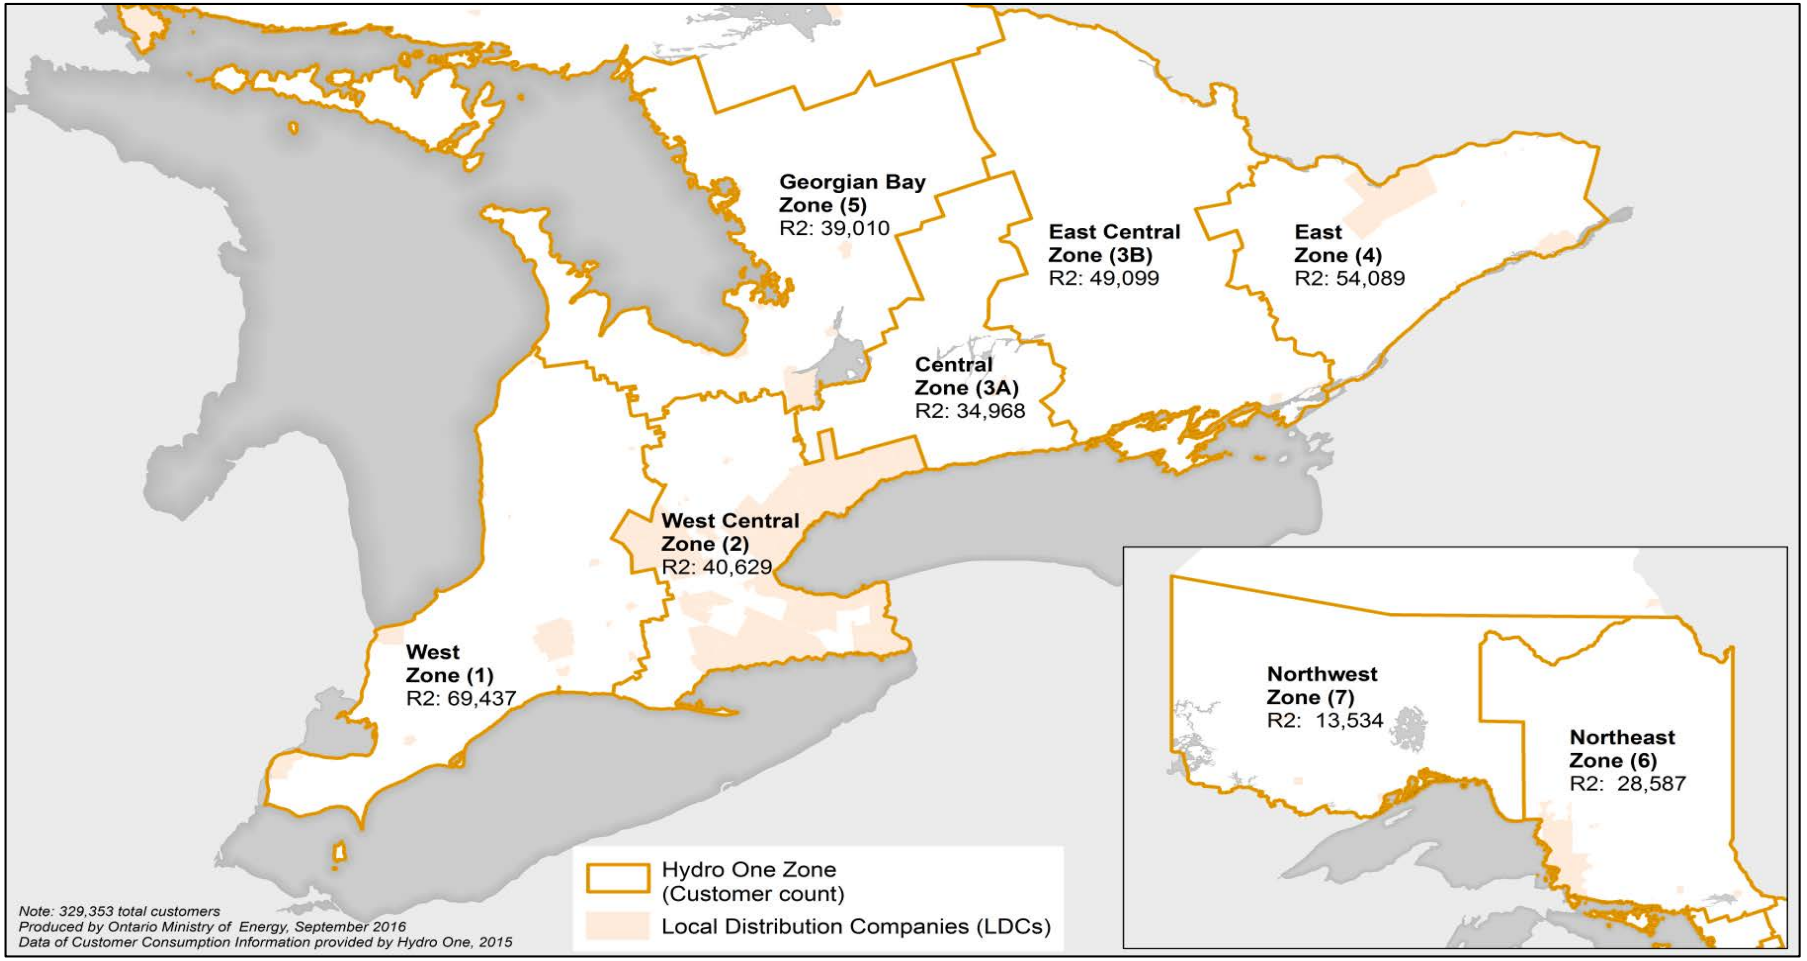
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility effective [X placeholder date].

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

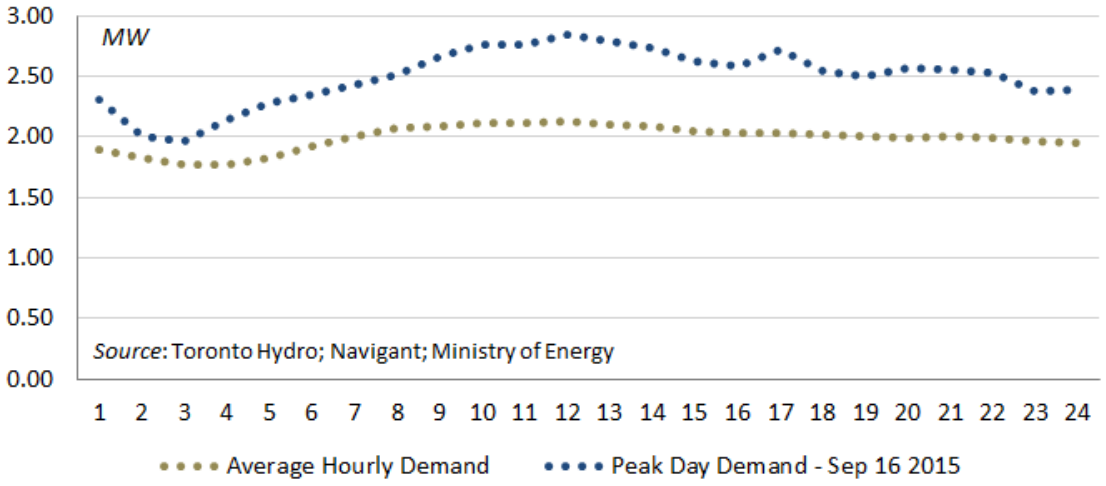
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

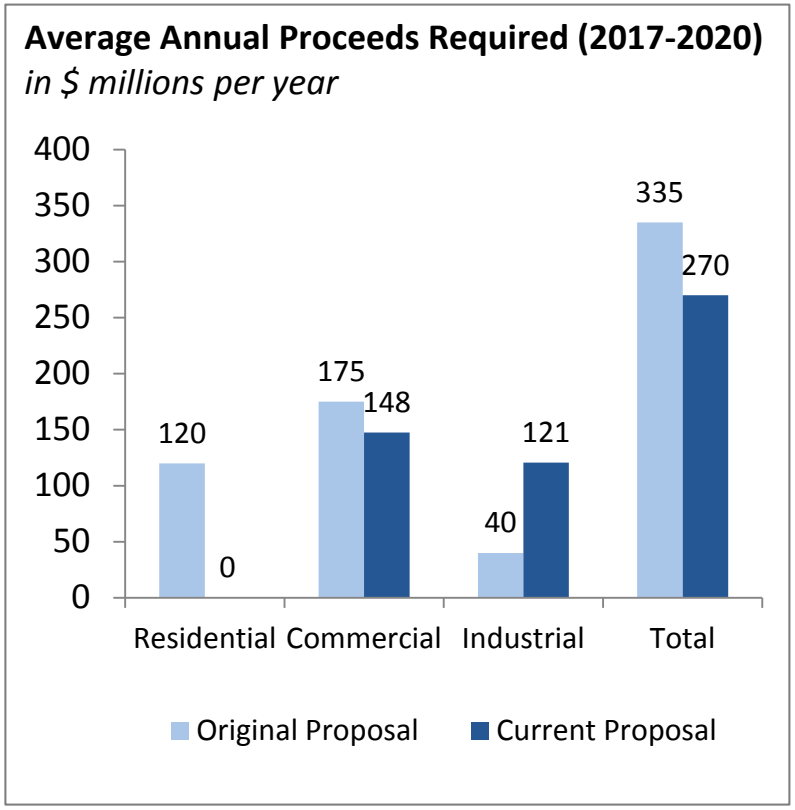
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $240 million relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $240 million in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after tax) (before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after tax) (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate: - $16<br>Updated RRRP: - $28 | $185 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $148 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $136 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $202 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $186 /MWh |

***Note:** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact | New Rate |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI: -$49/MWh NIERP: -$20/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh<br>ICI: -$51.30/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI, proceeds recycling).

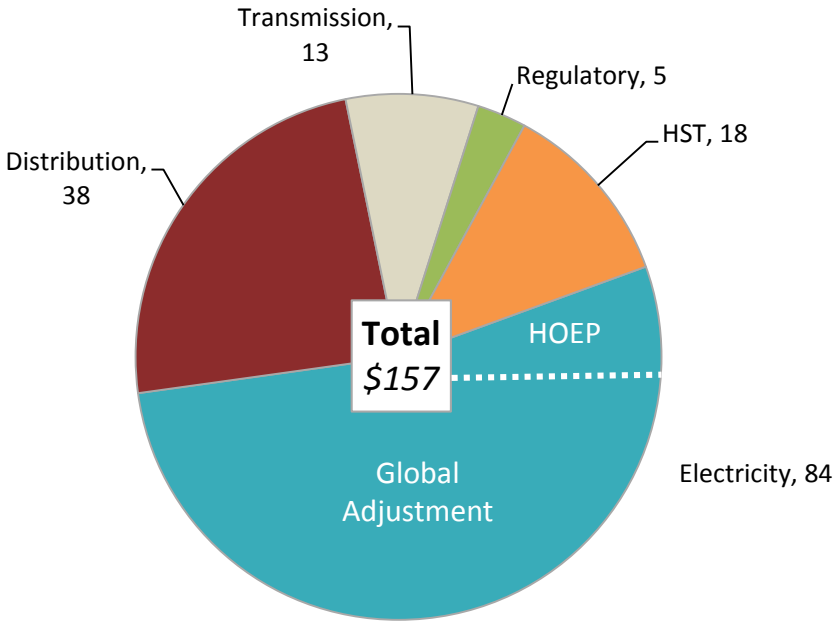
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

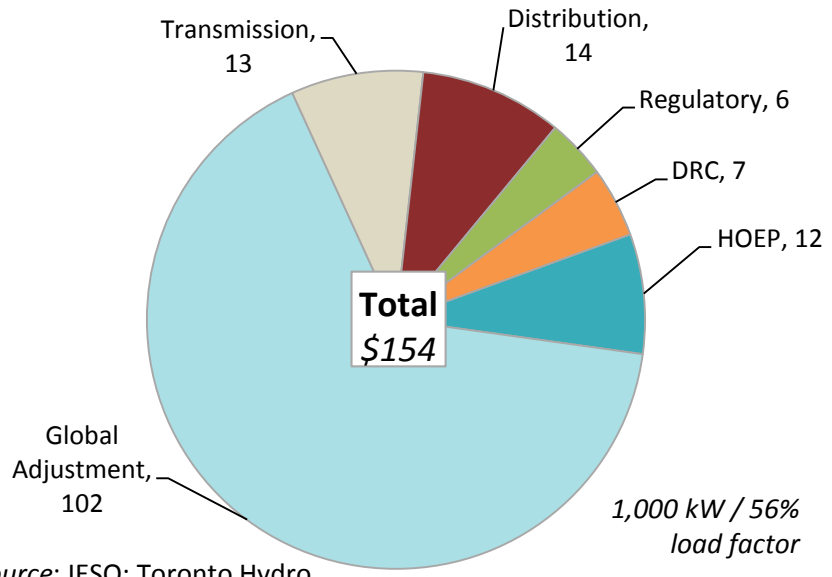
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

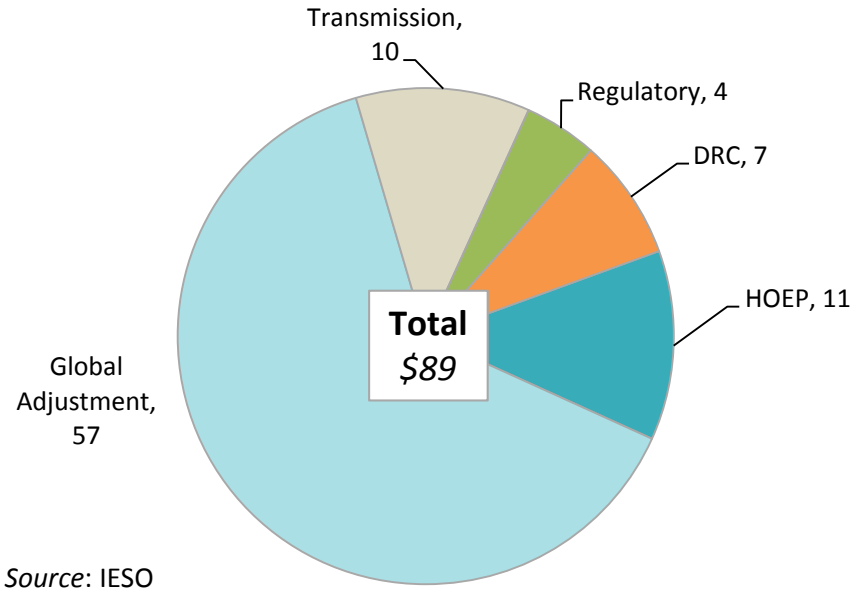
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Hi Boafoa,

Wondering if it's possible for the electricity item to be last on the agenda tomorrow. We have a Minister's briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week.  Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

# Ontario Rebate for Electricity Consumers Act, 2016

## EXPLANATORY NOTE

The *Ontario Rebate for Electricity Consumers Act, 2016* authorizes financial assistance for certain Ontario electricity consumers in respect of electricity costs. Consumers receive the financial assistance by means of an 8 per cent reduction in the amount payable before tax under their electricity accounts for each billing period. The amount of financial assistance for a billing period is required to be shown on invoices issued to consumers for the billing period.

The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of various other regulations, including to set out other ways for consumers to receive financial assistance, to alter the default rules in the Act for how to calculate the financial assistance and to limit or alter who is entitled to financial assistance. The Act amends the *Ontario Clean Energy Benefit Act, 2010* to authorize the making of regulations under that Act in respect of cut-off dates for financial assistance under that Act.

The Act contains administrative and enforcement provisions, including requirements relating to record keeping by electricity vendors and authorization for inspections and inquiries with respect to amounts of financial assistance provided and reimbursements to electricity vendors. The *Ontario Energy Board Act, 1998* is amended so that provisions of the *Ontario Rebate for Electricity Consumers Act, 2016* and regulations made under it will be enforceable by the Ontario Energy Board.

| 19. | Commencement |
| 20. | Short title |

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

## Definitions

**1.** (1) In this Act,

"billing period" means a period of time that is wholly or partly in the eligible period and for which an invoice in respect of an eligible account is issued; ("période de facturation")

"Board" means the Ontario Energy Board; ("Commission")

"consumer" means a person,

(a) to whom an invoice is issued in respect of an eligible account for a billing period, or

(b) who is prescribed by the regulations or who satisfies such conditions as may be prescribed by the regulations; ("consommateur")

"distribution system" has the same meaning as in section 3 of the *Ontario Energy Board Act, 1998*; ("réseau de distribution")

"electricity vendor" means the IESO, a licensed distributor, a licensed retailer or a person prescribed by the regulations; ("vendeur d'électricité")

"eligible account" means, in respect of a consumer, an account with an electricity vendor, or with a person prescribed by the regulations, for the provision of electricity in Ontario if,

(a) the consumer has a demand for electricity of 50 kilowatts or less, or such other amount of demand for electricity as may be prescribed,

(b) the consumer annually uses not more than 250,000 kilowatt hours of electricity, or such other amount of use of electricity as may be prescribed,

(c) the consumer,

(i) carries on a business that is a farming business for the purposes of the *Farm Registration and Farm Organizations Funding Act, 1993*, and

(ii) holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act,

(d) the account relates to,

(i) a dwelling,

(ii) a property, within the meaning of the *Condominium Act, 1998*,

(iii) a residential complex, within the meaning of subsection 2 (1) of the *Residential Tenancies Act, 2006*, without regard to section 5 of that Act, or

(iv) a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the *Co-operative Corporations Act*, or

(e) the consumer or the account satisfies such conditions as may be prescribed by the regulations; ("compte admissible")

"eligible period" means the period commencing January 1, 2017; ("période admissible")

"IESO" has the same meaning as in subsection 2 (1) of the *Electricity Act, 1998*; ("SIERE")

"licensed distributor" means a person licensed under Part V of the *Ontario Energy Board Act, 1998* to own or operate a distribution system; ("distributeur titulaire d'un permis")

"licensed retailer" means a person who is licensed under Part V of the *Ontario Energy Board Act, 1998* to retail electricity; ("détaillant titulaire d'un permis")

"market rules" means the market rules made under section 32 of the *Electricity Act, 1998*; (règles du marché")

"regulations" means the regulations made under this Act; ("règlement")

"retail" has the same meaning as in section 56 of the *Ontario Energy Board Act, 1998*; ("vendre au détail")

"unit sub-metering" means activities that are unit sub-metering for the purposes of the *Ontario Energy Board Act, 1998*; ("activités liées aux compteurs divisionnaires d'unité")

"unit sub-meter provider" means a person who is licensed to engage in unit sub-metering by the Board under Part V of the *Ontario Energy Board Act, 1998*. ("fournisseur de compteurs divisionnaires d'unité")

**Eligible account**

(2) For the purposes of this Act, if a consumer would, but for this subsection, have an eligible account with a licensed retailer and with a licensed distributor, but only one of them issues an invoice to the consumer for a billing period for all amounts payable by the consumer to them for the billing period,

(a) the consumer is deemed to have an eligible account for the billing period only with whichever of them issues the invoice for the billing period; and

(b) the licensed distributor or licensed retailer who issues the invoice for the billing period is deemed to be imposing all charges and other amounts payable under the invoice for the purposes of determining the amount of financial assistance to which the consumer is entitled.

**Base invoice amount**

**2.** (1) For the purposes of this Act, the base invoice amount for a billing period in respect of an eligible account is determined in accordance with the regulations and, unless otherwise prescribed by the regulations, includes, if the invoice is issued by a licensed distributor or a licensed retailer, amounts in respect of,

(a) the commodity price of the electricity;

(b) the rates and charges set out in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998* that are not required under subsection (2) or the regulations to be excluded;

(c) any adjustment on the invoice required pursuant to section 25.33 of the *Electricity Act, 1998*;

(d) any debt retirement charge payable by the consumer under subsection 85 (4) of the *Electricity Act, 1998*; and

(e) anything else prescribed by the regulations.

**Exclusions**

(2) Except as otherwise prescribed by the regulations, the base invoice amount for a billing period must exclude,

(a) the balance of any amounts carried forward from previous invoices;

(b) all penalties and interest;

(c) any charges that do not relate to the consumption of electricity;

(d) the fixed monthly service charge payable by a generation facility, within the meaning of section 56 of the *Ontario Energy Board Act, 1998*, that is classified as “microFIT” in a rate order issued by the Board under subsection 78 (3) of that Act;

(e) charges labelled as “specific service charges” or “retail service charges” in the applicable rate order issued by the Board under subsection 78 (3) of the *Ontario Energy Board Act, 1998*;

(f) the amount of any harmonized sales tax payable under Part IX of the *Excise Tax Act* (Canada); and

(g) any other amounts prescribed by the regulations.

**Financial assistance**

**3.** (1) A consumer who has an eligible account during a billing period is entitled to receive financial assistance in respect of the cost of electricity during the billing period in an amount equal to 8 per cent of the base invoice amount for the billing period in respect of the eligible account.

**Exception**

(2) Despite subsection (1), a consumer is not entitled to receive financial assistance under this Act,

(a) in respect of electricity consumed in generation station service;

(b) in such circumstances as may be prescribed by the regulations; or

(c) if the regulations prescribe that the consumer is not entitled to receive financial assistance.

**Payment of financial assistance**

(3) The financial assistance to which a consumer is entitled under this Act shall be paid,

(a) by crediting the consumer's eligible account; or

(b) in such other manner as may be prescribed by the regulations.

**Money appropriated by the Legislature**

(4) The money required for the purposes of this Act shall be paid out of the money appropriated for those purposes by the Legislature.

**No assignment of financial assistance**

(5) An assignment by a consumer to another person or entity, including a licensed retailer, of the consumer's entitlement to any payment, rebate or credit does not apply to any financial assistance to which the consumer is entitled under this Act, whether the assignment was made before or after this subsection comes into force.

**Same**

(6) Subsection (7) applies if,

(a) a consumer provides to another person electricity in respect of which the consumer is entitled to financial assistance under subsection (1); and

(b) an invoice for the electricity is issued to the person by the consumer, by an agent of the consumer or by a unit sub-meter provider providing unit sub-metering for the consumer.

**Requirement to pass on benefit**

(7) Despite subsections (1) and (5), the consumer and every unit sub-meter provider providing unit sub-metering for the consumer shall ensure that each person who is liable to pay an invoice referred to in clause (6) (b) receives a credit, determined in the manner prescribed by the regulations, in respect of the financial assistance to which the consumer is entitled with respect to electricity the consumer provides to the person.

**Invoices**

**4.** (1) Unless otherwise prescribed by the regulations, every electricity vendor who issues an invoice for a billing period to a consumer in respect of an eligible account shall clearly show on the invoice,

(a) a credit equal to the amount of the financial assistance provided to the consumer for the billing period; and

(b) the net amount of the invoice after the credit.

**Invoice issued by consumer, etc.**

(2) An invoice that is issued by a consumer, an agent of a consumer, a unit sub-meter provider or another person prescribed by the regulations must be in the form required by the regulations and contain or be accompanied by the information required by the regulations.

**Transitional**

(3) If, for technical or operational reasons, an electricity vendor or a person referred to in subsection (2) is unable to adapt its invoices to comply with this Act and the regulations by the time it issues its first invoice for electricity consumed in 2017 in respect of an eligible account,

(a) the electricity vendor or person shall adapt its invoices as soon as possible and, in any event, no later than July 1, 2017; and

(b) consumers continue to be entitled to receive the financial assistance to which they are entitled under this Act and may receive it as a lump sum credit on the invoice for the first billing period after the invoices have been adapted or by such other means as may be prescribed by the regulations.

**Financial arrangements**
**Purposes**
**5.** (1) The purposes of this section are,

(a) to ensure that financial assistance under this Act and the regulations is provided to those persons entitled to receive it; and

(b) to authorize the making of financial arrangements to reimburse electricity vendors, and other persons prescribed by the regulations, for financial assistance provided under this Act and the regulations.

**Regulations**
(2) The Lieutenant Governor in Council may, for the purpose of this section, make regulations,

(a) authorizing the Minister of Energy to make payments to persons who are electricity vendors or persons prescribed by the regulations in respect of the amount of financial assistance to which consumers are entitled under this Act and prescribing methods for determining the amounts payable;

(b) requiring the IESO to make payments to licensed distributors, or to persons prescribed by the regulations, in respect of financial assistance provided under this Act or the regulations and prescribing methods for determining the amounts payable;

(c) requiring a licensed distributor to make payments to other licensed distributors or licensed retailers in respect of financial assistance under this Act and prescribing methods for determining the amounts payable;

(d) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments in respect of financial assistance to consumers or other persons entitled to receive the financial assistance and prescribing the circumstances in which such payments are to be made and methods for determining the amounts payable;

(e) authorizing the Minister of Energy to make payments of financial assistance directly to consumers and prescribing the circumstances when such payments are to be made;

(f) requiring a person who is an electricity vendor or a person prescribed by the regulations to make payments to the Minister of Finance in respect of amounts received by them or in circumstances prescribed by the regulations and prescribing methods for determining the amounts payable;

(g) authorizing payments referred to in clause (a), (b), (c), (d) or (f) to be made by way of set-offs and credits and prescribing conditions entitling or requiring amounts to be set off or credited;

(h) governing the payments required under clause (a), (b), (c), (d) or (f), including methods for paying the amounts payable and when the payments must be made, and governing methods for determining amounts to be set off or credited, including the times within which amounts must or may be set off or credited;

(i) for the purposes of this Act and the regulations, requiring persons who are electricity vendors or persons prescribed by the regulations to provide information to the Minister of Energy, the Minister of Finance, the IESO, the Board or licensed distributors and prescribing the information to be provided and when it must be provided;

(j) governing the establishment and maintenance of variance accounts required for the purposes of this Act.

**Conflict with market rules and codes**

(3) In the event of a conflict, a regulation made under subsection (2) prevails over the market rules to the extent of the conflict and prevails over a code issued by the Board under section 70.1 of the *Ontario Energy Board Act, 1998* to the extent of the conflict.

**Provision of information**

(4) A person may do anything required by a regulation made under clause (2) (i) despite any agreement to the contrary and, if the person does so,

(a) the person is not liable for doing the thing in contravention of any agreement to the contrary; and

(b) doing the thing is deemed not to constitute a breach, termination, repudiation or frustration of any contract.

**Limitation periods for financial assistance, reimbursement**

**Financial assistance**

**6.** (1) Despite any past entitlement of a consumer to financial assistance under this Act, no financial assistance is payable to a consumer after a limitation period prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after a limitation period prescribed by the regulations in respect of the electricity vendor or other person, where such reimbursement is based on a consumer's past entitlement not yet paid or reimbursed under this Act, other than in such circumstances as may be prescribed by the regulations.

**Definition**

**7.** In sections 8, 9 and 10,

"Minister" means the Minister of Finance or such other member of the Executive Council to whom the administration of those sections is assigned under the *Executive Council Act*.

**Records**

**8.** (1) Every electricity vendor and every person prescribed by the regulations shall keep at a location in Ontario such records as are necessary to determine and verify compliance with this Act and the regulations and any records required by the regulations to be kept.

**Electronic records**

(2) If a person keeps records in an electronic form, the person shall ensure that, from the time the records are first made and for as long as they are required to be retained,

(a) they remain complete and unaltered, apart from any changes or additions made in the normal course of communication, storage or display; and

(b) they are capable of being printed and of being produced in electronically readable format for inspection, examination or audit.

**Retention of records**

(3) Records required to be kept under subsection (1) shall not be destroyed unless authorization has been given in writing by the Minister.

**Offence**

(4) Every person who fails to keep records in accordance with this section is guilty of an offence and, on conviction, is liable to a fine of not less than $50 and not more than $5,000.

**Inspections and inquiries**

**9.** (1) The Minister may appoint one or more inspectors who are authorized to exercise any of the powers and perform any of the duties of a person authorized by the Minister under subsection 31 (1) of the *Retail Sales Tax Act* for any purpose related to the administration and enforcement of this Act.

**Same**

(2) Subsections 31 (1), (2), (2.1) and (2.2) of the *Retail Sales Tax Act* apply, with necessary modifications, with respect to the administration and enforcement of this Act.

**Admission of evidence**

(3) The Minister, or a person authorized by the Minister, may, for any purpose related to the administration of this Act or the regulations, reproduce from original data stored electronically any information previously submitted as required under this Act or the regulations in any form by any person, and the electronically reproduced document shall be admissible in evidence and shall have the same probative force as the original document would have had if it had been proved in the ordinary way.

**Inquiry**

(4) The Minister may, for any purpose related to the administration of this Act or the regulations, authorize any person, whether or not the person is an employee in the Ministry of the Minister, to make such inquiry as the Minister considers necessary with reference to anything relating to the administration of this Act or the regulations.

**Copies**

(5) If a book, record or other document is examined or produced under this section, the person by whom it is examined or to whom it is produced or any officer of the Ministry may make, or cause to be made, one or more copies of it, and a document purporting to be certified by the person to be a copy made pursuant to this section is admissible in evidence and has the same probative force as the original document would have if proved in the ordinary way.

**Compliance**

(6) No person shall hinder or molest or interfere with any person doing anything that the person is authorized by this section to do or prevent or attempt to prevent any person doing any such thing.

**Same**

(7) Despite any other law to the contrary, every person shall, unless the person is unable to do so, do everything he, she or it is required by this section to do.

**Administration of oaths**

(8) Declarations or affidavits in connection with statements of information submitted pursuant to this section may be taken before any person having authority to administer an oath or before any person specially authorized for that purpose by the Lieutenant Governor in Council, but any person so specially authorized shall not charge any fee for doing so.

**Application of Public Inquiries Act, 2009**

(9) Section 33 of the *Public Inquiries Act, 2009* applies to an inquiry under subsection (4).

**Recovery of overpayments**

**Definitions**

**10.** (1) In this section,

"inspector" means an inspector referred to in section 9; ("inspecteur")

"overpayment" means an amount received by a person in excess of any reimbursement to which the person is entitled under this Act and the regulations. ("trop-perçu")

**Notice of overpayment**

(2) If it appears to an inspector that a person has received an overpayment, the Minister may send a written notice to the person advising the person of the following:

1. That the person has received an overpayment.

2. The amount of the overpayment and how it was calculated.

3. The required steps to be taken by the person with respect to the overpayment.

4. The date, not more than six months after the date of the notice, by which these steps must be completed.

5. That the Minister has the authority to assess the person for the amount of the overpayment, plus interest, if the person fails to complete the required steps by the specified date.

**Calculation of amount of overpayment**

(3) For the purposes of this section, an inspector shall calculate an overpayment or the outstanding balance of an overpayment in the manner and form and using such procedures as the Minister considers adequate and expedient.

**Assessment**

(4) If a person fails to complete the steps required in a notice under subsection (2) within the time specified in the notice, and any additional time requested by the person and permitted by the Minister, the Minister may assess or reassess the amount of the overpayment, or the outstanding balance of the overpayment, based on the inspector's calculation described in subsection (3).

**Penalty**

(5) If the Minister makes an assessment or reassessment under subsection (4) and is satisfied that the person's non-compliance with the required steps in the notice was attributable to neglect, carelessness, wilful default or fraud, the Minister may assess a penalty against the person equal to the outstanding balance of the overpayment when the penalty is assessed.

**Time limit**

(6) The Minister shall not assess or reassess under subsection (4) more than 48 months after the end of the month in which the person received the overpayment.

**Exception, where misrepresentation, etc.**

(7) Subsection (6) does not apply if the Minister establishes that the person has made a misrepresentation that is attributable to neglect, carelessness or wilful default or has committed any fraud in supplying information under this Act or the regulations or in omitting to disclose information.

**Deemed debt retirement charge**

(8) An amount assessed or reassessed by the Minister under this section is deemed for the purposes of the administration and enforcement of this Act to be a debt retirement charge, as defined in subsection 85 (1) of the *Electricity Act, 1998*, that has been collected, on the last day of the month in which the person received the overpayment, by the person as a collector appointed under subsection 85.3 (1) of the *Electricity Act, 1998* and, for those purposes,

(a) sections 85.11, 85.12, 85.14, 85.17 and 85.30 of that Act apply with necessary modifications;

(b) in the application of sections 85.11 and 85.14 of that Act and without limiting the generality of clause (a), references to the Financial Corporation are read as references to the Minister of Finance and references to the Minister of Finance are read as references to the Minister as defined in section 7 of this Act;

(c) the regulations made under that Act for the purposes of calculating the rate or rates of interest payable under section 85.11 of that Act and the manner of calculating the amount of interest apply with necessary modifications; and

(d) sections 23 and 36, subsections 37 (1), (1.1) and (2) and sections 37.1, 38 and 39 of the *Retail Sales Tax Act* apply with necessary modifications.

**Disposition of repaid amounts**

(9) If all or part of an overpayment is repaid to the Minister of Finance, the Minister of Energy shall make such financial arrangements and payments as may be necessary to ensure that any electricity vendor or other person entitled to all or part of the overpayment receives the appropriate amount.

**Confidentiality**

**11.** (1) Except as authorized by this section, no person employed by the Government of Ontario shall,

(a) knowingly communicate or knowingly allow to be communicated to any person any information obtained by or on behalf of the Minister of Energy or the Minister of Finance for the purposes of this Act; or

(b) knowingly allow any person to inspect or to have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Testimony**

(2) No person employed by the Government of Ontario shall be required, in connection with any legal proceedings,

(a) to give evidence relating to any information obtained by or on behalf of the Minister of Energy or Minister of Finance for the purposes of this Act; or

(b) to produce any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Exception**

(3) Subsections (1) and (2) do not apply in respect of,

(a) criminal proceedings under any Act of the Parliament of Canada;

(b) proceedings in respect of the trial of any person for an offence under an Act of the Legislature; or

(c) proceedings relating to the administration or enforcement of this Act or Part V.1 or VI of the *Electricity Act, 1998*.

**Communication**

(4) A person employed by the Government of Ontario may, in the course of duties in connection with the administration or enforcement of this Act,

(a) communicate or allow to be communicated to another person employed by the Government of Ontario in the administration or enforcement of any law or to an employee of the Board information obtained by or on behalf of either Minister for the purposes of this Act; and

(b) allow another person employed by the Government of Ontario in the administration or enforcement of any law or an employee of the Board to inspect or have access to any record or thing obtained by or on behalf of either Minister for the purposes of this Act.

**Reciprocal communication**

(5) A person who receives information or obtains access to any record or thing under subsection (4) has a duty to communicate or furnish to that Minister on a reciprocal basis any information, record or thing obtained by the person that affects the administration or enforcement of this Act.

**Use of information**

(6) Any information, record or thing communicated or furnished under this section may be used only for the administration or enforcement of this Act or an Act that is administered or enforced by the person receiving the information, record or thing.

**Same**

(7) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to,

(a) the person from whom the information, record or thing was obtained;

(b) any person by whom an amount is payable or has been paid under this Act; or

(c) the legal representative of a person mentioned in clause (a) or (b) or the agent of the person authorized in writing in that behalf.

**Information**

(8) The Minister of Finance may permit information or a copy of any record or thing obtained by or on behalf of the Minister of Finance for the purposes of this Act to be given to any person employed by any government if,

(a) the information, record or thing obtained by that government for the purpose of any Act that imposes a tax or duty are communicated or furnished on a reciprocal basis to the Minister; and

(b) the information, record or thing will not be used for any purpose other than the administration or enforcement of a law that provides for the imposition of a tax or duty.

**Offence**

(9) Every person who contravenes any provision of this section is guilty of an offence and on conviction is liable to a fine of not more than $2,000.

**Offences**

**False statements, etc., and fraud**

**12.** (1) Every person who engages in any of the following acts or omissions is guilty of an offence:

1. Making, participating in, assenting to or acquiescing in the making of a false or deceptive statement in any document or answer required or submitted under this Act or the regulations.

2. Destroying, altering, mutilating, hiding or otherwise disposing of information or records of an electricity vendor or other person, for the purpose of evading compliance with this Act or the regulations.

3. Making, assenting to or acquiescing in the making of a false or deceptive entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

4. Omitting to make or assenting to or acquiescing in the omission of an entry of a material particular in a record of an electricity vendor or other person required to maintain records for the purposes of this Act.

5. Wilfully evading or attempting to evade, in any manner, compliance with an obligation under this Act or the regulations.

**Penalty upon conviction**

(2) A person convicted of an offence under subsection (1) is liable to either or both of the following penalties in addition to any other penalty assessed under this Act:

1. A fine in an amount that is not less than $1,000 and not more than $10,000.

2. Imprisonment for a term of not more than two years.

**General offence**

(3) Every person who contravenes, by any act or omission, a requirement imposed under this Act is guilty of an offence and, on conviction, is liable, where no other penalty is provided for the offence, to a fine of not less than $50 and not more than $5,000.

**Limitation period**

**13.** A proceeding to prosecute an offence under this Act must be commenced within six years after the date on which the matter of the offence arose.

**Payment of fines**

**14.** Fines imposed on conviction of an offence under this Act are payable to the Minister of Finance on behalf of the Crown in right of Ontario.

**Regulations**

**15.** (1) The Lieutenant Governor in Council may make regulations,

(a) subject to the Minister of Energy's powers under subsection (2), prescribing anything required to be or referred to in this Act as being prescribed by the regulations;

(b) defining any word or expression used in this Act that is not already expressly defined in this Act;

(c) requiring any person to take such action or refrain from taking such action as may be necessary for the purposes of or in connection with any regulation made under this Act;

(d) governing information that must or may be provided to consumers concerning this Act and eligibility for financial assistance under it;

(e) governing the determination of the base invoice amount for a billing period with respect to a class of electricity vendors or a class of consumers;

(f) prescribing a method of paying or crediting to a consumer an amount of financial assistance to which the consumer is entitled under this Act and the circumstances in which the method applies;

(g) requiring a unit sub-meter provider to provide financial assistance in respect of the cost of electricity and prescribing,

(i) the circumstances in which the financial assistance is to be provided,

(ii) the person or class of persons entitled to receive the financial assistance,

(iii) the method of determining the amount of the financial assistance to be provided,

(iv) the manner for paying or otherwise providing the financial assistance;

(h) setting out one or more limitation periods for the purposes of subsection 6 (1) or (2), and governing the circumstances in which that subsection does not apply;

(i) respecting records to be kept by electricity vendors or by persons prescribed by the regulations;

(j) providing for matters which, in the opinion of the Lieutenant Governor in Council, are necessary or desirable to facilitate the implementation of this Act and the regulations.

**Regulations, Minister of Energy**

(2) The Minister of Energy may make regulations,

(a) prescribing information that must or may be included on invoices issued to consumers or that must or may accompany invoices issued to consumers or payments of financial assistance under this Act;

(b) governing the presentation of financial assistance under this Act on invoices issued to consumers;

(c) prescribing anything required to be or referred to in section 4 as being prescribed by the regulations.

**Retroactive regulations**

(3) A regulation made under this Act is, if it so provides, effective with reference to a period before it is filed.

**Subdelegation**

(4) The Lieutenant Governor in Council may, by regulation, delegate to the Minister of Energy the power to make some or all of the regulations under subsection (1).

***Ontario Clean Energy Benefit Act, 2010***

**16. (1) The *Ontario Clean Energy Benefit Act, 2010* is amended by adding the following section:**

**Cut-off dates for financial assistance, reimbursement**
**Financial assistance**

**6.1** (1) Despite any entitlement of consumers to financial assistance under this Act, no financial assistance is payable to a consumer after the date prescribed by the regulations in respect of the consumer, other than in such circumstances as may be prescribed by the regulations.

**Reimbursement**

(2) Despite any requirement under this Act to reimburse an electricity vendor or other person for financial assistance provided by them to consumers, no amounts for reimbursement are payable to the electricity vendor or other person after the date prescribed by the regulations in respect of the electricity vendor or other person, other than in such circumstances as may be prescribed by the regulations.

**(2) Subsection 15 (1) of the Act is amended by adding the following clause:**

(i.1) setting out one or more dates for the purposes of subsection 6.1 (1) or (2), and governing the circumstances in which that subsection does not apply;

***Ontario Energy Board Act, 1998***

**17. (1) The definition of "enforceable provision" in section 3 of the *Ontario Energy Board Act, 1998* is amended by adding the following clause:**

(c.2) a provision of the *Ontario Rebate for Electricity Consumers Act, 2016* or the regulations made under it,

**(2) Section 70 of the Act is amended by adding the following subsection:**

**Deemed condition of licences, unit sub-meter provider, *Ontario Rebate for Electricity Consumers Act, 2016***

(2.3) Every licence issued to a unit sub-meter provider is deemed to contain the condition that the unit sub-meter provider is required to comply with the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations made under it.

**Commencement**

**18. Subject to subsection (2), this Act comes into force on the later of January 1, 2017 and the day it receives Royal Assent.**

**Short title**

**19. The short title of this Act is the *Ontario Rebate for Electricity Consumers Act, 2016*.**

***Policy***

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

i) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

ii) Increase the total amount of rate protection available to R2 with low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

iii) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

iv) Expanding eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for:

i) the proposed *Ontario Rebate for Electricity Consumers Act, 2016* – **NTD-LSB – please confirm what title to use.]** and any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments and consequential legislative amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*, subject to the Legislature's approval of the Act, including the following elements:

   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way

in which electricity vendors providing the rebate are to be reimbursed;

v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments.
vii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date.

4. ENERGY notes the following amendments:

i) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

ii) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density rural electricity customers and provide for a periodic adjustment mechanism.

5. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

6. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan.

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

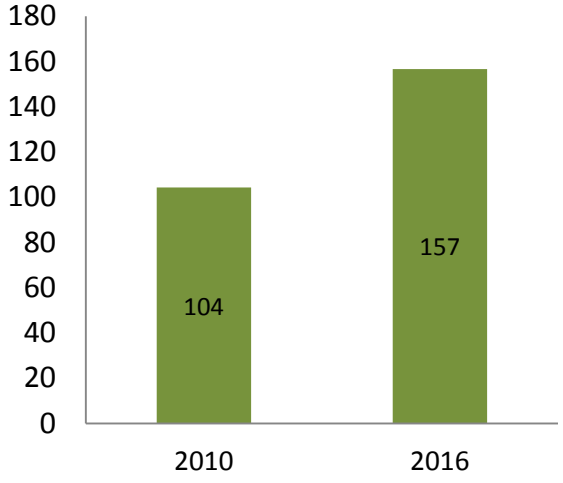
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

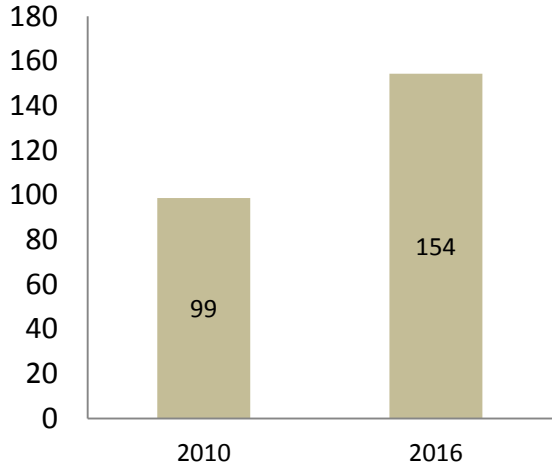
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

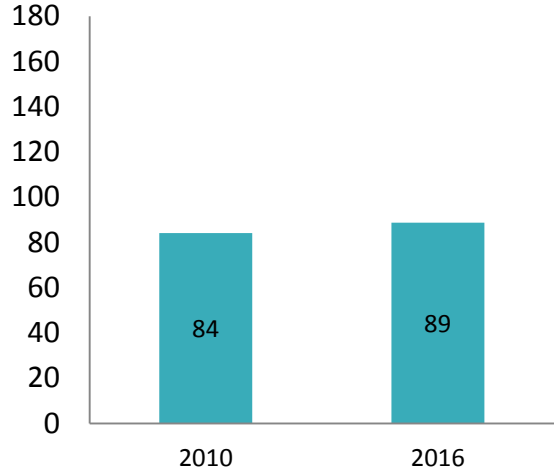
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



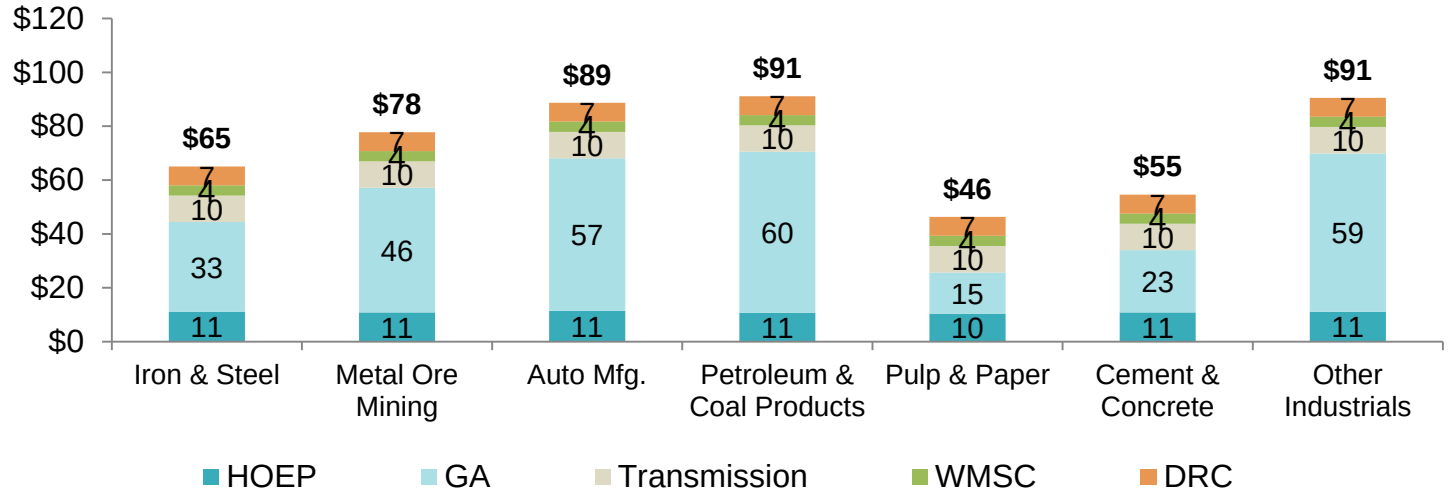
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2010, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Notes:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP. See Appendix for discussion on HST considerations.

# Rate Mitigation Proposal – Illustrative Impacts

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact* | Class A (Industrial) Impact* | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)*** | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

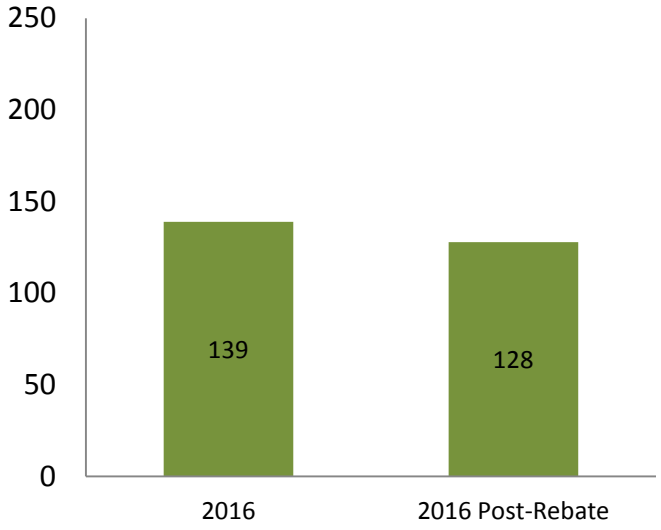
***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes.

**** Note:** Average Regulated Price Plan Impact represents a pre-tax value of the 8% rebate and does not include the impact of ICI expansion and RRRP update (total impact of $1.31/month based on 750 kWh/month).

*****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers). Impact shown is pre-tax and does not include the impact of ICI expansion and RRRP update (total impact of $1.74/month based on 1000 kWh/month).

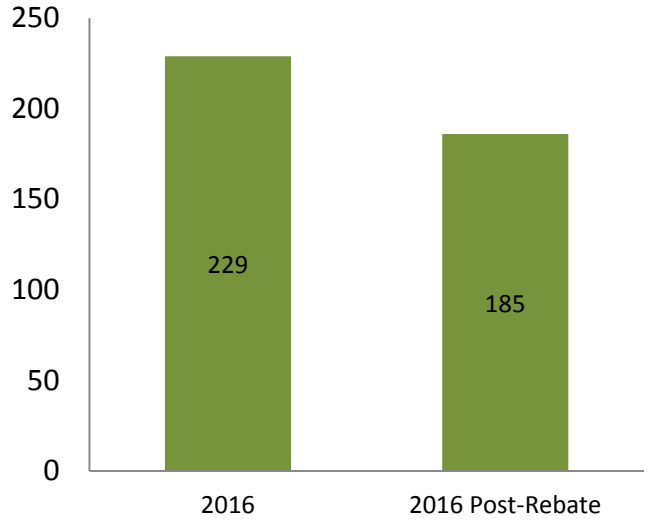
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750/kWh per month, 8% only**



The pre-tax impact of a 8% reduction.

**Rural (R2) Residential Bill**
**1,000/kWh per month, 8% and RRRP update**

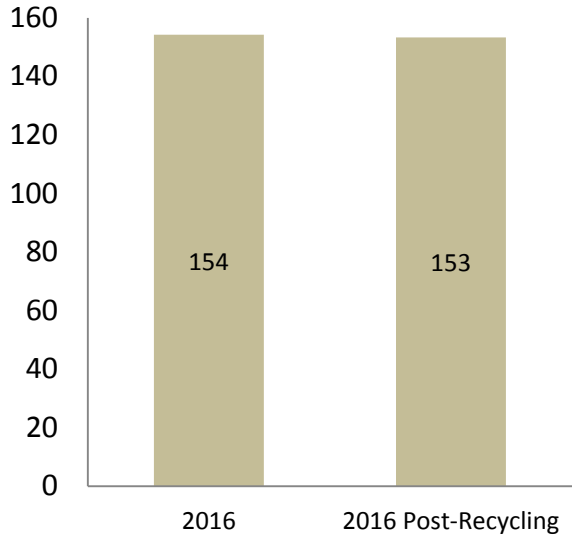


The pre-tax impact of the rate mitigation initiatives is a 19% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016. Commercial and industrial electricity prices reflect YTD June 2016.

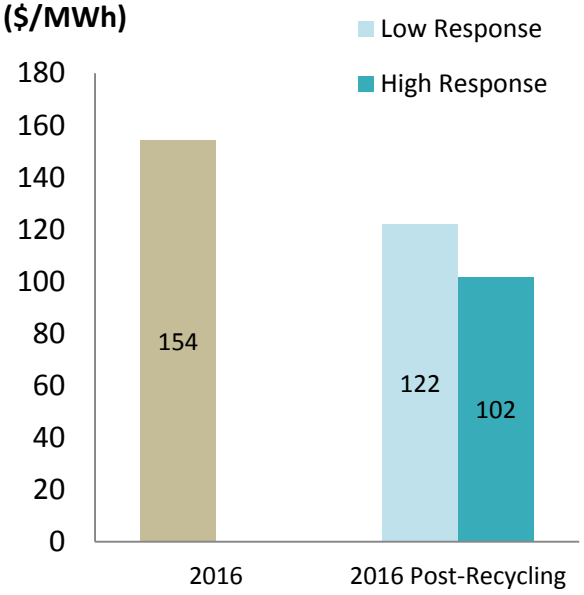
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



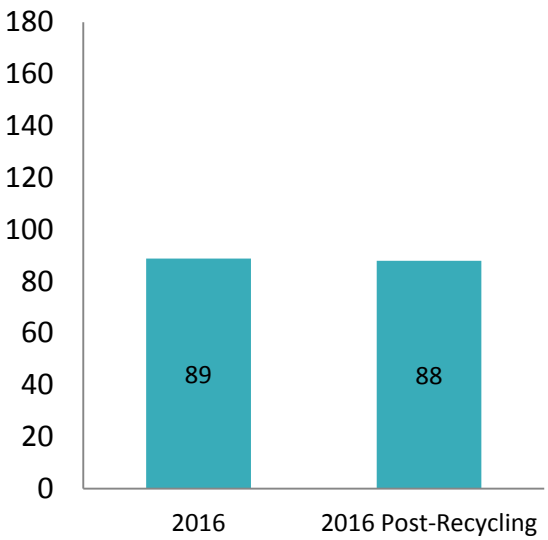
**Class B:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The net impact of the rate mitigation initiatives is a reduction of up to 21% and 34% for low and high response respectively.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The net impact of the rate mitigation initiatives is a 1% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Placeholder – Electricity Bill Mock-Up

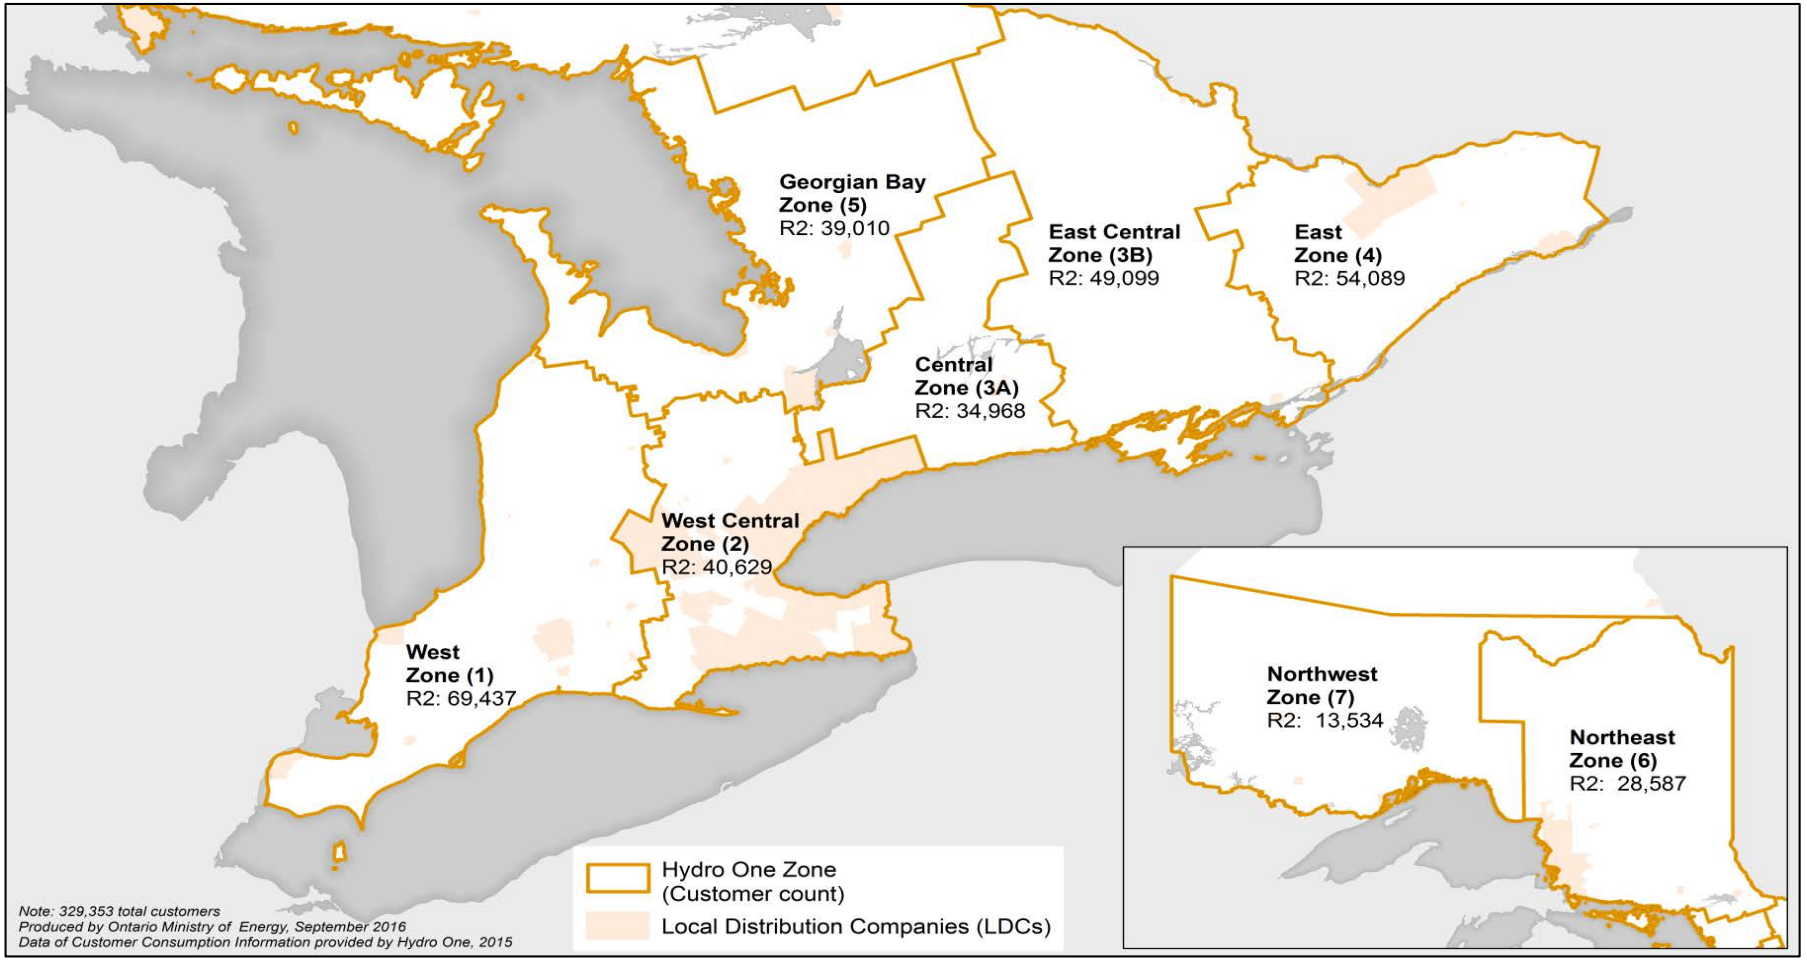
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility effective [X placeholder date].

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

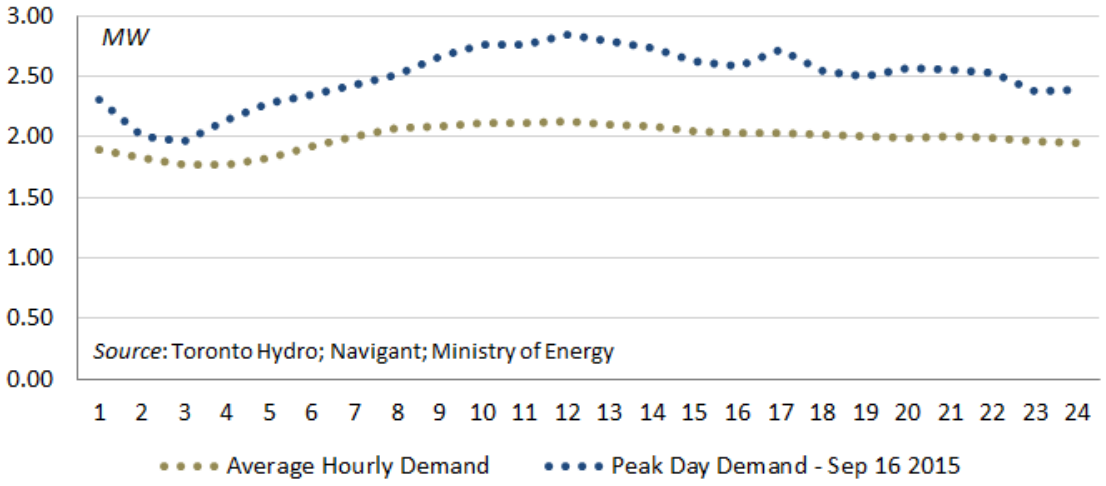
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

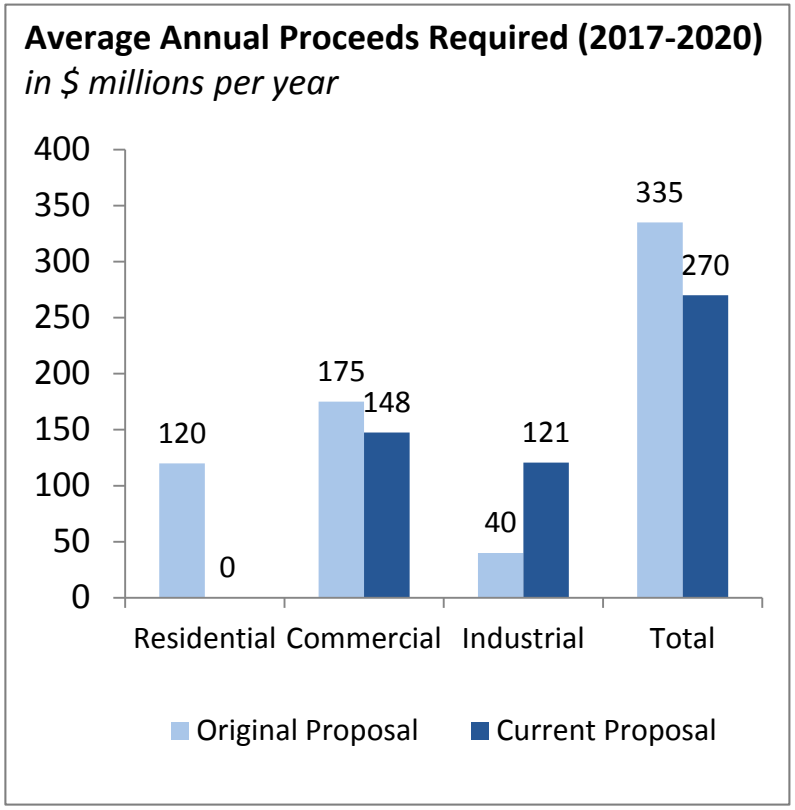
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $240 million relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $240 million in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after tax) (before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after tax) (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate: - $16<br>Updated RRRP: - $28 | $185 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $148 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $136 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $202 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $186 /MWh |

***Note:** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact | New Rate |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI: -$49/MWh NIERP: -$20/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh<br>ICI: -$51.30/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI, proceeds recycling).

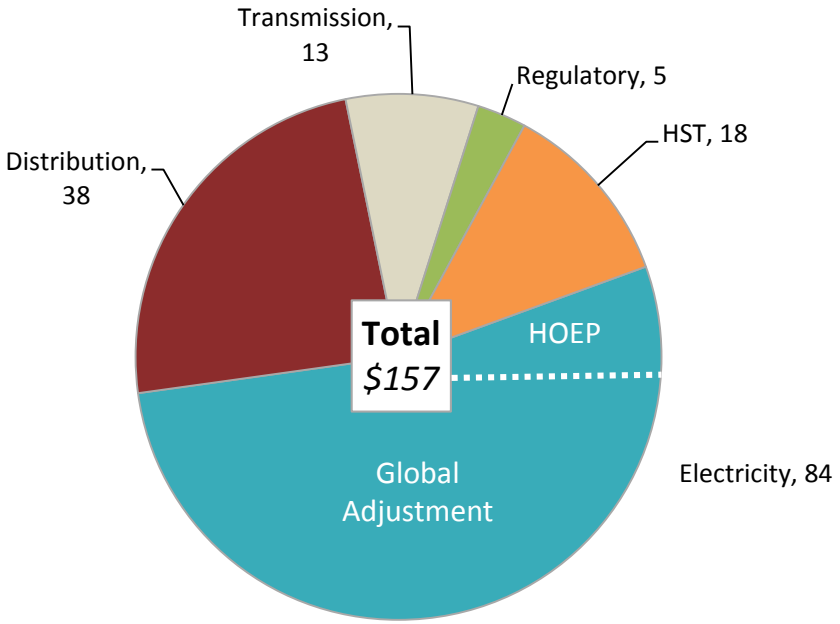
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

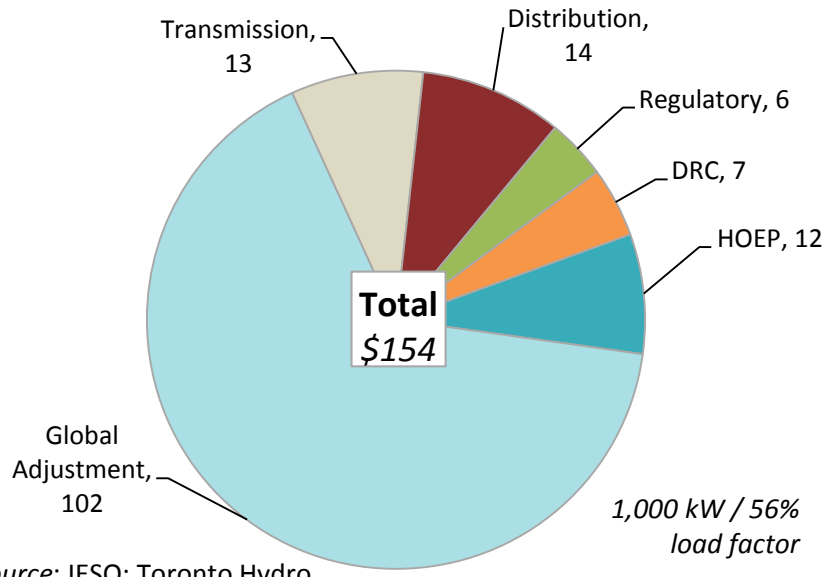
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

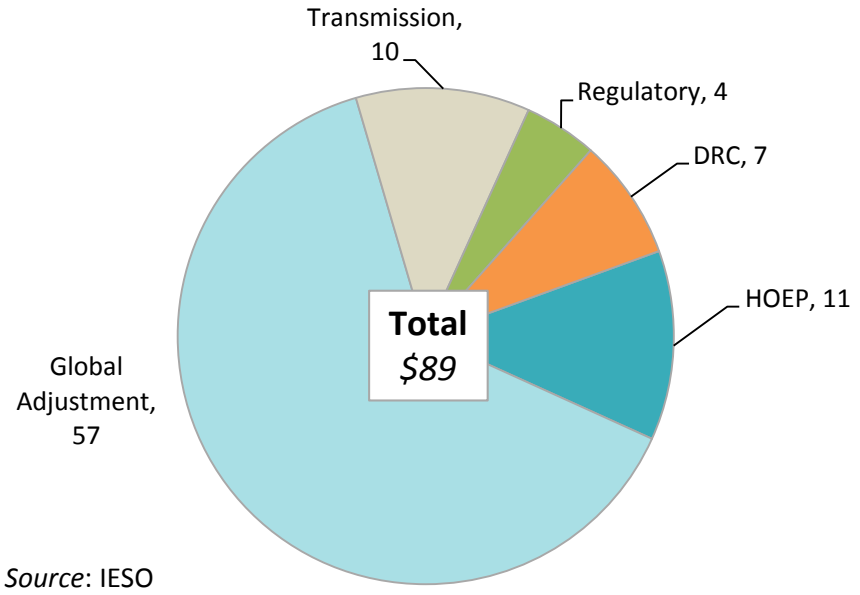
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |

**Subject:** RE: Major Projects this week

Hi Boafoa,

Wondering if it's possible for the electricity item to be last on the agenda tomorrow. We have a Minister's briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

**Subject:** Major Projects this week

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week. Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 12, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

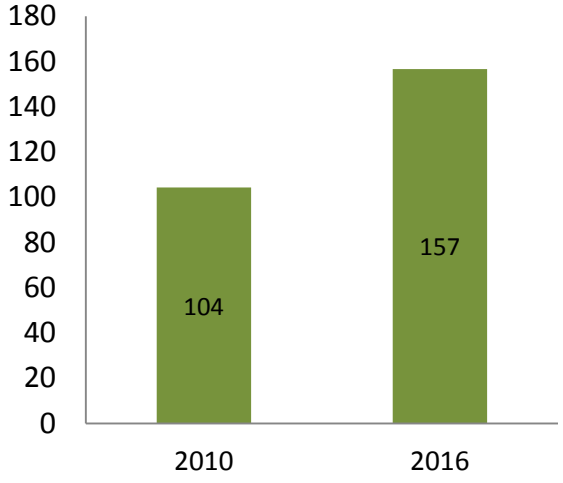
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

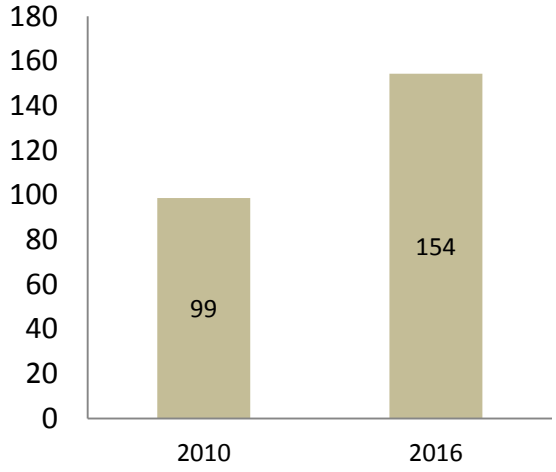
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

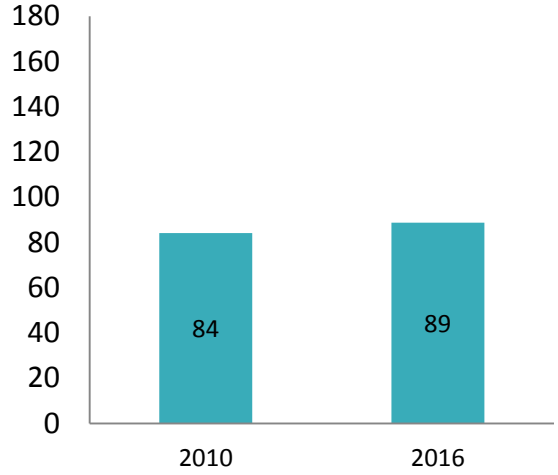
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



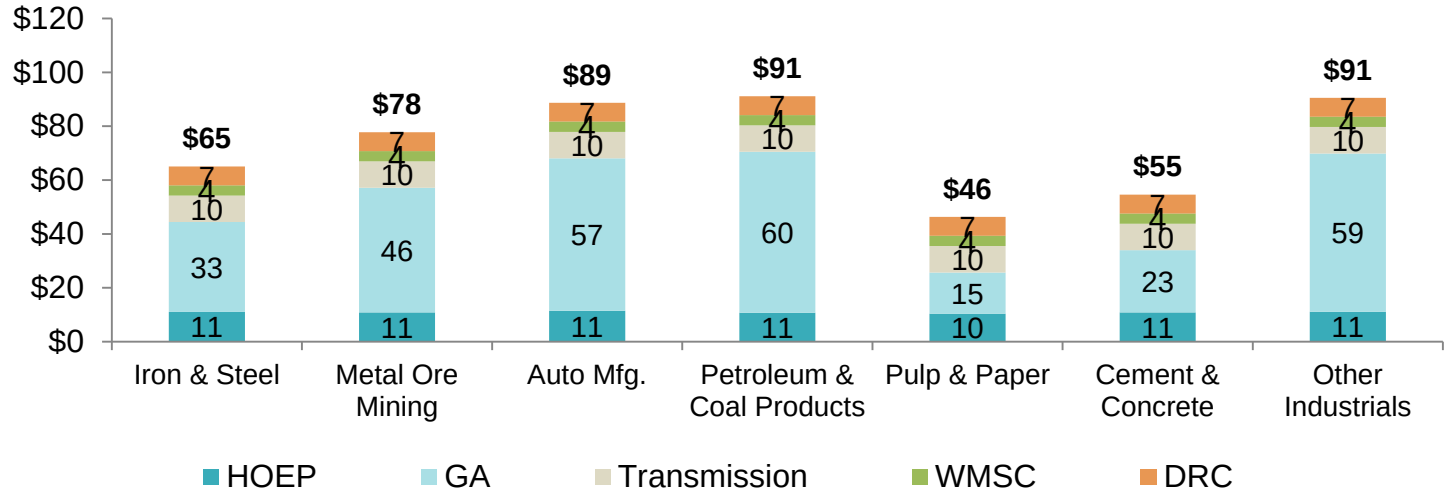
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

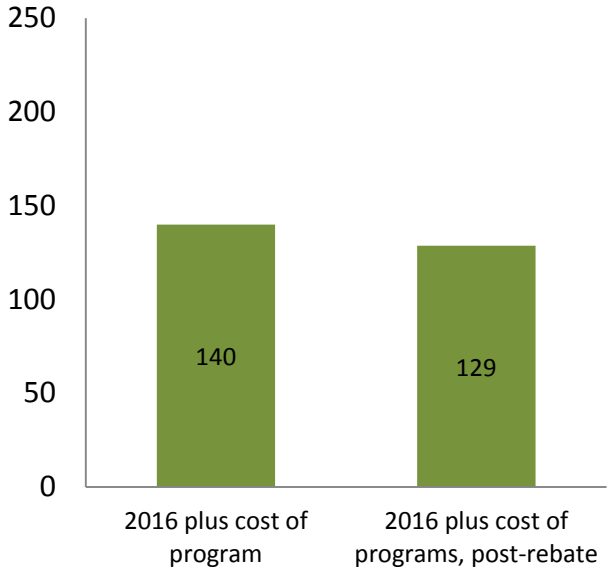
# Rate Mitigation Proposal – Illustrative Benefits*

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

- **Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Proceeds recycling is an estimated average over the first compliance period (2017-2020).

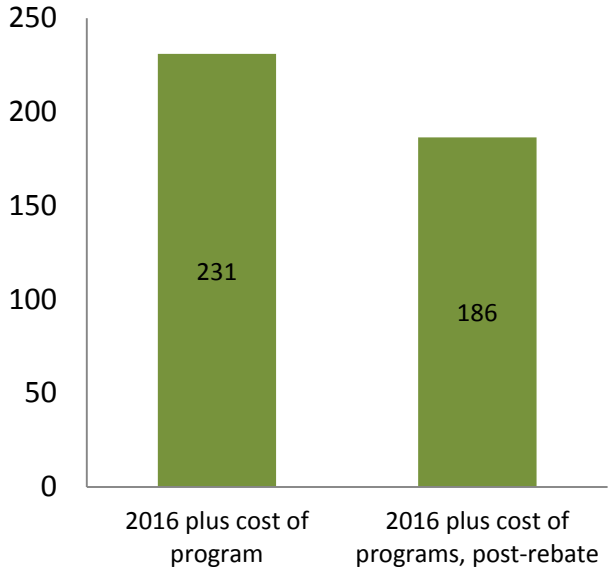
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750 kWh per month, 8% only**



The pre-tax impact is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000 kWh per month, 8% and RRRP Update**

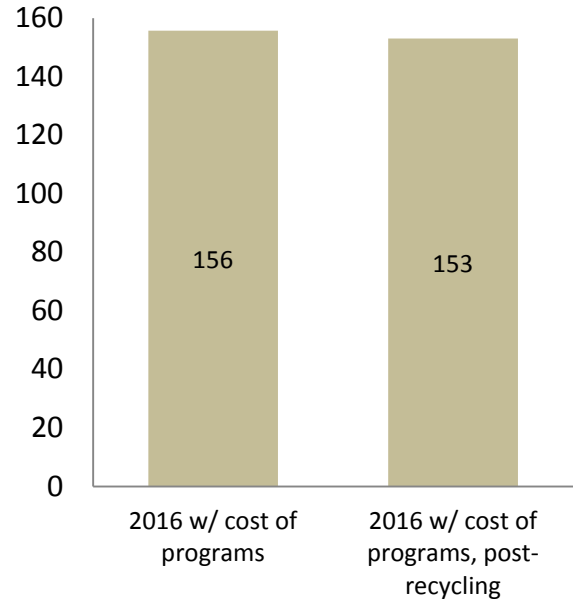


The pre-tax impact of the rate mitigation initiatives is a 20% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016.

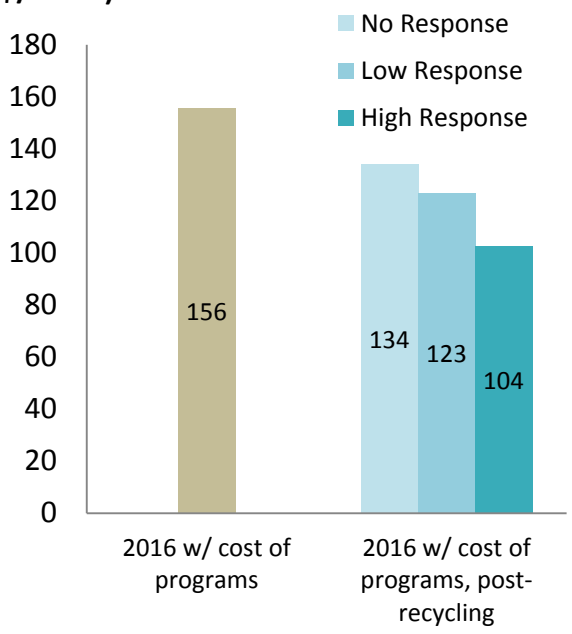
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

**Typical Class B (Commercial) Price ($/MWh)**



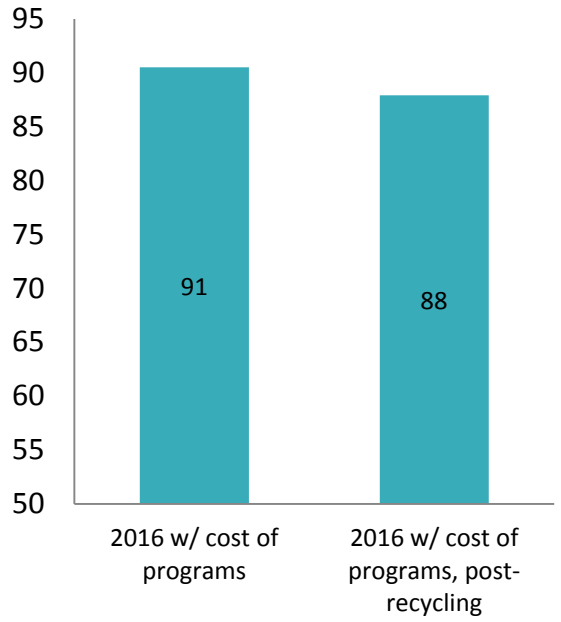
**Class B:** The benefit is a 2% reduction.

**Typical New Class A Price ($/MWh)**



**New Class A:** The benefit is a reduction of 14% to 34%.

**Typical Class A (Industrial) Price ($/MWh)**



**Existing Class A:** The benefit of the rate mitigation initiatives is a 3% reduction.

**Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

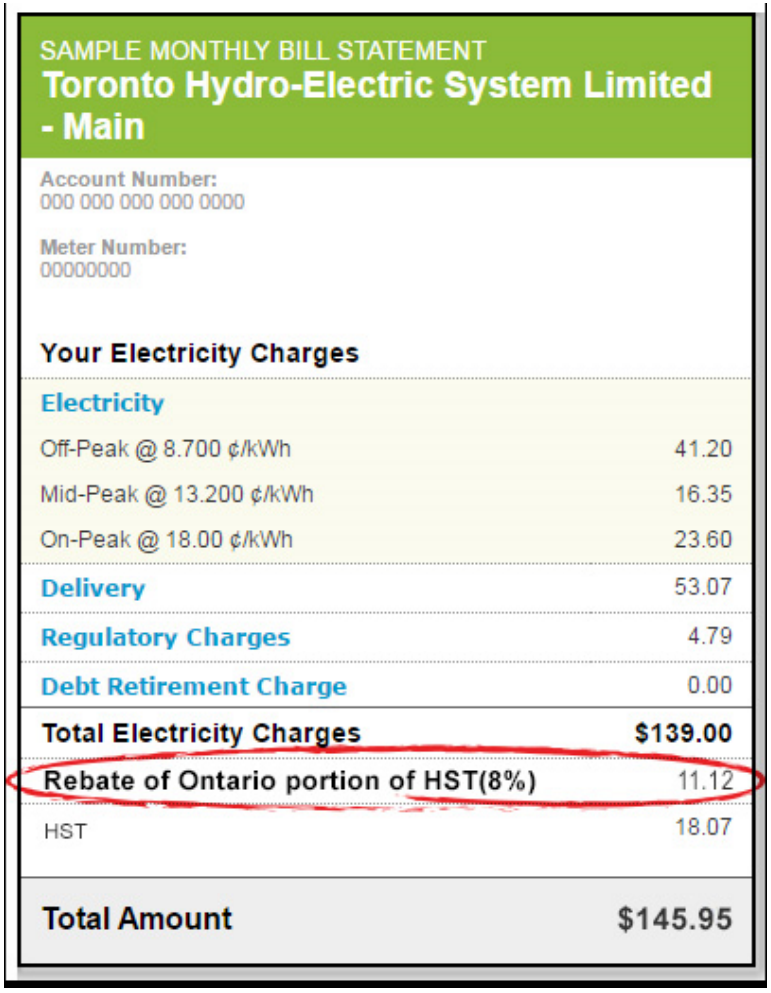
- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Electricity Bill Mock-Up



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | 11.12 |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

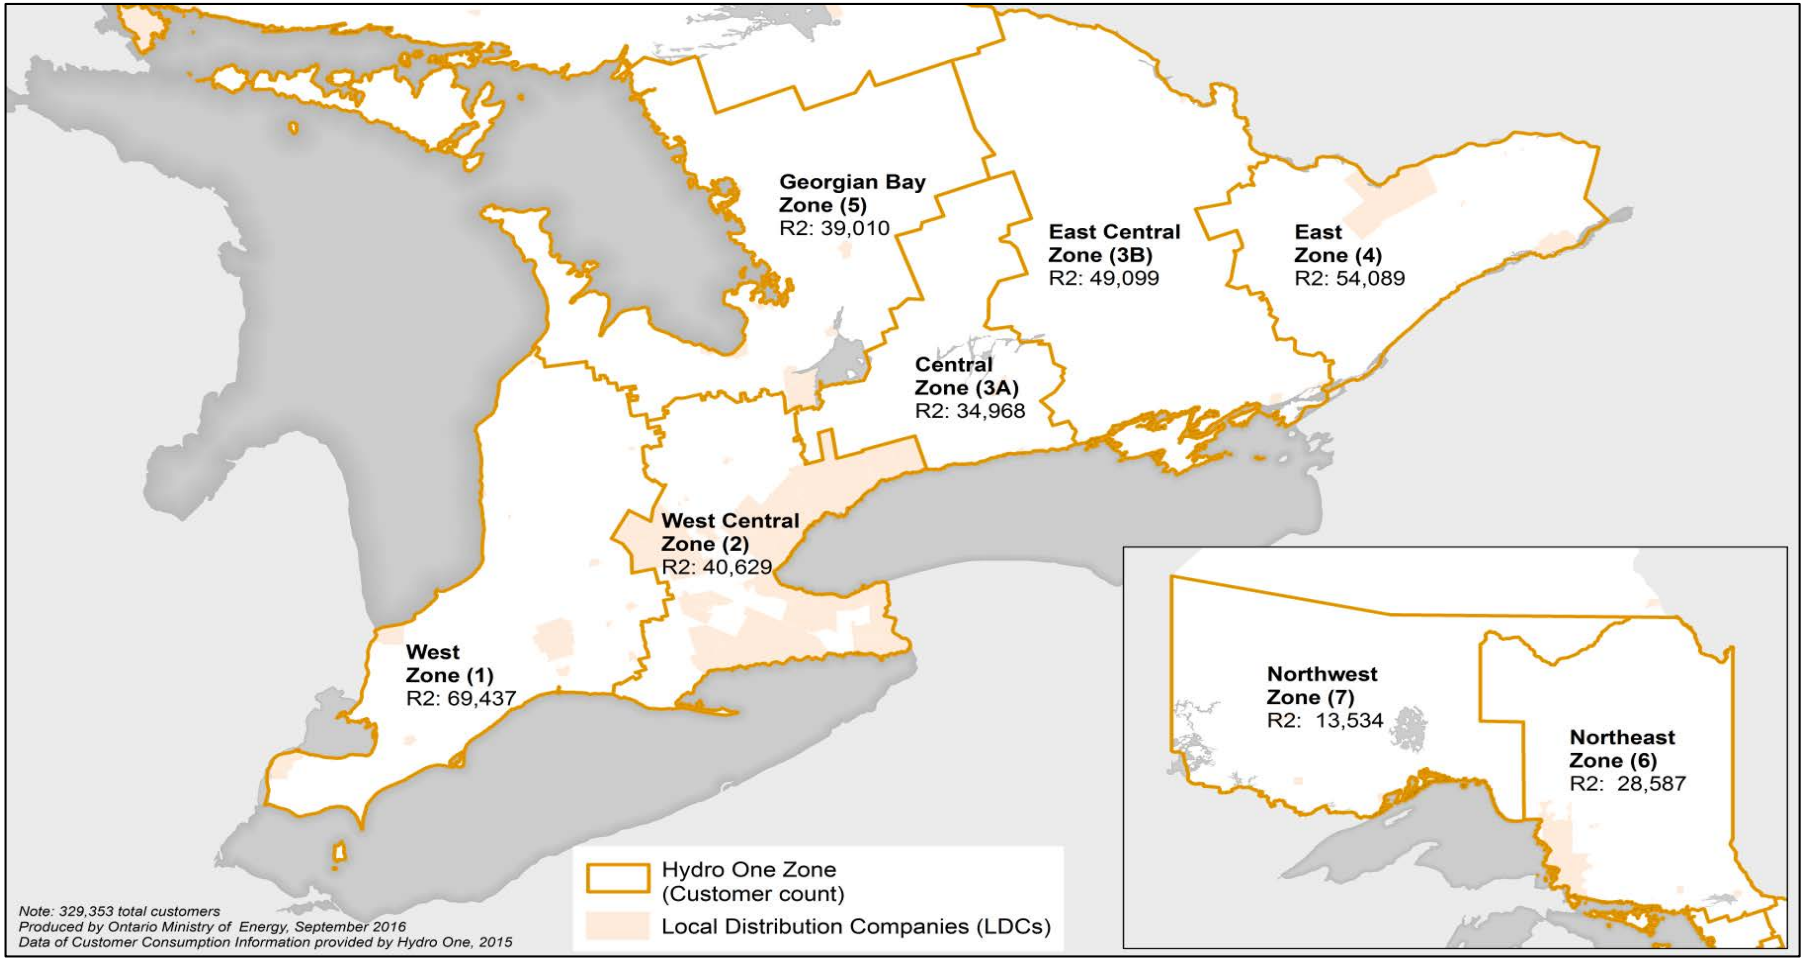
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

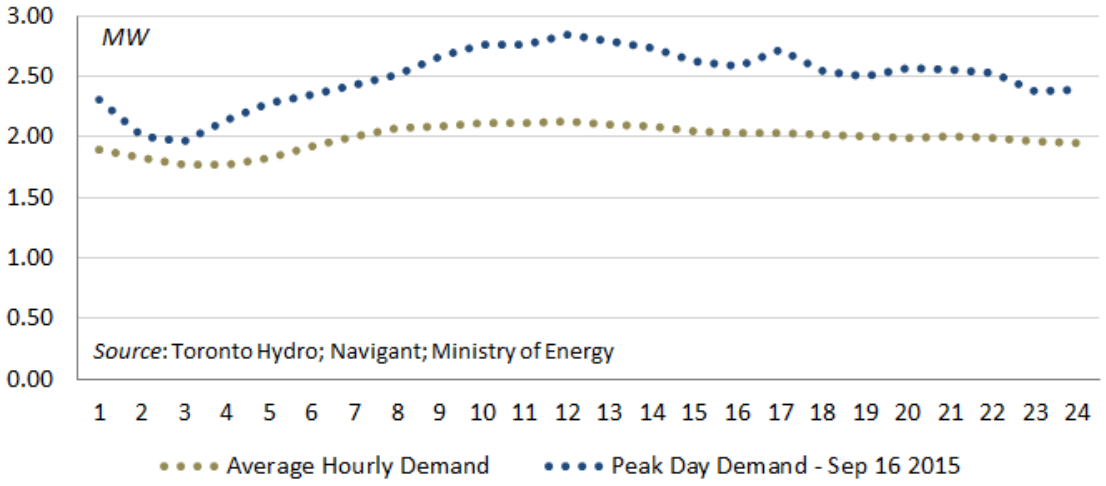
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

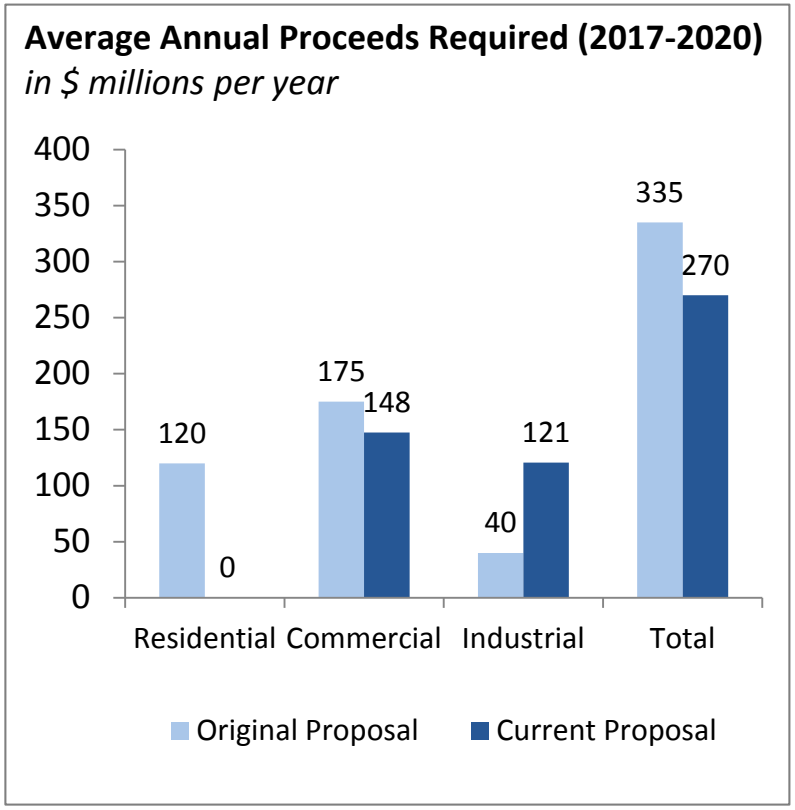
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- ~~HST~~ 8% Rebate of the pre-tax electricity costs (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Pending Update

Ontario

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills – $28 a month, in addition to the eight per cent rebate.
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

   i. Provide a rebate of 8% ~~on~~ of the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

   ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

   iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals. **[TBD]**

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the *Electricity Act, 1998* to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

# Appendix

# Illustrative Bill Impacts

| | Current Bill (after cost of new programs, before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (after cost of new programs, before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $140 /month | N/A | 8% ~~pre-tax~~ rebate: - $11 | $129 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $231 /month | RRRP: –$32 | 8% ~~pre-tax~~ rebate + Updated RRRP: - $45 | $186 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $102 /month | OESP: -$38 | 8% ~~pre-ta~~x rebate: - $8 | $94 /month |
| Small Business (Toronto – 403,200 kWh/month) | $150 /MWh | N/A | 8% ~~pre-tax~~ rebate: - $12/MWh | $138 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $204 /MWh | N/A | 8% ~~pre-ta~~x rebate: - $16/MWh | $188 /MWh |

***Note:** Some residential consumers ~~can~~ may also receive relief for sales tax on home energy of up to $224 for 2016 through the ~~tax credits based on income, age and geography (Northern Ontario Energy Credit and~~ Ontario Energy and Property Tax Credit~~)~~. People who live in the North may receive additional relief for home energy costs of up to $224 for 2016 through the Northern Ontario Energy Credit. These credits are delivered through the Ontario Trillium Benefit ~~Tax Credit and can be as high as $1,332 per year for a family~~.
** income of less than $28,000, family of 4.

Totals may not add due to rounding.

# Illustrative Bill Impacts (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net Impact, | New Rate, |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | -$0.90 /MWh (-1%) | $107 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $68 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling + ICI: -$53.90/MWh | -$52 /MWh (-34%) | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh (-1%) | $151 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | $1.74 /MWh | Proceeds Recycling: -$2.60/MWh | -$0.90 /MWh | $153 /MWh |

**Notes:**

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI and proceeds recycling).

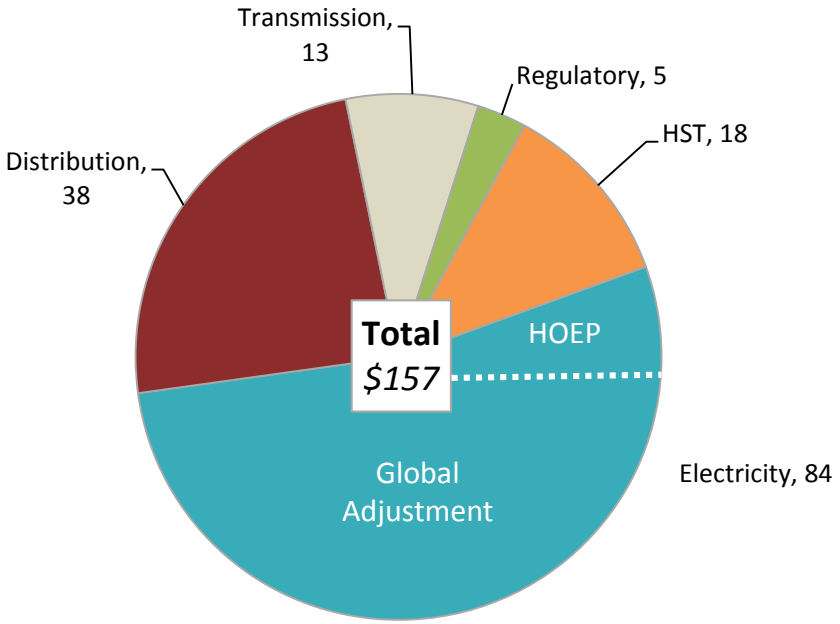
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

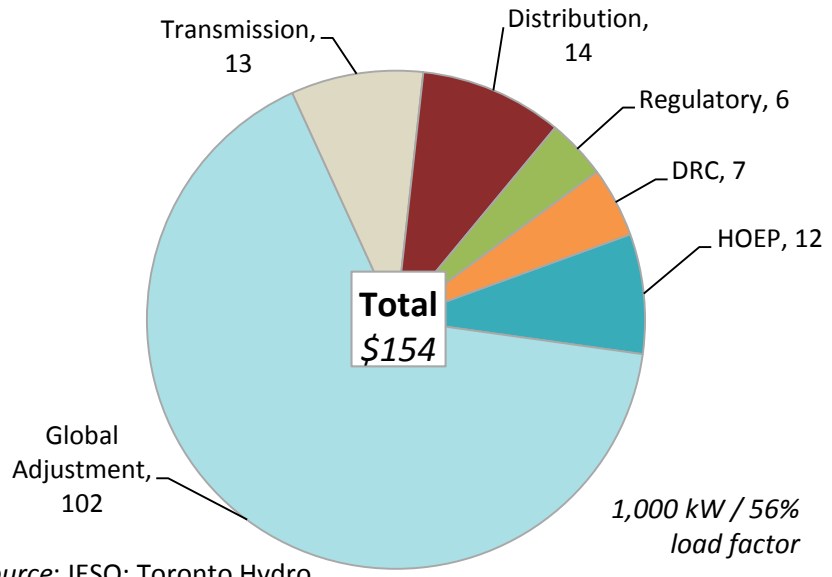
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

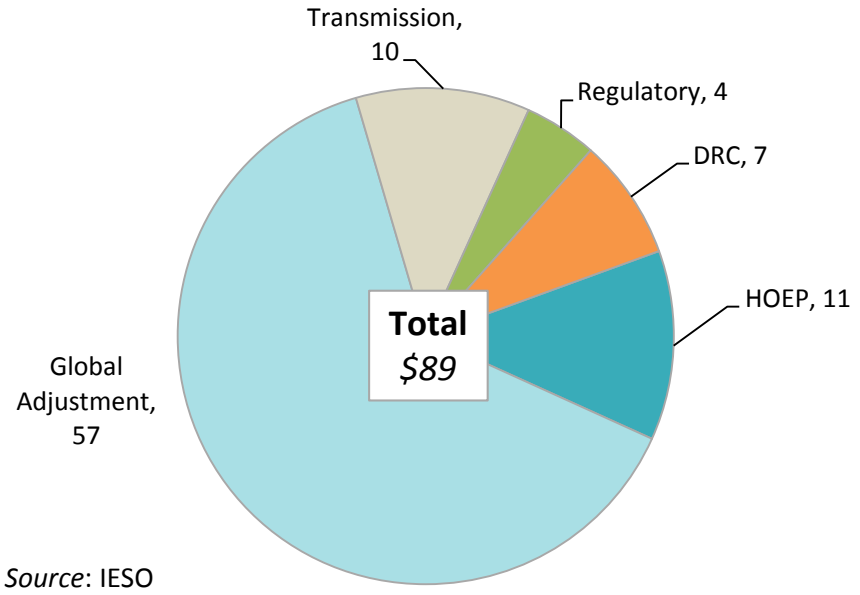
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

**Subject:** Fwd: MoE - OFA MOU for OREC

Hi John,

See Kens comment in the attached. He has a good point in the sense as to what sort of "are in agreement" looks like, especially since we seen that Energys PRRT didn't really mention the OFA as playing a role in the forecasting.

Salman

**Subject:** MoE - OFA MOU for OREC

Hi Caroline/Ken,

We have received a marked up version of the MOU between the OFA and MoE related to the OREC regulation. I did a quick blackline and there were actually other changes that were not highlighted and was advisable to check with you whether you see any issues/comments. The changes seem to revolve around the definitions of the program etc.

V3_clean = what we had last sent over
DAP Nov 25 = the latest markup we received
Track changes to v3_clean - quick blackline to show additional changes not shown in the markup received.

Hoping you can take a quick look.

Thank you,
Salman

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the [*Ontario Rebate for Electricity Consumers Act, 2016*] – NTD, pending the legislature considering the Bill], including and the regulations thereunder (the "Act"), certain consumers will be entitled to receive a credit, known as the financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers (" or "OREC"), against", in respect of the cost of electricity consumed by them during the period commencing January 1, 2017;

2. Funds in respect of the Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to mostspecified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act, its regulations and the Market Rules;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the ORECReimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f)of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

e)

**Commented [SQ22]:** What would this access look like? Are they expecting us to set up up an external site with all of our files/modeling as well?

Just need to clarify expectations.

**Commented [KR3]:** I would not expect this ti be anything other than physical access. You may wish to clarify this point.

## 4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process .

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

**Formatted:** Font: Not Bold

**Formatted:** Indent: Left: 0.25", Hanging: 0.25"

**Commented [SQ24]:** The only change outlined in the latest version.

**Commented [KR5]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

## 5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

## 6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

Formatted: Highlight

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

Formatted: Highlight

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:
email:

Formatted: Highlight

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor
Attention:
email:

Formatted: Highlight
Formatted: Highlight
Formatted: Highlight

**10. Execution**

The parties have executed this MOU, effective as of the date first above written.

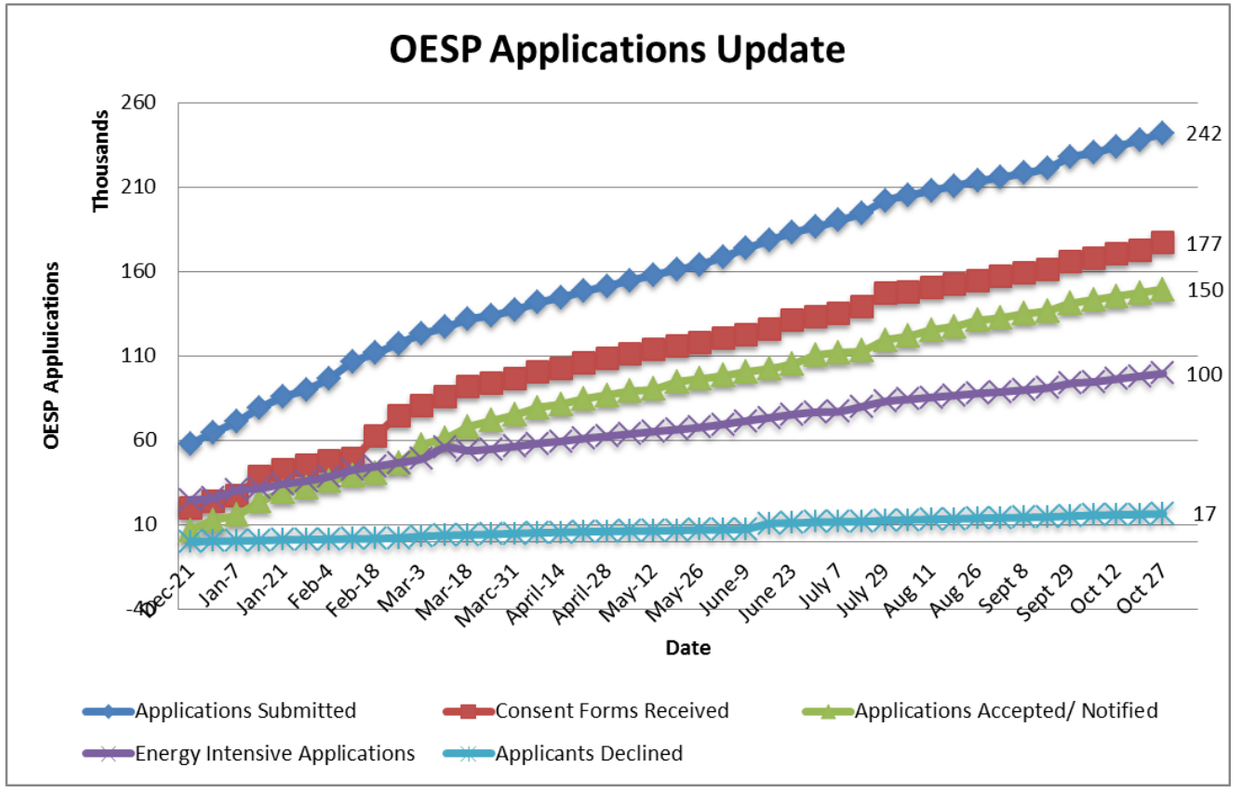
# Ontario Electricity Support Program – Updates and Trends

## OESP Applications Update

All program participation data figures increased this week, with Contact Centre calls now at 356K.
May 1st TOU price increase, and implementation of Wave II Communications, beginning in May, support continued increases in participation.

First Nations Applications: 8,249
Metis Applications: 2,614
First Nations and Metis Applications: 229



## Weekly Update / Outstanding Issues

- OEB Wave II Communications Strategy includes radio, Tim Horton's TV, transit, community newspapers, direct mail, digital (searches, web banners), and utility bill inserts to begin week of October 3.

**Meetings**

This Week (week of October 24)

- No meetings

**Outstanding Issues**

**The following proposed changes were approved by the OEB Chair, although have not yet been shared publicly, pending system changes, and a communications plan:**

**Medical Devices**

- For eligible OESP applicants that rely on an Oxygen Concentrator or Mechanical Ventilators (invasive and non-invasive), the customer qualifies for the higher level of assistance ($45 to $75).
- Based on research to date, the OEB Chair has approved the addition of in-home dialysis machines to qualify for this higher level of assistance .

**Inclusion of Inuit for enhanced sliding scale**

- First Nations and Métis customers currently qualify for the higher level of assistance ($45 to $75).
- Inuit eligibility for higher assistance was approved by the OEB Chair, as Aboriginal identity as defined by Stats Can includes Inuit.
- An additional 1,800 low-income households would be eligible for the OESP with this change.

# Ontario Electricity Support Program – Background

## OESP Program Details

The OESP provides an ongoing rate reduction directly on the bills of low-income electricity consumers starting January 1, 2016. The OESP credit amount for qualified customers is based on household income and household size. Application intake for the OESP opened on October 29, 2015. It is estimated that about 570,000 households could be eligible for the OESP.

Monthly credits range from $30 to $50. Customers with unique electricity needs, such as customers using electric heating, customers relying on certain electricity intensive medical devices, and First Nations or Métis customers, are eligible for a higher level of assistance, with credits that range from $45 to $75.

The OESP charge that is applied to all customer electricity bills, effective Jan. 1, 2016 is $0.0011/kWh. For a typical residential customer the OESP is estimated to cost $0.93/ month before tax.

The OESP is an application-based program. As a result, low-income electricity consumers have to apply to the program to determine if they are eligible. Ontarians whose electricity is included in their rent are not eligible for the program. For OESP recipients, credits are not applied retroactively to January 1, 2016; however all eligible customers will receive on-bill credits for the entire two year or five year (for recipients 65+ or receiving a disability benefit) eligibility period. Once an electricity customer applies for the OESP, it takes approximately 6-8 weeks to process the application.

## Roles and Responsibilities

**Ontario Energy Board (OEB) –** The OEB is responsible for overseeing the implementation of the OESP. It also oversees the CSP. The OEB also sets the OESP charge used to collect the money to fund the OESP, and will set any changes to the sliding scale credit amounts. As the regulator of the electricity sector in Ontario, the OEB oversees LDCs and USMPs, including overseeing their role in the OESP.

**Central Service Provider (CSP) –** ICF, the CSP, is responsible for primary intake for the OESP, by operating the OESP application website. ICF is also responsible for the design and management of the OESP system, operating the OESP contact centre, and providing the settlement function for intake agencies and ONWAA.

**LDCs and USMPs –** Utilities have a direct interface with the CSP, where it is responsible for verifying the account information of program applicants. It is also the responsibility of utilities to put the credit amount on the bills of eligible customers, promoting the program, and collecting the charge from the bills of all customers.

**Intake Agencies –** There are agencies across the province who are responsible for application intake for households who have not filed taxes in the last two years, whose situation has recently changed, or who generally need more assistance filling out their application.

**Ministry of Finance –** The Canada Revenue Agency, through the Ministry of Finance (MoF) is responsible for verifying the income of all household members who have filed a tax return in the past two years. MoF then combines the income of all household members to determine the total household income, and also the credit amount that eligible households receive. MoF has a direct interface with the CSP to confirm or is eligible or not for the OESP.

**Independent Electricity System Operator (IESO) –** The IESO is responsible for collecting the OESP charge from market participants, and providing the settlement function for those delivering and administering the OESP (e.g. MoF, LDCs and USMPs, ICF, etc.)

## How to apply for the OESP

### 1. Self-Serve Application

- An easy online application for the OESP is available at OntarioElectricitySupport.ca
- Paper applications are available for those who do not wish to submit an online application. These are available on the OESP website, or can be requested by calling the contact centre
- Applicants who have applied online or using a paper application must sign and mail a consent form to the central service provider, who will coordinate income verification with the Canada Revenue Agency

### 2. Assisted Application

- There are intake agencies across the province that applicants can visit if they need assistance filling out the application.
- Intake agencies can manually verify the applicants' household income
- To find an intake agency, applicants can either access a list on the OESP application website, or call the contact centre

### 3. First Nation Application

- There is a separate delivery stream of the OESP for First Nation applicants
- While First Nation applicants can apply using the online or paper application, the Ontario Native Welfare Administrators Association agreed to do application intake for First Nations
- Six Nations provided intake for its community for the first three months as well

## OESP Credit Amounts

**Table 1: Sliding Scale Fixed Credits**

| Sliding Scale #1 | | Household Size | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | 1 Person | 2 Persons | 3 Persons | 4 Persons | 5 Persons | 6 Persons | 7 or More Persons |
| Income Bracket | < $28,000 | $30 | $30 | $34 | $38 | $42 | $50 | $50 |
| | $28,001 - $39,000 | - | - | $30 | $34 | $38 | $42 | $50 |
| | $39,001 - $48,000 | - | - | - | - | $30 | $34 | $38 |
| | $48,000 - $52,000 | - | - | - | - | - | - | $30 |

**Table 2: Second Sliding Scale Fixed Credits**

| Sliding Scale #2 | | Household Size | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | 1 Person | 2 Persons | 3 Persons | 4 Persons | 5 Persons | 6 Persons | 7 or More Persons |
| Income Bracket | < $28,000 | $45 | $45 | $50 | $55 | $60 | $75 | $75 |
| | $28,001 - $39,000 | - | - | $45 | $50 | $55 | $60 | $75 |
| | $39,001 - $48,000 | - | - | - | - | $45 | $50 | $55 |
| | $48,000 - $52,000 | - | - | - | - | - | - | $45 |

Hi Shajee (in John's absence) and Emily,

Please see below. I believe that both of your branches have been involved in the OESP in some capacity and in the recent discussions on potential rate mitigation initiatives. Would one of you be in a position to get back to Michael Beare (in Brett's absence)? Happy to reply on the proper point of contact if you'd prefer.

Thanks,
Darren

**Subject:** OESP

Darren,

Your name was provided by a colleague at the Ministry of Finance as a potential point of contact regarding some potential changes to an electricity rebate program.

You may know that the PO is looking at ways to shift costs out of the electricity rate base. I would like to touch base with the OFA on one option in particular – the Ontario Electricity Support Program.

We have begun a discussion with MCSS to better understand if there are opportunities to align with existing low-income support programs. However, it's important to also consider other tax-based methods to deliver this program (e.g. Ontario Trillium Benefit).

I will be away next week, but hope there's a chance to connect early in the week of January 9th. Michael Beare is the file lead and will be available to answer questions prior to meeting.

Regards,
Brett

**Memorandum**

**To: File**
**Date:** March 22, 2012
**Re**: Accounting Treatment for OPA Charges, Other Financial Assets and Other Financial Liabilities

---

1. **Charges – Overview**

"Charges" are amounts incurred by the OPA to recover amounts paid or payable by the OPA to another person with respect to electricity.

The OPA has a legislated responsibility to record the transactions flowing through the global adjustment mechanism. The global adjustment and settlement accounts have been created for this purpose. The global adjustment and settlement accounts record charges that flow between the OPA and the IESO. The account flows include the amounts paid and received for: Demand Response 2 (DR2), Demand Response 3 (DR3), non-utility generation (NUG), regulated nuclear generation balancing amount (nuclear) and regulated hydro electric generation balancing amount (hydro). These accounts are settled simultaneously by the IESO. The account also records the amounts paid and received for OPA contracts (standard offer, generation and conservation/demand management, Feed-In Tariff and hydroelectric contract initiatives) which the OPA settles on a monthly basis with the IESO.

The DR3, NUG, nuclear, hydro, and OPA contract balances are offset in the global adjustment account eliminating the need for a flow of funds between the IESO and the OPA. The OPA records the effect of the transactions to meet its legislated responsibility. The OPA's generation contracts are estimated each month and settled on the actual amount owing in the following month. This gives rise to timing differences. The settlement dates can cross calendar months, creating a monthly balance in the account. Differences created from timing or settlement dates are reclassified into accounts receivable at month end.

The OPA is entitled under legislation to recover eligible charge amounts, as per section 25.2 (3) of the Electricity Act:
*(3) For greater certainty, the OPA may, subject to the regulations, establish and impose charges to recover from consumers its costs and payments under procurement contracts.*

### 1.1 Accounting Treatment for OPA Contract and Conservation Charges

Charges are currently recorded as accounts receivable from the IESO in the OPA's financial statements, as they represent current assets that are recoverable within 1 year. Specifically, charges represent financial assets, as per **PS.S.1000.40** below and are only recorded as receivable once they have been incurred by the OPA. Under legislation, the OPA has a contractual right to receive cash from another party (in this case the IESO via the Global

Adjustment Mechanism) with respect to amounts incurred for eligible charge amounts. This concept is consistent with criteria (c) of the definition below:

*.**40*** *A financial asset is any asset that is:*

*(a) cash;*
*(b) a realizable asset that is convertible to cash;*
*(c) a contractual right to receive cash or another financial asset from another party;*
*(d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;*
*(e) an equity instrument of another entity;*
*(f) an investment in a government business enterprise or government business partnership;*
*(g) a financial claim on an outside organization or individual; or*
*(h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph* **Error! Hyperlink reference not valid.***. [Former paragraph* **Error! Hyperlink reference not valid.** *retained in Archived Pronouncements]*

**Amounts Payable**

Amounts payable arise for OPA contract charges when the value of HOEP exceeds the value of the suppliers' contract price. In this case, the charges would become an OPA liability to the market in the form of charges payable to the IESO (which, in turn, must be returned to the market via the Global Adjustment). Such charges payable to the market meet the criteria for recognition as a liability, as outlined below:

**PS.3200.03**

*Liabilities should be recognized in the financial statements when:*

*(a) there is an appropriate basis of measurement; and*

*(b) a reasonable estimate can be made of the amount involved.* [SEPT. 2004]

---

## 2. Other financial assets and liabilities

Other financial assets and liabilities are made up of retailer settlement amounts, government procurements and regulated price plan variance amounts.

### 2.1 Other Financial Assets - Retailer Settlements and Government Procurements - Overview

Legislative provisions ensure that electricity retailers are made whole by the OPA for contracts with low-volume and designated consumers that were entered into before prices were frozen by legislation effective November 11, 2002. The OPA and retailers settling any differences between the HOEP and the contract price for each contract meet these provisions. When HOEP is greater than the contract price, the OPA receives payments from the retailers and records a financial liability. When HOEP is less than the contract price, the OPA pays the retailer and records a financial asset. The OPA tracks these variances in the retailer contract settlement deferral accounts. The retailer contract discount settlement account captures the funds related to the retailer incentives existing at the creation of the RPP. The retailer incentives captured are

held in a separate deferral account for settlement concurrent with the retailer settlement deferral accounts.

The OPA began amortizing these costs over the period of 2009-2011 to reflect the recovery of these amounts through its annual usage rate approved by the OEB. As at December 31, 2011, the balances of the retailer settlements are nil and have been recovered in full.

The OPA reimburses the government for costs incurred for electricity procurement and records the costs as a financial asset. Any subsequent balances are included in future revenue requirement submissions. The OPA began amortizing the government procurement costs in 2009 on a straight-line basis, and as at December 31, 2011, the balance to recover for these costs is nil.

### 2.2 Accounting Treatment – Retailer Settlements and Government Procurements

Under PSAS, retailer settlements and government procurements are treated as other financial assets in the OPA's financial statements. As they are normally not recovered within one year, they are categorized as non-current assets. As per **PS.S.1000**, retailer settlement and government procurement balances qualify as financial assets as per criteria (c) below:

> *.**40** A financial asset is any asset that is:*
>
> *(i) cash;*
> *(j) a realizable asset that is convertible to cash;*
> *(k) a contractual right to receive cash or another financial asset from another party;*
> *(l) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;*
> *(m) an equity instrument of another entity;*
> *(n) an investment in a government business enterprise or government business partnership;*
> *(o) a financial claim on an outside organization or individual; or*
> *(p) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph* **Error! Hyperlink reference not valid.***. [Former paragraph* **Error! Hyperlink reference not valid.** *retained in Archived Pronouncements]*

The OPA is required to carry the balance related to retailer settlement variances between the HOEP and contract price, as per legislation. The OPA is also entitled to recover these balances through legislative provisions, which represent a contractual right to receive cash or another financial asset from another party, as per criteria (c) above. Where retailer settlements fall into a liability balance, they would be categorized as other financial liabilities, as they would meet the criteria for recognition of a liability, as outlined in section 3.1 below.

## 3. Other Financial Liabilities – Regulated Price Plan (RPP) Variance - Overview

While prices for RPP consumers are set every six months by the OEB based upon a forecast of the cost of power over the next year, it is likely that there will be a difference between the actual and forecast cost of supplying electricity to all RPP consumers. When the hourly Ontario

energy price (HOEP) is greater than the RPP, the OPA pays the excess amount and records a financial asset as the electricity market funds paid are receivable from the market. When the HOEP is less than the RPP, the OPA receives the difference and records a financial liability as the funds received will be returned to the market. The OPA tracks this variance in the RPP variance account.

### 3.1 Accounting Treatment – RPP

RPP variance amounts are recorded by the OPA as other financial liabilities in the financial statements, as they meet the liability criteria outlined below:

**PS. S.1000**

***.45*** *Liabilities have three essential characteristics:*

*(a) they embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;*

*(b) the duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event, or on demand; and*

*(c) the transactions or events obligating the government have already occurred.*

Under legislation, the OPA is required to fund RPP variances where the HOEP is less than the RPP, which implies a duty or responsibility that the OPA has little to no discretion to avoid, as per criteria (a). For instances where the HOEP exceeds the RPP rate, the OPA would record a financial asset, as this circumstance would meet the criterion of **PS.S.1000.40** (financial asset), outlined in section 2.2 above.

**External Auditor Approval of Accounting Treatment**

The accounting treatment of OPA charges, retailer settlement, government procurement and RPP balances has been consistent since the OPA's inception and is approved by the OPA's external auditors on an annual basis. Based on governing legislation, the external auditors agree that these balances represent true assets and liabilities to the OPA. The signed auditors' report, along with the OPA's audited annual financial statements, can be found on the OPA website in the MD&A section of the OPA annual report.

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

Ontario

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms. The rebate will result in a savings of about $11/month for a typical residential consumer;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program. In combination with the 8% rebate, the updated RRRP program will result in a savings of about $45/month for a typical rural customer;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit. ICI provides participating consumers with an electricity bill savings of up to one-third;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

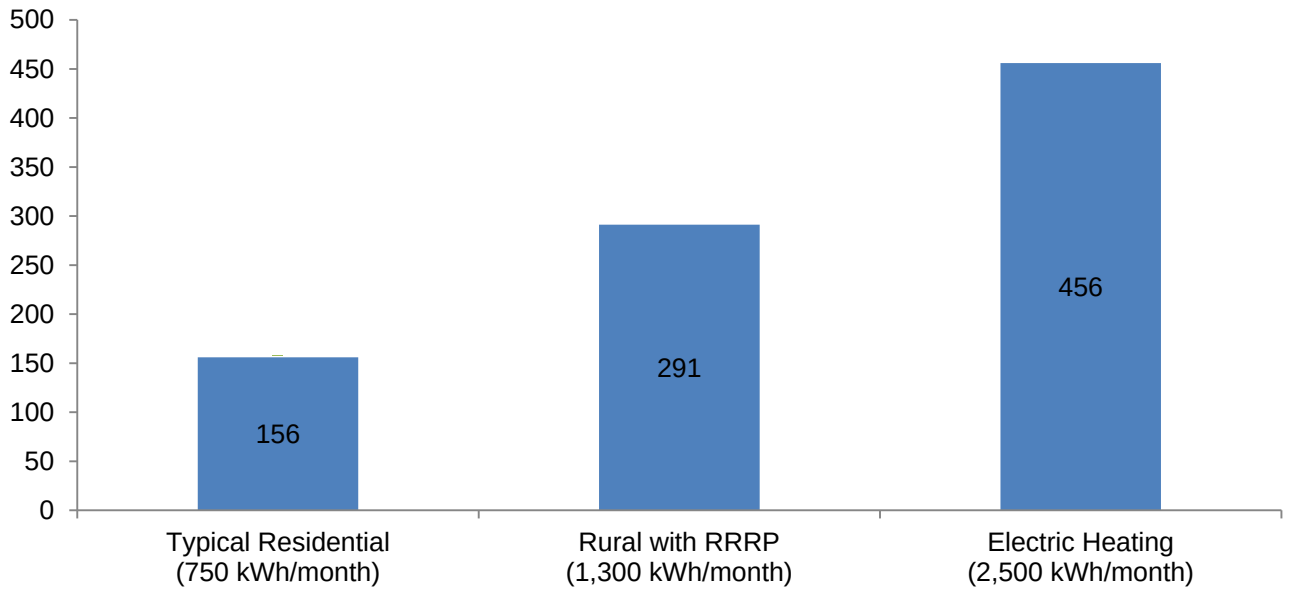
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills, After Tax**
*in $/month*

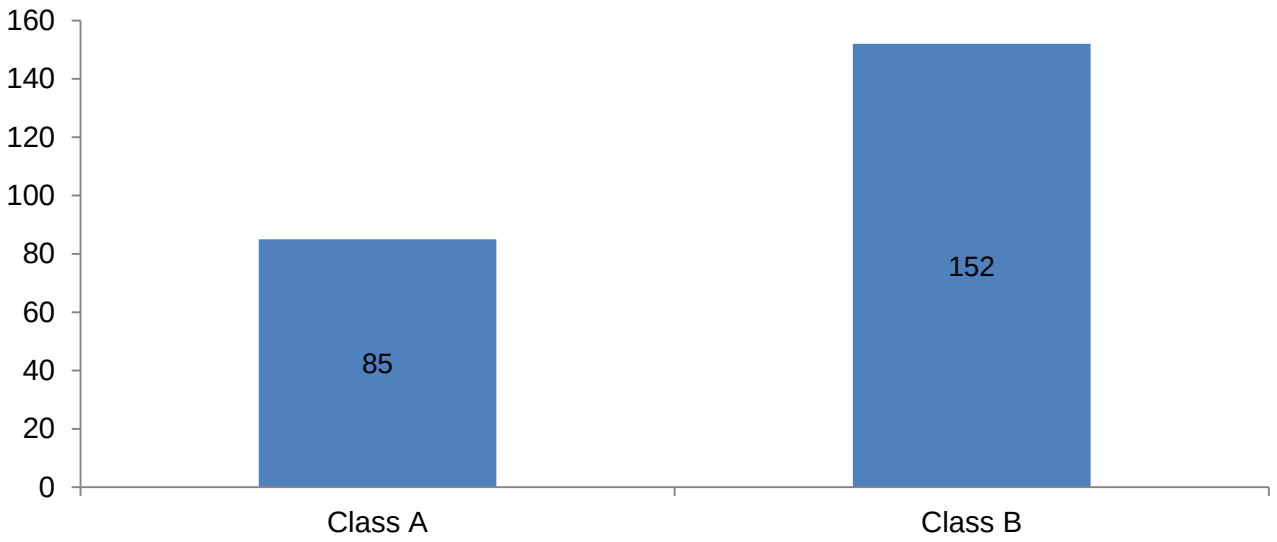


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how electricity sector programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | - | 1.00 | 1.03 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies*** | TBD | TBD | TBD | TBD | TBD | TBD | Medium-to-Long-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs). ***Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | - | 1.34 | 1.38 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Medium-to-Long-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- A number of the social assistance programs such as the OESP, RRRP and First Nations rates can be funded through the tax-base. **Note:** Table on slide 13 shows some preliminary costs based on some assumptions which could mean up to $416 million in costs to taxpayers in 2017 and up to $465 million in costs in 2020

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 million annually on the Province until April 2018 (i.e., The current planned date for removing DRC from all electricity bills) and zero thereafter.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 million annual fiscal pressure in 2017 to the province based on new borrowing and increasing to about $70 million by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# Proposed Taxpayer Funded Electricity Price Mitigation

- As shown in the Ministry of Finance table, if various measures proposed in this deck were to be accepted, taxpayer funded contributions to electricity price mitigation would increase to about $3.4 – 3.9 billion in 2017-18. That is a 65-95% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| **OCEB** | - | - | - | - | - |
| **OREC** | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| **Ending DRC[2]** | 330 | 330 | -- | -- | -- |
| **NIERP** | 120 | 120 | 120 | 120 | 120 |
| **NOEC** | 25 | 25 | 25 | 25 | 25 |
| **OEPTC[3]** | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| **1. OESP** | | 106 | 119 | 127 | 132 |
| **2. RRRP** | | 292 | 300 | 306 | 315 |
| **3. First Nations Delivery Rate** | | 18 | 18 | 18 | 18 |
| **4. Fund ICI through Tax Base** | | 900+100 | 900+100 | 900+ | 900+ |
| **5. Departure Tax** | | TBD | TBD | TBD | TBD |
| **6. Conservation Amortisation** | TBD | TBD | TBD | TBD | TBD |
| **7. DRC Ended for Class B** | 110 | 450 | -- | -- | -- |
| **8. Other** | | 30 | 45 | 60 | 70 |
| **TOTAL** | **1,305** | **3,901** | **3,197** | **3,237** | **3,261** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.
- IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be about $150 million. The bulk of the costs (i.e., capital) would only be recovered once the project has been implemented and as the benefits are being realized.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- By 2020, funding the OESP, RRRP and the First Nation rate reduction through a regulatory charge is estimated to cost approximately $2.45 for a typical residential customer using 750 kWh per month. Transitioning that funding to the tax-base would reduce a typical residential customer bill by that same amount. As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base. To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits).

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.

- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. The estimated fiscal impacts of funding the RRRP through the tax base do not include these costs, and future consideration of how these costs could be supported by the tax base will have to be undertaken.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs) and remains steady at this participation level in 2021 and 2022, with no increase in credit amounts.

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

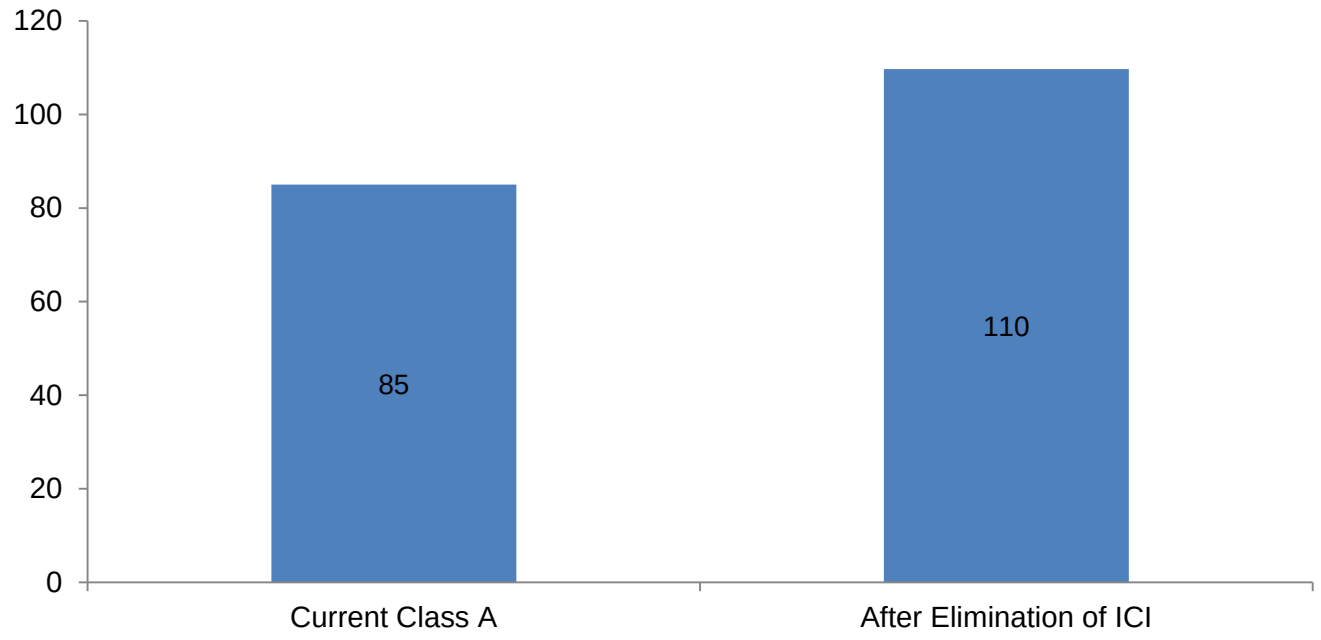
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

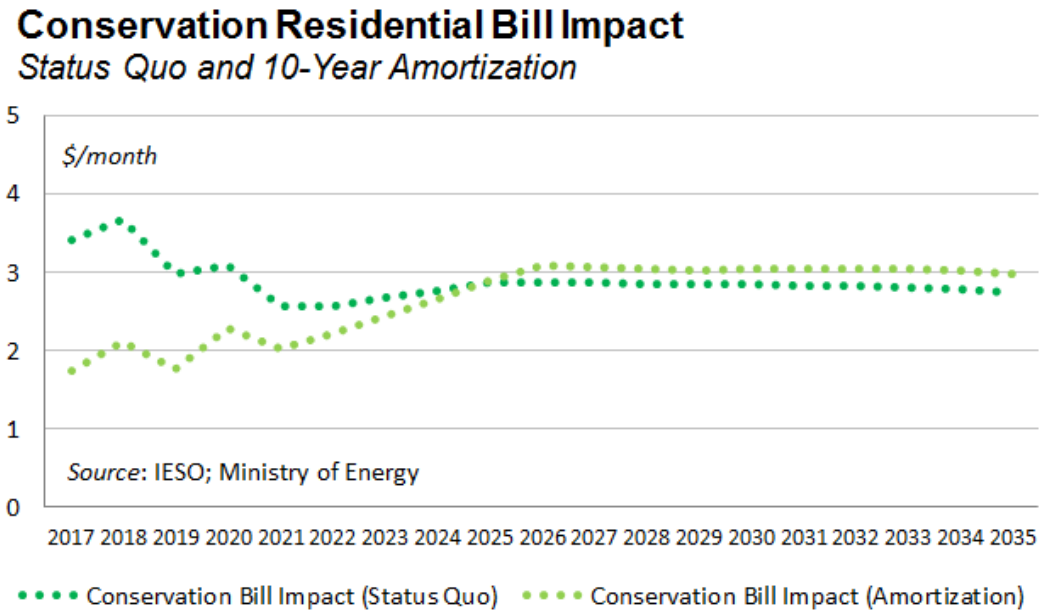
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro- November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 million annual fiscal pressure in 2017 to the province based on new borrowing and increasing to about $70 million by 2021, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.
- If the Province were to transfer $2.6 billion in economic benefits to the rate base over 10 years suggest the following impacts (assuming 140TWh per year):
  - Residential Ratepayer Impact (if spread over 10 years): up to $1.39 per month on a typical bill; and
  - Industrial Ratepayer Impact (if spread over 10 years): up to $1.86 / MWh

**Considerations**

- Cost savings to ratepayers and associated fiscal impacts would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- The departure tax was effectively a true-up for lower PILs payments from Hydro One in previous years – it was not a one-time windfall for the Province. In other words, it ensures that Hydro One paid all its tax obligations under the PILs regime before moving into the normal corporate tax regime.
- The related ~$2.4 billion fiscal benefit to the Province (from the deferred tax benefit) has already been credited to the Trillium Trust to be used to build infrastructure under Moving Ontario Forward.
- Repurposing funds paid to OEFC may have an impact on the defeasance of electricity stranded debt.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

*[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]*

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

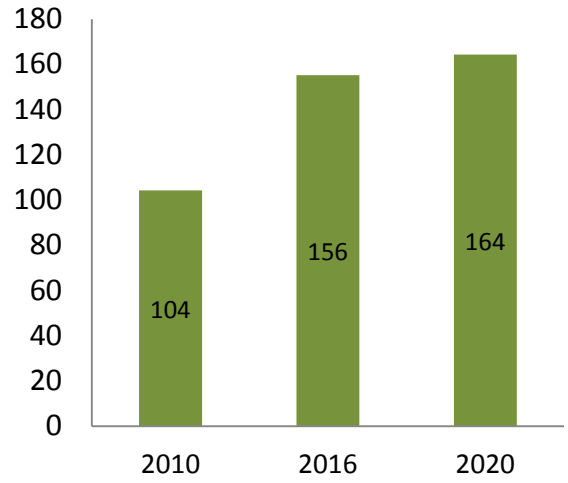
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

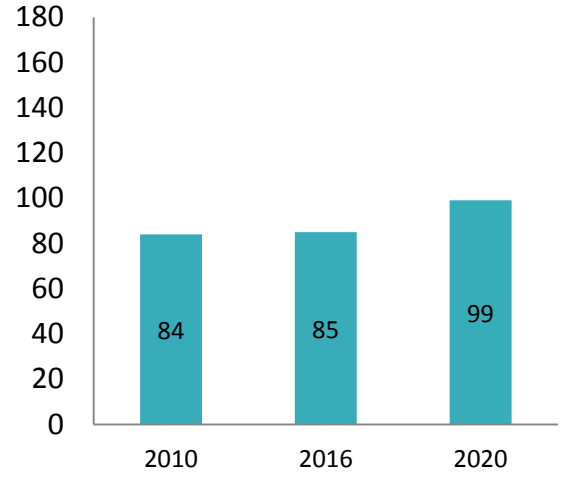
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# 2015 Indicative Industrial Electricity Prices – Jurisdictional Comparison

| 2015 Indicative Industrial Electricity Prices (Canadian ¢/kWh) | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Jurisdiction | Cost | | Jurisdiction | Cost | | Jurisdiction | Cost | | Jurisdiction | Cost |
| 1 | Manitoba | 4.67 | 17 | Arkansas | 7.49 | 33 | Newfoundland | 8.65 | 49 | Nova Scotia | 10.02 |
| 2 | Quebec | 5.17 | 18 | Tennessee | 7.53 | **34** | **U.S. Average** | **8.71** | 50 | North Dakota | 10.75 |
| 3 | Washington | 5.64 | 19 | Alabama | 7.58 | 35 | New York | 8.72 | 51 | Florida | 10.79 |
| 4 | Alberta | 5.87 | 20 | South Carolina | 7.68 | 36 | Indiana | 8.74 | 52 | Delaware | 10.96 |
| 5 | Ontario - North | 6.35 | 21 | Utah | 7.70 | 37 | Ohio | 8.75 | 53 | Maryland | 11.86 |
| 6 | Oklahoma | 6.64 | 22 | Oregon | 7.72 | 38 | Wyoming | 8.87 | 54 | Maine | 12.64 |
| 7 | Montana | 6.68 | 23 | West Virginia | 7.80 | 39 | Minnesota | 8.89 | 55 | Vermont | 13.14 |
| 8 | Kentucky | 6.80 | 24 | Saskatchewan | 7.81 | 40 | Prince Edward Island | 8.90 | 56 | California | 13.85 |
| 9 | British Columbia | 7.04 | 25 | Nevada | 7.83 | 41 | Colorado | 9.05 | 57 | New Jersey | 14.44 |
| 10 | Iowa | 7.06 | 26 | Arizona | 8.00 | 42 | Michigan | 9.13 | 58 | New Hampshire | 17.17 |
| 11 | Louisiana | 7.06 | 27 | Idaho | 8.05 | 43 | Virginia | 9.23 | 59 | Massachusetts | 17.56 |
| **12** | **Canadian Average** | **7.31** | 28 | North Carolina | 8.09 | 44 | South Dakota | 9.31 | 60 | Connecticut | 17.58 |
| 13 | Missouri | 7.32 | 29 | New Mexico | 8.09 | 45 | Kansas | 9.54 | 61 | Alaska | 18.85 |
| 14 | Georgia | 7.35 | 30 | Illinois | 8.24 | 46 | Nebraska | 9.56 | 62 | Rhode Island | 19.97 |
| 15 | Texas | 7.37 | 31 | Ontario - South | 8.35 | 47 | Pennsylvania | 9.59 | 63 | Hawaii | 31.10 |
| 16 | New Brunswick | 7.48 | 32 | Mississippi | 8.41 | 48 | Wisconsin | 9.87 | | | |

Note: Estimates may differ from actual costs to a consumer based on location, connection, and operational characteristics. Prices exclude taxes and, in other jurisdictions, participation in any applicable jurisdictional benefit programs.

The Ontario industrial price is based on the average all-in price for year-to-date May 2015, and includes the Hourly Ontario Energy Price (arithmetic average), Class A Global Adjustment, delivery, wholesale market service charges and the Debt Retirement Charge. The 2 cent per kilowatt hour difference between northern Ontario and southern Ontario reflects the Northern Industrial Electricity Rate Program rebate.

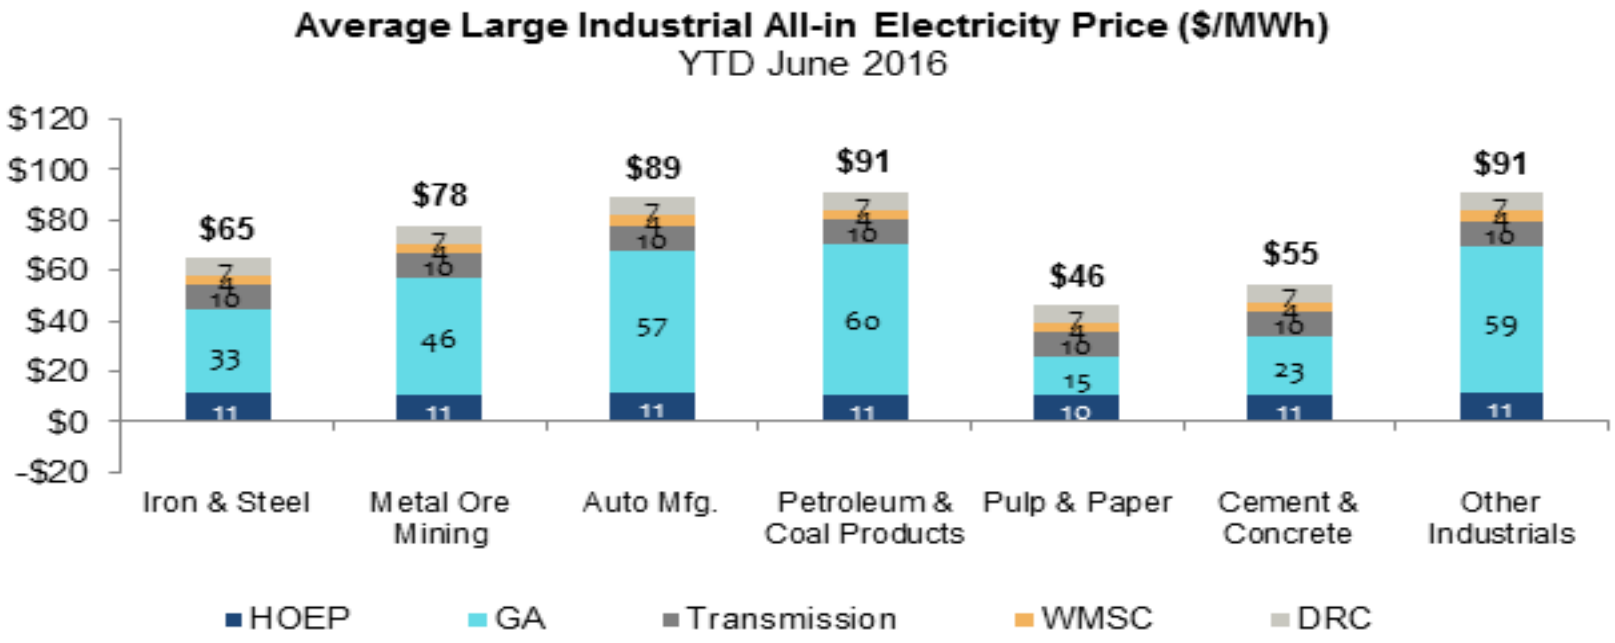
All other Canadian prices (except Ontario) are from the Hydro Quebec Rate Comparison for rates effective April 1, 2015 for select local distribution companies servicing specific cities. Where Hydro Quebec reports prices for two cities in a province (e.g., Calgary and Edmonton), an average of the two is used; in provinces where only one city is reported (e.g., Vancouver in BC, Montreal in QC), that one price is used to represent the province for indicative comparison purposes. In the Hydro Quebec Rate Comparison, a large consumer reflects 5 MW with monthly consumption of 3,060 MWh.

American jurisdictions reflect year-to-date May 2015 data from the US Energy Information Administration's survey of approximately 500 of the largest electric utilities. The price reflects the average revenue reported by the electric utility from electricity sold to the industrial sector. The value represents an estimated average retail price, but does not necessarily reflect the price charged to an individual consumer. Prices are converted at an exchange rate of 1 USD = 1.30 CAD, an approximation of the average for 2015 (1 USD = 1.2787 CAD).

# Indicative Electricity Prices Across Industrial Sectors

- The chart below shows estimated average all-in electricity prices by sector.

- Prices vary across sectors mainly due to differences in the level of Global Adjustment (GA) paid, which in turn reflects both the ability and willingness of companies to lower usage in the highest demand hours.



# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Current Status on Taxpayer Funded Electricity Price Mitigation

- The Ministry of Finance table shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.5 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| **OCEB** | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| **OREC** | - | - | - | - | - | 300 | 1,100* |
| **Ending DRC[2]** | - | - | - | - | 85 | 330 | 330 |
| **NIERP** | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| **NOEC** | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| **OEPTC[3]** | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

*Source: ENERGY PRRT Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

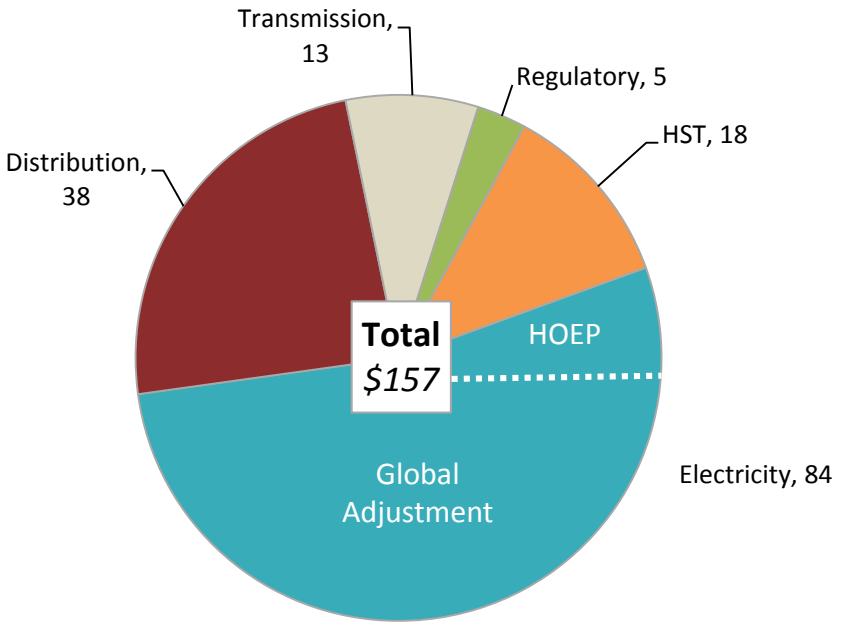
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



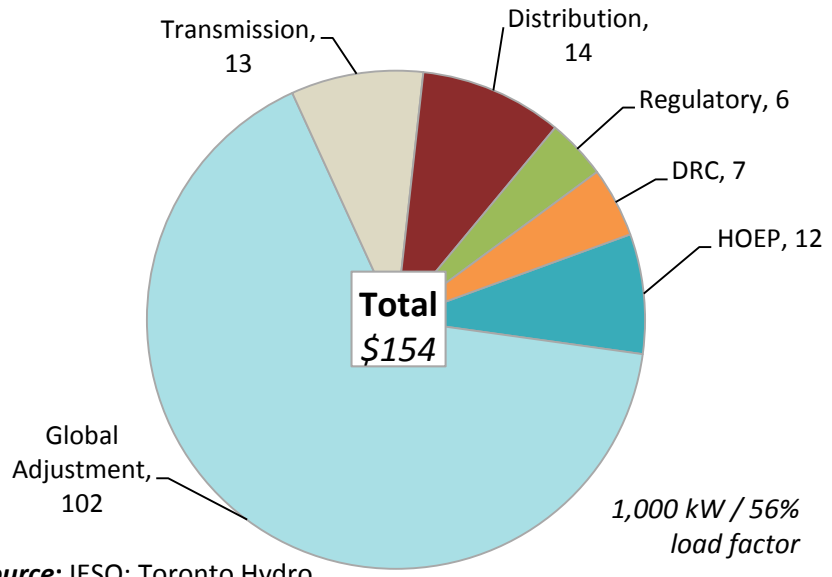
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

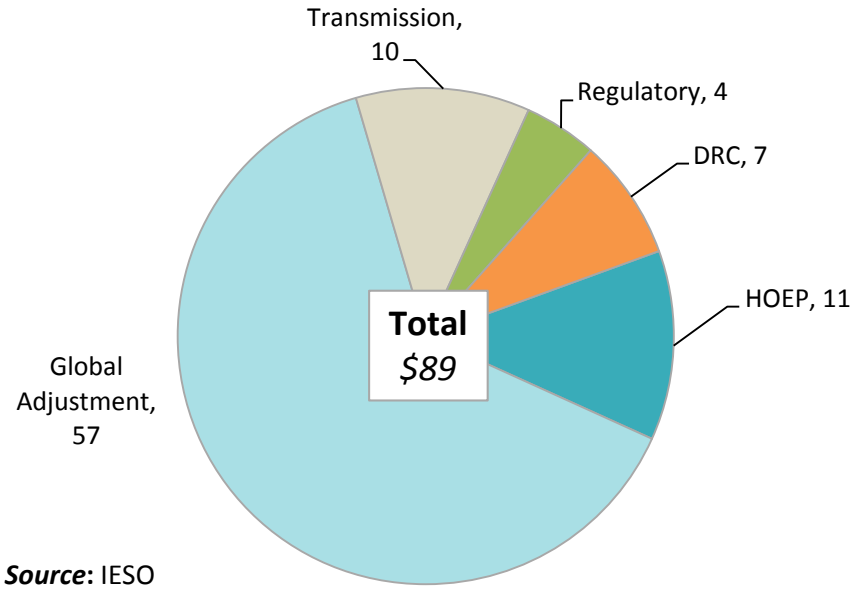
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



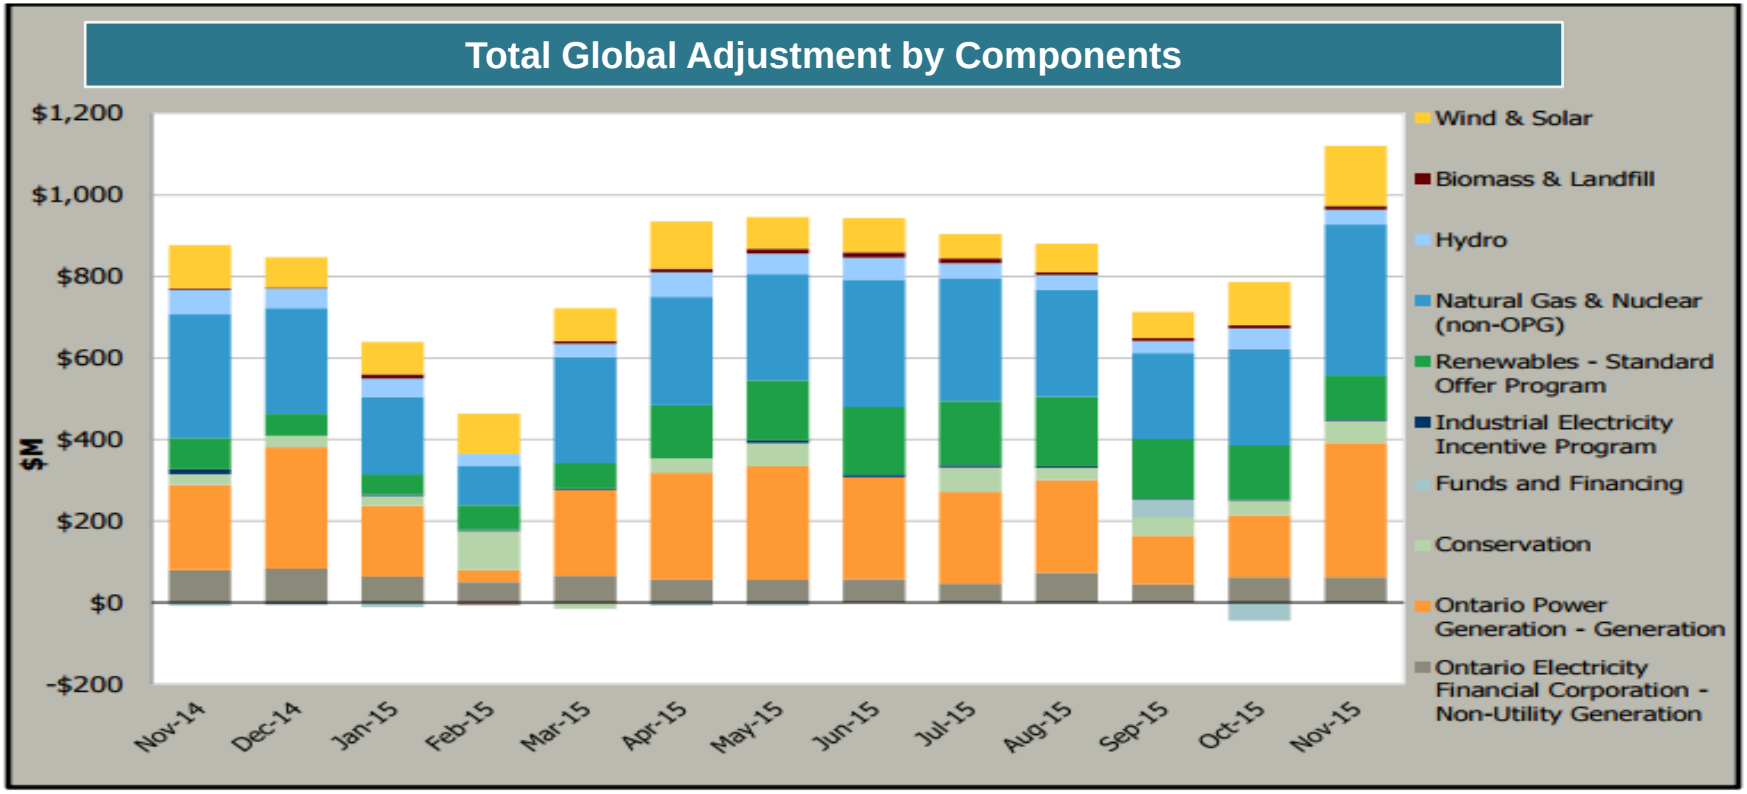
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

Hi Chris,

Here`s a markup of Energy`s deck, with staff comments.

TBS staff also asked for our comments. We can send them this for their information (and our other deck too, if that is helpful).

Ron

Ron - can CEFD take the lead on assessing Energy's rate mitigation deck? Per energy this is apparently tracking to MPC on Thursday, though that's news to us here. Will share with MO shortly.

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I’m happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

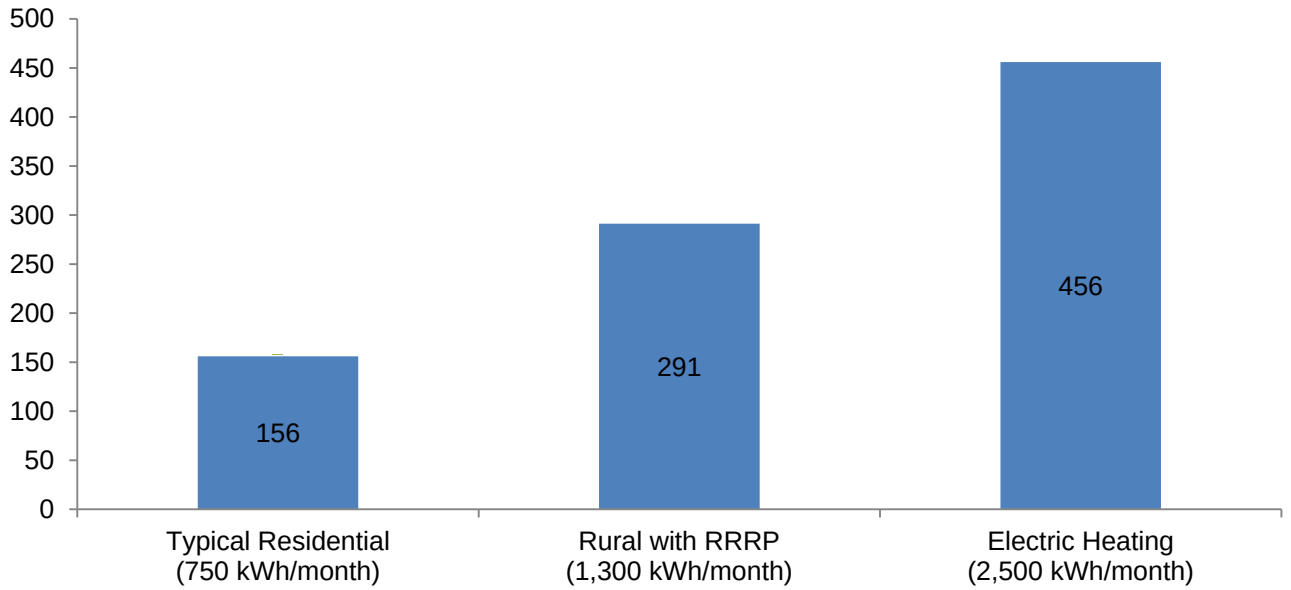
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

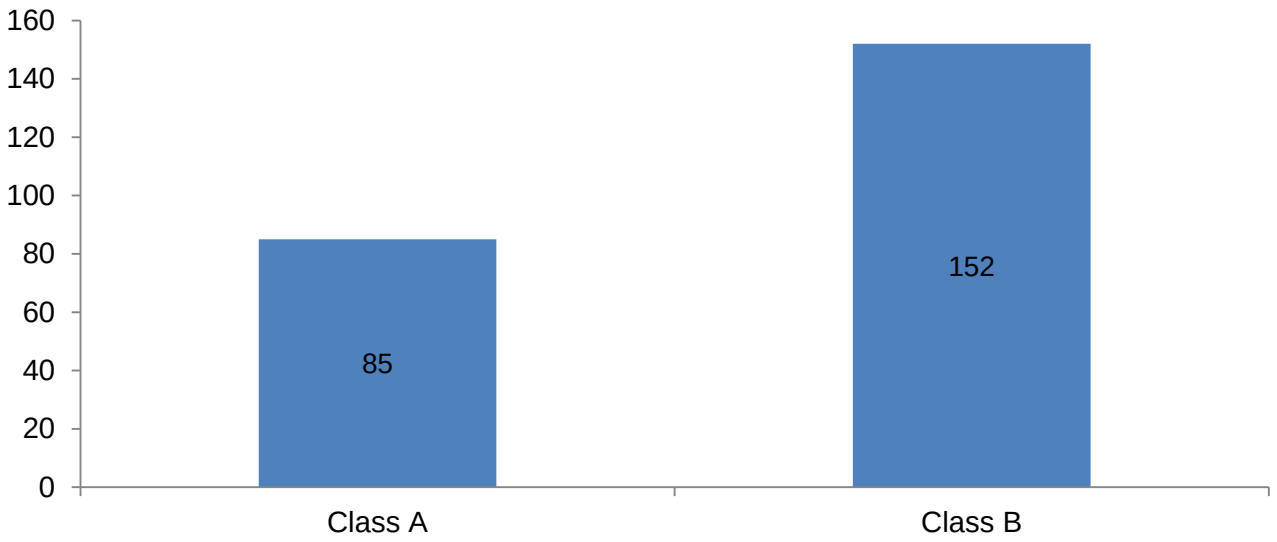


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.5 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how ~~government~~ electricity sector programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);¸(**NTD: If it provides system benefits, why not paid through the rate base)**
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 million ~~[placeholder for OFA]~~ on the Province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan (before the planned ICI expansion).

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based on new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+100 | 900+100 | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | TBD | TBD | TBD | TBD | TBD |
| 7. DRC Ended for Class B | 110 | 450 | -- | -- | -- |
| 8. Other | | 30 | 45 | 60 | 70 |
| **TOTAL** | **1,305** | **3,901** | **3,197** | **3,237** | **3,261** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if various measures proposed in this deck were to be accepted, taxpayer funded contributions to electricity price mitigation would increase to about $3.4 – 3.9 billion in 2017-18. That is a 65-95% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

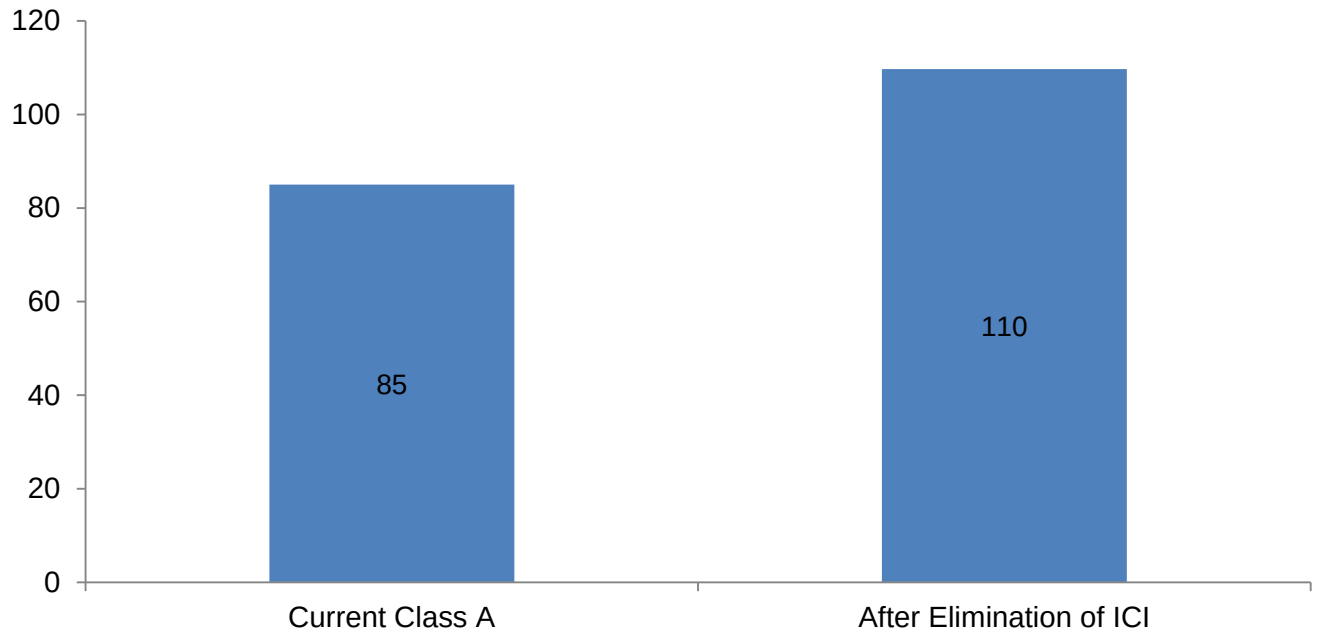
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.
